## Subscription Price of Bulletin

The FEDERAL RESERVE BULLETIN is issued monthly by the Board of Governors of the Federal Reserve System and is sent to member banks without charge. The subscription price in the United States, Canada, Mexico, and insular possessions is \$2.00 per year or 20 cents per single copy; elsewhere, \$2.60 per year or 25 cents per single copy.

*Federal Reserve Building, Washington.*

*The building, on Constitution Avenue at 20th St., is open to the public during office hours.  
Visitors are welcome.*

## *International Developments and United States Foreign Trade*

Foreign trade of the United States and the movement of gold and capital have been greatly influenced in recent months by the state of war in Europe. Exports have risen above the 1937-38 peak, as shown in the chart below, and important changes have occurred in the composition and geographical distribution of export trade. Imports have also increased but have not reached the 1937 level. Since the outbreak of war the export excess has averaged about \$115,000,000 a month, and was around \$140,000,000 in February and March, compared with an average of about \$100,000,000 a month in the corresponding period of 1937-38.

The export balance is now the principal known factor of growth in the stock of monetary gold in the United States. The reported net movement of capital has come to a virtual halt. Although the reported inflow of funds from neutral countries without rigid exchange controls has continued, the belligerents have been making such substantial drafts upon their balances and security holdings in the United States that the reported figures of foreign assets here show little increase. It is probable, however, that unreported capital has continued to flow into the United States since the outbreak of war. During the seven months ending March the United States acquired foreign gold at the rate of about \$250,000,000 a month, more than twice the average export surplus during the period. A partial shift from a credit to a cash basis in American export trade and advance payments by belligerent governments for aircraft and other goods which have been ordered but not yet exported may account for a part of the difference, but the figures seem to indicate that foreign flight funds are still finding their way into this country in ways which escape the reporting system.

The factors that have brought about the sharp rise in exports from the low levels that had prevailed from the middle of 1938 to the autumn of 1939 are largely related to the outbreak of war in Europe. Of considerable importance has been the increased demand of belligerent countries for certain products needed in the active prosecution of the war and not available in sufficient

quantities from domestic sources. Most neutral countries have also tended to buy more heavily in the United States. Interferences with customary European sources of supply, resulting from shipping and other distributional difficulties, and from a reduced volume of goods available for export in countries where home requirements have been increased, together with accumulation of inventories, have influenced this movement. On the other hand, decreased demand for some United States exports, particularly agricultural commodities, has resulted from the prohibition of certain types of imports by the belligerent countries and from the shift of purchases formerly made in the United States to markets in which payment does not have to be made in dollars or other international currencies. A further factor affecting American exports adversely has been the complete cessation of direct shipments to Germany owing to the blockade.

The accompanying table shows United States exports by major commodity groups and leading commodities for the six months ending February 1940 and for the corresponding periods a year and two years ago. Preliminary figures for March indicated no substantial change in the situation revealed by the figures for the first six war months. Total exports in March, at \$352,000,000, were somewhat larger than in February and only slightly below the January-December level. Exports of cotton and certain other agricultural commodities were smaller than in February, but shipments of industrial goods, particularly machine tools, tractors, and commercial motor vehicles, were larger.

**Agricultural commodities.**—Owing mainly to the high level of cotton shipments, agricultural exports, as indicated in the table, have been running larger than a year ago but have not regained the peak established in 1937-38, when a number of commodities re-entered the export market following a series of small harvests caused by drought. In the six months ending February cotton ex-

ports, reflecting mainly short stocks abroad, increased manufacturing activity, and the operation of the United States export subsidy, were up sharply from the exceptionally low levels of 1938-39 and were about 17 per cent larger than in the 1937-38 period. Certain manufactured foods—meat products and canned fruits and vegetables in particular—also increased from the level of the previous two years, but restrictions have recently been placed by belligerents on imports of these commodities from the United States. Other agricultural commodities as a group have declined about 40 per cent over the past two years. Much of this drop is accounted for by

<sup>1</sup> Excluding re-exports.

tobacco, shipments of which have been curtailed by British restrictions. Owing partly but not entirely to conditions growing out of the war, exports of wheat and other crude foodstuffs such as corn and fresh fruits and vegetables have also declined. The effects of the war and related developments on agricultural exports have thus been mixed and, on the whole, not favorable.

**Non-agricultural commodities.**—The situation is quite different with respect to non-agricultural exports, which have surpassed the relatively high level attained two years ago under the joint impetus, at that time, of increased armament expenditure and active business throughout the world. With the principal exceptions of automobiles, crude petroleum, and certain types of machinery, leading industrial exports have been larger than in each of the two preceding years. Arms and munitions have shown almost no advance from their low pre-war level. The most spectacular increase since 1937-38 has occurred in aircraft. Otherwise the increases have been principally in goods which are either to be processed further or are used in the process of manufacturing other goods; these include iron and steel, machine tools, copper, aluminum, and industrial chemicals. Shipments of lubricating oil and chemical specialties have also increased. Textiles, rubber manufactures, leather goods, and other products nearer the stage of individual consumption in some cases showed large percentage increases but have not contributed materially to the increase in the total dollar value of exports.

Shifts in the geographical distribution of United States exports are shown in the table below. The course of trade with countries directly involved in conflict has been mixed. Exports to Canada and to countries engaged in hostilities in the Orient and in the Baltic region rose sharply in the period September 1939-February 1940. Shipments to the United Kingdom and France have increased as compared

with a year ago but are not now significantly above their 1937-38 level, while exports to other British and French countries, Canada excepted, are lower than in this earlier period. With the blockade, direct exports to Germany and its occupied territories have ceased.

Trade with neutrals, on the other hand, has expanded generally and, as a rule, substantially, with the largest percentage gains shown

in shipments to Scandinavian countries. Figures covering trade with the Scandinavian countries since the extension of warfare to that area are not yet available, but a sharp drop in our exports to them is to be expected. While exports to the warring nations as a group during the six months ending February 1940 were about the same as in the corresponding period of 1937-38, exports to neutral countries were more than 20 per cent larger.

The individual situations in particular belligerent countries, and the economic and military policies pursued by their governments, have been the predominant influences on United States export trade, both with these countries and with neutrals, during the past

half year. The policies adopted by British and French countries have been of the greatest significance. The German economy has for some years been virtually on a military footing and the most recent changes have not been of a fundamental character. The Allied blockade of Germany has had more effect on her direct trade with the United States than any changes in German economic policy growing out of the war. Japan and China, which have been engaged in hostilities since 1936, have not recently taken economic measures which have affected their trade with the United States. Announcement by the United States in July 1939 that the trade treaty with Japan would cease to be effective on January 26, 1940, is believed to have been responsible to some extent for the increase in exports to that country during the period from September 1939 through January 1940. The principal increase in exports to China was in raw cotton, owing partly to a decline in cotton production in that country. Hostilities between Finland and the U. S. S. R. were in progress during only half the period September 1939-February 1940, and United States trade with both countries is comparatively small. There was a sharp increase, however, in exports of copper to the U.S.S.R. and aircraft to Finland.

Trade with England, France, and their allies has reflected the fact that these countries were suddenly confronted with the immense task of fashioning their peace-time economies into organizations capable of meeting the vastly different and more exhaustive demands of war-time. The attainment of this objective has necessitated the fabrication of a complex web of restrictive and coercive measures which, directly and indirectly, have influenced the trade of the United States with these and other countries. These measures fall into three main but not entirely distinct categories.

**Economic warfare.**—One category includes measures designed to weaken the economic

position of the enemy or to strengthen that of friendly countries. Export licenses and blockade controls have been set up to retain vital materials for the Allied countries and to cut them off from the enemy. This has not only brought a stop to direct trade between this country and Germany but has also affected our trade with neutral countries. Under the blockade German exports to certain markets have been cut off; and in an attempt to limit transit trade with Germany, neutrals have in some instances been allowed to import certain goods only in amounts considered adequate for their own needs, as in the case of American lubricating oil exports to Belgium, Denmark, and the Netherlands. With the same end in view the British and French governments have engaged in competitive buying, particularly in the Balkan area, of certain commodities which might otherwise be sold to Germany, or have attempted to aid friendly powers by buying their products. Demand has thus been shifted from customary channels. British purchases of Turkish tobacco instead of American come under this heading.

**Internal controls.**—A second category comprises measures primarily of an internal character designed to bring all available productive resources into use without serious price inflation; to assure that these resources are properly allocated for the production of goods—war materials, capital equipment, commodities for civilian consumption, and exportable products—which are most essential or which, for strategic or economic reasons, should be produced at home rather than purchased abroad; and to reduce to a minimum all consumption not considered vital to the war effort.

Thus the British Government has taken steps by means of subsidies, rationing, and direct control to increase the domestic production of cereals and certain other agricultural products and to reduce or limit consumption of various types of meat, dairy, and other food products. Through increased

taxes, direct rationing, and other methods the home consumption of such goods as petroleum products, tobacco, tea, spirits, various luxuries, and, most recently, of textiles, has also been restricted. In the industrial field numerous control agencies have been established to provide for priority of government and export orders, to allocate supplies of raw materials, and to control prices in such lines as iron and steel, machine tools, nonferrous metals, and textiles. The degree and rigidity of control varies according to the nature and strategic importance of the industry. A further line of control over industrial requirements has been established by closing the capital market to private borrowers except as authorized by the Treasury. In the field of labor the British Government, without using the formal executive powers which it has been granted, has sought trade union cooperation in the matter of filling shortages of skilled labor in the most active industries. In France similar steps have been taken to assure coordination of output with national requirements. In that country, however, the relatively smaller surplus labor supply and the general military mobilization have led to the imposition of direct government control over labor and wage rates in vital industries.

One effect of the control system is to clear the path for the great volume of government orders; another is to prevent the additional income created by such spending from being used to buy goods in competition with the government. As a result of the conflicting influences arising out of the war effort a number of industries are working at or near full capacity and in some cases are expanding, while some business and manufacturing lines are less active than before the war. Much information on industrial developments in France and England is no longer available. In both countries, however, recorded unemployment has fallen to the lowest level in recent years. In the United Kingdom there was a sharp increase in unemployment at

the outbreak of war owing mainly to serious dislocations in the consumers' service trades, and seasonal factors led to some subsequent increase, especially in building. During March, however, there was a sharp re-

Changes in *Total* unemployment include persons not classified by industries and hence not included in the industrial groupings. Figures for latter grouped as follows: *Building*—contracting, public works, building materials, and related industries; *Service trades*—distribution, government, utilities, transportation, hotel service, entertainment, etc.; *Food and miscellaneous industries*—agriculture, clothing, house furnishings, appliances, etc.; *Textiles*—textile manufacturing, bleaching, dyeing, and related operations; *Heavy industry*—machinery, metals, vehicles, shipbuilding, chemicals, coal and metal mining, etc. March figures preliminary.

duction in the number of unemployed. In that month total unemployment was the lowest since 1929, notwithstanding increases since last August in the volume of unemployment in certain lines, as shown in the chart. In the engineering and vehicle industries registered unemployment has virtually disappeared and it is reported that untrained labor has been pressed into service. Local labor shortages are said to exist in cotton and woolen manufacturing, and unemployment in shipbuilding, which was high at the outbreak of war, has been reduced sharply. The current consumption of raw

wool is reported to be larger than at any time in the history of the British industry. In general the various metal working, mechanical, and textile trades appear to be active. Machinery and materials for use in these industries, together with aircraft, have contributed most heavily to the increase in imports by England and France from the United States. A similar but relatively larger expansion has occurred in imports by Canada, where industrial activity has expanded sharply. Imports into the non-industrial parts of the Empire from the United States have increased but little.

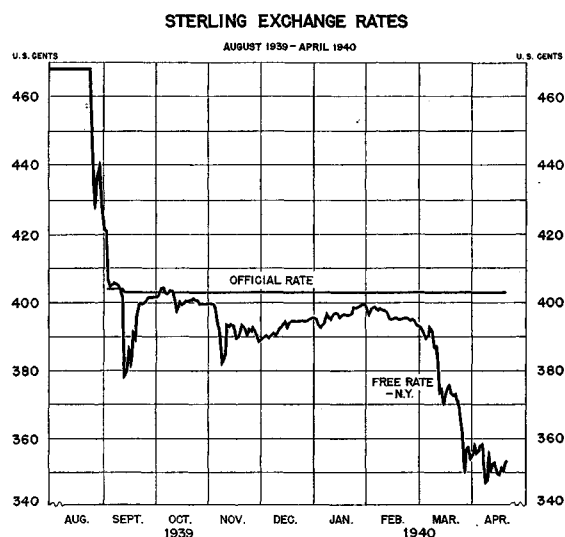

**External controls.**—The third category of measures taken by the British and French governments includes those designed to control international trade and financial transactions. They are aimed specifically at eliminating unessential imports, stimulating exports, and in general conserving and mobilizing the means of payment for foreign goods that are vital to the war effort.

In this connection it may be pointed out that through coordination of their external control measures British and French countries, with the exception of Canada, Newfoundland, and Hong Kong, have gone some distance in the direction of creating a unified economic area with sterling as a common international currency. Many of the restrictions which apply to other nations have been removed from commercial and financial transactions between these countries, which comprise what may be called the sterling control area. While lack of foreign exchange forces curtailment of commerce with other nations, trade between the sterling countries is being expanded as rapidly as possible. Canada, Newfoundland, and Hong Kong, owing to special circumstances affecting their international economic relationships, have taken independent measures and thus lie outside the sterling area. The Canadian dollar, for example, fluctuates independently of sterling and the Canadian Government has imposed almost no trade restrictions.

**Trade control.**—Imports into most of the countries in the sterling area have been subjected to almost complete control. The importation of goods in the luxury or semi-luxury class has generally been prohibited. Certain commodities, such as fresh fruits and tobacco, may no longer be purchased from the United States although they may be acquired from other countries, particularly those in the sterling group. Purchases of the more essential food and industrial products have been placed under government monopoly or its equivalent. The importation of nearly all other goods is permitted only under license. The British Government has also negotiated special purchase contracts covering non-ferrous metals, wool, wheat, meats, and other products with such countries as Canada, South Africa, Rhodesia, Australia, New Zealand, Argentina, Chile, Cuba, and Uruguay, which were willing to sell large quantities on favorable terms. Bilateral clearing agreements have been concluded, renewed, or extended with Norway, Spain, Sweden, Argentina, Uruguay, and certain other countries. These agreements provide, in general, that goods sold by those countries to the United Kingdom shall be paid for in sterling, which may then be used only to buy goods from the control area or to meet financial obligations in sterling. These clearing agreements may result in the diversion to the British market of certain purchases formerly made elsewhere by the foreign countries adhering to such agreements; but they may also lead to increased exports to the United Kingdom by these countries without an appreciable reduction in their imports from third parties.

In addition to these measures special efforts have been made to stimulate exports. While the primary concern is with current needs, the character of the efforts that are being made is to some extent shaped by the desire to recover for the export industries markets lost during the last twenty or thirty years. Export Councils have been created in both England and France to facilitate the

output and foreign distribution of goods which can be produced in excess of curtailed domestic requirements, and certain priorities and facilities have been granted producers of such goods. In April restrictions were placed on the domestic consumption of textiles in the United Kingdom to increase the exportable surplus of these goods. Earlier in the month the Chancellor of the Exchequer announced the formation, with government capital, of a trading company called the English Commercial Corporation, Ltd. This concern, which is expected to continue in existence after the war, will arrange for the sale of British goods in exchange for the products of foreign countries, and its initial activities will be concentrated in the Balkan area.

Free rate: certified noon buying rates in New York for cable transfers. Official rate: mid-point of official buying and selling rates for dollars in London; buying rate was \$4.06, Sept. 5-13, 1939; \$4.04, Sept. 14, 1939-Jan. 7, 1940; \$4.03½ since Jan. 8, 1940; selling rate was \$4.02, Sept. 5, 1939-Jan. 7, 1940; \$4.02½ since Jan. 8, 1940.

**Exchange control.**—The decline of sterling from \$4.68 just before the war to about \$4.00 in the official market and to a still lower figure in the free market—currently about \$3.50—may be said to be another form of external control favorable to British exports. The two markets for sterling—the official and the free—came into being as a result of the establishment of exchange restrictions

immediately after the outbreak of war. These restrictions were primarily designed to put a stop to the export of capital by residents of the sterling control area. Under the control, residents of this area could buy foreign exchange only under license and then only from authorized dealers. Nonresidents of the sterling control area were not generally permitted to buy foreign exchange in London for the purpose of transferring their funds abroad, but were privileged to sell sterling to other foreigners in markets abroad. Two markets for sterling were thus created: the official London market in which dealings were generally confined to those between British residents, on the one hand, and the exchange control authorities, on the other; and the free markets in New York and certain European centers where dealings took place exclusively between foreigners. Offerings of sterling in these free markets have been derived mainly from sterling assets held by nonresidents at the outbreak of war in the form of banking funds, securities, and other investments; from sterling payments for certain imports by countries in the sterling control area; and from certain other types of current sterling income.

The principal demand for free sterling comes from foreign purchasers of goods from the sterling control area and from nonresidents who have other sterling obligations to meet. Until March 1940 it was permissible to pay for nearly all British exports in free sterling, although it is not certain that this was always done; then, in that month, it was announced that tin, rubber, jute and its products, whiskey, and furs—commodities in which the British Empire has a strong trading position—would be deprived of the free sterling privilege when sold in the United States and certain other countries. Similar restrictions were placed on exports of some other commodities from various parts of the Empire. This curtailed the demand for free sterling and was the principal factor leading to a sharp decline in the New York rate during March from above \$3.90 to about \$3.50.

The advantage which the decline in sterling since August 1939 might otherwise have conferred on British exporters is limited by several factors. Material, labor, and transportation costs have risen substantially in terms of sterling in recent months. Precise measurement of the extent of the rise is not possible, but there is evidence that it has been appreciable; indexes of wholesale commodity prices and the cost of living have risen about 30 per cent and 15 per cent, respectively, since last August. It should be noted that price advances for some commodities, particularly certain metals and foods, have been limited by government price fixing. The export of British goods is also hampered by the heavy demands made on British industry by the government, which seriously limit the volume of exports that can be sold competitively in foreign markets, and by shipping difficulties, which interfere with the ability of British manufacturers to make delivery on foreign orders. Moreover, the significance of the recent decline in the free rate is lessened by the fact that free sterling is used for only a part of the commercial and financial transactions between the sterling area and the rest of the world. Trade with countries with which clearing or payments agreements have been concluded usually gives rise to no supply of or demand for free sterling, while even in trade with other countries a considerable proportion of exports and imports are dealt with on a foreign currency or an official sterling basis. The further extension of British trade agreements and exchange restrictions may confine still more closely the range of free sterling transactions. Also, the decline in sterling has exerted less of an influence on British purchases in non-sterling countries than the various external and internal control measures to which allusion has already been made. The sterling exchange rate is thus only one of many factors by which the British foreign trade balance is being adjusted to meet the exigencies of war, and it is not the most important of these factors.

Many of the types of economic control measures described above are now found, with varying degrees of severity, in nearly all foreign countries. Foreign exchange control is most prevalent, but many countries have subjected imports and exports to direct regulation. Constriction of their economic activity by factors beyond their control has also compelled many neutrals to adopt rationing, price fixing, and the regulation of industry. These measures have not been without effect on American export trade, although other influences have probably been more important. Restrictions on the private use of gasoline in the neutral countries of Europe, for example, have curbed exports of automobiles to this area while simultaneous increases in shipments of petroleum products have no doubt reflected an attempt to build up reserves of these essential commodities and possibly purchases for re-export. Owing perhaps to these same factors, as well as to those mentioned on an earlier page, the largest increase in exports to European neutrals has been in raw cotton. Certain of these countries have also taken increased quantities of rubber goods and metals and manufactures, particularly iron and steel. The recent extension of active warfare to the Scandinavian area may be expected in coming months to result in reduced exports by the United States to these countries; it may also lead to increased purchases here by other countries of machinery, metals, and possibly some of the other goods which they customarily bought in Scandinavia, such as wood, pulp, paper, meat, and dairy products.

Increased exports to Latin America appear for the most part to have resulted from purchases in the United States of goods formerly acquired in Europe. The principal increases have occurred in metals and manufactures and in machinery and vehicles. These countries have also taken somewhat larger quantities of finished textiles, chemicals, petroleum products, wood, and paper.

# Cheap Money and the Federal Reserve System

by

E. A. GOLDENWEISER

*Director, Division of Research and Statistics*

**F**OR the past ten years, with brief interruptions, money rates have gradually declined and at the present time are at an extraordinarily low level. This movement of rates has given rise to a great deal of discussion of the so-called easy money policy pursued by the Government, and particularly by the Federal Reserve System. It is proposed in this article to point out some of the principal causes of the prolonged decline in money rates, with special reference to the extent and timing of the influence of Federal Reserve policy, and to indicate in general terms some of the resulting problems in their broad economic setting.

It may be stated at the outset that economic forces outside the sphere of influence of monetary or other Governmental authorities have exerted a powerful influence toward a decline in money rates and that Federal Reserve policy, which, in the early years of the depression, had been directed toward easing credit conditions and combating a disastrous deflation, has for many years had little if any part in the continued decline in rates. Among the causes of this decline the principal one has been the huge inflow of gold brought about for the most part by disturbed economic and financial conditions in foreign countries.

## Level of Money Rates

At the present time rates for short-term money in the open market are close to zero and rates on high-grade bonds, Government and corporate, are at record low levels. Rates charged to commercial customers by banks in the larger cities have also declined considerably, and interest and other costs of mortgages on farms and on urban homes have been somewhat reduced. Many bank loans, however, particularly in smaller cities and in country districts, are still made at or near the rates that have been customary for many

years. Rates on long-term loans for small business enterprises and on consumer loans have shown little decline.

The course of different types of money rates over the past ten years is shown on the chart, and selected rates on various classes of loans for 1929, 1934, and 1939 are given in a table at the end of this article.

Commercial loans of city banks: averages of prevailing rates charged by banks in 19 large cities; monthly series discontinued, February 1939. Treasury bills: averages of daily dealers' quotations on 3-mo. bills, 1934-39; average rate on new 3-mo. bills, 1931-33; averages of daily yields on 3-6 mo. Treasury notes and certificates, 1929-30. Other series are averages of daily figures: yields on Moody's Aaa corporate bonds and on 3-5 year Treasury notes.

## Federal Reserve Policy: 1929 to 1933

A review of Federal Reserve policy during the past decade shows that after the collapse of the speculative boom in the early autumn of 1929 the Federal Reserve System reversed the policy of restraint that had characterized its actions in the preceding two years. Dis-

*Note.—Views expressed in signed articles published in the BULLETIN are those of the writers and not necessarily those of the Board of Governors of the Federal Reserve System.*

count rates and bill rates were reduced from the high levels reached in 1929 and the System also bought United States Government securities in the open market. At first this was for the purpose of helping member banks to carry the load of brokers' loans, which had been transferred to them by private lenders during the crisis in the stock market, and, later on, for the purpose of helping the banks to reduce their heavy indebtedness to the Reserve Banks and to meet demands for currency and for gold.

This was a period of extreme deflation; money was far from easy. The policy pursued by the System in its efforts to relieve the critical situation is better described, not as an easy money policy, but as a policy of help-

ing to ease an extremely tight money condition.

The chart shows for the period from 1929 to 1933 the amount of United States securities and of acceptances held by the Federal Reserve Banks, the public's demand for currency and for gold, which absorbed funds released through open-market operations, and the net effects on the member banks' reserve position.

The chart brings out graphically the sequence of events during the period covered. Security holdings of the Reserve Banks were increased by \$350,000,000 from September to December 1929, and were further increased gradually by \$230,000,000 from the beginning of 1930 to the autumn of 1931. Additional funds were also supplied by gold imports. The System's policy of easing was temporarily interrupted in the autumn of 1931. After suspension of gold payments in England, gold exports from this country assumed unprecedented proportions and Reserve Bank discounts for member banks and holdings of acceptances increased sharply. With gold moving out of the country at the rate of a hundred million dollars a week, the System raised its rates on discounts and acceptances, with the consequence that the Federal Reserve Bank holdings of acceptances were rapidly liquidated, and banks were obliged further to increase their borrowings at the Reserve Banks. As acceptance holdings of the Reserve Banks declined, however, bills were acquired in large volume by foreign central banks, which otherwise would have been inclined to withdraw their balances in gold, so that the tightening effect of System policy at this period may not have been as great as would appear from Federal Reserve figures taken by themselves.

After the passage of the Glass-Steagall Act early in February 1932, the System was in better position to enlarge its portfolio and from February to August of that year, while the deflationary cycle was still in progress, it purchased \$1,100,000,000 of United States securities. In 1933, \$600,000,000 more was added, so that by the autumn of that year there were \$2,400,000,000 of United States Government securities of different kinds in the System's open-market account. Funds placed at the disposal of member banks through purchases by the Reserve Banks in the open market enabled member banks to meet an increased demand of the public for

#### OPEN-MARKET PURCHASES AND DISPOSITION OF FUNDS

Monthly averages of daily figures. In the top section of the chart the curve below the zero line shows total member bank borrowings from the Federal Reserve Banks over and above total excess reserves, and above the zero line—excess reserves over and above total borrowings. In the middle section cumulative additions to member bank funds caused by changes in gold stock and currency in circulation are shown above the zero line and cumulative reductions—below the zero line.

currency, largely for hoarding, as well as a demand for gold for export, and at the same time to reduce the volume of their indebtedness to the Reserve Banks. In 1932 and 1933 member banks also began gradually to accumulate excess reserves, which at the end of the period were in substantial volume.

Since the autumn of 1933, with business recovery still incomplete and no evidence of speculative expansion of credit, the System has had no occasion for taking active measures to reduce member bank reserves, and, on the other hand, with these reserves growing rapidly, principally as the result of gold

## SOURCES OF MEMBER BANK RESERVES

### Federal Reserve Policy After 1933

Toward the end of 1933 member banks had repaid most of their borrowings to the Reserve Banks, currency and gold withdrawals had stopped, and the banks had a considerable amount of excess reserves. Since that time large-scale gold imports, which began after the reestablishment of a fixed price for gold in January 1934, account for most of the continuous increase in member bank reserves. The fact that member bank reserves, which had been increased in 1932 and 1933 largely by open-market purchases by the Reserve Banks, have since grown almost entirely as the result of gold imports is brought out by the chart.

imports, the System has not been called upon to act for the purpose of further adding to these reserves.

During this period, however, the System took steps with a view to placing itself in a better position to counteract excessive credit expansion in case it should develop at some future time on the basis of the ever-growing volume of reserves. For this purpose the Board in 1936 and 1937 increased the percentages of reserves that member banks were required to carry against their deposits. Reserve requirements were doubled in these two years, but were later reduced by about one-eighth in 1938, when a rapid business decline was under way. In aggregate dollar amounts

the net result of action by the Board has been that excess reserves, which are now in excess of \$6,000,000,000, are nevertheless smaller by nearly \$3,000,000,000 than they otherwise would have been. Against the background of the great and constantly growing volume of reserves, however, the steps taken to reduce excess reserves must be viewed as precautionary measures taken with reference to future developments, and not designed immediately to restrain or restrict credit expansion. No occasion for such restraint was apparent in current conditions. At the present time, full utilization of the Board's power to raise reserve requirements and the disposal of the System's entire portfolio of U. S. Government securities would still leave the member banks with excess reserves of nearly \$3,000,000,000.

### **New Phase of Federal Reserve Policy**

A more recent phase of Federal Reserve policy, first pursued in 1937 and followed on a much larger scale in 1939, has had to do with the System's endeavors, through open-market operations, to exert an influence toward maintaining orderly conditions in the capital market. This policy, which is independent of longer-term trends in money rates, is discussed in the Board's recently issued Annual Report for 1939.

### **Influence of Other Governmental Agencies**

Activities of the Government in several other fields, besides the strictly monetary field, have contributed to the reduction in the cost of money, particularly of mortgage money. The taking over of about \$2,000,000,000 of farm mortgages and other indebtedness at reduced rates by the Federal land banks and the Federal Farm Mortgage Corporation and of about \$3,000,000,000 of home mortgage loans at reduced rates by the Home Owners' Loan Corporation has been an important factor in reducing the rates that farmers and urban residents have had to pay for long-term mortgage loans obtained not only from the Government agencies themselves but also from other lenders. These activities of the Government were undertaken for the double purpose of easing the heavy burden of debt charges for borrowers and of protecting the lenders—banks, insurance companies, and others—by taking over frozen assets out of their holdings in a period of extreme deflation. Insurance by the Federal

Housing Administration of home mortgage loans conforming to specified standards has also increased home-mortgage lending by banks and other investors on more liberal terms and encouraged the construction and modernization of homes by owners. About \$2,000,000,000 of funds have been made available by private lenders to borrowers on insured home mortgages. Farmers and their cooperative organizations have secured short-term and intermediate-term funds at lower rates through production credit associations and banks for cooperatives and their financing agency, the Federal Intermediate Credit Banks.

### **Importance of Other Factors**

It is apparent, therefore, that the Federal Reserve System and other Governmental agencies, in their efforts to combat the depression, have pursued policies during the past decade, and particularly during the first half of the decade, that have tended to reduce the cost of money to borrowers. Other factors, not readily susceptible of control, however, have greatly accelerated and intensified the decline in money rates and may have been of far greater import than policies pursued by the Government. The tremendous inflow of gold, which resulted from world-wide economic and political conditions, has increased member bank reserves and deposits. Bank deposits have been further increased by large bank investments in Government obligations. It should perhaps be mentioned, however, that, contrary to popular belief, deficit financing by the Government does not increase member bank reserves. To the extent that Government obligations are purchased by others than banks, the result is merely a transfer of deposits from individuals to the Government. To the extent that they are purchased by banks, the result is an increase of deposit liabilities, which has the effect of increasing required reserves and consequently diminishing excess reserves.

While the supply of bank funds has been increasing at a rapid rate, the demand of business enterprises for bank credit for current operations and for long-term funds for improvement and expansion of plant and equipment, has not increased to the same extent. This has reflected many complex factors, including the great growth of liquid resources of corporations, which enables them to meet not only current financial requirements but also many capital needs without applying

either to banks or to the capital market for funds.

In final analysis, prevailing low money rates represent the effect of a vastly increased supply of current and investment funds without a corresponding growth in the demand for such funds.

### Problems Raised by Cheap Money

There are, of course, two sides to the problem of money rates: the borrower's and the lender's. From the point of view of the borrower the decline in rates has enabled many debtors to refund long-term debt at lower interest rates, with a consequent easing of many debt burdens, especially for farm and home owners and certain corporate borrowers. It has also reduced the cost of borrowing for business purposes.

At the same time it has raised difficult problems for many classes of lenders. For the banks it has increased the difficulty of making sufficient earnings on the capital invested in the business. To meet this situation, many banks have expanded their field of operation into bond investments, other longer-term credit, personal loans, installment financing and in other directions. Bank expenses incurred in paying interest on deposits have been greatly reduced and service charges have been generally imposed. Availability of United States Government obligations as a medium for investment, both at long and at short term, and the consequent opportunity for banks to place some of their funds in excess of current commercial demands in Government securities, has helped the banks to make reasonably adequate returns on their capital, notwithstanding the small amounts of commercial loans and the reduced rates of return that have prevailed generally both on loans and on investments. A study of bank profits in recent years appears elsewhere in this issue of the BULLETIN.

Other types of lenders for whom low money rates have created serious problems are insurance companies, endowed institutions, trust funds and others whose income is derived largely from fixed-interest rate obligations. The operations of many of these institutions were planned on the basis of higher returns on money than are now available on eligible investments. In many instances this presents a serious situation which calls for revision of basic plans and programs.

These problems are a part of the necessary readjustment of the country's economy to fundamentally changed conditions. After a long era of active demand for capital with abundant opportunity for investment, this country is confronted, for the present at least, with the problem of finding adequate and satisfactory outlets for the ever-mounting volume of investment funds. This is no longer a debtor country with a constant shortage of capital, but a creditor country with abundant funds seeking investment. Capital has lost much of its scarcity value and may have to be content with more moderate returns. This change in fundamental conditions has far-reaching implications, not only for investors but particularly for those who are responsible for formulating policies to be pursued by the Government and by private enterprise.

## **Executive Order and Regulation on Transfers of Danish and Norwegian Property**

The Executive Order of April 10, 1940, and the Treasury Regulations issued thereunder on the same day provide that transfers of credit, foreign exchange transactions, the export or earmarking of coin, bullion, or currency, and other similar operations by persons or institutions in the United States which involve Danish or Norwegian property, shall be subject to license by the Secretary of the Treasury. Applications for licenses must be made to the Federal Reserve Banks.

The Regulations also require the filing of reports by persons and institutions in the United States with respect to all Danish and Norwegian property situated in the United States. Such reports must be made on forms prescribed by the Secretary of the Treasury and obtainable from any Federal Reserve Bank, mint or assay office and the Secretary of the Treasury, and must be filed not later than May 15, 1940.

The texts of the Executive Order and accompanying Regulations of April 10 are as follows:

### **EXECUTIVE ORDER No. 8389**

**AMENDMENT OF EXECUTIVE ORDER No. 6560, DATED JANUARY 15, 1934,<sup>1</sup> REGULATING TRANSACTIONS IN FOREIGN EXCHANGE, TRANSFERS OF CREDIT, AND THE EXPORT OF COIN AND CURRENCY.**

By virtue of the authority vested in me by section 5(b) of the Act of October 6, 1917 (40 Stat. 411), as amended by section 2 of the Act of March 9, 1933<sup>2</sup> (48 Stat. 1), and by virtue of all other authority vested in me, I FRANKLIN D. ROOSEVELT, PRESIDENT of the UNITED STATES OF AMERICA, do hereby amend

<sup>1</sup> See BULLETIN for February 1934, pp. 78-79.

<sup>2</sup> See BULLETIN for March 1933, p. 115.

Executive Order No. 6560, dated January 15, 1934, regulating transactions in foreign exchange, transfers of credit, and the export of coin and currency by adding the following sections after section 8 thereof:

"Section 9. Notwithstanding any of the provisions of sections 1 to 8, inclusive, of this Order, all of the following are prohibited, except as specifically authorized in regulations or licenses issued by the Secretary of the Treasury pursuant to this Order, if involving property in which Norway or Denmark or any national thereof has at any time on or since April 8, 1940, had any interest of any nature whatsoever, direct or indirect:

"A. All transfers of credit between any banking institutions within the United States; and all transfers of credit between any banking institution within the United States and any banking institution outside the United States (including any principal, agent, home office, branch, or correspondent outside of the United States, of a banking institution within the United States);

"B. All payments by any banking institution within the United States;

"C. All transactions in foreign exchange by any person within the United States;

"D. The export or withdrawal from the United States, or the earmarking of gold or silver coin or bullion or currency by any person within the United States; and

"E. Any transaction for the purpose or which has the effect of evading or avoiding the foregoing prohibitions.

### **"Section 10. Additional Reports.**

"A. Reports under oath shall be filed, on such forms, at such time or times and from time to time, and by such persons, as provided in regulations prescribed by the Secretary of the Treasury, with respect to all property of any nature whatsoever of which Norway or Denmark or any national thereof is or was the owner, or in which Norway or Denmark or any national thereof has or had an interest of any nature whatsoever, direct or indirect, and with respect to any acquisition, transfer, disposition, or any other dealing in such property.

"B. The Secretary of the Treasury may require the furnishing under oath of additional and supplemental information, includ-

ing the production of any books of account, contracts, letters or other papers with respect to the matters concerning which reports are required to be filed under this section.

"Section 11. *Additional Definitions.* In addition to the definitions contained in Section 7, the following definitions are prescribed:

"A. The terms 'Norway' and 'Denmark', respectively mean the State and the Government of Norway and Denmark on April 8, 1940, and any political subdivisions, agencies and instrumentalities thereof, including territories, dependencies and possessions, and all persons acting or purporting to act directly or indirectly for the benefit or on behalf of the foregoing. The terms 'Norway' and 'Denmark', respectively, shall also include any and all other governments (including political subdivisions, agencies, and instrumentalities thereof and persons acting or purporting to act directly or indirectly for the benefit or on behalf thereof) to the extent and only to the extent that such governments exercise or claim to exercise de jure or de facto sovereignty over the area which, on April 8, 1940, constituted Norway or Denmark.

"B. The term 'national' of Norway or Denmark shall include any person who has been or whom there is reasonable cause to believe has been domiciled in, or a subject, citizen or resident of Norway or Denmark at any time since April 8, 1940, but shall not include any individual domiciled and residing in the United States on April 8, 1940, and shall also include any partnership, association, or other organization, including any corporation organized under the laws of, or which on April 8, 1940, had its principal place of business in Norway or Denmark or which on or after such date has been controlled by, or a substantial part of the stock, shares, bonds, debentures, or other securities of which has been owned or controlled by, directly or indirectly, one or more persons, who have been, or whom there is reasonable cause to believe have been, domiciled in, or the subjects, citizens or residents of Norway or Denmark at any time on or since April 8, 1940, and all persons acting or purporting to act directly or indirectly for the benefit or on behalf of the foregoing.

"C. The term 'banking institution' as used in section 9 includes any person engaged primarily or incidentally in the business of banking, of granting or transferring credits, or of purchasing or selling foreign exchange or procuring purchasers and sellers thereof, as principal or agent, or any person holding credits for others as a direct or incidental part of his business, or brokers; and, each principal, agent, home office, branch or correspondent of any person so engaged shall be regarded as a separate 'banking institution.'

"Section 12. *Additional Regulations.* The Regulations of November 12, 1934, are hereby modified insofar as they are inconsistent with the provisions of sections 9 to 11, inclusive, of

this Order, and except as so modified are hereby continued in full force and effect. The Secretary of the Treasury is authorized and empowered to prescribe from time to time regulations to carry out the purposes of sections 9 to 11, inclusive, of this Order as amended, and to provide in such regulations or by rulings made pursuant thereto, the conditions under which licenses may be granted by such agencies as the Secretary of the Treasury may designate."

FRANKLIN D. ROOSEVELT.

THE WHITE HOUSE,

April 10, 1940, 6 P. M., E. S. T.

#### REGULATIONS

Relating to transactions in foreign exchange, transfers of credit, payments, and the export or withdrawal of coin, bullion and currency; and to reports of foreign property interests in the United States.\*

Section 130.1. *Authority for regulations.* These regulations are prescribed and issued under authority of Section 5(b) of the Act of October 6, 1917 (40 Stat. 411) as amended by Section 2 of the Act of March 9, 1933 (48 Stat. 1), and Executive Order No. 6560, dated January 15, 1934, as amended.\*

#### Section 130.2. *Definitions.*

(a) The term "Order" shall refer to Executive Order No. 6560, of January 15, 1934, as amended.

(b) The term "regulations" shall refer to these regulations.

(c) The terms "property" and "property interest" or "property interests" shall include, but not by way of limitation, money, checks, drafts, bullion, bank deposits, savings accounts, any debts, indebtedness or obligations, financial securities commonly dealt in by bankers, brokers, and investment houses, notes, debentures, stocks, bonds, coupons, bankers' acceptances, mortgages, pledges, liens or other right in the nature of security, warehouse receipts, bills of lading, trust receipts, bills of sale, other evidences of title or ownership, goods, wares, merchandise, chattels, stocks on hand, ships, goods on ships, real estate mortgages, vendors' sales agreements, land contracts, real estate and any interest therein, leaseholds, ground rents, options, negotiable instruments, trade acceptances, royalties, book accounts, accounts payable, judgments, patents, trademarks, copyrights, insurance policies, safe deposit boxes and their contents, annuities, et cetera.

(d) Safe deposit boxes shall be deemed to be in the "custody" not only of all persons having access thereto but also of the lessors of such boxes whether or not such lessors have access to such boxes. The foregoing shall not in any way be regarded as a limitation upon the meaning of the term "custody".

(e) For the meaning of other terms reference should be made to the definitions contained in the Order.\*

Section 130.3. *Licenses to engage in foreign exchange transactions, et cetera.* Applications for li-

\* Sections 130.1 to 130.6:—Sec. 5 (b), 40 Stat. 415 and 966; sec. 2, 48 Stat. 1; 12 U.S.C. 95a; Ex. Order 6560, Jan. 15, 1934; Ex. Order 8389, April 10, 1940.

censes to engage in foreign exchange transactions, transfers of credit, payments, or the export or withdrawal from the United States or the earmarking of gold or silver coin or bullion or currency, involving property in which Norway or Denmark or any national thereof has at any time on or since April 8, 1940, had any interest of any nature whatsoever, direct or indirect, shall be filed in duplicate with the Federal Reserve bank of the district in which the applicant resides or has his principal place of business or principal office or agency, or with the Federal Reserve Bank of New York if the applicant has no legal residence or principal place of business or principal office or agency in a Federal Reserve district. Application forms may be obtained from any Federal Reserve bank, mint or assay office, or the Secretary of the Treasury, Washington, D. C. Applications shall be executed under oath before an officer authorized to administer oaths, or if executed outside of the United States, before a diplomatic or consular officer of the United States. The applicant shall furnish such further information as shall be requested of him by the Secretary of the Treasury or the Federal Reserve bank at which the application is filed. Licenses will be issued by the Secretary of the Treasury, acting directly or through any agencies that he may designate, and by the Federal Reserve banks acting in accordance with such rules, regulations, and instructions as the Secretary of the Treasury may from time to time prescribe, in such cases or classes of cases as the Secretary of the Treasury may determine in rules, regulations, and instructions prescribed by him. The Federal Reserve bank at which an application is filed will advise the applicant of the granting or denial of the license. When the transaction authorized by the license has been completed the license should be returned by the licensee to the Federal Reserve bank at which the application was filed, except in the case of licenses for the export or withdrawal of currency or gold or silver coin or bullion, in which case the license, after having been cancelled by the collector of customs or the postmaster through whom the exportation or withdrawal was made, shall be sent by such collector of customs or postmaster to the Federal Reserve bank at which the application was filed. Appropriate forms for applications and licenses will be prescribed by the Secretary of the Treasury. Licensees may be required to file reports upon the consummation of the transactions. The decision of the Secretary of the Treasury with respect to the approval or disapproval of an application shall be final.\*

*Section 130.4. Reports of Property Interests of Norway and Denmark and Nationals Thereof.*

(a) Within ten days from the publication of these regulations in the Federal Register,<sup>3</sup> reports shall be filed on Form TFR-100, duly executed under oath, containing the information called for in such Form, with respect to all property situated in the United States on the date as of which the report is made in which Norway or Denmark or any national thereof has at any time on or since April 8, 1940, had any interest of any nature whatsoever direct or indirect. Such reports shall be filed by:

\* Sections 130.1 to 130.6:—Sec. 5 (b), 40 Stat. 415 and 966; sec. 2, 48 Stat. 1; 12 U.S.C. 95a; Ex. Order 6560, Jan. 15, 1934; Ex. Order 8389, April 10, 1940.

<sup>3</sup> Period extended to May 15, 1940, by the Secretary of the Treasury.

(1) Every person in the United States directly or indirectly holding, or having title to, or custody, control, or possession of such property including, without any limitation whatsoever of the foregoing, every partnership, association, or corporation organized under the laws of the United States or any state or territory of the United States, or having its principal place of business in the United States, in the shares of whose stock or in whose debentures, notes, bonds, coupons, or other obligations or securities Norway or Denmark or any national thereof has at any time on or since April 8, 1940, had any interest of any nature whatsoever, direct or indirect; and

(2) Every agent or representative in the United States for Norway or Denmark or any national thereof having any information with respect to any such property.

Provided, That no report on Form TFR-100 need be filed where the total value of all property interests to be reported is less than \$250.

(b) The date as of which all reports on Form TFR-100 are required to be made is April 8, 1940.

(c) At the close of every business day in which there shall occur any acquisition, transfer, disposition, or any other dealing in any of the property interests designated in paragraph (a) above, a report, or reports, on Form TFR-200, duly executed under oath, containing the information called for in such Form shall be filed by every person, agent, et cetera, referred to in paragraph (a) above, provided, however, that such reports for the ten day period from the date of publication of these regulations in the Federal Register, may be filed at any time within such ten day period.

(d) Neither filing nor the failure to file a report or reports required to be filed on Form TFR-100, nor the absence of a duty to file such report or reports shall in any way affect the duty to file a report or reports on Form TFR-200, and vice versa.

(e) Reports shall be executed and filed in triplicate with the Federal Reserve bank of the district in which the party filing the report resides or has his principal place of business or principal office or agency, or if such party has no legal residence or principal place of business or principal office or agency in a Federal Reserve district, then with the Federal Reserve Bank of New York. A report shall be deemed to have been filed when it is received by the proper Federal Reserve bank or when it is properly addressed and mailed and bears a postmark dated prior to midnight of the date upon which the report is due. At the close of each business day the Federal Reserve bank shall forward two executed copies of every report filed on that day to the Secretary of the Treasury.

(f) (1) All spaces in the report must be properly filled in. Reports found not to be in proper form, or lacking in essential details, shall not be deemed to have been filed in compliance with the Order.

(2) Where space in the report form does not permit full answers to questions, the in-

formation required may be set forth in supplementary papers incorporated by reference in the report and submitted therewith. Supplementary documents and papers must be referred to in the principal statement in chronological or other appropriate order and be described in such manner that they can be identified.

(g) A separate report under oath must be filed by each person required to file a report except that persons holding property jointly may file a joint report.

(h) Upon a written request made to the Secretary of the Treasury by a party required to file a report, setting forth reasons why the report cannot be filed on or before the date such report is due, the Secretary of the Treasury, in his discretion, may grant such an extension of time for making the report as under the circumstances shall appear to be required.

(i) Report Forms TFR-100 and TFR-200 may be obtained from any Federal Reserve bank, mint or assay office and the Secretary of the Treasury, Washington, D. C.\*

**Section 130.5. Penalties.** Section 5(b) of the Act of October 6, 1917, as amended by Section 2 of the Act of March 9, 1933, provides in part:

" \* \* \* Whoever willfully violates any of the provisions of this subdivision or of any license, order, rule or regulation issued thereunder, shall, upon conviction, be fined not more than \$10,000, or, if a natural person, may be imprisoned for not more than ten years, or both; and any officer, director, or agent of any corporation who knowingly participates in such violation may be punished by a like fine, imprisonment, or both. As used in this subdivision the term 'person' means an individual, partnership, association, or corporation." \*

**Section 130.6. Modification or Revocation.** These regulations and any Forms or instructions issued hereunder may be modified or revoked at any time.\*

H. MORGENTHAU, JR.  
*Secretary of the Treasury.*

APPROVED: April 10, 1940.

FRANKLIN D. ROOSEVELT.

#### Financial Transactions under Neutrality Act of 1939

The President of the United States on April 25, 1940, issued a proclamation under authority of section 1(a) of the Neutrality Act of 1939 (Pub. Res. No. 54, 76th Cong.), approved November 4, 1939, proclaiming that a state of war exists between Germany and Norway. Section 7 of the Neutrality Act of 1939, with respect to financial transactions by persons within the United States relating to countries named in the Presidential proclama-

\* Sections 130.1 to 130.6:—Sec. 5(b), 40 Stat. 415 and 966; sec. 2, 48 Stat. 1; 12 U.S.C. 95a; Ex. Order 6560, Jan. 15, 1934; Ex. Order 8389, April 10, 1940.

tion, is quoted in full on page 1054 of the Federal Reserve BULLETIN for December 1939.

#### Operation of Common Trust Funds as Investment Trusts for Other Than Strictly Fiduciary Purposes

Section 17 of the Board's Regulation F, Trust Powers of National Banks, provides in part as follows:

"The purpose of this section is to permit the use of Common Trust Funds, as defined in section 169 of the Internal Revenue Code, for the investment of funds held for true fiduciary purposes; and the operation of such Common Trust Funds as investment trusts for other than strictly fiduciary purposes is hereby prohibited. No bank administering a Common Trust Fund shall issue any document evidencing a direct or indirect interest in such Common Trust Fund in any form which purports to be negotiable or assignable. The trust investment committee of a bank operating a Common Trust Fund shall not permit any funds of any trust to be invested in a Common Trust Fund if it has reason to believe that such trust was not created or is not being used for bona fide fiduciary purposes."

In amending Regulation F to permit the operation of Common Trust Funds, the Board intended that a Common Trust Fund should be used merely to aid in the administration of trusts by a trust institution through the commingled investment of funds of various trusts. While the operation of a Common Trust Fund might thus enable a trust institution to accept small trusts which it otherwise would be unwilling to handle, it was contemplated that trust guise or form should not be used to enable a trust institution to operate a Common Trust Fund as an investment trust attracting money seeking investment alone and to embark upon what would be in effect the sale of participations in a Common Trust Fund to the public as investments. In dealing with this matter, it appeared desirable to use largely general language, omitting certain exact, arbitrary restrictions which might unduly hamper the use of Common Trust Funds for proper purposes, and, accordingly, the above-quoted provisions were incorporated in the regulation. By adopting this approach, the Board placed reliance upon the exercise of sound judgment and good faith on the part of trust institutions and their trust invest-

ment committees in carrying out the broad intent and purposes of such provisions. In determining whether a particular trust is created and used for "bona fide fiduciary purposes", it is necessary to consider, in the light of such intent and purposes, not only the terms of the trust instrument but also other facts and circumstances concerning the creation and use of the trust. The regulation forbids the investment of funds of a trust in a Common Trust Fund if the trust investment committee "has reason to believe" that the trust does not conform.

In a recent ruling, the Board had occasion to consider the application of the above-quoted provisions of the regulation to the facts of a particular case. In that instance, a national bank proposed to create a Fund as a part of a plan under which the bank would solicit the public (through paid solicitors or agents of the bank, newspaper advertisements, circulars, etc.) to create uniform revocable trusts designed specifically to participate in the Fund. With this in view, the bank had prepared an application and receipt form and a so-called "Participating Trust Agreement" form. Under such trust agreement form, the creator of a trust was to deposit with the bank, as trustee, a stated principal sum in 120 equal monthly deposits and the bank was directed to invest such deposits, less authorized deductions, in participations in the Fund. The trust was to terminate upon revocation, death of the creator, notice delivered to the creator after continued default in making deposits, or the expiration of 10 years (i.e., the expiration of the period during which the deposits were to be made). In addition to an acceptance fee of \$10, an annual

fee of 6 per cent of the income of the trust, and a termination fee of 2 per cent of the then cash value of the trust assets, the bank was to receive the first year a fee of 2 per cent of the stated principal sum and each year thereafter a fee of \$5. Among other things, the trust agreement form referred to the fact that "other trust estates have been or are being established under participating trust agreements respectively, substantially similar to this instrument". In the application form, the person desiring to create such a trust applied for the execution of a Participating Trust Agreement, such "participation" to be in a stated principal sum. Such application form recited that there was paid therewith a stated sum, consisting of an acceptance fee of \$10 and the first of 120 equal deposits, and also that the bank would be empowered to invest the net deposits of the applicant in a Common Trust Fund to be held and managed by the bank as Collective Trustee pursuant to a Collective Trust Plan of a specified date. The bank's representative receiving the application was to give a receipt for the money but there was to be no binding agreement until the application was accepted by the bank and a Participating Trust Agreement was executed by the bank and the applicant.

These facts indicate broadly the nature of the bank's plan with respect to the creation and operation of the proposed Fund; and in view of such facts and other details of the plan, the Board expressed the opinion that the Fund could not be considered to be one operated in conformity with the Board's Regulation F and particularly those provisions of the regulation quoted above.

# Trend of Member Bank Earnings and Profits

by

ROLAND I. ROBINSON

Division of Research and Statistics

Member bank profits in 1939 were slightly above the average for the preceding five years. Net profits of all member banks in that year amounted to 350 million dollars, or 6.3 per cent of total capital accounts. Detailed figures of member bank earnings and profits for the year 1939 are shown in the tables on pages 460-465.

Member bank profits in relation to capital accounts by years for the past two decades are shown on Chart 1. At the beginning of this period money rates were high and bank-

banking profits remained close to a level of 9 per cent of total capital accounts.

During the depression of the early 1930's interest income of member banks declined, but the principal effect of the depression on bank profits was caused by the necessity of large charge-offs for actual or expected losses. These charge-offs were largest in the years 1931-1934. The annual net losses of member banks during these years averaged 4 per cent of total capital accounts. Official earnings and dividends reports do not disclose the full extent of the losses, since many banks suspended and in most suspensions only a part of the losses had been booked and reported. Many of the banks which remained open and were licensed following the banking holiday delayed much of their charging off of assets into 1933, 1934, and even later.

Net profits rose sharply in 1936, owing primarily to substantial profits obtained on securities sold; they declined somewhat in 1937 and 1938, and rose slightly in 1939. In general, profits in recent years have been between two-thirds and three-fourths of the average for the 1920's, the decrease being the net result of several changes, principally reduced total earnings offset to a considerable extent by reduced expenses. Net charge-offs, representing the difference between losses charged off and the sum of recoveries and profits on securities sold, have been much smaller since 1935 than in the 1931-1934 period and slightly smaller than in the 1920's; total charge-offs have been larger than a decade ago, but have been offset to a greater extent by recoveries of losses previously charged off and profits on securities sold.

In Chart 2 the important items of bank earnings are shown—total current earnings, net current earnings, and net profits, expressed in dollar aggregates for all member banks for the years 1927-1939. The differences between total earnings and net earnings represent expenses, including interest paid

CHART 1  
MEMBER BANK PROFITS  
AS A PERCENTAGE OF TOTAL CAPITAL ACCOUNTS

ing profits likewise. Larger charge-offs in 1921 reduced profits somewhat. In the subsequent years of the 1920's the amounts of banking profits increased at about the same rate as banking capital, and during 1925-1929

*Note.*—Views expressed in signed articles published in the BULLETIN are those of the writers and not necessarily those of the Board of Governors of the Federal Reserve System.

### *Trend of Member Bank Earnings and Profits*

on deposits, and the differences between net earnings and net profits represent net charge-offs. As shown on this chart, the total earnings of member banks are now around 1,300 millions of dollars annually, compared with an average of about 2,200 millions during the late 1920's. Expenses have also declined greatly, and net earnings have decreased pro-

of Federal and local Government securities on which the yields are lower than on other kinds of securities held by banks. Banks have developed new sources of income—most notably service charges.

Another important change in the earnings position of member banks, which has offset a great deal of the decline in total earnings, has been a big decrease in the amount of interest paid on deposits. The Banking Act of 1933 prohibited the payment of interest on demand deposits by member banks and it gave the Board of Governors power to set maximum rates on time deposits. Such regulation, combined with the voluntary action of bankers in further reducing interest rates, resulted in a substantial decrease in interest costs.

Some of these factors tend to reduce net earnings, others to increase them, but the net result is a moderate decline.

#### **Decrease in Rates of Interest Received**

Since the chief source of bank earnings is interest, the volume of total earnings depends largely on the amount of loans and investments held by banks and on the rates received on such assets. The current volume of member bank loans and investments is not much below that of a decade ago. The rates of interest received, however, have declined substantially. In 1939 member banks received in the aggregate an interest income of 3.1 per cent on their earning assets, and in the 1935-1939 period this return averaged around 3.2 per cent annually, whereas in 1927-1929 the comparable average was 5.5 per cent.

A large part of this decline has been due to decreases in the rates of interest received by banks on their loans and in the yields obtained from investment securities purchased by them. Much of the decline, however, has been due to a shift of bank holdings from loans to investments, particularly in the securities of Federal and local Governments. The rates prevailing on investments are below those received by banks on their loans.

The interest income from loans received by member banks at present averages slightly more than 4 per cent, compared with about 5¾ per cent in the 1927-1929 period. This change is reflected on Chart 3. This decline in the rates on loans, while considerable, is much less than the decline in open-market money rates.

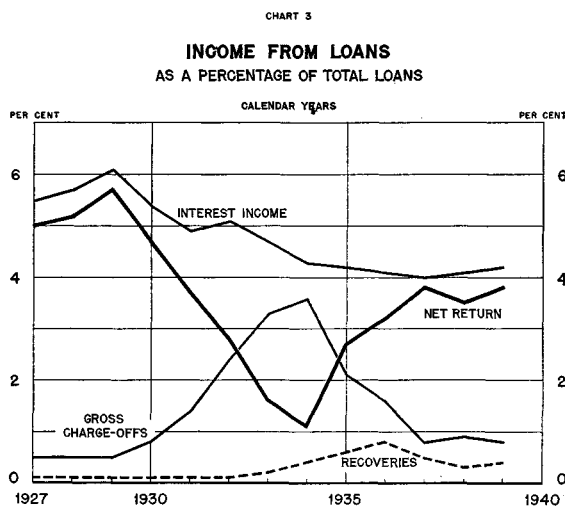

CHART 2  
**MEMBER BANK EARNINGS AND PROFITS**

portionately less than total earnings. Because of the somewhat irregular character of losses, recoveries, and other non-current items, such as profits from sales of securities, net profits have fluctuated more from year to year than net current earnings.

Many of the factors underlying the earnings situation of member banks have changed a great deal in recent years. Interest rates have declined considerably. Loan holdings, on which banks typically earn higher rates, have decreased and this decrease has not been fully offset by larger investment holdings. Yields on investment holdings are smaller, not only because of a decline in the level of interest rates, but also because bank holdings of investments consist more largely

A curve of the rate of net return on loans is also shown on Chart 3. The net return is computed by deducting charge-offs from the interest income and by adding recoveries. Because the charge-offs and recoveries booked in any one year do not usually relate to the loans made in the same year, the significance

of the net return figure for any given year is limited. Over a longer period of time, however, the general relationship of net return to gross interest income is of greater significance. Except for the interval during and following the depression, when large charge-offs were made, the difference between interest income and net return, that is, the net amount of charge-offs per year on loans, appears to have averaged about  $\frac{1}{2}$  of 1 per cent.

The rate of interest income from investments was 2.3 per cent in 1939. The decline to this level from earlier rates of between 4 and 5 per cent is relatively greater than the decline in rates on loans. As shown on Chart 4, the rate on investments at present is only slightly more than one-half the rate of the late 1920's. At that time banks received about 1 per cent less on investments than on loans. At present the difference is almost 2 per cent.

Although the rates of income on investments have decreased considerably, the rates at which banks are now booking interest from investments appear to be in excess of prevailing market yields on the types of securities now generally held by banks. This is to be expected, because the securities now

held by banks have been acquired over a number of years, many of them in earlier periods when yields were higher. In addition, the practice followed by many banks of charging off the premium on securities bought above par at the time of purchase and subsequently booking the full amount of coupon as interest income results in a larger computed rate of interest income.

The net return on investments, similar to the figure computed for loans, is shown on Chart 4. Because of the frequent practice of charging off premiums, and because of the practice of carrying securities purchased below par at cost until they are sold or until maturity and reporting any gain as "profits on securities sold," the significance of the fig-

ure of interest income from investments is somewhat less than that of the similar figure for loans. Although year-to-year changes may be somewhat random, longer-term levels of the net return figure are more significant. Except for the period during and immediately following the depression, the gross interest income and the net return on securities have been about the same. In other words, over a period of time and except for the worst depression period, losses on securities have been offset by recoveries and by profits from sales above cost.

### New Sources of Income

Attempting to offset the loss of gross income, banks have cultivated several new sources of revenue. One of the most important is service charges. These charges, which usually are on smaller deposit accounts or on the number of check and deposit transac-

tions in excess of a specified number, have been made by some banks for many years. Recently, however, the rates at which these charges are made have been increased by some banks and service charges have been adopted by other banks which formerly did not impose them. Such charges produced 54 million dollars of revenue in 1939, compared with 39 million in 1936 and 21 million in 1933. The 1939 amount is about 4 per cent of total earnings and nearly 14 per cent of net earnings.

A great many banks are supplementing their income from traditional sources by making personal loans, and there has been an increase in the amounts lent on real estate. Although the amounts of these new loans may not bulk large in the aggregate, the income they produce is proportionately more important because of the higher rates they bear. It may be noted on Chart 3 that the rate of interest income on loans has remained approximately constant for the past five years. During the same period the customer commercial loan rate is reported to have declined. It may be conjectured that a decline in the rates of income on commercial loans held by member banks has been offset by the injection of a growing proportion of these new types of loans on which the interest rates are higher.

#### **Decline in Interest Costs**

With the exception of interest paid on deposits, most bank expenses have been relatively stable over a long period. Salaries and wages increased during the 1920's, declined during the depression, and have since recovered a part of this loss. Taxes declined during the depression, and after subsequent increases are still somewhat below the levels of the 1920's. The so-called "other" expenses decreased in 1930-1933 and rose in subsequent years, reflecting to a considerable extent the addition of FDIC assessments.

Interest costs, however, are much lower than in former periods. In 1939 the interest paid by member banks on time and savings deposits amounted to about 1.4 per cent of such deposits, compared with an average of between 3 and 3½ per cent in the late 1920's. Furthermore, about 300 million dollars of interest on all classes of demand deposits was paid out annually in the late 1920's, an amount equal to about 1¼ per cent of such deposits. Current interest costs in aggregate

dollar amounts are only about one-fifth to one-fourth of their former levels.

#### **Charge-Offs, Recoveries, and Non-Current Profits**

The long-term levels of banking profits are dependent to a very great extent on the amounts of losses which must be charged off. The influence of these charge-offs, however, of subsequent recoveries, and of non-current profits, such as from sales of securities, in any one year is likely to be erratic. Furthermore, since some of the charge-offs are of an estimated character, they may be excessive in some periods and produce larger recoveries in subsequent periods. If a security is sold for less than its cost or if a loan is compromised for less than its book value, the loss is final and unrecoverable. Part of the losses reported by banks are of this character but many of them are estimates of losses on loans and depreciation on securities still owned. Such reported losses are frequently recoverable. In some years such as 1936 recoveries have been very large. A very large part of the charge-offs made in any year are on loans made or securities purchased in previous years, and likewise with recoveries. In other words the charge-offs, recoveries, and non-current profits of a given year are likely to be the result of lending, investing, and charge-off policies of prior periods. The charge-off figures for a single year are made all the less significant by the frequent banking practice of charging off greater amounts or of making more ample provision of valuation reserves in those years in which profits are otherwise ample.

As a result of the wide variations in charge-offs, recoveries, and non-current profits, the influence of these transactions on the net profits of any one year cannot appropriately be singled out for separate analysis. Over a period of time, however, their influence in determining the levels of banking profits can be appraised more accurately. The estimated and optional nature of the charges tends to be cancelled out.

Charge-offs on all classes of assets, including loans, securities, banking house and equipment, and other assets, are currently being made at substantially higher rates than in the 1920's. Recoveries are also larger than in the 1920's and banks have been receiving large profits from the sale of securities above cost. The gross charge-offs and

recoveries on loans are shown on Chart 3, and the gross charge-offs and recoveries and profits on securities are shown on Chart 4. The larger current charge-offs reflect further write-offs on assets held since the depression and also more conservative valuation practices by banks. Part of the charge-offs on securities are really the writing off of premiums on securities purchased above par. Some banks write off premiums directly at the time of purchase and others write them off more rapidly than required for amortization purposes. Since many banks follow these practices and since most of the securities purchased by banks are now quoted at premiums, the amount of such "losses" may be substantial.

The large security profits ensue from the rising prices of securities during the past several years. Part of the large recoveries may result from charge-offs made as far back as the banking holiday, but it would seem reasonable that by now a substantial portion of them are from the more recent charge-offs, which, as noted above, have been greater in recent years than during the period preceding the depression.

Since gross recoveries and profits on securities offset a large part of the gross charge-offs, net charge-offs at present are moderate.

### Geographic Variations

The profitability of banks varies widely among Federal Reserve districts. In 1939, as shown on Chart 5, member banks in the Chicago, Kansas City, and Dallas Federal

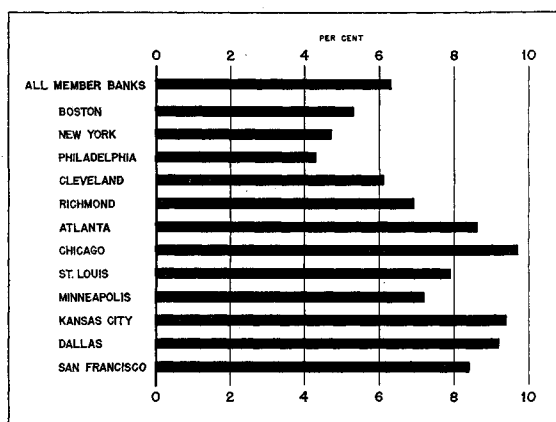

Reserve districts had profits amounting to more than 9 per cent of total capital accounts. At the other extreme, member banks in the New York and Philadelphia districts had profits amounting to only about 4½ per cent of total capital accounts. In the Kansas City and Dallas districts the high profits rates appear to have resulted largely from the higher rates received on loans, and that in the Chicago district was due in part to net non-current profits.

The accompanying table shows some of the significant earnings ratios of central reserve city, reserve city, and country banks, by Federal Reserve districts. Although the net profits of member banks as a proportion of total capital accounts vary widely among districts, as shown on the foregoing chart, the differences between reserve city and country banks in most districts are only moderate. Central reserve and reserve city banks paid out a larger part of their net profits in dividends than did country banks.

The interest income on loans in 1939 at central reserve city banks amounted to 2.6 per cent, at reserve city banks it was 4.2 per cent, and at country banks 5.4 per cent. In other words, the rate of interest income on loans at country banks was twice as great as it was at central reserve city banks, with reserve city banks about halfway between. Within the reserve city and the country classifications there are great regional variations. At reserve city banks, for example, the rate goes from 3.0 per cent in the Boston Federal Reserve district to 4.5 per cent in the Dallas district. The reserve city rate reported in the San Francisco district, 5.0 per cent, is still higher, but it is not comparable to those in the other districts because of the large branch banking systems in that district with many country branches classified as reserve city banks. There are similar variations among Federal Reserve districts in the rates received by country banks, but at higher levels, ranging from 4.7 per cent in the Boston district to 7.2 per cent in the Kansas City district.

A tabulation of average rates received on loans by groups of banks in previous years, shown in the table on page 389 of this BULLETIN, indicates that most of the decline in loan rates during the past decade occurred at city banks; at country banks in Southern and Western states the decline was relatively small.

CHART 5  
MEMBER BANK PROFITS  
AS A PERCENTAGE OF TOTAL CAPITAL ACCOUNTS  
FEDERAL RESERVE DISTRICTS - 1939

# *Trend of Member Bank Earnings and Profits*

As would be expected, the rate of income on securities varies only moderately among Federal Reserve districts. There are, however, substantial differences in rates earned among central reserve city, reserve city, and country banks. A considerable part of this variation is presumably due to the greater proportion of short-term issues held by central reserve city and reserve city banks, and a part is due to the relatively larger amounts of corporate securities held by country banks in some districts.

Country banks as a group have a larger proportion of total assets in loans than central reserve city and reserve city banks and about the same proportion in investments. In other words, country banks employ a somewhat larger proportion of their total assets

than central reserve city and reserve city banks. Banks in these cities are required by law and tradition to hold larger cash reserves. The proportions of loans to total assets and of securities to total assets show considerable variations among the several Federal Reserve districts.

The proportion of time and savings deposits to total deposits is larger for country banks than for reserve city banks; for both of these classes the proportions are much larger than that for central reserve city banks. Except at central reserve city banks the average rate of interest paid on time deposits varies only moderately among districts. It is slightly higher at country than at reserve city banks.

# Deposits by Classes of Depositors, 1937

by

HASKELL WALD

*Division of Research and Statistics*

THE recent publication of data compiled from corporation income tax returns for the year 1937 has made it possible to estimate the distribution of demand deposits by economic classes of depositors as of December 31, 1937. The information contained in this report represents a continuation of the study

panying chart, total estimated demand deposits, after being adjusted for transit items, amounted to \$23,370,000,000 on December 31, 1937. This total was \$1,400,000,000 less than at the end of the preceding year and marked a reversal in the upward trend in demand deposit holdings since 1933. Business enter-

## DISTRIBUTION OF DEMAND DEPOSITS BY CLASSES OF DEPOSITORS

ESTIMATED FIGURES FOR END-OF-YEAR DATES

published in the Federal Reserve BULLETIN for October 1939. For a description of the methods employed in building up these estimates and for a discussion of some factors affecting the comparability and limiting the accuracy of the figures, the reader is referred to the earlier report.

As shown in Table 1 and in the accom-

panies, financial groups, and public bodies shared in this decline, but there was a continued increase in the deposit holdings of the unclassified remainder, comprising mainly consumer balances, large balances of individuals, and balances of nonprofit organizations and some unincorporated groups for which no estimates could be made. Because of this,

*Note.*—Views expressed in signed articles published in the BULLETIN are those of the writers and not necessarily those of the Board of Governors of the Federal Reserve System.

**Deposits by Classes of Depositors, 1937**

the amount of deposits in the unclassified category increased from 27 per cent of the adjusted total on December 31, 1936 to 29 per cent on December 31, 1937, while the percentage holdings of business and public bodies declined by a small amount, and the per cent of the adjusted total held by the finance group remained about the same. The right-hand side of the chart illustrates the percentage increase was experienced by the finance group. It should be noted, however, that the major part of this increase occurred between the end of 1933 and the end of 1935 and that this can be partly explained by the abolition of the privilege of filing consolidated income tax returns in 1934. This meant that certain holding companies were listed under business categories in 1933 and

<sup>r</sup> Revised.

<sup>1</sup> Total demand deposits are partly estimated and exclude domestic interbank deposits.

<sup>2</sup> Includes amount reported as in process of collection by banks and estimated amount of items in transit between depositors. Method of estimation explained in Federal Reserve BULLETIN, October 1939, p 872.

<sup>3</sup> Excludes professional service, agriculture, finance, transportation, and public utilities.

<sup>4</sup> Includes foreign bank deposits with nonmember banks.

<sup>5</sup> Accounts of individuals with balances of \$100,000 and over, as reported by the 98 largest member banks, amounted to \$280,000,000 on December 31, 1933 and \$430,000,000 on December 31, 1935. No similar information is available for 1936 or for 1937.

changes in the percentage distribution of the deposit holdings.

The shift in the demand deposit holdings of the various classes of depositors between December 31, 1933, and December 31, 1937, is shown in Table 2 in terms of index numbers based upon the amount of deposit holdings on December 31, 1933. At the end of 1937, total demand deposits excluding items in transit were 55 per cent above the total amount of deposit holdings at the end of 1933. During this four-year period the greatest

under finance in subsequent years, the result being an understatement of the increase in business balances and an overstatement of the increase in financial deposits. The increase in financial deposit balances between December 31, 1935, and December 31, 1937, was essentially due to the increased holdings of foreign banks and individuals.

The largest absolute amount of increase in deposits between the end of 1933 and the end of 1937 was in the unclassified category. The deposits of this class increased steadily

# Deposits by Classes of Depositors, 1937

throughout this period and at the end of 1937 amounted to \$3,010,000,000 more than at the end of 1933. Business deposits were 26 per cent higher on December 31, 1937, than on December 31, 1933, but since this rate of growth was considerably below the rate of increase of the deposit holdings of the other groups, the per cent of the total deposits held by business enterprises declined from 41 per cent to 33 per cent between these two dates. The deposit holdings of public bodies declined by one-eighth between December 31, 1936, and December 31, 1937, but still remained 35 per cent above their 1933 level. It appears that the decline in demand deposits of State and local governments during 1937 reflected principally a shifting of public funds from demand to time deposits. Although the United States Treasury's bank deposits were 5 per cent less at the end of 1937 than four

years earlier, the amounts of demand deposits held by other public bodies had increased substantially.

Continuing the table on time deposits presented in the previous report, Table 3 summarizes the estimated time deposit holdings of the several classes of depositors. It appears that total time deposits increased \$860,000,000 during 1937, and that this increase occurred in the holdings of public bodies and the unclassified group. Business and financial enterprises held an estimated \$100,000,000 less in time deposits on December 31, 1937 than on December 31, 1936. In contrast to the 55 per cent increase in the amount of demand deposits between the end of 1933 and the end of 1937, time deposits increased only 20 per cent between these two dates. This more rapid growth in demand deposits has in part resulted from the decline in the rate of interest paid on time deposits. Large time accounts in most leading cities no longer receive any interest.

# *From the Board's Correspondence*

---

**T**HE character and volume of inquiries addressed to the Board in recent years reflect the public's growing interest in problems related to money and banking. The inquiries cover a wide range of subjects representing many points of view, and it is believed that some of the questions raised, together with the Board's replies, may be of interest to the readers of the BULLETIN. Selections for publication are made on the basis of frequency of inquiry, timeliness, and importance of subject matter.

## *Ownership of the Monetary Gold Stock*

**A**BOUT a year ago Senator Glass forwarded to the Board of Governors an inquiry from Senator Bankhead regarding the ownership of gold in the possession of the Treasury. The Board's reply, dated April 24, 1939, was reprinted on pages 7418 and 7419 of Volume 84, Part 7, of the Congressional Record of the Seventy-Sixth Congress, First Session, under date of June 19, 1939.

Some of the figures, of course, have changed during the intervening year. As of April 24, 1940, the Treasury held \$18,700,000,000 in gold, of which \$16,400,000,000 was pledged against an equal amount of outstanding gold certificates and gold certificate credits. The difference between these two figures, amounting to \$2,300,000,000, consists of several items, including approximately \$2,100,000,000 in gold that has not been put to active use.

The increase in the country's monetary gold stock during the year ending April 24, 1940 amounted to \$2,995,000,000, making a total increase of \$11,690,000,000 since January 31, 1934, when gold was revalued. Member bank reserve balances now amount to approximately \$12,885,000,000, of which more than \$10,000,000,000 has been acquired since January 31, 1934. Of the total volume of member bank reserve balances, upwards of \$6,000,000,000 is in excess of requirements.

"Honorable Carter Glass,  
United States Senate,  
Washington, D. C.

"Dear Senator Glass:

"In reply to the questions raised in Senator Bankhead's letter of March 21, which you enclosed with your letter of March 30, the Board wishes to state that title to gold

held in the Treasury is vested in the United States. The great bulk of this gold has been indirectly added to the money supply of the country through the issuance of gold certificates against it. In the following paragraphs there is a brief discussion of several phases of this question.

"1. Of the \$15,500,000,000 of gold which the Treasury holds, \$12,700,000,000 is pledged as security against an equal amount of outstanding gold certificates (including credits payable in such certificates). Under existing law this gold cannot be used for any other purpose so long as the certificates are outstanding. In addition, \$156,000,000 is held by the Treasury pursuant to law as a reserve against United States notes.

"2. All but a small amount of the gold certificates now outstanding have been issued by the Treasury to obtain gold or credits from the Federal Reserve banks. The Federal Reserve banks acquired \$3,600,000,000 of new gold certificates in exchange for their gold reserves which they transferred to the Treasury in January 1934. The remaining gold certificates which they hold have been issued largely for gold purchased by the Treasury since that time. The gold is paid for by drafts on the Treasury's account with the Federal Reserve banks. Having acquired the gold, the Treasury then replenishes its account at these banks by issuing gold certificates to them. The results of the operation are that (1) the Treasury has acquired the gold, (2) the Federal Reserve banks have acquired gold certificates, (3) the Treasury's balances at the Reserve

banks have been maintained, (4) an equivalent amount of reserve funds has been paid out and added to member bank reserves, and (5) deposits held by the public and available for payments either by check or in currency have increased. In brief, the effect of the gold inflow on the banking and credit situation has been the same as would have been that of an inflow of gold under the automatic gold standard.

"3. Since January 31, 1934, more than \$8,000,000,000 of gold has been purchased in this manner and member bank reserves have increased from about \$2,000,000,000 to \$9,000,000,000. This increase in member bank reserves presents a serious potential problem from the point of view of control of an inflationary situation if one should develop.

"4. About \$2,500,000,000 of gold in the Treasury has not yet been put to active use and is therefore at the free disposition of the Treasury. The Stabilization Fund holds \$1,800,000,000 of this gold, representing a portion of the profit realized when the gold content of the dollar was reduced, and the price of gold was raised from \$20.67 an ounce to \$35. The remain-

der of the unused gold, about \$700,000,000, is in the General Fund of the Treasury. To the extent that the Treasury puts this \$2,500,000,000 to use in the form of gold certificates, additional funds will be disbursed and member bank reserves will be further increased.

"5. Since the existing supply of currency and deposits in the hands of the public is considerably greater than in 1929 and is not being actively used, since the commercial banks have an unprecedented volume of excess reserves readily available for a further expansion of currency and deposits, and since the Federal Reserve System stands ready to supply additional funds whenever such action will serve the public welfare, the Board believes that additional issues of Treasury currency to the public, whether related to the gold stock now held or not, can serve no useful monetary purpose at this time and would make the problem of excessive bank reserves in the future more difficult to handle."

Sincerely yours,

M. S. ECCLES,  
*Chairman.*

## *Current Events*

### **Annual Report for 1939**

The Annual Report of the Board of Governors for 1939 was presented to Congress on April 20, 1940. As in 1939, the Annual Report this year was issued in one edition. Previously, a brief edition of the Report, containing the text and the records of policy actions, was published considerably in advance of the complete edition, which included a large number of statistical tables and some other appendix material. This additional material is now made available in the Federal Reserve Bulletin and in other publications and releases of the Board.

Copies of the Annual Report may be obtained upon request.

### **Meeting of Chairmen of the Federal Reserve Banks**

The Spring meeting of the Chairmen of the Federal Reserve Banks was held on April 12-14, 1940. The meeting was attended by all Chairmen and by members of the Board of Governors.

### **Election of Class B Director**

The Federal Reserve Bank of Cleveland on April 12 announced the election of Thomas E. Millsop, President, Weirton Steel Company, Weirton, West Virginia, as a Class B director of the Bank for the unexpired portion of the term ending December 31, 1942.

# Foreign Banking Laws and Reports

## French Financial Measures

On February 29, 1940, a convention was concluded between the Bank of France and the State providing for:

(1) Revaluation of the Bank's gold reserves on the basis of 23.34 milligrams gold 0.900 fine per franc,

(2) Application of the "gold profit" of approximately 17,300,000,000 francs thus realized by the Bank, supplemented by certain other funds drawn from the Exchange Stabilization Fund, to the repayment in full of advances of approximately 20,500,000,000 francs made by the Bank to the Treasury under the convention of November 12, 1938,<sup>1</sup>

(3) Cession by the Bank to the State, for account of the Stabilization Fund, of 30,000,000,000 francs in gold valued on the new basis, against delivery to the Bank of an equal face amount of negotiable three-month Treasury bills, and

(4) Opening of a fresh credit at the Bank in favor of the State authorizing temporary advances to the Treasury of 20,000,000,000 francs in addition to the 25,000,000,000 francs already authorized under the convention of September 29, 1938.<sup>2</sup>

A Presidential decree issued on the same day approved this convention, and authorized the Exchange Stabilization Fund to invest its liquid franc assets temporarily in three-month Treasury bills. The texts of the decree and of the convention are given in translation below.

### Decree Approving a Convention Entered Into Between the State and the Bank of France

The President of the French Republic,

On the report of the President of the Council, Minister of National Defense, of War, and of Foreign Affairs, and of the Minister of Finance,

By virtue of the law of December 8, 1939, modifying article 36 of the law of July 11, 1938;

The Council of Ministers concurring:

Decrees:

ARTICLE 1. The convention entered into on February 29, 1940, between the Minister of Finance and the Governor of the Bank of France, the text of which is annexed to the present decree, is approved.

ART. 2. For the duration of hostilities, the Exchange Stabilization Fund, established by article 3 of the law of October 1, 1936,<sup>3</sup> shall be authorized to invest its liquid franc assets temporarily in three-month Treasury bills.

ART. 3. The President of the Council, Minister of National Defense, of War, and of Foreign Affairs, and the Minister of Finance, each insofar as he is concerned, are charged with the execution of the present decree, which shall be submitted for ratification to the Chambers in conformity with the provisions of the law of December 8, 1939.

Done at Paris, February 29, 1940.

ALBERT LEBRUN.

By the President of the Republic:

The President of the Council,  
Minister of National Defense,  
of War, and of Foreign Affairs,  
EDOUARD DALADIER.

The Minister of Finance,  
PAUL REYNAUD.

### Convention Between the Minister of Finance and the Governor of the Bank of France

Between the undersigned, M. Paul Reynaud, Minister of Finance, acting on behalf of the State, and M. Pierre Fournier, Governor of the Bank of France, duly authorized by decision of the general council of the Bank of France, under date of February 29, 1940, it has been agreed as follows:

#### I. REVALUATION OF GOLD RESERVE—REIMBURSEMENT OF PRE-WAR ADVANCES TO THE STATE

ARTICLE 1. The Bank shall proceed to revalue its gold reserve and its available foreign exchange holdings under conditions set forth in article 1 of the convention of September 25, 1936,<sup>3</sup> on the basis of a weight of 23.34 milligrams gold 0.900 fine per franc.

<sup>3</sup> See BULLETIN for November 1936, pp. 878-880.

<sup>1</sup> See BULLETIN for January 1939, p. 30.

<sup>2</sup> See BULLETIN for November 1939, pp. 976-977.

ART. 2. The increment resulting from the revaluation provided for in the preceding article shall be applied in conformity with the provisions of article 8 of the convention of November 12, 1938,<sup>1</sup> to the definitive repayment in due measure of the temporary advances granted to the Treasury by the Bank of France in application of article 3 of the above-mentioned convention.<sup>1</sup>

The balance not so repaid shall be made up from liquid assets of the Exchange Stabilization Fund.

## II. TRANSFER OF GOLD BY THE BANK OF FRANCE TO THE STATE AND DELIVERY IN RETURN OF NEGOTIABLE TREASURY BILLS

ART. 3. The Bank of France shall transfer to the State, for account of the Exchange Stabilization Fund, gold drawn from its reserve to an amount of 30,000,000,000 francs, on the basis of a weight of 23.34 milligrams gold 0.900 fine per franc.

ART. 4. In return for the transfer provided for in article 3 of the present convention, the Bank of France shall receive in the nominal amount of 30,000,000,000 francs three-month Treasury bills bearing interest at the prevailing rate for ordinary Treasury bills with a maturity of 75 to 105 days and negotiable on the market.

ART. 5. The Bank of France shall enter on a special line on the assets side of its balance sheet the nominal amount of negotiable bills which it shall have received in execution of the provision of article 4 of the present convention.

On the liabilities side of its balance sheet the Bank shall show under the heading "Interest account" (compte annexe d'intérêts), an account designated to receive the necessary funds for interest service due to purchasers of these bills in case they are placed on the market.

The conditions for the administration of the two above-mentioned accounts shall be agreed upon in an exchange of letters between the Minister of Finance and the Governor of the Bank of France.

ART. 6. In case of retrocession of the gold by the State to the Bank the amount of negotiable bills referred to in the preceding articles shall be correspondingly reduced.

If the amount of such negotiable bills held in portfolio by the Bank is less than the amount of the gold returned, a new convention shall specify the terms of the transaction.

ART. 7. The amount of negotiable bills received by the Bank in execution of the present convention shall not be included in the figure of the productive

note circulation serving as the basis for calculation of royalties and of stamp tax as provided by the laws and conventions now in effect.

ART. 8. The State shall pay to the Bank, as reimbursement for expenses incurred in connection with the transactions mentioned in the preceding articles, a commission equal to 0.3 percent per annum of the nominal amount of the negotiable bills delivered to it.

This commission shall be paid, quarterly and in advance, at the time of the delivery of the negotiable bills and their successive renewals.

## III. NEW ADVANCES TO THE STATE

ART. 9. The Bank of France agrees to grant to the State, upon request by the Minister of Finance, and in addition to the advances provided in article 1 of the convention of September 29, 1938,<sup>2</sup> temporary advances up to 20,000,000,000 francs.

ART. 10. In return for the advances granted in application of article 9 of the present convention, non-interest-bearing three-month Treasury bills shall be delivered, renewable until repayment of the above-mentioned advances.

ART. 11. The Bank of France shall receive as reimbursement for expenditures incurred by it in supplying the advances mentioned in article 9 of the present convention, a commission of 0.5 percent per annum of the actual amount of these advances.

ART. 12. The provisions set forth in article 8 of the convention of November 12, 1938,<sup>1</sup> regarding repayment of advances granted in accordance with article 3 of the said convention, shall apply also to the definitive repayment of the advances provided for in article 1 of the convention of September 29, 1938,<sup>2</sup> and in article 9 of the present convention.

ART. 13. The amount of the advances granted, in execution of article 9 of the present convention, shall not be included in the figure of the productive note circulation serving as the basis for calculation of the royalties and of stamp tax as provided by the laws and conventions now in effect.

ART. 14. The present convention is exempt from stamp and registration taxes.

Done at Paris, in duplicate, February 29, 1940.

Read and approved:

The Minister of Finance,

PAUL REYNAUD.

Read and approved:

The Governor of the Bank of France,

PIERRE FOURNIER.

<sup>2</sup> See BULLETIN for November 1939, pp. 976-977.

## British Mobilization of United States Dollar Securities

On April 14, the British Treasury issued an order marking the second stage of its program for mobilizing the United States dollar securities in the hands of British investors. This program was initiated on February 18 with an order requisitioning the holdings of British residents in 60 American stocks.<sup>1</sup> The present order instructs British holders of over 100 securities denominated in United States dollars (in one case, only with optional payment in dollars) to deliver them forthwith to the Bank of England as agent of the British Treasury; payment is to be effected on April 29 in the sterling equivalent (at the official buying rate for dollars of \$4.03½ to the pound) of the closing market prices of the securities in New York on April 13.

Official British pronouncements in connection with the present order contained the following statement: "Certainly it does not follow simply because a second order has been made that all the stocks acquired by the Treasury under the first order have already been sold; less still is it to be inferred, merely because a longer list of securities is now being called up, that the whole of the dollar proceeds realized by any such sales have already been used up in purchases of United States war materials." Orders with respect to additional United States dollar securities will no doubt be announced from time to time.

In contrast to the previous mobilization order, the present list of affected securities contains a considerable number of preferred stocks and bonds, the latter including several issues by foreign obligors. The complete list is produced below:

## Annual Report of the Bank of Canada

The fifth annual report of the Bank of Canada, for the calendar year 1939, was submitted to the Minister of Finance of the Dominion on February 10, 1940, by the Governor of the Bank, Mr. Graham Ford Towers. The text of the report, with the omission of brief sections relating to security issues and markets in Canada in recent years and to the internal operations and personnel of the Bank, is given herewith.<sup>1</sup>

In dealing with the statement of accounts for the year 1939, I propose to show the major changes on the year in the form of a table indicating the effect of these changes on the chartered banks' cash reserves, to comment on certain of the individual items, and then to refer to the reasons underlying the policy which has been followed.

[In millions of dollars]

	Changes producing a decrease in chartered banks' cash	Changes producing an increase in chartered banks' cash
Increase in gold coin and bullion.....		39.8
Increase in sterling and U. S. A. dollars.....		36.0
Increase in Dominion and Provincial Government securities.....		46.3
Increase in active circulation.....	43.8	
Increase in Dominion Government balances.....	29.6	
Increase in "Other deposits".....	14.8	
Increase in "Rest fund".....	.5	
Other net changes.....	3.3	
	92.0	122.1
Deduct.....		92.0
Increase in chartered banks' cash reserves (Notes of and deposits with Bank of Canada).....		30.1

**Notes in circulation.**—Our note issue at the end of December was \$232,779,000, up \$57,520,000 from the previous year. Of this increase \$13,736,000 was held by the chartered banks. The remainder, \$43,784,000, represented larger holdings on the part of the general public. A decline of \$3,696,000 in the note issues of the chartered banks offset to that extent the increase in the public's holdings of Bank of Canada notes, leaving the net increase in active note circulation \$40,088,000 on the year. On the basis of daily averages, the increase was \$11,600,000 or 5.7 per cent as compared with 2.6 per cent between 1937 and 1938, and 10 per cent between 1936 and 1937.

<sup>1</sup> For previous reports see BULLETIN for May 1939, June, 1938, April 1937 and 1936.

Much the largest part of the increase in active note circulation took place during the latter part of the year, when normal seasonal expansion was considerably exceeded. The large wheat crop and higher farm income undoubtedly contributed to this rise, as also would rising business activity, increasing payrolls and stimulation of retail trade during the last few months of 1939. In addition, it is probable that some of the increase was required to replace United States bills which were returned to that country because of the premium on U. S. funds.

**Reserves.**—Gold coin and bullion held by the Bank at the year end were valued at \$225,677,000, an increase of \$39,765,000. The addition of 603,431 ounces to our stock of gold accounts for \$21,152,000 of this increase. The remainder is attributable to the change in the premium on U. S. dollars, since our gold stock under the Exchange Fund Act of 1935 is valued at market price in Canadian funds. The premium was 31/32 of 1 per cent on December 31, 1938 and 10 per cent at the end of 1939.

During the last three years, we have increased our gold and foreign exchange holdings from time to time, partly because of a desire to maintain a liquid reserve appropriate to our growing note and deposit liabilities, and partly because of the prospect that we would stand in need of such additional foreign resources as could conveniently be accumulated, if war broke out. It was the latter consideration which prompted the increase in our gold holdings during the first four months of 1939. Sterling and U. S. dollar exchange holdings of the Bank as at December 30 last were \$64,325,000, an increase of \$35,970,000 over the preceding year.

**Investments.**—The remainder of the increase in our assets during 1939 was in holdings of Dominion and Provincial Government securities, which on December 30 were \$231,773,000. This represented an increase of \$46,257,000 for the year, of which \$37,276,000 was in securities maturing in less than two years, and \$8,981,000 in securities of a maturity longer than two years. On the basis of the Wednesday figures published in our weekly statement, total investments averaged only \$4,500,000 more in 1939 than in the year 1938.

**Bank Rate.**—Bank Rate has remained unchanged throughout the year at  $2\frac{1}{2}$  per cent. As in previous years, there has been very little need for banks to borrow.

**Chartered banks' cash reserves.**—As I have indicated in the table (see p. 410) our transactions during the year had the effect of increasing the cash reserves of the chartered banks by \$30,100,000. During 1939, the banks' Canadian dollar deposits rose by \$352,000,000, and at the year-end their ratio of cash to deposits was 10.1 per cent, as compared with 10.3 per cent at the end of 1938. The increase in deposits, and the need for additional cash resources, were related to certain major developments to which I am referring below.

Most of the increase in the assets and liabilities of the banks took place during the last four months of the year, and was caused by an expansion of loans to finance the 1939 wheat crop—the second largest on record—and by the purchase of \$200,000,000 of securities from the Dominion Government. The securities took the form of 2 per cent obligations, which mature on October 16, 1941, but are callable by the Dominion Government on or after October 16, 1940, on thirty days' notice.

This short-term financing conformed to the programme outlined in the Budget Speech at the Emergency Session of Parliament. While it was recognized that Canada's war expenditure as a whole should be met by taxation and borrowing of savings, it was thought desirable that, in the initial stage, financing by the Dominion Government should take a form which would not in any way hamper the process of adjustment necessitated by war. I am referring to this subject again in the last section of my report.

**Securities.**—Apart from the Dominion's October Loan, the amount of new government issues in the latter part of 1939 was appreciably below recent levels. New corporate financing, however, continued to be in somewhat greater volume than in 1937 or 1938.

It is estimated by the Dominion Bureau of Statistics that net repatriations of Canadian securities have totalled about \$650,000,000 since 1932, some \$400,000,000 of the total having occurred since 1935.

**Foreign exchange.**—Despite the pressure of substantial capital movements, the sterling-U. S. dollar rate remained steady during the first part of 1939, in the neighborhood of \$4.68. Late in August, the rate fell sharply,

and after exchange control was instituted in the United Kingdom early in September, the official buying and selling rates on New York established a middle rate of \$4.03.

The Canadian dollar was also stable during the earlier period, the premium on U. S. dollars remaining less than one per cent. Foreign purchases of Canadian securities continued in considerable volume, and our current account balance of payments remained strong. It is, therefore, not surprising that the Canadian dollar held at only a small discount in New York, in spite of the position of sterling.

In the last days of August, however, it dropped sharply, and by the time Canada had declared war, the premium on U. S. funds was  $7\frac{1}{2}$  per cent. By the end of the following week, the premium had risen to about 11 per cent, with an appreciable outflow of capital coming into evidence. On September 16, the Dominion Government established foreign exchange control. Since that time, the premium on U. S. funds in Canada has been 10 per cent buying and 11 per cent selling. The corresponding rates on sterling have been \$4.43 and \$4.47.

**Balance of payments.**—Preliminary calculations of Canada's balance of international payments in 1939, made by the Dominion Bureau of Statistics, indicate that the net surplus on current account was appreciably greater than the revised 1938 figure of \$189,000,000. Exports of merchandise other than gold rose by \$85,000,000, and net non-monetary gold exports by \$25,000,000. A \$65,000,000 increase in imports left the favourable trade balance about \$45,000,000 greater than in 1938, and our net receipts on tourist account showed little change. On the other hand it is estimated that net interest and dividend payments to non-residents were slightly higher, and that net payments on account of freight and other service items also rose.

During the first part of the year it appeared probable that an even stronger total current account position would be shown, for the whole of the net rise in imports took place in the last four months.

The small increase in net interest and dividend payments, which has been mentioned above, deserves further comment. Chiefly as a result of repatriation, net interest payments to non-residents followed the trend of recent years, and recorded a further decline. This is after allowing for the effect of the premium on U. S. funds in the latter part of

the year, as all items in the balance of payments are expressed in terms of Canadian dollars. The increase in net dividend payments to non-residents which has taken place since the depth of the depression has, of course, been closely associated with, and in its effect upon the balance of payments offset by, expanding mineral exports.

**General.**—Last spring, I was present at the meetings of the Banking and Commerce Committee of the House of Commons, when certain aspects of monetary and fiscal policy were discussed at length. By order of the Committee, certain memoranda and tables which were presented in this connection have been published in the form of a booklet.

At that time, discussion centered upon the problems of depression, and I had occasion to emphasize the special limitations which are imposed upon monetary policy in Canada by the character of the Canadian economy. More than one-third of the total real income of Canadians in terms of goods and services is earned directly from sales to other countries. In the absence of structural changes, which lessen our dependence on export trade, it is clear that no amount of internal monetary stimulus can fully offset the effect upon Canada of a low level of foreign demand for Canadian goods and services.

War, on the other hand, gives rise to such a demand for goods and services of certain types, that monetary action to stimulate production becomes unnecessary. It is true that, in the initial period of shock and transition, credit expansion may help to prevent liquida-

tion which is not required by underlying conditions, and may ease the process of adjustment to the new situation. This was the case in the latter part of 1939. But, as was pointed out in the Budget Speech of last September, credit expansion should be confined to this initial phase.

If production for war purposes is expanded in any given period by more than the amount by which production of all kinds can be physically increased, then it must encroach upon the volume of goods and services which can be made available for other purposes. To the extent that Government expenditure is not financed by taxes or loans which correspondingly reduce private expenditure, it is necessarily financed by an increase in the effective money supply. Beyond a certain point, this latter method curtails real private expenditure in terms of goods and services just as surely as if private spending had been reduced directly by tax or loan. It does so by means of an inflationary rise in prices.

Recollecting the effect of developments of this character during and after the war of 1914-18, various countries have expressed the intention of doing everything possible to avoid a repetition of inflation during the present struggle. The success of such an effort in any country where it is made will, no doubt, largely depend upon the degree of public understanding and acceptance of the fact that the direct form of sacrifice is more equitable, and in the long run less costly, than any other method of dealing with the financial problems of a war.

### BALANCE SHEET OF THE BANK OF CANADA AS OF DECEMBER 30, 1939 AND DECEMBER 31, 1938

## *Annual Report of the National Bank of Belgium*

*The annual report of the National Bank of Belgium for the year ending December 25, 1939, was presented to the general meeting of shareholders on February 26, 1940. Sections from the address of the Governor of the Bank, M. Georges Janssen, are given herewith.<sup>1</sup>*

This report completes and in some measure synthesizes elements which have already been presented by the Bank's publications regarding its own activity and the economic development of Belgium. The report will accordingly be limited to essential facts in the field of credit, currency and exchange. It is appropriate to recall first the revision of the Bank's statutes which was the subject of your deliberations at the meeting of September 23, 1939.<sup>2</sup>

**Reform of the Statutes.**—In 1937 the legislative body placed the Bank in a position to purchase, to discount, and to sell public bills, in order to facilitate the accomplishment of its regulatory tasks and to adapt this function to the modifications which had taken place in banking structure and technique. It seemed prudent, however, to establish narrow limits to the new operations which the Bank was thus authorized to perform. Circumstances were to bring about a rapid extension of this reform. The modifications in the organic law in 1939 permitted the suppression of the former dual limits—500,000,000 francs for short-term public securities, one billion for long-term securities—and the raising of the authorized total to five billion francs, this figure being susceptible of some further increase as a result of the amortization of securities held by the Bank under the terms of the laws of December 27, 1930, and July 19, 1932.

The consideration which had influenced the legislative body in 1937, namely, the desire to avoid the possibility that the Bank's new powers might be diverted from their real purpose to the profit of the Treasury, was still uppermost in 1939. The report to the King preceding the decree of August 24,

1939, bears witness to this by emphasizing the manifold guarantees which have been taken against improper financing of the needs of the Government. It must, however, be emphasized that, technically, the interventions of the Bank in the market do not require specific limitations: in particular there is no reason to impose on operations in public bills restrictions from which discounts, loans and advances are exempt. The nature and the volume of the Bank's interventions in the market cannot be determined in advance: they are always dictated by circumstances. They may aim at one time at influencing the rate of interest or at rendering the discount rate effective, at another at causing expansion or contraction of credit, at another at safeguarding the internal credit basis by influencing international capital movements. None of these techniques essential to the administration of money and credit admits of any restriction other than that which exists in the obligation to ensure the maintenance of the legal minimum reserve. However, a limited but still most valuable contribution to the organization of our money market has been made. It has already produced results by no means negligible.

On the occasion of this reform, the allocation of the profits of operations in public bills was determined by agreement with the Treasury.

Another fundamental modification has been introduced in the Bank's statutes: it has been granted the maximum of liberty compatible with its terms of incorporation for the investment of its own funds.

The Bank has had the satisfaction of being represented again on the board of the Bank of the Belgian Congo. This has assured a continuance of the cooperation which the ties linking the colony with the mother country have rendered indispensable, both in the monetary and in the economic sphere.

**Monetary developments.**—At the beginning of 1939, monetary developments showed a dual tendency: a return flow of capital from abroad and an expansion of the circulation. While the latter was to continue throughout the year and even to increase from the end of August, the direction of the capital flow was to change several times.

The political difficulties at home early in

<sup>1</sup> The report, available in French, contains in addition sections dealing with the capital market, the position of the commercial banks, the general economic situation, industry, foreign trade, employment, prices, and government expenditure, as well as tables showing the operations of the Bank in detail. For earlier reports, see BULLETIN for April 1939 and 1938, March 1937, April 1936 and 1932, etc.

<sup>2</sup> See BULLETIN for February 1940, pages 101-105, especially footnote p. 105.

1939 and the intensification of international anxieties created a strong demand for foreign exchange beginning at the end of February. The resulting gold losses by the Bank did not stop until April 22, the date when the internal political troubles were settled. During this period the Bank made use of the technical measures of defense to as great an extent as seemed likely to hasten the solution of the crisis. A reversal in the movement in the month of May marked the beginning of an inflow of gold which steadily increased so that by the end of August, at the very moment when the menace of an international conflict became acute, the Bank had restored its metallic reserves.

The outbreak of hostilities did not immediately interrupt the movement of capital towards Belgium. No losses of gold occurred until the end of September; they continued until the end of November. They resulted alike from the developments on the exchange market and from the dispositions required to finance our foreign commerce. Since then the Bank's reserves have remained almost intact. As to the circulation, it rose considerably from the middle of August until the beginning of September; after a slight falling off during the second half of October, it continued to mount slowly but uninterruptedly.

To sum up: since the events of September the monetary situation has changed primarily in response to the desire for liquidity.

The trend which has just been described appears more concretely in a comparison of certain figures.

It should be noted in advance that the monetary circulation of a country is not to be estimated solely according to the volume of notes appearing on the balance sheets of the bank of issue. Actually, the monetary circulation comprises also the balances in current account at the Bank, the postal checking accounts, demand deposits in the banks and finally the subsidiary currency, notes and tokens, issued for account of the Treasury. The total movements of the monetary circulation so composed show fluctuations far smaller than those of the note circulation of the Bank. Whereas, from December 29, 1938, to December 28, 1939, the latter increased by 6,005,000,000 francs, or 27.3 per cent, the total monetary circulation increased by only about 10 per cent. Accordingly it follows, as is obvious, that the expansion of the note circulation reflects for the most part only a

variation in the different means of payment existing in the country, specifically an increase in hoarding and a decrease of deposits in banks.

The movement of the monetary circulation thus defined similarly reflects the repercussions of the monetary crises of the beginning of the year and of the international political crisis of the second half year. During the first period the total circulation increased from 42,593,000,000 francs at the beginning of July 1938 to 44,810,000,000 francs at the beginning of February 1939, largely because of the fact that the total of bank notes rose from 20,452,000,000 francs on June 23, 1938, to 22,182,000,000 francs on February 9, 1939. It fell then to 41,958,000,000 francs at the beginning of May, this time in response to the drop in demand deposits in the banks, for the note circulation, after a negligible contraction in the middle of March, reached 22,438,000,000 francs on May 4, or 256,000,000 francs more than on February 9.

From May on, at the same time that the ease in the exchange market was increasing, the total circulation again began an upward trend. At the beginning of September it rose to 46,750,000,000 francs. This expansion is explained by the increase of demand deposits in the banks up to and through August and, from the end of July, by the rise in the fiduciary circulation which increased from 22,696,000,000 francs on July 18 to 27,435,000,000 francs on September 7. Thereafter the total circulation increased more moderately; it reached about 48,000,000,000 francs at the beginning of January 1940; there was no further change in demand deposits in the banks, but the issue of notes rose from 27,435,000,000 francs on September 7 to 27,994,000,000 francs on December 28.

The trend toward liquidity which this development reflects then manifested itself in a considerable hoarding of notes. Net deposits in postal checking accounts which were reported, at the beginning of January 1940, at 4,319,000,000 francs, representing an increase of 513,000,000 francs since the beginning of January 1939, were affected only temporarily in the course of recent months. Demand deposits in the banks, on the contrary, were very sensitive to this movement; from December 31, 1938, to the same date in 1939, they underwent a decrease of about a billion.

It may be noted in passing and without stopping to interpret this comparison, that the total circulation, however large its ex-

pansion, remained well below the maximum figure on July 1937 of 50,440,000,000 francs, which is some 2,500,000,000 more than at the beginning of January 1940.

At the end of 1939, the Bank's assets of gold and exchange, discounts, and advances, stood as follows compared with December 25, 1938:

[In millions of francs]

Position on	Gold and exchange			Domestic bills	Foreign bills	Advances on public securities	Total
	Total	Minimum legal reserve	Excess				
December 25, 1938.....	21,714	9,866	11,848	1,021	10	194	22,939
December 25, 1939.....	21,131	11,545	9,586	4,829	18	1,042	27,020
Difference.....	-583	+1,679	-2,262	+3,808	+8	+848	+4,081

It is apparent from the comparison of 1939 with the preceding year, that the changes occurring in the statement are principally attributable to the expansion of domestic credit supplied by the Bank, whereas during the preceding year the reduction of gold holdings had constituted the principal element.

**Gold movements.**—The decrease in the Bank's gold holdings, which reached 583,000,000 francs in the space of a year, resulted from several movements which partially offset each other. Net sales of gold to the market represented 1,159,000,000 francs. In view of the wide fluctuations of the exchanges in 1939 and the insecurity resulting from the international conflict, this figure is not high. It excludes sales and purchases of gold to and from the Bank by the Treasury. On December 25, 1939, the Treasury's gold holdings were 506,000,000 francs against 1,286,000,000 francs on December 25, 1938.

The Treasury's operations on foreign markets were limited to the renewal of short-term loans placed in 1938 in the Netherlands and in Switzerland. The Netherlands' share was raised from 35,000,000 guilders to 41,000,000 guilders, while the Swiss share was reduced from 25,000,000 to 15,000,000 Swiss francs.

**Discounts and advances.**—The expansion of the credit provided by the Bank reached a peak on May 4, 1939: bills and advances then totaled 3,743,000,000 francs. By August 3 this figure had dropped to 1,165,000,000 francs, an amount comparable to the minimum of the year 1937. Expansion was resumed and showed a tendency to become

permanent from the end of August, a phenomenon common to the majority of countries. After having reached a figure of 3,777,000,000 francs on September 7, mainly in satisfying private requirements, the volume of credit furnished by the Bank decreased to 3,076,000,000 francs on September 28, later to rise to 6,040,000,000 francs on December 28. This last increase had its origin, to the extent of 3,525,000,000 francs, in the acquisition of public short-term securities, including 500,000,000 francs representing gold turned over to the Treasury to restore its reserves.

Over the period of the year the Bank's rates showed a slight reduction. It was only during the crisis of the early part of the year, on April 17, that the rates were raised to any extent; specifically they were increased from 2½ per cent to 4 per cent for the discount of accepted bills, and from 4 per cent to 5½ per cent for advances on public securities. As the crisis eased the Bank correspondingly reduced its rates in successive stages on May 11 and July 6.

Since the latter date the discount rate on acceptances and warrants has been 2½ per cent. Furthermore, with a view to facilitating the operations of the money market, advances on public securities maturing in 120 days maximum are granted up to 95 per cent of the nominal value of the security while in addition the rate for these operations has been reduced to 2½ per cent. Also, in order to encourage export trade, the Bank has inaugurated a special rate of 1½ per cent for trade acceptances, documentary drafts and bankers' acceptances representing sales abroad of goods manufactured in Belgium.

**Exchange market.**—The development of the belga in relation to the principal foreign currencies is marked by two periods: one extending from January to August, the other following the outbreak of hostilities in Europe.

In the course of the first eight months of the year, spot exchange at Brussels fluctuated within a narrow range, with the exception of the guilder which continued to be weak. Beginning at the end of August, however, events produced a divergent trend of the pound sterling and the French franc, on the one hand, and of the guilder, the Swiss franc and the Swedish krona on the other.

The pound sterling, which had remained practically at the parity of 27.50 belgas—England having reestablished de facto stability after the beginning of the year—fell

to 21.40 belgas on September 15. The setting up of an exchange control in England involving the limitation of transactions to certified commercial operations, and the official fixing of the price of gold and of the sterling rates on the dollar did not at once succeed in staying the fall of the pound sterling on foreign markets; however the quotation later returned nearly to parity with the official rates in London and remained approximately at that point until the end of the year, still manifesting a slightly weak tendency.

In France, exchange was subject to control from the beginning of the war. Moving in agreement with the pound sterling, on the basis of a parity of about 176.50 French francs to the pound, the French franc maintained on our market a trend parallel to that of the British exchange. This solidarity was confirmed upon the conclusion of the Anglo-French agreement uniting the resources of the two empires.

The extent of the fluctuations of the dollar bears witness to the obstacles placed by the war in the path of international exchange relations, particularly by the rise in freight rates and insurance which widens the spread between the gold points. From an average of 5.88 belgas at the beginning of August, the dollar rose to a maximum of 6.15 belgas on November 13. The reaction which set in on the exchange market on this date brought the dollar back to 5.99 belgas at the end of the year.

In the forward exchange market, the trend was favorable to the belga until February.

The quotations then rose rapidly until April, to return progressively to a level which, at the end of August, was lower than that at the beginning of the year.

Forward exchanges were greatly affected by the outbreak of hostilities. With the exception of the pound, quotations were suspended in the forward market from August 25 to the second half of September. The premium on the dollar at ninety days, around 1½ per cent per annum in August, rose in September to an average of 4½ per cent; this rate was held until November, then was exceeded at the end of the year. The forward pound and French franc were at a discount from the end of August. In December the quotations of the principal forward exchanges firmed, with the exception of the French franc, on which the discount increased.

During the first nine months the Bank remained in close contact with the forward exchange market. Its interventions, motivated by the desire to enlarge and to stabilize this market, were directed to maintaining the exchange rates in line with money rates on the domestic market. These interventions, fairly considerable during the first three months of the year, were practically discontinued after August 18, rates having become stabilized by this time at a satisfactory level. Furthermore, interventions of this nature have no justification except under conditions of freedom of exchange, which ceased to exist for the principal currencies after the third quarter of 1939.

# National Summary of Business Conditions

Compiled April 16 and released for publication April 18

**I**NDUSTRIAL activity continued to decline during March but at a somewhat slower rate than in the preceding two months, and in the first half of April there was little further decrease. Wholesale prices of basic commodities decreased somewhat in the latter half of March but recovered by the middle of April. Distribution of commodities to domestic consumers continued in large volume, and exports were at the high levels reached last December.

## Production

The Board's index of industrial production, which is adjusted for usual seasonal variations and for the number of working days, was 103 in March compared with 109 in February. The decline reflected chiefly a further reduction in output of steel and considerable decreases in activity at cotton and woolen textile mills.

Steel ingot production declined from an average of 69 per cent of capacity in February to an average of 64 per cent in March. In the first half of April output was at around 61 per cent of capacity. Automobile production in March and the first half of April was maintained at the high rate prevailing during January and February but did not show the increase customary at this season. Retail sales of automobiles continued in large vol-

ume, and dealers' stocks of new cars declined somewhat from the high level reached earlier. In the machinery industries activity

United States Department of Commerce estimates of the amount of income payments to individuals, adjusted for seasonal variation. By months, January 1934 to March 1940.

showed some decline from the high rate of other recent months, while at aircraft factories and shipyards activity continued at peak levels. Output of lumber and plate glass advanced seasonally in March.

In the woolen textile industry, where activity had been declining from the high level reached last November, there was a further sharp reduction in March. Activity at cotton textile mills also declined considerably but remained at a somewhat higher level than prevailed a year ago. Shoe production likewise declined considerably in March. At silk mills activity remained at an exceptionally low level, while rayon production was large.

Mineral production was maintained in large volume in March. There was some further reduction in output of bituminous coal, but output of anthracite increased, following a sharp decline in February. Crude petroleum production continued at record levels.

Value of construction contracts awarded, as reported by the F. W. Dodge Corporation, increased considerably in March, as is usual at this season. The increase was principally

in awards for private work, which in March approximately equalled those in the corresponding period last year. Public awards increased somewhat, following declines in January and February, but were in smaller volume than a year ago. Private residential building rose by about the usual seasonal amount.

### Distribution

Sales of general merchandise at department and variety stores and by mail-order houses increased by about the usual seasonal amount from February to March, with allowance for the earlier date of Easter this year. In the first week of April sales at department

Monthly index of number employed at factories, adjusted for seasonal variation, 1923-1925 average=100.

stores were at a higher level than in March.

Freight-car loadings showed little change from February to March, although a rise is usual between these months. Shipments of miscellaneous freight showed considerably less than the usual seasonal increase, and there was some further decline in loadings of coal.

### Foreign Trade

Exports of United States merchandise in March continued near the high level reached last December. Agricultural exports, principally cotton, decreased from February to March, while there were substantial increases in shipments of commercial vehicles and in metal working, agricultural, and other types of machinery.

During March, the country's monetary gold stock increased by \$256,000,000. In the first two weeks of April the rate of gold in-

flow was accelerated, acquisitions in this period amounting to \$145,000,000.

### Commodity Prices

Prices of a number of basic agricultural and industrial commodities, which had declined in the latter part of March, advanced during the second week in April. Prices of certain finished steel products, on the other hand, were reduced, and prices of most other commodities showed little change.

### Government Security Market

Prices of Treasury bonds moved sharply upward during March and the first few days of April to a new high level since last summer. On April 9, however, on receipt of news of the expansion of war activities in Europe, a decline of about one point occurred in long-term bonds. Subsequently the market recovered part of the loss. The yield on the 1960-65 Treasury bonds was 2.31 per cent on April 15, compared with a low of 2.26 per cent on April 2.

### Bank Credit

Reflecting continued heavy gold imports, excess reserves of member banks increased during the four weeks ending April 10 to a record high level of \$5,950,000,000. Total loans and investments at banks in 101 lead-

Wednesday figures partly estimated, January 3, 1934, to April 12, 1940.

ing cities, which had shown little net change during March, increased in the first two weeks of April, reflecting purchases of United States Government obligations.

Tables on the following pages include the principal available statistics of current significance relating to financial and business developments in the United States. The data relating to the Federal Reserve Banks and the member banks of the Federal Reserve System are derived from regular reports made to the Board; index numbers of production are compiled by the Board on the basis of material collected by other agencies; figures for gold stock, money in circulation, Treasury finance, and operations of Government credit agencies are obtained principally from statements of the Treasury or of the agencies concerned; data on money and security markets and commodity prices and other series on business activity are obtained largely from other sources. Back figures may in most cases be obtained from earlier BULLETINS and from Annual Reports of the Board of Governors for 1937 and earlier years. Current figures compiled by the Board are generally released prior to publication in the BULLETIN and press statements will be sent without charge to those wishing them. For a list of current releases see FEDERAL RESERVE PUBLICATIONS at the back of this BULLETIN.

<sup>1</sup> Two and one-half per cent to lenders other than banks.

NOTE.—Rates applicable to United States Government securities' repurchase agreements are as follows: New York, one per cent; Cleveland, Kansas City, and Dallas, one and one-half per cent.

Back figures.—See Annual Report for 1937 (table 40).

## FEDERAL RESERVE BANK BUYING RATES ON ACCEPTANCES

[Per cent per annum]

Maturity	Rate in effect on April 27	In effect beginning—	Previous rate
1-15 days <sup>1</sup> .....	½	Oct. 20, 1933	1
16-30 days.....	½	do.....	1
31-45 days.....	½	do.....	1
46-60 days.....	½	do.....	1
61-90 days.....	½	do.....	1
91-120 days.....	½	do.....	1
121-180 days.....	1	do.....	1½

<sup>1</sup> This rate also applies to acceptances bought under repurchase agreements, which agreements are always for a period of 15 days or less.

NOTE.—Minimum buying rates at the Federal Reserve Bank of New York on prime bankers' acceptances payable in dollars; higher rates may be charged for other classes of bills. The same minimum rates apply to purchases, if any, made by other Federal Reserve Banks.

Back figures.—See Annual Report for 1937 (table 41).

## MAXIMUM RATES ON TIME DEPOSITS

Maximum rates that may be paid by member banks as established by the Board of Governors under provisions of Regulation Q.

[Per cent per annum]

	Nov. 1, 1933 to Jan. 31, 1935	Feb. 1, 1935 to Dec. 31, 1935	In effect beginning Jan. 1, 1936
Savings deposits.....	3	2½	2½
Postal Savings deposits.....	3	2½	2½
Other time deposits payable in:			
6 months or more.....	3	2½	2½
90 days to 6 months.....	3	2½	2
Less than 90 days.....	3	2½	1

NOTE.—Maximum rates that may be paid by insured nonmember banks as established by the Federal Deposit Insurance Corporation, effective February 1, 1936, are the same as those in effect for member banks. In some States the maximum rates established by the Board and the Federal Deposit Insurance Corporation are superseded by lower maximum rates established by State authority.

## FEDERAL RESERVE BANK RATES ON INDUSTRIAL ADVANCES

Rates in effect April 27, 1940, on advances and commitments under Sec. 13b of the Federal Reserve Act.

[Per cent per annum except as indicated by footnote <sup>3</sup>]

Federal Reserve Bank	Advances direct to industrial or commercial organizations	Advances to financing institutions—		Commitments to make advances
		On portion for which institution is obligated	On remaining portion	
Boston.....	3½-6	3	3½	½-1
New York.....	4-6	3	4-5	1-2
Philadelphia.....	4-6	( <sup>1</sup> ) 2½	( <sup>1</sup> )	½-2
Cleveland.....	4½-6	3½	4	1
Richmond.....	6	4-6	4-6	1-2
Atlanta.....	5-6	5	5	½
Chicago.....	5-6	( <sup>1</sup> ) 2½	5-6	1-2
St. Louis.....	4-5½	3½	4	( <sup>2</sup> ) 1
Minneapolis.....	6	4½-5	4½-5	1
Kansas City.....	4-6	4	4	( <sup>2</sup> ) 2
Dallas.....	5-6	4	5-6	1
San Francisco.....	5-6	3-4	4-5	½-2

<sup>1</sup> Authorized rate one per cent above prevailing discount rate.

<sup>2</sup> Same as to borrower but not less than 4 per cent.

<sup>3</sup> Minimum charge one-half of one per cent.

Back figures.—See Annual Report for 1937 (table 40).

## MEMBER BANK RESERVE REQUIREMENTS

[Per cent of deposits]

Classes of deposits and banks	June 21, 1917- Aug. 15, 1936	Aug. 16, 1936- Feb. 28, 1937	Mar. 1, 1937- Apr. 30, 1937	May 1, 1937- Apr. 15, 1938	Apr. 16, 1938- and after
On net demand deposits: <sup>1</sup>					
Central reserve city.....	13	19½	22½	26	22½
Reserve city.....	10	15	17½	20	17½
Country.....	7	10½	12½	14	12
On time deposits:					
All member banks.....	3	4½	5½	6	5

<sup>1</sup> See footnote to table on p. 428 for explanation of method of computing net demand deposits.

March	18,433	—	256.0	459.8	—213.4	*9.2
April 1-24	18,708	—	275.3	207.7	64.8	—

<sup>2</sup> Preliminary. <sup>1</sup> Revised.

<sup>1</sup> Gold held under earmark at Federal Reserve Banks for foreign account on March 30, 1940, in millions of dollars: 1,299.5.

<sup>2</sup> Figures based on rate of \$20.67 a fine ounce in January 1934 and \$35 a fine ounce thereafter.

NOTE.—Figures for domestic production of gold are those published in table, p. 469, adjusted to exclude Philippine Islands production received in United States. Adjustment based on annual figures reported by Director of Mint and monthly imports of gold to U. S. from Philippines. For back figures see Annual Report for 1937 (table 29).

## BANK SUSPENSIONS <sup>1</sup>

	Total, all banks	Member banks		Nonmember banks	
		National	State	Insured <sup>2</sup>	Not insured
Number of banks suspended:					
1934	57	1	—	8	48
1935	34	4	—	22	8
1936	44	1	—	40	3
1937	59	4	2	47	6
1938	55	1	1	47	6
1939	42	4	3	25	10
1940—Jan.-Mar.	5	—	—	5	—
Deposits of suspended banks (in thousands of dollars): <sup>3</sup>					
1934	36,937	40	—	1,912	34,985
1935	10,015	5,313	—	3,763	939
1936	11,306	507	—	10,207	592
1937	19,723	7,379	1,708	10,156	480
1938	13,012	36	211	11,721	1,044
1939	34,998	1,341	24,629	6,589	2,439
1940—Jan.-Mar.	1,617	—	—	1,617	—

<sup>1</sup> Represents banks which, during the periods shown, closed temporarily or permanently on account of financial difficulties; does not include banks whose deposit liabilities were assumed by other banks at the time of closing (in some instances with the aid of Federal Deposit Insurance Corporation loans).

<sup>2</sup> Federal deposit insurance became operative January 1, 1934.

<sup>3</sup> Deposits of member banks and insured nonmember banks suspended are as of dates of suspension, and deposits of noninsured nonmember banks are based on the latest data available at the time the suspensions were reported.

Back figures.—See Annual Report for 1937 (table 76).

# MOVEMENT OF GOLD TO AND FROM UNITED STATES <sup>1</sup>

[In thousands of dollars]

1937	469,463	197,836	235,206	36,421
1938	405,929	168,778	204,745	32,406
1939	423,932	171,382	218,298	34,252
1939—February	29,973	12,380	15,201	2,392
March	37,322	16,274	18,211	2,837
April	32,822	13,311	16,832	2,679
May	34,656	14,165	17,763	2,728
June	36,883	15,312	18,676	2,895
July	33,245	12,794	17,683	2,768
August	33,314	13,118	17,496	2,701
September	36,594	15,138	18,526	2,930
October	35,830	13,683	19,029	3,119
November	34,668	13,041	18,636	2,990
December	43,447	17,633	22,386	3,428
1940—January	37,786	14,739	19,978	3,069
February	32,197	12,138	17,344	2,715
March	37,769	15,201	19,537	3,031

<sup>1</sup> Comprises centers for which bank debit figures are available beginning with 1919, except that one substitution was made in 1920 and one in 1928.

<sup>2</sup> Centers (other than the 141 centers) for which bank debits are currently reported. The number has changed very little since 1934 and has numbered 133 since 1936.

Back figures.—See Annual Report for 1937 (Table 71), which also gives a definition of bank debits. Figures for individual reporting cities and totals by Federal Reserve districts are available in mimeographed form.

## ALL BANKS IN THE UNITED STATES

Comprises all national banks in the continental United States and all State commercial banks, trust companies, mutual and stock savings banks and such private and industrial banks as are included in abstracts issued by State banking departments. Also includes, during the period June 1934-June 1935, private banks which, pursuant to the provisions of sec. 21 (a) of the Banking Act of 1933, submitted condition reports to the Comptroller of the Currency. Under the amended provisions of sec. 21 (a) private banks no longer report to the Comptroller of the Currency. For comparative figures of private banks included in the figures from June 1934 to December 1935, see Federal Reserve BULLETIN for December 1935, p. 883, and July 1936, p. 535. Figures for nonmember banks are for dates indicated or nearest thereto for which figures are available.

### NUMBER OF BANKS

<sup>1</sup> Prior to Dec. 30, 1933, member-bank figures include interbank deposits not subject to immediate withdrawal, which aggregated \$103,000,000 on that date. The nonmember bank figures include interbank deposits to the extent that they are not shown separately in a few State bank abstracts.

<sup>2</sup> Beginning December 1938 figures of loans and investments exclude approximately \$50,000,000 and \$100,000,000, heretofore reported as loans and investments, respectively, which indirectly represent bank premises or other real estate and are now classified in condition reports among "Other assets."

<sup>3</sup> Figures for "All banks" are preliminary.

Back figures.—See Annual Report for 1937 (tables 48-49).

<sup>2</sup> Preliminary.

<sup>1</sup> Classifications indicated were revised as of Dec. 31, 1938; for explanation see BULLETIN for January 1939, pp. 22-23, and BULLETIN for April, 1939, pp. 259-264, 332. Beginning June 30, 1939, detailed classifications available on June and December dates only.

<sup>3</sup> Not reported separately prior to December 1938 except for weekly reporting banks in leading cities.

<sup>4</sup> Figures in this column prior to Dec. 31, 1938, represent all loans on securities, regardless of purpose, excepting only loans on securities to banks and to brokers and dealers.

<sup>5</sup> This is a residual item and, because of the revised loan classifications, figures beginning Dec. 31, 1938, are not comparable with earlier figures.

<sup>6</sup> Includes Treasury certificates of indebtedness through 1934.

<sup>7</sup> Breakdown of loans and investments not reported separately.

<sup>8</sup> Central reserve city banks.

Back figures.—See Annual Report for 1937 (tables 52-58).

<sup>1</sup> Prior to Dec. 31, 1935, excludes balances with private banks to the extent that they were then reported in "Other assets." Since Oct. 25, 1933, includes time balances with domestic banks which on that date amounted to \$69,000,000 and which prior to that time were reported in "Other assets".

<sup>2</sup> Demand deposits other than interbank and U. S. Government, less cash items reported as in process of collection and, prior to Dec. 31, 1935, less cash items reported on hand but not in process of collection.

<sup>3</sup> Includes "Due to Federal Reserve Banks (transit account)," known as "Due to Federal Reserve Banks (deferred credits)" prior to Dec. 31, 1935.

<sup>4</sup> U. S. Treasurer's time deposits, open account, are combined with postal savings (time) deposits.

<sup>5</sup> Central reserve city banks.

<sup>6</sup> Partly estimated.

Back figures.—See Annual Report for 1937 (tables 52-58).

<sup>1</sup> Excluding balances with reporting firms (1) of member firms of New York Stock Exchange and other national securities exchanges and (2) of firms' own partners.

<sup>2</sup> Includes both money borrowed from banks and trust companies in New York City and elsewhere in the United States and also money borrowed from other lenders (not including member firms of national securities exchanges).

NOTE.—For explanation of these figures see "Statistics on Margin Accounts" in BULLETIN for September 1936. The article describes the method by which the figures are derived and reported, distinguishes the table from a "statement of financial condition," and explains that the last column is not to be taken as representing the actual net capital of the reporting firms.

Back figures.—See BULLETIN for March 1938, p. 196, and (for data in detail) Annual Report for 1937 (table 69).

# OPEN-MARKET RATES IN NEW YORK CITY

[Per cent per annum]

Year, month, or week	Prevailing rate 1 on—			Average rate on—			Average yield on U. S. Treasury 3-to-5 year notes
	Prime com- mer- cial paper, 4 to 6 months	Prime bank- ers' accept- ances, 90 days	Stock ex- change time loans, 90 days	Stock ex- change call loan re- new- als	U. S. Treas- ury bills		
					New issues of- fered within period <sup>2</sup>	91-day deal- ers' quo- tation

\* Less than \$500,000.

\* Includes \$81,000,000 loans of Public Works Administration.

\* Includes \$265,000,000 loans of Farm Security Administration.

\* Includes \$196,000,000 loans of Rural Electrification Administration.

\* Excludes Federal land bank bonds held by Federal Farm Mortgage Corporation.

\* Includes, however, investments in securities of agencies (other than mentioned in footnote 5) and deposits of agencies with Reconstruction Finance Corporation.

NOTE.—For explanation of table, see BULLETIN for October 1938, p. 882.

<sup>1</sup> Some of the loans made by the regional agricultural credit corporations (prior to October 1935) and by the banks for cooperatives and most of the loans made by the production credit associations are discounted with the Federal intermediate credit banks. The amounts in this column are thus included in the three columns under those headings. Such loans are not always discounted in the same month in which the original credit is extended.

## FEDERAL HOME LOAN BANK BOARD

### LOANS OUTSTANDING, BY INSTITUTIONS

[Loans in thousands of dollars]

End of month	Home mortgage loans by—			Federal home loan bank loans to member institutions <sup>1</sup>
	Home Owners' Loan Corporation	Federal savings and loan associations		
		Number of associations	Loans <sup>1</sup>	
1934—December	2, 379, 491	639	81, 300	86, 651

† Preliminary. \* Revised. \* Average per working day.

¹ For indexes of groups and separate industries see pp. 446-447; for description see BULLETIN for February and March, 1927.

² 3-month moving average of F. W. Dodge Corporation data, centered at second month; for description see p. 353 of BULLETIN for July 1931.

³ The indexes for factory employment and payrolls unadjusted for seasonal variation are compiled by the Bureau of Labor Statistics. For description of the seasonally adjusted index of factory employment compiled by F. R. Board of Governors see BULLETIN for October 1933, pp. 835-837, and for October 1939, p. 878. For current indexes of groups and separate industries see pp. 448-451. Underlying figures are for payroll period ending nearest middle of month.

⁴ For indexes of groups see p. 453.

Back figures.—See Annual Report for 1937 (table 81). For department store sales see BULLETIN for October 1933, p. 918; for factory employment and payrolls see BULLETIN for October 1933, pp. 838-866, and for October 1939, pp. 879-887.

<sup>1</sup> Without seasonal adjustment.

<sup>r</sup> Preliminary.

<sup>\*</sup> Revised.

<sup>2</sup> Revised figures, Jan. 1939: leather and products, 125; goat and kid leathers, 96; Rubber tires and tubes, 110; tires, pneumatic, 114.

NOTE.—Descriptive material and tables giving back figures may be obtained upon request from the Division of Research and Statistics. Series on shipbuilding, silk-loom activity, and on production of book paper, wrapping paper, fine paper, boxboard, mechanical wood pulp, chemical wood pulp, paper boxes, and lumber, included in the total index, are withheld from publication pending revision.

\* Preliminary.

\* Revised.

<sup>1</sup> Revised figures, Jan., 1939: goat and kid leathers, 96; rubber tires and tubes, 110; tires, pneumatic, 114.

NOTE.—Descriptive material and tables giving back figures may be obtained upon request from the Division of Research and Statistics. Series on shipbuilding, silk-loom activity, and on production of book paper, wrapping paper, fine paper, boxboard, mechanical wood pulp, chemical wood pulp, paper boxes, and lumber, included in the total index, are withheld from publication pending revision.

# FACTORY EMPLOYMENT, BY INDUSTRIES

\* Preliminary.

<sup>1</sup> In chart 12 loans to banks on securities are included in the total of "security loans" prior to June 30, 1937 and in the total of "other loans" since that date.

<sup>2</sup> Figures are reported on somewhat different basis beginning December 31, 1938. For detailed explanation of the changes and for estimates on old basis as of December 31, 1938, see BULLETIN for April 1939, page 332.

<sup>3</sup> Not originally plotted in chart book.

<sup>4</sup> Partly estimated.

<sup>5</sup> Detailed breakdown of loans and investments now available on June and December dates only.

<sup>1</sup> Federal deposit insurance did not become operative until January 1, 1934.

<sup>2</sup> The figures for December 1934 include 140 private banks which reported to the Comptroller of the Currency under the provisions of Section 21(a) of the Banking Act of 1933. Under the provisions of the Banking Act of 1935, private banks no longer report to the Comptroller of the Currency and, accordingly, only such private banks as report to State banking departments are in the figures shown for subsequent years.

<sup>3</sup> Separate figures not available for branches of insured and not insured banks.

<sup>4</sup> Comprises 51 insured banks with 24 branches and 500 uninsured banks with 108 branches. The figures for 1939 exclude one bank with 4 branches which heretofore was classified as an insured mutual savings bank but is now included with "Nonmember banks other than mutual savings and private banks."

<sup>5</sup> Comprises 1 insured bank with no branches and 62 uninsured banks with 6 branches.

**GROUP BANKS<sup>1</sup>—NUMBER AND DEPOSITS OF BANKS IN 41 GROUPS, AND NUMBER OF BRANCHES OF GROUP BANKS,

<sup>1</sup> The statistics include all groups of three or more banks controlled by (1) a "holding company affiliate" as defined in section 2(c) of the Banking Act of 1933 as amended; (2) a holding company which would be a "holding company affiliate" if the Reconstruction Finance Corporation did not own preferred stock in the subsidiary banks; and (3) what is regarded generally as a bank group even though there is technically no "holding company affiliate" as defined in section 2(c) of the Banking Act of 1933. For further discussion of group banking and for back figures, see Federal Reserve Bulletin for February 1938, pp. 92-101, June 1938, p. 450 and June 1939, p. 480.

<sup>2</sup> Only those States are listed in which one or more group banks were reported. In some groups all of the banks were not in the same State. <sup>3</sup> Included in the group figures are a few comparatively large banks which dominate the group rather than being subsidiary banks. If the figures of these banks were eliminated, the aggregate amount of deposits involved would be decreased by approximately \$2,100,000,000.

<sup>1</sup> Some State laws make a distinction between "branches" and certain other types of "additional offices." The table, however, covers all branches or additional offices within the meaning of Section 5155 U.S.R.S. which defines the term "branch" as "any branch bank, branch office, branch agency, additional office, or any branch place of business . . . at which deposits are received, or checks paid, or money lent." Back figures.—See BULLETIN for June 1939, p. 479.

<sup>1</sup> The ratios are based upon data taken from the customary abstracts of reports of condition and of earnings and dividends. It should be borne in mind in using them that the statistics employed represent aggregates for all member banks reporting on the various dates, and the ratios are therefore ratios of aggregates in which figures for large banks have a statistical influence somewhat disproportionate to their number in comparison with the figures for small banks. No adjustments have been made in the underlying data for changes during a given year in the number of banks whose reports underlie the statistics, since the figures presented are for sufficiently large groups that the results appear not to be appreciably affected by these changes.

<sup>2</sup> Figures for loans, investments, deposits, and total capital accounts are averages of amounts from reports of condition for 5 call dates (December to December).

<sup>3</sup> Includes interest on capital notes and debentures.

<sup>4</sup> By "total capital accounts" is meant the aggregate book value of capital stock, capital notes and debentures, surplus, undivided profits, reserves for contingencies, and other capital reserves.

Back figures.—See BULLETIN for May 1939, pp. 374-8. For summary figures for the country as a whole, see page 465 this BULLETIN.

NOTE.—The number of banks shown is as of the end of each calendar year. Balance sheet figures (i. e., loans, investments, assets, deposits, and capital accounts) are averages of the amounts reported for each call date in the calendar year and the final call date in the preceding year, except that in 1933 these figures are averages of only June 30, October 25, and December 30.

<sup>1</sup> Included in "other current earnings."

<sup>2</sup> Included partly in "salaries and wages" and partly in "other current expenses."

<sup>3</sup> Included partly in "interest on time deposits" and partly in "other current expenses."

<sup>4</sup> Included in "other current expenses."

<sup>5</sup> Includes interest on capital notes and debentures.

<sup>6</sup> Not available separately. For national member banks total dividends on preferred stock were only \$558,000 in 1933, compared with \$10,102,000 in 1934.

<sup>7</sup> Revised to exclude stock dividends declared by national banks; may include some stock dividends declared by State bank members, 1927-1933, inclusive.

<sup>8</sup> The aggregate book value of capital stock, capital notes and debentures, surplus, undivided profits, reserves for contingencies, and other capital reserves.

Security prices . . . . .	485

Tables on the following pages include the principal available statistics of current significance relating to gold, international capital transactions of the United States, and financial developments abroad. The data are compiled for the most part from regularly published sources such as central and commercial bank statements and official statistical bulletins; some data are reported to the Board directly. Figures on international capital transactions of the United States are collected by the Federal Reserve Banks from banks, bankers, brokers, and dealers in the United States in accordance with the Treasury Regulation of November 12, 1934. Back figures may in most cases be obtained from earlier BULLETINS and from Annual Reports of the Board of Governors for 1937 and earlier years. Daily and monthly press releases giving daily and monthly average foreign exchange rates will be sent without charge to those wishing them. Other data on the following pages are not regularly released prior to publication.

<sup>1</sup> Preliminary. <sup>2</sup> Corrected.

<sup>3</sup> Data reported monthly incomplete. For additional data see section at end of table.

<sup>4</sup> Figure for Dec. 1939 officially reported and carried forward.

<sup>5</sup> Figure for May 1939 officially reported and carried forward.

<sup>6</sup> Figure for Dec. 1938 officially reported and carried forward through Nov. 1939; Dec. 1939 figure officially reported and carried forward.

<sup>7</sup> Figure for Aug. 1, 1936, officially reported and carried forward through Mar. 1938; Apr. 1938 figure officially reported and carried forward.

<sup>8</sup> These countries are: Albania, Algeria, Australia, Austria through Mar. 7, 1938, Belgian Congo, Bolivia, China, Danzig through Aug. 31, 1939, Ecuador, El Salvador, Estonia, Guatemala, Finland, Latvia, Lithuania, Morocco, and Thailand (Siam).

NOTE.—For back figures and description of table see BULLETIN for June 1933, pp. 368-372, and July 1936, pp. 544-547; also see footnotes to table in BULLETIN for Aug. 1936, p. 667, and Dec. 1937, p. 1262.

<sup>1</sup> Reported at infrequent intervals or on delayed basis: U. S.—Exchange Stabilization Fund (Special A/c No. 1); U. K.—Exchange Equalization Account; France—Exchange Stabilization Fund and Rentes Fund; Belgium—Treasury. Gold in Swiss and Dutch Funds and in some other central reserves not reported.

<sup>2</sup> Figure for Mar. 1937, first date reported.

<sup>3</sup> Figure for Sept. 1937.

<sup>4</sup> First date reported.

<sup>5</sup> Transferred: from Bank to Account, \$1,648,000,000 on Jan. 6, and \$1,162,000,000 on Sept. 6, 1939; from Account to Bank, \$26,000,000 on Mar. 1 and \$94,000,000 on July 12, 1939.

Gold production in U. S. S. R.: No regular Government statistics on gold production in U. S. S. R. are available, but data of percentage changes irregularly given out by officials of the gold mining industry, together with certain direct figures for past years, afford a basis for estimating annual production, in millions of dollars, as follows—*at \$20.67 per fine ounce*: 1929, \$15; 1930, \$31; 1931, \$34; 1932, \$40; 1933, \$56; *at \$35 per fine ounce*: 1933, \$95; 1934, \$135; 1935, \$158; 1936, \$185; 1937, \$180; 1938 (preliminary), \$184.

<sup>1</sup> Preliminary. <sup>2</sup> Revised.

<sup>3</sup> Includes Philippine Islands production received in United States.

NOTE.—For monthly figures back to January 1929 and for explanation of table see BULLETIN for March 1939, p. 227; February 1939, p. 151; June 1938, pp. 539-540; and April 1933, pp. 233-35. For annual figures of world production back to 1873 (including Russia-U. S. S. R.), see Annual Report of Director of Mint for 1936, pp. 108-109 and 1939, p. 106. Figures for Canada beginning January 1939 are subject to official revision.

<sup>1</sup> Beginning April 1938 figures refer to Greater Germany.

<sup>2</sup> Includes \$17,465,000 exported to Rumania and unspecified net imports of \$95,937,000.

<sup>3</sup> Includes \$67,655,000 exported to Central and South America.

<sup>4</sup> Figures for April and May include exports to Canada of \$45,972,000 and \$144,910,000 respectively.

<sup>5</sup> No figures published since August 1939.

<sup>6</sup> Includes net exports to Canada of \$115,515,000.

<sup>7</sup> Through March 1935 gold held by government; subsequently, gold held by Reserve Bank of India to which government gold was transferred.

<sup>8</sup> Figures derived from preceding columns; gold movement plus production minus increases in Indian reserves and gold earmarked for foreign account in India.

<sup>9</sup> Includes net import of \$19,926,000 from Czecho-Slovakia and net export of \$15,374,000 to Austria.

<sup>10</sup> Includes net import of \$26,555,000 from Czecho-Slovakia.

NOTE.—Switzerland.—In some cases annual aggregates of official monthly figures differ somewhat from revised official totals published for year as a whole.

# INTERNATIONAL CAPITAL TRANSACTIONS OF THE UNITED STATES

## NET CAPITAL MOVEMENT TO UNITED STATES SINCE JANUARY 2, 1935

<sup>1</sup> Revised; these revisions are supplementary to those in Tables 1, 4, and 9—pages 355, 358, and 363 respectively—in the April 1940 BULLETIN.

<sup>2</sup> Prior to Jan. 3, 1940, the figures shown under Asia represent the Far East only, the remaining Asiatic countries being included under "All other."

<sup>3</sup> Inflow less than \$50,000.

NOTE.—Statistics reported by banks, bankers, brokers, and dealers. For back figures and description of the statistics, see BULLETIN for April 1939, pp. 284-296; April 1938, pp. 267-277; and May 1937, pp. 394-431.

# INTERNATIONAL CAPITAL TRANSACTIONS OF THE UNITED STATES

## NET CAPITAL MOVEMENT TO THE UNITED STATES SINCE JANUARY 2, 1935—Continued

[In millions of dollars. Minus sign indicates net movement from United States]

<sup>2</sup> Preliminary.

<sup>1</sup> Securities and silver coin held as cover for fiduciary issue, which has been fixed at £580,000,000 since Sept. 6, 1939; for information concerning previous status of fiduciary issue see BULLETIN for December 1939, p. 1140, and April 1939, p. 339.

<sup>3</sup> On Jan. 6, 1939, £200,000,000 of gold transferred to British Exchange Equalization Account.

<sup>4</sup> Effective Mar. 1, 1939, gold valued at current prices instead of legal parity and about £5,500,000 transferred from Exchange Account to Bank.

<sup>5</sup> On July 12, 1939, £279,000,000 of gold transferred from Exchange Account to Bank of England.

<sup>6</sup> On Sept. 6, 1939, £279,000,000 transferred from Bank of England to Exchange Account.

<sup>7</sup> By decree of Feb. 29, 1940 (see pp. 408-409), gold revalued on basis of 23.34 milligrams gold 0.900 fine per franc. Increment of about 17,000,000,000 francs supplemented by certain other funds was applied to the full repayment of advances to the Government granted under authority of the decree of Nov. 12, 1938, in the amount of 20,473,000,000 francs. Gold also revalued in Oct. 1936, July 1937, and Nov. 1938. For further details see BULLETIN for Dec. 1939, p. 1140, and Dec. 1938, p. 1091.

<sup>8</sup> Negotiable bills of Caisse Autonome and bills bought under authority of decree of June 17, 1938 (see BULLETIN for Aug. 1938, p. 650).

<sup>9</sup> Bills and warrants endorsed by National Wheat Board (law of Aug. 15, 1936—see BULLETIN for Oct. 1936, pp. 785-786), and bills rediscounted for account of Banques Populaires (law of Aug. 19, 1936—see BULLETIN for Oct. 1936, p. 788).

<sup>10</sup> Includes advances granted under authority of Conventions between Bank of France and Treasury of June 18, 1936, June 30, 1937, March 22, 1938, and April 14, 1938, as modified by Convention of Nov. 12, 1938; and under authority of Convention of Sept. 29, 1938, approved by decree of Sept. 1, 1939 (see BULLETIN for July 1936, p. 536; Aug. 1937, p. 720; June 1938, p. 452; Aug. 1938, p. 650; Jan. 1939, p. 30; and Nov. 1939, p. 976).

<sup>11</sup> On April 20, and again on Aug. 3, 1939, 5,000,000,000 francs of gold transferred from Stabilization Fund to Bank of France; on Mar. 7, 1940, 30,000,000,000 francs of gold transferred from Bank of France to Stabilization Fund.

<sup>12</sup> Figures not yet available.

NOTE.—For further explanation of table see BULLETIN for February 1931, pp. 81-83, and July 1935, p. 463.

<sup>1</sup> Averages of weekly figures through August 1939; beginning September 1939 figures refer to one week near end of month.

<sup>2</sup> Through December 1937 excludes deposits in offices outside England and Wales, which are included in total. Figures for 10 banks not available beginning 1936.

<sup>3</sup> District Bank included beginning in 1936.

NOTE.—For other back figures and explanation of tables see BULLETIN for October 1933, pp. 639-640.

<sup>2</sup> Preliminary.

<sup>1</sup> Combined monthly balance sheets not published for December. Prior to merger of two of the banks in February 1932 figures refer to six large Berlin banks. Beginning in 1935 figures are not entirely comparable with those shown for previous years due to changes in reporting practice (See BULLETIN for June 1935, p. 389).

<sup>2</sup> No figures available since June 1939.

NOTE.—For other back figures and explanation of table see BULLETIN for October 1933, pp. 641-646; June 1935, pp. 388-390; and August 1939, p. 699.

<sup>1</sup> Prices derived from average yields for 60 corporate bonds as published by Standard Statistics Co.

<sup>2</sup> Indexes of reciprocals of average yields. For old index, 1929-1936, 1929=100; average yield in base year was 4.57 per cent. For new index beginning January 1937, January-March 1937=100; average yield in base period was 3.39 per cent.

<sup>3</sup> Exchange closed from July 13 to Sept. 2, 1931, and from Sept. 19, 1931, to Apr. 11, 1932. Index for 1931 represents average of months January-June; index for 1932 represents average of months May-December.

<sup>4</sup> New index. See note 2.

<sup>5</sup> No figures available since August 1939.

Sources.—See BULLETIN for February 1932, p. 121; June 1935, p. 394; April 1937, p. 373; July 1937, p. 698; and November 1937, p. 1172.
