## THE LABOR MARKET

In a review of recent labor market developments, two facts stand out as of major importance. The first is that the year 1948 was one of record peacetime levels for activity in the labor market. Civilian employment, man-hours of work performed, average hourly and weekly wages, and aggregate wage and salary payments were all at new high levels. Notwithstanding the further exceptionally large expansion of the labor force, unemployment was slightly below 1947 and was lower, except for the war years, than at any time since 1929 .

The second fact is that activity in the labor market has receded in recent months. A moderate, but cumulating, weakness in the demand for labor has apparently been developing. By February seasonally adjusted employment in nonagricultural establishments had declined substantially from the end of last year and from the record level reached last fall and was moderately lower than in February 1948. Average hours of work in manufacturing have been reduced, layoff rates have been stepped up, and hiring rates have been cut in recent months. Unemployment increased considerably more than seasonally from the low levels of last fall and by early February was higher than at any time in the postwar period. In early March, as indicated by weekly claims filed for unemployment benefits, unemployment was still rising but the rate of increase appeared to be slackening.

Associated with the recent easing of de-
mand for labor and the moderate reductions in living costs since early last fall, there has been a slackening as compared with earlier postwar years in the rate of advance in average hourly earnings. Weekly earnings in manufacturing, which reflect hours of work as well as hourly earnings, registered a small decline in January. A large number of durable as well as nondurable goods industries showed declines from preceding months. Total wage and salary disbursements seasonally adjusted have declined somewhat from their record high reached last November.
Recently wage increases have been denied or have not been requested in some industries in which wage increases frequently have preceded bargaining in the heavy industries. This has been true, for example, among textile, clothing, and leather manufacturing companies. In many other instances wage increases of varying amounts have continued to be granted. In general, the recent increases have tended to be smaller than those granted last year and have been much more closely related to conditions existing in the industries or companies affected. In many important industries, such as steel, automobiles, electrical equipment, rubber, and coal, bargaining over further wage increases has not yet started this year.

## General Background

Record levels of labor market activity reached last year reflected the strongly expansive and inflationary tendencies that had
characterized economic conditions generally since the end of the war. Similarly, easing of the labor market since last fall has coincided with the slackening in general demand, as reflected in declining sales and prices.
The downward adjustment in employment and prices, although occurring in many lines, has not yet been of sufficient magnitude to permit full appraisal of its significance. Seasonal influences have been a factor in the employment declines since last fall, but they do not explain the reductions from levels of a year ago. The widespread nature and the generally moderate size of the reductions in employment and man-hours from a year ago, coupled with the continued large volume of physical production, suggest the possibility that productivity may have increased on a broad front. Little in the way of specific statistical evidence is at hand, however, to provide adequate proof that this has happened. The wearing down of backlog demands brought over from the war period, the filling of pipelines, the reduced needs for further inventory accumulation, and the greater efforts of some consumers to live within their means and of others to provide more adequately for the future are among the influences that have probably contributed to the recent easing of demand.
In this connection, it should be noted that recent declines in employment and average hours have been much more general and somewhat different in many respects than the short-lived and moderate reductions that oc curred in the spring of 1947 and the spring of 1948. Moreover, the recent reductions in employment have been reflected more directly in higher unemployment than in the earlier periods, when the areas in the economy that were still expanding strongly were of more importance and the areas that
were declining were fewer and less important to total employment.
Until recently, adjustments had been largely on an individual industry, or even a specific product basis, with employment in most industry divisions increasing or at least remaining fairly even. In the recent period, however, the declines in employment have been very widespread, especially among manufacturing groups, although in most instances they have been small in amount. Thus, in January 1949 all but one of the 20 industry groups in manufacturing participated in the decline in the number of man-hours worked from a year ago. In private nonmanufacturing activities employment in January 1949, seasonally adjusted, was below the peaks reached in 1948 in all divisions, and the total was slightly below a year ago. Government employment, seasonally adjusted, was higher in January 1949 than at any time in 1948.

## Labor Force

The total labor force, including about 1.3 million in the armed forces, averaged 62.7 million in 1948, as shown in the chart, or

LABOR FORGE, EMPLOYMENT, AND UNEMPLOYMENT SELECTED YEARS, 1929-1948

Bureau of Labor Statistics data, 1929-1939, and Bureau of Census data, 1941-1948.
1.1 million more than in the preceding year and about 6.7 million more than in 1940 . Prewar trends in the relationship between growth of the working-age population and labor force participation would have called for an increase in the labor force of only 600,000 from 1947 and of about 5 million from 1940. Whether the more-than-expected net additions reflect the ready availability of ample job opportunities and the pressure of higher living costs on family budgets or some more permanent change in the labor market is a matter of debate.
Structural analysis of the labor force shows that a number of significant changes have taken place since prewar years. A large proportion of the extra additions to the labor force since 1940 are women under 20 years or over 35 years of age. These groups have come into the labor force in sufficient numbers to much more than offset the less-thannormal additions from the 20 to 34 -year group, which has been most directly affected by the high marriage and birth rates of recent years. The proportion of women in the labor force increased from 28 per cent in 1940 to 32 in 1948.
Among men the percentage in the labor force has increased only slightly; it was 85 per cent last year as compared with 84 per cent in 1940. Increases in the groups of men who are under 20 years of age or over 55 offset the lower percentage shown for the 20 to 34 -year age group. Veterans are concentrated in the latter age group, and about one million veterans attending school were not in the labor force.
The total labor force in the next year or so may be expected to reflect the entrance into the labor market of many veterans who are now in school, in addition to the normal increase in the labor force. Women in the 20 - to 34 -year old group may also enter the
labor market in larger numbers than in the recent past if the birth rate continues to decline from its record level of 1947. Unless a sufficient number of other workers voluntarily withdraw from the labor market, employment must increase to prevent unemployment from rising.

## Total Employment

Total civilian employment was at a record level in 1948. The average for the year of 59.4 million was about 1.4 million above the year before and almost 14 million higher than in 1939. Employment of men in civilian activities was at an all-time high of 42.4 million in 1948, while employment of women, at 17 million, was about 2 million below the wartime peak but was more than 5 million above 1939.
Agricultural employment, which fluctuates widely within the year for seasonal reasons, averaged 8 million or slightly less than in 1947 and was about 1.5 million less than in 1939 and about 2.5 million less than in 1929.
Nonagricultural employment averaged 1.6 million higher in 1948 than in the previous year (Census series), 4.5 million higher than in 1946, and 15 million or 40 per cent higher than in 1939.
Domestic service employment has remained relatively stable at about 1.7 million during the last two years, following a sharp increase in 1946 from its low war levels. The number of self-employed has also remained fairly stable at about 6 million, following an increase of one-fourth in 1946 from the restricted war levels.

## Manufacturing Employment

Employment and average hours of work in manufacturing industries usually respond sooner and more sharply to weakening or strengthening of general demand than do
many other divisions of activity. Reflecting strong general demand in recent years, total man-hours of work in manufacturing in January 1949 (preliminary figures) were 78 per cent larger than in January 1939. The expansion was heavily concentrated in durable goods industries, which increased their total man-hours worked by 118 per cent while nondurable goods industries expanded 47 per cent. Expansion of employment was the major factor in the increase in total manhours in both durable and nondurable goods industries, but average weekly hours of work also increased substantially.

The volume of man-hours worked in January 1949 was also well above that in early 1946 with the expansion in durable goods industries again outstripping that in nondurable industries. In this three-year period average hours of work were reduced somewhat, while employment increased considerably. The following table shows percentage changes in man-hours, employment, and average hours of work in total manufacturing, and in durable and nondurable groups, from one year ago, three years ago, and prewar.
Man-hours, Employment, and Average Hours of Work in Manufacturing Industries

| Nondurable goods | 38.6 | -3.5 | -6.3 | 4.3 |

Note.-Based on Bureau of Labor Statistics data on employment and average weekly hours of production workers. Figures for January 1949 are preliminary.

Examination of changes in man-hours worked in manufacturing by major industry groups shows that, following the broad expansion of employment in 1946, a process of readjustment to peacetime labor needs began in a few manufacturing industries early in 1947 and subsequently spread to more industries. In January 1948, when total man-hours were 3 per cent higher than in the same month of 1947, about half of the manufacturing industry groups reported fewer man-hours of work than in January 1947. Adjustment to lower levels of labor requirements came in nondurable goods lines to a greater extent than in durable goods industries.

Between January and September 1948 employment and man-hours expanded moderately, but by January 1949 employment had dropped more than seasonally and average hours of work had declined. As a result, aggregate man-hours of work in every manufacturing group, except automobile production, reached a level below that reported a year earlier. In fact, the reductions were sufficient to bring total man-hours in manufacturing below the level of two years ago; the durable goods group was very slightly below, but the nondurable group was considerably below, the level of two years ago. In comparison with three years ago, however, man-hours worked in January 1949 were substantially higher for total manufacturing as well as for most industry groups.

In January 1949 man-hours worked in manufacturing were 6 per cent less than a year before, the decline of 7 per cent in nondurables lines exceeding that in durable goods industries. Among industry groups the sharpest declines over the year were reported in electrical machinery, furniture, textile, leather, and rubber manufacturing. In the iron and steel, stone, clay and glass, print-
ing, chemical, and petroleum groups the reductions were quite moderate-none being more than 3 per cent. The following table compares man-hours worked in manufacturing in January 1949 with those one year ago and three years ago and with the prewar level.

Percentage Changes in Man-hours Worked in Manufacturing Industries

| Industry group | Percentage increase, or decrease ( - ), January 1949 from: |  |  |

| Miscellaneous industries | -7.7 | 6.2 | 94.6 |

Note.-Based on Bureau of Labor Statistics data on the number of production workers and average weekly hours of work in major industry groups. January 1949 figures used in computations are preliminary.

The decline of 600,000 in manufacturing employment, seasonally adjusted, between September 1948 and January 1949 was fairly substantial. Also it contrasted with the increase of 300,000 in the comparable period the year before when the general demand situation was exceptionally strong. The widespread nature of the recent declines in factory employment and the lack of offsetting increases, rather than the size of the declines, are perhaps the most significant aspects of recent employment developments. Among major groups there is little evidence
of important expansive tendencies, although in most industries employment has been maintained at high levels.
The average work week in manufacturing industries, which had remained in a fairly narrow range slightly above the 40 -hour level in each of the three years $1946-48$, has moved toward a moderately lower level; in January 1949 average hours worked were below any January since 1941. Between January 1948 and January 1949 average weekly hours of work declined almost a full hour, or by over 2 per cent. All groups except transportation equipment and automobile manufacturing participated in the decline. In nondurable goods activities, average hours dropped almost an hour and a half, or 3.5 per cent, from a year ago, as compared with a reduction of less than half an hour, or one per cent, in the durable goods lines. Declines of an hour and a half or more were reported in the furniture, textile, apparel, leather, tobacco, and paper industries. Only slight changes were shown in iron and steel, chemical, and petroleum industries.
Important indications of the slackening demand for labor have been the substantial reductions both in the rate of hiring workers and in the rate at which workers voluntarily leave jobs. At the same time layoff rates have been increasing sharply. These changes were striking in the last two months of 1948 and in January 1949. The rate of hiring, 3.3 per 100 employees at work in January, was well below the rate reported for any January in recent years. With new jobs scarcer, workers were quitting their jobs at the lowest rate for any January since 1941. In contrast, the layoff rate rose sharply to the highest January rate since the late thirties and was over twice the rate reported in January 1948.

## Employment in Nonmanufacturing Industries

Nonmanufacturing establishments in January 1949 employed 28.5 million persons or about four-fifths more than manufacturing establishments, which had 15.9 million employees. Although nonmanufacturing employment as a whole has increased by 9 million or nearly 50 per cent since January 1939, the percentage increase was somewhat less than that shown for manufacturing. Construction and Federal employment, however, have increased relatively more than manufacturing since 1939. The chart shows monthly employment since 1939 for nonagricultural industry divisions.

Bureatu of Labor Statistics data, adjusted for seasonal variation by Federal Reserve. Latest figures shown are for January 1949.

In January 1949 nonmanufacturing employment was up 3 million persons or 11 per cent from early 1946. Employment in construction, trade, finance, public utilities, and State and local government increased relatively more than the average, while service and mining increased less than the aver-
age. Transportation employment declined as did Federal employment. Federal employment in early 1949 was substantially above its postwar low, but was 500,000 or one-fifth below its high level of January 1946, which still reflected the large wartime expansion.
In the past year total employment in nonmanufacturing lines, as shown in the table, has been relatively stable, but private employment has declined while both Federal and State and local government have increased. Transportation and service activities reported fewer workers in January 1949 than in the same month last year, while construction and trade showed little change. The number in mining also showed little change, but average hours of work at coal mines have been declining, and coal stocks have been increasing. Employment in financial establishments and in public utilities moved upward last year and in January 1949 was considerably higher than a year earlier. The table shows the changes in employment in nonmanufacturing activities and in manufacturing from one year ago, three years ago, and January 1939.

Employment•in Nonagricultural Establishments

[^1]Note.-Bureau of Labor Statistics estimates of full- and parttime wage and salary workers in nonagricultural establishments.

## Unemployment

Unemployment during 1948 averaged only 2.1 million persons, slightly less than in 1946 and 1947 and about 7.5 million less than in 1939. Unemployment as a percentage of the labor force averaged 3 per cent in 1948, or about the same percentage as in the peak prosperity year of 1929 , but very much below the rate of 25 per cent in 1933 and 17 per cent in 1939.

Unemployment during 1948 followed the usual seasonal pattern of higher unemployment in the winter months, when bad weather curtailed outdoor activity, and also in the summer, when youths on vacation from school entered the labor force looking for work. The smallest number of unemployed, 1.6 million, was reported in October. By January 1949 unemployment increased to a total of 2.7 million and in February advanced further to 3.2 million. The increases from earlier months were substantially more than expected because of seasonal influences. The level of unemployment in February 1949 was 600,000 higher than in the same month the year before and higher than at any time in the postwar period. The chart shows unemployment in terms of quarterly aver-

Bureau of Census; quarterly averages of monthly figures; first quarter of 1949 estimated by Federal Reserve from Census reports for January and February.
ages, which indicate the recent trend more clearly than monthly figures.

Claims filed for unemployment benefits under both the State and the veterans' programs also have reflected the general easing in the demand for labor and the growing unemployment in recent months. The number of continued claims filed under both programs totaled about 2.5 million at the end of February, more than double the low level in October 1948 and about 700,000 or twofifths above late February last year. Under the special program for railroad workers 80,000 persons were receiving unemployment benefits in mid-February this year as compared with 51,000 a year earlier.

The number of initial claims filed, which tends to reflect the incidence of new unemployment, increased sharply from last fall to early January but has declined somewhat since then. However, in early March such claims were still substantially larger than in the corresponding period last year. The downward trend in number of initial claims since early January and the relatively small increases in continued claims in recent weeks suggest that total unemployment in early March may still be increasing but at a slower rate than earlier in the year.

All States have reported substantial increases in the number of claims for unemployment benefits under their programs as compared with the same periods last year, which attests to the general and widespread character of the readjustments that have been taking place. In many States the number of continued claims has doubled. For the nation as a whole the rate of unemployment among persons insured under State unemployment programs was almost 6 per cent in mid-February 1949. In some States, however, the percentages were very high. In Oregon, Washington, and California the
rates were around 12 per cent, and in Rhode Island and Tennessee they were almost 10 per cent. Maine, New Hampshire, New York, Idaho, Utah, Arkansas, Nevada, and Montana all had rates of 7 to 9 per cent. In some of these States exceptionally bad weather was a factor. In Pennsylvania and West Virginia and in most of the industrial States in the Midwest, the unemployment rates were below the national average.

## Wage Changes

Increases in hourly earnings during 1948 were not reflected in increases in wholesale and retail prices to the same extent as during 1946 and 1947. Thus, in December 1948 average wholesale prices were slightly below the level of a year earlier, owing largely to substantial declines in prices of farm products and foods. Average prices of all commodities except farm products and foods were 5 per cent above December 1947, and within this broad group prices of some products, such as metals and metal products, were considerably higher than a year ago while some other prices were lower. Consumer prices were only 3 per cent higher in December 1948 than in the same month of 1947 and were about 2 per cent below the postwar peak reached in August and September 1948. In contrast to these small changes in average prices, average hourly earnings of wage earners in nonagricultural industries were 7 per cent higher in December 1948 than in the same month a year earlier.
Since last December average wholesale prices and consumer prices have declined further; in February consumer prices were probably little, if any, higher than in February 1948 and wholesale prices were lower. However, average hourly earnings in manufacturing increased further in January and probably in February as well.

For most individual industries and specific products, it is not possible to make accurate comparisons of wage increases and price changes because of lack of comparability of the statistical series and the difficulty of selecting proper periods for comparison. In some industries prices apparently advanced as much as or more than wages, as was the case rather generally in 1946 and 1947. But in some other industries wage increases in 1948 were followed by price stability or price reductions, which presumably were made possible by savings in costs of materials or other nonlabor items, by enhanced productivity, or by lower profit margins, which were accepted voluntarily or forced by competition in the product markets.
In the period from December 1945 to December 1946, which includes the first postwar so-called "round" of wage increases, wage advances were widespread, general, and large-averaging 14 per cent in terms of hourly earnings of nonagricultural wage earners, according to the index compiled by the Federal Reserve Bank of New York. The range among the major activities shown separately in the index was from 12 per cent in construction to 16 per cent in public utilities. During 1947 further large increases occurred with average hourly earnings increasing 11 per cent. In this period the percentage increases were somewhat less uniform in amount but were quite general among industries. The range was from 9 per cent in trade and services to 16 per cent in mining. During 1948 wages continued to advance, but the increases were generally considerably smaller than in the preceding year and much more differentiated in amount and selective in application among industries, companies, and workers. The average advance was 7 per cent, and the range among major activities was from 6 per cent in trade
and services to 10 per cent for construction. The following table shows these changes in hourly earnings, together with changes in consumer and wholesale prices.

Source.-Average hourly earnings of wage earners, Federal Reserve Bank of New York; consumers' prices and wholesale prices, Bureau of Labor Statistics.

In the first two postwar years weekly earnings advanced by about the same percentages as hourly earnings, but in the last year they increased a little less than hourly earnings because of the reduction in average hours worked. In the first postwar year consumer prices advanced sharply and increased considerably more than weekly earnings. As a result, the buying power of the weekly wages of nonagricultural wage earners, as represented by earnings in 1939 dollars, declined about 4 per cent. In 1947 average real weekly earnings increased slightly, and in 1948 real weekly earnings increased nearly 3 per cent. In January 1949, data for manufacturing alone indicated a slight decline in average weekly earnings. A similar slight decline occurred in consumer prices.
In recent months average hourly earnings have continued to advance but more slowly and much more selectively than during the postwar period generally. In some cases,

Bureau of Labor Statistics data. Weekly earnings expressed in terms of 1939 dollars are obtained by adjusting weekly earnin terms of 1939 dollars are obtained by adjusting weekly earnings by the changes in the consumers price index with 1939.
notably among textile, apparel, and leather companies, previous rates of pay have been continued. In a few cases, such as General Motors Corporation, wage rates have been reduced slightly in accordance with provisions for adjustments upward or downward as changes are shown by the consumers' price index. However, in many recently announced settlements wage increases or other benefits have been granted.
Appraisal of prospects for further wage increases is difficult because of the recent reductions in living costs and the rise in unemployment, which are likely to focus increased attention on conditions in specific industries and to result in even more selectivity among companies and industries than last year. In the bargaining period ahead, which includes negotiation of contracts in such major industries as steel, automobiles, rubber, electrical equipment, and coal, it is expected that more emphasis will be placed on welfare and pension benefits than in the earlier years. Bargaining for shorter hours of work without corresponding reductions in weekly earnings likewise has shown signs of increasing recently.

# NEW STATISTICS OF INTEREST RATES ON BUSINESS LOANS 

by
Richard Youngdahl

For nearly 30 years the Federal Reserve Board and Federal Reserve Banks have obtained regular reports on interest rates charged by selected member banks on loans to business borrowers. Because of the wide range in rates charged on individual loans at any one time owing to variations in the nature of the borrowers and of the loans, it has been difficult to compile a series of representative average or typical rates with assurance of consistency over time. Methods of reporting the basic data and of compiling time series of average or typical rates have been changed from time to time in order to improve the data. ${ }^{1}$

In recent years, surveys made by the Federal Reserve System have made available important new data regarding interest and discount rates charged on bank loans and the relationship of various loan and borrower characteristics to the rates charged. Such data emphasized the need and provided the basis for a comprehensive revision of the information formerly collected and published by the Board.

As a result of these developments, the System has revised its statistics of average rates charged on short-term commercial loans at banks in 19 leading cities for the period since 1939. ${ }^{2}$ This revision has the following major features:

1. Statistics reported by a selected group of 91 large banks in 19 leading cities show the amount of the loan and the interest rate charged for each new loan or renewal made in the first half of March, June, September, and December. The new reports began in June 1948. The periods covered by the reports are the same and the reporting banks nearly the same as in the series previously compiled, but the report form is different.
2. The new report form supplies data for each individual loan, whereas previously the banks reported the total number and dollar amount of loans made at certain rates of interest or ranges of rates.
3. The comprehensive loan surveys, as well as

[^2]the data now being regularly reported on the new basis, indicated that the wide variation in rates charged at any one time was reflected more in size differences among loans than in city or regional differences, which had been the basis of previously compiled averages. For this reason changes in average rates from one period to another often reflected changes in the size distribution of loans, rather than changes in the general level of interest rates. Data by individual loans permit the computation of averages in a manner that adjusts for changes in size composition and, therefore, give results that more accurately reflect variations over time in the level of interest rates.
4. On the basis of the new data, the following averages have been computed for June, September, and December 1948 and will be computed and published for future quarterly report periods:
(a) Average rates by size groups of loans, as follows:
(1) $\$ 1,000$ and less than $\$ 10,000$
(2) $\$ 10,000$ and less than $\$ 100,000$
(3) $\$ 100,000$ and less than $\$ 200,000$
(4) $\$ 200,000$ and more
(5) All sizes
(b) Average rates for each of these size groups, as well as for all loans, by city groups, as follows:
(1) New York City
(2) 7 northern and eastern cities
(3) 11 southern and western cities
(4) All 19 cities
5. Previously compiled data for the period March 1939 to June 1948 have been reworked to provide estimates of average rates charged on loans, as follows:
(a) Average rates for all 19 cities by the same size groups shown above for each quarterly date.
(b) A revised series of average rates for all 19 cities compiled from the new size-of-loan averages and a constant system of weights. This revised series eliminates certain erratic fluctuations and long-run trends introduced by shifts in
the size composition of loans. The revised series and the old series are compared in the chart.
(c) Revised annual averages of rates by groups of cities. It is not feasible on the basis of data available to compute satisfactory data by quarters or by size-of-loan groups for the city groups.

6. The designation of the series has been changed from "interest rates charged by banks on commercial loans" to "interest rates charged by banks on business loans." The shorter designation is "bank rates on business loans." While the term "commercial loans" is consistent with traditional banking usage, the term "business loans" is a more accurate description of the coverage of the averages, which includes rates on loans to all types of business concerns and not merely rates on loans to businesses primarily commercial in character.

## Structure of Rates and Rate Measurement

Bank loans to businesses take a variety of forms and differ widely in their characteristics as to size of loan, maturity, security, method of repayment, and other features. Nearly all variations in types of businesses are represented among borrowers from banks. Banks lend to large, medium-sized, and small companies; to concerns engaged in all, or nearly all, types of business activity; to newly established companies and to companies with years of business experience; to corporations, to partnerships, and to individual proprietorships.

Interest and discount rates charged by banks on business loans vary in accordance with the terms and conditions of the loan as well as with the characteristics of the borrower. Certain loan and borrower characteristics are associated with particularly wide differences in the rates charged. The Federal Reserve survey of bank loans to businesses showed, for example, that as of November 20, 1946 rates differed greatly on large and small loans, on loans to large and small companies, and on loans backed by various kinds of security. ${ }^{3}$ These differences may narrow and widen as interest rates fluctuate from one period to the next. Rates on some types of loans rise and fall in response to changes in the availability of funds and the demand for loans, while rates on other loans change more slowly.
Measurement of the movements and levels of interest rates thus involves a summarizing or averaging of rates on loans which differ considerably in many respects and which are made at greatly varying rates. A series on average interest rates should, if possible, be constructed in such a manner that fluctuations will reflect changes in the level of interest rates, i.e., in the price of loan funds, and not changes in the composition of business loans made at banks. That is, mere shifts in the proportion of large loans and small loans made, or in the proportion of loans made in particular areas of the country, should not have an effect on an average rate that is intended as a summary measure of changes in the prices for loans.
Size of loan and interest rate. Perhaps the most striking feature of the current bank loan market is the close relationship between the size of a loan and the interest rate charged. Data obtained in the System's survey as of November 20, 1946 indicate that rates tended to be considerably higher on small loans than on large loans, even when other loan and borrower characteristics were essentially similar. Rates on business loans at all member banks as of November 1946 ranged from an average of about 7 per cent on loans of less than $\$ 1,000$ and about 5 per cent on loans of from $\$ 1,000$ to $\$ 10,000$, down to an average of about 2 per cent on loans of $\$ 500,000$ or more. Short-term loans to

[^3]large prime commercial borrowers were generally made at 1.5 per cent at that time.
A similar relationship between loan size and interest rate also existed at large banks in major money centers, which are the institutions covered by the System's series on business loan rates. This kind of interest rate pattern, moreover, was shown for short-term business loans made in the three reporting periods in 1948 for which detailed information by size of loan is available. The chart shows the relationship of loan size and average interest rate for short-term loans made at these banks in the period December 1-15, 1948. The relationship held not only for all 19 cities taken as a group but for each city as well.

AVERAGE BANK RATES ON LOANS TO BUSINESSES BY SIZE OF LOAN, DECEMBER I-15, 1948

Note.-Average rates are for short-term loans to businesses made by banks in 19 selected cities during the period Dec. 1-15, 1948.

Variation in loan size and average interest rate. The wide pattern or spread of the rates charged on different kinds of short-term business loans, such as large and small loans, has great importance in the computation of a summary measure of interest rates. If, with the present pattern of rates, small and medium-sized loans are a substantial proportion of the total value of bank loans, the amount of interest paid relative to the amount borrowed will tend to be high. Conversely, a small proportion of small loans and a large proportion of large loans will result in a low straight average rate on all bank loans.

Averages of rates on all loans tend to exaggerate differences in rates among various sections of the country. In part the differences shown in previously compiled averages of rates on all business loans at banks in New York, in the North and East, and in the South and West, stem from such factors as differences in the size composition of bank loan portfolios. At New York City banks, for example, a much greater proportion of total loan volume is made up of large loans than is the case at banks in other cities.
It is true at the present time that average interest rates on loans of comparable size show some variation among these areas, with the lowest rates being charged in New York City banks. The rate variation is much smaller, however, than a straight average of rates on all loans indicates. The average rate on all short-term loans made in December 1-15, 1948 was 0.72 percentage points higher at banks in southern and western cities than in New York City. But on loans of comparable size, average rates tended to be about 0.30 percentage points higher. After allowance is made for inter-area differences in other loan characteristics, actual differences in rates among these money centers are even smaller.

Variation from one time to another in size and other characteristics of bank loans has resulted in movements in the straight average of the rates on all loans that did not necessarily reflect any change in the level or structure of interest rates. Thus, if in a given area, the proportion of large loans made should increase from one quarter of the year to another, a straight interest rate average would tend to decline. If the shift in the size composition of the loans were great enough, a drop in rates might be shown by the series even though the rate on each type and size of loan actually increased.

## Desirable Features for a Series on Business Loan Rates

For adequate understanding of longer-term trends and current tendencies in rates on bank loans, data are needed that will reveal both general movements in rates and changes in the structure of rates on bank loans. Data on the general level of rates should reflect changes in over-all supply and demand conditions of bank credit, including changes in response to actions of the monetary authorities. Data on the structure of rates should reliably reflect

## NEW STATISTICS OF INTEREST RATES ON BUSINESS LOANS

the differential impact of these changes in the cost of credit on important segments of the loan market.
Perhaps ideally a time series on bank business loan rates might be constructed by obtaining quotations every quarterly period on the interest cost of each loan in a broadly representative "basket" of hypothetical loans. For several important reasons, however, such a pricing of bank loan credit is not workable. Business loans are not commonly marketed like commodities such as wheat or refrigerators. Bank interest rates to business customers are not normally posted. Except for loans to prime borrowers, rates generally are not set up even in schedule form, except perhaps informally for internal guidance. The loan transaction between banker and customer is most frequently personally negotiated and in strict confidence. The terms of the loan as well as the facts regarding the need for the loan and the credit position of the borrower are not revealed. Evidence indicates, in fact, that substantial variations in rates may be shown as among highly similar loans made by a particular bank. This may result from considerations not easily associated with the circumstances of the loan itself. It may arise from special competitive conditions or from special business arrangements between a banker and a customer who, for example, may bring income to the bank from sources other than interest on loans. These circumstances raise difficulties in getting reports of rates on a single basket or successive baskets of identical loans on a basis satisfactory for use in the computation of average interest rates for groups of loans and for all loans.
From detailed data on business loans actually made, however, it is possible to set up a system of classification that will take account on an average of factors that cause major differences in interest rates among business loans. That is, if loans made by banks are classified by attributes most closely associated with differentials in rates, fluctuations in average interest rates that now result from changes in loan composition can be substantially eliminated. Such data would also provide valuable information on the structure of interest rates.

## New and Revised Series, by Size of Loan

The Federal Reserve quarterly series on interest rates on short-term business loans made at banks in selected cities has been set up to provide information on average fates on four major size groups of
loans for the period since March 1939. Quarterly rates for these groups of loans will also be available in the future (since June 1948) by three geographic areas of the country-New York City, seven northern and eastern cities, and eleven southern and western cities.
The summary averages of rates on all short-term loans at banks in the 19 cities have been revised to measure the average rate for a group of loans held largely constant with respect to size and geographic distribution. The size and geographic distribution of the portfolio of short-term loans outstanding as

of November 20, 1946 at the banks reporting rates is used in computing the summary average rate.
Average rates on all short-term business loans in the three geographic areas have also been computed. Like the averages for all loans in the 19 cities, the summary averages for the three geographic areas measure rates on groups of loans held constant by size and geographic distribution. Averages of rates for the three areas for the period 1939 through 1947 are on an annual basis only because available data would not support more detailed estimates. For the period beginning June 1948 summary averages for each geographic area are computed quarterly.
The new interest rate series for banks in all 19 cities for the period June 1948 through December 1948, and comparable estimates of rates for the period March 1939 through March 1948, are shown in Table 1 and in the chart. Similar averages for each geographic area for the period from June 1948 through December 1948 are shown in Table 2. Table 2 also shows estimates of average rates on all loans on an annual basis for each of the three geographic areas for the period 1939 through 1948.

Note.-Figures are averages of rates on short-term loans to businesses made in the first 15 days of each March, June, September, and December by banks in 19 selected cities.

Rates on Business Loans, 1939 through 1947
The level and structure of interest rates on bank loans in the forties, as in the late thirties, were products of conditions of extreme monetary ease. Conditions of ease in the thirties reflected primarily the huge excess reserves of banks resulting from large gold inflows and the limited demand for bank credit. They have continued in the war and postwar periods largely as a result of monetary policies associated with war financing and with postwar Government debt management.

Estimates of rates charged, by loan size, indicate that the pattern of rates charged by banks on shortterm business loans in 1946 and 1947 was very similar to that in 1939 and 1940. Rates on large business loans of $\$ 200,000$ and over averaged about 1.75 per cent in both periods, with prime commercial loans made at 1.5 per cent. Rates on very small and medium-sized loans were also about the same in the immediate postwar years as they were in 1939 and 1940.

The only significant changes in loan rates over the period from 1939 through 1947 occurred in the years 1942 through 1945. Average rates on large loans rose somewhat in mid-1942 and reached a peak of 2.75 per cent in mid-1943. Throughout the remainder of the war period they remained at levels close to 2.5 per cent. Rates on medium-sized loans also rose slightly during the war period. Rates on small business loans, however, showed little change.

The increase in loan rates in the early period of active United States participation in World War II probably reflected an expectation by banks and other lenders that the needs of war financing would drive interest rates up. This expectation was shown, for example, in bank hesitancy to take the 2 per cent United States Government bonds offered in October 1942, an issue which later in 1943 they bid to a premium. Thus in late 1942, banks began to ask higher rates on some of their large and mediumsized business loans. When it became fully apparent, however, that the war would be financed at low rates, average rates on business loans tended to decline slightly.

In part the rise in average rates on large loans during the early war years was probably due to the fact that many of the borrowers in the loan market were fast growing, war-born concerns with-
out established credit worth. Rates on bank loans to large war producers under the terms of the Government guarantee (Regulation V) tended to be somewhat higher than rates on loans where such guarantee was not required. This was due at least in part to the fact that the cost of the guarantee, which on an average was about 25 per cent of the interest rate charged, was generally added to the interest cost of the loan. On large loans guaranteed under the provisions of Regulation $V$, rates tended to be about 1 percentage point higher than the interest rate charged on loans to prime commercial borrowers.

For several quarterly periods during the war average rates on business loans tended to be lower than rates in nearby quarters. This is true especially for the first 15 days of December 1942, 1944, and 1945 and September 1943. War loan drives were underway during all or part of these periods. This seems to indicate that some businesses borrowed during the drives to purchase Government securities and that on these loans they were charged relatively low rates. It is possible that many of the loans may have been collateraled by the Government securities.

In 1946 and 1947, conditions of credit availability were essentially similar to those in the immediate prewar period. Banks did not hold substantial excess reserve balances with the Federal Reserve Banks as in prewar years, but they held billions of dollars of short-term United States Government securities, which could be sold to acquire reserves as needed. The cost of reserves to banks, therefore, corresponded to the low rates prevailing on shortterm Government securities, which until July 1947 was $7 / 8$ per cent or less. Banks were in a position to satisfy freely the large postwar loan demand at the low rates prevailing. Since the needs of banks for liquidity reserves were satiated by their large holdings of short-term Government securities, and since reserve funds could be readily obtained by selling securities to the Reserve Banks, even the record loan expansion of the postwar period generated no effective pressure for an increase in prime loan rates.

Data by size of loan and the revised average of rates on all loans show that the prices banks charged for business loans were about the same in the immediate postwar years as in the prewar period. The old series showed a small decline over this period. The differences in movements are due
largely to the fact that for the revised series the size composition of loans is held constant by the weighting system whereas for the old series it shifted over the period as there were shifts in the size composition of loans. After the war a greater proportion of bank loans to businesses were large loans than in the prewar period. Thus the old series tended to show a decline in rates as large, low-rate loans increased in importance.

Some borrowers may actually be able to obtain credit at lower rates than in prewar years, because of an increase in the size of loans they need to cover their requirements. But changes of this sort were not reflected in the averages.

## Rate Changes since Mid-1947

Beginning in mid-1947, rates on short-term Government securities have increased somewhat. By the end of 1947, Treasury bills and one-year Treas-

ury certificates were yielding 1 per cent and $1 / 8$ per cent, respectively. Yields on both corporate and Government bonds were somewhat higher in turn. In 1948 there was a further rise of about $1 / 8$ per cent in yields on short-term Government securities.

This rise in rates on Government securities was reflected in late December 1947 in an increase in interest rates on prime business loans, which rose $1 / 4$ of 1 per cent, from 1.5 to 1.75 per cent. The rate increase tended at first to be limited to a rise in the rates on large business loans, as is shown in the chart in the previous section. Rates on other loans were not as immediately affected, but subsequently showed a comparable rise.

In August 1948, yields on short-term Government securities increased again. This was reflected quickly in rates on all sizes of business loans. As is shown in Table 2, rates in September were generally somewhat higher in each of the three areas of the country than they were in June. The increases were larger for large loans than for small loans, however.

In the last quarter of 1948, rates on business loans showed little further rise. Rates on large loans averaged slightly higher while rates on small loans tended to be somewhat lower.

At the end of 1948 , interest rates were still low, although higher than in the immediate postwar period. Credit continued to be abundant and cheap.

## Appendix A

## Computation of New Interest Rates Series

To develop the new series on bank loan rates discussed above, the reporting arrangement through which the Federal Reserve System collects interest rate data was modified to provide information on an individual loan basis. Under the new plan, respondent banks in the 19 money centers list on a revised form the dollar amount, interest rate, and maturity of each loan made during the quarterly reporting periods. ${ }^{4}$ The new reporting form is shown on page 236.

[^4]All short-term business loans which banks report, that is all loans for one year or less, are sorted out by the Federal Reserve. These are grouped by major geographic areas-New York City, seven northern and eastern cities (Boston, Buffalo, Philadelphia, Pittsburgh, Cleveland, Detroit, and Chicago) and eleven southern and western cities (Baltimore, Richmond, Atlanta, New Orleans, Dallas, St. Louis, Minneapolis, Kansas City, Seattle, San Francisco, and Los Angeles). For each area the loans are classified by the following nine size groups:

| $\$ 1,000-\$$ | 4,999 |
| ---: | ---: | ---: |
| $5,000-$ | 9,999 |
| $10,000-$ | 24,999 |
| $25,000-$ | 49,999 |
| $50,000-$ | 99,999 |
| $100,000-$ | 199,999 |
| $200,000-$ | 499,999 |
| $500,000-$ | 999,999 |
| $1,000,000$ and over |  |

Averages of the rates paid on each size group of loans in each area are computed. This is done by dividing the dollar amount of interest charged, figured at an annual rate, by the dollar amount of loans made in each group of loans. The resulting rate averages for the minor size groups for each area are then combined into four major size groups of loans for the area. The weights used for this computation are based on the importance in each area of the minor size groups in the loan portfolios of reporting banks, as of November 20, 1946. As noted previously, the following are the major size categories of loans for which weighted average rates are computed:

$$
\begin{array}{r}
1,000-\$ 9,999 \\
10,000-\quad 99,999 \\
100,000-199,999 \\
200,000 \text { and over }
\end{array}
$$

For each of these loan categories an average rate for all 19 cities is computed by combining the corresponding averages for the three geographic areas. This is likewise done by the use of weights which are based on the distribution of short-term business loans outstanding at rate reporting banks as of November 20, 1946. The computation for loans made in the period December 1-15, 1948 is illustrated in Table 3.

Table 3
Computation of Average Interest Rates on Major Size Groups of Short-Term Business Loans at Banks In 19 Selected Cities, December 1-15, 1948
[Average rates in per cent per annum]

| Size group of loan and geographic area | (1) <br> Weights | Average interest rate ${ }^{1}$ |
| :---: | :---: | :---: |
| \$1,000-\$9,999: |  |  |
| New York City.. | 24 | 4.23 |
| Seven northern and eastern cities. | 22 | 4.51 |
| Eleven southern and western cities. | 54 | 4.62 |
| All cities. | 100 | 4.50 |
| \$10,000-\$99,999: |  |  |
| New York City... | 28 | 3.40 |
| Seven northern and eastern cities. | 25 | 3.60 |
| Eleven southern and western cities. | 41 | 3.68 |
| All cities. | 100 | 3.58 |
| \$100,000-\$199,999: |  |  |
| New York City.. | 26 | 2.70 |
| Seven northern and eastern cities. | 33 | 2.97 |
| Eleven Southern and western cities. | 41 | 3.14 |
| All cities. | 100 | 2.97 |
| \$200,000 and over: |  |  |
| New York City. | 46 | 2.16 |
| Seven northern and eastern cities | 32 | 2.44 |
| Eleven southern and western cities. | 22 | 2.57 |
| All cities. | 100 | 2.34 |

${ }^{1}$ Average for each area in each size group is a weighted average of average rates for minor size groups. Average for all cities in each size group shown is average of area averages shown in Column 2 weighted by the percentages shown in Column 1.

For each of the three geographic areas, and for all 19 cities throughout the country taken together, an average rate is computed as a summary measure of movements in rates on all sizes of loans. In each case the over-all average is obtained by combining the average rates for the four major size groups of loans. The weights used in making each average reflect the relative importance of the loan size
groups in the business loan volume outstanding as of November 20, 1946 at reporting banks in the area concerned. Table 4 illustrates the computation for the December 1-15 period.

## Appendix B

## Development of Revised Series, 1939-48

Quarterly estimates have been presented of average rates on four major size groups of short-term loans to businesses at banks in 19 selected cities for the period March 1939 through March 1948. On the basis of these averages, a revision has been made in the series on average rates for all loans to businesses at these banks. Revised estimates of average rates on all loans were also presented on an annual basis for the three areas of the country.

For the period from March 1939 through March 1948, more than 80 respondent banks supplied the Federal Reserve System with information on the total number and amount of loans made at each interest rate during the four 15 -day reporting periods of each year. Provision was also made for comments regarding loans made under unusual circumstances at special interest rates.

On the basis of these data, it was possible to relate interest rates to average sizes of loans and to prepare estimates of average rates for the four major size groups covered in the new series. The steps in the estimating process were:
(1) For each reporting period, the report for every bank was reworked to single out any individual loans reported and to obtain the average size of groups of loans made at various interest rates. In this connection, each report was scrutinized and

compared with the same bank's reports for nearby periods to eliminate loan groups which were noted by the respondent as including one or more loans made under unusual circumstances or which in the judgment of the statistician seemed to include such loans.
(2) These individual loans and averages (observations) for each reporting bank or branch were plotted by interest rate and loan size. The charts, which showed for each period a pattern of rates declining as loan size increased, revealed cases that were in some way exceptional from a rate standpoint. These were reexamined and the observation rejected if evidence of unusual circumstances was revealed. These rejections were due generally to circumstances where it seemed obvious that one or two large loans (or a few small loans) were mixed with an average containing in number (or dollar amount) primarily small loans (or large loans). Such observations were not useful guides and were thrown out where they could be detected.
(3) The observations were grouped into the
four major size categories of loans. For each observation, the interest rate was multiplied by the dollar amount involved. A preliminary average rate for each size group was computed by dividing the sum of these products by the total of the dollar amounts.
(4) The preliminary averages for each size group were adjusted to the levels indicated by the new series. At the time of the adjustment data were available for an overlap period of three dates (June, September, and December 1948). The levels were also checked against data reported in the business loan survey as of November 20, 1946 by the banks included in the quarterly series.
The resulting series of average rates for the four major size groups of loans were combined into a series of average rates for all loans. This was done on the basis of the same constant set of weights as is used in computing the new average for all 19 cities-that is, as derived from the distribution of short-term business loans outstanding at rate reporting banks on November 20, 1946.

# SAVINGS INSTITUTIONS AND THE CAPITAL MARKETS 

Charles H. Schmidt

Substantial amounts of funds entering the capital markets in recent years have come from institutions that accept individual savings in the form of life insurance premiums, deposits, or share purchases. As these forms of saving continue to grow, the investment activities of the institutions accepting them exert greater influence over the amount and type of securities offered in the capital markets.

As a basis for defining the role played by savings institutions in the present-day capital markets, analysis has been made of the investment activities of life insurance companies, mutual savings banks, and savings and loan associations. Choice of these institutions was dictated in part by the magnitude of their resources and in part by the availability of reasonably complete and current data. Thus, while time deposits of commercial banks represent an important form of institutionalized saving, the investment activities of commercial banks are not included in this analysis because of the difficulty of differentiating those associated with time deposits from those associated with demand deposits.

Savings institutions are but one form of institutional investor. Others are fire and casualty insurance companies, investment trusts, trust companies and trust departments of commercial banks, philanthropic foundations, and educational institutions. For many of these groups, information essential to an analysis of their investment activities is lacking. The effect of all these institutional investors on the capital markets is substantially greater than the effect of savings institutions alone.

## Summary

1. The flow of individual savings into life insurance, mutual savings bank deposits, and savings and loan association shares has significant economic implications. To the extent that savings are kept in this form, rather than used by individuals directly for the purchase of bonds, stocks, and realestate mortgages, investment funds and decisions are transferred from numerous individuals to a relatively small number of savings institutions. Moreover, investment decisions of these institutions are determined by their primary functions and by
statutory regulations as well as by relative yields of alternative investment outlets.
2. Savings institutions, though only one group of institutional investors, have considerable influence in the capital markets. Total resources of life insurance companies, mutual savings banks, and savings and loan associations exceed 89 billion dollars at the present time. Since 1921 their combined assets increased approximately 440 per centdoubling during the prosperous twenties, increasing moderately during the depression and recovery period of the thirties, and nearly doubling again since 1939. Over the entire period 1922-48 assets of life insurance companies increased more than those of mutual savings banks and savings and loan associations.
3. Throughout the period $1934-48$ these savings institutions supplied the bulk of the funds borrowed to finance long-term private capital requirements, and a substantial part of the funds borrowed by Government.
During the prewar period 1934-39, expansion of savings institution investments was concentrated in Government securities and corporate bonds.
During the defense and war period these institutions absorbed nearly one-sixth of the securities issued by the Federal Government. In the postwar period 1946-48, the net increase in corporate bond holdings of life insurance companies exceeded the estimated increase in long-term corporate debt outstanding, while the expansion of savings institution holdings of real-estate mortgages was about twofifths of the estimated increase in real-estate mortgage debt.
At the end of 1948 these savings institutions held nearly one-half of the total of corporate bonds and real-estate mortgages outstanding as compared with a prewar 1929-39 average of less than one-third.
4. Among these savings institutions, life insurance companies play the leading role in business financing. In part, the dominance of life insurance companies is attributable to their larger resources, which in 1948 were roughly two and a half times those of mutual savings banks and four times those of savings and loan associations. Also, it reflects
the nature of life insurance contractual liability, which permits the investment of funds over long periods of time, as well as a somewhat wider range of permissible investments. During the postwar period, life insurance company holdings of business securities and real-estate mortgages increased by roughly 14 billion dollars; at the end of 1948 roughly 37 per cent of their total resources were invested in business securities and 20 per cent in realestate mortgages.
5. Since savings institutions are restricted by law to investment in riskless and near-riskless assets, practically all of their business financing takes the form of long-term credits, evidenced by bonds, mortgages, or notes. In order to obtain investment outlets for a continually growing volume of funds, life insurance companies have relied extensively upon lending directly to businesses by private purchase of entire bond and note issues. Also, they have recently expanded their commercial and industrial real-estate holdings on an equity or risk basis.
6. Since mid-1946 savings institutions, particularly life insurance companies, have sold or redeemed in cash at maturity some 6 billion dollars of their United States Government security holdings. These funds have been largely reinvested in higher-yield and higher-risk mortgages and business securities.

## Functions of Savings Institutions

The investment activities of savings institutions are determined in part by their primary functions as insurers or depositories, in part by the volume of resources at their disposal, and in part by State or Federal laws regulating the type and relative amount of their investments. Finally, savings institutions, like all other investors, are confronted with problems of liquidity, safety of principal, and investment yields.

Life insurance companies, mutual savings banks, and savings and loan associations accept and invest, as insurers or depositories, the savings of individuals. However, the investment problems and policies of a company that insures persons against loss of life or earning power are different from those of an association engaged exclusively in home financing. Within the limits prescribed by statute, these differences in functions are reflected in the
investment portfolios and capital market activities of different savings institutions.

Life insurance companies. There are approximately 580 domestic legal reserve life insurance companies, with combined assets in excess of 55 billion dollars. Their primary function is that of assuring a predetermined income or lump-sum payment to a beneficiary in the event of death of the insured or to the insured on maturity of an endowment or annuity policy. Among these companies there are 12, each with resources of one billion dollars or more, that operate on a nationwide basis and together account for three-fourths of the industry's total resources. Accordingly, the industry's participation in the capital markets is largely reflected in the investment activities of these giant concerns.
Life insurance companies operate under State charter, and are subject to regulation by the insurance commissioners of the various States in which they do business. Moreover, the amount and character of their permissible investments are variously regulated by State statutes. In general, these statutes prohibit, or limit to a small percentage of total assets, the amount invested in equity capital shares, and restrict purchases of corporate bonds and notes to the higher-grade issues. Federal, State, and local government obligations are approved by all States for life insurance company investment, without limit as to the proportion of total assets that may be so invested. Real-estate mortgages are likewise generally approved, subject to certain limitations on the amount lent in relation to the value of the real estate mortgaged. Real estate, other than company-used property, has roughly the same investment status as common stock in most States. In recent years, however, some States have modified their statutes to permit life insurance companies to invest in rental housing projects and certain types of commercial and industrial property to the extent of 10 to 20 per cent of their total assets. ${ }^{1}$
Life insurance companies enjoy greater latitude in their investment activities than do many of the other savings institutions. The majority of their obligations are represented by long-term contracts

[^5]with policyholders. Moreover, their principal liquidity requirements are definitely determinable for some time in advance on the basis of their contractual obligations and their mortality experience. As a consequence, they can and do operate in the investment market on a longer-term basis than would be feasible for mutual savings banks. Thus, as is shown by the percentage distribution of their assets in Table 1, the primary role of life insurance companies in the capital market is that of supplying long-term credit to business through purchase of securities. They also have an important role in supplying mortgage money and funds borrowed by governments, especially the Federal Government.

Mutual savings banks. The majority of mutual savings banks, of which there are approximately 530 with combined assets in excess of 20 billion dollars, are located in the New England and Middle Atlantic States. They operate under State charter and function exclusively as depositories for savings. In other parts of the country their function is performed by other types of institutions. Investment portfolios of mutual savings banks reflect their liquidity requirements as well as statutory limitations on investments. Government securities and real-estate mortgages account for the greater part of mutual savings bank investment, while business security holdings are a relatively small

Source,--See appendix table.
proportion and confined almost entirely to the highest-grade corporate bonds.

Savings and loan associations. There are approximately 6,000 savings and loan associations, with combined assets at the end of 1948 of more than 13 billion dollars. They are mutual societies operating under State or Federal charter and are subject to the supervision and statutory requirements of the charter authority. The old building and loan associations, forerunners of the present-day savings and loan associations, were organized under State charter for the primary purpose of cooperative home financing, but at an early date they also provided a major service as depositories of small savings. Since the establishment of the Federal Home Loan Bank System in 1932 and of the Federal Savings and Loan Insurance Corporation in 1934, with provision for federally chartered associations and for insurance of share accounts up to $\$ 5,000$, the savings depository function of savings and loan associations has assumed even greater importance. At the present time, these associations are primarily savings institutions with financing of home purchases or construction as their major investment activity.
In the case of all Federal and the majority of State associations, investments are limited to first mortgage loans on houses and small apartments in the vicinity of the association, and to United States Government obligations. As a consequence, savings and loan associations have virtually no role in business financing. ${ }^{2}$

## Growth of Savings Institutions

Growth of savings institutions, as reflected by their total asset holdings, is largely dependent upon the volume and disposition of individual savings. In periods of prosperity the amount of savings lodged with such institutions rises, along with increases in individual holdings of cash and demand deposits, security purchases, and direct investment in homes, farms, and unincorporated businesses. In periods of depression additions to savings deposits and purchases of savings and loan association shares generally decline, and may even become negative as a result of withdiawals. In the case of life insurance premiums, however, there is

[^6]expansion during periods of prosperity but relatively little contraction in periods of depression. Individuals increase their commitments on life insurance and annuity policies when times are good, and are reluctant to reduce or cancel such contractual obligations when their incomes decline. Rather than cancel their life insurance, they draw upon other savings to maintain premium payments. Though policyholders may borrow on the cash surrender values of policies, or defer premium payments temporarily, the liquidity requirements which such borrowing entails are usually small relative to the total resources of life insurance companies. As a result, the growth of life insurance company resources is more sustained than that of most institutional investors, and their capital market activities are more persistent.

Individual saving and its disposition. The volume and disposition of individual saving at different levels and under different conditions of economic activity are indicated by data covering the period 1933-48. For purposes of analysis, these data have been grouped by periods, as follows: prewar, 193339; defense and war, 1940-45; and postwar, 1946-48. Though not particularly suitable for the purpose of comparing savings patterns in periods of expansion with those of periods of contraction, this grouping permits some analysis of individual saving in different economic climates.

As is shown in Table 2, the rate of individual savings in the prewar period was low relative to that of the war and postwar periods- 14 billion dollars in 1933-39, as compared with 130 billion in 1940-45 and an estimated 35 billion in 1946-48. Comparable annual rates of savings are 2.0 billion during 1933-39, 21.6 billion during 1940-45, and 11.7 billion during 1946-48.

During the prewar period 1933-39, individuals reduced their holdings of State and local government and corporate securities and savings and loan association shares, and their equities in farm and residential property, as is shown in Table 2. However, individual savings represented by private insurance reserves increased by 10 billion dollars, while 7.4 billion were added to cash and demand deposits, 2.5 billion to holdings of Federal Government securities, and 3.0 billion to individual equity in unincorporated business enterprises. Whether other forms of saving were reduced in order to maintain life insurance premium payments is not
determinable from these data, but the fact that additions to private insurance reserves were a very large proportion of net.individual savings emphasizes the relative constancy of saving through purchase of insurance.

During the defense and war period, individual income and saving increased sharply. Since the greater part of this saving reflected deferred demand -most types of consumer durable goods and many

1 Total individual savings as estimated by Department of Commerce. Additions to cash and demand deposits, private insurance reserves, security holdings, and debt retirement estimated from reserves, security holdings, and debt retirement estimated from Secutities and Exchange Commission data for 1946-47 and first three quarters of 1948. Additions to commercial bank time
deposits, mutual savings bank and postal savings deposits, and deposits, mutual savings bank and postal savings deposits, and savings and loan association shares, as reported in Federal Reserve Bulletin and as estimated by Home Loan Bank Board. Total direct investment and its components estimated from Securities and Exchange Commission and Department of Commerce data for $1946-47$; these estimates are highly tentative and subject to a ubstantial margin of error.
eriods were published by sources given above in nondurable consumer goods were not available during the war-individuals held these savings in the forms of currency, demand deposits, and Federal Government securities. Over 104 billion dollars of savings were accumulated in these forms, as compared with 41 billion placed with savings institutions. So far as direct investment was concerned, a wartime decrease of individual equity in urban homes offset in part an additional investment of 3.8 billion in farm property and unincorporated businesses. Insurance companies, along with mutual savings banks and savings and loan associa-
tions, added substantially to their resources during the defense and war period. The average annual increase of nearly 2.7 billion dollars in private insurance reserves was almost twice that of the prewar period, and part of the increase represented new life insurance policies which would be continued long after the war had ended.
In the postwar period, the net total of individual savings declined to an average of 11.7 billion dollars per year, as compared with the wartime average of 21.6 billion. As would be expected, purchases of Federal Government securities by individuals were sharply curtailed once the period of war financing was ended. However, the average amount of savings lodged with savings institutions increased after the war-in the case of savings and loan associations, from roughly 0.6 billion dollars per year to 1.1 billion; in the case of insurance companies, from 2.7 billion to 3.5 billion. One other characteristic of the postwar period is worth noting -it was the only one of the three periods in which individuals added to their holdings of corporate securities. The amount of such increase was small, however, in comparison with other forms of individual saving. It was only 3 billion dollars as compared with an increase totaling 17 billion in mutual savings bank deposits, savings and loan association shares, and private insurance reserves. The 1.3 billion dollar increase in holdings of State and local government securities appears small in view of the incentives which high Federal income taxes provide for investment in tax-exempt securities, and the greatly increased volume of financing by State and local governments.

Growth in assets of savings institutions. The steadily increasing flow of individual savings into life insurance contracts, savings bank deposits, and savings and loan shares is reflected in the growth of savings institution assets. Over the period 1922-48 the combined assets of savings institutions, as is shown in Table 3, increased from 17 to 89 billion dollars-an expansion of 440 per cent from their 1921 level. Life insurance company assets grew steadily throughout the entire period, even during the depression of the thirties; resources of mutual savings banks, on the other hand, increased relatively little during the thirties, while those of savings and loan associations declined. During the war and postwar periods, resources of life insurance
companies and mutual savings banks nearly doubled, while those of savings and loan associations more than doubled.

Of these savings institutions, life insurance companies have, because of their larger resources, the greatest influence in the capital markets. Their total assets exceeded 55 billion dollars at the end of 1948-about three-fifths of the total for all savings institutions.

## Capital Markets Activities of Savings Institutions

Life insurance companies, mutual savings banks, and savings and loan associations have had a major role in the investment of individual saving for some time, but their recent capital markets activities are of particular interest. For purposes of evaluating these activities, net changes in their various asset holdings have been computed for the periods 1934-39, 1940-45, and 1946-48. While net changes in assets do not measure the total volume of funds flowing into and out of various types of investments, they serve to indicate the relative importance of various capital market activities of savings institutions.

Public versus private financing. During the period 1934-39 the volume of corporate bonds and notes issued for new money (that is, total issues less refunding issues) was relatively small, totaling 3.3 billion dollars. During this same period outstanding real-estate mortgage debt declined by 2.6 billion dollars, while the marketable public debt of the Federal Government increased by 11.7 billion. Savings institutions, having experienced sub-
stantial depreciation in the market value of their investments during the depression, were extremely cautious in their acquisition of business securities and mortgages. This caution, together with a relatively small private demand for borrowed funds, led savings institutions to invest much more heavily in Government securities than in corporate securities and real-estate mortgages during the period 1934-39. In this period, as is shown in Table 4, 7.2 billion dollars was invested in United States Government securities and an additional 0.4 billion in State and local government securities, as compared with a net increase in business security holdings of 2.3 billion.

${ }^{2}$ Policy loans and premium notes of life insurance companies; other loans of mutual savings banks and savings and loan associations.
${ }^{3}$ Cash, real estate, and other miscellaneous assets.
${ }^{4}$ Net increase in total assets.
Note.-Data in this table derived from net changes in asset holdings of life insurance companies, mutual savings banks, and savings and loan associations. They reflect net, rather than gross, sources and uses of funds with no allowance made for write ups and write-downs of investment values. Details may not add to totals because of rounding.

Sources.-Institute of Life Insurance; Life Insurance Association of America; Federal Reserve Bulletin; National Association of Mutual Savings Banks; Home Loan Bank Board; appendix table.

During the defense and war period 1940-45, the Federal Government debt expanded greatly, corporate financing increased moderately, and there was a slight reduction in the total volume of mortgage debt outstanding. During this period, addi-
tions to resources of savings institutions increased substantially as a result of higher wartime incomes and a curtailed flow of consumer goods. With public financing requirements greatly in excess of private capital demand, savings institutions invested the greater part of their newly acquired resources in securities of the Federal Government. Consequently, these securities accounted for 25 billion of the 30 billion dollar net addition to assets of savings institutions during the period 1940-45.
The postwar period has witnessed the revival of private capital demands on a greatly enlarged scale and a sharp curtailment of public financial requirements in excess of current revenues. Since the end of 1945, outstanding marketable debt of the Federal Government has declined by roughly 41 billion dollars, while mortgage debt has increased by an estimated 23 billion and corporate bond and note issues for new money have totaled more than 10 billion. Savings institutions, with substantial resources at their disposal and a desire for higher rates of return on their investments, responded to private capital demands by increasing their holdings of business securities and mortgages to the extent of 21 billion dollars.
Sources of investment funds. The greater part of the funds invested by savings institutions during the period 1934-48 represented new saving, that is, premium receipts, deposits, and undistributed earnings on investments. Some funds, however, have been obtained through sale of previously acquired investments and other assets, as is shown in Table 4. Thus, during the prewar period 193439, real-estate mortgage holdings of savings institutions declined by 2.6 billion dollars. While a large part of this decrease resulted from write-offs rather than cash collections, part of it represented repayments of principal and proceeds from sales which provided funds for reinvestment in other securities. During the defense and war period 1940-45, approximately 1.6 billion dollars was obtained from the sale or maturity of State and local government securities, and roughly 4.2 billion from repayment of policy loans and premium notes, reduction of cash balances, and sales of miscellaneous assets. As some of these miscellaneous assets, such as company-used buildings and equipment, were written down in value rather than sold, the figure of 4.2 billion dollars is only a rough approximation of the funds obtained from reduction of other assets.

Postwar liquidation of investment in Government securities. During the postwar period reduction in holdings of United States Government securities has provided a substantial volume of funds for investment. The funds have been reinvested in higher-yield and higher-risk business securities and mortgages. Especially in the case of the insurance companies the shift of investment from Government securities to private securities and mortgages results from an effort to improve the average return on total investments, which has declined persistently since the late twenties.

During the period 1946-48, as is shown in Table 4, savings institutions supplemented new savings with a net amount of 4.1 billion dollars obtained from the maturity and sale of Government securities in excess of purchases. During the first half of 1946, savings institutions continued to purchase substantial amounts of Government securities. Around the middle of 1946, however, savings and loan associations began to decrease their holdings of Government securities, as is shown in Table 5. In 1947 life insurance companies followed and, by the end of 1948, their holdings had been reduced by 5.3 billion dollars.

Sales, rather than redemptions at maturity, accounted for the major part of the decline. ${ }^{3}$

Over the period July 1946-December 1948 disinvestment from Government securities by mutual savings banks and savings and loan associations was small relative to that of life insurance companies, and for the most part represented maturities rather than sales. Nevertheless, during the two and one-half years the combined sales and maturities of Government securities held by savings institutions amounted to some 6 billion dollars.

Importance of financing by savings institutions. The importance of savings institution activities in the capital markets is indicated in approximate terms by Table 6. In this table net changes in their principal investment holdings are compared with corresponding net changes in three major types of outstanding debt. During the period 1934-39 the net increase of 7.2 billion dollars in

${ }^{1}$ Changes in holdings of approximately 310 life insurance companies.
${ }^{2}$ Less than 50 million dollars.
Changes in holdings of approximately 540 mutual savings banks.
Includes all other nonbank and bank holders.
Note.-Figures, except those for savings and loan associations, represent changes in par value of marketable U. S. Government security holdings. Bond maturities estimated from date of first call or maturity of individual issues. Decreases in holdings of bills, notes, and certificates assumed to be result of maturity or call; to this extent data overstate maturities and understate sales. Details may not add to totals because of rounding.

Sources.- Except for savings and loan associations, computed from data published in Treasury Bulletir. Savings and loan association data from Home Loan Bank Board.
savings institution holdings of United States Government securities amounted to approximately three-fifths of the increase in marketable public debt of the Federal Government. The increase in their holdings of corporate bonds and notes amounted to 2.2 billion dollars, as compared with an estimated decrease of 3.3 billion in total longterm corporate debt, exclusive of corporate mortgage debt, outstanding. The decrease in their mortgage holdings equaled the decline in estimated mortgage debt outstanding.

Change in total of corporate bonds and notes and of real-estate mortgage debt outstanding during 1946-48 partly estimated.

Sources.-Treasury Bulletin; Department of Commerce; Home Loan Bank Board; Spectator Life Insurance Year Book; Federal Loan Bank Board; Spectator Life

Wartime additions to savings institution holdings of United States Government securities amounted to 25 billion dollars-somewhat less than one-sixth of the growth in marketable public debt. During this period their additions to business security holdings amounted to 1.8 billion, as compared with an estimated decrease of 5.9 billion in long-term corporate debt. Their mortgage holdings increased by nearly 2 billion dollars in the face of a continued decline in total outstanding mortgage debt.

During the postwar period 1946-48 savings institutions played a major part in meeting the external financing requirements of business. The net increase in their holdings of business securities exceeded the estimated increase in long-term corporate debt. At the same time, their holdings of mortgages increased roughly two-fifths as much as the estimated growth in total mortgage debt. Their reduction of Government security holdings, on the other hand, was equal to about 10 per cent of the decline in outstanding marketable debt of the Federal Government.

As a result of their wartime and postwar investment activities, the importance of savings institutions as suppliers of private credit in the form of business bonds and notes and real-estate mortgages has increased substantially. At the present time, combined mortgage and corporate bond holdings of life insurance companies, mutual savings banks, and savings and loan associations represent nearly one-half of total mortgage and long-term corporate debt outstanding, as compared with a prewar 1929-39 average of less than one-third.

Note.-End-of-year assets of the savings institutions discussed in this article are summarized for the period $1939-48$ in the following appendix table.

## LAW DEPARTMENT

## Administrative interpretations of banking laws, new regulations issued by the Board of Governors, and other similar material.

## Commodity Credit Corporation Paper

## Amendment to Regulation A

The Board of Governors of the Federal Reserve System, effective February 17, 1949, amended Regulation A relating to discounts for and advances to member banks by Federal Reserve Banks, so as to provide that the requirement that a note be negotiable in order to be discounted shall not apply to any note evidencing a loan which is made pursuant to a commodity loan program of the Commodity Credit Corporation and which is subject to a commitment to purchase by the Commodity Credit Corporation. The regulation was further amended to provide for the use of certificates of interest such as are issued by the Commodity Credit Corporation under its cotton loan program as security for advances made to member banks. Also, the provision of the regulation waiving the requirement of negotiability in the case of any note evidencing a loan which is the subject of a guarantee or commitment made pursuant to Executive Order No. 9112 or the Contract Settlement Act of 1944 has been eliminated because it is now obsolete. The text of the amendment to Regulation A is as follows:

## Amendment to Regulation A

Effective February 17, 1949, Regulation A is amended in the following respects:

1. The last sentence * of subsection (h) of section 1 is amended to read as follows:

The requirement of this section that a note be negotiable shall not be applicable with respect to any note evidencing a loan which is made pursuant to a commodity loan program of the Commodity Credit Corporation and which is subject to a commitment to purchase by the Commodity Credit Corporation.
2. Subsection (a) of section 2 is amended by adding thereto a new sentence reading as follows:

[^9]In the event notes which evidence loans made pursuant to a commodity loan program of the Commodity Credit Corporation and which comply with the maturity requirements of subsection (a) of section 1 of this regulation have been deposited in a pool of notes operated by the Commodity Credit Corporation, the certificate of interest issued by the Commodity Credit Corporation which evidences the deposit of such notes may be accepted as security for an advance made to a member bank under this subsection.

## Consumer Instalment Credit

## Amendment to Regulation W

The Board of Governors, effective March 7, 1949, adopted an amendment to Regulation W-Consumer Instalment Credit-making the standard maximum maturity on all extensions of consumer instalment credit uniformly 21 months, instead of 15 to 18 months, and reducing minimum down payments on furniture, appliances, etc., from 20 per cent to 15 per cent, while retaining the $331 / 3$ per cent minimum down payment on automobiles. The amendment also contains two minor modifications of a technical nature.
The text of the amendment is as follows:

## Amendment No. 3 to Regulation W

Regulation W is hereby amended in the following respects, effective March 7, 1949:

1. By inserting the following immediately after the words "structure or" and immediately before the number " 2 )" in section $7(g)$ of the regulation:
other entire unit designed for residential occupancy, or
2. By changing " 20 per cent" and " 80 per cent" in Part 1, Group B of the Supplement to read, respectively, " 15 per cent" and " 85 per cent."
3. By changing Part 2 of the Supplement to read as follows:

Part 2. Maturities.-The maximum maturity for all listed articles and for unclassified instalment loans is 21 months.
4. By changing the figure " 20 " to " 24 " in Part 3 of the Supplement.

## Resale of Repossessed Article

The fact that an automobile or other listed article has been repossessed does not, in the Board's view, in any way authorize the resale of the article on terms different from those otherwise applicable under Regulation W. It is immaterial that the repossession and sale to a new purchaser follow a "bona fide collection effort," referred to in section $5(c)(1)$ of the regulation, rather than an ordinary repossession of the car. The "obligation" referred to in both sections $5(c)(1)$ and $5(c)(2)$ is the obligation of the original obligor, and not the obligation of a new purchaser or obligor. Thus, any instalment credit arising from the subsequent sale of a repossessed automobile or other listed article should comply with the down payment or maximum loan value, and instalment payment and maturity requirements of the regulation. Any transfer by a finance company or other Registrant to a
third person of the unpaid balance of an instalment credit following repossession of a listed article, the effect of which would release the original obligor or purchaser or substitute a new obligor or purchaser, would be subject to the above views.

While the foregoing is believed to be clear under the regulation, it was considered desirable in this manner to remove any misunderstanding that may have arisen with respect thereto.

## Sale of Demonstrator Automobile

The Board is of the view that the sale of an automobile which has been used and driven as a "demonstrator" by an automobile dealer or salesman constitutes the sale of a used automobile for the purposes of Regulation W. This view applies even though the automobile has not been sold previously, and regardless of whether the sale of the demonstrator occurred before or after the next successive model change for the make of automobile in question. In such a case, Part 4 of the Supplement to the regulation requires that the down payment or maximum loan value be calculated on the basis of the specified percentage of the "appraisal guide value" where such value is lower than the "cash price."

## CURRENT EVENTS AND ANNOUNCEMENTS

## Federal Reserve Meetings

The Federal Advisory Council met in Washington on February 13-15. The annual organization meeting of the Council was held on February 13, at which Edward E. Brown, Chairman of The First National Bank of Chicago, was re-elected President; C. E. Spencer, Jr., Chairman of The First National Bank of Boston, was re-elected First Vice President; Robert V. Fleming, President and Chairman of The Riggs National Bank, was re-elected Second Vice President; and Herbert V. Prochnow was reappointed Secretary. The Council met with the Board of Governors of the Federal Reserve System on February 15.

A meeting of the Presidents of the Federal Reserve Banks was held in Washington on February 25 and 26, and on February 28 the Presidents met with the Board of Governors.

On February 28 and March 1 meetings of the Federal Open Market Committee were held. At the meeting on March 1, Thomas B. McCabe was re-elected as Chairman of the Committee and Allan Sproul as Vice Chairman. The representative members of the Committee elected by the Federal Reserve Banks for the period of one year beginning March 1, 1949, are Allan Sproul, Hugh Leach, Ray M. Gidney, W. S. McLarin, Jr., and C. E. Earhart, Presidents of the Federal Reserve Banks of New York, Richmond, Cleveland, Atlanta, and San Francisco, respectively. The members of the executive committee are Thomas B. McCabe,

Chairman; Allan Sproul, Vice Chairman; Marriner S. Eccles; James K. Vardaman, Jr.; and Hugh Leach.

## Change in Board's Staff

Mr. Frank A. Southard, Jr., resigned as Associate Director of the Board's Division of Research and Statistics effective February 28, 1949, to accept the appointment as United States Executive Director of the International Monetary Fund. Mr. Southard became associated with the Board on August 16, 1948, having previously served as Director of the Office of International Finance of the Treasury Department.

## Death of Director

Mr. L. H. Lund, Vice President and Treasurer, Westinghouse Electric Corporation, Pittsburgh, Pennsylvania, who had served as a Class B director of the Federal Reserve Bank of Cleveland since January 1, 1948, died on March 14, 1949.

## Admissions of State Banks to Membership in the Federal Reserve System

The following State banks were admitted to membership in the Federal Reserve System during the period January 16, 1949 to February 15, 1949:

Ohio
Rock Creek-The Citizens Banking Company of Rock Creek, Ohio

Virginia
Tappahannock-Southside Bank

## NATIONAL SUMMARY OF BUSINESS CONDITIONS

[Compiled February 24, and released for publication February 26]

Industrial production showed little change in January, continuing somewhat below the peak of last October and November. Employment in manufacturing showed a marked decline. Value of department store sales showed a larger decline than usual in January and the first three weeks of February. Prices of agricultural commodities decreased further but recovered part of their declines in mid-February. Prices of some industrial products were reduced further.

## Industrial Production

The Board's seasonally adjusted index of industrial production was 191 per cent of the 1935-39 average in January, as compared with 192 in December, 195 in November, and 193 in January 1948. Activity in durable manufacturing industries decreased slightly in January, while nondurable goods production was somewhat above the December rate. Output of minerals declined 3 per cent.

Steel production rose 2 per cent in January to capacity levels and was at the highest rate on record. Activity in the automobile industry also expanded, reflecting mainly increased production of trucks and of parts for new model passenger cars. Output in the steel and automobile industries has been maintained at the advanced January rate in February. Activity in machinery industries decreased about 4 per cent in January, reflecting reductions in industrial equipment as well as household appliance lines.

Federal Reserve index. Monthly figures, latest shown are for January.

Lumber production showed a substantial decline, in part because of unfavorable weather conditions in the Northwest, and activity in the furniture industry declined 6 per cent. Output of most other durable goods was maintained at about the December level.

According to preliminary indications, output of nondurable goods showed a slight increase in January. Activity at cotton textile, paper, and paperboard mills was above the reduced December rate. Newsprint consumption showed less than the usual seasonal decline. Activity in the petroleum refining, chemicals, and rubber products industries, on the other hand, was reduced somewhat. Output of manufactured food products showed the usual large seasonal decline.

Crude petroleum production declined $31 / 2$ per cent in January and was curtailed further in the early part of February, as stocks of crude and refined products continued to rise. Anthracite production was curtailed sharply in the latter part of January and early February, mainly because of unusually mild winter weather in the East. Output of bituminous coal and of metals was maintained in January at the reduced level of the preceding month.

## Employment

Employment in nonagricultural establishments showed more than the usual large seasonal decline

Bureau of Labor Statistics* estimates adjusted for seasonal variation by Federal Reserve. Proprietors and domestic serv ants are excluded. Midmonth figures, latest shown are for January.
in January and was 250,000 less than in January 1948, reflecting mainly reduced employment in most manufacturing industries. The number of persons unemployed increased by 700,000 in January and was substantially above the level of a year ago.

## Construction

Value of construction contract awards, according to reports of the F. W. Dodge Corporation, dropped sharply in January, with marked declines in most classes of construction. The number of new dwelling units started in January, as estimated by the Bureau of Labor Statistics, was 50,000 units as compared with 56,000 in December and 53,000 in January 1948.

## Distribution

Value of merchandise sold at department stores, despite a large number of special sales, showed more than the usual seasonal decline in January. The Board's adjusted index was 290 per cent of the 1935-39 average, as compared with 309 in December and 286 in January 1948. Sales during the first three weeks of February were 4 per cent smaller than in the corresponding period last year.

Carloadings of railroad freight generally declined further in January and the early part of February and were about 10 per cent below a year ago. Declines in rail freight from the levels of a year ago have resulted in part from diversion of shipments to other forms of transportation.

## Commodity Prices

Following marked declines in January, prices of

Bureau of Labor Statistics' indexes. "All items" includes fuel and housefurnishings groups not shown separately. Midmonth figures, latest shown are for January.
farm products and foods dropped further in the early part of February but in mid-February returned to the levels prevailing at the beginning of the month. Prices of some industrial commodities including scrap metals, alcohol, and rayon and petroleum products, were reduced further in February, while prices of most other industrial items continued to show little change.
Retail food prices continued to decline from mid-January to mid-February, reflecting mainly further sharp decreases in meat prices. In the latter part of February wholesale prices of meats showed some advance from the earlier low points which were one-fourth below the record levels prevailing last summer.

## Bank Credit

Seasonally large Treasury tax receipts increased Treasury deposits at the Reserve Banks in the latter part of January and the first half of February. This reduced deposits and reserves of commercial banks, and banks sold short-term Government securities and drew down their excess reserves. Reserve Bank holdings of Government securities increased as purchases of short-term securities exceeded further sales of bonds.

Business loans at banks in leading cities declined somewhat during the last half of January and the first half of February. Holdings of Government securities were reduced, reflecting sales of shortterm securities. Banks outside New York City increased considerably their portfolios of Treasury bonds.

Tables on the following pages include the principal available statistics of current significance relating to financial and business developments in the United States. The data relating to the Federal Reserve Banks and the member banks of the Federal Reserve System are derived from regular reports made to the Board; index numbers of production are compiled by the Board on the basis of material collected by other agencies; figures for gold stock, money in circulation, Treasury finance, and operations of Government credit agencies are obtained principally from statements of the Treasury, or of the agencies concerned; data on money and security markets and commodity prices and other series on business activity are obtained largely from other sources. Back figures for banking and monetary tables, together with descriptive text, may be obtained from the Board's publication, Banking and Monetary Statistics; back figures for most other tables may be obtained from earlier Bulletins.

${ }^{1}$ Rates shown also apply to advances secured by obligations of Federal intermediate credit banks maturing within 6 months.
Note.-Maximum maturities for discounts and advances to member banks are: 15 days for advances secured by obligations of the Federal Farm Mortgage Corporation or the Home Owners' Loan Corporation guaranteed as to principal and interest by the United States, or by obligations of Federal intermediate credit banks maturing within 6 months; 90 days for other advances and discounts made under Sections 13 and $13 a$ of the Federal Reserve Act (except that discounts of certain bankers acceptances and of agricultural paper may have maturities not exceeding 6 months and 9 months, respectively); and 4 months for advances under Section 10 (b). The maximum maturity for advances to individuals, partnerships, or corporations made under the last paragraph of Section 13 is 90 days. Back figures.-See Banking and Monetary Statislics, Tables 115-116, pp. 439-443.

${ }^{1}$ Averages of daily closing figures for reserves and borrowings and of daily opening figures for other columns, inasmuch as reserves required are based on deposits at opening of business.
demand balances due from domestic banks.
${ }^{2}$ Includes some interbank and U. S. Government time deposits; the amounts on call report dates are shown in the Member Bank Call Report. Note.-Demand deposits adjusted (demand deposits other than interbank and U. S. Government, less cash items reported as in process of collection) of all member banks estimated at 72,300 million dollars in the first half and 72,100 million in the second half of January.

1 Outside Treasury and Federal Reserve Banks. Includes any paper currency held outside the continental limits of the United States; totals for other end-of-month dates shown in table above, totals by weeks in table on p. 255, and seasonally adjusted figures in table on p. 264.

2 Includes $\$ 156,039,431$ held as reserve against United States notes and Treasury notes of 1890.
3 To avoid duplication, amount of silver dollars and bullion held as security against silver certificates and Treasury notes of 1890 outstanding is not included in total Treasury currency outstanding.

4 Because some of the types of money shown are held as collateral or reserves against other types, a grand total of all types has no special significance and is not shown. See note for explanation of these duplications.

Note.-There are maintained in the Treasury-(i) as a reserve for United States notes and Treasury notes of $1890-\$ 156,039.431$ in gold bullion; (ii) as security for Treasury notes of 1890 -an equal dollar amount in standard silver dollars (these notes are being canceled and retired on receipt; (iii) as security for outstanding silver certincates-silver in bulion and standard silver dollars of a monetary value equal to the face amount of such silver certificates; and (iv) as security for gold certificates-gold bullion of a value at the legal standard equal to the face amount of such gold certificates. Federal Reserve notes are obligations of the United States and a first hen on all the assets of the issuing Federal Reserve Bank. Federal Reserve notes are secured by the deposit with Federal Reserve agents of a like amount of gold certificates or of gold certificates and such discounted or purchased paper as is eligible under the terms of the Federal Reserve Act, or of direct obligations of the United States. Federal Reserve Banks must maintain a reserve in gold certificates of at least 25 per cent, including the redemption fund, which must be deposited with the Treasurer of the United States, against Federal Reserve notes in actual circulation; gold certificates pledged as collateral may be counted as reserves. "Gold certificates" as herein used includes credits with the Treasurer of the United States payable in gold certificates. Federal Reserve Bank notes and national bank notes are in process of retirement.

## MONEY IN CIRCULATION WITH ADJUSTMENT FOR SEASONAL VARIATION

${ }^{1}$ For end of year figures, represents change computed on absolute amounts in first column.
Nore.-For discussion of seasonal adjustment factors and for back figures on comparable basis see September 1943 BuLLETIN, pp. 822-826. Because of an apparent change in the seasonal pattern around the year end, adjustment factors have been revised somewhat for dates affected, beginning with December 1942; seasonally adjusted figures for money in circulation, as shown in Banking and Monelary Statistics, Table 111, p. 414, and described on p. 405, are based on an older series of adjustment factors.

${ }^{1}$ National series for which bank debit figures are available beginning with 1919.
2 Number of centers reduced from 193 to 192 beginning December 1947, when one reporting bank was absorbed by a reporting bank in another city. Weekly reporting member bank series.
-Statistics for banks in leading cities revised beginning July 3, 1946; for description of revision and for back figures see Bulletins for June 1947 (pp. 692-693) and July 1947 (pp. 878-883) respectively; deposits and debits of the new series for first six months of 1946 are estimated.

Note.-Debits to total deposit accounts, except interbank accounts, have been reported for 334 centers from 1942 through November 1947 and for 333 beginning December 1947; the deposits from which rates of turnover have been computed have likewise been reported by most banks and have been estimated for others. Debits to demand deposit accounts, except interbank and U. S. Government, and the deposits from which rates of turnover have been computed have been reported by member banks in leading cities since 1935.

2 June 30, 1947 figures are consistent (except that they exclude possessions) with the revised all bank series announced in November 1947 by the Federal bank supervisory agencies, but are not entirely comparable with prior figures shown above; a net of 115 noninsured nonmember commercial banks with total loans and investments of approximately 110 million dollars was added, and 8 banks with total loans and investments of 34 million were transferred from noninsured mutual savings to nonmember commercial banks.

Back figures.-See Banking and Monetary Statistics, Tables 1-7, pp. 16-23; for description, see pp. 5-15 in the same publication. For revisions in series prior to June 30, 1947, see pp. 870-871 of the Bulletin for July 1947.

[^18] 525 million at all insured commercial banks.
${ }_{5}$ Demand deposits other than interbank and U.S. Government, less cash items reported as in process of collection.
For other footnotes see preceding page.
Back figures.-See Banking and Monetary Statistics, Tables 18-45, pp, 72-103 and 108-113.

WEEKLY REPORTING MEMBER BANKS-NEW YORK CITY AND OUTSIDE LOANS AND INVESTMENTS
[Monthly data are averages of Wednesday figures. In millions of dollars]

${ }^{1}$ Beginning June 30, 1948, figures for various loan items are shown gross (i. e., before deduction of valuation reserves); they do not add to. the total and are not entirely comparable with prior figures. Total loans continue to be shown net.
${ }^{2}$ Including guaranteed obligations.
[Monthly data are averages of Wednesday figures. In millions of dollars]

${ }^{2}$ Excluding balances with reporting firms (1) of member firms of New York Stock Exchange and other national securities exchanges and (2) of firms' own partners.

Includes money borrowed from banks and also from other lenders (not including member firms of national securities exchanges).
${ }^{3}$ As reported to the New York Stock Exchange. According to these reports, the part of total customers' debit balances represented by balance secured by U. S. Government securities was (in millions of dollars): November, 49 ; December, 52 ; January, 56.

Note, -For explanation of these figures see "Statistics on Margin Accounts" in Bulletin for September 1936. The article describes the method by which the figures are derived and reported, distinguishes the table from a "statement of financial condition," and explains that the last column is not to be taken as representing the actual net capital of the reporting firms.

Back figures.-See Banking and Monetary Statistics, Table 143, pp. 501-502, for monthly figures prior to 1942, and Table 144, p. 503, for data in detail at semiannual dates prior to 1942.

${ }^{1}$ Monthly and weekly data are averages of daily figures, except for municipal bonds and for stocks, which are based on Wednesday figures.
: Average of taxable bonds due or callable in 15 years and over.

- Prices derived from average yields, as computed by Standard and Poor's Corporation, on basis of a 4 per cent 20-year bond.
${ }^{4}$ Prices derived from average yields, as computed by Standard and Poor's Corporation. ${ }^{\text {Standard and Poor's Corporation. }}$
- Prices derived from averages of median yields on noncallable high-grade stocks on basis of a $\$ 7$ annual dividend.

T Average daily volume of trading in stocks on the New York Stock Exchange.
Back figures.-See Banking and Monetary Statistics, Tables 130, 133, 134, and 136, pp. 475, 479, 482, and 486, respectively, and Bulletins for May 1945, pp. 483-490, and October 1947, pp. 1251-1253.

1 "Net profits" and "net income" refer to income after all charges and taxes and before dividends.
${ }^{2}$ Includes 29 companies engaged in wholesale and retail trade (largely department stores), 13 in the amusement industry, 21 in shipping and transportation other than railroads (largely airlines). and 11 companies furnishing scattered types of service.
following profits figures for the year 1946 include, and those for the fourth quarter exclude, certain large extraordinary year-end profits in the llowing amounts (in millions of dollars): 629 company series-total, 67; machinery, 49; other durable goods, 18; 152 company series-total, 49.
${ }^{4}$ Partly estimated. ${ }^{5}$ Class I line-haul railroads, covering about 95 per cent of all railroad operations.
${ }^{6}{ }_{7}$ Class A and B electric utilities, covering about 95 per cent of all electric power operations. Figures include affiliated nonelectric operations.
${ }^{7}$ Thirty large companies, covering about 85 per cent of all telephone operations. Series excludes American Telephone and Telegraph Company, the greater part of whose income consists of dividends received on stock holdings in the 30 companies.
${ }^{8}$ After all charges and taxes except Federal income and excess profits taxes.
Sources.-Interstate Commerce Commission for railroads; Federal Power Commission for electric utilities (quarterly figures on operating revenue and on income before income tax are partly estimated); Federal Communications Commission for telephone companies (except dividends); published reports for industrial companies and for telephone dividends. Figures for the current and preceding year subject to revision. For description of data and back figures, see pp. 214-217 of the Bulletin for March 1942 and also p. 1126 of the BuLletin for November 1942 (telephone companies) and p. 908 of the BuLLetin for September 1944 (electric utilities).

${ }^{1}$ Including holdings by banks in territories and insular possessions, which amounted to 400 million dollars on June $30,1948$.
2 Includes savings and loan associations, dealers and brokers, and investments of foreign balances and international accounts in this country.
Note.-Holdings of Federal Reserve Banks and U. S. Government agencies and trust funds are reported figures; holdings of other investor groups are estimated by the Treasury Department. The derived totals for banks and nonbank investors differ slightly from figures in the Treasury Bulletin because of rounding.

$r$ Revised. $\quad p$ Preliminary.
1 Excess of receipts $\left(+\right.$ ) or expenditures ( - ). $\quad{ }^{2}$ Excluding items in process of collection beginning with July 1947.
3 For description, see Treasury Bullelin for September 1947, and subsequent issues.
${ }^{4}$ Including 3 billion dollar transfer to Foreign Economic Cooperation Trust Fund, from which expenditures are made in later months.
${ }^{5}$ Change in classification. ${ }^{6}$ Including surplus property receipts and receipts from renegotiation of war contracts, which for fiscal years
1946-1948 amounted to 501,2.886, and 1,929 million dollars and 1,063,279, and 161 million, respectively.
7 These are appropriated directly to the Federal old-age and survivors insurance trust fund.
March 1949

|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

* Includes certain business type activities of the U. S. Government.

1 Assets are shown on a net basis, i. e., after reserve for losses.
${ }^{2}$ Totals for each quarter include the United States' investment of 635 million dollars in stock of the International Bank for Reconstruction and Development and its subscriptions of 2,750 million to the International Monetary Fund
${ }^{3}$ Excluding U.S. Maritime Commission. Latest available figures for this agency, which are included in the totals for earlier quarterly dates shown above, are as of Mar. 31, 1947. Inclusion or current data for the Commission will be resumed when available.

4 Less than $\$ 500,000$. ${ }^{5}$ Includes Farm Security Administration program. Homes Conversion program, Public War Housing program, and Veteran's Re-use Housing program, which were previously shown under "All other," as well as Public Housing Administration activities under the United States Housing Act, as amended.

- Includes War Damage Corporation, Smaller War Plants Corporation, and Defense Homes Corporation, all of which are in liquidation.
${ }^{7}$ Certain activities previously included are now shown under "Public Housing Administration"; see footnote 5. Figures for one small agency included herein are for a date other than Sept. 30, 1948.

Note. -This table is based on the revised form of the Treasury Statement beginning Sept. 30, 1944, which is on a quarterly basis. Quarterly figures are not comparable with monthly figures previously published. For monthly figures prior to Sept. 30, 1944, see earlier issues of the Bulletin (see p. 1110 of the November 1944 Bulletin) and Banking and Monetary Siatistics, Table 152. p. 517.

* Average per working day.
p Preliminary.
${ }^{r}$ Revised.
${ }^{1}$ For indexes by groups or industries, see pp. 284-287. For points in total index, by major groups, see p. 306.
: Based on F. W. Dodge Corporation data; for description, see p. 358 of Bulletin for July 1931; by groups, see p. 291 of this Bulletin.
${ }^{3}$ The unadjusted indexes of employment and pay rolls, wholesale commodity prices, and consumers' prices are compiled by or based on data of the Bureau of Labor Statistics. Nonagricultural employment covers employees only and excludes personnel in the armed forces.
${ }^{4}$ For indexes by Federal Reserve districts and other department store data, see pp. 293-296.
Back figures in Bulletin.--For industrial production, August 1940, pp. 825-882, September 1941, pp. 933-937, and October 1943, pp. 958-984; for department store sales, June 1944, pp. 549-561.

## INDUSTRIAL PRODUCTION, BY INDUSTRIES

(Adjusted for Seasonal Variation)
[Index numbers of the Board of Governors. 1935-39 average $=100$ ]

Preliminary. $\quad$ Revised.
i Series included in total and group inderes but not available for publication separately.

# INDUSTRIAL PRODUCTION, BY INDUSTRIES-Continued <br> (Adjusted for Seasonal Variation) 

${ }^{p}$ Preliminary. $\quad$ Revised. ${ }^{1}$ Series included in total and group indexes but not available for publication separately.
2 This series is in process of revision
Note.-For description and back figures see Bulletin for October 1943, pp. 940-984, September 1941, pp. 878-881 and 933-937, and August 1940, pp. 753-771 and 825-882.

$\rightarrow$ Corrected.
${ }^{1}$ Net proceeds to borrowers. ${ }^{2}$ Mortgages insured under War Housing Title VI through April 1946; figures thereafter represent mainly mortgages insured under the Veterans' Housing Title VI (approved May 22, 1946) but include a few refinanced mortgages originally written under the War Housing Title VI. Beginning with December 1947, figures include mortgages insured in connection with sale of Government owned war housing, and beginning with February 1948 include insured loans to finance the manufacture of housing.
${ }^{3}$ Less than $\$ 500,000$.
Note.-Figures represent gross insurance written during the period and do not take account of principal repayments on previously insured loans. Figures include some reinsured mortgages, which are shown in the month in which they were reported by FHA. Reinsured mortgages on rental and group housing (Title II) are not necessarily shown in the month in which reinsurance took place.

${ }^{p}$ Preliminary, ${ }^{r}$ Revised.
${ }^{1}$ Including both domestic and foreign merchandise. Beginning January 1948, recorded exports include shipments under the Army Civilian Supply Program for occupied areas. The average monthly value of such unrecorded shipments in 1947 was 75.9 million dollars (preliminary).
${ }_{2}$ General imports including merchandise entered for immediate consumption and that entered for storage in bonded warehouses.

$p$ Preliminary.
Revised.
${ }^{1}$ Sales indexes revised beginning January 1942; back figures a vailable from Federal Reserve Bank of New York.
${ }^{3}$ Figures for sales are the average per trading day, while those for stocks are as of the end of the month or the annual average
Note.-For description and monthly indexes for back years for sales see Bulletin for June 1944, pp. 542-561, and for stocks see Bulletin for June 1946, pp. 588-612.

${ }^{1}$ The ratio of stocks to sales is obtained by dividing stocks at the end of the month by sales during the month and hence indicates the number of months' supply on hand at the end of the month in terms of sales for that month.
${ }^{2}$ The 1941 average of monthly sales for each department is used as a base in computing the sales index for that department. The stocks index is derived by applying to the sales index for each month the corresponding stocks-sales ratio. For description and monthly indexes of sales and stocks by department groups for back years, see pp. 856-858 of Bulletin for August 1946 . The titles of the tables on pp. 857 and 858 were reversed.
${ }^{3}$ For movements of total department store sales and stocks see the indexes for the United States on p. 293.
4 Index numbers of sales and stocks for this department are not available for publication separately; the department, however, is included in group and total indexes. ${ }^{5}$ Data not available.

NoTE.-Based on reports from a group of large department stores located in various cities throughout the country. In 1947, sales and stocks at these stores accounted for about 50 per cent of estimated total department store sales and stocks. Not all stores report data for all of the departments shown; consequently, the sample for the individual departments is not so comprehensive as that for the total.

${ }^{p}$ Preliminary.

- Corrected.
${ }^{r}$ Revised.
${ }^{1}$ Includes construction expenditures for crude petroleum and natural gas drilling.
${ }^{2}$ Consists of sales abroad and domestic sales of surplus consumption goods and materials.
2 Less than 50 million dollars.
4Total wage and salary receipts, as included in "Personal income," is equal to total disbursements less employee contributions to social insur ance. Such contributions are not available by industries.
- Includes compensation for injuries, employer contributions to private pension and welfare funds, and other payments.
${ }^{6}$ Includes business and professional income, farm income, and rental income of unincorporated enterprise; also a noncorporate inventory valuation adjustment.
' Includes government social insurance benefits, direct relief, mustering out pay, veterans' readjustment allowances and other payments, as well as consumer bad debts and other business transfers.

8 Includes personal income exclusive of net income of unincorporated farm enterprise, farm wages, agricultural net rents, agricultural net interest, and net dividends paid by agricultural corporations.

Note.-Details may not add to totals because of rounding.
Source.--Same as for preceding page.

${ }_{1}^{1}$ Figures for other than Wednesday dates are shown under the Wednesday included in the weekly period.

- 2 For charts on pp. 22, 29, and 34 figures for a more recent period are available in the regular Bulletin tables that show those series. Because the Chart Book is usually released for duplication some time after the Bulletin has gone to press, most weekly charts and several monthly charts include figures for a more recent date than are shown in this table.
${ }^{3}$ Adjusted for seasonal variation.
${ }^{4}$ Beginning with July 1948 includes expenditures from Foreign Economic Cooperation Trust Fund.
${ }^{5}$ The chart "Rates Charged on Customers' Loans by Banks in Principal Cities," previously shown on p. 31, is replaced in the March issue of the Chart Book by a chart on "Rates Charged by Banks on Short-term Loans to Business." For description of the data shown on the new chart, see "New Statistics of Interest Rates on Business Loans." p. 228-37 of this Bulletin.
bestimates for January-March 1949 quarter are (in billions of dollars): All business, 4.4; manufacturing and mining, railroads and utilities, 3.0; manufacturing and mining. 2.0.
* Monthly issues of this edition of the Chart Book may be obtained at an annual subscription rate of $\$ 9.00$; individual copies of monthly issues at $\$ 1.00$ each.

Wholesale prices ..... 326
Retail food prices and cost of living. ..... 327
Security prices ..... 327

Tables on the following pages include the principal available statistics of current significance relating to gold, international capital transactions of the United States, and financial developments abroad. The data are compiled for the most part from regularly published sources such as central and commercial bank statements and official statistical bulletins, some data are reported to the Board directly. Figures on international capital transactions of the United States are collected by the Federal Reserve Banks from banks, bankers, brokers, and dealers in the United States in accordance with the Treasury Regulation of November 12, 1934. Back figures for all except price tables, together with descriptive text, may be obtained from the Board's publication, Banking and Monetary Statistics.

Gold production in U.S.S. R.: No regular Government statistics on gold production in U.S.S. R. are available, but data of percentage change Irregularly given out by officials of the gold mining industry, together with certain direct figures for past years, afford a basis for estimating annua production as follows: 1934,135 million dollars: 1935,158 million; 1936,187 million; 1937,185 million; 1938 , 180 million.
${ }_{1}$ Estimates of United States Bureau of Mines. $\quad r$ Revised. $\quad$ Corrected.
${ }_{2}$ Beginning 1942, figures reported by American Bureau of Metal Statistics. Beginning 1944, they are for Gold Coast only.
8 Reported by American Bureau of Metal Statistics.
4 Includes Philippine production received in United States through 1945. Annual figures are estimates of United States Mint. Monthly fgures are estimates of American Bureau of Metal Statistics, those for 1947 having been revised by subtracting from each monthly figure $\$ 452,705$ 60 that aggregate for the year is equal to the annual estimate compiled by the United States Mint.
${ }_{5}$ Gold exports, reported by the Banco Nacional de Nicaragua, which states that they represent approximately 90 per cent of total production.
${ }^{6}$ Beginning 1948, subject to revision. $\quad 7$ Monthly figures reported by the American Bureau of Metal Statistics.
Note.-For explanation of table and sources, see Bulletin for June 1948, p. 731; February 1939, p. 151; July 1938, p. 621; June 1938, p. 540; April 1933, pp. 233-235; and Banking and Monelary Statistics, p. 524 . For annual estimates compiled by the United States Mint for these and other countries in the period 1910-1941, see Banking and Monetary Statistics, pp. 542-543

## ${ }_{1}$ Preliminary, T Revised.

 and deposit accounts held with the U. S. Treasury, beginning Sept. 28, 1938, also funds held at commercial banks in New York City by centra banks maintaining accounts at the Federal Reserve Bank of New York; beginning July 17, 1940, also funds in accounts at the Federal Reserve Bank of New York which had been transferred from central bank to government names; beginning with the new series commencing with the month of July 1942, all funds held with banks and bankers in the United States by foreign central banks and by foreign central governments and their agencies (including official purchasing missions, trade and shipping missions, diplomatic and consular establishments, etc.).

2 The weekly series of capital movement statistics reported through July 1, 1942, was replaced by a monthly series commencing with July 1942 Since the old series overlapped the new by one day, the cumulative figures were adjusted to represent the movement through June 30 only. This adjustment, however, is incomplete since it takes into account only certain significant movements known to have occurred on July 1 . Subsequent figures are based upon new monthly series. For further explanation, see Bulletin for January 1943, p. 98.

8 Includes outfow of $\$ 249,300,000$ resulting from the sale of debentures in the United States by the International Bank for Reconstruction and Development in July 1947. (Of the total issue of $\$ 250,000,000, \$ 700,000$ was sold directly to Canadian purchasers.)

4 Includes inflow of 74.5 million dollars from Dec. 31, 1947, through May 31, 1948, 79.5 million from June 30 through Sept. 30, and 81.6 million from Oct. 31 through Dec. 31, 1948, resulting from net purchases of domestic securities by international institutions.

Note.--Statistics reported by banks, bankers, brokers, and dealers. For full description of statistics see Banking and Monetary Statistics, pp . 558-560; for back figures through 1941 see Tables 161 and 162, pp. 574-637, in the same publication, and for those subsequent to 1941 see Bulletin for December 1945, pp. 960-974.

$p$ Preliminary.
${ }^{1}$ Breakdown not available for most of these countries until June 30, 1942.
${ }^{2}$ Beginning January 1948, includes Pakistan, Burma, and Ceylon, previously included with India.

Footn tes to table on preceding page.
${ }^{p}$ Preliminary. $\quad{ }^{r}$ Revised.
Country breakdown is for "Official and private.
2 Official Canadian holdings of U. S. dollars on Dec. 31, 1946, amounted to 686.2 million dollars, according to the annual report of the Foreign Exchange Control Board of Canada for 1946

8 Breakdown not available for most of these countries until June 30, 1942.
4 Beginning March 1947, figures include balances in accounts opened by occupation authorities for foreign trade purposes.
Note.-Certain of the figures are not strictly comparable with the corresponding figures for preceding months owing to changes in reporting practice of various banks. The cumulative figures in Tables 1, 2, and 3 of "Net Capital Movement to United States" have been adjusted to exclude the unreal movements introduced by these changes. For further explanation see Banking and Monetary Statistics, pp. 578-584, and Bulletin for March 1947, p. 339, and September 1945, pp. 967-970.

$p$ Preliminary. $\quad r$ Revised.
Note.-The figures in this table are not fully comparable throughout since certain changes or corrections took place in the reporting practice of reporting banks on Aug. 12. 1936, and Oct. 18, 1939. (See Banking and Monetary Statistics, Table 161, pp. 589 and 591 .) On June 30, 1942, reporting practice was changed from a weekly to a monthly basis. For further information see Bulietin for September 1945, pp. 971-974.

[^33]CENTRAL BANKS—Continued

$r$ Revised.
${ }^{1}$ Government decree of Apr. 24, 1946, provided for the guarantee of all deposits registered in the name of the Central Bank.
${ }^{2}$ By decree of May 24, 1946, the Central Bank became responsible for all subsidiary money.
3 In accordance with the law of July 28, 1948, the National Bank revised its weekly statement, effective Sept. 16, 1948. The new figurea are therefore not comparable with those shown previously. Figures on the old basis through August 1948 are given in the Bulletin for November 1948 and prior issues. A detailed description comparing the items in the new and the old form is given in the Belgian newspaper "Echo de la Bourse" for Sept. 20, 1948.
${ }^{4}$ Latest month available.
${ }^{5}$ For last available report (January 1943), see Bulletin for July 1943, p. 697.
6 Beginning January 1948, gold valued at 31 pesos per U.S. dollar, while previously it was valued at 4.855 pesos per dollar.
${ }^{7}$ This figure represents the amount of the bank's subscription to the Fund less the bank's local currency liability to the Fund. Until such me as the Fund engages in operations in this currency, the "net claim" will equal the country's gold contribution

8 Gold not reported separately beginning May 31, 1948.
${ }^{\bullet}$ Gold not reported separately beginning Dec. 31, 1946.

${ }^{1}$ This figure represents the amount of the bank's subscription to the Fund less the bank's local currency liability to the Fund. Until such time as the Fund engages in operations in this currency, the "net claim" will equal the country's gold contribution
${ }^{2}$ For last available report from the central bank of Rumania (June 1944), see Bulletin for March 1945, p. 286; and of Yugoslavia (Feb. ruary 1941), see Bulletin for March 1942, p. 282.
${ }^{8}$ Gold revalued in June 1946 from approximately 85 to 172 shillings per fine ounce.
${ }^{4}$ Includes small amount of non-Government bonds.
${ }_{6} 6$ Gold revalued on Sept. 9, 1946, from 1,406.58 to $3,150.77$ Turkish pounds per fine kilogram.
6 Latest month available.
${ }^{7}$ Beginning October 1944, a certain amount of gold formerly reported in the bank's account shown separately for account of the Government.

See Bulletin for December 1936, p. 1025.

Note.-For monthly figures on money rates in these and other foreign countries through 1941 see Banking and Monetary Statistics, Table 172, pp. 656-661, and for description of statistics see pp. 571-572 in same publication.

COMMERCIAL BANKS

1 From September 1939 through November 1946, this table represents aggregates of figures reported by individual banks for days, varying from bank to bank, toward the end of the month. After November 1946, figures for all banks are compiled on the third Wednesday of each month, except in June and December, when the statements give end-of-month data.

Note.-For back figures and figures on German commercial banks, see Banking and Monetary Statistics. Tables 168-171, pp. 648-655, and for description of statistics see pp. 566-571 in same publication.

[^0]:    A copy of the Federal Reserve Bulletin is sent to each member bank without charge. The subscription price in the United States and its possessions, Bolivia, Canada. Chile, Colombia, Costa Rica, Cuba, price in the enited States and its possessions, Bolivia, Canada, Chile, Combia, Costa Rica, Cuba, Dominican Republic, Ecuador, Guatemala, Haiti, Republic of Honduras, Mexico, Newfoundland (including Labrador), Nicaragua, Panama, Paraguay, Peru, El Salvador, Uruguay, and Venezuela is $\$ 2.00$ per annum or 20 cents per copy; elsewhere, $\$ 2.60$ per annum or 25 cents per copy. Group subscriptions in the Unit
    $\$ 1.50$ for 12 months.

[^1]:    ${ }^{1}$ Less than 05 per cent.

[^2]:    ${ }^{1}$ See "Commercial Loan Rates at Banks in Principal Cities," Federal Reserve Bulletin, November 1939, pp. 963-67, and Winfield W. Riefler, Money Rates and Money Markets in the $U$ nited States, Harpers, 1930.
    ${ }^{2}$ Short-term loans include loans maturing in one year or less. The general term "interest rate" as used in this paper includes discount rates. The figures reported are the nominal rates indicated on the loan notes.

[^3]:    ${ }^{3}$ For a description of the structure of interest rates on business loans as of Nov. 20, 1946, see Richard Youngdahl, "The Structure of Interest Rates on Business Loans," Federal Reserve Bulietin, July 1947.

[^4]:    4 No further processing of the data by the respondent banks is necessary. The information is put on punch cards at the Reserve Banks. Consideration was given to the feasibility of including information for each loan on size and business of borrower, but in the final form this was not done since some banks-because of the form in which their records are keptwould have found it inconvenient to provide the information. Size of business is closely correlated with size of loan and this classification, although it would add significantly to the this classification, although it would add significantly to the
    accuracy of the data, is not essential. Rate variations are accuracy of the data, is not essential. Rate variations are
    not as large by kind of business as by the other two attributes.

[^5]:    ${ }^{1}$ For further details see "Statutory Regulation of Life Insurance Investment," Yale Law Journal, June 1948, pp. 1256 75, and "A New Source of Investment for Life Insurance, Companies Provides a New Form of Corporate Financing," Monthly Revieze, Federal Reserve Bank of Richmond, Oct. 31, 1948, pp. 3-7.

[^6]:    ${ }^{2}$ For a more detailed discussion of savings and loan association activities during the past 20 years see Norman Strunk, "The Improved Position of Savings and Loan Associations," Journal of Finance, October 1947, pp. 1-21.

[^7]:    ${ }^{8}$ These figures do not reflect with complete accuracy the total volume of life insurance company funds flowing into and out of Government securities during this period. For one thing, they represent changes in par rather than book value of security holdings. For another, decreases in bills, notes, and certificates are assumed to have resulted from maturities rather than sales.

[^8]:    ${ }_{1}^{1}$ Unless otherwise noted, data are from Institute of Life Insurance, Life Instrance Fact Book, 1948.
    ${ }^{2}$ Data for years $1939-41$ inclusive estimated from reports of 49 life insurance companies compiled by Life Insurance Association of America; data for other years supplied by the Institute of Life Insurance.
    ${ }^{3}$ Figures for recent years include small amounts of World Bank bonds.
    ${ }_{5}^{4}$ Data from Spectator Life Insurance Year Book, 1948, and Institute of Life Insurance.
    Anajor fems from federal Reserve Bulletin; others from Federal Reserve Board, National Association of Mutual Savings Banks, and Annual Reports of the Comptroller of the Currency.
    ${ }_{6}$ Estimated on basis of data published by National Association of Mutual Savings Banks and in Annual Reports of the Comptroller of the Currency.
    ${ }_{8}^{7}$ Major items from Home Loan Bank Board, Statistical Summary, 1948; other items supplied by Home Loan Bank Board.
    ${ }^{8}$ Less than 50 million dollars.
    Note.-Details may not add to totals because of rounding.

[^9]:    * This sentence was added to the regulation in 1942 and constitutes the third sentence of subsection ( $h$ ) of section 1.

[^10]:    ${ }^{1}$ After deducting $\$ 33,000$ participations of other Federal Reserve Banks on Jan. 26; Feb. 2; Feb. 9; Feb. 16; and Feb. 23.

[^11]:    ${ }^{1}$ Includes any banks in outlying sections of reserve cities that have

[^12]:    1 Total of amounts of coin and paper currency shown by denominations less unassorted currency in Treasury and Federal Reserve Banks.
    2 Includes unassorted currency held in Treasury and Federal Reserve Banks and currency of unknown denominations reported by the Treasury as destroyed. $\quad{ }^{3}$ Paper currency only; $\$ 1$ silver coins reported under coin.

    Back figures.-See Banking and Monetary Statistics, Table 112, pp. 415-416.

[^13]:    ${ }_{2}{ }^{1}$ Preliminary Includes demand deposits, other than interbank and U. S. Government, less cash items in process of collection.
    2 Beginning with December 1938, includes United States Treasurer's time deposits, open account.
    'Time deposits adjusted exclude interbank time deposits; United States Treasurer's time deposits, open account; and postal savings redeposited in banks.

    - Beginning June 1941, the commercial bank figures exclude and mutual savings bank figures include three member mutual savings banks.

    5 Prior to June 30, 1947, includes a relatively small amount of demand deposits.

    - Includes both amounts redeposited in banks and amounts not so redeposited; excludes amounts at banks in possessions.

    Note.-Except on call dates, figures are rounded to nearest 100 million dollars. See Banking and Monetary Stalistics, p. 11, for description and Table 9, pp. 34-35, for back figures.

[^14]:    Preliminary.
    ${ }^{1}$ Outstanding principal, represented by certificates of deposit.
    2 Includes working cash with postmasters, 5 per cent reserve fund and miscellaneous working funds with Treasurer of United States, accrued interest on bond investments, and accounts due from late postmasters.

    Back figures.-See Banking and Monetary Statistics. p. 519; for description, see p. 508 in the same publication.

[^15]:    ${ }^{1}$ Represents banks which, during the periods shown, closed temporarily or permanently on account of financial difficulties; does not include banks whose deposit liabilities were assumed by other banks at the time of closing (in some instances with the aid of Federal Deposit Insurance Corporation loans).
    ${ }^{2}$ Deposits of member banks and insured nonmember banks suspended are as of dates of suspension, and deposits of noninsured nonmember banks are based on the latest data available at the time the suspensions were reported.
    Back figures.-See Banking and Monetary Statistics, pp. 283-292: for description, see pp. 281-282 in the same publication.

[^16]:    © Partly estimated.
    ${ }^{r}$ Revised.
    *"All banks" comprise "all commercial banks" and "all mutual savings banks." "All commercial banks" comprise "all nonmember com mercial banks" and "all member banks" with exception of three mutual savings banks that became members in 1941 . Stock savings banks and nondeposit trust companies are included with "commercial" banks. Number of banks includes a few noninsured banks for which asset and liability data are not available.

    Beginning June 30, 1942, excludes reciprocal balances, which on Dec. 31, 1942, aggregated 513 million dollars at all member banks and 525 million at all insured commercial banks.

[^17]:    * These figures do not include data for banks in possessions of the United States. During 1941 three mutual savings banks became members of the Federal Reserve System; these banks are included in "member banks" but are not included in "all insured commercial banks."

    Beginning June 30,1948 , figures for various loan items are shown gross (i. e., before deduction of valuation reserves); they do not add to the total and are not entirely comparable with prior figures. Total loans continue to be shown net
    ${ }^{2}$ During the period Dec. $31,1942-$ June 30,1945 , agricultural loans included loans to dealers, processors, and farmers' cooperatives covered by purchase agreements of the Commodity Credit Corporation, which are now classified as commercial and industrial loans; consequently, beginning Dec. 31,1945 , these items may not be entirely comparable with prior figures.

    Central reserve city banks.

[^18]:    ${ }^{4}$ Beginning June 30,1942, excludes reciprocal bank balances, which on Dec. 31, 1942, aggregated 513 million dollars at all member banks and

[^19]:    ${ }^{3}$ Demand deposits other than interbank and U.S. Government, less cash items reported as in process of collection.
    ${ }^{4}$ Monthly and weekly totals of debits to demand deposit accounts except interbank and U. S. Government accounts.
    Back figures.-For description of revision beginning July 3, 1946, see Bulletin for June 1947, p. 692, and for back figures on the revised basis, see Bulletin for July 1947, pp. 878-883; for old series, see Banking and Monetary Stalistics, pp. 127-227.

[^20]:    * Separate figures for New York City are shown in the immediately preceding table and for the City of Chicago in this table. The figures
    for the New York and Chicago Districts, as shown in this table, include New York City and Chicago, respectively.
    For other footnotes see preceding table.

[^21]:    ${ }_{1}^{1}$ Monthly and weekly data are averages of daily figures, except for municipal bonds, which are based on Wednesday figures.
    ${ }^{2}$ Standard and Poor's Corporation. ${ }^{3}$ U. S. Treasury Department.
    ${ }^{2}$ Moody's Investors Service, week ending Friday. Because of limited number of suitable issues, the industrial Aaa and Aa groups have been reduced from 10 to 5 and 6 issues, respectively, and the railroad Aaa and Aa groups from 10 to 5 issues.

    Back figures.-See Banking and Monetary Statistics, Tables 128-129, pp. 468-474, and Bulletin for May 1945, pp. 483-490, and October 1947, pp. 1251-1253

[^22]:    ${ }^{+}$Revised.
    ${ }^{1}$ Estimates of new issues sold for cash in the United States.
    ${ }^{2}$ Gross proceeds are derived by multiplying principal amounts or number of units by offering price.
    ${ }^{3}$ Estimated net proceeds are equal to estimated gross proceeds less cost of flotation, i.e., compensation to underwriters, agents, etc., and expenses. $\quad{ }^{4}$ Includes repayment of other debt and other purposes.

    Source.-Securities and Exchange Commission; for compilation of back figures, see Banking and Monetary Slatistics (Table 138, p. 491), 2 publication of the Board of Governors.

[^23]:    ${ }^{p}$ Preliminary.
    ${ }^{1}$ Series included in total and group indexes but not available for publication separately.

[^24]:    ${ }^{1}$ Includes self-employed, unpaid family, and domestic service workers.
    ${ }_{2}$ Annual averages for 1940 include an allowance for January and February inasmuch as the monthly series began in March 1940.
    Note.-Details do not necessarily add to group totals. Information on the labor force status of the population is obtained through interviews of households on a sample basis. Data relate to the calendar week that contains the eighth day of the month. Back data are available

[^25]:    ${ }^{1}$ The RFC Mortgage Company, the Federal National Mortgage Association, the Federal Deposit Insurance Corporation, and the United States Housing Corporation.
    ${ }^{2}$ Including mortgage companies, finance companies, industrial banks, endowed institutions, private and State benefit funds, etc.

    Note.-Figures represent gross amount of mortgages held, excluding terminated mortgages and cases in transit to or being audited at the ing terminated mortgages and cas
    Federal Housing Administration.

[^26]:    - Revised.

    Note.-For description and back data, see pp. 529-533 of the Bulletin for June 1941. Based on daily average loadings. Basic data compiled by Associaion of American Railroads. Total index compiled by combining indexes for classes with weights derived from revenue data of the Interstate Commerce Commission.

[^27]:    $r$ Revised.
    Note.-Revised series. For description and back figures, see pp. 874-875 of Bulletin for September 1944.

[^28]:    $p$ Preliminary. $r$ Revised.

[^29]:    Preliminary.
    1 Figures include only personal instalment cash loans and retail automobile direct loans shown on the following page, and a small amount of other retail direct loans not shown separately. Other retail direct loans outstanding at the end of January ampunted to 100 million dollars and loans made during January were 10 million.
    ${ }^{2}$ Figures include only personal instalment cash loans, retain automobile direct loans, and other retail direct loans. Direct retail instalment loans are obtained by deducting an estimate of paper purchased from total retail instalment paper.
    ${ }^{3}$ Includes only loans insured by Federal Housing Administration.

[^30]:    ${ }^{p}$ Preliminary. $\quad{ }^{r}$ Revised.
    ${ }^{1}$ Collections during month as percentage of accounts outstanding at beginning of month.

[^31]:    $p$ Preliminary.
    Excludes mutual savings banks, on a few of which some checks are drawn.
    2 Includes branches and other additional offices at which deposits are received, checks paid, or money lent, including "banking facilities" at military reservations (see footnote 3, p. 191 of the Bulletin for February 1949.

    Back figures.-See Banking and Monetary Statistics, Table 15, and Annual Reports.

[^32]:    $p$ Preliminary.
    1 Total capital movement by countries differs from total capital movement in Table 1 by reason of exclusion of movement in banking funds of international institutions.

    See Table 1, footnotes 3 and 4.

[^33]:    ${ }^{1}$ Through February 1939, valued at legal parity of 85 shillings a fine ounce; thereafter at market price, which fluctuated until Sept. 6, 1939. when it was officially set at 168 shillings per fine ounce; the latter rate. remained in effect until June 9.1945 , when it was raised to 172 shillings and three pence.
    ${ }_{2}$ Securities and silver coin held as cover for fiduciary issue, the amount of which is also shown by this figure.
    ${ }^{3}$ Notes issued less amounts held in banking department.
    4 On Jan. $6,1939,200$ million pounds sterling of gold (at legal parity) transferred from Bank to Exchange Equalization Account; on Mar. 1. 1939, about 5.5 million pounds (at current price) transferred from Exchange Account to Bank; on July 12 , 1939 , 20 million pounds transferred from Exchange Account to Bank; on Sept. 6, 1939, 279 million pounds transferred from Bank to Exchange Account.
    ${ }_{5}$ Fiduciary issue decreased by 50 million pounds each on Jan. 7, Feb. 4, and Mar. 3, 1948, increased by 25 million pounds on Dec. 22,1948 , and decreased by 25 million pounds on Jan. 5,1949 . For details on previous changes in the fiduciary issue see Bulletin for February 1948 , p. 254 .

    Note.-For back figures on Bank of England, see Banking and Monetary Statistics, Table 164, pp. 638-640; for description of statistics, see pp. 560-561 in same publication.

[^34]:    ${ }^{1}$ This figure represents the amount of the bank's subscription to the Fund less the bank's local currency liability to the Fund. Until such me as the Fund engages in operations in this currency, the "net claim" will equal the country's gold contribution
    ${ }^{2}$ This statement represents combined figures for the Bank of the German States and the eleven Land Central Banks, and was published for the first time as of Sept. 7, 1948.
    ${ }^{8}$ Excludes currency issued in the Western sector of Berlin, amounting to 407.4 million German marks on Dec. 31, 1948.
    4 For last available report (January 1942), see Bulletin for March 1943, p. 278.
    5 Includes gold, silver, and foreign exchange forming required reserve ( 25 per cent) against notes and other demand liabilities,
    ${ }^{6}$ Beginning January 1949, this figure represents a net of the Bank's foreign assets and is not strictly comparable with amounts shown for rprevious months.

[^35]:    ${ }^{1}$ Based on quotations beginning Jan. 24, 1949.
    ${ }^{2}$ Excludes Pakistan, beginning April 1948.
    ${ }^{1}$ Quotations not available after Dec. 17, 1948 .
    Nore.-For back figures, see Banking and Monetary Statistics, Table 173, pp. 662-682. For description of statistics, see pp. 572-573 in same publication, and for further information concerning rates and averages for previous years, see Buletin for January 1949, p. 101; July 1947, p. 933; and February 1944, p. 209.

[^36]:    p Preliminary.
    ${ }^{1}$ New series beginning 1947, derived from average yields of 12 bonds on basis of a $28 / 4$ per cent 30 -year bond. Annual average for the old series for 1947 (121.5) and figures for years prior to 1947 are derived from average of 5 median yields in a list of 15 issues on basis of a 4 per cent 20 -year bond. Source.-Standard and Poor's Corporation; for compilations of back figures on prices of both bonds and common stocke in the United States see Banking and Monetary Statistics, Table 130, p. 475, and Table 133, p. 479.
    ${ }_{2}$ This index is based on one 15-year 3 per cent theoretical bond. Yearly averages for 1939 and 1940 are based on monthly averages and thereafter on the capitalized yield as calculated on the 15th of every month.
    $s$ This index represents the reciprocals of average yields for 13 issues, including government, provincial, municipal, mortgage, and industrial bonds. The average yield in the base period (January-March 1937) was 3.39 per cent.
    ${ }_{4}$ This index is based on 95 common stocks through 1944; on 100 stocks, 1945-1948; and on 106 stocks beginning 1949
    ${ }^{4}$ This index is based on 95 common stocks through 1944 ; on 100 stocks, $1945-1948$; and on 106 stocks beginning 1949 . panies abroad. See "'Bulletin de la Statistique Générale," September-November 1946, p. 424.

    6 This is a new index for 37 Netherlands issues ( 27 industrial, 5 banking, and 5 shipping shares) and represents an unweighted monthly average of daily quotations. The figures are not comparable with data for previous years shown in earlier Bulletins.

    7 Average based on figures for 5 months; no data available June-December.
    ${ }^{8}$ Average based on figures for 10 months; no data available January-February.
    Sources.-See Bulletin for June 1948, p. 747; March 1947, p. 349; November 1937, p. 1172; July 1937, p. 698; April 1937, p. 373; June 1935, p. 394; and February 1932, p. 121.

[^37]:    ${ }^{1}$ A more complete list, including periodical releases and reprints, appeared on pp. 1554-1557 of the Dec. 1948 Bultetin.
