## FEDERAL RESERVE BULLETIN

## TREASURY SURPLUS, BANK RESERVES, AND THE MONEY SUPPLY

Monetary expansion, which had been at a rapid rate in the last half of 1947, was interrupted in the first quarter of 1948. This was chiefly the result of a seasonally large Treasury cash surplus which drew funds from deposit accounts of individuals and businesses and from bank reserve balances. In addition policies of monetary authorities, together with self-restraint on the part of banks, imposed some restriction on bank credit expansion. Drains on bank reserves from Treasury operations were heavy, and during much of the period banks were obliged to sell United States Government securities to meet their reserve needs. Measures taken by the Federal Reserve System to increase the cost of, or the need for, bank reserves supplemented the restrictive effects of Treasury transactions.
As a result of these fiscal and credit developments, total bank deposits and currency in the hands of the public showed a decline of 5.3 billion dollars during the first quarter of this year. This is almost double the decline in the first quarter of 1947 and follows a growth of 8.9 billion during the last nine months of 1947.
Reduction in deposits and currency holdings of individuals and businesses and also in reserves of commercial banks resulted from tax and other cash receipts of the Treasury in excess of cash expenditures.

Surplus funds obtained by the Treasury were used to a large extent to retire securities held by Federal Reserve Banks and thus were not returned to the commercial banks, either as deposits or reserves. Borrowing at banks by consumers and real estate owners continued to expand, but business demand for credit was seasonally slack, and bank loans to businesses declined slightly. There was a small net increase in bank loans and the funds created, together with those obtained from an inflow of gold, offset in part the reduction

LOANS AND INVESTMENTS
ALL. COMMERCIAL BANKS

Figures are for all commercial banks in the United States. Data are for December 1940; June and December, 1941-1946; last Wednesday of month, 1947 and 1948. Figures subsequent to June 1947 are preliminary. Latest figures are for March.
in deposits and currency from Treasury operations.
The contractive effects of the fiscal and monetary factors operative in the first quarter of 1948 are largely transient. Treasury transactions over the remainder of the year will probably not absorb bank deposits and reserves, as they have in recent months, and may be a factor expanding bank reserves. Further gold inflow appears likely, and this will add to the reserves of commercial banks. Any net increase in Reserve Bank holdings of securities, resulting from purchases to maintain orderly conditions in the Government securities market, would also supply additional reserve funds to banks. Banks, therefore, may have additional funds available for increasing their loans and investments or could obtain reserves by selling Government securities to the Reserve Banks. Sustained demand for credit by consumers and real estate buyers and expansion in loan demands of businesses could thus be readily accommodated by banks. Voluntary restraint on the part of the banks in satisfying such loan demands would make possible an increase in commercial bank holdings of Government securities and a decrease in Federal Reserve holdings.

## Treasury Casf Surplus

In the first quarter of 1948, as in comparable periods of other recent years, the stream of Treasury cash receipts was swollen by very large corporate and individual income tax payments. Variations in Treasury cash income and outgo by quarters during recent years are shown on the chart. In addition, net sales of savings bonds by the Treasury were substantial during the first quarter, reflecting purchases by many investors who wished to acquire early the full
permitted to accumulate in Treasury accounts at commercial banks, thus reducing private deposits at banks but not total deposits or bank reserves.

TREASURY CASH INGOME AND OUTGO

Treasury Department data. For description, see Treasury Bulletin for September, 1947.
The bulk of the surplus funds, about 4.2 billion dollars, were transferred to Treasury account with the Federal Reserve Banks, where they remained on deposit during the quarter or were extinguished as the Treasury retired securities owned by the Reserve Banks. Funds used in this manner were withdrawn from the reserve balances of commercial banks, as well as from private deposits. These withdrawals were much larger than in the first quarter of 1947, when only 1.3 billion dollars were used either to retire securities held by Reserve Banks or to increase Treasury deposits at the Reserve Banks.

## Effect on Bank Reserves

The 4.2 billion dollar drain as a result of Treasury operations in the first three months of the year was the major factor that operated to reduce the volume of bank reserves
in that period, as shown in the table. At the same time reserve needs were increased by about 500 million dollars as a result of action by the Board of Governors of the Federal Reserve System increasing the reserves that New York and Chicago banks must hold against net demand deposits. Despite this increase, the total amount of required reserves held by member banks declined over the period because of the substantial decline in deposits.

in previous table. retirement of maturing issues held by Reserve Banks.

Banks met part of the drain of funds resulting from the Treasury cash surplus by drawing down their excess reserves, which at the beginning of 1948 were temporarily at a high level of about 1.5 billion dollarsmuch more than has customarily been held in recent years. These substantial excess reserve balances had been accumulated by banks as a result of the rapid return flow of currency from circulation in the week after Christmas and large net sales of Govern-
ment securities to the Reserve Banks late in the year, by both banks and their depositors.
Large amounts of additional reserve funds obtained by banks from other sources in the first quarter of the year tended to offset in part the restrictive effect on bank reserves of Treasury operations. A seasonal return of over one billion dollars of currency from circulation and a gold inflow of 400 million dollars provided corresponding amounts of bank reserves.

Banks as a group were able to meet, out of excess reserves held at the beginning of 1948 and out of new reserve funds acquired during the first quarter, more than half of the 4.2 billion dollar reserve drain from Treasury operations. The remainder of the reserve needs, amounting to 1.8 billion, was supplied through Reserve Bank purchases of Government securities.
Bank sales of Government securities to maintain reserves were not continuous throughout the first quarter. In January banks were able to increase slightly their holdings of these issues. This was possible, despite a 2.2 billion dollar loss of reserves from Treasury operations, because of large reserve gains from currency return and gold inflow and from Reserve Bank purchases of Government securities from nonbank owners, and because banks could utilize the unusually large excess reserves held at the beginning of the month. In February and March, on the other hand, when reserve losses arising from the Treasury operations were smaller, gains in reserves from other sources were minor and almost the full amount of the drain of funds was met through sales of Government securities to the Federal Reserve System.
The impact of Treasury operations on
bank credit developments was restrictive in the first quarter of 1948 because Treasury debt retirement operations were directed primarily toward securities held by the Reserve Banks. Such debt retirement did not return to the commercial banking system the reserve funds withdrawn by the cash surplus, and banks needing reserves had to sell Government securities in the market.
The restrictive effects of debt retirements in the first quarter of this year contrasts with the corresponding jeriod of 1947 when most of the funds drained from banks by the Treasury surplus were returned to them through Treasury retirement of Government securities owned by commercial banks and their depositors. Moreover, such drain as did occur in 1947 was nearly offset by reserve funds from other sources. Banks as a group were, therefore, under necessity in early 1947 to sell only moderate amounts of securities in the market to meet reserve needs. Many banks were in a position to make loans with funds received from redemption operations.

## Changes in Holdings of Government Securities

The volume of Government marketable securities outstanding was reduced 4.8 billion dollars as a result of Treasury debt retirement in the first quarter of 1948. As was stated above, the retirement program was focused primarily on securities held by the Reserve Banks, of which 3.9 billion were redeemed for cash. Of the maturing securities held by commercial banks and nonbank investors, only those presented voluntarily for cash redemption-about one billion dol-lars-were retired. This contrasts with the corresponding period of 1947, as is shown in the table, when debt retirement operations
reduced the holdings of these investors by 4.7 billion dollars, about equally divided between commercial banks and nonbank investors.

${ }^{3}$ Less than 50 million dollars.
In order to maintain their reserve position, however, commercial banks on balance sold 2 billion dollars of Government securities in the market. Purchasers included Reserve Banks and to a relatively small extent Government agencies and trust funds. While sales and purchases by other nonbank investors, as indicated below, were in large volume, net market changes in their holdings were very small.

Reduction in the volume of outstanding Government marketable securities in the first quarter of 1948 was largely concentrated in a decline in banking system portfoliosReserve Banks and commercial banks. Investor groups, however, made large adjustments in the composition of their Government security portfolios. Commercial banks and nonbank investors, especially institutional holders, sold a substantial amount of

Treasury bonds and bought Treasury bills and certificates. These programs of portfolio adjustment were reflected in the security holdings of Reserve Banks, which in turn purchased bonds and sold short-term issues in the market.

## Slackened Growth in Bank Loans

Growth in the volume of bank credit outstanding to businesses, individuals, and State and local governments, which during 1947 had been greater than in any previous year in the history of American banking, slackened in the first quarter of 1948. Total loans of all commercial banks increased in this period by about 800 million dollars. This growth was larger than in the corresponding period of 1946, a year of very large loan expansion, but was somewhat smaller than in 1947.

The pattern of bank loan expansion in 1947 and in 1946 reflected different types of fluctuations in the various kinds of bank credit. Growth in bank credit to consumers and real estate owners, mainly of urban houses, was generally sustained throughout both years. Loans for purchasing and carrying securities declined gradually and irregularly. On the other hand, expansion in bank credit to businesses, particularly to borrowers at the big city banks, showed marked seasonal concentration. In the first half of each of these years only a moderate increase occurred in business loans at city banks; the sharp expansions in these credits occurred in the second half of each year.

Bank lending in the first quarter of 1948 seems to have been in line with a pattern of this type. Slackening in total loan expansion reflected almost entirely a small decline in the volume of loans to businesses. At all
weekly reporting banks commercial and industrial loans turned down slightly in early 1948, as is indicated in the following chart. This decline, however, was largely the result of some curtailment in business loans at New York and Chicago banks. At weekly reporting banks outside these centers the volume of business loans was well maintained and outstandings increased slightly. Available evidence indicates little or no decline in business loans at banks outside leading cities. The total volume of business loans by banks continues at a much higher level than a year ago.
Reduction over the first quarter of the year of about 200 million dollars in bank loans outstanding to businesses at New York City banks appears to have reflected primarily declines in loans to food processors, sales

All insured commercial banks in the United States. Commercial loans include commercial and industrial loans, openmarket commercial paper, and acceptances. Latest figures are for Dec. 31, 1947.

are for Apr. 21, 1943.
finance companies, and public utilities. Declines in loans to manufacturers in the food processing industries were probably partly seasonal but may also have resulted from the readjustment in agricultural commodity prices in February. Some run-off in New York bank loans to sales finance companies may reflect a reduced need for funds because of a seasonal decline in their factoring business. Some sales finance companies, furthermore, have obtained additional funds from insurance companies and other sources, which permitted less direct reliance on bank credits. Utility companies probably used part of the proceeds from security financing and from insurance company loans to retire bank loans negotiated earlier as interim financing for expansion programs.
Refinancing of bank loans with other lenders may not be accompanied by a reduction in total bank credit if these lenders obtain their funds by selling securities to the banking system. Late in 1947 and early in 1948 institutional lenders, particularly insurance companies, sold Government securities on balance to the Reserve Banks. Deposits were created by this process and, as is pointed out in an article elsewhere in this Bulletin, insurance company deposit balances were very large at the end of January. To the extent that bank loans in the first quarter of this year were refinanced with insurance companies out of deposits obtained by such security sales, no net reduction in bank credit and the money supply was effected, and bank reserve positions were in fact eased.
Bank loans to others than businesses have continued to grow. Although for a number of months there have been some indications of a tightening in the terms at which mortgage credit is being made available, no important slackening appears to have devel-
oped thus far in the demand for mortgage credit or in the expansion of mortgage loans at banks. The volume of new mortgages offered has remained large and, despite some reported moderate tightness in the mortgage credit market, banks have added substantial amounts to their mortgage loan portfolios.
Banks also extended additional credit to consumers in the first quarter of 1948, largely in connection with purchases of automobiles and other durable goods on instalment basis. Growth in consumer instalment credit at commercial banks continued at the rate of about 100 million dollars a month shown throughout last year.
Reflecting some uncertainty in the market concerning the future course of interest rates and bond prices, bank portfolios of State and local government and corporate securities did not increase in January and February. Prices of such securities, particularly of taxexempt municipal securities, had declined during the latter half of 1947. As explained in the March Bulletin, this decline reflected to a large extent an increase in offerings of new securities relative to the supply of funds available for investment. New security issues by corporations and State and local governments continued in large volume during the first quarter of 1948 , but prices were firm around the levels reached toward the end of 1947. As the outlook for stability in interest rates and bond prices improved, banks in March resumed their purchases of these securities.

## Decline in Deposits and Currency

Reduction of 5.3 billion dollars in the volume of deposits and currency held by individuals and businesses during the first quarter of 1948 resulted from the large

Treasury cash surplus. This compares with a decrease of 2.7 billion in the first quarter of 1947.
About 6 billion dollars were withdrawn by Treasury fiscal and debt management operations from the total stock of deposits and currency held by the public, compared with about 4 billion in the first quarter of 1947, as shown in the table. As previously explained, this cash surplus was used primarily to build up Treasury deposit balances and to retire Government securities held by the Federal Reserve Banks.

${ }^{1}$ Including figures for week ending Apr. 7, 1948. and Apr. 9, 1947.

Further expansion in bank loans and a continuation of the gold inflow were factors tending to increase the volume of deposits and currency. The combined effect of these factors, as the table shows, was less than in the first quarter of 1947 and offset a smaller part of the contraction generated by Treasury transactions.
Demand deposits, adjusted to exclude United States Government deposits, interbank deposits, and items in process of col-
lection, declined from the record high of 87 billion dollars at the end of December 1947 to 82 billion at the end of March, as is shown in the chart. The decrease in these deposits, which are owned largely by individuals and businesses, occurred despite the fact that nearly one billion dollars of currency was returned to banks for deposit. A large return of currency from circulation is usual in January as the need for currency for transaction purposes is seasonally low in the post-Christmas period. Currency also declined in March, in part as a result of tax payments in this form. Time deposits increased further at about the rate of growth shown in the latter half of 1947.

## BANK DEPOSITS AND CURRENCY

Figures are partly estimated. Deposits are for all banks in the United States. Demand deposits adjusted exclude U. S. Government and interbank deposits and items in process of collection. Time deposits include deposits in the Postal Savings System and in mutual savings banks. Figures are for December 1940; June and December, 1941-1942; end of month, 1943-1946; last Wednesday of month 1947 and 1948 . Figures subsequent to June 1947 are preliminary; latest figures are for March.
Total deposits and currency, other than United States Government deposits, at the end of March amounted to 164 billion dollars, or 3 billion more than a year earlier.

Time deposits increased during the 12 -month period by more than 2 billion and demand deposits by over one billion, while currency showed a decline.

## Measures Restricting Monetary Expansion

Pressure on reserve positions from Treasury cash drains probably had a significant restraining effect on bank credit expansion in the first quarter of the year. Most banks have substantial holdings of Government securities that they can sell in order to acquire funds with which to expand further their loan portfolios. Nonetheless, the necessity, because of reserve drains, for very large sales in a short period of time probably induced some hesitancy on the part of banks to sell securities at the same time for the purpose of expanding loans.
Drains on bank reserves arising from Treasury fiscal and debt retirement operations, and the accompanying necessity for banks to sell securities in the market, were somewhat reinforced in their restrictive effects by measures taken by the Federal Reserve System and the Treasury. These measures, which included action to raise the cost to banks of obtaining reserve funds and to increase bank needs for reserve funds, introduced an element of uncertainty with respect to prospective credit conditions.
During the last half of 1947, the Treasury and the Federal Reserve System acted in cooperation to permit an increase in yields on short-term Government securities. As a consequence of this action, discussed in the March Bulletin, yields on Treasury bills had increased from $3 / 8$ of one per cent in mid-1947 to almost one per cent in the first quarter of 1948. During the same period, yields on 12-month Treasury certificates increased from $7 / 8$ per cent to $11 / 8$ per cent.

Accordingly, in order to obtain reserve funds in early 1948 by selling short-term Government securities, either to meet reserve drains or to permit loan expansion, banks were obliged to sacrifice higher yielding securities than would have been the case had short-term rates not risen. Early in January, the Reserve Banks increased their discount rates from 1 to $11 / 4$ per cent, thereby raising the cost of borrowed reserve funds above that for funds obtained through the sale of short-term securities in the market.

Increase in the cost of reserve funds was reinforced by downward adjustments on December 24 in Federal Reserve support prices for medium-term and long-term Government securities. As a result of this action, it was no longer possible to obtain reserve funds by the sale of longer-term issues at large premium prices. For many banks that acquired such securities at the higher prices previously prevailing, sale of these securities would result in moderate book losses.

On January 23, 1948, the Board of Governors announced that reserve requirements against net demand deposits at central reserve city member banks would be increased from 20 to 22 per cent, effective on February 27. This action increased required reserves at New York and Chicago banks by about 500 million dollars and made it necessary for these banks to sell additional Government securities. Like the drains from the Treasury cash surplus, the increase in reserve requirements had the effect of reducing the supply of assets which these banks had available for sale to the Reserve Banks to create reserves for further loan expansion.

## Voluntary Restraint on Credit

Encouragement of voluntary restraint in bank lending operations and particularly of
restraint in lending that adds strongly to inflationary pressures has come from both public and private sources. In its official publications and in public statements the Board of Governors and the Federal Reserve Banks have repeatedly pointed out the dangers to the economy, as well as to banks and their customers, of excessive bank credit expansion. The President of the United States in his Economic Report to the Congress and the President's Council of Economic Advisors in their reports have also emphasized the urgent need for restraint in further bank lending and investing.

- In November 1947 a joint statement was issued by Federal and State bank supervisory authorities calling attention to existing inflationary pressures and to the danger that further expansion in bank credit will make for still higher prices. Bankers were urged to exercise extreme caution in their lending policies and were requested to curtail all loans for speculation, to guard against overextension of consumer credit, and to confine extension of bank credit to financing that will help production. Early in January a nation-wide educational program to foster voluntary action for bank credit restraint was undertaken by the American Bankers Association.

Many banks were probably also moved to reappraise critically their lending policies, particularly with respect to term loans to businesses, by a growing uncertainty with respect to the future pattern and course of interest rates. Such uncertainty was a result of the slow rise in short-term interest rates, the upward movement in the latter part of 1947 in long-term rates, the lowering of Federal Reserve support prices for Government securities near the year end, and the
recent increase in the rediscount rate at the Reserve Banks.
The effects of official and other pleas for voluntary credit restraint by banks are not easily evaluated. The slackening or suspension of the growth in business loans, while partly seasonal, may reflect to some extent a more selective attitude on the part of banks. Loans to consumers and to owners of real estate, on the other hand, have continued to increase.

## Outloor for Monetary Expansion

Seasonal developments of the type that tend to make the demand for bank loans, particularly by businesses, somewhat slack in the first quarter of a year normally continue until about midsummer. Should such a seasonal pattern prevail this year, loan expansion at banks may show little further growth in the next few months. Total deposits and currency held by individuals and businesses accordingly may remain throughout the first half of 1948 at levels below those prevailing at the end of last year.
In the second half of 1948 , however, underlying factors may bring about a resumption of rapid deposit expansion. During this period it seems probable that no significant restraints on monetary expansion can be expected from further cash surplus of the Treasury. The effect of recent changes in the fiscal outlook may be to eliminate the Treasury surplus and possibly to bring about a deficit, at least for the balance of this calendar year. If Government expenditures for defense purposes should be increased, Treasury operations may tend to expand both deposits and reserves of banks. In addition, bank reserves and bank deposits probably will be increased by further gold inflow.

Future ease in bank reserve positions, which a Treasury cash deficit and a gold inflow would tend to promote, would be a factor encouraging banks to expand their lending on an aggressive basis. If demand for financing by consumers and real estate owners continues large and if there is a resurgence in loan demands by businesses, as is indicated by reports of business expansion plans, there would be a strong market for bank credit. Expansion in the money supply and consequent additions to inflationary pressures could result.
Under conditions of nearly full utilization of productive resources and materials, with demand pressing strongly on supply for a broad group of goods, and with large expenditures for military purposes in prospect, it would be difficult to avoid further increases in prices. Restraint on bank credit expansion would be desirable so that monetary expansion would not add unnecessarily to inflationary pressures. Traditional central banking instruments for limiting such expansion are not fully usable by the Federal Reserve because of the System's responsibilities for maintaining an orderly and relatively stable market for United States Government securities. In view of this situation the Board of Governors has requested the Congress to provide the System with new authority as a substitute, or partial substitute, for powers which, in substantial degree, have lost their effectiveness as a result of changes in monetary conditions since prewar years. In the absence of additional powers, the authorities would need to impose such restrictions as they can and voluntary restraint on the part of banks would also be essential.

## OWNERSHIP OF DEMAND DEPOSITS ${ }^{1}$

Demand deposits of business enterprises increased 3.4 billion dollars during the 11 -month period from February 26, 1947 to January 30, 1948, according to estimates based on the latest Federal Reserve System survey of deposit ownership. Personal deposits also grew substantially, although the rate of increase was substantially lower than that for business deposits. Balances of nonprofit associations showed a further moderate increase, while deposits of trust funds and foreigners declined somewhat. Total demand deposits of individuals, partnerships, and corporations increased 4.5 billion dollars over this 11 -month period, as is shown in Table 1. Expansion in deposits was general throughout the country, but was greater in the Midwest than in other sections.
Growth in demand deposits during this period

[^0]raised to record levels the balances of nearly all categories of depositors. An important exception was manufacturing and mining companies, whose deposits were still below their peak of mid-1945, as is indicated on the chart. During the early postwar period when incomes of manufacturing and mining companies were reduced and reconversion expenditures large, their deposits declined sharply and remained at the reduced level during 1946. Similarly, as inventory expansion gathered impetus in late 1946, balances of companies in trade lines were drawn down. Of the major holder groups, only individuals, both farmers and others, continued to build their deposit accounts throughout the first two transition years after cessation of hostilities. Deposit expansion in the recent period, in contrast, was general among most holder groups.

Nearly all categories of businesses added sig-

nificantly to their deposit accounts in the 11 -month period ending January 30, 1948, as is shown in Table 1. Deposits of financial businesses, manufacturing and mining companies, trade concerns, and other nonfinancial businesses, including service establishments, contractors, and amusement companies, all underwent large increases. The only business group whose deposits declined was public utilities, and in this instance the decrease was small.

${ }^{2}$ Excludes foreign banks and governments.
Note.-Detailed figures may not add to totals because of rounding.

Corporations generally expanded their deposits much more sharply than did unincorporated firms. Of the 3.4 billion dollar growth in business deposits, 2.9 billion was in corporate balances, as Table 2 shows. For each business category, except for public utilities, the percentage growth was greater in corporate than in noncorporate deposits. In the 7 -month period preceding the previous survey of deposit ownership (February 26, 1947), both corporate and noncorporate deposits declined, but a greater decline occurred in noncorporate than in corporate accounts.

Expansion in the deposits of businesses probably reflects business needs for larger cash balances in
consequence of greatly increased business expenditures for wages and materials, as well as for plant, machinery, and equipment. Growth in business deposits has been possible, despite the large capital expansion programs, because of large profits together with substantial equity and debt financing through the capital markets and unusually heavy borrowing from banks.

${ }^{1}$ Less than 50 million dollar increase.
NoTE.-Detailed figures may not add to totals because of rounding.

Increases of nearly one-third in deposit holdings of insurance companies resulted, in all probability, from large sales of their holdings of United States Government securities in late 1947 and early 1948. During this period there was widespread uncertainty regarding prices of Government securities. Insurance companies throughout 1947 had been reducing steadily their portfolios of Government securities by relatively small amounts, and investing the proceeds in other assets. When prices of Government bonds softened late in 1947, these companies sold an increased volume of long-term Government bonds, partly in anticipation of some further decline in the prices of these issues, and partly in anticipation of needs for funds for other investment purposes. From other sources of information, it is known that insurance companies invested some of the proceeds of such sales in short-
term Government securities. The present figures, therefore, reflect only the portion of sales accumulated as cash in deposit accounts.

Individuals, who increased their demand deposit balances throughout the war and postwar period, added 1.2 billion dollars to their accounts in the 11 months under review. This increase was about one-half as large as in the previous year. Farmers' deposits increased only slightly more rapidly than did other personal deposits. Comparatively moderate expansion in deposits of farmers, despite the unprecedentedly high level of farm income and prices, probably reflected the use of cash receipts by farmers to buy extraordinarily large amounts of consumer durable goods and farm machinery and equipment as well as to finance much of the large current volume of farm construction.

In addition to increasing their demand deposits, individuals expanded the volume of their assets held in other liquid forms. Time deposits, which are primarily in personal accounts, expanded about 2 billion dollars and holdings of United States savings bonds increased 1.8 billion during this 11 month period. On the other hand, currency held outside banks, largely by individuals, declined about 300 million dollars.

gains in these areas reflected above average increases in balances of both businesses and individuals. The smallest increases in deposits were in the Southeast and Far West-the Atlanta, Richmond, and San Francisco Federal Reserve Districts. In these sections business deposits increased by comparatively small amounts and, in the case of the San Francisco and Atlanta Districts, personal deposits actually declined. Comparative data are given in Table 3.

In contrast with the trend during the war and early postwar period, deposit growth was more rapid at large banks than at small banks in nearly all districts. In all likelihood, this development resulted from the greater recent expansion in business than in personal deposits. Business deposits, particularly of incorporated enterprises, have a greater relative importance in the deposit structure of large than of small banks.

From a peak of 788 million dollars in 1945, net profits after taxes of all member banks of the Federal Reserve System declined to 758 million in 1946 and to 653 million in 1947. An increase in total current earnings and a decrease in income tax payments were more than offset by an increase in current expenses combined with a switch, from a positive to a negative amount, in profits on securities sold and recoveries on loans and securities less losses and charge-offs. Net profits in 1947 amounted to 7.9 per cent of average total capital accounts as compared with 9.6 per cent in 1946 and 10.9 per cent in 1945 . These percentage declines were due in part to increases in average total capital accounts.

Almost 60 per cent of net profits in 1947 was retained by member banks in capital accounts and the remainder, amounting to 281 million dollars, was distributed as cash dividends. The proportion and the dollar amount of profits retained was smaller than in any year since 1943.

Comparative earnings figures for selected years since 1929 are given in the table below.
Earnings. Total current earnings of all member banks amounted to 2,579 million dollars in 1947, an increase of 176 million or 7 per cent over the previous year. This rate of increase was only about one-half that of recent years.
Of fundamental importance in the earnings situation in 1947 was the rapid rise in the volume of bank loans, particularly during the second half of the year. As is shown in the accompanying table, total loans increased by about 6 billion dollars or 22 per cent. Earnings on loans were 1,044 million dollars, an increase of 272 million or 35 per cent over 1946. The larger relative increase in earnings resulted from several factors: higher-yield categories such as consumer and real estate loans have become relatively more important segments of the aggregate loan portfolio; and there is evidence of a hardening of interest rates on loans during the year. The average yield on total loans

[^1]increased to 3.56 per cent as compared with 3.18 per cent in the previous year.

A further decrease of 5 billion dollars in member bank holdings of United States Government securities, combined with the full effect on 1947 earnings of the 15 billion decline during 1946, resulted in a decline in earnings of 133 million or 13 per cent from the previous year, despite a slight rise in the average yield. Earnings on Government securities in 1947 were 921 million dollars and were below earnings on loans for the first time since 1942. Reflecting shifts in the composition of the aggregate Government security portfolio, and the higher short-term rates that followed the mid-year discontinuance of the pegged rate of $3 / 8$ per cent on bills, the average yield to member banks from their Government holdings rose to 1.53 per cent in 1947 from 1.48 per cent in 1946.

Expenses and net current earnings. All major items of current expense continued to expand and aggregated 1,650 million dollars in 1947, an increase of 181 million or 12 per cent over the previous year. For the first time since 1938 there was a decline in net current earnings before income taxes, although the decline was only 5 million dollars from the peak of 934 million reached in 1946.

Salaries and wages, the largest single item of current expense, amounted to 797 million dollars or 98 million more than in the previous year. There was an addition of about 19,000 in the average number of officers and employees and an increase in the average salary paid, as is shown in
the accompanying table. Since 1940 the number of officers and employees of member banks has increased by about 50 per cent and the total of salaries and wages paid has about doubled.

|  | 1940 | 1945 | 1946 | 1947 |

[^2]
## MEMBER BANK EARNINGS, 1947

curities to an amount less than losses and charge-offs, which showed little change. In recent years, the excess of profits and recoveries over losses and charge-offs has provided a substantial portion of net profits of member banks. The maximum excess occurred in 1945, when it amounted to 224 million dollars or 28 per cent of net profits; in 1946, it had dropped to 109 million dollars. In 1947, for the first time since 1942, losses and charge-offs on loans and securities (including transfers to reserves for such losses) exceeded recoveries and security profits by 19 million dollars. The major changes in 1947, as compared with 1946, were a decrease of 93 million dollars in profits on securities sold and an increase of 41 million in losses and charge-offs on loans. It is probable that a considerable portion of this increase in losses and charge-
offs on loans consists of transfers to reserves for bad debt losses on loans as authorized for banks by the Bureau of Internal Revenue in December 1947.
Taxes paid or accrued on net income aggregated 257 million dollars in 1947, 28 million less than in 1946, reflecting lower profits before income taxes.
Earnings, by class of bank. The accompanying table shows earnings by class of bank for 1946 and 1947. In contrast with the experience of other classes of banks, central reserve city banks in New York showed a small decrease in total current earnings. Increased earnings on loans did not fully offset the decline in earnings from Government securities, as was the case elsewhere. Total current earnings increased 71 million dollars at reserve city banks and 109 million at country banks; they declined

${ }^{1}$ Includes interest on capital notes and debentures.
May 1948

3 million at central reserve city banks. All classes of banks reported about the same relative increase in current expenses, 12 per cent, but at country banks the dollar increase in current expenses was less than that in current earnings. Net current earnings before income taxes declined 35 million dollars at central reserve city banks and 2 million at reserve city banks, and increased 30 million dollars at country banks.

The excess of profits on securities sold and recoveries on loans and securities over losses and charge-offs resulted in a net addition to profits of 7 million dollars at central reserve city banks, and net decreases of 16 and 10 million dollars at reserve city banks and country banks, respectively. There were sizable declines in profits on securities
sold and increases in losses and charge-offs on loans at all classes of banks.
Taxes paid or accrued on net income were smaller than in 1946 at central reserve and reserve city banks but larger at country banks. The larger tax payments or accruals by country banks occurred despite lower profits before taxes and possibly reflect some shifts of small banks into higher tax brackets.
Net profits after payment of taxes were lower at all classes of banks except central reserve city banks in Chicago, where there was no change; the relative decreases were approximately the same, 14 per cent, at all classes.
Detailed figures of earnings and related items, together with selected ratios, will be found on pp. 576-587 of this Bulletin.

# NEW COMMERCIAL BANKING OFFICES, 1936-1947 

by

Caroline H. Cagle and Raymond C. Kolb

The size and composition of the commercial banking structure of the United States has changed considerably since 1900. During the first two decades of the present century, accompanying the rapid agricultural and industrial development of a vast geographic area, the number of banking offices more than tripled. A peak of over 31,000 banks and branches was reached in 1922. During the twenties relatively low levels of farm income were reflected in large numbers of bank suspensions in rural communities, while expansion of industrial activity was accompanied by numerous consolidations and absorptions of banks in urban centers. These developments, together with voluntary liquidations, were sufficient not only to offset the large numbers of newly organized banking offices but also to decrease substantially the total number of commercial banks and branches.

ALL COMMERCIAL BANKING OFFICES in the united states

By 1929 the number of banking offices in the United States had dropped by almost 4,000 from the 1922 peak. Severe conomic recession and general deflation of prices and incomes in the early thirties were attended by successive waves of bank
suspensions in both agricultural and industrial areas. These suspensions involved large and small banks alike, including banks with many branches, and finally made necessary the banking holiday of 1933. This action closed all banks in the country and they were permitted to reopen only after the situation of each had been reviewed by the supervisory authorities.

Reorganization of the country's banking structure, occasioned by the banking holiday, was virtually completed by 1935. Those banks, and their branches, that could not meet the test of soundness or early restoration to a sound operating condition disappeared. About 18,000 commercial banks and branches were restored to active operation.
Small but successive decreases in the number of banking offices occurred in the years 1936-43. The newly organized offices that appeared in this period were outnumbered by suspensions, consolidations, and liquidations. The tremendous stimulus provided to the economy by the prewar defense program and our subsequent entry into the war was not reflected immediately in the number of banking offices. It was not until 1944 that the total number of commercial banking offices increased-for the first time in nearly 25 years. ${ }^{1}$ This upward trend has continued, as is shown in the chart, and by the end of 1947 the number of commercial banking offices was 18,141 .

A major factor contributing to the growth in banking offices in recent years has been that the new banks and branches organized have, in contrast to prior years, more than offset decreases due to consolidations, liquidations, etc. ${ }^{2}$ The present article examines the characteristics and the factors involved in the establishment of new commercial banks and branches since the adjustments following the banking holiday. Its general purpose is to provide

[^3]background information against which to evaluate the current expansion in the number of the nation's banking offices.

NEW COMMERGIAL BANKS AND BRANGHES

Summary

1. More than 1,600 new commercial banking offices opened for business in the 12 -year period 1936-47. This number was about 9 per cent of the number in operation at the end of this period. The new offices were about equally divided between banks and branches, but the relative increase was much larger in branches than in banks. More new offices were organized in the past four years than in the preceding eight years. This accelerated growth reflected the high level of business and agricultural activity during and since the war, and in part the recent high rates of profits earned on bank capital.
2. Most of the new banks are small institutions of the insured nonmember class. Ninety per cent of them currently hold deposits of 5 million dollars or less, and 40 per cent have less than 1 million; corresponding percentages for all commercial banks are 75 and 17 . Over 80 per cent were organized as nonmember banks while a little over 50 per cent of all commercial banks are currently in this category. The remaining new banks were members of the Federal Reserve System, and of these two-thirds were national banks.
3. About half of the new branches established
since 1935 were organized by insured nonmember banks and most of the remainder by member (principally national) banks. Information as to the amount of deposits held by the branches is not available but their location for the most part in small communities suggests that the average is small.
4. Many new nonmember banks found it advantageous to change their status subsequent to organization-usually to a State member status in the case of insured nonmember banks and to an insured nonmember status in the case of noninsured banks. By 1947, the net result of these changes was a substantial increase in the number of the new banks-those organized since 1935-operating as State member banks, a marked decline in the number operating as noninsured banks, and little change in the number operating as insured nonmember banks.
5. Almost one-half of the new banking offices, both banks and branches, are in small towns (population 2,500 or less) with no other banking accommodations. Over one-half are located in the primarily agricultural North Central and South Atlantic areas and about 60 per cent are concentrated in 13 States. In these 13 States the type of office established was influenced to a considerable extent by State laws regarding branch banking. New branches rather than new banks tended to be organized where State laws with respect to the establishment of branches were liberal. On the other hand, where State laws prohibited the establishment of branches or permitted only limitedfunction offices many new banks were established.
6. There is little doubt that many of the new banking offices established after 1935 were to meet needs that arose because of large numbers of bank suspensions from 1921 to 1933. Over two-thirds of the bank failures during the period 1921-35 as a whole occurred in the North Central and South Atlantic areas, regions which account for a majority of the new banks and branches, and over 70 per cent of the failures were in towns with a population of 2,500 or less, the size of town in which a large proportion of the new banking offices have been organized. Similarly, over 90 per cent of the failures were among banks with loans and investments of 5 million dollars or less, a size group which includes roughly the same proportion of all new banks.
7. The expansion in business and agricultural activity during the war and immediate postwar years appears to have accelerated the establishment of new banks and branches. For the country as a whole the number of new banking offices was almost twice as large in the seven-year period $1941-47$ as in the previous five years. In the seven States where increases in income payments to individuals during the war and postwar years were largest, two and a half times as many new banking offices were established from 1941-47 as in the preceding five years.
8. On the average, banks organized since 1935 operate with a somewhat smaller capital base, relative to both total assets and to total assets less Government securities and cash assets, than do other commercial banks of similar size. At the end of 1946 these ratios were 5.4 as against 6.0 per cent relative to total assets and 19.1 as against 26.3 per cent relative to assets other than Government securities and cash assets. The ratios are particularly low for new banks organized prior to 1942 since such banks had full opportunity to share in the tremendous expansion in bank assets that took place during the war as a result of the Government's fiscal policy; the relative expansion of assets outstripped that of capital accounts. As might be expected, average annual asset expansion of the new banks from the time of organization to the end of 1946 was greater than for other banks of similar size. For new banks organized prior to the outbreak of war, asset expansion was considerably larger (and the capital base smaller) than for banks organized after 1941.
9. The present asset structure of the new banks differs somewhat from that of other commercial banks of similar size. New banks hold over 6 per cent more of their assets in the form of loans than do other banks of their size. However, their holdings of Government and other securities are substantially less, with the net result that the earning assets of the new banks are a slightly smaller proportion of total assets. The new banks have placed their loans in high-yield categories, such as real estate, consumer, and agricultural loans, in about the same manner as have all insured nonmember banks, a class of bank roughly similar to the new banks with respect to their distribution by geographic areas and deposit size. The maturity
distribution of the Government security portfolios of the new banks is also roughly similar to that of all insured nonmember banks.
10. Despite a smaller volume of earning assets, net profits of the new banks as a whole, after payment of income taxes but before provision for dividends, were 13 per cent of total capital accounts in 1946 as compared with 12 per cent for other commercial banks of similar size. This difference is due entirely to the relatively smaller capital accounts of the new banks. The rate of earnings on total assets was the same for the new banks as for other banks. It is noteworthy that banks organized in recent years earned considerably less in 1946 than banks organized prior to 1944. New banks have paid out less of their net profits in the form of dividends than have other banks of similar size-about one-seventh as compared with one-fourth.
11. Most of the banks that established branches organized only one branch each. At the top of the scale, however, one national bank was responsible for 59 branches. A smaller proportion of the new branches were established in the same city as the head office than the corresponding proportion for all branches now in existence. Explanation for this lies in the fact that a disproportionate number of the new branches were established by nonmember banks, which are located for the most part in small towns where the need for additional banking offices in the same town is limited but where the need may be great in surrounding communities.
Basic Characteristics of New Banking Offices
Number of new banking offices. During the 12year period 1936-47, 1,601 new commercial banking offices were organized, 788 banks and 813 branches. ${ }^{3}$ Thus, about 9 per cent of the 18,141 commercial banking offices in operation at the end of 19476 per cent of the banks and 20 per cent of the branches-have been established since completion of the readjustments following the banking holiday.
Several factors have influenced the establishment of new banking offices. In part, they have been organized to meet a demand for banking services in communities left bankless or practically so by the numerous suspensions that occurred in the twenties and early thirties. In recent years, the continuing high level of business and agricultural activity that

was initiated by the defense and war effort has accentuated this demand in some communities.

The recent increase in the rate of organization of new banking offices shown in Table 1 is illustrated by the fact that more were organized in the last four than in the preceding eight years. The excepcionally large number established since the end of World War II reflects, in part at least, the completion of organizations planned previously but postponed because of shortages of personnel, buildings, and material during the war years. In the years following 1942 additional stimulus to the organization of new banking offices was provided by the high rates of bank profits.

Size of new banking offices. Most of the new banks, as would be expected, are small institutions. Table 2 shows that 90 per cent of them have deposits of less than 5 million dollars and 40 per cent

Table 2
Current Size of New Banks and of All Banks ${ }^{1}$

[^5]have deposits of less than 1 million dollars. Corresponding percentages for all commercial banks in the same size groups are 75 and 17 .
Noteworthy differences in present size were observed between new banks organized prior to 1942 and those established thereafter. The size distribution of banks organized in the earlier period is almost comparable to that of all commercial banks whereas the distribution of those organized in later years is notably concentrated among the smaller size groups. ${ }^{4}$ Banks in existence before 1942 were in a position to take full advantage of the great expansion of deposits that resulted from the Government's war finance program; the later the date of organization, the less opportunity there was to share in this unusual expansion. The period of rapid deposit creation as the result of Government war financing has now ended, and the process of deposit growth has come to rely on more normal banking operations.
While information concerning the size of new branches is not available, the similarity between new banks and branches with respect to location for the most part in small communities suggests that the noted size pattern of new banks applies in general to new branches.

Class of new banking offices. Largely reflecting demand for additional offices in small agricultural communities, discussed more fully below, about 67 per cent of the new offices were in the nonmember

[^6]category (see Table 1). About 23 per cent of the new offices were in the national class and the remaining 10 per cent were State member offices. In the case of the member banks most of the new offices were branches whereas for the nonmembers they were banks.

By the end of the 12 -year period, 29 of the new banks and 48 of the new branches had gone out of existence or disappeared through consolidation or absorption. In addition, many of the new banks, but very few of the parent banks of the new branches, changed their class subsequent to organization. These changes resulted in a marked decrease in the number of new banks classified as noninsured and a marked increase in the number classified as State member. The movement was not directly from noninsured to member bank status but consisted of transfers into the State member group from the insured nonmember and into this latter class from the noninsured. The transfers into and out of the insured nonmember class about balanced out. Only a few banks changed from State member to national.

As is indicated in Table 3, since 1944 new offices of member banks have become a considerably larger proportion of all new banking offices (25 per cent of the total in the years prior to 1944 as compared with 43 per cent in the later years). The number of branches established by nonmember banks in the later years failed to keep pace with those established by member banks and consequently they became a much smaller proportion of all new branches. This can be explained largely on the basis that many of the nonmember bank branches established prior to 1944 were paying and
receiving stations or otherwise limited branch offices, concentrated in States which prohibit fullpower branches. As will be discussed in a later section, there has been a marked decline in recent years in the number of such limited-power offices established.

Table 3
Relative Importance of New Member and Nonmember Banks and Branches, 1936-44 and 1945-47
[Per cent]

| Branches. | 100 | 100 |
| Member. | 36 | 64 |
| Nonmember | 64 | 36 |

By size of town. ${ }^{5}$ Almost one-half of the new offices were established in towns with a population of less than 2,500 which had no other banking facilities, and of this group the bulk were in towns of less than 1,000 population. Large cities with populations of 100,000 or more and with over 10 other banking offices accounted for only 67 new banks-about 8 per cent of the total-but for 207 or about 25 per cent of the new branches. Details are given in Table 4.

Explanation for the concentration of new bank-

[^7]Table 4
Number and Location of New Banks and Branches, by Population and Number of Other Banking Offices in Town

ing offices in small towns probably lies partly in the suspension of so many banking offices in small communities during the period 1921-35. Over 70 per cent of the 14,301 bank suspensions during this period were in towns of less than 2,500 population, and most of these were in towns of less than 1,000 population-communities corresponding in size to those in which approximately half of the new offices have been organized. Even without the war, many small communities were in need of banking facilities, and the wartime acceleration of economic activity and growth of individual incomes, particularly farm incomes, increased this need.

The proportion of new banks located in the smallest towns has been larger since 1944 than in the previous years, while the proportion of new branches has been smaller. Partial explanation of this fact lies in the decline in the organization of limited-power branches in States where full-power branches are prohibited by law. Small towns abound in these particular States.

By geographic area and State. As is shown in the detailed Appendix table, new banking offices have been concentrated to a considerable extent in certain geographic areas and States-in regions which are predominantly agricultural and where bank suspensions during 1921-35 were very numerous. There were both fewer suspensions and fewer new banking offices in the New England area than elsewhere; in contrast, as is shown by the following tabulation, 55 per cent of the new banking offices are located in the North Central and South Atlantic areas-areas which accounted for 70 per cent of all bank suspensions in the period 1921-35.

| Geographic area | Suspensions $1921-35$ | New offices 1936-47 |
| :---: | :---: | :---: |
| New England | 1.0 | 3.8 |
| Middle Âtlantic | 5.2 | 7.2 |
| East North Central. | 20.5 | 18.7 |
| West North Central. | 36.6 | 20.1 |
| South Atlantic | 13.1 | 16.2 |
| East South Central. | 5.3 | 5.9 |
| West South Central. | 9.5 | 11.7 |
| Mountain | 5.8 | 5.2 |
| Pacific. | 3.0 | 11.2 |
| Total. | 100.0 | 100. |

Almost 60 per cent of the new offices were concentrated in 10 States in the North Central and South Atlantic regions plus California, New York, and Texas. As is shown in the Appendix table, these 13 States are those in which almost 50 per cent of the suspensions occurred. ${ }^{6}$ On the other
hand, in the four States and the District of Columbia, with the smallest number of suspensions, only 17 new banking offices were organized. ${ }^{7}$

In addition to bank suspensions, another factor which has had a bearing on the organization of new banking offices and their location has been the sustained expansion of business and agricultural activity since the initiation of the defense program. In the Appendix table this factor is measured by the sum of the annual increases over 1940 in total income payments to individuals in the six years 1941-46. ${ }^{8}$ To gauge the effect of this factor on the establishment of new banks and branches, the new banking offices organized in the 12 years have been divided into two periods, 1936-40 and 1941-47. For the country as a whole a little less than twice as many new banking offices were organized in the seven years 1941-47 as in the previous five years. By comparison, two and a half times as many new offices were organized in the seven States accounting for the largest amounts of increases in income payments-New York, California, Pennsylvania, Illinois, Ohio, Texas, and Michigan. Conversely, only about 25 per cent more new banking offices were established in these years in the 12 States reporting the smallest increases in income payments. ${ }^{9}$

The effect of increased business activity on the establishment of new banking offices appears to be even more marked when further localized. In the industrial areas listed below, the award of war contracts and expenditures for industrial, military, and housing facilities through May 1945 was accompanied by the organization of greatly increased numbers of banks and branches: ${ }^{10}$

| Industrial area | War contracts. etc. (In millions of dollars) | $\begin{aligned} & \text { New bank } \\ & 1936-40 \end{aligned}$ | ing offices 1941-47 |

Supply and Facility Contracts by State and Industrial Area, Jupply and 12,1945 .

By State laws regarding branch banking. State laws regarding branch banking (see the Appendix table) have been the decisive factor in determining whether a bank or branch would be established in a particular community. In general, the States accounting for many of the new offices reported the establishment of many banks if the State law prohibited branch banking and of many branches if the law permitted them.

To a large extent, new banks have been established in predominantly agricultural areas, long the stronghold for the small independent bank, where many State laws either prohibit or strictly limit the establishment of branches. As many as 439 new banks, or 55 per cent of the total, were located in eight States which prohibited or limited branch banking-Illinois 97, Texas 94, Georgia 55, Iowa 44, Nebraska 41, Florida 39, Minnesota 36, and Missouri 33. With the exception of Texas in the West South Central area, all of these States are in the South Atlantic and North Central regions. Despite this concentration, one or more new banks were accounted for by each of 43 States.

Most of the new banks were organized in the years following the outbreak of the war, whereas only a few more new branches were organized in the later than in the earlier period. In more than half of the 43 States in which new banks were established, twice as many were organized subsequent to 1941 as in the six previous years.

New branches as well as new banks are concentrated in the South Atlantic and North Central areas, which account for about one-half of the new branches as compared with 55 per cent of the new banks. The sizable percentage of new branches established in the industrial Middle Atlantic area is due almost entirely to the large number organized in New York State. California accounts for the high percentage in the Pacific area.

The District of Columbia and each of 37 States have one or more new branches, and 9 States account for 514 or over 60 per cent of all new branches in the country-California 105, New York 79, Iowa 78, Michigan 66, North Carolina 58, Indiana 34, Wisconsin 32, Massachusetts 31, and South Dakota 31. Iowa, the State which ranked first in number of bank suspensions, is the only State in which large numbers of both banks and branch offices were established.

There are marked differences by States in the number of branches organized in the six years prior to the outbreak of World War II as compared with the subsequent six-year period. While the District of Columbia and 21 States reported more new branches subsequent to the war than before, 13 other States reported fewer; almost all of this decline was concentrated in States which permit only limited-power branches. ${ }^{11}$ Many of the limited-power offices established in the past 12 years-in most cases limited to the receiving of deposits and cashing of checks-came into existence in the years 1936-38, probably to provide service for small towns left without banking facilities after the banking holiday. Establishment of this type of office almost ceased in the years 1939-44 but in more recent years it has been resumed to some extent.
As has previously been noted, the proportion of new branches established by nonmember banks and also the proportion located in the smallest towns has fallen off considerably in recent years. Most of the decline can be traced to the smaller number of limited-power offices organized in these later years in States which permit only limited-power branches -States where nonmember banks and very small towns predominate.

## Assets, Liabilities, and Earnings of New Banks

Growth in assets. The period $1936-46$ was one of tremendous expansion in bank assets, primarily because of bank participation in the defense and war financing program. Table 5 shows that the rotal assets of new banks organized in the period 1936-45 expanded from the year of organization to the end of 1946 by an average of 90 per cent per annum, a considerably higher annual rate of expansion than was typical of other banks of similar size. ${ }^{12}$ The rate of asset expansion declined sharply for banks organized after 1941, largely because these banks participated for a smaller number of years in defense and war financing and in the accompanying deposit growth.

[^8]Table 5
Asset Expansion of Banks Organized during $1936-45$

| 1945 | 121 | 201 | 66 |

${ }^{1}$ End-of-year figures.
Capital position. As a result of more rapid asset than capital expansion, banks organized since 1935 operate on a smaller capital base relative to total assets and to total assets less cash assets and United States Government securities than do other banks of similar size. At the end of 1946 these ratios were 5.4 per cent as compared with 6.0 per cent relative to total assets and 19.1 per cent as against

1 "Current" indicates as of Dec. 31, 1946 except for banks organ-
ized in 1947, for which the latest data available were used.
2 Includes all insured commercial banks with deposits on Dec. 31, 1946 of 5 million dollars or less.
26.3 per cent relative to assets other than Government securities and cash assets. Table 6 shows that on the whole banks organized prior to 1942 had decidedly lower capital ratios than banks organized in later years, reflecting their greater asset expansion as noted in the previous section. The average of the capital accounts to total asset ratios for banks organized in these earlier years was 4.3 per cent, and the ratio based on total assets less Government securities and cash assets averaged 15.2 per cent. On the other hand, banks organized after 1941, whose asset expansion was much smaller, had capital ratios more nearly comparable with other banks of similar size. As is indicated in Table 6, banks organized in 1946 and 1947, having had less than one year of operation, had exceptionally high ratios.
The following percentage distribution of the new banks and of member banks of similar size (deposits of 5 million dollars or less), according to their current ratios of total capital accounts to total assets, provides a further illustration of the relative capital position of the new banks.

A distribution of new banks by class (national, State member, insured nonmember, and noninsured) indicates that the capital ratios of the new banks in each group are lower on the average than those of other banks of the same class.

Character of assets. Comparison of the assets of new banks with those held by all small banks shows that new banks currently have a smaller volume of earning assets than have other small banks. New banks have entered the loan field to a greater extent than have other banks, but they hold a smaller proportion of their assets in Government and other securities and have larger cash assets. Table 7 shows that loans constituted about 23 per cent of the assets of all new banks, Government securities about 46 per cent, other securities 4 per cent, and cash assets 26 per cent; in contrast, all small banks as a group held only 17 per cent in loans, about 53 per cent in Governments, 6 per cent in other securities, and 24 per cent in cash assets.

1 "Currently" indicates as of Dec. 31, 1946 except for banks organized in 1947, for which the latest data available were used.
${ }_{2}$ Includes all insured commercial banks with deposits on Dec. 31, 1946 of 5 million dollars or less.

Some differences in asset distribution were noted between banks organized in the period 1936-41 and those organized in 1942-47. Those organized in the earlier period had about the same proportion of earning assets as had all banks of similar size ( 75 per cent); their smaller holdings of United States Government and other securities were compensated for by significantly larger holdings of loans. In contrast, the new banks organized subsequent to 1941 held only about 71 per cent of their assets in loans and investments. The proportion of their assets held in the form of Government and other securities is much smaller than for all banks of similar size and these smaller holdings are only partly counterbalanced by considerably larger loan holdings. The smaller holdings of Government securities of banks organized since 1941 may be explained in part by the fact that beginning in 1942 banks were not permitted to subscribe to longterm, high-yield Government issues except on a restricted basis and premiums on such securities purchased in the open market were high and resulting yields low, thus discouraging purchase.

The relatively large proportion of loans held by the new banks, particularly those organized in the later years, reflects their location, for the most part, in small agricultural communities where the need for lending facilities was and probably still is
greater than elsewhere. It may also indicate that in the communities in which the new banks are situated there is less competition from other lending agencies (such as sales finance companies, building and loan associations, etc.) than exists in other areas; similarly, there is less competition from other banks since most of the new banks were established in towns without other banking facilities.
New banks have placed their loans in high-yield categories (real estate, consumer, and agricultural loans) in about the same manner as have all insured nonmember banks, a group roughly similar to the new banks with respect to their distribution by geographic areas and deposit size. As the accompanying Table 8 shows, about 67 per cent of the loans of the new banks are of these types as compared with 73 per cent for all insured nonmember banks; the new banks, however, hold a larger proportion in consumer loans and less in real estate loans. It should be noted that both the new banks and the insured nonmember banks differ markedly from member banks, which hold less than 40 per cent of their loans in these three high-yield types.

The distribution, by type, of the Government securities held by the new banks is similar to that of all insured nonmember banks, as is shown in Table 8.

Table 8

[^9]Earnings. New banks earned a higher rate of profits on invested capital than did other banks of comparable size. As is shown by Table 9, the ratio of net profits (after payment of income taxes but before provision for dividends) to total capital accounts was 13 per cent for the new banks as compared with 12 per cent for all small banks. This difference was due entirely to the relatively smaller capital accounts of the new banks. In relation to total assets, the new banks earned about the same as other banks.

New banks have paid out in dividends only twothirds as much of their net profits as have other banks of similar size-about one-seventh as compared with one-fourth.

Table 9
Selected Earnings and Expense Ratios of New Banks and of All Small Banks, $1946^{1}$
[Per cent per annum]

| Ratio | Banks organized |  |  | $\begin{gathered} \text { Alll} \\ \text { small } \\ \text { banks } \end{gathered}$ |
| :---: | :---: | :---: | :---: | :---: |
|  | 1936-41 | 1942-45 | 1936-45 |  |
| Net profits to total capital accounts. | 16.5 | 9.6 | 13.3 | 11.9 |
| Net profits to total assets. . | 0.7 | 0.6 | 0.7 | 0.7 |
| Earning assets to total assets. | 75.0 | 73.2 | 74.5 | 75.0 |
| Expenses + income taxes to total earnings. | 71.6 | 77.1 | 73.8 | 69.7 |
| Capital accounts to total assets | 4.3 | 5.5 | 4.8 | 6.0 |
| Dividends to net profits. | 15.2 | 14.3 | 14.9 | 24.2 |

${ }^{1}$ Excludes banks organized in 1946 and 1947, for which earnings for the full year 1946 were not available, and noninsured banks,
for which no earnings reports were available.
${ }^{2}$ Includes all insured commercial banks with deposits on Dec. 31, 1946 of 5 million dollars or less.

Banks organized in the period 1936-41 had substantially higher profits relative to total capital accounts and to total assets than those organized after 1941; for the former group average profits in 1946 were 16.5 per cent of total capital accounts and for the latter 9.6. ${ }^{13}$ This higher profit ratio for banks organized prior to 1942 was due to a smaller capital base, a larger proportion of earning assets, and smaller expenses. The following percentage distribution of new banks by their 1946 ratios of net profits to total capital accounts shows more clearly the contrasts between new banks organized in the designated periods and member banks of

[^10]similar size (deposits of 5 million dollars or less).

|  | New banks |  | Small |
| :---: | :---: | :---: | :---: |
| Ratio | 1936~41 | 1942-45 | member banks |
| Net loss. | 0.6 | 8.8 | 0.7 |
| 0.0-4.9. | 3.3 | 14.7 | 6.8 |
| 5.0-9.9 | 13.3 | 18.9 | 31.5 |
| 10.0-14.9 | 22.1 | 31.1 | 35.1 |
| 15.0-19.9 | 30.9 | 16.8 | 17.4 |
| 20.0 and over | 29.8 | 9.7 | 8.5 |
| Total. | 100.0 | 100.0 | 100.0 |

Whereas only 17 per cent of the banks organized during 1936-41 earned less than 10 per cent on invested capital, twice that proportion of small member banks and 42 per cent of the banks organized during 1942-45 were in this profits group. Net losses were reported by almost 10 per cent of the new banks organized in the later period as compared with less than 1 per cent for banks organized in 1936-41 and for all small member banks. The extremely high profitability of the new banks organized before 1942 is indicated by the fact that almost a third of them earned 20 per cent or more on invested capital as compared with about 10 per cent for the new banks established since then and for all small member banks.

## Relation of New Branches to Parent Banks

Banks establishing branches. Most of the new branches were established by different banks, 540 banks accounting for the 813 branches that were organized during the 12 years. At the top of the scale, however, one national bank was responsible for the establishment of 59 branches; 432 banks established only one branch each. This is in line with the current situation with respect to branch banking, namely that most branch-operating banks operate only one branch each but that in a few cases banks operate extensive branch systems. The following tabulation shows the number of banks establishing one or more branches during 1936-47:

| Banks | Branches |
| :---: | :---: |
| 432 | .. 1 |
| 64 | , 2 |
| 21 | 3 |
| 6 | ... 4 |
| 5 | .. 5 |
| 6 | 6 |
| 2 | 7 |
| 1 | 9 |
| 1. | . 11 |
|  | 12 |
| 1 | 59 |

Location of new branches relative to head-office city. State laws on branch banking also influenced the
location of new branches with respect to the city of the head office. Some States permit branches only within the head-office city, others within the head-office county, others within counties contiguous to the head-office county, and still others on a Statewide basis. The following tabulation shows the percentage of new branches and of all branches (December 31, 1946) located within each of these limits:

|  | New branches | All <br> branches |
| :---: | :---: | :---: |
| Head-office city | 31 | 43 |
| Head-office county | 41 | 25 |
| Contiguous county. | 16 | 13 |
| Noncontiguous county | 12 | 19 |
| Total. . | 100 | 100 |

The important difference between new branches and all branches in this respect-greater concentration of new branches in head-office counties and less in head-office cities-can be explained largely by the fact that a disproportionate number of the new branches were established by nonmember banks, which are located for the most part in small towns where the need for additional banking offices is limited in the same town but may be great in surrounding communities. Contributing to the concentration of new branches of member banks in the city of the head office (see Table 10) are the high capital re-
quirements for the establishment of out-of-town branches by member banks.

Table 10
Number of New Branches, by Location of Branch Relative to Head Office and by Class of Parent Bank

| Location | Total | National | State member | Insured nonmember | Noninsured |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Head-office city. | 253 | 123 | 75 | 44 | 11 |
| Head-office county | 334 | 52 | 32 | 233 | 17 |
| Contiguous county. | 131 | 26 | 8 | 91 | 6 |
| Noncontiguous county | 95 | 70 | 6 | 17 | 2 |
| Total. | 813 | 271 | 121 | 385 | 36 |

## Conclusion

The increased rate of organization of new banking offices in recent years, in marked contrast to the prolonged contraction which began after World War I and continued through 1943, signifies a basic, but as yet moderate, change in the banking situation. In view of the current level of bank profits in relation to capital, still comparatively high notwithstanding declines in the last two years, and the prospects for increases in national income in the years ahead, some further increase in the number of banking offices may be expected.

## APPENDIX TABLE

${ }^{1}$ Computed from table on p. 21, Survey of Current Business, August 1947. Represents sum of annual increases over 1940 in income payments to individuals, 1941-46.
${ }_{2}$ The designations opposite each State indicate the maximum area in which branches may be established. For summary of State laws on branch banking, see Federal Reserve Bulletin for October 1939, pp. 851-70.
${ }^{3}$ Only "offices," "agencies," or "stations" for limited purposes, as distinguished from "branches," are permitted under certain circumstances.
${ }^{4}$ Branch of a Morris Plan Bank, the only type permitted by law, whose activities are confined to making loans and accepting payments on loans; deposits may not be accepted.

# LAW DEPARTMENT 

## Administrative interpretations of banking laws, new regulations issued by the Board of Governors, and other similar material

## Margin Requirements

## Ninety-Day Rule in Special Cash Account

Section $4(c)(8)$ of Regulation $T$ places a limitation on a special cash account if a security other than an exempted security has been purchased in the account and "without having been previously paid for in full by the customer . . . has been . . . delivered out to any broker or dealer." The limitation is that during the succeeding 90 days the customer may not purchase a security in the account other than an exempted security unless funds sufficient for the purpose are held in the account. In other words, the privilege of delayed payment in such an account is withdrawn during the 90 -day period.

The Board recently considered a question as to whether the following situation makes an account subject to the 90 -day disqualification: A customer purchases registered security $A B C$ in a special cash account. The broker executes the order in good faith as a bona fide cash transaction, expecting to obtain full cash payment promptly. The next day, the customer sells registered security XYZ in the account, promising to deposit it promptly in the account. The proceeds of the sale are equal to or greater than the cost of security ABC. After both sale and purchase have been made, the customer requests the broker to deliver security ABC to a different broker, to receive security XYZ from that broker at about the same time, and to settle with the other broker--such settlement to be made either by paying the cost of security XYZ to the other broker and receiving from him the cost of security ABC , or by merely settling any difference between these amounts.

The Board expressed the view that the account becomes subject to the 90 -day disqualification in section $4(c)(8)$. In the instant case, unlike that
described at 1940 Federal Reserve Bulletin 772, the security sold is not held in the account and is not to be deposited in it unconditionally. It is to be obtained only against the delivery to the other broker of the security which had been purchased. Hence payment cannot be said to have been made prior to such delivery; the purchased security has been delivered out to a broker without previously having been paid for in full, and the account becomes subject to the 90 -day disqualification.

## Foreign Funds Control <br> Treasury Department Release

The following release relating to transactions in foreign exchange, etc., in addition to those heretofore published in the Federal Reserve Bulletin, has been issued by the Office of the Secretary of the Treasury under authority of the Executive Order of April 10, 1940, as amended, and the Regulations issued pursuant thereto:

> Treasury Department
> Foreign Funds Control
> April 16, 1948
> Revocation of general license no. 49

Under Executive Order No. 8389, As Amended, Executive Order No. 9193, As Amended, Section 5 (b) of the Trading with the Enemy Act, As Amended by the First War Powers Act, 1941, relating to Foreign Funds Control.*
General License No. 49 (Section 131.49) is hereby revokel.
John W. Snyder
Secretary of the Treasury
${ }^{*}$ Section 131.49 , issued under sec. $5(\mathrm{~b}), 40$ Stat. 415,966 , sec. 2,48 Stat. 1, 54 Stat. 179 , sec. 301 , 55 Stat. $839 ; 12$ U.S.C. $95 a, 50$ U.S.C. App. Sup., 5 (b); E. ## Publication of the Annual Report of the Board of Governors

The Thirty-fourth Annual Report of the Board of Governors of the Federal Reserve System, covering operations for the calendar year 1947, is available for distribution. Copies may be obtained upon request from the Board's Division of Administrative Services, Washíngton 25, D. C.

## Federal Reserve Meetings

The Federal Advisory Council held meetings in Washington on April 25-27, 1948, and met with the Board of Governors of the Federal Reserve System on April 27, 1948.

## Change in Staff of Federal Advisory Council

The Federal Advisory Council on April 25, 1948, accepted the resignation tendered by Mr. Walter Lichtenstein as Secretary of the Council, and appointed Mr. Herbert V. Prochnow to succeed him in the position. Mr. Lichtenstein had served as Secretary of the Council since 1926. Mr. Prochnow became Acting Secretary of the Council in September 1945 and Associate Secretary in February 1948.

## Appointment of Branch Director

On April 19, 1948, the Board of Governors announced the appointment of Mr. Joseph W. Seacrest, Co-Publisher, Nebraska State Journal, Lincoln, Nebraska, as a director of the Omaha Branch of the Federal Reserve Bank of Kansas City for the unexpired portion of the term ending December 31, 1949. Mr. Seacrest succeeds Mr. L. E. Hurtz, President, Fairmont Creamery Company, Omaha, Nebraska, whose term expired December 31, 1947.

## Resignation of Branch Director

On April 26, 1948, the Board of Governors accepted the resignation of Mr. Rosco Stone, Manager, T. A. Ledford Estate, Hickman, Kentucky, as a director of the Louisville Branch of the Federal Reserve Bank of St. Louis. Mr. Stone had served the branch as a director since September 8, 1944.

## Addition to the Board's Staff

Mr. Winfield W. Riefler, who was a member of the research staff of the Board of Governors from 1923 to 1933 and a Director of the Federal Reserve Bank of Philadelphia in 1941 and 1942, has joined the Board's staff as Assistant to the Chairman of the Board. Since 1935 Mr. Riefler has been a professor at the Institute for Advanced Study, Princeton, New Jersey, and has served as an officer or director of several organizations engaged in economic research. From 1942 to 1944 he was in London as United States Minister and Special Assistant to the Ambassador.

## Correction

On page 402 of the April 1948 Federal Reserve Bulletin, the announcement of the appointment of Mr. McCabe to the Board of Governors, through typographical error, gave the expiration date of his term as 1952. Mr. McCabe's appointment as a member of the Board continues until February 1, 1956.

## Admissions of State Banks to Membership in the Federal Reserve System

The following State banks were admitted to membership in the Federal Reserve System during the period March 16, 1948 to April 15, 1948:

## Montana

St. Ignatius-Lake County Bank
Oregon
Umatilla-Inland Empire Bank
South Carolina
Pamplico-Pamplico Bank and Trust Company
Texas
Carrizo Springs-Union State Bank
Wyoming
Afton-Star Valley State Bank

Federal Reserve Bulletin

## NATIONAL SUMMARY OF BUSINESS CONDITIONS

[Compiled April 22 and released for publication April 24]

Curtailed coal output reduced industrial production in March and the early part of April. Value of department store sales continued at a level about 6 per cent higher than in the corresponding period a year ago. The general level of wholesale commodity prices increased somewhat.

## Industrial Production

Industrial production declined slightly in March owing to a sharp reduction in bituminous coal output after the middle of the month; and the Board's seasonally adjusted index was 192 per cent of the 1935-39 average as compared with 194 in February. Continuation of work stoppages at coal mines in April has reduced total industrial production further this month.

Production of durable manufactures increased in March, mainly because of larger output of steel and automobiles. Steel production for the month was at a new record peacetime rate. Steel mill operations were somewhat curtailed at the end of March because of reduced supplies of coal and declined considerably in the first three weeks of April. Activity in the automobile industry expanded in March to earlier postwar peak rates, after being curtailed by fuel shortages in February. Production of machinery and most other durable goods

Federal Reserve Index. Monthly figures, latest shown are for March.
was maintained at about the level of the preceding months.

Output of nondurable goods industries as a group decreased slightly in March. Activity declined in the cotton textile, rubber products, coke, flow, and meat packing industries, but increased in the rayon textile, paperboard, and alcoholic beverage industries. A substantial reduction in meat production under Federal inspection reflected work stoppages in plants of major packers beginning March 16. Paperboard production, following some curtailment in February, increased 7 per cent to a new record rate.

Output of minerals declined 10 per cent in March, reflecting a drop in coal production due to work stoppages at most mines beginning March 15 . Coal mine operations continued at a very low level during the first two weeks of April, but subsequently increased sharply following settlement of an industrial dispute.

## Construction

Value of construction contracts awarded, according to the F. W. Dodge Corporation, showed little change in March, as a decline in public awards offset a seasonal increase in private awards

Bureau of Labor Statistics' estimates adjusted for seasonal variation by
servants are excluded. March.
mainly for residential building. The number of dwelling units started in March, according to estimates of the Department of Labor, was 67,000 compared with 47,000 in February and 58,400 in March 1947.

## Distribution

Department store sales in March and the early part of April showed little change from the average level of 284 per cent of the 1935-39 average for January and February, after allowance is made for the usual seasonal fluctuation. Value of department store stocks reached a new peak at the end of February, when the Board's seasonally adjusted index was 303 per cent of the 1935-39 average.

Work stoppages sharply reduced railroad shipments of coal and coke from the early part of March to the middle of April. Loadings of forest products and general merchandise continued to show little change.

## Commodity Prices

The general level of wholesale commodity prices increased somewhat from the beginning of March to the third week of April. Cotton prices advanced sharply reflecting prospects of increased exports. Meat prices were also higher, owing to reduced supplies as a result of the strike in the packing industry. Hog prices, on the other hand, declined considerably further. Prices of other tarm products and foods and industrial commodities generally showed little change.

A further small reduction in retail food prices from mid-February to mid-March lowered the

Bureau of Labor Statistics' indexes. "All items" includes housefurnishings, fuel, and miscellaneous groups mot shown separately. Midmonth figures, latest shown are for March.
consumers' price index from 167.5 per cent of the 1935-39 average to 166.9. Retail prices of apparel and home furnishings and rental rates rose somewhat further.

## Bank Credit

During the first three weeks of April, in contrast to the situation in March, the Government's cash payments exceeded receipts and the Treasury's balance at Federal Reserve Banks declined sharply. As a consequence, commercial bank reserves and deposits, which had been under severe drain in March, increased somewhat in April.

Total Government security holdings of the Reserve Banks declined further by about one-half billion dollars during the first three weeks of April, following a small decline in March. Treasury retirement in March and early April of 1.3 billion dollars of securities held by Reserve Banks was offset in part by System purchases in the market.

Real estate and consumer loans at banks in leading cities continued to expand during March and the first half of April, while commercial and industrial loans declined somewhat. Holdings of Government -securities were reduced over the period.

## Security Markets

Prices of common stocks rose sharply in the last half of March and the third week of April. Trading in the New York Stock Exchange was more active. Prices of corporate bonds were firmer in the first three weeks of April, and prices of municipal bonds continued to advance.

Tables on the following pages include the principal available statistics of current significance relating to financial and business developments in the United States. The data relating to the Federal Reserve Banks and the member banks of the Federal Reserve System are derived from regular reports made to the Board; index numbers of production are compiled by the Board on the basis of material collected by other agencies; figures for gold stock, money in circulation, Treasury finance, and operations of Government credit agencies are obtained principally from statements of the Treasury, or of the agencies concerned; data on money and security markets and commodity prices and other series on business activity are obtained largely from other sources. Back figures for banking and monetary tables, together with descriptive text, may be obtained from the Board's publication, Banking and Monetary Statistics; back figures for most other tables may be obtained from earlier Bulletins.

${ }^{1}$ Averages of daily closing figures for reserves and borrowings and of daily opening figures for other columns, inasmuch as reserves required are based on deposits at opening of business.
${ }_{2}$ Demand deposits subject to reserve requirements, i. e., gross demand deposits minus cash items reported as in process of collection and demand balances due from domestic banks.
${ }_{3}$ Includes some interbank and U. S. Government time deposits; the amounts on call report dates are shown in the Member Bank Call Report.
${ }_{4}$ Data for these districts are not entirely comparable with prior periods due to a redesignation of reserve cities on Mar. 1, 1948.
Note.-Demand deposits adjusted (demand deposits other than interbank and U. S. Government, less cash items reported as in process of collection) of all member banks estimated at 71,050 million dollars in the first half and 70,000 million in the second half of March.

1 Outside Treasury and Federal Reserve Banks. Includes any paper currency held outside the continental limits of the United States; totals for other end-of-month dates shown in table above, totals by weeks in table on p. 523, and seasonally adjusted figures in table on p. 532.
${ }^{2}$ Includes $\$ 156,039,431$ held as reserve against United States notes and Treasury notes of 1890 .
${ }^{3}$ To avoid duplication, amount of silver dollars and bullion held as security against silver certificates and Treasury notes of 1890 outstanding is not included in total Treasury currency outstanding.
${ }^{4}$ Because some of the types of money shown are held as collateral or reserves against other types, a grand total of all types has no special significance and is not shown. See note of explanation of these duplications. ${ }^{5}$ Less than $\$ 500,000$.

Note.-There are maintained in the Treasury-(i) as a reserve for United States notes and Treasury notes of 1890- $\$ 156,039,431$ in gold bullion; (ii) as security for Treasury notes of 1890 -an equal dollar amount in standard silver dollars (these notes are being canceled and retired on receipt); (iii) as security for outstanding silver certificates-silver in bullion and standard silver dollars of a monetary value equal to the face amount of such silver certificates; and (iv) as security for gold certificates-gold bullion of a value at the legal standard equal to the face amount of such gold certificates. Federal Reserve notes are obligations of the United States and a first lien on all the assets of the issuing Federal Reserve Bank. Federal Reserve notes are secured by the deposit with Federal Reserve agents of a like amount of gold certificates or of gold certificates and such discounted or purchased paper as is eligible under the terms of the Federal Reserve Act, or of direct obligations of the United States. Federal Reserve Banks must maintain a reserve in gold certificates of at least 25 per cent, including the redemption fund, which must be deposited Federal Reserve Banks must maintain a reserve in gold certificates of at least 25 per cent, including the redemption fund, which must be deposited with the 1 reasurer of the United" States, against Federal Reserve notes in actual circulation; gold certificates pledged as collateral may be counted Reserve Bank notes and national bank notes are in process of retirement.

${ }^{1}$ For end of year figures, represents change computed on absolute amounts in first column.

Note.-For discussion of seasonal adjustment factors and for back figures on comparable basis see September 1943 Bulletin, pp. 822-826. Because of an apparent recent change in the seasonal pattern around the year end, adjustment factors have been revised somewhat for dates affected, beginning with December 1942; seasonally adjusted figures for money in circulation, as shown in Banking and Monetary Statistics. Table 111, p. 414, and described on p. 405, are based on an older series of adjustment factors.

$p$ Preliminary. $r$ Revised.
${ }^{1}$ Annual figures are estimates of the United States Mint. For explanation of monthly figures see table on p. 593.
${ }_{2}$ Includes gold in the Inactive Account amounting to 1,228 million on Dec. 31, 1937.
${ }^{3}$ Change includes transfer of 687.5 million dollars gold subscription to International Monetary Fund.

4 Not yet available.
© Gold held under earmark at the Federal Reserve Banks for foreign account including gold held for the account of international institutions amounted to $3,880.4$ million dollars on Apr. 30, 1948. Gold under earmark is not included in the gold stock of the United States.

Note.-For back figures, see Banking and Monetary Statistics, Table 156. pp. 536-538, and for description of statistics see pp. 522-523 in the same publication.

${ }_{2}^{1}$ National series for which bank debit figures are available beginning with 1919.
${ }^{2}$ Number of centers reduced from 193 to 192 beginning December 1947, when one reporting bank was absorbed by a reporting bank in another city. Deposits Weekly reporting member bank series.
${ }_{5}{ }^{4}$ Deposits and debits for first four months are partly estimated.
${ }^{5}$ Statistics for banks in leading cities revised beginning July 3, 1946; for description of revision and for back figures see Bulletins for June 1947 (pp. 692-693) and July 1947 (pp. 878-883) respectively; deposits and debits of the new series for first six months of 1946 are estimated.

Note.-Debits to total deposit accounts, except interbank accounts, have been reported for 334 centers from 1942 through November 1947 and for 333 beginning December 1947; the deposits from which rates of turnover have been computed have likewise been reported by most banks and have been estimated for others. Debits to demand deposit accounts, except interbank and U. S. Government, and the deposits from which slightly from those shown in Banking and Monelary Stalistics, Table 55, p. 254, due to differences in method of computation.

$p$ Preliminary.
${ }_{1}$ Includes demand deposits, other than interbank and U. S. Government. less cash items in process of collection.
: Beginning with December 1938 , includes United States Treasurer's time deposits, open account.
${ }^{8}$ Time deposits adjusted exclude interbank time deposits; United States Treasurer's time deposits, open account; and postal savings redeposited in banks.
\& Beginning June 1941, the commercial bank figures exclude and mutual savings bank figures include three member mutual savings banks.
$\$$ Prior to June 30,1947, includes a relatively small amount of demand deposits.

- Includes both amounts redeposited in banks and amounts not so redeposited; excludes amounts at banks in possessions.

Notz.-Except on call dates, figures are rounded to nearest 100 million dollars. See Banking and Monetary Statistics, D. 11, for description and Table 9. pp. 34-35, for back figures.

* Decreases in "noninsured nonmember commercial banks" figures reflect principally the admission to membership in the Federal Reserve System of one large bank with total loans and investments aggregating 554 million dollars on Dec. 31 , 1942 ; to a lesser extent, all year-to-year comparisons are affected somewhat by mergers, absorptions, changes in membership or insured status, etc

Back figures.-See Banking and Monelary Statistics, Tables $1-7$, pp. $16-23$; for description, see pp. $5-15$ in the same publication. For revisions in series prior to June 30, 1947, see pp. 870-871 of the BULLETIN for July 1947.

For other footnotes see preceding page.

${ }^{1}$ As reported by dealers; includes some finance company paper sold in open market.
${ }^{2}$ Less than $\$ 500,000$.
Back figures.-See Banking and Monetary Statistics, Table 127, pp. 465-467; for description, see p. 427.

CUSTOMERS' DEBIT BALANCES, MONEY BORROWED, AND PRINCIPAL RELATED ITEMS OF STOCK EXCHANGE FIRMS CARRYING MARGIN ACCOUNTS
[Member firms of New York Stock Exchange. Ledger balances in millions of dollars]

1. Excluding balances with reporting firms (1) of member firms of New York Stock Exchange and other national securities exchanges and (2) of firms' own partners.
${ }_{2}$ Includes money borrowed from banks and also from other lenders (not including member firms of national securities exchanges).
: As reported to the New York Stock Exchange. According to these reports, the part of total customers' debit balances represented by balances secured by U. S. Government securities was (in millions of dollars) : January, 56; February, 57; March, 62.

Note.-For explanation of these figures see "Statistics on Margin Accounts" in Bulletin for September 1936. The article describes the method by which the figures are derived and reported, distinguishes the table from a "statement of financial condition," and explains that the last column is not to be taken as representing the actual net capital of the reporting firms.

Back figures.-See Banking and Monetary Statistics, Table 143, pp. 501-502, for monthly figures prior to 1942, and Table 144, p. 503, for data in detail at semiannual dates prior to 1942.

r Revised.
${ }_{2}{ }^{1}$ Estimates of new issues sold for cash in the United States.
${ }_{3}^{2}$ Gross proceeds are derived by multiplying principal amounts or number of units by offering price.
${ }^{3}$ Estimated net proceeds are equal to estimated gross proceeds less cost of flotation, i.e., compensation to underwriters, agents, etc., and expenses. ${ }^{4}$ Includes repayment of other debt and other purposes.

Source. Securities and Exchange Commission; for compilation of back figures, see Banking and Monetary Statistics (Table 138, p. 491), a publication of the Board of Governors.

## p Preliminary.

${ }^{c}$ Corrected.
${ }_{3}^{1}$ Details on collection basis given in table below. ${ }^{2}$ Withheld by employers (Current Tax Payment Act of 1943).
${ }_{4}^{3}$ Total receipts less social security employment taxes, which are appropriated directly to the Federal old-age and survivors insurance trust fund. ${ }^{4}$ Excess of receipts ( + ) or expenditures ( - ). ${ }^{5}$ Change in classification. ${ }_{6}$ Based on telegraphic rather than the usual mailed reports for these months; this accounts in part for the increase in January and decrease in February from corresponding months of 1947.

Back figures.-See Banking and Monetary Statistics, Tables 150-151, pp. 513-516.

* Includes certain business type activities of the U. S. Government.

Assets are shown on a net basis, i.e., after reserve for losses.
${ }^{2}$ Includes investment of the United States in international instutitions as follows (in millions of dollars): Stock of the International Bank for Reconstruction and Development-318, 476, 635, 635, and 635 on Dec. 31, 1946, Mar. 31, June 30, Sept. 30, and Dec. 31, 1947, respectively International Monetary Fund Quota-2,750 on Mar. 31, June 30, Sept. 30. and Dec. 31, 1947.

Deferred charges included under Other assets prior to Mar. 31, 1947.
Federal land banks are excluded beginning June 30, 1947; U. S. Government interest in these banks was liquidated June $26,1947$.
5 Less than $\$ 500.000$. ${ }^{6}$ Includes U. S. Commercial Co. and War Damage Corp. $\quad 7$ Figures are for Mar. $31,1947 . \quad 8$ Figures are for Feb. 28, 1947, except for lend-lease and UNRRA activities, which are for Mar. 31, 1947. oFigures for three small agencies included herein are for dates other than Dec. 31 .

Note,-This table is based on the revised form of the Treasury Statement beginning Sept. 30, 1944, which is on a quarterly basis. Quarterly figures are not comparable with monthly figures previously published. For monthly figures prior to Sept. 30 , 1944 , see earlier issues of the Bul LETIN (see p. 1110 of the November 1944 BULLETIN) and Banking and Monetary Statistics, Table 152, p. 517.

p Preliminary.
- Revised.
${ }_{2} 1$ For indexes by groups or industries, see pp. 552-555. For points in total index, by major groups, see p. 574.
${ }^{2}$ Based on F. W. Dodge Corporation data; for description, see p. 358 of Bulietin for July 1931; by groups, see p. 559 of this Bulletin.
${ }^{2}$ The unadjusted indexes of employment and pay rolls, wholesale commodity prices, and consumers' prices are compiled by or based on data of he Bureau of Labor Statistics. Nonagricultural employment covers employees only and excludes personnel in the armed forces.

4 For indexes by Federal Reserve districts and other department store data, see pp. 561-564.
Back figures in Bulletin.--For industrial production, August 1940, pp. 825-882, September 1941, pp. 933-937, and October 1943, pp. 958-984; for factory employment. January and December 1943, pp. 14 and 1187, respectively, October 1945, p. 1055, and May 1947, p. 585; for department store sales, June_1944, pp. 549-561.

Note.-All indexes shown, except those for individual industries in the Machinery except Electrical and Transportation Equipment groups, have been adjusted to final 1945 data made available by the Bureau of Employment Security of the Federal Security Agency. Back data and data for industries not here shown are obtainable from the Bureau of Labor Statistics. Underlying figures are for pay roll period ending nearest middle of month and cover production workers only. Figures for March 1948 are preliminary.

Preliminary. $\quad r$ Revised. ${ }^{1}$ Includes construction expenditures for crude petroleum and natural gas drilling
: Consists of sales abroad and domestic sales of surplus consumption goods and materials. $\quad$ Less than 50 million dollars
"Total wage and salary receipts, as included in "Personal income," is equal to total disbursements less employee contributions to social insurance. Such contributions are not available by industries,

Includes compensation for injuries, employer contributions to private pension and welfare funds, and other payments.

- Includes business and professional income, farm income, and rental income of unincorporated enterprise; also a noncorporate inventory valuation adjustment.
${ }^{7}$ Includes government social insurance benefits, direct relief, mustering out pay, veterans' readjustment allowances and other payments, as well as consumer bad debts and other business transfers.

8 Includes personal income exclusive of net income of unincorporated farm enterprise, farm wages, agricultural net rents, agricultural net interest, and net dividends paid by agricultural corporations.

Note.-Details may not add to totals because of rounding

${ }^{1}$ Not available priot to 1945.
Note.-The ratios in this and the following three tables were computed from the dollar aggregates shown in preceding tables. Many of these ratios vary substantially from the average of individual bank ratios, which will be published in a subsequent issue, in which each bank's figures-regardless of size or amount-are weighted equally and in general have an equally important influence on the result. In the ratios based on aggregates presented here, the experience of those banks in each group whose figures are largest have a much greater influence than that of the many banks with smaller figures. (For example, the 100 largest member banks have total earnings which, combined, are approximately equal to those of all the other member banks, numbering about 6,800 .) Ratios based on aggregates show combined results for the banking system as a whole and, broadly speaking, are the more significant for purposes of general analyses of credit and monetary problems, while averages of individual ratios are useful primarily to those interested in studying the financial results of operations of individual banks.

1 Some State laws make a distinction between "branches" and certain other types of "additional offices." The table, however, covers all branches or additional offices within the meaning of Section 5155 U.S. R. S., which defines the term "branch"as "any branch bank, branch office, branch agency, additional office, or any branch place of business. . at which deposits are received, or checks paid, or money lent." Figures include "banking facilities" provided through arrangements made by the Treasury Department with banks designated as depositaries and financial agents of the Government.
${ }^{2}$ The figures for member (commercial) banks and those for mutual savings (noncommercial) banks both include one mutual savings bank in Indiana and two in Wisconsin. The total for "All banks," however, includes such banks only once; and they are not included in the total for Commercial banks.'

Back figures.-See Banking and Monetary Statislics, Table 1, pp. 16-17, and Tables 73-79, pp. 297-311, and descriptive text, pp. 14 and 294295; and Bulletins for July 1943, pp. 687-688; June 1944, pp. 6i2-613; June 1945, pp. 616-617; June 1946, pp. 672-673; and June 1947, pp. 752-753.

Retail food prices and cost of living. ..... 609
Security prices . ..... 609

Tables on the following pages include the principal available statistics of current significance relating to gold, international capital transactions of the United States, and financial developments abroad. The data are compiled for the most part from regularly published sources such as central and commercial bank statements and official statistical bulletins, some data are reported to the Board directly. Figures on international capital transactions of the United States are collected by the Federal Reserve Banks from banks, bankers, brokers, and dealers in the United States in accordance with the Treasury Regulation of November 12, 1934. Back figures for all except price tables, together with descriptive text, may be obtained from the Board's publication, Banking and Monetary Statistics.

${ }^{1}$ Estimated dollar values derived by converting gold at home in amounts up to 1224.4 million pesos at the rate of 3.0365 pesos per U. S. dollar and all other gold at the rate of 3.5447 pesos per U. S. dollar.
: On May 1, 1940, gold belonging to Bank of Canada transferred to Foreign Exchange Control Board. Gold reported since that time is gold held by Minister of Finance, except for December 1945, December 1946, December_1947 when gold holdings of Foreign Exchange Control Board are inciuded also.
${ }^{2}$ Figures relate to last official report dates for the respective countries, as follows: JavaJan. 31, 1942; Poland-July 31, 1939; Yugoslavia-Feb. 28, 1941
4 Figure for February 1941; beginning Mar. 29, 1941, gold reserves no longer reported separately.

Beginning December 1943, includes gold holdings of Swiss Government.

- For list of countries included, see Bulletin for June 1947, p. 755, footnote 7

Gold holdings of Bank of England reduced to nominal amount by gold transfers to British Exchange Equalization Account during 1939.
Notr.-For gold holdings of International Fund and Bank, see p. 600 . For back figures, see Banking and Monetary Statistics, Tables 156-160, pp. 536-555, and for a description of figures, including details regarding special internal gold transfers affecting the reported data, see pp. 524-535 in the same publication.

Footnotes to table on preceding page.
${ }^{1}$ Country breakdown is for "Official and private."
2 Prior to Jan. 3, 1940, the figures under Asia represent Far East only, the remaining Asiatic countries being included under "All other."
${ }^{3}$ Report dates for these years are as follows: 1938-Jan. 4, 1939; 1939-Jan. 3, 1940; and 1940-Jan. 1, 1941.
${ }^{4}$ Official Canadian holdings of U. S. dollars on Dec. 31, 1946, amounted to 686.2 million dollars, according to the annual report of the Foreign Exchange Control Board of Canada for 1946.

Note.-Certain of the figures are not strictly comparable with the corresponding figures for preceding months owing to changes in reporting practice of various banks. The cumulative figures in Tables 1.2, and 3 of "Net Capital Movement to United States" have been adjusted to exclude the unreal movements introduced by these changes. For further explanation see Banking and Monetary Statistics, pp. 578-584, and BulleTin for March 1947. p. 339, and September 1945, pp, 967-970.

${ }^{1}$ Prior to Jan. 3, 1940, the figures under Asia represent Far East only, the remaining Asiatic countries being included under "All other."
Note.-The figures in this table are not fully comparable throughout since certain changes or corrections took place in the reporting practice of reporting banks on Aug. 12, 1936, and Oct. 18, 1939. (See Banking and Monelary Statistics, Table 161, pp. 589 and 591.) On June 30, 1942, reporting practice was changed from a weekly to a monthly basis. For further information see Bulletin for September 1945, pp. 971-974.

[^40]

1 Securities maturing in two years or less
2 Includes notes held by the chartered banks, which constitute an important part of their reserves.
Beginning November 1944, includes a certain amount of sterling and United States dollars.
4 On May 1, 1940, gold transferred to Foreign Exchange Control Board in return for short-term Government securities (see Bulletin for July 1940, pp. 677-678).
${ }^{6}$ Gold revalued on Dec. 26, 1945, on basis of $134,027.90$ francs per fine kilogram. For details on previous devaluations see Bulletin for May 1940, pp. 406-407; January 1939, p. 29; September 1937, p. 853; and November 1936, pp. 878-880.

1 For explanation of this item, see Bulletin for July 1940, p. 732.
${ }^{8}$ By a series of Conventions between the Bank of France and the Treasury, dated from Aug. 25, 1940, through July 20, 1944, advances of 41,000 million francs were authorized to meet the costs of the German army of occupation.

- From Dec. 28, 1944, through Nov. 20, 1947, includes 9,447 million francs charged to the State to reimburse the Bank for the gold turned over by it to the National Bank of Belgium on Dec. 22, 1944. During the week ending Nov. 27, 1947, this amount was reduced to 5,039 million francs by a payment from the State to the Bank.

10 Central Administration of the Reichskredikassen. 1939, 5,000 million francs of gold transferred from Exchange Stabilization Fund to Bank france; in week ending Mar. $7,1940,30,000$ million, in week ending Oct. 11, 1945, 10,000 million, in week ending Dec. 27 , 1945 , 53,000 million, in week ending May 2, 1946, 35,000 million, in week ending July 3, 1947, 18,000 million, and in week ending Sept. 11, 1947, 12,000 million francs of oold transferred from Bank of France to Stabilization Fund.
${ }^{12}$ Gold holdings reduced by 12,000 million francs, representing contributions to the International Fund and Bank. An equivalent amount of Treasury bonds covering these contributions is shown under "Other assets."
${ }^{12}$ Includes a non-interest loan to the Government, which was raised from 10,000 million to 50,000 million francs by law of Mar. $29,1947$.
${ }^{4}$ Beginning November 1947, includes gold received by the French Government from the Tripartite Commission for the Restitution of Monetary Gold, of which $\mathbf{1 0 , 0 5 2}$ million francs has been pledged as collateral against a loan.
${ }^{16}$ Publication of Bank's statement suspended from Jan. 22 until Mar. 4.
Note.-For back figures on Bank of Canada and Bank of France, see Banking and Monelary Statistics, Tables 166 and 165, pp. 644-645 and pp. 641-643, respectively; for description of statistics, see pp. 562-564 in same publication. For last available report from the Reichsbank (February 1945), see Bulletin for December 1946, p. 1424.

- Revised.
${ }^{1}$ This figure represents the amount of the bank's subscription to the Fund less the bank's local currency liability to the Fund. Until such
time as the Fund engages in operations in this currency, the "net claim"' will equal the country's gold contribution.
${ }^{2}$ For last available report from the central bank of Rumania (June 1944), see Bulletin for March 1945, p. 286; and of Yugoslavia (February 1941), see Bulletin for March 1942, p. 282

Gold revalued in June 1946 from approximately 85 to 172 shillings per fine ounce.
4 Latest month available.
Includes small amount of non-Government bonds.
Gold revalued on Sept. 9, 1946, from 1,406.58 to 3,150.77 Turkish pounds per fine kilogram.
Beginning October 1944, a certain amount of gold formerly reported in the bank's account shown separately for account of the Government.
${ }^{8}$ See Bulletin for December 1936, p. 1025
' Before March 1947, included in "Sundry bills and investments."

Note.-For monthly figures on money rates in these and other foreign countries through 1941, see Banking and Monetary Statistics, Table 172, pp. 656-661, and for description of statistics see pp. 571-572 in same publication.

[^42]FOREIGN EXCHANGE RATES

${ }_{1}^{1}$ Prior to Nov. 1, 1942, the official designation of the Brazilian currency unit was the "milreis."
Average of daily rates for that part of the year during which quotations were certified.
${ }^{3}$ At the end of June 1945 official rates for the Australian and British pounds were abolished, and after this date quotations are buying rates in the New York market. The rates shown represent averages for the second half of 1945 and are comparable to those quoted before 1940 . "The rate quoted after July 22, 1946. is not strictly comparable to the "free" rate shown before that date. The average for the "free" rate July 1-19 is 5.1902, and for Jan. 1-July 19, 5.1860, while the average for the new rate for July 25-31 is 5.3350, and for July 25-Dec. 31, 5.3955 IBased on quotations through Jan. 23. ${ }^{\text {B }}$ Based on quotations beginning Feb. 10
Note,-For back figures see Banking and Monelary Statislics, Table 173, pp. 662-682. For description of statistics see pp. 572-573 in same publication, and for further information concerning developments affecting the averages during previous years, see Bulletin for July 1947, p. 933; February 1944, p. 209; and February 1943, p. 201.

[^43]${ }^{1}$ The new national index, published by the Central Institute of Statistics, is a weighted geometric average of the prices of 156 commodities. The weights are determined on the basis of the total quantities produced and imported in 1938. Yearly averages for 1934-1942 are derived from old index.

Sources.-See Bulletin for July 1947, p. 934; January 1941, p. 84; April 1937, p. 372; March 1937, p. 276; and October 1935. p. 678.

${ }^{p}$ Preliminary. (July $1914=100$ ) was terminated on June 17, and this date was used in computing the June figure. June $17,1947=100$ is also the base period used for the new weighted so-called "interim" index. For a description of this index see Ministry of Laboup Gazette, August 1947, p. 255. $\quad{ }^{2}$ Revised index from March 1936 (see Bulletin for April 1937, p. 373).
${ }^{3}$ This average is based on figures for the new index, beginning June. The averages for the old index, based on figures for January-June 17 , are 203 for ret ail food prices and 166 for cost of living.

Sources-See Bulletin for July 1947, p. 935; May 1942, p. 451; October 1939, p. 943; and April 1937, p. 373.

Preliminary.
${ }^{1}$ Figures represent calculated prices of a 4 per cent 20 -year bond offering a yield equal to the monthly average yield for 15 high-grade corporate bonds. Source.-Standard and Poor's Corporation; for compilations of back figures on prices of both bonds and common stocks in the United States see Banking and Monetary Statistics. Table 130, p. 475 , and Table 133, p. 479.

2 This index is based on one 15-year 3 per cent theoretical bond. Yearly averages for 1939 and 1940 are based on monthly averages and thereafter on the capitalized yield as calculated on the 15 th of every month.
${ }_{3}$ Beginning February 1947, this index represents the reciprocals of average yields for 13 issues ( 2 eternal government, 2 government, 2 munic-
ipal, 1 provincial, 3 mortgage, and 3 industrial bonds). From January 1946 through January 1947 the figures are based on the most representative bond for each group. The average yield in the base period (January-March 1937) was 3.39 per cent

4 This index is based on 95 common stocks through 1944, and on 100 stocks thereafter.
${ }_{5}^{4}$ In September 1946 this index was revised to include 185 metropolitan issues, 90 issue
nies abroad. See "Bulletin de la Statistique Génerale" September-Nover 1946
This is a new index for 37 Netherlands issues ( 27 industrial, 5 banking, and 5 shipping share
daily quotations The figures are not comparable with dota for previous years shown in arlier Buepresents an unweighted monthly averag daily quotations. The figures are not comparable with data for previous years shown in earlier Buletins.
${ }^{7}$ Average based on figures for 5 months; no data available June-December.
${ }^{9}$ Average based on figures for 10 months; no data a vailable January-February.

Proposal for a Special Reserve Requirement Against the Demand and Time Deposits of Banks, by Marriner S. Eccles. January 1948. 10 pages.
The Federal Reserve Chart Book as an Aid to Bank Mangement, by Charles H. Schmidt. April 1948. 9 pages.

Statement on Behalf of the Board of Governors of the Federal Reserve System Before the Joint Committee on the Economic Report. Presented by Marriner S. Eccles on April 13, 1948. 7 pages.

[^0]:    ${ }^{1}$ This article was prepared by Charles Fox of the Board's Division of Research and Statistics.

[^1]:    1 Not available prior to 1945.
    ${ }_{2}$ The following changes in reporting are reflected beginning with 1942: (a) earnings on loans include service charges and fees on loans, previously included in other earnings; (b) taxes on net income, previously included with other taxes in expenses, are a separate item; (c) recurring depreciation on real estate, previously included in losses and charge-offs, is included in other expenses.
    a Beginning with 1938 , interest on time deposits includes interest on interbank time deposits; interest (if any) on demand deposits is included in other expenses.

    4 Includes interest on capital notes and debentures.

[^2]:    ${ }^{1}$ Less than 50 million.

[^3]:    ${ }^{1}$ An apparent increase in 1934 was due to the fact that statistics for that year include a large number of banks which were classified as suspensions in 1933 but in 1934 reopened and were treated as additional banking offices.
    2 Branches, as discussed in this article, exclude offices at military reservations. These offices consist of "banking familitary reservations. These offices consist of baniving facilities" provided through arrangements made by the Treasury
    Department with banks designated as depositaries and fiscal Department with banks de
    agents of the Government.

[^4]:    ${ }^{3}$ For 1947, the numbers of new banks and branches are preliminary and subject to minor changes.

[^5]:    1 "Current" indicates as of Dec. 31, 1946 except for banks organized in 1947, for which the latest data available were used.

[^6]:    ${ }^{4}$ Banks organized in 1946 and 1947 of course had been in operation less than a year and had had little opportunity to grow. Exclusion of these banks, however, would not have changed the conclusions reached.

[^7]:    While figures on population are based on the 1940 Census. While important shifts in population have undoubtedly occurred during the war period, it is unlikely that the general conclusions drawn here would be altered materially if recent population figures were available.

[^8]:    ${ }^{11}$ Arkansas, Iowa, New Mexico, North Dakota, and Wisconsin permit only limited-function offices. Sizable declines occurred in all of these States except New Mexico.
    12 For further discussion of wartime expansion in bank assets, see Robert V. Rosa, "Impact of War on Member Banks, 1936-46," in Federal Reserve Policy (Postwar Economic Study No. 8), published by the Board of Governors in November 1947 Data compiled for this study show asset expansion of about 33 per cent per annum between 1939 and 1945 for an about identical proup of 4,586 member banks with deposits on Dec. 31, 1943 of 5 million dollars or less.

[^9]:    ${ }^{1}$ "Currently" indicates as of Dec. 31, 1946 except for banks organized in 1947, for which the latest available data were used.

[^10]:    ${ }^{13}$ Some of the banks organized in the more recent years have probably not reached their maximum size and earning capacity merely because of their newness.

[^11]:    Note.-Maximum rates that may be paid by insured nonmember banks as established by the F. D. I. C., effective Feb. 1, 1936, are the same as those in effect for member banks. Under Regulation $Q$ the rate payable by a member bank may not in any event exceed the maximum rate payable by State banks or trust companies on like deposits under the laws of the State in which the member bank is located.

[^12]:    ${ }^{1}$ Regulations $T$ and $U$ limit the amount of credit that may be extended on a security by prescribing a maximum loan value, which is a specified percentage of its market value at the time of the extension; the "margin requirements" shown in this table are the difference between the market value ( $100 \%$ ) and the maximum loan value.
    Back figures.-See Banking and Monetary Statistics, Table 145, p. 504, and Bulletin for March 1945, p. 235.

[^13]:    ${ }^{p}$ Preliminary. country banks are estimates. Weekly figures of borrowings of all memcountry banks are estimates. Weekly figures of borrowings of all mem-
    ber banks and of country banks may include small amounts of Federal ber banks and of country banks may inelude small amounts of Feder Bank discounts and advances for nonmember banks, etc.
    Reserve

[^14]:    ${ }^{1}$ Includes any banks in outlying sections of reserve cities that have

[^15]:    ${ }^{1}$ Represents banks which, during the periods shown, closed temporarily or permanently on account of financial difficulties; does not include banks whose deposit liabilities were assumed by other banks at the time of closing (in some instances with the aid of Federal Deposit Insurance Corporation loans).
    ${ }_{2}$ Deposits of member banks and insured nonmember banks suspended are as of dates of suspension, and deposits of noninsured nonpended are as of dates of suspension, and deposits of noninsured nonmember banks are based on
    suspensions were reported.

    Back figures.-See Banking and Monetary Statistics, pD. 283-292; for description, see pp. 281-282 in the same publication.

[^16]:    ${ }^{e}$ Partly estimated. - Revised.

    * "All banks" comprise "all commercial banks" and "all mutual savings banks." "All commercial banks" comprise "all nonmember commercial banks" and "all member banks" with exception of three mutuai savings banks that became members in 1941 . Stock savings banks and nondeposit trust companies are included with "commercial" banks. Number of banks includes a few noninsured banks for which asset and liability data are not available.
    ${ }^{1}$ Beginning June 30, 1942, excludes reciprocal balances, which on Dec. 31, 1942, aggregated 513 million dollars at all member banks and 525 million at all insured commercial banks.
    ${ }^{2}$ June 30, 1947, figures are consistent (except that they exclude possessions) with the revised all bank series announced in November 1947 by the Federal bank supervisory agencies, but are not entirely comparable with prior figures shown above; a net of 115 noninsured nonmember commercial banks with total loans and investments of approximately 110 million dollars was added, and 8 banks with total loans and investments of 34 million were transferred from noninsured mutual savings to nonmember commercial banks. Deposits unclassified as to time or demand have been included in time for mutual savings banks and in demand for commercial banks.

    For other footnotes see following page.

[^17]:    * These figures do not include data for banks in possessions of the United States. During 1941 three mutual savings banks tecame members of the Federal Reserve System; these banks are included in "member banks" but are not included in "all insured commercial banks."
    ${ }^{1}$ During the period Dec. 31, 1942-June 30. 1945, agricultural loans included loans to dealers. processors, and farmers cooperatives covered by purchase agreements of the Commodity Credit Corporation, which are now classified as commerctal and industrial loans: consequently. beginning Dec. 31, 1945 these items may not be entirely comparable with prior figures.
    ${ }_{2}$ Central reserve city banks.

[^18]:    ${ }^{1}$ Including guaranteed obligations. for the New York and Chicago Districts, as shown in this table, include New York City and Chicago, respectively.

[^19]:    ${ }^{1}$ Monthly and weekly data are averages of daily figures, except for municipal bonds, which are based on Wednesday figures.
    Standard and Poor's Corporation. $\quad 3$ U. S. Treasury Department.
    ${ }^{4}$ Moody's Investors Service, week ending Friday. Because of limited number of suitable issues, the industrial Aaa and Aa groups have been reduced from 10 to 5 and 9 issues, respectively, and the railroad Aaa, Aa, and A groups from 10 to 6,6 , and 8 issues, respectively.

    Back figures.-See Banking and Monetary Stalistics, Tables 128-129, pp. 468-474, and Bulletins for May 1945, pp. 483-490, and October 1947, pp. 1251-1253.

[^20]:    1"Net profits" and "net income" refer to income after all charges and taxes and before dividends.
    ${ }^{2}$ Includes 29 companies engaged in wholesale and retail trade (largely department stores), 13 in the amusement industry, 21 in shipping and transportation other than railroads (largely airlines), and 11 companies furnishing scattered types of service.

    - Net profits figures for the year 1946 include, and those for the fourth quarter exclude, certain large extraordinary year-end profits in the following amounts (in millions of dollars): 629 company series-total, 67 ; machinery, 49; other durable goods, 18; 152 company series-total, 49.

    Partly estimated. $\quad 6$ Class I line-haul railroads, covering about 95 per cent of all railroad operations.
    Class A and B electric utilities, covering about 95 per cent of all electric power operations. Figures include affiliated nonelectric operations.
    ${ }^{7}$ Thirty large companies, covering about 85 per cent of all telephone operations. Series excludes American Telephone and Telegraph Company, the greater part of whose income consists of dividends received on stock holdings in the 30 companies.
    ${ }^{8}$ After all charges and taxes except Federal income and excess profits taxes.
    Sources.-Interstate Commerce Commission for railroads; Federal Power Commission for electric utilities (quarterly figures on operating revenue and on income before income tax are partly estimated); Federal Communications Commission for telephone companies (except dividends); published reports for industrial companies and for telephone dividends. Figures for the current and preceding year subject to revision. For description of data and back figures, see pp. 214-217 of the Bulletin for March 1942 and also p. 1126 of the Bulletin for November 1942 (telephone companies) and p. 908 of the Bulletin for September 1944 (electric utilities).

[^21]:    1 Including amounts held by Government agencies and trust funds, which aggregated 5,564 million on Mar. 31, 1948.

    - Total marketable public issues includes Postal Savings and prewar bonds, and total nonmarketable public issues includes adjusted service, depositary, Armed Forces Leave bonds, and $21 / 2$ per cent Treasury investment bonds, series A-1965, not shown separately.

[^22]:    * Figures include only holdings by institutions or agencies from which reports are received. Data for commercial banks, mutual savinge banks and the residual "other" are not entirely comparable from month to month. Figures in column headed "other" include holdings by nonreporting banks and insurance companies as well as by other investors. Estimates of total holdings (including relatively small amounts of nonmarketable issues) by all banks and all insurance companies for certain dates are shown in the table above.

    1 Including stnck savings banks.
    ${ }^{2}$ Including Postal Savings and prewar bonds and a small amount of guaranteed securities, not shown separately below.

[^23]:    ${ }^{1}$ Difference between these figures and changes in the general fund balance represents net cash borrowing $(+)$ or net repayment of borrowing (-). For description, see Treasury Bulletin for September 1947.

[^24]:    p Preliminary. $\quad r$ Revised
    ${ }^{1}$ Series included in total and group indexes but not available for publication separately.

[^25]:    ${ }^{1}$ Includes self-employed, unpaid family, and domestic service workers.
    Annual averages for 1940 include an allowance for January and February inasmuch as the monthly series began in March 1940.
    : Beginning in June 1947 , details do not necessarily add to group totals.
    Note.-Information on the labor force status of the population is obtained through interviews of households on a sample basis. Data relate to the calendar week that contains the eighth day of the month. Back data are available from the Bureau of the Census.

[^26]:    $r$ Revised.
    Note.-For description and back data, see pp. 529-533 of the Bulletin for June 1941. Based on daily average loadings. Basic data compiled by Association of American Railroads. Total index compiled by combining indexes for classes with weights derived from revenue data of the Interstate Commerce Commission.

[^27]:    $r$ Revised.
    ${ }^{1}$ Figures for sales are the average per trading day, while those for stocks are as of the end of the month or the annual average.
    Note.-For description and monthly indexes for back years for sales see Bulletin for June 1944, pp. 542-561, and for stocks see Bulletín for June 1946, pp. 588-612.

[^28]:    1 The ratio of stocks to sales is obtained by dividing stocks at the end of the month by sales during the month and bence indicates the number of months' supply on hand at the end of the month in terms of sales for that month.
    ${ }_{2}$ The 1941 average of monthly sales for each department is used as a base in computing the sales index for that department. The stocks index is derived by applying to the sales index for each month the corresponding stocks-sales ratio. For description and monthly indexes of sales and stocks by department groups for back years, see pp. $856-858$ of Bulletin for August 1946 . The titles of the tables on pp. 857 and 858 were reversed.

    3 For movements of total department store sales and stocks see the indexes for the United States on p. 561.
    4 Index numbers of sales and stocks for this department are not available for publication separately; the department, however, is included in group and total indexes.

    Note.-Based on reports from a group of large department stores located in various cities throughout the country. In 1947 , sales and stocks at these stores accounted for about 50 per cent of estimated total department store sales and stocks. Not all stores report data for all of the departments shown; consequently, the sample for the individual departments is not so comprehensive as that for the total.

[^29]:    PPreliminary. $\quad$ Revised.
    Note.-Data based on reports from a smaller group of stores than is included in the monthly index of sales shown on p. 561.

[^30]:    ${ }^{p}$ Preliminary. ${ }^{1}$ Annual figures for charts on pp. $9-19$. inclusive, are published as they become available.

[^31]:    ${ }^{1}$ Includes figures for all banks that were members of the Federal Reserve System at the end of the year (including those becoming members during the year whose returns may cover operations for only part of the year); and in addition includes appropriate adjustments for member banks in operation during part of the year but not at the year end.
    ${ }^{2}$ Includes interest on capital notes and debentures.
    Note. -The figures of assets, deposits, and capital accounts are averages of the amounts reported for the call dates at the beginning, middle, and end of the year except in 1945, when the spring call was included. Averages are distorted in 1945 because the call dates other than the spring call were in or near bond drives, when deposits, loans, and investments were at their peaks for the year. The number of officers, employees, and banks are as of the end of the year

    Real estate assets are comprised of banking house and equipment, other real estate owned, and items indirectly representing bank premises or other real estate. Cash assets are comprised of cash, balances with other banks (including reserve balances), and cash items in process of collection. Total capital accounts are comprised of the aggregate book value of capital stock, capital notes and debentures, surplus, undivided profits, reserves for contingencies, and other capital reserves.

[^32]:    * Not including central reserve city banks.

    See footnotes on p. 576 .

[^33]:    ${ }^{1}$ Totals are for all banks that submitted reports covering the entire year, except two trust companies having no deposits.
    2 Includes interest on capital notes and debentures.
    Note.-The figures for assets, deposits, capital accounts, number of officers and employees, and number of banks are as of the end of year.
    See note on p. 576 regarding the composition of real estate assets, cash assets, and total capital accounts.

[^34]:    ${ }^{1}$ Ratios of less than .005 are shown as $\mathbf{0}$.

[^35]:    ${ }^{p}$ Preliminary.
    ${ }^{1}$ Excludes mutual savings banks, on a few of which some checks are drawn.
    ${ }^{2}$ Includes branches and other additional offices at which deposits are received, checks paid, or money lent, including "banking facilities" at military reservations (see footnote 4, p. 241 of the BuLleTIN for February 1948).

    Back figures.-See Banking and Monetary Statistics. Table 15, and Annual Reports.

[^36]:    Gold production in U.S.S. R.: No regular Government statistics on gold production in U.S.S. R. are available, but data of percentage changes irregularly given out by officials of the gold mining industry, together with certain direct figures for past years, afford a basis for estimating annual production as follows: 1934, 135 million dollars; 1935, 158 million; 1936, 187 million; 1937, 185 million; 1938, 180 million.
    ${ }^{1}$ Annual figures through 1940 are estimates of U.S. Mint; annual figure for 1941 based on monthly estimates of American Bureau of Metal Statistics.

    2 Beginning April 1941, figures are those reported by American Bureau of Metal Statistics. Beginning January 1944, they represent Gold Coast only.

    - Beginning May 1940, monthy figures no longer reported

    Onty figu 4, 1946, includes Philippine production received in United States. Annual figures are estimates of the United States Mint. Gigure $\$ 475,641$ so that metes of the American Bureau of Metal Statistics, those for 1946 having been revised by subtr

    - Figures for Canada beginning 1946 are subject to official revision. "Beginning April 1942, monthly figures no longer reported.

    TGold exports, reported by the Banco Nacional de Nicaragua, which states that they represent approximately 90 per cent of total production.
    Beginning December 1941, figures are those reported by American Bureau of Metal Statistics. For the period December 1941-December 1943 they represent total Australia; beginning January 1944, Western Australia only

    - Beginning May 1940, figures are those reported by American Bureau of Metal Statistics.

    Note.-For explanation of table and sources, see Bulletin for February 1939, p. 151; July 1938, p. 621; June 1938, p. 540; April 1933, pp. 233-235; and Banking and Monetary Statistics, p. 524. For annual estimates compiled by the United States Mint for these and other countries in the Deriod 1910-1941, see Banking and Monetary Statistics, Dp. 542-543.

[^37]:    1 This category made up as follows: through Sept. 21, 1938, funds held by foreign central banks at the Federal Reserve Bank of New York and deposit accounts held with the U. S. Treasury; beginning Sept. 28, 1938, also funds held at commercial banks in New York City by central banks maintaining accounts at the Federal Reserve Bank of New York; beginning July 17, 1940, also funds in accounts at the Federal Reserve Bank of New York which had been transferred from central bank to government names; beginning with the new series commencing with the month of July 1942, all funds held with banks and bankers in the United States by foreign central banks and by foreign central governments and their agencies (including official purchasing missions, trade and shipping missions, diplomatic and consular establishments, etc.).

    2 The weekly series of capital movement statistics reported through July 1, 1942, was replaced by a monthly series commencing with July 1942. Since the old series overlapped the new by one day, the cumulative figures were adjusted to represent the movement through June 30 only. This adjustment, however, is incomplete since it takes into account only certain significant movements known to have occurred on July 1 . Subsequent figures are based upon new monthly series. For further explanation, see Bulletin for January 1943, p. 98.

    Includes outflow of $\$ 249,300,000$ resulting from the sale of debentures in the United States by the International Bank for Reconstruction and Development. (Of the total issue of $\$ 250,000,000, \$ 700,000$ was sold directly to Canadian purchasers.)

    4 Includes inflow of 74.5 million dollars resulting from purchase of domestic securities by international institutions.
    Note.-Statistics reported by banks, bankers, brokers, and dealers. For full description of statistics see Banking and Monetary Statistics, pp. 558-560; for back figures through 1941 see Tables 161 and 162, pp. 574-637, in the same publication, and for those subsequent to 1941 see BulLeTIN for September 1945, pp. 960-974.

[^38]:    ${ }^{1}$ Total capital movement by countries differs from total capital movement in Table 1 by reason of exclusion of international institutions.
    Prior to Jan. 3, 1940, the figures under Asia represent Far East only, the remaining Asiatic countries being included under "All other."
    ${ }^{3}$ See Table 1, footnote 3.
    ${ }^{4}$ See Table 1, footnote 4.

[^39]:    ${ }^{1}$ Prior to Jan. 3, 1940, the figures under Asia represent Far East only, the remaining Asiatic countries being included under "All other." Includes outflow of $\$ 249,300,000$ resulting from the sale of debentures in the United States by the International Bank for Reconstruction and Development. (Of the total issue of $\$ 250.000,000, \$ 700,000$ was sold directly to Canadian purchasers.)

    Includes inflow of 74.5 million dollars resulting from purchase of domestic securities by international institutions.
    'Amounts outstanding Dec. 31 (in millions of dollars): foreign brokerage balances in United States, 92.1; United States brokerage balances abroad, 26.6.

[^40]:    ${ }^{1}$ Through February 1939, valued at legal parity of 85 shillings a fine ounce; thereafter at market price, which fluctuated until Sept. 6, 1939, when it was officially set at 168 shillings per fine ounce; the latter rate remained in effect until June 9, 1945, when it was raised to 172 shillings and three pence.
    ${ }^{2}$ Securities and silver coin held as cover for fiduciary issue, the amount of which is also shown by this figure.
    ${ }^{3}$ Notes issued less amounts held in banking department.
    ${ }^{4}$ On Jan. 6, 1939, 200 million pounds sterling of gold (at legal parity) transferred from Bank to Exchange Equalization Account; on Mar. 1 . 1939, about 5.5 million pounds (at current price) transferred from Exchange Account to Bank; on July 12, 1939, 20 million pounds transferred from Exchange Account to Bank; on Sept. 6, 1939, 279 million pounds transferred from Bank to Exchange Account.
    ${ }^{5}$ Fiduciary issue decreased by 50 million pounds each on Jan. 7, Feb. 4, and Mar. 3, 1948. For details on previous changes in the fiduciary issue see Bulletin for February 1948, p. 254.

    Note.-For back figures on Bank of England, see Banking and Monetary Statistics. Table 164, pp. 638-640; for description of statistics, see pp. 560-561 in same publication.

[^41]:    ${ }^{1}$ Government decree of Apr. 24, 1946, provided for the guarantee of all deposits registered in the name of the Central Bank.
    2 By decree of May 24, 1946, the Central Bank became responsible for all subsidiary money.
    ${ }^{3}$ This figure represents the amount of the bank's subscription to the Fund less the bank's jocal currency liability to the Fund. Until such
    time as the Fund engages in operations in this currency, the "net claim" will equal the country's gold contribution.
    4 Includes increment resulting from gold revaluation, notes forfeited to the State, and frozen old notes and current accounts.
    5 Latest month available.
    ${ }^{6}$ For last available report (January 1943), see Bulletin for July 1943, p. 697.
    7 Beginning January 1948 , gold valued at 31 pesos per U. S. dollar, while previously it was valued at 4.855 pesos per dollar.
    8 Gold not reported separately beginning Dec. 31, 1946.
    ${ }^{9}$ Change due to transfers in accordance with the law of July 2, 1947, relating to the Monetary Liquidation Fund.

[^42]:    ${ }^{1}$ From September 1939 through November 1946, this table represents aggregates of figures reported by individual banks for days, varying from bank to bank, toward the end of the month. After November 1946, figures for all banks are compiled on the third Wednesday of each month, except in June and December, when the statements will give end-of-month data.

    Note. For back figures and figures on German commercial banks, see Banking and Monetary Statistics, Tables 168-171. pp. 648-655, and for description of statistics see pp. 566-571 in same publication.
