## FEDERAL RESERVE BULLETIN

Vol. 24
APRIL, 1938
No. 4

## REVIEW OF THE MONTH

During the first quarter of 1938 excess reserves of member banks showed a substantial increase and at the end of March exceeded \$1,500,000,-

Growth of excess reserves

000 . This is about the volume of excess reserves held by member banks in April of last year and compares with an average level of about $\$ 1,000,000,000$. in the last three months of 1937. The principal source of new reserves in the early weeks of this year was the post-holiday return of currency from circulation, which amounted to about $\$ 350,000,000$, following a less-than-seasonal expansion in the period before Christmas. The banks also gained reserves from an addition to the active monetary gold stock, subsequent to the modification of the Treasury gold policy on February 14, from the issuance of silver certificates by the Treasury, and from a reduction in foreign central bank deposits at the Reserve banks, which had declined steadily since early last October. A reduction in required reserves, reflecting a decline in deposits, also released excess reserves to member banks. A temporary increase in the latter part of March in Treasury deposits with the Reserve banks was a factor of decrease in member bank reserves.

As shown on the accompanying chart, all classes of banks shared the increase in excess reserves from December to early March of this year. Later in March excess reserves of New York City banks continued to increase sharply, reaching a total of nearly $\$ 800,000$,000 , while those of outside banks declined somewhat. Treasury operations at the March quarterly income tax collection period were largely responsible for this shift in excess reserves among classes of banks. The New York banks gained reserves at this time as

Treasury interest payments and the redemption in cash of $\$ 400,000,000$ of Treasury bills maturing from March 16 through March 19, which were largely held in the New York market, substantially exceeded income taxes paid by depositors of the New York banks.

Banks elsewhere lost reserves as the result of payments of income taxes, but met part of these losses by withdrawals of correspondent balances from New York. The loss of reserves by outside banks at this time is usually of short duration. In the interval between the quarterly tax dates Treasury cash disbursements exceed receipts in most districts and local banks are thereby provided with new reserve funds.

The Treasury quarterly financing on March 15 was confined to the refunding of $\$ 455$,000,000 of notes maturing

Treasury financing in March on that date. Holders of the maturing notes were offered the option of exchanging them for $21 / 2$ percent bonds maturing on September 15, 1948. The new issue met a favorable re-
ception in the market, and practically all of the notes were presented for conversion. The Treasury also sold $\$ 50,000,000$ of bills each week during March in addition to the regular offerings to replace weekly bill maturities. The new bills mature during the June tax collection period. They were sold on a bookcredit basis to prevent a further rise in the Treasury balance at the Reserve banks, which has recently been in excess of usual workingbalance needs. The book-credit feature was particularly attractive to city banks outside of New York City, which purchased a large portion of these bills at slightly lower rates than were paid on the regular 91-day bills issued within the period.

On February 16, currencies of the four foreign countries in the Tripartite agreement other than France reached their highest quotations in this market since last November. Foreign uncertainties with regard to the dollar, while somewhat intensified early in February, had been operative in the exchange market since the beginning of the current recession in business. They were responsible in large measure for the heavy reduction in foreign dollar balances since last September. The necessity of paying for the excess of merchandise exports from this country, amounting to $\$ 600,000,000$ during the six months ending February, has also been a factor in the decline of foreign balances here.

The chart shows that both foreign central bank balances held with the Federal Reserve banks and other foreign balances with commercial banks in the United States were substantially reduced during the final months of 1937. This movement continued in both classes of balances throughout most of the first quarter of the current year, but at a somewhat slower rate. The withdrawal of short-term funds was at no time accompanied by a considerable volume of foreign selling of American securities, however, and over the whole period since last September foreigners
have somewhat increased their holdings of American stocks and bonds.

Following a statement by the President on February 18 that devaluation of the dollar was not in contemplation, the leading foreign currencies drifted irregularly lower in this market. In the second week of March, there were political developments in Europe that profoundly affected international markets and led to a rapid decline in the dollar quota-

Weekly figures of short-term liabilities to foreigners reported by banks in the United States, adjusted to exclude the approximate amount of deposits earmarked for redemption of foreign dollar bonds. Central bank balances are those reported by the Federal are designated "private" although they are known to include some central bank and other official balances.
tions of foreign currencies and to a cessation of the previous outward flow of capital from this country.

In France the Chautemps Cabinet, formed in January and not fully representative of the Popular Front, resigned on March 10 because of the difficult fiscal situation and its in-
ability to obtain full powers to take financial and economic measures by decree. Former Premier Blum, who was entrusted with the formation of a new Cabinet, first attempted to form a broad coalition Government embracing members of the conservative parties as well as of the Popular Front. The attempt failed. On March 13, a new Popular Front cabinet was announced and the franc, which had rallied from its earlier lows on the prospect that a broad non-partisan Government would be formed, broke sharply to about 3.05 cents on March 14. It fluctuated around this lower level, more than 20 percent below its 1929 parity with the dollar, throughout the rest of March. In the latter part of the month legislation was passed which increased by $5,000,000,000$ francs the limit on Treasury borrowing at the Bank of France.

More widespread in its effects than the French developments was the European war scare arising out of the announcement on March 9 that a plebiscite on the question of Austrian independence would be held the following Sunday, the resignation of Chancellor Schuschnigg on March 11, and the annexation of Austria by Germany on the 13th.

As the crisis developed, there was an increase in gold hoarding on the London market and European currencies fell. On March 15 the dollar equivalent of the London gold price declined to a level at which, for the first time since last September, it became profitable for American banks to buy gold in London for shipment to the United States, and several purchases were made on that and succeeding days. The decline of foreign currencies and the hoarding of gold abroad continued.

A further development that contributed to uncertainty during the third week of March was the Polish ultimatum to Lithuania. With Lithuania's acceptance of the Polish terms on March 19, however, and the gradual clarification of the Austrian situation, conditions in world markets became calmer.

Member banks in 101 leading cities reported some decline in deposits during the first three weeks of March.

## Member bank

 credit Their aggregate loans and investments also declined, owing largely to redemption of Treasury bills in the third week of March. As brought out in the chart, from last October through January, New York banks had steadily added to their holdings of Government securities, while holdings at banks in 100 other leading cities had shown little change. New York City banks increased their holdings of other securities by nearly $\$ 200,000,000$ in the first quarter of the year.Commercial and industrial loans at reporting banks showed a moderate decline in February and March. Since last October these loans had been generally decreasing, owing in part to the seasonal decline in the demand for credit. Ordinarily there is a small seasonal increase in these loans in the early spring. In the early part of March, loans to security dealers showed an abrupt increase, in connection with the public debt operations of the Treasury, followed by an equally sharp decline. Loans to brokers and dealers in securi-

Total loans and investments include various types not shown separately. Latest figures are for March 23, 1938. Figures shown for commercial loans, which include also industrial and some agricultural loans, are based upon new classifications beginning May 19, 1937 .
ties by New York City banks are now about half of what they were last September prior to the sharp decline in stock prices.

Government security prices, which had shown a steady advance for the six months, declined somewhat in March. The

## Securities markets

 average yield on long-term Treasury bonds, which declined to 2.41 percent early in March, closed the month at 2.52 percent. The average yield on $3-5$ year Treasury notes declined to 0.96 percent, almost reaching the low level of 0.92 percent in December 1936, but rose toward the end of the month to above one percent. Rates on new issues of Treasury bills were little affected by these fluctuations in longer-term Government securities. New issues of 91day Treasury bills sold during March at 0.07 percent, a yield slightly lower than in the two preceding months.The most striking development in the securities markets during the first three months of this year was a marked weakness in railroad bonds of medium- and lower-grade. After declining sharply in January to the lowest point since early 1933, prices of these obligations recovered slightly during February, but in March declined again to new lows which were about 20 points below their December level.

Yields on highest-grade corporate bonds rose slightly during the latter part of March, after remaining fairly stable during the earlier part of the year at the low level reached in December, which was only slightly above the all-time lows reached at the end of 1936. Prices of industrial and public utility bonds of the medium- and lower-grades have continued to fluctuate irregularly about their low levels reached in the last quarter of 1937. Common-stock prices declined in the latter part of March to below their lows of 1937.

Customers' debit balances with stock exchange firms declined during the first two months of this year by about $\$ 50,000,000$ and at the end of February were about $\$ 935,000$,000 as compared with the peak last year of
$\$ 1,560,000,000$. The current level of these balances and of brokers' loans is lower than at any time since 1933.

During the first quarter of this year, corporate security issues offered for new capital purposes totaled about a third as much as in the correspondCapital issues ing period of 1937. A moderate amount of corporate refunding was carried out in February and March, following several months of virtual inactivity in this field. Despite instability in the lower-grade bond market, a number of issues with medium ratings are reported to have sold well.

During the first three months of 1938 industrial production continued at the low level reached at the beginning

## Business conditions in first quarter of 1938

 of the year. Freight-car loadings decreased further, however, and retail distribution of commodities, which had been well maintained in most lines during the latter part of 1937, also declined during the quarter. Wholesale commodity prices generally showed little change, but prices of some basic agricultural and industrial commodities declined and in the fourth week of March were at lower levels than those reached last November.The Board's index of industrial production, which by January had declined to 80 percent of the 1923-1925 average, was at 79 percent in February, and preliminary estimates indicate little change from this level in March. In industries manufacturing nondurable goods there were moderate increases in activity in February at textile mills, clothing establishments, and shoe factories, while decreases were reported at rubber tire factories and meat-packing establishments. At steel mills, automobile factories, lumber mills and in other durable goods industries, output continued at a low level in March, as well as in February, and such increases as occurred were generally somewhat less than the usual seasonal amounts. Output of minerals declined in February but increased in March.

The extent of recent changes in activity in industries manufacturing durable goods and in those producing nondurable goods is indicated in the accompanying chart which shows the estimated number of man hours worked. The figures are based on reports for the payroll period ending nearest the middle of the month and are adjusted for seasonal variation.

Based on data compiled by the Bureau of Labor Statistics. February 1938 figures estimated.

Distribution of commodities to consumers decreased further in the first quarter of 1938. Sales of automobiles and other durable consumers' goods, which had declined in the latter part of 1937, continued at a low level in the first part of 1938, and sales by department and variety stores and mail order sales, which had been well maintained up to the end of last year, declined. The Board's seasonally adjusted index of department store sales for March is estimated on the basis of weekly figures to be around 85 percent of the 1923-1925 average as compared with 88 in February and a level of 93 during most of last year. The reduction from a year ago reflects a decline in retail prices as well as a smaller physical volume of sales. Inventories at department stores by the end of February had been reduced 10 percent from the level prevailing last August.

In the construction industry, contracts for residential projects, which in January were about 50 percent smaller than a year ago,
subsequently increased more than seasonally and in the first three weeks of March were 14 percent smaller than in the corresponding period last year. The value of all contract awards in the first quarter was one fourth smaller than a year ago, reflecting a smaller volume of private projects, particularly for factory, commercial, and public utility construction.

## Appointment of Mr. Draper to the Board of Governors

On March 11, 1938, the President nominated Ernest G. Draper of Connecticut as a member of the Board of Governors for the unexpired portion of the term of fourteen years from February 1, 1936, which was made vacant by the resignation of Mr. Broderick on September 30, 1937. Mr. Draper's appointment was approved by the Senate on March 23, and he assumed his duties as a member of the Board on March 30, 1938.

Mr. Draper was born in Washington, D. C., May 15, 1885, and received his B.A. degree from Amherst in 1906. He began his business career in New York City in 1906. He was president of the American Creosoting Company from 1912 to 1920, treasurer of The Hills Bros. Co. from 1920 to 1926, and vice president and treasurer of the same company from 1926 to 1935 . He has served as a member of the New York State Commission on Unemployment, of the New York City Art Commission, of the New York Advisory Commission on Minimum Wage, of the Business Advisory Council for the Department of Commerce, and as a representative of industry on the National Labor Board. Since 1935 he has been Assistant Secretary of Commerce.

## Appointment of Class C Director at a Federal Reserve Bank

On March 11, 1938, Henry I. Harriman, Boston, Mass., was appointed a Class C director of the Federal Reserve Bank of Boston for the unexpired portion of the term ending December 31, 1940.

# NATIONAL SUMMARY OF BUSINESS CONDITIONS 

[Compiled March 23 and released for publication March 25]

Volume of manufacturing production showed little change from January to February, while output of minerals declined further. Awards for residential building increased somewhat in February and rose considerably in the first half of March.

Production.--The Board's seasonally adjusted index of industrial production, which includes both manufacturing and mining, was 79 percent of the 1923-1925 average in February as compared with 80 percent in

Monthly index of physical volume of production, adjusted for seasonal variation, 1923-1925 average $=100$.

January. The decline in the total index was accounted for chiefly by a reduction in output of minerals, particularly of crude petroleum. Steel ingot production showed about the usual seasonal increase and averaged 32 percent of capacity in February. Automobile production decreased slightly further, and output of plate glass continued to decline. Lumber production rose seasonally. In the first three weeks of March activity at steel mills and automobile factories was at about the same average rate as in February. In the nondurable goods industries there were moderate increases in output in February at textile mills and shoe factories, where production has recently been at low levels, while at meat-packing establishments activity declined.

Value of construction contracts awarded, as reported by the F. W. Dodge Corporation, showed a sharp decline from January to February, reflecting chiefly a marked reduction in awards for publicly-financed projects. Contracts for residential building increased moderately. In the first half of March there was a considerable further increase reported for residential building and awards for other construction also increased.

Employment.-Factory employment and payrolls increased by somewhat less than the usual seasonal amount between the middle of January and the middle of February. The Board's seasonally adjusted index of factory employment was at 83 percent of the 1923-1925 average in February as compared with 84 in January. In the durable goods industries decreases were general in February, though not so large as in preceding months. Employment in nondurable goods industries increased somewhat following a period of rapid decline. Employment in trade, at mines, on the railroads, and in the construction and public utility industries decreased somewhat from the January level.

Distribution.-Value of department store sales, as measured by the Board's seasonally adjusted index, declined from 90 percent of the 1923-1925 average in January to 88 per-

Index of total loadings of revenue freight, adjusted for seasonal variation, 1923-1925 average $=100$.
cent in February; and in the first three weeks of March there was a further decrease. Sales at variety stores and mail order houses in February showed somewhat less than the usual seasonal increase.

Freight-car loadings decreased further in February, reflecting chiefly reduced shipments of coal and grain, and showed a seasonal increase in the first two weeks of March. The current level of carloadings is about 25 percent less than a year ago.

Commodity prices.-The general level of wholesale commodity prices, as measured by the Bureau of Labor Statistics' index, showed little change from the middle of February to the third week of March. There were seasonal increases in prices of livestock and meats, while prices of such basic commodities as wheat, cotton, rubber, zinc, and bituminous coal declined.

Index compiled by United States Bureau of Labor Statistics $1926=100$. By weeks, January 6, 1934, to March 19, 1938.

Bank credit.-Excess reserves of member banks increased during the first three weeks of March to over $\$ 1,500,000,000$, the highest level since last April. The bulk of the increase occurred at New York City banks,
which in the third week of the month held over $\$ 700,000,000$ of excess reserves.

Wednesday figures of estimated excess reserves for all member banks and for selected New York City banks, January 3, 1934, to March 23, 1938.

During February and the first half of March, there was little net change in deposits and in total loans and investments at reporting member banks in 101 leading cities. Holdings of United States Government obligations declined at banks in New York but increased in Chicago. Commercial loans, which had decreased sharply in the four preceding months, showed a further moderate decline.

Money rates and bond yields.-Conditions in the short-term money market continued easy in March. Rates on Treasury bills were slightly lower and prime commercial paper was quoted at a range of from $3 / 4$ to 1 percent as against the flat 1 percent rate which had prevailed since a year ago. Yields on Treasury bonds and notes, after declining for the past six months, advanced slightly around the middle of March. Yields on corporate bonds also advanced in March, reflecting principally declines in prices of railroad bonds.

## LAW DEPARTMENT

## Time When Guarantee Is Filed With Secretary of Exchange

Under section 6(c) (2) of Regulation T, one of the requirements for a guarantee being given effect for the purposes of the regulation is that "a duplicate original of the guarantee has been filed with the secretary of a national securities exchange of which the creditor is a member or through which his transactions are effected."

The Board recently considered a case in which a creditor had received a guarantee that satisfied all other requirements for its effectiveness under the regulation, but the creditor's office was located at such a distance from an appropriate national securities exchange that it would require several days for the duplicate original to reach the secretary of the exchange by mail. The question presented was whether in such circumstances, if the creditor mailed the duplicate original to the secretary of the exchange and also advised the secretary of these facts by telegraph, the creditor might thereupon treat the guarantee as having been appropriately filed, instead of allowing time for the duplicate original to reach its destination.

It is recognized that filing requirements of other statutes or regulations frequently are held not to be complied with until the document in question has been received in the office of the person with whom it is to be filed. The Board expressed the opinion, however, that in view of the purposes of this requirement in Regulation $T$ it would be proper in a case such as that described to treat the duplicate original of the guarantee as having been filed with the secretary of the exchange as of the time when the duplicate original has been mailed to him and he has been advised by telegraph.

## Amendment of Regulation T

The Board recently adopted Amendment No. 1 of its revised Regulation T. The amendment became effective on March 21, 1938, and made certain technical changes to facilitate transactions involving withdrawals from special omnibus accounts, shipments of securities in connection with special cash accounts, or financing of odd-lot dealers in special omnibus accounts. It amended the revised regulation as indicated below.

1. Section 4 (b) of said regulation was amended by striking out the word "and" after the semicolon in paragraph (2) of said section, by striking out the period at the end of paragraph (3) of said section and substituting therefor a semicolon and the word "and", and by adding at the end thereof a new paragraph reading as follows:
"(4) A transaction consisting of a withdrawal of cash or registered or exempted securities from the account shall not be subject to the restrictions specified in the second paragraph of section 3 (b)."
2. The second paragraph following paragraph (2) of section 4(c) of said regulation was amended by adding the following sentence at the end thereof:
"If any shipment of securities is incidental to the consummation of a transaction in a special cash account, the period applicable to the transaction under the foregoing provisions of this paragraph or the preceding paragraph shall be deemed to be extended by the number of days required for such shipment, except that the total extension of such period pursuant to this sentence shall not exceed 7 days for any transaction."
3. Paragraph (2) of section 4 (f) of said regulation was amended to read as follows:
"(2) Effect and finance, for any member of a national securities exchange who is registered and acts as an odd-lot dealer in securities on the exchange, such member's transactions as an odd-lot dealer in such securities, or effect and finance, for any joint adventure in which the creditor participates, any transactions in any securities of an issue with respect to which all participants, or all participants other than the creditor, are registered and act on a national securities exchange as odd-lot dealers."

## UNITED STATES GOVERNMENT CORPORATIONS AND CREDIT AGENCIES IN 1937

Total outstanding loans and investments in stock of financial institutions by Government corporations and credit agencies were reduced by $\$ 370,000,000$ in 1937 , or nearly as much as in 1936, and at the end of the year amounted to $\$ 8,560,000,000$. The proprietary interest of the United States was $\$ 4,070,000,000$ on December 31, 1937, an increase of $\$ 160,000,000$ over 1936. Practically all of this increase resulted from the transfer to the United States Housing Authority, organized in 1937, of $\$ 150,000,000$ of assets of the Public Works Administration which had not previously been reflected in the Treasury's combined statement of assets and liabilities. There was a moderate increase in the combined equity of private stockholders. Real estate and other property held for sale increased by $\$ 290,000,000$ during the year to a total of $\$ 620,000,000$. Liabilities in the form of bonds and notes were $\$ 6,010,000,000$ at the end of 1937 , or $\$ 90,000,000$ less than a year earlier.

The decrease in loans and investments of these agencies during 1937 reflected principally declines in home mortgage and farm mortgage loans that were made during the emergency period. Loans to financial institutions and others by the Reconstruction Finance Corporation and its holdings of preferred stock, capital notes and debentures of banks declined much less in 1937 than in 1936. Further liquidation of Commodity Credit Corporation loans that were made in 1934-1935 was partly offset by new loans on cotton. Agricultural production loans outstanding increased as did also the outstanding loans of Federal Home Loan Banks to their member institutions. Further investments were made in savings and loan associations. The Federal Housing Administration insured a large volume of privately made home mortgage loans, and the United States Housing Authority was given the power to issue obligations guaranteed by the United States to obtain funds to lend to public housing agencies.

Table 1 shows for December 31, 1937, the combined assets and liabilities of agencies classified by the Treasury as wholly financed from Government funds and of those classified as financed partly from Government funds and partly from private funds. Changes in the various items from the end of the preceding year are also indicated. Data
given in this table differ from those in statements released by the various agencies themselves in that interagency assets and liabilities are here excluded.

In Table 2 loans and investments are arranged so as to show separately those agencies which are not primarily lending agencies and so as to group the lending agencies in five classes. This table is based in part on additional data furnished by the Treasury Department. Out of the total of outstanding loans and investments of $\$ 8,560,000,000$ at

Note.-Farm mortgage and home mortgage agencies, the Federal intermediate credit banks and banks for cooperatives and the Federal Deposit Insurance Corporation and Federal Savings and Loan Insurance Corporation are classified in Treasury statements as agencies "partly financed by the United States," as is also the War Finance Corporation, which is not included in groups shown in this table and for which the amounts were less than $\$ 500,000$.
${ }^{1}$ Including Commodity Credit Corporation, Export-Import Bank, RFC Mortgage Company and Disaster Loan Corporation. Including also, though not an aftiliated agency, the Public Works Administration.
${ }^{2}$ In computing these changes an adjustment has been made in previously published figures for loans outstanding on December 31, 1936 . See table 3.
${ }_{3}$ The difference between this figure, derived from the Treasury Department statement, and the sum of corresponding figures in the regular Bulletin table on Farm Credit Administration loans is due to the inclusion of Federal Land bank "loans called for foreclosure" and matured "extensions" and of Federal Farm Mortgage Corporation "extensions" in the Treasury figure.
${ }^{4}$ Including loans by Home Owners' Loan Corporation and Federal Home Loan banks, and investments in shares of building and loan associations by Home Owners' Loan Corporation and the Treasury
${ }^{5}$ The difference between this figure and the sum of corresponding igures in the regular Builetin table on Farm Credit Administration loans is due to the exclusion from this figure of loans and discounts by the Federal intermediate credit banks to the banks for cooperatives.
${ }^{6}$ The difference between this figure and the sum of corresponding figures in the regular Bulletin table on Farm Credit Administration loans is due chiefly to deduction in the Treasury figure of reserves for uncollectible items.
${ }^{7}$ Less than $\$ 500,000$.
the end of $1937, \$ 7,810,000,000$ was held by three groups of agencies, namely: (1) the Reconstruction Finance Corporation, together with certain affiliated corporations, and the Public Works Administration; (2) the farm mortgage institutions under the Farm Credit Administration; and (3) the institutions under the Federal Home Loan Bank Board. Other agricultural loans amounted to $\$ 580,000,000$, and miscellaneous loans of various agencies accounted for the remaining $\$ 170,000,000$.

The Government's proprietary share in agencies which are, have been, or will be engaged primarily in lending, also shown in Table 2, amounted to $\$ 3,500,000,000$ at the end of 1937. The equity of the United States in the assets of three insuring agencies, the Federal Deposit Insurance Corporation, the Federal Savings and Loan Insurance Corporation, and the Federal Housing Administration, totaled $\$ 290,000,000$. Certain other Government corporations and agencies are primarily operating organizations. The Government's equity in three of these agencies, the Tennessee Valley Authority, the Panama Railroad Company and the Inland Waterways Corporation, amounted to $\$ 270$,000,000 at the end of 1937 or $\$ 80,000,000$ more than the year before owing to an increase in equity in the Tennessee Valley Authority.

Reconstruction Finance Corporation and affiliated agencies.-The decrease in outstanding loans and investments of the Reconstruction Finance Corporation, four corporations to which it supplies funds, and the Public Works Administration, for whose loans the Reconstruction Finance Corporation acts as distributing agent, amounted to $\$ 140,000,-$ 000 in 1937 as compared with $\$ 500,000,000$ in 1936. Table 3 shows in detail the loans and investments of this group of agencies.

As shown in this table, Reconstruction Finance Corporation investments in preferred stock, capital notes and debentures of banks were reduced during 1937 by $\$ 100,000$,000. This was a much smaller amount of net repayments than was received in 1936 when a few very large banks completely retired their preferred stock. Reconstruction Finance Corporation loans to banks and loans to aid in the reorganization or liquidation of closed banks were also reduced further by $\$ 50,000,000$, as compared with a reduction of $\$ 180,000,000$ in 1936. Outstanding loans on

${ }^{1}$ Including Commodity Credit Corporation, Export-Import Bank, RFC Mortgage Company, and Disaster Loan Corporation. Including also, though not an affiliated organization, the Public Works Administration. Except as otherwise indicated by title or footnote all items are Reconstruction Finance Corporation loans or investments.
${ }_{2}^{2}$ Including loans secured by preferred stock, etc., of banks.
${ }^{3}$ Less than $\$ 500,000$.
4 Including all loans of Commodity Credit Corporation and ExportImport Bank in addition to Reconstruction Finance Corporation loans. - 5 This change differs from that which will be found in comparing this table with the similar table in the April 1937 Bulletin because adjustment has been made for a reclassification in the Treasury statement of certain assets as loans rather than as investments.
commodities by the Reconstruction Finance Corporation, Commodity Credit Corporation and Export-Import Bank also declined somewhat less than in 1936, in part as a result of the new loans made by the Commodity Credit Corporation on the 1937 cotton crop.

A much smaller amount of new loans were made by the Public Works Administration than in 1936; on the other hand, the transfer of such obligations to private investors through the agency of the Reconstruction Finance Corporation amounted only to $\$ 65,000,-$ 000 as compared with $\$ 215,000,000$ in 1936. Reconstruction Finance Corporation loans to railroads increased slightly but there was a further small reduction in the outstanding amount of miscellaneous Reconstruction Finance Corporation loans to mortgage loan companies, building and loan associations, insurance companies, other financial institutions and certain other borrowers.

Four classes of loans made from Reconstruction Finance Corporation funds continued to increase during 1937 as in preceding years. Outstanding loans for self-liqui-
dating projects increased by $\$ 43,000,000$, loans to industrial and commercial businesses by $\$ 11,000,000$, and loans to refinance indebtedness of drainage, levee and irrigation districts by $\$ 13,000,000$. Outstanding loans of the RFC Mortgage Company increased by $\$ 31,000,000$, largely through purchases of Federal Housing Administration insured loans on newly constructed homes. Loans by the Disaster Loan Corporation which was formed at the time of the floods in 1937 amounted to $\$ 6,000,000$ at the end of the year.

In summary, the net decline during 1937 in outstanding loans and investments of the Reconstruction Finance Corporation and affiliated agencies amounted to about $\$ 140,000$,000. Funds returned to the Treasury were somewhat larger than this as a result of earnings of the Reconstruction Finance Corporation. The principal other changes in the assets and liabilities of these agencies were an increase of $\$ 45,000,000$ in Reconstruction Finance Corporation guaranteed notes held by the public, and the acquisition of $\$ 34,000,-$ 000 of United States securities by the Reconstruction Finance Corporation. There was also a decrease of $\$ 12,000,000$ in shortterm notes of the Commodity Credit Corporation outstanding.

Farm mortgage loans.-Outstanding loans of the permanent Federal Land banks and of the emergency Federal Farm Mortgage Corporation (the loans of which are known as "Land Bank Commissioner loans" and may be made until February 1, 1940) declined in 1937. A smaller amount of new loans was made than in any year since 1932. Voluntary repayments and foreclosures exceeded new loans so that the outstanding balances of mortgage loans were reduced by $\$ 60,000,000$ to a total of $\$ 2,880,000,000$, of which $\$ 2,060$,000,000 are first mortgage loans of the Federal Land banks.

Principal payments on Land Bank Commissioner loans, most of which are either first mortgage loans or second mortgage loans made in conjunction with a Federal Land bank loan, are not required during the first three years of a loan. The first principal instalments came due on a large number of Land Bank Commissioner loans in 1937. There is a moratorium on principal payments on Federal Land bank loans in good standing until July 1938 provided the loan was made before June 1935. Nevertheless,
voluntary repayments of loans in full or in part continued to be substantial and were larger than in 1936. The percentage of land bank loans in good standing on December 31,1937 was 79.4 percent as compared with 77.5 percent a year earlier and 55.0 percent in 1932.

In 1937 Congress extended for another year the period during which all borrowers from the Federal Land banks are to pay interest at a $31 / 2$ percent rate instead of at the rates fixed in their mortgage contracts which range from 4 to 6 percent. At the same time Congress reduced the rate of interest payable on Land Bank Commissioner loans until July 1939 from 5 percent to 4 percent. Payments by the Treasury to the Federal Land banks and the Federal Farm Mortgage Corporation to reimburse them for these temporary interest rate reductions amounted to about $\$ 40,000,000$ in 1937.

The following table, derived from a consolidation of Treasury statements for the Federal Land banks and the Federal Farm Mortgage Corporation, gives a general indication of the sources from which funds were obtained and the uses to which they were put in 1937.

${ }^{1}$ Exclusive of interagency liabilities.
Outstanding bonds were reduced during the year by about $\$ 180,000,000$ of which about $\$ 100,000,000$ was made possible by repayments and liquidation of loans and by reductions in holdings of cash and United States securities. The remainder was financed chiefly by temporary borrowings in anticipation of further repayments, by capital contributions by the United States Treasury, and by earnings. The increase of $\$ 14,000,-$ 000 in earned surplus was after setting aside valuation reserve appropriations as well as
transferring about $\$ 10,000,000$ to a general reserve against future losses on Federal Farm Mortgage Corporation loans. At the end of the year this reserve amounted to about 4 percent of outstanding loans of the Federal Farm Mortgage Corporation and will be increased further until it amounts to 10 percent of outstanding second mortgage loans and $21 / 2$ percent of outstanding first mortgage loans, a total about $\$ 25,000,000$ larger than at the end of 1937.

Home mortgage loans.-Government lending agencies under the supervision of the Federal Home Loan Bank Board include the permanent Federal Home Loan banks, which lend to private home-financing institutions, and the emergency Home Owners' Loan Corporation, whose loans were made directly to home owners in a refinancing program which terminated on June 12, 1936.

Outstanding loans of the Federal Home Loan banks on December 31, 1937, were $\$ 200,000,000$. These loans are almost entirely to member building and loan associations and the outstanding volume has been increasing steadily since March 1935 . The following summary of changes in the consolidated condition statement of the Federal Home Loan banks during 1937 shows that the increase in loans, amounting to $\$ 55,000$,000 , was financed by the sale of debentures:

Payments on capital subscription by the United States during the year brought the total amount paid to within a few hundred thousand of the $\$ 125,000,000$ authorized by Congress for this purpose. In May, 1937 the Federal Home Loan banks made their first offering of debentures; during the year three issues of consolidated debentures with maturities from one to three years were sold to investors in an aggregate amount of $\$ 78$,000,000 .

Home Owners' Loan Corporation loans to home owners were reduced by $\$ 370,000,000$ in 1937 and the amount outstanding at the
end of the year was $\$ 2,400,000,000$. These loans are to be amortized in 15 years, with the exception of most of the loans made before April 27, 1934, on which a moratorium was granted until June 13, 1936 and which have been reamortized over a 12 -year period. It appears that foreclosures and voluntary transfers of title accounted for about threefifths of the reduction of outstanding loans in 1937. A peak of foreclosure actions authorized by the Corporation was reached in August 1936.

The Home Owners' Loan Corporation is authorized to invest up to $\$ 300,000,000$ in shares of Federal and other savings and loan associations. Investments of this kind increased by $\$ 81,000,000$ to $\$ 206,000,000$ at the end of 1937. In addition, the Treasury holds $\$ 48,000,000$ of shares of Federal savings and loan associations which were acquired in 1934 and 1935.

There follows a summary of changes in the condition statement of the Home Owners' Loan Corporation during 1937:

${ }^{1}$ Data include a small amount of bonds guaranteed as to interest only which were called for redemption on July $1,1935$.

The Federal Housing Administration makes no mortgage loans but insures approved lending institutions against losses on home mortgages and housing project mortgage loans that meet certain requirements. Insured home mortgages that had become pre-mium-paying by the end of 1937 had aggregate principal amounts of about $\$ 830,000,000$ and commitments on housing project loans totaled about $\$ 40,000,000$. The mutual mortgage insurance fund held $\$ 20,000,000$ of United States securities at the end of 1937 or $\$ 6,000,000$ more than a year earlier. The principal credits to the fund during the year came from appraisal fees at the rate of $3 / 10$ of one percent on loans for which insurance approval was requested, and from annual premiums at the rate of $1 / 2$ of one percent on the original principal amount of loans subject to insur-
ance at any time during the year. Guaranteed debentures outstanding at the end of the year, that were issued in settlement of insurance claims, amounted to $\$ 224,000$, and property held was valued at $\$ 234,000$.

The Federal Housing Administration insured modernization and repair notes made by private lending institutions prior to April 1, 1937, and is again insuring such notes since the enactment of amendments to the National Housing Act on February 3, 1938. The total amount of notes which had been insured through 1937 was about $\$ 560,000,000$. Claims of $\$ 13,000,000$ had been paid with Treasury funds advanced through the Reconstruction Finance Corporation and $\$ 9,000,000$ of claims paid were carried as recoverable assets at the end of the year; the difference represented chiefiy collections and repossessions.

Short-term agricultural loans.-Agricultural loans and investments, other than those of the Reconstruction Finance Corporation and its affiliated agencies-the Commodity Credit Corporation and the Export-Import Bank-and other than farm mortgage loans discussed above, totaled $\$ 580,000,000$ at the end of 1937, an increase of $\$ 30,000,000$ in the year, as shown in Table 2. Of this total, $\$ 358,000,000$ were loans and investments of corporations and banks under the supervision of the Farm Credit Administration. These include the regional agricultural credit corporations, the production credit corporations, the Federal intermediate credit banks and the banks for cooperatives. Loans of the regional agricultural credit corporations, which were originally financed by the Reconstruction Finance Corporation and are now in liquidation, declined in 1937 to $\$ 16$,000,000 . Investments of the production credit corporations in class A stock of the Federally chartered but privately managed production credit associations were $\$ 76$,000,000 at the end of the year, slightly larger than a year earlier. These investments, made almost entirely in 1933 and 1934, provide capital funds which are largely invested by the associations in marketable securities to be offered as additional collateral for rediscounts obtained from the Federal intermediate credit banks.

Discounts and loans of the Federal intermediate credit banks and the banks for cooperatives increased by $\$ 48,000,000$ during 1937, to $\$ 266,000,000$. The total outstanding
at the end of the year included $\$ 136,000,000$ of discounts for production credit associations, $\$ 40,000,000$ for other financing institutions (chiefly State-chartered agricultural credit corporations), and $\$ 89,000,000$ of loans to cooperatives.

The following summary, derived from a consolidation of Treasury statements for the Federal intermediate credit banks and the banks for cooperatives, shows that expansion of their loans in 1937 was financed principally by an increase of $\$ 31,000,000$ in debentures outstanding, by payments on capital subscriptions by the United States of $\$ 7,000,000$, and by earnings.

${ }^{1}$ Exclusive of interagency liabilities.
Other agricultural loans outstanding at the end of 1937 were loans financed by special appropriations from Congress. Rural rehabilitation loans of the Farm Security Administration, formerly the Resettlement Administration, amounted to $\$ 123,000,000$ as
compared with $\$ 87,000,000$ a year earlier. Emergency crop loans and drought relief loans, administered by the Farm Credit Administration, were outstanding in the amount of $\$ 72,000,000$ after reserves for uncollectibles. Loans of the old Federal Farm Board and of the Agricultural Marketing Act Revolving Fund, to which the assets of the Federal Farm Board were transferred in 1933, totaled $\$ 26,000,000$ after reserves for uncollectibles; these are principally loans to cooperative marketing associations.

Other loans.-A major part of loans not discussed above is made up of shipping loans, rural electrification loans, and wartime railroad loans. The Rural Electrification Administration had outstanding loans of about $\$ 30,000,000$ at the end of 1937, the major part of which was disbursed in 1937. Outstanding loans of the United States Maritime Commission were $\$ 7,000,000$ smaller on December 31, 1937, than a year earlier. Wartime railroad loans carried by the Treasury as a recoverable asset remained unchanged in amount. The United States Housing Authority, which was organized in 1937, held at the end of the year $\$ 10,000,000$ of loans which had been taken over from the Public Works Administration, and also housing project properties valued at $\$ 110,000,000$ which were similarly transferred. No loans had been made by the United States Housing Authority under the enabling act which empowers it to issue $\$ 500,000,000$ of obligations guaranteed by the United States.

## STATISTICS OF INTERNATIONAL CAPITAL TRANSACTIONS OF THE UNITED STATES FOR 1937

Weekly statistics of international capital|ury Regulation of November 12, 1934. transactions of the United States for the year 1937 are published in the tables on this and following pages. These statistics are collected by the Federal Reserve banks from banks, bankers, brokers, and dealers in the Monthly and weekly data for the period from May 1929 to the end of 1936, together with five charts and a detailed description of the statistics, were published in the Bulletin for United States in accordance with the Treas-l May 1937, pages 394-431.

## ANNUAL REPORT OF THE BANK OF FRANCE

The annual report of the Bank of France for the year ending December 24, 1937, was submitted to the general meeting of stockholders on January 28, 1938. The main text of the address of the Governor of the Bank, M. Pierre Fournier, is given herewith: ${ }^{1}$

During the past year, domestic conditions were often difficult and international developments not always favorable. France, nevertheless, consistently strove to adjust her economic activity to the new conditions created by the fluctuations of her currency and by the far-reaching social reforms effected eighteen months ago.

Trade balance.-The primary cause of the wide fluctuations in franc exchange last year is to be sought in the trade import surplus. The effects of our payments abroad were intensified during certain periods, and at other times lessened, by capital movements between our country and foreign centers.

The position of our foreign trade was determined chiefly by the considerable increase of imports. Purchases abroad were necessary in the early part of the year because of the temporary revival of industrial activity, which began as early as 1936 as a result of the currency devaluation. Later on, in the case of certain raw materials, they reflected a decline in national production.

The general rise of prices throughout the world during the first three months, and afterwards the weakening of our exchange, made these imports very costly. Although their volume rose by only 23 percent during the first nine months, their value in French currency was more than 73 percent higher than for the corresponding period of 1936.

Exports increased less rapidly; with an advance of 58 percent in value they rose less than 5 percent in volume. They encountered trade barriers in nearly all markets, and were adversely affected by increased costs of production which, during much of the year at least, often brought French prices above those of competing industries. For the year as a whole the trade of France and her colonies with foreign countries left us with a debit balance of about $17,000,000,000$ francs, settlement of which exerted continuous pressure on franc exchange.

[^5]Capital movements.-Capital movements varied from time to time both in amount and direction. Purchases of foreign exchange in excess of strictly commercial requirements were made on a number of occasions, especially during the early weeks of the year, in May and June, and in September.

On the other hand, the measures taken to reestablish a free gold market, bring about budget equilibrium, or lighten the burden on the Treasury, caused large repatriations of short-term foreign balances; in March, for subscription to the loan issued with an exchange guarantee; on a still larger scale in July and August; and in the last quarter of the year, when the tendency of the market was reversed. The influx of tourists during the period of the Exposition and, later on, the depression experienced in certain foreign markets, gave additional support to the favorable movements mentioned.

This mobility of capital is evidence of the extreme sensitiveness of French opinion; it also reflects the unstable conditions in which most of the great financial markets, alternating between confidence and alarm, have operated since the war.

Transfers of capital also took place when credits were negotiated by the State railways in several foreign markets. A loan of $£ 40,000,000$, floated in London in February, was repaid in December. Two credits, of $200,000,000$ Swiss francs and $100,000,000$ guilders, respectively, were obtained in October and November, in Zurich and Amsterdam.

Exchange quotations.-As a result of these various influences, franc exchange showed wide fluctuations. During the first half year it fluctuated between the values represented by 49 and 43 milligrams of gold .900 fine, as provided in the monetary law of October 1, 1936. In January and February it stood around 105 to the pound sterling, between 106 and 107 until the middle of April, and somewhat above 110 until the end of June.

The law of June 30, giving the Government more extensive powers for the purpose of bringing about financial recovery, and a Cabinet decree of the same date, suspended for the time being any definition of the franc in terms of gold. During the second half year, accordingly, a new equilibrium for the franc outside the previously established limits was sought.

The pound, quoted at 129 francs on July 1, rose to 134 on July 22, remained at about 133 until the end of August, and then rose gradually to 151 on October 5. Thereafter, until the end of the year, the quotation was around 147 francs.

The Stabilization Fund, operated by the Governor of the Bank of France under instructions of the Minister of Finance, intervened whenever it seemed necessary, in order to prevent abnormal and temporary exchange movements and to safeguard the regular functioning of the market. Its efforts were greatly facilitated by active cooperation on the part of the monetary authorities in the countries participating in the tripartite agreement.

Reserve of the Bank of France.-According as the Stabilization Fund was called upon to buy or sell foreign exchange, it had either to strengthen its franc resources by sales of gold to the central bank, or to build up its foreign exchange holdings by purchases of gold from the public or the Bank, by utilizing the proceeds of foreign loans, or by direct purchases of foreign exchange in the market. Thus the reserves of the Bank were affected by the operations of the Stabilization Fund.

At the beginning of the year, the gold reserve was $60,359,000,000$ francs, valued at the rate of 49 milligrams of gold .900 fine per franc. Three withdrawals, aggregating $11,500,000,000$ francs, brought it down to $48,859,000,000$ francs at the end of the first half year.

Under the monetary law of June 30 a convention with the Government was signed on July 21, revaluing the gold and foreign exchange holdings on the basis of 43 milligrams of gold .900 fine per franc. In consequence, the metallic stock of the bank was shown on the weekly balance sheet of July 29 at $55,677,000,000$ francs, representing an increase in value of $6,818,000,000$ francs.

A transfer of $3,127,000,000$ francs from the Stabilization Fund on November 10 and the repayment of several short-term foreign investments increased the gold reserve of the Bank to $58,933,000,000$ francs, which is the figure shown on the final balance sheet for 1937, and which represents approximately 2,534 tons of gold .900 fine.

The full covering of Treasury engagements and the gradual improvement of Government finance enabled the authorities to make important decisions, and the Bank of France
was called upon to collaborate in carrying out those which fell within its sphere of operations.

On March 5 the public departments were instructed to limit their expenditures, while holders of gold ceased to be subject to previous legislation.

On June 30 the Government was authorized by a decree of the Cabinet to take measures designed to resist attacks on the credit of the Government, check speculation, and insure economic recovery, price supervision, budget and Treasury equilibrium, together with the defense of the central bank's reserve without setting up exchange control.

Assistance to the Government.-The Bank gave its utmost cooperation in carrying out the measures in which it was concerned.

Besides buying gold and foreign exchange from individuals as authorized by law, the Bank participated largely in Government issues intended to furnish resources for special expenditures, to procure liquid funds for the Treasury, or to consolidate outstanding loans; it also offered its facilities for the sale of bonds of the Caisse des Pensions and securities of various public bodies.

In addition, since the Treasury resources, whether derived from taxation or loan issues, were insufficient for its requirements, we granted new temporary advances to the Gov. ernment for a maximum amount of $15,000,-$ 000,000 francs under the convention of June 30,1937 . These advances had been drawn upon to the amount of $9,820,000,000$ francs on December 30.

Finally, the revaluation of the gold and foreign exchange reserve under the convention of July 21 made it possible to set up a fund for the support of rentes out of the increment accruing from the revaluation. This Fund is under the supervision of the Governor of the Bank of France.

Whatever cash balance shall be available upon the liquidation of this Fund is to be used for repayment of the direct advances made by the Bank to the Treasury in execution of the conventions of June 18, 1936, and June 30, 1937. If the balance available for repayment is less than the initial amount of the Fund, the difference remaining due to the Bank shall be provided out of the resources of the Exchange Stabilization Fund upon its liquidation.

Movement of prices.-The evolution of Government finance, the investment of private capital, and the development of the for-
eign exchanges, like the currency itself, are dominated by the economic and social problems of the country.

The rise in prices, which began late in 1936 and continued through 1937, threatens to put our trade and industries in a difficult position. The index of wholesale prices rose from 499 at the end of 1936 to 601 at the close of 1937, after reaching a peak of 620 on October 16.

Retail prices followed, but lagged somewhat behind, wholesale prices. The retail price index rose without interruption; it rose gradually during the first half of the year and then more rapidly until it reached 676 in December, as compared with 550 for the corresponding period of 1936. This advance, which amounted to about 23 percent during the year, tended to reduce domestic consumption.

To offset this danger the Government appointed special committees to supervise prices and to check any unjustified price increase. It also appointed representatives of the Government, agriculture, industry, commerce and labor, to make an extensive study of production. The suggestions made by these experts as a result of their study of each branch of our economic activity were made the basis of a number of decisions which seem likely to assist economic recovery and increase national production.

The money market.-The various economic and monetary trends of the past year inevitably had their effect on the capital market. Private establishments experienced great difficulty in obtaining long-term loans, owing to the Government's appeals to the market. They were, therefore, compelled to have recourse to short and medium-term loans not only for the larger working capital required to meet increased costs of production, but also for purposes which represented actual capital investment.

Nor was the money market always in a position to meet these demands easily. At times when the market was cramped by the conversion into foreign exchange and by hoarding of part of its normal capital supply, the withdrawals of the Government against the advances authorized by the existing conventions supplied the market with new cash resources. The Bank, also, was compelled to increase its aid to private business whenever the effects of a sharp contraction of credit seemed dangerous. Relative ease, however, was restored only as a result of repatriations during the last months of the year.

The average of bills discounted by the Bank rose from 6,970,000,000 francs during the fourth quarter of 1936 to $9,331,000,000$ francs in July 1937, 10,111,000,000 franes in October, and amounted to $8,568,000,000$ francs in December.

To these figures should be added the amount of rediscounts of bills created under the laws of August 15 and 19, 1936. The first of these laws related to the financing of the wheat harvest, and the second provided for temporary assistance to commerce and industry. Our portfolio showed these operations at a maximum of $728,000,000$ francs and 1,187,000,000 francs, respectively.

We also continued to aid exporters by mobilizing the foreign balances which the Exchange Clearing Offices could not liquidate promptly. In this matter we cooperated closely with the Reichsbank for the repurchase of credit receipts issued under the former Franco-German agreement.

In the distribution of these credits, however, we were always careful to verify the commercial character of the paper, in cooperation with the banks which assisted us in this difficult task.

The discount rate.-Although the Bank desired to keep credit conditions as easy as possible, we were compelled to raise the official rates, both for discounts and for advances on securities, when we found that demands for credit were creating tension in the exchanges, but we never failed to lower the rates as soon as circumstances permitted. We raised the discount rate from 2 to 4 percent in January, from 4 to 6 percent in June, and in the following months lowered it from 5 to 4 percent in August, to $31 / 2$ percent in September, and to 3 percent in November. Similarly, the rate for advances on securities was raised from $31 / 2$ to 5 percent in January, from 5 to 7 percent in June; then it was reduced to 6 percent in July, 5 percent in August, $41 / 2$ percent in September and 4 percent in November.
The Bank remained firmly attached to the tradition of limiting the costs imposed on industry and commerce during monetary crises by keeping its rates as moderate as possible. In this connection it is interesting to note that the rate of discount remained at 4 percent or less during more than three-fourths of the period between January 1, 1935, and December 31, 1937.

Assistance to production.-We have wished to supply the needs of production so far as
permitted under our statutes, and have always given it a liberal measure of assistance. We therefore favor the wider development of the banker's acceptance market, because this mechanism is admirably suited to foreign commercial operations; and also-as we have urged consistently-the creation of trade bills for all transactions of a short-term character.

We strongly urge that the influence of chambers of commerce and syndical organizations might be used to this end with those houses that still refuse to accept bills drawn upon them by their creditors; this unjustifiable practice results in substituting bank advances for commercial drafts; it is more difficult to realize upon these advances, and consequently the interest rate is more burdensome. The intervention of the Caisse Nationale des Marchés de l'Etat has enabled the banks and the central bank to participate more effectively in financing operations which have been of importance to a large number of enterprises.

The extension of short-term credit, however, even if readily adjusted to current trade requirements, could not remedy the insufficiency of working capital. An increase of working capital seems necessary if the new conditions of production are to be met. This, however, can be accomplished, while waiting for enterprises to build up their own resources or for the possibility of recourse to
the money market, only by the extension of medium-term credit.

Recent measures provide for the extension of the medium-term market, under the auspices of specialized organizations such as the Crédit National, the Crédit Foncier, the Caisse Nationale des Marchés, and the Caisse des Dépôts et Consignations. The assistance of the Bank, should it ultimately be needed, will be rendered only by way of rediscounting and without affecting the indispensable liquidity of our commercial portfolio.

Conclusions.-During 1937 various incidents again exercised a depressing influence on our economic life and on the position of our money market. These difficulties, however, are not peculiar to our own country; the solution of the problems posed-for every nation-by the necessity of developing its economic activity and improving the living conditions of its people, would be greatly facilitated by the broadening of international relationships and by close collaboration between all countries which are still suffering from the remote repercussions of the war. Without waiting for the results of agreements which should be sought in this sphere, France should find in her own resources and in her traditional qualities of work and thrift the elements needed to restore progressively the situation of her public finances, to develop her industry and trade, and to bring about a harmonious balance between the forces of production, labor, and saving.

second half year; and 246.30 francs for the year for shares subject to a tax of 12 percent for the first half year and to a tax of 15 percent for the second second hal

## ANNUAL REPORT OF THE NATIONAL BANK OF BELGILM

The annual report of the National Bank of Belgium for the year ending December 25, 1937, was presented to the general meeting of shareholders on February 28, 1938. Sections from the address of the Governor of the Bank, M. Georges Janssen, are given herewith. ${ }^{1}$

Reform of the statutes of the bank.-For the National Bank of Belgium the year 1937 was important for the reform of its organic laws and its statutes. These changes were effected under provisions of the royal decree of July 23, 1937, ${ }^{2}$ issued in accordance with the law of June 10, 1937, for coordination of the activities, organization and functions of certain institutions of public interest. Since the charter of the Bank is in the form of a contract, these reforms could not be made without the consent of the shareholders-a principle which the directors were at pains to preserve by a convention concluded between the Government and the Bank on June 8, 1937. Amendment of the text of the statutes in conformity with that of the royal decree of June 23, 1937, was voted by the shareholders in extraordinary session on August 30, and September 3, 1937. Notwithstanding the publicity given to the prolonged discussions which preceded the voting, we believe it may be useful to review the essentials of this reform.

Means of intervention in the credit market. -The rapid and far reaching changes in economic life and organization made it necessary to give the Bank power to intervene in the credit market. Within the limits of its statutory powers, the Bank is obligated to insure the stability of the currency and a satisfactory distribution of credit. These functions call for regulation of the means of payment available to the national economy. For a long time discount policy was the exclusive technical means which could be used for this purpose.

Changes in banking organization and technique, along with the decline in the volume of trade bills offered for discount at the Bank, made it increasingly difficult for the Bank to intervene in the money market. In order to enable the Bank to perform its function as

[^6]regulator of the market, it was authorized to engage in "open market" operations, i. e., to buy or sell Government securities in such amounts as seemed expedient to adjust the volume of money to the needs of monetary policy. In adopting a technique so new to our market, however, certain precautions seemed desirable, in order to prevent this means of intervention from being diverted from its purposes.

The amount of public securities which the Bank may buy under these provisions is limited in two ways:
(a) On the one hand, the maximum amount of short-term and medium-term securities which the bank may buy has been fixed at $500,000,000$ francs, but the total value of such bills shall not exceed $200,000,000$ francs for more than 12 consecutive months.
(b) On the other hand, the maximum amount of long-term Government securities which the Bank may buy has been fixed at $1,000,000,000$ francs; these securities must have been issued at least 2 years previously and be quoted on the Bourse. This limit of $1,000,000,000$ francs is increased by an amount equal to total repayments or realization of bills, annuities, and obligations of the Belgian Treasury held by the Bank under the laws of December 27, 1930, and June 19, 1932.
To complete the record, it should be stated that in addition to the securities which may be purchased by way of open market policy, and in addition to those which are held by virtue of the laws of December 27, 1930, and July 19, 1932, the Bank may buy public securities to an amount corresponding to its capital, surplus, and amortization accounts.

Inauguration of open market operations presuppposes not only a detailed preliminary study but also the realization of certain technical conditions. It would be premature to go into details on this matter; suffice it to say that this new policy-which is not a substitute for discount policy but rather complements it-will not be inaugurated until the conditions of intervention by the Bank shall have been exactly defined, both as regards the public authorities and the market.

The provisions governing the Bank's discount operations have been revised to bring them in line with current market practice.

The maximum maturity of trade bills which the Bank may admit to discount has been extended from 100 to 120 days. On the other hand, the form and the character of the paper admitted to discount has been left to the judgment of the Bank, which enables it to follow the development of commercial and banking practice more easily.

Administration.- The administration of the Bank will henceforth be carried on by the Committee of Management with the Governor of the Bank as chairman. The Administrative Council will not participate in the daily conduct of the Bank but will advise the Committee of Management, as it is well qualified to do because its members represent the various economic activities of the country. It is, therefore, the logical body to decide on the general policy of the bank of issue in matters which concern interest rates and conditions of discount operations and advances.

The number and complexity of the problems to be dealt with by the management of the Bank, as well as the great number of duties to be performed by its directors in various organizations, led the general meeting of shareholders to increase the number of managers from three to four.

In order to guarantee the independence of the Bank, the disqualifications attaching to members of the General Council were made more severe. The Governor, the Vice-Governor, and the managers cannot be members of any commercial enterprise, or of any enterprise which is commercial in form, except the bank of issue of the Belgian Congo, the Bank for International Settlements, and financial organizations of public interest created by special law.

The Administrative Council and the College of Censors respectively can include no more than two members who perform any duties in one of the banks referred to in article 1 of royal decree No. 185 of July 9, 1935. Even these duties must be purely consultative or supervisory, excluding any participation in administration or current management if these duties are performed in banks constituted under the form of joint stock companies, limited liability companies, or limited partnership companies.

Persons holding any office in a commercial concern or concern which is commercial in form, which controls directly or indirectly 25 per cent of the capital of a bank constituted under the forms previously mentioned,
are likewise excluded from the Administrative Council and the College of Censors.

Duration of the Bank.-The duration of the Bank has been extended from December 31, 1952, to December 31, 1961. This measure, taken on the initiative of the Government, postpones for nine years the maturity of the Government debt to the Bank.

## organization of credit

The organization of credit has occupied the attention of the Government ever since 1935. During the last months of 1937 it was made the subject of important reforms.

Several royal decrees issued in execution of the law of June 10,1937 , successively revised the statutes of the National Bank, of the Caisse Générale d'Epargne et de Retraite, of the Office Central de Crédit Hypothécaire, of the Office National du Ducroire, and of the Caisse Centrale du Petit Crédit Professionnel. Other royal decrees created a Caisse Nationale de Crédit aux Classes Moyennes, an Institut National de Crédit Agricole, and a Conseil de Coordination des Institutions de Crédit aux Classes Moyennes.

The royal decree of October 22, 1937, which created the Conseil des Institutions de Crédit, went far toward completing the work of reform inaugurated by the revision of the organic law of the central bank.

The Conseil des Institutions de Crédit is to supervise the coordination of the activity, the organization and the functions of the credit organizations created by special law. A basis of permanent collaboration has thus been established between the different credit institutions. The National Bank will, of course, be called upon to participate largely in the work of the Conseil.

Besides its participation in the Conseil des Institutions de Crédit and its long-standing collaboration in the Conseil Général de la Caisse Générale d'Epargne et de Retraite, the National Bank is or will be represented in the majority of the eight financial organizations created by special law: la Société Nationale de Crédit a l' Industrie, l'Institut de Réescompte et de Garantie, l'Office National du Ducroire, la Caisse Nationale de Crédit aux Classes Moyennes, l'Office Central de Crédit Hypothécaire, le Fonds d'Amortissement de la Dette Publique, l'Office Central de la Petite Epargne, le Conseil de Coordination des Institutions de Crédit aux Classes Moyennes.

Under a provision of the new statutes, the Bank will be able to participate freely in subscriptions to the capital of financial organizations of public interest created by special law. It will, however, be able to do this only by permission of the Minister of Finance, and then only to the amount of one-fourth the total of its capital and reserves, irrespective of its share subscription to the capital of the Bank for International Settlements.

All these provisions make it easier for the Bank to perform its appointed task of regulating credit. Its participation in the work of the Banking Commission supplies it with information which supplements that furnished directly by the private banks. It may be noted in this connection that the royal decree of November 24, 1937, has defined the character and form of the reports which article 12 of the royal decree of July 9, 1935, requires the banks to furnish periodically to the National Bank.

Finally, the creation of a service of public credit at the Ministry of Finance by royal decree of December 2, 1937, insures the necessary cooperation between the public authorities and the public credit institutions.

Only the experience of several years will make it possible to pass judgment on the value of the reforms which have been briefly reviewed. Their results will depend to a great extent on the manner in which they are carried out. It is undeniable, however, that the efforts made are in line with the necessity of adapting the organization of credit more closely to the needs of the general public. Up to the present time, reforms in the organization of public credit have been characterized by the autonomy permitted to each institution, an independence tempered nevertheless by legitimate concern for the interests of the Government and by the necessity of insuring a coordination of the activity of the various organizations.

Movements of gold.-The Anglo-Saxon markets, and particularly the United States, have absorbed almost all the increase in gold production during the past year.

Large quantities of the metal were also sent to these markets as a result of exports of foreign refugee capital.

During the first months of the year gold moved principally toward the United States. At the end of October the situation changed somewhat, and gold moved in moderate amount toward the Continent.

On the London gold market the value of a
fine ounce of gold averaged 142s. $0.1 / 2 \mathrm{~d}$. during the first quarter of $1937,140 \mathrm{~s} .95 / 6 \mathrm{~d}$. during the second quarter, $139 \mathrm{~s} .112 / 3 \mathrm{~d}$. in the third quarter, and 140s. $113 / 15 \mathrm{~d}$. during the fourth quarter. This decline in the value of gold naturally brought a corresponding appreciation in the pound sterling in foreign markets.

Movements of gold were greatly influenced by the confidence of public opinion in the metal as a medium for hoarding. Early in the year, when it was rumored that the price of gold might be lowered in certain markets, especially in the United States, a great part of the gold hoarded by individuals went into the central banks and into exchange equalization funds. During the closing months of the year purchases for private account were resumed on a large scale.

The metallic reserve of the Bank fluctuated in response to movements of gold and certain international exchanges. Up to the middle of March, the reserve was practically unchanged. In the second quarter a reduction took place. In June a rapid increase more than compensated for the earlier withdrawals. Then followed a decline which continued at an increasing rate up to mid-November. At that time, an opposite trend set in and lasted to the end of December.

To strike a balance of the total inflow and outflow of gold, it is necessary to include also foreign debt payments made during the past year.

While the appeal to foreign markets for account of the Government and public organizations was limited to the issue of the $31 / 2$ per cent loan of $48,000,000$ guildersrepresenting 780,720,000 Belgian francscapital repayments amounted to $2,312,000,-$ 000 Belgian francs. During the same period foreign debt repayments for account of private Belgian companies and those of the Belgian Congo amounted to $1,906,000,000$ francs.

Currency and exchange.-The international position of the Belgian currency was strong throughout the entire year. The belga fluctuated very little in relation to the dollar and the Swiss franc, but showed an almost continuous depreciation in relation to the guilder, which steadily grew stronger in terms of gold. The exchange rate on England for reasons given in discussing the gold market, rose during the year from 29.08 belgas to 29.46 belgas. In New York the pound rose from $\$ 4,91$ to $\$ 4.993 / 4$.

The year was marked by a new decline of the French franc in the international markets. In our own market the principal movements of this currency were as follows: In March the average rate declined from 27.60 belgas to 27.30 belgas. During the first 10 days of April it declined to about 26.50 belgas and remained at about this level until the end of June. On July 1 the franc was detached from gold; it declined at once by 16 per cent, which brought it to a rate in the neighborhood of 22.25 belgas. Then, about the beginning of October, it declined to about 20 belgas, fluctuating around this level until the end of the year.

On the forward market, the tendency was consistently favorable to the belga. The pound sterling showed a slight discount until August. Thereupon a moderate premium developed and was maintained up to the end of the year. Dollar and guilder futures were slightly above the rate for spot transactions. The Swiss franc maintained the same price for spot and forward during the first three quarters of the year. During the fourth quarter forward quotations were a little higher. The French franc was continuously quoted at a heavy discount.

The technical arrangements made within the framework of the Tripartite Agreement -to which, as is well known, Belgium ad-hered-continued to function normally. This collaboration between central banks is still limited to certain countries. The Bank for International Settlements, on its part, tried to contribute by technical methods to the solution of the difficult problem of international transfers.

The political situation in various parts of the world, together with the obstacles encountered by international trade, unfortunately seems more than likely to postpone for some time longer a settlement of the whole problem of international monetary relations.

It is interesting at this point to note the remarkable stability of our monetary circulation, which even shows a slightly downward trend. Although in existing circumstances this trend cannot be associated with the development of domestic prices, we can say that in relation to world prices this trend has fostered the conditions which have assured the favorable development of. Belgian economy since 1935. Generally speaking, the decline of French exchange does not seem to have had unfortunate consequences in this respect.

We might, however, call attention to the fact that the defense of currencies depends far more upon a sound economic policy and upon the equilibrium of public finances than upon central banks, whose task-essentially that of regulator-cannot be adequately performed unless the preliminary conditions have been realized. It is a matter of joint effort, for the success of which the collaboration of industrial leaders is no less essential than that of the public authorities.

Money market.-Discount operations and advances, which had declined sharply in volume since the monetary reform of 1935 , recovered to a certain extent during 1937. This recovery, however, was rather slight because the private banks had abundant resources and had recourse to the bank of issue only now and then and for relatively small amounts. The development of the operations of our discount offices do not seem to have been in harmony with the terms which they were in a position to give to their clients. Our official rates remained unchanged during the entire year. The discount rate for accepted bills was lowered to 2 per cent on May 16, 1935, and has not varied since that time. The discount rate for promissory notes and that on advances against Government securities have remained at the extremely low level of $21 / 2$ per cent and 3 per cent per annum.

At the beginning of the year the Minister of Finance decided to undertake the issue of Treasury certificates. Among the different methods which were considered in this connection the choice fell upon that of making the award to the highest bidder, the system employed with success for some time by the Government of the Colony and by l'Institute de Réescompte et de Garantie, and for a considerable time in foreign centers.

The maximum issue, which was originally fixed at $300,000,000$ francs, was increased at the beginning of August by $200,000,000$ francs, so that the total volume of certificates in circulation was thus increased to 500,000 ,000 francs. Every Friday-with certain ex-ceptions-awards are made for account of the Treasury in the amount of $40,000,000$ or $50,000,000$ francs, with a maturity of three months. The subscriptions are always many times larger than the amount offered.
Because of the importance of these issues from the point of view of credit policy and particularly from the point of view of openmarket policy, the organization of the market
comes within the framework of the tasks to be performed by the National Bank. From now on the Bank is entrusted with the business of awarding these certificates.

Various issues of short-term bills floated by the Belgian Congo at irregular intervals have also provided investment for some available funds seeking employment. Furthermore, l'Institut de Réescompte et de Garantie has continued to cooperate with credit institutions in granting medium-term facilities to their clients. The financing of these operations has been made by issues of short-term
bills, sold under very favorable conditions.
The course of the short-term open market during 1937 can be summed up as follows: During the early months an almost excessive abundance of funds was reflected in an abnormally low interest rate. From the second half of September until the second half of December the market experienced some tension. End of year payments were made with the greatest ease, since the abundance of available funds was increased by the return flow of capital brought about by maturing forward foreign exchange contracts.

Balance Sheet of the National Bank of Belgium as of Dec. 25, 1937 and 1936

${ }^{1}$ Of which, it is stated in the Report, $5,442,953,382$ francs represented foreign exchange, $907,041,636$ francs represented Belgian bills, and $24,093,237$ francs represented foreigu bills.

[^10]
## ALL BANKS IN THE UNITED STATES

Comprises all national banks in the continental United States and all State commercial banks, trust companies, mutual and stock savings banks and such private and industrial banks as are included in abstracts issued by state banking departments. Also includes, during the period June 1934-June 1935, private banks Which, pursuant to the provisions of sec. 21 (a) of the Banking Act of 1933, submitted condition reports to the Comptroller of the Currency. Under the amended provisions of Sec. 21 (a) private banks no longer report to the Comptroler of the Currency. For comparative figures of private banks included in the figures from June 1934 to December 1935, see Federal Reserve Bulletin for
December 1935 , p. 883, and July 1936, p. 535 . Figures for nonmember banks are for dates indicated or nearest thereto for which figures are available.

| San Francisco | 11/2 | Sept. 3, 1937 | 2 | 2 | Sept. 17, 1937 | 4 | Oct. 19, 1933 |

${ }^{1}$ Rates indicated also apply to United States Government securities bought under repurchase agreement. Back figures.-See Annual Report for 1936 (table 40).

## FEDERAL RESERVE BANK BUYING RATES ON ACCEPTANCES

| [Percent per annum] |  |  |  |
| :---: | :---: | :---: | :---: |
| Maturity | Rate in effect on Mar. 31 | In effect be-ginning- | Previous rate |
| 1-15 days ${ }^{1}$ | 1/2 | Oct. 20, 1933 | 1 |
| 16-30 days.- | $1 / 2$ | --..-do--..---- | 1 |
| 31-45 days- | 12 | -----do-.-..... | 1 |
| 46-60 days- | 12 | -----do-.------ | 1 |
| 61-90 days | 3 | -----do---------- | 1 |
| 121-180 days..----- | 1 | -----do----------- | 11/4 |

1 This rate also applies to acceptances bought under repurchase agree ments, which agreements are always for a period of 15 days or less.
Note.-Minimum buying rates at the Federal Reserve Bank of New York on prime bankers' acceptances payable in dollars; higher rates may be charged for other classes of bills. The same minimum rates apply to purchases, if any, made by other Federal Reserve banks.

Back figures.-See Annual Report for 1936 (table 41).

MAXIMUM RATES ON TIME DEPOSITS
Maximum rates that may be paid by member banks as established by the Board of Governors under provisions of Regulation Q.
[Percent per annum]

|  | $\begin{aligned} & \text { Nov. } 1,1933 \\ & \text { to } \\ & \text { Jan. } 31,1935 \end{aligned}$ | $\begin{aligned} & \text { Feb. 1, } 1935 \\ & \text { Dec. } 31,1935 \end{aligned}$ | $\begin{gathered} \text { In effiect } \\ \text { beginning } \\ \text { Jan. 1, } 1936 \end{gathered}$ |
| :---: | :---: | :---: | :---: |
| Savings deposits.- | 3 | 21/2 | 21/2 |
| Postal Savings deposits.---- | 3 | 21/2 | 21/2 |
| Other time deposits payable in: |  |  |  |
| 6 months or more | 3 | 21/2 | 21/2 |
| 90 days to 6 months...- | 3 | $21 / 2$ | 2 |
| Less than 90 days...... | 3 | 21/2 | 1 |

Note.-Maximum rates that may be paid by insured nonmember banks as established by the Federal Deposit Insurance Corporation, effective February 1, 1936, are the same as those in effect for member banks. In some States the maximum rates established by the Board lower maximum rates established by State authority.

## FEDERAL RESERVE BANK

 RATES ON INDUSTRIAL ADVANCESRates in effect Mar. 31, 1938, on advances and commitments under Sec. 13(b) of the Federal Reserve Act as amended June 19, 1934. [Percent per annum except as otherwise specified]

| Federal Reserve Bank | Advances direct to industrial or commercial organizations | Advances to financing institutions- |  | Commitments to make advances |
| :---: | :---: | :---: | :---: | :---: |
|  |  | On portion for which institution is obligated | On remaining portion |  |
| Boston. | 31/2-6 | 3 | 31/2 | 3/1 |
| New York.-. | 4-6 | 3 | 4-5 | 1-2 |
| Philadelphia | 4-6 | $121 / 2$ | ${ }^{(2)}$ | 1/2-2 |
| Cleveland. | 41/2-6 | $31 / 2$ | 4 |  |
| Richmond... | 6 | 4-6 | 4-6 | 1-2 |
| Atlanta | 5-6 | 5 | 5 | 1/2 |
| Chicago-- | 5-6 | ${ }^{1} 21 / 2$ | 5-6 | 1-2 |
| St. Louis | 4-51/2 | $31 / 2$ | 4 | $81 / 2$ |
| Minneapolis.- | 6 | 41/2-5 | 43/2-5 |  |
| Kansas City | 4-6 |  |  | 1/2-2 |
| San Francisco- | ${ }_{5-6}^{5-6}$ | 3-4 | 5-6 | 1/2-2 |

1 Authorized rate 1 percent above prevailing discount rate.
${ }_{2}$ Same as to borrower but not less than 4 percent.
${ }_{3}{ }_{3}$ Flat charge.
Back figures.-See Annual Report for 1936 (table 40 ).

## MEMBER BANK RESERVE REQUIREMENTS

[Percent of deposits]

| Classes of deposits and banks | June 21, 1917Aug. 15, 1936 |  | $\begin{aligned} & \text { Mar. 1, } \\ & 1997-1 \\ & \text { Apr. } 30, \\ & 1937 \end{aligned}$ | $\begin{gathered} \text { May 1, } \\ \text { 1937, } \\ \text { and after } \end{gathered}$ |
| :---: | :---: | :---: | :---: | :---: |
| On net demand deposits: ${ }^{\text {a }}$ |  |  |  |  |
| Central reserve city-- | 13 | 191/2 | $223 / 4$ | 26 |
| Reserve city-.-.-- | 10 | ${ }_{101 / 2}$ | $171 / 2$ | 14 |
| On time deposits: All member banks.. | 3 | 41/2 | 51/4 |  |

${ }^{1}$ See footnote to table on page 296 for explanation of method of computing net demand deposits.

## MONEY RATES AND BOND YIELDS

$r$ Revised
1 Some of the loans made by the regional agricultural credit corporations and the banks for cooperatives and most of the loans made by the production credit associations are discounted with the Federal intermediate credit banks. The amounts in this column are thus included in the three columns under those headings. Sueh loans are not always discounted in the same month in which the original credit is extended.

Gold production in U.S.S. R.: No regular Government statistics on gold production in U.S.S.R. are available, but data of percentage cbanges irregularly given out by cfficials of the gold mining industry, together with certain direct figures for past years, afford a basis for estimating annual production, in millions of dollars, as follows-at $\$ 20.67$ per fine ounce: $1929, \$ 15 ; 1930, \$ 31 ; 1931, \$ 34 ; 1932, \$ 40 ; 1933, \$ 56$; at $\$ 35$ per fine ounce: 1933 , $\$ 95$; 1934, $\$ 135 ; 1935, \$ 158$; 1936, $\$ 200$.
${ }^{c}$ Corrected.
${ }^{p}$ Preliminary
${ }^{1}$ Includes production in the Pbilippines.
Note.- For monthly figures back to January 1929 and for explanation of table see Bulletin for April 1933, pp. 233-35; February 1934, p. 108; November 1934, p. 737, July 1937, p. E87; and March 1€38, p. 265 . For annual figures of world production back to 1873 (including Russia-U.S.S.R.), see Annual Report of Director of Mint for 1936, pp. 108-109. Figures for Canada beginning January 1937 are subject to official revision.

[^19]${ }^{2}$ Includes exports of $\$ 50,661,000$ to Sweden and $\$ 12,571,000$ to Norway; and net imports of $\$ 53,465,000$ from Switzerland.
${ }^{2}$ Includes $\$ 10,129,000$ exported to Sweden and unspecified net imports of $\$ 19,684,000$
4 Includes $\$ 67,655,000$ exported to Central and South America and net exports of $\$ 16,596,000$ to Switzerland.
${ }^{5}$ Includes $\$ 15,120,000$ exported to Central and South America and $\$ 4,007,000$ imported from Japan.

- Includes $\$ 27,511,000$ exported to Central and South America.

T Includes $\$ 24,996,000$ exported to Central and South America.
8 Includes net exports of $\$ 12,119,000$ to Switzerland.

- Through March 1935 gold held by government; subsequently, gold held by Reserve Bank of India to which government gold was transferred.

10 Figures derived from preceding columns; net imports plus production minus increase in reserves in India
11 Includes $\$ 14,292,000$ exported to Germany.
NoTe.-Germany, Switzerland, and United Kingdom.-In some cases annual aggregates of official monthly figures differ somewhat from revised official totals published for year as a whole. German gold movements by individual countries not available beginning July 1937.

## CENTRAL BANKS

## p Preliminary.

${ }^{1}$ Issue department also holds securities and silver coin as cover for fiduciary issue, which is fixed by law at $£ 260,000,000$. However, by direction of British Treasury under Section 2, paragraph (2), of Currency and Bank Notes Act, 1928 (see Bulletin for August 1928, pp. 567-569), reductions in amount of fiduciary issue (and securities held as cover) have been in effect as follows: Dec. 16, 1936, to Nov. 10, 1937, £60,000,000; Nov. 17, 1937, to Jan. 12, 1938, $£ 40,000,000$; since Jan. 19, 1938, $£ 60,000,000$. From August 1, 1931, to March 31, 1933, increase of $£ 15,000,000$ in fiduciary issue (and securities held as cover) was authorized by British Treasury under Section 8 of Currency and Bank Notes Act.
${ }^{2}$ By law of October 1, 1936, gold provisionally revalued at rate of 49 milligrams gold 0.900 fine per franc (see Bulletin for November 1936, pp. 878-880). Of total gold increment of about $17,000,000,000$ francs, $10,000,000,000$ francs was initially turned over to Stabilization Fund established py law of October 1. By decree of July 22, 1937, gold was again revalued on basis of 43 milligrams of gold 0.900 fine per franc, and resulting increment of about $6,800,000,000$ francs was allocated to fund for regulating market for Government securities (see BulLetin for September 1937, p. 853).
${ }^{3}$ Bills and warrants endorsed by National Wheat Board (law of Aug. 15, 1936-see Buluerin for October 1936, pp. 785-786), and bills rediscounted for account of Banques Populaires (law of Aug. 19, 1936-see BULLeTIN for October 1936, p. 788).

Note.-For explanation of table see Bullevin for February 1931, pp. 81-83; July 1935, p. 463; July 1936, p. 603; and September 1937, p. 951

${ }^{1}$ Combined monthly balance sheets not published for December. Prior to merger of two of the banks in February 1932 figures refer to six large Berlin banks. Beginning in 1935 fgures are not entirely comparable with those shown for previous years due to changes in reporting practice. (Bee Bulletin for June 1835, p. 389).

NOTE.-For other baek figures and explanation of table see Bulierin for October 1933, pp. 641-646, and June 1935, pp. 388-390.

## SUBSCRIPTION PRICE OF BULLETIN

The Federal Reserve Bulletin is the Board's medium of communication with member banks of the Federal Reserve System and is the only official organ or periodical publication of the Board. The Bulletin will be sent to all member banks without charge. To others the subscription price, which covers the cost of paper and printing, is $\$ 2$. Single copies will be sold at 20 cents. Outside of the United States, Canada, Mexico, and the insular possessions, $\$ 2.60$; single copies, 25 cents.

[^0]:    ${ }^{1}$ Shares of Federal and other savings and loan associations beld by Home Owners' Loan Corporation.
    ${ }^{2}$ Less than $\$ 500,000$.
    ${ }^{3}$ Excludes $\$ 761,000,000$ of Federal Land bank bonds held by Federal Farm Mortgage Corporation.

[^1]:    ${ }^{r}$ Revised. See page 267
    : Inflow less than $\$ 50,000$.

[^2]:    r Revised-See page 267.

[^3]:    $r$ Revised-See page 267.

[^4]:    r Revised-See page 267.
    Note. The outstanding amounts shown above for Dec. 30, 1936, and subsequent dates indicate movements since earlier dates shown that differ from the movements recorded in tables 1, 4, and 5, due to a change on Aug. 12, 1936 in the reporting practice of one bank. See Bulletin for May 1937, pages 425 and 431

[^5]:    ${ }^{1}$ The report, available in French, contains in addition a section on personnel and tables showing the operations of the bank in detail. For earlier reports see Bulletin for April 1937, March $1936,1935,1934,1933,1932,1931,1930$, etc.

[^6]:    ${ }^{1}$ The report, available in French, contains in addition sections dealing with credit agreements, industry, commerce and agriculture, and the Belgian Congo, as well as tables showing the operation of the bank in detail. For earlier reports see BULLETIN for March 1937, April 1936, 1932, 1931, May 1930, April 1929, etc.
    ${ }_{2}$ For full text of this decree see Bulletin for October 1937, pages 1003-1006.

[^7]:    Includes industrial advances.
    Note.-For description of figures in this table and discussion of their significance, see Bulletin for July 1935, pp. 419-429. Reprints of article, together with all available back igures, may be obtained upon request from Division of Research and Statistics. Back figures are also shown in months and years are shown in the table on p. 259.

[^8]:    1 Weekly figures of excess reserves of all member banks and of country banks are estimates.
    ${ }^{2}$ Reserve requirements increased March 1, 1937, and May 1, 1937; see table at foot of page 307 for amount of changes.

[^9]:    1 Excluding central reserve city banks, for which figures for latest month are shown in table above.

[^10]:    Back figures.-See Annual Report for 1936 (table 67).

[^11]:    1 Nonmember bank figures not available. $p$ Figures for nonmember banks are preliminary
    ${ }^{2}$ Prior to Dec. 30,1933 , member-bank figures include interbank deposits not subject to immediate withdrawal, which aggregated $\$ 103,000,000$ on that date. The nonmember bank figures on all call dates include interbank deposits to the extent (estimated as $\$ 150,000,000$ on June 30 , 1937) that they were not shown separately in a few State bank abstracts
    : Beginning with this date (1) the figures exclude private banks in Georgia which no longer report to the State banking department (43 such banks reported deposits of $\$ 2,491,000$ and loans and investments of $\$ 1,087,000$ on December 31, 1936); and (2) the figures include Morris Plan and industrial banks in New York and North Carolina, of which there were 45 on June 30, 1937 with deposits of $\$ 50,287,000$ and total loans and invest ments of $\$ 61,165,000$. The figures already include such Morris Plan and industrial banks in other States as are covered by State banking department reports.

    Back floures.-See Annual Report for 1936 (tables 48-49).

[^12]:    1 Excluding balances with reporting firms (1) of member firms of New York Stock Exchange and other national securities exchanges and (2) of firms' own partners.
    ${ }^{2}$ Includes both money borrowed from banks and trust companies in New York City and elsewhere in the United States and also money bor rowed from other lenders (not including member firms of national securities exchanges)

    Note.-For explanation of these figures see "Statistics on Margin Accounts" in Bulletin for September 1936. The article describes the methods by which the figures are derived and reported, distinguishes the table from a "statement of financial condition," and explains that the last column is not to be taken as representing the actual net capital of the reporting firms.

    Back figures.-See Bulletin for March 1938, page 196.

[^13]:    1 Monthly and weekly data are averages of daily figures, except for municipal bonds, which are based on Wednesday figures.
    ${ }^{1}$ A verage of yields of all outstanding bonds due or callable after 8 years.
    ${ }^{3}$ Standard Statistics Co

    - Moody's Investors Service, week ending Friday. Because of limited number of suitable issues, less than 40 industrial bonds are included; the industrial Aaa group has been reduced from 10 to 3 and the industrial Aa group from 10 to 4.

    Back figures.-See Annual Report for 1936 (table 74).

[^14]:    ${ }^{1}$ Includes issues of noncontiguous U.S. Territories and Possessions.
    ${ }^{2}$ Includes publicly offered issues of Federal credit agencies, but excludes direct obligations of U. S. Treasury.
    $:$ Less than $\$ 500,000$.
    Source.-For domestic issues, Commercial and Financial Chronicle; for foreign issues, U. S. Department of Commerce. Monthly figures sublect to revision.

    Back figures.-See Annual Report for 1936 (table 72).

[^15]:    ${ }^{1}$ Includes $\$ 81,000,000$ of loans for distribution to depositors of closed banks
    Includes agricultural loans formerly shown separately
    Note.-For explanation of table and back figures, see Bulletin for April 1936, p. 220.

[^16]:    p Preliminary.

    - Revised.

    Note.-For description see Bulletins for February and March 1927. For latest revisions see Bulletins for March 1932, pp. 194-196, September 1933, pp. 584-587, and March 1937, p. 256. Series on silk-loom activity and on production of book paper, wrapping paper, fine paper, box

[^17]:    ${ }_{2}^{1}$ Formerly called "knit goods."
    ${ }_{3}^{2}$ New series.
    ${ }^{3}$ Preliminary revision,
    Back figures. - For monthly and annual indexes of groups, see Annual Report for 1936 (table 80); for indexes of subgroups, see Annual Report for 1936 (table 81). Figures for new and revised series available at Bureau of Labor Statistics.

[^18]:    
    Note.-For gross import and export figures and for additional countries see table on page 298.

[^19]:    p Preliminary
    ${ }^{1}$ Includes $\$ 17,465,000$ exported to Rumania and unspecified net imports of $\$ 95,937,000$

[^20]:    quotation, see note in Bulletin for March 1938, p. 244

[^21]:    p Preliminary.
    1 Prices derived from average yields for 60 corporate bonds as published by Standard Statistics Co.
    Exchange closed from July 13 to Sept. 2, 1931, and from Sept. 19, 1931, to Apr. 11, 1932. Index for 1931 represents average of months JanuaryJune; index for 1932 represents average of months May-December.
    i'Indexes of reciprocals of average yields. For old index, 1929-1936, 1929=100; average yield in base year was 4.57 percent. For new index beginning January 1937, January-March $1937=100$; average yield in base period was 3.39 percent.

    - New index. See note 3
