No. 1

## REVIEW OF THE MONTH

On December 21 the Secretary of the Treasury announced that the Treasury "proposes, whenever it is deemed advisa-

New Treasury gold policy ble and in the public interest to do so, to take appropriate action with respect to net additional acquisitions or releases of gold by the Treasury Department. This will be accomplished by the sale of additional public-debt obligations, the proceeds of which will be used for the purchase of gold, and by the purchase or redemption of outstanding obligations in the case of movements in the reverse direction."

The operations under this policy permit neutralizing the effect on member bank reserves of future gold acquisitions or sales of such gold. Effects on reserves of additions to the gold supply, either from imports or from new production, will be offset by the sale to the public of an equivalent amount of United States Government obligations and by the setting aside of the purchased gold in an inactive account in the Treasury. In this way the gold will be kept out of the country's credit base. An outward movement of gold acquired through sale of bills will be similarly offset by the purchase or redemption of United States obligations in the market, thus restoring to it the funds lost through the export of gold. To this extent, therefore, the volume of member bank reserves will neither increase nor decrease as the result of changes in the supply of gold.

The announcement by the Secretary of the Treasury states that the action was taken after conferring with the Board of Governors of the Federal Reserve System. The problem of dealing with the volume of excess reserves which is now in existence will not be affected by the new policy.

Reserve balances of member banks, which have been increasing rapidly in recent years, reached a new high level of $\$ 6,800,000,000$ in the early part of December, largely as a result of continued gold imports. Of this amount $\$ 4,600,000,000$ constituted required reserves and $\$ 2,200,000,000$ excess reserves. From the effective date of the 50 percent increase in reserve requirements last August to the beginning of December total reserves of member banks increased by $\$ 580,000,000$. Of this increase $\$ 160,000,000$ has been absorbed by an increase in required reserves resulting from a growth in the member banks' deposit liabilities, and $\$ 420,000,000$ has been added to excess reserves of member banks throughout the country.

In the three weeks from December 2 to December 23 excess reserves declined by about $\$ 320,000,000$, as a result of increases in money in circulation preceding Christmas and in balances of the Treasury at the Reserve banks, built up by quarterly income tax receipts and the sale for cash of new Treasury securities. This reduction in reserves, however, is temporary, since the return flow of currency from circulation after the Christmas holidays and disbursements by the Treasury out of its balances with the Reserve banks may be expected to build up member bank reserves in January to a level at least as high as that at the beginning of December. The new Treasury policy of offsetting the effect of gold movements on reserves will prevent any further increase that might result from additional gold imports and purchases of domestic gold.

Growth of member bank reserves in the
past three years has been due to gold imports of $\$ 4,000,000,000$, to gold acquired from domestic sources in the amount of $\$ 500,000$,000 , and to $\$ 800,000,000$ of silver purchased by the Treasury against which silver certificates were issued. While gold imports have been the principal factor in the growth of the total volume of member bank reserves, other factors have widely distributed these reserves among the different groups of member banks and the different sections of the country. This distribution has been effected by the complex of industrial, commercial, financial, and governmental transactions which involve the continuous shifting of funds among regions and among banks.

Gold imported into this country is sold to the Treasury and Treasury checks are drawn in payment for the gold or for the foreign exchange used to purchase it. These checks are drawn upon the Treasury's balances at the Federal Reserve banks, and become available to member banks, which deposit them at the Reserve banks and in exchange receive credits to their reserve accounts. Reserve balances of member banks receiving Treasury checks are thereby increased. In the past the Treasury did not offset this increase but replenished its balances with the Reserve banks by giving the Reserve banks an equivalent credit in the gold-certificate account. Under the newly adopted Treasury policy the Treasury will segregate the gold and will replenish its balances at the Reserve banks by the sale of Treasury bills in the market. This operation will diminish member bank reserves, thus offsetting the previous increase.

Since most of the foreign exchange transactions take place in New York, the effect of gold imports on member bank reserves has been as a rule immediately reflected in additions to the reserves of New York City banks, but in time these reserves have become widely distributed among banks elsewhere. In some cases this transfer to other parts of
the country may occur immediately after or even antedate the completion of the gold transaction. The foreign exchange used to obtain the gold may be obtained from an exporter, a foreigner purchasing securities in this country, or someone transferring a balance to this country, and this seller of exchange may deposit the funds or use them to make payments elsewhere than in New York. Thus reserves may be transferred from a New York City bank to a bank elsewhere before the gold is sold to the Treasury.

Subsequent to the importation of gold the continuous flow of funds in connection with a variety of payments leads to a broad distribution of the additional reserves thus acquired among different banks and regions. It is not possible to measure quantitatively the complex elements that make up this flow of payments, but several of the more important movements may be enumerated. Improvement in agricultural conditions since 1933 and the increase in farm income have carried funds to agricultural regions in payment for their crops sold at higher prices. Likewise industrial expansion in various sections of the country has resulted in a substantial shifting of funds to such sections. Perhaps the most important factor in the geographical distribution of surplus funds of banks since 1933, however, has been the expenditure by the Treasury of funds raised by the sale of Government obligations to banks.

Funds spent by the Treasury are not necessarily raised in the locality in which they are spent and do not necessarily remain in the particular section in which payments are made. The bulk of them may be transferred from one locality to another for the purpose of investment or in payment for goods and services; and with each transfer there is a shift of member bank reserves through the clearing system. City banks, especially those in New York City, have until recently bought relatively more Government securities than the so-called country banks, but expenditure by the Government throughout the country of
funds obtained from city banks has tended to reduce the excess reserves of city banks and to distribute them widely among country banks in different parts of the country.

Country banks thus acquiring excess funds

Weekly figures of net gains and losses cumulative from January 1, 1934, through December 16, 1936.
have kept a portion as excess reserves with Federal Reserve banks, have invested a portion, and have placed a substantial amount on deposit with correspondent banks in financial centers. Balances carried by country banks with city correspondents are now more than twice as large as they were at any time prior to 1934. City banks have, therefore, continued to hold a large part of legal excess reserves, but a portion of these reserves in effect belongs to country banks which may withdraw them on demand.

Figures have been compiled by the Federal Reserve Bank of New York measuring important elements in the movement of funds into and out of the New York Federal Reserve district, comprised mostly of transfers into and out of New York City. These figures illustrate the way in which reserves of banks in New York are affected by gold imports and the shifts of funds between them and banks
in other parts of the country. A summary of the more important of these figures is given in the chart, which shows cumulative movements since the beginning of 1934 when gold imports, excess reserves, and bankers' balances all began to increase rapidly.

The chart shows that during the past three years New York banks have gained reserves through gold imports, and that there has also been a net gain of funds by the New York district from other parts of the country arising from an increase in balances held in New York City for outside banks and from other transactions growing largely out of ordinary commercial and financial operations. During the same period the Treasury has made large withdrawals of funds from the New York district, representing the excess of funds raised in the district through the sale of Government securities and through tax receipts over Government disbursements in the district. These funds have been spent by the Government in other parts of the country, thus shifting reserve funds from New York banks to outside banks. Upon receipt of these funds the banks outside of New York, however, have in part redeposited them in the form of bankers' balances with New York City banks. As a consequence of these various movements total reserves and excess reserves of New York banks and total reserves, excess reserves, and New York balances of outside banks have all shown a considerable growth.

The preceding paragraphs have described how gold imports in recent years have increased the aggregate volume of excess reserves, and how Government borrowing and spending and other ordinary business and financial transactions have distributed the increased reserves among the various classes of member banks. As shown in the following table and also in the chart, all classes of member banks in the latter half of November had much larger excess reserves than in January

1934, and, notwithstanding the recent increase in reserve requirements, the ratio of excess to required reserves for member banks in the aggregate was somewhat larger than at the beginning of 1934 .

Distribution of Excess Reserves, by Classes of BANKS

Aggregate reserve balances of member banks in the latter part of November were slightly less than 50 percent in excess of requirements. Banks in reserve cities held excess reserves of 50 percent, while the socalled country banks held reserves of 70 percent above requirements. Central reserve city banks in New York City, with reserves of about 40 percent above requirements, had the smallest percentage of excess reserves of any class of banks.

Excess reserves of the various classes of banks are smaller than they were before the increase in requirements last August, but, owing to the subsequent growth in total reserves, they are substantially larger than immediately after the increase went into effect. All classes of member banks have shared in this increase in reserves, but the gains have been unequal, and the relative distribution of excess reserves among the various classes of banks has been considerably altered. In the case of New York City banks required reserves increased by $\$ 675,000,000$ between the first half of August and the latter part of November, as a result of the Board's action
and of further expansion in deposits. Since the reserve funds of these banks increased by only $\$ 215,000,000$, their excess reserves declined by $\$ 460,000,000$. Reserve city banks, at which required reserves have increased by $\$ 530,000,000$, showed a loss of but $\$ 240,000$,000 in excess reserves. At country banks, notwithstanding increased requirements of nearly $\$ 260,000,000$, excess reserves declined by only $\$ 100,000,000$ from an unusually high level in the first half of August, and are now at about the same level as in the first half of 1936 .

EXCESS RESERVES OF MEMBER BANKS

Averages of daily figures for weeks ending Friday; figures for country banks and for all member banks are estimated.
Owing to the large volume of balances that banks outside of New York City carry with correspondent banks, the effective, Bankers' as contrasted with the technical, rebalances serve position of these banks is considerably understated when their balances with Federal Reserve banks alone are considered. Banks outside of New York require balances with correspondents to serve as secondary reserves and for clearing purposes, but the volume of such balances at the present time is much larger than normal requirements. New York City banks have continued to hold only small working balances with correspondents. On June 30, 1936, all member banks held demand balances with
other domestic banks of $\$ 3,800,000,000$, whereas from 1922 to 1929 they held an average of $\$ 1,900,000,000$, which may be considered as a more nearly normal amount of working balances.

Of the total bankers' balances on June 30 about $\$ 1,700,000,000$ belonged to country member banks, compared with $\$ 900,000,000$ held by them at the end of 1929. Last July and August, following announcement of the increase in reserve requirements and about the time of its effective date, between $\$ 100$,000,000 and $\$ 200,000,000$ of bankers' balances were withdrawn from New York City banks, and there were also some withdrawals from banks in other cities. Since that time, however, country banks have again built up their balances with correspondents, and it is estimated that in November they were fully $\$ 200,000,000$ larger than last June. When balances with correspondent banks, as well as excess reserves, are considered, it appears that total unutilized funds owned by country banks at present are larger than last summer, before reserve requirements were increased.

It has been pointed out that in November each class of member banks taken as a group had aggregate reserve bal-

Reserve position of individual banks ances considerably in excess of requirements. A survey of the reserve position of member banks shows that this was true also of the majority of individual members. The results of this survey have been tabulated so as to show the number of banks that have reserves $162 / 3$ percent above requirements, or sufficient to meet an increase of one-half of the Board's authority to raise reserve requirements; banks that have reserves between $162 / 3$ and $331 / 3$ percent above requirements, and banks that have reserves $331 / 3$ percent or more above requirements, which would be sufficient to meet the maximum authorized increase in requirements. Out of the total of 6,400 member banks in the first half of November, nearly 3,800 , or 59 percent, had reserves that were $331 / 3$ percent
or more in excess of current requirements. About 60 percent of all country banks and 47 percent of all central reserve and reserve city banks were in this position. The results of the survey are summarized in the following table:

| Number of Member Banks Distributed According to Percentage of Excess Reserves [Based on daily averages for first half of November 1936] |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Ratio of excess to required reserves | $\begin{aligned} & \text { All } \\ & \text { mem- } \\ & \text { ber } \\ & \text { banks } \end{aligned}$ | Central reserve city banks |  | Reserve city banks | Country banks |
|  |  | New York | $\begin{aligned} & \text { Chi- } \\ & \text { cago } \end{aligned}$ |  |  |
| Less than $16 \frac{2}{3}$ percent. | 1,445 | 14 | 4 | 110 | 1,317 |
| 162/3 percent-331/3 percent... | 1, 171 | 8 | 1 | 71 | 1,091 |
| 331/3 percent and over.- | 3,772 | 15 | 12 | 155 | 3, 590 |
| Total number of mem- ber banks......-- | 6,388 | 37 | 17 | 336 | 5,998 |

The 2,600 banks which in the first half of November had excess reserves amounting to less than $331 / 3$ percent of required reserves were short of this amount by a total of $\$ 350$,000,000 , of which $\$ 120,000,000$ was at central reserve city banks in New York and \$230,000,000 at other banks. With comparatively few exceptions banks outside of New York City were in a position to cover the difference by using not more than half of their balances with correspondents, which have been approximately twice as large as was customary prior to 1934. New York City banks, however, hold only small working balances with other banks. The principal New York banks showing excess reserves of less than a third of required reserves hold substantial amounts of liquid assets, such as Treasury bills and notes, bankers' acceptances, and brokers' loans, which can be readily sold or called and thus shifted to other banks that have excess reserves.

An increase in reserve requirements at a time when member banks hold sufficient excess reserves to meet the increase results in making unavailable as a basis of credit expansion a portion of member bank funds for which these banks

## Effects of increase in requirements

are not finding a profitable outlet. An increase at such a time has no immediate effect upon the supply of credit in the money market, but merely limits a possible future growth in this supply.

The balance sheet of the Federal Reserve banks is in no way changed by an increase in reserve requirements of member banks, except to the extent that member banks may borrow to meet the increase. So long as member banks have excess reserves out of which to meet the increase, it does not affect the total amount of deposits at the Reserve banks, but merely converts a portion of the deposits already held from reserves held by member banks with the Reserve banks in excess of requirements to required reserves. It has no effect whatever on the volume of funds available to the Reserve banks for investment.

From the nature of the functions of the Federal Reserve banks it is clear that it is not a correct description of

Source of
Reserve bank lending power their operations to say that they invest funds deposited with them by member banks. The lending power of the Reserve banks is derived from the authority they have to issue Federal Reserve notes and to create deposits on the basis of a 40 or a 35 percent reserve, respectively, to be held against notes and against deposits. When a Reserve bank purchases in the market a United States Government obligation and pays for it, directly or indirectly, with a deposit credit on its books, it adds to the
reserve deposit of some member bank. It is for this reason that the Reserve banks purchase United States Government securities when they wish to ease the credit situation by placing additional funds at the disposal of member banks.

Mechanically the process is as follows: when a Reserve bank purchases a Government obligation, it pays for it by a check drawn on itself. The seller of the obligation deposits this check at his bank, and the bank in turn deposits it at the Federal Reserve Bank where it is credited to the depositing bank's account. Similarly when a Reserve bank discounts paper for a member bank or makes an advance to it, the member bank's reserve account is credited with the amount involved. In both cases, therefore, member bank deposits at the Federal Reserve banks are increased.

Limits of possible expansion by the Reserve banks are not related to the legal distinction, as between required and excess reserves, of member bank deposits that they hold, but are set by the amount of cash reserves of the Reserve banks themselves. The extent to which the lending power of the Federal Reserve banks is put to use, however, is not determined by the theoretical possibilities of expansion on the basis of available reserves or by the possible earnings from such expansion, but solely by a consideration of the amount of reserve funds required for the accommodation of commerce and business and the maintenance of sound credit conditions.

## NATIONAL SUMMARY OF BUSINESS CONDITIONS

[Compiled December 23 and released for publication December 25]

Production, wage payments, and the distribution of commodities to consumers increased considerably from October to November. Wholesale commodity prices have advanced steadily since the end of October.

Production and employment.-The Board's index of industrial production, which makes allowance for changes in the number of working days in the month and for the usual seasonal variations, was 114 percent of the 19231925 average in November, as compared with 109 percent in October. Output of both durable and nondurable manufactures showed a considerable rise. Production of steel ingots increased further to a rate of 79 percent of

Monthly index of physical volume of production, adjusted for seasonal variation, 1923-1925 average $=100$.
capacity in November, and output of automobiles also increased. Figures for the first three weeks of December indicate continued expansion in output of both steel and automobiles. In the plate glass industry, where there has been a strike, production was sharply reduced in November, and activity at lumber mills declined, reflecting the effects of the maritime shipping strike on the Pacific Coast. Increases in output were reported at meatpacking establishments and textile mills, and sugar meltings and output of tobacco products declined by less than the usual seasonal amount. At mines, coal production increased and output of crude petroleum and iron ore showed a smaller than seasonal reduction.

Value of construction contracts awarded, according to figures of the F. W. Dodge Corporation, continued at about the same rate in November as in the previous month.

Factory employment showed little change from October to November, although a decrease is usual at this season of the year, and the Board's seasonally adjusted index advanced to 96 percent of the 1923-1925 average. The number employed at factories producing durable goods continued to increase, with the largest expansion in the automobile and machinery industries. There was a decline in employment at lumber mills and in the glass industry. In the nondurable goods industries as a group employment showed a smaller decline than is usual in November. At shoe factories and establishments producing wearing apparel smaller than seasonal declines were reported and there were increases in employment at cotton and woolen textile mills and at meat-packing plants.

Distribution.-Department store sales increased substantially in November, and there was also a rise in sales at variety stores and at chain grocery stores. Sales by general merchandise stores and mail order houses serving rural areas declined from the high level reported for October.

Freight-car loadings showed a smaller than seasonal decrease in November. Loadings of coal, coke, and grain increased contrary to the usual seasonal tendency, and shipments of miscellaneous commodities and of most other classes of freight declined by less than the seasonal amount.

Commodity prices.-The general level of wholesale commodity prices continued to advance from the middle of November to the third week of December. There were substantial increases in the prices of wheat, flour, nonferrous metals, and rubber. Prices of wool, cotton yarns, and worsted yarns advanced somewhat further and cotton, pig iron, and steel scrap prices also increased in this period.

Indexes compiled by the United States Bureau of Labor Statistics, $1926=100$. By months, 1929 to 1931 ; by weeks, 1932 to date. Latest figure is for week ending December 19, 1936.

Bank credit.-The reserve position of member banks in recent weeks has been influenced largely by temporary seasonal developments in connection with holiday currency requirements and mid-December financing by the United States Treasury.

Notwithstanding the increased demand for currency for Christmas shopping, there was a further growth in demand deposits at
weekly reporting member banks through the first half of December, reflecting additions to monetary gold stock, as well as a sharp increase in bank loans.

At reporting banks outside New York City holdings of Government securities increased by $\$ 140,000,000$ in the four weeks ending December 16, while at New York City banks they showed a further small decline. There was an increase of $\$ 100,000,000$ in loans to brokers and dealers in securities in New York City, largely for the purpose of buying United States Government securities. Commercial loans showed a further increase of $\$ 150,000,000$, carrying the total volume of such loans to a level $\$ 800,000,000$ higher than a year ago.

Wednesday figures for reporting member banks in 101 leading cities, September 5, 1934, to December 16, 1936. Loans on real estate, loans to banks, and acceptances and commercial paper bought included in total loans and investments but not shown separately.

## SUMMARY OF FINANCIAL AND BUSINESS STATISTICS

## LAW DEPARTMENT

Effective date of definition of interest in section 1 (f) of Regulation $Q$

During the latter part of 1935, the Board of Governors of the Federal Reserve System revised its Regulation Q relating to the payment by member banks of interest on deposits, and the regulation in its revised form was made effective January 1, 1936. However, the definition of interest in subsection (f) of section 1 of such revision of Regulation Q was not made effective on January 1, 1936, but the date on which the subsection should become effective was deferred until further action of the Board of Governors. A notice of such deferment was published at page 48 of the Federal Reserve Bulletin for January, 1936.

During the past year the Board of Governors has given exhaustive consideration to this subject, and, as a result of this consideration, has taken action fixing February 1, 1937, as the date on which subsection (f) of section 1 of Regulation $Q$ shall become effective. This subsection which contains the definition of interest and which is quoted below will become effective on February 1, 1937, in the same form as that contained in subsection (f) of section 1 of the revision of Regulation Q published at page 862 of the Federal Reserve Bulletin for December, 1935, all of the other provisions of which became effective on January 1, 1936. The subsection reads as follows:
"The term 'interest' means a payment, credit, service or other thing of value which is made or furnished by a bank as consideration for the use of the funds constituting a
deposit and which involves the payment or absorption by the bank of out-of-pocket expenses (i.e., expenses arising out of specific transactions for specific customers and definitely attributable to such transactions as distinguished from overhead and general operating expenses), regardless of whether such payment, credit, service or other thing of value varies with or bears a substantially direct relation to the amount of the depositor's balance.
"The term 'interest' includes the payment or absorption of exchange and collection charges which involve out-of-pocket expenses, but does not include the payment or absorption of taxes upon deposits whether levied against the bank or the depositor nor the payment or absorption of premiums on bonds securing deposits where such bonds are required by or under authority of law.
"Notwithstanding the foregoing, the payment or absorption of isolated items of out-of-pocket expense in trivial amounts and not of a regularly recurrent nature, where the charging of such items to customers would cause undue friction or misunderstanding, will not be deemed to be a payment of interest, provided that the bank acts in good faith and does not utilize the absorption of such items as a basis for soliciting accounts or obtaining an advantage over competitors and provided further that the bank maintains and makes available to the examiners authorized to examine the bank a record showing the amounts of such items paid or absorbed by it, the dates of such payment or absorption, and the names of the customers for whom such items were paid or absorbed."

## INSURANCE OF DEPOSITS

The Federal Deposit Insurance Corporation has published the results of a survey showing for different size groups and classifications of deposits and for different size groups and types of banks the number and dollar amount of deposits in insured banks and the number and dollar amount of deposits wholly protected by insurance as of May 13, 1936. The full text of the report, together with statistical tables, is as follows:

The Federal Deposit Insurance Corporation on May 13, 1936, insured deposits in 14,092 commercial banks in the United States and its possessions, more than 92 percent of the 15,194 commercial banks in operation on that date. The percent of operating commercial banks in each State insured by the Corporation varied from 100 percent in Arizona, District of Columbia, Utah, Vermont and Wyoming to less than 70 percent in Kansas and Rhode Island.

On May 13, 1936, insured commercial banks reported a total of 57 million accounts, of which 56 million, or 98.4 percent, were accounts with balances not exceeding $\$ 5,000$, the maximum insurance for each depositor. Deposits in these banks amounted to $\$ 45$ billion, of which $\$ 19.5$ billion, or 43 percent, were insured. On October 1, 1934, total deposits of 14,060 insured commercial banks amounted to $\$ 36$ billion, of which $\$ 15.6$ billion, or 43.5 percent, were insured.

Figures for May 13, 1936, showed that insurance protection varied widely among banks, the coverage being affected by size of bank, type of bank, and type of deposit.

Insurance coverage was highest in small banks and lowest in large banks. Deposits in banks with total deposits not in excess of

$\$ 100,000$ each were 95 percent insured. In 13,204 banks with deposits of not more than $\$ 5,000,000$ each, comprising 93 percent of the total number of insured commercial banks, the insurance coverage was about 78 percent. In 772 banks, each with deposits of between $\$ 5,000,000$ and $\$ 50,000,000$ about 52 percent of the deposits were insured. In 109 banks with deposits of over $\$ 50,000,000$ each, approximately 25 percent of the deposits were insured. These 109 banks held more than one-half of total deposits and almost one-third of insured deposits of all insured commercial banks.
Insurance Coverage by Type of Deposit, Insured Commercial Banks, May 13, 1936

| Type of deposit | $\begin{aligned} & \text { Number } \\ & \text { of } \\ & \text { accounts } \\ & \text { (in thou- } \\ & \text { sands) } \end{aligned}$ | Amount of deposits (in millions of dollars) |  | Percent of deposits insured |

| Other items....---------- | 1,393 | 584 | 259 | 44 |

Insurance coverage varied also according to the type of bank. Banks operating branches or additional offices reported a higher proportion of insured deposits than did unit banks with the same volume of total deposts. The deposits of insured mutual savings banks were 89 percent protected, approximately the same protection as was reported for savings deposits in commercial banks of similar size.

Insurance coverage varied also according to the type of deposit. The general public held demand and time deposits amounting to $\$ 32$ billion. More than 95 percent of bank accounts were of this type. These deposits were 55 percent insured. Other deposits consisting chiefly of deposits of other banks and of governmental bodies amounted to $\$ 13$ billion and were 12 percent insured.

Demand deposits of individuals, partnerships and corporations in all insured banks were 38 percent insured. In the 13,204 banks reporting deposits not in excess of $\$ 5,000,000$ each, demand deposits were 81 percent in-
sured. Of the 22 million accounts of this type, more than 98 percent contained balances not exceeding $\$ 5,000$, the maximum insurance for each depositor. Savings and time

1 The number of operating insured commercial banks is 14,092 . The reports of 7 insured banks are not included. Deposit figures of noninsured banks are for nearest available date, predominantly June 30, 1936. Deposit figures for 40 noninsured banks are not included.
deposits of individuals, partnerships and corporations were 82 percent insured. Accounts of this type numbered more than 32.5 million, of which 99 percent contained balances not exceeding $\$ 5,000$.

Interbank deposits amounted to $\$ 6$ billion and were only 6 percent insured. Of these deposits, nearly half were in banks in New York. Since these deposits are held only for the account of banks, the low coverage in this class of deposit does not indicate lower insurance protection for the general public. The suspension of a bank with a large volume of interbank deposits, however, seriously affects the solvency of its correspondent banks. In these latter banks, the Federal Deposit Insurance Corporation protects a large proportion of the deposits and in the event of their failure would be called upon to make substantial payments to their depositors.

Insurance protection given to United States Government and postal savings deposits amounted to only 3 percent of the more than $\$ 1$ billion of such deposits, but these accounts were fully protected by the pledge of security and by legal preferment. Public funds of States and political subdivisions amounting to more than $\$ 3$ billion, were about 12 percent insured and uninvested trust funds, amounting to $\$ 1$ billion, were about 30 percent insured. In addition, however, a substantial proportion of these deposits was secured by the pledge of collateral or was preferred. Outstanding drafts and other miscellaneous items amounted to less than $\$ 1$ billion, of which about 45 percent were protected by insurance.

The percent of total deposits insured in the various States ranged from 85 percent in Vermont to 22 percent in New York State. The low coverage in New York, Massachusetts, Illinois and several other States was due to the concentration of deposits in a few large banks holding large proportions of interbank deposits, United States Government and other public funds, and uninvested trust funds. The percent of accounts with balances of $\$ 5,000$ or less ranged from 99.2 percent in North and South Dakota and West Virginia to 97 percent in New York.

The protection given to the general public by Federal insurance of deposits is measured by the amount of demand, savings and time deposits of individuals, partnerships and corporations, covered by insurance. In the country as a whole, these deposits were about 55 percent insured. The proportion of deposits of individuals, partnerships and corporations protected by insurance ranged from 88 percent in North Dakota and Vermont to 30 percent in New York.

In the 70 insured banks which were placed in receivership up to October 31, 1936, each of the 84,687 depositors was insured up to a maximum of $\$ 5,000$. Insurance fully protected 84,253 or 99.5 percent of the depositors. In addition 25 depositors were fully protected by pledge of collateral or by the holding of preferred claims.

Total deposits in these 70 banks amounted to $\$ 19.6$ million, of which 72 percent were insured and 14 percent were protected by pledge of security, by counterclaims, or by preferred claims. Depositors holding the re-
maining 14 percent of deposits and the Corporation receive proportionate shares of the proceeds of the liquidation of the assets of the banks.

Note: In order to lessen the work to be done by insured banks in making the report on May 13, 1936, banks were asked to report on a basis of balances in each account without combining accounts standing to the credit of a depositor in the same right and capacity. Banks reported the volume of deposits in accounts of $\$ 5,000$ and under and the first $\$ 5,000$ in accounts exceeding that amount instead of amounts standing to the credit of each depositor in the same right and capacity. To simplify presentation, figures used throughout are those reported. Tests showed that failure to combine accounts caused a relatively small error. This treatment overstates the amount of insured deposits by less than 1 percent of total deposits for the country as a whole. Th number of accounts is greater than the number of depositors.

## MONETARY LEGISLATION IN CZECHOSLOVAKIA AND RUMANIA

The Czechoslovak Parliament enacted legislation on October 9, 1936, effective October 10 , providing for reduction of the gold content of the crown by not less than 13.30 percent nor more than 18.68 percent, for revaluation of the gold and foreign exchange holdings of the National Bank, and for creation of a stabilization fund from the proceeds of revaluation. A brief summary of this measure was given in the Bulletin for November 1936, p. 852. Full texts of the law and of a decree fixing the gold content of the crown are given below. The decree fixes the value of the crown at 31.21 milligrams of fine gold, midway between the upper and lower limits established by the law. The gold content of the Czechoslovak crown was previously reduced in February 1934 from 44.58 milligrams of fine gold to 37.15 milligrams, a reduction of $162 / 3$ percent. ${ }^{1}$

By Royal decree of November 6, 1936, the Rumanian Government provided for revaluation of the gold holdings of the National Bank of Rumania and for allocation of the resulting increment in accordance with a convention between the Bank and the Government. Since June 1, 1936, the National Bank of Rumania has been permitted to buy gold at a premium of 38 percent above the price fixed by the monetary law of February 7, 1929. ${ }^{2}$ The authorization was granted by the Council of Ministers on June 26, 1936, with retroactive effect as from June 1. There has been no change in the legal gold content of the leu, which was fixed at 10 milligrams of gold .900 fine by the law of February 7, 1929. Translations of the Royal decree and two conventions of November 6, 1936, are given below.

[^0]
## Czechoslovak legislation

## Act of Parliament of 9th October $1936{ }^{3}$

(No. 262 in the Collection of Laws and Decrees) concerning a readjustment of Czechoslovak currency
The National Assembly of the Czechoslovak Republic has passed the following law:

Article 1. (1) The Czechoslavak crown (Kc) as the monetary unit of the Czechoslovak Republic is hereby fixed at not less than 30.21 and not more than 32.21 milligrams of fine gold.
(2) The Government is empowered to fix by decree within the above limits the precise value of the Czechoslovak crown in relation to gold.
(3) The National Bank of Czechoslovakia is under the obligation of maintaining the exchange rate of the Czechoslovak crown at a level answering to the provisions of secs. 1 and 2.
(4) This measure replaces the legal provisions hitherto in force expressing the value of the Czechoslovak crown in relation to gold.
(5) The Czechoslovak crown as fixed according to secs. 1 and 2 takes the place of the hitherto existing monetary unit, in all legal relations into which the Czechoslovak crown enters, in the proportion of 1:1.

Art. 2. The gross weight of gold coin will be fixed by Government Decree.
Art. 3. The amount of the appreciation in the value of the reserves of gold and foreign currency at the National Bank of Czechoslovakia, which shall be ascertained after deducting the liabilities of the Bank in gold and foreign cur-

[^1]rency, shall be calculated, according to the position obtaining on the day upon which this law takes effect, provisionally on the basis of the upper limit referred to in article 1, sec. 1, and is the property of the State. It will be kept at the National Bank of Czechoslovakia as a standing deposit for the purpose of enabling the National Bank to fulfil the duty laid upon it in article 1. Details regarding the booking and administering of this deposit will be fixed by a special agreement between the State and the National Bank of Czechoslovakia.

Art. 4. Gold which is subject to compulsory registration and surrender under the terms of the Government Decree of the 10th September 1934 (No. 202 in the Collection of Laws and Decrees) concerning the registration and compulsory offer of foreign legal tender, of claims against foreign countries, of precious metals and securities, as laid down in the Government Decree of 7th December 1934 (No. 242 in the Collection of Laws and Decrees) will be taken over by the National Bank of Czechoslovakia at a price corresponding to the value of the Czechoslovak crown prior to the coming of this law into force.

Art. 5. This law amends the Regulations of the Standing Committee of 7 th November 1929 (No. 166 in the Collection of Laws and Decrees) and the Act of 17th February 1934 (No. 25 in the Collection of Laws and Decrees). ${ }^{4}$

Art. 6. This law becomes effective on the day of promulgation, and will be carried out by the Minister of Finance.

Government Decree of 9th October 1936
(No. 263 in the Collection of Laws and Decrees) fixing the precise value of the Czechoslovak crown in relation to gold
The Government of the Czechoslovak Republic, in accordance with article 1 , sec. 2 of the Act of Parliament of 9th October 1936 (No. 262 in the Collection of Laws and Decrees) concerning a readjustment of Czechoslovak currency, decrees as follows:

Article 1. The value of the Czechoslovak crown is fixed at 31.21 milligrams of fine gold.

Art. 2. This Decree becomes effective on the day of promulgation, and will be carried out by the Minister of Finance.

[^2]
## Rumanian legislation

Royal Decree No. 2504 of November 6, 1936, Concerning the Revaluation of the Metallic Stock of the National Bank of Rumania

Charles II, by the grace of God and the will of the nation, King of Rumania,

To all to whom these presents shall come, greetings:

By virtue of the report of Our Minister Secretary of State to the Department of Finance No. 252,224 of November 6, 1936,

By virtue of the minutes of the Council of Ministers No. 2,376, drawn up at its session of November 6, 1936,

We have decreed and do decree:
Article I. By authority of the minute of the Council of Ministers No. 1228, published in the Moniteur Officiel No. 147 of June 27, 1936, the National Bank of Rumania pays at present for each kilogram of fine gold, over and above the price of $111,111.11$ fixed by the monetary law of February 7, 1929, a premium of 38 percent, making a total of $153,333.33$ lei for each kilogram of fine gold.

Accordingly, the National Bank of Rumania shall value and enter the gold bullion and coin included among its assets, and that which it may acquire in future, at the price indicated above, $153,333.33$ lei for each kilogram of fine gold.

Art. II. The increment which shall result from the revaluation of the cover (couverture), shall be credited to the account of the Public Treasury, in accordance with a convention between the State and the National Bank, which convention shall establish the manner of use of this increment.

Art. III. The net increment which shall accrue to the State under the above provisions, shall not be used for ordinary budget expenditures but only for exceptional military requirements.

Art. IV. Exchange transactions, as well as those in precious metals, continue subject to the legal provisions now in effect.

Art. V. The provisions of the present decree shall become effective from the date of publication in the Moniteur Officiel. ${ }^{5}$

Art. VI. Our Minister Secretary of State for the Department of Finance is charged with the execution of this decree.

Given at Bucarest, November 6, 1936.

[^3]Conventions Between the Rumanian State and the National Bank of Rumania

## FIRST CONVENTION

Between the Rumanian State, represented by the Minister of Finance, Monsieur M. Cancicov, on the one part, and the National Bank of Rumania on the other part, represented by the Governor, Monsieur M. Constantinescu, acting under the authority granted by the Administrative Council of the said institution, at its session of November 6, 1936, the following convention is adopted:
"The increment resulting from the revaluation of the gold stock held at the National Bank of Rumania, November 6, 1936, shall be utilized in accordance with art. 2 of the Royal Decree No. 2,504, published in the Moniteur Officiel No. 260 of November 7, 1936, as follows:
"(a) The sum of $220,506,179$ lei shall be used to reimburse the N. B. R. for the premiums paid by it for gold bought;
" (b) The sum of $1,817,919$ shall be used to pay the interest of 5 percent on the advance of 15 millions of French francs granted by the 'Steaua Romana' and utilized for the foreign payments of the State;
"(c) A sum up to $275,000,000$ lei is allocated to cover the differences resulting from the devaluation of foreign currencies. The unused balance, after the final accounting has been made, shall automatically accrue to the Treasury.
"(d) With the sum of $100,000,000$ lei a fund is established at the disposal of the N. B. R. to cover the expenses connected with transactions in and control of exchange. The unused portion of this fund shall be turned back to the Public Treasury;
"(e) The sum of $347,091,906$ lei shall be credited to a separate account set aside to cover the premium of 38 percent on the unpaid balance of the credit negotiated by the N. B. R. in 1931 at the Bank of France and utilized for the transfer of foreign payments of the State.
"(f) The balance of the net increment shall be credited to the State and shall be devoted exclusively to meeting the necessary expenditures for military requirements."

## SECOND CONVENTION

Between the Rumanian State, represented by the Minister of Finance, Monsieur M. Cancicov, on the one part, and the National Bank of Rumania on the other part, represented by the Governor, Monsieur M. Constantinescu, acting under the authority granted by the Administrative Council of the said institution, at its session of November 6, 1936, the following convention is adopted:
"The Public Treasury shall reimburse the National Bank of Rumania to the amount of 2 billions of lei to extinguish the temporary advance, granted to the State by this institution, in accordance with art. 34, paragraph 4 of its statutes."

## STATISTICS OF INTERNATIONAL CAPITAL TRANSACTIONS OF THE UNITED STATES

Statistics of international capital transactions of the United States from the beginning of 1935 to September 30, 1936, were published by the Treasury on November 27, 1936, and will continue to be published quarterly. ${ }^{1}$ These statistics are reported on a weekly basis by banks and brokers in the United States. ${ }^{2}$ Most of the international capital transactions of this country appear to have been handled by these reporting institutions. Reports received from other sources, such as the larger exporters, importers, and commercial and industrial concerns, indicate that the net movement of capital through these agencies has been comparatively small. There are, however, unreported capital movements which may at some periods have been fairly substantial.

In order that the figures relative to international capital transactions may be readily available to readers of the Federal Reserve Bulletin, they are presented at the close of this article in summary form. The first table shows the total capital movement as reported by banks and brokers. The five major forms which this movement has taken are also shown in the first table. Each of the six columns is then made the subject of a succeeding table in which the data are classified according to leading countries and areas. In addition to these seven tables, tables 8 and 9 show the outstanding assets and liabilities from which the figures of the movement of banking funds are derived. Only short-term balances reported by banks are shown. Outstanding balances reported by brokers are of little importance and figures on outstanding security holdings are not collected for the Treasury. Four charts showing the capital movement to the United States and its principal components are presented on pages 38 and 39.

The movement of capital between the United States and foreign countries constitutes a major element in the balance of international payments of the United States. In recent years it has been the factor chiefly responsible for the gold flow to the United

[^4]States and the growth of excess reserves in member banks of the Federal Reserve System. International capital movements have been discussed in several issues of the Federal Reserve Bulletin on the basis of the figures published at the end of this article. Such discussions occurred in the Bulletins for October and December 1935 and for May, July, and December 1936.

## DETAILED DESCRIPTION OF THE STATISTICS

Since the international movement of capital consists of transfers of ownership of balances, securities, properties, and other claims between the United States and foreign countries, the distinction between domestic entities and foreign entities must be precisely indicated. Banking institutions, security dealers, other concerns, and persons are regarded as domestic, whatever their nationality, if domiciled within the United States. Conversely, banking institutions, security dealers, other concerns, and persons are regarded as foreign, whatever their nationality, if domiciled outside the United States. Thus, the branches in the United States of foreign banking institutions are regarded as domestic, while foreign branches of domestic banking institutions are regarded as foreign.

Not every transfer of ownership between Americans and foreigners, however, involves an international exchange transaction. A foreign buyer of American securities with funds on deposit at an American bank, for instance, may use these funds to pay for the securities purchased; or, not having such funds, may borrow from an American bank or broker. Thus, the recorded inflow of capital represented by the security transaction would be offset by a recorded outflow of capital reflected, in the first case, in a decrease in American deposit liabilities to foreigners; and, in the second case, in an increase in the foreign assets of an American bank or broker. No foreign exchange transaction would have occurred, since what appear in the recorded figures as two separate operations are really two offsetting aspects of a single operation, transacted wholly in dollars. The net figures, which would show no movement of capital, would report this fact correctly.

The following paragraphs describe in detail the source and nature of the figures in
the various tables. The figures in the first column of table 1, and in table 2, represent the summation of the several components described below.

Banking funds (table 1, second column, and table 3). -The term banking funds is here used to cover short-term liabilities to foreigners reported by banks in the United States, and short-term claims on foreigners reported by such banks. The reports also cover accounts of clients so far as these are handled by the banks. The figures discussed here relate only to the net movement of capital to the United States represented by changes in these liabilities and assets. Figures of the outstanding amounts of liabilities and assets are presented in tables 8 and 9 , and the source and nature of these figures are described more fully in connection with those tables.

The net movement of capital to the United States in banking funds represents the cumulated sum of (a) increases in liabilities to foreigners (table 8) and (b) decreases in foreign assets (table 9), reported by banks in the United States. Decreases in liabilities and increases in assets constitute outward movements of capital and reduce the cumulative inward movement. The extent to which, for any given period, the net movement in banking funds represents (a) an increase in liabilities to foreigners, as opposed to (b) a decrease in assets held abroad, may readily be derived from the figures in tables 8 and 9.

Brokerage balances (table 1, third column, and table 4). -The term brokerage balances is here used to cover balances due from foreigners to reporting brokers and dealers in securities domiciled in the United States, and balances due to foreigners by such brokers and dealers. Total brokerage balances due from foreigners include both debit balances in foreign accounts with domestic brokers and dealers (reflecting funds borrowed by foreigners, presumably for the purchase of securities), and funds held abroad in the form of balances with foreign banks and brokers. Total brokerage balances due to foreigners include both credit balances in foreign accounts with domestic brokers and dealers, and overdrafts carried abroad by such brokers and dealers.

The net movement of capital to the United States in brokerage balances represents the cumulated sum of (a) increases in balances due to foreigners by security brokers and dealers in the United States and (b) de-
creases in balances due from foreigners to such brokers and dealers. Decreases in (a) and increases in (b) constitute outward movements of capital and reduce the cumulative inward movement. A net outward movement of capital in brokerage balances has usually indicated that foreigners have bought securities on margin in the United States.

Outstanding amounts of brokerage balances, both due to and due from foreigners, are not large and the figures are not published with this article, although they are available in the Treasury bulletin of November 27. Brokerage balances outstanding at the beginning and end of the period covered, and for the intermediate dates on which the cumulative net inward and net outward movements of capital in brokerage balances were largest, are given below.

Since changes in brokerage balances are closely related to security transactions, it appears desirable, for most purposes, to consider them as part of the net movement of capital in security transactions. ${ }^{3}$

Total securities (table 1, fourth column, and table 5). -The net movement of capital to the United States in security transactions represents the cumulated net purchases of both domestic and foreign securities from Americans by foreigners, i.e., total foreign purchases minus total foreign sales, as reported by banks, bankers, brokers and dealers in the United States. The reports cover (a) transactions executed in the United States for foreign account, or on behalf of a domestic trustee or nominee known to be acting for foreign account; (b) transactions executed in foreign countries for account of reporting institutions in the United States or their domestic clients; ${ }^{4}$ (c) transactions executed for joint foreign arbitrage account,

[^5]as reported by brokers and dealers in the United States who participate as principals in security arbitrage accounts jointly with brokers and dealers domiciled abroad.
The basic figures represent the total amount of money debited or credited (to either foreign or domestic account), i.e., the cost of purchases plus commissions, tax, etc., or the proceeds of sales less commissions, tax, etc. When security purchases in the United States are partially financed by funds borrowed in this country, the full cost of the purchase is included in the security figures and the funds borrowed are reported by the lending bank or broker; and conversely when such securities are sold and the indebtedness is repaid.

Domestic securities (table 1, fifth column, and table 6).-The net movement of capital to the United States in security transactions during the period covered by the figures has represented principally net foreign purchases of domestic securities. The term "domestic securities" is used to designate securities of the United States Government, States, and municipalities, and of corporations chartered in the United States, except that changes in foreign holdings of United States Treasury bills and certificates are largely reflected in the figures in table 8 (see below) and are not included in the figures of transactions in domestic securities.

Foreign securities (table 1, sixth column, and table 7). -The other component of the net movement of capital to the United States in security transactions represents net foreign purchases of foreign securities. The term "foreign securities" covers the securities of foreign governments and political subdivisions, and of corporations chartered in foreign countries, except that changes in American holdings of foreign government securities maturing within one year of the date of issue are largely reflected in the figures in table 9 (see below), and are not included in the figures of transactions in foreign securities. Foreign purchases of foreign securities include, in addition to ordinary investments, two special types of transaction: (1) the amounts of called or matured foreign securities redeemed in the United States, and (2) sinking fund purchases of foreign securities in the United States. New foreign security issues in the United States are included in the figure of foreign sales of foreign securities, and foreign subscriptions to such issues are also reported as foreign purchases.

Short-term foreign liabilities (table 8) and assets (table 9) reported by banks in United States.-The figures in tables 8 and 9 represent, respectively, the short-term ${ }^{5}$ indebtedness to, or claims on, governments, banks, concerns, and individuals domiciled abroad, recorded on the books of banks and bankers in the United States. These figures are derived from weekly reports furnished by banks and bankers performing foreign banking operations, including domestically owned commercial banks and trust companies, private banks, domestic branches and agencies of foreign banks, and the Federal Reserve banks. The reports cover not only the reporting banks' own short-term liabilities to foreigners, but also short-term obligations held for foreign account which represent claims on institutions, firms, and individuals in the United States. Thus, for example, United States Treasury bills and certificates and commercial bills drawn on American firms are reported as liabilities to foreigners if held for foreign account by reporting banks and bankers. Similarly, the reports cover short-term claims on foreigners of domestic clients as well as those of the reporting banks. Thus, deposits maintained abroad, or bills sent abroad for collection, for account of domestic clients, are included in the figures of foreign assets. The reports show shortterm liabilities to, or claims on, all concerns and individuals, whatever their nationality, domiciled outside the United States, including foreign branches, subsidiaries, or affiliates of domestic banks and other concerns.

In considering the scope of the figures presented in tables 8 and 9 it should be recognized that, although they are believed to cover the most important portion of this country's short-term foreign liabilities and assets, there are several classes of liabilities and assets that are not reflected in the records of domestic banks and bankers, and, consequently, do not enter their figures. Three such classes not included in the figures in tables 8 and 9 are: (1) the short-term foreign liabilities and assets on open account of commercial, industrial, and other concerns domiciled in the United States; (2) the foreign debit and credit balances of security brokers and dealers in the United States; and (3) foreign holdings of United States currency. Although reports are received from commercial,

[^6]industrial, and other concerns, publication of the figures has been postponed, owing to certain statistical inadequacies, until necessary improvements have been developed. The net movement of capital in brokerage balances is given in table 4, however, and some idea of the net change in foreign holdings of United States currency may be obtained from figures published monthly in the Federal Reserve Bulletin and annually by the Department of Commerce in The Balance of International Payments of the United States.

The detailed classification of foreign liabilities and assets, as reported by banks and bankers and as published in the Treasury bulletin of November 27, is as follows:
Short-Term Foreign Liabilities

## Payable in dollars

1. Deposits for foreign account
2. Loans to brokers and dealers in securities for foreign account
3. Bills held for foreign account
4. Short-term United States Government obligations held for foreign account
5. All other

Payable in foreign currencies
6. Borrowings from foreign banks
7. Acceptances made by foreign banks
8. All other

Short-Term Foreign Assets
Payable in foreign currencies

1. Banks' own deposits abroad
2. Deposits abroad for account of domestic clients
3. All other (including publicly offered securities of foreign governments or political subdivisions maturing within one year of date of issue)
Payable in dollars
4. Loans to foreign banks
5. Acceptances made for foreign account
6. All other

Note.-Certain of the figures for August 12, 1936, and succeeding weeks, in tables 8 and 9, are not precisely comparable to the corresponding figures for weeks preceding August 12, owing to a revision in reporting practice by one of the reporting banks. In order that allowance may be made for this revision, the figures for August 12, 1936, are presented below on a basis comparable with those for preceding weeks.

1 Gold released from earmark at Federal Reserve banks less gold placed under earmark (with allowance when necessary for changes in gold earmarked abroad for account of Federal Reserve banks).
${ }_{2}$ Figures are derived from preceding columns and indicate net result of such factors as domestic production, movements into and out of conmonetary use or unreported holdings, imports and exports that do not affect gold stock during the month or year, and increment result ing from reduction in weight of gold dollar.

Back figures.- See Annual Report for 1935 (table 32)

1 Figures represent customs valuations which, with some exceptions, are at rate of $\$ 35$ a ine ounce.
${ }^{2}$ Includes sll movements of unreported origin or destination.
Back figures.-See table, p. 829, and Annual Report for 1935 (tables 34 and 35).

## ALL BANKS IN THE UNITED STATES

Ccmprises all national banks in the continental United States and all State commercial banks, trust companies, mutual and stock savings banks and such private and industrial banks as are included in abstracts issued by State banking departments. Also includes, during the period June 1934-June 1935, private banks which, pursuant to the provisions of sec. 21 (a) of the Banking Act of 1933 , submitted condition reports to the Comptroller of the Currency. Under the amended provisions of Sec. 21 (a) private banks no longer report to the Comptroller of the Cur rency. For comparative figures of private banks included in the figures from June 1934 to December 1935, see Federal Reserve Bulletin for December 1935, p. 883 , and July 1936, p. 535. Figures for nonmember banks are for dates indicated or nearest thereto for which figures are available.

## ALL MEMBER BANKS-RESERVES, DEPOSITS, AND BORROWINGS

[In millions of dollars]

${ }^{1}$ Prior to Dec. 31, 1935, excludes balances with private banks to the extent that they were then reported in "Other assets." Since Oct. 25, 1933, includes time balances with domestic banks which on that date amounted to $\$ 69,000,000$ and which prior to that time were reported in "Other assets." ${ }^{2}$ Does not include cash items in process of collection reported in balances with domestic banks. Prior to Dec. 31, 1935, includes cash items on hand but not in process of collection, amounting on that date to $\$ 16,000,000$
${ }^{3}$ Includes "Due to Federal Reserve banks (transit account)", known as "Due to Federal Reser ve banks (deferred credits)" prior to Dec. 31, 1935. 4 Demand deposits other than interbank and U. S. Government, less cash items reported as in process of collection and, prior to Dec. 31, 1935, less cash items reported on hand but not in process of collection.

5 Beginning June 1933 flgures relate to licensed banks only.

- Oentral reserve city banks.

Back figures.-See Annual Report for 1935 (table 53)

${ }^{1}$ Does not include loans by joint stoek land banks, which are now in liquidation.
${ }^{2}$ Some of the loans made by the regional agricultural credit corporations and the banks for cooperatives and most of the loans made by the production credit associations are discounted with the Federal intermediate credit banks. The amounts in this column are thus included in the 3 columns under those headings. Such loans are not always discounted in the same month in which the original credit is extended.

${ }^{p}$ Preliminary.

## r Revised

* A verage per working day.
${ }^{1}$ For indexes of groups and separate industries see pp. 67-68; for description see Bulletin for February and March 1927.
${ }^{2} 3$-month moving average of F. W. Dodge Corporation data centered at second month; for description see Bulletin for July 1931, p. 358.
${ }^{3}$ The indexes for factory employment and pay rolls unadjusted for seasonal variation are compiled by the Bureau of Labor Statistics. For description and back figures for the seasonally adjusted index of factory employment compiled by F. R. Board of Governors see pages $950-978$ of the Bulletin for December 1936. For current indexes of groups and separate industries see pp. 69-72. Underlying figures are for pay-roll period ending nearest middle of month.

4 For indexes of groups see p. 74.
Back figures.-See Annual Report for 1935 (table 75). For department store sales see p. 631 of Bulletiv for August. 1936.

## INDUSTRIAL PRODUCTION, BY INDUSTRIES (ADJUSTED INDEXES)

[Index numbers of the Board of Governors; adjusted for seasonal variation. 1923-25 average=100]

1 Without seasonal adjustment.
2 Includes also lead and zinc: see "Minerals."

INDUSTRIAL PRODUCTION, BY INDUSTRIES (UNADJUSTED INDEXES)
[Index numbers of the Board of Governors; without seasonal adjustment. 1923-25 arerage $=100$ ]

[^23]
## GOLD MOVEMENTS-Continued

[In thousands of dollars at approximately $\$ 35$ a fine ounce]

${ }^{p}$ Preliminary. $\quad c$ Corrected.
$1 \$ 9,079,000$ imported by France from Spain in March, $\$ 8,354,000$ in June, $\$ 12,503,000$ in August, and $\$ 38,436,000$ in September 1936.
Note.-United Kingdom.-In some cases the annual aggregates of the official monthly figures differ somewhat from the revised official totals published for the year as a whole.

## GOLD MOVEMENTS-Continued

[In thousands of dollars at approximately $\$ 35$ a fine ounce]

## $p$ Preliminary. $r$ Revised.

1 Netherlands figures for October 1936 are for gross imports; exports, which are subject to license, were not reported. No figures reported for No vember 1936.
${ }_{3}^{2} \$ 8,444,000$ imported by Switzerland from Czechoslovakia in April and $\$ 15,933,000$ in May 1936 .
${ }_{4}$ Figures derived from preceding columns; net imports plus production minus increase in reserves in India.
Note.-Germany, Netherlands, and Switzerland.-In some cases the annual aggregates of the official monthly figures differ somewhat from the revised official totals published for the year as a whole. German gold movements by individual countries, beginning with July 1936, are subject revised official tota
to official revision.

CENTRAL BANKS

${ }^{1}$ Issue department also bolds securities and silver coin as cover for fiduciary issue, which is fixed by law at $\mathbf{£ 2 6 0 , 0 0 0 , 0 0 0}$.
${ }^{2}$ By law of October 1, 1936, gold provisionally revalued at rate of 49 milligrams gold 0.900 fine per franc. Of the total gold increniert of about $17,000,000,000$ francs, $10,000,000,000$ franes was initially turned over to the stabilization fund established by the law of October 1.
${ }^{3}$ Bills and warrants endorsed by the National Wheat Board (law of Aug. 15, 1936-see Bulletin for October 1936, pp. 785-786), and bills rediscounted for account of the Banques Populaires (law of Aug. 19, 1936-see Buldetin for October 1936, p. 788).

Note.-For explanation of table see Bulletin for February 1931, pp. 81-83, July 1935, p. 463, and July 1936, p. 603

## SUBSCRIPTION PRICE OF BULLETIN

The Federal Reserve Bulletin is the Board's medium of communication with member banks of the Federal Reserve System and is the only official organ or periodical publication of the Board. The Bulletin will be sent to all member banks without charge. To others the subscription price, which covers the cost of paper and printing, is $\$ 2$. Single copies will be sold at 20 cents. Outside of the United States, Canada, Mexico, and the insular possessions, $\$ 2.60$; single copies, 25 cents.

[^0]:    ${ }_{2}$ See Bulletin for May 1934, p. 288.
    2 See Bulletin for March 1929, p. 201.

[^1]:    ${ }^{3}$ The English texts given herewith are those published in a supplement to the Bulletin of the National Bank of Czechoslovakia for October 1936.

[^2]:    ${ }^{4}$ Sre Bulletins for December 1929, pp. 797-798, and May 1934, p. 288 .

[^3]:    "Published in the Moniteur Officiel No. 260 of November 7, ${ }^{5} \mathrm{P}$

[^4]:    ${ }^{1}$ See document entitled "Statistics of capital movements between the United States and foreign countries and of purchases and sales of foreign exchange in the United States, January 1935 through September 1936.'
    "The figures are reported to the Federal Reserve banks pursuant to the Executive Order of January 15, 1934 (Bulletin for February 1934, pp. 78-79), and the Treasury Requlation of November 12, 1934 (Bulletin for December 1934, p. 780 ).

[^5]:    ${ }^{3}$ See first chart, p. 38, and note.
    ${ }^{4}$ In general, transactions executed abroad otherwise than through the intermediary of a regularly reporting agency are not reported, though certain special transactions reported directly by industrial concerns are included.

[^6]:    5 "Short-term" is defined as relating to obligations maturing within one year of the date of report; except that long-term publicly offered securities are not regarded as short-term obligations, even when they come within one year of maturity.

[^7]:    1 Outflow less than $\$ 50,000$.

[^8]:    : Purchases less than $\$ 50,000$.

[^9]:    ${ }^{1}$ Includes Federal Reserve notes held by other Federal Reserve banks.

[^10]:    banks are estimates.
    ${ }_{2}$ Reserve requirements increased 50 percent effective Aug. 16.

[^11]:    ${ }^{1}$ Excluding central reserve city banks, for which figures for latest month are shown in table above.
    Note.-For explanation and figures for period January-June 1936 see September Bulletin, pp. 700-701. For earlier figures see April 1936 Bulletin, p. 299, and previous issues.

[^12]:    ${ }^{1}$ Figures of preceding call carried forward.
    ${ }^{3}$ Beginning June 30,1933 , all figures (other than for mutual savings banks) relate to licensed banks only, with some exceptions as to nonmember banks.
    ${ }^{2}$ Nonmember bank figures not available.
    4 Prior to Dec. 30, 1933, member-bank figures include interbank deposits not subject to immediate withdrawa!, which aggregated $\$ 103,000,000$ on that date.

    Back figures.-See Annual Report for 1935 (tables 47-48)

[^13]:    ${ }^{1}$ Loans (secured by stocks and bonds) to brokers and dealers in securities.
    2 Beginning June 30, 1933, figures relate to licensed banks only.
    'An estimated small amount of Home Owners' Loan Oorporation bonds fully guaranteed by the United States Government is included in "Other securities" on this date.

    Central reserve city banks.
    Back figures.-See Annual Report for 1935 (table 52).

[^14]:    ${ }^{1}$ Monthly data are averages of daily figures, except for municipal bonds, which are averages of Wednesday figures.
    ${ }^{2}$ Average of yields of all outstanding bonds due or callable after 8 years.
    3 Standard Statistics Co.
    ${ }^{4}$ Moody's Investors Service, revised series. Because of Iimited number of suitable issues, less than 40 industrial bonds are included; the industrial Aaa group has been reduced from 10 to 3 and the industrial Aa group from 10 to 4.

    Back figures.-See Annual Report for 1935 (table 74).

[^15]:    ${ }^{1}$ Includes issues of noncontiguous U. S. Territories and Possessions. $r$ Revised.
    ${ }^{2}$ Includes publicly offered issues of Federal land banks, Federal intermediate credit banks, Federal Farm Mortgage Corporation, and Home Owners' Loan Corporation; excludes direct obligations of U. S. Treasury.
    ${ }^{3}$ Less than $\$ 500,000$.
    Sources.-For domestic issues, Commercial and Financial Chronicle; for foreign issues, U. S. Department of Cormmerce. Monthly figures subject to revision.

    Back figures.-See Annual Report for 1935 (table 72) for figures of new issues-annual and quarterly basis.

[^16]:    ${ }^{1}$ Includes processing taxes, customs, and miscellaneous receipts. $\quad{ }^{2}$ Excludes public-debt retirement.
    ${ }^{3}$ Includes expenditures classified by the Treasury as agricultural aid, aid to home owners, and miscellaneous, which includes direct loans and expenditures of the Reconstruction Finance Corporation.
    ${ }_{4}$ Includes also increment resulting from reduction in the weight of the gold dollar, receipts from seigniorage, expenditures chargeable against increment on gold (other than for retirement of national-bank notes), and beginning June 1935 transactions in checking accounts of certain special go rernmental agencies whose balances were transferred on May 31, 1935, to these accounts.
    :Expenditures include $\$ 1,673,000,000$ of payments to veterans under the Adjusted Compensation Payment Act of 1936 .

    - Excess of credits.

[^17]:    $p$ Preliminary.
    ${ }_{3}^{1}$ Includes $\$ 108,000,000$ of loans for distribution to depositors of closed banks. : Includes $\$ 648,000$ of preferred stock instalment sale contracts
    ${ }^{3}$ Includes $\$ 100,000$ of loans to Rural Electrification Administration
    Note.-For explanation of table and back figures, see April Buldetis, p. 220.

[^18]:    $r$ Revised.
    In addition to loans the HOLC held on Nov. 30, 1936, \$462,000,000 in other assets, consisting principally of in restments in the Federal Savings and Loan Insurance Corporation and in various savings and loan assoiations, real estate and other property, and accrued interest receivable.
    re members, and a negligible amount to others than member institutions.
    ${ }_{3}$ Includes accrued interest.

[^19]:    ${ }^{1}$ Includes also lead and zinc; see "Minerals."

[^20]:    ${ }^{r}$ Revised.
    Note.-Figures for November 1936 are preliminary. For description see pages $950-953$ of the Bulletin for December 1936. Back data may be obtained from the Bureau of Labor Statistics. Underlying figures are for pay-roll period ending nearest middle of month.

[^21]:    $r$ Revised.

[^22]:    ${ }^{1}$ Includes 9,000 bales grown in miscellaneous territory.
    ${ }^{2}$ Includes 15,000 bales grown in miseellaneous territory.

[^23]:    ${ }^{1}$ Differs from official customhouse figures in which imports and exports for January 1934 are valued at approximstely $\$ 20.67$ a fine ounce.
