## RECENT DEVELOPMENTS IN BUSINESS FINANCE

The business enterprises of the country have now been operating for almost two years at practically full capacity and under conditions of rising prices. Over-all business expenditures have been in record volume. In part this has reflected the large operating requirements for inventories, customer financing, and the day-to-day expenses that are necessitated by an exceptionally large volume of sales. In part it has resulted from business investment programs undertaken at rising costs to provide increased facilities-plant and equipment--to meet large postwar demands.
Business expenditures of the past two years have been financed in part by the large volume of available internal funds, and in part by substantial acquisitions of funds from external sources. Funds obtained from internal sources averaged more than 15 billion dollars a year in 1946 and 1947, or almost three-fifths of total corporate uses of funds. The internal funds were derived primarily from undistributed profits but also from the use of liquid assets-cash and United States Government securities-accumulated during the war.
The large volume of undistributed profits has reflected chiefly the unprecedented volume of sales, but it has also been due to some extent to the reduction in taxes from high wartime rates. Prices have risen substantially, the dollar volume of business has been higher than ever before, and business profits, the residual element of the business sales dollar, have also risen sharply.
Funds from external sources have been in
large volume over the past two years and their cost has been exceptionally low. The total used by business concerns undoubtedly exceeded that of any previous two-year period. Over this period there has been increasing reliance on the security markets as a source of financing, although direct loans to businesses by banks and insurance companies expanded more, both in dollar amounts and percentagewise, than in any other two-year period on record.
The financial position of business corporations as a group today is still strong. This is true despite the use since the end of the war of a large volume of liquid assets for tax payments as well as for financing inventories, accounts receivable, plant, and equipment, and despite a large volume of debt financing. Business holdings of liquid assets in relation to sales are still somewhat above the prewar levels, and in relation to current liabilities they are substantially above such levels. The building up of the shareholders' equity through the large volume of undistributed profits, together with numerous stock issues, has resulted in an equity-to-debt ratio for business corporations in the aggregate that is slightly above that of 1939.

## Uses of Funds

The record rate of business operations that has prevailed since the latter part of 1946 has been the principal factor giving rise to the large volume of business expenditures. Operations at approximately full capacity and at

a high and rising price level necessitated a large volume of working capital. Business investment in plant and equipment to modernize operations and to expand capacity for probable future requirements has also been affected by the exceptional volume of postwar demand and by the high cost of such investment.
Aggregate corporate sales in 1947 probably exceeded 300 billion dollars, approximately a fourth larger than those in 1946 or 1944, the previous peak peacetime and wartime years. Sales last year in all broad industrial groups were the largest on record. The largest increases over 1946 occurred in industries manufacturing durable goods. Thus far in 1948 total business sales have continued high, although they are down seasonally from the level prevailing in the latter part of 1947.
Inventory accumulation. Inventory accu-
mulation is a business use of funds directly affected by the volume of sales. The percentage increase in such accumulation was about half as great in 1947 as it was in 1946, but in the first quarter of 1948 it again became large. The sharp rise in inventories thus far in 1948 may prove to be an important factor in the business situation, for it has occurred principally in trade as contrasted to manufacturing industries. Throughout the past two years, but particularly in 1947, the rise in prices has accounted for a large part of the increase in business inventories.

Note.-Monthly estimates of the Department of Commerce. For manufacturing and trade, figures are not addjitive since the For manufacturing and trade, figures are not additive since the former are on a revised, and the latter on an unrevised, basis of estimation. These figures, unlike those used in the gross national product tabulatio
The expansion of inventories since the end of the war has resulted in a generally more balanced composition of such inventories for peacetime purposes, even though some concerns have undoubtedly overextended their inventory positions. Stocks of durable goods have generally increased relative to those of nondurable goods, and finished goods have increased relative to raw materials and goods in process.
Business inventories as a whole and in most lines, though high, are still not excessive in relation to the scale of current operations as compared with such relationships in prewar years. Such relationships, however, accord-
ing to experience in past business cycles, are not unequivocal gauges of the adequacy or inadequacy of inventories. Inventory-sales ratios have not increased substantially recently, but this is only because large increases in sales have continued. Generally speaking, it is only when sales level off, or actually decline, that total inventories tend to become excessive. Moreover, the current inventory situation differs greatly among industries. In such manufacturing industries as iron and steel, nonferrous metals, and petroleum, for example, current inventories are undoubtedly low by whatever standard may be used, whereas in some lines of metal products, rubber, and textile manufacturing industries they may already be high.
Plant and equipment expenditures. The dollar volume of business expenditures on plant and equipment, which had already reached a record level in the first half of 1946, has grown considerably since then. Plans of businesses in the aggregate, according to Securities and Exchange Commission and Department of Commerce data, indicate expenditures for the year 1948 in excess of those of 1947; this would not be true for all lines of business. The rate of growth during the past twelve months, after taking account of seasonal factors, has slowed up somewhat.
The plans of business enterprises to complete their postwar expansion programs as soon as possible have been facilitated since mid-1947 by high volumes of new construction and of machinery and other equipment production. Such construction and equipment, however, have been available only at steadily increasing costs.
The total dollar volume of new plant and equipment expenditures of businesses for the year 1947 as a whole, as shown in the chart, totaled 16.2 billion dollars, about twice the amount expended in 1941 and more than 75
per cent above 1929, the two prewar years during which expenditures were largest. Some increase in expenditures would probably be shown even if allowance were made for the rise in construction costs and equipment prices.
Expenditures for plant, as compared to -those for equipment, have represented a larger proportion of the total in the last quarter of 1947 and thus far in 1948 than pre-
business expenditures on new plant and equipment

* Estimates based on anticipated expenditures of business.

Note.-Securities and Exchange, Commission and Department of Commerce estimates. "All other" includes primarily railroads and other transportation, electric and gas utilities, communiand other transportation, electric and gas utilities, communi-
viously in the postwar period. For the postwar period as a whole, however, equipment expenditures have constituted a higher proportion of total expenditures than in the prewar period, reflecting the substantial amounts that have been spent to modernize existing productive facilities and the expansion of plants in some lines during the war. Almost three-quarters of total expenditures since the end of the war have been for new equipment, and equipment prices have advanced relatively less than plant construction costs.
Business plans call for a further increase in plant and equipment expenditures in 1948 of
approximately 15 per cent above the record 1947 volume. The postwar expansion programs of many companies in such important broad industrial groups as electric light and power, railroads, petroleum, chemicals, and food still involve sizable expenditures before they will be completed. In addition, expenditures of commercial and service establishments in 1948 are expected to rise above the 1947 levels reflecting in part the absence of restrictions on construction expenditures in these industries such as were in effect in the first half of 1947.

## Internal Funds

Undistributed profits. The very high dollar volume of sales of the past two years has been accompanied by an unusually large volume of profits since profit margins have generally been maintained. A higher portion of these profits than in earlier years has been retained by business management, and undistributed profits, as in prior prosperous periods, have provided most of the new equity funds for business. In 1947, over 61 per cent of profits after taxes was retained and reinvested, as compared to 55 per cent in 1946 and only 31 per cent in 1929. The ready availability of such funds in large volume not only facilitated business operations during this period but also undoubtedly led some concerns to increase their expansion plans.

Aggregate undistributed corporate profits, as shown in the accompanying chart, totaled approximately 11.0 billion dollars in 1947, as compared to 6.9 billion in 1946, the previous annual high; 5.9 billion in 1943, the wartime peak; and 2.6 billion in 1929. Thus far in 1948 undistributed profits on an annual basis appear to have remained close to the high 1947 level.
The rise in corporate profits in 1947 resulted in part from the increase in the dollar

UNDISTRIBUTED CORPORATE PROFITS

* Undistributed profits were negative for "all other" group in these years.

volume of sales discussed earlier and in part from continued high profit margins, particularly for manufacturing companies. A Federal Reserve compilation of financial data based on the published reports of 200 of the largest manufacturing corporations in the country indicates that the average (median) profit after income taxes was 7.8 cents per dollar of sales in 1947 as compared with 6.7

cents in 1946 and 7.2 cents in 1939. Quarterly profits data for these same manufacturing companies and for large corporations in other selected industries, as are shown in the accompanying table, indicate that profit margins, for most of these groups of large corporations at least, reached a high point in the first quarter of 1947, declined during the spring and summer, but have since recovered a good part, if not all, of their mid-1947 declines. Estimates for all corporations as a group indicate an even more favorable comparison of current with prewar profit margins; this is due primarily to the exceptionally small number of unprofitable companies in business today as contrasted to prior years.

These data on profit margins, it should be noted, relate to profits after all costs and taxes. Since corporate income tax rates are much higher now than they were before the war, the relationship between corporate sales and total costs exclusive of income taxes has probably been more favorable recently than in most previous prosperous years. One important factor affecting this relationship has been the smaller relative increase in overhead as against direct costs during the period of rising prices. Many concerns may of course be extremely susceptible to serious difficulties in the event of even moderate declines in the volume of production because of the lower profit margins that accompany such declines.

For corporations in the aggregate the ratio of profits after taxes to net worth, which measures the book value of the owners' investment in corporations, rose sharply in 1947 to approximately 10.5 per cent, about $11 / 2$ times the ratio in 1946 and 1943, the previous peacetime and wartime peaks, and more than double the rate in 1929. A compilation of annual corporate financial data prepared by the National City Bank of New York and based on the published reports of
over 3,100 leading companies shows that the ratio of profits after taxes to net worth in 1947 varied from over 30 per cent in such manufacturing industries as cotton goods, lumber, and household equipment to less than 5 per cent in such nonmanufacturing industries as railroads and traction and bus transportation, and to deficits for the aircraft and parts manufacturing and air transport industries.

Liquid assets. In addition to the funds retained from current operations, businesses have been able during the postwar period to draw on liquid assets as a source of financing. These assets had been accumulated during the war years. In 1946 the liquid assets of business corporations in the aggregate decreased $61 / 2$ billion dollars. Since 1946, however, such assets have decreased only slightly, by approximately $1 / 2$ billion dollars in 1947. Most of the decrease in 1946, it will be recalled, resulted from the liquidation of tax notes and other Government securities to meet the high excess profits taxes payable that year on the previous year's income. The excess profits tax was no longer levied on 1946 corporate income. Since early 1947 corporate holdings of Government securities have declined less rapidly and holdings of cash have increased somewhat.

Changes in liquid asset holdings in these two years, and especially in 1947, have varied considerably among different lines of business. This is illustrated by the data for large corporations in 14 selected industries shown in the article "Industrial Differences in Large Corporation Financing," pages 623-33 of this Bulletin.
No large additional reduction in the liquid asset holdings of business enterprises is likely even though current holdings are still large relative to those of prewar years. Business management is keeping a larger dollar vol-
ume of liquid assets on hand either to meet increased operating requirements for funds resulting from higher prices or to meet possible future contingencies. In fact, some increase in such holdings may be expected if sales and corporate income taxes payable continue to increase, thus raising the requirement for liquid funds for operating purposes, and if the disbursements of concerns that have completed their postwar expansion programs are substantially less than their receipts.

## External Sources of Funds

As the period of practically capacity operations and of high prices has lengthened, business enterprises have sought a somewhat larger proportion of funds from external sources, particularly from sales of security issues. Total external sources provided corporations as a group with 42 per cent of their total funds in 1947 as compared with 33 per cent in 1946.

Bank loans. Commercial banks have been important sources of business funds since mid-1946. Outstanding total commercial and industrial loans of all banks increased over 8 billion dollars during the two-year period, a much larger increase than had previously occurred in a comparable period of time. The major part of the increase took place during the last half of 1946 and the last half of 1947. Further increase in the use of bank credit by business appears likely in 1948 despite the decrease, largely of a seasonal nature, in the first half of the year.

Last year's new bank loans to business, like those in the previous year, were extended to concerns of all sizes and in all industries. Although comprehensive data are not currently available on the size and industrial character of businesses that borrowed from banks, there are some indications available.

Thus commercial and industrial loans of banks in various classes of cities, as is shown in the table, experienced approximately the same percentage increases last year, indicating that the business loan demands of a variety of different-sized borrowers were involved. Petroleum, sales finance, and food,

Note.-Percentage changes computed from data in millions of dollars. Detailed figures may not add to totals because of rounding.
liquor and tobacco companies were important borrowers from large banks, while many small retailers and service enterprises borrowed from the smaller banks.

New term loans to business-loans with a maturity of over one year-continued in large volume in 1947 but were probably less important relative to new short-term loans than in either 1945 or 1946. The lower cost of bank loans, as compared to security issues, caused some concerns to seek accommodations, at least temporarily, through banks rather than through public security issues.

Thus far in 1948 the business loan volume of the large member banks of the Federal Reserve System that report on a weekly basis has fallen off somewhat from the end-of-1947 level. The decline has been greater at New York City and Chicago banks than at the banks located in other leading cities. This decline has been in part of a seasonal nature; in part the result of the abrupt commodity
price decline in February and the incomplete price recovery from those lows; in part the result of some repayment of bank loans of large companies, particularly public utilities, with the proceeds from private and public placements of security issues; in part the result of high fourth quarter profits of many concerns; and in part the result of a more restrained lending policy on the part of bankers who were influenced by anti-inflationary fiscal and monetary policies.

Security issues. Net new money obtained by corporations through issuing securitiesthat is, the dollar volume of new issues less that of refunding issues and less cash retirements of securities-was a much more important source of funds for business corporations in 1947 and early 1948 than in 1946. In 1947 this volume totaled 4.5 billion dollars as against 2.3 billion in 1946. Thus far in 1948 the volume appears to have been at an annual rate about equal to 1947. Strictly comparable data on net new financing are not available for all prior years, but if a rough allowance is made for the large volume of purely financial issues of the late twenties, the 1947 total is probably by far the largest annual volume of net new money ever obtained by corporations through security issues.

Manufacturing companies and public utility companies other than railroads each received roughly one-half of the new money obtained through corporate security issues last year and thus far in 1948. Railroads as a group actually used more money to retire outstanding securities than they obtained from issuing new ones.
The volume of new money obtained by manufacturing companies dropped off slightly after 1946, while that obtained by public utilities increased very sharply. In the case of the utilities such financing was
divided almost equally between telephone companies and those in the electric light and power and gas group.
The percentage of new corporate security issues, excluding refunding issues, represented by common stock, as is shown in the accompanying chart, has been larger since the end of the war than it was in prior periods of prosperity. Since mid-1945, the annual average ratio of the dollar volume of common stock to total new issues has been 16 per cent as compared to 14 per cent in both the 1935-39 and 1922-27 periods; the years 1928 and 1929 cannot be compared because of the difficulty of allowing precisely for the numerous financial issues offered then. During the last quarter of 1947 the dollar volume of new common stock issues totaled over 350 million dollars, the largest quarterly volume

CORPORATE SECURITY ISSUES FOR NEW CAPITAL anNuAL RATE

Note.-Commercial and Financial Chronicle compilations. Issues of investment trusts are excluded in 1926 and 1927.
of such financing since the second quarter of 1930. The proportion of new issues represented by common stock, however, as is shown in the table, has been smaller since the decline in stock prices in the late summer of 1946 than it was in the earlier part of the postwar period.

Corporate Security Issues for New Capital ${ }^{1}$

${ }^{1}$ Excludes refunding issues.
Note.-Commercial and Financial Chronicle data. Detailed figures may not add to totals because of rounding.

Private placements of new corporate securities, principally debt issues placed with insurance companies, continued in large volume in 1947; such placements reflected the availability of substantial amounts of institutional funds seeking investment. Privately placed bonds and notes, excluding term loans of banks but including refunding issues, totaled 1.8 billion dollars in 1947, 38 per cent of total debt issues; this represented the same proportion of the total as in 1946 when the dollar volume was slightly larger.
Life insurance companies have recently provided some funds to business corporations by actual acquisitions of business plant and equipment that are subsequently rented to the seller on long-term lease. The legal power to purchase such property has gen-
erally been acquired only recently, and thus far has been used almost exclusively to purchase stores, offices, and factories from large profitable corporations. During 1947 life insurance companies invested in such property approximately 125 million dollars, bringing their total holdings at the year-end to about 200 million.

## Conclusion

Prospects are for sustained large business investment in factories, machinery, and stocks of goods throughout the remainder of 1948 on the basis of orders already placed. Business enterprises anticipate spending more on plant and equipment in 1948 than they did in 1947, and aggregate business holdings of inventories and receivables still do not appear high relative to the volume of current and prospective sales although such is not the case in all lines of activity.
Business profits are also likely to be larger in 1948 than in 1947. In such a case the volume of undistributed profits would continue high despite probable higher cash dividends and corporate income taxes. Business holdings of liquid assets in the aggregate, however, will probably not be reduced further.
In view of their large planned expenditures, business concerns may increase their bank loans and make additional private as well as public sales of securities during the remaining months of 1948. Public sales of stock issues may be less costly as a result of the recent rise in the stock market. The major part of business external financing in 1948, as in 1946 and 1947, would probably occur during the last half of the year when business expenditures reach their seasonal peak.

# INDUSTRIAL DIFFERENCES IN LARGE CORPORATION FINANCING 

by

Charles H. Schmidt

Reconversion, replacement, and expansion of productive facilities, coupled with generally high levels of business activity and rising prices, have had a marked effect on postwar business financing. These developments can be observed from the over-all data on business plant and equipment expenditures, components of working capital, bond and stock issues, profits, and dividends of nonfinancial corporations that are discussed in the leading article in this Bulletin. Comparatively little is known, however, about financing developments in the postwar period among corporations of different sizes, or the importance of various sources and uses of funds in different industries.

As a basis for studying industrial differences, data were compiled for a sample of 279 large companies in 10 manufacturing and 3 public utility industries, and in retail trade. The sample includes a majority, and in several cases all, of the large corporations in industries dominated by large concerns. It also includes a number of large retail trade companies, which, although they account for a relatively small proportion of total corporate retail trade assets and sales, have been included because of a general interest in the postwar financial experience of that industry.

While comparisons of large with medium and small corporations in selected industries would no doubt be extremely interesting, published financial statements of smaller companies are not available in sufficiently detailed form to permit analysis of their sources and uses of funds.

## Summary

Postwar uses of funds by large corporations differed from one industry to another, reflecting dissimilar economic characteristics and reconversion problems. Similar differences existed with respect to sources of funds, depending upon the profitability of postwar operations, availability of liquid assets, and access to bank, trade, and other forms of credit, and to equity capital investment.

1. Plant and equipment expenditures of large corporations, except those in the automobile industry, were higher in 1947 than in 1946. The greatest relative increases occurred in the electric
and gas utility, retail trade, and communication (telephone) industries; the smallest, among the rubber and machinery manufacturing companies. Manufacturers of durable goods, including machinery and transportation equipment (other than automobiles), whose reconversion expenditures during 1946 were substantial, had relatively smaller increases in their 1947 plant and equipment expenditures than did manufacturers of such nondurable goods as tobacco, food, petroleum, and chemicals.
2. Large corporations in the majority of manufacturing and trade industries added more to their dollar volume of inventory holdings in 1946 than in 1947. This resulted from the need for replenishing war-depleted stocks and the sharp rise in prices during the latter part of 1946. There were, however, a few manufacturing industries, notably iron and steel, rubber, and petroleum, in which increased production and rising prices resulted in somewhat greater inventory accumulation during 1947.
3. There was some decline in the relative importance of internal funds (i.e. funds retained from operations and reduction in holdings of cash and marketable securities) from 1946 to 1947. However, such internal sources accounted for more than half of the total funds obtained by large corporations during 1947 in 8 of 14 industries. In retail trade the relative importance of internal funds increased slightly in 1947; in contrast, large tobacco companies obtained only about one-fifth of their funds from internal sources in both years.
4. Large corporations drew heavily upon their cash and marketable security holdings during 1946 in order to pay accrued Federal income taxes and to finance inventory and plant and equipment expenditures. However, as a result of increased earnings and a greater reliance upon external sources of funds, large corporations in 6 of 14 industries were able to increase their liquid asset holdings during 1947. In all but one of the remaining industries, decreases were much smaller during 1947 than in the preceding year.
5. A substantial proportion of the bank credit employed by large corporations in the postwar period is represented by term loans (i.e. loans with
a maturity at time of making of more than one year). Such loans were particularly prevalent in the petroleum, iron and steel, automobile, machinery, rubber, and chemical industries, where longterm bank credit has been used to finance in part reconversion, replacement, and expansion of productive facilities.
6. Large corporations in all but the railroad industry obtained more funds from the sale of their own bonds and stocks than were used to refund or retire such securities during 1947. In the majority of industries analyzed there were substantial increases in the amount of such net new money in 1947 as compared with 1946.

## Scope and Coverage of Sample

The selection of a sample of large companies was partly dependent upon the availability of published data. Generally speaking, it is only the larger companies that publish financial statements sufficiently detailed to permit analysis of their sources and uses of funds. Selection of companies to be included was limited to manufacturing and trade corporations with total assets of 10 million dollars and over at the end of 1947, and to public utility concerns, whose activities require substantially greater investments in plant and equipment, with end-of1947 total assets of 150 million dollars and over. Some of these companies were subsequently eliminated because detailed data were not available or because their fiscal periods did not permit comparisons for the end of the calendar year.

With the exception of retail trade, industrial representation was limited to those industries in which large corporations accounted for more than half of the total assets and sales of all corporations, as determined from Statistics of Income for 1941.

As is shown in Table 1, total asset coverage of the sample of 279 large corporations, except for retail trade, varies from 35 per cent of total corporate assets in the electric and gas utility industry to 95 per cent of total assets in the telephone industry. In 7 of the 10 manufacturing industries selected for analysis, total asset coverage of the sample represents 50 per cent or more of all corporate assets.

## Uses of Corporate Funds

As soon as wartime restrictions on materials and construction were relaxed, large corporations initiated extensive programs for replacement and ex-

NoTe.-Manufacturing and trade include only companies with end-of-year 1947 total assets of 10 million dollars and over; coverage estimates based on 1941 total assets and sales of all corporations submitting balance sheets, as reported in Slatistics of Income. The year 1941 is the most recent one for which Statistics of I ncome data are available on the standard peacetime industrial classification of manufacturing companies.
Railroads include only companies with end-of-year 1947 total assets of 150 million dollars and over; coverage estimates based on 1945 statistics for all Class I steam railways, as compiled by the Interstate Commerce Commission.
Electric and gas utilities include only companies with end-of-year 1947 total assets of 150 million dollars and over; coverage estimates based on 1946 statistics for all Class A and B electric and gas utilities, as compiled by the Federal Power Commission.

Communication industry represented by consolidated financial statements of the American Telephone and Telegraph Company and principal subsidiaries comprising the Bell System; coverage estimates based on 1946 statistics for Class A and B telephone companies, as compiled by the Federal Communications Commission.
pansion of plant and equipment. Substantial investments in inventories were also required to replenish the materials and parts needed for civilian goods. In some lines customer financing increased sharply, reflecting the re-establishment of normal trade relationships and an increased availability of consumer goods. These three forms of investment, augmented by a pronounced rise in the general price level, accounted for the major part of funds used by large corporations in most industries during 1946 and 1947. However, the proportions of total funds used for these three purposes, and for debt repayment, varied widely from one industry to another.
Large corporations in the petroleum, chemical, iron and steel, electric and gas utility, and communication industries, as is shown in Table 2,

[^0]concentrated two-thirds or more of their expenditures during 1946-47 on replacement and expansion of their productive facilities. In a few industries, notably nonferrous metals, machinery, and automobiles, in which plant and equipment additions and replacements might have been expected to represent a substantial proportion of the funds used by large companies, slightly more than a third of their postwar funds were devoted to such purposes.

Inventory accumulation accounted for as much as 83 per cent of the total funds used by tobacco companies, and over 40 per cent of funds used by food processing and retail trade companies.
Each of the other major uses of funds was important in only a few of the industries analyzed. Large corporations in the retail trade and food processing industries used 16 and 14 per cent, respectively, of total funds for customer financing. Debt repayment, primarily settlement of income tax liability, absorbed large proportions ( 49 to 22 per cent) of total funds used by the other transportation equipment, railroad, and machinery groups. In the nonferrous metal and automobile industries, large corporations used 27 and 22 per cent, respectively, of their total funds for extraordinary purposes, including payments to the Federal Government on prior year tax and renegotiation settlements.

Postwar uses of funds by the companies previously engaged in the production of planes, tanks, guns, and ships differed from those of other large corporations. Plant and equipment expenditures accounted for a smaller proportion of the total funds used by such former war producers than by other large corporations during 1946-1947, but payments of current and prior year income taxes and renegotiation settlements were relatively more important.
Plant and equipment expenditures. Many corporations initiated replacement and expansion programs as early as mid-1945, but the time required to fill orders for machinery and equipment and to complete construction projects was prolonged by shortages of steel and other critical materials. Notwithstanding these delays, plant and equipment expenditures of all businesses in 1946, as is shown in the leading article of this Bulletin, were nearly double those of 1945 , while similar expenditures in 1947 were approximately 30 per cent above the 1946 level.

The plant and equipment expenditures of large corporations in 1947 were above those of 1946 in most of the industries analyzed, although variation among industries was great. As is shown in

Table 3, the 1947 expenditures of large electric and gas utility companies on productive facilities were more than double the corresponding amount in 1946. A similar comparison for the large automobile manufacturing companies reveals a decline of 25 per cent in plant and equipment expenditures. Between these two extremes, there were some industries, especially food processing, tobacco, nonferrous metals, and retail trade, in which plant and equipment expenditures increased substantially from 1946 to 1947. In other industries, notably rubber and machinery, expenditures were only slightly higher during 1947 than in the preceding year.

${ }^{1}$ Gross book value of fixed property without deduction of accumulated depreciation.

Generally speaking, total plant and equipment expenditures in 1946-47 were sizable in comparison with the gross value of plant and equipment at the end of $1945 .{ }^{1}$ Industries in which capital expenditures of large corporations were greatest relative to the gross value of plant and equipment at the end of 1945 are automobiles and machinery (46 and 45 percent respectively) and chemicals, tobacco, communication and retail trade (between 30 and 39 per cent). Industries with the smallest postwar capital expenditures relative to gross plant and

[^1]equipment include nonferrous metals and iron and steel manufacturing, and electric and gas utilities. Both of the basic metal and metal products industries expanded their capacity during the war and have had few plant reconversion problems; relative to their total productive capacity on hand at the end of 1945, postwar expansion and replacement has been small. Large electric and gas utility concerns, on the other hand, initiated extensive expansion programs during 1945 and 1946, but their fulfillment has been delayed somewhat by material and equipment shortages.
In view of the high cost of plant and equipment in recent years, actual additions to productive capacity in the postwar period have been much smaller than the dollar figures might imply, when compared with prewar expenditures. In some industries the current costs of plant and equipment are from two to four times their prewar level. Not only have such increased costs augmented corporate expenditures, but they have also introduced an additional element of rigidity into product costs.

Inventory accumulation. Ranking second among postwar uses of corporate funds in many industries, and first in some, was inventory accumulation. With rapid turnover at steadily rising prices, inventories have constantly been replaced at greater cost, which in turn has required heavier investment in this form of working capital.

The majority of the selected industries experienced their greatest relative growth in inventories during 1946, as is shown in Table 4, though inventory expansion was well sustained during 1947, and for some industries was greater in 1947 than in 1946.
Among manufacturing concerns, the character and amount of inventory accumulation varied considerably, depending upon the type of material processed and production delays that resulted in part from shortages of material and component parts. Industries like food and tobacco manufacturing, which are primarily engaged in processing agricultural products, were forced by rapidly rising prices to invest substantial amounts in inventories. With large accumulated demands for their products at the war's end, companies in the automobile and railroad transportation equipment industries proceeded to purchase quantities of materials and supplies needed for production. Subsequently, because production was delayed by shortage of key

${ }^{1}$ End-of-year gross book value of inventories, without deduction of valuation or replacement reserves or reserves for possible future decline in value of inventory.
materials and component parts, their inventories of available materials and supplies tended to rise above the levels normally required. The result was a heavy investment in inventories over longer periods of time than originally anticipated, which tied up funds and augmented the need for working capital.

Retail trade inventory accumulation was particularly heavy during 1946, primarily because of the need for restocking war-depleted shelves. Rising prices also contributed materially to the increased investment. Uncertainties prevailing during the first half of 1947 concerning the future course of consumer demand and prices resulted in a sharp curtailment of retail trade inventory accumulation. Despite some resumption of inventory buying in the latter half of the year, additions to retail inventories in 1947 were only 16 per cent of those in the preceding year.
Relative to the dollar volume of inventories on hand at the end of 1945, inventory accumulation during the two-year period $1946-47$ was substantial in most of the industries analyzed. Electric and gas utility companies and the communication industry more than doubled their investments in materials and supplies, though the dollar volume of such investment was small. Manufacturers of automobiles and other transportation equipment added almost as much to the dollar volume of their inventories during the postwar period as they had
on hand at the end of the war. Additional postwar investment in inventories was relatively small among the large iron and steel and tobacco com-panies-though the substantial inventory holdings of the latter at the end of 1945 tend to obscure the magnitude of their postwar accumulation.

## Sources of Corporate Funds

The bulk of the funds used by large corporations in the years 1946-47 came from internal sources, chiefly profits retained from operations and liquidation of cash and marketable security holdings. A number of large corporations were relatively independent of outside financing sources. However, the number of large companies that sought outside financing was sufficient to contribute materially to the expansion of bank credit during the postwar period and to swell the volume of security financing to a relatively high level. Some of the large companies borrowed directly from banks and insurance companies, while others sold bonds as well as preferred and common stocks in the market.
Relative dependence upon internal sources of funds varied from one industry to another, during 1946 and 1947, as is shown in Table 5. For

Table 5

Note.-Funds from internal sources include funds from operations (net profit plus current depreciation accruals minus cash dividends), net decreases in cash balances, marketable securities, dividends), net decreases in cash balances, marketable securities, Also included are tax refund and renegotiation receipts and profits Also included are tax refund and renegotiation
Total sources of funds includes funds derived from internal and external sources. The latter, not shown in the table, consist external sources. The latter, not shown in the table, consist primarily of credit advanced by banks, trade suppliers, the U. S. Government (in the form of accrued income tax liability), and
bond and mortgage holders, and of additional equity capital bond and mortgage holders, and of additional equit
example, large railroad corporations obtained all, other transportation equipment companies 92 per cent, and large food and rubber companies roughly 85 per cent of their funds from internal sources in 1946. Other industries in which internal sources accounted for substantial proportions of total funds (74-79 per cent) were petroleum, nonferrous metals, and iron and steel in the manufacturing group, and retail trade.
The proportion of large corporation funds drawn from internal sources declined from 1946 to 1947 in every industry analyzed, except tobacco and retail trade. The decline was sharp in some industries, such as rubber, other transportation equipment, and chemicals, while it was less pronounced in communication, electric and gas utilities, and iron and steel.

Internal sources of funds. The principal source of internal funds in a period of economic prosperity is retained earnings, that is, net profit after taxes and dividends plus current depreciation accruals. What distinguishes the postwar period 1946-47 from the prewar thirties as far as internal sources of corporate funds are concerned are: first, the high level of corporate profits in the postwar period; and second, the volume of funds obtained through reduction of cash and marketable security holdings, especially in 1946.

Corporate profits were at record levels during 1946-47 in most industries, and dividend payments to stockholders were not increased in proportion to earnings. As a result, retained earnings provided two-thirds or more of the internal funds obtained by large corporations in 9 of the 14 industries.

Funds retained from operations were supplemented by those secured through reduction in holdings of cash and marketable securities-largely United States Government securities. Although such funds were used extensively for the settlement of accrued Federal income tax liabilities, some were available for the purchase of inventories and the financing of plant and equipment expenditures. Large corporations in all but one of the 14 industries reduced their liquid assets during 1946, as is shown in Table 6 . In 7 of these industries there was some further reduction of liquid assets during 1947, but in each case the decrease was smaller than that of the preceding year.

In contrast to 1946, there were a number of large

Table 6
Cash and Marketable Security Holdings, 1947 and 1946 279 Large Corporations in Selected Industries
[Dollar amounts in millions]

${ }^{1}$ Based on gross sources, as contrasted with net changes shown in preceding three columns.
corporations that increased their cash and marketable security holdings during 1947. In some industries, notably petroleum, nonferrous metals, automobiles, and communication, more was added to cash and marketable securities during 1947 than had been withdrawn during 1946. In others, such as chemicals and machinery, increases in liquid assets during 1947 were smaller than the corresponding withdrawals of the preceding year. While larger profits provided a substantial part of the increased holdings of cash and marketable securities during 1947, banks loans and proceeds from the sale of stocks and bonds and from expansion of other long-term debt contributed to the liquid asset expansion of many large corporations.
Miscellaneous internal sources were relatively insignificant except among some of the industries that had made war products-the machinery, automobile, and other transportation equipment manufacturers. In these groups, collections of amounts due from the Government on uncompleted war contracts and tax refunds supplied a substantial part of their internal funds during 1946, and a much smaller proportion in 1947.

External sources of corporate funds. External sources accounted for less than 30 per cent of total funds used by large corporations in most industries

## INDUSTRIAL DIFFERENCES IN LARGE CORPORATION FINANCING

during 1946, and as much as half of the funds used in 1947. There was considerable variation, industry by industry, in both years, so far as the relative importance of different external sources was concerned.

Bank credit. As is shown in Table 7, large corporations in 8 of the 14 industry groups increased their bank loans during 1947, and a like number in 1946. Among the 5 industries that borrowed from banks in both years, the amount of credit obtained was somewhat larger in 1947 than in 1946, while 4 industries that decreased their bank loans during 1946 borrowed from banks in 1947. Greatest relative expansion in bank loans during 1947 occurred among the chemical, electric and gas utility, communication, rubber, and food processing companies, while large iron and steel, automobile, and retail trade concerns reduced their bank loans.

${ }^{1}$ Little or no volume in preceding year; percentage change has no significance.
${ }^{2}$ Detailed information regarding bank loans not available.
${ }^{3}$ No outstanding bank loans.
Foreseeing a need for bank credit to finance reconversion from war to peacetime production, payment of Federal income tax liability, and expansion of plant and equipment, a number of large companies negotiated lines of credit in 1945 and 1946 at very favorable rates of interest. Many of these agreements provided for short-term borrowing up to a stated limit within a specified time period, with the borrower having the option at the expira-
tion of the loan of renewing it for a period of 5 to 10 years. Other agreements provided for loans with maturities at time of making of more than one year. Such term loans accounted for over 90 per cent of the total bank loans outstanding at the end of 1947 for large companies in the petroleum, iron and steel, automobile, and railroad industries. Approximately one-third of the bank loans held by food processing, other transportation equipment manufacturing, and electric and gas utility companies had original maturities of more than one year. Tobacco companies, which customarily borrow substantial amounts on short-term loans for the purpose of carrying inventories, obtained less than one per cent of their bank credit on a termloan basis.

Bonds and stocks. Sale of bonds and equity capital shares, together with some expansion of mortgages and other long-term debt, provided part of the funds used by large corporations during the postwar period. During 1946, large corporations in 11 of the 14 industries obtained more funds from such sources than they used for retirement of long-

${ }^{2}$ Proceeds from sale of bonds, mortgages, and capital stock, and increases in other long-term liabilities, net of bond refunding and retirement of bonds and stocks.
${ }_{2}$ Net new money obtained from bond and stock sales and increases in other long-term liabilities divided by net plant expenditure (plant and equipment expenditures minus current depreciation ture (plant
${ }^{3}$ Decreases in bonds and stocks.
${ }^{4}$ Net plant expenditure small and percentages have no significance; bulk of net new money used for inventory accumulation.
term debt and repurchase of stock. In 1947 large companies in all but one of the industries analyzed obtained some net new money from these sources.

Large corporations in 8 of the 14 industries obtained more funds from long-term debt and stock during 1947 than in the preceding year, as is shown in Table 8. These included large corporations that had initiated long-run replacement and expansion programs in 1945 and 1946 in the petroleum, chemical, railroad, electric and gas utility, and communication industries. On the other hand, large corporations in the automobile and machinery industries borrowed heavily to finance reconversion expenditures during 1946 and to a more limited extent for other purposes during 1947.

While funds obtained from the sale of securities and increase in other long-term debt are not necessarily used to finance plant and equipment expenditures, the one is frequently associated with the other. If net plant and equipment expenditure (plant and equipment expenditures less current depreciation accruals) is compared with net new money obtained from the sale of bonds and stocks, it appears that the latter exceeded the former in 3 of the 14 industries during 1947. Industries with large postwar capital expansion programs obtained funds from bond and stock sales equaling 30 to 100 per cent or more of their net plant and equipment expansion in 1947, and relatively smaller amounts in 1946.

Note.-Composite Sources and Uses of Funds Statements, Balance Sheets, and Selected Income Statement data for the sample of large corporations discussed in this article are shown on the following three pages.

# INDUSTRIAL DIFFERENCES IN LARGE CORPORATION FINANCING

## 1948 SURVEY OF CONSUMER FINANCES ${ }^{1}$

## Part I. Expenditures for Durable Goods

Incomes increased for a large part of the population in 1947, and at the beginning of 1948 consumers expressed intentions to maintain buying of houses, automobiles, and other durable goods at approximately the high levels of 1947. Although somewhat fewer people had liquid assets at the beginning of 1948, accumulated savings continued to be widely held in sizable amounts by people at low as well as high income levels. These are some of the results of the third annual survey of the financial position of consumers undertaken by the Board of Governors of the Federal Reserve System. This survey, conducted again for the Board by the Survey Research Center, University of Michigan, makes available important information about the financial status, buying plans, and general outlook of consumer spending units.
A broad summary of survey results and details relating to expenditures for consumer durable goods are presented in this article. Comparisons are made with findings from the two previous surveys which were conducted in early 1947 and early 1946 using similar techniques and including similar information. ${ }^{2}$ Some discussion of the nature of the surveys, the techniques used, and the limitations of the results is given at the end of the article. A second

[^2]article presented in this Bulletin gives more complete information on consumer income, while subsequent articles in later issues of the Bulletin will cover liquid and nonliquid asset holdings, saving out of income, and housing expenditures and finance.
Interviewing for the survey began early in January and continued through the first week in March. Approximately 3,500 interviews were taken in 66 sampling points and the results of the survey are based on this group of interviews. An additional 300 interviews, taken after the commodity price break during the first week in February, made it possible to build up two representative cross-section samples, one interviewed before the decline in the commodity market and one after it, and to ascertain any change in buying intentions or consumer expectations between these two samples. The interview unit was the consumer spending unit, defined as all persons living in the same dwelling and related by blood, marriage, or adoption, who pooled their incomes for their major items of expense. ${ }^{3}$ Sampling methods permit tabulation of many survey results on a family basis also, ${ }^{4}$ and some of the results will be presented on this basis in the following articles.

## Summary of Survey Results

Consumer financial status strong but weakening somewhat.

1. Of the total number of 48.4 million consumer spending units, about 2.5 million more in 1947 than in 1946 had money incomes above $\$ 5,000$, while about 2.5 million fewer consumer units had incomes below $\$ 3,000$. For consumers as a whole there was a rise of more than 10 per cent in total money income.
2. Almost 50 per cent of all spending units reported higher money incomes in 1947 than in 1946, but a considerable number of these consumer units

[^3]felt that because of the higher cost of living they were worse off financially at the end of the year than at the beginning. About 30 per cent of all spending units had substantially the same money income in 1947 as in 1946, and about 20 per cent experienced income declines.
3. Consumer units at higher income levels held a relatively large share of the liquid assets (i.e., checking accounts, savings accounts, or Government bonds) but, as noted in the first two surveys, lower income groups continued to have sizable amounts of liquid resources to draw upon. According to available Treasury and banking statistics, total personal holdings of liquid assets increased somewhat in 1947, although at a much slower rate than during the previous years.
4. In 1947, however, for the first time since the end of the war, there was some decline in the number of spending units holding liquid assets. About 3 million fewer spending units had savings bonds at the beginning of 1948 than a year earlier. This decline extended the tendency noted in 1946 and was the primary factor accounting for the smaller number of people holding liquid assets. There was little or no change in the number of people holding checking or savings accounts.
5. The total amount of net saving by consumers out of current income continued to decline in 1947, the result of further heavy dissaving (i.e., expenditures in excess of income) on the part of more than one-fourth of all spending units and somewhat smaller amounts saved by other spending units. The substantial dissaving in 1947 reflected consumer willingness to spend freely. Many consumers were willing to draw on their liquid assets or to borrow for the purpose of purchasing consumer durable goods or meeting higher living costs.
6. In 1946 dissavers were heavily concentrated in income classes up to $\$ 3,000$. In 1947, however, the concentration extended up to the $\$ 5,000$ income level. Particularly noteworthy was the significant rise in the number of dissavers with annual incomes of $\$ 3,000$ to $\$ 7,500$.

Heavy consumer spending for durable goods in 1947.
7. Roughly two-fifths of all consumer units indicated that they had purchased some consumer durable goods during 1947. Veterans of World War II continued to be heavy spenders on durable items; in fact, almost three-fifths of the spending units with veterans bought some type of durable goods.
8. About 7 million spending units bought automobiles in 1947 and approximately 17 million bought other selected durable goods such as furniture, refrigerators, radios, washing machines, ranges, and other large appliances.
9. About 9 million spending units used instalment credit in purchasing durable goods, including automobiles, nearly twice as many as in 1946.

## Consumer outlook for 1948 optimistic.

10. Although somewhat less so than in early 1947, most consumers were still optimistic about their income prospects and future business conditions. At the beginning of 1948 many more spending units expected a continuation of prosperous times than expected a decline in economic activity, and many more expected increases in income than expected decreases.
11. The break in commodity prices during the first week in February appears to have had little influence upon consumers' optimism. As many consumers expected their incomes to rise and good times to prevail after the price break as before.

## Consumer buying intentions remain strong.

12. At the beginning of 1948 as many consumers planned to buy automobiles and other selected durable goods as at the beginning of 1947. There was some indication of a drop in the demand for new cars on the part of spending units with incomes below $\$ 3,000$ but this was largely offset by an increase in the number of spending units at higher income levels that planned to buy new cars. There was little change in the number of spending units that were prospective buyers of durable goods other than cars.
13. No significant differences were noted in purchasing plans for consumer durable goods before and after the commodity price break. Although there was a very substantial shift in consumers' general price expectations after the break, with many more spending units anticipating price declines, these price expectations referred primarily to food prices. In the case of prices of durable goods, many spending units had anticipated declines as early as July 1947.
14. The number of consumer units planning to buy new houses was larger than the estimated number of completions of new houses for owneroccupancy in the year 1948. Somewhat more than 1 million spending units indicated they would or would probably buy such houses in 1948. The
prices that prospective buyers said they would pay for these houses were closely in line with prices paid in 1947.
15. As compared to buying intentions expressed a year ago, however, there was a further softening in the prospective demand for both new and existing houses. Approximately 20 per cent fewer spending units in early 1948 as compared to 1947 indicated some plan for buying houses. Again this slackening was most noteworthy on the part of spending units with incomes below $\$ 2,000$.

## Conclusions

1. The general financial status of consumers showed the first signs of weakening in 1947 in that fewer spending units held liquid assets at the end of the year and there was a substantial increase in total indebtedness. Most consumers, however, continue to have a strong financial status since (1) employment and income are at peak levels and widely distributed, and (2) well over two-thirds of all spending units still have liquid assets in their possession and sizable amounts are held by people in all income groups.
2. The outlook is that consumer expenditures for durable goods and houses will continue in expanding volume. Buying intentions for new cars still exceed expected production, and there is no change in prospective demand for other selected durable goods. It is possible that immediate consumer demand for certain types of durable goods has increased further since the survey, which was taken before the proposed increase in military expenditures.
3. There is a tendency for a greater proportion of consumer durable goods to be bought on a credit basis today than a year ago and for a somewhat smaller proportion to be bought through use of accumulated liquid savings. As the volume of consumer durable goods purchased continues to rise, however, substantial amounts of liquid assets are still being used in buying these goods, and there has been no slackening in the rate of turnover of such assets.
4. In order for spending units to satisfy their demand for houses, particularly new houses, in 1948, there will need to be a further substantial increase in the volume of mortgage credit. Since veterans account for approximately half of the total housing demand, no slackening in requests from veterans for mortgage loans can be anticipated.
5. In general, consumer plans to buy both dura-
ble goods and houses would indicate a continuation of heavy demand in those areas which are strongly dependent upon availability of credit and liquid assets for effective buying power.
6. Prospects are for further heavy dissaving on the part of at least one-fourth of all spending units and no substantial change in the aggregate amounts saved by other spending units.

## Purchases of Selected Consumer Durable Goods and Houses in 1947

Never before in the history of this country was there a greater volume of consumer durable goods produced than in 1947. Production of major appliances such as radios, washing machines, and kitchen ranges exceeded 1941 production peaks by substantial margins, while unit production of refrigerators and automobiles was close to former peak levels. Housing completions were not far behind the record annual volume of completions in the middle twenties.

Survey results indicate that approximately 20 million out of a total of 48.4 million spending units bought automobiles or other selected durable goods in 1947, while over 2 million bought houses. The total value of these purchases was roughly 30 billion dollars, of which about half represented house purchases.

Automobiles. Approximately 7 million new and used automobiles were purchased by spending units in 1947 at a total value of roughly 9 billion dollars. This was a considerably larger number of cars than was purchased in 1946 and, as Table 1 indicates, exceeded buying plans expressed at the beginning of 1947. More than three-fifths of all automobile buyers had incomes of $\$ 3,000$ or more (see Table 9 ). Veterans of World War II were very heavy buyers of cars. According to Table 2, one out of every four spending units with veterans bought automobiles as compared to one out of every eight among nonveteran units.

New automobiles were available in much greater quantities in 1947 than in 1946, as their production almost doubled. . Many more spending units succeeded in obtaining new cars in 1947 but a sizable number of prospective buyers probably went emptyhanded or purchased late-model used cars. The average price paid for new cars was about onefourth higher than prospective buyers anticipated paying. Spending units reported buying 2.8 million new automobiles in 1947 and 1.5 million in 1946.

Table 1
Consumer Intentions to Buy in 1948, 1947, and 1946, and Actual Purchases in 1947 and $1946{ }^{1}$

${ }^{1}$ Intended purchases for the year 1948 and actual purchases during 1947 were ascertained in the third survey made early in 1948. Intended purchases for 1947 and actual purchases during 1946 were ascertained early in 1947, while intended purchases for the year 1946 were ascertained early in 1946. In each case where a range is presented the bottom of the range includes all those who said definitely they would buy and one-half of those who said they would probably buy but might not. The top of the range includes all those who said they definitely or probably would buy, and one-half of those who said they were undecided. range incrides an those who said they dennitely or probably would buy, and one-halt of those who said they were undecided.
The distribution of spending units by intentions to buy, 1948 , 1947 , and 1946 , is shown in supplementary Table 8 following the text of this article.

2 Refers to total expenditure before deduction of the value of trade-ins or existing assets sold.
${ }^{3}$ This figure represents the number of cars bought, not the number of spending units that bought cars. Since only cars owners at the time of the early 1948 survey were asked about 1947 purchases, no cars were counted twice in the 1947 data.

4 Data not available.
${ }^{5}$ Farmers are excluded from the housing figures inasmuch as their purchases of housing are usually incidental to their purchases of farm land
b These are rough estimates which probably overstate purchases in 1946 because some buyers of lots or summer cottages are

These figures, after allowance for new cars sold to Government and business organizations, check closely with domestic registrations of new cars as reported by R. L. Polk and Company.

The greater sales of new cars meant greater turnover of used cars. Before the war, roughly two used cars were sold to every one new car. In 1947 about one and two-thirds used cars were sold to every one new car and there were about 1 million more actual used-car buyers than in the preceding year. As was noted in the 1947 survey, used-car purchases are not planned very fully in advance. In the past two years the number of spending units buying used cars has exceeded by three times the number of spending units planning to buy used cars at the beginning of the year.

${ }^{1}$ Spending units who said they would or probably would buy durable goods in 1948.
${ }_{2}$ Information on houses refers to nonfarm spending units only.

As the rather low average price paid for used cars might indicate, there was a sizable turnover of cars 10 years or older in the used-car market. The 1948 survey results show that almost one-third of all used cars bought were models of 1936 or older cars. About the same proportion were 1941 or later models.

Other selected durable goods. Over one-third of all spending units bought other selected durable goods in 1947 such as furniture, refrigerators, radios, washing machines, ranges, or other large appliances. The total value of these goods was a little over 5 billion dollars, about one-fourth larger than the total value of other selected durable goods bought in 1946. The median or middlemost expenditure for these goods was $\$ 200$ per spending unit.

The market for these other selected durable goods is more evenly distributed over the spending units at various income levels than is the automobile market. Almost half of the 1947 buyers of these goods had incomes below $\$ 3,000$. Of course, amounts spent by buyers in low income groups were smaller than amounts spent by other groups (see Table 10).

Actual purchases of these selected durable goods in 1947 substantially exceeded the volume of purchases planned at the beginning of the year. The possibility that such might be the case was noted in the 1947 survey. Examination of the prospective demand and actual purchases of selected durable goods in 1946 showed that plans to buy furniture were substantially understated, but in the case of some major household appliances plans to buy exceeded actual purchases. Yet it seemed possible that once the most urgent backlog demands had been filled and production was at peak levels, plans to buy major household appliances might also tend to be understated. In 1947, as is shown by supplementary Table 12 at the end of this article, the total number of actual buyers of furniture and of each type of major appliance exceeded the number of spending units that planned to buy at the beginning of the year. In the case of furniture, double the number of those who expressed intentions to buy actually bought in both 1946 and 1947. In the case of refrigerators and washing machines, little more than half the prospective buyers were able to make purchases in 1946, while in 1947 there were half again as many actual buyers as prospective buyers. In the case of radios, there were three times as many actual buyers as prospective buyers in 1947. In addition to the lack of full-year plan-
ning of radio purchases on the part of spending units, many radio buyers reported the purchase of small table models, which are seldom mentioned by prospective buyers.
Houses. About 2.2 million spending units reported buying new or existing houses in 1947. The total amount spent for these houses was roughly 15 billion dollars as the average price per house was somewhat more than $\$ 7,000$. As Table 1 shows, the dollar volume of house purchases in 1947 exceeded 1946 purchases somewhat, although a smaller number of spending units indicated that they purchased houses in 1947. It is believed that the 1946 estimates include some real estate purchases other than houses for year-round owner-occupancy so that both the number and amount of house purchases may be overstated in that year. About 40 per cent of the house buyers in 1947 were veterans of World War II; 9 per cent of veteran spending units bought houses compared to 4 per cent of nonveteran spending units.
According to the survey, approximately 700,000 of the houses bought for owner-occupany in 1947 were new dwellings. This figure is in reasonable agreement with estimated new house completions in 1947 after allowance for newly built rental houses. The number of existing houses purchased was 1.5 million. The median price paid for new houses fell between $\$ 7,500$ and $\$ 8,500$ and that of old houses between $\$ 5,000$ and $\$ 6,000$.
Total purchases of houses in 1947 were within the lower limits of the buying plans expressed at the beginning of the year. Spending units with incomes of $\$ 3,000$ or more accounted for three-fifths of total house purchases and appeared to be more successful than other spending units in completing their buying plans.

## Intentions to Buy in 1948

The derived estimates of intentions to buy in the Survey of Consumer Finances represent experimental data and must be interpreted with caution. The volume of purchases in any given year is a function of many factors not known to buyers at the beginning of the year. As observed when presenting the results of the previous two surveys, consumer plans to buy in any particular year are not to be construed as an indication of the exact measure of total demand or of the quantities of goods to be purchased during the year. In some cases backlog demands make for a total of inten-
tions that is larger than expected supplies; in other cases consumers do not fully plan ahead their entire year's purchases; and, finally, considerable shifts in buying intentions may possibly occur within a year as a result of changed economic conditions. A better basis for estimating approximate quantities of any durable item that may be purchased should be provided by a comparison of intentions data and actual purchases over a period of several years when supplies of goods are plentiful and backlog demands are small. Intentions data for the year 1948 should be compared carefully with similar data for the years 1947 and 1946 and with the actual volume of purchases in these same years to understand their meaning and limitations more fully.

Information on intentions to buy consumer durable goods and houses during 1948 was obtained during the first 10 weeks of the year. The buying plans were expressed at a time when consumer units were rather optimistic about their own income prospects and the general economic outlook. Any substantial changes in consumers' income expectations or general economic outlook could affect their buying plans. Many other factors, including such things as prices, availability, and style also have an important bearing upon the total prospective demand. Trade reports indicate that there was a substantial rise in buying orders for certain selected durable goods at the end of March after the first public discussion of increased defense expenditures. Thus, there may have been some increase in immediate demand for consumer durable goods since the survey was taken.

At the beginning of 1948 as many consumers planned to buy automobiles and other selected durable goods as at the beginning of 1947. The total of prospective buyers in 1948 was considerably below the number of actual buyers in 1947 (see Table 1), but as already indicated, intentions to buy certain items have often been incomplete. Because of this tendency for consumer buying plans to be only partially complete at the beginning of the year, it is more relevant to compare 1948 intentions with 1947 intentions rather than with the actual volume of purchases in 1947.

From 3.1 million to 4.5 million spending units indicated some plan to purchase new cars in 1948. Spending units with incomes below $\$ 3,000$ planned to buy less frequently than they had planned in the preceding year, but there were more spending
units at higher income levels that planned to buy new cars. In any event, the range of planned purchases exceeded probable domestic sales of new automobiles by a substantial margin.

Car owners, of course, account for the greatest share of the number of prospective buyers of new

Table 3
Car-Ownership Status of Prospective Buyers of New and Used Cars in 1948

${ }^{1}$ Spending units who said they would or probably would buy cars in 1948.
cars. Some three-fourths of these prospective buyers already own cars and as many as one-third own postwar cars. Table 3 classifies prospective buyers by ownership and age of cars.

A comparison of intentions to buy used cars over the three-year period-1946, 1947, and 1948-indicates that there were no sizable differences from one year to the next in the total buying plans of spending units for used cars.

There was some increase in the number of prospective buyers of selected durable goods other than cars for the year 1948. No particular significance is to be attributed to this slight shift. The greater availability of most major household appliances in 1948 as compared to 1947 may occasion a somewhat larger immediate demand for such goods. In any event, no general weakness was apparent in the market for furniture or major household appliances. Of persons at lower income levels, fewer intended to buy in 1948 than in 1947, while of those with incomes of $\$ 5,000$ or more, the proportion intending to buy increased, as is shown by Table 4.

Total prospective demand for houses was somewhat lower in early 1948 than in the previous year and still lower than intentions to buy in 1946. The decline in buying intentions during this period was most marked in the case of spending units

${ }^{1}$ Intended purchases for the year 1948 and actual purchases during 1947 were ascertained early in 1948 . Intended purchases for 1947 and actual purchases during 1946 were ascertained early in 1947, while intended purchases for the year 1946 were ascertained early 1947 and actual purchases during 1946 were ascertained early in 1947 , while intended purchases for the year 1946 were ascertained early
in 1946 . In every case, the percentage of people expecting to buy includes those who said definitely they would buy and those who said in 1946. In every case, the percentage of people expecting to buy includes those who said definitely they would buy and those who said
they probably would do so. Intended purchases for 1948 and actual purchases during 1947 are related to 1947 income, intended purchases they probably would do so. Intended purchases for 1948 and actual purchases during 1947 are related to 194
for 1947 and actual purchases during 1946 to 1946 income, and intended purchases in 1946 to 1945 income.

1947 and actual purchases during 1946 to 1946 income, and inte
${ }^{3}$ Less than one-half of 1 per cent.
with incomes below $\$ 2,000$. As construction costs continued to rise in these years, it is likely that spending units within this income range were priced out of the market.
Buying plans for new houses, however, were larger than the estimated number of completions of new houses for owner-occupancy in the year 1948. Somewhat more than 1 million spending units said they would or would probably buy new houses. Almost one-half of all prospective buyers said they would pay more than $\$ 7,500$ for a new house and as many as one-seventh indicated they would pay more than $\$ 12,500$. These prices were closely in line with prices paid in 1947.

The continuance of a strong demand for houses at steadily increasing prices is indicative of the over-all shortage of dwelling units plus the changing income status of many consumer units. As the total income of a consumer unit moves upward, roughly two and one-half times the increment in income is added to the basic price that the unit presumably can pay for a house under standard price-of-house-to-income relationships.

The number of persons intending to buy used houses was somewhat smaller in early 1948 than in early 1947 (see Table 8). This same tendency was noted between 1946 and 1947, and was borne out by lessened activity in existing residential properties during 1947.

Roughly three-fourths of the prospective demand for total houses in 1948 came from spending units that did not own homes. Not quite one-fourth of prospective house buyers were present home owners. Veterans of World War II continued to be important prospective buyers, although there were indications that the difference between veteran and nonveteran spending units in total intentions was narrowing.
Examination of the prospective demand for durable goods by income level of buyer indicates the very substantial increase in the percentage of buyers as the level of income increases. As the chart on page 641 shows, less than one-tenth of all spending units with incomes below $\$ 1,000$ were prospective buyers of selected durable goods other than automobiles as compared to one-fifth of all spending units with incomes of $\$ 2,000$ to $\$ 3,000$ and more than one-third of all spending units with incomes of $\$ 5,000$ or more. The same upward shifting appears in the case of automobile and house purchasers although the frequency of prospective buyers is considerably smaller (see Table 4). The maintenance of continued high levels of consumer expenditures during the past year, despite the large increases in prices of consumer goods, reflects the very sizable shifts toward middle and upper income levels since the prewar period and the resulting heavy buying demands of these groups.

Consumer plans to buy durable goods apparently were not affected by the break in commodity prices during the first two weeks of February 1948.

PROSPECTIVE BUYERS OF CONSUMER DURABLE GOODS AND HOUSES IN 1948, BY INCOME GROUPS

Further, the price break appeared to have little effect upon consumer expectations of durable goods prices, on which many spending units anticipated declines as early as July 1947.

For the past several years the price expectations
of consumer units do not appear to have been a significant factor in determining buying plans. Most consumer units anticipated only slight shifts in prices, either upward or downward, and no difference has been noted between the buying plans of consumer units expecting prices to rise or to fall.

## Method of Payment for Durable Goods

An increasing proportion of durable goods was bought on a credit basis during 1947, according to survey results. As is shown in Table 5, roughly onethird of all automobile purchasers made use of instalment credit in 1947 as compared to onefifth in 1946. In the case of other selected durable goods, buyers reported using instalment credit for 35 per cent of their purchases in 1946 and 42 per cent in 1947. There was a marked increase in the physical volume of durable goods sold during 1947, and about 9 million spending units used instalment credit in purchasing cars and other durable goods during this year. In 1946 only about 5 million spending units used instalment credit for such purchases.

Due to the increasing use of credit there was, of course, some decrease in the relative frequency of use of cash in payment for goods. Cash payments as shown in Table 5 include amounts ob-

[^4]tained from current income during the year, withdrawals of previously accumulated liquid asset holdings, proceeds from the sale of other assets, and trade-in allowances. Despite this decrease in the relative use of cash, there was a slight increase in the turnover of liquid assets for purchase of durable goods because of the substantial rise in the volume of goods sold.

According to the financing plans of prospective buyers in 1948, there will be a further rise in the proportion of consumer goods sold on an instalment basis during the coming year. This reflects the huge quantities of goods to be bought that are typically sold on a credit basis plus the fact that somewhat fewer spending units held liquid assets at the beginning of 1948.

For houses, over four-fifths of the actual buyers used mortgage credit in 1947 and 1946. As Table 5 shows, a smaller proportion of prospective buyers of houses in 1948 planned to use mortage credit than in 1947. Prospective buyers who were home owners less frequently indicated a need for credit than nonhome owners did.

It is estimated that the total amount of mortgage credit used by purchasers of houses in 1947 was almost 9 billion dollars, or about three-fifths of the total value of houses sold. In the case of automobiles and other selected goods, less than onefourth of the aggregate purchase price was on a credit basis.

## Consumer Attitudes and Expectations

Consumer attitudes and expectations regarding general economic conditions and their own personal financial status were for the most part little different in early 1948 than they were in early 1947. This was in contrast to the significant differences noted between early 1946 and 1947 when their expectations shifted in an optimistic direction.

Consumers were still optimistic at the beginning of 1948 about their future income prospects and about the general economic outlook. As Table 6 indicates, more than one-fourth of all spending units expected to be making more money 12 months hence, about one-tenth expected to be making less money, and almost two-fifths expected to be making about the same. Almost one-half of all spending units thought we would have good times in the year 1948 as compared to one-fourth expecting bad times. Most occupational groups agreed closely on the general economic outlook. Optimism about
the general economic outlook was voiced by more of the spending units with high incomes than of

Table 6

1 Based on interviews in January-March 1948 (third survey).
${ }^{2}$ Based on interviews in January-March 1947 (second survey).
${ }_{4}$ Based on interviews in January-March 1946 (first survey).
${ }^{4}$ The question was: "Would you say that you people are better off or worse off financially now than you were a year ago?"
${ }^{5}$ In 1948 and 1947 the question was: "How about a year from now-would you say that you will be making more money or less money than you are now, or will you be making the same?" The question was asked of nonfarm spending units only. Data for 1946 are not strictly comparable with data for other years because they are based on a comparison of expected annual income for 1946 with actual income in 1945.
6 The question was: "Now considering the country as a whole, do you think we will have good times or bad times or what during the next 12 months or so?"
those with low incomes. Professional and whitecollar persons were most optimistic about future income prospects, and showed little shift in such expectations from early 1947.
About one-third of the consumer units believed that they were better off financially at the beginning of 1948. Some two-fifths believed they were worse off. Spending units that indicated they were "better off" predominately referred to higher incomes and some to lower expenses. A worsened financial status in 1948 was associated with lower incomes and high prices. Almost one-fourth of those whose income increased in 1947 said that they were worse off because of the higher cost of living.
Unlike previously discussed consumer attitudes and expectations, which shifted in an optimistic
direction in 1946 and then stabilized, consumer price expectations fluctuated greatly during the three years. In early 1946 more than one-half of all spending units expected prices to rise while less than one-tenth expected prices to drop. The situation was entirely reversed in early 1947. By July 1947 more consumers anticipated price increases again, and in January 1948 price expectations com-

${ }^{1}$ The question was: "What do you think will happen to the prices of the things you buy during the next 12 months or yeardo you think they will go up, or down, or stay about where they are now?"
${ }_{2}^{2}$ Based on interviews taken in 1948 Survey of Consumer Finances.
${ }_{3}$ Based on a small survey (Interim Survey) taken in last two weeks of July 1947.
pared very closely with expectations noted in early 1946. As is shown by Table 7, however, only oneseventh expected price increases after the commodity price break.
The change in consumers' price expectations during the decline in commodity market prices of midFebruary 1948, provides further evidence of the responsiveness of price expectations to changing economic conditions. During the same period in 1948 neither general economic outlook nor income expectations reacted to the commodity price decline. Expectations about the general price level seem to reflect expectations about the price of food rather than clothing or durable goods. This finding was noted both in July 1947 and in early 1948.
Despite the obvious shifts in people's price expectations for the year, no changes have occurred in consumer expectations of prices three years hence. The great majority definitely expect a lower level of prices three years hence, and there was no significant difference in the three-year price expectations of the spending units interviewed before and after the price break.
Supplementary information concerning the buying intentions and actual purchases of spending units is given in Tables 8-13, pages 646-48.

## APPENDIX

## METHODS OF THE SURVEY OF CONSUMER FINANCES ${ }^{1}$

The interviewing for the third annual Survey of Consumer Finances was conducted between January 5 and March 5, 1948. The two preceding annual surveys were made during the same period of 1947 and 1946, respectively. In addition, a much smaller survey was conducted during July 1947. Each of these surveys was a separate undertaking; different respondents, representing each time a cross-section of American consumers, were interviewed in each survey. Certain minor objectives differed from survey to survey, and some methods were improved in the later surveys as compared to the earlier ones. But, fundamentally, the survey methods were alike in the following respects:

1. Facts of consumer budget (income, liquid asset holdings, amounts saved, amounts spent for

[^5]the purchase of automobiles, etc.) and psychological factors underlying consumer behavior (motives, attitudes, expectations) are ascertained in one operation. This combination facilitates interviewing and opens up new possibilities for analysis.
2. The universe from which the sample is drawn consists of all consumers in the Continental United States living in private households. Members of the armed forces living at military reservations, residents in hospitals and other institutions, and the floating population (residents in hotels, large boarding houses) are excluded. As an approximation it can be stated that 4 per cent of the 144 million population was not included in the universe of the 1948 survey. The proportion of people not included in the surveys was somewhat larger in 1947 and 1946.
3. Area sampling is used to select a representa-
tive cross-section of dwelling units. No latitude is given to the interviewers in selecting the dwelling units. First counties, then urban blocks and open country areas within the counties, and finally dwelling units are designated in the central office by means of random methods (coupled with stratification). ${ }^{2}$
4. In order to obtain more reliable information concerning consumers with relatively high incomes or liquid assets, areas in which such people are assumed to be more numerous are considerably over-sampled. Weights are used to compensate for the over-sampling.
5. All inhabitants of the designated dwelling units are enumerated and grouped into spending units. A spending unit is defined as all persons living in the same dwelling and related by blood, marriage, or adoption, who pool their incomes for their major items of expense. The head of each spending unit is interviewed.
6. The method of small-sample surveys is used because of its advantages with respect to cost, speed of field work and analysis, and reduction of reporting errors. Careful training of interviewers and checking and editing of the interviews, as well as application of uniform procedures, are facilitated with small samples. On the other hand, the sampling error would be reduced somewhat if larger samples were used. Moreover, small samples make it impossible to calculate information concerning certain subgroups of the population.
7. At least three calls are made at different times on each spending unit so as to reduce the frequency of "not-at-home" cases. No substitutions are made even if no one is found at home after repeated calls, or in case of refusal to be interviewed.
8. A questionnaire is prepared and is pretested in the field. Some questions are "direct," usually requiring short answers (e.g., "Do you own a car?"), and some are "open-ended" introducing the discussion of topics and requesting information about reasons for opinions held.
9. Interviewers are trained personally, both in general interviewing procedures and in the specific problems of the survey. To stimulate interest and build rapport, interviewers are instructed to intro-

[^6]duce the interview by explaining the purposes and importance of the survey as well as how the respondent was selected. The interviewers also use suitable introductions to sections of the survey and nonsuggestive probes to the questions to elicit additional information. The average time of an interview is about one hour.
10. The interviewers record the answers received as nearly verbatim as possible. By using this method, in contrast to a check-list type of interview, decisions as to the meaning of answers are made on a uniform basis in the central office.
11. The interviews are edited in the central office. In certain cases the editing process reveals the necessity of a second interview. This is the case especially if tabulation of all money received during the year (income, plus amounts borrowed, plus sale of assets, etc.) and money spent and saved shows incongruous results. In these cases the interviewers are instructed to ask specified additional questions. Letters are written to respondents who refused to be interviewed or refused to give certain information. Some missing information is obtained by mail.
12. All information, financial facts as well as opinions, is transcribed to punch cards by means of a coding process. An elaborate list of categories is set up to determine the frequencies of different shades of opinion. A check-coding process provides a measure of coding reliability.
13. The findings are published as obtained in the survey without any adjustment or correction made on the basis of outside information. ${ }^{3}$
In spite of making use of the same methodological principles, the more recent surveys were by no means repetitions of the earlier ones. The method was developed continuously and some of the principles listed above were applied more thoroughly in the third than in the first two surveys. Furthermore, the number of interviews was increased somewhat, from 2,890 in the 1946 survey and 3,058 in the 1947 survey to 3,562 in the 1948 survey. (The 12 largest metropolitan areas and 54 other counties made up the sampling points in each survey.) While these changes hardly affect the com-

[^7]parability of results, changes in the approach to certain issues-different forms of questions which are assumed to yield more reliable results-make comparisons impractical in a few instances. In addition, several subjects were included for the first time in the 1948 survey so that comparable earlier information is not available.

On the basis of sampling principles and survey findings, it is estimated that the universe from which the sample was drawn consisted of 48.4 million spending units or 42.0 million families ${ }^{4}$ at the beginning of 1948. These estimates are somewhat higher than those made at the time of the 1947 survey. The difference is probably larger than the actual growth in the number of families and spending units since it reflects certain improvements in basic data and survey methods, and also fluctuations in sampling.

Sample interview surveys, if properly conducted, yield information on the order of magnitude of data but do not yield exact values. All information derived from the Survey of Consumer Finances is subject to reporting errors and to sampling errors. For the latter, in contrast to the former, numerical measures are available.

Reporting errors and errors due to nonreporting are not generally measurable and their presence must be considered in the interpretation of survey results. Some of these errors may be expected to be relatively constant from year to year and therefore the changes noted in certain data from one survey to the next may not be affected by such errors. ${ }^{5}$

The magnitude of sampling errors varies with the item under consideration and the type of estimate. In general, distributions of the entire sample, such as the income distribution of all spending units in the Consumer Finances Survey, have relatively small sampling errors. Distributions based on a subgroup of the sample, on the other hand, are

[^8]subject to greater chance variation and the sampling errors may be too large to permit valid comparisons. Income distributions of spending units within one geographic region of the country, for instance, may not be reliable values for comparison with a similar distribution of another region.

In presenting dollar figures in the Survey, frequent use is made of medians. Most of the distributions here studied are highly skewed, and for such data the sampling errors of medians are smaller than those of means. For items like the price of new automobiles, however, for which the distribution is more nearly symmetrical, the mean has a smaller sampling error. The sampling errors of both medians and means tend to be larger when estimates are based on a subgroup rather than all of the sample.
The sampling errors of differences between two estimated quantities, such as estimated year-to-year differences, tend to be larger than those for the estimates themselves. But since the samples are comparable in all years, the increase in sampling errors for estimated year-to-year differences is not large. For example, the sampling error of the difference in the proportion of spending units that had incomes of $\$ 4,000$ or more in 1946 and 1947 is about 3 percentage points. This compares with an error of about 2.5 percentage points in the figure for the year 1947.

The sampling error measures the range on either side of the sample estimate within which a corresponding figure based on a complete enumeration could be expected to fall 95 times out of 100 . That is, a complete enumeration of all spending units would be expected to yield a median income within the range of $\$ 2,380$ to $\$ 2,680$, that is, within $\$ 150$ above or below the $\$ 2,530$ median income estimated from the sample. ${ }^{6}$ The chances that this result would be obtained are 95 in 100 . There are about 67 chances in 100 that the median would lie within a range only one-half as great, that is between $\$ 2,455$ and $\$ 2,605$. A few examples will serve to show the approximate magnitudes of some of the sampling errors:

[^9]Sampling Error for Selected Survey Data

| Item | Survey estimate | Estimated sampling error |
| :---: | :---: | :---: |
| Percentage of all spending units with money incomes of $\$ 4,000$ or more in 1947. | 24 percent | $\begin{gathered} 2.5 \text { percentage } \\ \text { points } \end{gathered}$ |
| Median income of all spending units | \$2,530 | \$150 |
| Percentage of all spending units reporting the purchase of automobiles in 1947. | 15 percent | 2.0 percentage points |
| Mean price of new cars purchased in 1947. | \$1,950 | \$45 |
| Percentage of spending units classified as managerial and self-employed with money incomes of $\$ 4,000$ or more in $1947 . .$. ............... | 56 percent | $\underset{\substack{7.0 \text { percentage } \\ \text { points }}}{ }$ |
| Median income of spending units classified as managerial and selfemployed | \$4,330 | \$580 |

Even a very brief and, by necessity, superficial discussion of survey methodology would be incomplete without calling attention to the fact that surveys intended to determine both the composition of household budgets and psychological factors influencing consumer behavior represent a relatively new development in the field of economic research. Considerable experience derived from the analysis and interpretation of results of a number of surveys repeated under varying conditions is needed before this type of research can be of maximum value.

SUPPLEMENTARY TABLES
Table 8
Consumer Attitudes toward Selected Purchases
IN 1948, 1947, and 1946

| Type of product and attitude toward purchase | Percentage distribution of all spending units |  |  |
| :---: | :---: | :---: | :---: |
|  | 1948 | 1947 | 1946 |

#### Abstract

Footnotes for Table 12, Cont. ${ }_{2}$ The fact that the number of spending units who reported buying refrigerators in 1947 was in excess of the number of refrigerators produced is indicative of the active market for used refrigerators. In the case of washing machines and radios, indicated purchases were less than production figures. This may be because a large number of purchases were made by buyers other than consumer spending units; it is also possible that some purchases of small washing machines and portable and table radios were not reported. ${ }^{3}$ Data not available.

Personal money incomes increased by approximately 20 billion dollars in 1947. This sizable increase was widely distributed throughout the population and a substantial number of spending units had higher money incomes in 1947 than in 1946. This article supplies new statistical information about the extent to which various groups in the population participated in the increase in money incomes in 1947 and in the distribution of total money income for the year.
The findings presented in this article are based upon the 1948 Survey of Consumer Finances, conducted for the Board of Governors of the Federal Reserve System by the University of Michigan Survey Research Center. Comparison of these findings is made with two previous surveys, which were conducted in early 1947 and early 1946 using similar techniques and including similar information. ${ }^{2}$ Another article on the 1948 survey, also presented in this Bulletin, gives a broad summary of survey results and details relating to expenditures for durable goods, while subsequent articles in later issues of the Bulletin will cover liquid and nonliquid asset holdings, saving out of income, and housing expenditures and finance.
As in the case of previous surveys of consumer

[^11]finances the present one covers, on a sample basis, the entire population of the United States residing in private households during the January-March interview period. The following groups were omitted: (1) members of the armed forces living at military reservations; (2) residents in hospitals and in religious, educational, and penal institutions; and (3) the floating population, that is, people living in hotels, large boarding houses, and tourist camps.

The interview unit of the Surveys of Consumer Finances is the spending unit, defined as all persons living in the same dwelling and belonging to the same family who pooled their incomes to meet major expenses.

## Summary of Findings on Consumer Income

1. The 20 billion dollar increase in civilian money income during 1947 was accompanied by increases in the money incomes of about half of the spending units. Approximately 24 million of the total of about 48 million spending units had larger money incomes in 1947 than in 1946. It is estimated that some 9 million spending units had lower incomes in 1947, primarily because of less steady work, lower profits, retirement, or sickness.
2. The increase in incomes of half the spending units during 1947 was accompanied by the shifting of many of these units to higher income groups. About two-fifths of all spending units reported money incomes of $\$ 3,000$ and above in 1947 as compared with slightly more than one-third in 1946 and less than one-third in 1945.
3. About three-fifths of the skilled and semiskilled workers and about the same proportion of professional persons and clerical and sales personnel said that their 1947 incomes were larger than 1946 incomes. Fewer self-employed persons, farm operators, and unskilled workers than persons in other occupational groups reported increases in income and more reported decreases in income.
4. There appears to have been no significant change between 1946 and 1947 in the proportion of income received by the various occupational groups in relation to their number in the total popu-
lation. The managerial and self-employed and professional groups received a proportion of total money income equal to roughly twice their respective proportions of the total population in both years. Skilled and semiskilled workers and clerical and sales personnel received a proportion of income roughly equal to their proportions in the total population, while farm operators, unskilled workers, and other miscellaneous groups such as retired persons, housewives, and students received proportions somewhat smaller than their population weight.
5. No increase or decrease occurred in the percentage of total income accounted for by the spending units who were the highest income recipients in 1947 and those who were the highest income recipients in 1946. In both years the tenth of the spending units with highest incomes received roughly one-third of total money income.
6. Consumers continued to be optimistic about future income prospects. Substantially more spending units expected their incomes to be higher rather than lower in early 1949.

Changes in Income from 1946 to 1947
Total money income before taxes, as reported in this survey, is the sum of the net money earnings from civilian employment (including wages and salaries and net incomes or losses from farm and nonfarm business and professional self-employment), armed forces pay of civilians not in the services at the time of interview and of members of the services living in private households, and net money income other than earnings. It does not include income received in kind, such as the value of home-produced food, free meals, or rentfree living quarters. Nor does it include the value of farm inventory changes or farm depreciation charges. Furthermore, it does not include capital gains or losses.

Heads of spending units (in some cases other members) were asked by interviewers to report separately the amount of money income received by each member of the spending unit from each of a number of specified types of income such as wages and salaries; interest, dividends, rents, or royalties; income from professional practice or unincorporated business; various types of allotments, pensions, retirement pay, contributions, and other income of this type; and income from work other than regular employment.

Increases in money incomes placed many spending units in higher income groups in 1947 than they had been in during 1946 or 1945. As the accompanying chart shows, the upward movement occurred throughout the entire income distribution. Almost one-fourth of all spending units had money incomes of $\$ 4,000$ or above in 1947 and about onethird had money incomes below $\$ 2,000$.

The median income figure, i.e., the income of the middlemost spending unit when all spending units were ranked by size of income, shown in Table 1, was approximately $\$ 2,500$. This represented an increase of some 10 per cent above the 1946 level and 25 per cent above the 1945 level. These sizable advances in median income are indicative of the increases in money income received by many millions of spending units between 1946 and 1947 as well as between 1945 and 1946.

There have, of course, been substantial increases in the cost of living during this three-year period, and so these increases in money incomes have not necessarily been gains in real income. Many spending units that were receiving larger money incomes in 1947 than in 1946 or 1945 found that the effective purchasing power of their incomes had not advanced correspondingly. As has been pointed out in Part I of the survey report, a considerable number of the spending units with higher money incomes in 1947 than in 1946 felt that because of the higher cost of living they were worse

${ }^{1}$ Income data for 1947 are based on interviews in JanuaryMarch 1948 (thitd survey); for 1946 on interviews in JanuaryMarch 1948 (thitd survey); for 1946 on interviews in January-
March 1947 (second survey); and for 1945 on interviews in JanMarch 1947 (second survey); and
uary-March 1946 (first survey).
${ }_{2}$ The median amount is that of the middle spending unit when all units are ranked by size of income.
off financially at the end of 1947 than at the beginning of the year.

Roughly one-half of all spending units reported an annual income in 1947 that was greater than their 1946 income. As Table 2 indicates, spending units in which the head of the unit was a professional person, a skilled or semiskilled worker, or a clerical or sales person most frequently said that their 1947 incomes were greater than their 1946 incomes. Approximately three-fifths of spend-
ing units in these categories reported increases. With each of these groups, decreases in income were reported by less than one-fifth of their number. For spending units in all occupational groupings declines in income were much more frequent between 1945 and 1946, when many people transferred from wartime to peacetime employment.

In the case of skilled and semiskilled workers, the large number of spending units reporting higher money incomes was in sharp contrast with the much smaller number reporting higher 1946 than 1945 incomes at the time of the second Survey of Consumer Finances. Although a substantial number of the heads of spending units in these groups received increases in basic hourly wage rates in both 1947 and 1946, many of these increases were offset in 1946 by a reduction in hours worked plus loss of overtime premiums formerly received in war industries, and also by changes to lower-paying jobs. In fact, spending units in the skilled and semiskilled group reported decreases in annual money incomes from 1945 to 1946 almost as frequently as they did increases. More units in the unskilled group reported increases in incomes from 1946 to 1947 than reported increases from 1945 to 1946, and considerably fewer spending units in this group reported decreases in incomes from 1946 to 1947 than had done so in the earlier period.

The proportion of spending units reporting no substantial changes in income or reporting decreases

[^12]in income from 1946 to 1947 was highest in the managerial and self-employed group and among farm operators. No more than about one-fifth of the spending units in these groups, however, reported income decreases.

For spending units in most occupational groups, median income increased between 1946 and 1947. Spending units in which the head of the unit was a managerial or self-employed person had the highest median income in 1947 with $\$ 4,500$. Professional persons followed with $\$ 4,000$; then skilled and semiskilled workers with $\$ 3,000$; clerical and sales personnel with $\$ 2,900$; and unskilled workers with $\$ 1,800$. Farm operators had a median income of $\$ 1,500$ but since their money incomes are substantially supplemented by nonmoney income, such as food produced on the farm, their reported incomes are not closely comparable with those of other occupational groups. Median income figures as well as income distributions of spending units within the different occupational groupings for the years 1947 and 1946 are shown in Table 7 following this article. Because of the small number of sample cases on which data for the separate occupations are based, particularly that for the professional group, these income distributions by occupation should be considered as approximations only and as very rough guides to shifts occurring between 1946 and 1947. It is noteworthy that the same sort of general upward shift in level of money income observed for the sample as a whole was also apparent for most occupational groups.

Estimates of the percentage of total money income received by the various occupational groups show that the managerial and self-employed and the professional persons received somewhat over onethird of total money income-a proportion of income equal to roughly twice their proportion of the total population in 1947. Skilled and semiskilled workers and clerical and sales personnel received about one-fourth and one-sixth of total income, respectively, proportions that were comparable to their population weight; unskilled workers, farm operators, and others received somewhat less of total money income than their numerical proportion. Unskilled workers received almost one-tenth of total money income and farm operators somewhat less. As in the case of the income distributions by occupational groups, these data should be considered rough approximations only.
While the percentage of all spending units shifting to higher income groups in 1947 was small, as is shown in Table 1, this is not inconsistent with the finding that as many as half of all spending units received increases in income. Since each income grouping used in the survey has a range of $\$ 1,000$ or more, very substantial increases in income are needed before most spending units shift into a higher income grouping. Table 3 shows income changes by income groups. Three-fifths or more of all spending units with incomes of $\$ 3,000$ and above in 1947 reported their annual incomes to be larger than in 1946. About one-fourth of the spending units with incomes below $\$ 1,000$ in

Table 3

[^13]1947 reported increases; a similar proportion of this group reported decreases and the remainder, or roughly one-half, said there was little change in their money incomes between the two years. It is not surprising that the number in this group reporting income increases was comparatively small and the number reporting income decreases was comparatively large. This is the lowest income category. Thus it included a considerable number of spending units that experienced substantial declines in income during 1947. It also included many persons living on fixed incomes, such as retired people and widows.
The income information already presented has stressed the fact that increases in money income were frequent between 1946 and 1947 and that these increases were not confined to one or two particular groups but appeared to be distributed throughout many segments of the population. Table 4 shows the share of money income received by each tenth of the nation's spending units when ranked by size of income. The tenth of the nation's spending units with the highest incomes in 1947 and the tenth with the highest incomes in 1946 received approximately one-third of total money income. There was no shift of any significance in the distribution of income among each tenth of spending units. In other words, the increment in money income between 1946 and 1947 appears to have been distributed among various spending units in proportions quite similar to the distribution of income in 1946.

The incomes of the top tenth of spending units in 1947 ranged upwards beginning with $\$ 5,700$. The incomes of the next highest tenth of spending units, ranging from $\$ 4,200$ to $\$ 5,700$, accounted for almost one-sixth of total income in that year. The bottom of the income range in 1947 for most of the tenths was often as large as or larger than that of the next highest tenth in 1945.
Income distributions of spending units according to other basic characteristics such as size, number of members employed, and place of residence, show the same relative pattern for the year 1947 as in 1946. For example, one-person spending units generally received lower incomes than larger spending units; the more employed people in a spending unit, the higher was its income. Spending units in metropolitan areas as a rule had higher incomes than units in other urban areas and rural areas. Income distributions of spending units having these various characteristics are presented in Table 8 at the end of the article.

## Composition of the Various Income Groups

In the following sections information is presented about the size and other characteristics of spending units in the various income groups, and about the occupation, age, etc., of members of these spending units. For example, who were the spending units that made less than $\$ 1,000$ in 1947? Were they families of two or more persons or were they single individuals? Were they gainfully employed or unemployed? What was their occupation?

Table 4

| Lowest tenth. | 1 | 1 | 1 | 100 | 100 | 100 | 0 | 0 | 0 |

${ }^{1}$ Income data for 1947 are Lased on interviews in January-March 1948 (third survey); for 1946 on interviews in January-March 1947 (second survey); and for 1945 on interviews in January-March 1946 (first survey). It is possible that the proportion of income received by the highest tenth of income receivers is underestimated by several percentage points in all years. Samples of approximately $3,000-$ 3,500 spending units having been used in these three surveys, it cannot be expected that a completely representative sample of the highest dollar incomes was obtained.

Note.-Detailed figures may not add to cumulative figures because of rounding.

Available data indicate that more than two-fifths of the spending units with money incomes under $\$ 1,000$ were single-person spending units. Farm operators, retired people, housewives (widows, etc.), and unemployed persons accounted for about twothirds of all the spending units in this low income grouping; and unskilled workers for about onesixth. There was very slight representation of the remaining occupational categories. In terms of age, roughly half the heads of all the spending units in this income group were 55 years of age or more.

The composition of the $\$ 5,000$ and over income grouping makes a striking contrast to the composition of the under $\$ 1,000$ grouping. Less than onetwentieth are single-person units and almost threefifths are three or more person units. Over half the spending units are headed by professional or managerial and self-employed persons; another onethird by skilled and semiskilled and clerical and sales personnel; and only one-tenth by farm operators and other groups so frequent in the lowest income category. Four-fifths of the spending units had people as their heads who were between the ages of 25 and 54.
In the intervening income groups ( $\$ 1,000-\$ 4,999$ ), there were sizable numbers of two or more person spending units, and the skilled, semiskilled, and unskilled workers, together with clerical and sales personnel, accounted for about three out of every five spending units.

## Income Expectations for 1948

Consumers continued to be optimistic about their income prospects. More than a quarter of all spending units expected that their rate of income would be greater in the early part of 1949 than
it was in the early part of 1948. About one-tenth anticipated that they would be making less money a year from the date of the survey, and about twofifths expected to be making about the same amount of money.

By occupational groups, as Table 5 shows, it was the professional persons and clerical and sales personnel who were the most optimistic about their future incomes, and the unskilled workers who were the least optimistic. The pattern of these income expectations was quite comparable to that expressed in early 1947. At that time also the professional and clerical and sales groups were the most optimistic. Other wage-earning groups, however, were not quite as optimistic in early 1947 as they appeared to be in early 1948.
In all income groups, many more spending units expected larger or smaller incomes a year hence. Spending units with incomes of $\$ 5,000$ or above more frequently expected increases or decreases in income than did the spending units in lower income groups. Income expectations expressed in the previous year's survey by spending units in the various income groupings showed this same tendency.

## Family Income in 1947

The income data reported by spending units in the Survey of Consumer Finances is tabulated by family units (as defined by the Bureau of the Census, United States Department of Commerce) as well as by spending units. The Census defines a family as all persons living in the same dwelling who are related by blood, marriage, or adoption. Table 6 presents income distributions by family units for 1947, 1946, and 1945 as derived from the

Table 5
Expected Income Change during 1948, by Occupation of Head of Spending Unit ${ }^{1}$

| Expected change of income <br> during coming year |
| :--- |

[^14]
## 1948 SURVEY OF CONSUMER FINANCES

three surveys. It is estimated that at the beginning of 1948 there were approximately 48.4 million spending units ${ }^{3}$ and 42.0 million family units. Since the spending unit is defined as all persons living in the same dwelling and belonging to the same family who pool their incomes to meet their major expenses, there may be more than one spending unit in any family. Early in 1948 there were approximately 39.9 million dwelling units, of which about 35 million were occupied by families (including only persons related to the head of the household) which represented only one spending unit. In approximately 5 million dwelling units, however, the families consisted of two or more spending units and this accounted for the entire difference in the number of family units as against spending units. In these families there were married sons or daughters (many of them veterans) who did not pool their incomes with the head of the family and therefore were considered separate spending units; there were also employed single sons and daughters, or in some cases elderly parents or other relatives who had separate incomes of more than $\$ 500$, and

\footnotetext{
${ }^{\mathbf{s}}$ In the publication of the results of the 1947 survey it was estimated that there were 46.3 million spending units in early 1947. In the light of other information now available for making such an estimate, it is probable that this figure is somewhat of an underestimate and that the true figure is closer to 47 million.
At the beginning of 1948 , there were an estimated 39.9 mil lion dwelling units in the United States. A breakdown of the lon dwelling units in the United States. A breakdown of the
occupants of these dwelling units by families is shown below:

$$
\begin{aligned}
& \text { Families } \\
& \text { and single } \quad \text { Spending } \\
& \text { individnals units } \\
& \text { (Estimated number. }
\end{aligned}
$$ (Estimated number, in millions)

| Total. | 42.0 | 48.4 |

did not pool them with the head of the household.
With the same total amount of money income distributed among family units instead of spending units, it is to be expected that there will be a larger proportion of all units in higher income groups. As Table 6 shows, about 20 per cent of all family units had incomes of $\$ 5,000$ or above in

March 1948 (third survey): for 1946 on interviews in JanuaryMarch 1948 (third survey): for 1946 on interviews in lanuary-
March 1947 (second survey); and for 1945 on interviews in Jan-
 persons living in the same dwelling who are related by blood, marriage, or adoption.
${ }^{2}$ Includes single-person family units.
${ }^{3}$ The median amount is that of the middle family unit when all units are ranked by size of income.

1947 and approximately 30 per cent of all family units had incomes below $\$ 2,000$. This compares with 14 per cent of all spending units having incomes of $\$ 5,000$ or above and 36 per cent having incomes below \$2,000.

Tables 7 and 8 following contain supplementary information relating to results presented in the text.

$r$ Revised
${ }^{1}$ Income data for 1947 are based on interviews in January-March 1948 (third survey); for 1946 on interviews in January-March 1947 (second survey). Because of the small number of cases in the various occupational groups and also because of some differences in the coding by occupations between the two years, these distributions should be considered as approximations only and as very rough guides to general shifts in the distribution of income between 1946 and 1947. All the occupational groupings are in terms of the occupa${ }_{2}$ As explained in the text, the income distribution for farm operators is not closely comparable with the distributions for other groups because of the large amount of non-money income that farmers produce for their own consumption.
${ }^{2}$ Less than one-half of 1 per cent.

[^15]ESTIMATED LIQUID ASSET HOLDINGS OF INDIVIDUALS AND BUSINESSES

Individuals increased their liquid assets during 1947 by an estimated 6.8 billion dollars while businesses decreased their holdings of liquid assets by 1.5 billion. This compares with an increase in individuals' holdings of 10.7 billion dollars and a decrease of 6.7 billion dollars in the liquid assets of businesses during 1946.

Estimates of liquid asset holdings of individuals and businesses as of December 31, 1947, and for end-of-year and mid-year dates from December 1939 to December 1946, are presented in the table on page 658 . These estimates cover the principal assets which are most readily convertible for use and for which there are representative statistics of ownership. Currency and demand deposits are the basic forms of cash ordinarily used, and under existing practices time deposits, shares of savings and loan associations, and United States Government securities are readily convertible into cash. Savings and loan shares, which have become increasingly important in recent years as a form of liquid saving, are included for the first time in these estimates. Other assets that may be commonly considered as liquid, such as corporate and municipal securities and insurance and pension reserves, are not included in the series.

The shift in liquid assets from businesses to individuals reflected in part extremely large business expenditures for expansion of plant, equipment, and inventories, as well as substantial net increases in credit granted to individuals. The decline in liquid assets of businesses during 1947, however, was much smaller than the decline in 1946, despite the fact that business capital expenditures were substantially larger. This was possible because of considerable increases in funds available to businesses during 1947 from certain sources, chiefly undistributed profits, increases in tax liabilities, and the sale of corporate securities. These developments for incorporated businesses are discussed in the leading article of this Bulletin.

Administrators of trust accounts of individuals continued to channel almost all increases in these funds into United States Government securities. Other individuals increased their liquid assets by adding to savings and checking accounts. Notwithstanding the inclusion of almost 0.8 billion dollars
of armed forces leave bonds made cashable in 1947, as well as the addition of from 0.3 to 0.4 billion dollars in accrued discounts to the value of discount savings bonds owned by individuals, there was an increase of only 0.2 billion dollars in their holdings of United States Government securities. This was because nontrust Government security holdings of individuals were being drawn down on a net cash basis during 1947. This decline was considerably smaller than the corresponding decline of approximately 3.5 billion dollars that took place during 1946. It is noteworthy in this connection that the third Survey of Consumer Finances, conducted early this year, found that several million fewer spending units held United States Government securities at the end of 1947 than a year earlier. ${ }^{1}$
The estimates presented in the accompanying table include liquid assets held by individuals (including farmers), unincorporated businesses, and corporations other than insurance companies. They do not include holdings of Federal, State, or local governments, Government agencies, foreigners, banks, savings and loan associations, insurance companies, or nonprofit associations. The estimates are approximations of amounts shown or implied in accounting records of the holders rather than those reported by banking and Treasury records, although they are derived from bank and Treasury reports. The deposit estimates, therefore, differ somewhat from the figures reported by banks and regularly published among banking statistics. ${ }^{2}$
The basic classifications used and method of estimate are the same as those employed previously, except that savings and loan shares are now included in the series, as was stated above. Estimates for dates prior to December 1947 include some small revisions in the ownership distribution of United States Government securities. ${ }^{3}$

## ${ }^{r}$ Revised.

${ }^{1}$ Figures for banks, insurance companies, savings and loan associations, nonprofit associations, foreigners, and governmental bodies and agencies are not included in the totals shown.
${ }^{2}$ These figures are estimates of demand deposit balances as they would appear on the records of depositors. They differ from figures based on bank records such as given in regular banking statistics. Depositor-record estimates are lower than bank-record estimates; for example, total demand deposits as of Dec. 31, 1947 on a holder-record basis (see table) amounted to 66.0 bilion dollars while on a bank-record basis these deposits amount to 80.2 billion. This is because checks are constantly in the mail, i. e., deducted on payor's records and not yet added on payee's records, payor's deposits as per bank records.
${ }_{3}{ }_{3}$ Private share capital in all operating savings and loan associations including private repurchasable shares, deposits, and investment certificates.

4 Includes outstanding amounts of excess profits tax refund bonds beginning December 1945, as follows: December 1945, 1,128 million dollars; June 1946, 58 million dollars; December 1946, 29 million dollars; December 1947, 12 million dollars. Armed forces leave bonds are included beginning December 1947. The amount outstanding at that time was 767 million dollars.
${ }^{5}$ Includes real estate companies, finance and credit companies, insurance agencies (not carriers), investment trusts, security brokers and dealers, holding companies not otherwise classified, etc.

6 Includes only amounts administered by corporate trustees.
7 Includes holdings of farmers and professional persons.

The Annual Report of the Bank of Canada for the year 1947 was submitted to the Minister of Finance, the Honorable D. C. Abbott, by Mr. Graham Ford Towers, Governor of the Bank, on February 11, 1948. Portions of the text of the report are given herewith. ${ }^{1}$

## Monetary Conditions

Dominion Government securities held by the chartered banks declined 669 million dollars during 1947, largely as a result of Government debt retirement. This reduction of security holdings would, in itself, have been accompanied by a reduction in the total of the banks' Canadian deposits by a corresponding amount. However, there was a more than offsetting increase during the year of 777 million dollars in the banks' Canadian loans and investments other than Dominion Government securities, and, including the effect of changes in other items, the total of their Canadian deposits rose by 178 million.
The daily average amount of chartered banks' cash reserves in 1947 was 2 million dollars less than in 1946. Nevertheless total Canadian dollar deposits increased, as referred to above. For both of these reasons, therefore, the cash ratio of the banks declined, and averaged 10.8 per cent in 1947 as compared with 11.4 per cent in 1946.
During 1947 the Dominion Government retired the balance of the deposit certificates which had been issued to chartered banks in previous years and of which 490 million dollars were outstanding as at December 31st, 1946. These certificates were the chief means by which the Government's direct borrowing needs from the banks were met during the war years, and at one time in the fall of 1945 reached a peak issue of 1,340 million dollars. In 1947 the Government also paid off in cash certain maturities of other securities of which the banking system held a substantial portion.

During 1947 there was a net decline of 170 million dollars in chartered bank holdings of Dominion Government bonds (excluding special banking securities such as deposit certificates). This decline

[^17]was largely accounted for by the Government paying off certain maturities, as mentioned in the preceding paragraph, rather than by net sales in the market. However, there were certain times during the year when banks were sellers of short- and medium-term Government bonds in order to maintain their cash position.

The increase of 461 million dollars in chartered banks' Canadian loans during 1947 was the largest annual increase on record. There was no increase in financial loans for the purpose of carrying bonds and shares and more than half of the loan expansion during the year was accounted for by loans to merchandisers and manufacturers. We estimate that loans to wholesale and retail merchandisers rose about 120 million dollars in 1947 and loans to manufacturers another 160 million. Higher commodity prices, some increase in the volume of inventories and an upward trend in the amount of outstanding consumer credit, all contributed towards the sharp increase in banks' current loans during the year. In addition, there were undoubtedly cases where bank borrowers obtained additional credit against their current assets such as inventory and receivables, for the purpose of obtaining funds to meet capital expenditures.

Chartered banks' holdings of provincial and municipal securities increased by 169 million dollars during 1947, and their portfolio of other non-Government securities-largely corporate debenturesby 147 million. In the case of provincial, municipal and corporate investments, most of the increase in banks' holdings has been due to acquisitions at time of issue rather than to market purchases.

It is clear that the present rate of capital development is straining Canada's manpower and material resources, and is pushing up prices. At the same time business, which in general entered the postwar period with unusually large liquid reserves, has been looking increasingly to banks for financing.
In my last annual report covering the year 1946, I referred to the fact that Canadians, like people in most other countries, had in recent years chosen to hold an increasing amount of their accumulated savings in the form of interest-bearing savings deposits. It was pointed out that the banks had found it necessary to invest in Dominion Government bonds in view of the fact that their scope for employing such funds in making commercial loans had been relatively limited.

During 1947 there was a marked change in this situation. A large increase took place in banks'
loans and non-Dominion Government investments, to which reference has already been made, and in comparison with previous years the public chose to transfer a somewhat smaller amount of its accumulated savings into the form of interest-bearing deposits. Banks were not in the position, as in earlier years, of seeking to invest in Government bonds, and during 1947 the ratio of such securities to personal savings deposits declined appreciably below the maximum of 90 per cent which was recognized in the agreement between banks and Government early in 1946.

## Security Markets

Prices for Dominion Government bonds were steady in Canada during 1947, the yield on the longest dated issue approximating 2.60 per cent throughout the year. Early in January 1948 the Bank discontinued its practice of furnishing daily quotations for Dominion Government securities to investment dealers and chartered banks, but continued to buy and sell in the market. Market prices declined at this time to a level where a yield of about 2.80 per cent could be obtained on the longest Victory Loan issue.

Provincial, municipal and corporation bond prices in Canada declined during the last quarter, resulting in a widening of the spread in yield between such issues and those of the Dominion Government.

Dominion Government domestic bonds outstanding declined 239 million dollars during 1947 as compared with an increase of 201 million in 1946. There was also a net reduction of 346 million dollars during 1947 in the amount of Dominion deposit certificates, Treasury bills and short-term notes outstanding.

The first series of Canada savings bonds which was introduced in October 1946 remained on sale until the end of August 1947. Sales during 1947 totaled 48 million dollars, making total sales for the issue 535 million; the amount outstanding at the end of 1947 was 417 million. In October a second series was offered and by the end of December about 900,000 individuals had subscribed for a total of 267 million dollars. There is one major change in the terms of the second series, in that holdings are limited to $\$ 1,000$ per person; the limit on the first series was $\$ 2,000$ per person. Many reports have testified to the value of the special features of the Canada savings bond, and particularly of the payroll savings plan, in meeting the needs of those who wish to save on a systematic basis.

During 1947 the totals of provincial, municipal and corporate bonds outstanding all increased. This marked the first increase in outstanding provincial
debt since 1940, the first increase in corporate debt since 1936 and the first appreciable increase in municipal debt since 1932. New issues of common and preferred stock were greater in amount than in 1946 and the largest for many years. Taking all non-Dominion Government securities as a group, the net increase in the amount outstanding was 263 million dollars in 1947 as compared with 59 million in 1946 and a net reduction of 48 million in 1945. Towards the end of 1947 signs of congestion appeared in the new issue market and flotations of common and preferred stock fell to a low level.

## Employment and Production in Canada

Against a world-wide background of heavy demand for goods and rising prices, economic activity in Canada rose during 1947 to a new peacetime peak. A year ago unemployment was already at the very low level of less than 3 per cent of the working force, and only a small net addition to the number at work could be expected from this source during 1947. In point of fact the slight further reduction of 30,000 in the number of unemployed was about offset by voluntary withdrawals from the working force over the year. Consequently most of the 100,000 or 2 per cent increase in over-all employment is attributable to natural growth of the working force, which accounted for about 60,000 , and to immigration.
Increases in industrial productivity, which normally occur rather slowly in any case, were limited in 1947 by continuing bottlenecks in the supply of certain basic materials such as steel. The available information suggests that industrial output rose by about 10 per cent during the year, while the volume of agricultural production was reduced by about 7 per cent owing to unfavourable crop conditions. The output of services, which account for about one-third of total employment and a somewhat higher proportion of the total value of production, is difficult to estimate. However, the production of services was probably very little higher in 1947 than in 1946, and it seems likely that the over-all physical volume of production of goods and services combined showed only a slight increase for the year.

## Expenditure and Prices

While the physical volume of Canadian production of goods and services increased only slightly from 1946 to 1947, over-all dollar expenditure on Canadian goods and services rose substantially. Foreign expenditure in Canada increased by about 10 per cent from the extraordinarily high peacetime level of the previous year. Private capital expenditure on plant, equipment and housing in-
creased by more than 50 per cent, and the book value of inventories rose by about 30 per cent over the year. Consumers spent a larger proportion of their income than in any year since 1939, and this together with a considerable increase in their income brought total dollar expenditure on consumers' goods and services about 13 per cent above the 1946 level. A substantial reduction in Dominion Government expenditure on goods and services more than offset increased provincial and municipal outlays. Moderating the effect of the over-all increase in expenditures in Canada was the large expansion in imports of goods, which rose by more than 700 million dollars or by nearly 40 per cent from 1946 to 1947. In physical terms the increase in commodity imports was only some 15 per cent, but this addition to the volume of raw materials, capital equipment and other goods available in our market was clearly a counter-inflationary influence.

Estimated Expenditure on Canadian Goods and Services ${ }^{1}$ [Calendar years, in billions of dollars]

${ }_{2}$ Dominion Government expenditure on mutual aid, UNRRA and other relief is excluded from Government expenditure and included in Exports.

After allowing for the offset of increased imports, total expenditure on Canadian goods and services, i.e., gross national expenditure rose, by roughly 1,400 million dollars or about 12 per cent from 1946 to 1947. Since physical production of goods and services was only slightly greater than in 1946, increased expenditure of this magnitude obviously involved higher prices. In the case of private capital investment, where the increase in expenditure was large even in terms of physical volume, the increase was clearly an important factor in pushing up prices. In the case of consumers' expenditure, how-
ever, where there was only a small percentage increase in physical volume, higher prices and increased dollar expenditure were largely the result of rising costs of imported goods or materials, and increased prices in export markets.

The combined effect of upward pressure on our price level from foreign and domestic sources was to increase the general wholesale price index by 28 per cent, and the cost of living index by 15 per cent during 1947. Although the situation with respect to wage rates varied considerably among different groups of wage earners, average hourly earnings of hourly rated employees in manufacturing industry rose by about 15 per cent over the year, and their average weekly earnings increased by nearly 16 per cent.

2 Midmonth.
${ }^{3}$ Mirst of month.
${ }^{4}$ Covers hourly rated wage-earners in manufacturing establishments with 15 or more employees. Figures are for last pay lishments with 15 or more employees. Figures are for last pay
period in previous month. Actual average earnings for Dec. period in previous month. Actual average earnin
1947 were $851 / 24$ (hourly) and $\$ 37.19$ (weekly).
In my last annual report I referred to the fact that Canadian prices had risen considerably less than United States prices since the end of the war. In the intervening year the gap has narrowed to some extent but the general level of prices and costs in Canada is still lower than in the United States and most other countries, in relation to any normal base period.

The fact that we exported nearly 2,800 million dollars' worth of goods in 1947, that we import goods on almost as great a scale, and that the prices of these goods are directly and immediately affected
by external price movements, shows how difficult it is to prevent Canadian prices from being affected by price changes abroad. Short of substantially appreciating its exchange rate and increasing its taxation, no country could have insulated itself completely from the world-wide rise in prices. Theoretically it might be contended that this could be done by means of direct controls, but these would have to be very much more rigorous and complete than those of wartime, to say the least.

## Exchange Situation

Reduction in Canada's gold and foreign exchange reserves during 1947 has tended to obscure the fact we still exported in that year more goods and services, in total, than we imported. It is evidence of Canada's growing productive capacity that in this period of extraordinary capital development and heavy imports of capital goods we have not, by contrast with 1929 and other earlier periods of boom, had a deficit in our current transactions with the rest of the world as a whole.

Our present foreign exchange problem therefore arose not from inadequate productivity, nor indeed from the character of our production. It has arisen rather from the traditional direction of our exports and imports, and the difficulties which beset our customers in Western Europe. Under present conditions of scarcity, a large part of our surpluses which are normally exported to Europe are of a kind for which there is a strong cash demand outside Europe, but exports have in fact been maintained to our traditional customers even though they were unable to pay cash in full, or to supply Canada with an increased volume of imports.

In my last annual report I referred to the export credits which Canada, along with the United States and other countries, had extended to her warravaged allies as part of a broadly based program to rehabilitate their economies and re-establish their ability to trade. During 1947 some 560 million dollars of our sales to other countries were financed out of drawings on Canadian export credits, and roughly 40 million out of Canadian relief appropriations. For approximately 600 million of our sales, therefore, we received no immediate cash return. At the same time, we had to pay cash for all our purchases from other countries, and our total sales to other countries did not exceed our total purchases from them by more than a comparatively small amount, perhaps of the order of 70 million dollars. Consequently we had a cash deficiency on our current transactions with other countries of some 530 million dollars, and a drain on our foreign exchange reserves of an equivalent amount. This,
together with payment of 74 million dollars on our subscription to the International Monetary Fund, redemptions of Canadian bonds held abroad, and other net capital payments abroad, accounts for the over-all reduction of 743 million dollars in our gold and foreign exchange reserves during 1947.

When Canada's export credit program of some 1,850 million dollars was undertaken, it was realized that it would involve a considerable drain on our exchange reserves, even if-as was then expecteddrawings were spread over a period running to 1950. Owing to the unfavourable developments in Europe, the need for goods from Canada has been greater, supplies available for export to Canada have been less, and drawings on the credits have been more rapid than contemplated. In point of fact, more than three-quarters of the total credits had been drawn by the end of 1947.
Having in mind the present level of our gold and foreign exchange holdings, and the magnitude of our trade with other countries, there is clearly need to increase these holdings. In such circumstances, we need to have an over-all balance of payments surplus greater than the value of any export sales which are financed out of the credits and for which, therefore, no immediate payment is received. The development of a larger balance of payments surplus involves increasing our exports, or reducing our imports, or both. In the last analysis (and apart from an improvement in average export prices relative to average import prices) these can only be achieved by increasing productivity and production, or by reducing or postponing domestic spending, particularly for nonessential capital purposes.
Proposals with regard to a European Recovery Program by the United States are, of course, of great interest to Canada. Implementation of such a program would not remove the need for Canada to increase the present small current account surplus in her over-all balance of payments. We need to increase this surplus if we are to be able to build up our exchange reserves to a more normal level and extend aid to other countries even on a much smaller scale than in recent years. What a European Recovery Program could do, in the short run, is to facilitate the continuance of Canadian shipments to Western European countries where they are badly needed; and without such a program the exchange problem of Canada, and indeed of practically all other Western Hemisphere countries, would be greatly aggravated. But we have an even greater interest in the long-run implications of a European Recovery Program. When the present unusually heavy demand for goods has declined, Canadian exports and employment will be influenced to an important degree by the extent of recovery in

Europe. We are, therefore, vitally concerned with any program which will help to strengthen the European economy and re-establish it as a substantial factor in normal international trade.
I turn now to the major changes which took place in the Bank of Canada's accounts during 1947, on which it is customary to comment in this report.

## Form of Statement of Assets and Liabilities

In accordance with the provisions of Section 33, Subsection 6, of the Bank of Canada Act Amendment Act, certain changes have been made in the form of the Bank's Statement of Assets and Liabilities. In the previous form of this Statement, Bank of Canada's holding of the capital stock of the Industrial Development Bank of necessity was included under the heading "Other investments." A separate heading for this particular item of our assets has now been established.

As provided by Section 21 (1) ( n ) of the Bank of Canada Act Amendment Act, the Bank has maintained working balances with central banks in various other countries. If a country's currency was not Sterling, U.S.A. dollars or convertible into gold, the previous form of the Bank's statement of assets and liabilities did not permit such a balance being shown as part of our holdings of foreign currency and it was therefore included under the heading "All other assets." In view of this situation and the fact that the heading "Reserve," under which the first four asset items on our statement have been grouped, does not serve any particular purpose at the present time when Canada's gold and foreign exchange reserves are almost entirely held by the Foreign Exchange Control Board, it has been decided to omit the heading "Reserve" and change "Other currencies of countries on a gold standard" to "Other currencies." At the same time the wording of Liability item 5 on our statement has been revised along the same lines becoming "Liabilities payable in Sterling, U.S.A. and other foreign currencies" instead of "Liabilities payable in Sterling, U.S.A. and foreign gold currencies."

## Notes in Circulation

The Bank of Canada note issue at the end of December 1947 was $\$ 1,211,350,386$, up $\$ 25,148,705$ from the same date a year before. Of the total amount of our notes outstanding, $1,027.4$ million dollars were held by the public and 183.9 million by the chartered banks. The increase in notes held by the public was 18.1 million dollars as compared with 43.1 million in 1946 and was the smallest increase for any year since 1938 .

## Appendix B

## Money Supply and Related Bank Assets

During 1947 the Bank's Research Department developed a presentation of statistics concerning money supply and related bank assets which differs in several important respects from the table which has been presented in previous annual reports. It is believed that the new series provide a better approach to the problem of measuring changes in the volume of money under present-day conditions. In the belief that these statistics will be of interest to those who follow changes in monetary conditions, we are publishing them in this Appendix and also expect to publish them each month in the Bank's Statistical Summary.
In measuring the volume of money one must decide which categories of bank deposits should be classed as "money" and which, by their nature, should be regarded more appropriately as part of the public's other liquid asset holdings such as Government bonds. Generally, it has been satisfactory to classify bank deposits as "money" if cheques may be drawn against them. In other countries this criterion has seemed to work fairly well because cheques may not be drawn against savings deposits. In Canada, however, cheques are, in practice, drawn freely against savings deposits and this has always posed an awkward problem when trying to assemble volume of money statistics. To omit all savings deposits of chartered banks would ignore the obvious fact that for many people a savings account is an active chequing account which is very similar to a current deposit. On the other hand we know from available information that of the total amount on deposit in savings accounts in Canada, much the larger part is, in practice, inactive. Chartered banks pay interest on the minimum quarterly balances in personal savings accounts, i.e. on the sum which has been left undisturbed for the quarterly period; from the amount of interest which is actually paid on this basis as compared with the nominal rate of interest, it is apparent that the aggregate minimum quarterly balances in personal savings accounts are about fivesixths of the total of such deposits at the present time.
It is therefore felt that a more realistic picture of monetary developments in Canada-and one more comparable with the usual presentation of similar statistics in other countries-is obtained by omitting the minimum quarterly balances in personal savings deposits and nonpersonal notice deposits, from volume of money statistics. It has seemed preferable to exclude these deposits from the volume of money on the basis that they are inactive in practice rather

I Note circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks.
${ }_{2}$ Subsidiary coin issued by the Mint less coin held by Bank of Canada and chartered banks in Canada.
3 Chartered banks, public demand deposits in Canada.
${ }^{4}$ Chartered banks' public notice deposits in Canada other than estimated aggregate quarterly minimum balances in personal savings accounts and nonpersonal notice deposits.

5 Chartered banks' Canadian dollar deposits of provincial governments, Canadian, United Kingdom, and foreign banks.
${ }^{6}$ Cheques on banks as shown in chartered bank monthend returns to the Minister of Finance.
${ }^{7}$ Bank of Canada Other Deposits as shown on published month-end statements-i.e. excluding Dominion Government, chart ered banks and foreign deposits.

8 Bank of Canada gold and foreign exchange holdings less the amount of foreign currency deposit liabilities
9 Bank of Canada and chartered bank holdings of Dominion Government Treasury bills, deposit certificates, Treasury notes and any other short-term issues sold direct to Bank of Canada a nd chartered banks.

10 Bank of Canada and chartered bank holdings of Dominion Government direct and guaranteed securities other than those shown as banking issues and exclusive of any temporary advances in connection with purchase of Victory Loan issues.

11 Chartered banks' temporary advances to the public in connection with the purchase of Victory Loan bonds at time of issue.
12 Canadian dollar deposits of the Dominion Government at chartered banks and Bank of Canada.
${ }^{13}$ All loans, in Canada of the chartered banks other than temporary advances in connection with Victory Loan issues, plus chartered banks' holdings of provincial, municipal and "other" securities, and Bank of Canada holdings of Industrial Development Bank capital stock.
${ }^{14}$ Estimated aggregate minimum quarterly balances in chartered banks' personal savings deposits in Canada plus nonpersonal notice deposits in Canada.
than to include them on the grounds that they are potentially active because cheques may be issued against them.

The published returns of Canadian chartered banks include among Assets "Cheques on other banks" which represents the amount of cheques which have been credited to the deposit account of the payee but not yet cleared against the deposit account of the drawer. To the extent of such items in "float" there is therefore duplication in the figures of bank deposits. In the table contained in this Appendix we have deducted "Cheques on other banks" from the figure of chartered bank deposits, in order to eliminate this duplication. A similar deduction is made in the United States in calculating their commercial banks' "Demand deposits adjusted."
Government deposits are given different treatment in different countries so far as volume of money statistics are concerned. In various countries including the United States the most commonly used figure of bank deposits excludes Government
deposits. On the whole it appears preferable to exclude Dominion Government deposits from the volume of money.
In view of the foregoing items not having been included in the figure of "Money supply" it has been necessary to make similar offsetting adjustments in the figures of related bank assets. Dominion Government Canadian dollar deposits at chartered banks and the Government account at Bank of Canada have been deducted from the total of Government investments held by Bank of Canada and chartered banks. The result of this deduction is a net figure of Government investments held by the banking system similar to that which would have existed had Government applied cash balances to redeem securities held by banks.
Aggregate minimum quarterly balances in personal savings deposits and nonpersonal notice deposits have also been shown as a deduction from related bank assets since the same items have been excluded from "Money supply."

## LAW DEPARTMENT

Administrative interpretations of banking laws, new regulations issued by the Board of Governors, and other similar material

## Real Estate Loans <br> Reconstruction Finance Corporation Participations

The Act of Congress approved May 25, 1948, (Public Law 548, 80th Congress) which amended the Reconstruction Finance Corporation Act, also amended the third paragraph of Section 24 of the Federal Reserve Act so as to make it clear that the restrictions or limitations of that section upon real estate loans by national banks do not apply to loans made to established industrial or commercial businesses in which the Reconstruction Finance Corporation cooperates- or purchases a participation. The purpose of this amendment is to continue in effect a similar exception previously provided in the law. The text of the amended paragraph is as follows:

Loans made to established industrial or commercial businesses (a) which are in whole or in part discounted or purchased or loaned against as security by a Federal Reserve Bank under the provisions of section 13b of this Act, (b) for any part of which a commitment shall have been made by a Federal Reserve Bank under the provisions of said section, (c) in the making of which a Federal Reserve Bank participates under the provisions of said section, or (d) in which the Reconstruction Finance Corporation cooperates or purchases a participation under the provisions of the Reconstruction Finance Corporation Act, as amended, shall not be subject to the restrictions or limitations of this section upon loans secured by real estate.

## Reserves <br> Central Reserve City Banks

The Board of Governors has amended the Supplement to Regulation D, relating to reserves required to be maintained by member banks with Federal Reserve Banks, so as to increase from 22 to 24 per cent the reserves required to be maintained against net demand deposits by member
banks in central reserve cities. This change became effective as to each member bank at the opening of business on June 11, 1948. There is set forth below the text of the Supplement as thus amended:

## Supplement to Regulation D

Effective as to each member bank at the opening of business on June 11, 1948

## RESERVES REQUIRED TO BE MAINTAINED BY MEMBER BANKS WITH FEDERAL RESERVE BANKS

Pursuant to the provisions of section 19 of the Federal Reserve Act and section 2(a) of its Regulation D, the Board of Governors of the Federal Reserve System hereby prescribes the following reserve balances which each member bank of the Federal Reserve System is required to maintain on deposit with the Federal Reserve Bank of its district:

6 per cent of its time deposits plus-
14 per cent of its net demand deposits if not in a reserve or central reserve city;

20 per cent of its net demand deposits if in a reserve city, except as to any bank located in an outlying district of a reserve city or in territory added to such city by the extension of the city's corporate limits, which, by the affirmative vote of five members of the Board of Governors of the Federal Reserve System, is permitted to maintain 14 per cent reserves against its net demand deposits;

24 per cent of its net demand deposits if located in a central reserve city, except as to any bank located in an outlying district of a central reserve city or in territory added to such city by the extension of the city's corporate limits, which, by the affirmative vote of five members of the Board of Governors of the Federal Reserve System, is permitted to maintain 14 per cent or 20 per cent reserves against its net demand deposits.

## CURRENT EVENTS AND ANNOUNCEMENTS

Governor Eccles transmitted the following letter to the President on May 26, 1948:

May 26, 1948.
My dear Mr. President:
On April 16, immediately following the Board Members' call on you at the White House, I tendered to you the following letter, which you read and then stated you did not wish to accept it as you still desired and intended to designate me as Vice Chairman:
"In your letter of January 27, four days prior to the expiration of my term as Chairman of the Board of Governors, you requested me to remain as a member of the Board and to accept the Vice Chairmanship. In my reply of the same day, I stated that after careful consideration of your request I had decided to remain with the Board in the capacity which you suggested.
"Two and one-half months have elapsed since that time. The formal order designating the Chairman of the Board has been issued, but none designating a Vice Chairman. In view of the circumstances, I shall continue to - serve as a member of the Board of Governors, but I wish to withdraw my name in case you are still considering designating me as Vice Chairman."

Four months have now elapsed since you first requested me to accept the Vice Chairmanship and nearly a month and a half since you reiterated that request.
Under these circumstances and in view of other developments, I wish to withdraw my name from any further consideration for designation as Vice Chairman. I shall continue to serve as a member of the Board.

## Respectifully yours,

(Signed) M. S. Eccles.
The President, The White House.

## Federal Reserve Meetings

A meeting of the Presidents of all of the Federal Reserve Banks was held in Washington on May 18, 1948. The Board of Governors met with the Presidents on May 21.

In accordance with the requirement of the law that the Federal Open Market Committee meet at least four times each year, the third meeting of the Committee during 1948 was held in Washington on May 20.
A meeting of the Chairmen of the Federal Reserve Banks, which was also attended by members of the Board of Governors, was held on May 29-31, 1948.

## Change in Board's Staff

Mr. J. Burke Knapp resigned as an Assistant Director of the Board's Division of Research and Statistics effective May 23, 1948, to accept a position with the Department of State. Mr. Knapp was associated with the Board's Division of Research and Statistics from February 1940, to August 1944, when he resigned to accept a position with the Department of State. He returned to the Board in October 1945, and served as Special Assistant to the Chairman until June 1, 1946, when he was appointed an Assistant Director of the Division of Research and Statistics.

## Appointment of Class $\mathbf{C}$ Director

The Board of Governors, on May 19, 1948, announced the appointment of Mr. Robert T. Stevens of Plainfield, New Jersey as a Class C director of the Federal Reserve Bank of New York for the unexpired portion of the term ending December 31, 1950, and his designation as Chairman and Federal Reserve Agent of the Bank for the balance of the year 1948. Mr. Stevens is Chairman of the Board of J. P. Stevens and Co., Inc., New York, New York. He also served as a Class B director of the Federal Reserve Bank of New York from January 1, 1934, to January 8, 1942, when he was called to active service with the United States Army.

## Publication of a Distribution of Deposits, by Counties

A geographical distribution of bank deposits of individuals, partnerships, and corporations in the United States, by counties, States, and Federal Reserve districts is being compiled and will be available for distribution in pamphlet form in a few weeks. It will show separately the demand and the time deposits of individuals, partnerships, and corporations in all banks in the United States on December 31, 1947. Corresponding data for December 31, 1941-1944 are contained in pamphlets published by the Treasury Department.

Data for national banks and banks in the District of Columbia were obtained by the Comptroller of the Currency, for State member banks by the Board of Governors of the Federal Reserve System, and for nonmember banks by the Federal Deposit Insurance Corporation. Data for noninsured banks were obtained with the cooperation of the State bank supervisory authorities. The Federal Deposit Insurance Corporation and the Board of Governors compiled the basic statistics for the pamphlet.

Copies of the pamphlet may be obtained upon request from the Board's Division of Administrative Services, Washington 25, D. C.

## Additions to Federal Reserve Charts on Bank Credit, Money Rates, and Business

The May issue of the Federal Reserve Chart Book on Bank Credit, Money Rates, and Business includes a new section on Business Finance. This section comprises revised charts (two pages) on Corporate Security Issues and the following new charts: Current Assets and Liabilities of Corporations, Business Expenditures on New Plant and

Equipment, and Corporate Profits (two pages). The May issue also includes a new chart on Short Term Open-Market Money Rates and three additional price charts showing the major component groups of the index of commodity prices of the Bureau of Labor Statistics (two pages) and wholesale prices of selected farm products.

## Admissions of State Banks to Membership in the Federal Reserve System

The following State banks were admitted to membership in the Federal Reserve System during the period April 16, 1948 to May 15, 1948:

Florida
Tampa-Columbia Bank of Ybor City
Mississippi
Forest-Farmers and Merchants Bank
Montana
Polson-The Security State Bank
Wyoming
Jackson-The Jackson State Bank

## NATIONAL SUMMARY OF BUSINESS CONDITIONS

[Compiled May 24 and released for publication May 26]

Industrial production decreased in April and increased in May owing chiefly to changes in coal production and supplies. Department store sales were at exceptionally high levels following the Easter shopping period. Wholesale and retail price levels were higher, reflecting chiefly increases in meat prices.

## Industrial Production

The Board's seasonally adjusted index of industrial production declined 5 points in April to 187 per cent of the 1935-39 average, reflecting chiefly lower output of iron and steel resulting from the labor dispute at coal mines, which began in the middle of March. Following settlement of the dispute around the middle of April, output of coal and steel increased and the total index in May is expected to be around 190 .
Steel production reached a low point of 71 per cent of capacity in the third week of April, as compared with a March average of 95 per cent, then advanced rapidly to a rate of 97 per cent in the fourth week of May. Automobile output was substantially curtailed in the first 3 weeks of May, as pig iron and steel supplies continued short and a work stoppage began at the plants of a major automobile company. Lumber output, adjusted for seasonal variation, declined 9 per cent in April,

Federal Reserve indexes. Monthly figures, latest shown are for April.
owing in large part to work stoppages on the West Coast.
Output of nondurable goods showed a further slight decline in April. According to preliminary indications textile production was below the March level. Coke production was sharply curtailed because of reduced coal supplies. Activity in the rubber products industry and in some chemical industries declined. On the other hand, production of gasoline increased, and newsprint consumption showed somewhat more than the usual seasonal rise.
Coal production for the month of April was in about the same small volume as in March. Output of crude petroleum was maintained at a record level, and there was an exceptionally large increase in output of iron ore.

## Construction

Value of construction contracts awarded expanded sharply in April, according to the F. W. Dodge Corporation, reflecting chiefly large increases in awards for private residential construction and for religious and other institutional buildings. Awards for manufacturing plants and public works and utilities showed little change from the levels prevailing in recent months.

CONSTRUCTION CONTRACTS AWARDED

F. W. Dodge Corporation data for 37 Eastern States. Other includes nonresidential buildings and public works and utilities. Monthly figures, latest shown are for April.

## Distribution

Department store sales, which usually decline after the Easter shopping season, were maintained this year and the Board's seasonally adjusted index rose from 284 in March to 299 in April, with some further rise indicated for May.

Railroad shipments of coal and coke showed a sharp increase in the latter part of April following the end of the coal strike. Shipments of perishable goods were curtailed temporarily in the middle of May in anticipation of a rail strike which was subsequently called off. Carloadings of most classes of manufactured goods continued to show little change in April and the first half of May.

## Commodity Prices

Wholesale prices of meats, livestock, and vegetable oils advanced from the middle of April to the third week of May, while most other farm products and foods showed little change or declined somewhat.

Price changes were also mixed for industrial materials. Wool tops, coal, coke, and building materials were higher in this period, reflecting in part freight rate increases while prices of steel, cotton grey goods, and certain other materials were reduced somewhat. Price reductions were announced for various electrical products.

Consumer prices in mid-April were 1.4 per cent higher than in March and exceeded slightly the previous peak reached in January. The advance in April reflected higher retail prices for foods, owing chiefly to reduced supplies of meats and

EMPLOYMENT IN NONAGRICULTURAL ESTTABLISHMENTS

Bureau of Labor Statistics' estimates adjusted for seasonal variation by Federal Reserve. Proprietors and domestic servants are excluded. Midmonth figures, latest shown are for
fresh vegetables, and further rises in prices for various consumer services.

## Bank Credit

Little change occurred in member bank reserve positions in the last half of April and the first two weeks of May. Treasury operations were largely neutral in their effect on total bank reserves. A further moderate gold inflow permitted a small reduction in Reserve Bank credit. In the third week of May member bank reserve balances were reduced considerably, in part as a result of a transfer by the Treasury of funds from war loan accounts to its balances at Reserve Banks. In addition, member banks used reserve funds to purchase in the market Treasury bills held by the Reserve Banks, with the result that the reserves of many large city banks fell temporarily below requirements.

Real estate and consumer loans continued to expand at banks in leading cities during April and the first half of May. Commercial and industrial loans increased somewhat during May following a decline in earlier months of the year.

## Security Markets

Prices of common stocks showed a marked further rise in the middle of May to a level 14 per cent below the high of May 1946, according to Standard and Poor's index of 90 stocks. Volume of trading was unusually large.

Following the Treasury announcement on May 13 that June and July certificate maturities would be refunded at $11 / 8$ per cent, prices of Treasury bonds advanced sharply.

Wednesday figures, latest shown are for May 26.

Tables on the following pages include the principal available statistics of current significance relating to financial and business developments in the United States. The data relating to the Federal Reserve Banks and the member banks of the Federal Reserve System are derived from regular reports made to the Board; index numbers of production are compiled by the Board on the basis of material collected by other agencies; figures for gold stock, money in circulation, Treasury finance, and operations of Government credit agencies are obtained principally from statements of the Treasury, or of the agencies concerned; data on money and security markets and commodity prices and other series on business activity are obtained largely from other sources. Back figures for banking and monetary tables, together with descriptive text, may be obtained from the Board's publication, Banking and Monetary Statistics; back figures for most other tables may be obtained from earlier Bulletins.

| Postal savings deposits. | 3 | 21/2 | 21/2 |
| Other deposits payable: In 6 months or more. | 3 |  |  |
| In 90 days to 6 months | 3 | $21 / 2$ | 2 |
| In less than 90 days. | 3 | 21/2 | 1 |

Note.-Maximum rates that may be paid by insured nonmember banks as established by the F. D. I. C., effective Feb. 1, 1936, are the same as those in effect for member banks. Under Regulation $Q$ the rate payable by a member bank may not in any event exceed the maximum rate payable by State banks or trust companies on like deposits under the laws of the State in which the member bank is located.

FEDERAL RESERVE BANK RATES ON INDUSTRIAL LOANS AND COMMITMENTS UNDER SECTION 13b

OF THE FEDERAL RESERVE ACT
Maturities not exceeding five years
[In effect May 31. Per cent per annum]

| Federal Reserve Bank | To industrial or commercial businesses |  | To financing institutions |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\underset{\text { loans }{ }^{1}}{ }$ | $\xrightarrow[\text { commit- }]{\substack{\text { On } \\ \text { ments }}}$ ments | On discounts or purchases |  | On commit ments |
|  |  |  | Portion for which institution is obligated | Remaining portion |  |
| Boston. | 21/2-5 | 1/2-11/4 | ${ }^{(2)}$ | ${ }^{(3)}$ | 1/2-11/4 |
| New York | $21 / 2$ | 1/2-11/4 | (2) | (3) | 1/2-11/4 |
| Philadelphia | 21/2-5 | 3/2-114 | (4) | ${ }^{(3)}$ | 1/2-114 |

[^20] been given permission to carry the same reserves as country banks.

${ }^{1}$ Averages of daily closing figures for reserves and borrowings and of daily opening figures for other columns, inasmuch as reserves required are based on deposits at opening of business.
${ }_{2}$ Demand deposits subject to reserve requirements, i. e., gross demand deposits minus cash items reported as in process of collection and demand balances due from domestic banks.
${ }^{3}$ Includes some interbank and U. S. Government time deposits; the amounts on call report dates are shown in the Member Bank Call Report.
Note.-Demand deposits adjusted (demand deposits other than interbank and U. S. Government, less cash items reported as in process of collection) of all member banks estimated at 69,200 million dollars in the first half and 69,600 million in the second half of April.

${ }^{1}$ Outside Treasury and Federal Reserve Banks. Includes any paper currency held outside the continental limits of the United States; totals for other end-of-month dates shown in table above, totals by weeks in table on p. 673 , and seasonally adjusted figures in table on p. 682 .
${ }^{2}$ Includes $\$ 156,039,431$ held as reserve against United States notes and Treasury notes of 1890.
${ }^{\boldsymbol{z}}$ To avoid duplication, amount of silver dollars and bullion held as security against silver certificates and Treasury notes of 1890 outstanding is not included in total Treasury currency outstanding.
: Because some of the types of money shown are held as collateral or reserves against other types, a grand total of all types has no special significance and is not shown. See note of explanation of these duplications. Less than $\$ 500,000$.

Note.-There are maintained in the Treasury-(i) as a reserve for United States notes and Treasury notes of 1890 - $\$ 156.039 .431 \mathrm{in}$ gold bullion; (ii) as security for Treasury notes of 1890 -an equal dollar amount in standard silver dollars (these notes are being canceled and retired on receipt); (iii) as security for outstanding silver certificates-silver in bullion and standard silver dollars of a monetary value equal to the face amount of such silver certificates; and (iv) as security for gold certificates-gold bullion of a value at the legal standard equal to the face amount of such gold certificates. Federal Reserve notes are obligations of the United States and a first lien on all the assets of the issuing Federal Reserve Bank. Federal Reserve notes are secured by the deposit with Federal Reserve agents of a like amount of gold certificates or of gold certificates and such discounted or purchased paper as is eligible under the terms of the Federal Reserve Act, or of direct obligations of the united States Federal Reserve Banks must maintain a reserve in gold certificates of at least 25 per cent, including the redemption fund, which must be deposited with the Treasurer of the United States, against Federal Reserve notes in actual circulation; gold certificates pledged as collateral may be counted as reserves. "Gold certificates" as herein used includes credits with the Treasurer of the United States payable in gold certificates. Federal Reserve Bank notes and national bank notes are in process of retirement.

MONEY IN CIRCULATION WITH ADJUSTMENT FOR SEASONAL VARIATION

| May.... .... | 27,749 | 27,945 | -45 |

${ }^{1}$ For end of year figures, represents change computed on absolute amounts in first column.

Note.-For discussion of seasonal adjustment factors and for back figures on comparable basis see September 1943 BuLIETIN, pp. 822-826. Because of an apparent recent change in the seasonal pattern around the year end, adjustment factors have been revised somewhat for dates affected, beginning with December 1942; seasonally adjusted figures for money in circulation, as shown in Banking and Monetary Statistics, Table 111, p. 414, and described on p. 405, are based on an older series of adjustment factors.

[^22]${ }^{2}$ Number of centers reduced from 193 to 192 beginning December 1947, when one reporting bank was absorbed by a reporting bank in another city. ${ }^{3}$ Weekly reporting member bank series.

4 Deposits and debits for first four months are partly estimated.
s Statistics for tanks in leading cities revised beginning July 3, 1946; for description of revision and for back figures see Bultetins for June 1947 (pp. 692-693) and July 1947 (pp. 878-883) respectively; deposits and debits of the new series for first six months of 1946 are estimated. Note.-Debits to total deposit accounts, except interbank accounts. have been reported for 334 centers from 1942 through November 1947 and have been estimated for others. Debits to demand deposit accounts, except interbank and U. S Government and the deposits from which rates of turnover have been computed have been reported by member banks in leading cities since 1935; yearly turnover rates in this series differ slightly from those shown in Banking and Monetary Statistics. Table 55, p. 254. due to differences in method of computation.

$p$ Preliminary. $\quad r$ Revised.
${ }^{1}$ Includes demand deposits, other than interbank and U. S. Government, less cash items in process of collection.
2 Beginning with December 1938, includes United States Treasurer's time deposits, open account.
${ }^{3}$ Time deposits adjusted exclude interbank time deposits; United States Treasurer's time deposits, open account; and postal savings redeposited in banks.
${ }^{4}$ Beginning June 1941, the commercial bank figures exclude and mutual savings bank figures include three member mutual savings banks.
$\$$ Prior to June 30, 1947, includes a relatively small amount of demand deposits.
6 Includes both amounts redeposited in banks and amounts not so redeposited; excludes amounts at banks in possessions.
Note.-Except on call dates, figures are rounded to nearest 100 million dollars. See Banking and Monetary Statistics, p. 11 , for description and Table 9, pp. 34-35, for back figures.

${ }^{1}$ Represents banks wirich, during the periods shown, closed temporarily or permanently on account of financial difficulties; does not include banks whose deposit liabilities were assumed by other banks at the time of closing (in some instances with the aid of Federal Deposit Insurance Corpolation loans).
${ }_{2}$ Deposits of member banks and insured nonmember banks suspended are as of dates of suspension, and deposits of noninsured nonmember banks are based on the latest data available at the time the suspensions were reported.
Back figures.-See Banking and Monttary Statistics, pp. 283-292; for description, see pp. 281-282 in the same publication.

# ALL BANKS IN THE UNITED STATES, BY CLASSES * PRINCIPAL ASSETS AND LIABILITIES, AND NUMBER OF BANKS 

[Amounts in millions of dollars]

[^23]"All banks" comprise "all commercial banks" and "all mutual savings banks." "All commercial banks" comprise "all nonmember com mercial banks" and "all member banks" with exception of three mutual savings banks that became members in 1941, Stock savings banks and nondeposit trust companies are included with "commercial" banks. Number of banks includes a few noninsured banks for which asset and lia bility data are not available.

Beginning June 30, 1942, excludes reciprocal balances, which on Dec. 31, 1942, aggregated 513 million dollars at all member banks and 525 million at all insured commercial banks.

For other footnotes see following page

2 June 30, 1947, figures are consistent (except that they exclude possessions) with the revised all bank series announced in November 1947 by the Federal bank supervisory agencies, but are not entirely comparable with prior figures shown above; a net of 115 noninsured nonmember commercial banks with total loans and investments of approximately 110 million dollars was added, and 8 banks with total loans and investments of 34 million were transferred from noninsured mutual savings to nonmember commercial banks.

Back figures.-See Banking and Monetary Stalistics, Taules 1-7, pp, 16-23; for description, see pp, 515 in the same publication. For revisions in series prior to June 30, 1947, see pp. 870-871 of the Bulletin for July 1947. For other footnotes see preceding page.

1 Monthly and weekly data are averages of daily figures, except for municipal bonds and for stocks, which are based on Wednesday figures.
2 Average of taxable bonds due or callable in 15 years and over.
: Prices derived from average yields, as computed by Standard and Poor's Corporation, on basis of a 4 per cent 20-year bond.
-Prices derived from averages of median yields, as computed by Standard and Poor's Corporation. 4 Standard and Poor's Corporation
${ }^{-}$Prices derived from averages of median yields on noncallable high-grade stocks on basis of a $\$ 7$ annual dividend.
${ }^{7}$ Average daily volume of trading in stocks on the New York Stock Exchange.
${ }^{8}$ Series discontinued beginning Dec. 1, 1947. Average for 1947 based on figures for 11 months.
Back figures.-See Banking and Monetary Statistics, Tables 130, 133, 134, and 136, pp. 475, 479, 482, and 486, respoctively, and Bulletins for May 1945, pp. 483-490, and October 1947, pp. 1251-1253.

$r$ Revised.
"Net profits" and "net income" refer to income after all charges and taxes and before dividends.
Includes 29 companies engaged in wholesale and retail trade (largely department stores), 13 in the amusement industry, 21 in shipping and transportation other than railroads (largely airlines), and 11 companies furnishing scattered types of service.

Net profits figures for the year 1946 include, and those for the fourth quarter exclude, certain large extraordinary year-end profits in the following amounts (in millions of dollars): 629 company series-total, 67 ; machinery, 49 ; other durable goods, 18; 152 company series-total, 49.

- Partly estimated. ${ }_{5}$ Class I line-haul railroads, covering about 95 per cent of all railroad operations.
- Class A and B electric utilities, covering about 95 per cent of all electric power operations. Figures include affiliated nonelectric operations.

1 Thirty large companies, covering about 85 per cent of all telephone operations. Series excludes American Telephone and Telegraph Company, the greater part of whose income consists of dividends received on stock holdings in the 30 companies.

After all charges and taxes except Federal income and excess profits taxes.
Sources.-Interstate Commerce Commission for railroads; Federal Power Commission for electric utilities. Gquarterly figures on operating revenue and on income before income tax are partly estimated); Federal Communications Commission for telephone companies (except dividends); description of data and back figures, see pp. 214-217 of the Bulletin for March 1942 and also p. 1126 of the Bulletin for November 1942 (telephone companies) and p. 908 of the Bulletin for September 1944 (electric utilities).

## ${ }_{*}^{*}$ Revised.

* Figures include only holdings by institutions or agencies from which reports are received. Data for commercial banks, mutual savinge banks and the residual "other" are not entirely comparable from month to month. Figures in column headed "other" include holdings by non nonming banks and insurance companies as well as by other investors. Estimates of total holdings (including relatively small amounts of onmarketable issues) by all banks and all insurance companies for certain dates are shown in the table above.

Including stock savings banks.
${ }^{2}$ Including Postal Savings and prewar bonds and a small amount of guaranteed securities, not shown separately below.
[On basis of daily statements of United States Treasury. In millions of dollars]

${ }^{p}$ Preliminary.
${ }^{1}$ Details on collection basis given in table below. $\quad 2$ Withheld by employers (Current Tax Payment Act of 1943).
Total receipts less social security employment taxes, which are appropriated directly to the Federal old-age and survivors insurance trust fund. ${ }^{4}$ Excess of receipts $\left(+\right.$ ) or expenditures ( - ). ${ }^{5}$ Change in classification. ${ }^{6}$ Based on telegraphic rather than the usual mailed reports for these months; this accounts in part for the increase in January and decrease in February from corresponding months of 1947.

Back figures.--See Banking and Monetary Statistics, Tables 150-151, pp. 513-516.

* Includes certain business type activities of the U. S. Government.

Assets are shown on a net basis, i.e., after reserve for losses.
2 Includes investment of the United States in international instutitions as follows (in millions of dollars): Stock of the International Bank for Reconstruction and Development-318, 476, 635, 635, and 635 on Dec. 31, 1946, Mar. 31, June 30, Sept. 30, and Dec. 31, 1947, respectively; International Monetary Fund Quota-2,750 on Mar, 31, June 30. Sept. 30, and Dec. 31, 1947.
'Deferred charges included under "Other assets" prior to Mar. 31, 1947.
Federal land banks are excluded beginning June 30, 1947; U. S. Government interest in these banks was liquidated June 26, 1947.
5 Detailed figures published in Bulletins for January, February, and March, 1948, pp. 82, 214, and 320, respectively, should be corrected as follows (in millicns of dollars) : Federal Housing Administration-Bonds, notes and debentures (1) Fully guaranteed, 33, and (2) Other $0 ;$ Reconstruction Finance Corporation-U. S. Government interest. 1.503.
${ }^{6}$ Less than $\$ 500,000$. ${ }^{7}$ Includes U.S. Commercial Co. and War Damage Corp. ${ }^{8}$ Figures are for Mar. 31, $1947 . \quad{ }^{9}$ Figures are for Feb. 28, 1947, except for lend-lease and UNRRA activities, which are for Mar. 31, 1947. ${ }^{10}$ Figures for three small agencies included herein are for dates other than Dec. 31 .

Note.-This table is based on the revised form of the Treasury Statement beginning Sept. 30, 1944, which is on a quarterly basis. Quarterly figures are not comparable with monthly figures previously published. For monthly figures prior to Sept. 30, 1944, see earlier issues of the Bulletin (see p. 1110 of the November 1944 Bulletin) and Banking and Monetary Statistics. Table 152, p. 517.

Note.-All indexes shown. except those for individual industries in the Transportation Equipment and Tobacco groups have been adjusted to final 1945 data made available by the Bureau of Employment Security of the Federal Security Agency. Back data and data for industries not here shown are obtainable from the Bureau of Labor Statistics. Underlying figures are for pay roll period ending nearest middle of month and cover production workers only. Figures for April 1948 are preliminary.

[^36]Note.-Estimates include all full- and part-time wage and salary workers in nonagricultural establishments employed during the pay period ending nearest the 15 th of the month. Proprietors, self-employed persons, domestic servants, and personnel of the armed forces are excluded. April 1948 figures are preliminary. Back unadjusted data are available from the Bureau of Labor Statistics; seasonally adjusted figures beginning January 1939 may be obtained from the Division of Research and Statistics.

${ }^{1}$ Net proceeds to borrowers. ${ }^{2}$ Mortgages insured under War Housing Title VI through April 1946; figures , thereafter represent mainly mortgages insured under the Veterans' Housing Title VI (approved May 22, 1946) but include a few refinanced mortgages originally written under the War Housing Title VI. Beginning with December 1947 figures include mortgages insured in connection with sale of Government owned war housing, and beginning with February
1948 include insured loans to finance the manufacture of housing.
${ }^{1}$ Less than $\$ 500,000$.
Note.-Figures represent gross insurance written during the period and do not take account of principal repayments on previously insured loans. Figures include some reinsured mortgages, which are shown in the month in which they were reported by FHA. Reinsured mortgages on rental and group housing (Title II) are not necessarily shown in the month in which reinsurance took place.

P Preliminary. $\quad$ Revised
${ }^{1}$ Including both domestic and foreign merchandise. Beginning January 1948, recorded exports include shipments under the Army Civilian Supply Program for occupied areas. The average monthly value of such unrecorded shipments in 1947 was 75.4 million dollars.
${ }^{2}$ General imports including merchandise entered for immediate consumption and that entered for storage in bonded warehouses.
Source-Department of Commerce.

1 The ratio of stocks to sales is obtained by dividing stocks at the end of the month by sales during the month and hence indicates the number of months' supply on hand at the end of the month in terms of sales for that month.
${ }^{2}$ The 1941 average of monthly sales for each department is used as a base in computing the sales index for that department. The stocks index is derived by applying to the sales index for each month the corresponding stocks-sales ratio. For description and monthly indexes of sales and stocks by department groups for back years, see pp. 856-858 of Bulletin for August 1946 . The titles of the tables on pp. 857 and 858 were reversed.

2 For movements of total department store sales and stocks see the indexes for the United States on p. 713.
4 Index numbers of sales and stocks for this department are not available for publication separately; the department, however, is included in group and total indexes. 5 Data not available.
Note.-Based on reports from a group of large department stores located in various cities throughout the country. In 1947, sales and stocks at these stores accounted for about 50 per cent of estimated total department store sales and stocks. Not all stores report data for all of the departments shown; consequently, the sample for the individual departments is not so comprehensive as that for the total.

BANK CREDIT, MONEY RATES, AND BUSINESS *-Continued

For footnotes see p. 726.
June 1948

## - Estimated. $\quad p$ Preliminary

r Revised.

## ${ }^{c}$ Corrected.

${ }^{1}$ For charts on pp. 28, 33, 35, 36, and 39, figures for a more recent period are available in the regular Buli.Etin tables that show those series. Because the Chart Book is usually released for duplication some time after the Bulletin has gone to press, most weekly charts and several monthly charts include figures for a more recent date than are shown in this table
${ }^{2}$ Figures for other than Wednesday dates are shown under the Wednesday included in the weekly period.
${ }^{3}$ Less than 5 million dollars.
${ }^{4}$ Beginning Mar. 1, 1948, data are not strictly comparable with earlier figures due to a redesignation of reserve cities on that date
${ }^{5}$ Adjusted for seasonal variation.
${ }^{6}$ The chart on "New orders, shipments, and inventories" previously shown on p. 61 is replaced in the June Chart Book by a chart on "Sales and inventories of manufacturers, wholesalers, and retailers." ${ }^{7}$ As of Jan. 31, 1948.
${ }_{8}$ Estimates for April-June 1948 quarter are (in billions of dollars): All business, 4.8; manufacturing and mining, railroads and utilities, 3.2; manufacturing and mining, 2.2

9 Member bank holdings of State and local government securities on Oct. 6, 1947, were 4.22 billion dollars, and of other securities were 3.08 billion; data for other series are available for June and December dates only.

* Monthly issues of this edition of the Chart Book may be obtained at an annual subscription rate of $\$ 9.00$; individual copies of monthly issues, at $\$ 1.00$ each.

Tables on the following pages include the principal available statistics of current significance relating to gold, international capital transactions of the United States, and financial developments abroad. The data are compiled for the most part from regularly published sources such as central and commercial bank statements and official statistical bulletins, some data are reported to the Board directly. Figures on international capital transactions of the United States are collected by the Federal Reserve Banks from banks, bankers, brokers, and dealers in the United States in accordance with the Treasury Regulation of November 12, 1934. Back figures for all except price tables, together with descriptive text, may be obtained from the Board's publication, Banking and Monetary Statistics.

GOLD RESERVES OF CENTRAL BANKS AND GOVERNMENTS
[In millions of dollars]

${ }_{1}$ Estimated dollar values derived by converting gold at home in amounts up to 1224.4 million pesos at the rate of 3.0365 pesos per U.S. dollar and all other gold at the rate of 3.5447 pesos per U.S. dollar.

1940, gold belonging to Bank of Canada transferred to Foreign Exchange Con trol Board. Gold reported since that time is gold held by Minister of Finance, except for December 1945, December 1946, December 1947 when gold holdings of Foreign Exchange Con
trol Board are inciuded also.
Jan 31 1942. P Jan. 31, 1942; Poland-July 31, 1939; Yugoslavia-Feb. 28, 1941.
${ }_{4}^{4}$ Figure for February 1941; beginning Mar. 29, 1941, gold reserves no longer reported separately.

5 Beginning December 1943, includes gold holdings of Swiss Government.

- For list of countries included, see Bulletin for June 1947, p. 755, footnote 7.
-Gold holdings of Bank of England reduced to nominal amount by gold transfers to British Exchange Equalization Account during 1939.

Note.-For gold holdings of International Fund and Bank, see p. 738. For back figures, see Banking and Monetary Statistics, Tables 156-160, pp. 536-555, and for a description of figures, including details regarding special internal gold transfers affecting the reported data, see pp. 524-535 in the same publication.
${ }^{1}$ Reported at infrequent intervals or on delayed basis: U. S.-Exchange Stabilization Fund (Special A/c No. 1); U. K.-Exchange Equalization Account; France-Exchange Stabilization Fund and Rentes Fund; Belgium-Treasury.
${ }^{2}$ Figure for end of September.
: Reported figure for total British gold reserves on Aug. 31, 1939, less reported holdings of Bank of England on that date.

- Figure for first of month.
${ }^{5}$ Gross official holdings of gold and U. S. British holdings (official and private) of U. S dollars, as reported by banks in the United States are shown in table on p. 735.

Note.-For details regarding special internal gold transfers affecting the British and French institutions, see p. 738, footnote 4, and p. 739. footnote 6. For available back figures see Banking and Monelary Staistics, p. 526, and Bulletin for November 1947, p. 1433; June 1947, p. 755; February 1945, p. 109.

Gold production in U.S.S.R.: No regular Government statistics on gold production in U. S. S. R. are available, but data of percentage changes irregularly given out by officials of the gold mining industry, together with certain direct figures for past years, afford a basis for estimating annual production as follows: 1934, 135 million dollars; 1935,158 million; 1936,187 million; 1937,185 million; 1938 , 180 million.
r Revised.
${ }^{1}$ Estimates of United States Bureau of Mines.
${ }^{2}$ Beginning 1942, figures reported by American Bureau of Metal Statistics. Beginning 1944, they are for Gold Coast only.

* Reported by American Bureau of Metal Statistics.

4 Includes Philippine production received in United States through 1945. Annual figures are estimates of United States Mint. Monthly figtires are reported by American Bureau of Metal Statistics.

Figures reported by the Secretaria de la Economia Nacional.
${ }^{6}$ Gold exports, reported by the Banco Nacional de Nicaragua, which states that they represent approximately 90 per cent of total production,
7 Total Australia reported by Commonwealth Bureau of Census and Statistics. Beginning 1946, subject to revision.
${ }^{8}$ Since May 1940, monthly figures are from the American Bureau of Metal Statistics. Annual figures for years $1940-1946$ are from the Keport on Currency and Finance," published by the Reserve Bank of India.

Note.-For explanation of table and sources, see Bulletin for February 1939, p. 151; July 1938, p. 621; June 1938, p. 540; April 1933, pp. 233-235; and Banking and Monetary Statistics, p. 524 . For annual estimates compiled by the United States Mint for these and other countries in the period 1910-1941, see Banking and Monetary Statistics, pp. 542-543.

GOLD MOVEMENTS
UNITED STATES

1 This category made up as follows: through Sept. 21, 1938, funds held by foreign central banks at the Federal Reserve Bank of New York and deposit accounts held with the U. S. Treasury; beginning Sept. 28, 1938, also funds held at commercial banks in New York City by central banks maintaining accounts at the Federal Reserve Bank of New York; beginning July 17, 1940, also funds in accounts at the Federal Reserve Bank of New York which had been transferred from central bank to government names; beginning with the new series commencing with the
month of July 1942 , all funds held with banks and bankers in the United States by foreign central banks and by foreign central governments month of July 1942, all funds held with banks and bankers in the United States by foreign central banks and by foreign central go
and their agencies (including official purchasing missions, trade and shipping missions, diplomatic and consular establishments, etc.).
and their agencies (including official purchasing missions, trade and shipping missions, diplomatic and consular establishments, etc.). Since the old series overlapped the new by one day, the cumulative figures were adjusted to represent the movement through June 30 only. This adjustment, however, is incomplete since it takes into account only certain significant movements known to have occurred on July 1 . Subsequent figures are based upon new monthly series. For further explanation, see Bulletin for January 1943, p. 98.
${ }^{1}$ Includes outflow of $\$ 249,300,000$ resulting from the sale of debentures in the United States by the International Bank for Reconstruction and Development. (Of the total issue of $\$ 250,000,000, \$ 700,000$ was sold directly to Canadian purchasers.)

Includes inflow of 74.5 million dollars resulting from purchase of domestic securities by international institutions.
Nore.--Statistics reported by banks, bankers, brokers, and dealers. For full description of statistics see Banking and Monetary Statistics, pp. 558-560; for back figures through 1941 see Tables 161 and 162 , pp. $574-637$, in the same publication, and for those subsequent to 1941 se Bulletin for September 1945, pp. 960-974.

# INTERNATIONAL CAPITAL TRANSACTIONS OF THE UNITED STATES-Continued <br> NET CAPITAL MOVEMENT TO UNITED STATES SINCE JANUARY 2, 1935—Continued 

[Net movement from United States, ( - ). In millions of dollars]

Footnotes to table on preceding page.
1 Country breakdown is for "Official and private."
Prior to Jan. 3, 1940, the figures under Asia represent Far East only, the remaining Asiatic countries being included under "All other."
Report dates for these years are as follows: 1938-Jan. 4, 1939; 1939-Jan. 3, 1940; and 1940-Jan. 1, 1941.
4 Official Canadian holdings of U. S. dollars on Dec. 31,1946 , amounted to 686.2 million dollars, according to the annual report of the Foreign Exchange Control Board of Canada for 1946.

Nотe.-Certain of the figures are not strictly comparable with the corresponding figures for preceding months owing to changes in reporting practice of various banks. The cumulative figures in Tables 1, 2, and 3 of "Net Capital Movement to United States" have been adjusted to exclude the unreal movements introduced by these changes. For further explanation see Banking and Monelary Staiistics, pp. 578-584, and Bulletin for March 1947, p. 339, and September 1945, pp. 967-970.

${ }^{1}$ Through February 1939, valued at legal parity of 85 shillings a fine ounce; thereafter at market price, which fluctuated until Sept. 6. 1939. when it was officially set at 168 shillings per fine ounce; the latter rate remained in effect until June 9, 1945, when it was raised to 172 shillings and three pence.
${ }_{2}$ Securities and silver coin held as cover for fiduciary issue, the amount of which is also shown by this figure.
${ }^{3}$ Notes issued less amounts held in banking department.
${ }^{4}$ On Jan. 6, 1939, 200 million pounds sterling of gold (at legal parity) transferred from Bank to Exchange Equalization Account; on Mar. 1 . 1939, about 5.5 million pounds (at current price) transferred from Exchange Account to Bank; on July 12, 1939,20 million pounds transferred from Exchange Account to Bank; on Sept. 6, 1939, 279 million pounds transferred from Bank to Exchange Account.
${ }^{5}$ Fiduciary issue decreased by 50 million pounds each on Jan. 7, Feb. 4, and Mar. 3, 1948. For details on previous changes in the fiduciary issue see Bulletin for February 1948, p. 254.

Note.-For back figures on Bank of England, see Banking and Monelary Statistics, Table 164, pp, 638-640; for description of statistics, see pp. 560-561 in same publication.

CENTRAL BANKS-Continued

${ }^{1}$ Securities maturing in two years or less.
Includes notes held by the chartered banks, which constitute an important part of their reserves.
Beginning November 1944, includes a certain amount of sterling and United States dollars.
4 On May 1, 1940, gold transferred to Foreign Exchange Control Board in return for short-term Government securities (see Bulletin for July 1940, pp. 677-678).

6 Gold revalued on Dec. 26, 1945, on basis of $134,027.90$ francs per fine kilogram. For details on previous devaluations and other changes in the gold holdings of the Bank of France, see Bulletin for May 1948, p. 601; May 1940, pp. 406-407; January 1939, p. 29; September 1937, p. 853; and November 1936, pp. 878-880.

For explanation of this item, see Bulletin for July 1940, p. 732 . Treasury, dated from Aug. 25, 1940, through July 20, 1944, advances of 441,000 million francs were authorized to meet the costs of the German army of occupation.

From Dec. 28, 1944, through Nov. 20, 1947, includes 9.447 million francs charged to the State to reimburse the Bank for the gold turned over by it to the National Bank of Belgium on Dec. 22, 1944. During the week ending Nov. 27, 1947, this amount was reduced to 5,039 million francs by a payment from the State to the Bank.

10 Central Administration of the Reichskreditkassen
11 Includes a non-interest loan to the Government, which was raised from 10,000 million to 50,000 million francs by law of Mar. 29 , 1947.
12 Publication of Bank's statement suspended from Jan. 22 until Mar. 4, 1948.
Note,--For back figures on Bank of Canada and Bank of France, see Banking and Monetary Statistics, Tables 166 and 165 , pp. $644-645$ and pp. 641-643, respectively; for description of statistics, see pp. 562-564 in same publication. For last available report from the Reichsbank (February 1945), see Bulletin for December 1946, p. 1424.

Government decree of Apr. 24, 1946, provided for the guarantee of all deposits registered in the name of the Central Bank
\& By decree of May 24, 1946, the Central Bank became responsible for all subsidiary money.
This figure represents the amount of the bank's subscription to the Fund less the bank's local currency liability to the Fund. Until such
time as the Fund engages in operations in this currency, the "net claim" will equal the country's gold contribution
4 Includes increment resulting from gold revaluation, notes forfeited to the State, and frozen old notes and current accounts.

* For last available report (January 1943), see Bulletin for July 1943, p. 697.

6 Beginning January 1948, gold valued at 31 pesos per U. S. dollar, while previously it was valued at 4.855 pesos per dollar.
7 Latest month available
Gold not reported separately beginning Dec. 31, 1946

- Change due to transfers in accordance with the law of July 2, 1947, relating to the Monetary Liquidation Fund.

${ }^{1}$ This figure represents the amount of the bank's subscription to the Fund less the bank's local currency liability to the Fund. Until such time as the Fund engages in operations in this currency, the "net claim" will equal the country's gold contribution.
${ }_{2}$ For last available report from the central bank of Rumania (June 1944), see Bulletin for March 1945, p. 286; and of Yugoslavia (Feb. ruary 1941), see Bulletin for March 1942, p. 282.
${ }^{3}$ Gold revalued in June 1946 from approximately 85 to 172 shillings per fine ounce.
${ }^{4}$ Includes small amount of non-Government bonds.
5 Gold revalued on Sept. 9, 1946, from $1,406.58$ to $3,150.77$ Turkish pounds per fine kilogram.
Latest month available.
7 Beginning October 1944, a certain amount of gold formerly reported in the bank's account shown separately for account of the Govern* ment.

See Bulletin for December 1936, p. 1025.

Note.-For monthly figures on money rates in these and other foreign countries through 1941, see Banking and Monetary Statistics, Table 172 , pp. 656-661, and for description of statistics see pp. 571-572 in same publication

${ }^{c}$ Corrected.
${ }^{1}$ From September 1939 through November 1946, this table represents aggregates of figures reported by individual banks for days, varying from bank to bank, toward the end of the month. After November 1946, figures for all banks are compiled on the third Wednesday of each month, except in June and December, when the statements will give end-of-month data.
${ }_{2}$ Represent six-month loans to the Treasury at $11 / 8$ per cent through Oct. 20, 1945, and at $5 / 8$ per cent thereafter.
Note.-For back figures and figures on German commercial banks, see Banking and Monetary Statistics, Tables 168-171, pp. 648-655, and for description of statistics see pp. 566-571 in same publication.
(Averages of certified noon buying rates in New York for cable transfers. In cents per unit of foreign currency]

${ }^{1}$ Prior to Nov. 1, 1942, the official designation of the Brazilian currency unit was the "milreis."
${ }_{3}^{2}$ Average of daily rates for that part of the year during which quotations were certified.
${ }^{3}$ At the end of June 1945 official rates for the Australian and British pounds were abolished, and after this date quotations are buying rates in the New York market. The rates shown represent averages for the second half of 1945 and are comparable to those quoted before 1940
"The rate quoted after July 22, 1946. is not strictly comparable to the "free" rate shown before that date. The average for the "free" rate for Juity 1-19 is 5.1902 , and for Jan. 1 -July 19, 5.1860 , while the average for the new rate for July $25-31$ is 5.3350 , and for July 25-Dec. 31 , 5.3955 'Based on quotations through Jan. 23. © Based on quotations beginning Feb. 10.
Nore.-For back figures see Banking and Monetary Statistics, Table 173, pp. 662-682. For description of statistics see pp. 572-573 in same publication, and for further information concerning developments affecting the averages during previous years, see Bultetin for July 1947 p. 933; February 1944. p. 209; and February 1943, p. 201.

[^46]1 The new national index, published by the Central Institute of Statistics, is a weighted geometric average of the prices of 156 commodities. The weights are determined on the basis of the total quantities produced and imported in 1938 . Yearly averages for $1934-1942$ are derived from old index.

2 Approximate figure, derived from old index (1913 = 100),

## $p$ Preliminary

${ }^{1}$ Figures represent calculated prices of a 4 per cent 20 -year bond offering a yield equal to the monthly average yield for 15 high-grade cor porate bonds. Source.-Standard and Poor's Corporation; for compilations of back figures on prices of both bonds and common stocks in the United States see Banking and Monetary Statistics, Table 130, p. 475, and Table 133, p. 479.
${ }^{2}$ This index is based on one 15-year 3 per cent theoretical bond. Yearly averages for 1939 and 1940 are based on monthly averages and thereafter on the capitalized yield as calculated on the 15 th of every month.
${ }^{3}$ Beginning February 1947, this index represents the reciprocals of average yields for 13 issues ( 2 perpetual government. 2 government, 2 municipal, 1 provincial, 3 mortgage, and 3 industrial bonds). From January 1946 through January 1947 the figures are based on the most repres entative bond for each group. The average yield in the base period (January-March 1937) was 3.39 per cent.
${ }^{\text {'This index }}$ is based on 95 common stocks through 1944 , and on 100 stocks thereafter.
In September 1946 this index was revised to include 185 metropolitan issues, 90 issues of colonial France, and 20 issues of French companies abroad. See "Bulletin de la Statistique Générale"" September-November 1946. p. 424.
${ }^{6}$ This is a new index for 37 Netherlands issues ( 27 industrial, 5 banking, and 5 shipping shares) and represents an unweighted monthly average of daily quotations. The figures are not comparable with data for previous years shown in earlier Bulletins.

TAverage based on figures for 5 months; no data available June-December
${ }^{8}$ Average based on figures for 10 months; no data available January-February,

1948 Survey of Consumer Finances-I. Expenditures for Durable Goods. June 1948. 15 pages. 1948 Survey of Consumer Finances--II. The Distribution of Consumer Income in 1947. June 1948. 8 pages.

[^0]:    I Net of cash dividend payments. Gross totals were derived by adding negative amounts in the Sources of Funds and Uses of Funds sections to the Uses of Funds-Totals, as shown in the Composite Sources and Uses of Funds Statement.
    ${ }^{2}$ Includes tax refund and renegotiation payments, additions to other assets, and nonrecurring or extraordinary charges to income
    ${ }^{3}$ Less than 0.5 per cent.
    Note.-Percentages may not add to 100 because of rounding.

[^1]:    ${ }^{1}$ As a measure of existing productive capacity, gross plant and equipment is subject to the limitation that some part of the investment may represent obsolete or worn-out machinery and equipment. Thus, any comparison of current plant and equipment expenditures, even after allowance for present higher costs, may not provide a true indication of the net increase in productive capacity resulting from the expenditure.

[^2]:    ${ }^{1}$ This article was prepared by Duncan McC. Holthausen of the Board's Division of Research and Statistics. It is the first in a series to be issued presenting the results of the Board's Survey of Consumer Finances in 1948. Other articles will appear in succeeding issues of the Bulletin.
    Rensis Likert, Director, and Angus Campbell, Assistant Director, Survey Research Center, University of Michigan, were in general charge of the survey. Responsibility for detailed planning and supervision of the survey, including interviewing, editing, tabulation of survey results, and preparation of suryey studies was carried by George Katona in collaboration with Janet Austrian, both of the Survey Research Center's staff. Charles F. Cannell served as head of the field staff and Roe Goodman as head of the sampling section of the Center.
    From the Board of Governors, general supervision of the survey has been under the direction of Woodlief Thomas, Director, and Ralph A. Young, Associate Director, of the Division of Research and Statistics. Mr. Holthausen has been in charge of the analysis of the data and the preparation of reports.
    ${ }_{2}$ The second survey was made for the Board of Governors early in 1947 by the Survey Research Center and results of that survey were reported in 1947 in the June, July, and August issues of the Bulietin. The first survey was made for the Board of Governors early in 1946 by the Division of Program Surveys, Bureau of Agricultural Economics, U. S. Department of Agriculture. The Survey Research Center staff currently in charge of the survey work was associated with the Division of Program Surveys at the time of the first survey. Results of that survey were reported in the June. July, and August issues of the Bulsemin under the general title National Survey of Liquid Assets.

[^3]:    3 If people contributed more than one-half of their income to the family it was considered that they pooled their income. In addition, the wife of the head of the family or a family member under 18 years of age or earning less than $\$ 10$ a week was always considered a member of the main spending unit.
    ${ }^{4}$ Families are defined as all persons living in the same dwelling unit who are related by blood, marriage, or adoption.

[^4]:    Data not available.
    ${ }^{2}$ Less than one-half of 1 per cent.
    Information on houses refers to nonfarm spending units only.

[^5]:    ${ }^{1}$ Prepared by the staff of the Survey Research Center, University of Michigan.

[^6]:    2 For a detailed description of the sampling method, including the principles of over-sampling mentioned under point 4 , see appendix to the article on the survey in the June 1947 BuL. LETIN.

[^7]:    ${ }^{3}$ This applies strictly to the percentage figures published. In determining the number of spending units in the nation, Census information is also used, the same as in the sampling process. The reports also contain a few adjustments made on the basis of data from the survey. In presenting the size distributions of income, saving, and liquid assets, estimates are made for a number of spending units from whom complete financial data were not obtained. Adjustments have been made for from 1 per cent to 4 per cent of spending units.

[^8]:    ${ }^{4}$ Families are defined here as all persons related by blood, marriage or adoption who live at the same dwelling unit. In some dwellings there is more than one family (for instance, in dwellings in which there is a boarder who is not related to the head of the household).
    ${ }_{5}$ Some approximate indications of the total effect of reporting and sampling errors can be derived from a comparison of Survey findings with outside estimates. These comparisons often refer to dollar aggregates, in which data both reporting and sampling errors are larger than for percentage distributions. In many instances, however, outside data are not available for comparison with Survey findings.

[^9]:    * For the purposes of this statement it has been assumed that a complete enumeration would be subject to at least as large errors of reporting and nonreporting as the sample, and hence, that the departure of the sample from a hypothetically complete enumeration would be due to sampling fluctuations.

[^10]:    ${ }^{1}$ Prospective buyers include spending units who said definitely they would buy and those who said they probably would do so Intended purchases for 1948 and actual purchases in 1947 are related to the spending unit's 1947 money income, intended purchases for 1947 and actual purchases in 1946 to 1946 money income, and intended purchases in 1946 to 1945 money income.
    ${ }^{2}$ Information on houses refers to nonfarm spending units only.
    Note.- Part of the upward shift in the distribution of buyers may be attributed to the substantial shifts in the distribution of income of spending units between 1945 and 1947, with fewer spending units having incomes below and more having incomes above $\$ 4,000$. See Table 4 for the percentage of spending units in each income group that are buyers.

[^11]:    ${ }^{1}$ This article was prepared by Duncan McC . Holthausen of the Board's Division of Research and Statistics. It is the second in a series to be issued presenting the results of the Board's 1948 Survey of Consumer Finances. The first article also appears in this Bulletin and other articles will appear in succeeding issues.
    From the Survey Research Center, University of Michigan, Rensis Likert, Director, and Angus Campbell, Assistant Director, were in general charge of the survey. Responsibility for detailed planning and supervision of the survey, including interviewing, editing, tabulaton of survey results, and preparation of survey studies was carried by George Katona in collaboration with Miss Janet Austrian. Charles F. Cannell served as head of the field staff and Roe Goodman as head of the sampling section of the Center.

    From the Board of Governors, general supervision of the survey has been under the direction of Woodlief Thomas, Director, and Ralph A. Young, Associate Director, of the Division of Research and Statistics. Mr. Holthausen has been in charge of the analysis of the data and the preparation of reports.
    ${ }^{2}$ The second survey was made for the Board of Governors early in 1947 by the Survey Research Center and results of that survey were reported in 1947 in the June, July, and August issues of the Bulletin. The first survey was made for the Board of Governors early in 1946 by the Division of Program Surveys, Bureau of Agricultural Economics, U. S. Degrartment of Agriculture. The Survey Research Center staff currently in charge of the survey work was associated with the Division of Program Surveys at the time of the first survey, Results of that survey were reported in the June, July, and August issues of the Bulletin under the general title Na-
    tional Survey of Liquid Assets. See the appendix to Part I tional Survey of Liquid Assets. See the appendix to Par
    of this 1948 Survey for information about survey methods.

[^12]:    ${ }^{1}$ Based on changes in amount of annual income received as reported by spending units early in 1948 (third survey) and early in 1947 ( second survey).

[^13]:    ${ }^{1}$ Based on changes in amount of annual income received as reported by spending units in early 1948 (third survey).
    2 Less than one-half of 1 per cent.

[^14]:    ${ }^{1}$ The question was: "Do you think a year from now you will be making more money or less money than you are now, or will you be making about the same?" The results are based on interviews in January-March 1948. This question was asked of nonfarm spending units only.

[^15]:    1 For comparable 1946 data, see July 1947 Federal Reserve Bulletin, p. 793; for comparable 1945 data, see Tables 18, 19, and 20 in Part Two of National Survey of Liquid Asset Holdings, Spending, and Saving, Division of Program Surveys, U. S. Department of Agriculture.
    : Members of spending unit were unemployed, retired, housewives, students, etc.
    ${ }^{3}$ The 12 largest cities in the nation and their suburbs.
    4Towns with less than 2,500 population and open country.

[^16]:    ${ }^{1}$ This survey, conducted for the Board by the Survey Research Center, University of Michigan, provides information on the distribution of holdings of liquid assets by individuals at the beginning of 1948 and their attitudes toward spending these assets. Some of the results are published in this issue of the Bulletin (pp. 634-56) and others will appear in the July and August issues.
    2 A detailed description of the methods by which these estimates are made, together with the basic worksheets, may be secured from the Division of Research and Statistics, Board of Governors of the Federal Reserve System, Washington 25, D. C . ${ }^{3}$ See Federal Reserve Bulletins for June 1945, February 1946, November 1946, and September 1947 for previously published estimates.

[^17]:    ${ }^{1}$ Sections of the report not given here include discussions of economic developments abroad, the progress of the economy of the United States in 1947, the major changes shown in the Bank of Canada's accounts during the year, and notes on perBank of Canada's accounts during the year, and notes on perSonnel matters. Appendix A records the estimated net new issues or retirements of Canadian securities, $1936-47$, and Ap-
    pendix $C$ shows the ownership of Dominion Government direct and guaranteed funded debt, 1938-47. Numerous charts illusand guaranteed
    For previous reports, see Bulletin for April 1947, April 1945, etc.

[^19]:    $\$ 230,044,000$ on May 19 ; and $\$ 240,244,000$ on May 26.

[^20]:    Includes any banks in outlying sections of reserve cities that have

[^21]:    P Preliminary,
    1 Annual figures are estimates of the United States Mint. For explanation of monthly figures see table on p. 731.
    2 Includes gold in the Inactive Account amounting to 1,228 million on Dec. 31, 1937.
    ${ }^{3}$ Change includes transfer of 687.5 million dollars gold subscription to International Monetars Fund.

    4 Not yet available
    5 Gold held under earmark at the Federal Reserve Banks for foreign account, including gold held for the account of international institutions, amounted to 3,883.2 million dollars on May 31.1948. Gold under earamounted to $3,883.2$ million dollars on May 31, 1948 . Gold
    mark is not included in the gold stock of the United States.

    Note.-For back figures, see Banking and Moneiary Statistics, Table 156 , pp. 536-538, and for description of statistics see pp. 522-523 in the same publication.

[^22]:    $r$ Revised

[^23]:    - Partly estimated. $\quad$ Revised

[^24]:    * These figures do not include data for banks in possessions of the United States. During 1941 three mutual savings banks became mem bers of the Federal Reserve System; these banks are included in "member banks" but are nol included in "all insured commercial banks.'

    During the period Dec. $31,1942-$ June 30,1945 , agricultural loans included loans to dealers, processors, and farmers' cooperatives covered by purchase agreements of the Commodity Credit Corporation, which are now classified as commercial and industrial loans; consequently, beginning Dec. 31. 1945, these items may not be entirely comparable with prior figures.

    2 Central reserve city banks.

[^25]:    ${ }^{3}$ Beginning June 30, 1942, excludes reciprocal bank balances, which on Dec. 31, 1942, aggregated 513 million dollars at all member banks and

[^26]:    ${ }^{1}$ Demand deposits other than interbank and U. S. Government, less cash items reported as in process of collection.
    ${ }^{2}$ Monthly and weekly totals of debits to demand deposit accounts except interbank and U. S. Government accounts.

[^27]:    ${ }^{1}$ Excluding balances with reporting firms (1) of member firms of New York Stock Exchange and other national securities exchanges and (2) of firms' own partners.
    ${ }^{2}$ Includes money borrowed from banks and also from other lenders (not including member firms of national securities exchanges).
    ${ }^{3}$ As reported to the New York Stock Exchange. According to these reports, the part of total customers' debit balances represeated by balances secured by U. S. Government securities was (in millions of dollars) : February, 57; March, 62; April, 66.

    Note.-For explanation of these figures see "Statistics on Margin Accounts" in Bulletin for September 1936. The article describes the method by which the figures are derived and reported, distinguishes the table from a "statement of financial condition," and explains that the last column is not to be taken as representing the actual net capital of the reporting firms.

    Back figures.-See Banking and Monetary Statistics. Table 143, pp. 501-502, for monthly figures prior to 1942, and Table 144, p. 503, for data in detail at semiannual dates prior to 1942.

[^28]:    ${ }^{1}$ Monthly and weekly data are averages of daily figures, except for municipal bonds, which are based on Wednesday figures.
    ${ }_{2}$ Standard and Poor's Corporation. ${ }_{3} \mathrm{U}$. S. Treasury Department.
    ${ }^{4}$ Moody's Investors Service, week ending Friday. Because of limited number of suitable issues, the industrial Aaa and Aa groups have been reduced from 10 to 5 and 9 issues, respectively, and the railroad Aaa, Aa, and A groups from 10 to 6,6 , and 8 issues, respectively.

    Back figures.-See Banking and Monetary Statistics, Tables 128-129, pp. 468-474, and Bulletins for May 1945, pp. 483-490, and October 1947, pp. 1251-1253.

[^29]:    ${ }^{1}$ Includes publicly offered issues of Federal credit agencies, but excludes direct obligations of U. S. Treasury.
    Includes issues of noncontiguous U. S. Territories and Possessions.
    ${ }^{2}$ Includes 244 million dollars of issues of the International Bank for Reconstruction and Development, which are not shown separately.
    Source.-For domestic issues, Commercial and Financial Chronicle; for foreign issues, U. S. Department of Commerce. Monthly figuree subject to revision. Back figures.-See Banking and Monetary Statistics, Table 137, p. 487.

[^30]:    ${ }^{1}$ Estimates of new issues sold for cash in the United States.
    Gross proceeds are derived by multiplying principal amounts or number of units by offering price.
    ${ }^{2}$ Estimated net proceeds are equal to estimated gross proceeds less cost of flotation, i.e., compensation to underwriters, agents, etc., and expenses. 4 Includes repayment of other debt and other purposes.
    Source--Securities and Exchange Commission; for compilation of back figures, see Banking and Monetary Statistics (Table 138, D. 491 ), a publication of the Board of Governors.

[^31]:    ${ }^{1}$ Including amounts held by Government agencies and trust funds, which aggregated 5.476 million on Apr. $30,1948$.

    - Total marketable public issues includes Postal Savings and prewar bonds, and total nonmarketable public issues includes adjusted service, depositary, Armed Forces Leave bonds, and 21/2 per cent Treasury investment bonds, series A-1965, not shown separately.

    ${ }^{2}$ Including holdings by banks in territories and insular possessions, amounting to 100 million dollars on June 30, 1942, and 400 million on

[^33]:    ${ }^{1}$ Difference between these figures and changes in the general fund balance represents net cash borrowing $(+)$ or net repayment of borrowing (-). For description, see Treasury Bullelin for September 1947.

[^34]:    * Average per working day. p Preliminary. PRevised.

    1 For indexes by groups or industries, see pp. 704-707. For points in total index, by major groups, see p. 726.
    : Based on F. W. Dodge Corporation data; for description, see p. 358 of Bulletin for July 1931 ; by groups, see p. 711 of this Bulletin.
    8 The unadjusted indexes of employment and pay rolls, wholesale commodity prices, and consumers' prices are compiled by or based on data of the Bureau of Labor Statistics. Nonagricultural employment covers employees only and excludes personnel in the armed forces.

    4 For indexes by Federal Reserve districts and other department store data, see pp. 713-716.
    Back figures in Bulletin.-For industrial production, August 1940, pp. 825-882, September 1941, pp. 933-937, and October 1943, pp. 958-984 for factory employment, January and December 1943, pp. 14 and 1187 , respectively, October 1945, p. 1055, and May 1947, p. 585; for department store sales, June 1944, pp. 549-561

[^35]:    ${ }^{p}$ Preliminary. ${ }^{\prime}$ Revised.
    ${ }^{1}$ Series included in total and group indexes but not available for publication separately.

[^36]:    ${ }^{1}$ Includes Federal Force Account Construction.

[^37]:    1 Includes self-employed, unpaid family, and domestic service workers.
    ${ }^{2}$ Annual averages for 1940 include an allowance for January and February inasmuch as the monthly series began in March 1940.
    : Beginning in June 1947, details do not necessarily add to group totals.
    Note.-Information on the labor force status of the population is obtained through interviews of households on a sample basis. Data relate to the calendar week that contains the eighth day of the month. Back data are available from the Bureau of the Census.

[^38]:    1 The RFC Mortgage Company, the Federal National Mortgage
    Association, the Federal Deposit Insurance Corporation, and the United States Housing Corporation.
    ${ }^{2}$ Including mortgage companies, fnance companies, industrial banks, endowed institutions, private and State benefit funds, etc.

    Note.-Figures represent gross amount of mortgages held, excluding terminated mortgages and cases in transit to or being audited at the ing terminated mortgages and cas
    Federal Housing Administration.

[^39]:    p Preliminary.

[^40]:    Revised.

[^41]:    ; Revised.
    1 Weekly figures not directly comparable with monthly data.
    ${ }^{2}$ Revised figures for the period May-October 1947 will be shown in future issues of the Bulletin.
    Back figures.-Bureau of Labor Statistics. Department of Labor.

[^42]:    p Preliminary.
    Note.-Data based on reports from a smaller group of stores than is included in the monthly index of sales shown on p. 713.

[^43]:    Prior to Jan. 3, 1940, the figures under Asia represent Far East only, the remaining Asiatic countries being included under "All other."
    Includes outflow of $\$ 249,300,000$ resulting from the sale of debentures in the United States by the International Bank for Reconstruction
    and Development. (Of the total issue of $\$ 250.000,000, \$ 700,000$ was sold directly to Canadian purchasers.)
    4 Amounts outstanding Jan. 31 (in millions of dollars) : foreign brokerage balances in United States, 90.9 ; United States brokerage balances abroad, 27.2.

[^44]:    ${ }^{1}$ Prior to Jan. 3, 1940, the figures under Asia represent Far East only, the remaining Asiatic countries being included under "All other."
    Note. -The figures in this table are not fully comparable throughout since certain changes or corrections took place in the reporting practice of reporting banks on Aug. 12, 1936, and Oct. 18, 1939. (See Banking and Monetary Statisitcs, Table 161, pp. 589 and 591. ) On June 30,1942 reporting practice was changed from a weekly to a monthly basis. For further information see Bulletin for September 1945 , pp. $971-974$.

[^45]:    ${ }^{1}$ Latest month available.
    \% For last available report (January 1942), see Bulletin for March 1943. p. 278.
    ${ }^{3}$ Includes gold, silver, and foreign exchange forming required reserve ( 25 per cent) against notes and other demand liabilities.

[^46]:    p Preliminary. r Revised.
