## CURRENT PRICE DEVELOPMENTS

On the first anniversary of the war's end inflationary pressures still dominate the economic situation. Incomes have increased in recent months, supplies of numerous goods and services have continued to be limited, and buyers, with some exceptions, have been making purchases freely. As a consequence, the upward pressure on prices has been very great and price increases have been substantial, with a quite general rise even before the period in July when controls were not in effect, and with sharp increases in prices of basic commodities during that period. The general level of wholesale prices and the cost of living also advanced considerably in July, as indicated in the accompanying chart showing price changes during the two war pe-

Bureau of Labor Statistics indexes. Index of wholesale prices converted to 1935-39 base by Federal Reserve. Latest figures shown are estimates for July 1946.
riods. Recent price advances have resulted in part from buying of a speculative sort and have themselves, in turn, stimulated such buying. To the extent that commitments for materials have been made at recent advanced prices they will add to the pressure from the cost side for further increases in prices of finished goods.

The central immediate problem of price control continues to be to prevent a spiral of price increases which would create new disparities and make more difficult the readjustments in price relationships which are to be expected eventually. The difficulties in the way of stabilizing the situation are especially great now as a result of recent developments in connection with the renewal of the price control law, and it is essential that action to control prices be supported throughout the community. As supplies continue to increase, sellers and buyers in a growing number of lines may find it to their direct advantage to exercise restraint in regard to prices and purchases. They may also recognize the general advantage of holding price advances to a minimum in order that the process of readjustment to peacetime conditions may be as orderly as possible.

## Inflationary Pressures Continue Dominant

Individual incomes, following a temporary decline after the cessation of hostilities, have
been rising and are now at the 1945 summer level. Incomes may be expected to rise somewhat further as production of peacetime goods, especially durable goods, is increased. Personal taxes are now less than a year ago and current incomes available for spending or saving are larger. Individual holdings of liquid assets have also increased somewhat further. Business enterprises generally continue in a strong financial position.

Total private and public expenditures for currently produced goods and services are at about the same level as a year ago and outlays for nonwar purposes are very much greater. Transfers of existing property, such as farm and urban real estate, have bcen in large volume. In general, growing expenditures for goods have reflected increases in supplies available for purchase and higher prices, but only because of strong demand on the part of buyers has a ready market been found for all the goods made available.

Private expenditures are now a third again as large as at the end of the war, with sharp increases in both consumer and business outlays. The return of 10 million veterans has been one important element in the increase in consumer buying, but increased supplies and deferred demands have been fully as important. Consumer outlays for food, textile, and other nondurable products have risen to exceptionally high levels, in part perhaps because automobiles and some other durable consumer goods could be obtained only in limited quantities and because some costs, notably rent, have not. increased with incomes. As supplies of durable goods increase, expenditures on durable goods will expand considerably. The same appears to be true of the purchase of new houses. Demand has been continually far in excess of supply. In considering this market, however, a special factor to be noted is that prices
of houses have already risen much more than prices of most durable goods. To some extent consumer outlays, particularly for durable goods, will depend on how much further consumers are willing to go in reducing their current savings and supplementing their incomes by drawing on their liquid assets or using consumer credit. Already the proportion of current income being saved has declined sharply from the unusually high wartime levels.

Business expenditures for plant, equipment, and inventory have been rising steeply. With large orders outstanding and increased supplies becoming available, they may be expected to continue upward. Many inventories are still below the relationship to current sales regarded by business men as appropriate and many industrial and commercial establishments are pressing forward with maintenance and expansion programs deferred during the war or rendered attractive by wartime developments. Similar factors are responsible for a large and continuing foreign demand for American goods. Finally, the military expenditures of the Federal Government recently have been declining only gradually and probably will be curtailed only slowly in the near future.

The volume of production, while increasing and already at a high level, is still inadequate to meet numerous demands at current prices, and consequently the general upward pressure on prices still prevails. The situation has been, and to some extent still is, aggravated by bottlenecks which distort the patterns of production and contribute to shortages of particular materials and parts. The lack of balance in the economy which was inherited from the war years runs all through the demand situation as well as the supply situation and is responsible, in fact, for much of the inflationary pressure. Dis-
parities, for example, create opportunities for quick gains and thereby stimulate speculation. Moreover, they increase the problems of direct price control, generating demands which otherwise would not arise, which, if granted, may necessitate numerous other price advances. The fact that foreign prices of certain major commodities imforted or exported by the United States are above domestic prices is a further complicating element in the current situation.

Two factors which would assist in the process of control would be a continued large and growing volume of production and increasing reluctance on the part of consumers and business buyers to follow up price advances in view of increasing evidence of larger supplies in many lines and the progressive satisfaction of currently urgent requirements.

Production of goods for civilians, although still quite uneven, is now at the highest level on record and in many lines is far above any prewar level. Output in most nondurable goods industries has been in large volume for six months or more. In the durable goods industries, where output has been interrupted by industrial disputes; activity is now increasing considerably. In agriculture, most crops in this country will be at or near record-breaking levels this season but carryovers are small and world shortages of food continue.

There is some evidence that processors and distributors of finished goods, recognizing the transitory character of many existing demands and scarcities, may be reluctant to increase prices. At high levels of production many manufacturers and distributors can absorb some increase in operating costs without reducing the return on net worth below a reasonable figure. The widespread pursuit of a policy of avoiding price increases in
coming months would greatly facilitate the task of price control and, by helping to discourage speculation, contribute importantly to future economic stability.

## Price Control Legislation

The President's message accompanying the veto on June 30 of the bill extending the Emergency Price Control Act expressed strong disapproval of amendments designed to remove ceilings on major food products and to require increases in ceilings to take account of advances in manufacturing costs for particular products since 1941. During the latter part of July a compromise bill was passed extending controls until July 1, 1947, with the following major amendments: (1) a three-man control board is to be established with the power of removing or replacing Federal ceilings on prices; (2) ceilings on prices of meats, dairy products, grains, cottonseed products, and soybean products are to be restored on August 21 unless otherwise determined by the control board; (3) prices of eggs, poultry products, tobacco, and petroleum products are to be exempted from control unless the control board finds that ceilings are necessary; (4) no ceilings are to be placed on agricultural products unless the product is certified by the Secretary of Agriculture as being in short supply and necessitating control; (5) no new Federal subsidy or purchase operations are to be permitted, no subsidy payments are to be made on products without ceilings, and all subsidies on food products are to be ended by April 1, 1947; (6) price ceilings on manufactured goods are to permit a reasonable profit with adequate allowance for average industry-wide increases in costs since 1940; (7) no limitations are to be placed on sellers to market goods at different price levels; (8) price ceilings for distributors are to
allow the average margins prevailing on March 31, 1946; (9) ceilings for cotton and wool products are not to be set below the sum of current costs of cotton or wool, average mill conversion costs, and average profits per unit equivalent to profit earned in the period 1939 to 1941; and (10) price ceilings on essential imported products are to be increased or removed under certain conditions when they are lower than world prices.

The new bill was signed by the President on July 25 and in an accompanying statement he warned that if it proved unworkable he would summon the Congress into special session to consider another measure. While the new law relaxes various features of previously existing controls, a certain amount of modification in the administration of these controls had already occurred before the end of June. To an important degree the success of the new law in restricting price increases will depend on the manner in which it is administered, the coordination of other Federal actions to minimize inflationary pressures, and the cooperation and support of business and consumer groups.

## Postwar Price Advances

Commodity prices had already increased considerably this year before the lapse of Federal price controls at the end of June. Numerous products had been removed from control, ceilings on many others had been raised, and a growing amount of certain commodities had been marketed above ceiling levels.

By the end of July, following large increases in quotations for farm products and foods after the lapse of controls, the general level of wholesale commodity prices was about 15 per cent higher than at the end of the war. Prices of industrial commodities had advanced about 10 per cent, farm prod-
ucts 20 per cent, and foods 30 per cent. Among industrial goods some of the largest advances occurred in prices of hides and leather products, textile products, household fuels, and building materials.

Wholesale prices of these industrial products and of food products are an important element in the prices of most goods purchased by consumers and, partly as a result of large increases in these wholesale prices, retail prices of most consumer goods have advanced about 15 per cent since the end of the war. Some of the advances in wholesale markets, however, have not yet been fully reflected in retail prices. Rent controls, moreover, have held that item of living costs at previously existing levels and, with prices of most other services purchased by consumers showing fairly moderate increases in this period, the total cost of living has risen by somewhat less than 15 per cent since the end of the war.

Prices of producers equipment have also been under considerable upward pressure, reflecting partly the accumulation of deferred demands during the war period and increases in labor and material costs. Price ceilings on many types of industrial equipment are difficult to administer effectively and prices for equipment do not figure as an important item in the current cost of doing business for many producers. As a result, price ceilings for a number of these products were removed this spring and their prices are reported to have risen from 10 to 20 per cent. At the time Federal ceilings on these products were lifted it was explained that even if ceilings had been retained it would have been necessary to raise them considerably owing to increases in costs of materials and labor since the ceilings were established in 1941 or 1942.

Manufacturers reconverting to the pro-
duction of consumer durable goods were initially allowed moderate price increases to compensate for cost increases since 1942, when output of these products was discontinued. Subsequently many of these allowances were raised to around 20 per cent and provision was made to have part of the advance in wholesale prices absorbed by distributors.

An important development last winter and spring which was a factor leading to a modification of the Federal price control program was the strong pressure for sharply increased wage rates. In the wage-price readjustments that followed, the country experienced a number of prolonged work stoppages which had the effect of restricting the supply of goods and adding to the upward pressure on prices, since there was not a corresponding reduction in demand for goods. A wage dispute in the steel industry was terminated in the middle of February with an increase of about 18 cents per hour in wage rates. This was accompanied by an increase in ceiling prices for iron and steel products of approximately 10 per cent. Subsequent to that time widespread advances were granted in price ceilings for other industrial products as well as in prices of farm products and foods.

## Recent Price Changes

During the early part of July, following the lapse of price control, there were sharp increases in prices of agricultural commodities while industrial prices continued to advance at a relatively moderate rate. The sudden rise in prices shown on the accompanying chart for farm products and foods reflected partly the discontinuance of large Federal subsidy payments, but some commodities, notably cotton, corn, and hogs, not directly affected by changes in subsidy arrangements, also advanced sharply. In markets for industrial

Bureau of Labor Statistics indexes. Latest figures shown are estimates for July 1946.
products prices rose much less, as sellers and buyers were generally in a position to await developments in other markets and clarification of Federal control policies.

Daily indexes of sensitive commodities, which are influenced considerably by changes in prices of agricultural commodities, advanced by about 20 per cent in July. Typically these indexes fluctuate much more sharply than do indexes of the general levels of wholesale commodity prices and of retail prices of goods and services.

The general index of wholesale prices compiled by the Bureau of Labor Statistics increased 10 per cent from the end of June to the week ending July 27. This index is based on open market quotations and is heavily weighted with prices of farm and food products-close to 40 per cent of the total index-and, since prices of these com-
modities advanced more sharply than prices of other products, the actual rise in the general level of wholesale prices was probably smaller than 10 per cent in this period. On the other hand, the actual rise earlier this year was probably greater than the rise shown by the index-partly because actual prices of goods in urgent demand and sold in widely dispersed markets, like various foods, textiles, and building materials, ranged above openmarket quotations and partly because of the difficulty of securing comparable price quotations in a period when the supply of various types of goods is changing rapidly.
In retail markets price comparisons under present conditions are also difficult to make. Final data for the consumers' price index of the Bureau of Labor Statistics are not yet available for July, but a preliminary survey by the Bureau showed increases of around 5 per cent from June in consumer prices in 11 large cities. In the preceding month the index advanced one per cent, reflecting mainly increases in ceilings allowed for retail prices of cereal and dairy products and of some clothing and housefurnishing items.
After the middle of July prices of most agricultural commodities, except livestock, declined from earlier peak levels. These declines reflected an expansion in marketings and improved crop prospects as well as buyer resistance to sharp price increases. Considering the extent of the sharp price increases for agricultural commodities in July and the longer term outlook for their supplies, it is possible that prices of these products had already gone far in reflecting the near term demand and supply situation. Some of the large supplies coming on the market, however, particularly of meats, were goods that had been withheld during the consideration of price control legislation pending possible higher prices. Larger marketings of live-
stock were also expected because of increases permitted during May in prices of feeds.

After the new Price Control Act became effective on July 25 , ceiling prices of all products not exempted from control and also rents were reestablished at the end of June levels. However, many increases in price ceilings, which had been pending before expiration of the old law, were announced immediately. These increases applied to various types of products but especially to building materials. Ceilings were removed from additional types of industrial equipment and various miscellaneous products, and it was planned that most changes in existing price ceilings made necessary by the new law would be put into effect very soon.

## Rising Consumer Demands

Last autumn, after the end of the war, national income and the gross value of national production declined by only 10 per cent, after allowing for seasonal changes, as a marked expansion in employment and production for civilian use largely offset the curtailment in munitions output. Incomes of individuals declined by a smaller amount, reflecting partly increased payments to discharged soldiers and unemployment compensation. Individual incomes were at an annual rate of 157 billion dollars during the first quarter of this year, compared with 163 billion at the end of the war, as shown in the chart on page 839. They rose by 4 billion dollars from the first to the second quarter, mainly as the result of larger incomes of industrial workers after the settlement of major wage disputes at sharply increased rates of pay. Production and incomes in most other lines of activity, including construction, distribution, and services, also continued to expand. Salaries and wages paid by the Fed-

Department of Commerce estimates. Figures for the first and second quarters of 1946 are preliminary. Amounts indicated as "Savings" represent excess of individual incomes over consumer expenditures and taxes.
eral Government, including those to the armed forces, continued to decline.
Reduced Federal taxes on corporate and individual incomes became effective at the beginning of the year and with wartime savings incentives no longer existing and many Federal controls discontinued, private demands for goods and services and for capital assets showed a further marked rise. Inventories of goods in all positions were low and, while production of finished civilian goods was increasing, aggregate supplies were still low relative to the levels of total incomes and demands.
During the third quarter of this year individual incomes are likely to rise further, reflecting additional increases in production and employment and also higher prices, which will raise incomes of farmers and some other proprietors considerably.

Incomes of most individuals, however, change slowly. The immediate influence of price changes is limited largely to net incomes of proprietors. Moreover, a fairly im-
last autumn as a result of large markets for goods, improved technical processes, an abundance of investment funds, low interest rates, and various other factors. While production of new plant and equipment will subsequently add considerably to the country's capacity to produce, it results immediately in adding to incomes without increasing the supply of goods available for final consumption. In fact, in some instances use of materials and other resources in the manufacture of producers goods has temporarily limited the production of consumer goods.
As a result, it is difficult to appraise accurately the long-term markets for equipment and for goods in such a period as the present -especially in view of the unstable price situation. With shortages still general and delivery dates greatly extended, there is danger that orders for goods from manufacturers and distributors will be accumulated to such an excessive extent that their reduction to more reasonable levels will create serious repercussions in the markets. In the distribution field, for example, reports from large department stores indicate that their outstanding orders increased considerably after the end of the war and on June 30 were over three times as large relative to their current sales as before the war. In the period when they are receiving shipments of the goods on order in large volume, these distributors will probably find it necessary to reduce the rate at which they are placing new orders or renewing old ones. This adjustment could be made gradually and in orderly fashion. If, on the other hand, outstanding orders for goods should continue to mount and the downward readjustment should not be made promptly enough, large cancellations may occur in the event of an important change in the outlook for supplies and prices.

So long as individual incomes are rising or are maintained at levels supporting a high rate of sales to consumers, business decisions may readily remain favorable to further expansion. It is essential, however, in such periods as the present, that business orders and expenditures do not become overextended relative to underlying changes in incomes and consumption.

## Expanding Supplies of Goods

After the end of the war supplies in retail markets of certain goods like gasoline and tobacco products expanded quickly, but the flow of most finished products to consumers was still relatively low for some months because of the time it took to rehire and train workers, seek out new sources of materials here and abroad, process the goods, replenish inventories, and settle wage-rate disputes.
Since the beginning of the year, however, production and shipments of most finished products for civilian use have shown a marked expansion. The extent and timing of this expansion is not indicated directly by such an over-all measure as the Board's index of industrial production because the total index is based on output at different stages of production and covers output for war as well as for civilian purposes. Last July, just prior to the end of the war, the total index was 210 per cent of the 1935-39 average and only about 85 points of the total were estimated to be production for civilian use. Probably close to 150 points were for civilian purposes during the first half of this year when the index was at an average level of 162 and in July the volume was nearly double the low rate of civilian production twelve months earlier. These figures can not be used to measure changes in total current output for civilian purposes because they do not

Federal Reserve Bulletin
include unprocessed agricultural products, construction, and services of various kinds, but they indicate roughly the magnitude of the expansion in civilian production which has occurred in manufacturing and mining -one of the most volatile sectors of the economy. An important share of the rise in production for civilians has been in producers goods and part of the rise in output of consumer goods has reflected the transfer of 10 million veterans to the civilian population.

Capital goods. Total output of many types of producers equipment during the past twelve months has been above the record volume reached in 1941, despite widespread industrial disputes last winter and spring and shortages of materials. With certain exceptions, like trucks and commercial aircraft, manufacturers of these goods were encouraged to resume large-scale output after VEday, and since the early months of this year output of most types of machinery, transportation equipment, and iron and steel products has expanded further.

While production of this equipment has been at high levels, orders from both domestic and foreign buyers have been even greater and large backlogs of orders have accumulated. Only in scattered instances, like truck tires and standard machine tools, have supplies begun to exceed demands. It is difficult to judge when the major part of demands for new equipment will be satisfied and especially what will be the prospective magnitude of these demands when the present most urgent needs are filled. It is certain, however, that the production and use of this equipment will add considerably to the economy's capacity to produce, lower production costs, and reduce labor requirements per unit of output. All of these developments ultimately will have the effects of reducing prices for goods.

In the construction industry, also, activity since the beginning of the year, both in residential and nonresidential building, has been above the advanced levels reached in 1941. Value of private awards for new factories and commercial building has far exceeded the level of the twenties and after allowing for a sharp increase in construction costs it appears that this building is in record volume. The number of new nonfarm dwelling units started in recent months has been at an annual rate of about 800,000 . This is below the peak level of 937,000 in 1925 but much higher than the average rate of 515,000 units in 1939. Considerable numbers of such residential buildings are still in process owing to great difficulties in securing the supplies needed to complete the building started. Even if residential building activity is greatly increased beyond current levelsand contract awards in June and the first half of July showed a decline from the May peak -the total supply of housing can not be expanded much within a short period of time. On the other hand, a high rate of construction would indicate an easing of the situation after a while and current demands might prove less insistent than at present, especially if prices of houses should advance much above present high levels.

Goods for consumers. Output of most consumer durable and nondurable goods for civilian use, except automobiles and major electrical appliances, was at a sharply advanced level by the spring of this year. Since that time there have been further increases in production of clothing, textile housefurnishings, rubber, and petroleum products, and output and marketings of these products and various other nondurable goods, including foods, have been from 30 to 60 per cent above average prewar levels. Also, since the spring of this year output of consumer metal
products, except automobiles, has risen considerably above the prewar average and has reached or surpassed the previous record levels reached in 1941. In recent weeks automobile production has exceeded the average rate prevailing in 1939.

The relatively high level of output of consumer nondurable goods since last autumn together with the more recent sharp expansion in output of durable goods has resulted in a large increase in supplies of goods available in retail markets. Comprehensive data are not available to measure how large the increase was from the end of the war to the middle of this year. Some indication of the extent of the rise, however, is provided by figures on receipts of merchandise at department stores. These stores sell most major classes of consumer goods except automobiles and foods and it is possible to derive the value of their receipts of these goods from the data reported on changes in the value of sales and stocks.

Indexes based on dollar figures derived from the value of sales and stocks reported by department stores to the Federal 842

In the fourth quarter of 1945 receipts of this merchandise rose by more than the usual seasonal amount, as shown in the chart, but they failed to surpass the levels prevailing during the first half of the year. During the first quarter of this year, however, receipts were 25 per cent larger than in the fourth quarter of last year and in the same period a year ago, after allowing for seasonal changes. Receipts during the second quarter increased further, as shown in the chart, and were about 40 per cent larger than during the same period last year despite transportation difficulties, industrial disputes in some supplying industries, and some withholding by manufacturers of goods pending the settlement of price uncertainties. Higher prices account for some of the rise shown in the past year, but since the average price advance in that period was probably not more than 10 per cent, the expansion indicated in the physical quantity of goods received was also quite sizeable. Considering the advances in recent months in output of clothing, housefurnishings, and miscellaneous products, it is likely that receipts of these goods during the third quarter will show a further increase from second quarter levels.

The sharpest gains in receipts during the past year have been in those types of goods like nylon hose, radios, ranges, and refrigerators, whose production was suspended during the war. The expansion in the receipts of these products does not, however, account for much of the rise this year in the total quantity and value of goods received at department stores. Practically all classes of goods have shared in the advance in recent months.

Demands accumulated during war years are still a factor of considerable importance in the sale of various types of semi-durable and durable goods sold at department stores

Federal Reserve Bulletin
-particularly metal products. Moreover, prices of metal products have not advanced as much as for most other products so that buying has not been restricted by this development. Receipts of these products, however, are now increasing at such a sharp rate that available supplies of some products like small radios and miscellaneous housewares are beginning to exceed demand. Supplies of other consumer durable goods are still generally short of demand.

Prices of clothing, jewelry, leather products, toilet articles, textile housefurnishings, and furniture have advanced sharply since prewar days. Receipts and sales of a num-
ber of these products were maintained at relatively high levels during the war period and have shown further large gains since last autumn. The period when their supply will generally begin to exceed consumer demands is likely to come sooner than for most durable goods-especially in view of the prospects of further advances in retail prices of these products.

The severity of eventual readjustments in commodity markets, economic activity, and employment will depend upon the extent to which inflationary forces are held in check during the period before increased production relieves the pressure on prices.

## A NATIONAL SURVEY OF LIQUID ASSETS

## PROSPECTIVE SPENDING AND SAVING AND SUMMARY OF SURVEY FINDINGS.

Indications are that the use of liquid assets by individuals will exert strong inflationary pressures in consumer goods and some investment markets through 1946. The demand for consumer goods made possible by the current all-time high in consumer income, plus purchasing power obtained from the spending of liquid assets and from borrowing, will continue to exceed the supply of goods. This will be particularly true for goods supplied by industries not yet producing at top capacity. It would appear that as much as 10 to 15 billion dollars of liquid asset holdings might be used for various purposes during 1946. From 2 to 3 billion dollars of this sum might be spent to buy consumer durables and housing; another 4 to 5 billion might be used for current consumption purposes, including meeting of family deficits; and a further 3 to 6 billion, held largely by top income groups, might be shifted to investments promising higher returns, such as real estate, equity securities, and unincorporated business. In addition to expenditure from liquid asset holdings, consumers might obtain from 3.5 to 4.5 billion dollars for spending from borrowing on the instalment plan to pay for durable goods or by mortgage credit to finance the purchase of new housing. Some current savings would of course be invested in liquid assets and such savings would be an offset to spending from the use of liquid assets and from borrowing. But on balance, in markets of limited supply, it does not seem likely that saving in liquid forms during 1946 would substantially dampen the inflationary pressures originating in consumer use of liquid assets and in consumer borrowing.

These conclusions are based upon the findings of

[^0]the national liquid assets survey conducted for the Board of Governors by the Division of Program Surveys of the Bureau of Agricultural Economics. The results of this survey are being presented in a series of three articles, of which this is the third.

The first of the three articles reporting the findings of the survey of liquid asset holdings, which was published in the June Bulletin, presented some of the major results, together with a description of the survey's methods and several tests of its reliability. The second article, devoted to factors influencing liquid asset holdings and savings with particular reference to income, appeared in the July Bulletin.

The present article is concerned with factors influencing prospective spending and saving as reflected in survey interviews. It also reviews the indicated demand for consumer durable goods and housing in 1946 in relation to the characteristics of prospective buyers and the methods that consumers will use in paying for these items. Another subject covered is the possible tendency of heads of spending units to convert investment in liquid assets into investment in non-liquid assets. A special feature of this article is a brief discussion of the changes in the distribution of income and saving during the war years. The changing pattern of distribution revealed by the analysis no doubt influenced respondents' attitudes toward spending and saving. Also included is a summary of the major findings of the national survey of liquid assets and a résumé of general conclusions to which the survey's results point. Finally, a special note prepared by the staff of the Division of Program Surveys of the Bureau of Agricultural Economics discusses the reliability of the survey findings.

Interviews with a carefully selected cross-section of the population conducted in the first quarter of 1946 indicate that people expected their income payments in 1946 to be almost the same as in 1945. The majority of spending units expected prices of cost-of-living articles to rise during 1946. ${ }^{2}$ People

[^1]expected to spend more on regular living expenses in 1946 than they had in 1945. In addition to increased spending for current consumption purposes, many people expressed the intention of purchasing automobiles, other durable goods, and houses, which were not available during the war.

Although most consumers attached great importance to a continuation of saving, many people, and especially those who had saved most in the past, expected that they would reduce their saving this year. A large majority of consumers, as was shown in the first article (June Bulletin), reported that they had no intention of using their liquid assets for any purpose in 1946. People generally planned to finance the bulk of their intended purchases of consumer durable goods out of current income, either directly or by using instalment credit. While only a minority of consumers might use liquid assets to meet extraordinary or ordinary consumption needs, their spending of such assets could represent a substantial addition to consumer expenditures from income and thus supplement existing inflationary forces.

In addition to the use of liquid assets for consumption purposes, some consumers planned to convert their liquid asset holdings during 1946 into investments in real estate, securities of changing value, or private business. The consumers having these intentions were only a small minority whose most frequently declared motive was the higher return to be obtained on investment in nonliquid assets. But a significant proportion of them were holders of substantial amounts of liquid assets. The aggregate amount of such conversions, if carried out in accordance with intentions, could generate strong inflationary pressures in the markets for non-liquid assets, with further repercussions in other markets. The fact that only a small minority indicated such intentions needs special emphasis. At least two-thirds of the holders of substantial amounts of liquid assets considered Government bonds and bank deposits the safest and wisest investment.

Consumer Expectations regarding Income, Spending, and Saving in 1946

Prospective income. Estimates of prospective income made by individuals or heads of spending units covered in this survey during the first quarter of 1946 indicate that consumers generally
expected income payments this year which will approximately equal total income payments to individuals in 1945. Actually, income payments to date in 1946 point to a total for the year of roughly 160 billion dollars, or about the same total as the all-time high recorded in 1945. As is shown in Table 1, one-fourth of the people expected their incomes to be higher in 1946 than in 1945, and onefourth expected decreases in income. The average amounts of increases and decreases in income expected by these two groups were approximately equal. One-third of the spending units expected their incomes would be the same while one-sixth had no definite expectation as to what changes would occur.

About half the people expecting 1946 incomes higher or lower than 1945 apparently based their expectations upon changes in their income status that had occurred by the early part of 1946. Loss of overtime or changes to lower paying jobs were important factors indicated for decreases. Improvement in income status for those discharged from the armed forces and higher pay rates for others were the principal reasons given for expecting increases.

As is indicated by the table, people in the two lowest income groupings expected income rises more frequently than people with incomes of $\$ 2,000$ and above. Spending units in the $\$ 2,000$ to $\$ 7,500$ income range expected income decreases more frequently than those in other ranges.

Table 1
1946 Income Expectations by Income Classes ${ }^{1}$

| Income class ${ }^{1}$ | Percentage of spending units in each income class expecting: |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Income increases of 5 per cent or more | Income the same (within 5 per cent) | Income decreases of 5 per cent or more | Uncertain and not known |
| Under \$1,000 | 29 | 35 | 10 | 26 |
| \$1,000-\$1,999 | 29 | 33 | 16 | 22 |
| \$2,000-\$2,999 | 25 | 32 | 28 | 15 |
| \$3,000-\$3,999 | 20 | 34 | 35 | 11 |
| \$4,000-\$4,999 | 21 | 30 | 35 | 14 |
| \$5,000-\$7,499 | 19 | 38 | 29 | 14 |
| \$7,500 and over | 23 | 44 | 20 | 13 |
| All classes. | 25 | 34 | 23 | 18 |

${ }^{1}$ Based on 1945 money income before taxes.
Occupationally, self-employed businessmen and managerial people generally expected higher incomes in 1946 than in 1945. Professional people
tended to expect higher 1946 incomes. The whitecollar group, where almost half of the individuals made less than $\$ 2,000$ in 1945 , also tended to expect higher 1946 incomes. Skilled and semi-skilled workers, three-fourths of whom made over $\$ 2,000$ in 1945, more often thought their incomes would be lower during 1946. Unskilled and service workers were evenly divided in opinion as to a rise or drop in income.

Expected trend of prices and living expenses. In the first quarter of 1946, more than 50 per cent of the spending units expected prices to rise during the year. Forty per cent expected prices to remain the same or were uncertain about the future price trend. Reasons given for price increases reflect the widespread strikes and wage increases during the interviewing period. References to the effects of wage increases as a factor in price increases were far more frequent than any other opinion. Few people mentioned the possibility of price increases as a result of ending or relaxing price controls.

When asked about the amounts that would be spent on regular living expenses such as food, clothing, and rent during 1946 as compared to 1945-
four of every ten spending units expected to spend more,
four of every ten spending units expected to spend the same,
one of every ten spending units expected to spend less, and
one of every ten spending units was uncertain as to future spendings.
These expectations correlated closely with expectations regarding prices. In some instances people referred to other added expenses making for increased living expenses, such as more persons in the spending unit or the need for nondurable goods, particularly clothing, not bought during the war. Expected reductions in expenses, not attributed to people's price expectations, were most often occasioned by the belief that there would be smaller outlays for moving or hospitalization, or by reason of a lower income in 1946, which would necessitate less spending.
Prespective saving. ${ }^{3}$ People's plans for saving

[^2]reported in the first quarter of the year indicate that total saving may be substantially less in 1946 than in 1945. This was noted in the first article of this series published in the June Bulletin and was based on the finding that the people accounting for 90 per cent of 1945 saving expected to save less in 1946. The findings of the supple mentary analysis indicate that expectations as to saving were not entirely consistent with expectations as to spending. In general, however, the nature of the inconsistency is such as to strengthen the conclusion of the first article.
Slightly over 50 per cent of the people expected to save as much in 1946 as they had in 1945, or more. Yet according to the expectations expressed, aggregate income will remain the same as in 1945 . spending for regular living expenses will rise, and more will be spent for consumer durables and housing. It appears that predictions as to saving were inconsistent with income and spending expectations in the case of one in every four spending units. If the reported income and spending expectations are realized, then obviously less will be available for saving and saving expectations will be frustrated. As was shown in the second article, about half of the people have no plan for saving on a regular basis, but only put aside what has not been spent during the month, and those in this group particularly will probably save less than expected.
The survey findings suggest that reluctance to give up plans for purchasing durable goods and to reduce living standards as prices rise is a major factor operating to decrease current saving. The findings, however, provide no support for a conclusion that people believe that they had saved enough during the war, or that they would recklessly increase their spending in relation to income after the war. Almost three-fifths of the respondents wanted to save as much as or more than during the war and an overwhelming majority indicated that saving was as important under postwar as under wartime conditions, or more so. The major motives for saving, e.g., desire for security in case of adversity or old age, desire to provide adequately for children's education, or desire to own a home, will apparently continue to be potent influences in postwar consumer saving.

## Potential Buyers of Consumer Durable Goods In 1946

In the first article of this series (June Bulletin) it was estimated from the survey replies that about 11 per cent of all spending units would probably buy automobiles in 1946 and 28 per cent would buy other consumer durable goods. If all prospective buyers were able to purchase desired consumer durable goods in 1946, some 4.0 to 5.5 billion dollars would be spent for cars and 3.2 to 4.0 billion for other consumer durables such as refrigerators, furniture, radios, and washing machines. Assuming people could actually buy in 1946 two-thirds of the cars and other consumer durables they said they would or would probably buy, from 5.0 to 6.5 billion dollars would be spent.

Although the bulk of prospective buyers come from middle-income groups, the more income a person has the more likely he is to buy a car or other durable consumer good. This is particularly so among car buyers, as is shown in Table 2. Only 3 per cent of the spending units with less than $\$ 1,000$ of income expected to buy cars as compared to 28 per cent of those with incomes of $\$ 5,000$ or over. In the case of other consumer durable goods, potential buyers were found to include 14 per cent of the under $\$ 1,000$ income group and 38 per cent of those receiving $\$ 5,000$ or more.

${ }^{1}$ Includes those who said definitely that they would buy and those who said they probably would buy.

Characteristics of prospective buyers of cars and other durable goods in 1946 are given in Table 3. Sixty per cent of potential buyers have incomes of less than $\$ 3,000$. People who expected to buy cars or other durables held more liquid assets than nonbuyers, but over 40 per cent of prospective buyers
held less than $\$ 500$ of liquid assets. On the whole, prospective buyers of durables tended to be younger than nonbuyers. Over two-fifths of the buyers were skilled or unskilled workers, while about onethird were professional, white-collar, or business people. Potential buyers were found in small cities and rural areas as well as large cities, in numbers that are roughly proportional to the population of these places.

${ }^{1}$ Those who said they would buy and who said that they probably would buy

People who planned to buy new cars in 1946 usually expected to pay between $\$ 1,000$ and $\$ 1,350$. As is shown by the chart on page 848 , one-fourth of the new car buyers were willing to pay $\$ 1,350$ or more. The amount individual units expected to pay for durable goods other than cars varied according to the number and kind of items to be

Note.-Includes buyers who said they definitely would buy, and those who said they would probably do so. The percentages shown would add to 100 if buyers who did not know how much they would spend were included.
bought. Potential buyers of these goods most often mentioned refrigerators, furniture, radios, and washing machines as the articles which they planned to buy. About a sixth of the people expected to pay $\$ 500$ or more for goods of this kind. Almost two-thirds of the buyers, however, intended to spend less than $\$ 300$. Only one in every five car buyers wished to purchase a used car. As would be expected, used car buyers planned to spend substantially less than new car buyers. Two-fifths of the spending units planning to buy used cars intended to pay less than $\$ 500$.

The possibilities of price increases would seem to have had little dampening effect on potential consumer demand for durable goods at the beginning of the year. Most of the prospective buyers expected prices to rise during the year. Only one in five of those intending to buy cars and other durables thought that 1946 would be a good time to buy. Approximately the same expectations with regard to prices and time to buy were expressed by nonbuyers.

## Method of Payment for Consumer Durables

Consumer durable goods may be paid for either fully in cash or with part cash (including trade-in allowance) and the remainder through borrowing. Somewhat more than half the spending units who planned to buy cars and other durables expected to pay for them fully in cash, or, in the case of cars, with cash plus the trade-in value of their old car. A third of the prospective buyers planned to use the instalment plan where a cash down payment (or equivalent in trade-in value) would of course be necessary. For cars only, not more than 40 per cent of prospective buyers in 1946 planned to finance their purchase through use of the instalment plan. Prior to the war, approximately 60 per cent of all car purchases were financed through the use of instalment credit.

Two out of three of prospective buyers who had some liquid assets preferred to buy durable goods out of income, directly or else indirectly by purchase on the instalment plan. Small holders of liquid assets, generally speaking, had a stronger preference for retaining their liquid assets than large holders, perhaps because of a need for having a backlog of assets to meet emergencies. Only a minority of all savings bond holders indicated specific plans for using them to purchase durables.

Prospective buyers with large liquid asset holdings for their income very seldom expected to make use of instalment credit to purchase cars and other durable goods. As is indicated in Table 4, three-

a major part of the total expenditure. A third of the cash buyers held $\$ 2,000$ or more in liquid assets as compared to less than a tenth of those planning to use instalment credit. Over three-quarters of the instalment buyers fell within the income levels of $\$ 1,000$ and $\$ 4,000$, which normally embrace the bulk of the instalment credit market, and nearly a third were concentrated in the middle income class between these levels, i.e., between $\$ 2,000$ and $\$ 3,000$. Two-thirds of the cash buyers were in the $\$ 1,000$ to $\$ 4,000$ income range, and about a fifth had incomes from $\$ 2,000$ to $\$ 3,000$. Skilled and unskilled workers accounted for 60 per cent of the purchasers using the instalment plan and only about 35 per cent of the cash purchasers. Confirming the urban character of instalment credit use, prospective instalment credit buyers were more widespread in cities than in rural communities; farm operators buying consumer durables would pay all cash in most instances. These and other characteristics of cash and instalment plan buyers are shown in Table 5.

## Potential House Buyers in 1946

About 7 per cent of all spending units other than farm operators expected to build or buy houses during 1946 (see first article in June Bulletin). On the average, the heads of these units expected to pay about $\$ 5,000$ for their houses. Were all these units able to purchase houses during 1946, the aggregate expenditure would amount to roughly 13 to 15 billion dollars. While it is probable, on the basis of new houses that may be available, that less than a quarter of the desired purchases of new houses will be realized, it is also probable that the typical purchase price paid for new and old houses will substantially exceed $\$ 5,000$. Aggregate expenditure therefore may run considerably higher than one-quarter of the amount originally estimated as possible on the basis of consumer expectations at the outset of this year.

No more than a third of the house buyers indicated they would pay over $\$ 6,000$. Another onethird planned to spend less than $\$ 4,000$, while a fifth planned to purchase houses in the $\$ 4,000$ to $\$ 6,000$ class. About 15 per cent of the prospective house buyers were not sure how much they would spend.

In terms of liquid asset holdings and income groups, the prospective buyers of houses had characteristics very similar to those of prospective buyers
of consumer durable goods. About 60 per cent of the people expecting to buy houses had incomes of less than $\$ 3,000$, and roughly 85 per cent held some liquid assets.

As might be expected, the prospective buyers of houses seldom intended to make full payment in cash. About one-sixth of potential house buyers said they would pay all cash. Three-fourths indicated they would borrow all or part of the total purchase price. It is estimated that prospective buyers as a group expected to borrow about onehalf of the entire amount to be spent on housing.

Whereas about one-third of the potential buyers of cars and other durables who had some liquid assets expected to use them to make such purchases, nearly one-half of the prospective house buyers who owned liquid assets expected to use them to buy houses. Large holders of liquid assets in particular planned to use them for personal housing.

## Farm Demand for Machinery and Buildings

Farm operators in the survey were asked special questions to determine their plans for buying farm machinery or building or repairing farm buildings. A fifth of the farm operators had definite plans to buy farm machinery, and a similar proportion expected to repair or remodel farm buildings. Roughly one in ten planned to put up new farm buildings. Farmers expected to borrow only a very small proportion of the total cost of desired farm machinery or building repairs. Despite the substantial amounts of money farmers expected to spend for farm machinery and buildings, they planned to buy cars and other durable consumer goods as extensively as the nonfarm population.

## Prospective Transfer of Liquid Assets to Non-Liquid Investments

With 10 per cent of the spending units holding 60 per cent of the liquid assets, the decision of relatively few people to purchase non-liquid assets -real estate, securities other than Government bonds, or businesses-out of the proceeds of their liquid assets could involve large transfers of money and have substantial effects on the real estate and security markets. During the interviewing period for this survey-the first quarter of 1946-heads of spending units holding $\$ 1,000$ or more in liquid assets were questioned on their attitudes towards various types of investments and their plans for
transferring liquid assets to other investment channels.

Almost two-thirds of these substantial holders of liquid assets expressed a preference for assets with fixed value (Government bonds and bank deposits). One-sixth stated that they thought it was wiser to hold assets with changing value, particularly real estate. The remaining group did not express a clear preference as to type of asset that should be held. In general, people with highest incomes and the largest holdings of liquid assets showed the greater preference for assets of changing value. About a quarter of the spending units holding assets of $\$ 5,000$ or more preferred assets of variable value as compared to a seventh of those units holding less than $\$ 5,000$. Among spending units with incomes of $\$ 7,500$ or more about one-third preferred assets of changing value as against one-sixth of those with less income.

According to intentions expressed during JanuaryMarch 1946, a relatively small number of the people holding liquid assets of over $\$ 1,000$, motivated according to their own declarations by the higher returns on alternative investments, planned to transfer some of their Government bonds or bank deposits to securities, real estate, or business during 1946. The survey indicated that 6 per cent of these holders definitely projected a shift from assets of fixed value to assets of changing value and 7 per cent had considered such action but made no definite decision. Most of those planning to shift assets mentioned sums between $\$ 2,000$ and $\$ 5,000$. Using a rough figure of $\$ 3,000$ as the average amount that may be transferred, it is estimated that about 3 billion dollars of Government bonds and bank deposits would be invested in assets of changing value by those holders with definite plans for shifting. If all heads of units considering such transfers but with no definite plans shifted similar average amounts, the aggregate total could reach 6 billion. Obviously such a sum, in addition to the flow of new savings for investment in securities and real estate other than personal housing, could exert a significant inflationary pressure in these markets and could have important secondary inflationary effects in other markets. Many factors, of course, would influence the possible inflationary effects.
It is to be emphasized that these results and interpretations are derived from interviews made in the first quarter of the year. Conditions affecting investment decisions of liquid asset holders have
changed considerably since, and investment developments of the year may be expected to reflect these changes.

## Wartime Changes in Distribution of Income and Saving

In assessing this report on consumer expectations and plans for spending and saving, it is important to keep in mind that the current pattern of income distribution is significantly different from that before the war. Over the war period, there was a general shifting of spending units from lower to higher income groups, and a large decrease in the proportion of total saving accounted for by the highest income recipients. These broad generalizations concerning trends in income and saving patterns are shown by comparing the findings of the 1945 liquid assets survey with roughly comparable data for prewar years.

The shift of spending units from lower to higher income groups is clearly illustrated by the accompanying chart. Spending units were much more widely distributed among income classes in 1945 than in 1941 or 1935-36. Whereas about one-half of all spending units received incomes under $\$ 1,000$ in 1935-36, the proportion of spending units in this income class declined to one-third in 1941 and to one-fifth in 1945. The general movement to higher income classes is evidenced by the fact that, despite the shift of people from the lowest income class,

August 1946
the proportion of spending units in the next higher income class- $\$ 1,000 \$ 1,999-$ was almost the same in each of these three periods. The income classes receiving $\$ 2,000$ and over have shown the greatest increases in numbers of spending units. In 1945 over half the spending units had annual incomes of $\$ 2,000$ or more as compared to one-third in 1941 and one-sixth in 1935-36. A sizeable part of the increase in the number of spending units receiving over $\$ 2,000$ has occurred in the broad income class of $\$ 3,000-\$ 4,999$. Over 20 per cent of the spending units were in this class in 1945, about 10 per cent in 1941, and only 5 per cent in 1935-36.

As a result of this shift of spending units to higher income classes, significant changes have occurred in the proportion of total income received by each income class, as is indicated by Table 6. The spending units in the income classes receiving under $\$ 2,000$, which had been substantially reduced in number, accounted for a fifth of the total income received by individuals in 1945. This may be compared with a third in 1941 and a half in 1935-36. The proportion of income received by the top 15 per cent of income recipients declined from about one-half in both 1935-36 and 1941 to a third in 1945.

In interpreting these shifts between income classes, it should be realized that income refers to money income received and does not take into account price and tax changes that have occurred during the war years. The Consumer's Price Index of the Bureau of Labor Statistics shows prices in 1941 to be about 7 per cent higher than prices prevailing in 1935-36, and prices in 1945 to be roughly 30 per cent higher. Because of these substantial price rises, a spending unit which has shifted from the under $\$ 1,000$ income group to the $\$ 1,000$ to $\$ 2,000$ income group may not have materially improved its buying power or financial position. Furthermore, taxes increased substantially during the war. This increased tax burden undoubtedly affected the spending habits of some lower income groups and to an even greater extent affected total saving, particularly of the highest income brackets.

In the case of saving, the comparative data indicate that there has been a marked decline since before the war in the degree of concentration among the top income recipients. Whereas the top 15 per cent of income recipients accounted for over 100 per cent of net saving in 1935-36 (thereby offsetting substantial dissaving on the part of some other income recipients), and about 85 per cent of
net saving in 1941, the proportion of total net saving accounted for by the corresponding group in 1945 dropped to about 50 per cent. As was shown in the second article reporting the findings of the liquid assets survey (July Bulletin), however, there were still a large number of spending units that did not save or that actually dissaved in 1945; they made up one-third of all spending units in that year. Within income classes, the largest proportion of non-savers and dissavers (one-half) was in the income class under $\$ 1,000$, and the smallest (one-twentieth) in the group receiving $\$ 5,000$ and over.

No comparable data are available on prewar holdings of liquid assets. It was found that in 1945 the 15 per cent of the spending units that were the top income recipients held about half of all liquid assets. Since liquid assets represent accumulations of net saving, it is likely that these liquid asset holdings in 1945 were less concentrated in top income brackets than in prewar years, as was found in the case of saving.

## Summary of Major Findings of the Survey

1. Over three-fourths of all spending units held
some liquid assets in the form of bank deposits or United States Government securities in the first quarter of 1946. Almost two-thirds of the people held savings bonds, two-fifths held savings accounts, and one-third checking accounts. Although the bulk of liquid assets was concentrated in a relatively small proportion of all the spending units, a substantial portion of the people with moderate incomes held considerable amounts of liquid assets, while some with rather large incomes held relatively small amounts of accumulated savings in liquid form.
2. About 70 per cent of all spending units managed to put aside some savings during 1945. As with liquid assets, these savings were largely concentrated in a relatively small proportion of the spending units. The 10 per cent of the spending units that saved the largest amounts in 1945 accounted for 60 per cent of all net saving in that year. When spending units are distributed by amounts of income received in 1945 , units with incomes of $\$ 5,000$ or more a year accounted for 40 per cent of the saving and made up 8 per cent of all spending units. About half of the saving was contributed by spending units with incomes of TABLE 6
Distribution of Spending Units, Income, and Net Saving, by Income Classes, in 1935-36, 1941, and 19451

${ }^{1}$ Figures for 1935-36 and 1941 are from Spending and Saving of the Nation's Families in Wartime, Bureau of Labor Statistics Bulletin No. 723, October 1942. Table 1 of this Bulletin gives the distribution of income by income classes, and Tables 2 and 4 were used to estimate total net saving by income classes.

The 1935-36 data were originally developed in the Study of Consumer Purchases, 1935-36, made by the National Resources Committee. The material for 1941 represents a combination of the results of two surveys-one a survey of spending units in urban areas made by the Bureau of Labor Statistics, the other a survey of spending units in rural areas made by the Bureau of Home Economics, United States Department of Agriculture. For 1945, the data are taken from the national liquid assets survey.

Readers are cautioned that the findings of these three surveys are not strictly comparable. The various surveys differ somewhat in the definition of spending units, in the coverage of spending units, and in the methods used in collecting the data. The figures in this table, therefore, can not be used to measure precise changes in income and saving by income classes. However, it is believed that the data accurately show the nature of certain broad changes which accurred in the pattern of income and saving during the war years.

In the table, income refers in all cases to money income before taxes and excludes income in kind. For the most part, each survey measured net saving as the net change in assets and liabilities for the spending unit. Total net saving represented the difference between the total of positive saving and the total of negative saving. Positive saving included the increase in liquid assets plus amounts invested in housing, insurance, securities, and business, plus the net reduction in debt. Negative saving included amounts realized from the sale of assets and the amount of increase in debt. The 1945 survey did not include under changes in debt the amounts of increase or decrease in instalment sale or charge account debt. However, the net change in these two types of debt was small in 1945, amounting to an increase of 250 million dollars.

The 1935-36 income data have been adjusted by use of income tax returns for under-representation of the higher income brackets in the sample. The 1941 figures were partly adjusted for this factor, but the blown-up sample totals of income and saving do not show as close agreement with recognized income and saving aggregates for the country as do the 1935-36 data. No adjustments were made in the 1945 data; in the liquid asset survey, the spending units in the higher income brackets were purposely over-sampled during the interview period in an attempt to secure more representative data for this group. The relation of the 1945 income and saving figures to over-all aggregates is discussed in the first article (June Bulletin).

Acknowledgment is made of the assistance of Miss Janet Austrian of the Bureau of Agricultural Economics, United States Department of Agriculture, in the preparation of this table.
$\$ 1,000$ to $\$ 4,000$ a year and this group included 65 per cent of all spending units. These figures demonstrate that the relatively small savings of many consumers in the lower and middle income groups cumulate to a significant proportion of national savings in a country like the United States.
3. In addition to income, there are other factors which are responsible for the volume of current saving, and to an even greater extent for the volume of accumulated savings. People who have had more education, who live in rural communities, who are self-employed or have professional occupations, or who have regular saving programs tend to save more and to hold more liquid assets than do other people with similar income.
4. According to people's expectations for 1946, their income would not differ greatly from 1945. A substantial majority of the spending units expected prices to rise during 1946. They expected that expenditures would be much larger than in 1945 -partly because of higher prices and partly because additional amounts would be spent for durable goods. As a result, amounts saved during 1946 would be substantially lower than in 1945.
5. A measure of the demand for consumer durable goods in 1946 is roughly provided by the survey results. About 3.6 million spending units definitely planned to buy new and used cars in 1946; by adding those units who would probably buy cars, a total of 5 million prospective car buyers is obtained. Prospective buyers of other consumer durables such as refrigerators, furniture, radios, and washing machines numbered 12.6 million, with 9.9 million definitely planning to buy. Prospective house buyers numbered 3.1 million, of whom 2.6 million definitely planned to buy. Were all prospective buyers able to make their purchases during 1946 at the prices they indicated, about 5.5 billion dollars would be spent for cars, 4.0 billion for other consumer durables, and 15.5 billion for housing, a grand total of 25.0 billion. Obviously, this tremendous backlog demand for durable goods will not be filled during 1946. The estimates of dollar "totals" used in this and subsequent paragraphs are in the nature of best guesses and therefore are subject to a considerable margin of error. They are based not only on the survey results but also on certain assumptions as to the availability of new consumer durable goods and housing.
6. Assuming that people should be able to buy from new production in 1946 two-thirds of the
consumer durable goods (including cars) and onefourth of the houses they said they would or would probably buy, then between 4.8 and 6.3 billion dollars would be spent for consumer durable goods and between 3.2 and 3.9 billion for new housing. Thus the grand total of these expenditures might amount to roughly 8.0 to 10.2 billion dollars.
7. It is estimated that 4.5 to 5.7 billion dollars of total expenditures for consumer durables and new housing would be paid for in cash, of which 2.0 to 3.0 billion would be supplied from liquid assets. The remaining 3.5 to 4.5 billion would be obtained by paying on the instalment plan in the case of consumer durables and by mortgage financing in the case of houses. These estimates reflect the intentions expressed by the heads of spending units with respect to payment. For consumer durables, they planned that about one-third of the total cost would be financed by borrowing and the remainder would be paid in cash, with one-quarter of the total cost representing use of liquid assets. According to expressed intentions, about three-fifths of the total cost of houses bought would be financed by borrowing and the remainder would be on cash payment. Liquid assets would be used to meet one-quarter of the total cost or over half of the cash payment.
8. To the amount of liquid assets that may be spent on new durables and housing-2 to 3 billion dollars-must be added the dissaving that may be incurred to meet other consumption expenditures. These funds would be used for such consumption expenditures as living expenses, medical care, and vacations. Such dissavings might amount to 4 or 5 billion dollars. Therefore, the total use of liquid assets for consumption in 1946 might run as high as 6 to 8 billion dollars.
9. Roughly 3 billion dollars would be transferred during 1946 from liquid assets (Government bonds and bank accounts) to real estate, other types of securities, or businesses, by those liquid asset holders with definite plans at the first of the year to make transfers. If all heads of spending units that were undecided about transferring some of their liquid assets made similar shifts, the aggregate total transferred might reach 6 billion dollars.
10. It would appear that as much as 10 to 15 billion dollars of individual liquid asset holdings might be used for various purposes during 1946. According to intentions expressed at the beginning of this year, consumers might use roughly 2 to 3 billion dollars of liquid assets to buy consumer
durable goods and new housing, and possibly 3 to 6 billion in shifting assets to the markets which include real estate, other securities than Government, and unincorporated businesses. In addition, perhaps 4 to 5 billion dollars of liquid assets in the form of dissavings-expenditure in excess of in-come-might be used for consumption purposes other than the purchase of durable goods and housing.
11. The pattern of the distribution of income and saving changed significantly during the war years. There was a general shifting of spending units from lower to higher income classes, and a large decrease in the proportion of total saving accounted for by the individuals with highest incomes. This is revealed by comparison of the survey results with income and saving data for the years 1935-36 and 1941.

## General Conclusions

1. Current buying will be paid for primarily out of current income. Relatively small amounts of liquid assets are held by most individuals and, according to intentions expressed at the beginning of 1946, these people do not intend to use their Government bonds or bank deposits for consumption expenditures. However, the use of liquid assets by consumers who plan to use them to purchase durable goods or housing, together with the use of liquid assets by consumers to meet other consumption outlays, could amount to a sizeable fund relative to the available supplies of such goods.
2. The use of instalment credit, an indirect way of buying from current income, will be substantial during the year. Borrowings to finance the purchase of consumer durable goods and houses will greatly exceed the amounts of liquid assets people plan to use for these purchases.
3. Strong inflationary pressures will continue in the consumer goods markets. The present demand for consumer goods, largely made possible by current income plus the additional purchasing power created by the availability of borrowing and by spending of liquid assets, will continue to exceed production, particularly in those industries not yet able to operate at top capacity.
4. The demand for consumer durable goods, in addition to the increase in prices of cost-of-living articles, will result in savings far below 1945 levels and in a large reduction in the rate of liquid asset accumulation. A greatly increased proportion of consumer income is currently being allocated to
consumer expenditures at the expense of saving.
5. Transfers of liquid assets to other forms of investment could exert considerable inflationary pressure in the real estate market and the markets for securities other than Government, and have important secondary effects in other markets.
6. The sum of 10 to 15 billion dollars, the estimated volume of liquid assets that might be used for various purposes in 1946, is a significant inflationary magnitude. Some allowance must be made, however, for the non-inflationary character of consumer savings that will be invested during 1946 in liquid assets. Even when allowance is made for the offsetting effects of such savings, it would appear that the likely use of individual liquid asset holdings during this year constitutes a serious current inflationary pressure. And in assessing its full inflationary force, account must be taken of additions to consumer purchasing power through the mechanism of borrowing.
7. The liquid assets held by the majority of people can not be considered to constitute a reserve fund large enough for carrying on regular expenditures in the event of drastic changes in income. Total asset holdings of three-fourths of the people amounted to less than one-fifth of their annual income.

## Note on Reliability of the Findings ${ }^{4}$

Some readers who are not familiar with scientific sampling procedures may wonder how a nation-wide survey based upon less than 3,000 interviews can be adequate for reaching reliable conclusions as to the nature of liquid asset holdings, spending, and saving of the nation's consumers.

The size of a sample is, of course, only one of several considerations that influence the accuracy of results. Millions of cases did not prevent the Literary Digest from having a serious bias in its poll. Accurate results require the elimination of bias and this can be achieved by using area sampling (in contrast to quota sampling), stratification of the universe, overinterviewing of units the variations of which may affect the results greatly, and several other refinements of scientific sampling methods. ${ }^{5}$

[^3]The Division of Program Surveys of the United States Department of Agriculture has pioneered in developing sampling methods during the past few years. With national samples similar in size to that used for the Liquid Asset Survey, data have been collected on people's holdings, purchases, and redemptions of savings bonds. The findings of these studies concerning the total holdings of bonds were in accord with Treasury data and the findings on the concentration of bonds were in accord with the findings of the Liquid Asset Survey. Furthermore, a pilot study on liquid assets done a year ago and conducted in two localities showed a similar degree of concentration of liquid assets to that found by the national survey. ${ }^{6}$

Every sample is subject to sampling error, and the size of the error is reduced if the size of the sample is increased (although not proportionally). Within a given sample, the sampling error is larger for some items of information than for others. The sampling error is smallest for data in which the range of answers is limited (e.g., with respect to the proportion of people who plan to draw on their liquid assets next year). The sampling error is larger for figures which show certain quantitative characteristics of the population or the percentage distribution of quantitative data (e.g., the percentage of people having incomes or liquid asset holdings of a certain size), and is greatest of all when averages and total dollar amounts are derived from the sample (e.g.,the total holdings of liquid assets for

[^4]comparison with data obtained from other sources). ${ }^{7}$
Reliable estimates of the error of the survey findings on concentration of personal holdings of liquid assets can be made through a series of time consuming computations. The following rough estimates may, however, suffice to show the order of magnitude of the error.
The statement that 50 per cent of the spending units--the 50 per cent who hold the least assetsjointly own 3 per cent of the aggregate liquid assets is subject to an error of approximately 0.6 percentage points. That is, there is a very high probability that the true value lies between 2.4 per cent and 3.6 per cent. Concerning the finding that the top 20 per cent of the units jointly own an amount of liquid assets (in dollars) which represents 77 per cent of all liquid assets, the margin of error may be estimated at 8 percentage points. In other words, it is very likely that the true value of the relation lies between 69 per cent and 85 per cent, with 77 per cent being the most probable value.

In summary, it must be emphasized that sample surveys do not yield exact values which are absolutely correct. If properly conducted, they do yield reliable information on the true order of magnitude of the values. It is possible that the concentration of personal liquid asset holdings is somewhat greater, or somewhat smaller, than is indicated by the published figures, but the range of error is so small as to require no change in the practical conclusions drawn from the survey.

[^5]
## POSTWAR ECONOMIC STUDIES NO. 6

The sixth of the Board's series of eight postwar economic studies is now available for distribution. Entitled Housing, Social Security, and Public Works, it contains the following three papers: "Housing Needs and the Housing Market," by Ramsay Wood; "Economic Aspects of Social Security," by Eliot J. Swan; and "Public Works and Services in the Postwar Economy," by Walter F. Stettner.

The fifth pamphlet in the series, Postwar Capital Formation and Its Financing in Manufacturing and Mining Industries, will be ready for distribution in a few weeks. Its publication will be announced promptly in the Bulletin. Notices of release of
the last two pamphlets will appear as they become available.

Each pamphlet contains essays on related subjects by specialists on the staffs of the Board and the Federal Reserve Banks. The views expressed in the papers are entirely those of the authors, and there is no official endorsement of any of the proposals made.
Individual pamphlets may be purchased for 25 cents each, or for 15 cents each for group purchases of ten or more in single shipment. Orders should be sent to the Division of Administrative Services, Board of Governors of the Federal Reserve System, Washington 25, D. C.

## INDEX OF DEPARTMENT STORE SALES AND STOCKS, BY MAJOR DEPARTMENTS

Monthly indexes of department store sales and stocks, by major departments, have now been compiled by the Board's Division of Research and Statistics. Indexes of sales, by departments, are available on a monthly basis for the period from January 1940 to date. End of month stocks indexes, by departments, are available for October 1940, January 1941, April 1941, and monthly beginning June 1941. Figures for the new indexes of sales and stocks for department groups are shown in the accompanying tables and the movements in the indexes are shown in the accompanying chart.

The departmental indexes are computed and published in order to provide additional information on the fluctuations in department store sales and stocks of various types of merchandise. They are not intended to serve as a measure of the changes in total department store sales and stocks. For this purpose the System's comprehensive monthly indexes of total sales and stocks should be used. The latter, moreover, are adjusted for seasonal variation and, in the case of the sales index, for changes in the number of business days. These refinements have not been attempted for the departmental indexes.

Although some of the Federal Reserve Banks have gathered data on department store sales and stocks, by departments, for a number of years, the compilation of such figures on a national basis was not begun until 1941. Collection of monthly data by departments was begun in January 1941 for sales and in June 1942 for stocks. Departmental sales and stocks data are now reported regularly to the System by about 350 independent department stores located in various cities throughout the country. The sample of reporting stores has been carefully selected from the standpoint of geographical distribution, and reports are now obtained from stores in virtually every department store trading area of importance. For the most part only the larger department stores are included in the sample inasmuch as they are able to report departmental figures in greater detail than is possible for most smaller firms. In recent years this reporting group of stores has accounted for about 50 per cent of the estimated total department store sales and stocks. Not all stores report data for all of the departments shown; consequently, the sample for individual departments is not so comprehensive as that for department groups.

The indexes of sales, by departments, were computed in the following manner. Monthly sales totals, by departments, were compiled for an identical sample of 353 stores for the years 1943 and 1944. These figures were carried back to 1940 and forward to current months on the basis of the year-to-year changes shown for each month by a group of stores which varies somewhat in number from month to month. The 1941 average of monthly sales for each department, thus obtained, was used as the base in computing the sales index for that department. Indexes of stocks were derived by applying to the sales index for each month the corresponding stocks-sales ratio (the stocks-sales ratio is obtained by dividing stocks at the end of the month by sales during the month). The stocks indexes for each department, therefore, like the sales indexes, have as a base 1941 average monthly sales for that department.
Indexes of department store sales and stocks, by departments, are shown for recent months on page 921 of this Bulletin, and figures for future months will be shown regularly in the Bulletin.

INDEX OF DEPARMENT STORE SALES, BY DEPARTMENT GROUPS
1941 Average Monthly Sales $=100^{2}$

${ }^{1}$ The stocks index is derived by applying to the sales index for each month the corresponding stock-sales ratio. This, in effect, bases the stocks index on 1941 average monthly sales.
${ }_{2}$ Included in this group are departments not classified elsewhere, such as luggage, toys and games, groceries and meats
${ }^{3}$ Data available for October 1940 only.
4 Data available for only nine months in 1941. Averages are estimated.
Note.-Indexes by departments within each department group may be obtained from the Division of Research and Statistics of the Board of Governors.

[^6]
## STATEMENT BY THE MINISTER OF FINANCE ON THE APPRECIATION OF THE CANADIAN DOLLAR

Decision of the Canadian Government to appreciate the Canadian dollar to parity with the United States dollar was announced by the Minister of Finance, Mr. J. L. Ilsley, to the House of Commons at an evening session on July 5, 1946. In his address, which is printed in full below, the Minister reiterated the Government's intention to continue Canadian price control operations, including the payment of subsidies, and emphasized the value of the exchange rate shift as a method for partially protecting the Canadian economy from the inflationary effects of price increases abroad.

I wish to announce to the House several important steps which the Government is taking in the economic and financial field in order to prevent undue increases in the cost of living and costs of production, improve the effectiveness of price control, encourage a greater supply of scarce goods which we import from other countries, and generally strengthen the stabilization program and facilitate an orderly postwar adjustment of the Canadian economy while protecting it from the major effects of adverse developments outside our borders.

It is now almost six months since the Prime Minister in a public statement gave a comprehensive review of the anti-inflation policy in the light of the postwar situation. At that time it was said that essential controls would be maintained so long as emergency economic conditions arising out of or resulting from the war required special action to preserve economic stability. But it was also stated that, in order to assist the process of conversion from war to peace production and the many adjustments that had to be made to postwar conditions, a degree of flexibility would be recognized in the administration of price control, and that progress would be made in removing controls that were no longer necessary or desirable.

Early postwar developments were not unfavourable. Reconversion unemployment did not occur on the scale which some had feared, demobilization proceeded with comparative smoothness and rapidity, and the evils of both inflation and deflation were avoided. In many lines there has been a
marked increase in the supply of goods and services available to consumers, and this will be further apparent to civilian consumers in the near future as the special requirements of demobilized members of the Armed Forces are satisfied. In the case of some other goods, however, various interruptions have seriously delayed the progress of production and distribution.

When Parliament gave its approval to the National Emergency Transitional Powers Act last December, it recognized that the emergency economic conditions which prevailed at that time would continue to endanger the stability of the Canadian economy for at least another year, and that certain measures such as price controls and rationing would have to be continued. Most of us hoped that the situation which made these controls necessary would gradually improve. In recent months and weeks, however, a series of developments of increasing seriousness have combined to create a great and growing threat to our national stabilization program.
Perhaps the greatest threat to the stability of prices in Canada comes from the rise in prices in the United States and, to a lesser extent, in other countries. The present position with respect to the future of price control in the United States is confused and uncertain. Without presuming to forecast what will happen in the legislative sphere, recent developments would seem to suggest that further increases in prices in that country are likely to occur. Indeed, quite aside from recent congressional developments, the fact is that prices in the United States have been rising steadily for some time and are already at a level substantially above the Canadian level when compared with the normal or prewar position. In view of the strong commercial ties between this country and the United States. this trend has naturally exercised an increasingly strong upward pressure upon Canadian costs and prices, which we have sought to resist or neutralize as best we could. To a lesser extent, increases in prices in other countries than the United States have had the same effect. Higher prices for Canadian imports tend to push up production costs and
the cost of living in Canada, except to the extent that these increases are offset by subsidy payments, or absorbed by Canadian importers and distributors. Every increase in foreign prices for our own export products also stimulates pressures for increases in the domestic price of such commodities. It tends to divert more of these commodities to the export market, and compels us to strengthen our controls over distribution so as to retain sufficient supplies for use in Canada itself.

But while the greatest threat to the stability of prices in Canada arises outside our own borders, the situation in Canada itself is not free from difficulty. The same tendencies that are present in almost every other country today are working in Canada also to raise prices. Most of the price increases which have been authorized in Canada in recent months, and which have naturally given rise to concern on the part of the public, were the result of an accumulation of cost increases (increases in labour and material costs and the like) which have been going on for five years. Moreover, the continued shortage of materials, and shortages of labour in certain lines, are tending to raise costs of production still further and to push prices up.

Still other price increases have resulted from the necessity of encouraging the production of needed but less profitable lines of goods as against the more profitable alternatives available to the same producers. The removal or reduction of subsidy payments on certain imports and domestic products have also given rise to price increases in recent months.

On the other side of the picture, it is clear to every observer that, with employment and consumer spending power being maintained the way they have, the demand for goods has continued to rise ever since the end of the war. In this situation many goods are still relatively scarce and this, too, creates another upward pressure on prices.

The whole combination of actual and prospective price rises abroad, shortages of goods which we urgently need from abroad, and delavs in domestic production, taken in conjunction with the difficulties of providing effective administration of controls in a transitional period, undoubtedly threaten to undermine price control in Canada unless strenuous measures of defense are taken now.

Accordingly I wish to announce the Government's decision to take four major steps to implement this country's determination to maintain
order, stability and independence in its economic and financial affairs. These measures we feel will go a long way toward insulating Canada against unfavourable external conditions and easing the inflationary pressures which are now so strong.

The first of these is the issuance of a long but simple and clear list of all goods and services which continue subject to price control, a list which includes practically all articles of significance in the normal household budget and in the costs of production of farmers, fishermen and other primary producers. The result of this will be to suspend from price control a number of less important articles which create administrative trouble and red tape out of all proportion to their importance.

That list is contained in an Order of the Wartime Prices and Trade Board, of which I am tabling copies now. It tells exactly what goods are subject to price control. The next question is, how is control to be exercised? As regards domestic products the answer is that the principles of price control remain the same as heretofore, that is, maximum prices are based on prices in effect in October 1941, or on specific price ceilings or regulated prices named in orders of the Prices Board, and price increases are in general authorized by the Board only where over-all financial need is proved. As regards imported goods, however, a change is being made which constitutes the second of the major announcements which I have to make. Hereafter all imported goods of a kind subject to price control, unless specifically dealt with on another basis in orders of the Board, will be priced on the basis of the importer's landed costs, plus a prescribed maximum mark-up in each case which will be somewhat less than the mark-up normally obtained by distributors of similar domestic goods.
Thirdly, for reasons which I shall discuss at some length later on, it has been decided to adjust the rate of exchange of the Canadian dollar to parity with the United States dollar. This change is' effective immediately, that is to say, at 8:00 p.m. Eastern Daylight Saving Time. Banks and other authorized agents of the Foreign Exchange Control Board will now buy United States dollars at $\$ 1.00$ Canadian funds, and sell at $\$ 1.001 / 2$. Similarly, the buying rate for pounds sterling will now be $\$ 4.02$, and the selling rate $\$ 4.04$. I wish to draw special attention to the fact that persons accepting United States dollars from tourists should now do
so at par, that is to say, dollar for dollar, instead of at a premium.

The fourth matter which I wish to mention is that the policy of paying subsidies will remain in effect in order to prevent undue increases in prices of articles of major importance in the consumer's cost of living or in primary producers' costs of production.

Having described in brief the four main features of this program, I should like now to give the House and the people of Canada some more detailed description and explanation of the steps we are taking.

First, in order to reassure the public and industry that the Government has no intention of dismantling the system of price control so long as the emergency exists, we have prepared a definitive and detailed list of all the goods and services which will remain under price control. I am aware that the decision made several months ago to suspend certain goods and services from price control, necessary as that was, has been followed by a certain amount of public confusion and uneasiness. But it will be agreed as a general principle that, as part of our gradual progress towards decontrol, and in order to lighten the heavy burden of administration, it is desirable to remove price ceilings from items which are trivial or unimportant to most consumers or producers, and from all items which are in such ample supply that price ceilings are no longer needed to keep prices within reasonable bounds. The present measure recognizes this and has the effect of removing from control a substantial number of individual items. This measure has the further merit that, by concentrating its attention on those things which matter most, the Prices Board will be able to make more effective use of the staff at its disposal.

The list of goods and groups of goods and services still under control is very large, so large that some may feel it should be further reduced. It is intended to cover virtually all of the items which are of everyday importance in the household budget, and many more; and also all the items of chief importance in costs of production. In general, basic materials are included and almost all parts and components of consumer goods. So far as the consumer is concerned, practically all food, fuel, clothing, textiles and leather goods remain under control, as well as the significant items under the headings of kitchenware, hardware, household appli-
ances, radios, automobiles, furniture, house furnishings and building materials. The farmer or fisherman will observe that most of the goods he needs to purchase to assist him in production are also included. The control of rents, I should add, remains unchanged.

At this point I want to emphasize that no increase in the ceiling prices of domestic goods remaining under control is involved in this step. The basis of price control continues to be the prices already authorized by the Wartime Prices and Trade Board. Demands for price increases will continue to be resisted, except in cases where the financial need of the producer concerned make some upward adjustment imperative.
The second step which the Government has authorized the Prices Board to take, that relating to prices of imported goods, is one which has been forced by external circumstances over which we have no control. The new system may be briefly described as follows: an order of the Prices Board will be issued establishing maximum mark-ups over landed costs for a wide list of imported consumer goods. The mark-up will be somewhat less than normal, in order to minimize any adverse effect on consumer prices in Canada, prevent pyramiding of foreign price increases, and remove any temptation to handle imported goods rather than domestic goods if domestic goods are available in adequate quantity.

It will be recalled that, commencing in February last, the Prices Board has been permitting imports from the United Kingdom and those war-ravaged countries which were so recently our allies to enter this country on somewhat the same terms as those now extended to all countries. It is expected that as a result of this action, goods which were in danger of being excluded from Canada in the operation of our own price control policy will begin to be imported more freely as conditions of supply improve. We are taking the view that it is better to get the goods, even at a higher price, than to insist that domestic price ceilings must be maintained on imports, which in many cases makes importation impossible. In so doing we are taking a step towards decontrol and providing for an extension of a two-way system of trade without seriously endangering our price control program at large. Needless to say, this decision will also assist considerably in easing the administrative burden of the Prices Board. Applications for specific price
increases on imported goods, with the exceptions noted, will no longer be necessary. The general law applicable to such goods is simple and clear, and provides for automatic flexibility in accordance with movements of foreign prices whether up or down.

It should be noted, however, that the new system does not apply to imported foods or to imports of goods eligible for subsidy. Existing price control orders will continue to apply to such goods. There are also a number of other classes of goods such as imported motor vehicles, farm implements and household appliances, which will not be in this list because they are already controlled by specific Board orders on a somewhat similar basis, or will be so controlled upon application and investigation.

The adjustment in the exchange rate will help to offset the effect of high and rising prices in other countries. It will mean that the cost of imports will be $10 \%$ less, in Canadian-dollar terms, than would otherwise have been the case. This is important in respect of machinery, equipment and supplies, and a wide variety of consumers' goods. In fact, we may hope that in some cases there will be an actual decrease below present costs of imports. In any event, as a result of the movement of the rate, actual or prospective increases in other countries' prices of such items as coal, crude oil, gasoline, farm implements, sisal for binder twine, clothing and textiles, citrus fruits, bananas, coffee, tea, sugar, etc., will be restricted in their effect upon Canadian prices, and the task of holding a reasonable level of costs by means of subsidies on essential imports will be kept within manageable proportions.

Another benefit from this change will be that prices of goods which we normally buy from England, France and a number of other countries will now be more in line with our prices, with the result that we will receive more goods from them They will receive more Canadian dollars from their commerce with us and so be less dependent on inter-governmental loans to finance their purchases from us.
Before dealing further with the question of exchange rate, it will be convenient here to comment on the policy with respect to subsidies. The change in import price policy does not affect imports of materials basic to the cost of living which are presently being subsidized. We may find it necessary to increase these subsidy payments, notwithstanding
the Government's desire to reduce and ultimately eliminate all wartime subsidies of this character. And the same will be true of certain important domestic subsidies. It had originally been intended that the Prices Board would be able to withdraw from practically all subsidy arrangements by the end of 1946, and actually a good deal of progress has already been made in this direction. However, as I have said, the Government feels the time is not opportune for any further major removal of subsidies and, having in mind the likelihood of rising prices in foreign markets, it is possible that we may not be able to reduce our total subsidy bill for this current year to the extent that we had expected.
I come now to the question of the exchange rate. The other proposals, it might be said, are principles of policy, and make for greater administrative eff1ciency, and for greater public assurance as to what is under price control, and as to how that control is to be exercised, but they do not actually attack the inflationary pressures at their source, except perhaps through subsidies.
Undoubtedly the greatest present source of inflationary pressure lies in the high and still rising price levels of other countries. Prices in other countries directly affect the prices of our exports and imports, and ultimately, through their influence on costs, affect the prices of virtually all our goods and services. Foreign prices are translated into Canadian equivalents through the medium of the exchange rate, and the question of the appropriate rate of exchange for the Canadian dollar is a matter of major importance in its own right, as well as in relation to price control.
Our present situation is that a very marked difference has developed between the general price levels of Canada and the United States, especially if American prices are translated into Canadian funds by the addition of $10 \%$ exchange premium. The depreciation of the Canadian dollar by $10 \%$ at the beginning of the war caused an immediate increase in many of our prices as compared with the United States. In the course of time our entire price structure might have reflected, on the average, the full $10 \%$ difference in the values of our two currencies. The application of price ceilings, however, came sooner in Canada, and had a more restraining influence on price increases here than in the United States. The result was that by the end of the war our general level of wholesale prices had increased on the whole no more than theirs, despite
the $10 \%$ exchange differential. In respect of retail prices and the cost of living the disparity is even more marked, for the United States index had by May of this year increased $33 \%$ over the level of August 1939, compared with an increase of $21 \%$ in Canada.

It has become increasingly clear that we could not continue to maintain a price structure which is roughly $10 \%$ out of balance in terms of our exchange rate, or, looking at it the other way round, to maintain an exchange rate which is roughly $10 \%$ out of line with our price structure.

If world prices, or at least American prices, had declined soon after the war, or showed any likelihood now of an early decline, no doubt it would be better for us to continue without changing the rate; but instead United States prices and costs have risen, and it is most unlikely that a major decline of the general price level can occur during the transitional period when both the foreign and the domestic demand for goods is so strong.

Accordingly, when this trend became clear, we were faced with the alternative of either changing the exchange rate, or of setting in motion, as the process of decontrol continued, an increase in our own price and cost structure, more or less to the American level plus $10 \%$. What this last would mean in terms of high cost of living, social unrest, and wage conflicts, can readily be imagined. The Government has decided that such an extra measure of inflation, additional to whatever price increases may otherwise be necessary if we are ever to complete the adjustment to postwar conditions, would have the most serious disruptive effects on the entire economic and social structure of our country, and must be prevented by the only action which in the long run can prevent it.

There are a number of further points I should mention, to avoid misunderstanding. I would not want anyone to think that by this action we were conflicting with the rules of the International Monetary Fund or using up our freedom of action to make other changes at a later time if we saw fit to do so. We propose to notify the Fund that the new rate is the proper initial rate for Canada at the time the Fund commences to operate. We believe that the circumstances are such as to make this new rate acceptable to the Fund as the initial rate for the Canadian dollar. In such event we retain the same freedom as any other member to move the rate later up or down by as much as $10 \%$,
without the Fund's approval, and by other amounts in accordance with the provisions of the Fund Agreement, if circumstances should arise which made such a move on our part seem necessary and desirable.
I have emphasized, for the sake of clarity, our future freedom of action in this regard. But we do not propose-no Canadian Government would ever propose-to move the exchange rate with every passing wind. The present move is only being made after very careful study and deliberation over a considerable period. I should like to re-affirm what I said on June 17th last, when introducing in this House the Foreign Exchange Control Bill, with reference to the great advantages obtainable by maintaining exchange stability for as long a period as economic conditions may justify. To maintain that desirable degree of stability, to avoid erratic and frequent fluctuations, as well as to protect ourselves against speculative or otherwise undesirable capital movements, we must maintain the principles and the administrative machinery of foreign exchange control. The present action does not in any way change that, for exchange control is as necessary at one level of rates as at another.
The alteration of the exchange rate at this time takes on added significance in the light of very recent developments in the United States. Even before the recent difficulties over price control legislation, however, price increases in the United States and further increases in prospect as a result of cost increases, were such as to make the case for restoring parity of exchange a strong one on economic grounds. The rapid deterioration in price control in the United States in recent weeks aggravated the situation, and emphasized the need for our action on practical grounds, to cushion the immediate impact of higher United States prices. But whatever the United States may do in the future to revive the Office of Price Administration and restore price ceilings in the United States, the divergence of the price levels in our two countries had already gone too far to permit the continuation of what had become an unrealistic exchange rate.
I have spoken several times of the general level of prices, and of the fact that our price structure as a whole has been prevented, so far, from showing the effects of the $10 \%$ exchange premium. The total price level is composed of many different prices, some of which have been held far below the American level; others have, in respect of exports
at least, already fully reflected the increases in the United States and the $10 \%$ exchange premium as well. It is a fact, therefore, that some industries which export chiefly to the United States have already obtained, for their exports though not for their domestic sales, the benefit of higher American prices which, when converted to Canadian currency, yielded them an additional premium of $10 \%$ which will no longer be available.

We must recognize that the disappearance of that premium will have some unfavourable effects for a number of industries. But I think we must also recognize that the action which is being taken is clearly desirable in the interest of the country as a whole, and that therefore it will also be in the long-run interest of Canadian industry. Moreover, this action is being taken at a time when the unfavourable effects will be minimized for practically every one of our great export industries with the exception of gold mining. In the case of agricultural products, for example, export prices are now almost entirely expressed in Canadian dollars rather than in foreign currencies; the same is true of a number of other products, and to the extent that exports to certain markets are still priced in foreign currency, there is in most cases a firm and rising price level in such markets. In any event, our export industries share with our domestic industry the benefits of our stabilization policy and the lower costs of production which it makes possible.

Indeed, unless we absolutely refuse to consider the possibility of ever restoring our dollar to parity with the American dollar regardless of their intrinsic values, it would be difficult to conceive of an occasion more appropriate than the present time.

That completes what I wish to say at this time about specific measures, the strenuous measures which I said earlier the present situation calls for. I believe they are necessary, and that they are also adequate for the job we have to do until full peacetime production is restored and supply is in better balance with demand. But that job is not easy, and success will continue to depend, as we must all recognize it has always depended, upon public understanding and support. That support implies a widespread feeling of responsibility, of restraint, of moderation in individual and collective action.

When all is said and done, the objectives of our national stabilization program are the preservation of real social values, the protection of the value
of real wages, of the real incomes of primary producers, of the real value of the income of pensioners, and teachers and office workers, and of the wartime savings of so many millions of Canadians.
Demands for increases in actual money wages, if pushed to extremes, lead only to conflict and turmoil, and in the end are worthless if they result in skyrocketing prices and a corresponding fall in the value of money. It is to protect the real value of the workman's wage and the purchasing power of the housewife's dollar that we are continuing the struggle to avoid price and wage increases beyond such reasonable amounts as are seen to be justified by changed conditions.

The same is true of farm prices and costs, both the farm household's living costs and the farm operator's costs of production. The farmer above all has reason to fear a substantial increase in his costs, for one thing because he knows how rigid those costs prove to be at a time when his own prices may be depressed. The Government has endeavoured by its policy of floor prices to insure farmers against sharp declines in agricultural prices in the future. But in the meantime, and for the future as well, it will be recognized by all farmers as essential to their welfare to keep their costs of production, I do not say absolutely fixed, but within reasonable limits. For this purpose, no amount of increase in farm prices, to be followed by an inevitable decline in the usual boom and collapse cycle, could possibly provide adequate compensation. It is the preservation of a reasonable balance that we must strive for, and it is by holding in check the farmer's costs that we can do him the best service.

The war, and the experience of other countries, have indeed taught us the vital importance of keeping all inflationary pressures under firm control until supply and demand conditions are in a more normal relationship. The present Canadian program should strengthen our hands in that regard. We have removed uncertainties and simplified administration by preparing a specific list of goods and services whose prices are under control. We have re-affirmed the principles of price control, and of adjustments where necessity is proved, in respect of Canadian products. We have established a simple and workable pricing principle for imports, which among other things will ensure a continued flow of whatever goods are available
from other countries despite fluctuations in foreign prices. We will reduce the impact of increases in foreign prices of the most essential goods by continuing and if necessary increasing subsidies. Finally, we have taken a step which will reduce the
cost of imported goods, or will offset increases that would otherwise occur, through our action in moving the exchange rate to a point which more accurately reflects the true international and domestic value of the Canadian dollar.

## MONETARY AND BANKING REFORM IN PARAGUAY

The Board of Governors has ready for distribution a monograph on the structure and functioning of monetary and banking institutions in Paraguay. This monograph, prepared by Robert Triffin and entitled Monetary and Banking Reform in Paraguay, is the result of work done by members of the Board's staff in connection with the recent adoption by Paraguay of new central banking legislation. The new legislation reflects recent developments in monetary theory and techniques that have not hitherto been systematically embodied in banking legislation.

At the request of the Paraguayan Government, the Board of Governors of the Federal Reserve System made available to Paraguay the services of three members of its staff, in order to help in prepa-
ration of basic monetary, central banking, and general banking legislation. These men served, in a personal and informal capacity, as members of a broader technical group formed in Asunción, under the leadership of the Minister of Finance and the President of the Bank of the Republic of Paraguay. Legislative enactment followed promptly upon the completion of each phase of the program.
The publication includes a translation of the laws, accompanying reports, and an introduction reviewing the monetary history of the country. Copies may be purchased for $\$ 1.00$ each. Orders should be sent to the Division of Administrative Services, Board of Governors of the Federal Reserve System, Washington 25, D. C.

## FRANCO-AMERICAN AGREEMENTS OF MAY 28, 1946

Agreements on economic and financial problems, concluded between France and the United States, were signed by representatives of the two countries on May 28, 1946, and made public by the Department of State on the same date. Four agreements were signed but only the following three ${ }^{1}$ are reprinted below:

1. A joint declaration by the President of the United States and the President of the Provisional Government of the French Republic.
2. A joint declaration on commercial policy and related matters.
3. A memorandum of understanding regarding the settlement of lend-lease, reciprocal aid, surplus war property, and financial claims arising out of the conduct of the war.
Declaration Made in Washington by the President of the United States and in Paris by the President of the
Provisional Government of the French Republic on May 28, 1946
Representatives of the Government of the United States and the Provisional Government of the French Republic have met together in Washington and have discussed important economic and financial problems of common interest. These problems have included the need for foreign credits for reconstructing and modernizing the French economy, the settlement of lend-lease, reciprocal aid and other war accounts, the purchase of United States surplus property situated in France and certain French overseas territories, the purchase of ships owned by the United States, and international commercial policy.

The discussions have brought out clearly the full agreement of the two Governments on cooperation in the fulfillment of the economic objectives which both Governments recognize as essential to world peace and prosperity. The well-being of the people of all nations can be advanced through a full flow of

[^7]trade which enables each country to maintain higher levels of production and better standards of living. These benefits of world trade can be realized only as the markets of the world are opened to all countries on fair and equal terms. The two Governments are determined to work together in securing general international acceptance of the world trade proposals of the United States to be considered by a conference of the United Nations.
The reconstruction and modernization of the French economy will facilitate the integration of Europe in the world economy and enable France to resume her place as a great producing and trading nation. The French Delegation has presented a program for reconstructing and modernizing the economy of France. The immediate objective is to restore French production to the prewar level; the ultimate objective is to expand French production to higher levels commensurate with the technical progress of the past two decades. One requisite for the fulfillment of this program is an adequate and assured supply of coal, not only from increased French production, but also from imports of German coal. The United States Government will continue to assist France in securing an adequate supply of coal from Germany.
In the opinion of the American representatives, attainment of the objectives of increased production and trade presented by the French Delegation is necessary to the full and effective participation of France in the world economy. In furtherance of the efforts of the French people to this end, the United States has agreed to the extension of additional credits to France.
At the end of 1945 the Export-Import Bank made a loan of 550 million dollars to France. The Board of Directors of the Export-Import Bank have now approved a new line of credit of 650 million. This action has been taken pending the time when the International Bank for Reconstruction and Development will be in full operation.

The two Governments have reached complete agreement for the final settlement of all lend-lease and reciprocal aid, including military and civilian supplies furnished by each Government to the other. They have also agreed on the acquisition of

United States Army and Navy surplus property lo cated in France and certain French overseas territories. Under this Agreement, credits of 720 million dollars have been provided for the purchase of surplus property and for goods supplied to France since the end of the war.

Discussions are taking place for an additional credit, subject to the provisions of the Merchant Ship Sales Act of 1946, whereby France will acquire approximately 750,000 tons of merchant shipping owned by the Government of the United States.

The two Governments believe that the results of the discussions which have now been concluded will help France in reconstructing and modernizing the French economy and are a substantial step towards the achievement of the international economic cooperation which is the prerequisite of a peaceful and prosperous world. They welcome the support of all of the United Nations. in establishing a world trading and monetary system which will assure a full flow of commerce to the benefit of the peoples of all countries.

## Declaration by the Government of the United States of America and the Provisional Government of the French Republic on Commercial Policy and Related Matters

The Government of the United States and the Provisional Government of the French Republic, having concluded comprehensive discussions on commercial policy and related matters, find themselves in full agreement on the general principles which they desire to see established to achieve the liberation and expansion of international trade, which they deem to be essential to the realization of world-wide prosperity and lasting peace.
The French Government has made known to the United States Government the measures which it has taken and intends to take to make possible the attainment of this common objective. The French Government has also made known to the United States Government its plan for the reconstruction and modernization of the French economy. In accordance with the letters exchanged on November 8, 1945, the two Governments have examined this plan and have agreed that the attainment of its objectives should make possible full participation by France in the cooperative achievement of an expanding world economv.

The two Governments have studied the problems
involved in the construction of a general framework for world trade and have also examined a number of specific questions relating to commercial policy and other matters which are of interest to themselves and to other countries. The following joint statement by the two Governments summarizes the understandings reached in these discussions.

## I

The two Governments are in complete agreement, at all important points, on the principles expressed in the "Proposals for Consideration by an International Conference on Trade and Employment" submitted to the French Government by the Government of the United States. They have therefore resolved to continue discussions between themselves and with other like-minded countries in order to give effect to these principles in the Charter of the proposed International Trade Organization. The two Governments are of the opinion that the prior conclusion of agreements among the major trading nations of the world for the substantial reduction of tariffs and other barriers to trade and for the removal of discriminatory arrangements would contribute greatly to the success of the World Conference.

## II

The French Government has advised the United States Government of the following policies:
(a) A new French tariff is being prepared which will contain ad valorem duties only and which will not increase the degree of protection over the level which existed prior to the war. This new tariff will serve as the level from which reciprocal reductions will be negotiated in the forthcoming multilateral conference.
(b) France has definitely abandoned its prewar policy of protecting French producers with import quotas.
(c) The French Government has reiterated that it has abandoned the price equalization (peréquation) procedure which it was compelled to use provisionally during the period prior to the revaluation of the franc in order to facilitate exports.

## III

The French Government has made clear that it must maintain import controls within the framework of an import program but that it will main-
tain such controls only so long as they are neces sary to safeguard the equilibrium of its balance of payments and to achieve in an orderly way its plan of reconstruction and modernization. The French Government will administer the issuance of import licenses under the French import program without discrimination as among foreign sources of supply as soon as France possesses, or is able to earn, sufficient free foreign exchange so that it is no longer necessary for her to make her purchases within the limits of bilateral trade and financial arrangements.

## IV

The two Governments have reached a mutually satisfactory understanding on the return to private channels of trade between France and the United States. The French Government has already restored to private channels a large part of the import trade of France and its colonies, and will continue to curtail the foreign procurement activities of the Government.

French Government procurement in the United States will be limited to equipment for public corporations and agencies. For the time being, Government procurement will also be continued for a restricted list of items, such as short supply foodstuffs, steel, lumber, tires and certain medical supplies.

Temporarily, a part of French imports will be handled by associations of private traders (groupements), until the difficulties of loading, shipment, and transport of essential supplies and their distribution in France are overcome.

The French Supply Council in the United States will continue to operate on a reduced scale, engaging principally in the liquidation of outstanding contracts and governmental procurement as indicated above. It will limit its purchases to the satisfaction of essential civilian requirements; it will make the maximum practicable use of normal trade channels; it will pursue methods consistent with commercial practices and it will cease operations as soon as possible.

## V

The two Governments have agreed that important benefits would accrue to both countries from a substantial expansion of French exports to the United States. They have discussed certain United States laws and regulations, which, in the
opinion of the French Government, tend to hamper unduly the importation of French products into the United States. Special attention has been given to trade mark and copyright legislation, the use of geographic names related to particular products, price control of imported goods, and valuation of imported goods for the assessment of customs duties. The various agencies of the United States Government which are concerned with these matters have agreed to give careful and sympathetic consideration to the views of the French Government, and to study the possibility of altering their administrative procedures or recommending to the Congress the revision of existing legislation.

## VI

The two Governments have agreed, subject to participation in the program by other important industrial nations, each to license freely and without royalty to the nationals of the other, on conditions of reciprocity, all former German-owned patents which have come into the full possession of either Government, reserving only those rights which have already been granted with respect to such patents. The two Governments believe that the general adoption of this policy will eliminate an important barrier to international trade and will contribute substantially to the achievement of expanding world economy. In accordance with these objectives, they have agreed, at some future time, jointly to consider other questions relating to German patents.

VII
The French Government will accord to American nationals who have suffered damage to their properties in France, through causes originating in the war, compensation equal to that payable to French nationals having the same types and extent of losses. The United States Government has informed the French Government that equality of treatment is accorded to French and American nationals with reference to war damages to property in the United States.

## VIII

In order to provide a sound framework for the expansion of mutually beneficial economic relations between their two countries, the Governments of France and the United States have agreed to begin negotiations as soon as possible looking toward the conclusion of a modern and compre-
hensive Treaty of Establishment, Commerce and Navigation.

Memorandum of Understanding between The Government of The United States of America
and The Provisional Government of The
French Republic
Regarding
Settlement for Lend-Lease, Reciprocal Aid, Surplus War Property, and Claims

1. The Government of the United States of America and the Provisional Government of the French Republic have reached an understanding for the final settlement of lend-lease and reciprocal aid, and of the French obligation to the United States Government under the military supply program (Plan A); the acquisition by the French Government of certain United States Army and Navy surplus property, including installations, located in France and certain French overseas territories, and for the final settlement of other financial claims of each Government against the other arising out of the conduct of the war. In arriving at this understanding both Governments have recognized the considerations expressed in Article VII of their Preliminary Agreement of February 28,1945 , on the principles applying to mutual aid, as well as the benefits accruing to each from the contributions of both to the defeat of their common enemies. In the light of the foregoing, both Governments agree that no further benefits will be sought as consideration for lend-lease and reciprocal aid.
2. The net amount due from the French Government to the United States Government for the foregoing, including all indebtedness arising from provisions of the lend-lease and reciprocal aid agreements of February 28, 1945, is $\$ 720,000,000$, made up in part of amounts now agreed upon and in part of estimated amounts subject to revision. The latter, for which the best available figures have been used pending their final determination by agreed accounting procedures, represent in the main transfers after September 1, 1945.
3. The French Government will pay interest on the net amount due to the United States Government from July 1, 1946, at the rate of two per cent per annum. Such interest payments will be
made annually on the first day of July of each of the years 1947 to 1950 , inclusive. Beginning on July 1, 1951, interest and principal will be paid in thirty (30) equal annual instalments. Each instalment shall consist of the full amount of the interest due for the year preceding the July 1 on which the payment is made, and the remainder of the instalment shall be the principal due in that year. Nothing herein shall be construed to prevent the French Government from anticipating the payment of any of such instalments, or of any part thereof. If, by agreement of both Governments, it is determined that because of extraordinary and adverse economic conditions arising during the course of payment, the payment of any instalment would not be in the joint interest of both Governments, payment may be postponed for an agreed upon period.

To the extent that the terms of payment provided in this paragraph 3 are inconsistent with those contained in previous agreements, the provisions of this paragraph shall prevail.
4. The two Governments have agreed upon arrangements and procedures for the settlement of past and future troop pay and procurement of United States Armed Forces in France and French overseas territories.
5. As and when requested by the United States Government from time to time prior to January 1, 1950, the French Government will transfer to the United States Government real property to be mutually agreed upon and not to exceed a total dollar value of $\$ 15,000,000$. In addition, the French Government will provide, at the request of the United States Government, francs representing an aggregate dollar value not in excess of $\$ 10$, 000,000 . Any francs so transferred will be furnished at the exchange rate established in conformity with procedures of the International Monetary Fund, or if no such rate exists, at the rate used in official French Government transactions at the time of such transfer. The United States Government will use francs so transferred exclusively to acquire or improve real property for United States Government use or to carry out educational programs agreed between the two Governments.
Transfers made in accordance with this paragraph 5 will be credited first to interest then due
and then to instalments of principal in direct order of maturity.
6. The two Governments have also agreed upon the following:
(a) All claims and financial obligations between the two Governments arising out of the acquisition, operation, disposition or loss of French vessels and cargoes of such vessels while under United States control will be settled by the United States for $\$ 17,500,000$ in accordance with the provisions of an agreement relating to the purchase by France of up to 75 Liberty ships.
(b) Both Governments express their intention of entering into a maritime claims agreement, providing for the mutual waiver of intergovernmental claims arising from maritime accidents, and for the handling by each Government of claims asserted in its courts by its nationals against the other Government and based on maritime accidents occurring prior to November 1, 1945.
(c) As part of the general settlement, the French Government has agreed to process and pay all unpaid claims of French residents against the United States Government arising out of the use or infringement in war production of patent rights held by them, out of the requisitioning by the United States Government for use in the war program of any property interest owned by French residents, and out of acts or omissions prior to July 1, 1946, in France or French overseas territories of members of the United States Armed Forces or civilian personnel attached to such Forces.
(d) During the course of the negotiations both Governments have reached agreement on the disposition of certain specific claims of one Government against the other. All other financial claims of either Government against the other, except where liability has heretofore been acknowledged and the method of computation agreed, which (1) arose out of lend-lease or reciprocal aid, or (2) otherwise arose on or after September 3, 1939, and prior to September 2, 1945, out of or incidental to the conduct of the war, not otherwise dealt with in this Memorandum of Understanding, are hereby waived.
(e) Appropriate nondiscriminatory treatment will be extended by the French Government to United States nationals in the use and disposition of installations in the building of which there has
been a United States Government contribution and which are transferred under this settlement.
(f) The United States Government reserves its right of recapture of any lend-lease articles held by the French Armed Forces, except petroleum products and an agreed list of noncombat aircraft. The United States Government has indicated that it does not intend to exercise generally this right of recapture, except that vessels of the United States Navy and lend-lease merchant vessels are to be returned to the United States Government unless otherwise agreed.
(g) Disposals for military use to forces other than the French Armed Forces of lend-lease articles held on September 2, 1945, or received thereafter by the French Armed Forces, and disposals for civilian use other than in France and French overseas territories of such lend-lease articles, will be made only with the consent of the United States Government and any net proceeds will be paid to the United States Government. The French Government will not, except to a very limited extent, release for civilian use in, or export from, France and French overseas territories lend-lease articles held by the French Armed Forces.
(h) Except as otherwise provided in this Memorandum of Understanding, the French Government and the United States Government receive full title to lend-lease and reciprocal aid articles respectively held as of September 2, 1945, or transferred thereafter. If any United States surplus installation not transferred under this Memorandum of Understanding contains a lend-lease interest, such lend-lease interest is retained by the United States.
(i) The United States Government will undertake to make available to the French Government part of the United States Government's share of captured German and Japanese surface naval vessels when such vessels become excess to United States needs and are no longer needed for any task connected with the implementation of the German and Japanese surrenders.
7. The two Governments agree to conclude such specific agreements as may be necessary to implement this general understanding.
8. This Memorandum of Understanding will be effective upon signature, and instruments of ratification will be exchanged as soon as possible.

## DEVALUATION OF THE FRENCH FRANC AND GOLD TRANSFERS

In a notice published in the Journal Officiel of December 26, 1945, the Minister of Finance established the new parity of the franc at 119.10669 francs to 1 U . S. dollar and 480 francs to 1 pound sterling. Accordingly, the French Exchange Stabilization Fund has fixed new buying and selling rates for the foreign currencies which it handles. The official buying rate for the dollar is 118.9 francs and the selling rate is 119.3 francs. The previous dollar buying rate was 49.53 francs and the selling rate 49.72 francs, so that the new rates represent a devaluation of the franc of approximately 58 per cent. The same notice of the Minister of Finance also fixed the parities between the metropolitan franc and the currencies of French overseas territories, which for this purpose were divided into groups. Most of the currencies were previously at par with the metropolitan franc, while henceforward only the franc currencies of Algeria, Tunisia, Morocco, the French Antilles, and French Guiana remain at par with the metropoli$\tan$ franc.

The gold reserve of the Bank of France was revalued as a result of a convention concluded between the Bank and the Government on December 24, 1945, approved by a law of December 26, 1945, on the basis of $134,027.90$ francs per kilogram of fine gold; the previous rate of valuation, established on February 29, 1940, had been 47,605.45 francs per kilogram fine.
Before revaluation the gold reserve had amounted to 65.2 billion francs. Revaluation increased its value by 118.2 billion francs to 183.4 billion francs. Coinciding, however, with the revaluation of the gold stock, 400 tons of gold amounting to 53.6 billion francs at the new gold price were transferred to the Exchange Stabilization Fund, leaving the Bank of France with a gold reserve of 129.8 billion francs.

The gold revaluation profit of some 118 billion francs was allocated, in compliance with the convention of December 24, 1945, as follows: (1) over 53 billion francs to the Exchange Stabilization Fund representing the price of the transferred gold; (2) 40 billion francs to the cancellation of negotiable Treasury bills on the statement of the Bank of France which the Bank had received in exchange for gold transferred to the Exchange

Stabilization Fund under agreements of February 29, 1940, and September 20, $1945^{1}$; (3) 11 billion francs to the upward revision of franc balances of the central banks of Argentina, Belgium, Denmark, Sweden, Switzerland, and Czechoslovakia; (4) the remainder of 14 billion francs to the credit of the Treasury's account with the Bank of France.
A further transfer of gold from the Bank of France to the Exchange Stabilization Fund was agreed upon by a convention between the Bank of France and the State on April 11, 1946, which was approved by a law of May 9, 1946. According to the agreement the Bank of France transferred to the Fund 35 billion francs of gold, on the basis of the new gold valuation price, for which it received an equal amount of negotiable Treasury bills with a maturity of three months, to be shown in a special item among the assets of the institution. The transfer was the third since August 1945. In terms of dollars the three transfers amounted to (1) 236.4 million dollars (agreement of September 20, 1945), ${ }^{2}$ (2) 449.7 million dollars (agreement of December 24, 1945), and (3) 294.0 million dollars (agreement of April 11, 1946), making a total of 980.1 million dollars. Since the reserve of the Bank of France, before the three transfers took place, amounted to $1,776.6$ million dollars, it amounts at present to 796.5 million dollars.

The gold transferred to the Fund is being spent mainly to meet overseas obligations, especially for imports from the United States. For the same purpose the Law of December 25, 1945, authorized the Government to requisition gold, foreign exchange, and foreign securities owned by French individuals or corporations.

## Convention

[December 24, 1945]
Between the undersigned, M. René Pleven, Minister of Finance, acting on behalf of the State, on the one hand, and M. Emmanuel Monick, Governor of the Bank of France, duly authorized by decision of the general council of the Bank of France, on the other hand, under date of December 24,1945 , it has been agreed as follows:

Art. 1. The Bank of France shall proceed to revalue:

[^8](1) Its gold reserve on the basis of $134,027.90$ francs per kilogram of fine gold;
(2) Its liquid foreign exchange balances on the basis of the buying prices of the Exchange Stabilization Fund beginning December 26, 1945.

Art. 2. The increment resulting from this procedure shall be entered in an account called "Increment of Revaluation-1945", and it shall be debited according to the provisions set forth in the following article, in derogation of the provisions of article 12 of the Convention of February 29, 1940, of article 4 of the Convention of June 9, 1940, and of article 4 of the Convention of June 8, 1944.

Art. 3. To the debit of this account there shall be charged the amounts necessary to:
A. Provide for the payment, at the price of a kilogram of fine gold stated in article 1 above, for a transfer of four hundred tons of fine gold, effected by the Bank of France in favor of the Exchange Stabilization Fund;
B. Amortize on the statement of the Bank of France the negotiable Treasury bills delivered in application of the Conventions of February 29, 1940, and September 20, 1945;
C. Carry out the exchange guarantee provided for in the Franco-Argentine, Franco-Belgian, Franco-Danish, Franco-Swedish, Franco-Swiss, and Franco-Czechoslovak monetary and financial agreements.

The balance of the account "Increment of Re-valuation- 1945 " remaining after execution of the transactions provided for in the preceding paragraphs, shall be credited to the current account of the public Treasury.

Art. 4. There shall be maintained in effect the provisions applicable to:

1. The advance of 10 billion francs provided for in article 2 of the Convention of November 12, 1938; ${ }^{3}$
2. The advances provided for by the Conventions of September 29, 1938, ${ }^{4}$ February 29, 1940, June 9, 1940, and June 8, 1944.

Art. 5. The present Convention is exempt from stamp and registration taxes.
Done at Paris, December 24, 1945.
Read and approved:
Read and approved: Emmanuel Monick

## Convention

[April 11, 1946]
Between the undersigned, M. André Philip, Minister of National Economy and Finance, acting on behalf of the State, on the one hand, and M. Emmanuel Monick, Governor of the Bank of France, duly authorized by decision of the general council of the Bank of France, under date of April 11, 1946, on the other hand, it has been agreed as follows:

Art. 1. The Bank of France shall transfer to the State, for account of the Exchange Stabilization Fund, gold drawn from its reserve to an amount of 35 billion francs, on the basis of $134,027.90$ francs per kilogram of fine gold.

Art. 2. In return for the transfer provided for in article 1 of the present convention, the Bank of France shall receive negotiable Treasury bills with a maturity of three months, to the nominal amount of 35 billion francs.

It may at any time sell them or buy them in the market. The conditions under which these transactions are to take place shall be specified in an exchange of letters between the Minister of Finance and the Governor of the Bank of France in such a manner that the Bank shall neither derive a profit nor suffer a loss.
Art. 3. The Bank of France shall enter as a special item on the assets side of its balance sheet the nominal amount of negotiable bills which it shall have received in execution of article 2 of the present convention.

Art. 4. In case of retrocession of gold by the State to the Bank, the amount of negotiable bills referred to in the preceding articles shall be correspondingly reduced.

If the amount of such negotiable bills held in portfolio by the Bank is less than the amount of gold returned, a new convention shall specify the terms of the transaction.

Art. 5. The amount of negotiable bills received by the Bank in execution of the present convention shall not be included in the figure of the productive circulation serving as the basis for calculation of royalties and of stamp tax as provided by the laws and conventions in effect. ${ }^{5}$

Art. 6. The Bank shall receive, as reimbursement for expenditures incurred, a commission

[^9]Federal Reskrve Bulletin
equal to 0.20 per cent per annum of the nominal amount of the negotiable bills transferred to it. This commission shall be paid quarterly and in advance, at the time of the delivery of the negotiable bills and of their successive renewals.

Art. 7. The present convention is exempt from stamp and registration taxes.

Done at Paris, in duplicate, April 11, 1946.

## LAW DEPARTMENT

## Administrative interpretations of banking laws, new regulations issued by the Board of Governors, and other similar material.

## Regulation U <br> Bank Loan to Enable Finance Company to Make Securities Loans

An inquiry has arisen as to whether, under Regulation U, a bank may lend to a finance company to enable the latter to make loans that are secured by stocks and are for the purpose of purchasing or carrying stocks registered on a national securities exchange.

Under the present provisions of Regulation U, a loan by a bank is not subject to the regulation if it is not secured directly or indirectly by any stock. However, it would, of course, be so secured if it was collateraled by notes for which stocks are pledged.

Furthermore, the Board is of the opinion that the proposed loans to the finance company should be considered to be for the purpose of purchasing or carrying registered stocks. Hence, if they are secured directly or indirectly by any stock, they would be subject to the regulation and a bank would not be permitted to make them.

## Applicability to Bank Acting as Trustee

The question has arisen as to whether Regulation U applies to the activities of a bank when it is acting in its capacity as a trustee.

It is the opinion of the Board that Regulation $U$ is applicable in such circumstances. In addition to the fact that this conclusion is indicated by the general purposes of the regulation, it is significant that the definition of "bank" in the regulation makes special reference to institutions "exercising fiduciary powers."

## Consumer Credit

Meaning of "Principal Amount" in Section 2(e) of Regulation W
Amendment No. 20 to Regulation W, effective July 5, 1946, amended section 2(e) of the regulation by inserting the words "in a principal amount
of $\$ 1,500$ or less" after the word "credit." The term "principal amount" as introduced into the section by this amendment has the same meaning as the term "deferred balance" as used in clause (4) of section $4(\mathrm{~d})$ which is for instalment selling the counterpart of the term "principal amount lent" as used and defined in clause (1) of section $6(a)$.

## Exemption of "Add-On Sale"

With reference to Amendment No. 20 of Regulation W effective July 5, 1946, which introduced the words "in a principal amount of $\$ 1,500$ or less" into section 2(e), the following question has been presented. An obligation of $\$ 700$ evidencing a prior instalment sale is to be consolidated, in consequence of an "add-on sale" of one or more listed articles having a cash price of $\$ 900$, with an additional instalment obligation arising from that sale. If the latter sale were standing alone, the down payment required by the regulation would not permit the deferred balance arising from that sale to be as large as $\$ 800$. The Board has been asked whether, in the case presented, the deferred balance arising from the "add-on sale" may exceed $\$ 800$ with the consequence that the consolidation may amount to more than $\$ 1,500$ and thus become exempt from the regulation.
The Board answered this question in the affirmative, and stated further that the same rule would apply in case the "add-on sale" or original sale were a sale of unlisted articles or both listed and unlisted articles.

## Listed Article Installed in Connection with Repairs or Improvements

The proviso added to section 8(a) of Regulation W by Amendment No. 20 does not make inapplicable section $12(\mathrm{~b})$ of the regulation. Consequently, a credit to repair a house and in addition to install a listed article cannot exceed the cost of repairs plus an amount equal to the cost of the listed article minus the down payment required thereon

Federal Reserve Bulletin

## LAW DEPARTMENT

by the regulation, and instalments in which the credit is payable must be sufficiently large to repay the balance of the cost of the listed article within 12 months. The cost of the listed article would include installation charges if any.

## Foreign Funds Control

## Treasury Department Release

The following release relating to transactions in foreign exchange, etc., in addition to those heretofore published in the Federal Reserve Bulletin, has been issued by the Office of the Secretary of the Treasury under authority of the Executive Order of April 10, 1940, as amended, and the regulations issued pursuant thereto:

## Treasury Department

Foreign Funds Control
July 4, 1946
Public Carcular No. 30
Under Executive Order No. 8389, as Amended, Executive Order No. 9193, as Amended, Sections 3(a) and 5(b) of
the Trading with the Enemy Act, as Amendcd by the First War Powers Act, 1941, Relating to Foreign Funds Control.*

## status of korea

(1) In general. For the purposes of the Order and General Ruling No. 11:
(a) Korea shall not be deemed to be a blocked country or to be enemy territory;
(b) Nationals of Korea shall not be deemed to be nationals of a blocked country solely by reason of the fact that Korea was regarded as subject to the jurisdiction of Japan.
(2) Under General Ruling No. 11A. Paragraph (1)(c) of General Ruling No. 11A shall not be deemed to apply to a partnership, association, corporation, or other organization solely by reason of the fact that it is organized under the laws of Korea, or has had its principal place of business therein.

John W. Snyder,<br>Secretary of the Treasury

[^10]
## CURRENT EVENTS

## Death of Member of Federal Advisory Council

Mr. Robert Strickland, President, Trust Company of Georgia, Atlanta, Georgia, who had served as a Class A Director of the Federal Reserve Bank of Atlanta from February 6, 1945, to December 31, 1945, and as the member of the Federal Advisory Council representing the Sixth Federal Reserve District since January 1, 1946, died on August 8, 1946.

## Appointment of Branch Directors

The Board of Governors of the Federal Reserve System on August 2, 1946, announced the appointment of Mr. John C. Curry, Administrative Assistant to Mr. Algernon Blair, Contractor, Montgomery, Alabama, as director of the Birmingham Branch of the Federal Reserve Bank of Atlanta for the unexpired portion of the term ending December 31, 1947.

The Board of Governors of the Federal Reserve System on August 7, 1946, announced the appointment of Mr. David P. Cameron, President, The Merchants Company, Hattiesburg, Mississippi, as director of the New Orleans Branch of the Federal Reserve Bank of Atlanta for the unexpired portion of the term ending December 31, 1946.

## Resignation of Branch Director

On July 23, 1946, the Board of Governors accepted the resignation of Mr. E. F. Billington, Vice President and Secretary, Soule Steam Feed Works, Meridian, Mississippi, as a director of the New Orleans Branch of the Federal Reserve Bank of Atlanta. Mr. Billington had served the Branch as a director since December 29, 1938.

## Changes in Board's Staff

Effective August 1, 1946, the following changes were made in the Board's staff:

Leo H. Paulger, who had been Director of the Division of Examinations since January 16, 1932, was appointed Special Adviser to the Board of Governors.

Robert F. Leonard, who had been Director of the Division of Personnel Administration, was appointed Director of the Division of Examinations.

Fred A. Nelson, who had been Assistant Director of the Division of Administrative Services, was appointed Director of the Division of Personnel Administration.

Effective August 9, 1946, Gardner L. Boothe, II, who had been Assistant Administrator for War Loans, was appointed Assistant Director of the Division of Administrative Services.

Admissions of State Banks to Membership in the
Federal Reserve System
The following State banks were admitted to membership in the Federal Reserve System during the period June 16, 1946, to July 15, 1946:

Indiana
Osgood-The Ripley County Bank
Minnesota
Barnum-State Bank of Barnum
Mississippi
Tupelo-Citizens State Bank
New Mexico
Roswell-Roswell State Bank
Texas
College Station-College Station State Bank

## NATIONAL SUMMARY OF BUSINESS CONDITIIONS

[Compiled July 24, and released for publication July 26]

With settlement of major industrial disputes, output at factories and mines increased sharply in June. Retail trade was in exceptionally large volume in June and the early part of July. Prices of agricultural commodities rose sharply in the first half of July following the lapse of Federal controls, and prices of industrial commodities showed some further rise.

## Industrial Production

The Board's seasonally adjusted index of industrial production rose from 159 per cent of the 193539 average in May to 170 in June. This compares with earlier postwar highs of 168 in November and in March. Most of the increase from May to June reflected sharp advances in output of coal and of iron and steel after settlement of the coal strike.
Output of durable manufactures increased about 10 per cent in June, reflecting chiefly the recovery of iron and steel output from the sharply reduced May rate. Steel mill activity advanced from 44 per cent of capacity at the end of May to 87 per cent of capacity at the end of June and in July rose somewhat further to a rate of 89 per cent during the current week. Output of nonferrous metals and of machinery showed moderate gains in June, largely reflecting settlement of wage disputes in these industries, and production of stone, clay and glass products recovered from the low May level. Lumber production showed about the usual seasonal increase.

Output of nondurable goods as a group showed little change from May to June, with a further decline in manufactured food output offset in the total by moderate gains in most other lines. Meat production under Federal inspection dropped further in June to a rate about 80 per cent of the 1935 39 average, but rose sharply after the lapse of price controls on June 30. Output at textile mills continued to advance slightly in June and was at a level 10 per cent above a year ago. There were slight gains in activity in the paper, chemical, petroleum and rubber products industries.
Minerals output rose 23 per cent as coal and metals production showed sharp gains with the settlement of wage disputes, and crude petroleum production advanced further to a new record rate under the pressure of exceptionally large demand for petroleum products.

## Construction

Value of construction contract awards, according to the F. W. Dodge Corporation, declined in June, following a sharp rise during the past year. Residential awards were reduced by one-fourth from the record level reached in May, while those for nonresidential construction showed only slight declines.

## Employment

EMPLOYMENT IN NONAGRICULTURAL ESTABLISHMENTS

Bureau of Labor Statistics monthly estimates, adjusted for seasonal variation by Federal Reserve. "Other" group includes transportation, public utilities, finance, service and miscellaneous industries. Proprietors and domestic workers are not included in these estimates. Latest figures shown are for June.

Employment in nonagricultural establishments continued to advance in June, after allowance for seasonal changes, reflecting large increases in mining and construction and a slight gain in manufacturing. The number of persons unemployed, other than students looking for summer jobs, showed little change from May to June.

## Distribution

Department store sales in June, after allowance for seasonal changes, were the largest on record, and in the first half of July sales showed about the usual seasonal decline.
Loadings of railroad revenue freight increased sharply in June, following interruptions to shipments in April and May as a result of industrial disputes. All classes of freight shared in the rise. After a temporary decline in the week of July 4, there was a further rise and in the middle of the month coal, livestock, forest products, and less than carlead lot shipments exceeded those during the same period last year.

## Commodity Prices

Prices of farm products and foods advanced sharply during the first half of July after the lapse of Federal price controls. Subsequently prices of grains and some foods declined somewhat while prices of livestock advanced further. Prices of

Bureau of Labor Statistics' indexes. Weekly figures, latest shown are for week ending July 27.
hides, cotton goods, newsprint, lumber, lead, and zinc also increased in July.

## Bank Credit

Treasury operations in connection with retirement of maturing obligations and quarterly income tax collections dominated bank developments in June and the first half of July. Member bank reserve positions fluctuated somewhat as Treasury balances at the Reserve Banks were built up and drawn down around the security redemption dates of June 1, June 15, and July 1. Reserve positions tightened generally during the period as a whole, however, reflecting both the shift of deposits from Treasury balances to private accounts accompanying security retirement and cash redemption of about 800 million dollars of Government securities held by the Reserve Banks. Drains on bank reserves were met by purchases of about 1 billion dollars of Government securities by the Reserve System.
Holdings of Government securities at reporting banks declined further by 3 billion dollars in June and the first half of July, reflecting the sale of these securities to the Reserve Banks as well as cash redemption by the Treasury. Loans for purchasing and carrying Government securities showed further declines. Commercial and industrial loans expanded considerably at banks outside New York City and real estate and other loans continued to increase.

Wednesday figures, latest shown are for July 24.

Tables on the following pages include the principal available statistics of current significance relating to financial and business developments in the United States. The data relating to the Federal Reserve Banks and the member banks of the Federal Reserve System are derived from regular reports made to the Board; index numbers of production are compiled by the Board on the basis of material collected by other agencies; figures for gold stock, money in circulation, Treasury finance, and operations of Government credit agencies are obtained principally from statements of the Treasury, or of the agencies concerned; data on money and security markets and commodity prices and other series on business activity are obtained largely from other sources. Back figures for banking and monetary tables, together with descriptive text, may be obtained from the Board's publication, Banking and Monetary Statistics; back figures for most other tables may be obtained from earlier Bulletins.

1 See table on maximum interest and commitment rates charge able under Regulation $V$ for rates on guaranteed Section $13 b$ loans.
${ }^{2}$ Including loans made in participation with financing institutions.
${ }^{3}$ Rate charged borrower less commitment rate
Rate charged borrower.
${ }^{5}$ May charge rate charged borrower by financing institution, if lower.
${ }^{6}$ Charge of $1 / 4$ per cent is made on undisbursed portion of loan.
Back figures.-See Banking and Monetary Statistics, Table 118, pp. 446-447.

MAXIMUM RATES ON TIME DEPOSITS
Maximum rates that may be paid by member banks as established by the Board of Governors under provisions of Regulation $\mathbf{Q}$
[Per cent per annum]

|  |  | Nov.1,1933-Feb. 1, 1935- <br> Jan. 31, 1935 | Effective <br> Dec.31,1935 |
| :--- | :---: | :---: | :---: |
| Jan. 1, 1936 |  |  |  |

Note.-Maximum rates that may be paid by insured nonmember banks as established by the F. D. I. C., effective Feb. 1, 1936, are the same as those in effect for member banks. Under Regulation $Q$ the rate payable by a member bank may not in any event exceed the maximum rate payable by State banks or trust companies on like deposits under the laws of the State in which the member bank is located.

MEMBER BANK RESERVE REQUIREMENTS
[Per cent of deposits]

| Period in effect | Net demand deposits ${ }^{1}$ |  |  | Time deposits (all member banks) |
| :---: | :---: | :---: | :---: | :---: |
|  | Central reserve city banks | Reserve city banks | Country banks |  |
| June 21, 1917-Aug. 15, 1936.. | 13 | 10 | 7 | 3 |
| Aug. 16, 1936-Feb. 28, 1937.. | 1915 | 15 | 10312 | 4313 |

| May 1, 1937-Apr. 15, 1938.. | 26 | 20 | 14 | 6 |
| Apr. 16, 1938-Oct. Nov. 1, 1941-Aug. 19, 1941.. | $228 / 4$ | 173/2 | 12 14 | 6 |
| Aug. 20, 1942-Sept. 13, 1942. | 24 | 20 | 14 | 6 |
| Sept. 14, 1942-Oct. 2, 1942.. | 22 | 20 | 14 | 6 |
| Oct. 3, 1942 and after. . . . . | 20 | 20 | 14 |  |

${ }^{1}$ Demand deposits subject to reserve requirements, i. e., demand deposits other than war loan deposits. minus cash items in process of collection and demand balances due from domestic banks.

MARGIN REQUIREMENTS 1
[Per cent of market value]

| Prescribed in accordance with Securities Exchange Act of 1934 | Feb. 5, July ${ }^{4945}$. | July 5 . $\underset{1946}{ }{ }^{\text {Jan. } 20}$ | $\begin{gathered} \text { Effec- } \\ \text { tive } \\ \text { Jan. 21. } \\ 1946 \end{gathered}$ |
| :---: | :---: | :---: | :---: |
| Regulation T: <br> For extensions of credit by brokers and dealers on listed securities. | 5050 | 7575 | 100100 |
|  |  |  |  |
|  |  |  |  |
| Regulation U : For loans by banks on stocks. | 50 | 75 | 100 |

${ }^{1}$ Regulations $T$ and $U$ limit the amount of credit that may be extended on a security by prescribing a maximum loan value, which is a specified percentage of its market value at the time of the extension; the "margin requirements" shown in this table are the difference between the market value ( $100 \%$ ) and the maximum loan value.

Back figures.-See Banking and Monetary Statistics, Table 145, p. 504

1 Outside Treasury and Federal Reserve Banks. Includes any paper currency held outside the continental limits of the United States; totala for other end-of-month dates shown in table above, totals by weeks in table on $p$. 881 , and seasonally adjusted figures in table on p. 890
${ }^{2}$ Includes $\$ 1.800,000,000$ Exchange Stabilization Fund and $\$ 156.039 .431$ held as reserve against United States notes and Treasury notes of 1890; the balance resulting from reduction in weight of the gold dollar, also included, is not shown in the circulation statement beginning July 31, 1945.
i To avoid duplication, amount of silver dollars and bullion held as security against silver certificates and Treasury notes of 1890 outstanding is not included in total Treasury currency outstanding. 5 Less than $\$ 500,000$.

4 Because some of the types of money shown are held as collateral or reserves against other types, a grand total of all types has no special significance and is not shown. See note for explanation of these duplications.

Note.-There are maintained in the Treasury-(i) as a reserve for United States notes and Treasury notes of $1890-\$ 156,039,431$ in gold bullion; (ii) as security for Treasury notes of 1890 -an equal dollar amount in standard silver dollars (these notes are being canceled and retired on receipt); (iii) as security for outstanding silver certificates-silver in bullion and standard silver dollars of a monetary value equal to the face amount of such silver certificates; and (iv) as security for gold certincates-gold buHion of a value at the legal standard equal to the face amount of such gold certificates. Federal Reserve notes are obligations of the United States and a first lien on all the assets of the issuing Federal Reserve Bank. Federal Reserve notes are secured by the deposit with Federal Reserve agents of a like amount of gold certificates or of gold certificates and such discounted or purchased paper as is eligible under the terms of the Federal Reserve Act, or of direct obligations of the United States. Federal Reserve Banks must maintain a reserve in gold certificates of at least 25 per cent. including the redemption fund wi ich must be deposited with the Treasurer of the United States, against Federal Reserve notes in actual circulation; gold certificates pledged as collateral may be counted as reserves. "Gold certificates" as herein used includes credits with the Treasurer of the United States payable in gold certificates. Federal Reserve Bank notes and national bank notes are in process of retirement.

${ }^{p}$ Preliminary, $\quad r$ Revised
1 Annual figures are estimates of the United States Mint. Monthly figures are those published in table on p. 938, adjusted to exclude Philippine Islands production received in United States.
${ }^{2}$ Figures based on rate of $\$ 20.67$ a fine ounce in January 1934 and $\$ 35$ a fine ounce thereafter
Includes gold in the Inactive Account amounting to 27 million dollars on Dec. 31, 1936, and 1,228 million on Dec. 31, 1937.
${ }^{5}$ Gold held under earmark at the Federal Reserve Banks for foreign account amounted to $4,226.8$ million dollars on July 31,1946 . Gold under earmark is not included in the gold stock of the United States, NOTE.-For back figures, see Banking and Monetary Statistics, Table
156, pp. $536-538$, and for description of statistics see pp. $522-523$ in 156, pp. $536-538$, and
the same publication.

${ }^{r}$ Revised.
${ }^{1}$ National series for which bank debit figures are available beginning with 1919.
: Annual figures for 1937-1942 (old series) include 133 centers; annual figures for 1942 (new series) and subsequent figures include 193 centers.
${ }^{2}$ See p. 717 of August 1943 Bulletin for description of revision beginning with May 1942; deposits and debits of new series for first four months of 1942 partly estimated.

NOTE.-Debits to total deposit accounts, except interbank accounts, have been reported since 1942 for 334 reporting centers; the deposits from which rates of turnover have been computed have likewise been reported by most banks and have been estimated for others. Debits to demand deposit accounts, except interbank and U. S. Government, and the deposits from which rates of turnover have been computed have been reported by member banks in 101 leading cities since 1935; yearly turnover rates in this series differ slightly from those shown in Banking and Monetary Statistics. Table 55, p. 254, due to differences in method of computation.
[Figures partly estimated. In millions of dollars]

$p$ Preliminary. Includes demand deposits, other than interbank and U. S. Government, less cash items in process of collection.
2 Beginning with December 1938, includes United States Treasurer's time deposits, open account.
3 Excludes interbank time deposits and postal savings redeposited in banks.
'Beginning June 1941, the commercial bank figures exclude and mutual savings bank figures include three member mutual savings banks.
5 Includes both amounts redeposited in banks and amounts not so redeposited; excludes amounts at banks in possessions.
Note.-Except on call dates, figures are rounded to nearest 100 million dollars. See Banking and Monetary Stalistics, p. 11 , for description and Table 9, pp. 34-35, for back figures.

p Preliminary.
1 Outstanding principal, represented by certificates of deposit.
2 Includes working cash with postmasters, 5 per cent reserve fund and miscellaneous working funds with Treasurer of United States, accrued interest on bond investments, and accounts due from late postmasters.

Back figures.-See Banking and Monetary Statistics, p. 519; for description, see p. 508 in the same publication.

${ }^{1}$ Represents banks which, during the periods shown, closed temporarily or permanently on account of financial difficulties; does not include banks whose deposit liabilities were assumed by other banks at the time of closing (in some instances with the aid of Federal Deposit Insurance Corporation loans).
${ }^{2}$ Deposits of member banks and insured nonmember banks suspended are as of dates of suspension, and deposits of noninsured nonmember banks are based on the latest data available at the time the suspensions were reported.

Back figures.-See Banking and Monetary Statistics. pp. 283-292; for description, see pp. 281-282 in the same publication.

1 "Net profits" and "net income" refer to income after all charges and taxes and before dividends.
Class I line-haul railroads, covering about 95 per cent of all railroad operations.

- Class A and B electric utilities, covering about 95 per cent of all electric power operations. Figures include affiliated nonelectric operations.
${ }^{5}$ Thirty large companies, covering about 85 per cent of all telephone operations. Series excludes American Telephone and Telegraph Com-
pany, the greater part of whose income consists of dividends received on stock holdings in the 30 companies.
After all charges and taxes except Federal income and excess profits taxes.
Sources.-Interstate Commerce Commission for railroads; Federal Power Commission for electric utilities (nonelectric operations and quarterly figures prior to 1942 are partly estimated); Federal Communications Commission for telephone companies (except dividends); published reports for industrial companies and for telephone dividends. Figures for the current and preceding year subject to revision. For description of data and back figures, see pp. 214-217 of the March 1942 Bulletin.

* Average per working day.
$p$ Preliminary.
$r$ Revised.
${ }^{1}$ Department of Commerce series on value of payments to individuals.
${ }^{2}$ For indexes by groups or industries, see pp. $910-913$. For points in total index, by major groups, see p. 929.
${ }^{3}$ Based on F. W. Dodge Corporation data; for description, see p. 358 of Bulletin for July 1931 ; by groups, see p. 917 of this Bulletin.
4 The unadjusted indexes of employment and pay rolls, wholesale commodity prices, and cost of living are compiled by or based on data of Bureau of Labor Statistics. Nonagricultural employment covers employees only and excludes personnel in the armed forces.
${ }^{5}$ For indexes by Federal Reserve districts and other department store data, see pp. 919-921.
Back figures in Bulletin.-For industrial production, August 1940, pp. 825-882, September 1941, pp. 933-937, and October 1943, pp. 958-984; for factory employment, January and December 1943, pp. 14 and 1187, respectively, October 1945, p. 1055, and May 1946, p. 529; for department stores sales, June 1944, pp. 549-561.

## INDUSTRIAL PRODUCTION, BY INDUSTRIES

(Adjusted for Seasonal Variation)
Index numbers of the Board of Governors. 1935-39 average $=100$ ]

Revised. Preliminary.
Series included in total and group indexes but not available for publication separately.
Note.-Series on petroleum refining, usually published in this table, is in process of revision. For description and back figures see Bulletin for October 1943, pp. 940-984, September 1941, pp. 878-881 and 933-937, and August 1940, pp. 753-771 and 825-882.

r Revised.

- Preliminary.

Series included in total and group indexes but not available for publication separately.
Note.- Series on petroleum refining, usually published in this table, is in process of revision. For description and back figures, see Bulletin for October 1943, pp. 940-984, September 1941, pp. 878-881 and 933-937, and August 1940, pp. 753-771 and 825-882.

${ }^{r}$ Revised. Note.-Indexes for major groups and totals have been adjusted to final 1944 data made available by the Bureau of Employment Security of the Federal Security Agency. Back data and data for industries not here shown are obtainable from the Bureau of Labor Statistics. Underlying figures are for pay roll period ending nearest middle of month and cover production workers only. Figures for June 1946 are preliminary.

${ }^{1}$ The 1941 average of monthly sales for each department is used as a base in computing the sales index for that department. The stocks index is derived by applying to the sales index for each month the corresponding stock-sales ratio. For description and monthly indexes of sales and stocks by department groups for back years, see pp. 856-858.
 of months supply on hand at the end of the month in terms of sales for that month.

3 For movements of total department store sales and stocks see the indexes for the United States on p. 919.

|  |  |  |  |  |  |  |  |  |  |  |  |

3 Preliminary.
${ }^{1}$ Pxcludes banks (shown in last column) that do not report to State banking departments, principally as follows on the latest date: 11 "cooperative" banks in Arkansas and 100 unincorporated (private) banks in Georgia, Iowa, Michigan, and Texas.
${ }^{2}$ The State member bank figures and the insured mutual savings bank figures both include three member mutual savings banks. These banke are not included in the total for "Commercial banks" and are included only once in "All reporting banks."

Includes all branches and other additional offices at which deposits are received, checks paid, or money lent. Includes offices at military reservations, consisting mostly of "banking facilities" provided through arrangements made by the Treasury Department with banks designated as depositaries and financial agents of the Government; the number of such offices on the above dates was $40,233,308,241$, and 111, respectively.

Note.-Prior to February 1946, statistics on number of banking offices were published quarterly. For back figures, see Banking and. Monelary Stalistics, Tables 1 and 14, pp. 16-17 and 52-53, and descriptive text, pp. 13-14.

${ }^{1}$ Banks with no time deposits, or no trust department earnings, as the case may be, were excluded in computing this average
2 The ratios for 64 member banks in operation at the end of 1945 were excluded from the compilations because of unavailability of data covering the complete year's operations, certain accounting adjustments, lack of comparability, etc.

Note. - These ratios, being arithmetic averages of the operating ratios of individual member banks, differ in many cases from corresponding ratios computed from aggregate dollar amounts shown in the June 1946 issue of the Bulcetin. Such differences result from the fact that each bank's figures have an equal weight in calculation of the averages whereas the figures of the many small and medium-sized banks have but little infuence on the aggregate dollar amounts.

Figures of earnings, expenses, etc., used in the calculations were taken from the annual earnings and dividends reports for 1945. Balance sheet figures used in the compilations, were obtained by averaging the amounts shown in each bank''s official condition reports submitted for Dee. 30, 1944, and June 30 and Dec. 31,1945 , except for a limited number of banks for which all three reports were not available; such reports as were available were used in those instances. Savings deposits are included in the time deposit figures used in these tables. Banks with no time deposits ( 385 in number) are included with the banks having ratios of time to total deposits of less than 25 per cent.

Tables on the following pages include the principal available statistics of current significance relating to gold, international capital transactions of the United States, and financial developments abroad. The data are compiled for the most part from regularly published sources such as central and commercial bank statements and official statistical bulletins, some data are reported to the Board directly. Figures on international capital transactions of the United States are collected by the Federal Reserve Banks from banks, bankers, brokers, and dealers in the United States in accordance with the Treasury Regulation of November 12, 1934. Back figures for all except price tables, together with descriptive text, may be obtained from the Board's publication, Banking and Monetary Statistics.

Include, in addition to gold of the Central Bank held at home, gold of the Central Bank held broad and gold belonging to the Argentine Stabilization Fund.
${ }^{2}$ On May 1, 1940, gold belonging to Bank of Canada transferred to Foreign Exchange Control Board. Gold reported since that time is gold held by Minister of Finance.

Figure for December 1938 is that officially reported on Apr. 30, 1938
4 Figures relate to last official report dates for the respective countries, as follows: JavaJan. 31, 1942; Norway-Mar. 30, 1940; Poland-July 31, 1939; Yugoslavia-Feb. 28, 1941.
${ }^{6}$ Figure for February 1941; beginning Mar. 29, 1941, gold reserves no longer reported sepaately.
${ }_{6}$ These countries are: Albania, Algeria, Australia, Austria through Mar. 7, 1938, Belgian Congo, Bolivia, Bulgaria, China, Costa Rica beginning July 1943, Danzig through Aug. 31, 939, Ecuador, El Salvador, Estonia, Finland, Guatemala, Iceland, Ireland beginning February 1943. Latvia, Lithuania, Morocco, and Siam. Figures for certain of these countries have been carried forward from last previous official report.
7 Gold holdings of Bank of England reduced to nominal amount by gold transfers to British Exchange Equalization Account during 1939.
\& In addition to gold held by the Swiss National Bank, the Swiss National Bank's Annual Report for 1945 stated that the Swiss Government owned gold amounting to 238 million dollars on Dec. 31, 1945.

Note.-For back figures, see Banking and Monetary Stalistics, Tables 156-160, pp. 536-555, and for a description of figures, including details regarding specialinternal gold transfers affecting the reported data, see pp. 524-535 in the same publication.
${ }^{1}$ Reported at infrequent intervals or on delayed basis: U.S.-Exchange Stabilization Fund (Special A/c No. 1); U. K.-Exchange Equalization Account; France-Exchange Stabilization Fund and Rentes Fund; Belgium-Treasury.
${ }^{2}$ Figure for end of September.
${ }^{3}$ Reported figure for total British gold reserves on Aug. 31, 1939, less reported holdings of Bank of England on that date.

Note.-For avaitable back figures and for de tails regarding special internal gold transfert affecting the British and French institutions, see Banking and Monetary Slatistics, p. 526, and Bulletin for February 1945, p. 190.

Gold production in U.S.S. R.: No regular Government statistics on gold production in U.S.S. R. are available, but data of percentage changes irregularly given out by officials of the gold mining industry, together with certain direct figures for past years, afford a basis for estimating annual production as follows: 1934, 135 million dollars; 1935, 158 million; 1936,187 million; 1937, 185 million; 1938, 180 million.

Preliminary. $\quad$ Revised.
${ }^{1}$ Annual figures through 1940 are estimates of U. S. Mint; annual figure for 1941 based on monthly estimates of American Bureau of Metal Statistics
${ }^{2}$ Beginning April 1941, figures are those reported by American Bureau of Metal Statistics. Beginning January 1944, they represent Gold Coast only.
${ }^{2}$ Beginning May 1940, monthly figures no longer reported.
Includes Philippine Islands production received in United States. Annual figures are estimates of United States Mint. Monthly figures through January 1946 represent estimates of American Bureau of Metal Statistics, those for 1945 having been revised by subtracting from each monthly figure $\$ 197,193$ so that aggregate for year is equal to a mnual estimate compiled by Bureau of the Mint. Beginning February 1946, figures are estimated on basis of mine production reported by Bureau of Mines.

- Figures for Canada beginning 1945 are subject to official revision.
- Beginning April 1942, monthly figures no longer reported.

Gold exports. reported by the Banco Nacional de Nicaragua, which states that they represent approximately 90 per cent of total production. ${ }^{2}$ Beginning December 1941, figures are those reported by American Bureau of Metal Statistics. For the period December 1941-December 1943 they represent total Australia; beginning January 1944, Western Australia only.

- Beginning May 1940, figures are those reported by American Bureau of Metal Statistics.

Note -For explanation of table and sources, see Bulletin for February 1939, p. 151; July 1938, p. 621; June 1938, p. 540; April 1933, pp. 233-235; and Banking and Monetary Statistics, p. 524 . For annual estimates compited by the United States Mint for these and other countriea in the period 1910-1941, see Banking and Monetary Statistics, pp. 542-543.

$r$ Revised.
${ }^{1}$ This category made up as follows: through Sept. 21, 1938, nds held by foreign central banks at the Federal Reserve Bank of New York and Philippine accounts held with the United States Treasury; beginning Sept. 28, 1938, also funds held at commercial banks in New York City by central banks maintaining accounts at the Federal Reserve Bank of New York; beginning July 17, 1940, also funds in accounts at the Federa Reserve Bank of New York which had been transferred from central bank to government names; beginning with the new series commencing with the month of July 1942, all funds held with banks and bankers in the Unjted States by foreign central banks and by foreign central governments and their agencies (including official purchasing missions, trade and shipping missions, diplomatic and consular establishments, etc.).
${ }_{2}$ The weekly series of capital movement statistics reported through July 1, 1942, was replaced by a monthly series commencing with $\mathrm{J} u \mathrm{ly} 1942$. Since the old series overlapped the new by one day, the cumulative figures were adjusted to represent the movement through June 30 only. This adjustment, however, is incomplete since it takes into account only certain significant movements known to have occurred on July 1 . Subseouent Gures are based upon new monthly series. For further explanation, see Bulletin for January 1943, p. 98
${ }^{3}$ Amounts outstanding Mar. 31, in millions of dollars; total foreign banking funds in United States, $6,812.3$, including official funds, $4,069.9$, and other funds, 2,742.4; United States banking funds abroad, 431.9; and brokerage balances (net due "foreigners"), 63,0 .

Note.-Statistics reported by banks, bankers, brokers, and dealers. For full description of statistics see Banking and Monetary Stotistics, pp. 558-560; for back figures through 1941 see Tables 161 and 162 , pp. 574-637, in the same publication, and for those subsequent to 1941 see Bulletin for September 1945, pp. $960-974$.

'Prior to June 30, 1942. included under "Other Asia."
${ }^{2}$ Country breakdown not available until June 30, 1942.

Footnotes to table on p. 942.
1 Prior to Jan. 3, 1940, the figures under Asia represent Far East only, the remaining Asiatic countries being included under "All other.
${ }^{2}$ Prior to June 30, 1942, included under "All other.
${ }^{3}$ Prior to June 30. 1942 , included under "Other Latin America."
Included "Canal Zone brior to June 30, 1942.
Note.-Certain of the figures are not strictly comparable with the corresponding figures for preceding months owing to changes in reporting practice of various banks. The cumulative figures in Tables 1, 2, and 3 of "Net Capital Movement to the United States" have been adjusted to exclude the unreal movements introduced by these changes. For further explanation see Banking and Monetary Siatisiics, pp. 578-584, and Bulle
in for September 1945, pp. $967-970$.

## INTERNATIONAL CAPITAL TRANSACTIONS OF THE UNITED STATES-_Continued SHORT-TERM FOREIGN LIABILITIES AND ASSETS REPORTED BY BANKS IN THE UNITED STATES, BY COUNTRIES-Continued <br> [In millions of dollars]

ASSETS-SUPPLEMENTARY DATA

[^35]CENTRAL BANKS

${ }^{1}$ Through February 1939, valued at legal parity of 85 shillings a fine ounce; thereafter at market price, which fluctuated until Sept. 6, 1939, when it was officially set at 168 shillings per fine ounce; the latter rate remained in effect until June 9, 1945, when it was raised to 172 shillings and three pence.
? Securities and silver coin held as cover for fiduciary issue, the amount of which is also shown by this figure.
${ }^{2}$ Notes issued less amounts held in banking department. legal parity) transferred from Bank to Exchange Equalization Account; on Mar. 1 1939, about 5.5 million pounds (at current price) transferred from Exchange Account to Bank; on July 12, 1939, 20 million pounds transferred from Exchange Account to Bank; on Sept. 6, 1939, 279 milion pounds transferred from Bank to Exchange Account.

- Fiduciary issue increased by 50 million pounds on June 12, 1940, Apr. 30, Aug. 30, and Dec. 3, 1941, and Apr. 22 and July 28, 1942; by 70 million pounds on Dec. 2, 1942; and by 50 million pounds on Apr. 13, Oct. 6, and Dec. 8, 1943, Mar. 7, Aug. 2, and Dec. 6, 1944, and on May 8, July 3, and Dec. 10, 1945.

6 Securities maturing in two years or less.
${ }^{7}$ Includes notes held by the chartered banks, which constitute an important part of their reserves.
${ }^{8}$ Beginning November 1944, includes a certain amount of sterling and United States dollars.

- On May 1, 1940 , gold transferred to Foreign Exchange Control Board in return for short-term Government securities (see Bulletin for July 1940. pp. 677-678).

Note.-For back figures on Bank of England and Bank of Canada, see Bankine and Monetary Statistics, Tables 164 and 166, pp 638-640 and pp. 644-645, respectively; for description of statistics see pp. $560-564$ in same publication.

${ }^{1}$ Gold revalued on Dec. 26, 1945, on basis of $134,027.90$ francs per fine kilogram. For details on previous devaluations see Bulletin for May 1940, pp. 406-407; January 1939, p. 29; September 1937, p. 853; and November 1936, pp. 878-880.

2 For explanation of this item, see Bulletin for July 1940, p. 732.
${ }^{8}$ By a series of Conventions between the Bank of France and the Treasury, dated from Aug. 25, 1940, through July 20, 1944, advances of 441,000 million francs were authorized to meet the costs of the German army of occupation.

4 Central Administration of the Reichskreditkassen.

- In each of the weeks ending Apr. 20 and Aug, 3, 1939, 5,000 million francs of gold transferred from Exchange Stabilization Fund to Bank of France; in week ending Mar. 7, 1940, 30,000 million, in week ending Oct. 11, 1945, 10,000 million, in week ending Dec. 27, 1945, 53,000, and in week ending May 2, 1946, 35,000 million francs of gold transferred from Bank of France to Stabilization Fund.
- Includes 9,447 million francs charged to the State to reimburse the Bank for the gold turned over by it to the National Bank of Belgium on Dec. 22, 1944.
${ }^{7}$ Forty billion francs of gold increment resulting from revaluation used to cancel an equal amount of Treasury bonds.
- Gold not shown separately in weekly Reichsbank statement after June 15, 1939.

Norg.-For back figures on Bank of France and Reichsbank, see Banking and Monetary Statistics, Tables 165 and 167, pp. $641-643$ and pp. 645-647, respectively; for description of statistics see pp. 562-565 in same publication.

1 Beginning Aug. 27, 1945, figures published in the balance sheet of the Commonwealth Bank cover central banking operations only, while previonsly these statements included the operations of the General Banking Divisinn

2 Gold revalued under authorization of decree of May 1, 1944; provisional rate fixed at 49.318 francs per gram.
Includes increment resulting from gold revaluation, notes forfeited to the State, and frozen old notes and current accounts.
4 Effective Jan. 1, 1946, a change in the Organic Law of the Banco Central de Bolivia divided the institution into Monetary (central banking functions) and Commercial Banking Departments
${ }^{3}$ Latest month available.
6 For last available report from the central bank of Bulgaria (January 1943), see Bulletin for July 1943, p. 697 ; of Finland (August 1943), see Bulletin for Apri] 1944, p. 405; of Greece (March 1941) and Japan (September 1941), see Bulletin for March 1942, p. 281; of Hungary (November 1944), see Bulletin for January 1946, p. 99; and of Java (January 1942), see Bulletin for March 1943 , p. 278.

3 First statement available since liberation is that for July 31 . Until May 1945 , known as the National Bank of Bohemia and Moravia
${ }^{5}$ In December 1945, State-guaranteed German assets, formerly included in "Clearing accounts" and "Other assets." were transferred to Government compensation account.

- Issue and banking departments consolidated.

CENTRAL BANKS-Continued

${ }_{2}^{1}$ Includes gold, silver, and foreign exchange forming required reserve ( 25 per cent) against notes and other demand liabilities.
${ }_{3}^{2}$ Gold revalued in July 1945 from 2,098 to 2,970 guilders per fine kilogram.
${ }^{3}$ Notes issued before October 1945 were gradually withdrawn from circulation and deposited in "blocked" accounts in accordance with the currency reform decrees effected between June and October 1945.

For last available reports from the central banks of Norway (March 1940) and Yugoslavia (February 1941), see Bulletin for March 1942, p. 282; and of Rumania (June 1944), see Bulletin for March 1945, p. 286.

5 The Bank of the Republic of Paraguay was reorganized in September 1944 under the name of Bank of Paraguay. The new institution is divided into a Monetary, a Banking, and a Mortgage Department. The first official balance sheet of the Monetary Department, which assumes central banking functions, was issued for the end of December 1944.

- Latest month available.
: Beginning July 1945, end-of-month statements have been available. $\quad$ Includes small amount of non-Government bon
${ }^{10}$ Issue and banking departments consolidated.
in Beginning October 1944, a certain amount of gold, formerly reported in the Bank's account, shown separatelv for account of the Government.
${ }^{12}$ See Bulletin for December 1936, p. 1025.

p Preliminary. r Revised.
${ }^{1}$ Figures represent calculated prices of a 4 per cent 20 -year bond offering a yield equal to the monthly average yield for- 15 high-grade corporate bonds. Source.-Standard and Poor's Corporation; for compilations of back figures on prices of both bonds and common stocks in the nited States see Banking and Monetary Statistics, Table 130, p. 475, and Table 133, p. 479.
${ }^{2}$ Published by the Ministry of National Economy with new base of $1938=100$. Figures are for the last Friday of each month. The number of bonds included in the new index was increased to 50 (formerly 36). The index for stocks was based on 300 issues until Dec. 6, 1945, and on 295 thereafter as a result of the nationalization of five banks. For complete information on the composition of the bond and stock indexes see "Bulletin de la Statistique Générale"' December 1942, pp. 511-513, and July-August 1942, pp. 364-371, respectively. For back figures for both indexes drom 1938 through 1941 on a monthly basis see "Bulletin de la Statistique Génerale" for October-December 1944, pp. 274-276.
fom 1938 through 1941 on a monthy basis see Bulletin de a 1 , 1935 , the 139 bonds included in the calculation of the average price have all borne interest at $41 / 2$ per cent. The series prior to that date is not comparable to the present series, principally because the 169 bonds then included in the calculation bore interest at 6 per cent. 4 Indexes of reciprocals of average yields. For old index, 1929-1936, 1929 = 100; average yield in base year was 4.57 per cent. For new index beginning January 1937, Jan.-Mar. $1937=100$; average yield in base period was 3.39 per cent
${ }_{5}$ This number, originally 329, has declined as the number of securities eligible for the index has diminished. In May 1941 it was down to 287. ${ }_{8}$ Average based on figures for 5 months; no data available June-Dec. ${ }^{2}$ Average based on figures for 7 months; no data available May-Sept. ${ }^{8}$ Average based on figures for 9 months; no data available May-July. 'A Average based on figures for 10 months; no data available Jan.-Feb

[^36]FEDERAL RESERVE SYSTEM

[^0]:    ${ }^{1}$ This is the third of three articles covering the national liquid assets survey. Prepared by Duncan McC. Holthausen of the Board's Division of Research and Statistics, it presents the findings in part three of the report of the Division of Program Surveys and summarizes the results of all three reports. Those wanting fuller information may obtain the full report (parts one, two, and three) by applying to the Division of Program one, two, and three Aby applying to the of Agriculture. Mr. George Katona and Mrs. Eleanor Maccoby of the Division of Program Surveys were primarily responsible of the Division of Program surveys were primary fillact of the studies and Mr. Henry H . Villard, forfor the conduct of the studies and Mr. Henry H. Villard, forthem throughout the planning and execution of the investigations.

[^1]:    ${ }^{2}$ A "spending unit" is defined as all persons living in the same dwelling unit and belonging to the same family who pool their income to meet their major expenses.

[^2]:    ${ }^{3}$ The survey measured savings by adding to the change in liquid assets (excluding currency) the amount used to purchase other assets (including housing and insurance) and to repro loans, and then subtracting the amount derived from the sale of such assets or the increase in loans.

[^3]:    ${ }^{4}$ Prepared by the staff of the Division of Program Surveys Bureau of Agricultural Economics, United States Department of Agriculture.
    ${ }^{5}$ A brief description of the methods in the Survey is given in the first article in this series, published in the Federal Reserve Bulletin, June 1946. A fuller description is contained in part one of the report on the Survey issued by the Division of Program Surveys.

[^4]:    ${ }^{6}$ Cf. Federal Reserve Buldetin, September 1945.

[^5]:    ${ }^{7}$ Cf. the last section in the article of the Federal Reserve Bulletin of June 1946.

[^6]:    ${ }^{1}$ The 1941 average of monthly sales for each department is used as a base in computing the sales index for the department.
    2 Included in this group are departments not classified elsewhere, such as luggage, toys and games, groceries and meats.
    ${ }^{3}$ Data not available.
    Nore.-Indexes by departments within each department group may be obtained from the Division of Research and Statistics of the Board of Governors.

[^7]:    1 The fourth agreement refers to the exhibition of American motion pictures in France.

[^8]:    ${ }^{1}$ See Bulletins for May 1940, pp. 406-407, and for January 1946. p. 33, respectively.
    ${ }^{2}$ See Bulletin for January 1946, p. 33.

[^9]:    s See Statutes of the Bank of France (1940), art. 166.

[^10]:    ${ }^{*}$ Sec. 3(a), 40 Stat. 412 ; Sec. 5(b), 40 Stat. 415 and 966; Sec. 2, 48 Stat. 1; 54 Stat. 179; 55 Stat. 838; Ex. Order 8389 , April 10,1940 as amended by Ex. Order 8785. June 14, 1941, Ex. Order 8832, July 26, 1941, Ex. Order 8963, Dec. 9, 1941, 1942, as amended by Ex. Order 9567, June 8, 1945; Regulations. April 10. 1940. as amended June 14, 1941, July 26, 1941, and February 19, 1946 .

[^11]:    Guarantee fee is charged only on guaranteed portion of loan.
    Based on average daily unused balance of the maximum principal amount of the loan. The financing institution may, in the alternative, charge a flat fee of not to exceed $\$ 50$, without regard to the

[^12]:    Includes any banks in outlying sections of reserve cities that have been given permission to carry the same reserves as country banks. All reserve cities have a population of more than 15,000 .
    ${ }^{2}$ Includes war loan deposits, shown separately for all country. banks in the table on the following page.

[^13]:    ${ }^{1}$ Averages of daily closing figures for reserves and borrowings and of daily opening figures for other columns, inasmuch as reserves required are based on deposits at opening of business.
    ${ }^{2}$ Figures include Series E bond deposit accounts, but do not include certain other demand deposits of the U. S. Government with member banks and, therefore, differ from figures for U. S. Government deposits shown in other published banking data. See also footnote 3.
    "Preceding column minus (a) so-called "float" (total cash items in process of collection) and (b) U.S. Government demand deposits (other
    than war loan and Series $E$ bond accounts) on the latest available call report date.
    Demand deposits subject to reserve requirements, i. e., demand deposits other than war loan deposits, minus cash items in process of collection and demand balances due from domestic banks.

    Includes some interbank and U. S. Government time deposits; the amounts on call report dates are shown in the Member Bank Call Report.

[^14]:    ${ }^{*}$ Total of amounts of coin and paper currency shown by denominations less unassorted currency in Treasury and Federal Reserve Banks.
    I Includes unassorted currency held in Treasury and Federal Reserve Banks and currency of unknown denominations reported by the Treasury as destroyed. $\quad$ Paper currency only: $\$ 1$ silver coins reported under coin.

    Back figures.-See Banking and Monetary Slatistics, Table 112, pp. 415-416.

[^15]:    * These figures do not include data for banks in possessions of the United States and therefore differ from those published by the Comptroller of the Currency and the Federal Deposit Insurance Corporation for national banks and insured banks, respectively. 1 Beginning June 30, 1942, excludes reciprocal bank balances, which on Dec. 31, 1942, aggregated 513 million dollars at all member banks and 525 million at all insured commercial banks.

    I During 1941 three mutual savings banks, with total deposits of 8 million dollars, became members of the Federal Reserve System. These banks are included in both "member banks" and "insured mutual savings banks," are not included in "commercial banks," and are included only once in "all banks."

    Decreases in "noninsured nonmember commercial banks" figures reflect principally the admission to mermbership in the Federal Reserve System of one large bank with total loans and investments aggregating 554 million dollars on Dec. $31,1942$.
    ${ }^{4}$ Beginning June 30, 1942, includes Bank of North Dakota, a nonmember bank not previously included in these statistics; on Dec. 31,1941 , its deposits, excluding interbank deposits, were 33 million dollars, and its loans and investments 26 million.

    Back figures.-See Banking and Monetary Statistics, Tables 1-7, pp. 16-23; for description, see pp. $5-15$ in the same publication.

[^16]:    Preliminary.
    Deposit Insurance Corporation
    ${ }^{1}$ During the period .Dec. 31, 1942-June 30, 1945, agricultural loans included loans to dealers, processors, and farmers' cooperatives covered
    by purchase agreements of the Commodity Credit Corporation, which are now classified as commercial and industrial loans; consequently, the items for Dec. 31, 1945, may not be entirely comparable with prior figures.

    During 1941 three mutual savings banks with total deposits of 8 million dollars became members of the Federal Reserve System. These
    banks are included in "member banks" but are not included in "all insured commercial banks.'
    ${ }^{3}$ Central reserve city banks.

[^17]:    1 Demand deposits other than interbank and U. S. Government, less cash items reported as in process of collection

    * Monthly and weekly totals of debits to demand deposit accounts except interbank and U.S. Government accounts.

[^18]:    Revised.

[^19]:    ${ }^{1}$ Excluding balances with reporting firms (1) of member firms of New York Stock Exchange and other national securities exchanges and (2) of firms' own partners.
    ${ }^{2}$ Includes money borrowed from banks and also from other lenders (not including member firms of national securities exchanges).

    - As reported to the New York Stock Exchange. According to these reports, the part of total customers' debit balances represented by balances secured by U. S. Government securities was (in millions of dollars): April, 154; May, 144.

    Note,-For explanation of these figures see "Statistics on Margin Accounts" in Bulletin for September 1936. The article describes the method by which the figures are derived and reported, distinguishes the table from a "statement of financial condition," and explains that the last method by which the figures are derived and reported, distinguishes the table from a st

    Back figures.- See Banking and Monetary Statistics, Table 143, pp. 501-502, for monthly figures prior to 1942, and Table 144, p. 503, for data in detail at semiannual dates prior to 1942.

[^20]:    ${ }^{\mathbf{1}}$ Monthly and weekly data are averages of daily figures, except for municipal bonds, which are based on Wednesday figures.
    Standard and Poor's Corporation.
    4 Moody's Investors Service, week ending Friday. Because of limited number of suitable issues, the industrial Aaa, Aa, and A groups have
    been reduced from 10 to 3,6 , and 9 issues, respectively, and the raltroad Aaa, Aa, and A groups from 10 to 7,6 , and 9 issues, respectively.
    5 Beginning Dec. 15, 1945, includes Treasury bonds of June 1952-54, June 1952-55, December 1952-54, and March 1956-58.
    6 No partially tax-exempt bonds due or callable in 15 years and over.
    Back figures.-See Banking and Monetary Statistics, Tables 128-129, pp. 468-474, and the Bulletin for May 1945, pp. 483-490.

[^21]:    ${ }^{1}$ Includes publicly offered issues of Federal credit agencies, but excludes direct obligations of U. S. Treasury.
    2 Includes issues of noncontiguous U. S. Territories and Possessions.
    Source.-For domestic issues. Commercial and Financial Chronicle; for ioreign issues. U. S. Department of Commerce. Monthly figures subject to revision.

    Back figures -See Banking and Monetary Stalistics. Table 137, p. 487.

[^22]:    - Revised.
    ${ }^{1}$ Estimates of new issues sold for cash in the United States. Current figures subject to revision:
    ${ }^{2}$ Gross proceeds are derived by multiplying principal amounts or number of units by offering price.
    Estimated net proceeds are equal to estimated gross proceeds less cost of flotation, i.e., compensation to underwriters, agents, etc., and expenses. Inciudes repayment of other debt and other purposes.
    ind

    Source.-Securities and Exchange Commission; for compilation of back figures, see Banking and Monetary Statistics (Table 138, p. 491), a publication of the Board of Governors.

[^23]:    * Figures include only holdings by institutions or agencies from which reports are received. Data for commercial banks, mutual savings banks, and the residual "other" are not entirely comparable from month to month. Since June 1943 the coverage by the survey of commercial banks has been expanded. Figures in column headed "other" include holdings by nonreporting banks and insurance companies as well as by other investors. Estimates of total holdings (including relatively small amounts of nonmarketable issues) by all banks and all insurance companies for certain dates are shown in the table above.

    1 Including stock savings banks. On May 31, 1946, commercial banks reporting to the Treasury held 26,829 million doilars of U. S. Government securities due or callable within one year out of a total of 65,972 million outstanding.
    ${ }_{2}$ Including 196 million dollars of Postal Savings and prewar bonds not shown separately below.

[^24]:    $r$ Revised. Preliminary. ${ }^{1}$ Series included in total and group indexes but not available for publication separately.

[^25]:    * Includes Contract Construction and Federal Force Account Construction. r Revised.

[^26]:    *Less than $\$ 500,000$.
    Note.-Figures represent gross insurance written during the period and do not take account of principal repayments on previousiy insured loans. Figures include some reinsured mortgages, which are shown in the month in which they were reported by FHA. Reinsured mortgages on rental and group housing (Title II) are not necessarily shown in the month in which reinsurance took place.

[^27]:    p Preliminary. $\quad$ Revised.
    Note.-Data based on reports from a smaller group of stores than is included in the monthly index of sales shown on page 919.

[^28]:    $p$ Preliminary.
    ${ }^{1}$ Figures include only personal instalment cash loans and retail automobile direct loans shown on the following page, and a small amount of other retail direct loans not shown separately. Other retail direct loans outstanding at the end of June amounted to 48 million dollars, and loans made during June were 12 million.
    ${ }^{2}$ Figures include only personal instalment cash loans, retail automobile direct loans, and other retail direct loans. Direct retail instalment loans are obtained by deducting an estimate of paper purchased from total retail instalment paper.
    ${ }^{3}$ Includes only loans insured by Federal Housing Administration.

[^29]:    ${ }^{p}$ Preliminary.
    ${ }^{1}$ Revised figures. Unadjusted quarterly data have not yet been revised; unrevised data and annual totals for all components appear in BulLETIN for July, 1946, p. 806.
    ${ }^{2}$ Based on new sources and not precisely comparable with previous years.
    ${ }^{3}$ Less than 50 million dollars.
    Note.-Detail does not always add to totals because of rounding. For a general description of above series see the Survey of Current Business or May and August 1942, and March 1943.

    Back figures: For annual totals 1929 through 1938, see the Survey of Current Business, May 1942 and April 1944. For quarterly estimates 1939 through 1944, see the Survey of Current Business for April 1944 and February 1946.

[^30]:    ${ }^{1}$ As revised in July 1946.

[^31]:    $p$ Preliminary.
    ${ }^{1}$ Represents banks on which checks are drawn, except that it excludes both member and nonmember mutual savings banks on a few of which some checks are drawn. Similar par list figures published heretofore have included member mutual savings banks and member nondeposit trust companies (three and four, respectively, on Dec. 31, 1945) on which no checks are drawn, because of the requirement that member banks remit at par for checks presented to them through the Federal banks remit at
    Reserve Banks

    The total in this table differs from total commercial banks in preceding table because the commercial bank total excludes some banks on which checks are drawn, namely, those that do not report banking departments (see footnote 1 of preceding table), and includes ndustrial banks and nondeposit trust companies whether or not checks are drawn on them
    Note.-Prior to February 1946, statistics on the Federal Reserve
    par list were published annually. For back figures see Banking and par list were pubhshed annuaily For back figures see Ban
    Monetory Statistics, Table 15 , and descriptive text, pp. 14-15.

[^32]:    ${ }^{1}$ Prior to Jan. 3, 1940, the figures under Asia represent Far East only, the remaining Asiatic countries being included under "All other."
    2 Inflow less than $\$ 50,000$.

[^33]:    ${ }^{1}$ Prior to Jan. 3, 1940, the figures under Asia represent Far East only, the remaining Asiatic countries being included under "All other."
    ${ }^{2}$ Inflow less than $\$ 50,000$.

[^34]:    ${ }^{1}$ Prior to Jan. 3. 1940, the figures under Asia represent Far East only, the remaining Asiatic countries being included under "All other."
    Note.-The figures in this table are not fully comparable throughout since certain changes or corrections took place in the reporting practice of reporting banks on Aug. 12, 1936, and Oct. 18, 1939. (See Banking and Monetary Statistics, Table 161, pp. 589 and 591 .) On June 30,1942 reporting practice was changed from a weekly to a monthly basis. For further information see Bulletin for September 1945, pp. 971-974.

[^35]:    ${ }^{1}$ Prior to June 30, 1942, included under "All other."
    ${ }^{2}$ Less than $\$ 50,000$.
    ${ }^{8}$ Prior to June 30, 1942 , included under "Other Latin America."
    "Included "Canal Zone" prior to June 30, 1942.
    ${ }^{6}$ Prior to June 30, 1942, included under "Other Asia."
    ${ }^{-}$Country breakdown not available until June 30, 1942.

[^36]:    ${ }^{1}$ Also Federal Reserve Agent. ${ }^{2}$ Cashier. ${ }^{\text {a }}$ Also Cashier. ${ }^{4}$ Managing Director. ${ }^{5}$ Vice President. August 1946
