## SUBSCRIPTION PRICE OF BULLETIN

The Federal Reserve Bulletin is the board's medium of communication with member banks of the Federal reserve system and is the only official organ or periodical publication of the board. It contains, in addition to the regular official announcements, the national review of business conditions, detailed analyses of business conditions, research studies, reviews of foreign banking, and complete statistics showing the condition of Federal reserve banks and member banks. The Buluerin will be sent to all member banks without charge. To others the subscription price, which covers the cost of paper and printing, is $\$ 2$. Single copies will be sold at 20 cents.

No. 12

## REVIEW OF THE MONTH

Further growth in industrial activity and in the volume of bank credit have been the prin-

Credit situation.
. ing the past month. The upward turn in production, employment, and trade which was noted in the previous review was followed in October by further increases and by an advance in prices. This increase in business volume has been accompanied by a larger demand for credit for commercial purposes and by somewhat firmer conditions in the money market. Money rates, however, showed only slight advances from the low level prevailing during recent months.

The volume of commercial loans at member banks in leading cities between the beginning of September and the middle of November increased by about $\$ 375,000,000$, the only substantial increase in loans of this character since the early months of the year. During the same period investments of member banks continued to increase rapidly and there has been a further growth, though at a somewhat slackened rate, in loans on securities. For the six months since the middle of May, when the recent rapid growth in member bank credit began, total loans and investments of reporting member banks increased by $\$ 1,725,000,000$, to the highest level on record. More than one-half of this increase reflects larger holdings of investments, and much the larger part of the increase in loans was in advances on securities. Changes in the composition of the loans and investments of member banks in leading cities between the middle of May and the middle of November are shown in the following table:

Reporting Member Banks
[In millions of dollars]

|  | $\underset{1924}{\operatorname{May} 14,}$ | $\begin{gathered} \text { Nov. } 12, \\ 1924 \end{gathered}$ | Increase |
| :---: | :---: | :---: | :---: |
| Loans secured by stocks and bond | 4,108 | 4,631 | 523 |
| All other loans.... | 7,947 | 8,241 | 294 |
| Investments.- | 4,652 | 5,560 | 908 |
| Total loans and investments | 16,707 | 18,432 | 1,725 |

While the present total of loans and investments of these banks ismore than $\$ 1,000,000,000$ larger than at the high point in 1920, their composition is different. The net increase as between the two dates is the outcome of a growth of more than $\$ 2,000,000,000$ in investments and of over $\$ 500,000,000$ in loans on stocks and bonds, partly offset by a decline of $\$ 1,500,000,-$ 000 in commercial loans. Thus the existing large volume of member bank credit in comparison with the previous peak, when considered with reference to its composition, reflects the smaller credit requirements to finance current business operations at the prevailing level of prices and a larger volume of investments arising from an increase in loanable funds at the disposal of member banks.

Figures for all member banks, which have recently become available, show that between June 30 and October 10, 1924, there was an increase of $\$ 633,000,000$ in investments and $\$ 556,000,000$ in loans, a total of $\$ 1,189,000,000$. Of this growth in bank credit more than a billion, or 90 per cent, was in central reserve and reserve cities, and in the banks outside of these cities, the so-called country banks, there was an actual decrease in loans, more than offset, however, by a growth of investments. Total deposits of member banks increased by about the same amount as their loans and investments, more than one-half of the increase being in the amount due to banks. The increase of $\$ 636,000,000$ in bankers' balances for the period was largely in reserve cities other than New York.

The accumulation of bankers' balances during recent months, which
Movement of is shown by the chart, has evibankers' bal- denced the general abundance ances. of loanable funds, and in the absence of an active commercial demand has been a factor in bringing about the low level of money rates in financial centers. The chart also brings out the fact that the recent growth
of bankers' balances in New York banks, which commonly have somewhat less than one-half of the total balances in the 12 Federal reserve bank cities, has been less than in other centers. The flow of surplus funds to the money centers generally occurs during periods

of relatively slack demand for credit for commercial purposes and is followed by a return flow of these funds to outside banks as the demand from their customers for credit increases. Relatively wide fluctuations occur in these bankers' balances in response to correspondingly wide variations in credit requirements in different localities from time to time and from season to season. These fluctuations reflect to some extent the net movement of funds from one section of the country to another, so that changes in bankers' balances exercise at times an important influence on the movement of money rates. Bankers' balances are reported current.y for banks in the 12 Federal reserve cities and are published monthly in the Federal Reserve Bulletin. ${ }^{1}$

The large growth in member bank deposits during the past six months has
Growth of been accompanied by an inmember bank reserves. crease in member bank reserve balances represented by a net addition of $\$ 250,000,000$ to the total deposits of the Federal reserve banks. This is an un-
${ }^{1}$ See p. 973 of this issue. For earlier figures see Bulletin for January, 1923, p. 27, and for July, 1924, p. 502.
usually rapid increase for this item* and has brought it to a level higher than at any previous time. The large growth in reserve balances since a year ago, which has supported the growth in member bank credit, has not reflected an increase during the year of Federal reserve bank credit outstanding, as represented by total earning assets of the reserve banks. These earning assets, which decreased from January to May and then increased from May to November, are still slightly less than a year ago. Gold received from abroad, however, has continued to furnish member banks with funds for increasing their reserve balances, and for the year the net imports of gold correspond roughly to the increase in these reserves.

The small net change in total earning assets of Federal reserve banks from November, 1923, to November, 1924, has
Reserve bank been accompanied by a considerable change in the composition of these assets, as the almost continuous decline in the volume of discounts, to a level $\$ 600,000,000$ lower than a year ago, has been offset in large part, though not entirely, by an increase in the holdings of Government securities and of acceptances. The tendency of changes in the volume of open-market holdings to be offset by opposite and equivalent changes in the volume of discounts, which was shown by the experience of 1922 and 1923, and which has been commented upon in earlier reviews, has been evident during this year, the increased purchases by the reserve banks in the open market being accompanied by a corresponding decline in discounts. The following table shows changes in the different classes of earning assets between the middle of November, 1923 and 1924.

Federal Reserve Banks
[In millions of dollars]

[^0]Since July, when the earning assets were at a low point for the year, there has been an increase of about $\$ 300,000,000$, of which about one-third has been in Government securities and two-thirds represent the extent to which the increase in acceptances has exceeded the decline in discounts. This growth in earning assets has been due in part to a seasonal increase of $\$ 215,000,000$ in the amount of money in circulation, which, in view of the much diminished volume of gold imports, has resulted in an increased demand for reserve bank credit. The entire increase in earning assets since the middle of September has been in acceptances, Government security holdings having remained unchanged. The larger offerings of acceptances to the reserve banks by dealers in acceptances have reflected somewhat firmer conditions in the money market.

The ease which prevailed in the money market since the middle of the year has recently become less pronounced and, as Money market. is indicated in the chart, during October and November rates increased slightly. The downward movement

in money rates set in about a year ago, and since August rates have been not only substantially below the rates prevailing during the period of easy money in 1922 but at the lowest level for a decade. The recent slight advance in rates reflects to some extent the seasonal demand for credit to finance autumn trade, which is also indicated in the growth of commercial
loans. Since early summer money rates in New York have continued to be below those in London, and this difference has been accompanied by an increase in the demand upon New York for foreign financing.

The volume of foreign capital flotations in the United States thus far this year has been more than two and one-half
Foreign loans. times as large as for the entire year 1923 and larger than for any year since the war. Sterling exchange during this period has had a considerable advance and stood at the end of November at $\$ 4.64$, the highest point since early in 1923, and less than 5 per cent below par. Currencies of five European countries have recently returned to parity and the extent of the improvement of leading foreign currencies in their relation to the dollar has been reflected in an advance during the past three months of 3 per cent in the Federal Reserve Board foreign exchange index. A statement of the extent and character of foreign borrowing in the United States during this year and its relation to the recent movement of the foreign exchanges is presented elsewhere in this issue.

A part of the loans extended to foreign countries during this year was for the purpose of monetary reform or exchange stabilization. Dollar credits obtained for the purpose of purchasing gold differ in their effect upon our domestic credit situation from credits used to buy goods in the United States. Proceeds of loans of the latter character results in an increase of the demand for goods in our commodity markets, while funds converted into gold are no longer available in our money market. Loans of this kind extended to countries that have reestablished sound currency conditions at home have been an important influence in enabling such countries to maintain the stability of their exchanges. To the extent that these credits are the basis of strengthening the actual gold reserves of foreign countries, they are a means of utilizing for monetary reconstruction a portion of the gold which came to this country as a result of disorganized conditions abroad. This inflow of gold has been the principal factor in bringing about the easy
money conditions in this country in contrast to the shortage of credit abroad. The differential in rates at a time of increased confidence in the European financial situation has facilitated foreign borrowing and the gold credits have contributed to the recent improvement of currency conditions in Europe.

## PAPER CURRENCY AND THE SILVER DOLLAR

The Treasury is endeavoring to restore the standard silver dollar to the place which it formerly held in the currency structure. In doing this the Treasury is actuated by two motives: First, to improve the quality of the paper money, particularly in the one-dollar denomination; and, secondly, to effect, in this way, a material saving in the expense of supplying the country with fit currency.

Following the violent fluctuations in the price of silver during 1920, there was a substantial decline in the number of silver dollars in the hands of the public; and since that time the number of these coins in circulation has been considerably below the level maintained during and prior to the war.

In its desire to reestablish the silver dollar as part of the circulating medium the Treasury is actuated by certain conditions which have arisen in the manufacture of the paper money and have resulted in a reduction in the life of the dollar bill. The extraordinary demand on the Bureau of Engraring and Printing for the various issues of Liberty bonds during the war period, when more than $200,000,000$ pieces were printed, and the increased demand for currency during that period and after the armistice, consumed all reserve stocks of paper money. Furthermore, the inability of the manufacturers of distinctive paper to obtain linen rags necessitated a change in the composition of the distinctive paper from a 100 per cent linen basis to a 100 per cent cotton basis; and this in turn resulted in the elimination of the sizing process which was formerly given to paper money before it was put into circulation. By the elimination of this sizing process, the life of the paper currency was materially reduced.

The great demand for paper currency necessitated the expediting of its manufacture to such an extent that the currency was printed and placed in the hands of the public without being properly seasoned, the period of manufacture being reduced from three months to
three weeks. Not only does the unseasoned paper currency have a much shorter life than when it is properly seasoned, but in order to supply the constantly growing demand for currency the Federal reserve banks have been forced to lower the standard of quality of the $\$ 1$ bills paid back into circulation, with the consequence that there is much currency of this denomination of a very poor quality now in the hands of the public.
To bring back the currency to the standard of fitness maintained prior to the war it will be necessary to build up reserve stocks as well as to increase the output of the currency. It is difficult to accomplish both of these things at the same time, and therefore the Treasury Department desires to put into circulation about $40,000,000$ silver dollars, which will replace one month's supply of paper dollars, thus permitting the accumulation of a reserve stock in process of seasoning. Aside from creating a reserve stock and thereby building up the standard of fitness of the currency, the life of the paper money will be increased by four or five months.

The cost to the Government of manufacturing and keeping in circulation a $\$ 1$ bill is 1.7 cents. It is therefore evident that if a month's supply of silver dollars, which have an almost indefinite life, can take the place of an equal amount of paper dollars, an annual saving of about $\$ 1,000,000$ will accrue to the Government.

If the Treasury is to succeed in its plan to reestablish the circulation of the silver dollar, it must have the cooperation of member banks of the Federal reserve system. The Christmas period will be an appropriate time to interest the public in this campaign. Many Christmas gifts of money are given by the banks' customers to employees and friends. The Treasury requests the banks to endeavor to persuade them to make these gifts in the form of silver dollars, which may be obtained in any quantity desired from the Federal reserve banks of each district in new, uncirculated, 1924 Peace dollars.

## NOTES

## Conferences in Washington.

The Federal Reserve Board held its regular autumn conference with the governors of the reserve banks and the Federal reserve agents on November 10 to 14, inclusive.

On November 24 the Federal Advisory Council held a meeting with the Federal Reserve Board.

## BUSINESS CONDITIONS IN THE UNITED STATES

Production of basic commodities and factory employment showed furtherincreases in October and distribution of merchandise was in large volume. The general level of wholesale prices advanced, reflecting largely a rise in the prices of agricultural products.

Production.-The Federal Reserve Board's index of production in basic industries, adjusted to allow for seasonal variations, increased 6 per cent in October, and was 16 per cent above the low point of midsummer, though still considerably below the level of the early months of this year. Output of iron and steel, cotton and woolen textiles, lumber, and bituminous coal was substantially larger than the month before. Factory employment increased 2 per cent in October, reflecting larger working forces in most of the manufacturing industries. Building contract awards increased and were 14 per cent above a year ago.

Crop estimates by the Department of Agriculture in November showed increases in the expected yields of corn, cotton, tobacco, and potatoes. The movement of crops to market in October reached the largest volume in five years and exports of grain and cotton were in greater volume than in the corresponding month of any recent year.

Trade.-Railroad freight shipments were larger in October than in any previous month, owing to exceptionally heary loadings of miscellaneous merchandise and grain. Wholesale trade increased slightly, but was 3 per cent less than in October, 1923. Sales of dry goods, shoes, and hardware were considerably smaller than a year ago, while sales of groceries and drugs were larger. Department-store sales showed a seasonal increase, but were 4 per cent less than last year, and sales of mail-order houses and chain stores also increased and were in greater volume than in 1923. In preparation for Christmas trade merchandise stocks at department stores increased substantially and were 1 per cent larger than a year ago.

Prices.-The wholesale price index of the Bureau of Labor Statistics rose 2 per cent in October, as a result of considerable advances in the prices of farm products and foods and slight increases in the prices of clothing and chemicals. Fuel and metal prices declined and prices of building materials and house furnishings were practically unchanged. During the first half of November quotations on all grains, cotton, silk, copper, and rubber advanced, while prices of raw sugar and bituminous coal declined.

Bank credit.-Loans for commercial purposes at member banks in leading cities, which had increased rapidly from the beginning of September to the middle of October, advanced only slightly in the following four weeks. The growth of loans secured by stocks and bonds

Indes of United States Bureau of Labor Statistics. ( $1913=100$, base adopted by bureau.) Latest figure, October, 152.

Weekly figures for member banks in 101 leading cities. Latest figures Index for 33 manufacturing industries. (1910 $=100$.) Latest figure, 91 . November 12.
was also relatively small, notwithstanding great activity in the securities market. Holdings of investments by these banks continued the increase which began in the early months of the year. The increase in demand deposits, which began last spring, continued, though at a somewhat slower rate, during the four weeks ending November 12.

At the reserve banks an increase in earning assets was the result of larger offerings of acceptances, reflecting firmer money conditions. While discounts and holdings of United States securities remained practically unchanged during the four weeks ending November 19, the increase in acceptances carried total earning assets to the highest point since the early part of the year. Money in circulation increased in October for the third successive month, and the total on November 1 was $\$ 215,000,000$ larger than in August.

Money rates continued to show a firmer tendency and by November 23 were generally from one-fourth to one-half of 1 per cent higher than in October.

BUSINESS INDEXES OF THE FEDERAL RESERVE BOARD
[Monthly average $1919-100$ ]

${ }^{1}$ The indexes of production in basic industries, building contracts, car loadings, and bank debits are adjusted to allow for seasonal variations. The indexes of department store sales and stocks are shown both with and without seasonal adjustments.

## BANK CREDIT

Aggregate loans and investments of all member banks in the Federal reserve system were $\$ 28,451,000,000$ on October 10, the date of the latest call for condition reports. This total was about $\$ 1,620,000,000$ above that on March 31, 1924, when the volume of member bank credit was at a level that had changed relatively little for nearly a year. Loans increased $\$ 644,000,000$ during the six months, nearly all the increase occurring since the end of June, and investments increased $\$ 975,000$,000 , the growth for the last three months being two-thirds of this total. Between June 30 and October 10 loans and investments increased by $\$ 1,190,000,000$.

In the following table there are presented the amounts of principal resources and liabilities of member banks for November 15, 1920, when the postwar credit liquidation began, for March 10, 1922, when this liquidation came to an end, and for selected subsequent dates:

1 Including rediscounts and overdrafts.
2 Including certified and cashiers' checks outstanding.
Member bank loans, after a severe decline between November, 1920, and March, 1922, advanced steadily and on October 10 of the present year the total was only slightly below that of 1920 and $\$ 2,659,000,000$ above the low point of 1922. The increase for the past year amounted to $\$ 963,000,000$ and in the three months ending October 10 to $\$ 556,000,000$. The banks' security holdings, which had remained relatively constant during the decline, in loans in 1921, increased by about $\$ 1,430$,000,000 in 1922, and, after remaining relatively constant in 1923 and the first quarter of this year, advanced further by $\$ 975,000,000$ between March and October, and on October 10,

1924, were the highest on record. On that date investments constituted 30.3 per cent of the member banks' total loans and investments, the highest proportion since June, 1919, to be compared with 23 per cent on November 15, 1920, when loans were at their highest point.

Total deposits of member banks declined less rapidly in 1921 and advanced more rapidly since the spring of 1922 than did total loans and investments, and on October 10 of this year total deposits were 108 per cent of loans and investments, compared with 105 per cent in March, 1924, and 96 per cent in November 1920. Time deposits increased steadily throughout the period and accounted for the major portion of the growth in total deposits up to March of this year. Of the increase of $\$ 2,524,000,000$ in deposits since that date, however, the growth in time deposits was less than a third, while demand deposits increased by $\$ 797,000,000$ and amounts due to banks by $\$ 1,010,000,000$. These bankers' balances, which represent funds redeposited by banks with their correspondents, increased during the past six months as the result of a flow of funds from country banks to the financial centers.

In the following table are shown the amounts of loans and investments of member banks, by class of banks, on October 10, 1924, and the extent of changes since March 31, 1924.

Loans and Investments of All Member Banks, by Class of Banks, October 10, 1924 [In millions of dollars]

|  | All member |  | Central reserve city banks |  | Reserve city banks |  | Country banks |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 9 <br> 8 <br> 8 <br> 8 |  | 9 $\stackrel{8}{8}$ 8 | 发 | ¢ + ¢ | 易 | O <br> 1 <br> 8 <br> 8 | 8 |
| Total loans and investments. | 28,451 | -1,619 | 7,492 | +983 | 9,685 | +542 | 1,274 | +94 |
| Total loans... | 19, 820 | +644 | 5,359 | +525 | 6,982 | +176 | 7,479 | -57 |
| Total investments | 8,631 | +975 |  | +458 | 2,703 | +366 |  | +151 |
| U. S.-.---- |  |  |  |  |  |  |  |  |
| - curities | 3,895 | +326 |  | +225 | 1,294 | +178 | 1,380 | -77 |
| curities | 4,736 | +649 |  | +233 | 1,409 | +188 | 2,415 | +228 |

The increase in total loans which, as has been brought out, was considerably more rapid in the three months ending October 10 than during the previous similar period, is shown in the above table to have occurred entirely at banks in central reserve and reserve cities, the loans of country banks having
decreased slightly. Although all classes of banks added to their holdings of security investments, the largest additions were also made by the city banks, which had $\$ 824,-$ 000,000 out of a total increase of $\$ 975,000,000$.

Since the early part of October the volume of member bank credit outstanding, as indicated by weekly reports of member banks in leading cities, has shown a further, though less rapid, increase. About one-half of the increase between October 8 and November 12 was in loans and one-half in security holdings. Deposits of these member banks continued the rapid increase which began in the spring of this year.

## AGRICULTURE

Continuation of good weather throughout the agricultural sections in October and the first weeks of November facilitated harvesting and marketing, but the dry weather delayed fall plowings and seedings of small grains in sections of the Kansas City and Dallas districts. Preliminary estimates by the Department of Agriculture in November showed increases in the expected yields of most crops which remained to be harvested, the most significant increases being in the estimated production of cotton, tobacco, and potatoes. Farm prices, after declining in September; increased in October and were somewhat higher than a year ago. Grains and meat animals were higher than in 1923, but fruits, vegetables, dairy products, and cotton were lower. While marketing was seasonally heavier than in September, the volume was the largest in the past five years. Livestock, grain, cotton, fruits, and vegetables were marketed in larger volume than in September, but the distribution of animal products was smaller. The foreign demand continued to expand in October and exports of agricultural products exceeded the volume for any month in recent years. Exports of all commodities, except beef and pork products, were larger than in September and decidedly heavier than in October last year.

## Grain.

Weather conditions in October and the early weeks of November were very favorable for maturing the corn crop, and there was considerable improvement in the quality. The expected yield was increased to $2,478,000,000$ bushels, as compared to $2,459,000,000$ bushels a month earlier. According to the Department of Agriculture only about 63 per cent of
the crop is of merchantable quality, the lowest percentage merchantable in 30 years with the exception of 1917. The production of flaxseed, which has been increasing steadily for several years, is expected to reach a record level this year. The crop is estimated to be $30,652,000$ bushels, as compared with $17,429,000$ bushels last year and 29,285,000 in 1902, the previous high level.

Movement of grains to market continued in exceptionally heavy volume in October and, contrary to the usual seasonal decline in the receipts of wheat, the volume marketed this year was greater than in September and more than twice as large as in October last year. Receipts of rye were also heavier than in September and about five times as heary as last year. Marketing of oats, corn, and barley was lighter than in September, since the seasonal peak of the movement of oats and barley has passed and the new corn crop had not reached the market. The rapid movement of wheat and rye was accentuated by the foreign demand which continued exceptionally heary. Exports of wheat were in the largest monthly volume since August, 1921, and exports of rye amounted to $10,853,000$ bushels, as compared with 11,563,000 bushels in September and only 455,000 bushels in October, 1923. In response to the increased demand for American grains prices advahced further in October and the index of all grain prices reached the highest level since November, 1920.

## Cotton.

In October and the first three weeks of November the weather continued very favorable for gathering the cotton crop and it has been ginned rapidly. Estimates based upon the condition of the crop on November 14 indicate a final yield of $12,992,000$ bales, a slight increase over the estimated yield on November 1 of $12,816,000$ bales. Ginnings prior to November 14 amounted to $11,148,000$ bales, as compared with $8,369,000$ bales prior to the same date last year. In the Atlantic States the quality of the crop is reported to be poorer than usual, due to the drought which followed a cold, wet spring. Although the crop has been ginned rapidly, marketing has been slower than last year, which may be attributed in part to the decline in prices which was very pronounced earlier in the season. Takings by domestic mills prior to November 7 were smaller than last year. Exports, on the other hand, have been much larger than in 1923 and in fact the total number of bales exported in October
was the largest for that month since 1913. Continued uncertainty in the textile industry in October resulted in smaller takings of raw cotton by domestic mills, and stocks at mills at the end of the month were 34 per cent smaller than at the end of October, 1923. Stocks at public warehouses, on the other hand, which have received the bulk of the new crop, were 21 per cent larger than last year.

In November there was some improvement in the textile industry which gave rise to a better demand for raw cotton, and the price at New Orleans advanced to 24.6 cents on November 14, but the increase in the expected yield served as a depressing factor and the price declined again and reached 23.7 cents on November 28.

## Tobacco.

In most of the heavy tobacco-producing sections weather conditions in October and November were generally satisfactory and the estimated yield based on conditions on November 1 was $1,214,000,000$ pounds, as compared with an expected production of $1,182,000,000$ pounds a month earlier. In the cigar-leaf sections of the New England States the quality of the crop was affected by wind and hail late in the season, but in Pennsylvania the quality is good. In the Richmond Federal reserve district the export types were injured slightly by early frosts and in the St. Louis district much of the crop was cut prematurely because of fears of frost. The quality of the crop in those districts has been affected, but the extent of the damage is yet uncertain. The crop is generally later than last year, and in Virginia many markets did not open until October. Early sales of bright tobacco in Virginia were at higher prices than in 1923, and the average prices received in North Carolina from October sales were higher than in 1923.
Stocks of tobacco held by manufacturers and dealers on October 1 were 1,724,767,000 pounds, as compared with $1,562,225,000$ pounds on the same date in 1923. Stocks of almost all types except some cigar types were heavier, and in view of this fact growers in the burley sections are considering a reduction in acreage next year and resolutions favoring a "cut-out" of the 1924 crop were recently adopted in Kentucky.
Production of tobacco products increased in October, and the output of all products except cigars was in larger volume than in October, 1923. In the Philadelphia Federal reserve district the demand for cigars in November
was substantially better than in October or in November a year ago. Manufacturers are operating at an average rate of 80 per cent of capacity and unfilled orders are larger than in October.

## Fruits and vegetables.

Expected yields of apples, pears, grapes, and white and sweet potatoes increased in October, but the output of all these crops except pears and white potatoes is smaller than last year. The white-potato crop, particularly in the northern producing States, escaped damage from early frosts and the total crop is the largest on record. The quality of the crop is good, but the price at the farm declined to an average of 69 cents a bushel on October 15 as compared with 91 cents a year ago. In some of the Western States the price is too low to make marketing profitable, and reports indicate that some of the crop will be fed to livestock. In the South, where the bulk of the sweetpotato crop is produced, the dry weather during the late summer months curtailed the crop and the yield is expected to be 22 per cent smaller than last year and is the smallest crop since 1916. While the apple crop is smaller than in 1923, it is slightly larger than the average production for the past five years. Prospects for the crop vary widely in the several producing States and the outlook is poorest in sections of Ohio, Michigan, Idaho, and Washington. In Virginia the crop is 55 per cent larger than in 1923 and 80 per cent larger than the average for the five years 1918-1922. Marketing of fruits and vegetables increased seasonally in October, but the distribution of fruits was considerably smaller than in October last year, due principally to smaller shipments of apples and citrus fruits. Exports were the largest in recent years, but prices declined in October to the lowest level since the autumn of 1922.

## Livestock.

Rains in the livestock sections of the Kansas City and San Francisco Federal reserve districts resulted in improvement in the pastures and ranges in October, and the feed conditions in the San Francisco district are better than at any time earlier in the year. In the Dallas district, however, conditions were decidedly unfavorable, and in many sections, particularly in New Mexico, Arizona, and western Texas, there is a shortage of feed and water which will make much feeding necessary during the winter. In sections where the drought has been severest some cattle have been moved to mar-
ket or into other grazing areas. The condition of the cattle and sheep was reflected by the condition of the ranges and was generally better than in September in the areas where the ranges had improved.
Warketing was seasonally larger in October than in September, but it was 10 per cent smaller than in October last year. Increased marketing of cattle was due in part to large receipts of grass-fed cattle from the summer ranges, some of which were reshipped to the country feeding districts, though the total movement into the country thus far has been smaller than last year. Although shipments of sheep to market were larger than in September, reports indicate that there will be fewer sheep for market from the feeding areas of the Corn Belt and the western feeding zones than last season. Receipts of hogs at the principal markets, although larger than in September, continued smaller than last year and further indicate a smaller supply to be marketed than last season. Despite the larger marketing in October than in September, prices of meat animals advanced and reached the highest level since early in 1921 with the exception of June, 1922. The rise in the price of hogs was the most significant, but in November there was a slight decline from the high levels reached in October.

## Dairy products.

Continuation of heary production, large stocks, and an increase in the estimated consumption of butter were the principal factors characterizing the dairy-products industry in September and October. Although there was a seasonal decline in the actual production of butter in October from the September volume, the output continued larger than in 1923. Stocks of butter, as represented by holdings at the principal wholesale markets, were reduced in October, but this was a seasonal occurrence, since in the autumn and winter months consumption exceeds production. Holdings on November 1 amounted to 135,251,000 pounds, as compared with $76,418,000$ pounds in 1923 and $73,857,000$ pounds in 1922. The price of butter since midsummer has been below the level of last year, and on November 21 the quotation for 92 -score creamery butter at New York was 45 cents a pound as compared with 53 cents a year earlier. While stocks of cheese are somewhat larger than last year, shipments to wholesale markets in October were smaller than in 1923, which is indicative of smaller production. Production
of condensed and evaporated milk has not increased to the same extent as that of butter and the industry is not carrying heavy stocks.

## MINING

## Coal and coke.

Trading in coal has continued to be influenced by weather conditions, an unusually warm October causing a noticeable recession in sales. After the middle of November a spell of more seasonable weather somewhat stimulated sales of anthracite around Philadelphia, but, in general, demand was limited throughout the month. Despite general business activity, buying of bituminous coal for industrial uses has not been as great as in late September and early October. Some reports indicate that consumers have largely contracted for winter requirements and are out of the market. Prices have been weak and the Coal Age index of spot prices fell from $\$ 2.12$ on October 27 to $\$ 2.06$ two weeks later. Company prices of anthracite have remained unchanged, but independents have advanced quotations on stove coal, while lowering them somewhat on steam sizes. Production of bituminous in October exceeded that of any month since January, and in November daily average output continued to increase, althouga, because of holidays, weekly totals were somewhat reduced. Anthracite production has been even more affected by holidays-Mitchell day in the last week of October and All Souls, election, and armistice days in the first and second weeks of November. With these allowances, output continued at close to the same rate prevailing throughout the year.

Despite greater activity in iron and steel, demand for coke has increased rather slowly and was still somewhat restricted during October and November. Output of by-product coke reached $2,899,000$ tons in October, the largest figure for any month since April. Beehive production totaled only 631,000 tons, over 100,000 tons more than in September. About the middle of November output of beehive was increased somewhat, equaling 152,000 tons in the week ending November 15. Prices have recently been stronger and a few advances have been made.

## Petroleum.

Further declines in the daily average production of crude petroleum occurred each week in October and the first week of November. For the week ending November 8 the daily
average output declined to $1,935,550$ barrels, the smallest volume since the week ending April 26, when $1,941,050$ barrels were produced. There was a slight increase, however, in the daily average output for the week ending November 15, but it was still smaller than for any week in October. A continuation of the decline in the production of crude oil has not been accompanied by a corresponding decline in consumption, and stocks have been reduced to some extent. Although prices in October were slightly lower than in September, the decline was not as great as in the summer months when stocks were accumulating rapidly. According to the Oil, Paint, and Drug Reporter the average price at the Pennsylvania, mid-continent, and Wyoming fields was $\$ 1.62$ a barrel, as compared with $\$ 1.66$ in September. Early in November quotations in most of the producing centers were decidedly firmer than for several months past, and advances were reported in the Gulf coast fields.

Production of all refined products except kerosene was smaller in September than in the preceding month, and stocks were slightly smaller at the end of September than a month earlier except for lubricating oils. Continuation of good weather in October and November stimulated the consumption of gasoline and the approach of winter gave rise to an increased demand for fuel oils. Although prices of gasoline were lower in October than in September, the market strengthened near the close of the month and continued firm early in November.

## Metals.

Production of nonferrous metals increased during October and all important commercial metals except copper improved in price. The accompanying chart shows average prices of copper, lead, and zinc, by months, since January, 1920. It may be noted that the trend of prices of these three metals was very similar in the period from January, 1920, to July, 1923. In the last half of 1923 and the first three months of 1924 lead prices moved upward rapidly and reached the highest point since the war, whereas zinc prices showed only a very small increase and copper declined. Prices of all three metals declined in the spring of 1924, though the decrease was relatively small in the case of copper. In July and August there was an upward movement in prices of all nonferrous metals and this continued through October in the case of lead and zinc, whereas copper prices declined in the early fall. During
the first three weeks of November quotations for copper and zinc increased, while lead prices receded slightly.

Monthly average prices of electrolytic copper at New York, prime Western zinc at St. Louis, and lead at St. Louis. Compiled by Ameri-
can Metal Market.

Copper production in October increased 9 per cent and was larger than in any other month during the past six years. Despite the large production, prices rose in the early part of November, due to a considerable improvement in demand from Connecticut brass manufacturers and from foreign buyers.
Prices of zinc and lead ores in the Joplin district increased steadily during October, and shipments of lead ore in the second week of the month reached the highest total on record. October production of crude lead was also larger than in any other month of the post-war period. Refinery output of slab zinc, on the other hand, was smaller than in the early months of the year and stocks on hand were reduced 16 per cent.
Silver production in October totaled 5,620,000 ounces, which is the largest monthly output since May. Demand for silver slackened somewhat in November, however, as a result of a decline in the purchases of oriental countries. Tin consumption increased slightly during October, and some further improvement in demand was evidenced during the early part of November.

## MANUFACTURING

## Food prodncts.

In October the food-products industries were characterized by decreases in the production of flour and sugar and an increase in the output of meat products. Contrary to the usual increase in October, the output of flour was 3 per cent smaller than in September, but it was in 7 per cent greater volume than October last year. In the Kansas City district, where one of the largest wheat crops on record was grown, the output of flour was 25 per cent greater than last year. After reaching a high point about the middle of October, flour prices weakened with the decline in the price of wheat and by the end of that month spring-wheat patents had declined from $\$ 8.35$ to $\$ 7.85$ a barrel. In November the market became considerably firmer, and quotations at Minneapolis advanced to $\$ 8.30$ on November 14. Exports of flour increased in October, but they failed to reach the volume of October last year.

Following the unusually heavy production in September the output of sugar at American refineries in October was 28 per cent smaller, and 14 per cent less than in 1923. There was an increased demand for refined sugar in October, but in the second week of November the demand fell off and quotations were lowered. With the approach of Thanksgiving Day, however, the demand increased again and quotations were advanced to the levels which had prevailed early in October. The beet-sugar crop is estimated to be $7,408,000$ tons, and in the Kansas City Federal reserve district the crop is reported to be one of the largest on record.

Seasonal increases in the marketing of livestock in October resulted in an increase in the production of meat products. All animals except sheep were slaughtered in larger numbers than in September, but the number of hogs slaughtered was considerably smaller than last year. The domestic demand for meat products, as represented by sales of meat products at 49 meat-packing companies reporting to the Chicago Federal Reserve Bank, was 9 per cent larger than in September, but was 2 per cent smaller than in October, 1923. Exports of beef and beef products were about the same in October as in September; foreign takings of lard were smaller, but exports of hams and bacon were larger. As compared with a year ago all meats were exported in considerably smaller volume.

## Textiles.

In textile industries during October and November buying increased, production was
enlarged, and prices rose. Demand appears to be greater than it has been at any time since early in the year, and October production figures indicated substantial increases as compared with September. Prices, which changed little or moved lower during October, turned definitely upward in the first three weeks of November. For the first time in months productive activity compares favorably with that of the same period a year earlier, but prices, except in the case of wool, are somewhat lower.

Buying of cotton gray goods was more active early in November, according to unofficial reports, than at any time this year, and many orders were booked for 1925 delivery. Demand for finished goods has also increased and ginghams have been in steady request. A large southern firm announced lower prices on ginghams than those previously announced by northern producers; the latter made reductions to the same level, but more recently the southerners have withdrawn their lines and announced that new business would be accepted only at higher quotations. Mill activity was increased during October in practically all States. Mill consumption of raw cotton was the largest for any month since last January, and in southern mills was greater than in any month, except January, since May, 1923. For the country as a whole cotton consumption and active-spindle hours both increased around 20 per cent in October as compared with September. Finished yards billed by cotton finishers showed a corresponding increase, and orders received were the largest since last November. Fairchild cotton-goods index rose from 15.475 on October 18 to 15.699 on November 22. This is the highest figure reached since early in September. The yarn index has also advanced.

Recovery in the woolen and worsted industry since last summer has been at a rate unequaled since the 1921 rise from the depression of 1920 . Wool consumption by a representative group of mills, which was $31,000,000$ grease equivalent pounds in June, equaled nearly $55,000,000$ pounds in October, an increase of approximately 75 per cent in five months. The rise from September to October was about 20 per cent, and active machinery hours in identical establishments at the same time increased as follows: Wide looms, 24 per cent; woolen spindles, 27 per cent; and worsted spindles, 39 per cent. In November reports have been received of further enlargement of operations in many plants. At the same time buying has been active and prices of goods advancing. The Fairchild woolen and worsted piecegoods price index has had an upward revision
twice since the piece-goods openings on September 6. At that time it was changed from 259.887 to 253.212 , owing entirely to reductions in worsteds. The last revision, November 15 , makes it 258.756 . Woolen suitings have advanced from about 234.3 to 248 and worsteds from 261.6 to 269.2. Carpet and rug openings were made in November at advances of from 3 to 8 per cent. Clothing is in good demand and production of men's garments has been much greater in recent months than a year ago.

Unusual activity in raw-wool markets has been an important factor in the improvement in the manufacturing section of the industry. Demand for the limited supplies of raw wool available has been large and prices have risen. The Fairchild indexes for domestic and foreign wools have advanced from their respective low points of 103 and 125 last June to 135 and 146, the highest prices since 1920. The chart below shows the raw wool stocks held by manufacturers and dealers at the end of each quarter since the middle of 1922. The latest figures are for September 30 and reflect only slightly the recent activity which had just begun at that

time. It will be noted that dealers' stocks were reduced and manufacturers' stocks increased during the third quarter, that consumption was a little greater than in the second quarter, and that imports were the smallest recorded in recent years. Monthly data for the third quarter and for October show a continuous rise in both consumption and imports. Further analysis of the statistics of stocks show that supplies of domestic wool are the largest, whereas those of foreign wool are the smallest recorded in the last two years. Reports indicate that
manufacturers are already rather actively contracting for the 1925 clip of territory wool at higher prices than during last season.

In the silk industry, likewise, buying and manufacturing activity reached higher levels in November. Employment in silk factories showed a general increase in October and takings of raw silk by mills, although slightly less than during September, continued to be large. Imports, less than the high record attained in September, nevertheless exceeded takings, and warehouse stocks were increased to 44,398 bales, the highest since last January. Trading in raw silk and in piece goods increased in November and many orders for future delivery were booked. Prices of broad and thrown silks have in many cases been advanced. Raw silk prices, after a reaction in September and October, have risen again and late in November reached the highest point since last March.

Hosiery and underwear have shared the recent improvement noted among other textiles. Demand for underwear has increased and mills have extended their operations somewhat. Southern mills opened 1925 heavyweight lines on November 17 at prices ranging from 11 to 13 per cent below those announced a year ago. Both advances and reductions have recently been announced on summer garments. The first census report on knit underwear showed increases in production, orders, and shipments in September as compared with August. Buying of hosiery has also increased, and prices have been advanced on some grades of cotton and silk hosiery and lowered on rayon (artificial silk) lines, moving in accordance with raw material prices. In September and October production, orders, and shipments for nearly all types of hosiery showed substantial increases. Stocks were reduced a little.

## Iron and steel.

After a few weeks of somewhat slackened demand, buying of iron and steel products began to increase late in October and in November the market was exceedingly active. Improvement was first noted in the western districts, but later all sections reported large sales. Buying of pig iron and the heavier forms of finished steel has shown particularly large increases. More recently prices have risen; the Iron Trade Review's composite iron and steel index during the week ending November 19 showed the sharpest rise since March, 1923. The increases have been most marked in pig iron and in bars, plates, and shapes. The Iron Age composite pig-iron price reached
a low point for the year of $\$ 19.21$ a ton on November 3 and in the following three weeks rose to $\$ 20.54$.

Mill operations have been further increased during November, following substantial enlargement of output in October. Daily average production of pig iron was 79,907 gross tons in October as compared with 57,577 tons in July, the lowest month of the year. The October figure is below that of the same month of both 1923 and 1922 and is 36 per cent less than the 1923 high point. Only 45 per cent of the total number of blast furnaces in the country were active at the end of October. Steel ingot average daily output has increased from 71,901 tons in July to 115,239 tons in October which is over 25 per cent below the 1923 maximum. Shipments of iron ore from the Great Lakes were small in October, as they have been throughout the year.

Railroads continue to be important factors in the market. Inquiries for freight cars and for structural material for bridges have been numerous, and many orders for rails have been placed. Orders for locomotives increased during October, but completions were rather small. Buying of structural steel has been active from other sources as well. October bookings were slightly less than in September, but shipments were larger. Awards in November, according to unofficial weekly figures, apparently have exceeded those for October.

## Automobiles.

Activity in the automobile industry has been stable throughout the fall. Production has increased considerably since the low point reached last June, but output of passenger cars is still well below that of this time last year. The number of cars produced has changed little in the past three months, being $252,000,260,000$, and 258,000 passenger cars, respectively, in August, September, and October. This stability is contrasted with an increase in 1923 from 299,000 in September to 334,000 in October. Trucks seem to be in a relatively better position than passenger cars, as truck production was a little larger in October than in September, and both months exceeded the corresponding months last year. About 32,500 freight carloads of automobiles were shipped during October, an increase as compared with September but much less than a year ago. Statistics of direct shipments from factory to dealers in October show a small decline from September and a very sharp drop since last October. Sales by dealers
to consumers followed somewhat similar trends. Sales reported by Middle Western wholesale dealers to the Chicago Federal Reserve Bank were somewhat larger than a year ago, but retail sales were smaller. For the first time in over a year stocks held by dealers were reported to be smaller than a year earlier.

Developments in the automobile-tire industry have been rather significant in recent

months. As may be seen on the accompanying chart, shipments had a remarkable increase in July and August, exceeding all previous records, and production started upward in the later month. In the meantime stocks were reduced considerably until this autumn, when shipments declined and production was further enlarged. October production of pneumatic tires has been exceeded only once before and that of inner tubes was the highest on record. Stocks on October 31 were larger than on the same date of any of the previous three years. The increase in October was contrary to the usual trend heretofore noted. Raw rubber has continued in good request, and in November prices reached new high levels since early 1923.

Lumber.
Shipments of lumber in October were the largest for any month since October, 1923, and production exceeded all months since last May. Within recent years peaks have been reached in the lumber industry in May and October. In November holidays restricted both the cutting and shipment of lumber, but weekly figures indicated an increase in orders, exceeding ship-
ments and output for the first time since August. Apparently the mild fall and evidences of the continuance of building activity have somewhat stimulated buying. As compared with last October, however, reports of production, shipments, and orders all showed declines. Such figures as are available for stocks indicate little general change.

Most of the increase in production during October was due to the great activity in Douglas fir. The West Coast Lumberman's Association reported a cut of $500,154,000$ feet of Douglas fir during October, as compared with 366,287,000 feet in September. Shipments at the same time increased from $372,580,000$ feet to $463,600,000$ feet. Southern pine output has remained at practically the same level since early in August. Shipments have fluctuated somewhat, but on the whole have exceeded cut since June, and stocks at the end of October equaled only $967,048,000$ feet, the smallest recorded for any date, except January 31, since the end of July, 1923, and less than on October 31 of any of the four previous years. Comparative statistics of production and shipments for October, however, indicate a slight increase in stocks for the various associations taken as a whole; especially was this true among mills on the Pacific coast. These mills also reported declines in unfilled orders. Prices, according to Lumber's indexes, moved upward slightly during late October and early November. The total change in recent months has been generally upward, but not large.

## Hides, leather, and shoes.

Hide and leather markets continue to be active, and prices, sales, and production are steadily increasing. Demand for hides has been large, the Chicago market remains strong and prices advanced further during November, the quotation for light native cow hides reaching the highest point since December, 1922. September statistics of hides and skins disposed of show a further increase in cattle hides and goat and kid skins, while the figures for calf and kip and sheep and lamb skins declined. In fact, fewer calfskins were moved than for any month, except March, 1923, since early 1922. At the same time, stocks of calfskins increased, continuing the tendency noted throughout the year, while those of most of the other species have been diminishing, although in September slight increases were noted in cattle hides and sheepskins.

Tendencies toward increased sales, production, and prices and reduced stocks have also been noted in the leather industry. The buying
of leather has been rather large, although resistance to price advances is generally reported. The buyers' market of last summer has changed its aspect, and prices have been raised, the Bureau of Labor Statistics index of leather prices advancing from 136.7 in September to 138.2 in October, as compared with the July index of 131.2, the lowest level reached since early 1916. Production of leather is increasing slowly from the low points reached in the spring and summer, but has not yet reached the level of last January or of a year ago. Stocks of sole leather in process of tanning have steadily increased, while those of cattle upper leather have just as steadily declined. Total finished stocks, as well as those held by tanners alone, have fallen in all cases, many to new low levels since the records began in 1920. Boot and shoe manufacturers increased stocks somewhat in August and September. Preliminary sole leather figures for October showed a continuation of previous tendencies, production and stocks in process attaining the highest levels since January and tanners' stocks falling to the lowest recorded.
Some explanation for improvement in the leather market is probably indicated by the rise in the production of shoes in October, the largest total attained since the spring of 1923. The increase from the July low point was nearly 50 per cent. This is partly seasonal, but the rise in that period in the two previous years averaged only about 27 per cent. All producing sections of the country and practically all kinds of shoes have shared in this increase. The Bureau of Labor Statistics index number of shoe prices rose from 180.9 in September, the low point of the year, to 181.6 in October, and other advances have been reported in November. Indexes of sales of shoes by wholesale dealers and chain stores indicated declines in distribution during October as compared with a year ago, and, when adjusted for seasonal changes, as compared with September.

## BUILDING

The volume of new building projected showed an unusually large expansion during October, and shipments of building materials were exceptionally large. Contract awards in 11 Federal reserve districts (according to statistics compiled by the F. W. Dodge Co.) totaled $\$ 424,000,000$, which was 18 per cent more than in September. Substantial increases in new construction were reported from the New York, Philadelphia, Atlanta, and St. Louis
districts. October contracts reached a value 14 per cent greater than a year ago, due to increases in all reporting Federal reserve districts except New York and Minneapolis.

Analysis of contracts by type of construction indicates that awards for residential, business, and industrial buildings were larger in October than in the previous month, while awards for educational, social, and institutional buildings were smaller. Statistics of contract awards and building permits, by geographical districts and classes of construction, are published on page 955.

Production and shipments of building materials increased in volume during October, but prices were unchanged. Shipments of cement were larger than in any previous month on record. Stocks of cement, oak flooring, and paving brick were reduced during the month, while stocks of maple flooring and various types of sanitary ware showed some accumulation.

## TRANSPORTATION

Railroad traffic was in record volume during October, yet no considerable shortages of equipment were reported. Carloadings totaled $4,916,000$, which was 9 per cent more than in September and 2 per cent more then in October, 1923. Shipments of both miscellaneous merchandise and grain were larger than in any previous month, whereas shipments of livestock, forest products, coal, coke, and ore were smaller than a year ago. Coal loadings, however, have increased in each month since June and were larger in October than in any month since January. Freight traffic was heavier than a year ago in the southern and western sections of the United States, but was slightly smaller in the East.

The surplus of freight cars, which declined to 94,000 on October 23, increased in the two following weeks to 116,000 , of which 60,000 were coal cars and 37,000 were box cars. Car shortages continued to be very small throughout this period. The number of freight cars awaiting repair has been reduced 9 per cent during the last two months. Orders for 135 locomotives and 11,853 freight cars were placed with equipment manufacturers during October, according to the Railway Age, and car purchases continued in large volume during the first half of November.

Gross revenues of Class I railroads amounted to $\$ 540,800,000$ in September, which was 1 per cent less than a year earlier. As operating expenses were 8 per cent less than in September, 1923, there was a substantial increase in net railway operating income and the operating ratio was reduced from 76.30 to 70.56 .

## Wholesale trade. <br> TRADE

The Federal Reserve Board's index of wholesale trade increased 2 per cent during October, but was 3 per cent lower than a year ago. Wholesale trade usually reaches a maximum volume in October, due to a combination of large fall sales of clothing and retailers' purchases in preparation for Christmas trade. Clothing sales were retarded this October by the prevalence of mild weather in most sections of the country, and sales of dry goods, shoes, and millinery were also smaller than in September. Sales of electrical supplies, stationery, drugs, groceries, and jewelry, on the other hand, were considerably larger.

Wholesale trade was smaller than in October, 1923, as the result of smaller sales of all kinds of wearing apparel, hardware, and meat. Dealers handling furniture, agricultural implements, and diamonds, however, reported a more active business than last year.

Stocks of merchandise at wholesale warehouses were reduced during October and were in about the same volume as a year ago. Stocks of dry goods and shoes were smaller in all reporting districts than on October 31, 1923, while stocks of groceries and drugs increased. Collections were somewhat larger in October and the value of accounts outstanding also increased in practically all reporting lines.

## Retail trade.

Retail business at mail-order houses and chain stores was exceptionally large in October, but sales of department stores were somewhat restricted as a result of the unusually small fall demand for clothing. The increase in mail-order sales may be largely ascribed to the larger purchasing power of farmers, while the improvement in chain-store business reflected the increased employment at industrial centers. Clothing sales were retarded in October by the mild weather which prevailed in most parts of the United States. Sales of mail-order houses and all lines of reporting chain stores except shoes were larger in October than a year ago.

Department-store sales showed less than the usual seasonal increase during October in all Federal reserve districts except Minneapolis and San Francisco, and averaged 4 per cent smaller than last year. Analysis of business by departments indicates that sales of women's and misses' ready-to-wear, men's clothing, boys' wear, silks and velvets, house furnishings, and jewelry were considerably smaller than in October, 1923, and sales of most other
departments show small declines. Sales of leather goods, corsets, floor coverings, toilet articles, men's wear, and notions, were larger than a year ago.

Stocks of merchandise on department-store shelves showed more than the usual seasonal increase in October and at the end of the month were 21 per cent larger than at the end of July. This accumulation of inventories in anticipation of Christmas trade was particularly large in the New York, Philadelphia, Cleveland, and Richmond districts.

Outstanding orders of department stores with wholesale dealers were reduced in volume during October and averaged less at the end of the month than at any time since June 30 . Orders on October 31 in the Kansas City district were less than one-half as large as a month earlier, while more moderate reductions occurred in all other reporting districts. Collections at reporting retail stores were larger in October and there was also an increase in the volume of accounts outstanding. Statistics of wholesale and retail trade by lines and districts are shown on page 956.

## PRICES

Wholesale prices increased 2 per cent in October, according to the index of the Bureau of Labor Statistics. Prices of farm products and foods showed particularly large advances, while there were more moderate increases in prices of clothing, chemicals, and miscellaneous articles. Fuel and metal prices declined, while averages for building materials and house furnishings were practically unchanged.

Regrouping of this index by stage of manufacture of commodities indicates that prices of raw materials and consumers' goods advanced substantially during October, while producers' goods declined. Of the raw materials, crops, and animal products were much higher than in September and forest products also increased, while mineral products showed a slight decline. Prices of consumers' goods and raw materials were higher in October than a year ago, while prices of producers' goods were 8 per cent lower.
During the first three weeks in November commodity prices showed a further advance. Quotations on all grains, cotton, silk, wool, copper, and rubber advanced, while prices of raw sugar and bituminous coal receded.

## COST OF LIVING

Retail prices continued to advance during October and the cost of living was 0.8 per cent higher than in September and 2.2 per cent higher than in May, the low point of
1924. Prices of food products, clothing, and fuel increased in October, while the cost of shelter, light, and sundries was unchanged. Of the food products, eggs, lard, pork chops, and oranges all showed increases of more than 5 per cent as compared with September.

## EMPLOYMENT

Factory employment continued to increase in October, and the board's index of factory employment was 91.1 for that month, as compared with 89.7 in September. Out of the 33 industries included only 8 showed any decrease in number on pay rolls between September 15 and October 15, and most of these were seasonal movements; for example, as in men's clothing, lumber, cement, and clay products. Substantial advances were again recorded in iron and steel and in textiles, particularly in the cotton, woolen, and knit-goods industries. Manufacturers of furniture and musical instruments also reported considerably more wage earners employed. Other industries showing increases worthy of note were silk, textile dyeing and finishing, paper containers, confectionery, leather tanning, shoes, and glass. As compared with previous years the general index is 10 per cent lower than it was a year ago and about on a level with that of September, 1922. The iron and steel and automobile indexes are about one-sixth less than in October, 1923, but correspond rather closely to the level of two years ago.' Textiles, owing largely to the small volume of employment in the clothing industry, appear to be still below all months since 1921. No group index is as high as in October of last year.

Figures from the Bureau of Labor Statistics show an increase of 3.7 per cent in total wage payments and of 2 per cent in average weekly earnings. Earnings, however, were 13.3 per cent less than a year ago, and as in the case of employment were about at the same level as two years ago. Contrary to the trend for the country as a whole, pay-roll totals in New York and Illinois were slightly less than in September. Factories operating reported that about 81 per cent of their normal full force of wage earners were employed and that they were working an average of 92 per cent of full time. Wage rate decreases averaged 9.5 per cent and affected 20,000 employees. Most of these wage reductions were in the cotton-goods industry. In that industry during the three months, between July 15 and October 15, some 25,000 employees, not allowing for duplications in different months, have been reported as affected by wage reductions, averaging about 10 per cent.

## MONEY RATES

Money rates in the New York market became distinctly firmer during November. following an increased demand for commercial credit and a lessened inflow of gold from abroad, Supplies of commercial paper in the open market increased during the month, and the rate on 4-6 months' maturities advanced above the September and October levels to $31 / 4-31 / 2$ per cent, the rate prevailing in the middle of July. The offering rate on bankers' acceptances increased the third week in November to $21 / 2$ per cent, the highest rate since last May. Prices of both short and long term Government securities responded to the rise in money rates, advancing their yields to about the June levels. The table below shows the rates prevailing in the New York market during the past three months:

| [Per cent] |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Prime commercial paper, 4-6 months | Prime bankers' acceptances, 90 days | Yield on certificates of indebtedness maturing Mar. 15, 1924 | Averyield on 41/4 per cent bonds | Renewal rate on call loans |
| September, 1924. | 314 | 21/8-21/4 | 2.14 | 3.95 | 2.07 |
| October, 1924.........- | $3-31 / 4$ | 2/4 | 2.41 | 3.93 | 2.32 |
| A verage for week end-ing- |  |  |  |  |  |
| Nov. 1, 1924 _---.. | $3-31 / 4$ | 21/4 | 2.45 | 3.90 | 2. 20 |
| Nov. 8, 1924 |  | $21 / 4$ | 2. 51 | 3.92 | 2. 75 |
| Nov. 15, 1924 | 314413 | $21 / 4$ | 2.61 | 3.97 | 2.20 |
| Nov. 22, 1924 ...... | 31/4-31/2 | 21/2 | 2.65 | 4.02 | 2.30 |

In the London market money rates were relatively stable in the last half of October and first part of November. Three months' bank bills were quoted at from $3 \frac{11}{16}$ to $33 / 4$ per cent during this period, and the average rate on Treasury bill allotments varied between 3.65 and 3.75 per cent.

## ACCEPTANCE MARKET

Money rates, though still low, showed a firmer tendency in the four weeks' period ending November 12. The supply of new bills which came into the market was well sustained, though it was somewhat smaller than in the preceding period. Demand for bills at banks in some of the financial centers was smaller than during the preceding four weeks, but purchases by interior banks were considerably targer. During the last week of the period money rates were slightly firmer, and there was a substantial increase in the volume of bills offered to the market due in part to bills which banks had been carrying in their portfolios. There was not a corresponding increase in the demand, and dealers' aggregate
portfolios were larger at the end of the period than a month earlier. Sales to the Federal reserve banks increased almost continuously and reached the highest point since February in the middle of November. The principal commodities against which bills were drawn were cotton, grains, sugar, tobacco, silk, and provisions.

Rates in the New York market at the close of the period were $21 / 4$ per cent bid and 2 to $21 / 8$ per cent offered for 30 -day bills, $23 / 8$ per cent bid and $21 / 8$ to $21 / 4$ per cent offered for 60 -day bills, and $21 / 2$ per cent bid and $21 / 4$ to $23 / 8$ offered for 90 and 120 day bills. All rates were approximately one-eighth of 1 per cent higher than at the end of the preceding period.

## SAVINGS DEPOSITS

The total of savings deposits reported by 907 banks distributed throughout the United States. was $\$ 7,490,179,000$ on November 1, 1924, as. compared with $\$ 7,443,388,000$ on October 1, 1924, and $\$ 7,001,416,000$ on November 1, 1923. This represents an increase of about 7 per cent between November, 1923, and November, 1924, and of 0.6 per cent between October 1 and November 1, 1924. Savings deposits increased during October in every district except Kansas City and New York, where slight decreases. occurred. The St. Louis district showed the most marked proportional increase, of 2 per cent, and there were also considerable increases. in the Cleveland, Atlanta, and San Francisco districts. A comparison by Federal reserve districts of savings deposits on November 1, 1924, with those a month and a year previous. is shown in the following table. In the Boston and New York districts the figures represent only deposits of mutual savings banks; in all. other districts, where there are but few mutual savings banks, savings deposits of other banks. are included.
Savings Deposits, by Fedmial Resterva Districts. [In thousands of dollars]

## COMMERCIAL FAILURES AND BANK SUSPENSIONS

Commercial failures numbering 1,696 , with liabilities amounting to $\$ 36,098,804$, were reported by R. G. Dun \& Co. for the month of October. The number of failures was about 30 per cent higher, and total liabilities in default about 5 per cent higher than in September. It is not unusual, however, for increases to occur in the latter months of the year, and the October insolvencies, only slightly more numerous this year than last, involved liabilities which were less than half the aggregate for October, 1923, the high point for that year. The improvement in the liabilities as between October of this year and last was due to a marked decrease in large defaults, particularly among manufacturing enterprises. During the past 10 months of this year there have been 16,922 failures, as against 15,173 for a similar period of last year. Defaulted indebtedness amounting to $\$ 466,822,260$ for the past months of this year compared with $\$ 437,480,368$ for last year.

Failures were more numerous in October than in the previous month in all districts except the Philadelphia and the San Francisco districts, and liabilities were larger in all except the Chicago, St. Louis, Kansas City, and Dallas districts. When October is compared with that month last year, however, the number of failures is found to have increased only in the Boston, New York, Cleveland, Richmond, Chicago, and Kansas City districts and liabilities only in the St. Louis and Minneapolis districts. In the San Francisco district, although failures were less numerous than in any month, with one exception, since September of last year, the total liabilities involved were the highest since October of last year. Comparative data by districts for the month of September are presented in the following table:

Fallures During October

| Federal reserve district | Number |  | Liabilities |  |
| :---: | :---: | :---: | :---: | :---: |
|  | 1924 | 1883 | 1924 | 1923 |
| Boston. | 143 | 130 | \$2, 728, 188 | \$15, 610, 419 |
| New York | 356 | 351 | 11,206, 118 | 34, 602,500 |
| Philadelphia | 59 | 62 | 1,388, 662 | 1,557, 615 |
| Cleveland | 176 | 137 | 4, 737, 431 | 7,706, 539 |
| Richmond | 111 | 91 | 1,765, 371 | 2,266, 828 |
| Atlanta. | 90 | 107 | 1,767,982 | 2,085, 051 |
| Chicago. | 268 | 208 | 4,337,448 | 4,790,027 |
| St. Louis. | 79 | 84 | 1,945, 106 | 1,308, 833 |
| Minneapolis | 65 | 90 | 1,160,571 | 1,118,598 |
| Kansas City | 130 | 96 | 1,277,290 | 1,340, 804 |
| Dallas. | 46 | 111 | 543,300 | 2, 417, 470 |
| San Francisco | 173 | 206 | 3,241,337 | 4,497,057 |
| Total | 1,696 | 1,673 | 36, 098, 804 | 79, 301, 741 |

During October 36 banks, with capital and surplus amounting to $\$ 1,877,000$, were reported to the Federal reserve banks as closed, suspensions occurring in all except the Boston, New York, and Cleveland districts. Eight of these banks were member State institutions, one a national bank, and twenty-seven nonmember banks. The nine member banks had capital and surplus of $\$ 626,000$ and the nonmember banks $\$ 1,251,000$. Last month the same number of closed banks was reported, with aggregate capital and surplus of $\$ 921,000$. Of the total number suspending operations in October, one in the Chicago district reopened within the month. In addition, five banks which had been closed previous to October, one in the Chicago and the remainder in the Minneapolis district, were reopened during the month. Although the figures which appear in the following table represent, so far as could be determined, banks which were closed by order of supervisory authorities, it is not known how many of these institutions may ultimately prove to be solvent.

Banks Closed During Оctober, 1924
[Amounts in thousands of dollars]

1 Includes one member State bank with capital and surplus of $\$ 70,000^{\circ}$ ${ }^{2}$ Of these, one bank with capital and surplus of $\$ 10,100$ was reopened during October.

## FOREIGN TRADE

Imports of merchandise during October were valued at $\$ 310,000,000$, compared with $\$ 287,-$ 000,000 during September. Exports during October were $\$ 527,000,000$, an increase of almost $\$ 100,000,000$ as compared with September and the highest figure shown for any month since January, 1921. The October increase reflects in part the seasonal movement of cotton and grain to Europe, especially to England and Germany.

Net exports of merchandise during October amounted to $\$ 217,000,000$, as compared with
$\$ 140,000,000$ during September and with $\$ 91,-$ 000,000 during October, 1923, and were the largest monthly net exports shown since February, 1921.

The total visible balance, including merchandise and gold and silver, which had been a net import balance of $\$ 103,000,000$ during the first 10 months of 1923 , was a net export balance of $\$ 425,000,000$ during the first 10 months of 1924.

## GOLD MOVEMENTS

## UNITED STATES

Total gold imports into the United States during the month of October were $\$ 19,700,000$, an increase of $\$ 13,000,000$ over the amount shown for September, accounted for by imports from the Netherlands. Gold exports during October decreased slightly as compared with September; a decline of $\$ 1,000,000$ was
shown for India and for Hongkong, while an increase of $\$ 1,000,000$ was shown for Canada and of $\$ 800,000$ for the Philippine Islands. Net imports for October were $\$ 15,576,000$, as compared with $\$ 2,076,000$ for September.

Gold imports for the 10 months ending October, 1924, totaled $\$ 290,000,000$, compared with $\$ 250,000,000$ for the $10-\mathrm{month}$ period of 1923, an increase of $\$ 40,000,000$. Imports from the Netherlands were larger by $\$ 37,000,000$; from England by $\$ 30,000,000$, and from Argentina by $\$ 18,000,000$, while imports from Germany were smaller by $\$ 45,000,000$ this year than in 1923. Gold exports were $\$ 12,000,000$ smaller than a year ago, the greatest decrease, $\$ 10,000,000$, being shown in exports to British India. Net imports rose from $\$ 223,000,000$ during the 1923 period to $\$ 274,000,000$ during 1924, an increase of $\$ 51,000,000$.

The movement of gold into and out of Great Britain during September was smaller than it has been at any time since 1920, when the British Government resumed the publication of gold import and export figures, after having discontinued them during the war. Gold imports during September were $£ 414,000$, less than one-fourth of the amount shown for the preceding month, and comparing with $£ 3,276$,000 for September, 1923. Gold exports were
$£ 642,000$, slightly more than one-fifth of the amount shown for August, and comparing with $£ 4,310,000$ for September, 1923. There were no gold exports to the United States from Great Britain in September, an occurrence which has been recorded for only three other months since 1920. The other important decrease is shown in exports to British India, which declined from $£ 1,183,000$ to $£ 589,000$. Net exports declined in September to only $£ 228,000$, less than one-sixth of the excess exports for August.
Imports for the 9 -month periods of 1924 and 1923 show a decline of about $£ 5,000,000$ from the Transvaal and of more than $£ 2,600,000$ from the United States. On the export side, an increase of more than $£ 12,000,000$ is shown in exports to the United States, whereas a decrease of almost $£ 10,000,000$ is shown in exports to India. This decrease is due in part to the fact that India has imported gold direct from the Transvaal. Net exports for the later period, therefore, total $£ 14,700,000$ as against $£ 4,136,000$ for the 1923 period, or an amount more than three and one-half times as great during 1924 as that shown for 1923.

## FOREIGN EXCHANGE

Advances were shown during the first three weeks of November for most leading foreign exchange rates. Sterling rose from $\$ 4.55$ on November 1 to $\$ 4.63$ on November 14 and remained at about that level until the 21st. The Netherlands florin, which had been ap-
preciating for several weeks past, as a result of the policy adopted by the Dutch Government and Amsterdam bankers of utilizing their dollar balances to support the exchange and also in consequence of considerable gold shipments to the United States, rose to 40.22 cents per florin on the 21st, which is slightly above parity. Swedish krona reached parity on the 7 th, and stood at a premium thereafter. Swiss francs, about at parity, fluctuated very slightly-between 19.25 and 19.30 cents per franc. The Danish and the Norwegian crown also appreciated considerably. Little change was shown for French and Belgian francs and a slight depreciation for Italian lire. The new German reichsmark was quoted during the first three weeks of November at 23.80 cents per reichsmark, i. e., at par.

Advances for the South American exchanges also are shown for the first three weeks of November. The Argentine peso rose from 83.44 cents on the 1 st to 86.63 cents per peso on the 20th. Brazilian milreis rose from 11.19 cents on the 1st to 11.76 cents per milreis on the 19th. Chilean pesos rose from 11.13 cents on the 1st to 11.38 cents on the 19th. Uruguayan pesos rose from 90.70 cents on the 1st to 99.28 cents on the 19th.

Of the Far Eastern exchanges, the Shanghai tael remained stable at about 76.50 cents per peso. Indian rupees advanced from 33.97 cents per rupee on the 1st to 34.73 cents on the 21st. Japanese yen fluctuated within narrow limits, between 38.28 and 38.66 cents per yen.

## FOREIGN LOANS AND FOREIGN EXCHANGE

Extensive foreign borrowings in the United States have characterized the present year, total new capital issues for the 11 months of 1924 being nearly three times as large as for the entire year 1923 and larger than for any year since the war. These foreign loans have been reflected in a firm or rising tendency in the foreign exchanges, notwithstanding this autumn's large exports and the reduced inflow of gold.

The volume of foreign capital flotations for the first 11 months of this year, according to figures compiled by the Guaranty Company of New York, has been more than $\$ 1,100$,000,000 , about four-fifths of which represents new capital. Of the new issues approximately 75 per cent were borrowings by foreign governments and 25 per cent by foreign corporations. This large foreign borrowing, of which roughly one-half was by European countries, was a factor in the recent improvement in the foreign exchanges. In contrast with the usual seasonal decline during the late summer and early fall, several of the leading European exchanges have had a marked rise. Exchanges of such countries as Austria, Germany, and Poland, which have been stabilized with reference to gold, have during this period maintained their rates practically at
par. Dutch florins and Swiss francs, quoted during the first quarter of the year at substantial discounts, have recently returned to parity, and fluctuations in French and Belgian francs have been much narrower. The pound sterling, which at this season usually declines as a result of large payments for exports from this country, has this year advanced from $\$ 4.31$ in June to $\$ 4.63$ in November, when it stood
about 5 per cent below par. This strength in the exchanges is especially noteworthy in view of the exceptionally heavy purchases in October of grain and cotton by European countries.

While a large part of the proceeds of these loans has been used in the purchase of goods in the United States, a portion of the funds, notably the loan to Germany, has been for the purpose of reestablishing currencies on a gold basis and maintaining their stability. The flotation of these loans and also the extension of short-term credits have been favored by the low level of money rates in the United States. The ease in the money market in this country is in contrast to the shortage of long-term capital as well as of bank credit prevailing on the Continent of Europe and reflected in high money rates. In the London market, which furnishes a large part of seasonal credit required by the Continent and where rates are ordinarily lower than in this country, money rates in recent months have been higher than in New York. A year ago three-month bank bills in London carried $31 / 8$ per cent and in New York $41 / 8$ per cent; at the end of May of this year the prevailing rate was 3 per cent in both markets, and in early November the rate was $21 / 4$ per cent in New York against $33 / 4$ per cent in London. The tightness of money throughout Europe is further shown by advances made in official discount rates of the central banks of issue. Since the first of the year discount rates have been advanced by the central banks of nine European countries. In such other countries as Switzerland and England, where there has been no change in the official rate of discount, there has been a distinct hardening of the money market.

## BRANCH BANKING IN THE UNITED STATES

Recent growth of branch banking in this country has given rise to a consideration of the place of branch banking in the American banking system and to proposals for legislative regulation. At its last session Congress had under consideration a bill proposing to liberalize the statutory provisions under which national banks operate in the several States and at the same time to impose some restriction upon State banks in the exercise of branch banking privileges within the Federal reserve system under State charters. Specifically the bill proposed to authorize national banks located in States which grant similar privileges to competing State banks and trust companies to establish branches within the corporate limits of the town or city in which the parent bank is located; and further to require State banks applying for membership in the Federal reserve system to relinquish branches outside the home town or city of the parent bank. Proposed amendments to the bill wouldrestrict the exercise of theselimited branch banking privileges by national banks to States which at the time of passage of the act permit State banks to establish branches, and similarly would require applying State banks to relinquish all branches in States which do not at the time of passage of the act permit intra-city branch banking. These amendments are intended to hold branch banking within the Federal reserve system to the territory in which it is permitted at the time of passage of the act and to prohibit any extension of this territory in the future under State legislation. Inasmuch as this bill and the amendmentswhich propose important modifications of our Federal banking laws-will undoubtedly come up for further consideration, the following survey of the Federal Reserve Board's administrative policy, of the legal status of branch banking in the several States, and of the extent of branch banking in this country is presented.

## LIMITATIONS UPON FEDERAL CONTROL OF BRANCH BANKING

On November 7, 1923, the Federal Reserve Board adopted a resolution defining the policy which it would pursue in the future in respect to admission to membership in the Federal reserve system of State banks operating branches outside of the city of the parent bank (or territory contiguous to that city) and in respect to applications of member State banks for permission to establish additional branches within the system.

The problem presented to the board at this time was one to which the board had given more or less continuous consideration in past years. It was not one primarily involving the relative merits or demerits of branch banking as compared with independent unit banking, but was rather a problem of developing an administrative policy which would in a measure eliminate what was conceived to be an inequitable discrimination among member banks in the exercise of branch banking privileges.
The Federal Reserve Board has no power to restrict branch banking under State laws, except to a limited extent by imposing restrictive conditions upon such State banks as freely elect to join the Federal reserve system and comply with such restrictive conditions of membership as the board may set up.

Only in the case of national banks is membership in the Federal reserve system compulsory, and under our national banking act national banks are not permitted to establish branches, although they are permitted to operate branches acquired by merger with State institutions, and branches established under State charters prior to nationalization of the parent bank. Even these very restricted branch banking privileges are, however, precisely defined in the Federal statute, and are not susceptible of the least modification through any administrative action of the Federal Reserve Board. So that in respect to the great majority of member banks-i. e., in the case of 8,080 out of 9,650 member banks-as well as of nonmember banks the Federal Reserve Board has no original control over branch banking activities.

Since the 18,818 nonmember State banks are entirely under State control, while the 8,080 national banks have their branch banking privileges, in so far as they may exercise any such privileges, defined and limited by Federal statute, it follows, as noted above, that the Federal Reserve Board can, through prescribing conditions of voluntary membership in the system, directly affect the branch banking privileges only of a comparatively small number of State institutions. In June, 1924, of the 1,570 State member banks, approximately one-half were located in States which do not permit branch banking, and since the board would, of course, have no authority to confer branch banking privileges upon any State member bank located in a State which
did not permit its own institutions to exercise such privileges, any branch banking regulation formulated by the board could in fact affect only some 700 or 800 banks located in States which permit branch banking out of the total of 28,468 banking institutions in the country.

Under these conditions the formulation of any general branch banking policy will, it is clear, require something more than an administrative ruling by the board. It will require legislation by Congress, and even that can in fact affect directly barely one-third of the banks in the country.

In reviewing the actions of the board before and since November, 1923, these limitations upon the power of the board and even of Congress to give widespread effect to any approved branch banking policy should be kept in mind.
administrative policy of the board prior TO NOVEMBER, 1923
In acting upon applications of State member banks for permission to establish additional branches within the system the board had prior to November, 1923, considered each case upon its own merits, giving consideration to public convenience and to the parent bank's capacity for properly organizing the branch and assimilating the business taken over. As a matter of general policy, rather than specifically of branch banking policy, the board in individual cases withheld its approval until satisfied that establishment of the additional branch or branches in question would not impair the solvency or liquidity of the parent bank. It gave consideration to the rate of expansion of the given branch system; coordination of branches already acquired; headoffice control, supervision, and personnel; affiliation with outside corporations; relation of capital and surplus to deposit liabilities, especially in rapidly expanding branch systems; methods of acquiring branches; and generally to local conditions and needs in so far as these could be clearly defined. The board distinguished branches from paying and receiving stations not vested with discretionary power to make loans, except for inconsiderable sums, and while reserving the right to reconsider in case such offices in any instance developed into full-fledged branches, it made approval of such outside offices more or less a matter of form, except where it appeared that the expense of maintaining them might impair the capital of the bank.

Although the board had not formulated any
arbitrary rule requiring simultaneous examinations of head offices and branches, it had nevertheless regarded any evidence of inability on the part of State authorities to conduct proper examinations of banks maintaining extensive branch systems as being in itself adequate justification for limiting further expansion of such systems. Responsibility for the conduct of adequate examinations, it has been felt, must in the case of member as of nonmember banks be assumed primarily by State authorities rather than in the case of member banks by the Federal reserve bank of the given district.
In general, it may be observed that prior to November, 1923, the board permitted expansion of member bank branch systems under State supervision and control, in so far as such expansion was consistent with sound banking principles of efficient administration, adequate State supervision, and complete solvency.

In one of its aspects the branch banking problem itself has been continuously presented to the board. This aspect has been that developing out of competition of member and nonmember branch systems with national banks which operate under a prohibition of branch banking imposed upon them by Federal statute. In States which have permitted branch banking national banks have experienced the pressure of competition with the expanding branch systems of State institutions and have in numerous instances been absorbed into branch systems, or have in other instances surrendered their Federal charters and taken out charters under State laws which granted them branch banking privileges. Under these conditions the Federal Reserve Board has given careful consideration to ways and means of enabling national banks to compete on terms of fair equality with State banks. In respect to national banks the board's branch banking policy has found expression in recommendations of amendatory legislation by Congress.

## BRANCH BANKING RECOMMENDATIONS TO CONGRESS

The board in its second annual report covering the calendar year 1915 recommended to Congress that national banks be permitted to establish branch offices within the city, or within the county in which they were located. ${ }^{1}$

Consistently with this recommendation, the board early in 1916 prepared and transmitted

[^1]to Congress the draft of an amendment to the Federal reserve act. In the terms of this amendment national banks located in cities of 100,000 and over having a capital and surplus of $\$ 1,000,000$ or more would have been permitted to establish branches within the corporate limits of the cities in which they were located, - and any national banks located in other places would with approval of the Federal Reserve Board and under such regulations as the board might prescribe have been permitted to establish branches within the limits of the county in which they were located or within a radius of 25 miles, irrespective of county lines, but not in any case outside the State or Federal reserve district of the parent bank. This privilege, it was further provided, should be restricted to banks with a capital equal at least "to the aggregate of the amounts which would be required of each branch under the provisions of section 5138, Revised Statutes, if it were organized as an independent association, together with the amount required of the parent bank itself in that section." ${ }^{2}$

An amendment drawn in compliance with these recommendations was adopted by the Senate, August 16, 1916, and together with other amendments was referred to a conference committee of the House and Senate. In conference it developed that the amendment was not acceptable to the House conferees and the Senate on recommendation of its conferees receded from its proposal.

In its 1918 report to Congress the board renewed its recommendation, expressing the opinion that national banks were "at a serious disadvantage in meeting the competition of State banks with branches," and that "the proper development of the Federal reserve system makes it necessary to coordinate as far as possible the powers of all member banks." This coordination of powers could not be effected without amendment of existing laws under which "some member banks, both National and State, are given advantage over other member banks." The board renewed its recommendation of previous years, being confident that the proposed amendment would 'prove beneficial to the Federal reserve system, as well as to the communities concerned." ${ }^{3}$
Substantially the same recommendation was included in its report for 1919. This report commented as follows upon a bill passed by the Senate which proposed to authorize national

[^2]banks in cities of 500,000 or more population, having a capital and surplus of $\$ 1,000,000$ or more, to establish not exceeding 10 branches within the corporate limits of the cities in which they were located, provided State law extended a similar privilege to State banking institutions:

Under the present law national banks can not afford the same facilities to the public as are given by State banks having branches, except in cases where State banks and trust companies operating branches have merged with national banks, when existing branches may be continued by the national banks. * * * While the board would prefer to have this privilege [of establishing branches] extended to national banks in cities of not less than 100,000 inhabitants, or, failing that, have the population limit raised to 200,000 , it wishes to point out that the limit fixed in the Senate bill does not affect the principle involved, and it therefore respectfully recommends once more that national banks be permitted to establish branches in cities in which they are located under such limitations as in the wisdom of Congress may be deemed desirable.

Again in its report for 1922 the board commented briefly upon branch banking developments, noting that the establishment of branches by the larger State banks "had gone so far in a few States, notably California, and in a few large cities, including New York, Cleveland, and Detroit, as to reduce greatly the number of national banks." The board expressed the opinion that the action of the Comptroller of the Currency in permitting national banks to open "additional offices" within the corporate limits of the cities in which they were located in States which permitted branch banking "does not meet the situation in California and does not fully meet it in the cities mentioned," and that "an amendment to the national banking act allowing national banks the same privilege given to State banks in States where branch banking is permitted is much to be desired."
In this connection the board noted a suggestion made by the Joint Commission of Agricultural Inquiry in its report to Congress dealing with the problem of rural credit, to the effect that " a system of limited branch banking might furnish a possible solution of this problem." Upon this suggestion the board commented as follows:

Such systems are in fact already established in some sections of the country, notably in California, and appear to have gone far toward solving the problem. Branch banking has lowered the rate of interest in some of the leading agricultural sections of California, and at the same time has provided added security for the deposits of farmers. There are interesting neighborhood branch banking groups in other States, which appear to be serving their communities well. ${ }^{4}$

[^3]Finally, in its 1923 report, the board notes the difficulties which originate in the differences of State laws and the competitive disadvantages under which national banks operate in States which permit branch banking, and expresses the hope "that it can by administrative measures find some reasonable method of harmonizing existing differences of interest of State and national banks in the matter of branch banking, and thus lay the basis for a policy which will result in shaping the development and practice of branch banking in the United States along useful and serviceable lines." ${ }^{5}$

In brief, the board's administrative policy, which was largely defined in and imposed by Federal statutes, was, on the one hand, a policy of permitting the States to determine what branch banking privileges should be exercised by State institutions within the Federal reserve system-in so far as the exercise of such privileges violated no principle of sound bankingand, on the other, a policy of recommending to Congress amendatory legislation liberalizing national bank charters.

## RESOLUTION ON BRANCH BANKING ADOPTED BY THE BOARD ON NOVEMBER 7, 1923

On November 7, 1923, the Federal Reserve Board's committee on examinations submitted a report and a resolution formulating certain general principles for guidance of the board in acting upon individual cases presented to it in applications for admission to membership of State banks operating branches outside the city or town or contiguous territory in which the parent bank was located and in applications of State member banks for permission to establish such branches. "The substance of this resolution," the committee observed, "has been a matter of long and intensive study by all members of the Federal Reserve Board and the board should be, therefore, in position to express itself and to take a definite stand on the subject." Reasons given for recommending immediate adoption of the resolutions were substantially the following:

The intent of the Federal reserve act was, in the opinion of the committee, necessarily to compromise and reconcile the operations of banks organized under the national bank act and the banking laws of 48 States, and operating in the Federal reserve system, which was primarily an instrument of coordination imposed upon the national system.

Unfair competition had resulted from the fact that certain member banks were privileged in a practice
${ }^{4}$ Tenth annual report to Congress, p. 48.

Which was, in the opinion of two Attorneys General, definitely forbidden to other member banks-specifically, in the practice of operating branches outside the home city of the parent bank.

Unlimited extension of branch banking would, in the opinion of the committee, "give to banks operating under liberal State charters such competitive advantages over the unit banks which are members of the Federal reserve system" as would impair materially the usefulness of these unit banks, if it did not ultimately result in their extinction.

It was a duty of the Federal Reserve Board-and one which could not be evaded by any technical interpretation of the law-to lay down a policy "to the general end that all banks, National and State, may operate for the good of the system," which could not be subserved by permitting activities by one group of member banks which endangered the existence of another group.

No bank, National or State, which was not willing to waive any privileges granted under State laws that were found to be inconsistent with the purposes of the Federal reserve system should enter or remain in the system, and it was the duty of the Federal Reserve Board to prescribe conditions under which banks might secure the compensating advantages of membership in the system.

It was manifestly unfair for the board to refrain from notifying members of the policy which it proposed to follow "in this important matter of branch banking, upon which the Federal reserve act expresises itself only by implication," and to permit member banks without warning to engage in a course, "unwittingly and innocently," which might "subsequently meet with criticism and disapproval of the board." Furthermore, it was only fair that member banks which were not permitted by a law to engage in or had not in fact actually engaged in branch banking should know the terms under which other member banks would be permitted to compete with them.
In consideration of these reasons the board adopted the proposed resolution, which was to the following effect:

Resolved, That the board continue hereafter as heretofore to require State banks applying for admission to the Federal reserve system to agree as a condition of membership that they will establish no branches except with the permission of the Federal Reserve Board; be it further

Resolved, That, as a general principle, State banks with branches or additional offices outside of the corporate limits of the city or town in which the parent banks are located or territory contiguous thereto ought not be admitted to the Federal reserve system except upon condition that they relinquish such branches or additional offices; be it further

Resolved, That, as a general principle, State banks which are members of the Federal reserve system ought not be permitted to establish or maintain branches or additional offices outside the corporate limits of the city or town in which the parent bank is located or territory contiguous thereto; be it further

Resolved, That in acting upon individual applications of State banks for admission to the Federal reserve system and in acting upon individual applications of State banks which are members of the Federal reserve system for permission to establish branches or additional offices, the board, on and after February 1, 1924, will be guided generally by the above principles; be it further

Resolved, That the term "territory contiguous thereto" as used above shall mean the territory of a city or town whose corporate limits at some point coincide with the corporate limits of the city or town in which the parent bank is located; be it further

Resolved, That this resolution is not intended to affect the status of any branches or additional offices established prior to February 1, 1924, either those of banks at the present time members of the Federal reserve system or those of banks subsequently applying for membership in said system.

## FURTHER DEFINITION OF THE BOARD'S BRANCH banking policy

At its meeting on January 7, 1924, the board gave consideration to the applications of three banks for permission to establish branches from time to time over a period of several months in accordance with contemplated programs of development, and adopted a resolution to the following effect: That no blanket authority to establish branches would be granted; that each application must be presented separately in regular form and manner, subject to approval of the State banking authorities and a recommendation of the Federal reserve bank of the district; that applications to establish branches in noncontiguous territory, filed before February 1 (under the board's resolution of November 7) might be considered by the board after that date; and that the board reserved right to pass on each application on its merits.

On March 27 the board issued a revise and further elaboration of its regulations formulated under that general provision of the Federal reserve act which authorizes it to prescribe conditions of membership for State banking institutions applying for admission to the system. In these regulations, as amended a month later, on April 7, the board took occasion to give more formal statement than it had previously given to principles which would govern it in approving the establishment of branches. It declared:
(1) That it would "as a general principle restrict the establishment of branches * * * to the city of location of the parent bank and the territorial area within the State contiguous thereto, * ** excepting in instances where the State banking authorities have certified, and the board finds that public necessity and advantage render a departure from the prineiple necessary or desirable."
(2) That as a general principle it would not consider applications for permits to establish branches unless State authorities "regularly made simultaneous examinations of the head office and all branches," such examinations being of a character to furnish the board with "information as to the condition of each bank and the character of its management" sufficient to enable the board "to protect the interests of the public."
(3) That it would, as a general principle, require each bank establishing or maintaining branches to
maintain for itself and branches "an adequate ratio of capital to total liabilities and an adequate percentage of its total investments in the form of paper or securities eligible for discount or purchase by Federal reserve banks."
(4) That it would not "consider any application to establish a branch, agency, or additional office until the State banking authorities have approved the establishment, * * * and the directors or executive committee and the Federal reserve agent of the Federal reserve bank of the district have made a report upon the financial condition of the applying bank or trust company, the general character of its management, what effect the establishment of such branch, agency, or additional office would have upon other banks or branches in the locality in which it is to be established, and whether, in their opinion, it would be in the interest of the public in such locality, together with their recommendation as to whether or not the application should be granted."
(5) That, unless extended by the board, a permit should become void after six months if the branch had not been established and opened within that time.
(6) That the board reserved the right to cancel any permit granted in the future, whenever it shall appear, after hearing, that such branch, agency, or additional office is being operated in a manner contrary to the interest of the public in the locality in which it is established

## EXTENT OF BRANCH BANKING IN THE DNITED STATES

One outstanding feature of banking development in the United States is found in the failure of branch banking to develop in any measure comparable with the development in other countries. The relatively small number of banks operating branches- 681 out of a total of 28,468 National and State banks in the country as a whole-is, of course, accounted for in part by Federal and State legislation prohibiting branch banking. But even within the jurisdiction of States which have never imposed restrictions upon banks in the matter of establishing branches, the development of branch banking has been to date generally inconsiderable. Among the States which freely permit state-wide branch banking are Wyoming, none of whose 79 State banks operate branches; Georgia, with only 19 banks operating branches out of a total of 562 State banks; Delaware, with 5 branch banks out of a total of 27 State institutions; Arizona, with 6 out of 44 ; Maryland, with 21 out of 148; North Carolina, with 39 out of 471; South Carolina, with 7 out of 330 ; Tennessee, with 19 out of 461; and Virginia with 24 out of 341.
Even in California, which among all the States has experienced the most considerable development of branch banking, there were in June, 1924, 576 independent unit banks, the number of banks operating branches
being 99, and the proportion of unit to branch banks nearly 6 to 1 . Of the unit banks 326 were operating under State charters imposing no restrictions upon the exercise of branch banking privileges, and 250 were national banks. Of the 99 banks operating branches, 15 operating 29 branches were national banks and 84 operating 509 branches were State institutions.

The predominance of California over other States in the matter of branch banking is apparent in the summary figures, 99 of the 681 banks operating branches in the country as a whole, and 538 of the 2,233 branches in operation in June being in this State. One member State bank in California was operating 88 branches, which was the largest number of branches found organized in a single system in the country, the largest branch system outside California being that of a member State bank in New York City, which reported 57 branches, all located within the city limits. But more than half of the California banks operating branches-53 out of 99 -were operating only 1 branch each, and only 13 of them were operating 5 or more branches.

These figures seem inconsiderable in comparison with those for foreign branch systems, which in individual instances number hundreds and even thousands of branches. While our banking system is, outside of California, predominantly one of independent unit banking, it is far from being a uniform system imposed upon the States by Federal legislation. Rather it is a composite of 48 different systems. As regards branch banking, the precise situation in any State is one which has developed under a complex of Federal and State legislation and administrative practice, more or less restrictive of branch banking, and is one which in so far as it is affected by State control, is in some respects different from that obtaining in any other State. In the main, however, our experience with branch banking has been in recent decades an experience under State rather than Federal control. That it is so still will be evident from the figures for June of the present year, when 573 of the 681 banks operating branches were operating under State charters and 1,985 of the 2,233 branches reported in operation were branches of State banks.

## LEGAL STATUS OF BRANCH BANKING

With reference to the legal status of branch banking, the States may be classified into three
groups according as branch banking, at least to the extent of operating teller-window branches, is (1) prohibited, (2) authorized, or (3) not specifically covered by provision in State laws. The States comprising each of these groups are listed below:
(1) States which by statute prohibit branch banking:

Alabama.
Arkansas.
Colorado. Connecticut.
Florida.
Idaho.
Illinois. Indiana. Minnesota.
(2) States which by statute authorize branch banking:

Arizona.
California.
Delaware.
Georgia. Louisiana. Maine.
Massachusetts. Michigan. Mississippi.
(3) States which do not by statute specifically provide for branch banking:

| Iowa. | New Jersey. |
| :--- | :--- |
| Kansas. | North Dakota. |
| Kentucky. | Oklahoma. |
| Maryland. | South Dakota. |
| Montana. | Tennessee. |
| Nebraska. | Vermont. |
| New Hampshire. | West Virginia. |

In 17 States establishment of branches is expressly by statute prohibited, and it happens that a precisely equal number of States have expressly by statute or by implication of statutory provision authorized branch banking. The free extension of branch systems on a state-wide basis is authorized in nineStatesArizona, California, Delaware, Georgia, North Carolina, Rhode Island, Virginia, and by implication of statutory provisions in South Carolina and Wyoming. Maryland and Tennessee in administrative practice permit state-wide branch banking but without express statutory authority. Louisiana, Maine, and Ohio restrict branch banking to the county or territory contiguous to the city or county in which the parent bank is located, and Massachusetts and New York restrict branch systems to the corporate limits of the city in which the parent bank is located. Additional offices or agencies but not full-power branches are permitted in Kentucky, under judicial decision, Michigan under judicial opinion, and Mississippi and Pennsylvania by statutory provision.

[^4]Banking policies in the several States have been built up from year to year under statutory provisions which have left some measure, large or small, of discretion to administrative agencies. It follows that such policies covering administrative practice are only partially set forth in legislative enactments. Branch banking policies in particular appear to be in some States largely of administrative rather than legislative origin.

They appear to be altogether of administrative origin in the 14 States which have on their

## BRANCH BANKING WITHIN AND WITHOUT

 THE FEDERAL RESERVE SYSTEMA summary classification of banks operating and not operating branches is given in Table 1, from which it appears that 382 , or more than half of the 681 banks operating branches in June, 1924, were nonmember banks. The 299 member banks operating branches include 108 national and 191 State banks, the proportion operating branches being higher for State member (12.2 per cent) than for any other class of banks.

statute books no provisions whatever either prohibitive or permissive of branch banking. Without express statutory provision, branch banking has been by administrative practice in some of these States prohibited-as in Iowa, Kansas, Montana, New Hampshire, North Dakota, Oklahoma, South Dakota, Vermont, and West Virginia; in others permitted under regulations more or less restrictive-as in Nebraska and New Jersey, which permit maintenance but not establishment of branches, and in Kentucky, which permits teller-window branches under judicial decision; and in still others freely permitted without restriction, as in Maryland and Tennessee.

As shown in the detailed figures given by States in Table 11, the 108 national banks operating branches were located in 21 States and the District of Columbia. Since national banks are not permitted to establish full-power branches de novo, these banks were operating either teller-window branches or branches originally established under State charters and brought into the Federal reserve system by conversion or merger. The 191 member State banks operating branches were located in 24 States- 37 in New York, 34 in Michigan, 22 in Ohio, 18 in California, 15 in Massachusetts, 12 in Pennsylvania, and from 1 to 8 in each of 18 other States. The 382 nonmember banks
operating branches also were widely distributed, being located in 25 States and the District of Columbia-66 of them in California, 35 each in North Carolina and Pennsylvania, 25 each in Louisiana and Ohio, 22 in Virginia, 20 in Maine, and from 1 to 19 in the 18 other States.
Table 1.-Number of Banks Operating and Not Operating Branches, June, 1924

| Class of bank | Number of banks ${ }^{1}$ |  |  |  |
| :---: | :---: | :---: | :---: | :---: |

| National.- | 8,080 | 108 | 1.3 | 7,972 |
| State | 1,570 | 191 | 12.2 | 1,379 |
| Nonmember | 18,818 | 382 | 2.0 | 18,436 |
| State, total member and nonmember | 20,378 | 573 | 2.8 | 19,815 |

${ }^{1}$ Exclusive of private banks not under State supervision and of 614 mutual savings banks.
RESOURCES OF BANKS OPERATING AND NOT OPERATING BRANCHES
Aggregate resources of banks operating and not operating branches are shown by class of banks in Table 2.

Approximately one-third of the aggregate resources of the 28,468 banks in the country are reported by the 681 banks operating branches; 21.2 per cent, or more than one-fifth of the resources reported by the 8,080 national banks, are reported by the 108 national banks operating branches; and 16.3 per cent, or nearly one-sixth of the resources reported by the 18,818 nonmember banks, are reported by the 382 institutions of this class operating branches.

More than half, 56.2 per cent, of the aggregate resources reported by banks operating branches are reported by the State member banks, 29.9 per cent being reported by national and 13.9 per cent by nonmember banks.
Table 2.-Resources of Banks Operatingand Not Operating Branches, June, 1924

| Class of bank | Resources |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Total | Banks operating branches |  | Banks not operating branches |
|  |  | Amount | Per <br> cent |  |
| Total | \$49,377,650,000 | \$15,973,162,000 | 32.3 | \$33,404,488,000 |
| Member, total | 35, 777, 256,000 | 13, 753, 434, 000 |  | 22, 023, 822, 000 |
| National |  | 4, 775, 878, 000 | 21.2 | 17, 779, 395, 000 |
| State | 13, 221, 983, 000 | 8, 977, 556, 000 | 67.9 | 4, 244, 427, 000 |
| Nonmember | 13, 600, 394, 000 | 2, 219, 728, 000 | 16.3 | 11, 380, 666, 000 |
| State, total member and nonmember.- | 26, 822, 377, 000 | 11, 197, 284, 000 | 41. 7 | 15, 625, 093, 000 |
|  |  |  |  |  |

On reference to Table 14 it will be found that approximately two-thirds of the banking resources of California and of New York are reported by banks operating branches, and that in four other States (Rhode Island, Louisiana, Massachusetts, and Michigan) branch banks report a larger aggregate of resources than is shown for unit banks. Incidentally it may be noted that for banks operating branches aggregate resources reported for New York are nearly four times the amount reported for California.
It will be apparent from the foregoing figures that banks operating branches are in the main banks of relatively large resources. This characteristic of branch banks is more clearly developed in Table 3, which gives average resources per bank for banks operating and not operating branches.

For all banks, member and nonmember, the average is $\$ 23,455,000$ for banks operating branches and $\$ 1,202,000$ for independent unit banks. For member banks the corresponding averages are $\$ 45,998,000$ and $\$ 2,355,000$, approximately the same averages obtaining for national and for State member banks. Smaller averages are shown for nonmember banks, but in this class also the average for branch banks greatly exceeds that for unit banks.

Table 3.-Average Resources Per Bank for Banks Operating and Not Operating Branches, JUNE, 1924

| Class of bank | A verage resources per bank |  |  |
| :---: | :---: | :---: | :---: |
|  | $\begin{aligned} & \text { All } \\ & \text { reporting } \\ & \text { banks } \end{aligned}$ | Banks operating branches | Banks not operating branches |
| Total. | \$1,734,000 | \$23,455, 000 | \$1,202,000 |
| Member... | 3, 707,000 | 45,998, 000 | 2,355,000 |
| National | 2, 791, 000 | 44, 221, 000 | 2, 230,000 |
| State. | 8,422,000 | 47, 003, 000 | 3, 078, 000 |
| Nonmember----------------.-.- | 723, 000 | 5, 811, 000 | 617,000 |
| State, total member and nonmember. $\qquad$ | 1,316,000 | 19,542,000 | 789,000 |

These general averages represent fairly the condition obtaining in the several States. Resources of banks in New York State, for example, average for banks operating branches $\$ 101,974,000$ and for those not operating branches $\$ 4,398,000$. Corresponding averages for California are $\$ 20,839,000$ and $\$ 1,901,000$; for Rhode Island, $\$ 34,652,000$ and $\$ 3,528,000$; for Massachusetts, $\$ 26,270,000$ and $\$ 3,300,000$; for North Carolina, $\$ 2,832,000$ and $\$ 669,000$; for Ohio, $\$ 22,903,000$ and $\$ 1,475,000$; for Michigan, $\$ 15,190,000$ and $\$ 1,020,000$; these proportions being typical for all States which
report any considerable development of branch banking.

## BANKS OPERATING HOME CITY AND OUTSIDE BRANCHES

More than half of the parent banks in the several States were operating only branches located in the home city of the parent bank or in territory immediately contiguous thereto. The percentage operating only home-city branches ranged from 35.9 in the case of nonmember branch banks to 89.8 for national banks. Figures for banks of each class operating branches only in home city, in and outside the home city, and only outside the home city are given in Table 4.

Corresponding figures for States are given in Table 12. In New York State, which of all the States reports the largest number of home-city-only branch systems, branch banking is by State law restricted to municipal limits, and to cities of 50,000 population. Except as regards the population limitation this is practically the situation also in Michigan, all but 4 of whose 63 branch systems are home-city-only systems. Of California's 99 branch banks, 36 operate only home-city branches, 52 only outside branches, and 11 both home-city and outside branches.

Table 4.-Number of Banks Operating Branches in and Outside the Home City of the Parent Bank, June, 1924

| Class of bank | Banks operating branches |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\begin{aligned} & \text { Total } \\ & \text { num- } \\ & \text { ber } \end{aligned}$ | Only in home |  | In and outside home city | Onlyoutsidehomecity |
|  |  | Num- | Per cent |  |  |
| Total | 681 | 371 | 54.5 | 38 | 272 |
| Member, total....-.-......-- | 299 | 234 | 78.3 | 18 | 47 |
| National -..........-...- | 108 | 97 | 89.8 | 2 | 9 |
| State ........--------.--- | 191 | 137 | 71.7 | 16 | 38 |
| Nonmember | 382 | 137 | 35.9 | 20 | 225 |
| State, total member and non-member | 573 | 274 | 47.8 | 36 | 263 |

Of the 310 banks operating branches outside the home city, 118, or 38.1 per cent, were comparatively small banks, reporting resources of less than $\$ 1,000,000$, while only 9 of the 371 banks operating home-city branches only reported resources under $\$ 1,000,000$. No particular significance attaches to these proportions as indicating any tendency on the part
of large banks to restrict their branch systems to municipal limits, since the proportions are undoubtedly affected by the accident of State legislation-such as, for example, that of New York specifically restricting branch banking to municipal limits and to the larger cities. It is, however, a matter of interest that so considerable a number of relatively small banks, presumably banks located in the smaller cities and towns, are operating outside branches.

A summary classification of home-city-only and outside-home-city branch systems by amount of resources reported is shown in Table 5.

Table 5.-Banks Operating Branches In and OUtside Home City, Classified by Amount of Resources, June, 1924

| Resources | Banks operating branches |  |  |
| :---: | :---: | :---: | :---: |

| \$1,000,000 to \$10,000,000. | 319 | 174 | 145 |
| $\$ 10,000,000$ and over. No report | 232 3 | 187 | 45 |
|  | 3 | 1 |  |

SIZE OF BRANCH SYSTEMS
More than half of the banks operating branches- 376 out of 681 , or 55.2 per centare one-branch systems, and more than fivesixths of them-591, or 86.8 per cent-are individually operating not over 4 branches. Of these 591 relatively small systems 356 are nonmember and 235 are member bank systems. Only 41 or 6.0 per cent of the branch systems embrace severally 10 or more branches, and only 16 as many as 20 branches. Of these 16 larger systems 6 are located in California-4 being member bank and 2 nonmember bank systems; one such system located in Louisiana, 3 in New York, 1 in Ohio, and 5 in Michigan are all State member bank systems. The 25 systems of 10 to 19 branches are found in the following States: 7 in New York, including 3 national, 2 State member and 2 nonmember systems; 6 in Michigan, including 5 State member and 1 nonmember system; 2 in California, and 2 in Tennessee, all four nonmember; 1 State member system each in Arizona, Rhode Island, and Mississippi; and 1 nonmember each in Delaware, Georgia, Maryland, Ohio, and Alabama. Of the 41
systems of 10 or more branches, 27 are member and 14 are nonmember systems; 38 of them are State and 3 are national bank systems. Summary totals for systems classified by size of system are given in Table 6.

Table 6.-Branch Systems Classified by Number of Branches Operated, June, 1924

| Number of branches | Banks operating specified number of branches |  |
| :---: | :---: | :---: |
|  | Number | Per cent |
| Total | 681 | 100.0 |
| 1 branch | 376 | 55.2 |
| 2 branches | 129 | 18.9 |
| 3 branches.. | 54 | 7.9 |
| 4 branches. | 32 | 4.7 |
| 5 to 9 branches. | 49 | 7.2 |
| 10 to 19 branches | 25 | 3.7 |
| 20 branches and over. | 16 | 2.3 |

BRANCHES IN AND OUTSDDE THE HOME CNTY OF THE PARENT BANK

The 681 banks operating branches in June, 1924, reported a total of 2,233 branches in operation, of which, as noted above, 248 were branches of national banks and 1,985, or 88.9 per cent, branches of State banks. Branches located in the home city or town of the parent bank numbered 1,463 , or 65.5 per cent, of all branches in operation, and branches outside the home city, 770. A majority of the homecity branches, 57.8 per cent, were operated by State member banks, and a majority of the outside branches, 59.5 per cent, by nonmember banks. Of the 248 branches of national banks all but 21 were home-city branches or "additional offices"; three-fourths ( 74.4 per cent) of the State member bank branches also were in the home city, while more than half ( 54 per cent) of the nonmember bank branches were outside the home city.

Summary totals for home-city and outside branches are given in Table 7 and detail by States in Table 13. Of the 1,463 home-city branches, 359 are in New York, 327 in Michigan, 249 in California, and 182 in Ohio, numbers in other States ranging from none in several States to 68 in Pennsylvania. California easily leads other States in number of outside branches, the number of such branches in this State being 289. North Carolina reports 60 outside branches, Maryland and Louisiana 48 each, Maine 46, Georgia 41, and other States smaller numbers.

Table 7.-Branches In and Outside the Home City of the Parent Bank, June, 1924

| Class of bank | Branches |  |  |  |

PARENT BANKS AND BRANCHES CLASSIFIED BY POPULATION OF COMMUNITY IN WHICH LOCATED

No bank located in a city of $1,000,000$ or more population operates a branch outside the home city or territory immediately contiguous thereto, although 87 banks located in such cities operate home city branches. Only 3 of the 284 parent banks located in cities of 100,000 or more population operate outside branches.

Of the 310 banks operating outside branches 214, or 69 per cent, are located in cities of under 10,000 population, while of the banks operating branches only in the home city only 7.3 per cent are in cities of this size- 65 per cent of these home-city systems being in cities of 100,000 or more population. This distribution of parent banks, which is shown in Table 8, bears out the presumption, raised in the classification of the same banks by amount of resources, that banks operating outside branches are in a majority of cases located in the smaller communities.
It follows necessarily that a large proportion of the 1,463 home-city branches are in the larger cities. Table 8 shows that 1,284 , or 87.8 per cent of them, are in cities of 100,000 or more population. It shows also that of the 770 outside branches the greater proportion are in the smaller communities- 630 , or 81.8 per cent of them, being in cities of 10,000 or less.

A further analysis of the data, not covered in the present tabulations, shows that 27 banks operating 33 outside branches were located in towns of less than 500 population, 9 of the branches being in towns larger than that of the parent bank; that 107 banks located in towns of 500 to 2,500 population were operating 151 branches, of which 6 were home-city and 145
outside branches; and that 107 banks located in towns of 2,500 to 10,000 were operating 206 branches, of which 23 were home-city and 183 were outside branches. The 284 parent banks located in cities of 100,000 or more population were operating a total of 1,570 branches, of which 1,284 were home-city and only 286 outside branches.

Table 8.-Parent Banks and Branches Classified by Population of Town or City in which Located, June, 1924

${ }^{2}$ Including 38 banks operating branches "in and outside" home city"

GROWTH OF BRANCH BANKING, 1865-1924
Accurate statistics are not available covering the growth of branch banking in the United States under State and Federal legislation since the passage of the national banking act in 1863, or even during the decade since organization of the Federal Reserve Board under the act of December 23, 1913. Some approximation can, however, be made to the correct figures by classifying branches in operation in June, 1924, by year of establishment of the branch, and cumulating the figures from year to year. The results obtained by this process are shown in Table 9. Inasmuch as no account is taken of branches which may have been established and discontinued prior to June, 1924, the cumulated totals in this tabulation may be assumed to be understatements rather than overstatements of the number of branches in operation in the given year. It will, of course, be understood that the classification of these branches as branches of national, State member, and nonmember banks applies to the status of the branches in June, 1924, and

Table 9.-Number of Branches in Operation, by Years

does not apply to earlier years. The distinction between member and nonmember banks originated under the Federal reserve act, and as regards the distinction between national and State banks, the status of any branch may have been changed by nationalization of parent State banks, by denationalization of national banks, or by mergers bringing branches into the class in which they are now operating.
Of the 2,095 branches for which date of establishment is reported, 462 were in operation in 1913, and 1,633 have been established since the Federal reserve aot went into effect. Approximately one-half of the total number of branches have been established in the years 1921-1924, the proportion being somewhat more than half for home-city and somewhat less than half for outside branches. Of the 1,043 branches established since 1920, 851 were classified in June, 1924, as branches of State banks and 192 as branches of national banks. The increase shown for national banks is practically all in number of home-city branches and indicates roughly the growth in so-called "additional offices" or "teller-window" branches.

## OLASSIFICATION OF PARENT BANKS AND BRANCHES BY FEDERAL RESERVE DISTRICTS

District 5 reports 115 banks operating branches, of which 19 were national, 11 State member, and 85 nonmember, these banks being located in the States of Maryland, Virginia, North and South Carolina, and the District of Columbia. The totals for all banks operating branches and for national and nonmember branch banks in this district exceed the corresponding totals for District 12, which embraces California and a large area outside of California-Oregon, Washington, Idaho, Nevada, Utah, and a large part of Arizona. Districts $1,2,4$, and 7 each report a larger number of member State banks operating branches than are shown for District 12. In number of branches, however, except as regards branches of national banks in the New York district, the totals shown for District 12 exceed those for any other district for national, State member, and nonmember banks.

Table 10.-Banks Operating and Not Operating Branches, by Federal Reserve Districts, June, 1924

STATE TOTALS
In Tables 11, 12, 13, and 14, giving figures for States, the States have been grouped with reference to administrative practice or provision in State laws (1) as permitting statewide branch banking; (2) as permitting branch banking within the municipal limits of the city, town, or county in which the parent bank is located or territory contiguous thereto; (3) as permitting branch offices or agencies, socalled "teller window" branches, but not permitting full-power branches; and (4) as prohibiting establishment of branches although permitting maintenance of branches established prior to enactment of present law.

Under present administrative practice and legislative enactment branch banking, at least in so far as any further extension of branch systems is involved, is restricted to the 20 States and the District of Columbia included in the first three groups. For one of these States-Wyoming-no branches were reported in operation in June, 1924, the number reported for the other 19 ranging from 12 in Kentucky to 538 in California.

While in the country, as a whole, branch offices of banks constitute only 7.3 per cent of the total number of bank offices-including in this total of 30,701 the 27,787 independent
unit banks, the 681 head offices of parent banks, and the 2,233 branches-it may be noted that in a number of States and for State member banks, as a class, the proportion of branches to total offices is much more considerable. In the case of State member banks branches constitute 42 per cent of total offices maintained by this class of banks, which include 1,379 unit banks, 191 head offices of branch banks, and 1,137 branches. In California the number of unit banks in June was 576 , of head offices 99, and of branches 538, giving a total of 1,213 , of which branches constituted 44.4 per cent. While no other State shows so high

Table 11.-Number of Banks Operating and Not Operating Branches, by Class of Bank, by States, June 1924

[^5]a proportion of branches to total bank offices, the proportion shown in a number of States is sufficient to indicate that branches constitute an important part of the banking machinery of these States. Michigan, for example, reported 332 branch offices, the number of head offices of branch systems being 63 and of unit banks 655. New York reported 359 branches, 74 head offices, and 898 unit banks; Ohio, 203 branches, 51 head offices, and 1,056 unit banks; Louisiana, 93 branches, 34 head offices,
and 217 unit banks; Maryland, 72 branches, 23 head offices, and 210 unit banks; Arizona, 20 branches, 6 head offices, and 57 unit banks. When, however, account is taken of the States which do not permit branch banking, and of those in which the number of branches is inconsiderable, it becomes apparent that the area in which branch banking has attained even such a degree of importance as is indicated in the tables is embraced in a rather small minority of the States.

Table 12.-Banks Operating Branches in and Outside the Home City, by Class of Bank, by States, June, 1924
 Without express statutory prohibition, but branches not permitted: Iowa, Kansas, Montana, New Hampshire, North Dakota, Oklahoma, South Dakota, Vermont, and West Virginia.

Table 13.-Number of Branches In and Outside Home City, by Class of Bane, by States, June, 1924

1 States expressly prohibiting branch banking: Colorado, Connecticut, Idaho, Mlinois, Missouri, Nevada, New Mexico, Texas, and Utah. Without express statutory prohibition but branches not permitted: Iowa, Kansas, Montana, New Hampshire, North Dakota, Oklahoma, South Dakota, Vermont, and West Virginia.

## EARNINGS AND EXPENSES OF MEMBER BANKS

The rate of net profit on the invested capital of member banks for the year ending June 30, 1924, was 9.11 per cent, as against 9.51 per cent for the previous 12 -month period. Net additions to profits for the year amounted to $\$ 337,115,000$ and were $\$ 8,022,000$ less than for the year before. On June 30 the aggregate capital and surplus of the banks which, although not a complete measure of their invested capital, may be taken as indicating the comparative levels of the capital investment, amounted to $\$ 3,700,000,000$, and was more than $\$ 70,000$,000 larger than on June 30, 1923, notwithstanding a decline in the number of reporting banks. The decrease in the rate of return on invested capital was therefore the result of a small decrease in net profits and a small increase in total capital and surplus.

Net profits declined despite an increase of $\$ 59,000,000$ in gross earnings, because expenses increased and because net losses charged off also increased. Total expenses for 1924 were $\$ 64,000,000$ higher than in 1923 and net losses, by which is meant the difference between total losses written off and recoveries on assets previously charged off, were $\$ 3,000,000$ higher. The increase in net losses for the year was not due to any increase in the amount of losses actually written off during the year, for these declined $\$ 15,000,000$, but to a decrease of $\$ 18,000,000$ in offisetting recoveries. The chart shows the amount and distribution of gross earnings for each of the last six years.

Gross earnings, expenses, and net losses reached their high point for the period in the fiscal year 1921. Throughout the six years variations in the amount of net addition to profits have been relatively small in comparison with changes in the other items. There have been marked fluctuations, however, in the rate of profit on invested capital, which was 12.83 per cent in 1920 and 8.56 per cent in 1922.

The gross earnings of member banks are made up chiefly of interest and discount received. This portion of their income amounted to about 87 per cent of the total in the fiscal year 1924 and has averaged somewhat higher than this over the past six years. The remainder of their income comprises relatively small amounts of commissions, and exchange and collection charges, together with additional amounts unclassified in the reports. Commissions and exchange and collection charges, together, have represented in recent years about 2 per cent of gross earnings.

Of the total gross earnings of member banks in 1924, expenses absorbed 72 per cent. Total losses amounting to 11.6 per cent of gross earnings were partially offset by recoveries, so that net losses amounted to 8.7 per cent. Thus total deductions from gross earnings on account of expenses and net losses combined amounted to 80.7 per cent, leaving 19.3 per cent of the banks' gross income as net profit. The chart exhibits an analysis of gross earnings for the year.
distribution of member bank earnings

Of the total expenses, almost one-third went for salaries and wages, and somewhat less than half for interest paid out on the bank's funds, the greater part of the latter being interest paid on deposits. The remainder of the expenses represented the payment of taxes and unclassified costs. The amount of interest paid on deposits represented, in 1924, 2 per cent of the average amount of total deposits, as compared with 1.84 per cent in 1919. Over the same period time deposits, on which the
higher rates of interest are paid, increased from 18.3 per cent of total deposits to 31.1 per cent.

In 1924 about 68 per cent of the total losses which the banks sustained were losses on loans and discounts, as compared with 74 per cent in 1923; and 17 per cent were losses on securities, which compares with 14 per cent in 1923. Comparison of the losses on loans and discounts with the average amount of loans and discounts outstanding shows that, on the average, for every thousand dollars of loans the banks sustained losses amounting to $\$ 7.20$ in 1924 and $\$ 8.80$ in 1923. In the case of securities, the banks' losses averaged $\$ 4.40$ in 1924 and $\$ 3.90$ in 1923 for every thousand dollars of investment holdings.

In the following table are presented the amounts of significant items of income, expense, and loss, and the same items expressed as percentages of the average volume of the banks' loans and investments, which in 1924 was $\$ 26,800,856,000$, and in 1923 about 4 per cent less than that amount. The table indicates an average rate of return on the earning assets of the banks of $\$ 6.50$ per hundred dollars in 1924 and practically the same in 1923. The increase in gross earnings of member banks in 1924 was therefore due almost entirely to the larger volume of their loans and investments. The average rate of gross return on earning assets does not reflect exactly the interest rates actually realized by the banks since there is a small portion of their earnings which is not in the nature of interest or discount. The actual rates at which funds were loaned, as reflected in that portion of the earnings which consisted entirely of interest and discount, averaged $\$ 5.63$ per hundred dollars in 1924 and $\$ 5.60$ in 1923.

Analysis of Member Bank Earnings, Years EndING JUNE 30, 1924 AND 1923

The statement shows that in 1924, after deducting from gross earnings of $\$ 6.50$ per hundred dollars of earning assets, total costs (including losses) amounting to $\$ 5.24$, a margin of net profit remained amounting to $\$ 1.26$ per hundred dollars of earning assets. In 1923 the margin of profit was $\$ 1.34$. The decline of $\$ 8,000,000$ in net addition to profits was the result of the smaller margin of profit per unit of earning assets in 1924 not entirely offiset by the growth in the volume of these assets.

Comparison between the capital investment and the amount of earning assets shows that the loans and investments increased more rapidly than the capital and surplus, so that for every $\$ 100$ of banking investment in 1924 there were $\$ 724$ of earning assets, as compared with $\$ 710$ in 1923. This increase accounts for the fact that the rate of profit on invested capital declined butslightly despite the narrower margin of profit per hundred dollars of earning assets. The relation between the margin of profit per unit of earning assets and the ratio between earning assets and invested capital is brought out by the following table. It will be noted that in 1924 the margin of profit per hundred dollars of earning assets was almost exactly the same as in 1922, and that it was because of a larger volume of assets per dollar of invested capital that the rate of return was larger in 1924. It will be noted also that the average earning assets were relatively largest in 1920 , which was also the year of maximum addition to profits.
Profits of Member Banks in Relation to Earning Assets and Invested Capital, 1919-24
[Amounts in thousands of dollars]

|  | Capital and surplus | Earning assets: | Ratio of earning assets to capital and surplus | Net profits | Profit per $\$ 100$ of earning assets | Rate of return on capital. and surplus (per cent) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1919. | 2, 776, 490 | 21, 063,372 | 7.59 | 334, 332 | 1. 59 | 12.04 |
| 1920.-- | 3, 193, 337 | 24, 820,716 | 7.77 | 409,608 | 1.65 | 12.83 |

${ }^{1}$ Average of amounts on call dates.
The rate of return on invested capital was higher in 1924 than in 1923 only in the Dallas and San Francisco districts. In both, particularly in the Dallas district, the margin of profit per unit of loans and investments was larger in 1924, chiefly as a result of reductions in losses charged off. In the case of the Dallas district, furthermore, there was a lower rate of expenses
per unit of earning assets. The increased margin of profit, together with a somewhat higher ratio of earning assets to capital and surplus in these districts, accounts for the improved ratios of net profits to invested capital.

The highest rates of earnings on invested capital for 1924 occurred in the New York and Philadelphia districts. Notwithstanding the fact that in these two districts gross income per hundred dollars of earning assets was lower than in the other districts, excepting only Boston, the margin of profit per hundred dollars of assets was larger than in any of the other districts. This was due to the fact that in these two districts costs, including losses, per hundred dollars of earning assets were lower than in the other districts.

In 1924, as in the two preceding years, the rate of profit on the invested capital of member banks was lower in the Minneapolis, Kansas City, and Dallas districts than in any of the other districts. The lowest rate, 1.83 per cent of capital and surplus, was in the Minneapolis district. In the three districts mentioned both the expenses and losses per hundred dollars of earning assets were higher, and the margin of profit lower than in any other part of the country.
The following table presents the data relative to member bank earnings and expenses for the years ending June 30, 1923 and 1924, classified by districts and comparable with figures for earlier years published in the Federal Reserve Bulletin for July, 1924.

ABSTRACT OF EARNINGS AND DIVIDENDS REPORTS OF ALL MEMBER BANKS, BY FEDERAL RESERVE DISTRICTS, FOR THE YEARS ENDING JUNE 30, 1923 AND 1924
[Amounts in thousands of dollars]

## NATIONAL BANK NOTE CIRCULATION

Retirement of 4 per cent bonds of 1925.-The Secretary of the Treasury has announced that $\$ 118,489,900$ of 4 per cent United States bonds payable on February 1, 1925, will be redeemed on that date. Over $\$ 76,000,000$ of these bonds were on deposit in the Treasury to secure national bank notes on October 31, 1924, and their redemption will necessarily result in some reduction in the circulation of these notes, since there will not be enough bonds bearing the circulation privilege outside the Treasury to replace those redeemed. Only about $\$ 11,000,000$ of such bonds will be left outstanding in the market after the withdrawal of the 1925 issue.

The anticipated reduction of national bank circulation by $\$ 65,000,000$ or more is about 10 per cent of the total of notes outstanding. The bulk of these are secured by 2 per cent consols payable in 1930 and a small part by Panama Canal bonds callable at any time and payable in 1936 or 1938. The table below shows the volume of bonds bearing the circulation privilege outstanding and the volume on deposit to secure national bank notes in 1914, in 1917, and in 1924:

Bonds Bearing the Circulation Privilege

1 Including $\$ 63,945,460$ of the 3 per cent loan of 1908-1918, which was retired in August, 1918.
${ }^{2}$ Including $\$ 21,447,180$ of the 3 per cent loan of $1908-1918$, which was retired in August, 1918.

While the total of outstanding bonds bearing the circulation privilege has diminished markedly since 1914 , the volume used to secure national bank notes, after a decline between 1914 and 1917, increased steadily after 1917 by about $\$ 13,000,000$ a year to an amount in 1923 somewhat greater than that of 1914 , followed by a slight decrease in 1924 . The proportion of bonds outstanding and also
available as security for increased circulation has accordingly grown less and less. The bulk of the consols and Panamas were already out of the market before 1917, and most of the remainder, together with nearly half of the 4 per cents, have been purchased by national banks since that date.

Recent growth of national bank note circu-lation.-The increase in national bank note circulation since 1917 is coincident with a rapid growth in the number and capital stock of all national banks, which began in that year and became more marked in 1919. The number of banks increased by about 10 per cent from 1917 to 1923 and their capital by 20 per cent over the same period. Although national bank circulation has not kept pace with this growth in the number and resources of national banks, it has been rapidly approaching the maximum possible issue on the basis of the volume of bonds available as security. While the law permits the issue of circulation to 100 per cent of the capital stock of national banks, the volume of bonds bearing the circulation privilege actually makes possible a note issue of not more than 56 per cent of the banks' present capital. The scarcity of these bonds has recently been the limiting factor in the increase of national-bank notes and, as we have seen, will result in some actual reduction in their volume after February 1. With the increased purchases of the circulation bonds by the banks their prices have tended upward over the past six years, at times even in the face of generally falling bond prices, and the profit earned by the banks on circulation based on newly acquired bonds has accordingly declined. The comptroller's estimate of profit earned on bank-note circulation has always been small, and on the basis of the prices of the 4 s in the summer of 1923 approached close to zero. This indicates that other factors than direct and immediate profit have largely actuated the national banks in increasing their note issues.

Geographical distribution of total bank-note circulation.-The distribution of the total circulation among different districts and groups of banks indicates the varying importance attached to the privilege of note issue by national banks in each district. The following table shows the amount and proportion of all notes outstanding which have been issued in each Federal reserve district and the ratio of the circulation to the capital stock of the national banks in each district in 1917 and in 1924:

Distribution of National Bank Note Circulation

| Federal reserve district | Amount of notes outstanding (000 omitted) June 30, 1924 | $\stackrel{\text { Per }}{\text { cent of }}$ total | Ratio of circulation to capital on- |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | $\begin{gathered} \text { June } 30 \\ 1924 \\ \text { (per } \\ \text { cent) } \end{gathered}$ | $\begin{aligned} & \text { May 1, } \\ & 1917 \\ & \text { (per } \\ & \text { cent) } \end{aligned}$ |
| Boston | \$52, 783 | 7.2 | 48.5 | 51.2 |
| New York | 96, 170 | 13.2 | 37.4 | 40.1 |
| Philadelphia | 58,706 | 8.1 | 61.0 | 72.3 |
| Cleveland. | 99,313 | 13. 6 | 77.7 | 70.6 |
| Richmond | 63, 539 | 8.7 | 68.3 | 69.6 |
| Atlanta. | 43,680 | 6.0 | 69.3 | 78. 1 |
| Chicago. | 91,703 | 12.6 | 50.4 | 50.7 |
| St. Louis | 43,321 | 5.9 | 61.3 | 64.9 |
| Minneapolis | 32,830 | 4.5 | 51.7 | 50.8 |
| Kansas City | 43, 679 | 6.0 | 49.5 | 64.7 |
| Dallas. | 47, 170 | 6.5 | 58.1 | 68.9 |
| San Francisco | 56, 292 | 7.7 | 55.6 | 60.3 |
| Total | 729,186 | 100.0 | 54.7 | 59.0 |

Banks in the New York, Cleveland, and Chicago districts have issued the largest percentages of the outstanding circulation and the St. Louis and Minneapolis districts the smallest, but the proportion of legally allowable circulation issued is differently distributed. The New York district's large share of the circulation is due simply to its large proportion of the banking capital of the country, notes to only 37 per cent of their capital having been issued by its national banks. The Cleveland district, on the other hand, has a large issue relative both to the total for the country and to the amount of national banking capital in the district. The Atlanta and Richmond districts also have large issues in proportion to their capital, although small shares of the total circulation. In the case of the Cleveland district rapid increases in circulation in recent years have more than kept pace with increases in the capital stock of national banks in that district. In all other districts circulation has lagged behind capital and has actually declined in the Kansas City and San Francisco districts.

A further analysis of the distribution of national bank circulation may be made on the basis of the different geographical divisions and the reserve city and country banks within those divisions. The following table is made up from the June 30, 1924, abstract-of-condition reports:

Distribution of Bank Notes Between Country and Reserve City Banks

|  | Per cent of total cir- <br> culation <br> by issued | Ratio of circulation to cepital |
| :--- | ---: | :---: | :---: | :---: | :---: |
| stock |  |  |

It will be observed that circulation is distributed among these sections pretty evenly in proportion to their banking capital, the Middle Western and Pacific States having issued somewhat more and the New England and Eastern States somewhat less than their share of notes on the basis of their capital stock. In each district the country banks have issued the greater part of the circulation, varying from 91 per cent in New England to 53 per cent in the Pacific States. Of the total, 70 per cent is the issue of country banks. This is not because the majority of the banking capital of the country belongs to country banks, as may be seen by comparing the ratio of circulation to capital in the different groups of banks. The country banks have issued notes to 70 per cent of their capital, the reserve city banks to only 37 per cent. The difference between the different sections of the country in this regard is more marked in the case of reserve city than of country banks. The reserve city banks in the Southern States have circulation amounting to nearly 60 per cent of their capital and those in New England to only 12 per cent, while the country banks in each of these sections have issued notes to about 70 per cent of their capital. The discrepancy is probably partly to be accounted for by the arbitrary classification of banks as reserve city or country banks, which throws those of the same size and character in different sections into different groups. Boston is the only reserve bank city in New England and its banks issue an unusually small
volume of notes compared with those in other cities of equal size. The only certain conclusion from these figures seems to be that the banks in smaller towns have taken greater adrantage of the circulation privilege than have the banks in larger centers. It is evidently of rather slight importance to the large city banks.

Distribution of circulation secured by 4 per cent bonds.-Of more immediate interest is the distribution of the circulation which will be canceled in February as a result of the redemption of the 4 per cent bonds. The following table shows the proportion of these notes issued by banks in the various Federal reserve districts and the percentage which they bear to the total issues of these banks and to the total issue of all national banks in the various districts. The figures of total circulation and of holdings of 4 per cent bonds are not available for the same dates but the difference is not sufficient to affect their relationship materially.

Distribution of National Bank Notes Secured by 4 Per Cent Bonds

| Federal reserve district | Amount of 4 per cent bonds owned by national banks March 15,1924 | Per cent distribu. tion | Total circulation of banks owning 4 per cent bonds Oct. 31, 1923 | Ratio of 4 per cent bonds to total circulation of these banks (per cent) | Total circulation of all national banks June 30, 1924 | Ratio of 4 per cent bonds to total national bank note circulation (per cent) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Bosto | \$6, 633, 000 | 7.6 | \$9, 497, 797 | 69.8 | 52, 783, 000 | 12.6 |
| New York | 19, 704, 400 | 22.6 | 32, 951, 352 | 59.8 | 96, 170, 000 | 20.5 |
| Philadelphi | 5, 868, 500 | 6.7 | 9, 245, 333 | 63.5 | 58, 706, 000 | 10.0 |
| Cleveland | 18, 337, 800 | 21.0 | 37, 336, 508 | 49.1 | 99, 313, 000 | 18.5 |
| Richmond | 5, 886, 750 | 6.8 | 10, 667, 750 | 55.2 | 63, 539, 000 | 9.3 |
| Atlanta. | 3,071, 000 | 3.5 | 5, 562, 045 | 55.2 | $43,680,000$ | 7.0 |
| Chicago | 10, 975, 300 | 12.6 | 20, 441, 216 | 53.7 | 91, 703, 000 | 12.0 |
| St. Louis | 4, 146, 000 | 4.8 | 7, 131, 581 | 58.1 | 43, 321,000 | 9.6 |
| Minneapolis | 3, 842,500 | 4. 4 | 7,883, 895 | 48.7 | 32, 830, 000 | 11.7 |
| Kansas City | 1,646, 500 | 1.9 | 3, 080, 947 | 53.4 | 43, 679, 000 | 3.8 |
| Dallas.- | 1, 443, 500 | 1.7 | 5,993, 794 | 24.1 | 47, 170, 000 | 3. 1 |
| San Francisco.- | 5, 599, 900 | 6.4 | 6,986, 793 | 80.1 | 56, 292, 000 | 10.0 |
| Total | 87, 155,150 | 100.0 | 156, 779, 011 | 55.6 | 729, 186,000 | 12.0 |

The majority of the 4 per cent bonds secure the circulation of banks in the New York, Cleveland, and Chicago districts, the same districts which have issued the majority of national bank note circulation. The New York and Cleveland districts will experience the greatest proportional contraction of national-bank currency upon the redemption of these bonds, about 20 per cent, while in other districts it will vary from 3 to 13 per cent. Taking only the banks which own 4 per cent bonds, however, about the same proportion of their issues will be withdrawn in
most districts, 50 to 60 per cent, with the exception of Dallas and San Francisco, where the proportion is 24 and 80 per cent, respectively. These ratios result from totaling figures for banks in widely different condition as regards circulation, however. In the case of certain banks, their entire note issue will be canceled when the 4 per cent bonds are retired, while others will lose only a small share of their circulation.

An analysis of the circulation of banks which hold the 4 per cent bonds, classified by size of capital, indicates both that it is the smaller banks which have the largest note issues in proportion to their capital and that it is likewise the smaller banks which have the largest share of their circulation secured by 4 per cent bonds. The following table shows the distribution of these bonds and of total circulation among these banks, which represent about 20 per cent of the circulation and capital of all national banks:

Distribution of Circulation Among Banis Holding 4 Per Cent Bonds

|  | Total circulation |  | 4 per cent bonds |  | Ratio of 4 per bonds to total circu(percent) | Ratio of total circula tion to capital (per cent) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Volume | Per cent | Volume | $\begin{gathered} \text { Per } \\ \text { cent } \end{gathered}$ |  |  |
|  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
| \$50-\$99,000...- | 52, ${ }^{\mathbf{5}, 790,672}$ | 3.7 | 3, 819,750 | 4.4 | 6.8 | 82.1 |
| \$100-\$499,000- | 37,041, 124 | 23.6 | 21,764, 750 | 25.0 | 58.8 | 85.2 |
| \$500-\$999,000- | 17, 104,997 | 10.9 | 9,239,500 | 10.6 | 54.0 | 73.9 |
| $\$ 1,000,000$ and over........ | 94, 472,821 | 60.3 | 50, 437, 100 | 57.9 | 53.4 | 45.8 |
| Total | 156, 779,011 | 100.0 | 87, 155, 150 | 100.0 | 55.6 | 55.5 |

It will be observed that the ratio of notes issued to capital stock is similar in the case of all classes of banks of less than $\$ 500,000$ capital, over 80 per cent, and that there is a marked decline in the ratio for banks of larger size than that. Banks evidently do not find it desirable to increase their circulation in proportion to their capital, as they rise above the $\$ 500,000$ class. The proportion of circulation based upon the 4 per cent bonds, on the other hand, is not very different for the various classes of banks of over $\$ 100,000$ capital, varying between 50 and 60 per cent, while the smallest banks have 80 per cent of their circulation secured by these bonds. This is not surprising in view of the large purchases of the 4's in recent years, probably to a consider-
able extent by newly established banks. It remains true, nevertheless, that the bulk of the notes secured by the 1925 bonds, as of all notes, are the issue of the larger banks.

Effect of reduction of bank notes upon currency system. - The reduction of the bank note circulation affects not only the national banks themselves, but their relation to the Federal reserve banks and the currency system of the country. The volume of national bank notes to be retired as the result of the bond redemptions in February is small in relation to the total monetary circulation of the country, less than 2 per cent; the $\$ 72,000,000$ of Panama bonds which are callable at any time secure notes amounting to about $11 / 2$ per cent more. The whole national bank note circulation equals about 15 per cent of all money in circulation, slightly less than the volume of gold certificates in circulation, and has been steadily increasing. The importance of the notes is less a matter of their volume than of their method of issue, and the processes through which they may be replaced by other forms of currency. The Federal reserve act contemplated a reduction in the national bank note circulation through the voluntary action of the national banks and their temporary replacement by Federal reserve bank notes secured by the same class of bonds, which the Federal reserve banks might purchase either from national banks at par or in the open market. The reserve banks were to purchase not more than $\$ 25,000,000$ of bonds a year, if so required by the Federal Reserve Board. The 2 per cent bonds were below par in the market from 1915 to 1919 and only $\$ 10,000,000$ of them were ever purchased from the national banks and some $\$ 60,000,000$ in the market, most of which were converted into 3 per cent conversion bonds and Treasury notes without the circulation privilege.

Except for the large temporary issues of Federal reserve bank notes to replace silver certificates under the Pittman Act, only $\$ 12,000,000$ of these were ever issued and provision has been made for the redemption of practically all of them at the present time. With the bonds at a considerable premium above par and a growing demand for them by national banks in comparison with the limited supply, it is improbable that any of them will be offered at par to the reserve banks by the national banks much before maturity.
With this reduction in the circulation bonds the gap in the monetary circulation of the country left by the cancellation of national bank notes may be filled either by gold cer-
tificates or Federal reserve notes, our only paper currencies which are capable of expansion. In whatever form the currency is issued it will have to be obtained from the Federal reserve banks, causing either an increase of discounts at these banks or of their acceptance or security holdings. The effect on the general credit situation will be slight, however, since the increased demand for reserve bank credit will arise only gradually as the outstanding national bank notes are presented for redemption. The immediate procedure, on the date of redemption of the 4 per cent bonds, will be a cancellation of the bonds and an assumption by the Treasury of the liability for the outstanding notes. Since the currency to take the place of the retired notes will be supplied by the Federal reserve banks, the ultimate effect will be an increase in the earning assets of these banks and the substitution of an elastic for an inelastic portion of the total money in circulation.

## State Banks and Trust Companies

The following list shows the State banks and trust companies which were admitted to membership in the Federal reserve system during the month ended November 21, 1924, on which date 1,579 State institutions were members of the system:

ADMISSIONS

Change of title and location.-The Bank of Castleford, Castleford, Idaho, has changed its title to the Security State Bank, and its location to Buhl, Idaho.

## New National Bank Charters

The Comptroller of the Currency reports the following increases and reductions in the number and capital of national banks during the period from October 18 to November 21, 1924, inclusive:

|  | Number of banks | Amount of capital |
| :---: | :---: | :---: |
| New charters issued. | 11 | \$645, 000 |
| Restored to solvency | 0 | - 0 |
| Increase of capital approved | 13 | 1,400,000 |
| Aggregate of new charters, banks restored to solvency, and banks increasing capital | 24 | 1,785, 000 |
| Liquidations. | 23 | 2,075,000 |
| Reducing capital | , | 100, 000 |
| Total liquidations and reductions of capital -- | 24 | 2,175,000 |
| Consolidations of national banks under act of Nov. $7,1918 .$ | 0 | 0 |
| Aggregate increased capital for period |  | 1,785,000 |
| Reduction of capital owing to liquidations, ete |  | 2, 175,000 |
| Net decrease |  | 390, 000 |

## Fiduciary Powers Granted to National Banks

During the month ended November 22, 1924, the Federal Reserve Board approved applications of the national banks listed below for permission to exer-
cise one or more of the fiduciary powers named in section 11 (k) of the Federal reserve act as amended, as follows: (1) Trustee; (2) executor; (3) administrator; (4) registrar of stocks and bonds; (5) guardian of estates; (6) assignee; (7) receiver; (8) committee of estates of lunatics; (9) in any other fiduciary capacity in which State banks, trust companies, or other corporations which come into competition with national banks are permitted to act under the laws of the State in which the national bank is located.

| Place | Dise trict No. | Name of bank | Powers granted |
| :---: | :---: | :---: | :---: |
| Portland, Conn | 1 | First National Bank | 1 to 9 |
| Bangor, Me... | 1 | Merchants National Bank. - | 1 to 9 |
| Wellesley, Mass | 1 | Wellesley National Bank..-- | 1 to 9 |
| Plymouth, N. H...- | 1 | Pemigewasset National Bank. | 1 and 4 |

## ESTIMATE OF PRODUCTION OF CROPS, BY FEDERAL RESERVE DISTRICTS

On the basis of the November estimates by the Department of Agriculture, the following table has been prepared showing the production
of leading crops in the different Federal reserve districts. A discussion of agricultural conditions in each district is given on page 910.
[In thousands of units]

[^6]
## BUSINESS STATISTICS

## INDUSTRIAL STATISTICS IN THE UNITED STATES

Increasing industrial activity, in many respects similar to the sharp recovery in the fall of 1922, has been indicated by business statistics of recent months. In fact, the seasonally adjusted index of production has moved with remarkable similarity in the two periods and recent employment figures have had some traits in common with those of two years ago. The accompanying table shows the movements of certain indexes from July to October, 1922 and 1924. By industries, the analogy between 1922 and 1924 is not so complete, but in iron and steel movements were remarkably similar. Others, such as wool, leather, and shoes, have moved in a like manner, although from somewhat lower levels and at a faster rate than in 1922. On the other hand, the minerals have risen either less rapidly than two years ago or have steadily maintained a higher level of output. The same is generally true of the building materials.

Index Number Comparisons, 1922 and 1924

| Month | Basic production ${ }^{1}$ |  | Manufacturing |  | Employment |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1924 | 1922 | 1924 | 1922 | 1924 | 1922 |
| July. | 94 | 95 | 97 | 103 | 87 |  |
| August | 94 | 95 | 104 | 111 | 87 | 88 |
| Soptember | 103 | 100 | 112 | 106 | 90 | 91 |
| October-... | 109 | 107 | 121 | 118 | 91 | 95 |

${ }^{1}$ Adjusted for seasonal variations.

Mineral output in October rose considerably and the index reached 132, the largest figure since January. Thegreatest part of this rise was due to bituminous coal, but all components of the index except anthracite increased in October. A rise in the agricultural index in October to a high point for the year is seasonal, but this year it reached a new high record for the post-war period of 186, caused by a remarkably heavy cotton movement accompanying unusually large receipts of wheat at Duluth. Other components moved practically in accordance with seasonal expectations, although fruit shipments did not reach the high level of October, 1923.

Individual manufacturing industries showed substantial increases between September and October. The basic production index with adjustments for seasonal increases rose 6 per cent and the more complete but unadjusted manufacturing index advanced over 7 per cent. The greatest growth was in cotton and wool consumption and pig-iron production-over 20 per cent in each case. Output of steel ingots, lumber, sole leather, and shoes increased approximately 10 per cent. Automobile output fell off slightly, whereas the manufacture of tires and tubes was a little greater. The production of tobacco and food products, cement, and crude petroleum increased by a little less than the usual seasonal trend.

INDEX OF EMPLOYMENT IN MANUFACTURING INDUSTRIES 1
[Not adjusted for seasonal variations. Monthly average, 1919=100]

${ }^{1}$ This table contains for certain months the index numbers of employment, together with group indexes for its important industrial components* The general index is a weighted average of relatives for 33 individual industries. The method of construction was described in detail and indexes for the above groups since January, 1910, were published on pages 1272-1279 of the Bullerin for December, 1923.

${ }^{1}$ This table contains for certain months the index numbers of production in basic industries which are shown in the chart at the bottom of page 907, together with the series of relatives used in constructing the index. In making the final index the relatives are adjusted to allow for seasonal fluctuations and are weighted. The methods of construction were described in detail and all relatives for each series since January, 1913, were published on pages 1414-1421 of the BULLETIN for December, 1922 .

# PRICE MOVEMENTS IN PRINCIPAL COUNTRIES 

## federal reserve board wholesale price indexes

Wholesale prices in October, according to the Federal Reserve Board's index numbers, rose 1.5 per cent in the United States, 1.7 per cent in England, 1.3 per cent in France, and 1.5 per cent in Canada. When these indexes are converted to a gold basis by making allowance for the depreciation of the foreign currencies in terms of the dollar, they indicate a rise in prices of 1.9 per cent in England, while in France prices remained unchanged. Compared with October, 1923, prices are 2.9 per cent lower in the United States, while they are 5.6 per cent higher in England, 9.2 per cent higher in France, and less than 1 per cent higher in Canada.
In the United States all groups rose except producers' goods, which fell 1.1 per cent. Domestic goods advanced 1.5 per cent on higher quotations for grain, cotton, cattle, and hogs. Imported goods rose 2.2 per cent, reflecting higher prices for wool, hides, rubber, burlap, tea, and coffee. The 2.1 per cent advance in export goods resulted chiefly from the rise in grains, cotton, cotton cloth, coffee, and flour.

Under the grouping, by stage of manufacture, raw materials rose 2.4 per cent, producers' goods fell 1.1 per cent, and consumers' goods rose 1.7 per cent.
In England, France, and Canada, as in the United States, the price advances were widely distributed among the various commodity groups. These movements reflected in general higher prices for foods, such as wheat, wheat flour, lard, tea, and coffee, and for basic materials, especially textiles, such as cotton, wool, hemp, and jute, and for rubber and hides.
In England all groups rose, the largest advance in imported goods amounting to 2.7 per cent. In France all groups advanced, except producers' goods, which remained unchanged. The greatest rise was in imported goods which advanced 3.4 per cent. In Canada prices of raw materials advanced, but those of semimanufactured products and of consumers' goods declined somewhat. A considerable advance amounting to 6.3 per cent, was shown for export goods.
FEDERAL RESERVE BOARD WHOLESALE PRICE INDEXES

The tables below give the all-commodities and group index numbers of wholesale prices in the five countries included in the Federal Reserve Board's indexes. In the first table the all-commodities index for each country is shown both in terms of paper currency and
converted to a gold basis. The latter figure takes into account the depreciation of the foreign currency in terms of the American dollar (or gold) and the series indicates relative price levels in the several countries when all prices are expressed in dollars.

[^9]WHOLESALE PRICES IN THE UNITED STATES INDEX OF THE BUREAU OF LABOR STATISTICS
$[1913=100]$

WHOLESALE PRICE LEVELS IN PRINCIPAL COUNTRIES
all.commodities idex numbers

1 First of month figures.
The foreign index numbers of wholesale prices are cabled to the Federal Reserve Board by the various foreign statistical offices. Index numbers of commodity groups for most of the countries are also available in the office of the Division of Research and Statistics of the board, and may be had upon request.
Wherever possible the indexes have been shifted from original bases to a 1913 base. Further information as to base periods, sources, number of commodities, and period of the month to which the figures refer may be found on page 48 of the January, 1924, issue of the Bulletin.

## CONDITION OF MEMBER BANKS AS OF OCTOBER 10, 1924

Loans and investments of all member banks increased $\$ 1,189,000,000$ between June 30 and October 10, 1924, and aggregated \$28,451,000,000 on the latter date. This total is the largest ever reported and is $\$ 5,032,000,000$ above the total reported on March 10, 1922, the low point of the post-war period. Although increases as compared with June 30 are reported for all Federal reserve districts, the increase in the Minneapolis district was especially marked, while those for the Richmond, Atlanta, St. Louis, Kansas City, and San Francisco districts were relatively small. The total increase in loans and discounts amounted to $\$ 556,000,000$, while investments went up $\$ 633,000,000$. Total deposits increased $\$ 1,242,000,000$ to $\$ 30,772,000,000$. Over one-half of this increase was in amounts due to banks. Demand deposits increased $\$ 421,000,000$, time deposits $\$ 394,000,000$, and United States deposits $\$ 123,000,000$, while certified and cashiers' checks outstanding show a decline of $\$ 331,000,000$. The accompanying
tables present figures reflecting the condition of state bank and trust company members and of all member banks on October 10, 1924.

The following statement shows changes in the principal resources and liabilities of all member banks on the last call date as compared with figures for June 30, 1924, and for September 14, 1923:

comparison between the rates charged during 1924 and rates charged at earlier periods，it should be borne in mind that the earlier rates refer to an entire month，while the latest figures cover only a week．Atten－ ion is also called to the fact that the method of reporting the rates has been somewhat modified and that slight changes in the rates may reflect these modifications．
