## FEDERAL RESERVE BULLETIN

## THE POSITION OF AGRICULTURE IN MID-1947

During the two years since the end of the war, the position of agriculture in the United States has been exceptionally favorable, and as the third postwar harvest begins farm prosperity is continuing. Production this year is expected to be close to the record level of the years 1944-1946, despite smaller feed crops, and prices are somewhat above the high level reached last autumn after price controls were removed. Agricultural prices are now much higher, in comparison with the prewar level, than prices of other commodities and above the peak reached in the early part of 1920. Farm income is at a new high and costs of farming, as compared with prewar years, are up much less than farm income. Costs have risen less because prices paid by farmers have not risen as much as prices received and, with farming practices greatly improved and weather conditions generally good, output per man and per acre have increased sharply.

There has been some undermaintenance of farm property but farmers hold deposits and other liquid assets in much larger volume than before the war, and the market value of farm land is up sharply and still increasing. Total mortgage debt on farms remains at a level considerably lower than before the war, although new mortgages are being written in substantial volume and in numerous cases at high ratios of debt to current advanced values.

Farmers are able to obtain record prices despite a volume of marketings over twofifths above the 1935-39 average, chiefly because of much more prosperous conditions in urban areas in this country, small production of agricultural commodities abroad, and the availability of funds, provided in part by the United States, to finance a heavy volume of exports. Consumption of agricultural commodities and their manufactures in this country has been in much larger volume than before the war, notwithstanding sharply advanced prices, primarily because of the large rise in per capita income. Also, there has been a 10 per cent growth in population and the share of consumer income available for purchase of food and clothing has increased, owing to special circumstances such as rent control and durable goods shortages. Because stocks of many agricultural commodities, particularly cotton and grains, have been low during the postwar years, prices may have been even more sensitive than usual to developments likely to limit supplies or maintain consumption.

The most obvious effect of the Federal price support program for agricultural products has been to provide actual limits to price declines for some products, such as eggs and potatoes, and to indicate for a considerable period ahead approximate limits to possible declines for many other agricultural products. Through its influence on markets the
program has had an indirect effect, at least in some instances, of increasing production. In situations, however, where supports tend to strengthen prices of materials, such as feedstuffs, more than finished products, such as livestock, output of finished products may be adversely affected.
How long present exceptionally favorable conditions in agriculture will continue and how great any later adjustments may be will depend not only on the nature of the situation already built up as a result of the war but also on a great variety of domestic and foreign developments in the period ahead. It is in the field of prices that the greatest changes in relationships have taken place and that the most marked adjustments are likely in some later period when foreign and domestic demands are not so insistent as they have been since the end of the war. Production of some agricultural commodities, such as those now being exported in particularly large volume, notably wheat, and those substituted for imports not available during the war, particularly oil-bearing crops, may be reduced considerably from present high levels.
Foreign demand for agricultural as well as industrial products has expanded more and continued longer at a high level than was expected. Owing to a great many economic and political difficulties, recovery abroad has been slow. Consequently, at the same time that foreign needs for imports have been very great the amount of foreign goods available for shipment to this country has been small. The result has been an export surplus of unprecedented magnitude, financed largely by grants and loans provided by the United States Government but to an increasing extent by drafts upon the accumulated gold and dollar reserves of foreign countries. This drain upon foreign re-
serves has led to discussions of new forms of foreign aid designed to speed recovery abroad through the continuance of a large flow of exports. In domestic markets the demands of processing industries for agricultural products have generally been at high levels, but in recent months output of textile and leather products has been considerably below earlier peak levels and output of food manufactures has been reduced somewhat.
Uncertain factors in the markets for farm products during the coming months include weather conditions and their effect on crops yet unharvested, changes in employment and incomes in industrial areas, and the ability of foreign countries to continue their large purchases of American products.

## High Level of Agricultural Production

Changes in agricultural production are unusually diverse this season, but the prospect is that over-all production in 1947 will be close to the record total for 1946 and considerably above prewar levels. Increases of 15 to 35 per cent are shown by official forecasts for cotton, wheat, and oil-bearing crops, while declines of 10 to 20 per cent are indicated for corn, oats, vegetable and truck crops, and tobacco. Livestock marketings may be in about the same large volume as last season, reflecting in part continued reduction in the number of meat animals on farms.
The following table shows for major groups the volume of production for sale and for use in the farm home, in 1947 and 1946 as compared with the prewar years 1935-39. Output of most agricultural products has increased sharply since before the war, but production of cotton and wool has been reduced considerably. Production of oil-bearing crops has tripled largely as a result of increased acreage planted to meet shortages growing out of wartime curtailment of
imports of vegetable oils. Wheat production this year is double the prewar level, owing in some part to larger acreage planted but chiefly to an exceptionally high yield per acre. Production of corn and other feed crops is up from the level of $1935-39$ but by about 21 per cent rather than the 52 indicated in the table, which shows production for sale and use in the farm home only. This part of production has increased more than production for feeding to stock on farms where feed crops are grown. Partly for this reason the increase in total crop production from the prewar period has been less than the 40 per cent indicated in this table.

Source.-U. S. Department of Agriculture data on total production for sale and use in farm home. 1947 figures are preliminary estimates based on July 1 indications, except July 15 for corn and Aug. 1 for cotton.

Output of livestock products has increased markedly since before the war with the greatest expansion in meat animals and poultry products, reflecting for the most part especially favorable prices and lower labor requirements for these products. Because the figures include sale of livestock out of inventory as well as out of current production, however, they overstate the rise since the prewar period in production of meat animals and total livestock. Currently the
number of animals on farms is being reduced whereas in the 1935-39 period it was being increased.

Production for sale and use in the farm home is expected to be up 38 per cent from the prewar period, as shown in the table and in the chart, which also shows the course

U. S. Department of Agriculture data. Average prices dur. ing first six months of 1947 are indicated by circle. Preliminary estimate of production for year 1947 computed as indicated in footnote to table on this page.
of prices received for farm products. The increase in terms of the total amount produced this year, however, is less, for reasons indicated above and because the size of this year's feed crop in considerable part will not be reflected in this index until later when the effects of reduced feed grain supplies are evident, in some degree, in the volume of livestock marketings. Allowing for all these factors, as the Department of Agriculture does in other indexes, the rise shown for production is estimated to be about 32 per cent, excluding any consideration of the production of draft animals, and 24 per cent taking account of the continued sharp decline in
such production as farming operations become more highly mechanized. On the other hand, because home use of farm products is now a relatively smaller part of output, reflecting a decline in farm population, marketings of farm products are up somewhat more from the 1935-39 period than production for sale and home use.
Causes of large output. Circumstances prevailing during and since the war have been unusually favorable for increased production even though during the war shortages developed for labor, equipment, and supplies. When the war began there were large supplies of grain on hand which permitted a rapid expansion in livestock output. Prices of most farm products rose sharply early in the war period and farmers were assured of a profitable market for all of their output. Farmers found it advantageous to purchase all the machinery and fertilizer made available and to use improved varieties of seed, thereby increasing yields and reducing labor requirements. Fertilizer consumption has more than doubled since prewar years and the use of machinery has been much more widespread. Throughout the period from 1940 to 1946 weather conditions were favorable in most regions. To some extent, also, increased production has been obtained by paying less attention to soil conservation.
The large volume of agricultural production in recent years has been achieved with about 9 per cent fewer workers on farms than in the prewar period and practically no increase in the total acreage planted to crops. There has been less abandonment of acreage planted, and, much more important, yields per acre harvested have increased about 25 per cent. The corn yield in 1946 was about 50 per cent above the prewar average and the wheat yield about 30 per cent higher while
cotton showed no change. Efficiency of livestock production has increased but the gains have been less marked than for crops, despite a similar increase in total output.
Current level of stocks. Stocks of wheat were low at the beginning of the 1947-48 season and so also were stocks of cotton, while those of tobacco and wool were high. Corn and other feed grain carry-overs may be larger than the average for prewar years. The number of livestock on farms, while larger than before the war, has been reduced sharply from the peak reached in 1943 and is still declining. Business inventories of products manufactured from agricultural commodities are considerably above the low levels of a year ago, and for textiles, leather products, and processed fruits and vegetables, the increase has been sufficient to result in curtailment of output this year.
Stocks of wheat on July 1 were only about 85 million bushels, but with the new crop estimated at 1,440 million bushels stocks are likely to be increased considerably this season. Even if, because of smaller feed grain crops, the domestic use of wheat should increase by 50 million bushels over last year, to a total of 830 million bushels, there would still be about 600 million bushels available for export or addition to carryover. Exports last season amounted to 395 million bushels.
Corn stocks on October 1 are likely to be about 350 million bushels. During the season now ending, the crop of nearly 3,300 million bushels permitted domestic consumption of 3,000 million bushels, exports of 125 million and an addition of 175 million bushels to stocks. In the coming season demands for domestic consumption of corn may be expected to be less than 3,000 million bushels, despite a smaller oats crop, because of reduced livestock numbers and larger supplies of wheat and by-product feeds. Ex-
ports are expected to be negligible. If the corn crop turns out to be about 2,800 million bushels, as indicated by July 15 conditions, and is not greatly below average quality, total supplies including the carryover will meet most domestic feeding requirements.

Cotton stocks at the beginning of the current season on August 1 were estimated to be about 2.8 million bales. This was much less than in other recent years but close to the average level of carryovers in the 1920 s. Cotton production this season, according to the August 1 official estimate, is indicated to be 37 per cent larger than last year's small crop. Such a crop, of 11.8 million bales, would be 1.5 million bales or more below estimated domestic consumption and exports during the past season. Last season's rate of consumption by domestic mills was exceptionally large, however, owing in part to the wartime depletion of civilian stocks of cotton goods and to substantial exports. Commercial exports of raw cotton were assisted by a Federal subsidy of 4 cents per pound that has been reduced in recent months to onehalf cent. Large quantities of cotton were exported by the Government to occupied territories and by the United Nations Relief and Rehabilitation Administration during the past season. In the season now beginning foreign demands for raw cotton and cotton manufactures may be smaller, owing to increased supplies available in other countries, the relatively high prices of American cotton, and the shortage of dollar exchange. The amount of cotton processed for domestic use, in comparison with the exceptionally high level of the past season, will depend on such factors as the extent to which inventories of cotton goods in business and consumer hands have been restored already, the prices charged for goods, and the general course of employment and income.

## Record Levels of Agricultural Prices

With the lifting of price controls last year the average level of prices received by farmers advanced 25 per cent from June to October. Since that time this average has fluctuated only moderately, although prices of individual farm products have shown marked changes. The present level is 155 per cent higher than that before the war and 15 per cent above the peak reached during the postwar inflationary boom in early 1920. Also, current prices on the average are about 30 per cent above the level at which the Government is required to support many agricultural prices.

From October 1946 to January 1947 average prices received by farmers declined somewhat, as is shown in the chart, but later they

U. S. Department of Agriculture data. Prices paid include interest and taxes. Latest figures shown are for July 15.
advanced, chiefly because of huge Government purchases of grain for export to meet emergency needs, and a seasonal decline in
supplies of farm products. On March 15 prices were 3 per cent higher than in October. Following declines in April and May, prices again advanced somewhat, reflecting renewed Government buying, increased prospects for continued large exports, forecasts of smaller corn and cotton crops than had been anticipated, and some revival of inflationary sentiment.
In the middle of July prices of corn and cotton were considerably higher than at the beginning of 1947 and close to the previous highs reached in the second half of 1946. During the subsequent three weeks corn advanced somewhat further, while cotton prices declined. Prices of winter wheat at Kansas City were about $\$ 2.25$ per bushel in the latter part of July, as compared with $\$ 2.90$ in March, but were above the level of $\$ 2.05$ per bushel prevailing in July 1946. Tobacco prices continued to decline from last autumn's levels. Prices of fruits were below last year's level while prices of truck crops, although not so high as levels reached in the spring when growing conditions were unfavorable, were above a year ago. Most livestock prices rose in June and July to close to earlier peak levels. Prices of dairy products, however, were generally no higher than in July of last year.
Higher support levels. Prices paid by farmers for goods used for production and household purposes, together with interest and taxes, rose by about one-fifth from June 1946 to March 1947 and since then have shown little change. On July 15 these prices were about 80 per cent higher than before the war, with generally the most marked increases shown for commodities sold by farmers to each other, particularly feeds, and products processed from agricultural commodities, especially manufactured foods and clothing. Average prices of fertilizer and machinery
are only about 40 per cent higher than before the war.
The farmer's and the nation's interest in changes in prices paid by farmers has been considerably enhanced by the enactment of legislation during the war requiring Federal support of prices of most farm products at around 90 per cent of parity, the level at which the price of any farm product bears the same relation to average prices paid by farmers as it did in 1910-14. Earlier price supports ranged from 50 to 75 per cent of parity and were in effect for only a few major crops. While most products have support levels of about 90 per cent of parity, prices of cattle, sheep, hay, truck crops, and fruits are not subject to support operations and, on the other hand, the support levels this year for a few products have been 100 per cent or more of parity. Practically all products which enter into export trade in substantial volume and are directly affected by developments abroad are included in the support program.
In July prices received on the average were at 119 per cent of parity, with the index of prices received at 276 per cent of the 1910-14 average and the index of prices paid at 231. Prices of most agricultural commodities in July were considerably above support levels, although prices of wool, tobacco, potatoes, eggs, and most oilseeds were close to support levels. Hog prices in July were about 50 per cent above their support levels.
The wartime support legislation extends through 1948, with financing dependent to some extent on annual appropriations. Last season Federal losses on the support program were small except in the case of potatoes. Also, large Federal holdings of cotton accumulated over a long period were sold at prices substantially above purchase
prices. In the case of wool, Federal holdings have continued at a very high level.

Causes of higher prices. Most important in maintaining existing price levels for agricultural products have been the exceptionally large volume of agricultural exports and the generally sustained high level of domestic demand. The curtailment since the beginning of the year in domestic demand for nondurable goods made from agricultural products, discussed below, has been of too short a duration and of too moderate a proportion to counterbalance the upward pressure on agricultural prices exerted by exceptional purchases for export.

In general, world demands for agricultural products continue greatly in excess of supplies, although in the case of some commodities the shortages prevailing during the war and immediate postwar period have been overcome. Sharp declines have occurred in recent months in foreign prices for vegetable oils, sugar, and rubber following only moderate increases in supplies, and prices of some other foreign products have been maintained only by government controls over marketings. Most of this country's surplus production of agricultural commodities remains in urgent need abroad, but foreign countries have found it increasingly difficult to finance the heavy requirements for dollar payments arising out of their imports of these and other products from the United States.

## Record Volume of Exports

Exports of agricultural products have been exceptionally large since last autumn, much greater than had been expected. Foreign needs have been urgent, owing to unfavorable crop conditions and the continued slow progress of reconstruction. At the same time foreign dollar resources, in-
cluding funds obtained from loans and grants, have been sufficient to finance large takings of agricultural as well as industrial commodities.

Agricultural exports, including shipments for civilian relief in occupied areas, were at an annual rate of about 4.2 billion dollars from November to March, and were six times the prewar rate of 750 million dollars. Meanwhile, cash farm income rose to about 3.5 times the annual rate of 8.5 billion dollars before the war, and thus the portion of farm income originating from exports was about three-fifths greater than before the war. This is a larger increase than occurred during and immediately after the first world war. Since the first quarter of the year agricultural exports have declined somewhat.

Food exports alone increased from an annual average of 270 million dollars in the prewar period to an annual rate of 2.9 billion, while other agricultural exports rose considerably less, from 480 million to 1.3 billion. During the 12 months ending June 1947, about 18.7 million tons of food were shipped abroad, as compared with 3.6 million in years prior to the war.

| Tobacco | 264 | 239 | 188 | 347 |

Note.--U. S. Department of Agricuiture estimates. Includes products shipped for military civilian relief. Experts of flour and other grain products are shown in grain equivalent.

In recent months food exports have amounted to about 10 per cent of the coun-
try's food production, and for wheat, flour, and some other food products the proportions have been much larger. Wheat exports, including wheat shipped as flour, during the year ended June 30 , amounted to 395 million bushels, or about a third of last year's crop. Thirty per cent of domestic flour output in the early part of this year has been for export. A substantial part of the domestic production of dried milk products and dried eggs has been exported in connection with Government price support operations. Meanwhile, exports of other dairy products, meats, fats and oils, and processed fruits and vegetables have been reduced from wartime levels and are generally small in relation to total domestic output. So also are exports of corn and potatoes. In the case of corn, however, exports have absorbed a significant portion of commercial supplies which have amounted to about one-fourth of the total crop.

The extent of the rise in exports of agricultural commodities does not indicate the full impact of foreign demands on farm prices and income. Exports of textile products and some other products made from agricultural materials but not regarded as "agricultural products" have been sharply above prewar levels. Exports of cotton yarns and fabrics, for example, during the first six months of this year were at an annual rate of 650 million dollars as compared with 40 million before the war. Also, the greatly expanded volume of exports of industrial products has added to incomes in this country and thus to domestic demand for farm products. Altogether, it is evident that foreign demand has been an important element in strengthening prices of farm products, especially grains, and that the course of export demand will have an im-
portant bearing on future markets for these products.

Large agricultural exports have reflected numerous factors likely to continue for varying periods. Unfavorable production and distribution conditions that developed in Europe during the war are being corrected only slowly. Shortages of fertilizers and farm equipment have been only partially met and depleted herds of livestock are being replenished only gradually. Unfavorable weather conditions prevailing in Western Europe and also in the Southern Hemisphere during the past year are not likely to be repeated but may be. In general it is apparent, however, that the great flow of agricultural commodities, especially of foodstuffs, which has characterized the export trade of the United States during the war and the postwar transition, is destined to decline with the progress of recovery abroad.
In the meanwhile, foreign countries have been able to finance their huge purchases of United States exports, not only of agricultural but also of industrial products, only by obtaining large grants and loans from this country and by making substantial drafts upon their accumulated gold and dollar resources. Of the total exports during 1946, about 55 per cent were financed by grants, loans, and liquidation of foreign gold and dollar reserves. In the first half of 1947, total exports continued to expand rapidly, and in the absence of a corresponding increase in imports, a heavy strain has been placed upon the facilities available to finance the export surplus. In many countries measures have already been taken to restrict importation of items least urgently required. While in general, agricultural commodities have escaped the first impact of these restrictions, it may be noted that the United Kingdom, which last year purchased 55 per cent
of all leaf tobacco exported from this country, increased import duties on tobacco very sharply effective in April of this year.

## Shifts in Domestic Agricultural Markets

Domestic takings of most agricultural commodities continue much larger than before the war, notwithstanding some reduction since last autumn in the physical volume of such commodities being manufactured into finished goods. These enlarged peacetime markets, with prices sharply higher than in prewar years, reflect a much higher level of per capita income, an increase of 13 million or one-tenth in the country's population, a rise in the share of incomes used to buy goods made from agricultural products, and increased business buying to replenish stocks and, in the case of a few products, to meet large demands for industrial uses.

Recent record peacetime levels of production, employment, and income, which have contributed greatly to agricultural prosperity, have been dependent in part on demands that are temporary, as, for example, those for inventory accumulation. At the same time some demands are not being met because of shortages of materials and plant capacity. In this situation, with wartime scarcities of some agricultural products persisting and prices changing rapidly, it has been difficult for producers and distributors to determine how large postwar domestic markets for agricultural commodities and their manufactures will be.

The most important markets for agricultural commodities are for food and beverage uses, and the other principal uses are in the manufacture of tobacco products, shoes, woolen apparel, cotton goods, tires, paints, and soap. Altogether, finished products made from agricultural materials, including manufactured foods, constitute the great
bulk of nondurable goods produced and in peacetime practically all of these finished products are ultimately purchased by civilian consumers.
During the war civilian buying of most nondurable goods was limited by lack of supplies. Following the sharp curtailment in military purchases, civilian supplies and purchases promptly expanded. Additional supplies of nondurable goods subsequently became available as a result of Federal surplus sales, larger food crops in 1946, an increased volume of imports, and an expansion in manufacturing output achieved, as in cotton goods, by drawing on domestic stocks of raw materials.
Recent reductions in demand. In the summer of 1946, domestic purchases of nondurable goods leveled off, in physical quantities, owing in part to growing consumer reluctance to purchase low quality goods at high prices as well as to continued shortages of such items as meats, tires, and men's clothing. Subsequently supplies have increased further, and this year purchases and output of most nondurable goods-for the first time since the end of the war-have been limited chiefly by demand rather than by supply factors. In general, markets for durable manufactures have been stronger than for nondurable goods, and total manufacturing production by June had declined by only 4 per cent from the first quarter level.

Combined output of manufactures produced from agricultural materials, including foods, liquors and beverages, and manufactures of tobacco, cotton, wool, and leather, was about 10 per cent smaller in June than at the beginning of the year and further declines occurred in July. In June shoe production continued, as in other recent months, about one-fourth below the advanced level of a year ago. Production at woolen mills
this year has been substantially below earlier peak levels and cotton consumption has shown a considerable decline from the first quarter level. Reductions in output have been generally much less marked for foods than for other products manufactured from agricultural commodities.

In June and July there was a revival of buying interest in nondurable goods for domestic autumn sales. Whether the physical quantity of purchases will be of sufficient volume, together with export demand, to restore manufacturing operations in these lines, and thereby consumption of agricultural materials, is still uncertain. Inflationary price developments such as those which occurred in many markets during June and July may stimulate activity temporarily, but over a longer period the quantity of goods which ultimate consumers, both domestic and foreign, are willing and able to buy at the prices charged will be of primary importance.

Enlarged volume of food consumption. Increased domestic demands for food have been an important influence contributing to the advanced level of farm prices and incomes in the postwar period. To a large extent these increased demands have stemmed from the expansion in nonagricultural wage and salary payments.

During and since the war the long-time trend toward increased per capita use of fruits and vegetables has continued. The consumption of milk increased during the war and in the early part of 1946 but, following the sharp advance in prices last autumn, milk consumption has declined. The use of butter, although above the wartime level, remains considerably below the prewar average. Consumption of meat and eggs has been exceptionally large in terms of prewar standards.

During the war period, when increases in food prices were controlled and incomes were rising, consumers were able to improve their diets by allocating about the same proportion of their incomes after taxes to food as before the war. Since last summer, however, prices of foods have risen considerably, while incomes have been rising only moderately, so that consumers in order to maintain their diets have spent a considerably larger proportion of their incomes for food. Rent control and low housing costs for many home owners have continued to permit many consumers to use a smaller share of their incomes for shelter than usual, and shortages of consumer durable goods have limited the increase in expenditures in that direction. Nevertheless, large expenditures to maintain improved diets in a period of sharply higher prices for foods have probably been a factor in limiting demands for some other nondurable goods.

Increased rent payments following relaxation of rent controls on July 1 may tend to curtail demand for food, since tenants spend a larger share of their incomes for food than do landlords. At the same time, however, sharply increased wage rates have recently been granted coal miners and wage increases are occurring in some other lines. Provision for the cashing of veterans terminal leave pay bonds also will make more funds readily available to consumers.
As a rule per capita food consumption shows little fluctuation except as a result of marked changes in supply. Small reductions in takings of perishable foods or of foods costly to store ordinarily lead quickly to the lowering of prices. At present the share of consumer incomes going to food is larger than has been customary. Margins of producers and distributors are larger than usual and speculative factors are important
in numerous markets. Consequently, with any reversal of inflationary tendencies, food prices may be particularly subject to downward pressures.

## Improved Financial Position of Farmers

During the first half of 1947, as in 1946 and the war years, farmers have been able to save substantial amounts out of current income and the market value of their land has continued to rise. In consequence the value of farmers' assets has increased further relative to the amount of their debts. At the beginning of the year total assets were nearly 111 billion dollars as compared with 54 billion at the beginning of 1940 , while total debts were somewhat less than the 10 billion dollars reported for 1940. Figures for the beginning of 1947, 1946, and 1940, as estimated by the Department of Agriculture, are shown in the table.

| Balance Sheet of Agriculture In billions of dollars |  |  |  |  |  |

${ }_{2}{ }^{1}$ Jan. 1 except for real estate data which refer to Apr. 1.
${ }^{2}$ Livestock, crops, machinery, and household equipment.
Source. -Data are from the forthcoming report "The Balance Sheet of Agriculture, 1947," U. $S$. Department of Agriculture. Figures for real estate, deht for 1946 and 1947 , and for value of household equipment for 1947, are preliminary.

Dollar figures on changes in assets, liabilities, and equities by themselves, however, give only a limited view of what has happened. A very large share of the increase in farmers' assets since 1940 has consisted
of revaluation of existing property. Nearly half the rise in the value of assets has been in real estate holdings, as is evident from the table. The rise in real estate holdings has reflected almost entirely higher dollar valuations. Soil resources have been permitted to deteriorate to some extent in the period. A large part of the rise in the value of other nonfinancial assets, such as farm equipment and livestock, has reflected higher prices. Farmers have been in a position to increase their holdings of deposits and other financial assets primarily because prices for agricultural products have been high as compared with other prices, and because during the war and early postwar periods many industrial products were not available for purchase by farmers.

The increase in assets relative to debts has been much greater than during the first world war period and it is evident that in many respects financing operations in farming have been on a more satisfactory basis than in the earlier period. For land values and mortgage debt there has been a sharp contrast, as is shown in the chart on the following page. In the first world war period mortgage debt rose at about the same sharp rate as farm land values. This time farm land values have risen about as much as they did before, but during the war mortgage debt decreased considerably, from 6.5 billion dollars to 4.7 billion, and since then has increased only slightly.

It should be observed, however, that broad comparisons based on changes in totals tell only part of the story. While aggregate mortgage debt has shown little change since the end of the war, the volume of repayments has been very large and so also has the volume of new debt written. Thus many individual farmers have greatly increased their indebtedness. This new debt
has been written on the basis of sharply advanced values. In general down payments have been large, but roughly one-seventh of the mortgage loans have amounted to 75 per cent or more of current value.

U. S. Department of Agriculture data. Jan. 1 figures for mortgage debt; Mar. 1 figures for land values. Mortgage debt figures for period 1941-47 are preliminary and are being revised on the basis of the 1945 Census of Agriculture.

With interest rates about one-fourth lower than after the first world war and farm income considerably higher the burden of mortgage debt charges has declined more than the reduction in debt indicates. Recognition of all of the favorable factors in the farm financial situation, however, should not be permitted to obscure the important underlying fact that agricultural prices are exceptionally high, or the probability that changes in the financial position of farmers will not long continue as favorable as they have been in recent years of unusually high demand for farm products. Land values cannot be expected to increase indefinitely, and, in a period of downward adjustment in agricultural prices, might decline considerably. Thus, while the equity position of farmers is continuing to improve, and while there are many elements of strength in the income and asset position of farmers, there are also elements of uncertainty, with some prospect that in a period of general readjustment after the present inflationary period, downward adjustments in agriculture will be greater than in most other sectors of the economy.

## SURVEY OF CONSUMER FINANCES ${ }^{1}$

## Part III. Consumer Saving in 1946 and Ownership of Selected Nonliquid Assets

During war years, involuntary spending restrictions and a high rate of saving accompanied limitations of civilian goods production. As production limitations were gradually withdrawn near the end of the war, however, consumer expenditures increased far more rapidly than consumer incomes and the rate of saving declined. According to Department of Commerce estimates, net personal saving for all spending units showed a decline in 1946 to about 8 per cent of total personal income, compared with 17 per cent in 1945, over 20 per cent during the war period, and an average of around 5 per cent in preceding years. Results of the survey of consumer finances provide a picture of the varying rates and forms of saving by different groups of spending units in 1946.
In addition to information relating to the saving of various income groups, this article presents data concerning their holdings of nonliquid assets, including life insurance, houses, and stocks and bonds other than Federal. It is the third of a series of articles presenting the results of a second national interview survey of consumer finances, conducted early in 1947 under the auspices of the Board of Governors of the Federal Reserve System by the Survey Research Center, University of Michigan. ${ }^{2}$ Other survey findings, particularly those pertaining to spending unit plans for purchasing

[^0]consumer durable goods and investing in nonliquid assets, and to the distribution of consumer income and liquid asset holdings among spending units, were published in the June and July Bulletins.

## Summary of Findings

(1) An appreciable number of spending units continued to save relatively large amounts of their income in 1946. The decline in net saving by consumers in 1946 from the large volume of saving in 1945 reflected not only reduced saving by some consumer units but also a considerable amount of expenditures in excess of income, that is, dissaving, by a sizable number of others. Dissaving occurred when consumers spent in excess of their incomes to purchase consumer goods or to meet emergency outlays.
(2) Most frequently reported forms of positive saving in 1946 by spending units were payments of life insurance premiums, increases in holdings of Government bonds, savings accounts, and checking accounts, payments on mortgages, and contributions to retirement funds. Reductions in holdings of liquid assets and borrowing were the primary forms of dissaving.
(3) The half of spending units with incomes of $\$ 2,000$ to $\$ 5,000$ in 1946 accounted for about twofifths of net saving; little change from 1945 occurred in the share of total saving of this income group. Spending units with incomes of $\$ 7,500$ or more also accounted for about two-fifths of total net saving in 1946. In all probability, this was a somewhat larger share of net saving than this group accounted for in 1945, for which comparable figures are not available. Small amounts were saved on balance by spending units with incomes between $\$ 1,000$ and $\$ 1,999$, but in the lowest income group (under $\$ 1,000$ ) the positive saving of some spending units was more than offset by the dissaving of others.
(4) A high percentage of spending units containing veterans of World War II dissaved in 1946. While these veteran spending units accounted for somewhat more than one-fifth of the total spending
unit population, they made up one-third of the number of spending units reporting dissavings.
(5) While positive saving was most closely associated with income, dissaving was influenced by such additional financial factors as the ownership of disposable, especially liquid, assets and eligibility for credit.
(6) Wide variation was revealed in holdings of selected nonliquid assets in early 1947. Threefourths of the 46.3 million spending units reported at least one person carrying life insurance, over twofifths indicated they owned their homes, and no more than one-tenth reported that they owned stocks or bonds other than Federal securities.

## Method of Estimating Saving in the Survey

In the survey of consumer finances net saving is considered to be the difference between consumer income and consumer expenditures (including taxes). Since the survey did not undertake to measure spending unit expenditures or taxes, amounts saved or dissaved by individual spending units were estimated in this second survey by requesting detailed information on changes in the various asset and liability items that make up the unit balance sheet. Included among these items were changes in liquid asset holdings, changes in consumer indebtedness, net sales or purchases of stocks and bonds, payments of life insurance premiums, payments to retirement funds, net sales and purchases of houses, payments on house mortgages, house improvements, and investment or withdrawal of investment in unincorporated businesses. For each individual spending unit the amounts reported for these various items, as well as a number of less important items, were listed under "additions to" and "withdrawals from" savings. The total of "additions" minus the total of "withdrawals" represented the net saving of each spending unit.

This method of estimating the saving of a particular spending unit entails the inclusion or exclusion of certain data not entirely consistent with the concept of saving. For example, interest and tax payments on a house should be considered consumer expenditures but they are often included with the amount of principal repayment when spending units indicate their mortgage payments, since, in fact, their actual payments do include these items. In the case of life insurance, the reported saving data generally include the total amount of the premium, not just the increase in cash reserves.

With house improvements, some spending units may have included maintenance and repair items instead of reporting only structural additions as requested. In addition to the factors tending to overstate saving, there are factors tending to understate saving, such as inadequate recollection by some spending units of the increases in their checking and saving accounts and holdings of Government bonds.

In the interest of improving the savings data reported in the survey of consumer finances, the form used for the second survey was more complete than that used in the earlier survey. As a result, the 1946 saving data are not directly comparable with the 1945 data. In the earlier survey, no attempt was made to include consumer borrowing or amounts spent on house improvements since it was thought that the amounts involved in such transactions were not significant during that particular period. Furthermore, the method used to obtain information on unincorporated business saving was considerably improved in 1946, and the 1946 saving schedule covered in detail many forms of saving that were not separately covered in the first survey. Had this schedule been used for the 1945 data, it is believed that the number of "zero savers" would have been decreased, and the number of both positive savers and dissavers increased.

## Net Saving in 1946

About two-thirds of all spending units reported positive saving in 1946, less than one-tenth reported zero savings, and more than one-quarter reported dissaving. ${ }^{3}$ As compared to 1945 and after allowance for differences in survey coverage of saving, fewer spending units were positive savers in 1946 and more spending units were dissavers or negative savers. Also there was a decline in the median percentage of income saved from 8 per cent in 1945 to 5 per cent in 1946, as shown in Table 1.

The bulk of positive savers reported saving from 1 to 20 per cent of their incomes. Some 6 per cent of all spending units reported saving 50 per cent or more of their incomes. As for dissaving, 11 per cent of all spending units indicated that amounts

[^1]dissaved during 1946 totaled to 25 per cent or more of their money incomes during that year, while 16 per cent of all spending units indicated dissaving amounting to a smaller proportion of their incomes.

[^2]Of the many forms of saving, payment of life insurance premiums was the most frequently reported type in 1946. Over 75 per cent of all spending units indicated that they saved some money in this form. Increases in amounts held in liquid assets were reported by 31 per cent of all spending units. Payments on house mortgages, house improvements, and contributions to retirement funds were also frequent forms of saving. Primary forms of dissaving were use of liquid assets and borrowing for consumption purposes, which were reported by 35 and 16 per cent of all spending units respectively. More detailed information on the various forms of saving and dissaving is presented in Table 2. The table shows only the frequency of the various forms of positive and negative saving, not the relative amounts. The average amounts of life insurance premiums were much smaller than the average additions to liquid assets or than the average amounts spent for improvements to or purchases of houses.

Within each income group also the most common form of saving was through premium payments on life insurance. As shown in the chart on page

954 , about 45 per cent of the spending units with incomes under $\$ 1,000$ and 90 per cent of the spending units with incomes of $\$ 5,000$ or more saved in this form. The percentage of spending units reporting saving in the forms of net additions to liquid assets, payments on house mortgages, and house improvements increased gradually from the lowest to the highest income group. On the other hand, a smaller proportion of spending units with incomes of $\$ 5,000$ or more than of middleincome groups reported saving in the form of debt reduction.

${ }^{1}$ Less than one-half of 1 per cent.
2 About one-fifth of all farm operators (representing 2 per cent of all spending units) purchased farm equipment.

Net withdrawals of liquid assets and increases in debt-the principal forms of dissaving-were reported most frequently by spending units with incomes of $\$ 2,000$ to $\$ 2,999$. Nevertheless sizable numbers of spending units with incomes below $\$ 1,000$ as well as with incomes of $\$ 5,000$ or more reported similar financial changes.

Most of the spending units that added to their liquid asset holdings during 1946 were positive savers. Among those that decreased their liquid assets about two-thirds were negative savers. The

remaining one-third added amounts in excess of their withdrawals from liquid assets to various types of nonliquid assets such as insurance, houses, corporate stocks and bonds, and other business investments.

The net saving of all spending units or of any particular group of spending units, as computed in the survey, is the amount saved by the positive savers less the amount dissaved by the negative savers. ${ }^{4}$ About 61 per cent of the total amount of net saving in 1946 was accounted for by the 10 per cent of spending units with incomes of about $\$ 5,000$ or more, as shown in Table 3. At the same time this group accounted for 44 per cent of all positive saving and only 7 per cent of all dis-

[^3]saving. Middle-income groups with incomes between $\$ 2,000$ and $\$ 5,000$ accounted for 44 per cent of total net saving, 46 per cent of all positive saving, and 53 per cent of all dissaving. Spending units with incomes below $\$ 2,000$ were minus savers as a group, dissaving an amount equal to 5 per cent of total net saving. Positive savers in this income grouping saved an amount equal to 10 per cent of all positive saving, while the dissavers accounted for 40 per cent of total negative saving.

${ }^{1}$ Annual 1946 money income before taxes.
? Positive saving comprises the saving of all spending units with money incomes in excess of expenditures, negative saving comprises the dissaving of all spending units with expenditures in excess of money incomes, and net saving (plus or minus) is positive saving less negative saving for all spending units combined. The 1945 saving figures, based on the results of the first survey, are presented in the July 1946 Federal Reserve Bulletin, p. 717 (see Table 1), but they are not strictly comparable to these estimates for 1946. As already noted, the form used to estimate saving in 1946 was more complete than the form used for the 1945 data. It is possible that the schedule used for 1945 resulted in an underestimate of the number of dissavers and the amounts dissaved as compared to the number of positive savers and the amounts of positive saving. Had the 1946 schedule been used for the 1945 data it is possible that a smaller proportion of net saving would have been accounted for by the lower-income groups and a somewhat larger proportion by the upper-income groups.

As compared to 1945 , middle-income groups accounted for about the same proportion of total net saving in 1946 while upper-income groups accounted for a somewhat larger share and the lowest income groups a smaller share. As indicated before, the 1946 and 1945 saving data are not strictly comparable and afford only rough measures of broad changes between the two years.

The close relationship that exists between positive saving and income is indicated in Table 10 at the end of this article, where each tenth of the nation's spending units is ranked by income and the relative proportions of money income and of net, positive, and negative saving accounted for by each
tenth are shown. Shares of money income and positive saving accounted for by each tenth of the spending units increased gradually from lowest to highest tenths. It should be noted that a considerably higher proportion of positive saving than of money income was accounted for by the highest tenth of income receivers. Amounts of negative saving or dissaving were not so closely correlated with the amounts of income received. The amounts of dissaving accounted for by each tenth of the spending units when ranked by income appear to have been distributed almost at random.

No significant changes were observed between the first and second surveys in the importance attached to saving and the reasons people listed for saving. An overwhelming majority of all spending units again said that they saved for "security" reasons such as for a "rainy day," old age, and emergencies. Other important reasons given were those pertaining to chiddren and their education. The purchase of a house or other real estate was a less frequent reason for saving, while saving for the purpose of buying consumer durable goods was rarely mentioned.

## Positive Savers in 1946

As has been indicated previously, in 1946 about 65 per cent of all spending units were positive savers, that is, spending units with money incomes in excess of expenditures. From the lowest to the highest income group there was a progressive increase in the proportion of positive savers. The percentage ranged from 42 for spending units with incomes under $\$ 1,000$ to 89 for spending units with incomes of $\$ 7,500$ or more. A distribution of positive and negative savers by income groups is presented in Table 4.

In view of the close relationship between saving and income, it is not surprising that the largest percentage of positive savers is found among the occupational groups with highest incomes, namely, professional persons and managerial and self-employed persons. Fewer spending units with veterans of World War II than with no veterans of World War II reported positive saving.

Additional information relating to positive savers, showing percentages of income saved and a distribution of amounts saved by income and occupational groups, and by veteran status, is given in Table 5. The majority of positive savers in every income group except $\$ 7,500$ and above saved less than

20 per cent of their incomes. This was also found to be the case in each occupational group except managerial and self-employed and farm operator groups, who predominantly saved a larger percentage of their money incomes. Spending units in these groups often reported substantial amounts saved in the form of business investment, such as

Table 4

increases in inventories or additions to plant and equipment by unincorporated businessmen, or the purchase of land or equipment by farmers. The particularly high rates of saving indicated for farm operators to some extent result from comparing their annual saving with an income figure (money income) that does not make allowance for substantial non-money sources of income.

## The Dissavers

About 12.5 million spending units reported that they dissaved in 1946. These spending units spent sizable amounts for consumption purposes either by drawing down their holdings of liquid assets or by borrowing. In order to dissave, that is, to spend an amount for consumer expenditures in excess

Table 5
Positive Savers: Percentage of Income Saved and Amounts Saved, by Income and Occupational Groups, and by Veteran Status, $1946^{1}$

${ }^{3}$ This table includes only those spending units that were positive savers, i. e., units with money incomes in excess of expenditures.
of money income, a spending unit must either have previously accumulated liquid assets or disposable nonliquid assets or it must be eligible to buy consumer goods on credit or to borrow.

During 1946 and to date in 1947 dissavings have been substantial. The largest proportion of dissavers in 1946 was found among spending units making less than $\$ 3,000$. As shown by the accompanying chart, about one-third of the spending units with incomes up to $\$ 3,000$ dissaved. Further, at least one-tenth of the spending units in all income groups dissaved. Table 11 at the end of this article indicates the relative proportions of positive and negative savers among spending units holding various amounts of liquid assets at the beginning of 1946.

Dissavings substantially supplemented the incomes of spending units that received less than $\$ 3,000$ in 1946. Over one-fifth of all spending units with incomes under $\$ 1,000$ dissaved amounts equal to 25 per cent or more of their incomes. About one-tenth of all spending units with incomes from $\$ 1,000$ to $\$ 2,999$ dissaved amounts equal to 10 to 24 per cent of their incomes, and another one-tenth dissaved amounts equal to 25 per cent or more of their incomes. In higherincome groups the amounts dissaved were often
substantial but, when expressed as percentages of incomes, they were relatively small. The contrast is shown in Table 6.

Who were these dissavers? In terms of occupation, the largest proportions of dissavers were in

Note.-Positive savers include spending units with money incomes in excess of expenditures during 1946, negative savers include spending units with expenditures in excess of money incomes, and zero savers include spending units that neither saved nor dissaved.
clerical and sales, skilled and semi-skilled, and unskilled occupational groups. There was little difference in the proportion of dissavers among spending units of varying size. There were some differences by place of residence, with fewer dissavers

| No veteran of World War II in unit. | 24 | 9 | 6 | 9 | 17 | 7 |

${ }^{1}$ This table includes only those spending units that were dissavers, i. e., units with expenditures in excess of money incomes.
found in rural areas. By veteran status there were substantial differences. Almost two-fifths of all spending units with veterans of World War II as members were dissavers, while no more than onefourth of the spending units with no veterans of World War II dissaved. These spending units with veterans as members, although accounting for little more than one-fifth of the total spending unit population, made up about one-third of the total number of dissavers.

The substantial dissavings of the veteran group were in all probability the result of large than normal outlays for clothing, housing expenses, moving, all types of consumer durable goods, including house furnishings, and other consumption ex-
penditures that were associated with a return to civilian life. Use of liquid assets accumulated during the war years enabled many veterans to live beyond their incomes in 1946.
Since dissaving occurs when more is spent for consumption purposes than is received as income, it is not surprising that a high percentage of dissavers in 1946 were purchasers of automobiles and other selected consumer durable goods. Approximately one-third of all spending units purchased such goods in 1946 and almost two-fifths of these purchasers were dissavers. In lower-income groups as many as one-half of the purchasers dissaved. Only one-fifth of the spending units not buying consumer durable goods were dissavers.

## The Relation of Factors Other than Income to Saving

The previous discussion of positive savers and dissavers has indicated some of their characteristics, such as income, occupation, and place of residence. It was shown, for example, that there was a very close relationship between positive saving and income. It is very likely that some of the differences between various groups in the rate of saving arose from differences in income. For example, professional people saved more, on the average, than unskilled workers, but the professional people had higher incomes. The question arises whether there are any differences among occupational groups in rate of saving that are not due to income.
Influences of factors other than income on saving can be analysed by comparing the characteristics of "large," "medium," and "small" savers within the same income groups. "Large savers" were defined to include the top 25 per cent of savers among spending units in each income group, "small savers" the bottom 25 per cent-including many dissavers, and "medium savers" the middle 50 per cent. "Large savers" were thus units whose savings in 1946 were large for their income, not large in the absolute sense.
The various characteristics of large and small savers are compared in Table 7. Managerial and self-employed persons and farm operators, when compared with people of similar incomes but different occupations, were large savers in 1946. By age of the head of the spending unit, the lowest age groups had more small savers, most of whom were dissavers, than other age groups with the same incomes. There was little difference in 1946 in

${ }^{2}$ The 25 per cent of the cases in each income group with the largest saving in 1946 were considered "large savers." The 25 per cent of the cases in each income group with the smallest saving in 1946. including many spending units that dissaved. were conin 1946. including many spending units that dissaved. were conper cent in each group.
${ }_{3}$ The 12 largest cities in the nation and their suburbs.
the relative proportion of large and small savers with either a grammar school or college education. There were more large savers for their income in rural areas than in metropolitan areas. This dif-
ference may be attributed in part to the substantial amounts of non-money income received by many spending units in rural areas.

There were many more small savers, most of whom were dissavers, and fewer large savers in spending units with veterans of World War II than in spending units without veterans but with similar incomes. An indication of the relationship between liquid asset holdings and dissaving is shown at the end of Table 7. Of spending units with no holdings of liquid assets at the beginning of 1946, only 10 per cent were small savers for their income as compared to 27 per cent of the spending units holding $\$ 1$ to $\$ 199$ and 31 per cent of those holding $\$ 1,000$ or more.

A grouping of savers by change in income from 1945 to 1946 indicates that, for spending units whose income was smaller in 1946 than in 1945, there were fewer large savers and more small savers than for spending units whose incomes were the same or larger. In the case of spending units receiving substantial increases in income in 1946 as compared to 1945 , however, there were more small savers than there were in groups receiving the same incomes in both 1946 and 1945 or slightly higher incomes in 1946. This occurrence was perhaps peculiar to 1946 because of the large numbers of veterans who received higher incomes in that year but were dissavers.

## Ownership of Nonliquid Assets

A major objective in both the first and second surveys of consumer finances has been to gather information relating to the distribution of liquid asset holdings among spending units, people's attitudes toward their assets, and the extent to which these assets have been used in the past and may be used in the future for consumption and investment purposes. In the surveys, liquid assets have been defined to include Government bonds, savings accounts, and checking accounts. These are the particular assets (except for currency) that increased so tremendously in volume during the war. They are readily converted to cash and for the most part at a known and fixed value, and in terms of their volume they represent a "new" factor to be reckoned with in evaluating current economic conditions.

There are, of course, other consumer assets that are liquid in nature, most particularly, reserves on life insurance policies, stocks and bonds of corpora-
tions, and bonds of State and local governments. Although it was not deemed feasible to obtain a valuation of these assets from consumers, it was decided to obtain in this second survey information about the ownership of houses, securities other than Federal, and life insurance.

About 9 per cent of all spending units indicated that at least one member of the spending unit owned stocks and bonds other than Federal in the early part of 1947, over two-fifths of all spending units (excluding farm operators) indicated that they owned their homes, and more than threefourths of the spending units reported that at least one of their members carried life insurance.

The accompanying chart shows the wide variation in ownership of securities by income groups. As few as 4 per cent of the spending units with incomes under $\$ 1,000$ and over 50 per cent of those with incomes of $\$ 7,500$ or more had securities other than United States Government securities. There was not as marked a difference in the percentage of spending units in the various income groups owning houses and insurance.

Professional persons reported security ownership most frequenty, as shown by Table 8, while managerial and self-employed persons most often owned their houses and carried life insurance. People living in metropolitan areas most frequently owned stocks and carried life insurance, but they owned their homes less frequently than did other groups.

Table 8
Characteristics of Spending Units Owning Various Types of Nonliquid Assets

| Open country.. | 9 | 55 | 61 |

${ }^{1}$ House ownership shown only for nonfarm spending units.
${ }^{2}$ Not available. Among farm operators 64 per cent reported that they owned all or some part of the land they farmed.

On the average, 2.3 persons in each spending unit that reported carrying life insurance were insured. It is estimated that the total number of persons in the United States carrying life insurance in early 1947 exceeded 80 million.

## Comparison of Survey Aggregates with Other Aggregate Data

The purpose of the Survey of Consumer Finances is to find out about the distribution of income, saving, and liquid asset holdings among spending units, to ascertain the plans of spending units for purchasing durable goods and for transferring liquid assets to various types of investment, and to find out what their general attitudes are concerning the economic outlook. The major findings related to this objective have been presented in this article and in articles in the June and July issues of the Bulletin. In addition, it is possible to make estimates of aggregates such as personal income, saving, and liquid asset holdings from survey results. Information about their order of magnitude in relation to recognized outside estimates is of interest.

Because of certain types of sampling and reporting errors in consumer interview surveys, estimates of expanded aggregates based on survey results, particularly aggregates expressed in dollar
terms, are less reliable than the major survey findings of the present survey. ${ }^{5}$ Such estimates are derived by multiplying the average or mean value for the sample spending units of the particular item being estimated (money income, amount saved, etc.) by the total number of spending units or 46.3 million. As indicated in a previous article, in the case of income, saving, and liquid asset data certain types of statistics such as the mean are subject to greater error than a median value or a frequency distribution showing the proportion of spending units with various characteristics. ${ }^{6}$

To illustrate, the mean income is subject to much greater error than the median income or a percentage distribution of spending units by income groups, because each individual affects the median or a percentage distribution to the same degree but his effect on the mean is weighted by the size of his income. The chance inclusion or exclusion of a high-income person in the sample, then, may affect the mean substantially but not the median. Further, there are differences in the degree of error in different mean values. A statistic such as a mean income of the people who bought automobiles is subject to greater percentage error than the mean price they paid for their automobiles since the former figure is an average computed from a series of dollar amounts that have a much greater range from the lowest to the highest reported figure than a series of prices paid for automobiles. While survey data in the form of frequency distributions are also subject to certain limitations, the margin of error is narrower than when the data are expressed in the form of mean values representing all spending units or families.

Reporting errors in consumer interview surveys, considered apart from sampling errors, affect both the mean values and the frequency distributions, although they affect the latter to a lesser extent than the former. Reporting errors arise first because the data supplied by spending units are based largely on memory. While it is true that some respondents check their records or notebooks before answering certain questions, in most instances the answers are given from memory and people's recollections are sometimes inaccurate. Secondly, reporting errors arise because people are reluctant to divulge certain types of information or complete information about

[^4]certain types of issues. Interview methods used in the survey minimize this type of error but in the case of some financial data (for example, hidden currency hoards) it is not possible to overcome reluctance on the part of some respondents to provide this kind of information. Both forms of reporting errors are of particular importance when aggregate national data are computed. Forgetting certain occasional income receipts, or the desire not to divulge one's entire income, may not affect the respondent's income bracket but does affect the mean income and hence the aggregate income computed for all people. Even if the income bracket or the savings account bracket is affected by a reporting error, incorrect reports by many respondents are needed to alter appreciably the frequency distribution (proportion of spending units in the respective bracket), while the extent of each incorrect report affects the size of the national totals computed from the survey.
After making allowances for differences between the coverage of the survey estimates of income, saving, and liquid asset holdings and the coverage of recognized estimates by other sources, it appears that the expanded survey totals are in reasonable accord with outside estimates of these aggregates. ${ }^{\text {² }}$ The percentage relationships listed below should be considered approximations since it was difficult to make precise adjustments for comparability because of differences in coverage and in definitions of concepts. In the case of income, the expanded survey total for 1946 amounted to about 85 per cent of the Department of Commerce estimate after adjustiment for comparability. The expanded survey total of liquid assets (including checking and savings accounts and United States Government bonds) as of early 1947 covered about two-thirds of the Federal Reserve Board's estimate of personal liquid asset holdings of these types. This result was comparable to that of last year's survey in that the coverage of United States Government bond holdings was more complete than for other types of liquid assets. The

[^5]survey estimate accounted for about 80 per cent of bond holdings, 60 per cent of saving account holdings, and 60 per cent of checking account holdings. ${ }^{8}$ Survey estimates of amounts saved in 1946 totaled about 70 per cent of the Securities Exchange Commission estimates after adjustments for coverage and about 80 per cent of the Department of Commerce estimates. The percentage of personal income saved as derived from the survey agrees closely with the Department of Commerce estimate after adjustment for differences in coverage.

Another outside estimate with which survey estimates may be compared is the number of new automobiles bought by consumers. This was shown as 1.5 million in Part I of this series. Outside estimates show that 1.8 million new passenger cars were registered domestically in 1946 (source: R. L. Polk and Company) and it is estimated that at least 300,000 of these registered cars were business or Government purchases, not consumer purchases.

Tables 9 through 13 contain supplementary information relating to results presented in the text.

# MEMBER BANK LOANS TO SMALL BUSINESS ${ }^{1}$ 

## by

Charles H. Schmidt

Small businesses are the most numerous of all business borrowers at member banks, both large and small. They obtain bank credit primarily through loans of less than $\$ 5,000$ each. Thus the aggregate dollar volume of member bank loans to small business is low and a significant increase in the number of small businesses financed would mean only a slight increase in bank earning assets.

Small business concerns form the major part of the business population and play an important role in the manufacture and distribution of goods and in providing services for consumers. To some extent the success of these small concerns is influenced by the volume of commercial bank credit available for their use, and by the terms and conditions upon which it may be obtained. Comprehensive and detailed information on bank loans to small business has been greatly needed for a better understanding of their financing problems.

Information on member bank loans to small business has become available through the recent Federal Reserve System survey of member bank loans outstanding on November 20, 1946. Almost 2,000 member banks, including banks in all regions and size classes, participated in the survey and submitted detailed information on about 100,000 individual loans to businesses of all sizes. The sample of loans included about one-sixth of

[^8]the estimated total number of loans outstanding at member banks on the date of the survey.

A significant part of the total amount of bank credit to small business is extended by nonmember banks (insured and uninsured) which were not covered by the survey. Most of these banks are small. Like the smaller member banks, they are usually located in rural or small urban communities, and their business loans are made chiefly to small local enterprises. Although the volume of credit extended to small businesses by these banks as of the date of the survey is not known, it must have been less than 950 million dollars, the amount of total commercial and industrial loans of these banks at the end of 1946.
For purposes of this article, small business has been defined as follows: small manufacturing and mining concerns, total assets of less than $\$ 750,000$; small wholesale trade concerns, total assets of less than $\$ 250000$; small retail trade, service, construction, public utility (including transportation), and all other concerns, total assets of less than $\$ 50,000 .^{2}$

## Summary

Some of the more important aspects of member bank loans to small business, as shown by the survey data, were:
(1) On November 20, 1946, three-fourths of the total number of member bank loans were extended to small businesses. Credit to small concerns included 514,000 loans, totaling 2.9 billion dollars.
(2) The typical loan to small business was between $\$ 1,000$ and $\$ 5,000$ in size. Loans of this size were usually made to unincorporated concerns, many of which were established after 1942. In about half the cases, such loans were secured by equipment, endorsed or co-maker note, plant and other

[^9]real estate, or inventories. In four of every five cases such loans had a maturity at time of making of not more than one year, and bore interest at average rates of 5 to 7 per cent per annum, depending upon the type of security employed.
(3) A larger proportion of the dollar volume of credit to small business was extended to manufacturing and mining and wholesale trade concerns than might have been expected on the basis of either their larger size or their relative numbers in the small business population. Retail trade, service, and other small business concerns received proportionately less of the total credit. Small retailers, however, are the most numerous, in terms of both number of bank borrowers and number of concerns.
(4) A very large proportion of the business loans of the smallest banks was made to small concerns. Larger banks, however, are more important suppliers of credit to small business than is generally assumed; approximately three-fifths of the number and three-fourths of the amount of all member bank loans to small business were made by banks with total deposits of 10 million dollars and over.
(5) Almost four-fifths of all member bank loans to small business had original maturities of not more than a year. The term loan, however, is a much more important source of funds for small business than has been commonly supposed. Maturity of loan varies greatly with business of borrower, the longer-term loans being relatively more important among small public utility and service concerns than among small wholesalers and manufacturing companies.
(6) Despite wide variations in rates of interest paid by individual borrowers on individual loans, the majority of interest rates for loans of a given type tend to cluster about their average, which generally is higher for small businesses than for large companies. Over three-fifths of all loans of $\$ 1,000-$ $\$ 5,000$ to small business concerns were made at rates of 5 to 6 per cent, inclusive, with an average of 5.7 per cent for all loans in this size range to small business.
(7) As a general rule, the average annual interest rate increases sharply as the size of the loan, and presumably the size of borrower, decreases. Longterm loans secured by equipment usually bear higher interest rates and are smaller in size than are other types of loans. Except for loans under $\$ 1,000$, the larger banks extend credit at slightly
lower rates for a given type of loan than do the smaller banks, but the spread in interest rates by size of bank is slight.

## Volime and Distribution of Bank Loans to Small Business

Share of small business in bank loans. As of November 1946 an estimated 2.9 billion dollars of member bank credit was extended to small business. In view of the large expansion in dollar volume of inventory holdings and the growth in charge account and instalment sales that characterized business as a whole during 1946, it is of some interest to find that not more than an estimated 514,000 small businesses, or probably about one-sixth of the small business population, were borrowing from member banks. ${ }^{3}$
That the number of small business borrowers was not larger may be attributed in part to the wartime accumulation of liquid assets and the continuing profitability of operations that permitted many small businesses to finance themselves. In part it may result from the availability of credit from other sources, such as credit extended by trade suppliers, or from the inability of some concerns to meet the customary standards for bank credit. That the amount borrowed did not exceed 2.9 billion dollars reflects also the characteristically small financial requirements of individual borrowers. In part, also, it results from the limited resources of the average small business, which place a ceiling on the amount of credit than can be extended in accordance with established bank lending practice.
In view of these considerations it is doubtful whether the dollar volume of loans to small business would ever loom very large in the over-all bank credit picture. For example, a doubling of the amount of such loans outstanding in November 1946, with all that this implies with respect to the willingness of small concerns to borrow, the activities of banks seeking new loan opportunities, and the eligibility of applicants to obtain bank credit, would have brought the total to less than 6 billion dollars. This compares with total loans and investments of all member banks of 96 billion dollars at the end of 1946.

Small business concerns greatly outnumbered other business borrowers on November 20, 1946,

[^10]even though they accounted for only a small proportion of the dollar volume of outstanding business credit. As shown in Table 1, three-fourths of the total number of business loans at member banks, as contrasted with only one-fifth of the total dollar volume, were to small concerns. In each of the major industry groups, small business accounted for a large proportion of the number of bank loans, the highest being 87 per cent in manufacturing and mining, and the lowest being 50 per cent for the "all other" group. In retail trade, which included the largest number of small business borrowers, nearly four-fifths of all loans were made to small concerns, while in public utilities (including transportation) small concerns accounted for over seventenths of all member bank loans.

1 In this and all subsequent tables small businesses are defined
in terms of total assets of each concern in 1946, as follows: manuin terms of total assets of each concern in 1946, as follows: manufacturing and mining, under $\$ 750,000$; wholesale trade, under $\$ 250.000$; retail trade, public utilities. services, construction, and all other (including sales finance), under $\$ 50,000$.
${ }^{2}$ Includes loans to sales finance companies and a small number
of loans unclassified by business of borrower.
Note.-Detailed figures may not add to totals because of rounding.

Variation in the importance of the credit obtained by small, relative to all, businesses in the several industry groups was much wider when dollar volume rather than number of loans was considered. This was primarily the result of differences in the average size and credit requirements of small concerns in different industries. Thus in retail trade, small businesses received nearly one-third of the outstanding volume of member bank credit to retailers. In contrast, small concerns in the public utility and transportation industry, which is dominated by the giant telephone, electric power, and railroad systems, accounted for less than 6 per cent of the out-
standing volume of member bank loans to all concerns in the industry.

Share of large and small banks in loans to small business. The role of larger banks in the financing of small business is frequently overlooked, on the assumption that their credit facilities are not geared to the handling of small loans, and that small business is more commonly associated with local banks in rural and minor urban areas. In reality, a large number of small businesses borrow from the larger banks, either directly or through the correspondent relationship of a local bank. As indicated by Table 2, 60.75 per cent of the total number of

${ }^{2}$ Number of member banks as shown in Federal Reserve Bulletin, March 1947, p. 260. For use in loan survey, number includes branches of certain member banks which were considered separate lending institutions for sampling purposes and excludes some member banks with no commercial and industrial loans outstanding. So defined, the total number (7.639) is about 10 outstanding. So defined, the total number ( 7.639 ) is about 10 page 998 of this BULLETIN.
Note.-Detailed figures may not add to totals because of rounding.
business loans of banks with deposits of 10 million dollars or over were made to small business. As a result, these banks granted approximately threefifths of the number and three-fourths of the dollar amount of all member bank loans to small business. While manufacturing and mining concerns accounted for a substantial part of the bank credit to small business at the larger banks, the distribution of loans by size of bank indicates that small retail trade, service, and construction concerns also obtained a good share of their loans from banks with deposits of 10 million dollars or over.
While the smaller banks did not account for the major proportion of bank loans to small business, their lending operations were primarily concerned with meeting the credit needs of small businesses
in relatively small communities. For the 6,100 member banks with total deposits of less than 10 million dollars each, representing four-fifths of the member bank population as shown in Table 2, loans to small businesses accounted for roughly nine-tenths of the number and seven-tenths of the amount of outstanding business credits. ${ }^{4}$

As regards the terms and conditions upon which small businesses obtained their funds, the survey indicates comparatively minor differences so far as size of bank is concerned. For example, average interest rates on loans to small business did not vary by more than 1.4 percentage points from the smallest to the largest banks. For most loans of a given size to small businesses, interest rates were slightly lower at large than at small banks. For loans under $\$ 1,000$, however, small businesses paid a little more at the large banks, where such loans are often made in the personal loan departments.

Regional distribution. Distribution of bank loans to small business by Federal Reserve districts reflected primarily the regional distribution of small business. Within each district, as is shown in Table 15 at the end of this article, the greatest number of these loans was made to retail trade concerns, which accounted for roughly two-fifths of all small business loans. In most districts manufacturing and mining concerns received about one-fifth of the loans, though two of the less industrialized districts reported proportionately fewer credits to small manufacturers. Relatively greater regional variation in the distribution of loans occurred in the case of wholesale trade, service, construction, and public utilities, reflecting perhaps some variation in the relative importance of these activities in different Federal Reserve districts.
In terms of dollar volume, manufacturing and mining received the largest share of the loans in every district, with some variation in proportion reflecting the greater importance of manufacturing and the presence of larger concerns, on the average, in some areas. Regional differences in the relative amounts of credit received by other industry groups followed the same general pattern as for number of loans.

## Characteristics of Small Concerns Utilizing Bank Credit

Business of borrower. Small business concerns predominate in those industries requiring relatively

[^11]little fixed capital investment and involving a scale of operations such that one man, usually both manager and owner, can supervise all phases of the business. Retail trade probably accounts for about half of all small business concerns. Next is the services group, accounting for roughly one-fourth; the remaining fourth is made up of manufacturing and mining, public utilities, construction, wholesale trade, and small concerns in miscellaneous industries.
Small businesses that seek funds from external sources are generally more dependent than larger concerns upon short-term and intermediate credit to finance their working capital needs and purchases of fixed assets. This is primarily because they lack access to long-term borrowed and equity funds, and are often unwilling to share management in order to obtain equity capital. ${ }^{5}$ However, it appears from the survey that there is considerable variation from one industry to another in the extent to which small concerns use bank credit. This is indicated in a general way by major industrial differences in the distribution of the number of member bank loans to small business, as compared with the industrial pattern of the small business population previously noted.
Fewer small retail trade concerns appear to borrow from banks than their numerical importance in the business population might imply. Although they comprised the largest single group of small business borrowers in November 1946, small retail trade concerns, as shown by Table 3, accounted for less than half ( 38 per cent) of the total number of member bank loans to small business. To some extent this may result from the well established practice whereby many small stores secure shortterm credit from their suppliers. Small service concerns, with roughly 12 per cent of the loans, were also considerably less numerous users of bank credit than their numbers in the business population would suggest. The remaining industry groups, which probably constitute only about one-fourth of the total number of small businesses, accounted for half of the number and nearly four-fifths of the amount of member bank loans. In large part this reflects the extensive use of credit by small manufacturing and mining concerns, whose size is larger on the average than that of other small businesses; one-fifth of all bank loans to small business and

[^12]nearly half of the outstanding volume were to these concerns.

Differences by industry in the amount of bank credit used by small concerns are reflected in the average loan sizes shown in Table 3. The major differences are traceable to differences in size of borrower. Thus the average loan to small retailers was $\$ 2,400$, compared with $\$ 9,600$ to wholesalers and $\$ 13,200$ to manufacturers, both of which are larger in terms of total assets. Nevertheless, when size of business is held constant there is evidence of appreciable differences in financing requirements from one industry to another. Thus the average loan for small construction concerns was $\$ 3,200$, as compared with $\$ 2,400$ for small retailers, though the size criterion employed is the same for both. Similarly, loans to manufacturers and wholesalers with total assets of less than $\$ 50,000$ were larger on the average than those to small retail trade concerns.

Survey data for industry subgroups, though of somewhat limited value for analyzing small business, indicate that the number of small business concerns in an industry, as well as the size of business unit and the credit requirements of the industry, results in variations in the number and
amount of loans within industries. Thus, in both retail and wholesale trade the food, liquor, tobacco, and drug concerns received the largest number and amount of loans, and the home furnishings, metal products, and building materials group the next largest number. In manufacturing and mining, the metals and metal products group and the "all other" group (largely paper, printing and publishing, and building materials) contained the greatest number of bank borrowers.

Small businesses in the service, public utility, and construction fields present a special credit situation. To an increasing extent they require modern, specialized equipment in order to operate in their respective fields. This is true whether they offer personal services, run repair shops, provide trucking or some other local public utility service, or whether they carry on one of the many phases of subcontracting in the construction industry. They require short and intermediate credits to finance general working capital needs and purchases of equipment. Since the earnings prospects of such borrowers may be difficult to judge, banks are disposed, in making such loans, to seek some additional assurance of repayment in the form of security.

Predominance of unincorporated concerns. Unincorporated businesses-sole proprietors, and to a lesser extent partnerships-are the types of organization most frequently encountered among small businesses. As shown by Table 4, roughly fivesixths of all small businesses with loans outstanding from member banks on the survey date were unincorporated. In four industry groups, unincorporated concerns accounted for $93-95$ per cent of the number of loans to small business concerns.
small concerns may have incorporated in preparation for further growth, and, by being aggressive in promoting their business activities, may have acquired a better standing as credit risks. Moreover, incorporation probably imposes greater responsibility upon management to keep adequate records, which can be used in appraising the creditworthiness of the loan applicant. Also, through incorporation and the sale of stock the average small business may be able to attract larger amounts of equity capital,

${ }^{1}$ See Table 1 for definition of small businesses.
${ }^{2}$ Includes loans to sales finance companies and a small number of loans unclassified by business of borrower.
Note.-Detailed figures may not add to totals because of rounding.

The average loan to small incorporated manufacturing and mining concerns was nearly three times as large as the average loan to unincorporated concerns in the same industry. For the other industry groups the difference in average loan size was much less, the incorporated concern borrowing about twice as much as the unincorporated concern, on the average. These differences largely reflect the predominance of unincorporated concerns among the smaller units in the business population.

As was pointed out in an earlier article in this series, small concerns pay higher rates of interest than large concerns for loans of a given size, while smaller loans bear higher rates of interest than large loans, on the average. ${ }^{6}$ To a great extent the higher rates of interest paid by unincorporated borrowers are attributable to their smaller size and smaller loans. In addition, some of the effects of incorporation discussed in the earlier article are especially relevant with reference to small business. Many

[^13]and thus improve its credit position. As size and equity capital investment increase, the chances are that a business concern will also have larger holdings of securities and fixed plant and equipment to offer as security for loans.
New vs. old business. During the first years of American participation in World War II, the number of small business concerns declined sharply as their owners entered military service or sought employment in shipyards and factories. Starting in 1944, however, the number of new businesses began to exceed the number of discontinued businesses, the margin widening with the cessation of hostilities.

Comparison of the estimated number of business concerns in existence in 1943 with those in existence as of mid-1946 indicates a net increase, allowing for discontinuances, of some 643,000 in the business population. ${ }^{7}$ Many of these new businesses, the vast majority of which would be classed as small, were financed with accumulated wartime savings; others were started by returning veterans with or

[^14]without the assistance of the loan guarantee or insurance provisions of the Servicemen's Readjustment Act (G.I. bill).

That a number of the businesses organized since 1942 were borrowing from member banks is indicated by Table 5. ${ }^{8}$ All told, 180,000 loans, amounting to 730 million dollars, were outstanding on the survey date to businesses organized since 1942; they accounted for roughly one-third of the number and one-fourth of the amount of all credits to small business.

| All business groups. | 334 | 180 | \$2,158 | \$730 |

[^15]Manufacturing and wholesale trade, which accounted for 17 per cent of the increase in the business population, accounted for 27 per cent of the borrowers organized since 1942. About 45 per cent of the increase in the business population, and approximately the same percentage of new borrowers, were represented by retail trade concerns. Rough as these comparisons are, they suggest that newly organized manufacturing and wholesale trade concerns were somewhat more dependent upon, or more successful in obtaining, bank credit than were their counterparts in the public utility, service, and construction industries, which accounted for 34 per cent of the increase in the business population, but only 25 per cent of the new borrowers.

As regards the average size and term of loans to

[^16]new businesses, the survey data indicate that loans to concerns organized since 1942 were, on the average, about two-thirds the size of those to older concerns. Most of this difference in size can be attributed to the fact that concerns organized in 1942 or before, having been in existence longer, had achieved somewhat larger size. Survey data also indicate that a higher percentage of loans to new business concerns was secured, and that interest rates on both secured and unsecured loans were slightly higher for such borrowers than for concerns established earlier.

## Characteristics of Loans to Small Business

Size of loan. Nearly three-fourths of the estimated 514,000 member bank loans to small business outstanding in the latter part of 1946 represented advances of less than $\$ 5,000$ each. The very minor scale on which the operations of many small businesses are conducted is further evidenced by the frequency of the loan of less than $\$ 500$. It accounted for nearly one-sixth of all bank loans to small retailers, over one-fifth of the loans to small service establishments, and one-seventh of the loans to small construction concerns.
The size group which includes the largest proportion of the loans to small businesses is $\$ 1,000 \$ 5,000$. As shown by Table 6,45 per cent of all member bank loans to small businesses fell within this range. This proportion varied from industry to industry, being highest for the public utility group and retail trade concerns ( 52 per cent and 51 per cent, respectively), and smallest for manufacturing and mining concerns ( 34 per cent). Small concerns in manufacturing and mining and in wholesale trade, being larger by definition than small concerns in the other industry groups, had a somewhat higher proportion of their loans in amounts of $\$ 5,000$ or more (about 50 per cent, as compared with 16 per cent for the others).
Since roughly half of all loans to small business fell in the $\$ 1,000-\$ 5,000$ size class, this may be considered the representative or typical loan for the purpose of describing the terms and conditions upon which small business most frequently obtains bank credit. In four of five cases this typical loan had a maturity at time of making of not more than one year and in over three-fifths of the cases it was made on the basis of security. Among the more important types of security employed were equip-

NoTE.-Detailed figures may not add to totals because of rounding.
ment, endorsement or co-signature on the note, plant and other real estate, and inventories. About one of every two loans was obtained with one of these types of security.

Average annual interest rates on the typical loan varied by industry groups between 6.8 per cent (public utilities) and 5.5 per cent (wholesale trade). The median interest rates were generally somewhat above, though fairly close to, the arithmetic average. On the typical loan of $\$ 1,000-\$ 5,000$ to small retail trade concerns, for instance, the median was 6.0 per cent as compared with an average rate of 5.7 per cent. Interest rates also varied with the type of security employed (loans secured by equipment bearing the highest average rates, those by stocks and bonds the lowest) and with period to maturity, size of borrower, and size of bank.

Maturity and repayment method. Approximately four-fifths of all member bank loans to small business were repayable upon demand, or had maturities at time of making of one year or less. The majority of these short-term loans were repayable in a single lump sum and bore rates of interest which, depending upon the size of loan and type of security employed, were generally lower than rates
on loans of intermediate and sometimes even longer term,
Term loans. The term loan, defined as a loan with a maturity at time of making of more than one year, whether or not secured, has achieved considerable importance to small business. ${ }^{9}$ Providing for repayment on a serial or instalment basis, and frequently secured, the term loan affords a planned method of financing working capital requirements or the purchase of real estate or equipment at moderate cost. As such, it embodies many advantages for the small concern. Spacing repayments over equal intervals of time enforces a certain amount of financial planning, and to some extent minimizes the possibility that insufficient funds will be on hand when loans fall due.

Of the total number of member bank credits to small business outstanding in the latter part of 1946, a little more than one-fifth were term loans. As shown by Table 7 , the use of term loans by small borrowers yaried widely from one industrial group to another, depending on the nature of the credit

[^17]required. Thus, in the public utility field, 40 per cent of all loans to small business were made on a term basis; in wholesale trade only 12 per cent. As a group, small retail trade concerns obtained approximately one-fourth of their loans on a term basis, but within retail trade the proportion of term loans varied from 14 per cent for apparel, dry goods, and department stores to 32 per cent for food, liquor, tobacco, and drug outlets. Somewhat smaller variations are noted within the manufacturing and mining subgroups.

Over three-fifths of all term loans to small businesses were for periods of one to three years, onefifth for periods of three to five years, and an additional fifth for periods of five years or longer. Repayment in equal instalments over the life of the loan was favored in the overwhelming majority of cases in each maturity classification; all other methods of repayment, including the single payment, serial notes, or serial payments, and unequal instalments, accounted for no more than one-seventh of all the loans in any group. Details are given in Table 8 on the following page.

Table 7
Term Loans of Member Banks to Small Businesses, November 20, 1946, by Business of Borrower ${ }^{1}$
[Estimates of outstanding loans]

[^18]Secured vs. unsecured loans. Small businesses in most lines of activity obtain a substantial amount of bank credit without having to furnish security; nearly two-fifths of the outstanding member bank loans to small business in November 1946 were unsecured. On the average, the unsecured loan was smaller than the secured loan, but in some industries certain types of secured loans were smaller than unsecured loans. Average interest rates on unsecured loans were lower than those on loans secured by some types of security and higher than those secured by other types of security.
The volume of unsecured loans made by member banks to small business is indicative of the familiarity of the banker with the management capabilities and future prospects of many small business concerns in his locality. These are major factors in the case of a concern whose resources and credit standing are not of themselves sufficient to assure repayment of the loan.
While a substantial proportion of bank loans to small business were unsecured, a much larger proportion, roughly three-fifths of the number and dollar volume, were secured by endorsement or cosigned note, or by the pledge of assets. By offering security for loans, many small business concerns that could not otherwise obtain bank credit are able to do so, while others are enabled to borrow larger amounts and at rates more nearly commensurate with those charged large borrowers on loans of comparable size.
The prevalence of secured loans among small borrowers, where they ranged from over four-fifths of all loans to small public utility concerns to slightly less than half of all loans to small retail apparel, department, and dry goods stores, can be ascribed to several factors. In the first place, the mortality rate of small businesses, especially those newly organized, is high. It is estimated that onefourth discontinue operations within one year and less than one-third survive for ten years. ${ }^{10} \mathrm{Al}$ though many of these casualties result from causes other than insolvency, failures are more frequent relative to the business population in the case of small than of large concerns. In such situations, security for loans serves as insurance against hazards that cannot be appraised with certainty. In the second place, most small business concerns cannot supply the detailed financial and

[^20]operating statistics on which banks must rely to some extent in evaluating the earnings prospects and creditworthiness of prospective borrowers. In cases such as these, although a bank places chief reliance on the good faith of the borrower, it requires the pledging of security as an additional measure of protection. In some instances the security may be the basis for more favorable credit terms than would otherwise be obtainable. In the third place, whereas most large business concerns operate on a regional or nation-wide basis and are in a position to shop around for credit among different banks, many small businesses are dependent upon their local banks for whatever credit they receive. In the absence of a competitive situation, the local bank is less inclined to waive the requirement of security, especially if the borrower is small and the financial and operating statements needed as a basis of credit appraisal are unavailable.
Types of security. The type of security for a given loan is largely determined by (1) the nature of the transaction being financed, (2) the availability of alternative security, and (3) the business of the borrowing concern. Thus a small retailer who borrows to finance the purchase of a delivery truck may not have stocks and bonds or fixed assets to offer as security, but he will probably require a loan of relatively small amount and intermediate maturity for which the asset acquired will serve as security. In the same way, the proprietor of a small cannery,
whose credit requirements are highly seasonal and of relatively short duration, may well use his own products as security for a loan to finance general working capital requirements during the canning season.
As of the survey date, as shown by Table 9, nearly five-sixths of the secured member bank loans to small business used one of five types of security: assignment of title or chattel mortgage on equip-

[^21]ment ( 30 per cent), endorsement or co-signature on note, or mortgage on plant and equipment (each, 18 per cent), stocks and bonds ( 10 per cent), and inventories ( 8 per cent). The remaining onefifth was covered, in order of importance, by life insurance, assignment of claims, accounts receivable, miscellaneous security, and Government participation or guarantee (including G.I. loans).

Equipment was the security most frequently pledged for bank loans to small concerns in public utility, construction, and service activities. This concentration is explained by the limited availability of other types of security to these businesses, as well perhaps as by their special financing requirements. Equipment was used as security in 75 per cent of all secured loans to small public utilities, 45 per cent of the secured loans to small construction concerns, and 37 per cent of those to small service establishments. With so much dependence on this type of credit, which usually carries high interest rates, the use of bank credit was relatively more expensive in these industries than in manufacturing and wholesale trade. The variety of security available to the latter industries is indicated by the distribution of loans shown in Table 9. These industries made greater use of stocks and bonds and of inventories than did most other industries.

From the bank's standpoint, different types of security involve different handling costs. The evaluation and supervision of stock and bond collateral, for example, is a much simpler and less ex-
pensive operation than is the appraisal and collection of assigned accounts receivable. It is partly for this reason that most forms of assigned claims play a very minor role as security for loans to small businesses.

Average interest costs for different types of security are indicated in Table 10, which also shows the average size of different types of secured loans. The most common type, that secured by equipment, is of smaller average size and bears a considerably higher rate of interest than any other type. Loans secured by stocks and bonds, inventories, or plant and other real estate are of larger average size and usually have lower than average interest rates. Of these three types of collateral, only plant and other real estate appears to have been generally used by small businesses to obtain a substantial proportion of their bank credit. For concerns in retail trade, service, and construction activities loans secured by plant and equipment were substantially larger than other secured loans and, partly as a consequence of their larger size, bore lower than average interest rates. The greater part (more than fourfifths) of the low-interest loans secured by stocks and bonds or inventories were made to concerns in manufacturing and mining and in wholesale and retail trade.

Bank loans granted on the basis of participation or guarantee, including Reconstruction Finance Corporation participations and blanket guarantees, Federal Reserve Bank participations and guaran-

August 1947
tees, and also loans made under the provisions of the Servicemen's Readjustment Act (G.I. loans), accounted for a very small proportion (roughly one-half of 1 per cent) of all secured loans to small business. However, the few loans of this type outstanding on the survey date were substantially larger, on the average, than other types of secured loans. Moreover, variations in interest rates from one size or maturity of loan to another were relatively small, reflecting the effect of the rate limits established for this type of borrowing.

Analysis of the survey data reveals that new small businesses, that is, those organized since 1942, not only had a larger proportion of secured loans than did small businesses organized in 1942 or before, but that the types of security pledged most frequently by the respective groups were not the same. Compared with the older businesses, the newer businesses made more frequent use of the endorsed or co-signed note and of inventories and equipment, and less frequent use of other types of security, including plant and other real estate, and stocks and bonds.
Interest costs. As was noted in an earlier article on the loan survey, rates of interest paid on bank loans decreased as size of borrower increased. ${ }^{11}$ Thus, concerns with total assets of 5 million dollars or more paid on the average only 1.9 per cent per annum for bank credit while small businesses, as defined for purposes of this article, paid 4.5 per cent.

As shown by Table 11, the average rate of interest paid by small business concerns varied markedly with the size of loan, ranging from 7.4 per cent on loans of less than $\$ 500$ to 3.8 per cent on loans of $\$ 25,000$ or more. Inasmuch as 28 per cent of the loans to small business involved amounts under $\$ 1,000$, a considerable portion of their borrowing was at the higher rates, which averaged 7.4 per cent on loans of less than $\$ 500$, and 6.8 per cent on loans of $\$ 500-\$ 1,000$.

Variations from industry to industry in average interest rates for loans of the same size were not very great. The largest difference was for loans of $\$ 25,000$ or more; average rates for loans of this size to construction concerns were 1.5 percentage points higher than for those to manufacturing and mining concerns. However, rates on individual loans varied considerably around the averages. For

[^22]a loan of comparable size in any one industry, some small businesses borrowed at rates commensurate with those paid by larger concerns, while others paid rates well above the average for small

businesses. As shown by Table 12, some small retail trade concerns borrowing from $\$ 1,000$ to $\$ 5,000$ paid less than 1 per cent per annum while others paid 10 per cent or more. For the most part, however, interest rates on loans of this size to small retailers were between 4 and 7 per cent.

Table 12
Member Bank Loans of $\$ 1,000-\$ 5,000$ to Small Retail Trade Concerns, November 20, 1946, by Interest Rate Class ${ }^{1}$
[Estimates of outstanding loans]

| Interest rate classes <br> (Per cent per annum) | Number of loans |  |
| :---: | :---: | :---: |
|  | In thousands | Percentage distribution |
| 0.0-0.9. | 0.2 | 0.2 |
| 1.0-1.9. | (2) | (3) |
| 2.0-2.9. | 0.7 | 0.7 |
| 3.0-3.9. | 3.2 | 3.2 |
| 4.0-4.9. | 18.1 | 18.0 |
| 5.0-5.9. | 23.7 | 23.6 |
| 6.0-6.9. | 39.2 | 39.0 |
| 7.0-7.9. | 2.6 | 2.6 |
| 8.0-8.9. | 5.3 | 5.3 |
| 9.0-9.9 | 0.5 | 0.5 |
| 10.0 and over. | 7.1 | 7.0 |
| All loans.. | 100.6 | 100.0 |

[^23]As shown by Table 13, interest rates paid on loans of $\$ 1,000-\$ 5,000$ by small business concerns in other industry groups were likewise concentrated about the average rates for loans of this size. Thus, when all loans of $\$ 1,000-\$ 5,000$ are arranged in order of magnitude of interest rates charged, the central or median loan for all industry groups combined was found to bear interest at the rate of 6.0

${ }^{1}$ See Table 1 for definition of small businesses.
2 Includes loans to sales finance companies and a small number of loans unclassified by business of borrower.
Note.-To obtain the quartiles and median, the loans of $\$ 1,000-$ $\$ 5,000$ for each business group were arranged according to their interest rates, starting with the lowest rate and progressing through the highest. The first quartile is that loan which separates the first fourth of the loans arranged by interest rates from the remaining three-fourths; the median, that loan which separates the maist half from the second half; the third quartile, that loan which separates the first three-fourths from the remaining one-fourth.
per cent. If the range is broadened to include onehalf of the loans on either side of the central or median loan, the lower limit or first quartile loan bore a 5.0 per cent interest charge, while the upper limit or fourth quartile loan bore an interest charge of 6.0 per cent. In all, over three-fifths of the loans of $\$ 1,000-\$ 5,000$ to small businesses bore interest rates between 5.0 per cent and 6.0 per cent inclusive.
It was pointed out in an earlier article in this series that nearly all of the major types of secured loans to small businesses carried average interest rates below the average rates on unsecured loans. ${ }^{12}$ However, this may have reflected somewhat the differences in size of loan shown in Table 10. Thus, some types of secured loans bearing average rates of interest lower than those for unsecured loans were substantially larger in average size. In addition, it should be noted

[^24]that two-thirds of the total number of secured loans to small business were endorsed or comaker notes, or were secured by equipment or by plant and other real estate. These types of secured loans have average interest rates as high as or higher than the average rates on unsecured loans to small businesses in the same industry group. The fact that many secured loans to small business carried higher interest charges than many unsecured loans indicates that security may often be requested when borrowers are in a weaker than average financial position.
Variations in average interest rates on loans of different maturities to small business are shown in Table 14. Loans with original maturities of

${ }^{1}$ See Table 1 for definition of small businesses.
Note.-Detailed figures may not add to totals because of rounding.
one to three years have the highest average interest rates, ( 5.6 per cent) and demand loans the lowest ( 4.2 per cent). Roughly two-thirds of the total number of loans to small businesses had maturities at time of making of six months or less and bore rates of interest averaging around 4.3 per cent. Loans with maturities of more than three years bore somewhat lower average interest rates than those of intermediate maturity (six months to three years), though slightly higher rates than loans with original maturities of six months or less. The lower average interest rates on loans of longer maturity, which is somewhat surprising, is accounted for in part at least by the fact that many of the longer-term loans were large real estate loans which commercial banks obtained by offering terms similar to those offered by other financing institutions, while many of the loans of intermediate maturity were small equipment loans for which there were fewer lenders competing.

[^26]
## TRANSACTIONS IN GOLD AT PREMIUM PRICES ${ }^{1}$

It is well known that active speculative markets in gold exist in various foreign countries. For the most part, these markets are illegal, though in a few instances importation or sale of gold is legal or is tolerated. Under present circumstances gold is traded in many foreign centers, often against United States dollars, at prices above monetary parities. The premiums differ from one center to another, so that speculators can make large profits by purchasing gold in one foreign market and selling it in another.

The International Monetary Fund recently issued a statement ${ }^{2}$ deprecating international dealings in gold at premium prices, and requesting member countries to take such action as they can within

[^27]their jurisdictions to prevent such dealings. The Fund emphasized that these transactions tend to undermine exchange stability and cause gold to flow into private hoards rather than into monetary reserves. Furthermore, in countries where the gold is sold, payment is often made with dollars illegally acquired or held. Moreover, foreign exchange which otherwise could be used for sorely needed imports is diverted to the purchase of gold for private hoards.
In view of these circumstances, and on general grounds of the national policy, the Treasury Department and the Board of Governors of the Federal Reserve System request American individuals, banks and business enterprises to refrain from encouraging and facilitating this traffic and in particular to refrain from extending the use of their facilities and funds for the carrying out of such transactions.

## TERMINATION OF RATION BANKING PROGRAM

The Ration Banking Program inaugurated in 1943 as a part of the general ration control program was terminated effective July 1, 1947. Since June 30 , ration banking activity in the banks has been limited to the clearance of a small number of ration checks which failed to clear to the bank on which drawn prior to the closing date and to the rendering of final statements and reports.

The Ration Banking Plan, as described in the Federal Reserve Bulletin for February 1943, was developed by the Office of Price Administration with the cooperation of Federal and State bank supervisory authorities, the American Bankers Association, and representative bankers. After having been tested in 33 banking offices in the Albany-Troy-Schenectady area of New York, the Plan was placed in operation on a nation-wide basis in January 1943.

Under ration banking, ration stamps, coupons, certificates, tokens, and other ration evidences taken in by storekeepers, wholesalers, and other sellers of rationed commodities in the course of business from their customers were deposited with the participating banks to the credit of the ration accounts of the depositors. Ration bank accounts were handled in much the same manner as regular bank
accounts except that they were kept in units of measure instead of units of value. The ration depositor drew ration checks on his ration account in favor of his supplier of goods. The general public did not participate in ration banking. In addition to the thousands of commercial banks participating in the ration banking program, the facilities of the Federal Reserve Banks and their 24 branches were used in effecting the clearance of ration checks.
In a letter dated June 4, 1947, addressed to all banks participating in ration banking, Irvin L. Rice, Acting Administrator of the Sugar Rationing Administration, United States Department of Agriculture, in announcing the termination of the ration banking program, stated:
"The activities of those banks which participated in ration banking will, I feel confident, be recorded in history as an outstanding contribution to the war effort. The people are greatly indebted to the Na tion's banking institutions for the major parts they played in assisting in the equitable distribution of scarce commodities. Their participation in the Ration Banking Program has been an important $\operatorname{cog}$ in the rationing system. I wish to take this opportunity to express my personal gratitude to them."

## LAW DEPARTMENT

## Administrative interpretations of banking laws, new regulations issued by the Board of Governors, and other similar material.

## Consumer Credit

## Authorization to Continue Regulation

By Joint Resolution of Congress approved August 8, 1947, the authority of the Board of Governors of the Federal Reserve System to exercise regulatory control of consumer credit was continued for a temporary period. Under this law, such control cannot be exercised after November 1, 1947. The text of the Joint Resolution and an accompanying statement issued by the President are set forth below:
[Public Law 386-80th Congress]
[Chapter 517-1st Session]
[S. J. Res. 148]
JOINT RESOLUTION
To authorize the temporary continuation of regulation of consumer credit.
Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That after November 1, 1947, the Board of Governors of the Federal Reserve System shall not exercise consumer credit controls pursuant to Executive Order Numbered 8843, and no such consumer credit controls shall be exercised after such date except during the time of war beginning after the date of enactment of this joint resolution or any national emergency declared by the President after the date of enactment of this joint resolution.

Approved August 8, 1947.

## Statement by the President

## August 8, 1947

I have today approved the Joint Resolution of Congress (S. J. Res. 148) authorizing continuation of regulation of consumer instalment credit until November 1, 1947. I regret that the Congress did not see fit to follow the recommendation of the Federal Reserve Board and of the Council of Economic Advisers, in which I fully concurred, by enacting legislation to provide for continuing as long as necessary regulation of consumer credit as a means of helping to promote economic stability. It is unfortunate that the Congress did not provide for restraints on overexpansion of instalment credit in order to diminish inflationary pressures arising from this source.

Continuation for the next three months of present controls, as now provided under Regulation W of the Federal Reserve Board, has, however, been permitted and implied by the Congress and this is preferable to immediate abandonment of these restraints. For that reason I have signed the Joint Resolution.

Not only during the next three months while the controls remain in full force and effect but for an indefinite period thereafter, it will be in the public interest for every merchant and financial agency extending instalment credit to avoid undue relaxation of terms. It will be far better to reduce prices rather than to relax terms in seeking new customers. Self-restraint on the part of those who use credit as well as upon the part of those who extend it will reduce the danger of an overexpansion of instalment credit which would inevitably be followed by severe contraction, thereby contributing to unemployment and to reduced production.

## Cost of Federal Reserve Branch Bank Buildings

Under a provision of Section 10 of the Federal Reserve Act, the cost of a branch bank building of a Federal Reserve Bank, exclusive of the cost of vaults, permanent equipment, furnishings, and fixtures, is limited to $\$ 250,000$. This provision was amended by Act of Congress approved July 30 , 1947, to provide that the limitation shall not apply as long as the aggregate of such costs incurred by all Federal Reserve Banks for branch bank buildings with the approval of the Board of Governors does not exceed $\$ 10,000,000$. The text of the Act is as follows:
[Public Law 262-80th Congress]
[Chapter 352-1st Session]
[S. 1519]
AN ACT
To amend Section 10 of the Federal Reserve Act, as amended, and for other purposes.
Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the ninth paragraph of Section 10 of the Federal Reserve

Act, as added by the Act of June 3, 1922, and amended by the Act of February 6, 1923 (U. S. C., title 12, sec. 522), is hereby amended by changing the period at the end thereof to a colon and by adding the following proviso: "Provided further, That the cost as above specified shall not be so limited as long as the aggregate of such costs which are incurred by all Federal Reserve banks for branch bank buildings with the approval of the Board of Governors after the date of enactment of this proviso does not exceed $\$ 10,000$,000."

Approved July 30, 1947.

## Cancellation of Stock of Federal Deposit Insurance Corporation

By Act of Congress approved August 5, 1947, provision was made for the retirement and cancellation of the capital stock of the Federal Deposit Insurance Corporation, including both that subscribed to by the United States and that subscribed to by the Federal Reserve Banks. The amount received by the Corporation for such stock is to be paid in both instances to the Treasury of the United States. The Act also increased the compensation of directors of the Corporation and authorized the Secretary of the Treasury to loan to the Corporation such funds as are required for insurance purposes, not to exceed $\$ 3,000,000,000$ outstanding at any one time. The text of the Act is as follows:
[Public Law 363-80th Congress]
[Chapter 492-1st Session]
[S. 1070]

## AN ACT

To provide for the cancellation of the capital stock of the Federal Deposit Insurance Corporation and the refund of moneys received for such stock, and for other purposes.
Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Fcderal Deposit Insurance Corporation is directed to retire its capital stock by paying the amount received therefor (whether received from the Secretary of the Treasury or the Federal Reserve Banks) to the Secretary of the Treasury as hereinafter provided, to be covered into the Treasury as miscellaneous receipts. As soon as practicable after the enactment of this Act, the Corporation shall pay to the Secretary so much of its capital and surplus as is in excess of $\$ 1,000$,000,000 . The balance of the amount to be paid to the Secretary shall be paid in units of $\$ 10,000,000$ except that the last unit to be paid may be less than $\$ 10,000,000$. Each unit shall be paid as soon as it may be paid without reducing. the capital and surplus of the Corporation below $\$ 1,000$,000,000 . As each payment is made a corresponding amount of the capital stock of the Corporation shall be retired and canceled and the receipt or certificate therefor shall be surrendered or endorsed to show such cancellation. The stock subscribed by the various Federal Reserve Banks shall be retired and canceled, pro rata, before the stock subscribed by the Secretary is retired and canceled.

Sec. 2. Section 12B(d) of the Federal Reserve Act, as amended (U. S. C., title 12, sec. 264(d)), is hereby repealed.
Sec. 3. Section 12B(b) of the Federal Reserve Act, as amended (U. S. C., title 12, sec. 264(b)), is amended by striking out " $\$ 10,000$ " and inserting in lieu thereof "\$15,000."
Sec. 4. Section 12B(o) of the Federal Reserve Act, as amended (U. S. C., title 12, sec. $264(0)$ ), is amended to read as follows:
"(o) The Corporation is authorized to borrow from the Treasury, and the Secretary of the Treasury is authorized and directed to loan to the Corporation on such terms as may be fixed by the Corporation and the Secretary, such funds as in the judgment of the Board of Directors of the Corporation are from time to time required for insurance purposes, not exceeding in the aggregate $\$ 3,000,000,000$ outstanding at any one time: Provided, That the rate of interest to be charged in connection with any loan made pursuant to this paragraph shall not be less than the current average rate on outstanding marketable and nonmarketable obligations of the United States as of the last day of the month preceding the making of such loan. For such purpose the Secretary of the Treasury is authorized to use as a public-debt transaction the proceeds of the sale of any securities hereafter issued under the Second Liberty Bond Act, as amended, and the purposes for which securities may be issued under the Second Liberty Bond Act, as amended, are extended to include such loans. Any such loan shall be used by the Corporation solely in carrying out its functions with respect to such insurance. All loans and repayments under this section shall be treated as public-debt transactions of the United States."
Approved August 5, 1947.

## Common Trust Funds

## Acquisition of Interest in Participations

The Board was recently advised by a bank that it occasionally makes loans to the trustors of revocable living trusts secured by assignments of their interests in the trusts. The bank inquired whether, when such a loan is made to the trustor of a trust which holds participations in the common trust fund operated by the bank, the bank acquires an interest in such participations withir the meaning of the following provisions of section $17(a)$ of Regulation F :
"(2) A bank administering a Common Trust Fund shall not invest any of its own funds in such Common Trust Fund and if a bank, because of a creditor relationship or any other reason, acquires any interest in a participation in a Common Trust Fund under its administration the participation shall be withdrawn on the first date on which such withdrawal can be effected in accordance with the provisions of this section;"
The Board is of the opinion that a loan such as
that described may cause the bank to have an interest in participations in the common trust fund, within the meaning of Regulation F, even though there has been no default on the loan.

The Board has heretofore expressed the opinion that a plan for the operation of a common trust fund which contained the following provision is not in conflict with Regulation F:
> "The Trust Company shall not be deemed to have acquired an interest in a participation in the common fund by reason of an advance to the trust holding such participation (1) if the Trust Company is not entitled to reimbursement out of the principal of the participating trust, or (2) if the advance is adequately secured by assets of the participating trust other than the participation in the common fund."

The Board believes that the same principles apply to loans of the character described above, and that this is as liberal an interpretation of the Regulation as can be justified. Under the facts presented, it appears that the bank could resort to the principal of the participating trusts to collect the loans. Accordingly, in making such a loan, the bank acquires an interest in participations in the common trust fund, within the meaning of the Regulation, unless the loan is adequately secured by assets other than such participations.

## Margin Requirements <br> Borrowing of Securities

The Board of Governors has been asked for a ruling as to whether section $6(h)$ of Regulation T, which deals with borrowing and lending of securities, applies to a borrowing of securities if the lender is a private individual, as contrasted with a member of a national securities exchange or a broker or dealer.

Section $6(h)$ does not require that the lender of the securities in such a case be a member of a national securities exchange or a broker or dealer. Therefore, a borrowing of securities may be able to qualify under the provision even though the lender is a private individual, and this is true whether the security is registered on a national securities exchange or is unregistered. In borrowing securities from a private individual under section $6(h)$, however, it becomes especially important to bear in mind two limitations that are contained in the section.

The first limitation is that the section applies
only if the broker borrows the securities for the purpose specified in the provision, that is, "for the purpose of making delivery of such securities in the case of short sales, failure to receive securities he is required to deliver, or other similar cases." The present language of the provision does not require that the delivery for which the securities are borrowed must be on a transaction which the borrower has himself made, either as agent or as principal; he may borrow under the provision in order to relend to someone else for the latter person to make such a delivery. However, the borrowing must be related to an actual delivery of the type specifieda delivery in connection with a specific transaction that has already occurred or is in immediate prospect. The provision does not authorize a broker to borrow securities (or make the related deposit) merely in order that he or some other broker may have the securities "on hand" or may anticipate some need that may or may not arise in the future.
The ruling in the 1940 Federal Reserve Bulletin, at page 647, is an example of a borrowing which, on the facts as given, did not meet the requirement. There, the broker wished to borrow stocks with the understanding that he "would offer to lend this stock in the 'loan crowd' on a national securities exchange." There was no assurance that the stocks would be used for the purpose specified in section $6(h)$; they might be, or they might merely be held idle while the person lending the stocks had the use of the funds deposited against them. The ruling held in effect that since the borrowing could not qualify under section $6(h)$ it must comply with other applicable provisions of the Regulation.
The second requirement is that the deposit of cash against the borrowed securities must be "bona fide." This requirement naturally cannot be spelled out in detail, but it requires at least that the purpose of the broker in making the deposit should be to obtain the securities for the specified purpose, and that he should not use the arrangement as a means of accommodating a customer who is seeking to obtain more funds than he could get in a general account.
The Board recognizes that even with these requirements there is still some possibility that the provision may be misapplied. The Board is reluctant to impose additional burdens on legitimate transactions by tightening the provision. If there should be evidence of abuses developing under the provision, however, it would become necessary to consider making it more restricted.

## CURRENT EVENTS AND ANNOUNCEMENTS

## Federal Reserve Reprints

Reprints of Bulletin articles and other current releases regularly issued by the Board are listed on pages $1066-69$ of this issue, together with the usual list of Board publications. The list of all available reprints and releases will be repeated at semiannual intervals. A select list, including current additions, will be included in all intervening issues.

Many of the reprints listed in this issue of the Bulletin are of articles which were published many years ago and are now primarily of historical or educational interest. Available supplies of these, some of which are limited, will be retained for distribution on request only through October 1947. These reprints are indicated with an asterisk. Others will be retained for longer periods.

Copies of reprints may be obtained by writing to the Division of Administrative Services, Board
of Governors of the Federal Reserve System, Washington 25, D. C.

## Admissions of State Banks to Membership in the Federal Reserve System

The following State banks were admitted to membership in the Federal Reserve System during the period June 16, 1947 to July 15, 1947:

Alabama
Tuskegee-Alabama Exchange Bank
Idaho
Mackay-American State Bank
Texas
Hereford-Hereford State Bank

## NATIONAL SUMMARY OF BUSINESS CONDITIONS

[Compiled July 28, and released for publication |uly 30]

Industrial production declined somewhat further in June and the early part of July. Value of retail trade continued to show little change, after allowance for seasonal changes. Prices of commodities traded in the organized markets generally advanced and prices of coal and iron and steel were increased.

## Industrial Production

Total output of manufactures and minerals, as measured by the Board's seasonally adjusted index, which reached a postwar peak of 190 per cent of the 1935-39 average in March, had declined to 183 by June and a further reduction is indicated in July.

Durable goods production continued to decline slightly in June, reflecting mainly further small reductions in demand for various metals and metal products and building materials. Automobile passenger car production, however, which has been limited by the available supply of steel sheets, increased in June. In July the rate of automobile production was reduced again, reflecting partly a temporary curtailment in supplies of steel. Production of steel was curtailed in the early part of July as a result partly of uncertainties surrounding the signing of a new wage contract in the bituminous coal industry, but at the end of July steel operations again were scheduled at a rate of 94 per cent of capacity.

Federal Reserve index. Monthy figares, latest shown are for June.

Contraction in nondurable goods production continued in June, reflecting chiefly earlier declines in domestic demands for these goods as well as some slackening in export demands. Further reductions in output in the textile industry accounted for most of the decline in June, but there were also decreases in activity in most other nondurable goods lines except meat packing, petroleum refining, and newsprint consumption.

Production of minerals decreased somewhat in June as a decline in production of bituminous coal more than offset gains in output of anthracite and crude petroleum.

## Employment

Employment in most types of nonag-icultural establishments continued to show little change in June, after allowance for seasonal changes. Further reductions in employment in the textile and rubber industries were offset by increased employment in automobile plants and in some nonmanufacturing lines.

## Consfruction

Value of construction contracts awarded, as reported by the F. W. Dodge Corporation, declined 10 per cent from May to June, reflecting chiefly a further decrease in awards for most types of private

CONSTRUCTION CONTRACTS AWARDED

F. W. Dodge Corporation data for 37 Eastern States. Non residential includes awards for buildings and problic works and utilities. Monthly figures, latest shown are for June.
construction. Awards for public construction, following increases in earlier months of the year, showed little change. New dwelling units started, according to preliminary estimates of the Bureau of Labor Statistics, continued to increase in June and amounted to 75,000 units as compared with 65,000 in June 1946.

## Distribution

Department store sales in June and the first three weeks of July showed about the usual seasonal decline and were 6 per cent greater than in the same period last year. The Board's seasonally adjusted index of sales was about 290 per cent of the 1935-39 average in May and June as compared with 270 during the first four months of the year. Value of sales at most other retail stores, after allowance for seasonal changes, has been slightly lower in recent months than during the first quarter of the year.

Despite a marked expansion in grain shipments in June sad the early part of July, total loadings of railroad revenue freight declined considerably, reflecting the temporary curtailment in coal shipments in this period and a further decline in shipments of manufactured goods.

## Commodity Prices

Prices of commodities traded in the organized markets generally advanced somewhat in June and the early part of July. Prices of coal, pig iron, and various steel products were also increased in this period. Wholesale prices of chemicals and some

Bureau of Labor Statistics' indexes. "All items" includes housefurnishings, fuel, and miscellaneous groups not shown separately. Midmonth figures, latest shown are June for food
and all items, May for clothing and and all items, May for clothing and rent.
other products were reduced. Toward the end of the month prices of wheat and cotton declined considerably.
Retail prices of foods increased somewhat in June and the consumers' price index of the Bureau of Labor Statistics, at 157 per cent of the 1935-39 average, was slightly above the March peak.

## Treasury Finance and Bank Credit

On July 2, the Federal Open Market Committee of the Federal Reserve System directed the Federal Reserve Banks to terminate the policy of buying all bills offered at the fixed rate of $3 / 8$ per cent and to terminate the repurchase option privilege on Treasury bills; the new policy applied to bills issued on or after July 10. The average rates bid on the weekly bill offerings rose to .74 per cent for the issue of July 24.
Additions to monetary gold stock during June and the first three weeks of July, together with a return flow of currency from circulation during July following a seasonal increase prior to July 4, resulted in a growth in member bank reserve balances. Required reserves increased, reflecting a further growth in deposits at member banks.
Commercial and industrial loans at banks in leading cities outside New York increased somewhat between early June and mid-July, following a decline which had been in progress since early April. Real estate and consumer loans continued to increase. Government security holdings at banks in leading cities increased by over 600 million dollars between June 4 and July 16 with most of the additions at New York City banks.

MEMBER BANK RESERVES AND RELATED ITEMS

Tables on the following pages include the principal available statistics of current significance relating to financial and business developments in the United States. The data relating to the Federal Reserve Banks and the member banks of the Federal Reserve System are derived from regular reports made to the Board; index numbers of production are compiled by the Board on the basis of material collected by other agencies: figures for gold stock, money in circulation, Treasury finance, and operations of Government creait agencies are obtained principally from statements of the Treasury, or of the agencies concerned; data on money and security markets and commodity prices and other series on business activity are obtained largely from other sources. Back figures for banking and monetary tables, together with descriptive text, may be obtained from the Board's publication, Banking and Monetary Statistics; back figures for most other tables may be obtained from earlier Bulletins.

${ }^{1}$ Averages of daily closing figures for reserves and borrowings and of daily opening figures for other columns, inasmuch as reserves required are based on deposits at opening of business
${ }_{2}$ Figures include Series $E$ bond deposit accounts, but do not include certainother demand deposits of the U.S. Government with member banks and, therefore, differ from figures for U. S. Government deposits shown in other published banking data. See also footnote 3.
"Preceding column minus (a) so-called "float" (total cash items in process of collection) and (b) U. S. Government demand deposits (other than wrar loan and Series $\mathbf{E}$ bond accounts) on the latest available call report date.

- Demand deposits subject to reserve requirements, i. e., demand deposits other than war loan deposits, minus cash items in process of collection and demand balances due from domestic banks.

Includes some interbank and U. S. Government time deposits; the amounts on call report dates are ghown in the Member Bank Call Report.
[Outside Treasury and Federal Reserve Banks. In millions of dollarsi

${ }^{1}$ For end of year figures, represents change computed on absolute amounts in first column.
Note.-For discussion of seasonal adjustment factors and for back figures on comparable basis see September 1943 Bulletin, pp. 822-826. Because of an apparent recent change in the seasonal pattern around the year end, adjustment factors have been revised somewhat for dates affected, beginning with December 1942; seasonally adjusted figures for money in circulation, as shown in Banking and Monetary Statistics, Table 111, p. 414, and described on p. 405, are based on an older series of adjustment factors.

ANALYSIS OF CHANGES IN GOLD STOCK OF
UNITED STATES
[In millions of dollars]

p Preliminary
${ }^{1}$ Annual figures are estimates of the United States Mint. Monthly figures are those published in table on p. 1048 adjusted to exclude Philippine Islands production received in United States.
${ }^{2}$ Includes gold in the Inactive Account amounting to 27 million dollars on Dec. 31, 1936, and 1,228 million on Dec. 31, 1937 .
i Change reflects primarily gold subscription to International Monetary Fund.

4 Not yet available.
$s$ Gold held under earmark at the Federal Reserve Banks for foreign account including gold held for the account of international institutions amounted to $3,682.5$ million dollars on July 31, 1947. Gold under ear mark is not included in the gold stock of the United States.

Note.-For back figures, see Banking and Monetary Statistics. Table 156, pp. 536-538, and for description of statistics see pp. 522-523 in the same publication.

- Revised.

1 National series for which bank debit figures are available beginning with 1919.
: Annual figures for $1937-1942$ (old series) include 133 centers; annual figures for 1942 (new series) and subsequent figures include 193 centers.
: See page 717 of August 1943 Bulletin for description of revision beginning with May 1942; deposits and debits of new series for first four months of 1942 partly estimated

1 Statistics for banks in leading cities revised beginning July 3, 1946; for description of revision see pp. $692-693$ of BuLletin for June 1947 and for back figures see pp. $878-883$ of the BULLETIN for July 1947; deposits and debits for frst six months of 1946 are estimated.

Nore.-Debits to total deposit accounts, except interbank accounts, have been reported since 1942 for 334 reporting centers; the deposits from which rates of turnover have been computed have likewise been reported by most banks and have been estimated for others. Debits to demand deposit accounts, except interbank and U. S. Government, and the deposits from which rates of turnover have been computed have been reported by member banks in leading cities since 1935; yearly turnover rates in this series differ slightly from those shown in Banking and Monetary Siatistics, Table 55, p. 254, due to differences in method of computation.

${ }^{p}$ Preliminary. ${ }^{1}$ Includes demand deposits, other than interbank and U. S. Government, less cash items in process of collection.
${ }_{2}^{2}$ Beginning with December 1938, includes United States Treasurer's time deposits, open account.
3 Excludes interbank time deposits and postal savings redeposited in banks.

- Beginning June 1941, the commercial bank figures exclude and mutual savings bank figures include three member mutual savings banks.
$\$$ Includes both amounts redeposited in banks and amounts not so redeposited; excludes amounts at banks in possessions.
Note.-Except on call dates, figures are rounded to nearest 100 million dollars. See Banking and Monetary Statistics, p. 11, for description and Table 9. pp. 34-35, for back figures.

* These figures do not include data for banks in possessions of the United States and therefore differ from those published by the Federal Deposit Insurance Corporation. During 1941 three mutual savings banks became members of the Federal Reserve System; these banks are included in "member banks" but are not included in "all insured commercial banks."
${ }^{1}$ During the period Dec. 31, 1942-June 30, 1945, agricultural loans included loans to dealers, processors, and farmers' cooperatives covered by purchase agreements of the Commodity Credit Corporation, which are now classified as commercial and industrial loans; consequently, beginning Dec. 31,1945 , these items may not be entirely comparable with prior figures.

2 Central reserve city banks.
[In millions of dollars]

[^34]525 million at all insured commercial banks.
4 Demand deposits other than interbank and U.S. Government, less cash items reported as in process of collection.
For other footnotes see preceding page.
Back figures.-See Banking and Monetary Statistics, Tables 18-45, DD. 72-103 and 108-113.

${ }^{r}$ Revised.
${ }_{2}^{1}$ Monthiy figures are averages of weekly prevailing rates.
${ }^{2}$ The average rate on 90 -day stock exchange time loans was 1.50 per cent beginning Aug. 2, 1946. Prior to that date it was 1.25 per cent.
${ }^{3}$ Rate on new issues offered within period.
${ }_{4}^{4}$ Revised beginning Dec. 17, 1945; an explanation of the nature of this revision will be published in the Bulletin for September.
Back figures.-See Banking and Monetary Siatistics, Tables 120-121, pp. 448-459, and the Bulletin for May 1945, pp. 483-490.

COMMERCIAL LOAN RATES
AVERAGES OF RATES CHARGED CUSTOMERS BY BANKS IN PRINCIPAL CITIES

${ }^{1}$ Prior to March 1939 figures were reported monthly on a basis not strictly comparable with the current quarterly series.

Back figutres.- See Banking and Monelary Stalistics, Tables 124-125, pp. 463-464; for description, see pp. 426-427.

${ }^{1}$ Estimates of new issues sold for cash in the United States.
${ }^{2}$ Gross proceeds are derived by multiplying principal amounts or number of units by offering price.
${ }^{3}$ Estimated net proceeds are equal to estimated gross proceeds less cost of flotation, i.e., compensation to underwriters, agents, etc., and expenses. $\quad$ Includes repayment of other debt and other purposes.

Source.-Securities and Exchange Commission; for compilation of back figures, see Banking and Monetary Statistics (Table 138, p. 491), a publication of the Board of Governors.

1 Assets are shown on a net basis, i.e., after reserves for losses.
${ }^{2}$ Beginning June 30,1946 , includes investment of the United States in international institutions as follows (in millions of dollars): Stock of the International Bank for Reconstruction and Development-June 30, 1946, 159; Sept. 30, 1946, 159f Dec. 31, 1946, 318; Mar. 31, 1947, 476; International Monetary Fund Quota-Mar, 31, 1947, 2,750. ${ }^{3}$ Deferred charges included under "Other assets" prior to Mar. $31,1947$.
${ }^{4}$ Less than $\$ 500,000.2{ }^{5}$ Includes U. S. Commercial Company and War Damage Corp.
${ }^{6}$ Figures are for Feb. 28, 1947, with the exception of those for lend-lease and UNRRA activities.
${ }^{7}$ Figures for Inland Waterways Corp. and Warrior River Terminal Co., Inc., which are included in this group, are for Feb. 28, 1947, and those of The Virgin Islands Co. are as of Dec. 31, 1946.

Note.-This table is based on the revised form of the Treasury Statement beginning Sept. 30, 1944, which is on a quarterly basis. Quarterly figures are not comparable with monthly figures previously published. Monthly figures on the old reporting basis for the months prior to Sept 30, 1944, may be found in earliet issues of the Bulletin (see p. 1110 of the November 1944 Bulletin) and in Banking and Monelary Sialistics, Table 152, p. 517.

## BUSINESS INDEXES ${ }^{1}$

$\geqslant$ Preliminary. $\quad r$ Revised. ${ }^{1}$ Series included in total and group indexes but not available for publication separately.
2 This series is currently based upon man-hour statistics for plants classified in the automobile and automobile parts industries and is designed to measure productive activity during the month in connection with assembly of passenger cars, trucks, trailers, and busses; production of bodies, parts, and accessories, including replacement parts; and output of nonautomotive products made in the plants covered.

[^42], This series is in process of revision.
Note.-For description and back figures, see Bulletin for October 1943, pp. 940-984, September 1941, pp. 878-881 and 933-937, and August 1940, pp. 753-771 and 825-882.

$r$ Revised. Note.-Indexes for totals, major groups, and industries in the Furniture, Apparel, Lumber, and Leather groups have been adjusted to final 1945 data made available by the Bureau of Employment Security of the Federal Security Agency. Back data and data for industries not here shown are obtainable from the Bureau of Labor Statistics. Underlying figures are for pay roll period ending nearest middle of month and cover production workers only. Figures for June 1947 are preliminary.

${ }^{1}$ Mortgages insured under War Housing Title VI through April 1946; figures thereafter represent mainly mortgages insured under the Veterans' Housing Title VI (approved May 22, 1946) but include a few refinanced mortgages originally written under the War Housing Title VI. ${ }_{2}$ Less than $\$ 500,000$.

Note.-Figures represent gross insurance written during the period and do not take account of principal repayments on previously insured loans. Figures include some reinsured mortgages, which are shown in the month in which they were reported by FHA. Reinsured mortgages on rental and group housing (Title II) are not necessarily shown in the month in which reinsurance took place.

- Revised.
${ }^{1}$ Figures for sales are the average per trading day, while those for stocks are as of the end of the month or the annual average.
Note.-For description and monthly indexes for back years for sales see BuLLETIN for June 1944, pp. 542-561, and for stocks see Bulletin for June 1946, pp. 588-612.

P Preliminary. $\quad$ Revised
indexes for these cities may be obtained on request from the Federal Reserve Bank in the district in which the city is located.

${ }^{1}$ The ratio of stocks to sales is obtained by dividing stocks at the end of the month by sales during the month and hence indicates the number of months' supply on hand at the end of the month in terms of sales for that month
${ }^{2}$ The 1941 average of monthly sales for each department is used as a base in computing the sales index for that department. The stocks index is derived by applying to the sales index for each month the corresponding stocks-sales ratio. For description and monthly indexes of sales and stocks by department groups for back years, see pp. 856-858 of Bulletin for August 1946 . The titles of the tables on pages 857 and 858 were reversed
${ }^{3}$ For movements of total department store sales and stocks see the indexes for the United States on p. 1025.
Note.-Based on reports from a group of large department stores located in various cities throughout the country. In 1945 sales and stocks at these stores accounted for about 50 per cent of estimated total department store sales and stocks. However, not all stores reported data for all of the departments shown; consequently, the sample for the individual departments is not so comprehensive as that for the total.

${ }^{p}$ Preliminary. ${ }^{\text {I }}$ Includes recent revisions shown on pp. 830-835 of the Bulletin for July 1947.
${ }^{2}$ Figures include only personal instalment cash loans and retail automobile direct loans shown on the following page and a small amount of other retail direct loans not shown separately. Other retail direct loans outstanding at the end of June amounted to 94 million dollars, and loans made during June were 15 million.
loans are obtained by deducting an estimate of cash loans, retail automobile direct loans, and other retail direct loans. Direct retail instalment 4 Includes only loans insured by Federal Housing Administration.

${ }^{1}$ Revised figures. Estimates on this page represent a basic revision by the Department of Commerce of national income and product statistics, 1929-June 1947. In many cases changes in underlying definitions as well as statistical refinements account for revisions in the series. An explanation of the conceptual and statistical changes as well as a complete and detailed breakdown of the new series, $1929-1946$, appear in
An explanation of the conceptual and statistical July 1947 Supplement to the Survey of Current Business, entitled "National Income and Product Statistics of the United States, $1929-1946$."
The July 1947 Supplement to the Survey of Current Business, entitled "National lincome and Product Statistics September will contain additional statistics not published in this issue and a discussion of the new series.
${ }^{2}$ Preliminary; based on incomplete data
${ }^{3}$ Less than 50 million dollars.
${ }^{4}$ Includes noncorporate inventory valuation adjustment.
Note.-Detail does not always add to totals because of rounding.

p Preliminary.
${ }^{\text {i }}$ Pxcludes banks (shown in last column) that do not report to State banking departments, principally as follows on the latest date: 10 "cooperative", banks in Arkansas and 96 unincorporated (private) banks in Georgia, Iowa, Michigan, and Texas.
"The State member bank figures and the insured mutual savings bank figures both include three member mutual savings banks. These banks are not included in the total for "Commercial banks" and are included only once in "All reporting banks."
"Includes all branches and other additional offices at which deposits are received, checks paid, or money lent. Includes offices at military reservations, consisting mostly of "banking facilities" provided through arrangements made by the Treasury Department with banks designated as depositaries and financial agents of the Government; the number of such offices on the above dates was 40, 233, 308, 241, 79, and 74, respectively.

Note-Prior to February 1946, statistics on number of banking offices were published quarterly. For back figures, see Banking and Monetary Statistics, Tables 1 and 14, pp. 16-17 and 52-53, and descriptive text, pp. 13-14.

Tables on the following pages include the principal available statistics of current significance relating to gold, international capital transactions of the United States, and financial developments abroad. The data are compiled for the most part from regularly published sources such as central and commercial bank statements and official statistical bulletins, some data are reported to the Board directly. Figures on international capital transactions of the United States are collected by the Federal Reserve Banka from banks, bankers, brokers, and dealers in the United States in accordance with the Treasury Regulation of November 12, 1934. Back figures for all except price tables, together with descriptive text, may be obtained from the Board's publication, Banking and Monetary Statistics.

Gold production in U.S.S.R.: No regular Government statistics on gold production in U.S.S. R. are available, but data of percentage changes irregularly given out by officials of the gold mining industry, together with certain direct figures for past years, afford a basis for estimating annual production as follows: 1934, 135 million dollars; 1935, 158 million; 1936, 187 million; 1937, 185 million; 1938, 180 million.
${ }_{1}$ Annual figures through 1940 are estimates of U.S. Mint; annual figure for 1941 based on monthly estimates of American Bureau of Metal Statistics.
${ }_{2}$ Beginning April 1941, figures are those reported by American Bureau of Metal Statistics. Beginning January 1944, they represent Gold oast only.

4 Includes $\mathrm{Ph}_{1}$ represent estimates of American Bureau of Metal Statistics, those for 1945 having been revised by subtracting from each monthly figure $\$ 197,193$ so that aggregate for year is equal to annual estimate compiled by Bureau of the Mint.

5 Figures for Canada beginning 1945 are subject to official revision. 6 Beginning April 1942, monthly figures no longer reported.
7 Gold exports, reported by the Banco Nacional de Nicaragua, which states that they represent approximately 90 per cent of total production.
8 Beginning December 1941, figures are those reported by American Bureau of Metal Statistics. For the period December $1941-$ December 1943 they represent total Australia; beginning January 1944, Western Australia only.

9 Beyinning May 1940, figures are those reported by American Bureau of Metal Statistics.
Note.-For explanation of table and sources, see Bullerin for February 1939, p. 151; July 1938, p. 621; June 1938, p. 540 ; April 1933, pp 233-235: and Banking and Monetary Statistics, p. 524. For annual estimates compiled by the United States Mint for these and other countries in the period 1910-1941, see Banking and Monetary Stalislics, pp. 542-543.

1 This category made up as follows: through Sept. 21, 1938, funds held by foreign central banks at the Federal Reserve Bank of New York and Philippine accounts held with the U. S. Treasury; beginning Sept. 28, 1938, also funds held at commercial banks in New York City by central banks maintaining accounts at the Federal Reserve Bank of New York; beginning July 17. 1940, also funds in accounts at the Federal Reserve Bank of New York which had been transferred from central bank to government names; beginning with the new series commencing with the month of July 1942, all funds held with banks and bankers in the United States by foreign central banks and by foreign central governments and their agencies (including official purchasing missions, trade and shipping missions. diplomatic and consular establishments, etc.) ; and beginning Feb. 28, 1946, Italian special deposit account held with the U. S. Treasury.

2 The weekly series of capital movement statistics reported through July. 1,1942 , was replaced by a monthly series commencing with July 1942 Since the old series overlapped the new by one day, the cumulative figures were adjusted to represent the movement through June 30 only. This adjustment, however, is incomplete since it takes into account only certain significant movements known to have occurred on July 1 . Subsequent figures are based upon new monthly series. For further explanation, see Bulletin for January 1943 , p. 98.

Note.-Statistics reported by banks, bankers, brokers, and dealers. For full description of statistics see Banking and Monetary Statistics, pp. 558-560; for back figures through 1941 see Tables 161 and 162 , pp. $574-637$, in the same publication, and for those subsequent to 1941 see Bulletin for September 1945, pp. $960-974$.
[Net movement from United States, ( - ). In millions of dollars]

$r$ Revised to exclude international institutions.
${ }^{1}$ Prior to June 30, 1942 , included under "Other Asia."
2 Country breakdown not available until June 30,1942 .
See footnote 3 below.
Footnotes to table on p. 1052.
Revised to include Germany.
${ }^{1}$ Country breakdown is for "Official and private."
Prior to Jan. 3, 1940, the figures under Asia represent Far East only, the remaining Asiatic countries being included under "All other."
Report dates for these years are as follows: 1934-Jan. 2, 1935; 1935-Jan. 1, 1936; 1938-Jan. 4, 1939; 1939-Jan. 3, 1940; and 1940Jan. 1, 1941.

These figures are not strictly comparable with the corresponding figures for preceding months due to exclusion of an account amounting to $\$ 4,322,000$, which should not have been reported as "foreign." The cumulative figures in Tables 1 , 2 , and 3 of "Net Capital Movement to United States" have been adjusted to exclude the unreal movement introduced by this change
${ }_{5}$ Official Canadian holdings of U.S. dollars on Dec. 31,1946 , amounted to 686.2 million dollars, according to the annual report of the Foreign Exchange Control Board of Canada for 1946.

Prior to June 30, 1942, included under "All other."
Prior to June 30, 1942, included under "Other Latin America." $\quad 8$ Included "Canal Zone" prior to June $30,1942$.
NoTe.-Certain of the figures are not strictly comparable with the corresponding figures for preceding months owing to changes in reporting practice of various banks. The cumulative figures in Tables 1, 2, and 3 of "Net Capital Movement to United States" have been adjusted to exclude the unreal movements introduced by these changes. For further explanation see Banking and Monetary Statistics, pp. 578-584, and BulleTIN for May 1947, p. 621, and September 1945, pp. 967-970.

${ }^{1}$ Gold revalued on Dec. 26, 1945, on basis of $134,027.90$ francs per fine kilogram. For details on previous devaluatione see Bulletin for May 1940, pp. 406-407; January 1939, p. 29; September 1937, p. 853; and November 1936, pp. 878-880.
: For explanation of this item, see Buleetin for July 1940, p. 732 .

- By a series of Conventions between the Bank of France and the Treasury, dated from Aug. 25, 1940, through July 20, 1944, advances of 441,000 million francs were authorized to meet the costs of the German army of occupation.
- Beginning Dec. 28, 1944, includes 9.447 million francs charged to the State to reimburse the Bank for the gold turned over by it to the National Bank of Belgium on Dec. 22, 1944.
bentral Administration of the Reichskreditkassen.
- In each of the weeks ending Apr, 20 and Aug. 3, 1939, 5,000 milion francs of gold transferred from Exchange Stabilization Fund to Bank of France; in week ending Mar. 7, 1940, 30,000 million, in week ending Oct. 11, 1945, 10,000 million, in week ending Dec. 27, 1945, 53,000 million, and in week ending May 2, 1946, 35,000 million francs of gold transferred from Bank of France to Stabilization Fund
${ }^{7}$ Gold holdings reduced by 12,000 million francs, representing contributions to the International Fund and Bank. An equivalent amount of Treasury bonds covering these contributions is shown under "Other assets."

Includes a non-interest loan to the Government, which was raised from 10,000 million to 50,000 million francs by law of Mar. 29, 1947
Notr.-For back figures see Banking and Monetary Statistics, Table 165, pp. 641-643; for description of statistics see pp sol 503 in same puhlication. For last available report from the Reichsbank (February 1945) see Bulletin for December 1946, p. 1424

'Government decree of Apr. 24, 1946, provided tor the guarantee of all deposits registered in the name of the Central Bank.
: By decree of May 24, 1946, the Central Bank became responsible for all subsidiary money.
'This figure represents the amount of the bank's subscription to the Fund less the bank's local currency liability to the Fund. Until such time as the Fund engages in operations in this currency, the "net claim" will equal the country's gold contribution.
${ }^{5}$ Includes increment resulting from gold revaluation, notes forfeited to the State, and frozen old notes and current accounte.
${ }^{5}$ For last available report (January 1943) see Bulletin for July 1943, p. 697.

CENTRAL BANKS-Continued

[^52]${ }^{1}$ This figure represents the amount of the bank's subscription to the Fund less the bank's local currency liability to the Fund. Until such time as the Fund engages in operations in this currency, the "net claim" will equal the country's gold contribution

2 Gold not reported separatelv beginning Dec. 31, 1946.
${ }^{3}$ For last available report from the central bank of Japan (September 1941), see Bulcetin for March 1942, p. 281; of Java (January 1942). see Bulletin for March 1943, p. 278.

${ }^{1}$ Prior to Nov. 1, 1942, the official designation of the Brazilian currency unit was the "milreis."
: At the end of June 1945 official rates for the Australian and British pounds were abolished, and after this date quotations are buying rate in the New York market. The rates shown represent averages for the second half of 1945 and are comparable to those quoted before 1940
"The rate quoted after July 22, 1946, is not strictly comparable to the "free" rate shown before that date. The average for the "free" rate for July $1-19$ is 5.1902 , and for Jan. $1-J u l y 19,5.1860$, while the average for the new rate for July $25-31$ is 5.330 , and for July $25-D e c .31,5.3955$

Based on quotations through July 19. Official rate abolished
6 On July 5, 1946, Canada reduced its official buying rate for one U.S. dollar from 1.10 to 1.00 Canadian dollar,
7 As of July 13,1946 , the Swedish Riksbank reduced its selling rate for one U. S. dollar from 4.20 to 3.60 kronor .
Note.-For back figures, see Banking and Monetary. Statistics, Table 173, pp. 662-682. For description of statistics see pp. $572-573$ in same publication, and for further information concerning developments affecting the averages during 1942 and 1943 , see Bulletin for February 1943 D. 201, and February 1944, p. 209.

* Banking and Monetary Statistics. From unbound editions of this 979 -page volume published in 1943, separate sections as follows:

1. General Statistics of all Banks in the United States. 54 pages.
2. Assets and Liabilities of all Member Banks. 43 pages.
3. Assets and Liabilities of Insured Banks. 8 pages.
4. Assets and Liabilities of Weekly Reporting Member Banks in Leading Cities. 70 pages.
5. Bank Debits and Deposit Turnover. 25 pages.
6. Bank Earnings. 22 pages.
7. Bank Suspensions. 12 pages.
8. Branch, Group, and Chain Banking. 27 pages.
9. Federal Reserve Banks. 34 pages.
10. Member Bank Reserves, Reserve Bank Credit, and Related Items. 42 pages.
11. Currency. 16 pages.
12. Money Rates and Security Markets. 83 pages.
13. United States Government-Treasury Finance and Government Corporations and Credit Agencies. 14 pages.
14. Gold. 23 pages.
15. International Financial Statistics. 125 pages. Part II. Member Bank Statistics by Federal Reserve Districts. 253 pages.

The statistics given in the foregoing sections of Banking and Monetary Statistics include data compiled by various agencies, governmental and private, and cover the period ending in 1941 and extending back in many cases to 1914 and in a few cases to an earlier date. The introduction to each section summarizes the history, source, and method of compilation of the data, and gives some indication of the purposes for which they may be used.

[^0]:    1 This article was prepared by Duncan McC . Holthausen of the Board's Division of Research and Statistics. It is the third in a series to be issued presenting the results of the Board's Survey of Consumer Finances in 1947. Previous articles appeared in the June and July 1947 Bulletins.
    Dr. Rensis Likert, Director, and Dr. Angus Campbell, Assistant Director, Survey Research Center, University of Michigan, were in general charge of the survey. Responsibility for detailed planning and supervision of the survey, including interviewing, editing, tabulation of results and their presentation to the Board, was carried by Dr. George Katona in collaboration with Mrs. Eleanor E. Maccoby, both of the Survey Research Center's staff. Mr. Charles F. Cannell served as head of the field staff and Mr. Roe Goodman as head of the sampling section of the Center. This staff was formerly assoctated with the Division of Progran Surveys, U. S. Department of Agriculture.
    From the Board of Governors. general supervision of the survey has been under the direction of Woodlief Thomas, Director, and Ralph A. Young. Assistant Director, of the Division of Research and Statistics. Mr. Holthausen has been in charge of the analysis of the data and the preparation of reports. Generous and helpful cooperation was received from members of the technical staffs of the Bureaus of the Budget and other of the technical staffs of the Bureatt of the Budget and
    interested public agencies in developing the survey plans.
    interested public agencies in developing the survey plans.
    ${ }_{2}$ The first survey was made for the Board of Governors early in 1946 by the Division of Program Surveys, Bureau of Agricultural Economics, U. S. Department of Agriculture. Results of that survey were reparted in 1946 in the June, July. and Aligust issues of the Bulletin under the general title National Survey of Liquid Assets.

[^1]:    ${ }^{3}$ As indicated in a previous article, the universe from which the samples were selected for the two surveys and to which these saving estimates apply was the population of the continental United States residing in private households during the interview periods. Omitted from the scope of the surveys were menhers of the armed forces living at military reservawere menhers residents in hospitals and in religious, educational, and nenal institutions; and the floating population, that is, people living in hotels, large boarding houses, and tourist camps.

[^2]:    ${ }^{1}$ Spending units with money incomes in excess of expenditures.

    - Spending units with expenditures in excess of money incomes

    3 Percentage of income saved by middlemost spending unit when all units are ranked from the highest positive saver in percentage all units are ranked from the highest
    terms to the highest negative saver.

    * Note of caution.-The estimates of saving for 1946 and 1945 are not strictly comparable. The form used to estimate saving in 1946 was more complete than the form used for the 1945 data. Had the 1945 savings been determined on the basis of the 1946 schedule, it is probable that there would not have been as high a proportion of "zero savers" as reported. It is also possible that the schedule used for 1945 made for an underestimate of the number of dissavers and the amounts dissaved as compared to the number of positive savers and the amounts of positive saving.

[^3]:    ${ }^{4}$ It is estimated that the amounts dissaved by the latter group were one-third as large as the amounts saved by the positive savers.

[^4]:    ${ }^{5}$ See the Federal Reserve Bulletin, Tune 1947, pp. 658.663 for a complete discussion of the sampling method and the sampling techniques employed to reduce sampling error.

    Ibid., pp. 660 and $663 .^{6}$

[^5]:    ${ }^{7}$ The survey totals were computed by multiplying mean values obtained from survey results by 46.3 million (the number of spending units). The mean values were computed after assignments of income, or saving, or liquid asset holdings in the small proportion of cases where spending units had reported most financial information but had omitted one of these particular items. The complete interviews obtained were weighted upward to represent the spending units who should have been in the sample but who were not at home or refused to be interviewed. There is evidence that spending units refusing to be interviewed had higher incomes on the average than spending units giving full information. No adjustment has been made in the aggregates for this fact; if it were taken into account. the percentage relationships of expanded survey totals to outside estimates would be higher.

[^6]:    ${ }^{8}$ The percentage relationships indicated for savings accouthts and checking accounts may not be strictly comparable because of possible differences in separating personal from business accounts between the survey estimates and Federal Reserve Board estimates.

[^7]:    ${ }^{1}$ House ownership shown only for nonfarm spending units.

[^8]:    ${ }^{1}$ The present article is the fifth in a series covering the re sults of the nation-wide sample survey of business loans out standing at member banks as of Nov. 20, 1946 . The four previous articles were "Business Loans of Member Banks," by Albert R. Koch, Federal Reserve Bulletin, March 1947; "Term Lending to Business by Commercial Banks in 1946," by Duncan McC. Holthausen, Federal Reserve Bulletrn, May 1947; "Security Pledged on Member Bank Loans to Business," by Tynan Smith, Federal Reserve Bulletin, June 1947: and "The Structure of Interest Rates on Business Loans at Member Banks," by Richard Youngdahi, Federal Reserve Bulietin, July 1947.
    The survey of bank loans to industrial and commercial businesses, on which this article is based, was planned by the Board's Division of Research and Statistics in consultation with the Board's Divisions of Bank Operations and of Examinations, the Federal Reserve Banks, and other interested agencies. The information was collected and compiled into district totals at the Reserve Banks and national totals were trict totals at the Reserve B
    prepared at the Board's offices.
    Preparation of this article was under the immediate direction of Susan S. Burr, Chief of the Business Finance and Capital Markets Section of the Division of Research and Statistics, Richard Youngdahl, of the Division was largely responsible for the supervision of the collection and tabulation of the information.
    Copies of a booklet containing reprints of all articles in the member bank commercial and industrial loan survey series are available upon request from the Division of Administrative Services, Board of Governors of the Federal Reserve System, Washington 25, D. C.

[^9]:    2 The size classes selected for purposes of describing small business in this article were determined in part by the size units employed in collecting the loan survey data, and in part units employed in collecting the loan survey data, and in pariations in average size of concern from one by known variations in average size of concern from one
    industry to another. Thus, in the case of retail trade. service, industry to another. Thus, in the case of retan trade, service, and construction, where the average concern is substantially
    smaller in terms of total assets than the average manufacturing smaller in terms of total assets than the average manufacturing concern, the smallest size class provided by the survey data
    was used, with correspondingly larger size classes for wholesale trade and manufacturing. Concerns referred to in this article as public utilities are predominantly local taxi, trucking, warehousing, noncertificated air carrier, and radio broadcasting establishments; most of the wire communication, power and light, and rail transportation services are performed by the larger corporations.

[^10]:    ${ }^{3}$ This figure, representing the number of loans to small business, overstates the number of small business concerns to the extent that individual concerns borrowed concurrently from two or more member banks.

[^11]:    ${ }^{4}$ See Table 2, note 2 , for explanation of the number of member banks as defined for purposes of the loan survey.

[^12]:    5 Many very small concerns, which are either unable or un-
    willing to borrow, are largely dependent on retained earnings* and the owner's personal resources to finance their operations.

[^13]:    Data on interest rates by corporate status and size of borrower, and by size of borrower and size of loan, were presented in "The Structure of Interest Rates on Business Lnans at Member Banks," by Richard Youngdahl, Federal Reserve Mulletin, July 1947, pp. 803-819.

[^14]:    ${ }^{7}$ See Melville J. Ulmer, "The Postwar Business Population," Surven of Current Business, January 1947, pp. 9-23.

[^15]:    See Table 1 for definition of small businesses.
    ${ }^{2}$ Includes loans to sales finance companies and a small number of loans unclassified by business of borrower.
    Note.-Detailed figures may not add to totals because of rounding.

[^16]:    8 While some of the borrowing concerns which were reported as "organized since 1942" may have been older concerns that merely changed their form of organization (e.g., a partnership that was incorporated, or vice versa), the majority probably were "new concerns" in the sense of having been started since 1942.

[^17]:    - See Duncan McC. Holthausen. "Term Lending to Business by Commercial Banks in 1946," Federal Reserve BulazTIN. May 1947, for analysis of member bank term loans to businesses of all sizes.

[^18]:    ${ }^{1}$ See Table 1 for definition of small businesses.
    ${ }^{2}$ Includes loans to sales finance companies and a small number of loans unclassified by business of borrower.
    NoTE,-Detailed figures may not add to totals because of rounding.

[^28]:    ${ }^{1}$ Regulations $T$ and $U$ limit the amount of credit that may be ex-

[^29]:    r Revised.
    Includes any banks in outlying sections of reserve cities that have been given permission to carry the same reserves as country banks. All reserve cities have a population of more than 15,000 .
    ${ }^{2}$ Includes war loan deposits, shown separately for all country bank in the table on the following page.

[^30]:    1 Outside Treasury and Federal Reserve Banks. Includes any paper curtency held outside the continental limits of the United States; totals for other end-of-month dates shown in table above, totals by weeks in table on p .987 , and seasonally adjusted figures in table on p .996.
    ${ }^{2}$ Includes $\$ 156,039,431$ held as reserve against United States notes and Treasury notes of 1890
    ${ }^{5}$ To avoid duplication, amount of silver dollars and bulion held as security against silver certificates and Treasury notes of 1890 outstanding is not included in total Treasury currency outstanding.
    ${ }^{4}$ Because some of the types of money shown are held as collateral or reserves against other types, a grand total of all types has no special significance and is not shown. See note of explanation of these duplications.
    ${ }^{5}$ Less than $\$ 500,000$.
    Note.-There are maintained in the Treasury-(i) as a reserve for United States notes and Treasury notes of 1890 - $\$ 156,039,431$ in gold bullion; (ii) as security for Treasury notes of 1890 -an equal dollar amount in standard silver dollars (these notes are being canceled and retired on receipt); (iii) as security for outstanding silver certificates-silver in bullion and standard silver dollars of a monetary value equal to the face amount of such silver certificates; and (iv) as security for gold certificates-gold bulfion of a value at the legal standard equal to the face amount of such gold certificates. Federal Reserve notes are obligations of the United States and a first lien on all the assets of the issuing Federal Reserve Bank. Federal Reserve notes are secured by the deposit with Federal Reserve agents of a like amount of gold certificates or of gold certiffcates and such discounted or purchased paper as is eligible under the terms of the Federal Reserve Act, or of direct obligations of the United States. Federal Reserve Banks must maintain a reserve in gold certificates of at least 25 per cent, including the redemption fund, which must be deposited with the Treasurer of the United States, against Federal Reserve notes in actual circulation; gold certificates pledged as collateral may be counted as reserves. "Gold certificates" as herein used includes credits with the Treasurer of the United States payable in gold certificates. Federal Reserve Bank notes and national bank notes are in process of retirement.

[^31]:    1 Represents banks which, during the periods shown, closed tem-

[^32]:    * These figures do not include data for banks in possessions of the United States and therefore differ from those published by the Comptroller of the Currency and the Federal Deposit Insurance "Corporation for national banks and insured banks, respectively. "All banks" comprise "all commercial banks" and "all mutual savings banks." "All commercial banks" comprise "all nonmember commercial banks" and "all member banks except three mutual savings banks that became members or the Federal Reserve System in 194 ; these three banks are included in both

    Back figures.-See Banking and Monetary Statistics. Tables 1-7, pp. 16-23; for description, see pp. 5-15 in the same publication. For recent revisions in series see pp. $870-871$ of BULLETIN for July 1947.

    For other footnotes see following page.

[^33]:    ${ }^{1}$ Beginning June 30, 1942, excludes reciprocal bank balances, which on Dee. 31, 1942, aggregated 513 million dollars at all member banks and 525 million at all insured commercial banks.

    2 Decreases in "noninsured nonmember commercial banks" figures reflect principally the admission to membership in the Federal Reserve System of one large bank with total loans and investments aggregating 554 million dollars on Dee. 31 , 1942 ; to a lesser extent, all year-to-year comparisons are affected somewhat by mergers, absorptions, changes in membership or insured status, etc.

    For other footnotes, see preceding page.

[^34]:    ${ }^{3}$ Beginning June 30, 1942, excludes reciprocal bank balances, which on Dec. 31, 1942, aggregated 513 million dollars at all member banks and

[^35]:    ${ }_{4} 1$ Including guaranteed obligations.

    * Separate figures for Now York City are shown in the immediately preceding table and for the City of Chicago in this table. The figures for the New York and Chicago Districts, as shown in this table, include New York City and Chicago, respectively.

[^36]:    ${ }^{1}$ Excluding balances with reporting firms (1) of member firms of New York Stock Exchange and other national securities exchanges and (2) of firms' own partners.
    ${ }_{3}$ Includes money borrowed from banks and also from other lenders (not including member firms of national securities exchanges).
    ${ }^{2}$ As reported to the New York Stock Exchange. According to these reports, the part of total customers' debit balances represented by balances secured by U. S. Government securities was (in millions of dollars): April, 62 ; May, 63 .

    Note.-For explanation of these figures see "Statistics on Margin Accounts" in Bulletin for September 1936. The article describes the method by which the figures are derived and reported, distinguishes the table from a "statement of financial condition," and explains that the last column is not to be taken as representing the actual net capital of the reporting firms.

    Back figures.-See Banking and Monetary Slatistics, Table 143, pp. 501-502, for monthly figures prior to 1942, and Table 144, p. 503, for data in detail at semiannual dates prior to 1942.

[^37]:    r Revised.
    Monthly and weekly data are averages of daily figures, except for municipal bonds, which are based on Wednesday figures.
    Revised beginning June 1, 1946; an explanation of the nature of this revision will be published in the Bulletin for September.
    3 Standard and Poor's Corporation. 4 U.S. Treasury Department.
    5 Moody's Investors Service, week ending Friday. Because of limited number of suitable issues, the industrial Aaa, Aa, and A groups have been reduced from 10 to 5,8 , and 8 issues, respectively, and the railroad Aaa, Aa, and A groups from 10 to 6 , 6 , and 9 issues, respectively

    Back figures.-See Banking and Monetary Statistics, Tables 128-129, pp. 468-474, and the Bulletin for May 1945, pp. 483-490.

[^38]:    r Revised. ""Net profits" and "net income" refer to income after all charges and taxes and before dividends.
    : Includes 29 companies engaged in wholesale and retail trade (largely department stores), 13 in the amusement industry, 21 in shipping and transportation other than railroads (largely airlines), and 11 companies furnishing scattered types of service.
    $z$ Net profits figures for the year 1946 include, and those for the fourth quarter exclude, certain large extraordinary year-end profits in the following amounts (in millions of dollars): 629 company series-total, 67 ; machinery, 49 ; other durable goods, 18; 152 company series-total, 49.
    ${ }_{4}$ Partly estimated. Class I line-haul railroads, covering about 95 per cent of all railroad operations.
    ${ }^{4}$ Partly estimated. Class A and B electric utilities, covering about 95 per cent of all electric power operations. Figures include affiliated nonelectric operations.
    ${ }_{7}^{6}$ Thiss A and B electric utilities, covering about 95 per cent of all electric power operations. Figures include affiliated nonelectric operations. pany, the greater part of whose income consists of dividends received on stock holdings in the 30 companies.
    ${ }^{8}$ After all charges and taxes except Federal income and excess profits taxes
    Sources.-Interstate Commerce Commission for railroads; Federal Power Commission for electric utilities (quarterly figures on operating revenue and on income before income tax are partly estimated); Federal Communications Commission for telephone companies (except dividends) published reports for industrial companies and for telephone dividends. Figures for the current and preceding year subject to revision. For description of data and back figures, see pp. $214-217$ of the Bulietin for March 1942 and also p. 1126 of the Bulletin for November 1942 (telephone companies) and p. 908 of the Bulletin for September 1944 (eiectric utilities).

[^39]:    r Revised.

[^40]:    * Figures include only holdings by institutions or agencies from which reports are received. Data for commercial banks, mutual savings banks and the residual "other" are not entirely comparable from month to month. Since June 1943 the coverage by the survey of commercial banks has been expanded. Figures in column headed "other" include holdings by nonreporting banks and insurance companies as well as by other investors. Estimates of total holdings (including relatively small amounts of nonmarketable issues) by all banks and all insurance companies for certain dates are shown in the table above.
    ${ }^{1}$ Including stock savings banks.
    - Including Postal Savings and prewar bonds and a small amount of guaranteed securities, not shown separately below.

[^41]:    ${ }^{p}$ Preliminary. $\quad$ Revised. ${ }^{1}$ Series included in total and group indexes but not available for publication separately
    ${ }^{2}$ This series is currently based upon man-hour statistics for plants classified in the automobile and automobile parts industries and is designed to measure productive activity during the month in connection with assembly of passenger cars, trucks, trailers, and busses; production of bodies, parts, and accessories, including replacement parts; and output of nonautomotive products made in the plants covered

[^42]:    ${ }^{p}$ Preliminary.

[^43]:    ${ }^{1}$ Formerly combined and published as Finance, Service, and Miscellaneous.

    * Includes Federal Force Account Construction.

    Note.-Unadiusted data compiled by Bureau of Labor Statistics. These estimates have been adjusted to levels indicated by final 1945 data made available by the Bureau of Employment Security of the Federal Security Agency. Estimates include all full-and part-time wage and salary workers in nonagricultural establishments employed during the pay period ending nearest the 15 th of the month. Proprietors, self-employed persons, domestic servants, and personnel of the armed forces are excluded. June 1947 figures are preliminary. Back unadjusted data are available from the Bureau of Labor Statistics; seasonally adjusted figures beginning January 1939 may be obtained from the Division of Re-

[^44]:    $p$ Preliminary. r Revised.
    Note.-Data based on reports from a smaller group of stores than is included in the monthly index of sales shown on p. 1025.

[^45]:    p Preliminary
    Back figures.-Bureau of Labor Statistics, Department of Labor.

[^46]:    ${ }^{\top}$ Revised. $\quad{ }^{1}$ Revision made beginning October 1946.
    Back figures.-Bureau of Labor Statistics, Department of Labor.

[^47]:    ${ }^{c}$ Corrected. $\quad$ Estimated. ${ }^{p}$ Preliminary. $r$ Revised.
    ${ }^{1}$ Page references are to charts included in the August issue of the Chart Book. Changes in the charts included appear in pp. 45-49 and 64-65. Charts on pp. 45, 46,47 , and 65 are new. Charts on pp. 46, 48, 49, and 74 of earlier issues have been eliminated (the curve on "nonagricultural employment,' shown on p. 48 of earlier issues, is shown on p. 49 of the August issue). Other changes involve pagination only.
    ${ }_{2}$ Figures for other than Wednesday dates are shown under the Wednesday included in the weekly period. ${ }_{3}$ Less than 5 million doliars
    ${ }^{4}$ Figures are for the revised series; for description of the revision beginning July 3, 1946, see pp. $692-693$ of the Bulletin for June 1947 , and for back figures see pp. 878-883 of the Bulletin for July 1947.
    ${ }_{6}$ Revised; an explanation of the nature of this revision will be published in the Bulletin for September.
    ${ }_{7}^{6}$ For charts on pp. 28, 33, 37, and 39, figures for a more recent period are available in the regular Bulletin tables that show those series.
    7 Inclades recent revisions shown on pp. 830-835 of the Bullerin for July 1947.
    ${ }^{8}$ The figures shown are cumulative totals, not aggregates of the individual components. ${ }^{2}$ Adjusted for seasonal variation.
    10 Charts on pp. 44 and 48 have been revised to show new estimates of national income and product published by the Department of Commerce in the Supplement to the Survey of Current Business for July 1947. The new charts on pp. 45, 46, and 47 are also based on the revised estimates. For further information on the revisions, see footnote 1 on p. 1033 of this Bulletin. Figures for charts on pp. 44, 45, 46, and 47 are semiannual rather than quarterly for the first half of 1947.
    ${ }^{11}$ As of Mar. 31, 1947. ${ }^{12}$ Figures available for June and December dates only.

    * Monthly issues of this edition of the Chart Book may be obtained at an annual subscription rate of $\$ 9.00$; individual copies of monthly issues, at $\$ 1.00$ each.

[^48]:    Revised to include Germany.
    Total capital movement by countries differs from total capital movement in Table 1 by reason of exclusion of international institutions.
    Prior to Jan. 3, 1940, the figures under Asia represent Far East only, the remaining Asiatic countries being included under "All other.'
    3 Inflow less than $\$ 50,000$.

[^49]:    r Revised to include Germany.
    ${ }^{1}$ Prior to Jan. 3, 1940, the figures under Asia represent Far East only, the remaining Asiatic countries being included under "All other."
    Note.-The figures in this table are not fully comparable throughout since certain changes or corrections took place in the reporting practice of reporting banks on Aug. 12, 1936, and Oct. 18, 1939. (See Banking and Monetary Statistics, Table 161, pp. 589 and 591 .) On June 30 , 1942 reporting practice was changed from a weekly to a monthly basis. For further information see Bulletin for September 1945, pp. $971-974$.

[^50]:    ${ }^{1}$ Prior to June 30, 1942, included under "All other." $\quad r$ Revised to include Germany.
    ${ }_{2}$ Report dates for these years are as follows: 1939-Jan. 3, 1940; and 1940-Jan. 1, 1941.
    ${ }^{3}$ Less than $\$ 50,000$.
    ${ }^{7}$ Country breakdown not available until June 30, 1942.

[^51]:    ${ }^{1}$ Through February 1939, valued at legal parity of 85 shillings a fine ounce; thereafter at market price, which fluctuated until Sept. 6, 1939 . when it was officially set at 168 shillings per fine ounce; the latter rate remained in effect until June 9 , 1945, when it was raised to 172 shillings and three pence
    ${ }_{2}$ Securities and silver coin held as cover for fiduciary issue, the amount of which is also shown by this figure.
    ${ }^{3}$ Notes issued less amounts held in banking department.
    ${ }^{4}$ On Jan. 6, 1939, 200 million pounds sterling of gold (at legal parity) transferred from Bank to Exchange Equalization Account; on Mar. 1 , 1939, about 5.5 million pounds (at current price) transferred from Exchange Account to Bank; on July 12, 1939, 20 million pounds transferred from Exchange Account to Bank; on Sept. 6, 1939, 279 million pounds transferred from Bank to Exchange Account.
    $\$$ Fiduciary issue increased by 50 million pounds on June 12, 1940, Apr. 30, Aug. 30, and Dec. 3, 1941, and Apr. 22 and July 28, 1942; by 70 million pounds on Dec. 2, 1942; and by 50 million pounds on Apr. 13, Oct. 6, and Dec. 8, 1943, Mar. 7, Aug. 2, and Dec. 6, 1944, May 8 July 3, and Dec. 10, 1945, and on Dec. 10, 1946.
    ${ }^{5}$ Securities maturing in two years or less
    ${ }^{7}$ Includes notes held by the chartered banks, which constitute an important part of their reserves
    ${ }^{8}$ Beginning November 1944 , includes a certain amount of sterling and United States dollars.
    9 On May 1, 1940, gold transferred to Foreign Exchange Control Board in return for short-term Government securitiss (see Bulletin for July 1940, pp. 677-678).

    Note.--For back figures on Bank of England and Bank of Canada, see Banking and Monetary Statistics, Tables 164 and 166, pp. 638-640 and pp. 644-645, respectively; for description of statistics see pp. 560-564 in same publication.

[^52]:    - Revised. corrected

[^53]:    ${ }^{1}$ Includes gold, silver, and foreign exchange forming required reserve ( 25 per cent) against notes and other demand liabilities.
    ${ }^{2}$ Latest month available.
    ${ }^{3}$ This figure represents the amount of the bank's subscription to the Fund less the bank's local currency liability to the Fund. Until such
    time as the Fund engages in operations in this currency, the "net claim" will equal the country's gold contribution.
    ${ }^{4}$ For last available report from the central bank of Portugal (March 1946), see Bulletin for May 1947, p. 626; of Rumania (June 1944),
    Buleetin for March 1945, p. 286; and of Yugoslavia (February 1941), see Bulletin for March 1942, p. 282.
    ${ }^{5}$ Gold revalued in June 1946 from approximately 85 to 172 shillings per fine ounce. ${ }^{6}$ Includes small amount of non-Government bonds.
    7 Gold revalued on Sept. 9, 1946, from 1,406.58 to $3,150.77$ Turkish pounds per fine kilogram.
    ${ }^{8}$ Beginning October 1944, a certain amount of gold formerly reported in the Bank's account shown separately for account of the Government. $\quad$ See Bulletin for December 1936, p. 1025. ${ }^{10}$ Before March 1947, included in "Sundry bills and investments.'

[^54]:    ${ }^{1}$ From September 1939 through November 1946, this table represents aggregates of figures reported by individual banks for days, varying from bank to bank, toward the end of the month. After November 1946, figures for all banks are compiled on the third Wednesday of each month, except in June and December, when the statements will give end-of-month data.
    ${ }_{2}$ Represent six-month loans to the Treasury at 11/9 per cent through Oct. 20.1945 , and at $5 / 8$ per cent thereafter.
    Note.-For back figures and figures on German commercial banks, see Banking and Monetary Statistics, Tables 168-171, pp. 648-655, and for description of statistics see pp. 566-571 in same publication.

[^55]:    Preliminary.
    ${ }^{1}$ Figures represent calculated prices of a 4 per cent 20 -year bond offering a yield equal to the monthly average yield for 15 high-grade cor porate bonds. Source.-Standard and Poor's Corporation; for compilations of back figures on prices of both bonds and common stocks in the United States see Banking and Monetary Statistics, Table 130, p. 475, and Table 133, p. 479.
    ${ }^{2}$ This index is based on one 15 -year 3 per cent theoretical bond. Yearly averages for 1939 and 1940 are based on monthly averages and thereafter on the capitalized yield as calculated on the 15th of every month.
    ${ }^{3}$ Indexes of reciprocals of average yields. For old index, $1929-1936,1929=100$; average yield in base year was 4.57 per cent. For new index beginning January 1937, January-March $1937=100$; average yield in base period was 3.39 per cent.

    4 This index is based on 95 common stocks through 1944, and on 100 stocks thereafter.
    ${ }^{5}$ In September 1946 this index was revised to include 185 issues of metropolitan and 90 issues of colonial France. See "Bulletin de la Statistique Générale," September-November 1946, p. 424.

    Average based on figures for 5 months; no data available June-Dec. $\quad$ Average based on figures for 7 months; no data available May-Sept.

    - Average based on figures for 9 months; no data available May-July. * Average based on figures for 10 months; no data available Jan.-Feb.
    ${ }^{10}$ Average based on figures for 8 months; no data available Sept.-Dec. 11 Average based on figures for 7 months; no data available Jan.-May.
    Sources.-See Bulletin for March 1947; p. 349; November 1937, p. 1172; July 1937, p. 698; April 1937, p. 373; June 1935, D. 394; and February 1932, p. 121.
