## Oncreasing Industrial and Trade Activity

Economic activity increased sharply in May, following a brief decline in April. Expenditures by the Federal Government and its agencies in connec-

## Impact of defense program

tion with the defense effort continued to increase and the total of these expenditures and British government payments for military purposes in this country is now running at a rate of over $\$ 1,000$,000,000 a month. As more materials were required for military purposes and as civilian demand continued to grow, pressure on plant capacity increased further. Prices of many commodities, particularly farm products and goods manufactured from them, rose rapidly. Increases in prices of a number of commodities, chiefly metals, have been restricted by governmental action. Supplies of various important metals are limited and priorities have been put into effect for some of them.

Widespread expansion in activity and advances in wage rates in many industries, such as those producing steel, coal, and cotton textiles, have resulted in a rise in income payments during recent months. Dividend disbursements have also increased as profits, after allowance for higher taxes, have been above a year ago. Cash farm income in the first three months of the year was 4 per cent higher than a year ago and in April was 13 per cent larger.

Trade in wholesale and retail markets was in large volume during May. There was heavy buying of cotton textiles, due in part to increases in cotton prices, and demands for other textile products, shoes, and paper were large. Consumer purchases of automobiles and household equipment were at unusually
high levels, owing mainly to the rise in incomes but also to uncertainty as to future availability and prices.

Diversion of a considerable tonnage of ships from regular routes focused attention again on difficulties in obtaining imports and on the additional demand that will be placed on domestic transportation facilities. By the latter part of May loadings of railroad freight were more than 860,000 cars weekly and not far below the capacity of the railroads on the basis of the facilities now available and the most efficient operations heretofore achieved. Additional orders were placed for railroad equipment to be delivered before the autumn traffic peak this year, and plans were being formulated for extensive purchases to increase carrying capacity in 1942 and 1943, but there were reports of difficulties in obtaining steel needed for this purpose.

In the corporate security markets the inactivity which has prevailed for many months continued during May. Common stock prices were somewhat lower than during earlier months this year and not far above the lowest level reached in June 1940. United States Government and high-grade corporate bonds have fluctuated around a level slightly below the all time peak reached in December last year.

During May the Treasury, through authorized agencies, sold about $\$ 440,000,000$ of new Defense Savings Bonds to the general public, other than commercial banks, and allotted about $\$ 660,000,000$ on cash subscriptions to a public offering of $21 / 2$ per cent 15 17 year bonds for delivery June 2. An additional $\$ 790,000,000$ of these bonds were ex-
changed for a maturing bond issue. About $\$ 200,000,000$ of Government guaranteed obligations of the Home Owners' Loan Corporation were retired out of accumulated cash balances of the Corporation. Corporate financing increased during the latter part of May but the total volume for the month, including issues for refunding and for new capital, was about the same as the average monthly volume during 1940 .

The magnitude of the economic problems arising from the adjustment of the economy to a large-scale defense program has become increasingly evident in recent months. Actual expenditures on the defense program have been larger than generally expected and have had a powerful effect on civilian demand. Various shortages that were discussed last autumn as possibilities are becoming realities now. Measures for curtailing civilian purchases are being considered and increasing attention is being given to programs for expanding output of defense materials. Measures for curtailing consumption include direct limitation of production, as in the case of automobiles, and other less direct methods such as the proposed limitation of consumer demand by further increases in taxes. Some of the taxes proposed would be selective in character, designed to restrict consumer purchases of automobiles and various other durable goods using materials required for defense purposes. Regulation of consumer credit is another step under discussion as a method of limiting such purchases. The Treasury's program for sale of Defense Savings Bonds to the general public is designed to encourage savings and channel the funds into defense expenditures rather than have them augment demand for goods during the emergency.

Expenditures by the Federal Government under the defense program have increased rapidly since last June. Such
Progress of the defense program of these expenditures as are reported on the daily Treasury statements amounted to about $\$ 850,000$,-

000 in May, compared with $\$ 150,000,000$ a year ago and less than $\$ 500,000,000$ last December. It appears that defense expenditures for the fiscal year ending June 30 will be close to $\$ 6,200,000,000$; currently they are running at a rate of well over $\$ 10,000,000,-$ 000 a year.

These outlays as reported by the Treasury include military expenditures by the Army and Navy, expenditures from special funds appropriated to the President, and outlays for Selective Service, emergency ship construction, defense housing, and the lend-lease program. They do not include outlays for defense purposes by various civil departments and agencies, which are not shown separately in current reports, and defense disbursements by the Reconstruction Finance Corporation, the Export-Import Bank and other agencies outside the regular Budget. Nor do they include British government expenditures in this country for military purposes.

Total appropriations and contract authorizations made under the defense effort as a whole now aggregate more than $\$ 40,000,000$,000 , including British government orders placed in this country and defense expenditures of other governmental agencies as well as the items reported in Treasury statements. This figure includes about $\$ 5,000,000,000$ for pay, travel, subsistence, and nonindustrial items and over $\$ 35,000,000,000$ for construction and the purchase of armament and munitions. Of this latter amount, about \$20,$000,000,000$ had been placed under contract or letter of intent by the end of April. Actual cash expenditures for all these programs, including pay, subsistence, and the like to the end of April 1941 amounted to about $\$ 7,000$,000,000 and in recent weeks have been running at a rate of more than $\$ 12,000,000,000$ a year.

The following summary shows by major items the distribution of appropriations and authorizations and of contract obligations made up to April 30, 1941. Some of these
figures are provisional and are subject to revision. Over half of the amount authorized for purchase of miscellaneous equipment and supplies and a third of the funds for construction of posts, depots and housing had been spent by April 30, while expenditures for airplanes and engines, industrial facilities, ordnance supplies, and ships ranged from 16 down to 8 per cent of authorizations. Expenditures for many of these items will be spread over a period of several years. In other cases provision has been made only for actual and estimated needs during this and the next fiscal year and additional appropriations for subsequent years will be necessary. In fact consideration is being given to additional needs within the next year. Thus to complete the defense program and maintain the Army and Navy will in the course of time require larger expenditures than are indicated in the table.

4. Contracts are not recorded against this authorization.

Wholesale commodity prices advanced considerably from February to the end of May. There were important in-
Rise in commodity prices creases in both agricultural and industrial commodities, and the general index of wholesale prices
rose to 85 per cent of the 1926 average at the end of May. This was 4 points higher than in February and 8 points, or 10 per cent, above the level last summer when defense activities were at an early stage of development. Price increases since February have been sharp for most leading commodities other than metals, for which maximum limits have been established by the Federal Government. Except for the metals, domestic basic commodities have shown advances as large on the average as increases in prices of imported commodities.

While Federal action has contributed to stability in prices of some materials, prices of industrial raw materials and semifinished goods as a group have shown a sharp rise since February, as indicated in the accompanying chart. With increases continuing

Federal Reserve classification of Bureau of Labor Statistics data. All foodstuffs excluded. May 1941 estimated.
during the month prices for this group of materials at the end of May were about 8 per cent higher than in February. In recent weeks price increases have become more widespread, including textile materials, hides and leather, chemicals, fuels, and building materials. Prices of finished industrial prod-
ucts have also advanced considerably since the early part of April.

Retail prices, which earlier had shown relatively little change since the beginning of the war, have recently increased. The sharpest advances have been in foods and textile products. Most other groups of retail prices have also shown increases and the most pronounced recent advances in wholesale prices, which may subsequently be reflected in retail prices, have been in raw materials used in production of nondurable consumers' goods, which make up a considerable part of the cost of living.

An important factor contributing to the recent rise in prices of agricultural commodities has been actual and prospective Federal action relating to large-scale purchases of livestock products and higher loan rates for major crops during the coming season. Commodity prices generally have been affected by the continued sharp growth of demand, reflecting the high level of industrial activity and increased consumer incomes. Buying of goods has continued to be in excess of the volume of output in many lines and in some instances above the rate of ultimate consumption.

Changes in supplies of commodities have been mixed. Imports of many crude materials have continued to rise sharply and domestic stocks of these commodities are mostly larger than at the beginning of the year. However, with domestic consumption at a high rate, increased shipping charges in effect, and prospects of a further reduction in shipping facilities, prices of many of these imported commodities have increased sharply. Visible stocks of domestic commodities have been generally reduced further this year, but the reductions have been offset in a limited degree by increases in supplies held by industrial consumers.

Through Federal action, maximum prices have been established for most nonferrous metals, steel scrap, and semi-
Federal action on prices finished and finished iron and steel mill products, except pig iron. Shortly after the action setting maximum prices on steel products at first-quarter levels, agricultural implement manufacturers and some other steel users were urged, in view of the action on steel, not to increase prices of their products. Prices of steel scrap are below the peak reached at the beginning of this year and prices of nonferrous metal scrap, which had risen sharply after prices of new metals had been stabilized, have been sharply reduced since the end of March. Tin prices have also been influenced by Federal action in connection with the accumulation of a stockpile in this country. As a result of this program the United States has become by far the leading world buyer of tin and the purchase ranges established in an

Bureau of Labor Statistics index of 28 basic commodities. Federal Reserve classification of 6 metals and 22 other basic commodities. Latest figures shown are for Tuesday, May 27.
agreement with British authorities have largely determined the domestic price level for this commodity.

The effect of Federal action in limiting advances in basic metal prices is shown in the accompanying chart. The chart also shows in contrast the steady, sharp rise in prices of 22 other basic commodities since last August. This group includes both domestic and imported commodities-foodstuffs, textiles, and miscellaneous industrial materials.

Further increases in prices of several important foodstuffs during May reflected the operations of Federal programs as well as sharply rising domestic demand. Purchases of hog, dairy, and poultry products by the Surplus Marketing Administration were greatly expanded beginning in the middle of March. Early in April the Department of Agriculture announced that prices of these products would be supported until June 1943 in order to encourage more production to meet export demands under the lend-lease program and also to supply growing domestic demands. Prices will be supported at levels substantially above those of most recent years.

In May Federal action to limit price advances was extended more generally beyond the metals. Trading on organized markets, particularly in imported commodities, was surveyed with a view to discouraging excessive speculative activity and in several instances the commodity exchanges, in cooperation with Federal agencies, raised margin requirements. In the textile industry a Federal maximum price schedule was issued for combed cotton yarn made for sale.

Consumer and industrial demands for textiles have been supplemented since last summer by large-scale Federal purchases and recently textile markets have been influenced by Federal action, chiefly on loan rates. Output has advanced to new record levels and order backlogs have continued to rise. Wholesale prices of textile materials and prod-
ucts have risen sharply and in May were about 25 per cent above the prewar level.

An important factor contributing to the heavy demand for textiles in recent months has been the rise in the price of raw cotton which advanced one cent in March to 11 cents per pound and two cents more in May to around 13 cents. This rise reflected prospects for a smaller crop and higher loan rates next season, and also further increases in the already high rate of domestic consumption. During May legislation was enacted providing for loans on cotton as well as other basic crops at 85 per cent of parity, which indicates rates next season equivalent to about 14.4 cents per pound in the 10 spot markets-or more if prices paid by farmers should in-crease-compared with 9.3 cents this season. With further increases in raw cotton prices in prospect, buying of cotton yarns and gray goods was large and prices advanced so sharply that market conditions became disorderly. On May 26 a Government schedule went into effect establishing maximum prices for combed yarns made for sale, at a level below peak quotations but above average prices received on current shipments.

Industrial activity generally was at a high rate in May and, with further advances in many lines, the Board's sea-
sonally adjusted index rose to about 148 per cent of the
Sharp increase in
ind industrial aetivity 1935-1939 average as compared with 140 in April and 143 in March. Output increased to new record levels in the machinery, aircraft, shipbuilding, chemical, and nonferrous metal industries. In most other lines, such as cotton and wool textiles, rubber, paper, lumber, and cement, activity was sustained near the high rates reached earlier this year.

The temporary decline in the Board's index in April reflected the closing of most bituminous coal mines and some automobile plants during negotiations concerning wage rates, working conditions, and, in the case of the Ford Motor Company, the question of union recognition. In general, the curtailment in
coal output did not seriously affect other industries because most of them had large supplies of coal on hand when the mines were closed. Steel production, however, was reduced in the latter part of April, owing to shortages of coal and coke, and output dropped from 100 per cent of capacity to 94 per cent at the month end.

When the bituminous coal mines were reopened at the beginning of May production rose sharply, reaching a weekly rate of about $11,000,000$ tons toward the end of the month. This was somewhat below the peak level of output at the end of March before the mines were shut down. Steel output also increased in the first half of May and in the latter half of the month was again at about capacity operations.

Changes in activity over the past year are shown for selected industries in the accompanying table. The most pronounced increases have been in lines most directly stimulated by the defense program and further marked advances are expected in the aircraft, shipbuilding, machinery, and chemical industries as additional plants now under construction are placed in operation and as overtime and extra shift work are used to a greater extent than now. In some other lines, notably steel, output currently is at about capacity and additions to capacity now under way are not extensive. Automobile production will be curtailed considerably in the model year beginning August 1, 1941, and over the next year there will probably also be reductions in output of other products for civilian use.

Steel-New orders for steel declined somewhat during May, according to trade reports, but continued in excess of shipments, and unfilled orders increased further from the exceptionally high level of the previous month. The decline in new orders in May was attributed by many trade observers to the system of inventory control recently instituted by the Office of Production Management. Under the order issued steel suppliers may make delivery of steel only to customers

Nore.-Figures for May 1941 are estimates made June 5. Indexes are adjusted for seasonal variation.
who supply a sworn statement that the steel to be delivered is for current use and not for purposes of unnecessary inventory accumulation. Toward the end of May another order was issued directing iron and steel producers to give preference to defense orders and allowing customers unable to obtain satisfactory placement or delivery of orders to apply for priority ratings.

In the early part of June announcement was made that the Office of Production Management had informed the Executive Subcommittee of the Iron and Steel Industry Defense Committee that the government desired to consider a plan to enlarge the annual capacity of the steel industry by approximately ten million tons of ingots in the shortest possible time. The subcommittee was
asked to canvass members of the iron and steel industry to determine which companies could enlarge their plants, and to report back to the Office of Production Management at the earliest convenient date.

The announcement followed closely the issuance of the second report on the adequacy of the steel industry for national defense, submitted to the President in the latter part of May by Gano Dunn, special consultant to the Office of Production Management. This report stated that prospective demand for steel for military and civilian uses and for export would probably exceed available capacity by more than a million tons in 1941 and by more than 6 million tons in 1942.

Estimates of probable demand for steel were considerably larger than those given in the first report issued three months ago. Increases were made to allow for further expansion in civilian consumption as well as larger military requirements resulting from the lend-lease program and other developments of national policy. The estimates of steel requirements for civilian uses did not provide for all the increase in demand for steel products that might arise from expanding national income, as some allowance was made for restrictions already announced or likely to be imposed on output and consumption of such products.

The anticipated shortages were based on steel output at an average rate of $1021 / 2$ per cent of the rated capacity available at the beginning of each year. In the first five months of this year, however, output averaged somewhat under 100 per cent; consequently, unless demand is smaller than anticipated, the shortage in 1941 may amount to several million tons.

Automobile production and sales.-Automobile production declined sharply in the first half of April, owing to the shutdown of Ford Motor Company plants, but an agreement between the company and the workers was reached about the middle of April and there-
after output increased rapidly. In May domestic output amounted to about 525,000 cars and trucks, as compared with 462,000 in April. The Office of Production Management has announced that output in the year ending July 31 will approximate $5,290,000$ units; in the ten months through May about 4,290,000 units were produced, leaving $1,000,000$ for the last two months of the season if this total is to be attained.

Demand for automobiles continued at exceptionally high levels through May. In April sales of new cars and trucks totaled 557,000 and in May there was probably a further increase to new record levels. A part of this large volume of buying has no doubt been in anticipation of delayed deliveries and higher prices later, but increased buying power arising from expanding activity has probably been the dominant factor. A recent report by the Chrysler Corporation on its new car sales in February this year compared with February 1939 showed that sales to industrial workers increased 165 per cent over this twoyear period and those to construction workers rose by 128 per cent, while sales to other buyers as a group increased by less than 100 per cent. Included in this latter group were agricultural workers who purchased 44 per cent more cars than two years ago and merchants and salesmen who bought 29 per cent more. Sales of used cars have been at record levels for several months and stocks of both new and used cars at present probably amount to less than a month's supply at the current high rate of sales.

In the year beginning August 1 automobile manufacturers have agreed to curtail output to $4,224,000$ units, a reduction of about onefifth from the previous year. Also, the General Motors Corporation has announced the abandonment of plans for any model changes in the following year. That the reduction in automobile output will be limited to 20 per cent is by no means certain, however, owing to many factors that may restrict supply and also demand.

Construction activity is at the highest rate since 1930, reflecting work on a wide variety of defense projects and a conConstruction
at high level tinued high level of private resi-
dential building in the face of increased costs. Employment in the construction industry was maintained throughout the winter, as the usual seasonal decline, notably in residential building and highway work, was offset by the sharp increase in employment on cantonment construction, which reached a peak in February. The subsequent rapid decline in activity on this troop housing program released a considerable number of workers at the time when the spring rise in private building was being accompanied by increased activity on Federally financed construction of shipways, munition and aircraft factories, and defense housing.

Factory construction is near an all-time high, owing principally to the large volume of new plant construction for military purposes. Commitments as of May 1 under the program for Government financed expansion of plant and equipment amounted to $\$ 2,058$ million and, in addition, certificates of necessity had been approved or were pending for $\$ 930$ million of privately financed expansion for production of military equipment. Of the total of nearly $\$ 3,000$ million committed for such facilities, approximately $\$ 800$ million is for plant construction, as distinguished from equipment. This volume of work, the bulk of which is scheduled for completion by the end of this year, is larger than the total of all factory construction in this country last year. The program is continually being expanded, moreover, and it appears that the $\$ 2,058$ million represents only about two-fifths of the total Government financed construction of manufacturing facilities that may be completed before the summer of 1942.

Government financed construction of housing for families of enlisted personnel and workers in defense industries has increased in recent months and as of May 17 some

11,000 dwelling units were completed and 51,000 more were under construction. This represents the bulk of the total of about 73,000 units to be built with the $\$ 240,000,000$ of Federal funds already made available for direct construction. An additional 35,000 38,000 units would be provided by the $\$ 150,-$ 000,000 recently authorized but not yet appropriated by Congress. In certain communities, housing construction has not kept pace with the rapid influx of new workers and rents have increased considerably.

Private residential building has not yet been curtailed by shortages of materials or labor, other than of a local or temporary nature, and the value of such construction in 1941 has been at a level about a fourth higher than a year ago. The increase in the number of dwelling units is nearly the same; while building material costs and wage rates have increased, the average house is smaller. Unless there is a drastic curtailment of private residential building from current levels, the number of nonfarm dwelling units to be built this year will be somewhat above the 1940 total of 466,000 units.

Commercial, educational, and other types of construction financed by private funds or by state and local governments, and not primarily related to defense activity, have shown little or no change from a year ago. With shortages of structural steel being reported already on some defense projects, priorities that would curtail construction of nondefense projects using structural steel may be established.

If the proposed additional troop housing program, with the accompanying large demand for carpenters, is carried out this summer and autumn when private building activity ordinarily is at a maximum, there may be shortages of carpenters. Also, the number of structural steel workers available for private work may be reduced, not only by the large volume of defense plant construction, but also by rising employment in shipyards.

The impact of the defense program on construction has varied by locality as well as by type of construction. The unusual size of many of the military projects, such as cantonments, air training stations, and munition and aircraft factories, and the pressure for their speedy construction have resulted in boom conditions in some areas. In many others there has been little stimulation to construction, while building costs have increased in response to national conditions.

In private residential building the sharpest increases over a year ago have been reported in the Richmond, Chicago, and Kansas City Federal Reserve districts, resulting in large part from the effects of the defense program on areas around Washington and Norfolk, and on cities like Akron, Indianapolis, South Bend, and Wichita. There have been less than average increases in the New York, Atlanta, Dallas, and San Francisco districts, where residential building had been at relatively high levels for a year or more. New York City has experienced little direct stimulus from defense activities and residential building there is somewhat lower than a year ago. Declines of a sixth to a third from last year in private residential building have been reported for a number of areas, including Harrisburg, Pa., Wheeling, W. Va., Atlanta, Ga., Miami, Fla., Des Moines, Iowa, and Lincoln, Nebr.

Total nonagricultural employment has risen by about $31 / 4$ million persons since May 1940, one of the largest twelveEmployment month increases on record, while agricultural employment has changed only seasonally. Increases have been more rapid in manufacturing and construction than in other lines, which as a group have been less directly affected by the defense program. In addition to the $31 / 4$ million increase in nonagricultural employment, there has been an increase of about $11 / 4$ million persons in the military and naval forces during the past year, while the number on the rolls of the Works Projects Administration, the Civil-
ian Conservation Corps, and the National Youth Administration has declined by about 400,000 .

Most of the sharp rise in construction employment occurred on Federal projects. In the last quarter of 1940 men were employed in large numbers to build army cantonments, and recently, after this work had fallen off, there has been a rapid increase in employment in other public construction, notably factories and defense housing.

In manufacturing there have been rapid and fairly regular increases in employment in industries whose facilities are now being used largely for defense purposes. Twenty industries of this sort, which a year ago employed 11 per cent of all factory wage earners, have increased the number on their payrolls about 60 per cent, compared with an increase of 13 per cent in all other industries. In a number of these other industries, like steel and automobiles, there have been large gains in employment, but the rate of gain has been much less rapid. Increases in the number of hours worked per week have also been greatest in lines most directly affected by the defense program.

The concentration of increases in a relatively narrow sector of the general field of employment has created shortages of a number of types of skilled workers, particularly those specialized in aircraft, shipbuilding, and machine shop work. These shortages have existed for some time, however, and the continued rise in employment in these lines indicates that men are being rapidly trained to meet the demand.

Wage rates remained fairly stable from the beginning of the defense program through February 1941, but average hourly earnings rose somewhat, reflecting mainly increased overtime payments in industries engaged in defense production. Beginning in March substantial increases in wage rates occurred in the coal, steel, automobile, and electrical equipment industries, and there were smaller increases in aircraft, textiles,
shipbuilding, and a number of other lines.
As a consequence principally of higher incomes, sales in practically all lines of retail trade have advanced consid-

## Expansion in retail sales

 erably during the past year,and it appears that currently they are larger than at any previous time. Recently the rise in dollar volume has to some extent reflected price advances, but there has also been a continued increase in the physical volume of goods distributed.

Practically all sections of the country have reported an expansion in retail trade since the inauguration of the defense program, with particularly marked increases in shipbuilding centers, in other industrial regions, and in areas where military or naval bases have been established or enlarged. For example, department store sales this year have been 49 per cent greater than last year in Norfolk and 41 per cent greater in Tacoma.

The table shows comparisons for cities reporting sales increases of 20 per cent or more; the increase for the country as a whole was 14 per cent. Corresponding data for other cities are given on page 576 .

| DEPARTMENT STORE SALES BY CITIES |
| :--- | :--- | :--- |
| January-April 1941 compared with January-April 1940 |

The largest increases in distribution to consumers have occurred in durable goods such as automobiles and various types of household appliances and equipment, including furniture, electric refrigerators, and the like. Sales of foods and drugs have generally increased by smaller than average amounts while increases for items such as apparel have been greater than for perishables but less than for durable commodities. This is indicated in the following table which shows sales or shipments in the first four months of 1941 as compared with the corresponding period in 1940. Similar comparisons for the month of May would probably show generally larger increases.

Retail Trade
January-April 1941 compared with January-April 1940

| Commodity or line of trade | Percentage increase |
| :---: | :---: |
| Automobiles (number) | 35 |
| Furniture (value) | 20 |
| Household refrigerators (number shipped) ${ }^{\text {a }}$ | 42 |
| Other electrical appliances ${ }^{1}$. | 22 |
| Vacuum cleaners (number shipped) | 22 |
| Electric ranges (number shipped) | 51 |
| Department stores (value) | 14 |
| Mail order sales (value). | 15 |
| Chain stores |  |
| Shoe (value) | 19 |
| Apparel (value) | 14 |
| Variety (value) | 9 |
| Drug (value) | 9 |
| Grocery chains and independents (value) | 7 |

I January-March comparison.
Sales by general merchandise establishments have expanded most in the durable goods lines, as is indicated in the following table compiled from data for about 250 large department stores. In the first four months of 1941 each of the items included under homefurnishings increased over the corresponding period in the previous year more than did sales of any other major group of merchandise handled by these stores.

The sharp rise in sales of durable consumers' goods has been accompanied and facilitated by a considerable expansion in consumer credit. According to Department of Commerce estimates, installment sales in 1940
amounted to approximately $\$ 5,000,000,000$, an increase of 20 per cent over 1939, and at the end of 1940 actual indebtedness of consumers arising out of installment purchases was estimated to be approximately $\$ 3,000$,000,000 . About half of this amount was due on automobile contracts. Since the end of 1940 there has been a continued expansion in the amount of consumer credit outstanding, reflecting further increases in installment purchases of durable commodities. Consumer indebtedness on cash loans has been maintained in recent months at the record level reached at the end of last year. Thus the amount available for consumer expenditures on commodities has expanded not only as a
result of the rise in current income, but also through larger extensions of credit, which are reflected in increased consumer debt.

Department Store Sales by Departments
January-April 1941 compared with January-A pril 1940

* Reports of total sales from a larger number of stores showed an in crease of 14 per cent.

## Defense Loans and Commitments of Weekly Repozting Member Banks

MEMBER banks in leading cities had $\$ 460,000,000$ of defense loans outstanding as of April 30, 1941, and $\$ 630,000,000$ of commitments for future loans, according to a survey conducted by the Board of Govenors of the Federal Reserve System. This survey was for the purpose of supplying information to the Defense Contract Service of the Office of Production Management and to the Board as to participation of banks in the defense effort. Some preliminary figures from this survey have just become available and are summarized in the following table:

|  | Loans |  | Commitments for future loans |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Number | Amount in thousands of dollars | Number | Amount, in thousands of dollars |
| Total | 3,627 | 460,000 | 2,253 | 633, 000 |
| For plant facilities. | 1,233 | 138,000 | 857 | 264, 000 |
| For defense supplies. | 2, 282 | 287,000 | 1,315 | 310,000 |
| For both | 112 | 35,000 | 81 | 59.000 |
| To prime contractors | 1,925 | 291, 000 | 1,429 | 495,000 |
| To sub-contractors. | 1,372 | 97, 000 | 591 | 67,000 |
| To both | 330 | 72,000 | 233 | 71,000 |
| To borrowers with assets of: |  |  |  |  |
| Under \$100,000 | 1,135 | 16,000 | 464 | 17,500 |
| \$100,000-1,000,000 | 1,459 | 104, 000 | 938 | 147,000 |
| \$1,000,000 and over | 963 | 337,000 | 830 | 464,000 |
| Unspecified.......- | 70 | 3,000 | 21 | 4,500 |

Information regarding these loans and commitments by Federal Reserve districts is given in tables on page 538.

Of the $\$ 460,000,000$ of defense loans outstanding, about 63 per cent was for the purpose of financing the production of defense supplies and materials, and 30 per cent for providing plant facilities. The remainder represents loans which serve both purposes.

About 63 per cent of the loans were made to establishments which had contracted directly to supply the Government with defense supplies and materials; about 21 per cent were to establishments which were subcontractors to those having direct Government contracts; and the remainder represented mostly loans to establishments working in both capacities. The loans made to subcontractors indicate that the spreading of defense production to sub-contractors has made substantial progress. These figures do not indicate adequately this progress since some sub-contractors do not need financing.

About three-fourths of the loans in dollar amounts were made to borrowers with assets of $\$ 1,000,000$ or more, but a large number of loans have been made to smaller borrowers.

# Financial Problems of Defense 

by

Marriner S. Eccles *

THE problem of financing defense is not solely the responsibility of Government. The business interests of the country have a very important role to play. For this reason I appreciate the opportunity, as a public official having some responsibility for the conduct of public affairs, to speak on this subject at this meeting of leading business executives from all parts of the country.

The financial problems of defense arise from the unprecedented size of public expenditures, concentrated mainly in the field of heavy industry, and the necessity for calling forth in the shortest possible time the maximum amount of defense production both for ourselves and for those we wish to aid. The financial problem is not how to provide an adequate supply of money but how to direct the use to which money and credit are put in such a way as to further the success of the enterprise and to avoid inflationary consequences. The avoidance of inflation is as essential for the preservation of our political and economic system as the defense effort itself. I am using the word inflation in the popular sense of disruptive price rises, whether confined to some segments of the economy and due to non-monetary causes or of a general nature and due to excessive monetary and credit expansion.

We can meet defense needs and supply our civilian population only to the extent that we utilize our man power, materials and productive facilities. Defense must come first. What is left over will determine the extent to which we can meet civilian requirements.

[^0]We have no problem insofar as an ample supply of money is concerned. The volume of demand deposits and currency now in existence approximates $\$ 45$ billions, or 50 per cent in excess of the peak amount of the twenties. The present volume could be increased almost indefinitely by further expansion of bank credit in loans to corporations, to individuals and to the Government. Merely to increase the supply of money would not in itself bring about needed production, but might result in inflationary developments.

Rather, a primary concern of defense financing is to avoid an increase of the means of payment, that is, of money in the hands of those who would spend it faster than our economy could produce goods. This would result in a rapid bidding up of prices. The problem in general terms is simple, but in detailed application it becomes difficult and complex. In general terms, it means that we should aim to finance defense entirely out of taxation and savings, preferably taxation as full employment and production are attained. It means priorities in certain fields where both civilian and defense requirements cannot be immediately supplied out of available raw materials, existing capacity, or available skilled labor supply. It means price controls in cases where demand for essential basic materials exceeds present supply. It means a program of taxation that will transfer back to the Government in the aggregate a substantial portion of the funds spent by Government, thus reducing the funds available to the public for private expenditure. It means encouraging a maximum amount of
savings by all groups and classes of the population. It means avoidance of unneeded expansion of bank credit which adds to the supply of money and thus of purchasing power.

It is evident that the general problems of defense financing, which I have enumerated, are interrelated and must be dealt with by a coordinated series of measures. For instance, inflation cannot be dealt with solely by monetary and credit measures. As a matter of fact, at this stage of our defense effort such measures are of secondary importance. Fiscal policy, involving both the type of Government financing and taxation, and direct controls are far more important at present.

Let us consider briefly some of the more important aspects of this general summary.

In order to limit the need for price controls and priorities every means possible should be used to increase the output. This can be done by expanding the facilities of production, by increasing the available labor supply where there is a shortage of certain skills, by the working of longer hours, by preventing strikes and unjustified wage and salary increases, and by utilizing to the fullest possible extent existing plant and facilities wherever they may be. To be sure, this is a difficult and a complicated task, requiring full information and full cooperation on the part of Government, industry and labor.

In my opinion, taxation is the most important single means of maintaining stability in the economy and of preventing either general inflationary or deflationary developments. We must abandon the idea that taxation is merely a means of securing revenue. The effects of taxation on the economy should be the primary consideration. For a tax system to be equitable, ability to pay should be the guiding principle. For this reason, a general sales tax, which has been strongly advocated by some business groups, would be a great mistake because it would fall heaviest on those least able to pay. Selective sales taxes which would have the effect of reduc-
ing demands for certain products, such as automobiles, mechanical refrigerators and other articles that use resources greatly needed for defense, are justifiable and necessary at this time. Sales taxes on foodstuffs, clothing and other necessaries are wholly unwarranted, particularly when surpluses exist. Taxes on such items would tend to diminish consumption, thus reducing effective demand. This, in turn, may create localized unemployment as well as idle capacity that could not be used for defense.

The first source of defense revenue should be the corporation tax and the excess profits tax because, in general, corporations are the greatest beneficiaries, directly and indirectly, from defense expenditures. In other words, the surplus accruing from the expanding national income tends to become concentrated in the first instance in the possession of business corporations. The most certain way to insure against inflation is for the Government to levy on these earnings and divert the proceeds directly into the defense program before they are distributed into the general income stream through higher wages and higher dividend payments.

Thus, the most direct way to attack the inflation problem is through heavy corporate income and excess profits taxation. If these surplus funds are not thus collected in the first instance at the source, but are later distributed through large wage increases and large dividend payments to the community, it becomes necessary subsequently for the Government to abstract excess incomes through the personal income tax, excise taxes, and other forms of mass taxation. The problem is not avoided but only delayed and made more difficult by failure to tap the profits at the source.

High taxation of personal incomes and excise taxation will be necessary in any event, but the amount needed from these sources will be reduced by a prior collection at the points where the profits originate, namely, in the business units. If excess
profits are not tapped, they will lead to demands for higher wages. Apart from the question of equity and the problem of allaying industrial unrest, is the question of going directly to the source of the increased flow of income and diverting it into the defense program before it spreads out into the community and adds private mass purchasing power on top of the Government's demands springing from the defense program.

With greatly increased surtax rates, especially in the middle income brackets, and in the absence of an undistributed profits tax, there will be a tendency on the part of some corporations to hold back disbursements of dividends. This is a further reason for heavy normal and excess profits taxes on corporations.

In addition, the tax program, to be effective and equitable, should close important loopholes in the gift and inheritance tax laws. Similarly, the setting up by corporations of annuity and pension plans which are charged to expense and provide large benefits to individuals in lieu of increasing salaries and paying bonuses, should not be permitted to become an avenue of tax avoidance.

With reference to the individual income tax, the normal tax and surtaxes on individual incomes have been moderate, compared with other countries, except in the very highest income groups. They can and must be substantially increased. With expanding employment and payrolls resulting from defense expenditures, it is equitable and necessary that some of the benefits be recovered by the Treasury. Exemptions should be reduced, thereby spreading the base and increasing the number of income taxpayers. This is a more direct and equitable way of raising revenue from the lower income groups than by imposition of certain indirect excise and sales taxes.

To the extent that wages are increased and prices are controlled, corporation profits are less than they would be otherwise, and Federal revenue from this source is accordingly
diminished. Under these circumstances, it is only fair that this loss of revenue be made up by taxing directly the beneficiaries of the increased wages.
The tax system should be so designed as to prevent any group from profiting out of this great national emergency at the expense of others. Neither industry nor labor should be permitted to take advantage of the emergency. Men drawn into the Army and Navy are called upon to make great personal sacrifices. Neither unity nor morale can be built upon inequality of treatment of our citizens.

It is perhaps a natural but none the less false notion that either capital or labor can make up now for lean years. If they were to reap great profits and higher wages, they would be inviting inflated prices and in the end the added profits and wages would buy fewer goods. I think it is of great importance that we grasp fully the fact that we as a nation cannot profit out of world calamity. We cannot turn our industrial machine largely to making the things of war rather than the things of peace and have a higher standard of living.

We have to start from the first principleand I believe that most of us accept it-that the burdens to be borne and the sacrifices to be made should be equalized so far as possible. And that principle applies particularly to taxation. Therefore, those corporations and individuals who profit most should be the first to be taxed. They must be the primary ones from whom the Government recaptures the proceeds of its expenditures.
I am wholeheartedly in accord with the objectives of taxation policy recently announced by the Secretary of the Treasury when he appeared before the Ways and Means Committee in advocacy of measures to raise an additional $\$ 31 / 2$ billions of revenue. As he stated then, the purpose is to design our tax program, first, so that we may pay as we go for a reasonable proportion of our expenditures; secondly, so that all sections of the people shall bear their fair share
of the burden; third, so that our resources may be mobilized for defense while reducing the amount of money that the public can spend for comparatively less important things; and finally, so that a general rise in prices may be avoided by keeping the total volume of monetary purchasing power from outrunning production.

The Secretary of the Treasury has proposed that we raise at least two-thirds of the sums necessary for defense out of taxation, and with that purpose I am likewise heartily in accord. The rest should, so far as possible, be raised by the sale of Government securities to the public, thus utilizing existing funds, instead of by the sale of securities to the commercial banks since the latter method creates additional bank deposits. As I have indicated, we need to use existing funds, which are abundant. Expansion of bank credit which creates new funds would only tend towards inflation.

The Treasury's three new types of savings bonds, together with savings stamps, are being offered to the public beginning today. They are excellently designed to give all of our people an opportunity to participate in the financing of the defense program. They are designed to attract the smallest savings of the people as well as those up to $\$ 50,000$ a year. Apart from that patriotic purpose, however, they are important in helping to protect the country against inflation and they are a store of buying power for the future when supply can again be matched to demand.

Another very large store of savings which should also be tapped consists of idle balances in banks held by corporations, by wealthy individuals, and by trustees as well as by various public and private bodies. These funds are frequently not of the type that can or will go into long-term Government securities, nor can they be attracted into short-term Government securities now available because practically no return can be obtained upon them. I believe many of
them would be invested in registered shortterm issues (not available to banks) of two years' maturity, if such issues were made available at interest payable semiannually, of from one-half to one per cent, depending upon the length of time they are held, and were redeemable on any interest payment date on 30 days notice. So far as long-term rates are concerned, I think they are fair and that the Government would not be justified in paying more than two and one-half per cent for long-term money on fully taxable securities.

To the extent that we pay for defense out of taxes and through borrowing from savers rather than from the commercial banks, thus using existing funds and not creating new funds, we help protect the country against the hazards of monetary and credit inflation. To the extent that people pay taxes or invest in Government bonds, such as the new savings bonds, these funds will not be available for the public to bid up prices in the market place and they will aid in financing defense, thus avoiding inflationary effects.

This is the time for the public to build up a backlog of future requirements, especially of consumers' durable goods, such as automobiles, housing, etc., that now are using some of the materials needed in defense. Instead of spending existing funds and mortgaging future income for these goods, it would be far better to defer these expenditures until the time when the Government's defense outlays can be reduced. At such a time the back$\log$ of buying power coming into the market will be an offset to the reduced Government expenditures and help to sustain employment and national income.

We should consider the advisability of providing a method of controlling the volume of forward buying on installment credit. Further expansion of installment credit at this time would be an inflationary factor. Installment credit has tended to expand as employment and payrolls expanded and to contract when both were declining. It has thus
tended to be an unstabilizing influence on the economy when it might have been made a stabilizing influence.

I have said that monetary and credit factors are at this time less important than other factors in the situation. Nevertheless, with the existing large volume of deposits and the vast reservoir of excess reserves which could serve as a basis for doubling the existing volume of deposits, it will probably become necessary at some future time to absorb into required reserves a portion of the idle funds held by the banks. This would diminish the pressure on the banks to find outlets for their funds in Government securities and would facilitate the placing of a larger part of the new issues with nonbanking investors. It would also make the banks more careful about avoiding unsound or speculative extensions of credit and would restrain further growth in the already abundant volume of bank deposits. Consequently, it would diminish inflationary dangers.

There is one additional matter of importance in connection with defense financing that should be given consideration. It is the subject of public expenditures for purposes other than defense. I do not believe that agricultural benefits should be curtailed, particularly in those fields where agriculture does not profit as other groups do from defense expenditures or is adversely affected as the result of the present international situation; nor do I believe that we should abandon social efforts on the part of the Government in those cases where the problem is not adequately met by the improved employment situation resulting directly or indirectly from defense expenditures.

We are hardly justified in spending billions to aid other countries and billions more in our own defense effort if at the same time we shut our eyes to urgent social needs at home that must depend upon Government assistance. However, reductions should be made wherever this can be brought about through increased efficiency as well as in those fields of Government activity which utilize men or materials needed in private enterprise or in defense.

I have attempted to outline briefly the general public policies which I feel should be pursued to facilitate the financing of defense effectively with a minimum of economic dislocation now and after the defense effort has been completed. The successful carrying out of such a program as I have discussed-and it is a program designed to preserve all of the essentials of our democratic system-depends primarily upon the understanding of and acceptance by the people of this country, particularly the leaders in business and industry.

We have every reason to succeed. We are in a much stronger position than any nation in the world today. We have a vast endowment of natural resources. We have abundant and high-calibre man power. We have existing and potentially great productive facilities. We can provide, without inflation, all of the monetary and credit resources we require.

We will fail only if we are ignorant of the social and economic problems confronting us or if through blind self-interest we imagine that we can make others bear the sacrifices and burdens which all must share in the greatest undertaking upon which our nation has ever embarked.

# From a Legal Standpoint 

## Administrative interpretations of banking laws, new regulations issued by the Board of Governors and other similar material.

## Financial Transactions Under Neutrality Act of 1939

The President of the United States on April 24, 1941, issued a proclamation under authority of section 1 of the Neutrality Act of 1939 (Pub. Res. No. 54, 76th Cong.), approved November 4, 1939, proclaiming that a state of war exists between Bulgaria, on the one hand, and Yugoslavia and Greece, on the other hand. Section 7 of the Neutrality Act of 1939, with respect to financial transactions by persons within the United States relating to countries named in the Presidential proclamation, is quoted in full on page 1054 of the Federal Reserve Bulletin for December 1939.

## Act Authorizing Waiver of Performance and Payment Bonds on Supply Contracts Under National Defense Program

The President of the United States on April 29, 1941, approved an Act to expedite the national defense by authorizing the Secretary of War or the Secretary of the Navy, in their discretion, to waive the requirement contained in the Act of August 24, 1935, for performance and payment bonds in connection with supply contracts for the manufacturing, producing, furnishing, construction, alteration, repair, processing or assembling of vessels, aircraft, munitions, matériel or supplies of any kind or nature for the Army or the Navy. The Act of August 24, 1935, known as the Miller Act, requires in certain circumstances performance and payment bonds in the case of contracts exceeding $\$ 2,000$.

The text of the Act is published below together with a statement, inserted by Senator Thomas of Utah in the Congressional Record, explaining the purpose of this legislation. This statement does not refer to the Secretary of the Navy but subsequent to its publication the bill was amended so as also to authorize the Secretary of the Navy to waive the requirement of performance and payment bonds.
[Public Law 43-77Th Congress]
[Chapter 81-1st SESSION]
[S. 1059]
AN ACT
To expedite the national defense by clarifying the application of the Act of August 24, 1935 (49 Stat. 793 ), as to the requirement of mandatory performance and payment bonds in connection with supply contracts.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Act of August 24, 1935 (49 Stat. 793), may, in the discretion of the Secretary of War or the Secretary of the Navy, be waived with respect to contracts for the manufacturing, producing, furnishing, construction, alteration, repair, processing, or assembling of vessels, aircraft, munitions, materiel, or supplies of any kind or nature for the Army or the Navy, regardless of the terms of such contracts as to payment or title: Provided, That as to contracts of a nature which, at the date of the passage of this Act, would have been subject to the provisions of the Act of August 24, 1935 (49 Stat. 793), the Secretary of War or the Secretary of the Navy may require performance and payment bonds as provided by said Act.

Approved, April 29, 1941.

## CONGRESSIONAL RECORD-SENATE <br> April 4, 1941, Page 3106

## STATEMENT WITH RESPECT TO S. 1059

Section 1a of the act of August 24, 1935 (49 Stat. 793 ), commonly known as the Miller Act, provides that "before any contract, exceeding $\$ 2,000$ in amount, for the construction, alteration, or repair of any public building or public work" is awarded, the contractors shall furnish a performance bond for the protection of the United States, in an amount satisfactory to the contracting officer, and a payment bond, for the protection of persons supplying labor and material in the prosecution of the work, with sureties satisfactory to the contracting officer and in an amount specified in the statute. It is customary to require performance bonds in an amount at least equal to 10 per cent of the contract price. Payment bonds must by statute be in penal amount equal to 50 per cent of the cost of the work in contracts below $\$ 1,000,000$; 40 per cent for contracts from $\$ 1,000,000$ to $\$ 5,000,000$, and in penal amount of at least $\$ 2,500,-$ 000 in larger contracts. From the phraseology,

## From a Legal Standpoint

"public building or public work" of the act, it would appear that the requirement for these bonds was intended to relate only to contracts for buildings river and harbor improvements, camps, cantonments, and such other real estate projects, or the alteration or repair thereof.

In construing the act of August 1, 1892, known as the Heard Act, the predecessor of the Miller Act, the Supreme Court of the United States, in 1910, held that a boat was a public work and that whether a work is "public" or not does not depend upon its being attached to the soil, but, if it belongs to the representatives of the public, it is a "public work." Following that reasoning, the Attorney General of the United States, in 1932, expressed the opinion that work on a vessel owned by the United States was a public work within the meaning of the act. Again in 1936, the Attorney General ruled that contracts exceeding $\$ 2,000$ in amount, for the alteration or repair of United States Coast Guard vessels, boats, and aircraft, since the property belongs to the United States, were contracts for public work. He further stated that contracts for the construction of such craft which provide for the passing of title to the United States during the progress of the work as partial payments are made are within the meaning of the term "any public work." Extending the analogy, he held the same year that a contract for making cotton mattresses from materials owned by the Government was public work.

It was but a step further for the Comptroller General to find that any Army contracts for supplies which provide for partial payments as the work progresses are contracts for public work, since title passes to the Government when the first partial payment is made, requiring performance and payment bonds under the Miller Act. By this reasoning, all sorts of contracts involving partial payments for supplying aircraft, machine guns, tanks, clothing, neckties, shoe laces, and other articles, must be classified as contracts for public works, making it incumbent upon the contractor, no matter what his financial strength may be, or whether the bonds are deemed to be necessary for the protection of the United States, or of laborers and materialmen, to furnish the performance and payment bonds specified by the Miller Act. The decisions of the Supreme Court, the Attorney General, and the Comptroller General are binding upon the War Department, and compliance therewith is mandatory. The same reasoning did not apply to Navy contracts since they only take a legal lien (under a statute passed in 1911) instead of title when partial payments are made.

Believing that Congress originally intended that the Heard Act and later the Miller Act should apply only to construction contracts, the War Department has submitted to the Congress a draft of legislation designed to clarify the meaning and application of the Miller Act to make it inapplicable to supply contracts for the Army. The proposed legislation was embodied in S. 1059, the present bill, as originally introduced. It was the view of the committee, however, that to center responsibility it would be better to permit the Secretary of War, in his discretion, to waive the requirements of the Miller Act as to bonds, so that the bill was amended and reported in its present form. The proposed act does not affect construction contracts.

## NECESSITY FOR SUCH LEGISLATION

The national-defense program, calling for almost unheard-of quantities of material and equipment for the men entering the military service by voluntary enlistment and by induction under the Selective Service Act, the manufacture and construction of aircraft, munitions, tanks, guns, and supplies of every sort, has taxed the industrial resources of the United States to such an extent that private capital is unable to finance to completion thousands of supply contracts, many of them running into forty or fifty millions of dollars each. Increased facilities must first be constructed, new machinery purchased, and countless new employees engaged. The contractor then finds his resources expended and must seek additional financing of his Government supply contracts on a scale never before encountered. To meet this situation the Government has provided for advance payments, when necessary, at the beginning of the contract, and partial payments as the work progresses, to simplify private financing.
As a result, however, of the interpretation given the Miller Act, an inconsistent situation has grown up. If by the terms of a contract, 100 airplanes are paid for on completion of the contract, no Miller Act bond is required. If 100 airplanes are paid for as each airplane is delivered, no Miller Act bond is required. If the contract is let on a cost-plus-a-fixedfee basis, no Miller Act bond is required. If, however, partial payments are made on a lump-sum contract to help the contractor finance the work in progress prior to its delivery, Miller Act bonds must be supplied. This mandatory requirement for performance and payment bonds where partial payments are made to help finance the work in progress has resulted in serious difficulties and delays in the financing and progress of the defense program.
The final execution and approval of a number of large aircraft contracts has been delayed from 2 to 5 months because of the inability of certain companies to obtain Miller Act bonds.
In some cases as many as 13 or more bonding companies have had to be called upon to provide a single bond, necessitating sending it from place to place for signature. In other cases the Government waited while the surety company made a long financial investigation and extracted the last ounce of security from the contractor's free assets. In some cases the contract had to be rewritten on a cost-plus-a-fixed-fee basis or with partial payments eliminated so that bonds could be waived. In one case a contract for $\$ 13,115,138.13$ for furnishing 341 airplanes was executed September 14, 1940. It was not possible for the contractor, a reliable but tremendously expanded corporation, to furnish the necessary bonds. The bond requirement was finally removed in February 1941 by eliminating the partial payments provided by the contract, resulting in a delay of 5 months before a complete contract could be obtained. With the elimination of partial payments, financing to a total of $\$ 6,000,000$ was needed to finance this contract to the delivery stage.
In another instance, involving an original contract and a change order for 3,000 airplanes, at a total cost of $\$ 34,717,082.50$, a delay of 6 months occurred before a legal contract could be finally approved, and it was necessary to eliminate partial payments by appropriate change order because no bonds could be furnished. Such examples might be multiplied many times.

The other side of the picture involves difficulties that have occurred when bonds have been furnished.

In many instances surety companies, claiming to be financing institutions within the meaning of the Assignment of Claims Act of 1940 (Public, No. 811, 76 th Cong.), are requiring contractors to give them assignments of all rights under supply contracts on which bonds are given. If a bank loan is necessary to enable the contractor to finance his work and an assignment to the bank is contemplated, the fact that the bonding company claims a priority hampers bank financing. Although the Judge Advocate General of the Army has ruled that bonding companies are not financing institutions within the meaning of the Assignment of Claims Act of 1940, nevertheless many banks are reluctant to make defense loans in the face of prospective litigation with a surety company. In this situation, the Government supply contractor meets practically insurmountable obstacles in getting private financing.

Other surety companies are demanding from contractors indemnity for the bonds written by them and are requiring the deposit of collateral security or the giving of mortgages or other liens on the contractor's plant and equipment. This practically strips the contractor of available bankable security when a loan is necessary to finance operations under the contract.
The use of partial payments, because of the necessity for giving performance and payment bonds under the Miller Act, has been practically discontinued by the War Department as a means of financing Ordnance contracts and some Air Corps contracts. Frequently, if partial payments are not used, the contractor must have financing up to 50 or 60 per cent of the amount of his contract prior to receiving payments from the Government for articles completed. Banks hesitate to make loans in such amounts. Advance payments under existing law are authorized only up to 30 per cent of the amount of the contract. If the Government makes an advance of 30 per cent, the banks necessarily feel that they are not required to make loans to take up 50 or 60 per cent, because their claims are subordinate to the advance payment. These are practical difficulties experienced in financing contracts for carrying out the defense program.

In endeavoring to solve the difficulties in obtaining bonds for large Air Corps contracts, reduction in the penalties of performance bonds to 5 per cent of the total contract price was attempted by the War Department. This resulted in refusal by the surety companies to give performance bonds to small contractors because the business was not considered sufficiently profitable or attractive. This situation compelled the Air Corps contracting officers to the penal amount of the performance bonds at the dictation of the surety companies.

Surety companies have, in some instances, required agreements from contractors to the effect that no more contracts will be undertaken until the ones on which bonds already have been written are completed. In one case a surety company refused to write additional bonds until an existing contract was completed, with the result that the contractor was too late to bid on pending invitations and lost the opportunity to undertake additional defense work. Necessarily; this resulted in retard-
ing and delaying procurement under the nationaldefense program. How many other instances of this kind actually exist is not known, but they are constantly being mentioned orally to contracting officers. Written complaints are stated by an Air Corps report to be relatively few for fear of black list.

The original purpose of the Miller Act was to protect laborers and materialmen with respect to Government construction projects, since no mechanics' or materialmen's liens attach because of Government ownership. Ordinarily lien protection does not exist and is not needed with respect to contracts for supplies, as distinguished from construction. between private individuals in the business world. Necessarily, the producer or manufacturer must pay his laborers weekly or at least twice monthly. It is the last claim he fails to pay. The individual labor claim, therefore, if any, is small in event of bankruptey and has a priority there. There seems to be little logic in requiring payment bonds for laborers employed by contractors with the Government, when such laborers are protected by the Fair Labor Standards Act, the Walsh-Healey Act, and the Bacon-Davis Act as to wages, hours of labor, and methods and times of payment.

Likewise, materials usually are sold on a 30 - to 60 -day basis, cash on delivery, or only after satisfactory assurance of sound credit standing on the part of the purchaser. Materialmen can protect themselves and are better protected by adequate financing of the contractor insuring performance of the contract than by bonds. With respect to performance bonds for the protection of the United States, it may be said that the Government is its own insurer in other matters, and there is little likelihood of substantial loss in connection with the furnishing of supplies payable on the installment plan, since the payments do not exceed work successfully nearing completion.

The need for legislation such as S. 1059 is considered by the War Department to be urgently needed at this time in order properly to expedite the na-tional-defense program under the new appropriation acts. The bill as reported would permit the Secretary of War to require performance and payment bonds in any case of supply contracts where he deems them to be necessary. The War Department requires performance bonds in many cases where that requirement is not mandatory by law, and $S$. 1059 as reported would permit the same practice with respect to the bonds that would be authorized to be waived thereunder when the interests of the Goverment so require.

## General Ruling Issued by Secretary of the Treasury

The Office of the Secretary of the Treasury on May 24, 1941, amended General Ruling No. 4 issued under authority of the Executive Order of April 10, 1940, as amended, and Regulations issued pursuant thereto relating to transactions in foreign exchange, etc. This Ruling was printed in the Federal Reserve Bulletin for July 1940, at page 650, and the amended Ruling reads as follows:

## Treasury Department, Office of the Secretary, May 24, 1941

General Ruling No. 4, As Amended, Under Executive Order No. 8389, As Amended, and Regulations Issued Pursuant Thereto, Relating to Transactions in Foreign Exchange, Etc.
Except as specifically provided herein or otherwise, all definitions appearing in Executive Order No. 6560 of January 15, 1934, as amended by Executive Order No. 8389 of April 10, 1940, as amended, and the Regulations issued thereunder, shall apply to the terms employed in all rulings, licenses, instructions, etc., and, in addition, the following definitions and rules of interpretation are prescribed:
(1) The term "Order" shall mean Executive Order No. 8389, as amended.
(2) The term "license" shall mean a license issued under the Order.
(3) The term "interest" when used with respect to property shall mean an interest of any nature whatsoever, direct or indirect.
(4) The term "blocked country" shall mean any foreign country designated in the Order.
(5) The term "Netherlands East Indies" shall mean the following: Java and Madura, Sumatra, Riouw-Lingga archipelago, Banka, Billiton, Celebes, Borneo (West, South and East Divisions), Timor archipelago, Bali and Lombok, Lesser Sunda Islands and Dutch New Guinea.
(6) The term "Netherlands West Indies" shall mean the following: Dutch Guiana, Dutch St. Martin, Curacao, Bonaire, Aruba, St. Eustatius and Saba.
(7) Any person licensed as a "generally licensed national" shall, while so licensed, be regarded as a person within the United States who is not a national of any blocked country; provided, however, that the licensing of any person as a "generally licensed national" shall not be deemed to suspend in any way the requirements of the Order and Regulations relating to reports, and the production of books, documents, records, etc. (see sections 10 and 14 of the Order and section 130.4 of the Regulations).
(8) The term "blocked account" shall mean an account in which any blocked country or national thereof has an interest, with respect to which account payments, transfers or withdrawals or other dealings may not be made or effected except pursuant to a license authorizing such action. The term "blocked account" shall not be deemed to include free dollar accounts of the type referred to in General License No. 32 , as amended, or the accounts of generally licensed nationals.
(9) The term "banking institution" shall have the meaning prescribed in Section 11D of the Order.
(10) The term "domestic bank" shall mean any branch or office within the United States of any of the following which is not a national of any blocked country: any bank or trust company incorporated under the banking laws of the United States or of any state, territory, or district of the United States, or any private bank or banker subject to supervision and examination under the banking laws of the United States or of any state, territory or district of the United States. The Treasury Department may also authorize any other banking institution to be treated as a "domestic bank" for the purpose of this definition or for the purpose of any license, ruling, or instruction.
(11) The term "national securities exchange" shall mean an exchange registered as a national securities exchange under section 6 of the Securities Exchange Act of 1934 ( 48 Stat. 885, U. S. C., title 15 , sec. 78 f).
(12) Reference to any general license or general ruling which has been amended shall be deemed to refer to such license or ruling as amended.
(13) Any person who by virtue of any definition in the Order is a national of more than one blocked country shall be deemed to be a national of each of such blocked countries.
(14) In any case in which a person is a national of two or more blocked countries, a license with respect to nationals of one of such blocked countries shall not be deemed to include such person unless a license of equal or greater scope is outstanding with respect to nationals of each other blocked country of which such person is a national.
(15) The Secretary of the Treasury reserves the right to exclude from the operation of any license or from the privileges therein conferred or to restrict the applicability thereof with respect to, particular persons, transactions or property or classes thereof. Such action shall be binding upon all persons receiving actual notice thereof, or constructive notice if in any case notice is filed pursuant to the provisions of the Federal Register Act ( 49 Stat. 500, as amended by 50 Stat. 304; U. S. C., Sup. V, title 44, sec. 301 et seq).
(16) No license shall be deemed to authorize any transaction prohibited by reason of the provisions of any law, proclamation, order or regulation, other than the Order and Regulations.

## D. W. Bell,

Acting Secretary of the Treasury.

# From the Board's Correspondence 

Questions of general interest, relating to money and banking, are answered in this section of the Bulletin.

## Commercial Banks Not Dermitted to Suy Datense Savings Sonds

#### Abstract

QUESTION Why are commercial banks not permitted to purchase the new issues of Defense Savings Bonds?

## ANSWER

LIMITATION of the sale of Defense Savings Bonds to investors other than commercial banks is one of several steps being taken by the Government to reduce the stimulative effect of large defense expenditures on private spending and investment. The Government's object is to prevent an excessive growth in private spending for consumption and investment that would lead to a rise in prices and interfere with the defense program.

When banks purchase bonds from the Treasury there is an increase in the volume of bank deposits, i.e., in the supply of money available for spending. When, on the other hand, individuals purchase bonds, there is no change in the total supply of funds but only a shift of existing deposits from one holder to another. This difference may be made more apparent by describing the flow of funds in each case. When banks buy bonds directly from the Government, the proceeds are added to the Treasury's deposit balances, and, as the Treasury draws upon these balances in payment for goods or services, Treasury checks are deposited by the recipients and are added to their deposit accounts. Purchases of securities by banks from non-bank holders also result in a growth of the public's bank deposits. The increase in deposits does not necessarily occur in the same banks that buy the bonds, but may be distributed among a large number of banks. On the other hand, when individuals or corporations buy bonds from the Treasury or from one another, they
draw on their existing deposit accounts with the consequence that the deposits of the recipients of the funds are increased by exactly the same amount that the deposits of the purchasers of the securities are diminished; there is no change in the total volume of deposits. When they buy bonds from banks, the total volume of deposits is reduced.

To the extent that commercial banks add to their holdings of Government securities, the Government's expenditures are financed without drawing upon the public's current income or its accumulated savings. In these circumstances the amount of money that the public (individuals and corporations) receives from the Government in wages, payment for goods, and so on, is larger than the amount that the public furnishes the Government by payment of taxes and the purchase of Government obligations.

Since the existing supply of bank deposits is already much larger than ever before and is sufficient to finance a considerably increased volume of business, it is better for the Treasury to borrow funds out of current income or accumulated savings than to sell securities to commercial banks, thereby further increasing the supply of money. To be sure, when individuals purchase Government bonds by drawing upon deposits that would otherwise be idle, the immediate economic effect is no different than if banks purchased the bonds. In both cases the effect is to increase the volume of active deposits. However, when individuals purchase the bonds, the volume of idle deposits is correspondingly reduced, whereas when banks increase their holdings of Government securities, new deposits are created and the same volume of idle deposits remains available for spending or investing.

On this point, Daniel W. Bell, Under-Secretary of the Treasury, in a recent speech commented as follows:
"It is clearly more desirable for the Treasury to obtain existing idle balances than to finance its defense expenditure by a further expansion of bank deposits, or, in other words, by the creation of new balances. Both, it is true, increase the flow of funds at present, but the ultimate result is quite different. A further expansion of deposits leaves us with as many if not more idle balances to cope with in the future. A reduction of idle balances, on the other hand, causes balances to be used at the present time; this in turn prevents them from coming into use in the future, when an expansion of the flow of funds may be much less desirable than at present. Idle balances are a source of inflationary expansion which cannot easily be checked by the usual methods of credit control; hence a program designed to reduce idle balances serves to strengthen our controls over credit expansion against the day when such controls may have to be used."
The defense program is likely to provide more inducements for spending and investing idle funds than there have been in recent years. In the past few years there has been need for stimulating consumption and investment, and the Government, by borrowing from banks, augmented private funds, but under the defense program it may be desirable to curtail some kinds of private consumption and investment.

At a time when there is an enormous increase in the demand for many goods and services, caused by greatly increased Government expenditures and contracts for future delivery, and when profits are rising, there are likely to be more inducements for people to spend their increased income and to borrow money from the banks to build houses, buy new farm machinery, and enlarge
factories. To the extent that these needs can be supplied by the economic system without strain there is comparatively little danger of widespread price increases. But when money is spent for military purposes, incomes are increased without a corresponding expansion in the output of consumers' goods. In many crucial lines, output is already at capacity levels, both in terms of machines and available skilled workers. Even in nondefense industries, output has been increasing rapidly with a corresponding decrease in idle capacity. In the existing situation, therefore, there is much danger that a continued rapid growth in total spending may lead to substantial price rises in many lines where additional output is difficult to obtain and may interfere with the progress of the defense program.

Everything possible should be done to prevent a general rise in prices. Measures can be taken to increase available supplies of goods by reallocation of resources and by supplying new facilities. Direct controls can be exercised over the prices of particular commodities and services and supplies may be rationed. Taxes can be raised in order to absorb a greater portion of income. Restrictions can be imposed on the extension of credit to private borrowers. Finally, savings can be increased, thereby diminishing the amount of income that is spent, and it is to this end that the Treasury is seeking to encourage the purchase of Defense Savings Bonds by individuals. Sales of these bonds to banks would not accomplish this purpose because such sales would not decrease, but on the contrary would increase, the amount of funds available for private spending.

## Cutrent Ruents

## Appointment of President of the Federal Reserve Bank of Philadelphia

On May 17, 1941, announcement was made of the resignation of John S. Sinclair as President of the Federal Reserve Bank of Philadelphia, effective as of the close of June 30, 1941, and of the appointment of Alfred H. Williams as President to succeed Mr. Sinclair, effective July 1, 1941. Mr. Williams has served as a class C director of the Philadelphia Bank since March 3, 1939, and Deputy Chairman since December 14, 1939.

## Appointment of President and First Vice President of the Federal Reserve Bank of Atlanta

Effective May 15, 1941, W. S. McLarin, Jr., was appointed President and Malcolm H. Bryan was appointed First Vice President of the Federal Reserve Bank of Atlanta, each for the unexpired portion of the term of five years ending February 28, 1946. The appointment of Mr. McLarin was to fill the vacancy caused by the death of Robert S . Parker on March 28, 1941, and Mr. Bryan succeeded Mr. McLarin as First Vice President. Mr. McLarin first joined the staff of the Atlanta Bank in July 1916 and was appointed First Vice President on October 13, 1939. Mr. Bryan was a member of the faculty of the University of Georgia for more than ten years prior to his joining the staff of the Board of Governors, in December 1936. He went to the Atlanta Bank as Vice President in April 1938.

## Meeting of Federal Advisory Council

The Federal Advisory Council held its second meeting of the year on May 18, 19, and 20.

Appointment of Class C and Branch Directors
On June 4, 1941, announcement was made by the Board of Governors of the appointment of Walter H. Lloyd, Jr., editor of The Ohio Farmer, Cleveland, Ohio, as a Class C director of the Federal Reserve Bank of Cleveland for the unexpired portion of the three-year term ending December 31, 1941.

The Board, on May 29, 1941, announced the appointment of Frank D. Jackson, President, Jackson Grain Company, Tampa, Florida, as a director of the Jacksonville Branch of
the Federal Reserve Bank of Atlanta for the unexpired portion of the three-year term ending December 31, 1943. On the same date the Board announced the appointment of Lloyd Noble, President Noble Oil Company, Ardmore, Oklahoma, as a director of the Oklahoma City Branch of the Federal Reserve Bank of Kansas City for the unexpired portion of the three-year term ending December 31, 1942.

## Admissions of State Banks to Membership in the Federal Reserve System

The following State banks were admitted to membership in the Federal Reserve System during the period April 16, 1941, to May 15, 1941, inclusive.

## Arkansas

Arkadelphia-Elk Horn Bank and Trust Company
Camden-The Merchants and Planters Bank
Indiana
Andrews-The State Bank of Andrews
Hope-The Hope State Bank
Kansas
Burns-Burns State Bank
Michigan
Detroit-Commonwealth Bank
Missouri
St. Charles-The Saint Charles Savings Bank
New Jersey
Fair Lawn-Fair Lawn-Radburn Trust Company
Wildwood--The Union Bank of Wildwood, N. J.
New York
Waterford-Bank of Waterford
Pennsylvania
Kane-Kane Bank and Trust Company
Mont Alto-The Mont Alto State Bank
Virginia
Chatham-Planters Bank and Trust Company McKenney-The Bank of Dinwiddie, Incorporated

Wisconsin
Denmark--Denmark State Bank

# Adjustment for Seasonal Variation 

by

H. C. Barton, Jr.<br>Division of Research and Statistics

CHANGES in economic activity reflect the composite influence of a great many natural, business, and social forces, and an important phase of economic analysis consists of identifying these forces and determining their effects on the economy. One group of forces is related to the season of the year and consequently brings changes in economic activity at fairly regular annual intervals. These regularly recurring seasonal changes, which are reflected in many series of economic data, can be measured quite accurately and this measurement is useful not only in appraising the seasonal movements themselves and in making plans for peak loads and periods of inactivity, but also in adjusting the data for seasonal variation so as to reveal more clearly cyclical and other nonseasonal changes.

Measures of seasonal variation and seasonally adjusted data have been used for over twenty years at the Board of Governors of the Federal Reserve System in the analysis of business and financial developments. At the present time approximately 250 seasonally adjusted series are published regularly in the Federal Reserve Bulletin and nearly as many more have been compiled for internal use. As this work has been carried on, continued improvement has been made in the technique of seasonal adjustment and considerable change has taken place since publication of the last comprehensive article on the subject by members of the Board's staff. ${ }^{1}$

[^1]The present method is distinguished from others commonly followed chiefly by its greater flexibility. All methods of seasonal adjustment are based on averaging procedures, since the object of the computations is to measure usual or average seasonal movements. In most methods averaging is accomplished by mathematical formulae, and this involves an implicit assumption that all values used in the formula should receive full weight in determining usual seasonal movements. Averaging procedures used in the method to be described in this article, on the other hand, consist largely of freehand curves which are designed to afford opportunity for the exercise of judgment on the part of the analyst regarding qualitative aspects of the data being adjusted. This permits analysis of forces causing the movements, as well as of the size of the resulting fluctuations.

Owing to the wide variety of factors that influence economic data, it is often difficult to determine the extent to which seasonal influences underlie changes in a series, and it seems desirable to make numerous judgments that cannot be derived mechanically from changes in the series itself. Other information, concerning movements of related series, unusual weather conditions, strikes, actions of regulatory bodies, and the like, can be used to advantage. In order to bring information of this sort to bear on the problem of measuring seasonal variation it has been found desirable to use charts extensively and to base the method of adjustment on freehand curves
which can be adapted to special situations more readily than mechanically computed averages.

This method involves a succession of judgments at various steps in the process rather than a single judgment at the outset as to the formula to be used and consequently it requires more time of trained research persons. It is believed, however, that the use of freehand curves and also of charts, by permitting the analyst to take into account unusual movements in the series, makes possible a more accurate measurement of seasonal variation. The additional research required for the process, moreover, provides the analyst with other useful information about the series and about related economic activities.

## Definition of Seasonal Variation

For most purposes, seasonal variation may be regarded as changes that recur with some degree of regularity at annual intervals because of weather conditions, trade practices, and consumer habits that are linked to calendar dates.

These same influences, it may be noted, are also responsible for movements that are not "seasonal" in the sense of the above definition. Warm weather, for example, permitted an unusually early opening of Great Lakes ports in 1937 and ore carloadings increased sharply in April instead of in May. This large April increase, though clearly related to weather conditions, was an "erratic" rather than a "seasonal" movement because it was an isolated rather than a regularly recurring event. ${ }^{1}$

On the other hand, movements need not be absolutely regular to be regarded as seasonal in character. In fact, the seasonal characteristics of practically all series change over a period of years. Most series are composites covering a number of lines, and when these lines have different seasonal characteristics, changes in their relative importance affect

[^2]the net seasonal movements shown by the combined series. Also shifts in consumer buying habits or trade practices alter the seasonal characteristics of the individual parts that comprise the total series. Sometimes these seasonal influences change abruptly, with consequent sharp changes in the seasonal pattern of the data affected. Recognition of the fact that changes of this sort are common occurrences led to development of the method of measuring changing seasonal variation described in the Journal of the American Statistical Association for September 1928. Changes in technique since then have been gradual, but continued refinements have resulted in a method which is now different from the one used in earlier years.

## Summary of Steps in Present Method

Individual steps in the process of seasonal adjustment are summarized below. Of these steps the first five are designed to determine the main nonseasonal movements of the series, ${ }^{1}$ the next five to discover and eliminate the typical differences for each of the twelve months between the original data and their main nonseasonal movements, ${ }^{2}$ and the last five to check and improve the accuracy of the preceding ten.

## A. Determining main nonseasonal movement

1. Plot the unadjusted series on an absolute scale. (See Chart 1.)
2. Compute a twelve-month moving average for the series. (See Table 1.)
3. Plot the moving average or a former seasonally adjusted series on Chart 1.
4. Draw a freehand curve through the unadjusted series wherever the moving average appears to depart significantly from the main nonseasonal movements of the series.
5. Transcribe the values read from the freehand curve. (See Table 1.)

[^3]B. Determining typical differences
6. Compute ratios of the unadjusted series to the corresponding values of the freehand curve. (See Table 1.)
7. Plot the above ratios by years for all January's, then for all February's, and so on. (See Chart 2.)
8. Average the ratios for each month by means of a freehand line drawn through the points on Chart 2.
9. Adjust the points on the freehand lines so that the sum of their values for all months of each calendar year will be 1200 or will depart from this total by no more than an amount that can be accounted for by some special circumstance affecting the series.
10. Compute a preliminary series adjusted for seasonal variation by using the values obtained in step 9 as divisors of the unadjusted series. (See Table 2.)

## C. Checking

11. Plot the preliminary adjusted series on Chart 1 as an indicator of the accuracy of the freehand curve drawn in step 4.
12. Repeat steps 4 through 10 for all points where the original freehand curve departs from the general movements of the preliminary adjusted series.
13. Plot the revised adjusted series on a calendar or tier chart. (See Chart 3.)
14. Examine the calendar chart for regularly recurring divergences in the figures for each month from the general movements of the adjusted series.
15. Modify the curves obtained in step 9 so as to remove divergences found in step 14 that appear to be seasonal in character and recheck with the calendar chart.

## Determining Main Nonseasonal Movements

The first five steps in the process as applied to the Federal Reserve index of miscellaneous freight-car loadings are illustrated in Chart 1 and in Table 1. ${ }^{1}$ The twelve-month moving average, shown in Chart 1 , is clearly a rather unsatisfactory indicator of the main nonseasonal movements of this series particularly at its cyclical peaks and valleys. Departure from the series at these points is due to the fact that the twelve-month moving

* For periods in which moving average is satisfactory no freehand
curve values appear and the ratics are to the moving average.
average gives equal weight to all values in each twelve-month period and can, therefore, give a good fit only where nonseasonal movements of the data follow a straight line or change gradually. The movements of the carloadings series are not so sharp as to make the moving average meaningless, and this average was a helpful guide in the drawing of the freehand curve. In some series, however, cyclical movements are so sharp that computation of the moving average is not worth while. In series of this sort, for example, many of those relating to construction and durable goods manufacturing industries, the freehand curve can be drawn more satisfactorily by inspection of the unadjusted data and better still by using as a guide a former adjusted series even though that series is in need of revision.

It has been said that determination of the cyclical movements of a series in this way is a little like the faith of a mystic-conclusive evidence to the recipient of the vision alone. At any rate it is clear that, since the accuracy of a freehand curve as first drawn depends so largely on personal judgment, such guides as are available should be used and later adequate impersonal checks should be made. A previously adjusted series or a twelve-month moving average is usually the best readily available guide and their use will be treated separately in the discussion which follows.

Where the series has already been adjusted for seasonal variation the initial drawing of the curve is relatively easy. Even if the previous adjustment is rather poor, a considerable part of the seasonal fluctuations will have been eliminated and the process consists mainly in tracing a line through data whose scatter about the principal nonseasonal movements of the series is largely erratic. If these adjusted data are so erratic as to make fitting by inspection difficult they can be smoothed with a short-term moving average. In either case, extreme points that indicate the presence of special nonrecurring events are ex-
cluded as not being a part of the general movements of the series. The line is made to follow the rest of the adjusted data fairly closely so that for most series there are seldom more than two or three successive points above or below. If, however, the curve has repetitive movements during the same months of successive years, there is reason to suspect that the "adjusted" data followed have considerable seasonality and this should be taken into account in drawing the curve. But if investigation shows these recurrent fluctuations to be due to nonrepetitive influences, such as a price change in one year, a union agreement in another, and so on, the freehand curve is made to follow them.

If the series has not previously been adjusted for seasonal variation, a twelve-month moving average usually is used as the preliminary guide for drawing the freehand curve. The merit of a twelve-month moving average as a base from which to measure seasonal variation directly, or as a guide for a freehand curve that is to be similarly used, lies in the fact that it is itself practically free from seasonal variation. It also eliminates, however, some nonseasonal movements that should be included in such a base and the drawing of a freehand curve is designed to correct this undesirable smoothing.

One defect of the moving average characteristic of all mathematical smoothing formulae is that the effect of a large erratic movement in the underlying series is dispersed over a longer period than that in which it actually occurs. The miscellaneous freight-car loadings series has no large erratic fluctuations so that the moving average shown in Chart 1 requires no correction for this particular characteristic. In many other series, however, corrections of this sort are necessary. When a strike, for example, causes a sharp drop in a series the twelvemonth moving average (if centered say on the seventh month) is pulled down six months earlier, when the value for the strikeaffected month is first included, and released.
five months later, when the strike month drops out. Correction consists in breaking the freehand curve during the period in which the erratic movement occurs, and in drawing it in adjacent months at the levels their figures indicate.

Another weakness of the moving average is its system of equal weights for each month which causes it to be too low at the maximum and too high at the minimum points of major cyclical moves and which also makes it insensitive to nonseasonal swings that occur within a shorter period. During the period of high carloadings in 1936 and 1937 the moving average generally runs below the unadjusted series. Freehand correction in such a period should raise the curve sufficiently so that it will follow the unadjusted series with approximate allowances for seasonal movements. Similarly, instead of following the minor inventory cycle that affected loadings during the latter part of 1939 and the first part of 1940 , the moving average cuts through it with the result that differences between the series and its moving average reflect inventory accumulation and decumulation as well as the usual seasonal swing. Freehand correction is here again largely a matter of judgment based on an appraisal of seasonal movements in other years and the effects of nonseasonal influences in the period under consideration.

A minor difficulty with the moving average arises from centering it, as is done in Table 1, at the seventh month instead of between the sixth and the seventh. The consequent halfmonth lead in the average makes no difference when the underlying series is moving horizontally but causes the average to be slightly low when the series is rising and slightly high when it is declining. The extent of this bias can be readily determined and eliminated by correctly centering the average graphically between the sixth and seventh months at a few sample points and drawing the freehand curve at the revised level. This graphic procedure is less time

## CHART I- DETERMINING NONSEASONAL MOVEMENTS

--- UNADJUSTED SERIES.

- twelve-month moving average.

- REVISED fREEHAND CURVE.

## CHART 2-DETERMINING SEASONAL MOVEMENTS

consuming than centering the moving average correctly by means of an additional averaging computation.

Although it is ordinarily better to use a moving average as a guide in spite of the many corrections needed, a freehand curve is sometimes drawn entirely from inspection of the unadjusted data. The moving average is of little assistance in series that are very short or in series, like steel production, which have short-time nonseasonal movements much larger than their seasonal fluctuations. In such cases a fairly smooth freehand curve is drawn following the main nonseasonal movements of the series as well as possible. This curve serves as the basis for a preliminary adjusted series which is then used as guide for a new freehand curve.

A question naturally arises at this point as to why one of the mathematical formulae that yield smoother and closer fitting curves than the twelve-month moving average ${ }^{1}$ has not been substituted either as the sole indicator of nonseasonal movements or as a better guide for freehand curves. The reason is that formulae giving significantly better results are laborious to compute and also require some freehand correction. Macaulay's 43 -term formula, for example, takes about twice as long to compute as a twelvemonth moving average and provides no data for a period of nearly two years at the beginning and at the end of the series. It has already been pointed out, moreover, that application of any mathematical formula tends to smooth the larger erratic fluctuations, such as those caused by strikes and floods, making the resulting curve unsatisfactory as a base from which to measure seasonal variation. It is of course possible to edit out such erratic fluctuations from the series and then fit a curve mathematically, but the process is lengthy and the resulting curve also requires revision similar to that in steps 11 and 12.
${ }^{1}$ See The Smoothing of Time Series by Frederick R. Macaulay.

## Determining Typical Differences of Unadjusted Series from Its Main Nonseasonal Movements

In determining the typical differences for each of the twelve months between the unadjusted series and its main nonseasonal movements, the first steps are mechanical. Ratios of the unadjusted series to corresponding freehand curve values are computed (see Table 1) and, as a matter of convenience, expressed as percentages. ${ }^{12}$ If seasonal variation were constant for the entire period covered by the series it would be unnecessary to plot the ratios and to inspect them for changes from year to year. An arithmetic mean or an average of middle items would serve to describe their central tendency for all periods. But since practically no series do, in fact, show constant seasonal variation, the ratios are always plotted, as in Chart 2 , with the values for the same month shown together for successive years.

The problem comes in measuring the regularly recurring element in the specific fluctuations shown by the ratios. The first step in the process (not shown in Chart 2) is to fit freehand averages as closely and smoothly as possible to the ratios. Ordinarily not more than two or three successive ratios will be above or below the average line, but the direction of the line is not usually changed unless three or four points would otherwise lie outside it. ${ }^{3}$ In fitting the averages account is taken of the fact that the significance of individual ratios varies considerably from a seasonal standpoint. In some periods, particularly during sharp cyclical moves when

[^5]seasonal changes are likely to be submerged, there is considerable margin of error in the freehand curve base. Even where the freehand curve is entirely accurate, however, each ratio to it includes an element of erratic as well as of seasonal change. Individual ratios which for either reason are far out of line are given very little weight in the averaging process.

Although changes in these freehand averages are usually smooth, any abrupt change in the level of the ratios for a given month must be investigated and, if it is found to be attributable to a sudden change in some seasonal influence rather than to the accidental fluctuations of a few points, the freehand line is drawn to reflect it. Sudden large changes in seasonal pattern are less likely to occur in series which cover a wide range of products, no one of which comprises a large part of the total, than in series which refer to a single product or to a few distinct classes of products. The miscellaneous freight-car loadings series covers hundreds of different items and changes in seasonal pattern of the total have been rather gradual. Most of the changes in seasonal patterns for individual items have been offsetting or too small for measurement. There was, however, a fairly sharp change in the total between 1932 and 1933 when summer and fall months declined and winter months rose, reflecting mainly the decline of agricultural products as a part of total loadings.

After freehand averages have been drawn through the ratios, values on the lines are transcribed and the twelve figures for each calendar year are added. These totals will be in the neighborhood of 1200 if the ratios have been properly averaged and if the level of the freehand curve (step 4) is accurate. If the sum of these values is quite far from 1200 in the same direction over a period of several years, it is usually the level of the freehand trend-cycle curve that is inaccurate, in which case it is revised with corresponding corrections in the ratios. If the
differences are smaller or if they fluctuate above and below 1200 , the next step is to adjust the freehand lines through the ratios so that the sum of their values is 1200 in each calendar year or a different total in certain years because of a special circumstance affecting the series. Freehand lines balanced to 1200 (see Chart 2) are the preliminary seasonal adjustment factors.

The purpose of balancing seasonal factors to 1200 (i.e., to an average of 100 ) is to make the proportionate adjustments upward equal to those downward so that their application will not materially affect the general level of the series. Annual averages of the adjusted series will differ slightly from the corresponding averages of the unadjusted, however, even with constant factors averaging exactly 100. Furthermore, for changing seasonal factors some twelve-month periods must be different from 1200 even when calendar year totals are forced. On theoretical grounds, therefore, changing seasonal factors need only approximate 1200. However, except in a few cases where the accuracy of the factors would have been seriously impaired, ${ }^{1}$ calendar year totals of changing seasonal factors published by the Board have been forced to 1200 mainly to facilitate checking the numerous transcriptions that are made of these data. Also, on theoretical grounds, factors for the year that is current at the time a series is adjusted should balance because they are in effect constant factors applying to all succeeding years until the adjustment is revised.

After tentative seasonal factors have been selected on the basis of the ratio charts and properly balanced, they are used as divisors of the unadjusted data to obtain a preliminary adjusted series as shown in Table 2.

[^6]Table 2.-Computation of Preliminary Adjusted Series
(Miscellaneous freight-car loadings; 1935-39=100)

## Checking the Preliminary Seasonal Adjustment

The first step in checking the accuracy of the preliminary adjustment is to plot the preliminary adjusted series along with the unadjusted series and the freehand curve on Chart 1. Comparison of the adjusted series with the freehand curve ordinarily will indicate a number of periods in which the latter can be made to fit more closely without undue sacrifice of smoothness.

Revision of the freehand curve on this basis is similar to the original drawing of a freehand curve using a former adjusted series as a guide, and the revised curve should be
carefully examined to see that it contains no repetitive movements that are seasonal in character. Two sets of movements in the revised freehand curve shown in Chart 2 are open to suspicion on this account; interruptions of the general downward movement in the first part of both 1930 and 1931 and yearend bulges in each of the last three years. If the green dots on Chart 1 are examined carefully, however, it is apparent that the timing of these moves is in neither case exactly the same and that their magnitudes are substantially different. Thus, the regularly recurring element in them is smaller than would appear at first glance. Furthermore, sim-
ilar movements appear in seasonally adjusted data for the production of manufactured goods (which comprise about two-thirds of miscellaneous freight-car loadings) and in these data seasonal adjustments are computed separately for a large number of individual lines. For this reason it would appear that the repetitive movements in the carloadings series do not reflect changes in the composition of loadings. Another reason for thinking that these movements are nonseasonal is that each can be accounted for on other grounds. The moves in 1938-39 and 1939-40 both reflected the beginning of periods of inventory liquidation following periods of rapid rises in manufacturing production, with the move in 1939-40 being of much the greater magnitude, and the slackening in early 1941 appeared to reflect the fact that a number of manufacturing lines were nearing capacity operations.

Revisions made in the freehand curve are next carried through to obtain a revised preliminary adjusted series. Ordinarily this process can be accomplished without actually transcribing the new freehand curve values or computing the new ratios as was done in the first instance under steps 5 and 6 . The effects on the original ratios of revisions in the freehand curve can be determined, after a little practice, by inspection of differences between the original and the revised freehand curve, and the revised ratios can then be plotted directly on Chart 2.

Revised seasonal factors, represented by the green lines on Chart 2, are selected and balanced to 1200 in the same manner as before, but the process is easier because the original factors already balanced to 1200 serve as a guide. In many cases changes will not be numerous and the preliminary adjusted index will be revised for only a few months.

The final stage of checking is begun by plotting the revised preliminary adjusted series on a calendar or tier chart (Chart 3). This chart is examined, reading vertically,
to see whether there are months which show recurring movements that are seasonal in character. ${ }^{1}$ It usually is helpful to make a mechanical preliminary examination in which a check mark is placed over each month that is for three or more successive years either all above or all below an imaginary line between the two adjacent months. Not all these points will be recurring interruptions of the general movement of the series and even fewer will be seasonal in character, but this mechanical checking facilitates concentration on the points that may need revision.

In Chart 3 many of the check marks that would be made in this mechanical way do not appear. For example, June would be checked as being low and July as being high during the first three years shown. These check marks, and a number of others, were taken out because (in one or more of the three years) the points, though high or low in relation to immediately adjacent months, still fitted smoothly into the general movement of the series over a somewhat longer period. The series from April to August 1929 is smoother with June and July at their present values, for example, than if June were raised and July lowered as would be indicated by the first mechanical checking. There are usually a number of instances in which such changes are a matter of indifference, and in such borderline cases (for example, June of 1932, 1933, and 1934) the check marks are left in.

Check marks remaining on the calendar chart after this elimination process refer to monthly figures which on their face would appear to include some seasonal movement. Even though these movements are recurring, however, there remains the possibility that some of them may have been caused by nonseasonal influences. Freight rate increases, for example, which became effective at the

 ARE NOT SHOWN BEGAUSE OF OVERLAPPING.
end of March 1938 were responsible for the sharp drop in loadings during April of that year and for this reason the figure cannot be regarded as seasonally low, and this group of check marks should be disregarded.

The final step in the process is to eliminate as far as possible all recurring movements that remain in Chart 3 by a final revision of the seasonal factors shown in Chart 2. Since the factors must ordinarily continue to balance to 1200 and since changes in them must continue to be smooth, it is not always possible to make revisions that will eliminate successive movements at one point without introducing them at others. Back and forth checking of the effects of changes on both charts serves as the basis for decision and it was found that lowering the factors for March 1931-33 and raising the corresponding factors for April eliminated most of the recurring movements in Chart 3 and left changes in the factors smooth enough to be consistent with the concept of average seasonal variation. These changes are indicated by the red lines on Chart 2 and by dotted lines on Chart 3.

## Evaluation of Present Method

The seasonal adjustment process described in this article requires a higher grade of work and somewhat more time than most mechanical methods. In the last comprehen-
sive revision of the Board's index of factory employment 90 individual series averaging 14 years in length were adjusted for seasonal variation. For each of them about a halfday's work of a professional nature was required in steps $4,8,9,12,14$ and 15 and about two days of clerical work in the remaining steps. Other kinds of data, such as construction contracts and many industrial production series are more erratic and their adjustments somewhat more time-consuming. Department stores sales and money in circulation require, in addition to the process described in this article, special adjustments for the changing dates of Easter.

Time spent this way, however, yields more accurate seasonal adjustments than can be obtained by applying an inflexible mathematical process, and in addition yields a knowledge of other characteristics of the underlying series that is valuable on its own account. The effect on the series of nonrecurring "seasonal" forces, of strikes and floods, of price changes and economic legislation, are all examined in the process. Since seasonal adjustment is only a part of the general problem of series analysis, additional knowledge gained in the process itself serves the broader purpose for which the work is done, and greater accuracy obtained at the beginning facilitates analysis of the adjusted figures.

## Revised Index of Freight-Car Loadings

AREVISED Federal Reserve index of freight-car loadings is shown in the accompanying table. This index, while broadly similar to that previously published by the Board, differs from the earlier index in several respects: seasonal adjustments for each class of freight have been revised for recent years; weights for combining individual classes of freight to obtain the total index have been changed for the period since 1931; and the base has been shifted from 1923-1925 to 1935-1939. The methods of computing daily average carloadings for each month from the weekly data of the Association of American Railroads and of combining them into the total index remain as described in the Federal Reserve Bulletin for June, 1937. The procedure followed in adjusting individual series for seasonal variation is described in detail in the article beginning on page 511 of this Bulletin.

Changes in seasonal movements of individual classes of freight, for which revised 1940 factors are shown in the accompanying table, had a considerable effect on the general seasonal pattern of total loadings. The largest changes were for livestock carloadings, the peak movement of which in September and October has become more pronounced as a consequence of a decline in the proportion of hog shipments in total livestock shipments. For miscellaneous carloadings, seasonal variations in recent years have been less marked than they were during the early 1930's and before; shipments in the winter months have become a larger part of the annual total while

[^8]shipments in the summer have become a smaller part.

The usual procedure for computing seasonally adjusted indexes has been modified in the case of ore loadings for April and May and for October and November. Loadings of iron ore in these months are very erratic, owing to differences from year to year in the dates of opening and closing the navigation season on the Great Lakes, and, as a result, seasonal adjustment by the usual method has been unsatisfactory. For example, in April, 1937, the combination of an early opening of navigation and a large demand for iron ore raised the old seasonally adjusted index for ore to a peak twice as high as the level of adjacent months. Distortion of this kind is lessened by treating April and May as a single period for seasonal adjustment purposes and treating October and November similarly. A single index for each of these periods has been computed and assigned to each of the two months in the period. In maintaining the index currently, preliminary indexes will be computed for April and for October and these will be revised when the succeeding months' figures become available.

For the period beginning in 1931, weights derived from 1935-1939 revenues have been used in combining the indexes for eight classes of freight into the total index, while prior to 1931 weights based on 1928 revenues were used. For the earlier period the total index was lowered 1 percent to make it continuous with the index for succeeding years, based on 1935-1939 revenue weights. The two sets of weights are shown in the following table:

Importance of Various Classes of Freight in Total Index, 1935-1939

| Class of Freight | Per cent of total |  |
| :---: | :---: | :---: |
|  | Derived from 1928 revenues | Derived from $1935-1939$ revenues |
| Grain.. | 7.1 | 5.6 |
| Livestock | 1.5 | 1.8 |
| Coal- | 21.4 | 21.3 |
| Coke. | 0.8 | 0.7 |
| Forest products. | 5.3 | 5.8 |
| Ore....------- | 2.2 | 2.4 |
| Merchandise l.c.l. | 9.7 | 7.6 |
| Miscellaneous.- | 52.0 | 54.8 |
| Total. | 100.0 | 100.0 |

[Index numbers; 1935-39 average $=100$. The terms "adjusted" and "unadjusted" refer to adjustment for seasonal variation.]

Seasonally adjusted estimates of nonagri-| rollees in CCC camps, and the military and cultural employment are shown below by months from 1929 to date and comparable current figures will be published regularly in the Federal Reserve Bulletin. These data, which were derived from estimates of total nonagricultural employment compiled without seasonal adjustment by the Bureau of Labor Statistics, do not include persons naval forces.
Each of the 63 separate employment series which comprise the Bureau's unadjusted total was examined for seasonal variation and all those found to have such variation were adjusted. The adjusted series were then combined into groups and totals comWPA employed on WPA and NYA projects, en- on an unadjusted basis.

TOTAL NONAGRICULTURAL EMPLOYMENT ADJUSTED FOR SEASONAL VARIATION [Thousands of persons]

[^10]Note: Figures for April 1941 are preliminary.

## National Summary of Business Conditions

Compiled May 17 and released for publication May 19. Figures shown on charts may differ from preliminary figures used in text. Later developments are discussed on pages 495-505 of this Bulletin.

WHOLESALE commodity prices advanced sharply in April and the first half of May, with the exception principally of metals for which maximum prices had been established. Industrial production declined in April, owing to reduced output of coal and automobiles, but increased rapidly in the first half of May as operations in these industries were resumed.

## Production

In April the Board's seasonally adjusted index of industrial production declined to 139 per cent of the 1935-1939 average, a drop of 4 points from March. The decline reflected chiefly a sharp reduction in output of bituminous coal, as most mines were closed during the entire month. The mines were reopened on April 30 and in the first half of May coal output increased rapidly.

Automobile production also declined in April, owing to stoppage of work at plants of the Ford Motor Company during an industrial dispute. This was settled about the middle of the month and domestic output has since advanced to a high monthly rate of over 500,000 cars and trucks. Announcement by the Office of Production Management that output in the twelve months ending July 31 would approximate $5,290,000$ units indicates that a rate close to that now prevailing should

Federal Reserve index of physical volume of production, adjusted for seasonal variation, 1935-39 average $=100$. Subgroups shown are expressed in terms of points in the total index. By months, January 1935 to April 1941.
be maintained through July, although there is usually a considerable decline in this period.
Steel production was curtailed somewhat in the latter half of April by shortages of coal and coke and output declined from a level of 100 per cent of capacity to 94 per cent at the month end. Subsequently output increased, reaching 99 per cent by the middle of May.

In most other lines activity continued to increase during April and the first half of May. Machinery production rose further and activity in the aircraft and shipbuilding industries continued to expand rapidly. Consumption of nonferrous metals also advanced, and, as in March, domestic sources of copper were supplemented by large supplies from Latin America. Textile production rose further from the high rate prevailing in March. Consumption of raw cotton in April amounted to 920,000 bales, a new record level, and rayon deliveries also rose to a new peak. At wool textile mills activity was maintained near the high March rate. Continued advances were reported in the chemical, paper, and food industries.

Anthracite production declined considerably in April, owing to a delay by dealers in placing usual spring orders, but increased in the first half of May. Output of crude

Bureau of Labor Statistics' indexes based on 12 foodstuffs and 16 industrial materials, August $1939=100 . \quad$ Thursday figures, January 3, 1935, to May 22, 1941.
petroleum showed little change from the March rate, following some increase from the reduced level of the winter months. Iron ore shipments in April amounted to about 7,000,000 tons, an exceptionally large amount for this time of year, and mine output of nonferrous metals continued at near capacity rates.

Value of construction contract awards in April declined somewhat from the high March total, owing principally to a smaller volume of defense plant contracts, according to F. W. Dodge Corporation reports. There was an increase in contracts for publiclyfinanced defense housing, and awards for private residential building rose by about the usual seasonal amount.

## Distribution

Sales of general merchandise at department and variety stores showed about the usual seasonal rise from March to April, making allowance for the changing date of Easter. Retail sales of new automobiles, which had amounted to 526,000 cars and trucks in March, rose further in April and sales of used cars were at peak levels.

Freight-car loadings declined sharply in April, reflecting a reduction in shipments of coal and coke, but increased in the first half of May when coal mines were reopened. By the middle of the month total loadings had risen to a weekly rate one-fourth higher than in the corresponding period last year and about the same as the seasonal peak reached in the autumn of 1940.

## Commodity Prices

Prices of most basic commodities, both domestic and imported, advanced sharply further in the first half of May following a short period of little change during the latter part of April. Price increases were most pronounced for agricultural commodities reflecting in part the prospect of legislation raising Federal loan rates for basic farm crops. Prices of a number of semimanufactured industrial products, including petroleum products, coke, leather, textile yarns and fabrics, and building materials, also advanced. Metal prices, now for the most part subject to Federal control, remained at the maximum levels established earlier.

## Bank Credit

Bank loans and investments have shown a marked rise since last summer, the increase at reporting banks in 101 leading cities amounting to $\$ 4,000,000,000$. In April and early May holdings of investments by these banks increased considerably, mostly at New York City banks, reflecting substantial purchases of newly-issued Reconstruction Finance Corporation notes. Increases in commercial loans in this period were somewhat smaller than during the preceding two months.

Excess reserves of member banks were $\$ 5,700,000,000$ on May 14. Since January they have declined by about $\$ 1,100,000,000$, owing largely to increases in Treasury deposits with the Reserve Banks and in currency in circulation. The decrease has occurred entirely at New York City banks.

MEMBER BANKS IN IOI LEADING CITIES

Wednesday figures, January 2, 1935, to May 21, 1941. Commercial loans, which include industrial and agricultural loans, represent prior to May 19, 1937, so-called "Other loans" as then reported.

## United States Government Security Prices

Prices of United States Government securities, which had risen sharply from April 9 to April 21, subsequently declined irregularly through May 15. On that date the 1960-65 bonds were $3 / 4$ of a point lower than on April 21 and about $11 / 4$ points below the all-time peak reached on December 10, 1940. The yield on this issue is currently about 2.09 per cent, compared with 2.03 per cent on December 10 .
defense loans and commitments of weekly reporting member banks as of april 30, 1941, by federal reserve districts

Back figures.-See Annual Report for 1937 (table 40).

## federal reserve bank buying rates on acceptances

[Per cent per annum]

| Maturity | Rate in effect on May 31 | In effect be-ginning- | Previous rate |
| :---: | :---: | :---: | :---: |
| 1-15 days | $1 / 2$$1 / 2$$1 / 2$$1 / 2$$1 / 2$811 | Oct. 20, 1933 |  |
| 16-30 days.. |  | ---do.- | 1 |
| 31-45 days.. |  | --.-do....- | 1 |
| 46-60 days.. |  | -...do. | 1 |
| $61-90$ days. |  | -...do. | 1 |
| $91-120$ days |  | --..do.. | 1 |
| 121-180 days |  | do. | 11/4 |

1 This rate also applies to acceptances bought under repurchase agreements, which agreements are always for a period of 15 days or less.
Note.-Minimum buying rates at the Federal Reserve Bank of New York on prime bankers' acceptances payable in dollars; higher rates may be charged for other classes of bills. The same minimum rates apply to purchases, if any, made by other Federal Reserve Banks.
Back figures.-See Annual Report for 1937 (table 41).

# MEMBER BANK RESERVE REQUIREMENTS 

[Per cent of deposits]

| Classes of deposits and banks | June 21, Aug. 15, 1936 |  | Mar. 1, Apr. 30, 1937 | $\begin{gathered} \text { May 1, } \\ 1937- \\ \text { Apr. } 15, \\ 1938 \end{gathered}$ | $\begin{aligned} & \text { Apr. 16, } \\ & 1938- \\ & \text { and } \\ & \text { after } \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| On net demand deposits: |  |  |  |  |  |
| Central reserve city.- | 13 | 191/2 | 228/4 | 26 |  |

| Country --.-.-.---- | 7 | 101/2 | 1214 | 14 | 12 |
| On time deposits: All member banks... | 3 | 41/2 | 51/4 | 6 | 5 |

See footnote to table on p. 548 for explanation of method of computing net demand deposits.

## MARGIN REQUIREMENTS

Prescribed by Board of Governors of the Federal Reserve System in accordance with Securities Exchange Act of 1934
[Per cent of market value]

|  | Apr. 1, 1936Oct. 1937 | $\begin{gathered} \text { Nov. } 1, \\ \text { 1937 } \\ \text { and } \\ \text { after } \end{gathered}$ |
| :---: | :---: | :---: |
| For extensions of credit by brokers and dealers on listed securities, under Regulation T. | 55 | 40 |
| For short sales, under Regulation T | ${ }^{(2)}$ | 50 |
| For loans by banks on stocks, under Regulation U.-- | ${ }^{3} 55$ | 40 |

1 Regulations $T$ and $U$ limit the amount of credit that may be extended on a security by prescribing a maximum loan value, which is a specified percentage of its market value at the time of the extension; the "margin requirements" shown in this table are the difference between the market value ( $100 \%$ ) and the maximum loan value.
${ }^{2}$ Requirement under Regulation $T$ was the margin "customarily required" by the broker
3 Regulation U became effective May 1, 1936
Note.-Regulations $T$ and $U$ also provide special margin requirements on "omnibus" accounts and loans to brokers and dealers.

FEDERAL RESERVE BANK RATES ON INDUSTRIAL ADVANCES
Rates in effect May 31 on advances and commitments under Section 13b of the Federal Reserve Act
[Per cent per annum except as indicated by footnotes ${ }^{6}$ and ${ }^{7}$ ]

| $\underset{\text { Bank }}{\text { Federal Reserve }}$ | Advances direct to industrial or commercial organizations | Advances to or in participation with financing institutions |  | Commitments to make advances |
| :---: | :---: | :---: | :---: | :---: |
|  |  | On portion for which institution is obligated 1 | On remaining portion 1 |  |
| Boston. | 31/2-6 | 3 | 31/2 | 1/2-1 |
| New York | 4-6 | 2-3 | 2-5 | 1-2 |
| Philadelphia... | $33^{1}-6$ | $21 / 2$ | ${ }^{(2)}$ | 1/2-2 |
| Cleveland.... | 31/2-5 | (1) | (5) | 14-1 |
| Richmond. | 4-6 | (4) 3 | (5) 4 | 1-2 |
| Atlanta. | 4-6 | 4 | 4-6 | 1-2 |
| Chicago | 3-6 | 3-6 | 3-6 | 1/2-2 |
| St. Louis. | $31 / 2-51 / 2$ | 11/2-2 | (2) | ${ }^{6} 1$ |
| Minneapolis | 3-6 | 3-6 | 3-6 | 1-2 |
| Kansas City..... | 4-6 | 4 | 4 | ${ }^{(7)} 2$ |
| Dallas...--.... | 4-6 | 4 | 4-6 | 1 |
| San Francisco...-- | 4-6 | 3-4 | 4-5 | 1/2-2 |

: The Federal Reserve Banks of New York, Philadelphia, Cleveland, Richmond, Atlanta, Chicago, Minneapolis, Kansas City, and Dallas may charge same rate as charged borrower by financing institution, if lower than rate shown
2 Same as rate charged borrower by fnancing institution
${ }^{3}$ One per cent less than rate charged borrower by financing institution.
${ }^{4}$ One per cent less than rate charged borrower by financing institution with minimum of three per cent (see note 1).
${ }^{5}$ One-half of one per cent less than rate charged borrower by financing institution with minimum of four per cent (see note 1).
6 Minimum charge one-fourth of one per cent.
7 Minimum charge one-half of one per cent.

## MAXIMUM RATES ON TIME DEPOSITS

Maximum rates that may be paid by member banks as established by the Board of Governors under provisions of Regulation Q
[Per cent per annum]

|  | $\begin{aligned} & \text { Nov. 1, } 1933 \\ & \text { Jon. } 31,1935 \end{aligned}$ | $\begin{aligned} & \text { Feb. 1, } 1935 \\ & \text { Dec. } \mathbf{3 1}, 1935 \end{aligned}$ | $\begin{gathered} \text { In effect } \\ \text { beginning } \\ \text { Jan. 1, 1936 } \end{gathered}$ |
| :---: | :---: | :---: | :---: |
| Savings deposits | 3 | 21/2 | 23/2 |
| Postal savings deposits.-.-- | 3 | $21 / 2$ | $21 / 2$ |
| Other time deposits payable in: |  |  |  |
| 6 months or more.....-- | 3 | $21 / 2$ | 23/2 |
| 90 days to 6 months..... | 3 | $21 / 2$ | 2 |
| Less than 90 days...-..- | 3 | 21/2 | 1 |

Note.-Maximum rates that may be paid by insured nonmember banks as established by the Federal Deposit Insurance Corporation, effective February 1, 1936, are the same as those in effect for member banks. In some States the maximum rates established by the Board and the Federal Deposit Insurance Corporation are superseded by lower maximum rates established by State authority.

1 Comprises centers for which bank debit figures are available beginning with 1919, except that one substitution was made in 1920 and one in 1928.
y Centers (other than the 141 centers) for which bank debits are currenty reported. The number has changed very little since 1934 and has been 133 since 1936
Back figures.-For corresponding monthly totals for 1928-1937 see Annual Report for 1937 (Table 71), which also gives a definition of bank debits. Monthly figures for individual reporting centers with totals by Federal Reserve districts for recent years, and annual figures for indi-
vidual reporting centers with totals by Federal Reserve districts for the vidual reporting centers with totals by Federal Reserve districts for
years $1919-1939$, are available and will be furnished upon request.

## ALL BANKS IN THE UNITED STATES

Comprises all national banks in the continental United States and all State commercial banks, trust companies, mutual and stock savings banks and such private and industrial banks as are included in abstracts issued by state banking departments. Also includes, during the period June 1934-June 1935, private banks which, pursuant to the provisions of sec. 21 (a) of the Banking Act of 1933 , submitted condition reports to the Comptroller of the Currency. Under the amended provisions of sec. 21 (a) private banks no longer report to the Comptroller of the Currency. For comparative figures of private banks included in the figures from June 1934 to December 1935, see Federal Reserve Bulletin for December 1935, p. 883, and July 1936, p. 535. Figures for nonmember banks are for dates indicated or nearest thereto for which figures are available.

${ }^{1}$ Classifications indicated were revised as of Dec. 31, 1938; for explanation see Bulletin for January, 1939, pp. 22-23, and Bulletin for April 1939, pp. 259-264, 332. Beginning June 30, 1939, detailed classifications available on June and December dates only.

2 Not shown in call reports prior to December 193s, but the total amount of agricultural loans was reported separately on some dates, and the total amount of "Commercial, industrial and agricultural paper"' has been reported by weekly reporting banks since May, 1937.
${ }^{3}$ Figures in this column prior to Dec. 31, 1938, represent all loans on securities, regardless of purpose, excepting only loans on securities to banks and to brokers and dealers.
${ }_{4}$ This is a residual item and, because of the revised loan classifications, figures beginning Dec. 31, 1938, are not comparable with earlier figures.
${ }^{5}$ Includes Treasury certificates of indebtedness through 1934.

- Breakdown of loans and investments not reported separately.
${ }^{7}$ Central reserve city banks.
Back figures.-See Annual Report for 1937 (tables 52-58).

1 Prior to Dec. 31, 1935, excludes balances with private banks to the extent that they were then reported in "Other assets." Since Oct. 25, 1933, includes time balances with domestic banks which on that date amounted to $\$ 69,000,000$ and which prior to that time were reported in "Other assets." ${ }_{2}$ Demand deposits other than interbank and U. S. Government, less cash items reported as in process of collection and, prior to Dec. 31 , 1935 less cash items reported on hand but not in process of collection.
${ }^{3}$ Includes "Due to Federal Reserve Banks (transit account)," known as "Due to Federal Reserve Banks (deferred credits)" prior to Dec. 31, 1935.
${ }^{4}$ U. S. Treasurer's time deposits, open account, are combined with postal savings (time) deposits.
${ }^{5}$ Central reserve city banks.
${ }^{6}$ Partly estimated.
Back figures.-See Annual Report for 1937 (tables 52-58).
[Monthly data are averages of Wednesday figures. In millions of dollars.)

[^18] back figures see Buldetin for November 1935 (pp. 711-738) or reprint, Bulletin for December 1935 (p. 876), Annual Report for 1937 (tables $65-67$ ) and corresponding tables in previous Annual Reports.

${ }^{1}$ Demand deposits other than interbank and U. S. Government, less cash items reported as in process of collection.
U. S. Treasurer's time deposits, open account, are combined with postal savings (time) deposits.
[In millions of dollars]

[^19] the New York and Chicago districts, as shown in this table, include New York City and Chicago, respectively.
[In millions of dollars]

* See note on preceding page.
${ }^{1}$ Demand deposits other than interbank and U. S. Government, less cash items reported as in process of collection.
${ }_{2}$ U. S. Treasurer's time deposits, open account, are combined with postal savings (time) deposits.

${ }^{1}$ As reported by dealers; includes some finance company paper sold in open market.
Back figures.-See Annual Report for 1037 (table 70).

${ }^{1}$ Monthly and weekly data are averages of daily figures, except for municipal bonds, which are based on Wednesday figures.
2 Average of yields of all outstanding partially tax-exempt Government bonds due or callable in more than 12 years.
${ }_{4}^{3}$ Standard Statistics Co.
${ }^{4}$ Moody's Investors Service, week ending Friday. Because of limited number of suitable issues, the industrial Aaa and Aa groups have each been reduced from 10 to 3 issues, and the railroad Aaa and Aa groups from 10 to 5 and 10 to 9 issues respectively.

Back figures.-See Annual Report for 1837 (table 80). Figures for U. S. Treasury bonds available on request.

1 Some of the loans made by the regional agricultural credit corporations (prior to October 1935) and by the banks for cooperatives and most of the loans made by the production credit associations are discounted with the Federal intermediate credit banks. The amounts in this column are thus included in the three columns under those headings. Such loans are not always discounted in the same month in which the original credit is extended.

${ }^{r}$ Revised.

* Revised from January 1937 to date owing to adjustment of manufacturing employment to Census of Manufactures through 1939.

1 Includes self-employed persons, casual workers, and domestic servants not included in total of employees in nonagricultural establishments.
${ }^{2}$ Excludes military and naval forces.
Note.-Compiled by Bureau of Labor Statistics. Figures for April 1941 are preliminary. For seasonally adjusted data and back figures see pp. 534-535 of this Bulletin.

## FACTORY EMPLOYMENT AND PAYROLLS, BY INDUSTRIES

[^28]1 Includes also semi-annual figures on ownership of U. S. Government obligations
${ }_{2}^{2}$ Series not shown in Chart Book
${ }^{3}$ Figures available for June and December dates only.
${ }^{4}$ Figures are reported on somewhat different basis beginning December 31, 1938. For detailed explanation of the changes and for estimates on old basis as of December 31, 1938, see BULLETIN for April 1939, page 332.
${ }^{5}$ Includes since December 31, 1938, only loans made for the purpose of purchasing or carrying securities; loans on securities made for other purposes are included in commercial loans and in all other loans.

- Includes loans to banks and other loans under new classification beginning December 31, 1938.
${ }^{7}$ Total direct and guaranteed obligations outstanding, as shown for page 19 of chart book.
${ }^{8}$ Partly estimated.
[Amounts in thousands of dollars]

${ }^{1}$ Figures of loans and investments beginning December 31, 1938 are not entirely comparable with prior call dates because investments and other assets (principally loans) indirectly representing bank premises and other real estate are now reported separately. Such investments and other assets amounted to $\$ 94,569,000$ and $\$ 49,939,000$, respectively, on December 31,1938 .

This is a combination of two or more items shown separately on June and December call dates.
${ }^{1}$ United States Treasurer's time deposits, open account, are combined with postal savings (time) deposits.
4 Reserves for dividends payable in common stock, $\$ 5,544,000$ on December 31,1938 , were formerly published as part of undivided profits. Reserves for undeclared cash dividends on capital stock and for accrued interest on capital notes and debentures, $\$ 10,691,000$ on December 31 , 1938 , serves for undeclared cash dividends on capital stock and for accrued interest on capital notes and debentures, $\$ 10,691,000$ on December 31,1938 ,
were formerly reported in combination with dividends declared but not yet payable. Beginning December 31,1938 these two reserves are included were formerly reported in combin
" Demand deposits other than interbank and United States Government, less cash items reported as in process of collection.

Tables on the following pages include the principal available statistics of current significance relating to gold, international capital transactions of the United States, and financial developments abroad. The data are compiled for the most part from regularly published sources such as central and commercial bank statements and official statistical bulletins; some data are reported to the Board directly. Figures on international capital transactions of the United States are collected by the Federal Reserve Banks from banks, bankers, brokers, and dealers in the United States in accordance with the Treasury Regulation of November 12, 1934. Back figures may in most cases be obtained from earlier Bulletins and from Annual Reports of the Board of Governors for 1937 and earlier years. Daily and monthly press releases giving daily and monthly average foreign exchange rates will be sent without charge to those wishing them. Other data on the following pages are not regularly released prior to publication.

GOLD RESERVES OF CENTRAL BANKS AND GOVERNMENTS

1 Figures relate to last official report dates for the respective countries, as follows: Germany -June 15, 1939; Italy-late in Mar. 1940; Norway-Mar. 30, 1940; Poland-July 31, 1939; Vene zueia-end of Mar. 1939
${ }^{2}$ Beginning April 1940 , reports on certain Argentine gold reserves no longer available
${ }^{8}$ On May 1, 1940, gold belonging to Bank of Canada transferred to Foreign Exchange Con-
trol Board. Gold reported since that time is gold held by Minister of Finance.
${ }^{4}$ Change from previous December due largely to inclusion of gold formerly not reported.
${ }^{5}$ Figures shown for December 1936 and December 1937 are those officially reported on Aug. 1. 1936, and Apr. 30, 1938, respectively.

- Beginning Mar. 29, 1941, gold reserves no longer reported separately

7 These countries are: Albania, Algeria, Australia, Austria through Mar. 7, 1938, Belgian Congo, Bolivia, China, Danzig through Aug. 31, 1939, Ecuador, El Salvador, Estonia, Finland Gnatemala, Iceland, Latvia, Lithuania, Morocco, and Thailand (Siam). Figures for certain of these countries have been carried forward from last previous official report.

Gold holdings of Bank of England reduced to nominal amount by gold transfers to British Exchange Equalization Account during 1939.

- Increase due to inclusion of additional foreign gold reserves not previously reported.

NOTx.-For description of table and back figures see Bulletin for September 1940, pp 925-934 and pp. 1000-1007; details regarding special internal gold transfers affecting the reported figures through April 1940 appear on p. 926 in that issue.

Goid production in U. S. S. R.: No regular Government statistics on gold production in U. S.S. R. are available, but data of percentage change. irreqularly given out by officials of the gold mining industry, together with certain direct figures for past years, afford a basis for estimating annual production as follows: $1934, \$ 135,000,000 ; 1935, \$ 158,000,000 ; 1936, \$ 187,000,000 ; 1937, \$ 185,000,000 ; 1938, \$ 180,000,000$.
r Revised.

- Preliminary.
f Figure carried forward from last previous figure without footnote $f$.
A Annual figures through 1939 are estimates of U. S. Mint. Annual figure for 1940 and monthly figures are based on reports of American Bureau of Metal Statistics. Since these reports are given in thousands of fine ounces, the dollar figures are accurate only within a margin of error of $\$ 17,500$. ${ }^{2}$ Beginning May 1940, monthly figures no longer reported. Annual figure for 1940 estimated at three times production for first four months of the year.
${ }^{3}$ Includes Philippine Islands production received in United States.
${ }^{4}$ Figures for Canada beginning January 1940 are subject to official revision
${ }^{5}$ Beginning May 1940, figures are those reported by American Bureau of Metal Statistics.
Note.-For monthly figures back to January 1929 and for explanation of table and sources see Bullemin for March 1939, p. 227; February 1939, p. 151; Jupe 1938, pp. 539-540; and April 1933, pp. 233-35, For annual figures of world production back to 1873 (ineluding Russia-U. S. S. R.), see Annual Report of Director of Mint for 1940. p. 101, and 1936. pp. 108-109.

[^29]
p Preliminary.
Through February 1939, valued at legal parity of 85 shillings a fine ounce.
Securities and silver coin held as cover for fiduciary issue, the amount of which is also shown by this figure.
Notes issued less amounts held in banking department
1 On Jan. 6, 1939, $£ 200,000,000$ of gold (at legal parity) transferred from Bank to Exchange Equalization Account; on Mar. 1, 1939, about f5, 500,000 (at current price) transferred from Exchange Account to Bank; on July 12, 1939, $£ 20,000,000$ of gold transferred from Exchange Account to Bank; on Sept. 6, 1939, $£ 279,000,000$ transferred from Bank to Exchange Account.

5 Fiduciary issue increased by $£ 50,000,000$ on April $30,1941$.

- Gold revalued in Mar 1940 No, 1938 July 1937, and Oct.
- Gold revalued in Mar. 1940, Nov. 1938, July 1937, and Oct. 1936. For further details see Bulletin for May 1940, pp. 406-407; January 1939, p. 29; September 1937, p. 853; and November 1936, pp. $878-880$.

7 For explanation of these items through June 10, 1940 , see BULIETiN for July 1940, p. 732. In the period since June 10, the Bank has made further advances to the Government under the following Conventions with the Treasury: Convention of June 12 authorized $25,000,000,000$ francs for general purposes; Convention of Aug. 25 authorized $50,000,000,000$ franes to meet the costs of the German army of occupation; Conventions of Oct. 29 and Dec. 12, 1940, and of Jan. 20 and Mar. 22, 1941, increased the authorized advances for meeting occupation costs to $65,000,000,000,73,000$, $000,000,85,000,000,000$, and $100,000,000,000$ francs, respectively. Total authorizations now outstanding, including those issued prior to June 10 , amount to $170,000,000,000$ francs.

In each of the weeks ending Apr. 20 and Aug. 3, 1939, 5,000,000,000 franes of gold transferred from Exchange Stabilization Fund to Bank of France; in week ending Mar. 7, 1940, $30,000,000,000$ francs of gold transferred from Bank of France to Stabilization Fund.

Note.-For further explanation of tables see Bulletin for February 1931, pp. 81-83.

Note.-For figures for other countries and references to explanation of table see Bulletin for September 1940, p. 1018.

COMMERCIAL BANKS

$r$ Revised to include inter-bank note holdings and amounts due to foreign banks, two items omitted from both sides of balance sheet in figures previously published (see explanation of previous procedure in Bulletin for October 1933, pp. 645-646).

I A verages of weekly figures through August 1939; beginning September 1939 figures refer to one week near end of month.
Represents six-month loans to the Treasury at $11 / 8$ per cent, callable by the banks in emergency under discount at the bank rate.
Through December 1937, excludes deposits in offices outside England and Wales which are included in total
${ }^{4}$ Beginning 1936, figures on this basis available only for all 11 banks-see footnote 5 .

- District Bank included beginning in 1936.

NoTE.-For other back figures and explanation of tables, and for figures for German commercial banks, see Bulletin for August 1939, p. 609 June 1935, pp. 388-390; and October 1933, pp. 641-646.

# Federal Reserve Publications $^{\text {a }}$ 

Copies of the publications and releases listed below may be obtained from the Board of Governors of the Federal Reserve System, Washington, D. C.

## CURNENT RELEASES

## Daily

Foreign Exchange Rates (for previous day).

## Weekly

Monday :
Condition of Reporting Member Banks in Leading Cities.
Bank Debits-Debits to Deposit Accounts, except Inter-Bank Accounts.
Tuesday:
Money Rates-Open-Market Rates in New York City. (Also monthly).
Thursday:
Condition of the Federal Reserve Banks.
Condition of Reporting Member Banks in Central Reserve Cities. (Also included in statement of Condition of Reporting Member Banks in Leading Cities, released on following Monday).
Department Store Sales-Index for United States and Percentage Changes by Federal Reserve Districts.

## Monthly

Federal Reserve Bulletin. Released about the 10th of the month. The subscription price is $\$ 2.00$ per annum, or 20 cents per single copy, in the United States (including insular possessions), Canada, Chile, Colombia, Costa Rica, Cuba, Dominican Republic, Ecuador, Guatemala, Haiti, Republic of Honduras, Mexico, Newfoundland (including Labrador), Nicaragua, Panama, Paraguay, Peru, El Salvador, Uruguay, and Venezuela. In all other countries the subscription price is $\$ 2.60$ yearly, or 25 cents per single copy. Group subscriptions for 10 or more copies, in the United States, 15 cents per copy per month, or $\$ 1.50$ for 12 months.

Brokers' Balances. Released about the 20th of the month.
National Summary of Business Conditions. Released about the 18 th of the month.
Business Indexes. Released about the 18th of the month.
Bank Debits-Debits to Deposit Accounts, except Inter-Bank Accounts. Released between the 6th and 12th of the month.
Foreign Exchange Rates. Released about the 1st of the month.
Department Store Sales-Percentage Changes by Federal Reserve Districts and by Cities. Released about the 22 nd of the month.
Department Store Sales-Percentage Changes by Departments. Released about the end of the month.

## Quarterly

Member Bank Call Report. Released about two months after call date.

## Semi-Annually

Federal Reserve "Par List" (Banks upon which checks will be received by Federal Reserve Banks for collection and credit). Released in January and July, with monthly supplements about the 7th of the month.

## AnNuAlly

List of Stocks Registered on National Securities Exchanges. Supplements issued quarterly. 25 cents for list and supplements.
Bank Debits-Debits to Deposit Accounts, except Inter-Bank Accounts. Released ordinarily in February.
Annual Report, covering operations for the preceding calendar year.

## BOOKS

The Federal Reserve System-Its Purposes and Functions. Obtainable in cloth binding at 50 cents per copy and in paper cover without charge. 128 pages.

Digest of Rulings--to October 1, 1937. Digests of Board rulings, opinions of the Attorney General and court decisions involving construction of the Federal Reserve Act, together with compilation showing textual changes in the Act. $\$ 1.25$ per copy. 683 pages.

Chart Book I, Federal Reserve Charts on Bank Credit, Money Rates, and Business. New edition, completely revised, February 1941. 72 pages of charts with space for plotting through 1942. 50 cents per copy; in quantities of 10 or more, 45 cents per copy.

Chart Book II, Federal Reserve Charts on Industrial Production. October 1940. 224 pages of charts, with space for plotting through 1946. \$1 per copy; in quantities of 10 or more, 85 cents per copy.

Constitutionality of Legislation Providing a Unified Commercial Banking System for the United States. Opinion of the Board's General Counsel. 21 pages. March 1933.

Supply and Use of Member Bank Reserve Funds. Explanation of analysis of sources of member bank reserve funds and uses to which such funds are put. 31 pages. July 1935.

Member Bank Statistics. A discussion of the statistics compiled and published by the Board covering the operations and condition of member banks. 28 pages. November 1935.

Summary of Provisions of State Laws Relating to Bank Reserves. 33 pages. March 1937.

Analyses of the Banking Structure-As of December 31, 1935. Number, deposits, and loans and investments of banks classified by size of bank and town and by other factors. 33 pages. August 1937.

Problems of Banking and Bank Supervision. Excerpts from the 1938 Annual Report. 33 pages.

The History of Reserve Requirements for Banks in the United States. 20 pages. November 1938.

Monetary Measures and Objectives. Three statements by the Board on objectives of monetary policy, on proposals to maintain prices at fixed levels through monetary action, and on legislative proposals relating to monetary measures and objectives. 8 pages. July 1937, April 1939, and May 1939.

Revised Indexes of Factory Employment. Bureav of Labor Statistics indexes adjusted for seasonal variation by Board of Governors. 32 pages, October 1938; 10 pages, October 1939.

The Gold Problem Today, by E. A. Goldenweiser. 4 pages. January 1940.

The Par Collection System of the Federal Reserve Banks, by George B. Vest. 8 pages. February 1940.

The Banks and Idle Money, by Woodlief Thomas. 9 pages. March 1940.

Historical Review of Objectives of Federal Reserve Policy, by A. B. Hersey. 11 pages. April 1940.

Cheap Money and The Federal Reserve System, by E. A. Goldenweiser. 5 pages. May 1940.

Ownership and Utilization of the Monetary Gold Stock. 3 pages. May and June 1940.

General Indexes of Business Activity, by Frank Garfield. 8 pages. June 1940.

New Federal Reserve Index of Industrial Production. 77 pages. August 1940.

The Gold Stock. 2 pages, September 1940.
Measurement of Production, by Woodlief Thomas and Maxwell R. Conklin. 16 pages. September 1940.

Gold Reserves of Central Banks and Governments. 18 pages. September 1940.

Development of Federal Reserve Banking, by M. S. Szymczak. 8 pages. December 1940.

Economic Preparedness for Defense and Post Defense Problems, by Marriner S. Eccles. 8 pages. January 1941.

Special Report to the Congress, submitted December 31, 1940. 2 pages. January 1941.

Economic and Monetary Aspects of the Defense Program, by John H. Williams. 4 pages. February 1941.

Federal Reserve Bank Lending Power not Dependent on Member Bank Reserve Balances. 2 pages. February 1941.

Money in Circulation. 1 page. February 1941.
Commodity Prices, by Frank Garfield and Clayton Gehman. 16 pages. March 1941.

Inflation, by E. A. Goldenweiser. 3 pages. April 1941.

Financial Problems of Defense, by Marriner S. Eccles. 11 pages. Mimeographed release, May 1, 1941.

Gold, Capital Flow and Foreign Trade. A review of international trade and financial developments from the outbreak of war in Europe to May 1941, statements of the gold and dollar resources and expenditures of the United Kingdom, and the text of the Lend-Lease Act and Appropriation Act pursuant thereto. 28 pages. January, February, and May 1941.

Revised Indexes of Freight-Car Loadings. 5 pages, June 1941.

Seasonally Adjusted Estimates of Nonagricultural Employment. 2 pages. June 1941.

Adjustment for Seasonal Variation, by H. C. Barton, Jr. Description of method used at the Board in adjusting economic data for seasonal variation. 12 pages. June 1941.

[^0]:    * An address by Marriner S. Eccles, Chairman of the Board of Governors of the Federal Reserve System, delivered at the 29th Annual Meeting of the Chamber of Commerce of the United States at Washington, D. C., May 1, 1941.

[^1]:    1 "The Use of Moving Averages in the Measurement of Seasonal Variations" by Aryness Joy and Woodlief Thomas, Journal of Variations" by Aryness Joy and Woodlief Thomas, Jo
    the American Statistical Association, September 1928.

[^2]:    ${ }^{1}$ For a discussion of techniques that have been developed for the study of all seasonal movements regardless of regularity see Horst Mendershausen in Econometrica for July 1937.

[^3]:    ${ }^{1}$ "Main nonseasonal" movements are similar to those described in the usual terminology of time series analysis as "trend-cycle." The term "main nonseasonal" is more accurate for present purposes because the freehand curve reflects not only major trendcycle movements but also shorter fluctuations. The curve still remains fairly smooth, however, and does not reflect brief erratic movements which are also nonseasonal in character.
    ${ }^{2}$ For an adaptation of this method to weekly data see Federal Reserve Bulletin for August 1939, pp. 641-44.

[^4]:    ${ }^{1}$ Charts shown in this article are about half the size of the working charts actually used in making seasonal adjustments and charts 1 and 3 do not have the smaller grid lines actually used in plotting the points. As in the charts and tables shown facilitate plotting and computing.

[^5]:    1 Occasionally, series are encountered (e.g., money in circulation and some employment series) in which the absolute amount of seasonal variation appears to be entirely independent of the of seasonal variation appears to be entirely independent of the nonseasonal level of the series rather than roughly proportionate
    to it as in most series. If this is the case, somewhat more accurate results are obtained by taking absolute differences of the series from the freehand curve. Results are noticeably better, however, only if the series shows both a large and fairly regular seasonal and substantial changes in level.
    ${ }^{2}$ For graphic methods of obtaining ratios to freehand curves and moving averages see William A. Spurr in Journal of the American Statistical Association, June 1937 and December 1940. ${ }^{3}$ Closeness of fit should depend partly on the nature of the underlying data. For a series like miscellaneous carloadings, which is a composite of many different commodities, the fit should be close, since changes in the seasonal pattern of the total may be caused by shifts in the relative importance of components, even though the pattern of each component remains fairly stable.

[^6]:    1 A case in point is the automobile employment series during 1935. The introduction of new model cars is a clearly discernible seasonal stimulus to automobile employment which occurred once in the spring of 1935 as in earlier years and again in the fall as in later years. Since neither model change was an isolated in later years. Since neither model change was an isolated other the first of a series of regularly recurring events, it seems other the first of a series of regularly recurring events, it seems
    proper to regard both of them as seasonal. Consequently the proper to regard both of them as seasonal. Consequently the is, factors adding to more than 1200 .

[^7]:    ${ }^{1}$ The calendar chart can also be examined to see if there are groups of months, as well as individual months, which show similar movements in successive years. If the freehand curve has been carefully reviewed, however, there should be none and in any case these broader repetitive movements can ordinarily be identified more readily from the continuous series plotted in Chart 1 than from Chart 3 .

[^8]:    ${ }^{1}$ Obtained by dividing the unadjusted total index by the adjusted index.
    ${ }_{2}$ Seasonal factors for April and May and for October and November are combined in computing adjusted indexes-see text.

[^9]:    ${ }^{1}$ Includes self-employed persons, casual workers, and domestic servants not included in total of employees in nonagricultural establishments

[^10]:    1 Includes self-employed persons, casual workers, and domestic servants not included in total of employees in nonagricultural establishment but excludes military and naval forces.

[^11]:    Tables on the following pages include the principal available statistics of current significance relating to financial and business developments in the United States. The data relating to the Federal Reserve Banks and the member banks of the Federal Reserve System are derived from regular reports made to the Board; index numbers of production are compiled by the Board on the basis of material collected by other agencies; figures for gold stock, money in circulation, Treasury finance, and operations of Government credit agencies are obtained principally from statements of the Treasury, or of the agencies concerned; data on money and security markets and commodity prices and other series on business activity are obtained largely from other sources. Back figures may in most cases be obtained from earlier Bulletins and from Annual Reports of the Board of Governors for 1937 and earlier years. Current figures compiled by the Board are generally released prior to publication in the BuLLETIN and press statements will be sent without charge to those wishing them. For a list of current releases see Federal Reserve Publications at the back of this Bulletin.

[^12]:    1 Two and one-half per cent to lenders other than banks. Note.-Rates applicable to United States Government securities' repurchase agree-

[^13]:    ${ }^{1}$ Includes industrial advances past due 3 months or more which are not included in industrial advances outstanding in weekly statement of condition of Federal Reserve Banks

    Does not include financing institution guaranties of advances and commitments made by Federal Reserve Banks, which amounted to $\$ 1,260$, 828, May 21, 1941
    ${ }^{4}$ Tuesday. $\quad{ }^{5}$ Latest date for which figures are available.

[^14]:    1 Excluding central reserve city banks, for which figures for latest month are shown in table above.

[^15]:    ${ }^{1}$ Total of amounts of coin and paper currency shown by denominations less unassorted currency in Treasury and Federal Reserve Banks.
    ${ }^{2}$ Includes unassorted currency held in Treasury and Federal Reserve Banks and currency of unknown denominations reported by the Treasury as destroyed.
    ${ }^{3}$ Paper currency only; $\$ 1$ silver coins reported under coin.
    Back figures.-See Annual Report for 1937 (table 36).

[^16]:    1 Less than $\$ 50,000$.
    Back figures.-See Annual Report for 1937 (table 38).
    Description.-See BULLETIN for January 1932, pp. 7-8.

[^17]:    ${ }^{1}$ Prior to Dec. 30, 1933, member bank figures include interbank deposits not subject to immediate withdrawal, which aggregated $\$ 103,000,000$ on that date. Prior to June 1940 the nonmember bank figures on some call dates included some interbank deposits not shown separately in a few State bank abstracts.
    ${ }^{2}$ Prior to December 1938 the figures include loans and investments indirectly representing bank premises or other real estate, now classified in condition reports among "Other assets." The amounts of such loans and investments in December 1938 were approximately $\$ 50,000,000$ and $\$ 100$, 000,000 , respectively.
    ${ }^{3}$ One bank (with deposits, excluding interbank deposits, of $\$ 90,000,000$ and total loans and investments of $\$ 96,000,000$ on December 30, 1939) which, prior to March 1940, was classified as a mutual savings bank, is now included in figures in the "Other nonmember banks" column.

    4 Figures for "All banks" not available.
    Back figures.-See Annual Report for 1937 (tables 48-49).

[^18]:    Note.-For description of figures see Bulletin for November 1935 (pp. 711-738) or reprint, and Bulletin for June 1937 (pp. $530-531$ ). For

[^19]:    * Separate figures for New York City are shown in the immediately preceding table, and for the city of Chicago in this table. The figures for

[^20]:    ${ }^{1}$ Excluding balances with reporting firms (1) of member firms of New York Stock Exchange and other national securities exchanges and (2) of firms' own partners.
    ${ }^{2}$ Includes money borrowed from banks and also from other lenders (not including member firms of national securities exchanges)
    Note. - For explanation of these figures see "Statistics on Margin Accounts" in Bulletin for September 1936. The article describes the method by which the figures are derived and reported, distinguishes the table from a "statement of financial condition," and explains that the last column is not to be taken as representing the actual net capital of the reporting firms,

    Back figures.-See Bulletin for March 1938, p. 196, and (for data in detail) Annual Report for 1937 (table 69).

[^21]:    1 Standard Statistics Co. Monthly data are averages of Wednesdry figures.
    ${ }_{2}$ Average prices of industrial high-grade preferred stocks, adjusted to a $\$ 7$ annual dividend basis.
    ${ }_{3}$ A verage daily volume of trading in stocks on the New York Stock Exchange. Weekly figures are averages for the week ending Saturday. Back fioures.-For stock prices, see Anaual Reportfor 1937 (table 79).

[^22]:    ${ }^{*}$ Revised.
    ${ }^{1}$ Includes publicly-offered issues of Federal credit agencies, but excludes direct obligations of U. S. Treasury.
    3 Includes issues of noncontiguous U. S. Territories and Possessions.
    ${ }^{3}$ Less than $\$ 500,000$.
    Source.-For domestic issues, Commercial and Financial Chronicle; for foreign issues, U. S. Department of Commerce. Monthly figures subject to revision.

    Back figures.-See Annual Report for 1937 (table 78).

[^23]:    ${ }^{1}$ Principal amount of obligations guaranteed as to interest and princi-

[^24]:    ${ }^{1}$ Beginning with July 1, 1940, net receipts represent total receipts less net social security employment taxes, which under the 1939 amendments 1 Beginning with July 1, 1940, net receipts represent total receipts less net social security employment taxes, Which under the 1939 amendments
    to the Social Security Act are appropriated directly to the Federal old-age and survivors insurance trust fund. To make the figures for earlier to the social security Act are appropriated directy to the Federa old-age and survivors insurance trust fund. To make the figures for earlier
    periods comparable, transfers to this trust fund, formetly shown under expenditures, have been deducted from total receipts, from total expenditures, and from transfers to trust accounts.

    Details given in lower section of table
    ${ }^{3}$ For details, see preceding page.
    ${ }^{4}$ Less than $\$ 500,000$.
    Note.-For explanation of table see Bulemtin for October, 1940, p. 1052.

[^25]:    ${ }^{1}$ Include national defense loans amounting to $\$ 21,160,000$ on A pril $30,1941$.
    Note.-For explanation of table and back figures, see BUlLETIN for April 1936, p. 220.

[^26]:    - Revised.

    Includes also lead production shown under "Minerals."

[^27]:    r Revised. $\quad \boldsymbol{p}$ Preliminary

[^28]:    - Preliminary. $r$ Revised.

[^29]:    ${ }^{1}$ Prior to Jan. 3, 1940, the figures under Asia represent Far East only, the remaining Asiatic countries being included under "All other".
    Last report date on old basis.
    First report date on new basis.
    4 The figures in this supplementary table represent a partial analysis of the figures in the main table under the headings Other Europe, Latin America, and Asia.

    Note.-The figures given in this table are not fully comparable throughout as a result of certain changes or corrections in the reporting practice of reporting banks which occurred on Aug. 12, 1936, and Oct. 18, 1939 (see Bulletin for May 1937, p. 431, and April 1940, p. 363).

[^30]:    1 A verage based on figures for 8 months.
    ${ }^{2}$ No data available since August 1939, when figures were 616 and 726 respectively for France, and 92 for Germany.
    Sources.-See Bulletin for March 1935, p. 180, and March 1931, p. 159.

[^31]:    ${ }^{1}$ Prices derived from average yields for 60 corporate bonds as published by Standard Statistics Co.
    ${ }_{2}$ Since April 1, 1935, the 139 bonds included in the calculation of the average price have all borne interest at $41 / 2$ per cent. The series prior to that date is not comparable to the present series, principally because the 169 bonds then included in the calculation bore interest at 6 per cent.
    ${ }^{3}$ Indexes of reciprocals of average yields. For old index, 1929-1936, $1929=100$; average yield in base year was 4.57 per cent. For new index beginning Jan. 1937, Jan.-Mar. $1937=100$; average yield in base period was 3.39 per cent.
    ${ }^{4}$ Average May-Dec. only; exchange closed Jan. 1-Apr. 11.
    ${ }^{5}$ A verage Apr.-Dec. only--see note 2. Average Jan.-Mar. on old basis was 95.9
    ${ }^{6}$ Average based on figures for 8 months; no data available since August 1939 , when figures were 82.9 and 94.0 for bonds and common stocks, respectively,

    - A verage based on figures for 7 months; no data available May-September.
    - Average based on figures for 9 months; no data available May-July.

    Sources.-See Bulletin for November 1937, p. 1172; July 1937, p. 698; A pril 1937, p. 373; June 1935, p. 394; and February 1932, p. 121.
