## SUBSCRIPTION PRICE OF BULLETIN

The Federal Reserve Bulletin is the board's medium of communication with member banks of the Federal reserve system and is the only offieial organ or periodical publication of the board. The Bulletin will be sent to all member banks without charge. To others the subscription price, which covers the cost of paper and printing, is $\$ 2$. Single copies will be sold at 20 cents. Outside of the United States, Canada, Mexico, and the insular possessions, $\$ 2.60$; single copies, 25 cents.

## FEDERAL RESERVE BULLETIN

Vol. 14
DECEMBER, 1928

## REVIEW OF THE MONTH

In recent weeks the volume of member bank credit increased, reflecting the renewed growth of loans on securities. Demand
Recent course of bank credit. for loans for commercial and industrial purposes reached its seasonal peak at the end of October and declined somewhat in November, and the banks also further reduced their holdings of investment securities. Collateral loans, however, which include loans to brokers and dealers in securities, showed a rapid increase in November, accompanying the growth in the volume of transactions on the stock exchange and the continued rise in security prices. The recent increase in security loans, which for the past three months has amounted to over $\$ 500$,000,000 at member banks in leading cities, has carried the total to a level above the maximum reached last summer. The total volume of member bank credit, however, as measured by the reports of these banks, is still considerably below the midyear level, as the result of liquidation of security holdings by the member banks. The volume of reserve bank credit outstanding in November was larger than in the summer, owing largely to the seasonal demand for currency, but in consequence of large purchases of acceptances in the open market by the reserve banks, member bank indebtedness to the reserve banks declined to the lowest point since last May. In the early part of December, however, a loss of gold and the seasonal demand for currency resulted in a rapid increase in member bank borrowing, and money rates, which had eased somewhat in the preceding weeks, rose to the highest level since 1921.

Condition reports for all member banks of the reserve system as of October 3, 1928, show a decrease in loans and invest-
Condition of all ments of about $\$ 130,000,000$ member banks. during the third quarter of 1928. ${ }^{1}$ The following table shows the principal items of the condition statement and the changes for the quarter and for the year:

For the year ended on October 3, 1928, the growth in member bank credit amounted to $\$ 1,744,000,000$, or 5.3 per cent. For the last quarter, however, there was a decrease of $\$ 132,000,000$, entirely in the banks' investments. Net demand deposits decreased for the year, while time deposits increased by $\$ 950,000,000$. During the last quarter there were decreases both in demand and time deposits. Owing to the decline in demand deposits, which carry higher reserve requirements, reserve balances of member banks, notwithstanding the large growth in total depos-

[^0]its, showed little change for the year. The much larger growth of loans and investments than of deposits for the year, which reflected chiefly the withdrawal of gold for export, accounted for the large increase in member bank indebtedness at the reserve banks.

A reduction in bank credit, particularly at this season of the year is an unusual occurrence, as is indicated by the
Decline in chart, which shows the course credit at New
York banks. York banks. of member bank credit for the past nine years. Declines in the volume of credit have been infrequent during the years shown in the chart, the year 1921

being the only one in which liquidation was considerable and continuous. Ordinarily bank credit has expanded from quarter to quarter in conjunction with the growth of the country's business, and occasional declines have occurred as a rule only from seasonal high peaks reached at the end of a calendar or fiscal year. The recent decline is measured from the high figure reported for the end of the fiscal year ended
last June, but usually the third quarter, during which occurs a seasonal demand for credit and currency in connection with autumn trade and crop marketing, shows a net growth in the volume of bank credit. For this reason an analysis of the decline in credit between June 30 and October 3 may be of interest.

All Member Banks
[In millions of dollars]

Reduction in the volume of member bank credit during the quarter was entirely at banks in New York City, while the combined total for the other banks, and particularly for the so-called country banks located outside reserve cities, increased for the period. At banks in New York City there was a decrease both in loans and in investments, while outside of New York City the banks increased their loans but reduced their holdings of investments. Holdings of United States securities showed considerable increases in all classes of member banks, while holdings of other investments declined throughout the system, the aggregate decline being in excess of $\$ 300,000,000$. The figures indicate that the pressure of higher money rates, which have been in effect during the quarter, has been an influence in inducing member banks throughout the country to dispose of a part of their holdings of municipal and corporate securities and that banks in New York City, where rates have shown the greatest advance, have reduced both their investments and their loans.

The decline in loans at New York banks, indicated by the reports of member banks for the third quarter, was accompanied by a growth of loans extended through these
Growth of non- banks by corporations and individuals. During the period of low money rates from 1922 to 1927 securities were floated by corporations in exceptionally large volume, and the proceeds of these flotations not only strengthened the cash position of the corporations and enabled them to reduce their bank loans but also placed at their disposal funds in excess of their current requirements. The high money rates prevailing in recent months on loans in the security markets have attracted large amounts of these surplus funds, with the consequence that loans to brokers for the account of 'nonbank customers increased very rapidly during the last quarter.

One of the effects of this transfer of lending from banks to corporations has been a decline in bank deposits as the deposi-
Bank creditand tors have drawn on their balbank reserves. ances to provide funds for the loans. The decline in deposits, in turn, has been a factor in diminishing reserve requirements of member banks. Loans to brokers by corporations, therefore, have had the incidental effect of supplying credit for the use of the stock market while at the same time releasing member bank reserves. The growth of bank reserves in general has been relatively slow in recent years and has fallen far behind the rate of growth in bank credit. A chart is here introduced showing the course of bank credit and of bank reserves since 1919. The lower line represents member bank reserve balances, and the dotted line represents these balances multiplied by 13 , the average ratio of member bank credit to member bank reserves. The two upper lines represent, respectively, loans and investments of member banks and of all banks in the United States. The chart brings the volume of bank credit in the country into comparison with the volume of member bank reserves. The reserves of member banks are related not only
to the credit extended by these banks but also to the credit extended by nonmember banks, which hold a large part of their legal reserves on deposit with the member banks. The chart shows that in recent years, and particularly since 1925, the growth in bank credit has been much more rapid than the growth in member bank reserves, as is indicated by the increasing divergence between the dotted line and the line for loans and investments of member banks.

The total loans and investments of all banks for June dates and of all member banks for all call dates. Member bank reserve balances are shown by months-solid line giving actual amounts and broken line these amounts multiplied by 13.

This development has been due chiefly to the fact that the increase in deposits has taken place largely in time deposits, which has enabled member banks greatly to increase their operations without a corresponding growth in reserve requirements or in the demand for reserve bank credit to meet these requirements. The growth which has occurred in the demand for reserve bank credit since the autumn of 1927 has been caused by gold exports rather than by a growth in member bank reserve requirements.

In recent weeks, however, a growth of loans, both commercial loans and security loans, and of demand deposits, has reReserve bank credit. sulted in an incease in member bank reserve requirements. Average reserves carried by member banks increased by about $\$ 78,000,000$ between August and November. At the same time the seasonal demand for currency caused a further demand of about $\$ 115,000,000$ for reserve bank credit. While these factors of additional demand for reserve bank credit were offset in part by gold imports, largely from England, there was nevertheless an increase of about $\$ 168,000$,000 in the volume of reserve bank credit outstanding. This increase in reserve bank credit, however, was not until December reflected in a growth of member bank indebtedness to the reserve banks, because it had been obtained entirely through the sale of acceptances to the reserve banks. The comparatively low rates carried by bills in the open market have resulted in a large increase in the use made of these bills for financing the marketing of crops and other products, and the much higher rates on other classes of paper have made acceptances unattractive to investors. The bills, therefore, have been offered in large volume to the reserve banks, whose holdings
at the end of November were larger than at any other time in nearly nine years. Purchases of bills by the reserve banks until December were in fact larger than the increase in the total of reserve bank credit, and discounts for member banks declined by the end of November to the lowest level since last spring. This reduction in indebtedness of member banks has placed them in a position more easily to meet the heavy seasonal demand for currency which became active in the beginning of December. When the return flow of currency sets in after the Christmas holidays, the decrease in the demand for reserve bank credit may be expected to result both in a reduction of the reserve banks' holdings of acceptances, as these bills mature, and in a further liquidation of discounts for member banks.

## Appointment of Governor at New York Bank

On November 23, 1928, Mr. George L. Harrison was appointed governor of the Federal Reserve Bank of New York to succeed the late Governor Strong. Mr. Harrison was at one time general counsel of the Federal Reserve Board and since 1920 has held the office of deputy governor of the Federal Reserve Bank of New York.

## EARNINGS AND EXPENSES OF MEMBER BANKS

Combined net profits of all member banks in the Federal reserve system amounted to $\$ 254,000,000$ for the first half of 1928 . These profits represent an increase of nearly $\$ 40,000,000$ over the last six months of 1927 and constitute a return of 9.32 per cent on the banks' capital funds, as against 8.21 per cent for the last six months of 1927 and 9.13 per cent for the first six months of that year. Earnings and expenses of all member banks for 6-month periods since December 31, 1926, are summarized in the table on page 827.

The increase of nearly $\$ 40,000,000$ in net profits for the first half of 1928 resulted from an increase in gross earnings only partially offset by growth in expenses, and a decline in net losses charged off. As a result chiefly of
growth in the volume of member bank loans and investments gross earnings for the first half of 1928 showed an increase of about $\$ 27,000,000$ over the preceding six months. This increase was partially absorbed by an increase of $\$ 10$, 000,000 in expenses. The net amount of assets which were charged off during the period, after allowing for recoveries on assets previously charged off, showed a decrease of more than $\$ 20,000,000$. The decline in losses charged off was largely in losses on loans. Declines in bond values during part of the period were reflected in an increase of $\$ 2,000,000$ in amounts charged off on bonds and securities. During the same period, however, member banks as a group showed an increase of $\$ 4,000,000$ in profits on securities sold (which are reported among their gross earnings).

${ }^{1}$ Total losses charged off less recoveries on assets previously charged off.
Summary for the fiscal year, 1928.-Member banks earned net profits of $\$ 470,000,000$ during the year ending June 30,1928 , an increase of about $\$ 30,000,000$ over the preceding fiscal year. The banks' capital funds, at $\$ 5,362,000,000^{1}$ in 1928, were $\$ 360,000,000$ larger than in 1927, and the increased profits constituted about the same rate of return on capital funds in 1928 ( 8.77 per cent) as was earned in 1927.

Gross earnings showed an increase of about $\$ 125,000,000$ for the year, owing chiefly to a growth of $\$ 2,000,000,000$ in the volume of member bank loans and investments. Of this increase in gross earnings nearly $\$ 90,000,000$ was absorbed by increased expenses attributable in large measure to increase in the amount of interest paid on deposits, in consequence of growth in the volume of deposits, and to increase in salaries and wages. Despite an increase in recoveries on assets previously charged off there was an increase of more than $\$ 5,000,000$ in net losses charged off. ${ }^{2}$

[^1]Earnings and expenses of member banks are summarized in the following table and are shown in somewhat greater detail in the table on page 877 of this issue of the Bulletin.

${ }^{1}$ A verage of amounts from reports of condition for 5 call dates, June 30 , 1927, to June 30, 1928.
${ }^{2}$ Capital, surplus, and undivided profits, less reserve for taxes, interest, etc., accrued.

Operating ratios.-As has already been pointed out, growth during the year in the volume of loans and investments in part explains increases in the amounts of both their earnings and their expenses. In the table following, in which earnings and expenses are expressed as ratios, the effect of this growth in volume is eliminated, and what may be called the earning power of a dollar of active bank assets in 1927 and 1928 may be compared.

Operating Ratios for the Years Ending June 30, 1927 AND 1928

|  |
| :--- |

1 Total loans and investments.
${ }^{2}$ Equivalent to the product of the two preceding ratios, i. e., of the ratios shown for net profits per $\$ 100$ of earning assets and earning assets per $\$ 1$ of capital funds.

During 1928 total interest earned by member banks amounted to $\$ 5.30$ per $\$ 100$ of earning assets (loans and investments) as against $\$ 5.37$ in 1927. This decrease in the rate at which interest was earned, per $\$ 100$ of earning assets, was offset by increase in the rate of other earnings, with the result that gross earnings per $\$ 100$ of earning assets, at $\$ 6.43$, were about the same for 1928 as for the preceding year. Expenses and net losses per $\$ 100$ of earning assets showed practically no change as between 1927. and 1928 and as a consequence net profits in 1928, at $\$ 1.38$ per $\$ 100$ of earning assets, were practically the same as in 1927.

Comparison of averages for the two fiscal years, 1927 and 1928, shows that growth in the capital funds of member banks was at about the same rate as growth in the volume of their loans and investments, so that the proportion between the two showed little change. In 1928 member banks held $\$ 6.37$ of earning assets for each dollar of capital funds. Profits of $\$ 1.38$ per $\$ 100$ of earning assets represented, therefore, a return 6.37 times as large on the banks' capital funds, or 8.77 per cent, which approximates closely the figure, 8.78 per cent, for 1927.

Interest received and interest paid.-Beginning with the last half of 1926, interest, discount, and dividends earned by member banks, together with interest paid on deposits, has
been reported to show separately amounts received on loans, on investments, and on balances with other banks; and amounts paid on time deposits, on demand deposits, and on balances due to other banks. Comparison of amounts of the several classes of interest for the year 1928 with the average amounts on which they were earned or paid indicates approximately the rates that were effective during the year. Ratios computed in this manner are presented in the accompanying table. It should be noted that the average amounts of loans, investments, and deposits derived from figures for five call dates are only approximations to the amounts upon which interest was actually earned and paid during the year.
Interest Earned and Deposit Interest Paid by
Member Banks During the Year Ending June 30, 1928
[Amounts in thousands of dollars]

1 Figures for interest received and interest paid include $\$ 1,334,000$ of interest earned and $\$ 2,310,000$ of interest paid by State banks and not classified on their reports of earnings and expenses. These relatively small amounts have been apportioned, by Federal reserve districts, on the basis of the distribution of the classified amounts.
of thed of the amounts of related assets and deposits for five call dates.

More detailed statistics of member bank earnings and expenses for the years ending June 30, 1927 and 1928, are presented in the tables on pages $877-881$ of this issue of the Bulletin. These and the statistics presented in the preceding summary tables are based upon reports which the banks are required to make semiannually-State banks reporting to the Federal Reserve Board and national banks reporting to the Comptroller of the Currency. ${ }^{\text {. }}$

[^2]
## NATIONAL SUMMARY OF BUSINESS CONDITIONS

Industry continued active in October, and the distribution of commodities was in large volume. Wholesale commodity prices declined sharply, owing chiefly to decreases in the prices of farm products. Member bank credit in use increased in October and November, while reserve bank credit outstanding showed little change. Conditions in the money market were somewhat easier.

Production.-Industrial production continued in October at the high level of September and considerably above the level of a year ago. Output of minerals increased over September, while the production of manufactures declined slightly. Factory employment and pay rolls increased to the highest level since early in 1927. The production of pig iron was particularly large in October and the first half of November, and the output of steel continued in record volume. Automobile production declined considerably in October, after exceptional activity in September, and showed further reduction in November, as is usual at this season. Activity increased in October in meat-packing and in the textile industries, with the exception of silk. Copper mining and smelting continued at a high level, and the output of coal and petroleum increased by more than the usual seasonal amount, while the production of zinc declined. There was also a decline in the output of lumber and building materials.

Building contracts awarded continued to increase in October and were larger than in that month of any previous year, but declined sharply during the first two weeks of November. The increase in October was due principally to large contracts for engineering and industrial projects.

The November cotton crop estimate of the Department of Agriculture was slightly larger than the October estimate and indicated a yield of $14,133,000$ bales- $1,178,000$ more than the production of 1927. Ginnings of the current crop prior to November 14 totaled 11,320,302 bales, compared with $10,894,912$ in the similar period of a year ago. Indicated yields of wheat, corn, oats, potatoes, and tobacco were larger than in 1927 crops, while estimates of hay, rye, and flaxseed were smaller.

Trade.-Department-store sales in October were in about the same volume as in the corresponding period in the preceding year, but
showed somewhat less than the seasonal increase from the high level of September. Inventories of these stores increased during the month, but continued smaller than a year ago. The volume of distribution at wholesale was larger than in September and showed a substantial gain over October, 1927. Freight-car loadings continued larger in October and November than a year ago, reflecting chiefly large loadings of miscellaneous freight.

Prices.-Wholesale commodity prices declined in October after a continuous increase for three months, and the Bureau of Labor Statistics index for October, at 97.8 per cent of the 1926 average, was over 2 per cent below that for September. This decline reflected chiefly large decreases in prices of farm and food products and hides and leather. Prices of industrial commodities increased slightly, with small gains recorded in metals, building materials, and chemicals and drugs. The principal increases occurred in prices of iron and steel, copper, and raw silk. During the first three weeks of November prices of cotton, pig iron, copper, and petroleum increased, and prices of wheat, oats, and rye recovered somewhat from the low levels of October. Prices of meats, livestock, and corn declined.

Bank credit.-Between October 24 and November 21 there was a considerable increase in loans and investments of member banks in leading cities, but at the end of this period the total was still below the large volume outstanding at the middle of the year. Loans chiefly for commercial purposes remained at a high level during the period, and loans on securities showed further growth, reflecting a marked increase in the volume of loans to brokers and dealers in securities. Investments showed further decline.

During the four weeks ending November 21 there was little change in the volume of reserve bank credit in use. Reserve bank holdings of acceptances increased further and discounts for member banks declined.

During the last week of October and the first three weeks of November conditions in the money market were somewhat easier; the rate on four to six months commercial paper declined from a level of $51 / 2$ per cent to a range of from $51 / 4$ to $51 / 2$ per cent, and rates on call and time loans in the open market also declined slightly.

## RESERVE BANK CREDIT

| Total (11 mos.). |  | $-254.3$ | -417.3 | +135.3 | +27.7 |

${ }^{1}$ This figure, derived from preceding columns, represents in general an excess of domestic production over domestic consumption in the arts. reports of gold imports and exports; in any given month furthermore it may be affected by the fact that at the end of a month (a) gold recently imported (e.g., Canadian ore) may not yet have reached a reserve bank or the Treasury for inclusion in the official figures of monetary gold stock and (b) gold recently withdrawn from stock for export may not yet have been actually exported.
${ }^{2}$ Includes effect of earmarking operations connected with gold held abroad by Federal reserve banks.
${ }_{a}$ Preliminary.

GOLD MOVEMENTS TO AND FROM UNITED STATES
[In thousands of dollars]

1 November figures are preliminary-3 customs districts: New York St . Lawrence, and San Francisco.
Includes all movements of unreported origin or destination.

This chart is based on weekly averages of daily figures; latest figures are for week ending November 24

Note.-These tables contain, for certain months, index numbers of industrial production, together with group indexes for important components. The combined index of industrial production is computed from figures for 60 statistical series, 52 of manufactures, and 8 of minerals. ponents. The eombined index of industria production is computed from figures for 60 statistical series, 52 of manufactures, and 8 of minerals. tions, and the individual products and industries have been weighted in accordance with their relative importance. The sources of data and methods of construction were described and monthly indexes for the above groups were published in the Buletin for February and March, 1927.

Note.-This table contains for certain months general index numbers of employment and pay rolls, together with group indexes for important industrial components. The general index is a weighted average of relatives for 34 individual industries. The method of construction was described in detail and indexes for the above groups since January, 1919, were published in the Bulletin for May, 1925 . See also p. 668 cf BULLETIN for September, 1925, for certain revisions.

## NOVEMBER CROP REPORT, BY FEDERAL RESERVE DISTRICTS

[District figures derived from November estimates, by States, made by the Department of Agriculture]
(In thousands of units)

${ }_{2}$ Estimated production of wheat, oats, and hay unchanged from October report.
${ }_{2}^{2}$ Includes 7,000 bales grown in miscellaneous territory.

## FOREIGN BANKING AND BUSINESS CONDITIONS

## BRITISH CURRENCY AMALGAMATION

On November 22 the British Currency and Bank Notes Act of 1928, which was passed on July 2 of this year, came into operation. ${ }^{1}$ The act as passed provided that it "shall come into operation on the appointed day and the appointed day shall be such day as his Majesty may by Order in Council appoint -." November 22 having been fixed as the appointed day, the act now comes into full operation and the reorganization of the British currency after the war is now completed.

The principal items in the issue department of the Bank of England for the Wednesday preceding and the Wednesday following November 22 are given below:

Bank of England Issue Defartment
[In thousands of pounds stering]

|  | $\begin{gathered} \text { Nov. 21, } \\ 1928 \end{gathered}$ | $\begin{gathered} \text { Nov. } 28, \\ 1928 \end{gathered}$ | Increase (+) or decrease (一) |
| :---: | :---: | :---: | :---: |
| Gold | 161, 214 | 159, 087 | -2,127 |
| Securities and silver | 19,750 | 260, 000 | +240,250 |
| Notes issued. | 180,964 | - 419, 087 | +238,123 |

On November 21, prior to amalgamation, the volume of Bank of England notes outstanding was $£ 180,963,000$, and the amount of currency notes outstanding was $£ 286,750,000$, making a total gross amount outstanding of $£ 467,713,000$. Of this amount $£ 56,250,000$ in bank notes was used as cover for currency notes, making the net amount outstanding about $£ 411,000,000$. Of this amount $£ 19,750$,000 of bank notes and $£ 230,500,000$ of currency, a total of $£ 250,250,000$, was not covered by gold but by securities and to a small extent by silver, and constituted the so-called fiduciary currency. By the terms of the amalgamation act this amount was raised to $£ 260$,000,000 , and when the issues were consolidated the issue department of the bank turned over to the banking department in exchange for securities the surplus of $£ 10,000,000$ in notes. This amount constituted an addition to the reserves of the banking department, which are held largely in the form of bank notes.

A table showing the principal items of the banking department on November 21 and November 28 is given below:

[^5]Bank of England Banking Department [In thousands of pounds sterling]

The table shows that the note holdings of the bank increased by only $£ 4,000,000$ during the week. This increase represents the net result of the addition to the holdings of the banking department of $£ 10,000,000$ released by the amalgamation, less $£ 4,000,000$ representing the growth in circulation for the week, and $£ 2,000$,000 withdrawn in gold, which necessitated the redemption of a corresponding amount of notes held in the banking department. While the reserves of the banking department show a net increase of about $£ 4,000,000$ during the week, deposits increased by over $£ 6,500,000$, the increase being largely in the form of public deposits. As a consequence of the growth of liabilities during the week, the reserve ratio increased by less than 1 per cent. Had it not been for the amalgamation, however, the ratio, which on November 28 was 43.66 per cent, would have been about 38 per cent. The amalgamation, therefore, has had the result of strengthening the position of the banking department of the Bank of England. It is to be noted, however, that the Christmas currency demand, which in past years has been covered largely by the issue of fiduciary currency notes, must this year be met by the withdrawal of notes from the reserves of the banking department of the Bank of England.

## THE RETURN TO GOLD-GUATEMALA

The following addition should be made to the list of countries returning to the gold basis since 1922, as published in the Federal Reserve Bulletin of August, 1928, page 562:

1924-November 26: Guatemala.-New monetary law became effective prohibiting the issue of additional fiduciary notes, fixing the value of the existing peso circulation in terms of a new unit (the quetzal), and specifying the gold content of the quetzal. The stabilization office already under obligation to maintain stability of exchange was thereby given an official standard to maintain. Full legal convertibility of notes into gold or gold exchange was achieved with the founding of the Central Bank of Guatemala on June 30, 1926.

## anNual report of the danish national bank

The annual report of the Danish National Bank for the year ending July 31, 1928, contains the following sections dealing with financial and economic conditions:

Influence of the American market.-An important feature in the reports of international money markets during the past year has been the advance in discount rates. * * * The advance in the discount rate of the Federal Reserve Bank of New York, which to some extent inevitably influenced the rise in other centers, was due in part to the return to a gold basis by Italy and France, because this action brought about a net export of gold from the American banks amounting to slightly more than half a billion dollars during the period from August, 1927, to the end of June, 1928. Considerable pressure was thus brought to bear upon the Federal reserve banks, all the more as loans made for stock exchange investments increased at the same time, and this also added to the stringency in the money market. The raising of the discount rate was intended partly to induce liquidation in the large volume of loans on the stock exchange, partly to reduce the foreign demand for loans, and to check in some measure the enlarged domestic demand for credit normally experienced in the autumn, with a view to restoring the normal relationship between loans and deposits, the latter of which had declined as a result of exportation of gold. However, as business has given no signs of any great expansion, and as the price level has remained stable, one does not expect an increase in the discount rate to exert much influence in these directions. These facts may explain why it has not been necessary to follow the raising of the American discount rate by similar increases in other countries.

The Danish money market.-In the case of Denmark, the discount rate throughout the past year was maintained at 5 per cent, the point to which it declined on June 24, 1926. Further reduction has seemed out of the question, as the discount rate is lower than the market rate (based on the effective rate of interest on Government obligations and mortgage loans), and also because the savings banks are slow to follow with a decrease in interest rates on their deposits-a fact of considerable importance in this country, where savings institutions handle so large a proportion of deposits. There would have been danger that deposits would be withdrawn from the commercial banks in order that they might be
placed with savings institutions, and thus the volume of funds available to commercial banks for lending would be reduced.

Under the unchanging discount rate, advances made by the banks have remained at the same level throughout the year, and the price level has shown no great fluctuations.

Wholesale prices and foreign trade.-Following are the official wholesale price indexes for Denmark:

The slight advance in the general index from August, 1927, to July, 1928, is seen to be attributable to the group of exported goods (agricultural products) but this advance is slightly less than the rise in price indexes of, for example, the United States Bureau of Labor and of the Swedish "Kommerskollegium"; furthermore, the Danish price level has throughout the year been coming more nearly into line with the world price level. One should add that prices of agricultural exports during the spring of 1928 were considerably lower than they were at the beginning of the fiscal year; and the average of the price indexes for both imports and exports for the year August, 1927, to July, 1928, was somewhat below that of the year before. The increase in value of our foreign trade shown in the figures given below is due to an increase in the volume of commodities imported and exported:

Inasmuch as the increase in value was greater for exports than for imports, the value of the excess of imports declined from $152,000,000$ kroner in $1926-27$ to $123,000,000$ kroner in 1927-28.

Foreign balances.-As this reduction in excess imports was accompanied by large borrowings abroad (the largest loan being that floated by the Government for reorganization of Den danske Landmandsbank, under the law of April 4, 1928, in a nominal amount of $\$ 55,000,000$ ), the holdings of the commercial banks and of the National Bank with their foreign correspondents increased considerably, as shown below:

Commercial banks.-A detailed examination of changes in the balance sheets of the commercial banks shows that the volume of their advances has not increased during the past year. The total amount of advances (discounts, loans on security, credits in current account) has in fact been reduced during the course of the year from $1,915,000,000$ kroner to $1,872,000,000$ kroner. Considering that a large part of this reduction is due to provision for writing off losses and for amortizations undertaken at the end of 1927, and furthermore that the portfolio of stocks and bonds has increased by the sum of $29,500,000$ kroner, the volume of funds available in the market has, practically speaking, undergone no change. That this has been possible in a period of improvement in industry and commerce should perhaps be attributed to a tendency on the part of commerce and industry to carry on business with reduced stocks, as is probably being done in other countries. On the other hand, the items of the balance sheets indicate that the general position of the banks is essentially very strong, and it will of course be still further strengthened if the increase in deposits, which in recent months seems to have succeeded the previous decline, continues to be maintained.

Advances by the National Bank.-The influx of foreign capital into this country has been reflected in lessened activity of the National Bank in the matter of advances, as the commercial banks have been able to reduce the volume of their rediscounts with the National Bank; moreover, deposits of savings institutions in
the commercial banks have risen by about $10,000,000$ kroner during the year. The following table shows the advances made by the National Bank:

| [Millions of kroner] |  |
| :--- | :--- | ---: | ---: |
|  |  |
|  |  |

This decline of $45,500,000$ kroner is, however, compensated by an increase of $31,500,000$ kroner in the foreign-exchange holdings of the bank, and by an increase of $12,200,000$ kroner in its securities portfolio; hence the National Bank as well as the commercial banks has made available to the domestic market an undiminished volume of purchasing power throughout the year.

Reorganization of the Landmandsbank.-As was noted in the annual report for 1926-27, the National Bank agreed to lend its assistance in making such final settlement with regard to Den danska Landmandsbank that the bank "should be enabled to continue its business as a private bank by means of an issue of new shares" (art. 1 of the law of July 16, 1927, in respect to preparing for a reorganization of the Landmandsbank). For this reason the National Bank was prepared to participate in a subscription to new capital for the Landmandsbank in the amount of $10,000,000$ kroner. The offer was not taken up, however, on the theory that the Government was responsible for all the affairs of the Landmandsbank according to the law of April 19, 1928, governing the relations between the Government and the Landmandsbank. Simultaneously with the reorganization of the Landmandsbank, the balance of the National Bank was reduced by $30,000,000$ kroner, which had been set aside in 1922 as a reserve fund of the Landmands-bank.

Repatriation of Danish currency.-After the restoration of the former gold parity of the Danish crown, the Government settled its debts to the Swedish Riksbank; these debts grew out of the exportation into Sweden of subsidiary silver coins and their subsequent repatriation. The securities loan of $10,000,000$ kroner which the Government had obtained under the law of February 15, 1924, from the Swedish Riksbank was paid at the close of the
year; furthermore the account in Swedish kronor which the Danish Government opened with the National Bank, and which on July 30, 1927, was included under "Sundry credits" as "Correspondents abroad for account of customers" in the amount of $6,863,678$ kronor, has been settled.

In this connection it is worth noting that since the beginning in July 1923, of the exchange of subsidiary currency with Sweden, the bank has received from that country for account of the Minister of Finance, Danish subsidiary coin in the amount of $20,700,000$ kroner, while it has sent back to Sweden $5,400,000$ kronor in Swedish subsidiary coin.

Convertibility of notes.-By ordinance of December 10, 1927, of the Ministry of Industry, Commerce, and Navigation, the provisions of the ordinance of January 1, 1927, published by virtue of the law of December 27, 1926, in respect to convertibility of notes of the National Bank, were renewed until December 31, 1928. Under these provisions, the National Bank is not required until that date to redeem its notes in gold, unless they are presented for redemption in amounts of 28,000 kroner or in multiples thereof, and the redemption may be made at the option of the bank in Danish gold coin at its par value, or in gold bullion, or in any other form of gold, reckoned at the value of 2,480 kroner per kilogram of fine gold. No export of gold from the bank took place during the year, either for foreign or for its own account. The provisions of the law of December 27, 1926, will remain in force until the close of 1929. * * *

Government conversion loans.-By the law of October 28, 1927, the Minister of Finance
was authorized to float a loan of $30,000,000$ kroner for the purpose of redeeming the 5 per cent treasury bonds issued under the law of July 25, 1925. The National Bank became underwriter for this loan, and offered to the public $30,000,000$ kroner of 5 per cent treasury bonds, maturing in 5 years, at the subscription price of 98 per cent. The amount was fully subscribed. Inasmuch as the Government loan of $60,000,000$ kroner, issued under the law of June 15, 1918, matured on June 15, 1928, the National Bank, together with a group of six private banks, floated the two following loans under authority of the law of April 4, 1928-30,000,000 kroner in Government bonds bearing 5 per cent and maturing in 20 years, and $30,000,000$ kroner in treasury bonds at 5 per cent and maturing in 5 years. The subscription price to the public was $971 / 2$ per cent and $983 / 4$ per cent, respectively. These loans also were fully subscribed.

Scandinavian Monetary Union.-After the Bank of Norway on May 1,1928 , resumed the conversion of its notes in gold at their former parity, conditions seemed favorable for entering into negotiations for a Scandinavian monetary union. The National Bank will participate in these discussions with the desire to reestablish among the Scandinavian countries a type of cooperation similar to that which formerly obtained. It is our opinion that agreements between the banks of issue in respect to the circulation of our currencies in common are important to the three countries not only in their relations with one another, but also in their relations with other foreign countries.

${ }^{1}$ Based on noon buying rates for cable transiers in New York as certified to the Treasury by the Federal Reserve Bank of New York, in pursuance of the provisions of sec. 522 of the tariff act of 1922. For back figures see Bullemin for January, 1928, pp. 56-62.

Effective June 25, 1928.
${ }^{2}$ A verages based on daily quotations of closing rates as published by New York Journal of Commerce.

- Nomina

Bliver currency. Parity represents gold value of unit in 1913 computed by multiplying silver content of unit by Now York average price for October 1928 , and $\$ 0.57787$ for November, 1927 . The corresponding London prices (converted at average rate of exchange) Were $\$ 0.58339$ $\$ 0.58382$, and $\$ 0.58244$.

## PRICE MOVEMENTS IN PRINCIPAL COUNTRIES

WHOLESALE PRICES
ALL COMMODITIES

1 New index --1926 $=100$.
1 First of month flgures.
${ }^{3}$ New official index
Norz.-Thess indexes are in most cases published here on their original bases, usually 1913 or 1914, as determined by the various foreign statisicel offces which compile the nder numbers and furnish them to the Federal Reserve Board. In several cases, however, vit, France, Netherlands, Japan, New Zealand, and South Aitica, they have been recomputed from original bases (1901-1010; 1910-1910; October, 1900; 1909-1913. 1910) to a 1913 base. Index numbers of commodity groups for most of the countries are also available in the office of the Division of Research and Statistics and may be had upon request. Further information as to base periods, sources, numbers of commodities, and the period of the month to which the figures refer mas be found on pages $769-770$ of the B DLibrin for November, 1927.

2 Includes dividends.

[^12]
## CLASSIFICATION OF LOANS AND INVESTMENTS OF ALL MEMBER BANKS

This table is based on figures published in the annual report of the Comptroller of the Currency for national banks, and on figures compiled from reports of member State banks to the Federal Reserve Board.

CLASSIFICATION OF LOANS ON JUNE 30, 1925-1928
[In millions of dollars]

1 Includes overdrafts; excludes acceptances of other banks and bills of exchange or drafts sold with indorsement.
CLASSIFICATION OF SECURITIES ON JUNE 30, 1925-1928
[In millions of dollars]

Note.-Of the total loans of all member banks on June 30, 1928, about $\$ 4,650,000,000$, or 13.3 per cent of their total loans and investments was reported as eligible for rediscount at the reserve banks; this compares with about $\$ 4,770,000,000$, or 14.5 per cent, for June 30,1927 , and $\$ 4,920,000,000$, or 15.7 per cent, reported for June $30,1926$.

CONDITION OF ALL MEMBER BANKS
ALL MEMBER BANKS-CONDITION ON A SERIES OF CALL DATES ENDING WITH OCTOBER 3, 1928

${ }^{1}$ Exclusive also of certiffed and cashiers' or treasurers' checks outstanding and of letters of credit and travelers' checks sold for cash and outstanding.
${ }_{2}$ Combined excess of amounts due to banks over amounts due from banks as shown by individual bank reports. When for a given bank amounts due from banks exceed amounts due to banks, the excess due from can not be deducted in determining deposits on which reserves are computed, and for this reason amounts in this column do not agree with the difference between aggregate amounts due to banks and due from banks. In this calculation the amounts due to banks include due to Federal reserve banks, bankers, and trust companies, certified and cashiers' or treasurers' checks outstanding, and letters of credi and travorst due romb ran include items with Federal reserve banks in proce.
${ }^{3}$ Deficiencies in reserves indicated by a minus ( - ) sign.
all member banks-principal resources and liabilities on call dates, march, 1922-october, 1928
[A mounts in millions of dollars]

$0$

[^0]:    1 See pp. 883-887 and Member Bank Call Report No. 41

[^1]:    ${ }^{1}$ A verage of amounts from reports of condition for five call dates during the year.
    ${ }^{2}$ Profits on securities sold, which showed an increase of $\$ 17,000,000$ in 1928 and which are reported among the banks' gross carnings, have not been taken into account in the computation of net losses.

[^2]:    ${ }^{2}$ Statistics of member bank earnings and expenses, together with some analytical material, have been published in previous issues of the BULLETIN. (See pp. 402-405 of the issue for June, 1925; pp. $869-873$ of the issue for December, 1925; pp. 409-414 of the issue for June, 1926; pp. 22-28 of the issue for January, 1927; pp. 460-463 and 549-553 of the issue for July, 1927 ; pp. 830-832 and 882 - 885 of the issue for December, 1927: and pp. 450-452 and 536-539 of the issue for July, 1928.) Statistics for years ending June 30, 1919 to 1927, were published also in the Annual Report of the Federal Reserve Board for 1927. (See pp. 247-252.) Detailed figures for national banks are published in the annual reports
    of the Comptroller of the Currency.

[^3]:    NOTE.-Rates on prime bankers' acceptances. Higher rates may be charged for other classes of bllls.

[^4]:    1 It is to be noted that some of the reporting mail-order houses have been establishing throughout the country during recent years an increasing number of branch stores in which sales are made "over the counter." Changes in the volume of sales by these firms, therefore, no longer measure changes in sales through the mails.
    ${ }_{3}{ }^{2}$ Figures corrected.
    including sales made through branch stores.
    Note.-For description of inderes given in this table see Bollestin for April, 1923.

[^5]:    1 The act and an article discussing it were published in the Federal Reserve Bulletin of August, 1928, pages 564-569.

[^6]:    Changes: Bank of Finland from $6 \frac{1}{2}$ to 7 per cent on November 15, 1928; Imperial Bank of India from 5 to 6 per cent on November 15, 1928.

[^7]:    1 Includes one increase in capital of $\$ 333,333.33$ incident to a consoliation of State bank under act of Feb. 25, 1927
    Reduction in capital incident to a consolidation under act of Nov. 7

[^8]:    ${ }^{1}$ Preliminary.

[^9]:    Note.-For back figures and explanatory notes, especially as regards California, see Bulletin for December, 1927, pp. 828, 873, and 886-925.

[^10]:    ${ }^{1}$ These ratios are based upon data taken from the customary abstracts of reports of condition and of earnings. expenses, and dividends. It should be borne in mind in using them that the statistics employed represent aggregates for all member banks reporting on the various dates, and such ratios as are shown in this and the following tables are therefore ratios of aggregates in which figures for large banks have a statistical influence somewhat disproportionate to their number in comparison with the figures for small banks. No adjustments have been made in the underlying large groups that the results appear not to be appreciably affected by these changes. arge groups that the results appear not, to be appreciably affected by these changes.
    ${ }^{3}$ A verages of amounts from reports of condition for 4 call dates (June 30, 1926, to June 30, 1927), and for 5 call dates (June 30, 1927, to June 30, 1923).

    - Capital surplus and undivided profits less reserves for taxes, interest, ete., acerued.

[^11]:    ${ }^{1}$ Averages of amounts from reports of condition for four call dates (June 30, 1926, to June 30, 1927) and for five call dates (June 30,1927 , to June 30, 1928).

[^12]:    ${ }^{3}$ As of June 30, 1928.

[^13]:    1 Includes rediscounts and overdratts.
    2 Excludes acceptances of other banks and bills of exchange sold with iadorsement.
    ${ }^{2}$ Excludes acceptances of other banks and bills of exchange sold with indorsement.
    2 Excludes bonds borrowed
    i Does not include items with Federal reserve banks in process of collection, or amounts due from foreign banks or own foreign branches.
    DDoes not include items with Federal reserve banks in process of collection, or amounts due from foreign bank
    8 Ineludes certified and cashier's or treasurers' checks and letters of credit and travelers' checks sold for cash.

    - Includes postal-savings deposits.

    8 Includes amounts due to Federal reserve banks, foreign banks, and other banks, bankers, and trust companies; does not include due to own foreign branches.
    8
    ${ }^{1}$ Deposits subject to reserve requirements.
    NOTE A.-These series are on the same basis as those given for 1914-1927 in Table 35 of the Board's latest annual report and in the October Bulletin (pp. 683 and 730 ); they differ from those Nore B.-Revised series-on same basis as those given on p. 883; they differ from those given in Table 35 of the Board's latest annual report by including "Letters of credit and travelers'
    checks sold for cash and outstanding" ( $\$ 27,338,000$, on Oct. 3,1928 .
