# Special Report to the Congress 

by the

Board of Governors of the Federal Reserve System, the Presidents of the Federal Reserve Banks, and the Federal Advisory Council

(Submitted to the President of the Senate and the Speaker of the House of Representatives, December 31, 1940)

FOR the first time since the creation of the Federal Reserve System, the Board of Governors, the Presidents of the twelve Federal Reserve Banks, and the members of the Federal Advisory Council representing the twelve Federal Reserve Districts present a joint report to the Congress.

This step is taken in order to draw attention to the need of proper preparedness in our monetary organization at a time when the country is engaged in a great defense program that requires the coordinated effort of the entire Nation. Defense is not exclusively a military undertaking, but involves economic and financial effectiveness as well. The volume of physical production is now greater than ever before and under the stimulus of the defense program is certain to rise to still higher levels. Vast expenditures of the military program and their financing create additional problems in the monetary field which make it necessary to review our existing monetary machinery and to place ourselves in a position to take measures, when recessary, to forestall the development of inflationary tendencies attributable to defects in the machinery of credit control. These tendencies, if unchecked, would produce a rise of prices, would retard the national effort for defense and greatly increase its cost, and would aggravate the situation which may result when the needs of defense, now a stimulus, later absorb less of our economic productivity. While inflation cannot be controlled by monetary measures alone, the present extraordinary situation demands that adequate means be provided to combat the dangers of overexpansion of bank credit due to monetary causes.

The volume of demand deposits and currency is fifty per cent greater than in any other period in our history. Excess reserves are huge and are increasing. They provide a base for more than doubling the existing supply of bank credit. Since the early part of 1934 fourteen billion dollars of gold, the principal cause of excess reserves, has flowed into the country, and the stream of incoming gold is continuing. The necessarily large defense program of the Government will have still further expansive effects. Government securities have become the chief asset of the banking system, and purchases by banks have created additional deposits. Because of the excess reserves, interest rates have fallen to unprecedentedly low levels. Some of them are well below the reasonable requirements of an easy money policy, and are raising serious, long-term problems for the future well-being of our charitable and educational institutions, for the holders of insurance policies and savings bank accounts, and for the national economy as a whole.

The Federal Reserve System finds itself in the position of being unable effectively to discharge all of its responsibilities. While the Congress has not deprived the System of responsibilities or of powers, but in fact has granted it new powers, nevertheless, due to extraordinary world conditions, its authority is now inadequate to cope with the present and potential excess reserve problem. The Federal Reserve System, therefore, submits for the consideration of the Congress the following five-point program:

1. Congress should provide means for absorbing a large part of existing excess reserves, which amount to seven billion dollars, as well as such additions to these reserves as may occur. Specifically, it is recommended that Congress-
(a) Increase the statutory reserve requirements for demand deposits in banks in central reserve cities to $26 \%$; for demand deposits in banks in reserve cities to $20 \%$; for demand deposits in country banks to $14 \%$; and for time deposits in all banks to $6 \%$.
(b) Empower the Federal Open Market Committee to make further increases of reserve requirements sufficient to absorb excess reserves, subject to the limitation that reserve requirements shall not be increased to more than double the respective percentages specified in paragraph (a).
(The power to change reserve requirements, now vested in the Board of Governors, and the control of open market operations, now vested in the Federal Open Market Committee, should be placed in the same body.)
(c) Authorize the Federal Open Market Committee to change reserve requirements for central reserve city banks, or for reserve city banks, or for country banks, or for any combination of these three classes.
(d) Make reserve requirements applicable to all banks receiving demand deposits regardless of whether or not they are members of the Federal Reserve System.
(e) Exempt reserves required under paragraphs (a), (b) and (d) from the assessments of the Federal Deposit Insurance Corporation.
2. Various sources of potential increases in excess reserves should be removed. These include: the power to issue three billions of greenbacks; further monetization of foreign silver; the power to issue silver certificates against the seigniorage, now amounting to one and a half billion dollars on previous purchases of silver. In view of the completely changed international situation during the past year, the power further to devalue the dollar in terms of gold is no longer necessary or desirable and should be permitted to lapse. If it should be necessary to use the stabilization fund in any manner which would affect excess reserves of banks of this country, it would be advisable if it were done only after consultation with the Federal Open Market Committee, whose responsibility it would be to fix reserve requirements.
3. Without interfering with any assistance that this Government may wish to extend to friendly nations, means should be found to prevent further growth in excess reserves and in deposits arising from future gold acquisitions. Such acquisitions should be insulated from the credit system and, once insulated, it would be advisable if they were not restored to the credit system except after consultation with the Federal Open Market Committee.
4. The financing of both the ordinary requirements of Government and the extraordinary needs of the defense program should be accomplished by drawing upon the existing large volume of deposits rather than by creating additional deposits through bank purchases of Government securities. We are in accord with the view that the general debt limit should be raised; that the special limitations on defense financing should be removed; and that the Treasury should be authorized to issue any type of securities (including fully taxable securities) which would be especially suitable for investors other than commercial banks. This is clearly desirable for monetary as well as fiscal reasons.
5. As the national income increases a larger and larger portion of the defense expenses should be met by tax revenues rather than by borrowing. Whatever the point may be at which the budget should be balanced, there cannot be any question that whenever the country approaches a condition of full utilization of its economic capacity, with appropriate consideration of both employment and production, the budget should be balanced. This will be essential if monetary responsibility is to be discharged effectively.

In making these five recommendations, the Federal Reserve System has addressed itself primarily to the monetary aspects of the situation. These monetary measures are necessary, but there are protective steps, equally or more important, that should be taken in other fields, such as prevention of industrial and labor bottlenecks, and pursuance of a tax policy appropriate to the defense program and to our monetary and fiscal needs.

It is vital to the success of these measures that there be unity of policy and full coordination of action by the various Governmental bodies. A monetary system divided against itself cannot stand securely. In the period that lies ahead a secure monetary system is essential to the success of the defense program and constitutes an indispensable bulwark of the Nation.

## Gold, Capital Flow, and Foreign Trade During War

The physical movement of gold to the United States since the outbreak of war has

Gold inflow during war been far larger than in any previous period of corresponding length. From the end of August 1939 to the end of December 1940, imports amounted to $\$ 5,800,000,000$. Nearly $\$ 700$,000,000 of these imports remained in foreign ownership, having been placed under earmark at the Federal Reserve Banks. The remainder was added to the monetary gold stock of the United States. Including acquisitions from domestic production and certain other sources, the gold stock increased by $\$ 5,300,000,000$ during the war period, reaching $\$ 22,000,000,000$ at the end of 1940 .

The war has profoundly changed the character of both of the principal factors behind the gold flow to this country-namely, the capital movement and the trade balance. The countries in which the pre-war movement of capital to the United States largely originated have increasingly limited or prohibited the transfer of capital abroad; and, as regards trade, the belligerent countries which can still transport goods from the United States have taken foreign trade initiatives more or less completely out of private hands and vested them in the government. As the war has progressed, the inward movement of capital on private account, which had previously constituted by far the major part of the total, has given way to the accumulation of official funds and other official assets in this country; and American exports have come increasingly to consist of goods purchased by governments for the prosecution of the war.

The regularly reported capital inflow to the United States during the first eight months of the war was relatively small, amounting to about $\$ 250,000,000$. It reflected in

Capital
movement large part the continued transfer to the United States of funds owned by private residents of European countries which had not yet been involved in the war and had not adopted the exchange restrictions characteristic of the belligerent countries. In April and May, however, military developments on the Continent severed financial relations between this country and many of the previous sources of private capital inflow. Since that time movements of reported capital for private account have been insignificant in size and erratic in direction; on balance, in the last eight months of 1940, they have shown a moderate outflow. Continued liquidation of American securities for British account has been a factor in this outflow, and a substantial repatriation of privately-owned funds listed in Swiss names has taken place in recent months.

The predominant factor in the reported capital movement since last May has been the change in the volume of official funds held in the Federal Reserve Bank of New York and in the New York market for the account of foreign central banks and governments. In a little over two months after the beginning of May, these funds were built up by over $\$ 400,000,000$, representing in large part the deposit in official accounts of the proceeds of gold sent to this country. The rate of increase subsequently slackened and later some decline occurred, but during the last six
months of the year a further $\$ 300,000,000$ was accumulated in these accounts. Weekly changes were somewhat irregular, often reflecting merely the inevitable gaps between gold sales and official disbursements by countries engaged in large-scale purchases of war materials in this country.

Even unidentified transactions, which have been an important factor in the gold movement of recent years, appear to reflect a similar tendency toward official transactions. There is reason to believe that in the prewar period the unexplained movement of gold to the United States resulted mainly from the transfer of private capital here in ways which escaped the reporting system. It is known, for example, that foreigners seeking to escape the requisitioning of dollar assets by their home governments placed funds on deposit here in accounts which appeared to belong to residents of this country rather than to foreigners. Again, refugees coming with large dollar deposits or security holdings have converted what were previously foreign liabilities of this country into domestic. This inflow of refugee funds undoubtedly continues to contribute to the unidentified total, but other types of private capital movement must have been curtailed by the extension and tightening of exchange restrictions abroad-particularly after German occupation of some of the chief remaining centers of free exchange. Notwithstanding this fact, far more gold has come to the United States during the war as the result of transactions that cannot be fully identified than in any previous period of similar length. From September 1, 1939, to the end of 1940 the volume of unidentified transactions appears to have been considerably more than $\$ 2,000,000,000$. The movement has been greatest since the spread of German control in Europe last spring and the intensification of British purchasing activities in this country. This suggests the extent to which official transfers of funds for investment in plant and prepayment of war purchases may
have become a factor in the movement of gold to this country, replacing the transfer of private capital.

The war brought an immediate and sharp increase in United States merchandise ex-

## United States

 foreign trade ports. The increase in imports, while substantial, was considerably smaller, as shown on the chart. The resulting export balance, ap-

proaching $\$ 1,500,000,000$ in 1940 , was more than double the annual rate maintained in the first half of 1939 . It exceeded the unusually high rate reached in 1937-38, when exports were continued in large volume while imports declined drastically along with income and industrial production in the United States. Not since the early 'twenties has the annual export surplus been so great as in the year now ended.

The growth in imports was confined to the first few months of the war. With the commencement of hostilities there was

## Imports

 an immediate increase in United States demand for both foreign and domestic goods. Imports rose substantially, and from October 1939 to January 1940 ranged 30 per cent higher than in immediately preceding months. Since that time they have fluctu-ated moderately around a slightly lower figure. While higher than in the immediate pre-war period, this level of imports is only three-quarters that of the peak reached early in 1937, when inventories of foreign commodities were being accumulated, and about half as large as average purchases abroad from 1925 to 1929. The failure of import values to accompany the rise in the physical volume of domestic industrial output to new high levels is due largely to the lower prices now prevailing, although other factors have also been present. It would appear that, after rough adjustment for price changes, imports on a quantity basis were about 85 per cent of the previous maximum level.

| Finished manufactures.--------------- | 378 | 405 | $-27$ |

Source: Department of Commerce. Imports for consumption; latest figures preliminary.

As shown in the table, the rise in imports has not been evenly distributed among different commodities. While all main import groups experienced gains during the upsurge in the late months of 1939, imports of foodstuffs and finished manufactures have since fallen below their pre-war levels. The demand for food is relatively inelastic, and the rise of incomes in this country since the war began has increased consumption of foreign foods to only a moderate extent. At the same
time, prices of coffee, sugar and several other foods dependent on European outlets have declined owing to the piling up of surpluses as a result of the blockade. Imports of manufactured foods have been further curtailed because the European sources of many of these products have been cut off, and this factor is also responsible in large part for the lower imports of finished goods. On the other hand, the demand for crude materials and semi-manufactures has risen rapidly with increased industrial production and with attempts to accumulate stock-piles of strategic materials in the United States. The quantity of these goods now being imported appears to be within roughly 15 per cent of the 1929 average, but owing to the lower prices now prevailing their value is 40 per cent less than in that year.

The effect of the war upon United States export trade has been more far-reaching. Exports Increased demand from the warring nations both for munitions and for the machinery and materials to produce them, the introduction of rationing and of foreign trade and exchange controls, blockade of the Continent, the difficulties experienced by nations now at war in supplying goods to neutral countries, exchange shortages resulting from the loss of markets, and increased incomes due to expanded production are all consequences of the war that have reacted upon the volume and distribution of United States exports.
The charts on the next page show the wide shifts which these factors have caused in United States export trade. As shown on the first chart, unusually large shipments of cotton, due more to the replenishment of low stocks abroad and the assistance rendered by the export subsidy than to the direct repercussions of war, served to maintain total agricultural exports at a relatively high figure during the first year of hostilities. Such exports have now fallen, however, to the lowest level of the century. The main factors in the decline have been the blockade of important European markets and the cur-

EXPORTS OF UNITED STATES MERGHANDISE

Source: Department of Commerce. Exports of United States merchandise; industrial (non-agricultural) and agricultural. War materials represent aircraft, firearms, ammunition, explosives, machine tools, and metals and manufactures. Latest month, November.
tailment of shipments to the British Empire as a consequence of reduced allotments of shipping and exchange, rationing of internal consumption, and the negotiation of intrasterling area purchasing agreements. Shipments of agricultural products to the Far East have also diminished.

Industrial exports, on the other hand, rose steeply between the outbreak of war and June 1940 and have since fluctuated in the vicinity of $\$ 300,000,000$ a month. This figure is half again as large as in the pre-war months. It equals in value the average for 1929 and it far surpasses that year from the standpoint of physical volume. As shown in the chart, increases have occurred largely in a few commodities of military significance -iron, steel, other metals, aircraft, machine tools, and munitions. These commodities, which represented about 25 per cent of all United States exports before the war, have in recent months exceeded 40 per cent of the total. Other non-agricultural exports have shown little change over the war period.

The rise in total industrial exports was accompanied by large shifts in the destination of these products, as shown on the second chart. Shipments to Continental Europe have fluctuated most widely. Upon the outbreak of war, the loss of German and Polish markets and the initial difficulties of shipping caused a slight drop in industrial exports to this area. Then, with increasing war needs, both immediate and prospective, shipments to France and the leading neutrals rose sharply until, in March 1940, total exports of industrial products to Continental Europe were double the pre-war level. Beginning in April, however, the spread of warfare and, with it, of the British blockade, rapidly eliminated these markets. With the fall of France in June, they largely passed from the export picture. Now small shipments to Sweden, Finland, Spain, and Portugal, and somewhat more substantial exports to Russia through Siberia, make up the bulk of our trade with Continental Europe.

## UNITED STATES INDUSTRIAL EXPORTS BY AREAS

Source: Department of Commerce. Exports of United States merchandise other than agricultural exports. Latest month, Oetober.

There was also an initial rapid increase in industrial exports to Latin America as European sources of supply were cut off and attempts were made to build up inventories of goods in which future shortages were feared. By the second quarter of 1940, these shipments were 50 per cent higher than in the pre-war period. Subsequently they declined somewhat as exchange difficulties arising from the loss of European markets became increasingly acute. It is anticipated that these difficulties will soon be overcome to a considerable extent through the extension of credit to Latin American countries.

In marked contrast to the situation with respect to other areas, exports of industrial

Trade with the British Empire products to the British Empire show a sharp and almost uninterrupted expansion. The rise was slow in starting, however, since shipments of non-essential goods were restricted and war orders and the ability of American industry to fill them were only gradually built up. Through March 1940 the rate of industrial exports to the British Empire was only 12 per cent above that of the pre-war quarter. This state of affairs changed rapidly as British demand grew with the increasing tempo of the war. Orders were stepped up sharply beginning in April, and during the summer months exports were enlarged by shipments of overage weapons and munitions as well as by increased takings of industrial materials needed for the war effort. The latter have risen further as output in the United States has expanded, and British Empire purchases have lately become by far the most important factor in United States foreign trade.

The dominant position which this group of countries now holds in United States exports is apparent from the table, which also shows the great influence of British demand in shaping our export commodity distribution. The British Empire is now purchasing about 65 per cent of United States exports. Among war materials, exports of which have risen most steeply, the percentage is even higher.

Purchases by other countries have fallen con-siderably-about 25 per cent since the prewar period-with the declines being spread over nearly all types of commodities except iron and steel.

To a large extent the changes in exports to the British Empire shown in the table reflect shifts in British requirements, but limitations on productive capacity in the United States have also affected the course of trade. The most pressing British need has been for aircraft, firearms, explosives, other military equipment, and ships. Exports of these commodities show substantial increases over the war period, but except for aircraft this is due mainly to shipments of so-called over-age materials rather than to new output. Productive capacity in the United States for commodities of this type was small before the outbreak of war and many of these items require a long period of manufacture.

* United Kingdom, Canada, British India, South Africa, Australia, New Zealand, and Hong Kong; smaller British countries included with "Other countries."

In marked contrast is the situation with respect to agricultural exports and certain manufactured goods such as passenger cars
and some types of machinery. These have declined, in some cases sharply, notwithstanding the abundance of United States supplies. For the most part, however, these commodities are either non-essential or are available in ample quantities elsewhere. To conserve dollar resources the British Government has diverted purchases to countries with which it has been able to make special financial arrangements. At the same time, in order to save shipping space, it has rationed domestic consumption and, where possible, expanded home output.

There is finally the group of commodities which are currently moving to the British Empire in largest volume-iron, steel, other metals, machine tools, and other similar products used chiefly in the manufacture of finished military equipment. These have shown the largest growth to date. The steel industry in the United States is currently working at close to full capacity with a larger proportion of ingot output being exported than at any time in recent years and considerably more than half the exports going to the British Empire. The machine tool industry is also working at close to capacity and has been exporting more than half of its total output, nearly all to the Empire.

If the war continues, the trend of United States exports over the coming year will reflect mainly the movement of goods to the United Kingdom, Canada, and other British countries. Agricultural and non-essential industrial exports to this area are unlikely to show much expansion. Even if financial obstacles are removed, the shortage of shipping space will remain a limiting factor, and allowance must also be made for the British desire to maintain the closest possible economic relationships with other friendly countries which also have agricultural surpluses. In the field of military equipment and materials, on the other hand, considerations of the foregoing character are less important. British demand for military goods and war materials far exceeds the supplies available
in this country. The volume of exports to the Empire, therefore, will depend mainly upon the rapidity with which American production can be expanded and upon official policy regarding deliveries. If rapid progress is made in production and the British share of the output is increased, it is possible that exports to the Empire may attain a level of $\$ 3,500,000,000$ in 1941 as against approximately $\$ 2,100,000,000$ in 1940 . With little change in the volume of imports from the area, this would mean a United States export balance with British countries in 1941 of considerably more than $\$ 2,000$,000,000.

Gold and dollar resources of the British Empire at the outbreak of the war were estimated in the Bulletin for December 1939 at $\$ 6,400,000,000$, including direct and miscella-

British dollar resources neous investments. The figures for securities and investments in this estimate were based upon the latest Department of Commerce data available at the time. The securities data were converted by the Board to a market value basis and brought down to date by adjustment for subsequent shifts in market value and for operations reported weekly by banks, brokers, and dealers. Since publication of the estimate the Department of Commerce has completed a comprehensive revision of its data based upon sources not previously available. Taking account of this revision in the figures for securities and other investments, and employing the same figures for gold and balances as in the earlier table with some change in classifications, the Board's estimates of foreign gold and dollar resources at the beginning of the war would be altered as shown in the table on the following page.

The table indicates that gold and dollar resources of every sort held by the British Empire amounted to over $\$ 7,000,000,000$ at the outbreak of the war. In the intervening period the Empire has produced $\$ 1,100,000,-$ 000 of gold and sold $\$ 1,400,000,000$ of goods
to the United States. Drafts upon the aggregate of these gold and dollar resources have been made to pay for $\$ 2,600,000,000$ of goods already delivered by the United States and to cover substantial withdrawals of capital from England as well as for other purposes.

The situation cannot, however, be adequately presented in terms of such figures. In the first place there is no one figure that really measures British dollar resources. A portion of the balances and securities in British names may be held for nationals of other countries who, at the outbreak of the war, were using the facilities of London as a world financial center. Even dollar resources in the full ownership of British nationals are in many forms with various degrees of availability. Gold, which would appear to be the most basic resource, differs as regards its availability for purchases in the United States according to both its location and ownership. Gold held in the United Kingdom,

India, and South Africa involves the delays and risks of sea transport, and the central reserves of the dominions are not as freely at the disposition of the British authorities as gold belonging directly to the British Treasury. Other dollar resources raise somewhat similar problems from the standpoint of ownership.

Security holdings, which at best are difficult to determine accurately, show also the widest possible variation from the standpoint of marketability. To be used they must be converted into cash. Even the best securities may shrink in value if pressed in too great volume upon the market. Others may have no ready market at all. So-called direct investments-i. e. investments representing controlling interests-may be almost impossible to convert into cash; or again, if entire companies can be sold as going concerns, they may offer the best means of raising a large lump sum within a short period. Some of the

[^0]great British interests in American insurance, textile, and oil companies might, if a favorable opportunity offered, be so handled. But any figure that can be given for securities or investments must be regarded more as broadly indicative of possibilities that might be realized under certain facilitating circumstances than as a definitive measure of dollar resources that can be promptly turned to war purchases.

Even if a definitive measure of dollar securities and investments could be given, it would not complete the record since there is a possibility that British investments in other countries might be sold on the American market. Possibilities of this sort, however, appear to be limited. Emphasis should rather be placed on the difficulties of realizing within a short period the full cash value indicated for security holdings in the table. In the sixteen months since the outbreak of the war only a small part of this indicated value has in fact been converted into cash.

The other aspect of the situation that greatly alters the significance of any figure for British resources derived from regularly published data is the necessity for acting in advance of deliveries. It has been necessary for the British to make substantial payments to finance expansion of plant needed to fill their orders, and even greater sums have been paid out for goods in process of production on which delivery will be taken in the months ahead. Furthermore, the resources still in British hands are subject to commitments that have been incurred on the great mass of orders placed, but not yet paid for.

It is in the light of these two major con-siderations-the varying degree of availability of their indicated dollar assets and the extent to which the British have had to anticipate the future-that the resources at the disposal of the British for additional purchases in this country must be appraised.

Continued inflow of gold into this country as a result of international developments since the beginning of
Gold and bank reserves in 1940 1934 has resulted in an extraordinary increase in bank reserves and has also been a major influence in the expansion of bank deposits. The increase in the country's gold stock from both foreign and domestic sources during 1940 amounted to $\$ 4,350,000,000$ compared with a growth of $\$ 3,100,000,000$ in 1939 and with average increases of about $\$ 1,600,000$,000 in the four previous years. Member bank reserve balances increased by $\$ 2,900,000,000$ in 1939 and by $\$ 2,400,000,000$ in 1940. The much smaller increase in bank reserves than in gold stock during the past year was due to further expansion in the demand for currency, to the building up of foreign balances at the Federal Reserve Banks, and to sales of securities from the Federal Reserve System Open Market Account. This is brought out by the following table:
Factors Influencing Member Bank Reserves
[In millions of dollars]

With a continued growth in bank deposits there was an increase of about $\$ 970,000,000$ in the required reserves of member banks during 1940. Reserves in excess of legal requirements increased by $\$ 1,400,000,000$, or by about two-thirds as much as in 1939. As
shown in the accompanying chart all of the increase in excess reserves occurred in the

EXCESS RESERVES OF MEMBER BANKS

Latest figures are for week ending Friday, December 27, 1940, and are preliminary.
first half of the year; in the latter half there was a decline on balance. Factors accounting for changes in member bank reserves are shown by weeks in the chart on page 30 of this Bulletin and in the table on the opposite page.

In July 1940 excess reserves reached a record high level of about $\$ 7,000,000,000$. This was followed by a decline in August and September, owing to a temporary increase in Treasury cash balances and deposits with the Reserve Banks. By the end of October reduction of these balances and continued heavy gold inflow brought excess reserves to their previous peak. In the last two months of the year excess reserves were reduced by sales of Government securities from the Federal Reserve Open Market Account, by a further growth in currency circulation, accelerated by seasonal trade demands, and by a building up of the Treasury's deposits at the Reserve Banks through the sale of $\$ 530,000,000$ of new Defense notes.

At the same time the rate of gold inflow slackened.

The somewhat reduced level of bank reserves at the end of the year is likely to be temporary. Treasury withdrawals from its deposits with the Reserve Banks to meet current expenses, and the return of currency from circulation after the holiday, together with further increases in monetary gold stock and possible expenditures from the large volume of deposits held by foreign governments with the Reserve Banks, may be expected to increase excess reserves in the near future to well beyond the recent high level of $\$ 7,000,000,000$.

Growth in bank reserves has occurred at all classes of banks in all sections of the country. Funds obtained from Distribution of
excess reserves the gold inflow, which has been largely responsible for the increase in reserves, have generally been deposited in the first instance in New York City banks, but have been to some extent shifted to other banks as the result of heavy foreign purchases of goods throughout the country, security transactions in New York, and Treasury and business disbursements of funds borrowed from New York banks. In the past year New York City banks have added large amounts to their holdings of United States Government obligations and have also increased their commercial and industrial loans.

In 1940, as shown in the chart, the excess reserves of New York City banks increased by a somewhat smaller amount than in the two previous years, while at reserve city banks and country banks, as groups, the 1940 increases were fully as large as or larger than in 1938 and 1939. The largest increases during the year were at banks in the Boston, New York, Cleveland, and San Francisco districts, while the smallest increases were in the Atlanta, Kansas City, and Dallas districts. The latter, however, hold substantial amounts of available cash funds in the form of balances with correspondent banks.

# Economic Preparedness for Defense and Dost Defense Droblems 

By

Marriner S. Eccles<br>Chairman of the Board of Governors of the Federal Reserve System *

N appearing before the National Industrial Conference Board, it is appropriate that I should appraise the national economic outlook as I see it at this time. As Chairman of the Board of Governors of the Federal Reserve System, I am primarily concerned with banking and monetary problems and with fiscal policies as they affect monetary conditions. I can speak only for myself, and not for my associates on the Board or in the Reserve System, or for the Government. Many of the issues which I must touch on in order to present a rounded picture of present and potential problems as I see them are by their nature highly controversial. I wish to indicate my own views as frankly as possible for what they may be worth as a part of the full consideration and discussion that are required by the gravity of the times and the importance of the problems before us.
Underlying my approach to all of these problems is my belief that democracy and the system of free enterprise can function to provide reasonably full and sustained employment for all of our available man power, in peace as well as in war times. The great bulk of that employment is and must be provided by private enterprise. Public policy, therefore, should be directed to creating an economic climate that will give the greatest possible encouragement to private initiative and private enterprise that is consistent with orderly and continuous national progress.
The experience of the past decade has served to confirm my conviction that having given this encouragement to private activity, Government should assure employment on useful public works, on a basis that is noncompetitive with private industry, for those able and willing workers whom private indus-

[^1]try is unable to employ. Far from being wasteful, that is the essence of conservation for it means adding to the store of national wealth, in providing roads, schools, hospitalization, public housing, and other betterments, that private enterprise does not and cannot be expected to provide. We gain all these things instead of irreparably losing the product of labor by keeping it idle. Such a policy is economically sound, and when supplemented by an adequate social security program of pensions, public health and relief for the unemployables, compensates for the loss of buying power when the expenditures of private enterprise decline. This in turn benefits private business and restores national income and national revenues.

While fundamental principles of Government policy do not change, policies must vary as economic conditions change. Policy that is appropriate to a period of deflation and under-employment is not appropriate for a time of full employment and the inflationary possibilities that then arise. At a time when activity is rapidly expanding, and we are approaching conditions of reasonably full employment, the fiscal and monetary policies appropriate to the depression period need to be altered to fit the changed conditions.

A condition of rapidly expanding employment and production has now begun to develop, primarily as the result of our vast defense effort and British purchases and their stimulative effects, both directly and indirectly, on the entire economy. I wish now to discuss what seem to me to be the major factors, in the light of present conditions, that should be taken into account as they affect the banking and monetary field, the budget and taxation.

We are again hearing much about the dangers of inflation. It is vitally important to
face the inflation issue squarely, but it is also important not to become mere inflation alarmists. We have had too much loose talk about inflation for seven years. First of all, we must distinguish between a price inflation due to non-monetary causes and one resulting from monetary causes. I have several times in the past defined the latter as a condition arising when the means of payment in the hands of those who will spend it increases more rapidly than the production of goods. This means that the economy has reached the limit of its ability to produce, that is to say, full employment of its man power and productive facilities, but that, nevertheless, the creation of money continues, uncontrolled and unchecked. A price inflation, due to nonmonetary causes, arises when production in particular fields is interrupted or curtailed, whether from bottlenecks, short-sighted wage and price policies, monopolistic practices by capital or labor, or related causes, when there is pressing consumer demand for the goods produced in these fields and when there is neither a shortage of facilities that exist or can be constructed nor a shortage of man power. The cure for such a condition is not less, but more production. It cannot be remedied by monetary means, except at the cost of restricting the entire economy.

The immediate danger is that the upward spiral of prices in particular sectors of the economy will throw these sectors out of balance with the rest of the economy, to the detriment especially of agriculture, unorganized labor and both the low income and fixed income groups. Since our major objective at all times, and especially when we cannot afford to lose time in building our defenses, is full production and employment, it is essential in the general welfare that business and labor avoid strikes and lockouts that interrupt the flow of production, and likewise avoid price and wage policies that induce for-ward-buying and inventory bulges due to fears of higher prices.

It would be best for all concerned if through self-discipline capital and labor prevented these abuses from developing, but if they fail to do so, regulation by Government will be necessary. Through increased efficiency and operating for longer hours, capital and labor can increase production. To avoid bottlenecks due to skilled labor shortages in certain fields, it will be necessary not only to utilize existing skills as fully as possible by working
longer hours, but also to increase as rapidly as possible vocational and apprenticeship training. In these ways bottlenecks and unwarranted price rises can be avoided. Otherwise, governments have no choice, as we have seen in other countries, except to intervene directly by enforcing priorities, by preventing strikes and lockouts and by fixing prices as well as wages and hours.

These are vital considerations at this time when production must not merely be sustained, but must be greatly expanded to provide defense requirements and at the same time take care of normal civilian needs. I do not think it possible to over-emphasize the evils in the kind of inflation originating in what essentially are monopolistic practices either by capital or labor. The result is not only greatly to increase the cost of defense as well as the general cost of living, but the need to redress the unbalanced conditions that inevitably follow calls for increased subsidy payments to agriculture and increased payments in pensions and relief for the aged and the unemployables in order to try to make up for their diminished buying power. Likewise, it leads to demands on the part of all who are employed for increased wages and salaries to help them meet the increased cost of living. The result is the familiar general upward spiral of all prices which in the end benefits nobody, and defeats the essential national purpose of substantially full employment and production for defense as well as for civilian needs.
I am aware that some men in business and in the ranks of labor feel that they should be allowed to make up now for some of the lean years. Past losses cannot be made up now except at the risk of these inflationary consequences. The price and profit increases necessary to make up for such past losses would have to come out of the economy generally, at the expense of all other groups.
This problem-what may be called the bottleneck problem-requires that now more than ever before we keep a discriminating eye on price movements. Any increase in business activity characteristically produces relative scarcities in certain areas of production relative to the whole. These relative scarcities tend to cause price advances. This is particularly true of a period dominated by defense expenditures. The defense program is concentrated upon specialized sectors of the heavy goods industries. Every effort
must be made to increase supply in these areas. To the extent that supply cannot be increased with sufficient rapidity to keep pace with both Government and civilian requirements, priorities and rationing may be necessary as a check upon undue price advances.

There would be no economic justice in permitting the necessities of a great national emergency to yield excessive returns to producers in specialized areas at the expense of the rest of the community. Primary responsibility for preventing the breakdowns, the price distortions and consequences to the entire economy that would result from the attempt to take advantage of the emergency rests upon business and labor leadership. We need above all in this crucial period rapidly expanding production in the industries where preventable bottlenecks are most likely to develop. The time may come when we shall have to curtail private purchases of automobiles and private and public construction in order to give the defense program the right of way in the heavy industries. But priorities and rationing should not be applied until we have exhausted every effort to enlarge productive capacity in the bottleneck areas.

We must also keep a vigilant eye on speculative forward-buying and excessive inventory accumulations. We should be alert to the possibility that the large cash and credit resources available might be turned into speculative channels under the favorable expectations which a prolonged defense program creates. We would be better protected against such speculative inflationary developments if the volume of idle funds already existing were curbed and prevented from increasing still more and if our bank credit structure were again brought within range of control.

What I have been discussing are inflationary conditions due to bottlenecks and other non-monetary causes. Looking beyond these immediate problems, we should be prepared to protect the economy also against the evils of general inflation due to fiscal and monetary factors.

As the result of gold imports, silver purchases, and purchases by banks of United States Government securities the volume of bank deposits has increased to the highest levels in the history of the country. Demand deposits and currency now amount to $\$ 41.5$ billions, or about $\$ 14.5$ billions above the peak of the boom period of the Twenties. At the
same time, gold and silver purchases have raised the volume of excess reserves to $\$ 7$ billions, which is a wholly unprecedented volume, capable of supporting a bank credit expansion of fully $\$ 60$ billions in addition to the present total of deposits.

As long as these funds have been relatively dormant, they have not presented a serious problem except as they have tended to depress the interest rate structure to excessively low levels. To avoid that extreme--to keep the bank credit picture within the realm of control that is the special responsibility of central banking authorities-I advocated, in connection with the Banking Act of 1935, that Congress give the Reserve System adequate powers to absorb the excess, and I subsequently urged that consideration be given to the main causes of this condition, that is, to silver purchases and to the causes of the inflow of gold from abroad which are almost entirely responsible for the present and continuing growth of excess reserves. The authority granted by Congress has been entirely inadequate to cope with the unprecedented growth of excess reserves. For that reason, the Board of Governors as long ago as 1938 recommended in its annual report that Congress take cognizance of and deal with this rapidly enlarging problem.
The need for dealing with it becomes increasingly imperative because of the rapid expansion generated by the defense program. It is essential now that the excess reserves be brought within a range where they can be adjusted to the needs of legitimate business through the open-market function of the Reserve System, and not be left as a basis for an uncontrolled multiple credit expansion such as could be built upon them. ${ }^{1}$
By the open-market function, I mean simply the authority which the Reserve System has to buy or sell Government and certain other securities for its own account, these operations being carried out by the System's Open Market Committee. The importance of these operations lies in the fact that when securities are bought it increases member banks reserves. Conversely, when securities are sold from the open-market account it absorbs and thus decreases the reserves of member banks. The open-market instrument

[^2]is a flexible one, affecting only banks that desire to purchase or sell securities, largely in accordance with their reserve position, whereas raising reserve requirements affects all banks in accordance with their classification. I want to say in passing that, contrary to a persistent popular fallacy, the Reserve System does not use reserves deposited with it by member banks to buy Government securities. As a matter of fact the System creates the funds used in open-market operations. These funds are in no way dependent upon such reserves as member banks carry with the Reserve Banks.

Regaining control over excess reserves is a necessary precaution against the inflationary possibilities of over-expansion of bank credit based upon these redundant reserves. It is not a step that would in any way restrict legitimate business expansion, Government financing or development of the defense program. It is a safeguard against necessary expansion developing into over-expansioninto creation of the means of payment out of all proper relationship to production. How this step may best be accomplished is a matter for Congress to determine. However, I see no feasible way to accomplish it except by increasing the reserve requirements of the banks to a point which would reduce the excess reserves to an amount that could be absorbed by the sale of Government securities from the System's portfolio, leaving only enough securities to take care of System expenses. In addition, adequate provision should be made for absorbing future gold or silver acquisitions that add to excess reserves. This power of raising or lowering reserve requirements should be made applicable to New York, the money center, or to all reserve cities, or to country banks, or to any combination of the three groups. This would provide for flexibility and make it possible to adjust reserve requirements more in accordance with needs.

Furthermore, reserve requirements must be made applicable to all banks of deposit, whether they be members of the Federal Reserve System or not. It is not equitable to ask only the member banks of the Reserve System to subject themselves to increases when those who elect to remain outside the System, or those who are now members and who choose to withdraw, can escape sharing in what is a national responsibility. This situation is not only inequitable but it renders
monetary control ineffective so long as any bank that does not like the reserve requirements can relieve itself of the restriction by withdrawing from the System. Demand deposits are the major part of our money sup-ply-and control over their expansion and contraction must reach all banks that are in a position to create them.

As long as we have a vast oversupply of excess reserves, the inducement exists throughout the banking system to expand and to put these resources to work in loans and investments. When the economy is reaching the stage of full production and employment that inducement should be removed.
Not only do the excess reserves afford an opportunity for over-expansion but they also tend to depress the interest rate structure to excessively low levels. I have continuously advocated a policy of monetary ease as the appropriate accompaniment of a period of under-employment, but I have never favored artificially low rates such as have been brought about through an uncontrolled surplus of excess reserves. No such oversupply of excess reserves is necessary to carry out a policy of monetary encouragement to business recovery. Instead, excessively low interest rates tend ultimately to induce inflated prices of Governments, municipals, and other high-grade securities. The effects are reflected in credit lines generally, and are felt by insurance companies, savings banks, educational institutions, and other fiduciaries representing the accumulations of many millions of our people, small as well as large savers. Moreover, this creates a future problem for monetary authorities because at such time as it may become necessary to curtail further credit expansion, as a safeguard against inflationary developments, this step cannot be taken without causing a decline in the price of outstanding securities.

Although some interest rates have become extremely low, rates in the home and farm mortgage field have been relatively slow to respond to the general decline and are not now too low, in my judgment. I think there would be no justification for increased rates on home or farm mortgages, and that increases in such rates would be unwise and unwarranted. The volume of existing idle funds is so large that some of the higher bond and mortgage rates may go lower even though there is no further expansion of existing funds.

I am concerned with interest rates not as an end in themselves, but as a means to the end of stability in the progress of our economy. Excessively low rates do not contribute to stability any more than do excessively high rates. Neither is fair to lender and to borrower. It is one thing to have interest rates low as the result of the pressure of savings or investment funds on the market. It is a quite different thing to depress the interest rate structure abnormally through excess reserves created by causes extraneous to our economy. I have always contended, and I reiterate now, that these abnormal pressures should be removed, and they must be removed as an essential element of defending the economy against possible inflationary overexpansion later on.

As an additional measure I favor exempting deposits held with the Reserve Banks and vault cash held by banks from assessments for Federal deposit insurance. While I have never been against interbank deposits, I do not favor over-concentration of funds that serve no useful purpose at money market banks, but tend to depress short-term rates to such low levels that the very banks which concentrate their funds in the money centers find themselves in an adverse competitive position. Nor is it to the interest of the money market banks to accumulate excessive correspondent bank balances on which they can earn nothing, but on which they pay the assessment. Furthermore, if a bank's funds are locked up by the authorities to serve as reserves, it is not fair to the bank to require it to pay assessments on the locked-up funds that earn nothing for the bank. Another reason for exempting reserves is that there is no risk involved in depositing these funds with Reserve Banks and thus no justification for assessing a premium to insure them.

Some of the large city banks have been much interested in getting legislation that will exempt them from paying deposit insurance assessments on the interbank deposits they hold. It seems to me that since they pay no interest to the depositing banks on these funds, that the more equitable amendment would be to exempt the originating bank from paying the assessment if these funds are deposited with Reserve Banks. In other words, if any bank is to be benefited by exemption from the assessment, it should be the originating bank which deposits the funds as a reserve in the Reserve System, and not
the bank that gets the use of the funds without paying anything for them. It is not in the interest of the city bank to have interbank deposits in abnormal amounts because they cannot be profitably used by reason of their volatile nature. The city banks should be interested in having only such correspondent bank balances as reflect the business done by the correspondent banks and the services rendered for them.

I have dwelt at some length on the general subject, with some of its ramifications, with regard to controlling monetary inflation by controlling excessive bank reserves. This subject, however, cannot be considered separately from the other sources of moneycreation, that is, Government deficit-financing through the banks, and gold and silver policy. As an integral part of the general policy that is necessary for the period we are єntering, we must discourage the purchase of Government securities by banks. For that creates new deposits. With the volume of bank deposits and currency greatly in excess of the highest levels we have ever had, it becomes important that we do not continue to add to this total, particularly at a time when one effect of the defense program is to activate the existing volume of deposits as they are drawn upon by business and put to more active use. Instead, Government securities should be sold to private and institutional investors. This has the effect of using existing funds rather than creating additional deposits. When the Government borrows existing funds it does not reduce the supply because as soon as these funds are expended by the Government, they go right back into the money system again, chiefly as bank deposits. Another popular mistake is to suppose that Government deficit-financing creates excess reserves. Instead, they originate from gold, silver, or other currency acquisitions. When the Government sells its securities to the banks, instead of creating excess reserves, this absorbs them because the new bank deposits thereby created have to be based upon or charged against the bank reserves.

So long as banks have an oversupply of excess reserves, they have every inducement to invest in Government securities. That inducement can only be reduced or removed by reducing or removing the excess reserves which, as I have sought to indicate, should be adjusted to the normal requirements of
business. If this is done the rate on Government bills and short-term notes would be likely to increase sufficiently to attract the large amounts of idle corporate balances, representing reserves of various kinds, that have accumulated. For the most part, these funds are now deposited in banks and earn nothing for the corporate owners. They would be inclined to invest them in shortterm Governments if the yield were raised from the prevailing artificially low levels. At the same time, longer-term issues should be adapted to the requirements of insurance companies, savings banks, and individual or institutional investors. Thus the non-banking market for Government securities would be broadened out to absorb whatever Government financing may be necessary during the period in which we are making large defense outlays.

But deposits as well as reserves are also increased as gold and silver continue to flow into our money system. Even if we had authority to offset the effect of the gold and silver acquisitions on excess reserves, these acquisitions would still continue to add to deposits, unless we are prepared to deal with these factors at their source. I have publicly stated my opposition to the purchase of foreign silver as unjustified from a monetary standpoint. If, for other reasons, at this time it is considered desirable to assist silverproducing countries, that could be done by making loans secured by silver or other assets. Therefore, Congress should repeal the present legislation, and at the same time cancel out the billion and a half of seigniorage which could be used for issuance of additional silver certificates. Likewise, I favor canceling the authority under the so-called Thomas amendment to issue $\$ 3$ billions of greenbacks. Both of these sources of funds, if resorted to, would add to excess reserves and to deposits, and would greatly accentuate the problem of the monetary authorities.

While the expenditure of the gold stabilization fund would have the same effect, the problem of gold presents a particularly difficult question. I believe that Congress, in considering all the interrelated elements of the monetary picture, should consider whether or not it would be wise to make credits available at low rates, as a means of aiding the British, taking as collateral their gold, as well as their security holdings here, in Canada, or elsewhere, rather than to continue to accumu-
late more and more of the world's gold supply at the cost of inflating our banking and credit structure.

I have come last to the problem of the bud-get-but not because it is of least importance. As long as we continue to operate on a deficit basis, it will be necessary for the Government to go to the market for the funds to make up the difference between tax collections and expenditures. I believe that we should at this time take further steps to close the gap between income and outgo as far as can be done without either confiscatory taxation or the retarding of private enterprise. So long as the Government is rapidly increasing its total expenditures, I do not see how these outlays can be covered on a pay-as-yougo basis because the increased national income and the tax revenues resulting therefrom cannot be realized until some time after the sums are spent. In other words, there is a lag between the time when the Government has to raise the money and the time when it takes effect as income among the people who ultimately receive it in payment for goods and services. Taxes on 1940 incomes are paid in the fiscal years 1941 and 1942. There may be a lag of a year or a year and a half before money borrowed for defense, in effect, shows up in expenditures, then in higher national income, and finally in increased tax receipts.

It would not be wise to try to put sufficiently high rates into effect to close the gap entirely until we have reached a condition of full production and employment. But at that time, the tax system in effect should be adequate to bring about the balancing of the Federal budget.

Revision of the tax structure should not be delayed until a full-employment income is reached. We should begin to re-design the tax system in the near future. First and foremost, we should revise our corporate, individual and inheritance tax structure so as to close very important existing loopholes that make tax rates much less effective than they should be. For instance, there is not much use in raising individual surtax rates if corporations are permitted to hold back earnings in the form of idle funds instead of paying them out as dividends to stockholders. If the estate and the individual surtaxes are to be made as productive as they should be, then the gift tax must also be revised. The excess profits tax, which is clearly inadequate, should be revised to apply to all earnings.
above a certain ceiling, say, of 10 per cent of invested capital, with such exceptions as may be necessary as a matter of equity or to stimulate new business. The present law allows an option under which corporations are able to make abnormal earnings after all taxes, including the excess profits tax, are paid-earnings in some cases larger than they have ever been before. I am heartily in accord with the proposals of the Treasury with reference to the excess profits tax and to eliminate tax free securities.

The present tax structure, strengthened in the ways I have indicated, will bring in enormous revenues once the national income has risen to $\$ 90-100$ billions. As national income approaches these levels, rates should be raised still more if necessary to balance the budget.

In addition to our own large defense expenditures, the amount of which we cannot foresee at this time, there is the increasing amount of help to Great Britain which must also be taken into account. If the total of these reaches a much larger figure than is now apparent, it may be necessary to impose selective consumption taxes on those things that are most essential to defense and the least essential to civilian consumption, in order to divert production and income to defense purposes. This may become necessary as a measure against a general price inflation. But such taxes should not be imposed until we have first placed on the statute books a tax structure sufficiently progressive to insure that the defense program will not increase the current inequality of wealth and income. Indeed, tax policy should be designed to minimize this inequality, bringing about a wider distribution of the benefits as well as the burdens. When full employment and production have been reached, increased consumption taxes are the most effective means of preventing a general price inflation, but they presuppose the prior enactment of steeply progressive income and estate taxes.

Direct responsibility for taxation is, of course, outside the realm of monetary policy, but the subject of taxation cannot be separated from the primary concern of those charged with monetary powers and responsibilities. It is not possible to appraise monetary policy realistically without taking account of the effect of taxation and of Government financing on the banking and credit structure. When the time arrives when
monetary restraints may become necessary, deficit-financing should be discontinued, thereby bringing the budget into balance. The time for such action will arrive when the economy has reached full production, that is, substantially full employment, and both monetary and fiscal policy may need to be invoked to maintain a proper relationship between production of goods and creation and use of money.

Since it would be practically impossible to balance the budget while public expenditures are rapidly increasing and before a much larger national income has been achieved, we might consider viewing certain expenditures for defense as a capital investment. In effect, it may be considered a necessary substitute for an equal amount of capital expenditure by private industry which in borrowing for capital outlay would amortize the debt over the life of the investment. If we were to treat the investment in ships, bases, arsenals, factories, powder plants and the other capital investments paid for by the Government as private business would treat similar capital investment, we might then consider covering only the amortization, operating and maintenance costs out of current receipts.

No matter how these outlays may be regarded for bookkeeping purposes, the defense program is demonstrating before our very eyes the feasibility of raising the national income through governmental expenditures. Nor can there be any doubt that once a full income is achieved we can, out of a full income, raise enough taxes to cover expenditures. We can then have a balanced budget.

A full defense effort will bring very large profits. Profits of manufacturing and of trade were already very favorable in the fiveyear average 1936-1940. Indeed, for a great many companies they were larger than in any previous five-year period in their history. Many of our industries have learned how to live very well even under quasi-depressed conditions. At a national income level of from $\$ 90$ to $\$ 100$ billions, profits can be expected to rise to unprecedented levels. Without a steeply progressive tax structure these profits would bring increased concentration of wealth. Business leadership cannot afford to let the defense program yield this result. We shall do well, therefore, after the tax collection lag of the first years of defense expansion is overcome, to raise the whole of the budget through taxes.

There is one more suggestion in this field. Some considerable borrowing, in lieu of taxes, from the mass of the population, in the form of a modified "baby" bond, would be highly desirable, especially after a full employment income has been reached. If savings bonds are held widely through the country, by the whole population, a degree of security is achieved against unforeseen contingencies. In so far as such bonds may, after the defense effort is over, be converted into cash and the proceeds spent, business activity would thereby be stimulated just at the time when it needs to be sustained. Such a program would provide in some measure a post-defense cushion against depression. It therefore would seem to me wise, as employment increases and the income of the mass of the population rises, to intensify the national campaign to sell as many savings bonds as possible, especially to the middle income classes. Such borrowing would not preclude us from balancing the budget because we could use the proceeds from the sale of savings bonds to retire a part of the Federal debt now outstanding in the hands of banks and corporations.

Our productive capacity is greater today than ever before. It exceeds by far the peak reached in the boom of the Twenties. If we have the will to do it, we have the organization, man power, and resources to provide both adequate defense and a higher standard of living than any hitherto reached in our history. We are witnessing in the defense program what can be achieved in national prosperity, income and employment through adequate governmental expenditures. It is my hope that the country will never forget this lesson; that we shall henceforth use fearlessly the resources of the state to help maintain employment and business activity at a full income level. Once such a program is boldly adopted as a permanent policy, businessmen can plan their operations on the expectation of a gradually rising national income. This they have never been abe to do in the past. Such a policy, boldly conceived and persistently carried out, would revitalize private enterprise. There is nothing in this program that calls for Government operation of productive processes. All production, even on Government projects, can and should be carried out under private contract. Private business would be assured a full market. The necessary tax bill would be a small
price to pay for an assured market adequate to absorb all the productive capacity of modern industry. Think what such a market would mean to business!

After the capital investment in defense is made, we will still have the heavy cost of maintaining our armed forces, which should be met out of current receipts. In addition, it is reasonable to expect at that time there will be large accumulated deficiencies in private construction of all kinds and other capital requirements. But it is unlikely that the volume of private activity would be enough to make up for the deficiency in production and employment once the heavy defense outlays, including the large exports of military supplies to Great Britain, are over. At that time, it is of crucial importance that we be prepared to make the transition to a peacetime basis without precipitating a period of idle men, idle factories, declining national income and increased Federal deficits.

It would be tragically ironic if we, as a nation, solved the problem of unemployment by making instruments of destruction, but were unable to maintain employment by making the things of peace. It is not for the purpose of returning men to the breadlines that we are making this vast defense effort to preserve our political and economic system. The transition will be effected more readily if at that point the budget is in balance. On the same principle that I stated at the outset, we should then be prepared to have Government take up the slack of employment, employing surplus labor, beyond what private activity absorbs, in useful ways. There are many with which you are familiar, such as public health and hospitalization, and particularly the urgent need for a vast reconstruction and improvement of our entire highway system to keep pace with automotive progress.

There is no excuse for defeatism, for having a static economy frozen at a level of under-employment. We are moving towards relatively full utilization of our men and our machines because of defense needs. When peace is restored to this world, we can, if we have the will and the wisdom, divert such of our productive facilities as are now employed in the destructive work of war into constructive work of peace. Thereby we can lay the foundations for a new and better world-a world in which democratic institutions can survive.

# From a Legal Standpoint 

Administrative interpretations of banking laws, new regulations issued by the Board of Governors and other similar material.

## General Licenses Issued by the Secretary of the Treasury

The Secretary of the Treasury has revoked General License No. 35 issued under authority of the Executive Order of April 10, 1940, as amended, and Regulations issued pursuant thereto relating to transactions in foreign exchange, etc. General License No. 35 was published in the Federal Reserve Bulletin for November at page 1176. There have been no further General Licenses issued since the publication of those on pages 1175 and 1176 of the November 1940 Federal Reserve Bulletin.

## Procedure Under Assignment of Claims Act of 1940

The Director of Procurement of the Treasury Department, on December 3, 1940, issued to the heads of all Executive Departments and Independent Establishments of the Government of the United States a circular setting forth the procedure to be followed in order to secure uniform compliance with the requirements of the Assignment of Claims Act of 1940. The procedure was suggested as a convenient means by which the assignee can obtain the proof which he will need to satisfy the appropriate officers of the Government that the requirements of the statute with reference to the filing of notices of assignments have been complied with. This circular was accompanied by a suggested form of notice of assignment, with provision for acknowledgment of receipt by the addressee; instructions for the use of such form; and a decision of the Comptroller General of the United States dated December 2, 1940, ruling on two points arising under this Act. A supply of the form of notice of assignment has been printed, and banks and other financing institutions may obtain copies from the Federal Reserve Banks upon request.

The circular issued by the Director of Procurement, together with attachments, is as follows:

## Treasury Department, Procurement Division, Washington, December 3, 1940

Circular No. 447
To the Heads of All Executive Departments and Independent Establishments.
Following conference with representatives of interested Departments and independent establishments, the following procedure is suggested in order to secure uniform compliance with the requirements of the Act of October 9, 1940, Public No. 811, 76 th Congress, Third Session known as the Assignment of Claims Act of 1940.

In the event that any moneys due or to become due from the United States under any contract are assigned pursuant to the terms of the Assignment of Claims Act of 1940, the assignee is required to forward a true copy of the assignment, together with written notice thereof, to each of the parties specified in proviso 4 of the Act. This notice of said assignment in the form attached hereto should be furnished to each of such parties in quadruplicate. Three of the four copies of each notice of assignment should be returned to the assignee under the contract with the receipt form at the end thereof properly executed. One of these copies is for the assignee. The other two copies should be attached to the first voucher, invoice, or other similar document submitted for payment. One copy of each receipt should be furnished to the General Accounting Office with the first voucher and the other copy of each receipt retained by the appropriate officer of the Department making payment. Reference as to the previously filed receipts should be made on subsequent vouchers.
This procedure is designed to afford the assignee and the appropriate officers of the Government convenient evidence that there has been compliance with the requirements of the statute with reference to the filing of notice of such assignments. However, rigid adherence to this procedure should not be insisted upon if satisfactory evidence of compliance with the statute is provided by other means.

For your further information there is attached a copy of a decision of the Comptroller General of the United States (No. B-13700), dated December 2, 1940 and addressed to the Federal Works Administrator, which quotes the full text of the Assignment of Claims Act of 1940 and rules on two points arising thereunder.

It is suggested that copies of this circular be furnished as promptly as possible to all contracting officers, purchasing officers, finance officers and disbursing officers in your department or establishment.
(Sgd.) Clifton E. Mack,
Director of Procurement.

NOTICE OF ASSIGNMENT
(Before filling out this notice, read carefully instructions on reverse side.)

Date
To

Re Contract Number
Made by the United States of America Department

(Name of Contractor)

PLEASE TAKE NOTICE that monies due or to become due under the contract described above have been assigned to the undersigned pursuant to the provisions of the Assignment of Claims Act of 1940 (Public No. 811, 76 th Congress), approved October 9, 1940.

A true copy of the instrument of assignment is attached hereto.

Payments due or to become due under such contract should be made to the assignee.

Please return to the undersigned the three enclosed copies of this notice with appropriate notations showing the date and hour of receipt and duly signed by the person acknowledging receipt on behalf of the addressee.

Very truly yours,

| By (Name of Assignee) |  |
| :---: | :---: |

(Name and title of signing officer)
(Address of Assignee)
Receipt is hereby acknowledged of the above notice and a copy of the above mentioned instrument of assignment. These were received at ................... a.m. on

## (Date)

$\qquad$ p.m.

On behalf of $\qquad$
(Name and title of addressee of notice.)

## INSTRUCTIONS

In order to avoid delay, inconvenience, and possible impairment of the validity of assignments, these instructions should be followed carefully.

1. Under the terms of the Assignment of Claims Act of 1940 , written notice of each assignment of moneys due or to become due from the United States or from any agency or department thereof, toqether with a true copy of the instrument of assignment must be filed with:
(a) the General Accounting Office,
(b) the contracting officer or the head of his department or agency,
(c) the surety or sureties upon the bond or bonds, if any, in connection with such contract, and
(d) the disbursing officer, if any, designated in such contract to make payment.
2. All blanks should be carefully filled in and the original and three copies should be forwarded to each of the parties with whom notice is required to be filed.
3. The addressee should acknowledge receipt of this notice on the three copies and return the same to the assignee.
4. One copy of each such receipt should be retained by the assignee for his own records and two copies of each such receipt should be attached to the first invoice, voucher, or other similar document submitted for payment.
5. It will not be necessary to forward additional copies of such receipts with requests for further payments, because the first copies will be duly recorded in the appropriate offices of the Government.
6. If there is no surety bond in connection with the contract giving rise to the claim which is assigned, it is not necessary to serve notice of assignment upon any surety.
7. If no disbursing officer is designated in such contract to make payment, it is not necessary to serve notice of assignment upon any disbursing officer.
8. To the original (but not the copies) of each notice of assignment, there should be attached one true copy of the instrument of assignment. This may consist of (a) a duplicate original containing all the signatures, seals, acknowledgments, etc., which appear on the original, (b) a complete photostatic copy of the original, or (c) a certified copy of the original, provided that such copy is accurate and complete in all respects, including signatures, seals, acknowledgments, etc., which may be typewritten, and provided that the certificate to the effect that it is a true copy be executed by a notary public or other officer authorized by law to administer oaths.

## Comptroller General of the United States Washington

December 2, 1940.
B-13700
Federal Works Administrator,
Federal Works Agency.
SIR:
I have your letter of November 28, 1940, as follows:
"Reference is made to the 'Assignment of Claims Act of 1940,' approved October 9, 1940 (Public, No. 811, 76 th Congress), a copy of which is attached for your convenient reference.
"Where moneys due under a contract have been assigned in accordance with this law, the question arises as to the procedure to be followed in making payments under the contract with particular reference to the matter of whether the assignee, as well as the contractor, is required to execute certificates on vouchers, invoices, or other similar documents submitted for payment. It will be appreciated if you will advise this Agency as to whether such certificates must be signed by the assignee in each case, and if so what form of certificate will be satisfactory to your office.
"Referring to proviso No. 4 of the act, requiring that the assignee 'shall file written notice of the as-
signment together with a true copy of the instrument of assignment with' the agencies specified, please advise whether the following instruction would be appropriate.
'To the original (but not the copies) of each notice of assignment there should be attached one true copy of the instrument of assignment. This may consist of (a) a duplicate original containing all the signatures, seals, acknowledgments, etc., which appear on the original, (b) a complete photostatic copy of the original, or (c) a certified copy of the original, provided that such copy is accurate and complete in all respects, including signatures, seals, acknowledgments, etc., which may be typewritten.
"With respect to the certification of a copy of the original assignment, do you consider it necessary that such certificate be executed by a Notary Public or other officer authorized by law to administer oaths."

The Assignment of Claims Act of 1940, Public, No. 811, 76 th Congress, approved October 9, 1940, provides:
"That sections 3477 and 3737 of the Revised Statutes be amended by adding at the end of each such section the following new paragraph:
"'The provisions of the preceding paragraph shall not apply in any case in which the moneys due or to become due from the United States or from any agency or department thereof, under a contract providing for payments aggregating $\$ 1,000$ or more, are assigned to a bank, trust company, or other financing institution, including any Federal lending agency: Provided,
" 1 . That in the case of any contract entered into prior to the date of approval of the Assignment of Claims Act of 1940, no claim shall be assigned without the consent of the head of the department or agency concerned;
"' 2 . That in the case of any contract entered into after the date of approval of the Assignment of Claims Act of 1940, no claim shall be assigned if it arises under a contract which forbids such assignment;
"' 3 . That unless otherwise expressly permitted by such contract any such assignment shall cover all amounts payable under such contract and not already paid, shall not be made to more than one party, and shall not be subject to further assignment, except that any such assignment may be made to one party as agent or trustee for two or more parties participating in such financing;
"'4. That in the event of any such assignment, the assignee thereof shall file written notice of the assignment together with a true copy of the instrument of assignment with-
"'(a) The General Accounting Office,
"'(b) the contracting officer or the head of his department or agency,
" (c) the surety or sureties upon the bond or bonds, if any, in connection with such contract, and
"'(d) the disbursing officer, if any, designated in such contract to make payment.
Notwithstanding any law to the contrary governing the validity of assignments, any assignment pursuant to the Assignment of Claims Act of 1940 shall constitute a valid assignment for all purposes.'
"Any contract entered into by the War Department or the Navy Department may provide that payments to an assignee of any claim arising under such contract shall not be subject to reduction or set-off, and if it is so provided in such contract, such payments shall not be subject to reduction or set-off for any
indebtedness of the assignor to the United States arising independently of such contract.
"Sec. 2. This Act may be cited as the "Assignment of Claims Act of 1940'."

It is to be observed that the assignment permitted by the said act relates to "the moneys due or to become due" under a public contract. The act does not authorize assignment of the contract itself, with the resultant shift of responsibility for its performance, etc., from the contractor to the assignee, consequently, irrespective of an assignment by a contractor of "the moneys due or to become due," the contractor is charged with the duty of performing the contract in accordance with its terms. Such being the case, it is the responsibility of the contractor to execute certificates on vouchers, invoices, etc., as required by the contract or otherwise, such certificates having reference to material facts incident to performance of the contract and as establishing the right to pay-ment-matters which, generally, would not be within the knowledge of the assignee-it being considered for all practical purposes that no money is due and payable by the United States until such certificates are executed by the contractor. Since it is the responsibility of the contractor to establish that an amount is due and payable under a contract there would appear to be no necessity or requirement for a certification in that respect from the assignee. As is indicated by your letter, however, once it is established that an amount is due and payable under the contract, the question arises as to the procedure then to be followed, that is, whether the assignee should be required specifically to claim the moneys due, whether payment should be made direct to the assignee on the contractor's usual certification, etc.

There would appear to be no necessity for a specific claim from an assignee under a valid assignment for an amount established to be due and payable under a particular contract. However, it is to be recognized that disputes unknown to the Government may exist between the contractor and its assignee in connection with the assignment, the consideration or a condition of the assignment may have failed, etc. Also, it is to be noted that the assignee, and not the contractor, is required to supply to the Government information as to the assignment, and that a "true copy" of the assignment is required to be furnished. Having regard therefor, in order to insure that payments are properly made, to prevent frauds upon the United States, and to protect the rights of all parties involved, it would appear that the voucher, invoice, or other data in support of a payment direct to the assignee should clearly indicate that the contractor recognizes the assignment, its validity, and the right of the assignee to receive the payment. The form or means of indicating such recognition is not material insofar as this office is concerned. For instance, the contractor's certification on a voucher in which the name of the assignee is shown would suffice for audit purposes.

There would appear to be no objection to the proposed instruction quoted in your letter with respect to the "true copy" of the instrument of assignment which the assignee is required to furnish but, with respect to example (c), in order to establish clearly, that the copy of assignment furnished is a "true" copy, it would seem desirable that the certificate to that effect be executed by a notary public or other officer authorized by law to administer oaths.

Respectfully,
(Signed) Lindsay C. Warren, Comptroller General of the United States.

# From the Board's Correspondence 

Questions of general interest; relating to money and banking, are answered in this section of the Bulletin.

## The Gold Standard

#### Abstract

QUESTION There seems to be a confusion of thought, not only among laymen but bankers, as to the question, "Is the United States on a gold standard?" One group maintains we are on a "restricted gold standard" or "modified gold standard" while others state we are "off the gold standard." Which is correct or is there another answer to the question?

## ANSWER

WHETHER our monetary system rests on a gold standard depends on the way that standard is defined. Formerly the gold standard might have been defined as a monetary system under which the authorities were required to buy gold from any one and to sell it to any one, in any amount, at a fixed price, and to allow gold to move into or out of the country without restriction.

In the sense of this definition, we are not now on a gold standard. Private individuals may not, as a rule, buy or own gold coin, gold bullion, or gold certificates, and all gold transactions are subject to Treasury regulation. This has been true since the spring of 1933. The Treasury, however, has purchased at a fixed price of $\$ 35$ an ounce all the gold offered, and on the few occasions when the sale of gold to settle international balances was requested, gold was released by the Treas-
ury also at a fixed price. Moreover, gold movements have continued to affect the volume of bank reserves and bank deposits in the United States in the same way as before 1933. In fact, we have operated for the past seven years in a manner that does not differ in its economic effects from those of the old gold standard.
Perhaps the most important difference between our present arrangement and the gold standard as we used to know it is the fact that the price of gold and the Treasury's willingness to buy or sell it are not guaranteed by law, but are discretionary. Ordinarily this is more a theoretical than a practical difference; but at least on two occasions since 1934 rumors that the price of gold would be changed gained currency here and abroad and had considerable effects on international gold movements.

It should be added that in any event a single country obviously can not be on an "international" gold standard. The United States, however, has kept the dollar stable in terms of gold, as it would have been under the gold standard; but, with other countries off gold, their currencies have not been held in a fixed relationship to the dollar, as they would have been had an international gold standard been in effect.

# Current Events 

Resignation and Appointment of President and First Vice President of the Federal Reserve Bank of New York
Effective as of December 31, 1940, George L. Harrison resigned as President of the Federal Reserve Bank of New York and was succeeded on January 1, 1941, by Allan Sproul. Mr. Sproul was succeeded as First Vice President by Leslie R. Rounds, formerly Vice President of the Bank. The appointments of Messrs. Sproul and Rounds were for the unexpired portions of the five-year terms ending February 28, 1941. On January 2, 1941, Mr. Harrison was appointed a member of the Federal Advisory Council to represent the second Federal Reserve district, succeeding Leon Fraser in that capacity.

Mr. Harrison began his service with the Federal Reserve System in 1914 as Assistant Counsel to the Federal Reserve Board and after serving in that capacity and as General Counsel to the Board he resigned in June 1920 to accept appointment as Deputy Governor of the Federal Reserve Bank of New York. He held this position until November 22, 1928, when he was appointed Governor and on March 1, 1936, he became President of the Bank.

Mr. Sproul, after ten years of service at the Federal Reserve Bank of San Francisco, was appointed Secretary and Assistant Deputy Governor of the Federal Reserve Bank of New York on March 1, 1930. Since that time he has also served the Bank as Assistant to the Governor, Deputy Governor, and, since March 1, 1936, as First Vice President.

Mr. Rounds has held various official positions at the New York Bank since his original appointment on August 1, 1917. He was appointed Deputy Governor on January 1, 1928, and Vice President on March 1, 1936.

## Federal Reserve Meetings in Washington

The Chairmen of the Federal Reserve Banks met in Washington on December 9 and 10, 1940, and on the latter date met with the Board of Governors. During the meeting with the Board there was a discussion of the activities of the Federal Reserve Banks in connection with the plan of the National Defense Advisory Commission to increase the participation of small business concerns in the defense program.

A conference of the Presidents of the Federal Reserve Banks was held in Washington on December 17 and the Federal Open Market Committee held its fourth meeting of the year on December 18, 1940.

## National Defense Loans

The Bank Management Commission of the American Bankers Association recently issued a bulletin on "National Defense Loans" which contains information relating to the assignment of claims under Government contracts as security for bank loans. The bulletin also contains suggestions with respect to the functions of banks in financing defense loans. Copies may be obtained from the offices of the Association at 22 East 40th Street, New York City, for twenty-five cents per copy.

## Admissions of State Banks to Membership in the Federal Reserve System

The following State banks were admitted to membership in the Federal Reserve System during the period November 16, 1940, to December 15, 1940, inclusive.

Connecticut
Company The Springdale Bank and Trust
Boswell-The Farmers and Merchants Bank
Charlestown-First Bank of Charlestown
Elkhart-First Old State Bank
Greensburg-Union Trust Company
Warsaw-Lake City Bank
Iowa
Dubuque-American Trust \& Savings Bank
Early-Early Savings Bank
New Hampton-Security State Bank
Sheldon-Security State Bank
Missouri
Kansas City-Mercantile Home Bank \& Trust Co.

Michigan
Ontonagon-The Citizens State Bank of Ontonagon

Minnesota
Winona-Merchants Bank of Winona
New York
Bay Shore-South Side Bank of Bay Shore, N. Y. Pennsylvania
Pittsburgh-Bank of Ohio Valley
Pittsburgh-St. Clair Deposit Bank of Pittsburgh

## Texas

Bandera-First State Bank
Cleveland-Farmers State Bank
Taft-The First State Bank of Taft
Yorktown-First State Bank of Yorktown
Virginia
Mount Jackson-Peoples' Bank of Mount Jackson
Remington-State Bank of Remington, (Incorporated)

Wisconsin
West Allis-Milwaukee County Bank

## British Motilization of United States Dollar Securities

On December 14 the British Treasury's mobilization of United States dollar securities owned by residents of the United Kingdom was carried a considerable step further by the issuance of a Treasury order requisitioning British holdings of 65 additional American security issues. Two previous orders relating to other American security issues were described in the Bulletins for March 1940, pages 206-207, and May 1940, pages 408-409. In November an order supplementing the first two was issued, covering holdings by United Kingdom residents of the securities listed in the previous orders which for technical reasons had not yet been acquired by the Treasury.

The present order requires United Kingdom residents to transfer to the Bank of England as agent of the British Treasury their holdings of the securities listed below, including 42 common stocks, 17 preferred stocks, and 6 bond issues. Payment is to be effected on January 14 in the sterling equivalent (at the official buying rate for dollars of $\$ 4.031 / 2$ to the pound) of the closing market prices for the securities in New York on December 14. The security holders are offered special facilities for converting the sterling proceeds directly into certain British Government bond issues, but this procedure is not obligatory. An announcement accompanying the order stated that similar measures with respect to the American securities still retained by United Kingdom investors would be promulgated from time to time. It should be noted, however, that the bulk of British holdings is in American common stocks and that 164 common stock issues, including most of the market leaders, have been requisitioned by the orders to date.

## Common Stocks

Standard Gas and Electric Company, $6 \%$ Gold Debentures due 1966 (Series B)

# National Summary of Susiness Conditions 

Compiled December 17 and released for publication December 19. Figures shown on charts may differ from preliminary figures used in text. Later developments are discussed on page 28 of this Bulletin.

INDUSTRIAL activity continued at a high rate in November and the first half of December and distribution of commodities increased considerably. Commodity prices generally showed little change following earlier advances.

## Production

Volume of industrial production, which usually declines at this season, showed little change from October to November, and the Board's seasonally adjusted index rose 3 points further to 132 per cent of the 19351939 average.

Reflecting work on a large volume of orders for national defense purposes and for civilian needs, activity in the machinery and textile industries continued to increase sharply. At machinery plants and at cotton textile mills activity reached new high levels and at woolen mills output was close to the previous peak reached early in 1937.

Steel ingot production, which had been at about 94 per cent of capacity in October, increased somewhat further in November and the first half of December. Automobile production continued in unusually large volume, amounting in November to around 500,000 cars and trucks. Retail sales of new cars

Index of physical volume of production, adjusted for seasonal variation, $1935-39$ average $=100$.
have been large this autumn and production has been maintained at high levels in order to supply this demand and to build up dealers' stocks. Lumber production declined less than seasonally from October to November. New orders for lumber continued somewhat above the current rate of production although below the high level of the three preceding months when large orders were placed for cantonment construction. Lumber stocks at mills continued to decline and were smaller than at any time in recent years. Bituminous coal production increased considerably in November, following a sharp decline in the previous month, while output of crude petroleum was maintained at about the October rate. Production of most metals continued in large volume.

Value of total construction contract awards declined less than seasonally in November. In the 37 eastern States for which $F$. W. Dodge Corporation data are available total contracts showed little change; awards for public construction increased further and those for private work declined by somewhat less than the usual seasonal amount. In the far western States contract awards showed a decline from the unusually high level reached in October.

Three-month moving averages of $F$. W. Dodge data for value of contracts awarded in 37 Eastern States, adjusted for seasonal variation. Latest figures based on data for October and November and estimate for December.

## Distribution

Distribution of commodities to consumers increased considerably in November. Sales at department stores and mail-order houses rose sharply, while variety store sales increased by about the usual seasonal amount. In the first half of December there was the customary large expansion in retail sales.

Total freight-car loadings showed considerably less than the usual seasonal decline in November and the early part of December. Loadings of coal, which had been curtailed in October, increased sharply and shipments of ore and of miscellaneous merchandise declined much less than is usual at this time of the year.

## Wholesale Commodity Prices

Prices of basic commodities, which had risen substantially since August, generally showed little change from the middle of November to the middle of December. Prices of a few imported commodities, particularly cocoa, burlap, and shellac, increased considerably and there were small advances in steel scrap and some other domestic commodities, while moderate declines were reported for such varied commodities as lead, grains, and lard.

Indexes of value of sales and stocks, adjusted for seasonal variation, 1923-25 average $=100$.

## Bank Credit

Total loans and investments at reporting member banks in 101 leading cities have increased sharply since the beginning of October. Commercial loans continued to increase in November and the first half of December, and holdings of United States Government obligations at New York City banks rose sharply. Principally as a result of the expansion of bank loans and investments, Government expenditures, and foreign disbursements financed by additional gold imports, bank deposits increased to new high levels. At the same time there has been a considerable increase in currency in circulation partly in response to seasonal trade demands.

## United States Government Security Prices

Prices of United States Government securities continued to rise during the latter half of November and the early part of December, and the 1960-65 bonds advanced to successive new high levels, with a peak of about $1115 / 8$ on December 10. The yield on this issue declined to a low point of 2.03 per cent on the latter date, but increased slightly toward the middle of the month, reflecting some easing in prices.

Wednesday figures for reporting member banks in 101 leading cities, September 5, 1934, to December 18, 1940. Commercial loans, which include industrial and agricultural loans, represent prior to May 19, 1937, so-called "other loans" as then reported.

## INDUSTRIAL PRODUCTION-DECEMBER AND THE YEAR 1940

Estimates now available for December indicate a figure of about 136 for the Board's seasonally adjusted index of industrial production as compared with 133 in November and 129 in October. Actual volume of output, which usually declines in November and December, showed little change during this period and was about 7 per cent greater than in the peak period at the end of the previous year. In December the seasonally adjusted index of durable manufactures apparently

Industrial Production
$[1935-39$ average $=100]$

|  | Industrial production | Manufactures | Dur- <br> able <br> manufactures | Nondurable manufactures | Minerals |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1929. | 110 | 110 | 133 | 93 | 107 |
| 1932 | 58 | 57 | 41 | 70 | 66 |
| 1933. | 69 | 68 | 54 | 79 | 76 |
| 1936 | 103 | 104 | 108 | 100 | 99 |

| $1940{ }^{\text {e }}$ | 122 | 123 | 135 | 113 | 117 |

- All 1940 figures are preliminary estimates.
showed a rise of about 5 points to 160 per cent of the 1935-1939 average and nondurable manufactures rose 2 points to 122, while minerals remained unchanged at 118.

For the year 1940 as a whole the Board's index averaged 122 as compared with 108 in 1939, 113 in 1937, and 110 in 1929. The rise
over 1939 was most marked in output of durable manufactures but, as the table indicates, nondurable manufactures and minerals also increased materially. The increase over 1929 for the year 1940 was almost entirely in nondurable manufactures and in minerals, but by December 1940 production of durable manufactures was substantially above the high point reached in the summer of 1929. As has been indicated elsewhere, particularly in the Federal Reserve Bulletin for September 1940, the index of industrial production should not be taken as a single adequate measure of the economic well-being of the nation. Especially over long periods considerable allowance needs to be made, not only for changes in the nature and quality of industrial products, but also for many other developments, including changes in other types of production, in foreign trade, in the size and composition of the population, and in the division of income.

Preliminary annual estimates for the various group indexes are shown in the table below; corresponding monthly figures for 1940, in most instances through November, are shown on pages 56 to 59 of this Bulletin. The largest increases for the year, as compared with 1939, were in the metals, machinery and transportation equipment groups of industries. Production was larger than for any previous year in most groups, the principal exceptions being lumber, leather, and alcoholic beverages.

1 See footnote to table on p. 38 for explanation of method of computing net demand deposits.

MAREIN REQUIREMENTS 1
Prescribed by Board of Governors of the Federal Reserve System in accordance with Securities Exchange Act of 1934
[Per cent of market value]

|  | Apr. 1, Oct. 31, 1937 | $\begin{aligned} & \text { Nov. } 1, \\ & \text { 1937 } \\ & \text { and } \\ & \text { after } \end{aligned}$ |
| :---: | :---: | :---: |
| For extensions of credit by brokers and dealers on listed securities, under Regulation T. | 55 |  |
| For short sales, under Regulation T --.-.-.-.-.----- | (2) | 50 |
| For loans by banks on stocks, under Regulation U. | ${ }^{3} 55$ | 40 |

${ }^{1}$ Regulations $T$ and $U$ limit the amount of credit that may be extended on a security by prescribing a maximum loan value, which is a specified percentage of its market value at the time of the extension; the "margin requirements" shown above are the difference between the market value ( $100 \%$ ) and the maximum loan value
${ }^{2}$ Requirement under Regulation $T$ was the margin "customarily equired" by the broker.
${ }^{3}$ Regulation $U$ became effective May 1, 1936
Note.-Regulations T and U also provide special margin requirements on "omnibus" accounts and loans to brokers and dealers.

## FEDERAL RESERVE BANK RATES ON INDUSTRIAL ADVANCES

Rates in effect December 31 on advances and commitments under Section 13b of the Federal Reserve Act
[Per cent per annum except as indicated by footnotes ${ }^{5}$ and ${ }^{6}$ ]

| Federal Reserve Bank | Advances direct to industrial or commercial organizations | Advances to or in participation with financing institutions |  | Commitments to make advances |
| :---: | :---: | :---: | :---: | :---: |
|  |  | On portion for which institution is obligated 1 | On remaining portion ${ }^{1}$ |  |
| Boston. | 31/2-6 | 3 | $31 / 2$ |  |
| New York. | 4-6 | 2-3 | 2-5 | 1-2 |
| Philadelphia | 31/2-6 | $21 / 2$ | (2) | 1/2-2 |
| Cleveland | 31/2-5 | 3 | $31 / 2$ |  |
| Richmond | 4-6 | (3) 3 | (4) 4 | 1-2 |
| Atlanta... | 4-6 | 4 | 4-6 | 1-2 |
| Chicago.. | 3-6 | 3-6 | 3-6 | 1/2-2 |
| St. Louis-- | $31 / 2-51 / 2$ | 11/2-2 | ${ }^{(2)}$ | (5) 1 |
| Minneapolis | 3-6 | 3-6 | 3-6 | 1-2 |
| Kansas City | 4-6 | 4 | 4 | ${ }^{(6) 2}$ |
| Dallas | ${ }_{4}^{4-6}$ | - ${ }_{3}^{4}$ | 4-6 | 1/2-2 |
| San Francisco.. | 4-6 | 3-4 | 4-5 | 1/2-2 |

${ }^{1}$ The Federal Reserve Banks of New York, Philadelphia, Richmond, Atlanta, Chicago, Minneapolis, Kansas City, and Dallas may charge same rate as charged borrower by financing institution, if lower than rate shown.
${ }^{2}$ Same as rate charged borrower by financing institution.
${ }^{3}$ One per cent less than rate charged borrower by financing institution with minimum of three per cent (see note 1).
4One-half of one per cent less than rate charged borrower by financing institution with minimum of four per cent (see note 1).
${ }^{5}$ Minimum charge one-fourth of one per cent.

- Minimum charge one-half of one per cent.

## MAXIMUM RATES ON TIME DEPOSITS

Maximum rates that may be paid by member banks as established by the Board of Governors under provisions of Regulation Q
[Per cent per annum]

|  | $\begin{aligned} & \text { Nov. 1, } 1933 \\ & \text { Jan. } 31,1935 \end{aligned}$ | $\begin{aligned} & \text { Feb. } 1,1935 \\ & \text { Dec. } 31,1935 \end{aligned}$ | $\underset{\substack{\text { beginning } \\ \text { Jan. 1, } 1936}}{\underset{\text { In effect }}{ }}$ |
| :---: | :---: | :---: | :---: |
| Savings deposits. | 3 | $21 / 2$ | $21 / 2$ |
| Postal savings deposits. | 3 | 21/2 | $21 / 2$ |
| Other time deposits payable in: |  |  |  |
| 6 months or more......- | 3 | $21 / 2$ | 21/2 |
| 90 days to 6 months..... | 3 | $21 / 2$ |  |
| Less than 90 days.-.-...- | 3 | $21 / 2$ |  |

Note.-Maximum rates that may be paid by insured nonmember banks as established by the Federal Deposit Insurance Corporation, effective February 1, 1936, are the same as those in effect for member banks. In some States the maximum rates established by the Board and the Federal Deposit Insurance Corporation are superseded by lower maximum rates established by State authority.

p Preliminary.
1 Gold heid under earmark at Federal Reserve Banks for foreign account on November 30, 1940, in millions of dollars: $1,815.1$
${ }^{2}$ Figures based on rate of $\$ 20.67$ a fine ounce in January 1934 and $\$ 35$ a fine ounce thereafter.
${ }^{3}$ Includes gold in the Inactive Account amounting to $\$ 27,000,000$ on December 31, 1936, and $\$ 1,228,000,000$ on December $31,1937$.
Note.- Figures for domestic production of gold are those published in table, p. 71, adjusted to exclude Philippine Islands production received in United States. Adjustment based on annual figures reported by Director of Mint and monthly imports of gold to U. S. from Philippines. For back figures see Annual Report for 1937 (table 29).

${ }^{1}$ Comprises centers for which bank debit figures are available beginning with 1919, except that one substitution was made in 1920 and one in 1928.
${ }^{2}$ Centers (other than the 141 centers) for which bank debits are currently reported. The number has changed very little since 1934 and has numbered 133 since 1936.
Back figures.-For corresponding monthly totals for 1928-1837 see Annual Report for 1937 (Table 71), which also gives a definition of bank debits. Monthly figures for individual reporting centers with totals by Federal Reserve districts for recent years, and annual figures for individual reporting centers with totals by Federal Reserve districts for the years 1919-1939, are available and will be furnished upon request.

## ALL BANKS IN THE UNITED STATES

Comprises all national banks in the continental United States and all State commercial banks, trust companies, mutual and stock sayings banks and such private and industrial banks as are included in abstracts issued by State banking departments. Also includes, during the period June 1934-June 1935, private banks which, pursuant to the provisions of sec. 21 (a) of the Banking Act of 1033, submitted condition reports to the Comptroller of the Currency. Under the amended provisions of sec. 21 (a) private banks no longer report to the Comptroller of the Cur rency. For comparative figures of private banks included in the figures from June 1034 to December 1935, see Federal Reserve Bulletin for December 1935, p. 883, and July 1936, p. 535. Figures for nonmember banks are for dates indicated or nearest thereto for which figures are available.

${ }^{1}$ Prior to Dec. 30, 1933, member bank figures include interbank deposits not subject to immediate withdrawal, which aggregated $\$ 103,000,000$ on that date. The nonmember bank figures include interbank deposits to the extent that they are not shown separately in a few State bank abstracts.
${ }_{2}$ Beginning December 1938 figures of loans and investments exclude approximately $\$ 50,000,000$ and $\$ 100,000,000$, heretofore reported as loans and investments, respectively, which indirectly represent bank premises or other real estate and are now classified in condition reports among "Other assets."

Other assets." (with deposits, excluding interbank deposits, of $\$ 90,000,000$ and total loans and investments of $\$ 96,000,000$ on December 30, 1939)
3 One bank ( which, prior to March 1940, was classified as a mutual savings bank, is now included in figures in the "Other nonmember banks" column.

Back figures.-See Annual Report for 1937 (tables 48-49).
[In millions of dollars]

${ }^{1}$ Classifications indicated were revised as of Dec. 31, 1938; for explanation see Bulletin for January, 1939, pp. 22-23, and Bulletin for April 1039, pp. 259-264, 332. Beginning June 30, 1939, detailed classifications available on June and December dates only.

Not shown in call reports prior to December 1938, but the total amount of agricultural loans was reported sebarately on some dates, and the total amount of "Commercial, industrial and agricultural paper"' has been reported by weekly reporting banks since May 1937.

Figures in this column prior to Dec. 31, 1938, represent all loans on securities, regardless of purpose, excepting only loans on securities to banks and to brokers and dealers.

This is a residual item and, because of the revised loan classifications, figures beginning Dec. 31, 1938, are not comparable with earlier figures.
Includes Treasury certificates of indebtedness through 1934.

- Breakdown of loans and investments not reported separately.

Central reserve city banks.
Back figures.-See Annual Report for 1937 (tables 52-58).

1 Prior to Dec. 31, 1935, excludes balances with private banks to the extent that they were then reported in "Other assets." Since Oct. 25 , 1933, includes time balances with domestic banks which on that date amounted to $\$ 69,000,000$ and which prior to that time were reported in "Other assets."
${ }^{2}$ Demand deposits other than interbank and U. S. Government, less cash items reported as in process of collection and, prior to Dec. 31 , 1935 less cash items reported on hand but not in process of collection.
${ }^{3}$ Includes "Due to Federal Reserve Banks (transit account)," known as "Due to Federal Reserve Banks (deferred credits)" prior to Dec. 31,1935
4 U.S. Treasurer's time deposits, open account, are combined with postal savings (time) deposits.
${ }^{5}$ Central reserve city banks.
${ }^{6}$ Partly estimated.
Back figures.-See Annual Report for 1937 (tables 52-58).

1 Excluding balances with reporting firms (1) of member firms of New York Stock Exchange and other national securities exchanges and (2) of firms' own partners.
${ }^{3}$ Includes both money borrowed from banks and trust companies in New York City and elsewhere in the United States and also monay borrowed from other lenders (not including member firms of national securities exchanges).

Note. - For explanation of these figures see "Statistics on Margin Accounts" in Bulletin for September 1036. The article describes the method by which the figures are derived and reported, distinguishes the table from a "statement of financial condition," and explains that the last column is not to be taken as representing the actual net capital of the reporting firms.

Back figures.-See Bulletin for March 1938, p. 196, and (for data in detail) Annual Report for 1987 (table 69).

${ }^{p}$ Preliminary. $\quad$ * A verage per working day. $\quad r$ Revised.
1 Department of Commerce series on value of payments to individuals.
; For indexes by groups or industries, see pp. 56-59; for description, see pp. 753-771 of Bulletin for August 1940.
${ }^{2}$ Based on F. W. Dodge Corporation data; for description, see p. 358 of BULLETin for July 1931; by groups, see page 64.
4 The unadjusted indexes of employment and payrolls, wholesale commodity prices, and cost of living are compiled by or based on data of the Bureau of Labor Statistics. For description of seasonally adjusted index of factory employment compiled by the Federal Reserve Board of Governors, see Bulletin for October 1938, pp. 835-837, and for October 1939, p. 878. For indexes by groups or industries see pp. 60-63 for employment and payrolls and p. 66 for prices.
${ }^{5}$ Revised to exclude military and naval forces.
${ }^{6}$ Seasonal adjustment factors revised. For back figures see p. 65 of this Bulretin.
Back figures in Bulletin.-For industrial production, August 1940, pp. 825-882; for factory employment and payrolls, October 1938, pp. 838-866, and October 1939, pp. 879-887; for freight-car loadings, June 1937, pp. 524-529; for department store sales, October 1938, p. 918.
Jandary 1941

## INDUSTRIAL PRODUCTION, EY INDUSTRIES

## (Adjusted for Seasonal Variation)

F Revised.
in chart 12 loans to banks on securities are included in the total of "security loans" prior to June 30 , 1937 and in the total of "other loans" since that date.
Figures are reported on somewhat different basis beginning December 31, 1938. For detailed explanation of the changes and for estimates on old basis as of December 31, 1938, see Bulletin for April 1939, page 332.
${ }^{3}$ Not originally plotted in chart book. 4 Partly estimated.

- Detailed breakdown of loans and investments now available on June and December dates only.

Gold production in U. S.S.R.: No regular Government statisties on gold production in U. S. S. R. are available, but data ot percentage changes irregularly given out by officials of the gold mining industry, together with certain direct figures for past years, afford a basis for estimating annual production as follows-at $\$ 20.67$ per fine ounce: $1929, \$ 15,000,000 ; 1930, \$ 31,000,000 ; 1931, \$ 34,000,000 ; 1932, \$ 40,000,000 ; 1933, \$ 56,000,000 ;$ at $\$ 35$ per fine ounce: $1933, \$ 95,000,000 ; 1934, \$ 135,000,000 ; 1935, \$ 158,000,000 ; 1936, \$ 187,000,000 ; 1937, \$ 185,000,000 ; 1938, \$ 180,000,000$.
p Preliminary-figures thus footnoted under individual countries are those reported by the American Bureau of Metal Statistics, adopted for use in the table pending receipt of the usual direct reports to the Board; these figures are not directly comparable with the preceding series (for description of sources of direct reports, see references cited in note below).

Figure carried forward from last previous figure without footnote
1 Includes Philippine Islands production received in United States.
2 Figures for Canada beginning January 1940 are subject to official revision.
Note.-For monthly figures back to January 1929 and for explanation of table and sources see Bulcetin for March 1939, p. 227; February 1939 , p. 151; June 1938, pp. 539-540; and April 1933, pp. 233-35. For annual figures of world production back to 1873 (including Russia-U. S. S. R.), see Annual Report of Director of Mint for 1939, p. 106; and 1936, pp. 108-109.

- Revisions have been effected in the figures for Asia in Table 6 beginning December 1938 as a result of amended reports submitted by a reporting bank.
${ }^{1}$ Figures cover period through Wednesday nearest the end of the month in terms of business days, unless otherwise specified.
2 Prior to Jan. 3, 1940, the figures shown under Asia represent the Far East only, the remaining Asiatic countries being included under "All other'.
${ }^{3}$ For explanation see Bulletiv for May 1937, pp. 395-396.
Inflow less than $\$ 50,000$.
${ }^{5}$ Outflow less than $\$ 50,000$.

$r$ Revisions have been effected in the figures for Asia beginning Sept. 1938 and for Japan and China beginning Jan. 3, 1940, as well as in the related totals, as a result of amended reports submitted by a reporting bank.

1 Figures relate to Wednesday nearest the end of the month in terms of business days, unless otherwise specified.
${ }_{2}$ Prior to Jan. 3, 1940, the figures shown under Asia represent the Far East only, the remaining Asiatic countries being included under "All other".
${ }^{3}$ Last report date on old basis.
${ }^{4}$ First report date on new basis
${ }^{6}$ The figures in this supplementary table represent a partial analysis of the figures in the main table under the headings of Other Europe, Latin America, and Asia.

Note.-The figures given in this table are not fully comparable throughout as a result of certain changes or corrections in the reporting practice of reporting banks which occurred on Aug. 12, 1936, Jan. 5, 1938, and Oct. 18, 1939 (see Bulletin for May 1937, p. 425; April 1939, p. 295; and A pril 1940, p. 362).

r Revised.
1 Figures relate to Wednesday nearest the end of the month in terms of business days, unless otherwise specified.
${ }^{2}$ Prior to Jan. 3, 1940, the figures shown under Asia represent the Far East only, the remaining Asiatic countries being included under "All other'.
${ }^{3}$ Last report date on old basis.

- First report date on new basis.

5 The figures in this supplementary table represent a partial analysis of the figures in the main table under the headings Other Europe, Latin America, and Asia.

Note. -The figures given in this table are not fully comparable throughout as a result of certain changes or corrections in the reporting practice of reporting banks which occurred on Aug. 12, 1936, and Oct. 18, 1939 (see Bulletin for May 1937, p. 431, and April 1940, p. 363).

[^20]COMMERCIAL BANKS

${ }^{1}$ A verages of weekly figures through August 1939; beginning September 1939 figures refer to one week near end of month.
${ }^{2}$ Represents six-month loans to the Treasury at $11 / 8$ per cent, callable by the banks in emergency under discount at the bank rate.
Through December 1937 excludes deposits in offices outside England and Wales, which are included in total
Beginning 1936, figures on this basis available only for all 11 banks-see footnote 5.
District Bank included beginning in 1936
No figures available since March 1940
Note.-For other back figures and explanation of tables, and for figures for German commercial banks, see Bulletin for August 1939, p. 699; June 1935, pp. 388-390; and October 1933, pp. 641-646.
[Averages of certified noon buying rates in New York for cable transfers. In cents per unit of foreign currency]

[^0]:    $r$ Revised

    * In accordance with the freezing regulations issued during 1940, gold and dollar assets of these countries are available for purchases in the United States only with the consent of the Treasury. The same applies to certain countries in Other Europe, and to the extra-European possessions of the affected countries.
    ${ }^{1}$ Broad estimate, based on last previous reported gold holdings and subsequent gold movements.
    ${ }^{2}$ Broad estimate, based on probable acquisitions of gold from private note-issuing banks in 1935, Austria in 1938, and Czecho-Slovakia in 1939, adjusted for net exports since 1935.
    ${ }^{4}$ Reported figure for December 1938.
    4 Estimate based on scattered data.
    ${ }^{5}$ Includes $\$ 100,000,000$ of fcreign-held United States Government, State, and Municipal bonds not distributed by countries.

[^1]:    *An address delivered before the National Industrial Conference Board, in New York City, on November 28, 1940.

[^2]:    1 This does not mean sudden or drastic action to absorb excess
    reserves but it does mean foresighted preparation, authorized by reserves but it does mean foresighted preparation, authorized by
    the Congress, so that the monetary authorities may be placed in the Congress, so that the monetary authorities may be placed in
    a position to take such monetary action as may be necessary to meet conditions as they mas develop in the future.

[^3]:    Tables on the following pages include the principal available statistics of current significance relating to financial and business developments in the United States. The data relating to the Federal Reserve Banks and the member banks of the Federal Reserve System are derived from regular reports made to the Board; index numbers of production are compiled by the Board on the basis of material collected by other agencies; figures for gold stock, money in circulation, Treasury finance, and operations of Government credit agencies are obtained principally from statements of the Treasury, or of the agencies concerned; data on money and security markets and commodity prices and other series on business activity are obtained largely from other sources. Back figures may in most cases be obtained from earlier Bulletins and from Annual Reports of the Board of Governors for 1937 and earlier years. Current figures compiled by the Board are generally released prior to publication in the BULLETIN and press statements will be sent without charge to those wishing them. For a list of current releases see Federal Reserve Publications at the back of this Bulletin.

[^4]:    1 Excluding central reserve city banks, for which figures for latest month are shown in table above.

[^5]:    1 Less than $\$ 50,000$
    Back figures.-See Annual Report for 1937 (table 38).
    Description.-See BULLETIN for January 1932, pp. 7-8.

[^6]:    ${ }^{1}$ Represents banks which, during the periods shown, closed tem porarily or permanently on account of financial difficulties; does not include banks whose deposit liabilities were assumed by other banks at the time of closing (in some instances with the aid of Federal Deposit insurance Corporation loans)
    ${ }^{2}$ Federal deposit insurance oecame operative January 1, 1934.
    ${ }^{2}$ Deposits of member banks and insured nonmember banks suspended are as of dates of suspension, and deposits of noninsured nonmember banks are based on the latest data available at the time the suspensions were reported.
    Back figures.-See Annual Report for 1937 (table 76).

[^7]:    Notz, For description of figures see Buleetin for November 1935 (pp. 711-738) or reprint, and Bulletin for June 1937 (pp. 530-531). For back figures see Bulletin for November 1935 (pp. 711-738) or reprint, Bullemin for December 1985 (p. 876), Annual Report for 1937 (tablee $65-67$ ) and corresponding tables in previous Annual Reports.

[^8]:    ${ }^{1}$ Monthly and weekly data are averages of daily figures, except for municipal bonds, which are based on Wednesday figures.
    ${ }_{3}$ Average of yields of all outstanding bonds due or callable after 12 years.
    ${ }^{3}$ Standard Statistics Co.

    - Moody's Investors Service, week ending Friday. Because of limited number of suitable issues, the industrial Aas and Aa groups have each been reduced from 10 to 4, and the railroad Aas group from 10 to 5 .

    Back figures.-See Annual Report for 1937 (table 80). Figures for U. S. Treasury bonds available on request.

[^9]:    ${ }^{r}$ Revised.

[^10]:    t Beginning with July 1, 1940, net receipts represent total receipts less net social security employment taxes, which under the 1939 amendments to the Bocial Security Act are appropriated directly to the Federal old-age and survivors insurance trust fund. To make the figures for earlier periods comparable, transfers to this trust fund, formerly shown under expenditures, have been deducted from total receipts, from total expenditares, and from transfers to trust accounts.
    : Detalls given in lower section table
    For details, see preceding page.

    - Less than $\$ 500,000$.

    Notr.-For explanation of table see Bulletin for October, 1940, p. 1052.

[^11]:    1 Federal Home Loan Bank Board estimates for all Federal savings and loan associations.
    : Excludes loans to other than member institutions which are negligible in amount.

[^12]:    ${ }_{5}$ Revised. Preliminary.
    ${ }^{1}$ Includes also lead and zinc production shown under "Minerals."

[^13]:    - Revised.

    Note.-Compiled byBureau of Labor Statistics. Figures for November 1940 are preliminary.
    1 Includes self-employed persons, casual workers, and domestic servants not included in total of employees in nonagricultural establishments.
    a Revised to exclude military and naval forces.

[^14]:    ${ }^{1}$ Includes 20,000 bales grown in miscellaneous territory.
    ${ }^{2}$ Includes 18,000 bales grown in miscellaneous territory.
    Note.-1939 figures for all crops except cotton are as revised in December 1940.

[^15]:    Tables on the following pages include the principal available statistics of current significance relating to gold, international capital transactions of the United States, and financial developments abroad. The data are compiled for the most part from regularly published sources such as central and commercial bank statements and official statistical bulletins; some data are reported to the Board directly. Figures on international capital transactions of the United States are collected by the Federal Reserve Banks from banks, bankers, brokers, and dealers in the United States in accordance with the Treasury Regulation of November 12, 1934. Back figures may in most cases be obtained from earlier Bulletins and from Annual Reports of the Board of Governors for 1937 and earlier years. Daily and monthly press releases giving daily and monthly average foreign exchange rates will be sent without charge to those wishing them. Other data on the following pages are not regularly released prior to publication.

[^16]:    ${ }_{f}^{p}$ Preliminary. ${ }^{r}$ Revised. ${ }^{c}$ Corrected.
    $f$ Figure carried forward from last previous official report, as indicated by last previous figure without footnote f, except in the case of Germany, Italy for Nov. 1939, Poland, Spain, and Venezuela; last official German report dated June 15, 1939, Italian figure officially reported Mar. 20, 1939, last Polish report dated July 31, 1939, Spanish figures officially reported on Aug. 1, 1936, and April 30, 1938, and last Venezuelan report is for end of March 1939.

    Totals do not include Government gold reserves shown in separate section at end of table, or other central reserves which are unreported or which are too minor to be included. Among unreported reserves are those of the U.S.S. R., those in the Canadian, Swiss, and Netherlands stabilization funds, and certain German holdings. Totals may include some figures which are preliminary or carried forward from previous report dates (see footnote ${ }^{5}$ ).
    ${ }^{2}$ Beginning April 1940, reports on certain Argentine gold reserves no longer available.
    ${ }^{1}$ On May 1, 1940, gold belonging to Bank of Canada transferred to Foreign Exchange Con-trol-Board.
    ${ }^{4}$ Figure reported in special semi-annual statement of National Bank of Belgium; change from previous December due largely to inclusion of gold formerly not reported separately.
    ${ }^{5}$ These countries are: Albania, Algeria, Australia, Austria through Mar. 7, 1938, Belgian Congo, Bolivia, China, Danzig through Aug. 31, 1939, Ecuador, El Salvador, Estonia, Guatemala, Finland, Latvia, Lithuania, Morocco, and Thailand (Siam). Figures for certain of these countries have been carried forward from latest report date (see footnote $f$ )

    - Increase due to inclusion of additional foreign gold reserves not reported previously.

    NOTE.-For description of table and back figures see BULLETIN for September 1940, pp 925-934 and pp. 1000-1007; details regarding special internal gold transfers affecting the reported figures through April 1940 appear on p. 926 in that issue.

[^17]:    r Revisions have been effected in the figures for total capital movement and foreign banking funds in the United States (total and central bank funds) beginning September 1938, for domestic securities beginning December 1938, and for other foreign banking funds in the United States beginning August 7, 1940. These changes have been necessitated by the receipt of amended reports from a reporting institution.
    ${ }^{1}$ Figures cover period through Wednesday nearest the end of the month in terms of business days, unless otherwise specified. see Bulletin for April 1939, p. 285

    Bullemin for April 1939, p. 285 . a foreign central bank account amounting to $\$ 55,000,000$ was changed to a foreign private account.
    Note.-Statistics reported by banks, bankers, brokers, and dealers. For back figures and description of the statistics, see Bulletin for April 1930, pp. 284-296; April 1938, pp. 287-277; and May 1937, pp. 394-431.

[^18]:    * Revisions have been effected in the figures for Asia in Tables 2 and 3 beginning December 1938 as a result of amended reports submitted by a reporting bank.

    1 Figures cover period through Wednesday nearest the end of the month in terms of business days, unless otherwise specified.
    ${ }^{2}$ Prior to Jan. 3, 1940, the figures shown under Asia represent the Far East only, the remaining Asiatic countries being included under "All other"'.
    ${ }^{3}$ Inflow less than $\$ 50,000$.
    Note.-Statistics reported by banks, bankers, brokers, and dealers. For back figures and description of the statistics, see Bulletin for April, 1939, pp. 284-296; April 1938, pp. 267-277; and May 1937, pp. 394-431.

[^19]:    Preliminary.
    1 Effective Mar. 1, 1939, gold valued at current prices instead of legal parity (see Bulletin for April 1939, p. 271).
    S Securities and silver coin held as cover for fiduciary issue, which has been fixed at $£ 630,000,000$ since June 12, 1940; for information concerning previous status of fiduciary issue see BULLETIN for November 1939, p. 1024, and A pril 1939, p. 339.
    ${ }^{3}$ On Jan. 6, 1939, $£ 200,000,000$ of gold (at legal parity) transferred from Bank to Exchange Equalization Account; on Mar. 1, 1939, about £5,500,000 (at current price) transferred from Exchange Account to Bank; on July 12, 1939, £20,000,000 of gold transferred from Exchange Account to Bank; on Sept. 6, 1939, $£ 279,000,000$ transferred from Bank to Exchange Account.

    4 By decree of Feb. 29,1940 (see BULLETIN for May 1940, pp. 406-407), gold revalued on basis of 23.34 milligrams gold 0.900 fine per franc. Increment or For further details see Bulletin for January 1939, p. 29; September 1937, p. 853; and November 1936, pp. 878-880.

    5 Negotiable bills of Caisse Autonome, bills bought under authority of decree of June 17, 1938 (see Bulletin for August 1938, p. 650) and, from Mar. 28, $1940,30,000,000,000$ francs of negotiable Treasury bills received in return for gold transferred to Exchange Stabilization Fund on Mar. 7,1940 ${ }^{6}$ Bills and warrants endorsed by National Wheat Board (law of Aug. 15, 1936-see Bulietin for October 1936, pp. 785-786), and bills rediscounted for account of Banques Populaires (law of Aug. 19, 1936-see BULIETIN for October 1936, p. 788).
    ${ }^{7}$ Inchudes advances granted under authority of Conventions between Bank of France and Treasury of June 18, 1936, June 30, 1937, Mar. 22, 1938, and Apr. 14, 1938, as modified by Convention of Nov. 12, 1938; Convention of Sept. 29, 1938, approved by decree of Sept. 1, 1939; ànd Convention of Feb. 29, 1940 (see Bulletin for May 1940, pp. 406-407).

    8 On Apr 20 , and again on Aug. 3, 1939, 5,000,000,000 francs of gold transferred from Exchange Stabilization Fund to Bank of France; on Mar. $7,1940,30,000,000,000$ francs of gold transferred from Bank of France to Stabilization Fund.

    Note,-For further explanation of table see Bulletin for July 1935, p. 463, and February 1931, pp. 81-83.

[^20]:    ${ }_{1}^{1}$ Figures are for period May 1-9, inclusive.
    ${ }^{2}$ No figures available.
    Note.-For figures for other countries and references to explanation of table see Bulietin for September 1940, p. 1018.

[^21]:    Note.-Developments affecting averages since September 1940: No rates certified as follows: Greece-beginning October 27. For information concerning the bases and nominal status of exchange quotations, and concerning temporary suspensions of quotations prior to the end of September 1940, see Bulletin for November 1940, p. 1241; September 1939, p. 831; March 1939, p. 236; and March 1938, p. 244

[^22]:    ${ }^{1}$ Average based on figures for 8 months.
