Subscription Price of Bulletin

A copy of the Federal Reserve BULLETIN is sent to each member bank without charge. The subscription price in the United States and its possessions, Canada, Chile, Colombia, Costa Rica, Cuba, Dominican Republic, Ecuador, Guatemala, Haiti, Republic of Honduras, Mexico, Newfoundland (including Labrador), Nicaragua, Panama, Paraguay, Peru, El Salvador, Uruguay, and Venezuela, is \$2.00 per annum, or 20 cents per copy; elsewhere, \$2.60 per annum or 25 cents per copy. Group subscriptions for 10 or more copies, in the United States, 15 cents per copy per month, or \$1.50 for 12 months.

NUMBER 6

SLOWING DOWN OF CREDIT EXPANSION

Growth of bank deposits, which had been rapid for the previous two years, has slowed down appreciably since last fall. This reflected a marked reduction in the rate of expansion of demand deposits, since time deposits increased even more rapidly than in earlier periods. Expansion of currency continued at the same rate as last year.

Since last summer the larger part of the growth in deposits and currency has been in holdings of individuals. Business firms appear to be following the policy of investing their free funds in Government securities rather than adding further to their cash balances, except temporarily between war loan drives. With amounts accumulated since the end of the Fourth War Loan Drive, both business and individuals have substantial cash balances on hand on the eve of the Fifth War Loan Drive, which begins June 12.

Increased purchases of United States Government securities by nonbank investors, with no change in the rate of growth of the public debt, have been the dominant factor leading to a diminished need for bank purchases of United States Government securities and consequently a lessening in the rate of expansion of bank deposits. Banks have been given less opportunity and have had less inducement to purchase Government securities; since last October the Treasury has made only small direct offerings of new Government securities to commercial banks and at the same

time an increasing number of banks have found themselves without excess reserves which they could invest.

Many banks have resumed their practice of operating without a substantial amount of excess reserves. They have a considerable supply of Treasury bills, which the Reserve Banks stand ready to purchase at a fixed rate, and they also hold other Government securities, for which there is a ready market. A policy of investing all available funds and being prepared to sell some of their holdings of Government securities to Federal Reserve Banks in case of need was adopted by most banks in the large financial centers nearly two years ago. At that time excess reserves of other banks were still large, as were balances with city correspondents; in many cases increases in reserve balances were more than sufficient to cover enlarged reserve requirements resulting from expanding deposits. During the past two years excess reserves of reserve city banks have declined but not as much as in New York City and Chicago, and this year both excess reserves and balances with correspondents are declining at country banks. Nonmember banks also are drawing upon their correspondent balances. It would appear, therefore, that all classes of banks are making fuller use of the funds available to them and for current liquidity are depending on their holdings of Government securities to a greater extent than on excess reserves or other idle balances.

CHANGES IN DEPOSITS

In the ten months from the middle of last year to the end of April 1944, demand deposits, other than United States Government deposits, showed an increase of 6 billion dollars, about half of the growth shown during the preceding year. Time deposits at commercial banks increased substantially during the period, by nearly 3 billion dollars, and those at mutual sav-

NOTE.—Figures are partly estimated. Deposits are for all banks in United States. Demand deposits—adjusted exclude U. S. Government and interbank deposits and items in process of collection. Time deposits include deposits in the Postal Savings System and in mutual savings banks. Figures for 1944 are preliminary; latest figures are for April.

ings banks and the Postal Savings System also showed an accelerated growth. Money in circulation increased by 4 billion dollars, continuing its previous rate of growth. Changes in the volume of deposits and currency in recent years are shown in the chart.

Fluctuations in the volume of deposits, and particularly in their composition, during the past two years have largely reflected the influence of war loan drives.

Since bank holdings of private and local government debt have been declining, fluctuations in total deposits and currency have, for the most part, reflected changes in holdings of United States Government securities by banks, including the Federal Reserve Banks. During each drive period there has been a sharp growth of total deposits, reflecting not only Government security purchases by banks but also expansion of loans made to finance the purchase of securities by customers. Between drives total deposits have tended to shrink somewhat, largely because of the currency outflow and the repayment of loans. Commercial banks have reduced their holdings of securities in the periods between more recent drives, but most of the sales have been made to the Reserve Banks to meet currency demands and other reserve needs, and total holdings of banks, including the Reserve Banks, have shown little change.

The composition of deposits has also varied considerably. During the period of the drives private deposit accounts have gone down and those of the United States Government have increased sharply as the result of payments for securities purchased by investors other than banks. These variations are shown in the chart. Because of the wide fluctuations in adjusted demand deposits, which include deposits of businesses, individuals, and local governments and exclude those of the United States Government and banks, it is difficult to detect broad trends. These deposits at the opening of the Fifth Drive are probably close to 64 billion. This represents an increase of about 6 billion dollars since the low point at the close of the Fourth War Loan Drive in February, but is only slightly above peaks immediately preceding the Third and Fourth Drives. This is a definite slowing down in deposit growth in con-

trast to the latter half of 1942 and the first half of 1943 when demand deposits of businesses and individuals were expanding at a rate of well over a billion dollars a month.

OWNERSHIP OF DEPOSITS

Information regarding the ownership of demand deposits was obtained by the Federal Reserve Banks through special surveys of a sample of banks, as of July 31, 1943, and February 29, 1944. Estimates of the distribution of deposits at all commercial banks, derived from these data and published in the May BULLETIN, indicate that the growth in demand deposits in this period was principally in personal accounts, which comprise less than a third of all demand deposits of businesses and individuals. Some of the increase represented a seasonal growth in deposits in rural communities.

The decline in business accounts, which was concentrated in those of financial businesses and of manufacturing and mining corporations, reflected to some extent the fact that the February survey was made more closely following a war loan drive than the July survey. Business concerns, which accounted for the major part of the deposit growth in 1942 and the first half of 1943, have to an increasing extent followed a practice of building up deposit balances between drives and drawing upon them to purchase large amounts of securities during drives. Much of the 6 billion dollar increase in adjusted demand deposits since February has no doubt been in business deposits.

It appears that individuals, notwithstanding purchases of over 12 billion dollars of United States savings bonds during the past year and some purchases of other issues, have continued to accumulate sub-

stantial holdings of deposits and cash. These accumulations of currency, demand deposits, and savings deposits, may have amounted to nearly 15 billion dollars between the end of the Second War Loan Drive in May 1943, and the beginning of the Fifth Drive in June 1944. It would appear, therefore, that individuals are in a position to increase their purchases of securities in the Fifth War Loan Drive.

REGIONAL CHANGES IN DEPOSITS

Growth in deposits during 1943 was more evenly spread among the various geographical areas than that which occurred during 1942, and changes during 1944 to date have shown no striking regional differences. In 1942 the districts with greatest relative increases in war production and construction showed the greatest relative deposit increases. This was particularly true of the south, the southwest, and the west-coast areas. The influence of increased farm income was also evident in many districts. The table on the next page shows the relative changes in demand deposits and time deposits for the twelve Federal Reserve districts, with central reserve city banks shown separately. The range between the lowest and highest percentages, which in 1942 was from 4 per cent in New York City to 37 per cent in the Kansas City District, narrowed in 1943 to a range of 15 to 32 per cent. In the first four months of 1944 the changes in all districts were relatively small. Similar trends for 1942 and 1943 are indicated by end-of-year figures of demand and time deposits of individuals, partnerships, and corporations by Federal Reserve districts and States, assembled by the Treasury Department and published in the table on page 616 of this BULLETIN.

¹ Increase or decrease (-) in total of demand deposits—adjusted and time deposits of all member banks; U. S. Government and inter-bank deposits not included; end-of-year figures from call reports; figures for Apr. 16-30, 1944, are daily averages as reported for reserve purposes.

² Percentage increases for all member banks in United States and in New York City adjusted to include deposits on Dec. 31, 1941, of one large bank that became a member in 1942.

In the early months of the war, deposits in New York City grew relatively less than those in other parts of the country but recently New York has fared somewhat better. On balance, funds are no longer being drained from the New York market as rapidly as formerly, particularly by Treasury operations. In the first quarter of 1944, for the first time in more than two years, Treasury operations resulted in a net addition of funds to this center. Part of this development was due to especially heavy cash redemptions of maturing Government securities in the New York market and increased interest payments on Government securities.

BANK INVESTMENT IN UNITED STATES GOVERNMENT SECURITIES

Since last October commercial banks have obtained nearly all of their increased holdings of Government securities by purchases in the market rather than by subscriptions

for new issues. The only new offerings available for bank purchase were a limited amount of securities purchasable during the Fourth War Loan Drive by commercial banks with time deposits and beginning in May an increase in weekly offerings of Treasury bills to 1.2 billion dollars, compared with maturing issues of 1.0 billion. During the Fifth Drive banks with time deposits again are being permitted to purchase limited amounts of the new issues offered; the terms and conditions are set forth in the description of the offerings published on page 537 of this BULLETIN.

Recently commercial banks and the Federal Reserve Banks together have taken a much smaller proportion of the increase in the public debt than in previous periods when the financing program called for periodic offerings of securities to banks. In the first four months of this year, the banking system increased its holdings by an estimated 4.7 billion dollars of securities, representing a little more than a fourth of the 17 billion dollar increase in the direct and guaranteed debt of the Government. During the full calendar year 1943 revised figures show that commercial banks and the Federal Reserve Banks increased their holdings of United States Government securities by 23.8 billion dollars, or 42 per cent of the 57 billion increase in the debt. The corresponding percentage for 1942 was 49 per cent.

These figures indicate that considerable progress has been made through the war loan drives in the Government's program to finance the war to the largest extent possible outside of the banking system. Thus, if the record of the first third of the year continues, or is improved upon, the proportion of the increase in the debt taken by nonbank investors will have increased

from about one-half of the total growth in 1942 to approximately three-quarters.

Most of the recent additions to commercial bank holdings of Government securities occurred during the Fourth War Loan Drive. Such purchases are associated in part with the readjustment of investment positions by individuals and nonbanking businesses, who sell outstanding issues prior to entering subscriptions for new securities offered during drives. Some of the securities that banks acquire during war loan drives come from the Federal Reserve System open-market account or are bills which had previously been sold to the Reserve Banks on option account. The banks' reserve needs decline because of the shift of funds from customers' deposits, against which reserves are required, to reserve-exempt Government war-loan deposit accounts. The banks put some of the free reserves to use by purchasing securities from the Reserve Banks.

Following the Third and Fourth War Loan Drives the aggregate holdings of commercial banks and the Federal Reserve System have tended to be relatively constant. There has been, however, a shifting of securities from member banks to Federal Reserve System account. A part of this movement results from the growth in required reserves that accompanies the shifting of deposits from exempted war loan balances to private accounts, but the most important and persistent factor accounting for Federal Reserve purchases is the continued expansion of currency in circulation, which draws both deposits and reserves from banks.

Weekly fluctuations in holdings of various kinds of Government securities by member banks in leading cities and by Federal Reserve Banks are shown in the chart. Holdings of other banks not shown

have not varied as widely as those of the weekly reporting member banks and have shown a continued and more pronounced increase. It will be noted that most of the current fluctuations in the reporting banks' holdings are in Treasury bills. These changes reflect adjustments in reserve positions and correspond generally to opposite movements in Reserve Banks' holdings of bills. Changes in holdings of bonds, notes, and certificates reflect principally new offer-

NOTE.—Member bank figures are for weekly reporting banks in 101 leading cities. Latest figures are for May 17.

ings, retirements of maturing issues, and market purchases at times of war loan drives. The Reserve Banks have also gradually increased their certificate holdings in the past year.

The increase in Government security holdings by Federal Reserve Banks between the close of the Fourth War Loan Drive in February and the opening of the Fifth War Loan Drive in June is in excess of 3 billion dollars, balancing increases

of 1.5 billion in currency and of almost as much in required reserves of member banks and some decline in gold stock. During the Fifth Drive, as in the Third and Fourth, member banks will again have increased reserves available for temporary use and will probably repurchase some bills from the Reserve Banks or absorb a greater proportion of the new bill issues. There will also be some increase in excess reserves. In the Fourth War Loan Drive, Reserve Bank holdings declined by more than half a billion dollars while excess reserves of member banks temporarily increased by about 300 million dollars. During the Second and Third Drives increases in excess reserves had been much larger. The magnitude of the changes during the Fifth War Loan Drive will depend on the extent to which banks employ the excess reserves that tend to pile up during that period.

DECLINE IN BANK LOANS

Bank loans, which increased in the early years of the defense program and declined in 1942 and early 1943, have shown rather wide fluctuations during the past year. The early increase was in commercial and industrial loans, made to finance business expansion not only in defense industries but in industry and trade generally. The subsequent contraction of bank loans reflected a liquidation of about 6 billion dollars in nonwar loans, including both those for business purposes and those made directly or indirectly to finance consumer credit. War loans have continued to increase, and in the past six months the decline in consumer credit has been much slower than previously.

Most of the variations in loans during the past year seem to have been associated with the war loan drives. Loans to brokers and

dealers, as well as to others, for purchasing and carrying United States Government securities increased sharply during the drives and were reduced somewhat between drives. In addition, during the Third Drive last autumn, there were substantial increases in commercial loans, as shown on the chart. The concentration of these increases in the period of the drive suggests that they were associated to some extent with the drive. Whether they represented

NOTE.—Weekly reporting member banks in 101 leading cities. Commercial loans include open-market paper. Other loans include real estate loans and "other" loans. Total loans include loans to banks, not shown separately. Latest figures are for May 17.

credit to replenish balances depleted by heavy purchases of Government securities or were extended more or less directly for such purchases can not be determined, but these credits had not been liquidated to any extent by the year-end.

During the Fourth War Loan Drive there was no similar increase in commercial loans and recently there has been a rather sharp decline in such credit. Loans both to brokers and dealers and to others for

purchasing and carrying Government securities increased over the drive but subsequently virtually all of this advance was wiped out. Loans to brokers and dealers prior to the opening of the Fifth War Loan Drive were below the early January level and loans to others for these purposes had returned to about that level. This is the result presumably of considerably less speculative purchasing of securities during the Fourth War Loan Drive. Both types of these loans, however, continue higher than they were last summer.

FULLER INVESTMENT OF BANKS

The decline in excess reserves of member banks, which has been in progress since early in 1941, continued into the first quarter of 1944. Not only are excess reserves lower but most banks have reduced their balances due from other domestic banks, particularly since the first of this year. These changes show that banks are gradually moving toward a policy of fuller investment. This movement has progressed by successive stages, with the largest money market banks having made the first complete move to this basis. The banks in other centers, as represented by reserve city banks, followed soon after, but only recently have country banks shown a clear movement in this direction. The chart shows changes in the holdings of reserves and of balances due from other banks for the important classes of banks.

Excess reserves at New York City banks showed a sharp decline in 1941, and since early 1943 both New York City and Chicago banks have been operating without excess reserves. New York City banks have virtually no balances due from banks and Chicago banks have only a moderate volume. Reserve city banks also reached their peak of excess reserves at the begin-

ning of 1941 but they continued to hold substantial amounts of excess reserves until recent months, and their balances with correspondents, which are a relatively important part of their funds, did not begin to decline materially until 1943. By the end of 1943, however, these banks had sub-

NOTE.—Total reserves and required reserves are monthly averages of daily figures. Balances due from banks are call date figures through December 1942 and monthly averages of daily figures thereafter. Reciprocal bank balances and amounts due from private banks and American branches of foreign banks are included to June 1942 and excluded thereafter. Reserve-requirement percentages were raised for all classes of member banks on Nov. 1, 1941, and were lowered at central reserve city banks on Aug. 20, Sept. 14, and Oct. 3, 1942. U. S. Government war-loan deposits were exempted from reserve requirements on Apr. 13, 1943.

stantially reduced their balances due from other banks and in addition brought their excess reserves to relatively low levels. This movement has continued in 1944.

At country banks reserves held continued to increase more rapidly than amounts required during 1942 and excess reserves

reached their peak in the early months of 1943. Balances maintained by country banks with city correspondents, which had increased sharply through the late 1930's, continued to increase until the end of 1942. During the later months of 1943 and early 1944 excess reserves declined somewhat, but continued large relative to any period before 1940. Balances due from banks have also declined, especially in 1944, but they are still higher than at any time before 1941. Comparisons of member bank figures of amounts due to and amounts due from other domestic banks, show a decline in the net balance due to banks in recent months, indicating that nonmember banks also are making fuller use of available funds.

Although member banks have steadily increased their holdings of Government securities and an increasing number of them have come to operate on a full investment basis, a great many banks still have larger cash holdings than banks customarily held before the past decade. This is no doubt in part a matter of policy on the part of some banks, based on their appraisal of possible needs for cash. In part, however, it is the result of the distribution of funds throughout the country, whereby many banks obtain new deposits and reserves almost as fast as they can invest them.

Banks or their customers purchase Government securities and when the funds are transferred elsewhere by Treasury calls on war loan balances and subsequent expenditure, some banks recover more deposits than they lose through Treasury calls and currency demands and some recover less. Among those banks that recover less, the ones without excess reserves meet the resulting drain on their reserves by selling securities to the Reserve Banks. Through this process additional reserves are made

available to other banks. Net withdrawals of funds from banks with excess reserves, on the other hand, are likely to result in a decline in bank reserves and no increase in Reserve Bank security holdings.

In recent weeks Treasury withdrawals from war loan accounts and the growth in currency in circulation have made it necessary for the Reserve Banks to increase their security holdings in order to maintain reserves of many banks at the required level. At times, particularly at the end of March and again at the end of April, there were temporary sharp declines in excess reserves associated with unexpectedly large income tax collections by the Treasury. These declines reflected losses of funds by banks which had excess reserves and were in a position to meet the withdrawals without selling securities to the Reserve Banks. The general trend in excess reserves through their various fluctuations has been toward lower average levels.

CREDIT POLICY AND WAR FINANCE

It appears that in general bankers are coming to recognize that they can rely on their portfolios of short-term Government securities as liquid reserves, and are permitting excess reserves and balances due from banks to decline. This development is consistent with the over-all objectives of war finance. While the primary object has been to sell as large a part of the new Government debt as is possible to non-banking holders, it is nevertheless necessary for banks to absorb the residual amount. Credit policy in wartime is circumscribed by the necessity, on the one hand, of providing sufficient reserves for banks to purchase such securities as are not sold to other investors and, on the other, of restricting bank reserves so as not to induce banks to be active competitors

for the securities that might otherwise be purchased by nonbanking businesses and individuals. It is necessary that banks be in a position to purchase out of funds on hand or easily and assuredly accessible, and to hold, such United States obligations as are offered to them; at the same time it is important to prevent excessive ease in the market conducive to unnecessary security purchases by banks.

Both of these objectives seem to be well within reach. Nonbanking investors have been taking an increasing proportion of the

debt, and business concerns have shown less disposition to accumulate cash and deposits. Consequently there is a reasonable prospect that the financing requirements of the Government will be met in still larger part from individual and business savings rather than through extension of bank credit. In this event, additional Government security purchases by the Reserve Banks will be largely for the purpose of meeting currency demands rather than to support further expansion in bank credit and deposits.

PROPOSAL FOR GUARANTEE OF INDUSTRIAL LOANS BY FEDERAL RESERVE BANKS

The Baruch-Hancock Report on War and Postwar Adjustment Policies of February 15, 1944, recommended "as a permanent source of credit for small and medium-sized enterprises on a basis of broader risks than banks can be expected to assume, that the Federal Reserve System's authority to make industrial loans or commitments be expanded and liberalized. These loans should be made in such a way as to supplement, not compete with, private investment, for which enormous funds are available."

Companion bills, which would carry this recommendation into effect, were introduced on May 15, 1944, by Senator Wagner, Chairman of the Committee on Banking and Currency of the Senate, and by Representative Spence, Chairman of the Banking and Currency Committee of the House of Representatives. In introducing the measure, Senator Wagner had an explanatory statement with respect to the plan inserted in the Congressional Record. The text of this statement is as follows:

In the shift of production from war goods to civilian goods, many business enterprises will find themselves in need of additional funds to finance their operations. This need is imminent since the changing requirements of the armed services are necessitating a growing volume of cancellations and curtailments. The need will become much more extensive when the volume of production for war declines at the time of armistice, whether on one front or both fronts, and the volume of civilian production needs to be increased accordingly. While it can be expected that after the settlement of war contracts American business as a whole will have a greater volume of liquid assets than ever before, this condition will not be uniform. Numerous enterprises will not be able to resume peacetime operations without financial assistance, in many cases beyond that available from private sources upon terms which will meet the borrower's requirements. Among such concerns will be those which have invested heavily in plant facilities and equipment in relation to their

cash position, those who propose to change the type of product previously manufactured, and those that have had no war contracts and have suffered drastic curtailment during the war. Again, some contractors, in order to avail themselves of a favorable opportunity for purchasing Government-owned facilities and inventory, may require a larger amount of credit than can be obtained upon terms customarily granted by banks. Such situations may occur before settlement of canceled contracts as well as thereafter.

In these and other circumstances, some degree of financial assistance from the Government will be necessary to encourage private financing institutions to extend the type of credit indicated if the production of such businesses is not to be curtailed or entirely lost. It is important, therefore, that some governmental agency be given the authority now to facilitate the extension of credit in the situations indicated, during the period of cancellations of war contracts as well as during the reconversion period and thereafter. It would be highly preferable that the agency so empowered should be permanent in character and should have no incentive to compete with private lending institutions. Agencies which are set up for the exclusive purpose of extending Government credit have a tendency to maintain the volume of their business even after the need for such credit may have declined. Therefore, to guard against competition with private financing institutions and to insure the tapering off of operations of the agency whenever conditions warrant, it is proposed to give this responsibility to the Federal Reserve System, which has permanent functions other than the loaning of money and is interested in maintaining private banking and credit on a sound basis.

Limited authority of Federal Reserve Banks under present law. Under section 13b of the Federal Reserve Act, the Federal Reserve Banks are authorized to make credit available to business enterprises, either directly when such credit is not otherwise available or through participation with commercial banking institutions. Such loans, however, may be made only for the purpose of providing working capital, must have maturities not exceeding five years, and may be provided only for established businesses. Be-

cause of such restrictive provisions of the statute, the Federal Reserve Banks have not been able to make credit available to many deserving business enterprises; nor would they be able to assist to an important degree in financing such enterprises henceforth.

Authorization to Federal Reserve Banks to guarantee loans. In order to remedy these defects in the present law and to meet the need described above, it is proposed that, in lieu of the existing authority of the Federal Reserve Banks to make loans to business and industry under the restrictions noted, these banks be authorized to guarantee financing institutions against loss on loans made to business enterprises or to make commitments to purchase loans so made. Such guarantees and commitments by the Federal Reserve Banks would be available in proper cases to any financing institution, whether or not a member bank of the Federal Reserve System. The procedure followed in making such loans and guarantees would be generally similar to that which has been used in financing war production under the V loan program. However, a Federal Reserve Bank would execute the guarantees as principal and not as fiscal agent of the Government. A borrower would be expected to apply for such a loan through his usual banking connection. The bank would in turn make application to the Federal Reserve Bank of its district for the guarantee. General regulations governing the policy and procedure relating to the program would be issued by the Board of Governors of the Federal Reserve System.

Qualifications of the System for the task. The twelve Federal Reserve Banks and their twenty-four branches are in a position to extend this service economically and efficiently. The officers and employees of the Federal Reserve Banks have gained wide experience in administering the V loan program, in addition to that gained since 1934 in making loans to business enterprises under the existing provisions of the law. Financing institutions and borrowers alike are familiar with the services of the Federal Reserve Banks in this field. The authority to guarantee loans to business enterprises, therefore, could be put into effect without delay and the credits consummated expeditiously. Moreover the Federal Reserve System has important responsibilities in the credit field and in the supervision of banks and, since the loans in all cases would be made by private banking institutions, the guaranteeing of such loans by the Reserve Banks would not be competitive with the private banking system.

Such guarantees would be available for any types of loans made by financing institutions to business and industry, to meet situations of the various kinds referred to in the first part of this statement. Such loans could be made on a short-term or long-term basis and to provide either working capital or facilities. They would assist both in the financing of the resumption of peacetime operations and thereafter in meeting the needs of deserving business enterprises which can not be adequately supplied by private credit agencies without some degree of assistance.

It is contemplated that the guarantees by the Reserve Banks under this authority would not exceed 90 per cent of the amount of the credits, since any enterprise which has reasonable prospects of successful operation should be able to obtain financing in which its bank assumes at least 10 per cent of the risk under the loan.

Fund for meeting losses. Being banks of issue, the Federal Reserve Banks could not be expected to utilize any large proportion of their own funds in making credit of this kind available without some protection against losses which might be incurred. There is, however, a fund which can be made available for use in meeting losses incurred by the Reserve Banks in guaranteeing loans, without any new appropriation by Congress.

The Secretary of the Treasury is authorized by existing law to pay to the Federal Reserve Banks approximately 139 million dollars (the amount which these banks were required by law in 1933 to subscribe for stock of the Federal Deposit Insurance Corporation) for the purpose of enabling the Reserve Banks to make loans to business and industry. This amount has already been appropriated by Congress for this purpose. Under this existing authority approximately 27 million dollars has been paid. The proposal would require the payment of the remaining 112 million of this appropriation to the Board of Governors and also would require the Federal Reserve Banks to pay to the Board the approximately 27 million which they have heretofore received from the Secretary of the Treasury under the present authority. The entire amount thus paid to the Board would constitute a fund to be utilized to provide for losses incurred by the Federal Reserve Banks in connection with loans to business and industry. The Board would have authority to invest any part of this fund not currently needed in obligations of the United States, and any income derived from such investments would be added to the fund and thus become available to meet losses on guaranteed loans. The stock of the

Federal Deposit Insurance Corporation heretofore subscribed for by the Federal Reserve Banks would be transferred to the United States.

The use of this fund in this way, it is estimated, would permit guarantees of loans in an aggregate amount outstanding at any one time of at least one-half billion dollars.

The bills S. 1918 and H.R. 4804, which were introduced in the Senate and House, respectively, on this subject, are identical. The text of these bills is as follows:

A BILL to amend section 13b of the Federal Reserve Act, as amended.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 13b of the Federal Reserve Act, as amended, is amended to read as follows:

"SEC. 13b. (a) Each Federal Reserve bank is authorized (1) to guarantee a financing institution against loss of principal or interest on any loan made to a business enterprise and (2) to make commitments to purchase and thereafter to purchase from a financing institution any loan made to a business enterprise.

"(b) Each Federal Reserve bank shall pay to the Board of Governors of the Federal Reserve System, upon request of the Board, the aggregate amount which the Secretary of the Treasury has heretofore paid to such bank under the provisions of this section. The amount of \$139,299,557 (the amount which was paid by the Federal Reserve banks for stock of the Federal Deposit Insurance Corporation), less all amounts heretofore paid to the Federal Reserve banks by the Secretary of the Treasury under the provisions of this section, shall be paid by the Secretary of the Treasury to the Board upon its request; and for the purpose of enabling the Secretary of the Treasury to make such payment, the unexpended balance of the appropriation made by the last sentence of subsection (e) of this section as originally enacted by the Act of June 19, 1934, and now carried on the books of the Treasury under the title 'Payments to Federal Reserve banks for industrial loans (sec. 13b, Federal Reserve Act, as amended)' is hereby made available. All amounts paid to the Board under this section shall constitute a fund which shall be utilized by the Board, on such basis as the Board may deem proper, to provide for losses (which may in the Board's discretion in-

clude expenses to the extent not covered by earnings) heretofore or hereafter incurred by Federal Reserve banks through operations under this section. From time to time the Board shall make payments out of such fund in such sums and to such Federal Reserve banks as the Board may deem necessary to provide for any such losses. The Board may deposit all or part of such fund with any Federal Reserve bank, subject to the Board's order, and may, in its discretion, invest any part of such fund not currently needed for the purposes of this section in obligations of the United States or obligations fully guaranteed by the United States as to principal and interest; and any income derived from such investments shall be added to and become a part of such fund. The determination of the existence and amount of any loss incurred by a Federal Reserve bank through operations under this section shall be made by such bank with the approval of the Board. Whenever a payment has been made under this section to a Federal Reserve bank to reimburse it for any loss, any amount subsequently recovered by such bank which reduces the amount of the loss for which such bank has received reimbursement shall be paid to the Board and shall become a part of such fund.

"(c) The stock of the Federal Deposit Insurance Corporation heretofore subscribed for by and issued to each Federal Reserve bank is hereby transferred to the United States. The certificates of stock of the Federal Deposit Insurance Corporation heretofore issued to the Federal Reserve banks shall be surrendered and canceled and appropriate evidence of the ownership of such stock by the United States shall be issued by the Corporation to the Secretary of the Treasury. Neither the Board nor any Federal Reserve bank shall hereafter have any obligation or liability to the United States or to the Secretary of the Treasury by reason of this section, as heretofore or now existing, or by reason of any action pursuant thereto.

"(d) All actions and operations of the Federal Reserve banks under this section shall be subject to such regulations, limitations, and conditions as the Board of Governors of the Federal Reserve System may from time to time prescribe.

"(e) The provisions of the Securities Act of 1933 shall not apply to any obligation evidencing a loan all or part of which is guaranteed or is the subject of a commitment pursuant to the provisions of subsection (a) of this section."

FIFTH WAR LOAN DRIVE

The Fifth War Loan Drive to raise funds from nonbank investors for the financing of the war will begin on June 12 and extend through July 8. The over-all goal for this drive has been set at 16 billion dollars, and the goal for individuals at 6 billion. Both goals have been increased over those of previous drives. In the Fourth Drive the total goal was 14 billion dollars and the goal for individuals was 5.5 billion.

Major emphasis throughout the drive will be placed on raising funds from individuals. The total goal for the Fourth Drive was over-subscribed by 2.7 billion dollars, but individuals subscribed for 200 million dollars less than the 5.5 billion goal at that time. Nevertheless, the goal for individuals in the Fifth Drive has been increased to 6 billion dollars, which is 700 million larger than total subscriptions by individuals in the Fourth Drive. The increased emphasis on sales to individuals and the establishment of higher goals call for greater efforts on the part of everyone connected with the drive.

Although subscriptions will be received from all nonbank investors during the entire period of the drive, from June 12 to June 26 reports on the progress of the drive will cover only sales to individuals. From June 26 to July 8, the campaign to sell securities to individuals will be supplemented by an intensive campaign for subscriptions from all other nonbank investors. A final report on the drive will not be available until the close of July, since all subscriptions for savings bonds and savings notes processed by the Federal Reserve Banks and by the Treasury Department during the two months of June and July will be accredited to the drive. This continues the practice established in the Fourth Drive.

The issues included in the drive consist of Series E, F, and G savings bonds, Series C savings notes, 2 and 2½ per cent Treasury bonds, 1¼ per cent Treasury notes, and ⅞ per cent certificates of indebtedness. The issues provide for long- or short-term investment needs of all

classes of nonbank investors. This is the first time that Treasury notes have been offered in a war loan drive, and it is expected that they will prove attractive to corporations for investment of short-term funds.

The three issues of savings bonds and the savings notes will be dated the first of the month in which purchased. The marketable issues, except the 2½ per cent bonds, will be dated June 26. The 2½ per cent bonds were originally issued in the Fourth Drive and were dated February 1, 1944. These bonds sold during the Fifth Drive will constitute an additional offering of the issue dated February 1, but will accrue interest from June 26 and will have a special coupon attached covering interest accruing between June 26 and September 15, 1944. These bonds are callable March 15, 1965, and mature March 15, 1970. Commercial banks are not permitted to own these bonds until February 1, 1954, except for the limited investment of time deposits. The 2 per cent bonds are callable June 15, 1952, and mature June 15, 1954. The 1¼ per cent notes mature March 15, 1947, and the ⅞ per cent certificates mature June 1, 1945.

In order to avoid unnecessary transfers of funds from one locality to another during the drive, the Treasury has again requested that all subscriptions by corporations and firms be entered and paid for through banking institutions where the funds are located. Statistical credit for subscriptions will be given to localities that the subscribing corporations and firms may designate. Subscriptions by insurance companies will be credited to the State of the home office, as in the past.

The Treasury has again asked the cooperation of all banks in declining to make speculative loans for the purchase of Government securities in order to minimize the amount of indirect participation by commercial banks in the Fifth War Loan. One of the primary objectives of the war loan drives is to obtain the largest amount of funds possible outside the banking system in order to reduce the amount of securities that

the Government will need to sell to commercial banks. The purchase of securities in war loan drives for the purpose of resale to commercial banks following the drives is not in keeping with this important objective of the Government's financing program. On the other hand, the Treasury approves of bank loans to enable investors to purchase securities in anticipation of income, provided that the loans are on a short-term or amortization basis and are to be fully repaid within six months.

As in the case of the Fourth War Loan Drive, dealers and brokers in securities are requested to limit the amount of their subscriptions in the drive to the amount of securities which they will be able to retail to customers, other than commercial banks, for investment after the drive has closed, plus the amount required for the investment of their own funds. Generally speaking, the volume of purchases for subsequent resale to customers should be small regardless of the

size of the investment firm, as most customers will have ample opportunity to subscribe during the drive.

Commercial banks have been excluded from the drive. Concurrently with the drive, however, but not counted against the goals, commercial banks having time deposits will be permitted to subscribe in limited amounts to the 2 and 2½ per cent bonds and to Series F and G savings bonds. The limit, including subscriptions to 2¼ and 2½ per cent bonds during the Fourth War Loan and purchases of Series F and G savings bonds on and after January 1, 1944, will be 20 per cent of the bank's savings deposits and time certificates of deposits of individuals and nonprofit corporations and associations, but not more than \$400,000 for any one bank. Not more than \$100,000 of such subscriptions may consist of Series F and G savings bonds singly or in combination.

CURRENT EVENTS

Federal Reserve Meetings

The Federal Open Market Committee met in Washington on May 4, 1944.

A meeting of the Chairmen of the Federal Reserve Banks was held in Washington on May 10-11, 1944.

The Federal Advisory Council held a meeting in Washington on May 14-15 and met with the Board of Governors on May 15, 1944.

Admissions of State Banks to Membership in the Federal Reserve System

The following State banks were admitted to membership in the Federal Reserve System during the period April 16, 1944, to May 15, 1944, inclusive:

Arkansas

Brinkley—Bank of Brinkley

Kentucky

Hopkinsville—First-City Bank & Trust Company

Missouri

Warsaw—Osage Valley Bank

Webb City—Webb City Bank

New York

Johnstown—The Peoples Bank of Johnstown, N. Y.

Manlius—Bank of Manlius

Monroe—Citizens Bank of Monroe

Oyster Bay—North Shore Bank Trust Company

Ohio

Oakwood—The Oakwood Deposit Bank Company

Pennsylvania

Derry—Fidelity Deposit Bank of Derry

Texas

Brownsville—Pan American State Bank

West Virginia

Mullens—The Peoples Bank of Mullens

Wisconsin

Racine—American Bank and Trust Company

Wyoming

Hanna—Hanna State & Savings Bank

CORRESPONDENCE

Measurement of Factors Influencing the Volume of Deposits and Currency

QUESTION: Since changes in bank deposits are influenced not only by changes in the volume of loans and investments, but also by gold movements, by advances and security sales and purchases by the Federal Reserve Banks, and by other factors, is it possible to set up a balancing statement showing the sources of the volume of deposits and currency?

ANSWER: It is possible to put together in a comprehensive balanced statement figures representing the various items that affect the amount of bank deposits and currency. Such a statement would be based on a consolidation, with elimination of duplications, of statements of the Treasury, the Federal Reserve Banks, all commercial banks, and possibly mutual savings banks, and the Postal Savings System. These include all agencies that accept deposits or issue currency. When other financial agencies obtain funds they do so by selling securities to

the public and obtaining existing money (deposits or currency) in exchange, or by selling securities to, or borrowing from, certain of the agencies listed.

To compile such a statement in an accurate and systematic fashion would not only be a large and detailed technical task but would also presume a degree of accuracy in some of the underlying statistics that does not in fact exist. It is, however, possible to frame a simple statement which covers the principal items that account for most of the changes.

Such a statement follows. It covers two periods: (1) 1938-1940, when the growth in bank deposits and currency was based more largely on the gold inflow than on credit expansion; and (2) 1941-1943, when there was a large expansion in deposits and currency based on credit expansion, or, more specifically, on bank purchases of Government securities.

DEPOSITS AND CURRENCY IN UNITED STATES AND PRINCIPAL FACTORS AFFECTING THEIR VOLUME
[In millions of dollars]

Item	Dec. 31, 1937	Dec. 31, 1940	Dec. 31, 1943	Change Dec. 31, 1937- Dec. 31, 1940	Change Dec. 31, 1940- Dec. 31, 1943

¹ Loans and investments of Federal Reserve Banks, commercial and mutual savings banks, and the Postal Savings System, less bank borrowing.

² The difference between these net figures and the totals shown below result from several small unenumerated items, mainly miscellaneous bank assets and liabilities and differences between deposits due to and due from banks.

NATIONAL SUMMARY OF BUSINESS CONDITIONS

Compiled May 20, and released for publication May 23. Figures shown on charts may differ from preliminary figures used in text.

Industrial production and employment at factories and mines declined somewhat further in April, reflecting principally reduction in output of metal industries. The number of industrial wage earners was about 6 per cent or 800,000 less than in November 1943.

INDUSTRIAL PRODUCTION

The Board's seasonally adjusted index of output in manufacturing and mining industries was at 240 per cent of the 1935-39 average in April, as compared with 242 in March and 245 in February.

Federal Reserve indexes. Groups are expressed in terms of points in the total index. Monthly figures, latest shown are for April.

Small declines in output of metals and metal products continued to account for most of the decrease in industrial production. Electric steel production decreased further in April to a level 5 per cent below the same month last year. Production of most nonferrous metals declined, reflecting partly planned curtailments and partly the effects of labor shortages in mines and smelters. A further curtailment of aluminum production was announced in May. Activity at plants producing munitions in the machinery and transportation equipment industries declined somewhat in April. Production under

the farm machinery program continued to increase and was reported at a rate above the highest volume recorded in any peacetime year.

Output of nondurable manufactured goods showed little change in April. Activity at cotton mills was maintained at the level of recent months, approximately 15 per cent below the peak level of April 1942. As a measure to increase production, a 48-hour work week was ordered in the cotton textile industry, effective May 14.

The number of animals slaughtered continued at an exceptionally high level in April, and effective May 3 most meat products were removed from rationing. Output of dairy products continued to rise seasonally and supplies available for civilians increased.

Mineral production was maintained in large volume in April. Production of both bituminous and anthracite coal for the year through May 6 was approximately 5 per cent more than in the same period in 1943.

Crude petroleum production in April continued at a level about 12 per cent above a year ago. Mine production of iron ore showed a large seasonal rise, reflecting the opening on April 10 of the season for lake shipments.

DISTRIBUTION

Department store sales declined in April and, after allowance for usual seasonal changes, were about 10 per cent below the high level which prevailed in the first quarter of this year. In the first half of May sales were maintained and were considerably larger than in the corresponding period of 1943.

Carloadings of railroad freight in April and the first half of May were maintained in large volume. Grain shipments continued to decline from the exceptionally high levels of January and February. Ore loadings increased sharply in April and were 60 per cent greater than a year ago.

NATIONAL SUMMARY OF BUSINESS CONDITIONS

COMMODITY PRICES

Wholesale prices of most commodities showed little change from the middle of April to the third week of May. Prices of farm products and foods were slightly lower, while maximum prices of some industrial commodities were raised.

The cost of living index advanced one-half per cent from mid-March to mid-April, reflecting higher retail prices for foods and furniture and increased excise taxes effective April 1.

BANK CREDIT

From the end of the Fourth War Loan Drive in the second week of February through the middle of May, demand deposits of individuals and businesses at weekly reporting banks increased by about 3 billion dollars. Time deposits also increased appreciably. During the same period war-loan accounts at reporting banks declined by more than 6.5 billion dollars. Holdings of U. S. Government securities by these banks declined by about 2 billion dollars and loans contracted by more than 1.5 billion dollars. A large part of the loan decline was the liquidation of credits extended during the war loan drive. Loans to brokers and dealers are now less than

they were before the Fourth War Loan Drive and loans to others for purchasing and carrying U. S. Government securities are down to about predrive levels. During the same period commercial loans also declined rapidly.

Sales of U. S. Government securities by commercial banks were paralleled by equivalent purchases by the Federal Reserve System. System holdings are now about 2.5 billion dollars larger than they were at the end of the Fourth War Loan Drive. These purchases were made to supply member banks with reserve funds needed to meet a continued increase in currency and the growth in required reserves which resulted from shifts of deposits from Treasury war-loan accounts to other accounts. Some of these needs have been met by a decline in excess reserves. Sharp declines in excess reserves at the end of March and April were associated with unexpectedly large tax receipts and the building up of Treasury balances at Reserve Banks. Currency in circulation, which increased somewhat less rapidly during the first quarter of 1944 than in the same period last year, renewed its rapid outflow late in April and during early May. In the four weeks ending May 17 the currency outflow was over 500 million dollars.

WHOLESALE PRICES

Bureau of Labor Statistics' indexes. Weekly figures, latest shown are for week ending May 20.

MEMBER BANK RESERVES AND RELATED ITEMS

Wednesday figures, latest shown are for May 24.

REVISED INDEX OF DEPARTMENT STORE SALES

The Federal Reserve System indexes of department store sales have been revised for the period from 1919 to date. This revision represents the joint work of the Board's Division of Research and Statistics and the research departments of the twelve Federal Reserve Banks. The principal features of the revision are:

(1) Indexes for each of the twelve Federal Reserve districts have been compiled on a simi-

NOTE.—This revision of the national index of department store sales was conducted by Richard Youngdahl under the general supervision of John O. Bergelin, head of the Regional Research Section of the Board's Division of Research and Statistics. Mr. Youngdahl also worked closely with the Federal Reserve Banks in the development of the general procedures followed and in the revisions of the various district indexes.

lar basis and the national index has been computed by combining the twelve district indexes on the basis of the relative importance of sales in each district in the base period.

(2) The average of the years 1935 to 1939, inclusive, has been used as the base period for these indexes.

(3) The sample of reporting stores in each district has been enlarged, in some instances considerably.

(4) The district indexes, and consequently the national index as well, have been adjusted to conform to the changes indicated by comprehensive Census data for the years 1929 and 1939 and similar adjustments will be made in the future as benchmark data become available.

DEPARTMENT STORE SALES

(5) The indexes have been adjusted for customary seasonal movements which, in the case of department store sales, are extremely large.

Each district index has been computed by the research department of the Federal Reserve Bank in that district, following a general procedure worked out by Reserve System representatives, and the national index has been computed by the Board's Division of Research and Statistics. The following sections discuss the general procedures followed, with particular reference to the computation of the national index. Detailed descriptive material for each of the district indexes has been prepared by the research departments of the various Federal Reserve Banks and may be obtained from them upon request. Tables giving back figures and the seasonal adjustment factors used currently for the indexes are shown at the end of this article.

DEPARTMENT STORE SALES IN RELATION TO TOTAL RETAIL SALES

Department store sales constitute approximately 10 per cent of total retail sales and, as is indicated in the accompanying chart, show movements from year to year that are roughly similar to those of total retail sales. This general correspondence in movement reflects the fact that department stores carry a broad line of merchandise, including both durable and non-durable consumers' goods. However, some items important in total retail trade, notably automobiles, building materials, and foods, are barely represented in department store sales. Quantities and prices of these goods not sold at department stores change quite differently in some periods from those for department store merchandise and, consequently, marked differences develop between the levels of department store sales and those of retail sales generally. In the period from 1929 to 1933, for example, sales of automobiles and building materials decreased considerably more than department stores sales and this accounted in large measure for the greater decline shown by total retail sales. Food prices declined considerably in

these years but the quantities of food sold were largely maintained so that sales of food, measured in dollar values, showed about the same decline as department store sales. Conversely, in 1942 and 1943, when production of automobiles for civilians was discontinued and gasoline rationing was instituted, sales at department stores showed a greater rise than total retail sales. In this period food prices increased rapidly and the value of food sales rose more than did department store sales so that the difference between movements of department store sales and those of total retail sales were less marked than would otherwise have been the case.

TOTAL RETAIL SALES AND DEPARTMENT STORE SALES

Total retail sales: Department of Commerce index. Figures for the years 1930-1932 and 1934 are not available. Department store sales: Federal Reserve index.

Another factor accounting for the greater increase in department store sales in 1942 and 1943 has been that department stores have been in a better position to shift from items such as household appliances and the like, which are no longer obtainable in any substantial quantity, if at all, to other commodities, which are still being manufactured. Ordinarily, sales of women's and misses' apparel and accessories account for about 40 per cent of total department store sales; home furnishings, about 25 per cent; men's and boys' wear, about 10

per cent; and other commodities, such as dry goods, drugs and cosmetics, toys and sporting equipment, and the like, about 25 per cent of the total. In the past year or two these proportions have changed as a result of wartime developments. Sales of women's apparel and accessories have increased while those of house furnishings and men's clothing have declined appreciably in importance.

THE REPORTING SAMPLE

According to the 1939 Census of Business, there were in that year 4,051 department stores with total sales of over three and one-half billion dollars.¹ The new Federal Reserve System indexes are based on voluntary reports made by over 1,400 of these stores whose aggregate sales in 1939 amounted to over two and one-half billion dollars, or more than 70 per cent of the total.

The sample of reporting stores has been expanded to include the sales of a greater number of independent stores, as well as those of a representative group of the J. C. Penney Co. stores and of the retail outlets (but not including the mail-order sales) of Montgomery Ward and Co. and Sears, Roebuck and Co. From the standpoint of its geographical distribution, the present sample is well-balanced inasmuch as reports are now obtained from stores in virtually every department store trading area of importance. Moreover, the method of computing the national index, i.e., by combining the twelve district indexes in accordance with weights derived from comprehensive Census data, corrects for errors which might arise as a result of disproportionate coverage as among the districts.

In the sample on which the old national and district indexes were based sales by the J. C. Penney Co. stores and by the retail outlets of Montgomery Ward and Co. and Sears, Roebuck and Co. were inadequately represented. These indexes, therefore, tended to understate the

general level of department store sales over the past decade or more, inasmuch as during that period these companies expanded their operations generally throughout the country, opening a number of stores whose sales increased rapidly. This downward bias in the old index has been corrected in the present revision. The sample of J. C. Penney Co., Montgomery Ward and Co., and Sears, Roebuck and Co. stores now reporting sales to the Federal Reserve System appears to measure accurately the changes in the sales of all of the department stores owned by these companies and to give their total sales proportionate representation in the new sample for each district.

Although the number of small stores currently reporting sales to the Federal Reserve System is considerably larger than in earlier years, they are still under-represented in the present sample. This is evident from the fact that, while the stores included in the enlarged sample were but one-third of the total number of stores classified as department stores by the 1939 Census of Business, the sales by reporting stores in that year comprised over 70 per cent of the total department store sales in the country. However, the errors in the indexes resulting from inadequate coverage of the small department stores appear to be minor judging from the relatively small adjustments that were necessary to make the movements of sales by the reporting sample of stores conform to those shown by Census data which included the small stores. Generally speaking, it appears that in any particular locality the sales of these stores tend to move approximately as do the sales of the larger stores.

The sample of reporting stores is considerably larger than would ordinarily be needed to measure changes in department store sales on a national basis. It is necessary, however, for the Board of Governors and the Federal Reserve Banks to study not only national but district and local business developments as well and, in order to provide information on this basis, a much broader sample is required.

In recent years, when there have been marked

¹ These totals exclude the central distribution outlets which handle only catalog sales on a mail-order basis. There were 23 such outlets of 5 major companies included in published Census data for 1939.

REVISED INDEX OF DEPARTMENT STORE SALES

shifts in population, particularly in some of the smaller centers, the larger sample has proved to be extremely useful in providing an accurate measure of changes in sales both regionally and nationally. The larger sample also enables the System to provide cooperating stores with reports for areas in which they are particularly interested and to make information available to local organizations which are engaged in making economic surveys of their communities.

ADJUSTMENT TO CENSUS DATA

The twelve district indexes have been adjusted, when necessary, to reflect the changes in department store sales from 1929 to 1939 as indicated by Census data for those two years. A special tabulation of the department store sales data reported to the Bureau of the Census was prepared for the Board of Governors of the Federal Reserve System for this purpose. This tabulation showed sales by Federal Reserve districts, and by major cities within each district, excluding catalog sales by mail-order firms but including sales taxes so that the data would be comparable with those collected weekly and monthly by the Federal Reserve System.

It would have been desirable to establish benchmarks for years other than 1929 and 1939. Unfortunately, adequate Census data for each Federal Reserve district, with the exception of San Francisco, were not available for the intervening Census years and could not be obtained without a disproportionate amount of work. It may be noted, however, that the revised national index shows a very close correspondence to Census levels for the years 1935 and 1937, although not for 1933. In 1933 it appears that Census coverage was incomplete owing to the fact that reporting was not compulsory but was on a voluntary basis in that year. In the case of the San Francisco District it was possible, through supplemental information obtained by the Federal Reserve Bank and the use of various methods of correction, to obtain data for all of these Census years for use

as benchmarks for the monthly index of sales in the Twelfth Federal Reserve District.

COMPUTATION OF THE NATIONAL INDEX

The national index is an average of the twelve district indexes, each weighted according to the relationship of total department store sales in the district to the total for the country as a whole in the base period. Actual sales data for the base period years were not available but estimates were readily obtained by dividing the daily average Census sales figures for 1939 for each district by the corresponding 1939 annual index number which had the 1935-1939 average as a base. The resulting estimates of daily average sales in the base period were then used to compute the percentage which the sales in each district were of the national total in the base period. These percentages, shown in the table below, were used as weights throughout the period covered by the index and will be used in carrying the index forward. This procedure gives the same result as would be obtained by deriving estimates of the daily average dollar value of sales in each district in each month, adding these to obtain national totals, and then computing an index from the national dollar value totals so obtained.

COMPUTATION OF WEIGHTS

Federal Reserve district	Department store sales in 1939			Department store sales in 1935-1939 period	
	Total sales (Census data, in thousands of dollars)	Daily average sales (in thousands of dollars)	Annual index (1935-39 = 100)	Daily average sales Col. (2) ÷ Col. (3) (in thousands of dollars)	Percentage of United States daily average sales
	(1)	(2)	(3)	(4)	(5)
Boston.....	238,100	778	104.2	747	6.86

United States...	3,551,157	11,584	106.4	10,886	100.00

NOTE.—The figures shown for total sales in 1939 include sales taxes which were not included in Census figures previously published for that year.

COMPUTATION OF THE DISTRICT INDEXES

The majority of the district indexes are computed directly from the sales of a sample of department stores believed to be representative of total department store sales in the district. In some cases, however, district indexes are obtained by combining separate indexes for the various parts of the district. Generally speaking, the latter method is used when the economic character and development of the different sections of a district vary greatly, and when, therefore, it is particularly important that the department store sales experience of each area be proportionately represented in the total district index. In such cases the indexes are built up either from a number of individual city and area indexes (Atlanta and San Francisco Districts), from separate State indexes (Richmond District), or from a major city and an "all other district" index (Philadelphia and Minneapolis Districts).

The general procedure used in the computation of the district indexes, or the component parts of a district index, is as follows:

(1) The monthly sales of the stores included in the index sample were summed, and these monthly totals were then divided by the number of trading days in the month to obtain daily average sales. (For a discussion of the treatment of trading days, see below.)

(2) The daily average sales were converted to index numbers by dividing each by the daily average sales during the base period, 1935-39. Where necessary, this base was adjusted for changes in the number of reporting stores as follows:

When a department store previously in business began reporting its sales to a Federal Reserve Bank, the base was increased by the percentage which the sales of the new reporting store in the first reporting year were of the total sales of the old sample in that year. In the future, sales data for a new reporting store of this type will be included in the indexes at once if annual sales figures can be obtained for the previous year. If not, the store will be included in the sample as soon as it is believed that sufficient data are available to make a proper adjustment in the base.

When a reporting store discontinued reporting

but remained in business, the base was decreased by the percentage which the sales of that store bore to the total sales of the sample in the last year for which its reports were obtained.

When a new reporting store was not previously in business and if the coverage of the sample in the area was such as to make it likely that sales of the new store were either new department store sales or were sales which might otherwise have been made by the other reporting stores in the area, sales of this store were included in the current reporting sample and no adjustments were made in the base. If the coverage of the sample was such as to make this procedure improper, i.e., if the coverage was quite incomplete, an adjustment in the base was made in accordance with the best estimate of the statistician. Similarly, in cases where a reporting store went out of business, adjustments in the base were made or not made, depending upon the individual circumstances.

(3) The index so obtained was adjusted to 1929 and 1939 Census levels where this seemed necessary and appropriate.

(4) Seasonal adjustment factors were computed by the method generally used throughout the Federal Reserve System. This method was described in the Federal Reserve BULLETIN for June 1941. A special adjustment for the changing date of Easter, which has an important influence on department store sales, was also necessary. The method of determining this adjustment is described in a separate section below.

(5) Seasonally adjusted indexes were computed by dividing the indexes obtained in (3) above by the appropriate seasonal adjustment factors. In most cases where the total district indexes were obtained by combining separate indexes for various cities or areas within the district, each of the component series was adjusted for seasonal variation before being consolidated into a district index.

TRADING DAY ALLOWANCES

The Federal Reserve System's indexes of department store sales are measures of the level of daily average sales rather than of total sales in a given month or year. Through the use of daily average sales, obtained by dividing total sales for the period by the corresponding number of trading days, the fluctuations in the volume of sales resulting from calendar irregularities are largely eliminated. No single

nation-wide pattern is followed in computing the number of trading days, because trading habits and customs vary significantly from city to city and from district to district. In all districts, however, Sundays, New Year's Day, Memorial Day (except in the Atlanta and Dallas Districts), Independence Day, Labor Day (except in the Dallas District), Thanksgiving, and Christmas are considered as non-trading days.

Throughout the country the days of the week vary in importance as trading days. In certain districts, for example, an unusually large proportion of a week's sales is made on Saturday. In others various local trading practices, such as evening openings, and special buying habits peculiar to the area result in an especially large fraction of the week's sales being made on days other than Saturday. Just as, because of calendar irregularities, the various months do not have an equal number of trading days, so too do the various months include a differing number of the more important trading days. That is, some months will have five Saturdays, which are generally of greater than average importance as a trading day, while others will have only four. Moreover, the number of such days included in any given month varies from year to year. This set of circumstances raises a special problem inasmuch as the level of daily average sales in months having a greater number of the more important trading days will be overstated somewhat unless, in the determination of the number of trading days in a month, a special allowance is made for the varying importance of the days of the week.

Two different methods were used to evaluate the trading importance of the various days of the week. In some districts the reporting stores furnished the Federal Reserve Bank with special tabulations which showed directly or from which could be determined the proportion of total weekly sales made on each day of the week. In other districts the importance of particular days in the trading week was determined by use of a method developed by the staff of the Bureau of Foreign and Domestic Com-

merce. This method is described in the November 1943 issue of the *Survey of Current Business*.

In the Federal Reserve districts of Boston, Richmond, Chicago, St. Louis, Kansas City, and San Francisco the evidence clearly indicated that particular days are of special importance in the trading week, and appropriate adjustments were made in the determination of the number of trading days in each month. In most of these districts it was found that Saturday is the most important trading day, accounting for about one-fifth of the week's sales. Generally, adjustment for this was made simply by adding an extra one-third of a day to the actual number of trading days in months having five Saturdays. In the Richmond and San Francisco Districts, however, different allowances were used for each trading day of the week and the allowances varied also among the different areas in these districts for which separate indexes were computed. In the Federal Reserve districts of Atlanta and Dallas it was apparent that no trading day was of such particular importance that a special allowance was necessary. In the remaining districts (New York, Philadelphia, Cleveland, and Minneapolis) it was known that shopping habits had altered radically from time to time but, because data on which to base changing adjustments were not available, no special trading day allowances were used.

EASTER ADJUSTMENT FOR DEPARTMENT STORE SALES

Special adjustments have been made in the March and April seasonal adjustment factors to allow for changes in the date of Easter. These adjustments, which were made individually for each Federal Reserve district, were determined in the following manner:

(1) Preliminary seasonal adjustment factors which eliminated, so far as possible, seasonal fluctuations other than those caused by changes in the date of Easter were computed by the method described in the Federal Reserve BULLETIN for June 1941.

(2) A seasonally adjusted index was computed using these factors, and percentage

REVISED INDEX OF DEPARTMENT STORE SALES

changes in sales from March to April as indicated by this index were calculated for each year.

EASTER ADJUSTMENT IN DEPARTMENT STORE SALES
KANSAS CITY DISTRICT

(3) These changes were adjusted for short-term trend, i.e., they were lowered slightly when the general movement or trend of the seasonally adjusted index during the first half

of the year was upward and were raised slightly when the general movement was downward. The changes, thus adjusted for short-term trend, were plotted according to the date of Easter, as shown in the accompanying chart.

(4) A freehand curve was drawn through the resulting scatter chart. This shows the upward progression in the change from March to April as the date of Easter advances from the latter part of March to the latter part of April.

(5) For each year the percentage change which corresponded to the date of Easter in that year was read from the freehand curve and these figures were rounded to the nearest even whole number.

(6) The preliminary seasonal adjustment factors previously derived for March and April in (1) above were then adjusted for changes in the date of Easter by subtracting (algebraically) half of the selected percentage change from the March seasonal adjustment factor and adding (algebraically) half of the selected percentage change to the April seasonal adjustment factor. The total of the March and April adjustment factors is not changed by the Easter adjustment. In 1943, for example, when Easter fell on April 25, the percentage change on the freehand curve, read to the nearest even number, was +4; consequently the seasonal adjustment factor for March was lowered by 2 points and that for April was raised by 2 points.

¹ The factors for March and April vary considerably from year to year owing to changes in the date of Easter. The general method used in making this special adjustment is described in the text. More detailed information explaining how the adjustment is made in each Federal Reserve district may be obtained, upon request, from the Federal Reserve Bank in that district.

² These seasonal factors are approximations obtained by dividing the unadjusted index for each month by the corresponding seasonally adjusted index and as a result may not total 1,200 for the year. Specific adjustment factors are not available because the seasonally adjusted index for each of these districts is a weighted average of seasonally adjusted indexes for various parts of the district and that for the United States is a weighted average of the twelve district indexes. The seasonal adjustment factors for the various city, State, or area indexes from which the district indexes are derived may be obtained, upon request, from the respective Federal Reserve Banks.

Back figures.—Changing seasonal factors are used in the computation of all of the System indexes of department store sales. Back figures may be obtained, upon request, from the various Federal Reserve Banks or from the Board of Governors.

Group banking—Number, deposits, and branches of group banks, Dec. 31, 1943	614
Chain banking—Number, deposits, and branches of chain banks, Dec. 31, 1943	615
Distribution of deposits by Federal Reserve districts and States .	616

Tables on the following pages include the principal available statistics of current significance relating to financial and business developments in the United States. The data relating to the Federal Reserve Banks and the member banks of the Federal Reserve System are derived from regular reports made to the Board; index numbers of production are compiled by the Board on the basis of material collected by other agencies; figures for gold stock, money in circulation, Treasury finance, and operations of Government credit agencies are obtained principally from statements of the Treasury, or of the agencies concerned; data on money and security markets and commodity prices and other series on business activity are obtained largely from other sources. Back figures for banking and monetary tables, together with descriptive text, may be obtained from the Board's publication, *Banking and Monetary Statistics*; back figures for most other tables may be obtained from earlier BULLETINS.

MEMBER BANK RESERVES AND RELATED ITEMS

Wednesday figures, latest shown are for May 24. See p. 565.

MEMBER BANK RESERVES, RESERVE BANK CREDIT, AND RELATED ITEMS

[In millions of dollars]

¹ Rates shown also apply to advances secured by obligations of Federal Intermediate Credit Banks maturing within 6 months.

NOTE.—Maximum maturities for discounts and advances to member banks are: 15 days for advances secured by obligations of the Federal Farm Mortgage Corporation or the Home Owners' Loan Corporation guaranteed as to principal and interest by the United States, or by obligations of Federal Intermediate Credit Banks maturing within 6 months; 90 days for other advances and discounts made under Sections 13 and 13a of the Federal Reserve Act (except that discounts of certain bankers' acceptances and of agricultural paper may have maturities not exceeding 6 months and 9 months respectively); and 4 months for advances under Section 10(b). The maximum maturity for advances to individuals, partnerships, or corporations made under the last paragraph of Section 13 is 90 days.

Back figures.—See *Banking and Monetary Statistics*, Tables 115-116, pp. 439-443.

FEDERAL RESERVE BANK BUYING RATES ON BILLS

[Per cent per annum]

Maturity	Rate on May 31	In effect beginning—	Previous rate
Treasury bills ¹	¾	Apr. 30, 1942	—
Bankers' acceptances: ²			
1-90 days.....	¾	Oct. 20, 1933	1
91-120 days.....	¾	Oct. 20, 1933	1
121-180 days.....	1	Oct. 20, 1933	1½

¹ Established rate at which Federal Reserve Banks stand ready to buy all Treasury bills offered. Effective Aug. 3, 1942, purchases of such bills, if desired by the seller, were made on condition that the Reserve Bank, upon request before maturity, would sell back bills of like amount and maturity at the same rate of discount. Since May 15, 1943, all purchases have been made subject to repurchase option.

² Minimum buying rates on prime bankers' acceptances.

Back figures.—See *Banking and Monetary Statistics*, Table 117, pp. 443-445.

MEMBER BANK RESERVE REQUIREMENTS

[Per cent of deposits]

	Net demand deposits ¹			Time deposits (all member banks)
	Central reserve city banks	Reserve city banks	Country banks	
June 21, 1917-Aug. 15, 1936.....	13	10	7	3
Aug. 16, 1936-Feb. 28, 1937.....	19½	15	10½	4½
Mar. 1, 1937-Apr. 30, 1937.....	22½	17½	12½	5½
May 1, 1937-Apr. 15, 1938.....	26	20	14	6
Apr. 16, 1938-Oct. 31, 1941.....	22½	17½	12	5
Nov. 1, 1941-Aug. 19, 1942.....	26	20	14	6
Aug. 20, 1942-Sept. 13, 1942.....	24	20	14	6
Sept. 14, 1942-Oct. 2, 1942.....	22	20	14	6
Effective Oct. 3, 1942.....	20	20	14	6

¹ Demand deposits subject to reserve requirements; i. e., demand deposits other than war loan deposits, minus cash items in process of collection and demand balances due from domestic banks.

MARGIN REQUIREMENTS¹

[Per cent of market value]

Prescribed by Board of Governors of the Federal Reserve System in accordance with Securities Exchange Act of 1934	Apr. 1, 1936-Oct. 31, 1937	Effective Nov. 1, 1937
For extensions of credit by brokers and dealers on listed securities, under Regulation T.....	55	40
For short sales, under Regulation T.....	(2)	50
For loans by banks on stocks, under Regulation U.....	55	40

¹ Regulations T and U limit the amount of credit that may be extended on a security by prescribing a maximum loan value, which is a specified percentage of its market value at the time of the extension; the "margin requirements" shown in this table are the difference between the market value (100%) and the maximum loan value.

² Requirement under Regulation T was the margin "customarily required" by the broker. ³ Regulation U became effective May 1, 1936.

NOTE.—Regulations T and U also provide special margin requirements on "omnibus" accounts and loans to brokers and dealers.

FEDERAL RESERVE BANK RATES ON INDUSTRIAL LOANS AND COMMITMENTS UNDER SECTION 13b OF THE FEDERAL RESERVE ACT

Maturities not exceeding five years

[In effect May 31. Per cent per annum]

Federal Reserve Bank	To industrial or commercial businesses		To financing institutions		
	On loans ¹	On commitments	Discounts or purchases		On commitments
			On portion for which institution is obligated	On remaining portion	
Boston.....	2½-5	1½-1	(2)	(3)	1½-1
New York.....	2½-5	1½-1½	(2)	(3)	1½-1½
Philadelphia.....	2½-5	1½-1½	42	(3)	1½-1½
Cleveland.....	2½-5	1½-1½	(2)	(3)	1½-1½
Richmond.....	2½-5	1½-1½	(2)	(3)	1½-1½
Atlanta.....	2½-5	1½-1½	(2)	(3)	1½-1½
Chicago.....	2½-5	1½-1½	2½-5	2½-5	1½-1½
St. Louis.....	2½-5	1½-1½	1-1½	(3)	1½-1½
Minneapolis.....	2½-5	1½-1½	(2)	(3)	1½-1½
Kansas City.....	2½-5	1½-1½	(2)	(3)	1½-1½
Dallas.....	2½-5	1½-1½	(2)	(3)	1½-1½
San Francisco.....	2½-5	1½-1½	(2)	(3)	1½-1½

¹ Including loans made in participation with financing institutions.

² Rate charged borrower less commitment rate.

³ Rate charged borrower.

⁴ May charge same rate as charged borrower by financing institution, if lower.

⁵ Financing institution is charged ¼ per cent on undisbursed portion of loan under commitment.

Back figures.—See *Banking and Monetary Statistics*, Table 118, pp. 446-447.

MAXIMUM RATES ON TIME DEPOSITS

Maximum rates that may be paid by member banks as established by the Board of Governors under provisions of Regulation Q

[Per cent per annum]

	Nov. 1, 1933-Jan. 31, 1935	Feb. 1, 1935-Dec. 31, 1935	Effective Jan. 1, 1936
Savings deposits.....	3	2½	2½
Postal savings deposits.....	3	2½	2½
Other deposits payable:			
In 6 months or more.....	3	2½	2½
In 90 days to 6 months.....	3	2½	2
In less than 90 days.....	3	2½	1

NOTE.—Maximum rates that may be paid by insured nonmember banks as established by the F. D. I. C., effective Feb. 1, 1936, are the same as those in effect for member banks. Under Regulation Q the rate payable by a member bank may not in any event exceed the maximum rate payable by State banks or trust companies on like deposits under the laws of the State in which the member bank is located.

¹ Includes applications approved conditionally by the Federal Reserve Banks and under consideration by applicant.

² Includes industrial loans past due 3 months or more, which are not included in industrial loans outstanding in weekly statement of condition of Federal Reserve Banks.

NOTE.—The difference between amount of applications approved and the sum of the following four columns represents repayments of advances, and applications for loans and commitments withdrawn or expired.

Minneapolis.....	378	153	437	232
Kansas City.....	360	64	924	120
Dallas.....	626	70	859	39
San Francisco.....	787	323	391	175

¹ Includes any banks in outlying sections of reserve cities which have been given permission to carry the same reserves as country banks. All reserve cities have a population of more than 15,000.

² The series published through April 1943 included interbank deposits. The amount of such deposits for the current month at all country banks can be derived by comparison with the table on the following page; banks in the small centers held 216 million dollars during the last half of April 1943. Figures in this table include war loan deposits, shown separately for all country banks in the table on the following page.

¹ Figures do not include certain other demand deposits of the U. S. Government with member banks and, therefore, differ from figures for U. S. Government deposits shown in other published banking data. See also footnote 2.

² Preceding column minus so-called "float" (total cash items in process of collection) and estimate of U. S. Government deposits other than war loan accounts.

³ Demand deposits subject to reserve requirements; i.e., demand deposits other than war loan deposits, minus cash items in process of collection and demand balances due from domestic banks.

⁴ Includes some interbank and U. S. Government time deposits; the amounts on call report dates are shown in the *Member Bank Call Report*.

¹ Total of amounts of coin and paper currency shown by denominations less unassorted currency in Treasury and Federal Reserve Banks.

² Includes unassorted currency held in Treasury and Federal Reserve Banks and currency of unknown denominations reported by the Treasury as destroyed.

³ Paper currency only; \$1 silver coins reported under coin.

Back figures.—See *Banking and Monetary Statistics*, Table 112, pp. 415-416.

UNITED STATES MONEY, OUTSTANDING AND IN CIRCULATION, BY KINDS

¹ Outside Treasury and Federal Reserve Banks. Includes any paper currency held outside the continental limits of the United States; totals for other end-of-month dates shown in table above, totals by weeks in table on p. 565, and seasonally adjusted figures in table on page 574.

² Includes \$1,800,000,000 Exchange Stabilization Fund, \$143,852,358 balance of increment resulting from reduction in weight of the gold dollar, and \$156,039,431 held as reserve against United States notes and Treasury notes of 1890.

³ Figures for total Treasury currency outstanding and for total Treasury cash by weeks and months are shown in the table on p. 565.

⁴ Because some of the types of money shown are held as collateral or reserves against other types, a grand total of all types has no special significance and is not shown. See note for explanation of these duplications.

NOTE.—There are maintained in the Treasury—(i) as a reserve for United States notes and Treasury notes of 1890—\$156,039,431 in gold bullion; (ii) as security for Treasury notes of 1890—an equal dollar amount in standard silver dollars (these notes are being canceled and retired on receipt); (iii) as security for outstanding silver certificates—silver in bullion and standard silver dollars of a monetary value equal to the face amount of such silver certificates; and (iv) as security for gold certificates—gold bullion of a value at the legal standard equal to the face amount of such gold certificates. Federal Reserve notes are obligations of the United States and a first lien on all the assets of the issuing Federal Reserve Bank. Federal Reserve notes are secured by the deposit with Federal Reserve agents of a like amount of gold certificates or of gold certificates and such discounted or purchased paper as is eligible under the terms of the Federal Reserve Act, or, until June 30, 1945, of direct obligations of the United States if so authorized by a majority vote of the Board of Governors of the Federal Reserve System. Federal Reserve Banks must maintain a reserve in gold certificates of at least 40 per cent, including the redemption fund which must be deposited with the Treasurer of the United States, against Federal Reserve notes in actual circulation; gold certificates pledged as collateral may be counted as reserves. "Gold certificates" as herein used includes credits with the Treasurer of the United States payable in gold certificates. Federal Reserve Bank notes and national bank notes are in process of retirement.

MONEY IN CIRCULATION WITH ADJUSTMENT FOR SEASONAL VARIATION

31.....	22,112	22,201	+46

¹ For end of year figures, represents change computed on absolute amounts in first column.

NOTE.—For discussion of seasonal adjustment factors and for back figures on comparable basis see September 1943 BULLETIN, pp. 822-826. Because of an apparent recent change in the seasonal pattern around the year end, adjustment factors have been revised somewhat for dates affected, beginning with December 1942; seasonally adjusted figures for money in circulation, as shown in *Banking and Monetary Statistics*, Table 111, p. 414, and described on p. 405, are based on an older series of adjustment factors.

ANALYSIS OF CHANGES IN GOLD STOCK OF UNITED STATES

[In millions of dollars]

² Preliminary. ³ Figure carried forward.

¹ Annual figures through 1942 are estimates of the United States Mint. Annual figure for 1943 and monthly figures are those published in table on p. 619, adjusted to exclude Philippine Islands production received in United States.

² Figures based on rate of \$20.67 a fine ounce in January 1934 and \$35 a fine ounce thereafter.

³ Includes gold in the Inactive Account amounting to 27 million dollars on Dec. 31, 1936, and 1,228 million on Dec. 31, 1937.

⁴ The net gold import figures for months subsequent to December 1941 have not been released for publication.

⁵ Gold held under earmark at Federal Reserve Banks for foreign account amounted to 3,612.8 million dollars on Apr. 29, 1944.

NOTE.—For back figures, see *Banking and Monetary Statistics*, Table 156, pp. 536-538, and for description of statistics see pp. 522-523 in the same publication.

¹ Revised.

² National series for which bank debit figures are available beginning with 1919.

³ Annual figures for 1935-1942 (old series) include 133 centers; annual figures for 1942 (new series) and 1943, and monthly figures, include 193 centers.

⁴ See p. 717 of August 1943 BULLETIN for description of revision beginning with May 1942; deposits and debits of new series for first four months of 1942 partly estimated.

NOTE.—Debits to total deposit accounts, except interbank accounts, have been reported since 1942 for 334 reporting centers; the deposits, from which rates of turnover have been computed, have likewise been reported by most banks and have been estimated for others. Debits to demand deposit accounts, except interbank and United States Government, and the deposits from which rates of turnover have been computed have been reported by member banks in 101 leading cities since 1935; yearly turnover rates in this series differ slightly from those shown in *Banking and Monetary Statistics*, Table 55, p. 254, due to differences in method of computation.

^p Preliminary.

¹ Includes demand deposits, other than interbank and United States Government, less cash items in process of collection.

² Beginning with December 1938, includes United States Treasurer's time deposits, open account.

³ Excludes interbank time deposits and postal savings redeposited in banks.

⁴ Beginning with June 1941, the commercial bank figures exclude and the mutual savings bank figures include three member mutual savings banks.

⁵ Includes both amounts redeposited in banks and amounts not so redeposited; excludes amounts at banks in possessions.

NOTE.—Except on call dates, figures are rounded to nearest 100 million dollars. See *Banking and Monetary Statistics*, p. 11, for description and Table 9, pp. 34–35, for back figures.

1943.....	6,223	4,982		1,241	
1944—Jan.—Apr.....					

¹ Represents banks which, during the periods shown, closed temporarily or permanently on account of financial difficulties; does not include banks whose deposit liabilities were assumed by other banks at the time of closing (in some instances with the aid of Federal Deposit Insurance Corporation loans).

² Federal deposit insurance became operative Jan. 1, 1934.

³ Deposits of member banks and insured nonmember banks suspended are as of dates of suspension, and deposits of noninsured nonmember banks are based on the latest data available at the time the suspensions were reported.

Back figures.—See *Banking and Monetary Statistics*, pp. 283–292; for description, see pp. 281–282 in the same publication.

* These figures do not include data for banks in possessions of the United States and therefore differ from those published by the Comptroller of the Currency and the Federal Deposit Insurance Corporation for national banks and insured banks respectively.

¹ Beginning June 30, 1942, excludes reciprocal bank balances which on that date aggregated 600 million dollars at all member banks and 614 million dollars at all insured commercial banks.

² Beginning June 30, 1941, member bank figures and insured mutual savings bank figures both include 3 member mutual savings banks with total deposits of 8 million dollars in June 1941, which became members of the Federal Reserve System during 1941. These banks are not included in "commercial banks" and are included only once in "all banks."

³ Decreases in "noninsured nonmember commercial banks" and "all nonmember commercial banks" figures (with corresponding increases in member bank and all insured commercial bank figures) reflect principally the admission to membership in the Federal Reserve System of one large bank with total loans and investments aggregating 472 million dollars on June 30, 1942.

⁴ Beginning June 30, 1942, includes Bank of North Dakota, a nonmember bank not previously included in these statistics; on Dec. 31, 1941, its deposits, excluding interbank deposits, were 33 million dollars and its loans and investments 26 million dollars.

Back figures.—See *Banking and Monetary Statistics*, Tables 1-7, pp. 16-23; for description, see pp. 5-15 in the same publication.

^e Estimated. Complete reports now collected semiannually; monthly figures for three items estimated on basis of reports from a small number of large firms.

¹ Excluding balances with reporting firms (1) of member firms of New York Stock Exchange and other national securities exchanges and (2) of firms' own partners.

² Includes money borrowed from banks and also from other lenders (not including member firms of national securities exchanges).

NOTE.—For explanation of these figures see "Statistics on Margin Accounts" in *BULLETIN* for September 1936. The article describes the method by which the figures are derived and reported, distinguishes the table from a "statement of financial condition," and explains that the last column is not to be taken as representing the actual net capital of the reporting firms.

Back figures.—See *Banking and Monetary Statistics*, Table 143, pp. 501-502, for monthly figures prior to 1942, and Table 144, p. 503, for data in detail at semiannual dates prior to 1942.

¹ Monthly and weekly data are averages of daily figures, except for municipal bonds, which are based on Wednesday figures.

² Standard and Poor's Corporation.

³ U. S. Treasury Department.

⁴ Moody's Investors Service, week ending Friday. Because of limited number of suitable issues, the industrial Aaa and Aa groups have been reduced from 10 to 5 and 10 to 6 issues, respectively, and the railroad Aaa group from 10 to 5 issues.

Back figures.—See *Banking and Monetary Statistics*, Tables 128-129, pp. 468-474.

¹ Estimates of new issues sold for cash in the United States. Current figures subject to revision.

² Gross proceeds are derived by multiplying principal amounts or number of units by offering price.

³ Estimated net proceeds are equal to estimated gross proceeds less cost of flotation, i.e., compensation to underwriters, agents, etc., and expenses.

⁴ Includes repayment of other debt and other purposes.

Source.—Securities and Exchange Commission; for compilations of back figures, see *Banking and Monetary Statistics* (Table 138, p. 491), a publication of the Board of Governors.

^r Revised.

¹ "Net profits" and "net income" refer to income after all charges and taxes and before dividends.

² Class I line-haul railroads.

³ Series excludes American Telephone and Telegraph Company, the greater part of whose income consists of dividends received on stock holdings in the 32 companies. Dividend payments shown here include amounts paid to parent companies, as well as to the public.

⁴ After all charges and taxes except Federal income and excess profits taxes.

⁵ Quarterly dividend data are not available for all companies in the group and, therefore, do not add to the yearly totals shown.

⁶ Partly estimated.

Sources.—Interstate Commerce Commission for railroads; Federal Communications Commission for telephone companies; published reports for industrial and electric power companies. Figures for the current and preceding year subject to revision, especially for war producers whose contracts are under renegotiation. For description of data and back figures, see pp. 214-217 of the March 1942 BULLETIN.

¹ Revised.

* Figures include only holdings by institutions or agencies from which reports are received. Data for commercial banks, savings banks, and the residual "other" are not entirely comparable from month to month. Since June 1943, the coverage by the survey of commercial banks has been expanded, and in November 1943 stock savings banks, formerly included with commercial banks, were included with mutual savings banks. Figures in column headed "other" include holdings by nonreporting banks and insurance companies as well as by other investors. Estimates of total holdings (including relatively small amounts of nonmarketable issues) by all banks and all insurance companies for certain dates are shown in the table above.

¹ On Mar. 31, 1944, commercial banks reporting to the Treasury held \$21,783,000,000 of United States Government securities due or callable within one year out of a total of \$46,586,000,000 outstanding.

² Including \$196,000,000 of Postal Savings and prewar bonds not shown separately below.

¹ Excluding Federal land bank bonds held by the Federal Farm Mortgage Corporation.

² Excluding investments in preferred stock, the amount of which is shown in the lower section of this table.

³ Excluding loans by Federal savings and loan associations, which are privately owned institutions under the supervision of the Federal Home Loan Bank Administration. Loans by these institutions are reported quarterly and amounted to 1,927 million dollars on Mar. 31, 1944.

BUSINESS INDEXES

[The terms "adjusted" and "unadjusted" refer to adjustment of monthly figures for seasonal variation]

NOTE.—Figures for April 1944 are preliminary. Indexes for major groups and totals have been adjusted to final data for 1941 and preliminary data for the second quarter of 1942 made available by the Bureau of Employment Security of the Federal Security Agency. Back data and data for industries not here shown are obtainable from the Bureau of Labor Statistics. Underlying figures are for pay roll period ending nearest middle of month and cover wage earners only.

NOTE.—Revised seasonally adjusted estimates of the Board of Governors based on revised Bureau of Labor Statistics data released in May 1944. Estimates include all full- and part-time wage and salary workers in nonagricultural establishments employed during the pay period ending nearest the 15th of the month. Proprietors, self-employed persons, domestic servants, and personnel of the armed forces are excluded. April 1944 figures are preliminary.

NOTE.—Group totals include sales in departments not shown separately. Figures for basement store are not strictly comparable with those for main store owing chiefly to inclusion in basement of fewer departments and somewhat different types of merchandise. The ratio of stocks to sales is obtained by dividing stocks at the end of the month by sales during the month and hence indicates the number of months' supply on hand at the end of the month in terms of sales for that month.

^p Preliminary. * Revised.

¹ Includes repair and modernization loans. A revision of repair and modernization estimates was shown on p. 392 of the BULLETIN for April 1944. This revision is preliminary and subject to change.

² An estimated total of noninstalment consumer loans; i.e., single-payment loans of commercial banks and loans by pawnbrokers.

NOTE.—National estimates of consumer short-term credit for the period from January 1929 through August 1942 were prepared by the Bureau of Foreign and Domestic Commerce, United States Department of Commerce, and published in the November 1942 issue of the *Survey of Current Business* with a description of sources of data and methods of estimation. Later estimates, comparable with those formerly published by the Department of Commerce, were made at the Board of Governors of the Federal Reserve System.

CONSUMER INSTALMENT SALE CREDIT, EXCLUDING AUTOMOTIVE

Banks converted into branches.....	+6	+6	+2	+2		+4	+4			
Decrease in number of branches:										
Branches discontinued.....	-7	-7	-5	-3	-2	-2	-2			
Branches and additional offices established at military reservations.....	+26	+26	+24	+22	+2	+2	+2			
Net increase or decrease in number of branches.....	+30	+29	+23	+22	+1	+6	+6		+1	

¹ Includes unincorporated (private) banks.

² Federal deposit insurance did not become operative until Jan. 1, 1934.

³ The State member bank figures and the insured mutual savings bank figures both include three member mutual savings banks, which became members of the Federal Reserve System during 1941. These banks are not included in the total for "commercial banks" and are included only once in "all banks."

⁴ Covers all branches and other additional offices at which deposits are received, checks paid, or money lent. Offices established at military reservations (shown separately) include "banking facilities" provided through arrangements made by the Treasury Department with banks designated as depositaries and financial agents of the Government. Four of these banking facilities are in each case operated by two national banks, each bank having separate tellers windows; each of these facilities is counted as one banking office only.

⁵ Separate figures not available for branches of insured and noninsured banks.

⁶ Exclusive of new banks organized to succeed operating banks.

⁷ Exclusive of liquidations incident to the succession, conversion, and absorption of banks.

⁸ Exclusive of conversions of national banks into State bank members, or vice versa. Such changes do not affect Federal Reserve membership; they are included under "conversions."

⁹ Exclusive of insured nonmember banks converted into national banks or admitted to Federal Reserve membership, or vice versa. Such changes do not affect Federal Deposit Insurance Corporation membership; they are included in the appropriate groups under "inter-class bank changes."

Back figures.—See *Banking and Monetary Statistics*, Tables 1 and 14, pp. 16-17 and 52-53, and descriptive text, pp. 13-14.

¹ Some State laws make a distinction between "branches" and certain other types of "additional offices." The table, however, covers all branches or additional offices within the meaning of Section 5155 U.S.R.S., which defines the term "branch" as "any branch bank, branch office, branch agency, additional office, or any branch place of business . . . at which deposits are received, or checks paid, or money lent." Figures include "banking facilities" provided through arrangements made by the Treasury Department with banks designated as depositaries and financial agents of the Government. The table does not include "seasonal agencies" which are only in operation at certain periods of the year.

² The figures for member (commercial) banks and those for mutual savings (noncommercial) banks both include one mutual savings bank in Indiana and two in Wisconsin. The total for "All banks," however, includes such banks only once; and they are not included in the total for "Commercial banks."

Back figures.—See *Banking and Monetary Statistics*, Table 1, pp. 16-17, and Tables 73-79, pp. 297-311, and descriptive text, pp. 14 and 294-295.

¹ The term "group banking" indicates the type of multiple office banking structure in which three or more independently incorporated banks are controlled directly or indirectly by a corporation, business trust, association, or similar organization.

² A group operating in more than one State has been assigned to the State in which the principal office of the controlling interest is located, but each constituent bank has been assigned to the State in which it operates.

³ Included in the group figures are some banks which dominate the respective groups rather than being subsidiary banks; some of these are comparatively large banks.

Back figures.—See *Banking and Monetary Statistics*, Tables 78-84, pp. 312-322, and descriptive text, pp. 295-296.

¹ The term "chain banking" indicates a type of multiple office banking structure in which the operations or policies of at least three independently incorporated banks are controlled by the same individual or individuals.

² A chain operating in more than one State has been assigned to the State containing the "key" or largest bank or a majority of the constituent banks, but each constituent bank has been assigned to the State in which it operates.

Back figures.—See *Banking and Monetary Statistics*, Tables 78-84, pp. 312-322, and descriptive text, pp. 295-296.

Tables on the following pages include the principal available statistics of current significance relating to gold, international capital transactions of the United States, and financial developments abroad. The data are compiled for the most part from regularly published sources such as central and commercial bank statements and official statistical bulletins; some data are reported to the Board directly. Figures on international capital transactions of the United States are collected by the Federal Reserve Banks from banks, bankers, brokers, and dealers in the United States in accordance with the Treasury Regulation of November 12, 1934. Back figures for all except price tables, together with descriptive text, may be obtained from the Board's publication, *Banking and Monetary Statistics*.

² Preliminary. ⁷ Revised.

¹ Figures through March 1940 and figure for December 1942 and December 1943 include, in addition to gold of the Central Bank held at home, gold of the Central Bank held abroad and gold belonging to the Argentine Stabilization Fund.

² Change from previous December due largely to inclusion of gold formerly not reported.

³ On May 1, 1940, gold belonging to Bank of Canada transferred to Foreign Exchange Control Board. Gold reported since that time is gold held by Minister of Finance.

⁴ Figures relate to last official report dates for the respective countries, as follows: Bulgaria—Jan. 31, 1943; Greece—Mar. 31, 1941; Java—Jan. 31, 1942; Norway—Mar. 30, 1940; Poland—July 31, 1939; Yugoslavia—Feb. 28, 1941.

⁵ Figure for December 1938 is that officially reported on Apr. 30, 1938.

⁶ Figure for February 1941; beginning Mar. 29, 1941, gold reserves no longer reported separately.

⁷ Beginning December 1942, includes gold reserves abroad, formerly not reported.

⁸ Increase over reserves reported at end of 1941 and 1942 due primarily to inclusion for first time of gold held for Foreign Exchange Institute.

⁹ These countries are: Albania, Algeria, Australia, Austria through Mar. 7, 1938, Belgian Congo, Bolivia, China, Costa Rica beginning July 1943, Danzig through Aug. 31, 1939, Ecuador, El Salvador, Estonia, Finland, Guatemala, Iceland, Ireland beginning February 1943, Latvia, Lithuania, Morocco, and Thailand (Siam). Figures for certain of these countries have been carried forward from last previous official report.

¹⁰ Gold holdings of Bank of England reduced to nominal amount by gold transfers to British Exchange Equalization Account during 1939.

NOTE.—For back figures, see *Banking and Monetary Statistics*, Tables 156-160, pp. 536-555, and for a description of figures, including details regarding special internal gold transfers affecting the reported data, see pp. 524-535 in the same publication.

¹ Reported at infrequent intervals or on delayed basis: U. S.—Exchange Stabilization Fund (Special A/c No. 1); U. K.—Exchange Equalization Account; France—Exchange Stabilization Fund and Rentes Fund; Belgium—Treasury.

² Figure for end of September.

³ Reported figure for total British gold reserves on Aug. 31, 1939, less reported holdings of Bank of England on that date.

⁴ Figure for Sept. 1, 1941.

NOTE.—For certain back figures and for details regarding special internal gold transfers affecting the British and French institutions, see *Banking and Monetary Statistics*, p. 526.

Gold production in U. S. S. R.: No regular Government statistics on gold production in U. S. S. R. are available, but data of percentage changes, irregularly given out by officials of the gold mining industry, together with certain direct figures for past years, afford a basis for estimating annual production as follows: 1934, 135 million dollars; 1935, 158 million; 1936, 187 million; 1937, 185 million; 1938, 180 million.

¹ Preliminary. ² Figure carried forward. ³ Corrected.

⁴ Annual figures through 1940 are estimates of U. S. Mint; annual figure for 1941 based on estimates of American Bureau of Metal Statistics.

⁵ Beginning April 1941, figures are those reported by American Bureau of Metal Statistics.

⁶ Beginning May 1940, monthly figures no longer reported. Annual figure for 1940 estimated at three times production for first four months of the year.

⁷ Includes Philippine Islands production received in United States. Annual figures through 1942 are estimates of United States Mint. Annual figure for 1943 and monthly figures are estimates of the American Bureau of Metal Statistics.

⁸ Figures for Canada beginning 1943 are subject to official revision.

⁹ Beginning April 1942, figures no longer reported. Annual figure for 1942 is rough estimate based on reported production of \$7,809,000 in first three months of year.

¹⁰ Gold exports, reported by the Banco Nacional de Nicaragua, which states that they represent approximately 90 per cent of total production.

¹¹ Beginning December 1941, figures are those reported by American Bureau of Metal Statistics for total Australia.

¹² Beginning May 1940, figures are those reported by American Bureau of Metal Statistics.

NOTE.—For explanation of tables and sources, see BULLETIN for February 1939, p. 151; July 1938, p. 621; June 1938, p. 540; April 1933, pp. 233-235; and *Banking and Monetary Statistics*, p. 524. For annual estimates compiled by the United States Mint for these and other countries in the period 1910-1941, see *Banking and Monetary Statistics*, pp. 542-543.

¹ Differs from official customhouse figures in which imports and exports for January 1934 are valued at approximately \$20.67 a fine ounce.

² Includes \$31,830,000 from Argentina.

³ Includes \$28,097,000 from China and Hong Kong, \$15,719,000 from Italy, \$10,953,000 from Norway, \$10,077,000 from Chile, and \$37,555,000 from other countries.

⁴ Includes \$75,087,000 from Portugal, \$59,072,000 from Argentina, \$43,935,000 from Italy, \$33,405,000 from Norway, \$30,851,000 from U. S. S. R., \$26,178,000 from Hong Kong, \$20,583,000 from Netherlands Indies, \$16,310,000 from Yugoslavia, \$11,873,000 from Hungary, \$10,802,000 from Chile, \$10,775,000 from Brazil, \$10,416,000 from Spain, \$10,247,000 from Peru, and \$28,935,000 from other countries.

⁵ Includes \$44,920,000 from U.S.S.R., \$10,963,000 from Central America, and \$44,603,000 from other countries.

⁶ Includes imports from U. S. S. R. as follows: February—\$11,236,000, August—\$3,407,000, September—\$5,652,000, October—\$5,550,000, November—\$5,615,000, December—\$13,460,000.

NOTE.—Figures for months subsequent to December 1941 have not been released for publication. For back figures see *Banking and Monetary Statistics*, Table 158, pp. 539-541, and for description of statistics, see p. 524 in the same publication.

NFT CAPITAL MOVEMENT TO UNITED STATES SINCE JANUARY 2, 1935

¹ This category made up as follows: through Sept. 21, 1938, funds held by foreign central banks at the Federal Reserve Bank of New York; beginning Sept. 28, 1938, also funds held at commercial banks in New York City by central banks maintaining accounts at the Federal Reserve Bank of New York; beginning July 17, 1940, also funds in accounts at the Federal Reserve Bank of New York which had been transferred from central bank to government names; beginning with the new series commencing with the month of July 1942, all funds held with banks and bankers in the United States by foreign central banks and by foreign central governments and their agencies (including official purchasing missions, trade and shipping missions, diplomatic and consular establishments, etc.).

² Reported figures for capital movement through July 1 have been adjusted to represent the movement through June 30 on the basis of certain significant movements known to have occurred on July 1. Subsequent figures are based upon new monthly statistical series. For further explanation, see BULLETIN for January 1943, p. 98.

³ Amounts outstanding on Feb. 29, in millions of dollars: total foreign banking funds in United States \$4,906.6, including official funds, \$3,453.3, and other funds, \$2,037.3; United States banking funds abroad, \$292.0; and brokerage balances (net due "foreigners") \$42.0.

NOTE.—Statistics reported by banks, bankers, brokers, and dealers. Data by countries and geographic areas through December 1941, have been published in earlier BULLETINS for all types of capital movement in the above table (except columns 3 and 4), and for outstanding short-term liabilities to and claims on "foreigners" as reported by banks and brokers. For back figures, see *Banking and Monetary Statistics*, Tables 161-163, pp. 574-637, and for full description of statistics see pp. 558-560 in same publication.

¹ Through February 1939, valued at legal parity of 85 shillings a fine ounce; thereafter at market price, which fluctuated until Sept. 6, 1939, when it was officially set at 168 shillings per fine ounce.

² Securities and silver coin held as cover for fiduciary issue, the amount of which is also shown by this figure.

³ Notes issued less amounts held in banking department.

⁴ On Jan. 6, 1939, 200 million pounds sterling of gold (at legal parity) transferred from Bank to Exchange Equalization Account; on Mar. 1, 1939, about 5.5 million pounds (at current price) transferred from Exchange Account to Bank; on July 12, 1939, 20 million pounds transferred from Exchange Account to bank; on Sept. 6, 1939, 279 million pounds transferred from Bank to Exchange Account.

⁵ Fiduciary issue increased by 50 million pounds on June 12, 1940, Apr. 30, Aug. 30, and Dec. 3, 1941, and Apr. 22 and July 28, 1942; by 70 million pounds on Dec. 2, 1942; and by 50 million pounds on Apr. 13, Oct. 6, and Dec. 8, 1943, and on Mar. 7, 1944.

⁶ Securities maturing in two years or less.

⁷ Includes notes held by the chartered banks, which constitute an important part of their reserves.

⁸ On May 1, 1940, gold transferred to Foreign Exchange Control Board in return for short-term Government securities (see BULLETIN for July 1940, pp. 677-678).

NOTE.—For back figures on Bank of England and Bank of Canada, see *Banking and Monetary Statistics*, Tables 164 and 166, pp. 638-640 and pp. 644-645, respectively; for description of statistics see pp. 560-564 in same publication.

¹ Gold revalued March 1940, November 1938, July 1937, and October 1936. For further details see BULLETIN for May 1940, pp. 406-407; January 1939, p. 29; September 1937, p. 853; and November 1936, pp. 878-880.

² For explanation of this item, see BULLETIN for July 1940, p. 732.

³ By a series of Conventions between the Bank of France and the Treasury, dated from Aug. 25, 1940, through Dec. 16, 1943, advances of 351,000 million francs were authorized to meet the costs of the German army of occupation.

⁴ Central Administration of the Reichskreditkassen.

⁵ In each of the weeks ending Apr. 20 and Aug. 3, 1939, 5,000 million francs of gold transferred from Exchange Stabilization Fund¹ to Bank of France; in week ending Mar. 7, 1940, 30,000 million francs of gold transferred from Bank of France to Stabilization Fund.

⁶ Gold not shown separately in weekly Reichsbank statement after June 15, 1939.

NOTE.—For back figures on Bank of France and Reichsbank, see *Banking and Monetary Statistics*, Tables 165 and 167, pp. 641-643 and pp. 645-647, respectively; for description of statistics see pp. 562-565 in same publication.

¹ Separate figures for National Bank of Belgium not available. The Bank of Issue of Brussels was founded by the German Military Administration on June 27, 1940; it has no note issue, drawing its resources principally from advances from the National Bank and deposits by the Postal Checking Office.

² For last available report from the central bank of Bulgaria (January 1943), see BULLETIN for July 1943, p. 697; of Finland (August 1943), see BULLETIN for April 1944, p. 405; of Greece (March 1941) and Japan (September 1941), see BULLETIN for March 1942, p. 281; and of Java (January 1942), see BULLETIN for March 1943, p. 278.

³ Represents Bank's claim on the Government for the Bank's foreign exchange losses resulting from the revaluation of the krone on Jan. 23, 1942.

⁴ Latest month for which report is available for this institution.

⁵ Items for issue and banking departments consolidated.

¹ Through August 1939, averages of weekly figures; beginning September 1939, end-of-month figures, representing aggregates of figures reported by individual banks for days, varying from bank to bank, toward the end of the month.

² Represent six-month loans to the Treasury at 1½ per cent, callable by the banks in emergency at a discount equal to the Bank of England rate.

³ Through December 1937, excludes deposits in offices outside England and Wales which are included in total.

⁴ Figures for three banks only. Data for Crédit Industriel et Commercial not available September 1940–March 1941.

NOTE.—For back figures and figures on German commercial banks, see *Banking and Monetary Statistics*, Table 168, pp 648–655, and for description of statistics see pp. 566–571 in same publication.

¹ Prior to Nov. 1, 1942, the official designation of the Brazilian currency unit was the "milreis."

² Average of daily rates for that part of the year during which quotations were certified.

NOTE.—For back figures, see *Banking and Monetary Statistics*, Table 173, pp. 662-682. For description of statistics see pp. 572-573 in same publication, and for further information concerning developments affecting the averages during 1942 and 1943 see BULLETIN for February 1943, p. 201, and February 1944, p. 209. There are no developments to record for 1944.

^p Preliminary.

¹ Figures represent calculated prices of a 4 per cent 20-year bond offering a yield equal to the monthly average yield for 15 high-grade corporate bonds for the series beginning 1937 and for a varying number of high-grade bonds for the series prior to that date. The yearly average for 1937 is the same for both series. Source.—Standard and Poor's Corporation; for compilations of back figures on prices of both bonds and common stocks in the United States see *Banking and Monetary Statistics*, Table 130, p. 475, and Table 133, p. 479.

² Since Apr. 1, 1935, the 139 bonds included in the calculation of the average price have all borne interest at 4½ per cent. The series prior to that date is not comparable to the present series, principally because the 169 bonds then included in the calculation bore interest at 6 per cent.

³ Indexes of reciprocals of average yields. For old index, 1929-1936, 1929 = 100; average yield in base year was 4.57 per cent. For new index beginning January 1937, Jan.-Mar. 1937 = 100; average yield in base period was 3.39 per cent.

⁴ This number, originally 329, has declined as the number of securities eligible for the index has diminished. In May 1941, it was down to 287.

⁵ Average Apr.-Dec. only. Average Jan.-Mar. on old basis was 95.9.

⁷ Average based on figures for 7 months; no data available May-Sept.

⁹ Average based on figures for 10 months; no data available Jan.-Feb.

Sources.—See BULLETIN for November 1937, p. 1172; July 1937, p. 698; April 1937, p. 373; June 1935, p. 394; and February 1932, p. 121.
