## FEDERAL RESERVE BULLETIN

## CONSUMER CREDIT TRENDS

During the three years that have elapsed since V-J Day, the American public has gone into debt more rapidly than in any other period in our history. At the same time consumers in general have been fully employed, have received a record amount of income, and have continued to increase their exceptionally large holdings of liquid assets. The large volume of consumer spending from current incomes, rapid turnover of accumulated savings, and increased borrowing, accompanied by limits on output of goods and services, have contributed to the upward spiral of prices.
The unprecedented volume of home buying during this three-year period has added approximately 10 billion dollars to the outstanding mortgage debt on one- to fourfamily nonfarm homes, bringing the aggregate of such long-term obligations to more than 32 billion. In the same period short-term credit extended to consumers has risen more than 8 billion dollars to a new high of just over 14 billion at the end of June. The movement of these two types of credit thus far in 1948 indicates that their combined total will have passed the 50 billion dollar mark by the end of this year.
Expansion in debt may be explained largely in terms of the return of housing and major consumers' durable goods to the mar-
ket after the wartime curtailment of production. In the July issue of the Bulletin, current developments in the construction and real estate markets were discussed. The present article reviews the recent changes in short-term consumer credit and certain factors affecting the future outlook for this important sector of personal debt.
During the war there was a rapid liquidation of consumer credit from a level of approximately 10 billion dollars in 1941, the highest point ever reached up to that time, to just under 5 billion at the low point reached in 1944. The absorption of current income in reduction of debt and the restraint exercised in the incurring of new obligations contributed materially to the efforts during this period to hold inflation in check. p Preliminary.
the same time a record volume of savings, distributed widely among American families, was accumulated. The reduction in debt together with the much higher level of personal incomes put consumers in a strong financial position.
When consumers' durable goods began to return in quantity, demand was supported not only by the high level of income and the large accumulations of savings of consumers but also by their ability to obtain credit on the basis of their strong financial position. As the savings of some buyers were reduced and as terms for credit were relaxed, more recourse was made to credit, particularly instalment credit, which has shown a continued expansion.
From September 1941 until last year consumer instalment credit, and for a while other forms of consumer credit, were subject to regulation by the Board of Governors of the Federal Reserve System under Executive Order. This regulation was terminated as of November 1, 1947, by Congressional resolution. A bill to authorize regulation of instalment credit for a temporary period was introduced in the Senate during the special session of the Congress that met in November 1947. This measure was passed by the Senate, but it was not voted upon in the House of Representatives prior to adjournment in June of this year. In the special session convening on July 26, identical bills (S. 2910 and H. R. 7062 entitled the "AntiInflation Act of 1948") contained among other things substantially the same provisions as were embodied in the bill passed by the Senate. The original Senate bill, with the termination date changed from March 15, 1949, to June 30 , 1949, was eventually adopted by both Houses and was approved by the President on August 16.

## Postwar Developments in Consumer Credit

Wide fluctuations in the total volume of short-term consumer credit over the years have reflected principally changes in instalment credit. For special reasons growing out of the war, the period since 1941 has witnessed, first, a rapid decline in outstanding volume from the 10 billion dollar level of September 1941, and later, an even more rapid rise to a new high of 14 billion dollars. As shown in the chart, consumer credit was cut in half over the two years 1942 and 1943 and then nearly tripled. In the short space of three years since V-J Day the aggregate amount outstanding has increased more than 8 billion dollars, or about 2 billion more than in the eight years between the depression low of the thirties and the prewar peak.

COMPOSITION OF CONSUMER GREDIT OUTSTANDING

Estimates. Latest figures shown are for June.
The importance of changes in instalment credit is indicated by the chart. The 1942-43 decline in this type of credit accounted for more than 85 per cent of the decline in total consumer credit, while the postwar rise in
instalment credit accounted for 60 per cent of the total rise. Other forms of consumer credit fell very little in the early war period and began to increase earlier than instalment credit. Their greatest growth occurred in 1946, and in recent months a tendency to level out has appeared. Instalment credit, on the other hand, has continued upward.
All major segments of consumer credit are above their prewar highs. Reflecting the moderate decrease during the war and the earlier start of the expansion, noninstalment forms show the greatest gains as compared with the 1941 totals. Charge accounts have nearly doubled; single-payment loans are up about 70 per cent; and service credit is estimated to be about 55 per cent higher. In contrast, instalment credit has increased only 15 per cent over prewar levels.

## Consumer Credit in Recent Months

In the 12 months ending June 1948, total consumer credit rose 2.9 billion dollars as compared with 3.4 billion in the previous 12 -month period. The recent increase, however, has been quite different in character and significance from the earlier one. As mentioned previously, noninstalment credit has been leveling off while instalment credit has continued to rise.
The changing importance of the various types of credit is evident from the table which shows for each type its proportionate share of the net increase in consumer credit during various periods since the end of the war. Instalment credit, for example, accounted for only 40 per cent of the increase in total credit from the end of the war to June 1946, but increased its share to 61 per cent of the net gain from June 1946 to June 1947, and further to 78 per cent in the 12 months ending June 30,1948 . By way of contrast, the contribution of the increase in
charge-account balances dropped from 38 per cent of the net gain the first year following V-J Day, to only 16 per cent in the past 12 months. The shares of single-payment loans and of service credit have also declined. These developments point to instalment credit as the principal source of future increases in total consumer credit.

Instalment credit. Instalment credit outstanding rose about 2.3 billion dollars from June 1947 to June 1948, about 10 per cent more than the 2.1 billion dollar increase of the previous 12 months. The rate of advance appeared to be falling off in the first quarter of 1948, but in the second quarter there was a pick-up in activity and the net gain in outstanding credit was again about 10 per cent above that of the corresponding period of the previous year.

In statistical compilations instalment credit is divided into instalment sale credit and instalment loan credit, primarily because of the sources from which the data are obtained. Instalment sale credit is originated by retailers in connection with the sale of goods, although much of the paper is later sold to sales finance companies or banks. Instalment loan credit is originated by financial institutions through the making of direct loans to consumers. The purposes of credit
of the first type are ascertainable by reason of the character of the transaction involved, and a very large part of it goes for the purchase of consumers' durable goods. The purposes underlying the second type of credit are not so easily determined, but some of the breakdowns available permit identification of a substantial portion. Directly and indirectly, loan credit is widely used in the purchase of consumers' durable goods, although in some lesser degree than sale credit.
As indicated by the chart, instalment sale credit before the war frequently was nearly double instalment loan credit and had a somewhat wider range of fluctuation. In the earlier part of the war period sale credit fell more rapidly, and at the beginning of 1943 it dropped below loan credit. Loan credit leveled out sooner and began to rise again before sale credit. About the middle of 1946, however, the movements became parallel and more recently the spread between the two types has narrowed.

Some of the delay in the upturn of sale credit can be attributed to the slow recovery in automobile production, and the recent in-
crease to more rapid output of automobiles. On the other hand, it is to be noted that changes in methods of financing motor vehicles have taken place since before the war. At the end of 1940, for example, loan credit extended by commercial banks for the purchase of automobiles was only one-eighth as large as automobile sale credit. Today it is about two-fifths, although at one time during the early postwar period it was threefifths as large.
Noninstalment credit. Noninstalment credit increased by about 650 million dollars in the 12 -month period ended June 1948 as contrasted with 1,300 million for the previous 12 months, or 50 per cent less. The rate of advance, which at first was very rapid after the war, has been gradually declining, and in recent months a distinct leveling off of outstandings has been evident.
To a considerable extent noninstalment credit is convenience credit and is payable in fairly short periods of from 30 to 90 days. It is divided into charge accounts, loans payable in a lump sum, and service credit. Charge-account credit is particularly subject to seasonal influences, reaching a high point at the end of each year, falling off sharply in January, and recovering somewhat in the first half of the year. This year the January decline was larger than that in 1947, and the net result for the first half of 1948 was a decline half again as large as occurred in the corresponding period a year ago. Singlepayment loans have little seasonal variation, and the total outstanding now is slightly smaller than in early 1948 . Service credit represents credit such as is extended to consumers by professional people and by utility companies for services rendered. Service credit is estimated to have remained nearly constant throughout the 12 -month period.

## Credit Buying

Notwithstanding the rapid expansion during the past two years in both instalment and charge-account transactions, neither has regained the relative position it held in consumer purchasing before the war. Instalment transactions, which totaled 8.5 billion dollars in 1947, were larger than in any previous period, but they accounted for only 7 per cent of all retail sales as compared with 13 per cent in 1940 and 1941.

Charge-account sales have increased less rapidly than those made on an instalment basis, but amounted to 19 per cent of the record volume of retail sales in 1947 as compared with 23 per cent of the retail volume in 1941. The course of retail trade in the first half of 1948 points to a further gain in the proportion of instalment sales this year and also to a moderate increase in chargeaccount business.

An indication of the increasing frequency of the use of instalment credit is given in the Consumer Finances Survey made for the Board of Governors. Data from the survey show that one out of every four spending units, or approximately 12 million spending units, bought on the instalment plan (instalment sale credit) in 1947 as compared with a ratio of one out of every seven or eight spending units in 1946. Instalment loans at banks, loan companies, credit unions, and other such agencies were obtained by 15 per cent of all spending units in 1947 ( 7 million spending units) as compared with 13 per cent in the preceding year. There was some evidence to indicate that the new users of such credit were concentrated in the middle and upper income classes, principally those with incomes of above $\$ 3,000$ a year.

## Instalment Buying Terms

Reports on instalment buying terms throughout the country indicate that when Regulation W was terminated many credit grantors adopted credit policies that were considerably less restrictive than those required by the regulation but somewhat more restrictive than those prevailing before the war. In recent months there has been a further relaxation in the down payment and maturity requirements in instalment credits for practically all categories of durable goods. Competition has been the primary factor influencing the granting of more liberal contracts; when one important retail outlet in a community relaxed terms, other stores soon felt that it was necessary to follow.

An important element in limiting the relaxation of terms has been the policy of many financial institutions to set terms less liberal than those prevailing elsewhere. Terms offered by certain groups of credit grantors, principally the smaller furniture and household appliance firms as well as automobile dealers, have not varied materially from the requirements of these financial institutions. Such stores are largely dependent on the discounting of instalment obligations for the financing of additional business, since only a limited proportion of capital can be tied up in instalment credit. More liberal contracts are frequently offered by those outlets that are able to retain the bulk of their own receivables. Stores that have been forced to ease terms in order to meet this latter competition have accordingly been exerting pressure on financial institutions to grant more lenient terms.

It is difficult to generalize about current instalment terms, first, because there is a
wide range of terms available for each commodity and, second, because there are no tabulations of actual sales contracts available that would lend themselves to statistical measurement. Reports received recently, however, give some indication of the terms now available to prospective purchasers of consumers' durable goods and provide a rough basis for estimating the extent to which terms offered have shifted since the termination of Regulation W.

For purposes of comparison it should be noted that the minimum down payment required on the major consumers' durable goods at the time the regulation was terminated was one-third (furniture, 20 per cent); and the maximum length of contract permitted was 15 months.

Automobiles. Instalment contracts for automobiles appear to show more uniformity than those for any other type of durable goods. Initial cash payments of one-third are generally required, although a higher proportion may be necessary in the case of older-model, used cars. A softening of down payment requirements is apparent in the fact that payments of one-fourth or less in cash are occasionally allowed. The length of automobile contracts is closely related to the age of the car, with the longest periods (usually up to two years) being available for new and "new used" cars. On prewar model cars the period is ordinarily held to one year.

Major household appliances. Credit terms available for the purchase of refrigerators, washing machines, stoves, and other major household appliances fall into two almost distinct classifications: 10 per cent down and 18 months to pay; and 20 per cent down and 12 to 18 months to pay. The exceptions to these patterns are in the direction of no down payment requirement and, especially
on the more expensive items, 24 to 36 months to pay.

Radios, radio-phonographs, and television sets. In general the instalment contracts being written for these products recognize the elements of rapid depreciation and obsolescence, and therefore somewhat larger down payments and shorter maturities are required than for household appliances. While many stores are holding to down payment requirements of 25 per cent and a one-year term, another substantial group is offering terms of 10 per cent down and 18 months to pay. There is also a fringe of exceptions-stores that will make the sale without any down payment and allow 24 to 36 months to pay out the contract.

Furniture. Current down payment requirements on furniture appear to cluster around either 10 or 20 per cent. Some outlets offering 10 per cent down allow the contract to extend for a period of 24 months, while those requiring larger down payments tend to restrict the repayment period to 12 to 18 months.

## Significance of Present Trends

The prospect without regulation would be increased use of consumer instalment credit in buying, some further reduction in down payments, and some lengthening of maturities. Together with the seasonal rise in the use of instalment credit during the late months of the year, these factors would result in a growth exceeding that which occurred in the first six months.

The increase in instalment credit this year is of special significance because it is taking place notwithstanding the fact that the output of consumers' durable goods is no longer growing. With a rise of 85 per cent in durable goods production in 1946, there was an
increase of 65 per cent in instalment credit. In 1947 the percentage increase in credit of 55 per cent accompanied a growth of only one-third in durable goods. Gradually the increases in credit have outstripped the expansions in output of goods. By the middle of 1947, durable goods production had stabilized at a level that has been maintained up to the present time. Yet instalment credit continued to rise-one billion dollars for the first six months of 1948 and more in prospect.

In view of the current tight situation in supplies of labor and materials, further expansion of instalment credit can neither increase output nor put more people to work. It can only add more purchasing power to the already swollen spending stream and reinforce inflationary pressures. International developments, moreover, inevitably cause added pressures in the markets for consumers' durable goods. At the same time that men are withdrawn from civilian production by the draft and that such materials as steel are made more scarce by the armament program, domestic demand for durable goods, already strong, is augmented by the desire of consumers to anticipate more acute shortages.

Because more purchasing power is being added to a supply of funds already excessive in relation to available goods, expansion of instalment credit under present conditions is of an inflationary character irrespective of its relative level as compared, for example, with national income. While credit outstanding now amounts to no more than 3.9 per cent of annual disposable income in the United States, as compared with a range of 5.5 per cent to 7.1 per cent in the years just preceding the war-the highest levels on record-conditions today are much different. In the year 1940, for example, when the per-
centage was at its peak, average unemployment was 14.5 per cent of the total labor force, according to the Bureau of Census estimates, as compared with 3.5 per cent in 1947. Furthermore, the financial position of consumers was much less strong in 1940 than at the present time. At the beginning of 1948, spending units with incomes of $\$ 5,000$ and less held about 65 billion dollars of liquid assets widely distributed.

On the basis of the current financial position and incomes of consumers, many credit grantors no doubt feel safe in permitting debt to grow to much larger totals. There is a natural tendency, also, on the part of consumers to go into debt most heavily at times of high employment, large incomes, and substantial accumulated savings. These are just the factors, however, that create the danger of the present situation. They provide a stimulus to further expansion of credit which at this time can only add further impetus to the rise in prices.

Since the end of Regulation W a number of trade associations of credit grantors have urged their members to exercise caution in liberalizing terms and expanding portfolios. Such efforts have undoubtedly had some effect in moderating the increase in instalment debt. These voluntary efforts, however, have not prevented a gradual reduction in the down payments and lengthening of the maturities advertised by credit grantors until they are now rapidly approaching those which were being offered before the war. Regulation of instalment credit, which the Board has recommended on a number of occasions and which the President requested in his recent message to Congress, can make a worthwhile contribution to economic stability at maximum employment.

# STATEMENT BEFORE THE HOUSE BANKING AND CURRENCY COMMITTEE AUGUST 2, 1948* 

Chairman Wolcott and Members of the Committee:
I deeply appreciate the consideration your Chairman has extended to me in making the time of my appearance here as convenient as possible. Although Congressman Wolcott had asked me to come before you earlier, he kindly consented in deference to my request to wait until this morning. I therefore acceded to the urgent request of Senator Tobey to appear before the Senate Banking and Currency Committee last Thursday morning. Since your Committee has been fully occupied with the testimony of Mr. Porter, I trust that the postponement until this morning has not caused you inconvenience.

On the evening before going to the Senate Committee, I canvassed the members of the Board by telephone to ascertain their views on the two titles of the proposed anti-inflation bill which relate to consumer credit and bank reserves. The members of the Board agreed unanimously to the following statement:

## Anti-Inflation Act of 1948

The proposed "Anti-Inflation Act of 1948" includes two titles relating to credit controls. Both are, in substance, part of the comprehensive antiinflationary program which the Board of Governors has previously recommended to Congress. Title One relates to regulation of consumer credit and Title Two relates to bank reserves. As you gentlemen know, the proposed regulation of consumer credit is identical, except for the date, with the bill passed by the Senate, and acceptable to the Board of Governors as one part of an overall program.
The proposal with respect to bank reserves is similar to that advanced by the Board in April, except that the increased requirements would be applicable only to member banks, whereas the Board had recommended that they be made applicable to all commercial banks. This is a significant difference. We feel deeply that it is not fair to member banks in their competitive relations to nonmember banks to require that they be singled out to carry the additional re-

[^0]serves that may be necessary to combat this inflationary situation. As an emergency measure, however, the bill would be adequate to meet the immediate need for additional authority to deal with reserves.

In thus stating the views of the Board on these two titles of direct concern to the System, I do not want to create the impression that action in the credit field alone will solve our inflationary problems. Other areas, particularly a budgetary surplus, are more important.

Since I presented that statement to the Senate Committee, the Board has this morning had an opportunity to meet and to discuss the proposed legislation at length. The Board is agreed that the inclusion of the nonmember banks is essential to make the proposed legislation fully effective. I have also been in touch with several of the Presidents of the Federal Reserve Banks, and others. There is strong concurrence with the statement that it would be very unfair to single out member banks to carry the additional reserves to combat this inflationary situation. This is particularly true of the Presidents from those districts where there are large numbers of nonmember banks, which would be given a competitive advantage as against member banks. It might result in a serious loss of membership in the System and weaken the effectiveness of its policies. As you know, the effective reserve requirements in most states are substantially below those carried by member banks, and thus nonmember banks have greater latitude and earning power.

The question of the inclusion of nonmember banks is very important and we would appreciate it greatly if the Committee would give this problem serious consideration. Unquestionably from the point of view of effectiveness as well as equity the proposed legislation should apply to all commercial banks.

Now, I would like to give you some of my personal observations concerning the impact of the inflationary forces on our credit control mechanism. These remarks are substantially the same as those I made last week before the Senate Banking and

## STATEMENT BEFORE THE HOUSE BANKING AND CURRENCY COMMITTEE

Currency Committee, except for elaborations on a few points on which questions were asked by the Senators.

Consideration of the pressures now at work in our economy must be based on an understanding of the fact that the financial forces generated in a great war are among the most disrupting factors that can affect the economic system. We are now dealing, and for years shall be forced to deal, with the monetary backwash of the greatest and most costly war of all time. We are faced with the problems of liquidating the effects of that war upon our own economy, and indeed upon the economy of the world. If history is a guide, we must realize that these problems will not be solved in a day. They will extend over a number of years-how many depends upon how wisely and how courageously we devote ourselves to the task.

The financial cost of the last war, if all conceivable items of cost were included, perhaps could never be accurately summed up. Suffice it to say that our national debt rose to approximately 280 billion dollars and is still above 250 billion. The solution of our present problems does not require us to determine whether the debt should have risen so high, whether we should have spent so much, whether we should have taxed ourselves more and borrowed less, or whether the pattern of our borrowing was well conceived. What has been done is in the realm of fact and the consequences must be dealt with accordingly. One of the important facts is that the creation of our national debt resulted in a tremendous expansion of the money supply. While the Government borrowed vast sums from nonbank lenders, other vast sums were supplied by the commercial banking system. And let me say right here that this nation owes a debt of gratitude to commercial bankers generally for their service in the task of financing the war. The rapid expansion of the money supply which resulted from their contributions must not be permitted to rise and plague them as if they had cunningly contrived it for their own selfish ends.

Nevertheless, as a net result of war financing, there were increases in the public's holdings of demand deposits and currency from less than 40 billion in 1940 to 110 billion at present; of time deposits from less than 30 billion to nearly 60 billion; of United States Government securities, which are readily convertible into money, from a few billion to over 90 billion. The total supply of
these forms of money and potential money is now more than three times the prewar total.
The productive capacity of the nation was largely devoted to war purposes for almost five years. At the peak more than 50 per cent of our record production was for war use. While millions of people were coming into possession of more money than any people had ever had to spend and save, there was a scarcity of things to spend it for. Consequently two great backlogs rapidly accumulated-a backlog of unfilled wants and a backlog of money savings. With removal of controls this pent-up spending power, plus an unprecedented volume of current income were turned loose in a market characterized by scarcities and shortages. Prices, wages, and profits rose rapidly, and the spiral of inflation was on its way.
At present, with a supply of money or potential money readily available to buy the current output of goods and services about three times the prewar level, the overall physical volume of production of goods and services, so far as it can be measured, is probably little over a half larger than the prewar maximum. Production, it is important to emphasize, is practically at capacity; there has been little increase in its physical volume during the past year and a half, notwithstanding the great pressure of unsatisfied demands, expanding credit, and rising prices.
Prices on the average have risen by nearly threefourths since before the war and two-thirds of this increase has occurred in the past two years. The dollar value of the total national product, at nearly 250 billion dollars a year, is over two and half times the prewar maximum. On the basis of the present volume of money, the turnover of which is low relative to past periods of high activity and could be greatly increased, prices could rise even further. Further expansion of bank credit, the capacity for which is tremendous, would add to the already excessive money supply and could do little to increase output.

## Public Debt Holdings Provide Basis for Postwar Credit Expansion

Capacity for still further credit expansion also grew out of war finance. In helping to finance the Government's large war expenditures and to provide the money supply demanded by the expanding and abnormal war economy, the commercial banks of the country and also the Federal Reserve Banks
greatly expanded their holdings of Government securities. Commercial bank holdings of Government securities of all types increased from about 16 billion in 1940 to a peak of 90 billion at the end of 1945 and then were reduced during 1946 to 70 billion, largely by Treasury use of its excess bank deposits to retire debt. Subsequently, to meet the demands of rapidly expanding private economy in the postwar period, banks have further reduced their holdings of Government securities, but they still hold 65 billion dollars of them. Other investors have also sold or redeemed some of the holdings of Government securities in order to obtain funds for other uses.

Sales of U. S. Government securities in the market by banks and others have not been absorbed by purchases on the part of other investors. In order to keep the prices of Government securities from declining, the Federal Reserve System has continued to carry out its wartime responsibility of supporting the market by buying at relatively stable prices securities offered for sale and not purchased by others. The result of these purchases by the Federal Reserve Banks is to supply additional reserve funds to banks. Because of the fractional system of reserve requirements, these new reserves in turn provide the basis for an increase in bank credit that may be many times the amount of new reserves obtained.
In the postwar period these reserves supplied the basis for an increase in bank credit in response to an active demand for loans to finance the operations and expansion of the business system in an era of high demand, accelerated activity, rising costs, and rising prices. There is ample evidence that bank credit is also being used for purposes ordinarily served by the capital market. As a result, despite a reduction of 25 billion dollars in the volume of Government securities held by commercial banks, deposits and currency held by the public have increased by an additional 15 billion since the end of 1945. This has been largely the result of an increase of 15 billion in bank loans.

The Board of Governors has kept the Congress and the public informed concerning these results of supporting the market for Government securities. It has repeatedly pointed out that the effect has been to increase significantly, and it may be dangerously, the money supply. The need for market support of Government securities has greatly increased the problem faced by the System in adopting policies to
regulate the supply of money and credit to the justifiable needs of a stable, full-employment economy. As long as various holders of Government securities endeavor to sell more of their holdings than other investors are willing to buy, the Federal Reserve Banks must purchase the balance and these purchases create bank reserves.
It is my view that the System is obligated to maintain a market for Government securities and to assure orderly conditions in that market, not primarily because of an implied commitment to wartime investors that their savings would be protected, nor to aid the Treasury in refunding maturing debt, but because of the widespread repercussions that would ensue throughout the economy if the vast holdings of the public debt were felt to be of unstable value.

## Policies Adopted to Restrain Inflationary Credit Expansion

The Federal Reserve System and the Treasury have, nevertheless, been able to adopt some policies designed to offset the expansive effect on bank reserves of market purchases of Government securities by the Federal Reserve System. The first and quantitatively more effective of these measures has been the use of the Treasury surplus to retire maturing securities, particularly those held by the Federal Reserve Banks. The debt retirement program was made possible first by a large cash balance built up by the Treasury in the Victory Loan drive in 1945 and later by a substantial surplus of cash receipts over expenditures. In paying out a large part of the excess cash collected from the public to the Federal Reserve for retirement of debt, that amount of money was eliminated from the money supply and also from bank reserves.
As a second measure of restraint, about a year ago the Federal Reserve and the Treasury embarked upon a program of permitting yield rates on short-term Government securities to rise from the very low levels at which they had been pegged during the war. The purpose of this action was to encourage banks and others to invest available funds in short-term securities. This enabled the Federal Reserve to reduce its holdings of short-term securities and thus offset the effect on reserves of its purchases of longer term bonds. The rate on 90 day Treasury bills rose from $3 / 8$ of one per cent to about 1 per cent, and that on one-year Treasury certificates from $7 / 8$ to $11 / 8$ per cent. The Federal

Reserve Banks early in 1948 raised their discount rates from 1 per cent to $11 / 4$ per cent.

Late in 1947, market yields on Government bonds also rose, that is, prices of bonds, which had been selling at large premiums, declined in the market. This adjustment was in large part inaugurated by sales by financial institutions to obtain funds to invest in corporate securities and mortgages, but it was accelerated by sales made in fear of further declines in prices of bonds from their high levels. In order to check this decline, the Federal Reserve System adopted a policy of freely purchasing bonds at an established series of prices, which maintained yields in accordance with a pattern ranging from $11 / 8$ per cent for one-year issues to $21 / 2$ per cent for the longest-term bonds. This pattern kept the prices of all except a few very short issues of securities at par or higher.
It may be of interest to review credit developments and the effects of these policies during the past twelve months. In the year ending June 30 , 1948, commercial banks showed a small increase in their deposits and their total loans and investments, although there were some wide fluctuations during the period. In the twelve months, commercial banks increased their total loans and their holdings of corporate and State and local Government securities by a total of 7 billion dollars. Most of this growth occurred in the latter half of 1947 and was accompanied by an expansion in bank deposits and reserves. In the early months of 1948 , however, deposits were withdrawn to make seasonal heavy tax payments, which were not offset by Treasury expenditures. Banks met these needs largely by reducing their holdings of Treasury bonds. Some maturing bonds were exchanged for certificates and a part of these issues were sold. At the same time banks in general purchased added amounts of Treasury bills, an indication of the effect of the higher short-term rates in attracting available funds.

Banks also continued to increase their loans in the first half of 1948 by about 1.7 billion dollars-a somewhat slower rate of growth than in 1947. Most of the dollar increase in bank loans during 1947, particularly in the last half, was in commercial and industrial loans, but the increases in consumer loans and real estate loans showed larger percentage increases in 1947 and have continued to expand in 1948.

Savings institutions, particularly insurance companies, also considerably expanded their holdings of
mortgages and investments other than U. S. Government securities during the past year. In the aggregate, these assets of selected groups of financial institutions increased by 8.6 billion dollars in the period, of which 6.4 billion was met by receipts of new savings from the public and 2.2 billion by a reduction in their holdings of Government securities. Nonbank investors, as a group, sold and redeemed bonds, but purchased certificates and bills, reflecting increased popularity of these issues with the rise in rates. Life insurance companies substantially increased their holdings of Government securities during the war and then in the postwar period reduced these holdings while increasing their mortgages and other investments.
Sales of Treasury bonds by nonbank investors and by banks in the past year have been largely purchased by the Federal Reserve System. The System purchased 5.7 billion dollars of Treasury bonds in the market and also purchased in the market a net amount of about 2.6 billion dollars of notes and certificates, but sold on balance nearly 4 billion dollars of bills to banks and other investors. In the same period the Treasury redeemed for cash about 5 billion dollars of maturing issues of various kinds held by the Federal Reserve Banks. With all of these wide shifts in holdings of different types of securities, there was only a small net decline in the System's aggregate holdings of Government securities, although the total fluctuated considerably from time to time.

The purpose of this detailed survey of figures is to illustrate how shifts in holdings of the public debt are being used to finance inflationary spending, and how Federal Reserve and Treasury policies endeavor to offset these tendencies. Treasury use of surplus funds to retire securities held by the Federal Reserve drains reserves from banks and makes it necessary for them to sell securities if they wish to maintain their loans, and even more so if they want to expand credit. The higher rate on Treasury bills encourages banks and other holders of liquid funds to buy bills rather than invest in other assets. Since most of the bills have been held by the Federal Reserve, a reduction in System holdings is made possible and bank reserves are thereby absorbed. Nevertheless, sales of bonds to the Federal Reserve, primarily by nonbank investors, have been so large that the restrictive effect of the other policies has been fully offset.

A third method of restraint used by the Federal

Reserve authorities during the past year was to increase reserve requirements at central reserve city banks in New York and Chicago by 2 per cent of demand deposits in February and again in June. This added about a billion dollars to member bank required reserves and immobilized that amount of bank assets. The effects of these changes, however, were concentrated on New York City and Chicago banks, where loan expansion has been less than at other banks. Under existing law there is no further power to increase requirements except in central reserve cities.

It should be mentioned that bank reserves have been supplied in the past year by an inflow of gold amounting to 2.2 billion dollars and also by a decline of about half a billion in currency in circulation. A temporary increase of 1.3 billion in Treasury deposits at the Federal Reserve offset in part these factors. The total growth in reserves was 1.4 billion, sufficient to cover the increases in reserve requirements at central reserve city banks and also increased requirements resulting from deposit growth. The Federal Reserve System was not able through its policies to prevent some continued expansion of bank credit.

## Prospective Demands for Credit

Economic prospects indicate a continuation of strong inflationary pressures during the next several months and perhaps for a much longer period. Individual incomes have continued at a high level, with a tendency to increase as prices and wages have risen and employment has grown with the labor force. Consumer spending, based on current incomes, the use of past savings, and borrowing, also has continued to expand. Construction volumes seem likely to remain for a while at capacity levels, with possible further rises in prices. Business expenditures are also expected to continue in large volume. Government expenditures are increasing, while the recent income tax reduction will lower receipts, thereby sharply reducing the Treasury surplus.
Continuation of these tendencies will call forth further credit expansion. Borrowing by consumers and home-owners will no doubt continue to expand and thereby add to consumer spending and to demands for housing, which are already excessive. Prospective large outlays by business for expansion of inventories and plants will probably exceed internal funds available and also amounts obtained
by flotation of new securities. Overall demands for funds may continue in excess of the current volume of savings readily available for lending for such purposes. To help meet the demands for credit and capital, corporations, individuals, and financial institutions will sell some of their holdings of Government securities and also increase their borrowings from banks.
If these tendencies continue, sales of Government securities by nonbank investors may exceed 1.5 billion in the last half of 1948 and perhaps be much greater early in 1949. These sales will keep the Government bond market under pressure and require support purchases by the Federal Reserve, if the policy of maintaining the $21 / 2$ per cent yield level on long-term Treasury bonds is continued. Thus additional reserve funds would be made available to banks which, unless otherwise offset, could sustain a further very large inflationary expansion of bank credit. Additional reserves supplied through the gold inflow may be approximately offset by the drain resulting from seasonal currency demands.
To avoid an abundance of reserves, an easy shortterm money market, and continued inflationary credit expansion, positive measures to absorb reserves will be needed. In view of the pressure of current demands, the continued shortages of many goods, the limited capacity for increased output, and the available accumulations of liquid assets, further credit expansion will add to the pressure for rising prices. Continued credit expansion will store up trouble for the future and make the inevitable adjustment more dangerous for the stability of the economy.
This course of economic and monetary developments has been the source of increasing concern to th Federal Reserve authorities. We are convinced that, so long as the present situation lasts, it is important to restrict further credit expansion and to promote a psychology of restraint on the part of both borrowers and lenders. To keep the reserve position of banks under pressure and discourage further inflationary credit expansion will require carefully coordinated operating measures on the part of both the Treasury and the Federal Reserve System.
Of the three sets of measures used to restrain the growth of bank reserves during the past yearnamely (1) use of the Treasury cash surplus to retire Federal Reserve-held securities, (2) reduction
in Federal Reserve holdings of Treasury bills through a rise in short-term rates, and (3) increases in reserve requirements at central reserve city banks -the first and most important has been greatly reduced in its potency and the third has been almost wholly exhausted.

Whereas the Treasury showed an excess of cash income over cash outgo of 9 billion dollars in the fiscal year 1947-48, the prospects for the current year, on the basis of very tentative and unofficial estimates, are for a cash surplus of only about 3 billion, most of which will be concentrated in the first quarter of 1949. This difference in the surplus reduces considerably the most important antiinflationary influence in the situation during the past year. The Treasury cash surplus was a particularly effective device because it exercised a drain on bank reserves. As a result the banks losing reserves had to sell securities in order to maintain their reserve positions. While under these pressures they are less likely to be seeking new loans and in some cases less willing to meet loan applications.

## Possible Measures of Restraint

This brings us to the various ways in which restraint may be exercised over credit expansion.

The first means is voluntary self restraint on the part of borrowers and lenders. I am convinced that the voluntary program originated and actively developed by the American Bankers Association has had a significant effect in developing a more cautious and critical attitude on the part of bankers toward so-called unproductive or speculative loans. If inflationary pressures were mild, voluntary restraint might be adequate to hold them in check. Continued and intensified voluntary restraint will make our joint task easier.

There are a number of reasons, however, why voluntary restraint cannot be relied upon to do the whole job alone when inflationary pressures are as strong as they are at the present time. Perhaps the most important reason is that a loan which may appear productive when viewed by itself may not add to the total output of the economy as a whole. For example, a customer may increase his production by borrowing funds to purchase needed parts that are in short supply. Such a loan would appear to be productive from the individual point of view of both the borrower and the lender. But will the loan increase the supply of the parts or total output? If all resources are being used to capacity, the loan
may merely enable the borrower to secure parts that otherwise would have been bought by another firm. From the point of view of the economy as a whole, the loan has increased the demand for goods but it may not have increased total supply at all, with a bidding up of prices as the only result. Basically, that is why I believe that self restraint, though important, is inadequate to check a strong inflationary development.

Another reason is the force of competition not only among banks but among all lenders. We have in the United States 14,000 commercial banks and many thousands of other lending agencies. If, because of concern for the general interest, a bank should refuse to lend even to a good customer, this does not mean that the customer will not secure the funds. It may merely result in a permanent loss of the customer to some other lender. And unfortunately the new lender may secure the funds from sale of Government securities, with the result that the loan may be just as inflationary as if the bank had made it in the first instance.
I want to emphasize that I support strongly the self-restraint program developed by the American Bankers Association and would like to see it pursued aggressively, not only by banks but by all lenders. It is an important step in the right direction. Primarily for the reasons I have mentioned, however, I do not think it can do the job alone.

Another approach to the problem is through control over member bank reserves. Bank credit cannot expand unless banks acquire or have reserves on which to expand. One way in which the System has supplied reserves has been through purchases of long-term Government securities. A means of restraint would be for the System to limit its purchases of such securities either by refusal to buy or by reducing its prices sufficiently to attract other purchasers. As you know, the System has made a public commitment to support the $21 / 2$ per cent yield level on long-term Government bonds for the foreseeable future. I gave my reasons for subscribing to that commitment when my confirmation was under consideration by the Senate Committee on Banking and Currency. Although that commitment substantially limits our freedom of action, I believe there is a better way to operate against credit expansion than now to abandon that commitment.

Our basic problem is to absorb reserves. Increases in reserves may be anticipated from three principal sources: (1) imports of gold, (2) return
of currency from circulation, and (3) purchases of Government bonds by the Federal Reserve Banks to support the long-term yield level. The principal problem before the System is to absorb or offset reserves arising from these sources. The only way it could do this effectively under present authority is to liquidate part of its holdings of Government securities. It would be necessary, of course, to sell them at prices the market would pay.

The System has a large portfolio of bills, certificates, and other short maturities that it could use. If the inflationary demand for bank credit is strong, sale of these holdings to absorb reserves would result in a further stiffening of short-term interest rates. The Open Market Committee of the Federal Reserve System feel that a policy of endeavoring to sell short-term securities in order to absorb any additions to reserves is a necessary and desirable step. If an increase in the short rate should result, it would tend to attract funds from other uses to investment in short-term Government securities. As I have pointed out, the policy of allowing short-term rates to rise was begun about a year ago and has had some success.

At this point the necessity for teamwork between the Treasury and the Federal Reserve becomes apparent. I am keenly sensitive to the necessities of the Treasury in its task of managing the public debt. I thoroughly understand the Treasury's responsibility to keep the interest cost of the debt as low as possible consistent with all relevant factors. I know that the Treasury Department is equally sensitive to the responsibilities of the Federal Reserve in the field of monetary and credit policy. The problems of mutual concern to the Treasury and the Reserve System in their respective fields are being approached in a continued spirit of cooperation.

The rediscount rate is another instrument of policy in the short-term market. It should not be written off. Although its effectiveness is diminished in times like these when the volume of member bank borrowings is small, and when banks can readily obtain needed funds by selling some of their large holdings of Governmnt securities, higher discount rates would have some restrictive effect. If, for example, the yield on short-term Government rises, it would become appropriate under these circumstances to increase the discount rate. This action would discourage the market from reacquiring through the discount window any funds
that had been withdrawn through the disposal by the Reserve System of short-term Governments.

An increase in the discount rate has great psychological effect. Each increase repeats the warning that credit is in need of continued restraint. Changes in the Federal Reserve discount rate and open market operations supplement each other as necessary parts of an overall credit policy.

These two related instruments influence the total volume of reserves of nember banks. The third general instrument-reserve requirements-is designed to influence the amount of bank credit that can be based on a given volume of reserves. An increase in requirements immobilizes reserves and makes them unavailable for further lending and investing. As you know, the Board of Governors has on previous occasions presented various ways of dealing with the problem of reserves or immobilizing certain bank assets.

The method proposed in the bill before you is simple and direct, and involves no departures from existing principles. The bill would authorize the Board of Governors to increase by 10 and 4 percentage points the reserves that member banks may be required to maintain against their demand and time deposits, respectively. The authorization would be granted for a period of two years. As I have already explained, we feel deeply that it is not fair to member banks in their competitive relations with nonmember banks to require that they be singled out to carry the additional reserves that may be necessary to combat this inflationary situation. I earnestly hope that Congress will, during this interval, reconsider the whole structure of reserve requirements, possibly along the lines developed recently before the Joint Committee on the Economic Report.
I should like to indicate briefly what can and cannot be accomplished through increases in reserve requirements. Changes in requirements cannot, of course, be considered in isolation. They must be related to other instruments of policy. In practice they are closely related to open market operations. One method that banks use to adjust their positions. to the pressure exerted by an increase in requirements is to sell Government securities. To the extent that these are purchased by the Federal Reserve, new reserves are created which meet the higher requirements. This is not the whole story, nor does it happen invariably, but it does illustrate the complexity of our problem. An increase in require-
ments immobilizes a larger portion of the assets of member banks and makes them unavailable for sale in order to obtain funds to increase loans. It, therefore, reduces the liquidity of banks and lowers the ratio of multiple credit expansion that can occur on the basis of any increase in available reserves.

The purpose of increasing authority over reserve requirements is not to obviate the possible need for open market operations and a rise in short-term rates. That problem would still be with us.

## Conclusion

In conclusion, I should like to state emphatically the Board's view that the use of its powers over the supply of reserves under present conditions should be directed toward restraining further credit expansion and not toward forcing liquidation of the outstanding volume of credit. The Federal Reserve System was established to provide for flexibility in our monetary system. It was not designed to make available any amount of money that borrowers might demand without regard to the productive capacity of the economy and the speculative nature of the commitments. The System would be derelict in its duty if it did not exercise a proper measure of restraint.

Expansion of the public debt because of war and the necessity of maintaining a degree of stability in the value of the vast holdings of that debt by financial institutions and individuals has confronted the System with formidable difficulties in the exercise
of restraint over credit expansion. The proper handling of this problem requires the most careful management. It can be facilitated by the extension of the System's powers, as proposed in the bill before you, which extension is thoroughly consistent with existing powers and traditional methods.
As I have pointed out, there are possibilities and prospects for a continuation of inflationary pressures which will call forth additional demands for credit. I feel confident that the Federal Reserve authorities will use their existing powers to the fullest extent possible to restrain these tendencies without depriving the economy of the credit needed to maintain production and employment at the highest sustainable levels. We would endeavor to use the additional powers proposed in the same way.
Finally, it should be emphasized as strongly as possible that action in the monetary field alone cannot readjust the unbalanced relationships within the economic structure which have already been created by inflationary forces, and cannot check further inflationary pressures arising from nonmonetary causes.
The additional powers sought would enable the Reserve System to exert a very necessary degree of restraint upon the now unrestrained expansion of credit. For that reason they are urgently needed, even though they are not and should not be regarded by the Congress or by the public generally as a cure-all.

The Board of Governors of the Federal Reserve System on several occasions in the past has recommended to the Congress legislation which would authorize the regulation of consumer instalment credit. This is the sector of consumer credit which has been subject to wide fluctuations in the past, thereby contributing to instability and unemployment. The Board believes that measures permitting the moderation of these fluctuations, which are tending to increase in size and influence, are an essential part of a program to achieve stable production and employment at maximum levels, a declared national goal of this country.
The Congress has before it at this time a resolution which would restore, in so far as instalment credit is concerned, the authority that was exercised from 1941 to 1947 through Regulation W. This would be a temporary measure designed to help meet the special inflationary pressures which exist today. The Board's opinion is that, while permanent legislation would be preferable, conditions are such as most urgently to require action and a temporary measure is better than none. To have any real usefulness, however, the authority should be provided for a sufficiently long period so that persons subject to regulation will realize their responsibility and adhere to its provisions. For this reason, we believe that any legislation on this subject should extend at least until June 30, 1950. During this period, of course, the Board would be able to modify the regulation to meet changing conditions.
Regulation under the proposed legislation would be in much the same form as it was under the Board's Regulation W when that was last in force. It would cover instalment credit, not only instalment credit for financing the purchase of consumers' durable goods but also instalment credit for other consumer purposes, both of which are inflationary under present conditions. It would prescribe maximum maturities and minimum down payments as did Regulation W, but not necessarily at the same levels. The proposed legislation includes provision for more appropriate enforcement machinery than was available under Executive Order No. 8843 which authorized Regulation W. Courts of equity would be empowered to aid enforcement by enjoining violations, as

[^1]provided in legislation dealing with similar matters.
The case for this legislation seems to the Board to be particularly strong in the light of the general conditions which now exist. During the three years that have elapsed since V-J Day, the American public has gone into debt more rapidly than in any other period in our history. At the same time consumers in general have been fully employed, have received a record amount of income, and have continued to increase their exceptionally large holdings of liquid assets. The large volume of consumer spending from current incomes, rapid turnover of accumulated savings, and increased borrowing, accompanied by limits on output of goods and services, have contributed to the upward spiral of prices.

Consumer credit consists of both instalment credit and single-payment credit. Wide fluctuations in the total volume of consumer credit over the years have reflected principally changes in instalment credit The 1942-43 decline in this type of credit accounted for more than 85 per cent of the decline in total consumer credit, while the postwar rise in instalment credit accounted for 60 per cent of the total rise. Other forms of consumer credit fell very little in the early war period and began to increase earlier than instalment credit. Their greatest growth occurred in 1946, and in recent months a tendency to level out has appeared. Instalment credit, on the other hand, has continued upward.

Instalment credit outstanding rose 2.3 billion dollars from June 1947 to June 1948, about 15 per cent more than the 2 billion increase of the previous 12 months. The rate of advance appeared to be falling off in the first quarter of 1948, but in the second quarter there was a pick-up in activity and the net gain in outstanding credit was again 15 per cent above that of the corresponding period of the previous year.
An indication of the increasing frequency of the use of instalment credit is given in the Consumer Finances Survey made for the Board of Governors. The information was obtained by interview of a selected sample of consumer spending units in the country, each unit being a group of persons in the same family and dwelling who pool incomes to meet major expenses. Data from the survey show that one out of every four consumer spending units, or approximately 12 million spending units, bought

Federal Reserve Bulletin

## REGULATION OF CONSUMER INSTALMENT CREDIT

on the instalment plan (instalment sale credit) in 1947 as compared with a ratio of one out of every seven or eight in 1946. Instalment loans at banks, loan companies, credit unions, and other such agencies were obtained by 15 per cent of all consumer spending units in 1947 ( 7 million spending units) as compared with 13 per cent in the preceding year. There was some evidence to indicate that the new users of such credit were concentrated in the middle and upper income classes, principally those with incomes of above $\$ 3,000$ a year.

Reports on instalment buying terms throughout the country indicate that when Regulation W was terminated many credit grantors adopted credit policies that were considerably less restrictive than those required by the regulation but somewhat more restrictive than those prevailing before the war. In recent months there has been a further relaxation in the down payment and maturity requirements in instalment credits for practically all categories of durable goods. Competition has been the primary factor leading to lower down payments and longer maturities; when one important retail outlet in a community relaxed terms, other stores soon felt that it was necessary to follow.

The prospect for the balance of this year is for increased use of consumer instalment credit, further reduction in down payments, and lengthening of maturities. Together with the seasonal rise in the use of instalment credit during the late months of the year, these factors suggest a growth exceeding that which occurred in the first six months.

The increase in instalment credit this year is of special significance because it is taking place notwithstanding the fact that the output of consumers' durable goods is no longer growing. With a rise of 85 per cent in durable goods in 1946, there was an increase of 65 per cent in instalment credit. In 1947 the percentage increase in instalment credit of 55 per cent accompanied a growth of but one-third in durable goods. Gradually, the increases in credit have outstripped the expansions in output of goods. By the middle of 1947, durable goods production had stabilized at a level that has been maintained up to the present time. Yet instalment credit continued to rise-one billion dollars for the first six months of 1948 and more in prospect.

In view of the current tight situation in supplies of labor and materials, further expansion of instalment credit can neither increase output nor put more people to work. It can only add more purchasing power to the already swollen spending stream and reinforce inflationary pressures. International developments, moreover, inevitably add
pressures in the markets for consumers' durable goods.
Because more purchasing power is being added to a supply of funds already excessive in relation to available goods, expansion of instalment credit under present conditions is of an inflationary character irrespective of its relative level as compared, for example, with national income. While credit outstanding now amounts to no more than 3.9 per cent of annual disposable income in the United States, as compared with a range of 5.5 per cent to 7.1 per cent in the years just preceding the warthe highest levels on record-conditions today are much different. In the year 1940, for example, when the percentage was at its peak, average unemployment was 14.5 per cent of the total labor force, according to the Bureau of Census estimates, as compared with 3.5 per cent in 1947. In other words, there is no slack today. More credit cannot call forth more goods-it can only add to the upward pressure on prices.
It should be noted that the Board's position on regulation of instalment credit is not to be taken as in any way indicating a feeling that all instalment credit is undesirable. The problem is to prevent the abuse-not the use-of credit. A damping of disruptive fluctuation is what we are interested in, and more stability at levels related to the conditions. of the time.

Since the end of Regulation W a number of trade associations of credit grantors have urged their members to exercise caution in liberalizing terms and expanding portfolios. Such efforts have undoubtedly had some effect in moderating the increase in instalment debt. These voluntary efforts, however, have not succeeded in preventing gradual reduction in the down payments and lengtheningof the maturities advertised by credit grantors. Easy terms are rapidly approaching those which were offered before the war.

Now is the time when it is in the best interest of all consumers to save more and spend less. This is the time to reduce-not to increase-debt. This is a time for restraint-voluntary, yes, but reinforced, much as we all dislike compulsions, so far as: necessary to protect the real interests of all of us.
Finally the Board has asked me to reiterate as strongly as possible that regulation of instalment credit is a tool--but only a supplementary tool-for dealing with the problem of inflationary credit. By itself it cannot do the job. To be adequately effective, it must be buttressed by the basic bank credit controls which the Board has advocated repeatedly, beginning with its 1945 annual report toCongress.

## 1948 SURVEY OF CONSUMER FINANCES ${ }^{1}$

## Part IV. Consumer Saving and the Allocation of Disposable Income

During 1947 the rate and volume of consumer saving out of income continued to decline. A majority of the nation's consumer units saved in 1947, some saving substantial amounts and others saving small amounts. At the same time, expenditures of many other consumer units exceeded incomes and resulted in a large volume of dissaving. The declining saving rate was indicative of a widespread consumer willingness to spend current income or accumulated savings or to borrow in order to purchase a record quantity of consumers goods and services at inflated prices.

The 1948 Survey of Consumer Finances, conducted for the Board by the Survey Research Center of the University of Michigan, obtained information about the principal types of saving of a cross-section of the nation's consumer units. The survey data provide insights about the 1947 saving patterns of consumers in all walks of life and indicate some of the important factors affecting individual saving such as durable goods expenditures, income changes, retirement status, and unusual expenses. In addition to a discussion of saving, this article includes information about consumer income after Federal taxes, and spending unit expenditures for selected durable goods and other consumers goods and services. Where relevant and valid, comparisons with the results of two previously conducted surveys are included in the analysis. ${ }^{2}$

[^2]The information here presented from the 1948 Survey of Consumer Finances is based upon the results of about 3,500 interviews taken in 66 sampling points throughout the nation. The sample is representative of the entire population of the United States residing in private households. ${ }^{3}$ The interview unit of the surveys is the spending unit, defined as all persons living in the same dwelling and belonging to the same family who pooled their incomes to meet major expenses.

## Summary of Findings on Consumer Saving and Disposable Income

1. It is estimated that 31 million spending units saved roughly 25 billion dollars in 1947, 13.5 million spending units dissaved or spent about 11 billion dollars in excess of their incomes, and the remaining 4 million spending units neither saved nor dissaved.
2. The percentage of aggregate consumer income saved, as well as the total volume of individual net saving, declined further during 1947, primarily reflecting an increased volume of dissaving, i.e., expenditures in excess of income, on the part of some consumer units.
3. As compared to 1946 , there was a substantial increase in 1947 in the proportion of dissavers with incomes of $\$ 3,000$ and above. More than 25 out of every 100 consumer units with incomes of $\$ 3,000$ and above dissaved in the past year as compared to less than 20 out of every 100 consumer units with similar incomes in 1946. This change may have been partly due to the upward shift in incomes that brought many consumer units above the $\$ 3,000$ level in 1947 from levels of below $\$ 3,000$ in 1946, where dissaving was more frequent. There was virtually no change in the proportion of dissavers at lower income levels.
4. Most dissavers, consumer units that spent more than their incomes, were not in adverse circumstances during 1947 and did not have unbalanced budgets solely because of higher living expenses. Almost three-fifths of the dissavers purchased automobiles, furniture, radios, or household appliances during 1947. The ability to dissave presumes a certain degree of financial well-being, for to spend

[^3]more than one's income, a person must either have sufficient income or collateral to be an acceptable risk for credit or have past savings to draw upon.
5. The spending units that neither saved nor dissaved were most likely to be in adverse financial circumstances in 1947. These spending units, largely with less than $\$ 1,000$ in income, had incomes too low to qualify as good credit risks and most had no savings to draw upon.
6. As in 1946 the most frequently reported forms of saving were life insurance premiums, followed by additions to liquid assets (Government bonds and checking and savings accounts), payments of home mortgages, home improvements, and retirement funds.
7. Top income units accounted for increased proportions of positive and net saving in 1947, notwithstanding a substantial increase in the proportion of negative saving accounted for by them. Middle and lower income units, on the other hand, were represented by smaller proportions of these various types of saving, and the lower income units, those with incomes of less than $\$ 2,000$, were net dissavers as a group.
8. It is estimated that more than two-thirds of all spending units incurred Federal income tax liabilities for the year 1947. Median income after Federal tax for all spending units was roughly $\$ 2,380$ compared with a median income before tax of $\$ 2,530$.
9. The proportion of income saved by spending units in the upper income groups was considerably larger than the proportions saved in either lower or middle income groups. Almost the same average proportion of income after Federal taxes was spent by consumer units in lower income groups for automobiles and other selected durable goods during 1947 as was spent by middle and upper income groups.
10. In the case of "other consumer expenditures" which were primarily nondurable goods and services, consumer units with incomes of less than $\$ 2,000$ had expenditures amounting to about 100 per cent of their incomes after Federal tax as compared with approximately 70 per cent for spending units with incomes of $\$ 5,000$ and above.

## Saving in 1947

In the Survey of Consumer Finances net saving is defined as the difference between consumer income and consumer expenditures (including taxes).

Amounts saved or dissaved by individual spending units were obtained in this survey by requesting detailed information on changes in the various asset and liability items that make up the consumer balance sheet. Frequent forms of "additions to" saving were payment of life insurance premiums, increases in liquid asset holdings, decreases in debt, payments for home improvements, and payments to retirement funds. The primary forms of "withdrawals from" saving were decreases in liquid assets and increases in debt. For each individual spending unit, the total of "additions" minus the total of "withdrawals" represented its net saving. If the figure was plus, the spending unit was a saver (positive saver) in 1947; if minus, the spending unit was a dissaver (negative saver). ${ }^{4}$

By the definition of saving, consumer nondurable and durable goods are not considered assets, and thus monies spent for such goods are termed expenditures and do not add to the saving of a spending unit. If durable goods expenditures were considered a form of positive saving, the saving shown for 1947 would have been much higher in amount. In addition, there would have been many more positive savers and fewer dissavers.

The rate of consumer saving out of income declined further in 1947, reflecting the continued heavy use of liquid assets and credit to buy an increasing supply of durable goods and to purchase other consumers goods and services. According to survey data, spending units as a whole reported net saving amounting to approximately 9 per cent of their money incomes as compared to almost 12 per cent in 1946. In both 1947 and 1946 more than six in every ten spending units reported saving out of current income, almost three in every ten reported dissaving (i.e., expenditures in excess of income), and almost one in every ten reported neither saving nor dissaving.

A substantially higher volume of dissaving in 1947 made for a decline in the net amount of saving as well as in the percentage of income saved. Spending units that were dissavers spent an estimated 11 billion dollars in excess of their incomes, while amounts saved by other spending units were approximately 25 billion dollars.

While fewer spending units added to their liquid assets in 1947 as compared to 1946, there was little difference in the frequency with which other types

[^4]of "additions to" saving were reported by consumer units. The most common form was again through payment of life insurance premiums. As shown by Table 1, roughly three-fourths of all spending units indicated that they put away some money in this form. Increases in liquid asset holdings were reported by more than one-fourth of all spending units. Payments on home mortgages, home improvements, and payments to retirement funds were other frequently reported types of "additions to" saving.
The most common forms of "withdrawals from" the balance sheet of saving were through use of liquid assets and credit, reported by one-third and one-fifth of all spending units, respectively. As compared to 1946 it would appear that a larger proportion of spending units incurred debts and a smaller proportion used their liquid assets.

For comparable 1946 data, see Federal Reserve Bulletin, August 1947, Table 2, p. 953 .

Savers and dissavers. As shown by Table 2, almost two-thirds of all spending units were positive savers in 1947, that is, their money incomes were in excess of their expenditures. Similar to the findings of a year ago, higher proportions of upper income people than lower income people were positive savers. About four out of every ten spending units with incomes of less than $\$ 1,000$ were positive savers as compared to eight out of every ten with incomes of $\$ 7,500$ and above. A larger proportion of the managerial and self-employed group were positive savers than spending units in other occupational groups.

About 28 per cent of all spending units, or 12.5 million units, were dissavers in 1947. The total amount of their dissaving was considerably larger than in any other postwar year. Within occupational groups the largest proportion of dissavers.

${ }^{1}$ Spending units with money incomes in excess of expenditures.
${ }^{2}$ Spending units with expenditures in excess of money incomes.
${ }^{8}$ Less than one-half of 1 per cent.
For similar 1946 data, see Federal Reserve Bulletin, August 1947, Table 4, p. 955 . The 1947 and 1946 data are not strictly comparable. The saving figures for 1947 exclude changes in charge accounts and back bills and thus may understate by several percentage points the proportion of dissavers with incomes of less than $\$ 3,000$. Any characteristic of a spending unit that is heavily weighted by low income groups, would show a similar understatement of the number of dissavers. See the appendix to this article for a more complete discussion of the comparability of the saving data.

[^5]was found among spending units headed by skilled and semiskilled persons as in 1946.
There were fewer positive savers and more dissavers in 1947 than in 1946 in the spending units headed by professional, managerial, and selfemployed persons and skilled and semiskilled workers. At the same time many more veterans of World War II were positive savers in 1947, and fewer, dissavers. Although veterans are still heavy purchasers of durable goods, they begin to show expenditure and saving patterns more similar to those of nonveteran spending units in their own age groups.

Additional information relating to both positive and negative savers in 1947, including percentages of income and amounts saved or dissaved by income and occupation groups, and by veteran status is given in Tables 3 and 4. As compared to 1946, positive savers tended to save smaller percentages of their incomes, while the dissavers showed little change in amounts of dissaving as percentages of their incomes.
The majority of positive savers in every income group except $\$ 7,500$ and above saved less than 20
per cent of their incomes. This was also found to be the case in each occupational group except managerial and self-employed and farm operator groups. Spending units in these groups often reported substantial amounts saved in the form of business investment, such as increases in inventories or additions to plant and equipment by unincorporated businessmen, or the purchase of land or equipment by farmers. The particularly high rates of saving indicated for farm operators to some extent result from comparing their annual saving with an income figure (money income) that does not make allowance for substantial nonmoney sources of income.

A measure of the extent to which dissavings supplemented the incomes of spending units is provided by Table 4. About one-sixth of all spending units with incomes under $\$ 1,000$ dissaved amounts equal to 25 per cent or more of their incomes. In higher income groups the amounts dissaved were often substantial, but, when expressed as percentages of income, they were relatively small. Approximately one-fifth of all spending units in the retired group reported dis-
savings amounting to 25 per cent or more of their incomes. This was also the case for one-tenth of professional persons and farm operators.

Further information about the saving of various groups is found in Table 15 in the appendix to this article. In this table saving is related to the age, size, type, and education of the spending unit, and place of residence. The largest proportions of positive savers were found among spending units with the following characteristics which are probably related in part to the receipt of high incomes: three to four persons in size, head of the unit from 45 to 54 years of age, head of the unit college educated, and metropolitan area of residence.

The largest proportion of dissavers was found in urban areas, where few spending units were zero savers. By other characteristics, spending units of two persons, in the age group of 18 to 34 , and where the head was of high school education, showed the largest proportions of dissavers. The largest proportions of zero savers were found in rural areas, among spending units of one person, in the age group of 65 and over, and in the group with no education.

Dissaving. Available information about dis-
saving in prewar periods would indicate that the dissaving pattern in 1947 was not unusual for a year of high durable goods production. Data for the year 1941, show that roughly one-third of all consumer units were dissavers in that year. ${ }^{5}$ Apparently, sizable numbers of dissavers are to be expected in a year when durable goods production is at high levels.

Accumulated liquid savings, the spending of which for consumption purposes represents the principal means of dissaving today, were small in total volume at the beginning of 1941. These savings amounted to less than one-third of present-day liquid asset holdings. In 1941, dissaving was largely possible through the availability and use of consumer credit. While credit was an important means of dissaving in 1947, it was not the primary form.

The most pronounced change in the pattern of consumer saving as between 1946 and 1947 was the large increase in the number of dissavers at middle and high income levels. Table 4 shows that about 30 per cent of spending units with incomes of $\$ 3,000$ to $\$ 4,999$ were dissavers, 21 per cent of

[^6]Table 4
Dissavers: Dissaving As a Percentage of Income, with Amounts Dissaved, by I'come and Occupational Groups, and by Veteran Status, 19471
[Percentage of all spending units in each group]

${ }^{1}$ This table includes only those spending units that were dissavers, i. e., units with expenditures in excess of money incomes. For similar 1946 data, see Federal Reserve BrilletiN, August 1947. Table 6, p. 957. See general footnote to Table 2 in this article and also the appendix for discussion of the comparability of these data.
those with incomes of $\$ 5,000$ to $\$ 7,499$, and 16 per cent of those with incomes of $\$ 7,500$ and above. As compared to 1946, the percentage of dissavers in these income groups was as follows:

|  | 1947 | 1946 |
| :--- | :---: | :---: |
| $\$ 3,000-\$ 3,999$ | 30 | 21 |
| $\$ 4,000-\$ 4,999$ | 31 | 19 |
| $\$ 5,000-\$ 7,499$ | 21 | 15 |
| $\$ 7,500$ and above | 16 | 11 |

Part of this increase in the proportion of dissavers at middle and high income levels may have stemmed from the upward shift in incomes that
one must have accumulated savings to draw upon or have an income or collateral or both sufficient to qualify as an acceptable credit risk. Of the spending units dissaving in 1947, almost threefifths bought automobiles or other selected durable goods during the year. In any year, prewar or postwar, the purchase of durable goods has meant that many families spend more than their incomes. It does not follow that these families are undergoing hardship or that their budgets are unbalanced because of higher living expenses. Many families purchasing automobiles, for example, whether in 1941 or in 1947, could not possibly

Table 5

${ }^{2}$ Less than one-hali of 1 per cent.
took place during 1947. This upward shift had the effect of bringing lower parts (percentiles) of the income distribution, which generally had higher proportions of dissavers in 1946, into each higher level of 1947 income. However, these changes in income level accounted for only part of the increase.

The higher frequency of dissaving at upper income levels may be primarily attributed to the buying of consumer durable goods. As already shown in Part I of the 1948 Survey of Consumer Finances, ${ }^{6}$ many more spending units at upper income levels bought automobiles and other selected durable goods such as furniture, household appliances, and radios in 1947 than in 1946. Not only was there a considerably larger number of spending units at higher income levels in 1947, but also a much larger proportion of that group bought durables.

The dissavers were not necessarily people in adverse financial circumstances, because to dissave

[^7]pay for these cars from their saving out of that year's income and therefore in part at least used accumulated savings or credit to meet the purchase price. Survey data show that about half the consumer units spending $\$ 500$ or more on durable goods during 1947, were dissavers for that year.

Information showing the relation between amounts saved and amounts of expenditures for durable goods is given in Table 5. In general, relatively more dissavers than positive savers bought durable goods, and the amounts expended by the dissavers for such goods were somewhat larger than amounts spent by other spending units. Some of the positive savers, especially those in upper income groups, saved large amounts notwithstanding the fact that they spent sizable amounts for durable goods. This was generally not true for those with smaller incomes. It is interesting to note that over four-fifths of the zero savers, largely

## 1948 SURVEY OF CONSUMER FINANCES

people of very low incomes, had no expenditures for durable goods.

There were other spending units among the group spending more than their incomes in 1947 that were not necessarily hardship cases. They spent money for such items as vacation expenses, repairs to homes or automobiles, moving expenses, emergencies, or medical care, including maternity cases. Roughly one-third of the dissavers reported expenditures for emergencies and illnesses. Emergencies and illnesses are common, of course, at all income levels, but there is less capacity to absorb their cost out of current income at lower income levels than at higher income levels. However, irrespective of the size of income, when these contingencies arise, their effect upon expenditure and dissaving is similar to that of the purchase of a large durable good. These costly contingencies are, along with purchases of durable goods, among the major causes of dissaving at all income levels.

Also among the group of dissavers were spending units, other than those reporting emergencies and illnesses, that were retired or experienced declines in income because of unemployment, business losses, or other reasons. Survey data show that about one-third of all dissavers were in this general category. Many of these spending units

${ }^{1}$ Positive saving comprises the saving of all spending units with money incomes in excess of expenditures. negative saving comprises the dissaving of all spending units with expenditures in excess of money incomes, and net saving (plus or minus) is positive saving less negative saving for all spending units combined.
For similar 1946 data, see Federal Reserve Buleetin, August 1947, Table 3, p. 954.
mulated savings to draw upon and most frequently their incomes are too small in relation to living expenses to permit the use of credit. These consumers are the "zero" savers. Zero savers spent all their money income during the year and had saved nothing by the end of the year. Roughly 8 per cent of all spending units were zero savers in 1947. Over half of these units had incomes of less than $\$ 1,000$, and four-fifths had incomes of less than $\$ 2,000$. In contrast, only one-third of the positive savers and two-fifths of the dissavers had incomes of less than $\$ 2,000$. Of the entire group of zero savers, about one-third were in the oldest age group ( 65 and over); more than four-fifths were nonveterans of World War II.

In the course of the three Surveys of Consumer Finances undertaken by the Board, new insights have been acquired about the saving habits of people. One-fifth to one-fourth of consumer units indicate that they have a regular saving plan-that is, a plan for setting aside a certain amount of money each payday. Most consumers indicate that they take care of their expenditures first and may possibly save any part of income that is left over. A few spending units say that they do not believe in saving money and spend all their income. There are others that indicate they just do not earn enough to save.

While most people have no saving plan, it does not follow that they believe in spending more than their incomes for ordinary living expenses. Survey data do not indicate that many consumer units operated their budgets at a deficit solely as a result of higher living expenses. When they dissaved, it was generally because of a large expenditure such as the purchase of a durable good, or payments in connection with an illness, or medical bills, such as in childbirth cases. As already indicated, sometimes spending units dissaved because of a decline in income as a result of the temporary loss of a job or business losses, etc.; a few other dissavers were units where the head was retired and they were living from accumulated savings. But it would appear that few consumer units with unchanged or increased incomes dissaved merely because of higher costs of living. As prices rose, families whose incomes did not rise correspondingly either did not change their buying habits and had less money to put aside out of income or they did change their buying habits and made adjustments in their budgets. Those that spent more of their income
for food, possibly were forced to cut expenditures for clothing or for recreation or for luxuries. In any case, regular day-to-day expenditures were generally limited to current income.

With most families, dissaving, as commonly defined, is probably a one-year occurrence, not to be followed by further dissaving in the next year. This is especially true where families have dissaved in one year by using credit to buy consumers goods since the repayment of debt, much of which takes place in the following year, constitutes an "addition to" saving.

There were interesting differences in the saving patterns of consumer units experiencing increases or decreases in income during 1947. For consumer units with incomes of $\$ 1,000$ to $\$ 4,999$, the highest proportions of dissavers were found among units whose incomes had either declined or risen sharply. There are fewer dissavers and more positive savers among spending units whose incomes had remained the same or increased by less than 25 per cent. Information for the year 1946 also indicated that spending units receiving large increases in income were more likely to be heavy spenders and small savers than spending units experiencing no change in their incomes. Thus, experience from the current period would indicate that, in certain periods at least, increases in incomes are associated with a higher rate of spending and not of saving.

## Forms of Saving

As already pointed out, life insurance is the most common form of "additions to" saving for spending units as a whole. The accompanying chart indicates that within each income group also the most common form was through premium payments on life insurance. About four out of every ten spending units with incomes under $\$ 1,000$ and nine out of ten spending units with incomes of $\$ 5,000$ or more had "additions to" saving in this form. The percentage of spending units reporting other common forms of "additions to" saving including increases in liquid assets, payments on home mortgages, and home improvements increased gradually from the lowest to highest income groups. On the other hand, a smaller proportion of spending units with incomes of $\$ 5,000$ or more than of middle income groups reported debt reduction.

Net withdrawals of liquid assets and increases

in short-term debt-the principal forms of "withdrawals from" saving-were reported most frequently by spending units with incomes of $\$ 3,000$ to $\$ 4,999$. Nevertheless, substantial numbers of spending units with incomes below $\$ 3,000$ as well as with incomes of $\$ 5,000$ and over reported similar financial changes. In 1946, the largest proportions of spending units reporting net withdrawals in liquid assets and increases in debt were in the income group of $\$ 2,000$ to $\$ 2,999$. Comparison with 1946 data indicates that the larger number of dissavers at higher income levels in 1947 resulted from more frequent use of accumulated savings and credit.

Of spending units that were dissavers in 1947 almost three-fourths reported net withdrawals in liquid assets. In contrast, no more than one-fifth of the positive savers reported such withdrawals. For the dissavers, there was a very close correlation between total amounts dissaved and total amounts of decline in liquid asset holdings. This is shown by Table 6 .

More than one-third of the dissavers had increases in consumer debt as compared to one-seventh of the positive savers. Table 7 shows the changes in consumer debts of spending units among various saving groups.

In the great majority of cases where spending units dissaved, it was a case of "withdrawals from" saving exceeding "additions to" saving. Table 16 in the appendix to this article indicates that 75 per cent of the negative savers had some "additions to" saving in previously committed forms (contractual) such as premium payments on life insurance, payments on home mortgages, and payments to retirement funds. Few negative savers, however, added to their liquid assets or reduced short-term debts.

The Distribution of Saving by Income Groups
The rather close correlation between the total positive saving of the various income groups and their total money income, observed in last year's survey, is again confirmed by data from the 1948 survey. As Table 8 indicates, the proportion of total positive saving accounted for by the various income groups was roughly comparable to the proportion of money income received by these groups. Amounts of negative saving were more closely related to the number of spending units in the various income groups than to the proportion of income received.

Total net saving, the difference between positive and negative saving, was in large part accounted for by spending units with incomes of $\$ 5,000$ and above. They accounted for over four-fiths of the net saving. Notwithstanding the fact that seven out of every ten spending units with incomes of under $\$ 2,000$ were positive savers, amounts dissaved by the remaining three out of every ten spending units with incomes of this size were larger than the total positive saving of the others and these income groups showed net dissaving. Their net dissaving was equal to 13 per cent of total net saving for all spending units. While amounts dissaved by spending units in middle and upper income groups were as large as amounts dissaved by lower income groups, positive savers in the middle and upper range of the income scale saved amounts which were more than sufficient to offset any dissavings.

Table 9

${ }^{1}$ Income and saving data for 1947 are based on interviews in January-March 1948 (third Survey of Consumer Finances); for 1946 on interviews in January-March 1947 (second survey); for 1945 on interviews in January-March 1946 (first survey); and for 1941 estimated from information obtained in Family Spending and Saving During Wartime, Bureau of Labor Statistics Bulletin No. 822, April 1945.

The figures in this table cannot be used to measure precise changes in income and saving. However, it is believed that the data show with reasonable accuracy the nature of certain broad changes which occurred in the pattern of income and saving during these years

The 1941 data were obtained by totaling the amount of money income, positive saving, negative saving, and net saving accounted for by the income classes shown in the Bureau of Labor Statistics report, and then calculating the cumulative values of each decile by interpolation (Lagrange technique).

The survey covering 1941 and the surveys covering 1945 through 1947 differed somewhat in their definitions of money income, saving and the spending unit. in the universe covered, as well as in sampling methods. The surveys for 1945 through 1947 also differed somewhat in their definition of saving as discussed in the appendix to this article.
${ }^{2}$ Annual money income before taxes.
${ }^{3}$ Positive saving comprises the saving of all spending units with money incomes in excess of expenditures.
${ }^{4}$ Negative saving comprises the dissaving of all spending units with expenditures in excess of money incomes.
${ }^{5}$ Net saving (plus or minus) is positive saving less negative saving for all spending units combined.
${ }^{6}$ Less than one-half of 1 per cent.

As compared to 1946, upper income groups accounted for a larger share of net, positive, and negative saving in 1947. Spending units with incomes under $\$ 1,000$ were again net dissavers as a group in 1947, and spending units with incomes of $\$ 1,000$ to $\$ 1,999$ became net dissavers as a group for the first time since the end of the war.

There have been substantial changes in the saving and dissaving patterns of the various income groups since the war. As the total volume of dissaving increased, the positive saving of lower and middle income groupings was offset to a greater extent by this dissaving, and larger proportions of total net saving were thus accounted for by top income levels. Actually, the proportions of the various types of saving accounted for by spending units when grouped in tenths according to income size were generally similar in 1947 to the pattern shown in 1941, but significant changes occurred from 1945 and 1946 patterns.
The highest tenth of the nation's spending units when ranked by income accounted for roughly three-fourths of total net saving in both 1947 and 1941. As shown by Table 9, this same top tenth
received one-third of total money income in these two years and accounted for one-half of total positive saving. The respective annual data from which these time-span comparisons are drawn differ in a number of important respects, so that only broad shifts in saving patterns may properly be inferred from them.

Selected saving data for family units are presented in Tables 17 and 18 in the appendix.

## Disposable Income

The size distribution of money income before taxes during 1947 was presented in Part II of the 1948 survey results. For some purposes, it is more useful to know the distribution of income after taxes. A beginning step in this direction was made this year. For the first time in the Consumer Finances Surveys, estimates of Federal personal income tax liability, apart from tax on capital gains or losses, were prepared for each spending unit. Income after tax, called disposable income in this article, was estimated for each spending unit by deducting the computed Federal income tax lia-
bility from money income before taxes. ${ }^{7}$ The tax estimates, unlike other survey data, were not based on special information concerning tax liabili-

${ }^{2}$ The median amount is that of the middle spending unit when all units are ranked by size of income.
ties obtained during the interview, but were calculated on the basis of the income, size, and composition of each unit. A detailed presentation of the

[^8]estimating procedure is given in the appendix to this article.

It should be stressed that the tax estimates are only approximations; that they refer not to payments but to Federal personal income tax liabilities, apart from taxes on capital gains and losses; and that State and local income taxes are not included.

Of course, the distribution of spending units by income after Federal taxes shows a general downward shift from the distribution by income before taxes. The downward shift was most marked at the upper end of the income distribution as can be seen in Table 10 . The number of spending units with incomes of $\$ 7,500$ and over (before taxes) was reduced by two-fifths through taxation, from 5 per cent of the approximately 48.4 million spending units down to 3 per cent. Before Federal income taxes, a little less than one-fourth of all consumer spending units, more than 11.5 million units, had incomes of $\$ 4,000$ and over. Less than one-fifth of all spending units had disposable incomes (incomes after taxes) of this size.

Survey estimates show that more than two-thirds of all consumer units had tax liabilities. As Table 11 indicates, these units include those at bottom as well as top income levels. The proportion of units incurring tax liability increased very sharply from lower to higher income groups. It is estimated that about one-sixth of the units with incomes under $\$ 1,000$ had tax liabilities, while more than nine-tenths of all units with incomes of $\$ 3,000$ and above incurred tax liabilities.

1 Other consumer expenditures include all expenditures for goods and services other than for selected durable goods. Other consumer expenditures were estimated for each spending unit in the survey by deducting from money income reported by each unit the total of its selected durable goods expenditure, net saving, and Federal income tax liability. This residual estimate of other consumer expenditures thus includes expenditures for food, housing, clothing, medical care, other living costs, State and local taxes, recreation, transportation, and education as well as expenditures for durable goods such as floor coverings, jeweiry, fur coats, and other miscellaneous durable items. Durable goods excluded from the "other consumer expenditures" estimate are automobiles, furniture, radios, and household appliances such as refrigerators, ranges, washing machines, vacuum cleaners, home freezers, and miscellaneous other appliances.
${ }^{2}$ Disposable income is defined as money income less estimated Federal personal income tax liability.

Estimates from the survey data indicate that about two-thirds of the approximately 34 million consumer units with tax liabilities had liabilities of $\$ 200$ and above. For almost one-fourth of the units with tax liabilities, the amounts were $\$ 500$ and above.

Comparison of the proportions of income received by spending unit groups before and after taxes, show that the highest tenth of incomereceivers before taxes obtained about 33 per cent of total personal income, while the tenth of units with the largest disposable incomes obtained 31 per cent (see Table 19 in the appendix to this article). The lowest half of spending units when ranked by size of disposable income showed a somewhat larger proportion of income than the similar grouping of spending units when ranked by income before taxes.

## Other Consumer Expenditures

It is possible to make a rough estimate of the total expenditure of each spending unit for nondurable goods and services, durable goods not included in the list of selected durables, and State and local taxes. This is done by subtracting from the money income of each spending unit the unit's expenditures for automobiles and selected durable goods, saving, and estimated Federal personal income tax liability. ${ }^{8}$
"Other consumer expenditures," as estimated above, include expenditures for food, housing, clothing, taxes other than the Federal personal income tax, medical care, other living expense, recreation, education, and durable and semidurable goods such as floor coverings, jewelry, and fur coats, which are not included in the list of selected durables. ${ }^{9}$
It is estimated that close to one-third of all spending units had "other consumer expenditures" amounting to less than 80 per cent of their disposable incomes, roughly two-fifths had expenditures amounting to from 80 to 99 per cent of their disposable incomes, and about one-fourth had expenditures amounting to 100 per cent or more of their disposable incomes.

As shown by Table 12, consumer units in lower income groups spent larger proportions of their disposable income for "other consumer expenditures," as measured in the survey, than did those in higher income groups. More than two-thirds of the units

[^9]with less than $\$ 3,000$ of disposable income spent at least 80 per cent of their income for such purposes, while this was true of two-fifths or less of the units with incomes of $\$ 5,000$ and over. Almost half of the units with disposable incomes of less than $\$ 1,000$ had "other consumer expenditures" amounting to 100 per cent or more of their disposable incomes. Expenditures of this size were clearly not confined to the lowest income levels, however, as one-fifth to one-tenth of spending units with disposable incomes of $\$ 2,000$ and above had similar expenditures.
The one-fourth of all consumer units that spent all of their income or more for "other consumer expenditures" contained those spending units that may have been most affected by the rise in the cost of living and by the occurrence of costly medical bills and emergencies. Within this one-fourth of all units there were a number of zero savers (8 per cent) or people spending 100 per cent of their incomes. As already observed, the zero savers may include many hardship cases. The remaining 18 per cent of all spending units spent over 100 per cent of their incomes for "other consumer expenditures" and were therefore dissavers. While many of these spending units were dissaving as a result of emergencies, illnesses, and income declines as well as higher living costs, it is probable that a number of them had large outlays for recreation, education, large-scale entertainment (such as wedding expenses), and for goods such as jewelry and fur coats which are included with "other consumer expenditures." One-third of the 18 per cent bought automobiles or other selected durable goods.
A distribution of the dollar amounts spent by consumer units for "other consumer expenditures" is given in Table 20 in the appendix to this article. Roughly half of all spending units had expenditures of $\$ 1,500$ to $\$ 3,999$. Approximately 5 per cent spent $\$ 5,000$ and above, while about the same percentage spent less than $\$ 500$.

## Allocation of Disposable Income

Spending units within each of the various disposable income groups allocated their income in quite different ways among saving, selected durable goods, and "other consumer expenditures." As shown by Table 13, for spending units as a whole, approximately four-fifths of disposable income was used for "other consumer expenditures," about one-
tenth was spent for selected durable goods, and a similar proportion went to saving.
Consumer units at upper income levels spent a smaller proportion of their disposable income for "other consumer expenditures" than consumer units at lower income levels. Previous budget studies have consistently shown similar patterns.

The pattern of expenditure for durable goods in 1947 reflected an apparent willingness on the part of consumer units to spend a fairly constant proportion of their income for such goods irrespective of the size of their income. While spending units at low income levels bought few new automobiles and expensive appliances, they were active buyers of used cars and low-priced appliances, thus spending almost as large a proportion of their income for durable goods as consumer units at higher income levels. A somewhat similar relationship of durable goods purchases to income existed in 1941, although consumer units as a whole spent a lower proportion of their income for such goods in that year. ${ }^{30}$

| Other consumer expenditures ${ }^{3}$ | 81 | 101 | 88 | 84 | 65 |
| Total. | 100 | 100 | 100 | 100 | 100 |

${ }^{1}$ Disposable income is defined as money income less estimated Federal personal income tax liability.

2 Includes automobiles, furniture, radios, and household appliances such as refrigerators, ranges, washing machines, vacuum cleaners, home freezers, and miscellaneous other appliances. Expenditures for automobiles are net of trade-in allowances.
${ }^{3}$ Covers expenditures for all goods and services not included in selected durable goods (see footnote 2). Includes food, housing, clothing, medical care, other living costs, State and local taxes, recreation, transportation, and education, as well as expenditures for durable goods such as floor coverings, jewelry, fur coats, and other miscellaneous durable items.
creased sharply from lowest to highest income groups, reflecting the converse movement of "other consumer expenditures" in relation to income. As a group, spending units with disposable incomes of under $\$ 2,000$ had net dissaving amounting to roughly one-tenth of their incomes. On the other hand, units with disposable incomes of $\$ 5,000$ and above saved more than one-fifth of their incomes. This does not imply that all units with incomes of $\$ 5,000$ and above were positive savers and that all units at bottom income levels were dissavers. As has been mentioned earlier, no more than one-third of the units at bottom income levels were dissavers and about half were savers. Even at top income levels, as many as one-fifth of the units were dissavers.

An indication of the extent to which the various disposable income groups accounted for total expenditures on selected durable and other consumption goods is given in Table 14 in the appendix. There were very significant differences in the relative importance of the various groups in consump-
tion markets. The tenth of spending units with disposable incomes of $\$ 5,000$ and over accounted for about one-third of expenditures for selected durable goods and somewhat more than one-fourth of "other consumer expenditures." The two-fifths of spending units with disposable incomes of under $\$ 2,000$, on the other hand, accounted for about one-eighth of expenditures for selected durable goods and onefifth of "other consumer expenditures." The half of spending units with incomes after Federal taxes of $\$ 2,000$ to $\$ 4,999$ accounted for somewhat more than half of expenditures for each of these categories of goods.

The shares of selected durable goods expenditures accounted for by the various disposable income groups were very similar to the proportions of income received. In the case of "other consumer expenditures," lower income groups accounted for a somewhat larger share of these expenditures than of income while upper income groups accounted for a smaller share.

## METHOD OF OBTAINING SAVING DATA

In the Survey of Consumer Finances net saving is considered to be the difference between consumer income and total consumer expenditures and taxes. The saving data were derived directly, however, by requesting detailed information from each spending unit about changes in the various asset and liability items that make up the unit balance sheet. For dhe 1947 saving data changes were obtained for the following items classified as an "addition to" or "withdrawal from" saving:

## "Additions to" saving

a. Increases in U. S. savings bonds, Series A-F.
b. Increases in other U. S. Government bonds.
c. Increases in savings accounts in banks, savings and loan associations, credit unions, and postal savings.
d. Increases in checking accounts.
e. Life insurance premiums paid.
f. Amounts paid into retirement funds.
g. Purchase price of real estate (house, farm, or other real estate).
h. Amounts repaid on mortgages.
i. Amounts spent on structural additions to or major improvements on houses, farm buildings.
j. Amounts paid on debts to banks, credit unions, loan companies, private individuals, and insurance companies.
k. Payments made on instalment debts.

1. Amounts lent by individuals.

| \$3,000-\$4,999 | 25 | 32 | 25 | 35 | 33 |
| \$5,000 and over. | 10 | 32 | 79 | 30 | 27 |
| All income groups. . | 100 | 100 | 100 | 100 | 100 |

Note.-For definition of disposable income and for coverage of selected durable goods and other consumer expenditures, see footnotes to Table 13, p. 926.
m . Excess of amounts spent for purchase of securities (other than U. S. Government bonds) over amounts received from sale of securities.
n. Profits left in unincorporated businesses by owners.
o. New investments in business.
p. Purchase price of farm machinery.

## "Withdrawals from" saving

a. Decreases in U. S. savings bonds, Series A-F.
b. Decreases in other U. S. Government bonds.
c. Decreases in savings accounts in banks, savings and loan associations, credit unions, and postal savings.
d. Decreases in checking accounts.
e. Lump-sum receipts from life insurance policies.
f. Net amounts received from sale of real estate.
g. New mortgage debts incurred.
h. Amounts borrowed from banks, credit unions, loan companies, private individuals, and insurance companies.
i. Amounts of instalment sales contracts.
j. Amounts received as repayments from debtors.
k. Excess of amounts received from sale of securities (other than U. S. Government bonds) over amounts spent for purchase of securities.

1. Amounts, other than profits, taken out of unincorporated business by owners.
m . Inheritances and large gifts of money and bonds received.
The total of "additions" minus the total of "withdrawals" represented the net saving of each spending unit. ${ }^{1}$ The net figure could be either plus, minus, or zero.
This method of estimating the saving of a particular spending unit entails the inclusion or ex-

${ }^{1}$ Positive savers are units with money incomes in excess of expenditures and negative savers, or dissavers, are units with expenditures in excess of money incomes.

2 The 12 largest cities and their suburbs.
${ }^{3}$ Less than one-half of 1 per cent.
4 Where only one spending unit is present in a dwelling unit, this unit is a primary unit. Where two or more spending units live in a dwelling unit, one is designated the primary unit and any others as secondary units. The primary unit contains the head of the dwelling unit, while additional units are termed related secondaries if they are related by blood, marriage, or adoption to the head of the primary unit and unrelated secondaries if not related such as roomers and domestic help.
clusion of certain data not entirely consistent with the survey concept of saving. For example, interest and tax payments on a house should be considered consumer expenditures but sometimes they are included with the amount of principal repayment when spending units indicate their mortgage payments. A special effort was made to exclude interest and tax payments in the 1947 data. In the case of life insurance, the reported saving data generally include the total amount of the premium, not just the increase in cash reserves. In addition to these several factors tending to overstate saving, there are factors that may tend to understate saving, such as inadequate recollection by some spending units of the increases in their checking and saving accounts and holdings of Government bonds. The 1947 saving data did not make any allowance for
changes in amounts of charge accounts or back bills.
In the interest of improving the savings data reported in the survey, the form used for obtaining the 1947 data differs from the 1946 form, and in turn both these forms differ from that used for 1945 saving data.

The 1947 form differed from the 1946 form in the following four ways:

1. Changes in charge account and other bills outstanding were omitted in the 1947 survey.
2. A special effort was made to exclude interest and tax payments from mortgage payments in the 1947 schedule.
3. A special effort was made to exclude maintenance and repair costs from the cost of additions and structural improvements to homes in the 1947 schedule.
4. Accrued interest on savings bonds was included in the 1947 data.

The first of these changes slightly affected the comparability of the 1947 and 1946 saving estimates. Data obtained in the survey but not included with the 1947 saving tabulation show that the 1947

figures understate by several percentage points the percentage of spending units with incomes under $\$ 3,000$ that were dissavers. This slight understatement of the percentage of dissavers would apply to any grouping of spending units by a characteristic that includes a large proportion of lower income units.
The 1947 and 1946 data were in turn not strictly comparable with the 1945 data, but again the comparability was not greatly affected. For the 1945 data, no attempt was made to include consumer borrowing or amounts spent on home improvements, since it was thought that the amounts involved in such transactions were not significant during that particular period. Furthermore, the method used to obtain information on unincorporated saving in both 1947 and 1946 was a considerable improvement over the 1945 form, and the more recent schedules covered in detail many forms of saving that were not separately covered in 1945. The data for 1945 probably showed more "zero
savers" and fewer positive and negative savers than would have been obtained had the 1947 or 1946 schedules been used.

## Method of Estimating Disposable Income

For the first time in the Consumer Finances Surveys, an estimate was made of each spending unit's disposable income, defined for purposes of this survey as the total money income of a spending unit less its Federal income tax liability. While no questions were asked in the interviews about Federal income tax payments, it was possible to roughly estimate a tax liability figure for each spending unit by taking into account the number of earners and number of dependents in each unit and by making certain assumptions about the filing of joint returns and deduction allowances for contributions, etc. ${ }^{2}$ The estimates thus made represented the Federal tax liabilities on 1947 incomes, not the tax payments of spending units during 1947. No estimates were made for State and local taxes.
The disposable income figures shown in this report therefore represent total money income less estimated Federal tax liabilities. The disposable income figures differ from traditional disposable income figures which are based on tax payments (not liabilities) and exclude State and local as well as Federal taxes.
In connection with the approximate estimates of tax liability, certain items of information were not obtained which are necessary in order to precisely calculate personal income tax liability. The two most important items were: (1) the existence of dependents not living in the same dwelling unit and thus not included for tax purposes (except in some cases for children away at school), making for an underestimate of total exemptions claimed; and (2) the possible understatement of deductions claimed. Some units undoubtedly claimed deductions that were larger than the amounts estimated for them, the survey allowance being the Treasury standard deduction on incomes up to $\$ 5,000$ and 10 per cent of incomes above $\$ 5,000$. Some units with incomes of $\$ 5,000$ and above may have also claimed less than the estimated deduction. Table 15 shows the amounts of tax liability estimated for spending units within various income groups.
The tax liability for each spending unit was esti-

${ }^{2}$ Family units with expenditures in excess of money income.
mated by using a standardized procedure of computation. The steps in the calculation were as follows:

1. A table was prepared giving the amount of tax by size of income and by number of dependents. The table provided for the Treasury standard deduction for contributions, medical bills, etc., on incomes up to $\$ 5,000$, and a deduction of 10 per cent of taxable income (excluding items in (2) below), for incomes larger than $\$ 5,000$.

[^12]2. Taxable income was calculated by deducting from total income amounts received by individual income recipients from social security benefits, sickness and injury benefits, armed forces pay and allowances up to the limit of their special exemption, contributions for support, etc. Tax-free interest was not deducted but would be received by only about 1 per cent of the income recipients.

${ }^{1}$ Covers expenditures for goods and services other than for selected durable goods. Includes expenditures for food, housing: lected durable goods. Includes expenditures for food, housing, clothing, medical care, other living costs, State and local taxes for durable goods such as floor coverings, jewelry, fur coats, and other miscellaneous durable items.
the husband or wife, earned more than $\$ 550$, separate returns were calculated from the table for each of these additional earners, leaving all other dependents with the main income receiver.
6. Where more than one tax return was estimated for a given spending unit, the separate tax liabilities were totaled and the total was considered to be the tax liability of the spending unit.
This method of estimating taxes made no provision for the following:

1. Dependents, other than children away at school, not living in the dwelling unit;
2. Larger deductions than the Treasury standard deduction on incomes up to $\$ 5,000$ or larger or smaller deductions than 10 per cent of income on incomes greater than $\$ 5,000$;
3. Tax-free interest;
4. Taxes on alimony received;
5. Taxes on capital gains and losses;
6. Carryover of business and capital losses from previous years;
7. Allocation of income among the taxpayers in one unit that may differ somewhat from the survey allocation; and
8. State and local income taxes which amount to about one-tenth of Federal personal income tax.
For individual spending units, taxes may have been over- or underestimated. The limitations of these tax estimates should be recognized in making use of either the tax or disposable income data.

## REVISED CONSUMER CREDIT SERIES

Revised estimates for the following segments of the consumer credit series are presented in the accompanying tables, along with brief notes on the type of revision made: (1) Consumer instalment credits of commercial banks, (2) Consumer instalment loans of credit unions, and (3) Single-payment loans. Total instalment loans, total instalment credit, and total consumer credit have also been revised to incorporate these changes in the parts.

## Estimates of Consumer Instalment Credits of Commercial Banks

The monthly series on consumer instalment credits at commercial banks has been revised from January 1947 to date on the basis of the June and December 1947 statements of condition submitted by all insured commercial banks. ${ }^{1}$ Commercial bank holdings of consumer instalment paper as of June 30,1948 were raised 101 million dollars by the revision. The amount outstanding of each type of credit except automobile paper was increased, while the latter was reduced slightly. Revised

1 For a description of method used in adjusting to call data, see Federal Reserve Bulletin, July 1947, p. 831.
monthly estimates for both amounts outstanding and volume of credit extended are presented in the table on this page.

## Estimates of Consumer Instalment Loans of Credit Unions

The monthly series on instalment loans of credit unions has been revised from January 1929 to date to exclude real estate mortgage loans. Since the consumer credit series conceptually includes only short-term credit, it was desirable to remove mortgage loans of State credit unions which have heretofore been included. Federal credit unions are for all practical purposes prohibited from making real estate loans by the 24 -month maturity clause in the statute governing them. Some information on mortgage loans was available from published State reports. In other States special inquiry of the State supervisory authorities for end-of-year information was made by the Federal Reserve Board.
New year-end figures were derived and monthly amounts outstanding computed by distributing the difference between the new and old series on a straight-line basis. Annual volume figures were

[^14]${ }^{1}$ These series include both FHA-insured loans and an unknown amount of noninsured loans.
estimated by applying to the revised December 31 levels, ratios between annual volume and end-ofyear balances based on data for those States where both volume and amount outstanding were known. A monthly series on loans made for the period January 1939 to date was then derived by distributing annual totals in the same manner as the unrevised series. A monthly volume series prior to January 1939 has never been estimated.

Further revision was made in both the State and Federal credit union series from January 1946 forward on the basis of official year-end information compiled by the Federal Deposit Insurance Corporation for Federal credit unions and the Bureau of Labor Statistics for State-chartered credit unions. ${ }^{2}$ Revised estimates for January 1929 to date are presented in the table which begins on this page.

[^15]
## Estimates of Single-payment Loans Outstanding

Estimates of single-payment loans outstanding have been revised from July 1947 to date in accordance with December 1947 statements of condition of insured commercial banks. ${ }^{3}$ Revised figures are shown in the table appearing on pages 936 and 937.

## Revised Consumer Credit Aggregates

Revisions in the segments described above affect the series on instalment loans, total instalment credit, and total consumer credit. The June 30, 1948 estimates for instalment loans, total instalment credit and total consumer credit were increased 31 million. Revised figures for these series also will be found in the table on pages 936 and 937.

# THE PHILIPPPINE CENTRAL BANK ACTT 

by

David L. Grove and John Exter

On June 15, 1948, a Bill creating a Central Bank of the Philippines and reorganizing the monetary system of the country was signed by President Quirino and became law. The legislation brings to an end the rigid 100 per cent reserve currency system which has been in effect in the Philippines, with only relatively minor changes, since 1903, and replaces it by a modern flexible currency system in which monetary authority and responsibility will rest in a central bank. The new legislation represents a consummation of Philippine aspirations for an independent currency system under which the peso will remain stable in relation to, and freely convertible into, the dollar, but under which the money supply will be more responsive to the domestic needs of the economy. The establishment of such a system was recommended by the Joint Philip-pine-American Finance Commission in June 1947. ${ }^{2}$

The Central Bank, which will be a Government institution, will have a monopoly of currency issue and will have broad regulatory authority over the credit and exchange operations of the banking system. It will have responsibility for developing and maintaining a market for Government securities and will, in addition, act as general fiscal agent of, and financial adviser to, the Government. The Central Bank will be a 'bankers' bank" and will not deal directly with the public, except in the course of its open-market operations. The Bank will commence business as soon as its governing board has been appointed and its capital paid in.

The new legislation should be viewed against the background of the 100 per cent reserve currency system which it supersedes and of the financial environment in which the Central Bank will operate.

## The 100 Per Cent Currency Reserve System

The Philippines has never before had a central bank. Except for limited issue of notes by two commercial banks, the power of issue has for

[^19]years been vested in the Philippine Treasury, which has had authority to issue Treasury certificates backed 100 per cent by silver coins and United States dollars. In practice these certificates have for some time been issued almost exclusively against dollars. The Treasury has been obliged to buy and sell dollars on demand at exchange rates based on the par value of the peso, which was fixed by law at 50 United States cents. Thus, in effect, the Philippines has been on a dollar exchange standard with a 100 per cent dollar reserve requirement against its note issue. The supply of currency has responded almost automatically to the dollar surpluses and deficits in the international balance of payments of the Philippines, irrespective of whether the response had a beneficial or harmful effect on the domestic economy. Moreover, the 100 per cent reserve system has tended to immobilize needlessly a part of the official international reserves of the country. Dollar reserves have had to be maintained even against the hard core of notes that was always needed to finance domestic transactions and that would never be presented for conversion into dollars to finance remittances or payments abroad.

Whatever flexibility has existed in the Philippine monetary system has been provided by the credit operations of the commercial banks. Although the banks have been required by law to maintain a cash reserve "in lawful money of the Philippines or of the United States" equal to only 18 per cent of their demand deposits and 5 per cent of their savings deposits, ${ }^{3}$ the volume of their credit operations has been narrowly restricted by the following two factors.

First, unlike the practice in the United States, the bulk of monetary payments in the Philippines is made in cash rather than by check. As a result, whenever the banking system expands credit, the loss of cash reserves to the public is much heavier than in countries where checks are more commonly used.

Second, the Philippines has such a high propensity to import that a large percentage of any

[^20]expansion of the money supply is likely to be used for additional importation from abroad, principally from the United States. To the extent that importers draw down their deposit balances in order to buy dollars from the banks, the banks lose reserves and the capacity of the banking system to extend credit is reduced.

The restrictive effects of these factors on bank credit expansion have been intensified by the absence of a central bank. The Philippine branches of foreign banks have needed central bank credit facilities less than the other banks, because they could ordinarily seek accommodation from their head offices when in need of funds. For the domestic banks, however, the absence of a central bank has meant that each bank has had, in effect, to rely exclusively on its own resources. In these circumstances, reasonable standards of precaution have required Philippine banks to maintain larger excess reserves and more liquid portfolios than would have been necessary had central bank credit been available. For these reasons, Philippine banks, in the aggregate, ordinarily have held reserves which were two to three times the legally required minimum.

No agency has had responsibility for seeing to it that the supply of money responded to the needs of the economy. The Philippine National Bank, which is a Government-owned commercial bank, has had inadequate resources and powers to undertake the responsibility, even if it had been so charged. The Government itself might have endeavored to regulate the money supply by the exercise of its fiscal powers, but has not done so; in any event, fiscal measures would have been difficult to employ in a country without a well developed tax system and a well organized government securities market. Thus, movements in the money supply of the Philippines have been the uncoordinated product of the country's international balance of payments and of the diverse credit activities of the banking system.

Another disadvantage of the system, given the limited ability of the Government to borrow domestically, was that it tended to obscure the distinction between domestic currency requirements and foreign currency requirements. This became particularly apparent when the Government was faced with a budgetary deficit last year; it was unable to sell its securities because of the absence of a securities market, and was unable to get
adequate accommodation from the banks because of their limited credit potential. As a result, the Government had to borrow dollars in order to obtain pesos with which to finance local expenditures.

When a system requiring a 100 per cent reserve against the note issue is applied to a growing economy, it may logically be expected to impart to it a consistent deflationary bias. In order to create the larger money supply required for an increasing population and an ever-expanding domestic trade, it would be necessary for the country to have a persistently active balance of payments, which in itself would be a costly luxury for an underdeveloped economy. It would be difficult to demonstrate conclusively, however, that the operation of the system in the Philippines was a major deterrent to the full development of the country's economic potentialities in the prewar period. Except for the exchange crisis of 1920 and 1921, which can be blamed on a violation of the system rather than on the system itself, there was never any real threat of a breakdown of the Philippine monetary system. On the other hand, some of the more serious depressing effects of the system were undoubtedly obscured by such favorable factors as the free access of Philippine products to the protected American market, the continuous expenditures of United States Government agencies in the Islands, and the remission to the Philippines by the United States Government of taxes paid by American manufacturers on the processing of sugar and coconut oil of Philippine origin.

Now that the Philippines is independent many of the economic benefits resulting from the association with the United States will gradually disappear. United States Government payments in the Islands are scheduled to decline after 1950. After 1974 Philippine products will be subject to the full American tariff. These factors alone may subject the economy to pressures which will severely test its inherent strength. Moreover, the greater part of the task of reconstructing and developing the Philippine economy lies ahead. In these circumstances it could hardly be expected that the Philippine Government would retain a monetary system whose excessive rigidity might delay its program of reconstruction and development or might deprive it of any effective defense against the domestic consequences of world economic fluctuations.
There are many who point out that the 100 per cent reserve system guarantees the international
stability and convertibility of the peso and serves to attract foreign capital. The new monetary system recognizes the value of these objectives but is designed to achieve them without needlessly sacrificing domestic monetary stability and orderly economic development.

## The New Monetary System

The Central Bank Act is an integrated body of provisions defining the monetary system of the Philippines and establishing the Central Bank to administer it. It declares the principal objectives of the Bank to be to maintain monetary stability within the Philippines, to preserve the international stability and convertibility of the peso, and to promote orderly growth in production, employment, and real income.

Since monetary authority in most countries is divided between the Treasury and the central bank, it has been customary to have currency legislation distinct from central bank legislation. This is unnecessary in the Philippines because all monetary authority and responsibility are to be vested in the Central Bank; consequently, all necessary legal provisions concerning the currency have been incorporated in the Central Bank Act.

The Act provides that the Philippine peso shall continue to be equal by law to 50 United States cents, but it goes further than former legislation by also defining the peso in terms of gold. It provides that the Central Bank shall have a monopoly of the issue of currency and may issue notes and coins in exchange for any assets which it is legally authorized to acquire. ${ }^{4}$

The Central Bank will not be required, as the Treasury has been, to hold the official international reserve exclusively in dollars; gold and foreign currencies other than dollars may also be included. Nevertheless, the Act will not in practice take the Philippines off the dollar exchange standard. Practically all Philippine trade and other international transactions have long been conducted on a dollar basis and are expected to continue to be so conducted in the future.

The legislation explicitly recognizes the validity of all international agreements entered into by the Philippines which affect its currency. Under the

[^21]terms of the Executive Agreement between the United States and the Philippines, pursuant to the Philippine Trade Act of 1946, the Philippine Government has agreed that, until July 3, 1974, "the value of Philippine currency in relation to the United States dollar shall not be changed, the convertibility of Philippine pesos into United States dollars shall not be suspended, and no restrictions shall be imposed on the transfer of funds from the Philippines to the United States except by agreement with the President of the United States." In effect, this means that, for the life of this Agreement, the Philippines cannot change the dollar value of its currency nor adopt exchange controls without the approval of the President of the United States. The legislation is also in complete harmony with the Articles of Agreement of the International Monetary Fund, of which the Philippines is a charter member.

## Organization of the Central Bank

The Central Bank will be a Government-owned institution with a capital of 10 million pesos. ${ }^{5}$ The Bank will be headed by a "Monetary Board" consisting of seven members, one of whom will be the chief executive of the Bank and will bear the title of "Governor." The Secretary of Finance, the President of the Philippine National Bank, and the Chairman of the Board of Governors of the Rehabilitation Finance Corporation will be ex-officio members of the Monetary Board. The other four members, including the Governor, will be appointed for six-year terms by the President of the Republic. The Governor of the Bank must be of recognized competence in the field of banking, and the other three appointive members must be of recognized competence in the economics of banking, finance, commerce, agriculture, or industry. It should be noted that none of the appointive members will be chosen on a regional or functional basis, as is provided in many central bank laws. The members are to represent the public interest in the broadest sense of the term and are not to be spokesmen for special groups.

The Secretary of Finance will preside at the meetings of the Board, but will have no special powers in the determination of policy or in the administration of the Bank. The principal reason for placing the Secretary of Finance on the Mone-

[^22]tary Board is to promote an effective coordination of monetary and fiscal policies. As a member of the Monetary Board, the Secretary of Finance will share responsibility for central bank policy. Conflict with the Government is one of the obstacles over which central banks have stumbled and come to grief in many countries. The origin of much of the trouble frequently has been in central bank legislation which endeavored to make central bank policy completely independent of the national economic policies of the Government. The Philippines hopes to avoid such conflict by making all of the members of the Monetary Board subject to governmental appointment and by having the Secretary of Finance participate in, but not dominate, the formulation and execution of monetary policy.

The Governor is the only member of the Board who is required to devote all of his time to the Bank. The Law provides that he shall formulate the policies of the Bank for the approval of the Monetary Board, shall direct the operations and internal administration of the Bank, and shall represent the Board and the Central Bank in dealings with third parties. In emergencies, the Governor, with the concurrence of the Secretary of Finance or in the absence of the Secretary with the concurrence of any two other members of the Monetary Board, may decide any matter or take any action within the authority of the Board itself. The Governor will be assisted in the performance of his duties by a Deputy-Governor, appointed by him with the approval of the Board.

In recognition of the discretionary judgment which must be exercised by the Monetary Board, the Act provides for the establishment of a Department of Economic Research which will play an important role in the formulation of monetary and banking policy. The chief of the research department will attend meetings of the Board, with the right to be heard but without the right to vote.

All functions of bank examination and supervision will be placed under a department of the Bank to be called the "Department of Supervision and Examination," which will be headed by a "Superintendent of Banks." These functions were formerly exercised by the Bureau of Banking in the Department of Finance. Assigning the functions of bank examination and supervision to the Central Bank represents a departure from the practice of many countries, in which bank examination is
placed in the Treasury or in some other Government agency. The principle behind such separation has generally been that central banks should be subject to the same sort of scrutiny and examination as commercial banks and that, accordingly, a separate agency should be given responsibility for examining all banks, including the central bank. In practice, the application of this principle has frequently led to conflict between the central bank and the superintendent of banks over their respective roles in regulating the activities of commercial and savings banks and over the central bank's right of access to data obtained by the superintendent. As a result of such conflicts and, perhaps even more important, as a result of the general trend toward greater central bank control over the credit and exchange operations of the banking system, there has been a growing recognition that the character and scope of commercial and savings bank examination should be distinct from those of central bank examination. The Philippine legislation is in keeping with this trend. Inspection of the Central Bank itself is to be made by a special auditor appointed by the Auditor General of the Philippine Government.

## Guiding Principles of Central Bank Action

In order to make possible the effective execution of appropriate monetary policies, the instruments of action given to the Central Bank under its charter are both large in number and flexible in design. The Law recognizes, however, that in a country without a well-established body of tradition in the field of central banking, there is a danger that the use of such instruments will be ill-timed and contrary to the intent which prompted their inclusion in the law.
As a partial safeguard against this danger, the third chapter of the Act prescribes the basic guiding principles of monetary management which the Central Bank is expected to follow. Similarly, the sections in Chapter IV, which define the individual instruments of Central Bank action, in most cases include an introductory comment on the general circumstances under which the particular instrument or authority is, or is not, to be used. These guiding principles are not intended to provide a ready answer to the problems which will confront the Bank. Their purpose is the modest one of providing some sort of orientation to clarify the intent of the Law with respect to the use of the powers
contained therein. The statements of principle should be especially useful in strengthening the position of Board members in carrying out antiinflationary policies over the protests of groups pressing for easy money policies.

The guiding principles are divided into two parts. The first is concerned with the Central Bank's responsibility for maintaining domestic monetary stability, the second with its responsibility for maintaining the international stability of the peso. While the Law treats the problems of domestic and international monetary stabilization separately, it recognizes their close interrelation.

Domestic monetary stabilization. It has already been observed that the fundamental weakness of the former monetary system was that it did not respond effectively to the domestic needs of the Philippine economy. The Central Bank Act, on the other hand, is particularly concerned with this problem, but at the same time recognizes that a flexible domestic monetary policy must take into consideration possible repercussions on the international economic position of the country. The Central Bank's responsibilities with respect to this problem are as follows (Section 64):
"The Monetary Board shall endeavor to control any expansion or contraction in the money supply, or any rise or fall in prices, which in the opinion of the Board is prejudicial to the attainment or maintenance of a high level of production, employment, and real income. In adopting policies and measures in accordance with this principle the Monetary Board shall have due regard for their effects on the availability and cost of money to particular sectors of the economy as well as to the economy as a whole, and their effects on the relationship of domestic prices and costs to world prices and costs."

The broad directive just quoted is followed, in Section 66 , by an outline of the procedures which the Monetary Board shall take "whenever abnormal movements in the money supply or in prices endanger the stability of the Philippine economy or important sectors thereof." In such circumstances, the Board shall:
"(a) Take such remedial measures as are appropriate and within the powers granted to the Monetary Board and the Central Bank under the provisions of this Act; and
"(b) Submit to the President of the Philippines, and make public, a detailed report which shall include, as a minimum, a description and analysis of:
"(1) The causes of the rise or fall of the money supply or of prices;
"(2) The extent to which the changes in the money supply or in prices have been reflected in changes in the level of domestic output, employment, wages and economic activity in general, and the nature and significance of any such changes; and
"(3) The measures which the Monetary Board has taken and the other monetary, fiscal or administrative measures which it recommends be adopted."

The Board is required to prepare such a report, moreover, whenever the money supply increases or decreases by more than 15 per cent, or whenever the cost of living index increases by more than 10 per cent, in relation to the level existing at the end of the corresponding month of the preceding year, and in the report the Board must state whether, in its opinion, the changes in the money supply or in the cost of living represent a threat to the stability of the Philippine economy or of important sectors thereof.
International monetary stabilization. The Central Bank Act recognizes the importance to the Philippines of continuing to maintain an internationally stable and convertible peso, and states explicitly in Section 67 that:
"The Central Bank of the Philippines shall exercise its powers under this Act to maintain the par value of the peso and the convertibility of the peso into other freely convertible currencies."

Toward this end, the Act provides, in Section 68, that:
"the Central Bank shall maintain an international reserve adequate to meet any foreseeable net demands on the Bank for foreign currencies. In judging the adequacy of the international reserve, the Monetary Board shall be guided by the prospective receipts and payments of foreign exchange by the Philippines. The Board shall give special attention to the volume and maturity of the Central Bank's own liabilities in foreign currencies, to the volume and maturity of the foreign exchange assets and liabilities of other banks operating in the Philippines and, insofar as they are known or can
be estimated, the volume and maturity of the foreign exchange assets and liabilities of all other persons and entities in the Philippines."

The international reserve may consist of gold, foreign exchange, and foreign government securities having maturities of not more than five years. The Board is instructed to "endeavor to hold the foreign exchange resources of the Central Bank in freely convertible currencies" and to "give particular consideration to the prospects of continued strength and convertibility of the currencies in which the reserve is maintained, as well as to the anticipated demand for such currencies." The special conditions under which inconvertible currencies may be acquired by the Central Bank are discussed later in this article.

The Act does not establish any required ratio between the Bank's international reserve and its note and deposit liabilities. The usual purpose behind such reserve requirements in the legislation of other countries has been to place a limit on central bank credit expansion. The strict observance of these requirements in periods of crisis, however, would frequently defeat the purpose of central bank reserves, which is to provide resources for financing temporary deficits in the country's international balance of payments, and might obstruct the bank in the discharge of its responsibility as "lender of last resort." In practice, therefore, the requirements have usually either been lowered or suspended whenever they blocked, or threatened to block, central bank action." Experience has also demonstrated that movements in the traditional reserve ratio cannot serve as a sound guide to central bank policy. Attempts have been made in recent Latin American legislation to provide mechanical reserve ratios of a different sort, relating the international reserve to sales of exchange during some preceding period or to movements in the money supply, or to some combination of the two, but, unfortunately, even such refined ratios are unlikely to serve as an adequate guide to appropriate central bank policy. In recognition of the foregoing, the Philippine Central Bank Act leaves the question of the adequacy of the international reserve of the Bank to the judgment of the Monetary Board and merely lays down broad guiding principles to be followed in the exercise of that judgment.

[^23]The procedures to be followed whenever the international stability of the peso is threatened are provided in Section 70 of the Act:
"Whenever the international reserve of the Central Bank falls to an amount which the Monetary Board considers inadequate to meet the prospective net demands on the Central Bank for foreign currencies, or whenever the international reserve appears to be in imminent danger of falling to such a level, or whenever the international reserve is falling as a result of payments or remittances abroad which, in the opinion of the Monetary Board, are contrary to the national welfare, the Monetary Board shall:
"(a) Take such remedial measures as are appropriate and within the powers granted to the Monetary Board and the Central Bank under the provisions of this Act; and
"(b) Submit to the President of the Philippines a detailed report which shall include, as a minimum, a description and analysis of:
"(1) The nature and causes of the existing or imminent decline;
"(2) The remedial measures already taken or to be taken by the Monetary Board;
"(3) The further monetary, fiscal or administrative measures proposed; and
"(4) The character and extent of the co-operation required from other Government agencies for the successful execution of the policies of the Monetary Board.
"If the resultant actions fail to check the deterioration of the reserve position of the Central Bank, or if the deterioration cannot be checked except by chronic restrictions on exchange and trade transactions or by sacrifice of the domestic objectives of a high level of production, employment and real income, the Monetary Board shall propose to the President such additional action as it deems necessary to restore equilibrium in the international balance of payments of the Philippines.
"The Monetary Board shall submit periodic reports to the President until the threat to the international monetary stability of the Philippines has disappeared."

The measures taken in accordance with the provisions of subsection (a) above to check the deterioration in the reserve position of the Central

Bank may consist of direct restrictions on exchange operations or of indirect measures designed to contract the money supply, in order thereby to reduce the demand for foreign currencies. The choice between exchange restrictions and a deflationary monetary policy, and among various combinations of the two, will depend on the circumstances prevailing at the time. The Law does not give domestic monetary stability priority over international stability, nor vice versa. In some circumstances the Monetary Board might consider the hardships of a temporary deflation to be more than counterbalanced by the undeniable long-run advantages of free convertibility; at other times, deflation might be too bitter a medicine.

The situation envisaged in the next to the last paragraph of Section 70 is that of a fundamental conflict between the objectives of domestic and international monetary stability which would require consideration of revaluation. The conditions under which a change in the par value of the peso is authorized under the Act are stated in detail in Section 49, as follows:
"The par value of the peso shall not be altered except when such action is made necessary by the following circumstances:
"(a) When the existing par value would make impossible the achievement and maintenance of a high level of production, employment and real income without:
"(1) The depletion of the international reserve of the Central Bank; or
"(2) The chronic use of restrictions on the convertibility of the peso into foreign currencies or on the transferability abroad of funds from the Philippines; or
"(3) Undue Government intervention in, or restriction of, the international flow of goods and services; or
"(b) When uniform proportionate changes in par values are made by the countries which are members of the International Monetary Fund; or
"(c) When the operation of any executive or international agreement to which the Republic of the Philippines is a party requires an alteration in the gold value of the peso."

It should be noted that the existence of any of the conditions enumerated does not make a modification of the par value obligatory, under the terms of this Act, but merely permissible.

The administrative procedure for changing the par value of the peso is as follows: The Monetary Board, with the concurrence of at least five of its seven members, must first propose such action to the President, who may, if he deems it advisable, take such action after having obtained the approval of Congress (except in grave and urgent circumstances, in which case the President may act without such approval but must then report on his action to Congress at the earliest opportunity).
Any action to change the par value of the peso (or to apply exchange controls) would also be subject, of course, to thie conditions imposed by the Executive Agreement pursuant to the Philippine Trade Act and by membership in the International Monetary Fund.

## Instruments of Central Bank Action

The specific instruments of action available to the Central Bank include operations in gold and foreign exchange, lending to banks and the Government, open-market operations, control of bank reserve requirements, and selective regulation of bank credit operations. These powers, as will be apparent from the following discussion, are flexible in design. This seems particularly desirable in an economy in which Government fiscal operations are unlikely to exert appropriate countercyclical influences, at least for some time to come, and which, because of its extreme dependence on the exportation of a few basic products, is sensitive to changing business conditions abroad, especially in the United States.
During the first few years of the Central Bank's existence, large export proceeds and large United States Government payments to the Philippines will probably prevent the money supply from falling, and may even increase it. In such a period the Bank may wish not only to restrict its own credit operations quite narrowly but also to limit the expansion of credit by the commercial banks through the use of its powers over their credit operations. At a later time, these powers could be used in a different direction to counteract depressive forces.

Operations in gold and foreign exchange. The Central Bank may buy and sell gold, regulate all dealings in gold, and require at any time that gold holdings of all persons or entities be delivered to the Bank. The Bank may engage in foreign exchange transactions with Philippine banks, Philip-
pine Government agencies, foreign and international financial institutions, and foreign governments, but not with the general public. In order to maintain the convertibility of the peso, the Central Bank is required, however, to buy any quantity of foreign exchange offered to it, and sell any quantity demanded from it, by any bank operating in the Philippines, provided that the currency offered or demanded is freely convertible into gold or United States dollars.

Notwithstanding the obligation just described, in order to protect the international reserve of the Central Bank during an exchange crisis and to give the Monetary Board and the Government time in which to take constructive measures to combat such a crisis, the Board, with the concurrence of at least five of its seven members and with the approval of the President of the Republic, may temporarily suspend or restrict sales of exchange by the Central Bank and may subject all transactions in gold and foreign exchange to license by the Bank. It is unlikely that this authority will be exercised within the foreseeable future because of the presently favorable balance of payments and the extraordinarily high level of the international reserve. The Philippine financial position is sound and the Philippine economy should be able to adapt itself to the tapering off of the currently large United States Government payments without the imposition of exchange controls.

The question of inconvertible currencies poses no immediate problem for the Philippines because Philippine trade is at present conducted almost exclusively in dollars. As long as the maintenance of a high level of exports is not dependent upon the acceptance of currencies which are not freely convertible into gold or United States dollars, it is to the interest of the Philippines that the Bank not accumulate such currencies. Nevertheless, the day may come when the Central Bank must choose between accumulating inconvertible currencies and suffering a curtailment of exports which would seriously reduce income and employment. The Bank might well decide that the former would be the lesser evil, particularly in view of the diffculties and hardships that would be involved in shifting factors of production from the export industries into other productive activities. This decision would be especially defensible in cases where the period of inconvertibility of a foreign currency was expected to be rather short. In view of the
foregoing considerations, the Central Bank Act states (Section 75) that:
"The Central Bank shall avoid the acquisition and holding of currencies which are not freely convertible, and may acquire such currencies in an amount exceeding the minimum balance necessary to cover current demands for said currencies only when, and to the extent that, such acquisition is considered by the Monetary Board to be in the national interest. The Monetary Board shall determine the procedures which shall apply to the acquisition and disposition by the Central Bank of foreign exchange which is not freely utilizable in the international market."

The Monetary Board will fix the rates at which the Central Bank will buy and sell foreign exchange, but the rates for spot exchange may not differ from the legal parities by more than one-half per cent, unless in any given case a greater divergence from the legal parity exists in foreign markets. The rates applicable to nonspot exchange transactions of the Central Bank may not differ from the spot rates by more than the additional costs or expenses involved in each type of transaction.
The Monetary Board will also determine the minimum and maximum rates within which the other banks may buy and sell spot exchange, but the limits fixed by the Board may not differ from the respective legal parity by more than one per cent, unless in any given case a greater divergence from parity exists in foreign markets. The rates fixed by the banks for their nonspot exchange transactions may not differ from their spot exchange rates by margins larger than those considered reasonable by the Monetary Board. The Board may at any time, however, specifically fix such margins.
Any revaluation profits or losses made by the Central Bank on its net international assets or liabilities, as a result of changes in the gold value of the peso or in the parities or exchange rates of foreign currencies with respect to the Philippine peso, are to be offset by any amounts which, as a consequence of such revaluations, are owed by the Philippines to the International Monetary Fund and the International Bank for Reconstruction and Development, or are owed by these institutions to the Philippines. The Central Bank will sterilize any remaining profit or loss by entering it in a special blocked account. The purpose
of such sterilization of revaluation profits and losses is to remove their potential influence on decisions to modify the value of the peso.

Similarly, any revaluation profits and losses made by the other banks on their net assets or liabilities in gold and freely convertible foreign currencies are to be for the account of the Central Bank and are to be distributed by the Bank in the same manner as those arising from its own holdings. The Monetary Board may, furthermore, at any time declare that revaluation profits or losses on banks' net holdings of any inconvertible foreign currency shall also be for the account of the Central Bank. The purpose of these provisions is principally to remove the speculative element of revaluation profits and losses from the normal exchange operations of the banking system.

In order that the Central Bank may at all times have foreign exchange resources sufficient to enable it to maintain the international stability and convertibility of the peso and in order to promote the domestic investment of bank resources, the Monetary Board is authorized, in Section 80, to require the banks to sell to the Central Bank all or part of their surplus holdings of foreign exchange. It should be noted that the exercise of this power is permissive, not obligatory. Such transfers may be required for surplus holdings of all foreign currencies or for only certain of such currencies, and are to be made at the regular buying rates of the Central Bank. Surplus holdings of any foreign currency are defined as the amount by which a bank's assets in the currency exceed the sum of: (a) the working balance which it needs to accommodate normal short-run fluctuations between the bank's sales and purchases of the currency and (b) the total liabilities of the bank in the currency. In calculating surplus holdings in any given currency, however, a bank may, with the permission of the Monetary Board, subtract from its net assets in that currency an amount equal to its net liabilities in other currencies into which the currency concerned is freely convertible.

Loans to banking institutions. The Central Bank is given wide latitude with respect to the volume, character, security, and maturity of its loans to banks, but its credit policy is subject to the following general principles, which are stated in Section 86 of the Law:
"The rediscounts, discounts, loans and advances which the Central Bank is authorized to extend to
banking institutions under the provisions of the present article of this Act shall be used to regulate the volume, cost, availability and character of bank credit and to provide the banking system with liquid funds in times of need.
"In periods of inflation, or as long as inflationary dangers exist, the Central Bank shall refrain from extending credit to banks and at such times shall grant credit only in exceptional cases where special circumstances justify a deviation from the principle stated herein.
"Conversely, whenever the national monetary policy requires an expansion of the money supply, the Central Bank shall make full use of the credit operations authorized under the present article of this Act."

Here again, it should be emphasized that the "guiding principle" is not intended to serve as a substitute for sound judgment but is designed rather to provide orientation and to place some impediment in the way of excessive or untimely credit expansion by the Central Bank.
The maximum permissible maturities for Central Bank loans and advances to banks are greater than those customarily permitted in the legislation of more highly industrialized countries. The Bank may grant loans with maturities up to 180 days against paper related to commercial loans and up to 270 days against paper related to production or processing loans. The Bank may in addition make advances up to 180 days against gold, against evidences of debt of domestic credit institutions, against utilized portions of bank advances on current account-provided they are covered by regular over-draft agreements between banks and their customers and were used to finance the production, processing, storage, or marketing of goods-and finally against obligations of the Government or of other official entities, provided that the obligation matures within 10 years from the date of the advance by the Central Bank.

The speed with which a central bank can contract the money supply is obviously conditioned by the maturity pattern of its portfolio. This is the real basis for the traditional principle that central bank loans should be "self-liquidating" and of short maturity. While the maximum maturities mentioned in the preceding paragraph may seem so long as to impair somewhat the speed with which the Central Bank could, in case of need, force a
drastic contraction of credit, their justification is to be found in certain characteristics of the Philippine economy. In the Philippines, as in other underdeveloped areas, productive and commercial processes are impeded by shortages of working capital as well as by lack of mechanization and limited transportation facilities. In order to meet the legitimate credit needs of business and agriculture in such communities, banks must adapt the character of their lending operations to the environment in which they operate. This requires that commercial banks at times grant loans of longer maturities than is the practice in the United States. The granting of such loans by the commercial banks will be facilitated if the Central Bank itself can make advances to the banks with similarly extended maturities, even though this may involve some sacrifice of the speed with which the Central Bank can contract the money supply.

Whenever inflation looms on the horizon, the Central Bank should, of course, give careful attention to the liquidity of its portfolio. In times of deflation or depression, on the other hand, undue preoccupation with liquidity would defeat what should be a primary objective of central bank policy under such circumstances-namely, to prevent a serious fall in the money supply. In recognition of these considerations, the Philippine Central Bank Act permits the maximum maturities of new credit operations to be raised from the normal periods of 180 and 270 days to a year whenever, in the opinion of the Monetary Board, a deflationary situation exists which requires special expansionary measures. In similar circumstances, the Bank is also empowered (Section 89) to grant advances up to one year to mortgage institutions against their mortgage loans.

Just as the Act recognizes that normal maturity requirements should be liberalized in periods of emergency, it also recognizes that adherence to normal eligibility rules at such times might block the discharge of the Central Bank's responsibility as "lender of last resort" and, accordingly, provides, in Section 90, that:
"In periods of emergency or of imminent financial panic which directly threaten monetary and banking stability, the Central Bank may grant banking institutions extraordinary advances secured by any assets which are defined as acceptable security by a concurrent vote of at least five mem-
bers of the Monetary Board. While such advances are outstanding, the debtor institution may not expand the total volume of its loans or investments without the prior authorization of the Monetary Board."

The Philippine Central Bank Act does not prescribe the interest or rediscount rates to be charged on the Central Bank's loans. The Act merely provides that the rates are to be fixed by the Monetary Board in accordance with the character and terms of the credit operations, with due consideration being given to the credit needs of the market, the composition of the Central Bank's portfolio, and the general requirements of the national monetary policy.

Advances to the Government. Direct loans to the Government and to its political subdivisions are limited to short-term advances for the purpose of covering seasonal gaps between revenues and expenditures. ${ }^{7}$ These advances have to be repaid before the end of the first quarter following the termination of the fiscal year and their total may not exceed 15 per cent of the estimated income of the borrower for the current year.

Open-market operations. For some time to come, open-market operations will not serve as a very effective instrument of Central Bank action in the Philippines. The Central Bank must first develop a market for Government securities. To this end, the Bank is given charge of the marketing of all Government obligations and will administer a special "Securities Stabilization Fund" for the account of the Government. The objective of this Fund is to promote private investment in Government obligations by increasing their liquidity and stabilizing their value. The Fund will have an initial capital of 2 million pesos, but provision is made to increase its resources by the allocation of part of the annual profits of the Bank. The Monetary Board is instructed to use the resources of the Fund to prevent or moderate sharp fluctuations in the quotations of Government obligations, but not for the purpose of altering movements resulting from

[^24]basic changes in the pattern or level of interest rates.
In order to regulate bank reserves and the money supply, the Central Bank may engage in openmarket operations for its own account. Whenever the Bank's total holdings of Government securities are so small as to prevent the Bank from engaging in selling operations on the scale desired, or, as is more likely in practice, whenever its holdings of such securities do not have maturities or other characteristics which would evoke favorable market response, the Bank may issue obligations of its own; these obligations may have such characteristics as the Monetary Board considers appropriate. This provision has the effect of providing the Bank with an unlimited and highly flexible portfolio for open-market sales.
The Act provides the same general type of policy directive for the open-market operations of the Central Bank as it does for the Bank's lending operations: in periods of inflation, or as long as inflationary dangers exist, the Bank is to refrain from security purchases and at such times must endeavor to sell securities. Whenever there is danger of deflation, on the other hand, the Bank may freely engage in open-market purchases.
Bank reserve requirements. The Central Bank has broad authority over the reserve requirements which the banks must observe. The Monetary Board may prescribe reserve ratios from 10 to 50 per cent against demand deposits and from 5 to 25 per cent against time and savings deposits. The ratios established are to apply to all banks uniformly, regardless of the size of the city in which they are located. Notwithstanding the upper limits just mentioned, the Board may, in periods of inflation, prescribe ratios up to 100 per cent against any future increase in the deposits of each bank. Whenever the use of such special authority results in required reserves in excess of 50 per cent of the total demand deposits of a bank or in excess of 25 per cent of its total time and savings deposits, the Central Bank may pay interest on the excess at a rate not higher than the Bank's lowest rediscount rate.

The required reserves of each bank will ordinarily have to be held in the form of a noninterestbearing deposit with the Central Bank; nevertheless, the Board may, whenever circumstances warrant, permit the maintenance of part of the required reserves in the form of assets other than peso deposits with the Central Bank. Thus, in periods of
inflation, the Monetary Board might raise requirements substantially, ${ }^{8}$ but might permit all or part of the increase to be held in the form of Government securities, or of foreign exchange. The use of this authority could be of considerable value in accustoming banks to invest in Government obligations. It would have the further advantage of curbing bank credit expansion without necessarily forcing the banks to hold assets yielding no return and it should therefore be more acceptable to the banking community.

Interbank clearing. The Central Bank is to provide facilities for interbank clearing, and is to use the reserve deposits of the banks for this purpose.

Selective regulation of bank credit operations. In addition to the quantitative control which it may exercise over the volume of bank credit through the adjustment of reserve requirements and, at some later date, through open-market operations, the Central Bank is given several instruments of quantitative control which should enable it to curb credit expansion in certain directions, while at the same time permitting it in other directons. The selective controls include authority:

1) to regulate interest rates;
2) to establish maximum maturities for bank loans and investments, and to prescribe the kind and amount of security to be required against the various credit operations of the banks;
3) to place ceilings on the amount of bank loans and investments, or certain categories thereof, or to place a limit on the rate of increase of such assets over time. In no case may the Board establish limits which are below the value of the loans or investments of the banks on the date on which they are notified of such restrictions;
4) to prescribe minimum ratios which the capital and surplus of banks must bear to the volume of their assets or to specific categories thereof, ${ }^{\circ}$ and
5) to prescribe minimum cash margins for the opening of letters of credit, and to relate the size of the required margin to the nature of the transactions to be financed. This last power is designed to give the Central Bank authority to restrict the abuse of bank credit for speculative or nonessential importation.
[^25]The selective controls listed above can, if exercised in accordance with the spirit of the Law, be of great value at times when the use of other instruments of central bank action would be ineffectual or awkward.

## Functions as Fiscal Agent, Banker, and Financial Adviser of the Government

The Central Bank is to act as fiscal agent, banker, and financial adviser of the Government, its political subdivisions and instrumentalities. It will represent the Government in all dealings with the International Monetary Fund and may also represent it in its dealings with the International Bank for Reconstruction and Development. Before the Government may undertake any credit operation at home or abroad it must first consult with the Central Bank in order that the latter may render an opinion on the probable effects of the proposed operation on the money supply, the price level, and the balance of payments. Moreover, to assure the Central Bank of a voice in the formulation of national economic policies, the Act provides for the representation of the Governor of the Bank on the National Economic Council, which is the entity responsible for the coordination of such policies. Thus, the Law places great stress on an effective integration of monetary policy with the fiscal and general economic policies of the Government.

The Central Bank will be the depository of all official funds. An important element of flexibility is introduced, however, by the provision that the Monetary Board may from time to time authorize certain other banks to accept Government deposits. Thus, bank reserves can be increased and credit expansion encouraged at any time by the simple expedient of placing Government funds with the banks; similarly, bank credit can be tightened, with equal or greater effectiveness, by the withdrawal of these funds at times when credit stringency is in order.

## Concluding Comments

The Central Bank Act establishes an institution which, if prudently managed, should make a valuable contribution to the economic progress of the

Philippines. With the establishment of a Central Bank to which they can turn in times of need, the banks will be in a much better position to accommodate the credit needs of a vigorously growing economy. The banks should in particular be able to give more sympathetic consideration to the medium and long-term credit needs of agriculture and industry-needs which tended to suffer under the former system. With the development of a market for Government securities, the scope of fiscal policy will be broadened and a channel for safe investment of savings will be opened; both a greater volume and more effective utilization of savings should result.
It would be folly to believe that the Central Bank can fully insulate the Philippine economy from fluctuations in world demand for the raw material exports on which so large a part of the Philippine level of consumption depends. Nevertheless, the impact of world economic fluctuations, particularly those of brief duration, can be cushioned by appropriate central bank policy. The fulfillment of this compensating function will undoubtedly occupy a prominent place in the Bank's activities; but a major concern of the Bank should be to create and maintain a financial environment in which a fuller and more diversified utilization of the rich resources of the Philippine economy is encouraged and local and foreign capital are permitted to make the greatest contribution of which they are capable.
The Philippine Government has recognized the need for further reforms in other fields, two of the most important of which are taxation and agriculture. It is expected that the Central Bank's policies will be integrated with such reforms and will form a part of a unified program of reconstruction and development. If the new Bank, in the formulation of monetary policy, adopts a perspective which encompasses the entire economic environment in which it operates, it should be able to make an outstanding contribution to the effective conduct of Philippine economic affairs.

[^26]
# SECOND ANNUAL REPORT OF THE NATIONAL CREIIT COUNCIL OF FRANCE 

The reorganization of the French banking system which was carried out by the law of December 2, 1945, included, along with the nationalization of the Bank of France and of the four largest deposit banks, the establishment of a new agency, the $N a$ tional Credit Council, as an advisory and regulatory body with a wide range of functions in the fields of banking and credit policy. ${ }^{1}$

The Council consists of 40 members including representatives of various government departments, of public and private financial institutions, as well as of business, agriculture, labor, and consumer groups. The President of the Council is a cabinet minister designated by the Government. The

President may delegate his powers to the Governor of the Bank of France, who is vice-president ex-officio.
Aside from important technical attributions relating to banking organization, the Council formulates, in its monthly meetings, general directives and specific recommendations on credit policy for the guidance of the Government, the Bank of France, and the banking system.

The following excerpts from the Annual Report of the Council for 1947 deal with the course of the inflation in France during that year and with the resulting problems of credit policy which the Council had to face. ${ }^{2}$

## ECONOMIC DEVELOPMENT IN 1947

At the threshold of the year 1947, the economic and monetary situation continued to show an inflationary trend. The dominating influence during the year was a fundamental disequilibrium between income distributed in the form of profits or wages and available goods, which resulted in constantly rising prices. In the social sphere, this rise caused a gap between the level of wages and the cost of living.

During the summer of 1946 an attempt was made to bridge this gap by an increase in wages, but the effects of this measure were rapidly counteracted by a continuance in the rise of prices. Thus by the end of the year 1946, the public was convinced that any impetus given to the race between prices and wages offered no effective solution of the problems caused by the inflation.

The movement of prices in 1947. It is for this reason that, beginning early in 1947, the fight against the deterioration of the currency took first of all the form of measures designed to redace the cost of living. Without attempting to influence directly the volume of production, the public authorities tried to direct prices downward, in order to restore the purchasing power of the workers' incomes and at the same time to increase the volume of goods offered on the market. Just as the

[^27]anticipation of an early rise in prices had induced merchants and producers to hoard, so the fear of a fall could not fail to cause them to sell, thus making possible the natural continuance of the cut in prices prescribed in the first instance by the authorities.

The measures taken early in 1947 against the price rise were the following:

A first decree making compulsory an immediate cut of 5 per cent;

Announcement of the staggering of the decrease in two stages. The second price-cut decree was in fact issued two months after the first.

Various provisions, directed toward a general strengthening of the discipline which producers and merchants were invited to adopt, supplemented these two decrees.

As is shown in the following table, the results

| Period | Wholesale prices |  |  | Retail prices, Paris |
| :---: | :---: | :---: | :---: | :---: |
|  | Industrial products | Foodstuffs | General index |  |
| 1946-December. | 739 | 954 | 846 | 865 |
| 1947-January . | 756 | 992 | 874 | 856 |
| February. | 756 | 1,021 | 889 | 858 |
| March. | 755 | 965 | 860 | 838 |
| April. | 757 | 938 | 847 | 837 |
| May. | 759 | 1,132 | 946 | 886 |
| June. | 762 | 1,047 | 904 | 935 |
| July. | 790 | 985 | 888 | 965 |
| August | 796 | 1,211 | 1,004 | 1,068 |
| September. | 825 | 1,367 | 1,096 | 1,157 |
| October... | 866 | 1,392 | 1,129 | 1,268 |
| November. | 1,001 | 1,422 | 1,211 | 1,336 |
| December. | 1,001 | 1,434 | 1,217 | 1,354 |

obtained, however useful they may have been, did not last beyond the month of May.

The policy of lowering prices had an immediate and direct effect so far as retail prices and the prices of industrial products were concerned. By restoring confidence in the maintenance of the purchasing power of the currency, it put an end to the speculative flight from the franc which was in progress at the end of 1946. This flight took the form of buying securities on the stock exchange, the purchase of luxury goods, black market transactions in gold and foreign exchange, and the hoarding of stocks by merchants. Prices of foreign securities as well as of gold fell significantly. However, the effect of the January decree was offset by increases which had to be granted in the prices of imported raw materials, coupled with the general rise which took place in foreign markets after the relaxation of price control in the United States in July 1946. Finally, the decrees had practically no effect on the price of food. Prices on the agricultural markets followed the laws of supply and demand rather than responding to price control measures difficult of enforcement.

The inadequacy of the price cuts shown in the field of consumer goods encouraged indirect increases in official wage rates; it was therefore not possible to impose the pegging of industrial prices at the levels fixed in the beginning of the year.

The contrast between the reality of economic developments and the hopes based on the decrees of January and February 1947 became apparent, especially in the middle of the summer. As early as July, a substantial increase in cereal prices had to be granted, both in order to prevent a short harvest from having too serious financial consequences for the farmers and to encourage the growing of crops which are indispensable to the national food supply; this increase immediately resulted in a rise in the price of bread. At the end of August, the fear of a shortage gave rise to bidding up of prices on the part of consumers, anxious to protect themselves from the expected restrictions.

The nonrenewal of the subsidies filling the gap between the cost and the official selling price of coal and iron and steel products contributed equally to the necessity for a new examination of the price problem. Continuation of the former selling prices of these products became impracticable when the prices of other products rose; such a policy ceased to be of any benefit to the consumers, and forced the Treasury to pay subsidies which could not be met from current revenue. It therefore contributed to the monetary inflation since it widened the gap between incomes distributed in the form of profits or wages and the commercial value of goods offered on the market.

At the end of the summer of 1947, it seemed evident that all hope had to be abandoned for
stabilizing prices at a level lower than that prevailing at the end of 1946. The effort to achieve economic equilibrium thereafter was no longer limited to an attempt to bridge the gap between wages and the cost of living, but was directed toward bridging the gap between aggregate incomes and available goods. The discontinuance of subsidies and the freeing of prices of the bulk of industrial and agricultural products were the main features of the measures adopted by the public authorities at the end of the year to facilitate the adjustment of the amount of incomes distributed to the volume of goods which might be offered in exchange. These price measures found their counterpart in financial measures designed to freeze savings accumulated earlier and to adjust the parity of the franc to prices. Despite its apparent inflationary character, this adjustment falls within the scope of the same policy. It is designed to facilitate the adjustment of the French balance of payments.
Production in 1947. The wage increases which began in the month of June offered the first indications of the difficulties in the way of the policy of lowering prices. The primary cause of its failure, however, must be sought, not in these wage increases, but in the insufficiency of goods for domestic consumption in comparison with the enlarged money incomes.
In the agricultural field the deficiency in the grain harvest entailed a heavy reduction in the total of foodstuffs available for distribution under rationing or control and resulted in an enlarged demand for nonrationed food products. In the prewar economy, the free play of international exchange generally assured to each country its food supply at a reasonably constant level. In 1947, France did not have at her disposal foreign means of payment which would have permitted adequate imports; and if she had had them, she would still have been un-able-because of world-wide shortages--to make up for the deficit in her own production. Because of this lack of sufficient foodstuffs, the adaptation of the supply to a demand kept down with difficulty could not be made without raising the general price level.
With regard to industrial production, the advance achieved in 1947 undoubtedly resulted in equalling or exceeding the prewar figures in various branches -notably coal, electricity, glass, and chemical products. But this advance, limited moreover by reason of the insufficient supply of metallurgical coke, was not reflected in an immediate improvement in the volume of goods available for the consumers. The most noticeable progress was made in activities such as the production of coal, electric power, and raw materials, which were not working directly to sat-
isfy essential consumption needs. By contrast, the industries producing consumer goods have not as yet recovered their prewar rate of output.
Moreover, the improvements noted in industrial production did little to increase the volume of consumption goods. The rebuilding of stocks of machine tools necessary to insure the regular operation of industrial equipment, the building up of stocks by commercial enterprises whose number had increased abnormally since Liberation, the large ship-
ments of manufactured goods-textiles in particu-lar-to overseas territories where the scarcity after the war was even greater than in metropolitan France, the exports of all kinds-automobiles and quality fabrics-to earn for us part of the foreign exchange required for the purchase of raw materials and food products, have prevented the progress shown in the field of production from manifesting itself in an equivalent increase in goods offered for domestic consumption.

## BANK CREDIT POLICY

## Principles

The National Credit Council continued throughout the year 1947 to orient its activity toward the double objective which was assigned to it by the economic and monetary situation: bank credit had to play its normal role in speeding up production; its distribution had to be directed in such a way as to avoid aggravating further the existing causes of inflation.

The mere statement of these purposes is sufficient to show that, while not considering them contradictory, the National Credit Council has constantly found itself confronted with two divergent tendencies, one of which places the emphasis on the necessities of production, the other on the dangers of inflation.

According to one opinion, the role of credit should be to furnish funds to enterprises on the basis of their standing, their activity, and their good management, regardless of whether the banker is in a position to assure himself that these funds are actually indispensable to the accomplishment of his customer's program, or that this program represents a positive economic interest: provided that the repayment of the funds is not doubtful, credit must be supplied freely to match a free demand.

According to the opposite opinion, not only are these assurances indispensable, but in the face of rising prices and of expanding incomes, the filling of all credit demands presents the gravest dangers: by permitting everyone to build up his resources by borrowing, it prevents the rise of prices from playing its normal role as a curb on spending, it permits following this rise without hesitation and it even encourages it since it enables the same enterprise to speed up its purchases and to slow down its sales. Thus, even though he is confident that his function is indispensable to the success of a business and that the latter contributes to useful production, the banker who would satisfy his customer's credit requirements in full still adds fuel to the inflation: credit must be restrained in an arithmetical, comprehensive, and predetermined manner in order
that, for some time at least, business enterprises, short of ready cash, are forced to discuss prices, to speed up sales, to convert surplus assets into cash, to repatriate capital from abroad: inflation can be stopped only at this price provided that it is attacked also through the cutting of public expenditures.
Both positions have a logical basis. The first, which on the whole is that of business concerns, takes into consideration mainly the need for funds. The interested parties point out that the real value of their circulating capital is constantly shrinking chiefly for the reason that the rise in costs precedes the rise in selling prices. In these conditions, the financing of even a constant volume of production requires ever larger funds. A fortiori, if productive capacity increases because of the progressive elimination of bottlenecks (coal, raw materials, labor, transportation, foreign exchange) the need for funds, especially at first, grows still more rapidly, and credit requirements should be satisfied at this growing rate.
It can scarcely be denied that, from their point of view, business executives reason correctly: each one of them is naturally disturbed if he finds his capacity to renovate his plant, to produce, or to distribute hampered by credit restrictions. Only with difficulty does he grasp the fact that credit contributes to the inflation of purchasing power as a whole. If liberally distributed in a period of full employment and inflation, credit contributes to the increase in money incomes and can serve as an important supplementary inflationary factor. The general rise in prices favors the profitable operation of businesses whose costs are the least well adjusted.
The opposite position, less influenced by the individual difficulties-often very real-affecting the financial status of a certain number of concerns, emphasizes the gravity of the monetary danger and tends toward a radical reduction in credit to be carried out through the application of ratios. It holds that measures to restrain the expansion of the money supply can help to prevent undue price increases and the ensuing inevitable bankruptcies are most likely to affect the very businesses which
are the least protected in the struggle for the desired reduction of costs.
This position, finally, is supported by considerations based on the necessary equilibrium between public and private finances: if the extension of credit granted by the banks to industry, commerce, and agriculture must have as its unavoidable consequence a reduction of the aid furnished by the banks to the State, i. e. the nonrenewal of a portion of their Treasury bills, it forces the Treasury to resort to the bank of issue in order to obtain, in the form of direct advances, the amount necessary to redeem the bills not renewed. Direct borrowing from the bank of issue is generally considered, in France and abroad, to be one of the most serious symptoms of inflation, and measures must be taken to combat it.

This complex problem, which dominates the entire credit policy, is not peculiar to France. In terms perhaps less sharply outlined because the degree and the characteristics of the inflation are not the same as in France, it nevertheless faces public opinion and the competent authorities in many foreign countries, particularly in those whose banking organization is old and developed. In the United States, England, Belgium, Switzerland, and Italy, the controversy is more or less open, more or less sharp. It takes place between the supporters of a mechanical credit restriction considered as a necessary cure, in spite of its indiscriminate character, and the partisans of expanding credit, or at least of maintaining credits outstanding, as the indispensable condition to the success of the production drive, in spite of the possibilities of misuse.

The National Credit Council, facing this basic question, believed that it should avoid any purely doctrinaire attitude.
It concluded that neither of the two patterns outlined above responded to the exigencies of the French economic and financial situation. It has deemed it preferable to define a policy adapted to the practical conditions of the moment, in the light of certain simple principles and of concrete data.
It considered first of all that certain types of bank credit, although current and important abroad, such as credit for speculation in securities and real estate, or consumer credit, were practically without importance in France, and that the risk of a serious credit inflation was correspondingly reduced.

Likewise it appeared to the Council that the adoption of an over-all ceiling for the total volume of bank credit, or even the adoption of compulsory "ratios," which result in a uniform limitation of the advances available for business, was difficult to carry out in a period of rapid rise of prices.

This rise being neither chiefly caused, nor pri-
marily supported, by the expansion of bank credit, to attempt to combat it by blocking credit would have been, indeed, a futile and dangerous undertaking: it could have resulted in a rigid and indiscriminate limitation of private credit. This would have entailed the progressive closing down of enterprises whose circulating capital had been reduced by the price rise and would have left as the only masters of the situation those enterprises which found themselves independent of the banks.

The Council considered, on the contrary, that, in all cases where the conditions requisite to production deemed useful to the economy were present, credit should be supplied.

It also was not unaware of the extreme gravity of the danger of a monetary inflation, in whatever form it might manifest itself. If the volume of money incomes-whether it enlarges the note circulation or the total of bank deposits-grows more rapidly than the volume of goods offered to consumers at a given price level, in a word, if an "inflationary gap" appears, this price level is in danger of rising. It rises, indeed to the extent that hoarding or, otherwise expressed, liquiditypreference, or the demand for cash do not increase concurrently, an eventuality which as yet seems not to have occurred. It does not take long for the price rise to make necessary a rise in wages, and the volume of money incomes, whether in the form of profits or of wages, is once more lifted to a higher level. The fatal results of this cycle are well known, and because the National Credit Council realizes fully the tragic character of the cycle, it combats it vigorously in the domain which has been entrusted to its care.
The first element of danger presented by the extension of credits has often been pointed out and, in chronological order, it was the first to come under the Council's scrutiny. As its first report has noted, a liberal distribution of credit threatens to encourage holding goods off the market, the building up of "speculative stocks." There is ample evidence, indeed, that when a whole country anticipates a price rise, each of its citizens, whether moved by fear or hope, attempts to obtain the goods he lacks and to hold on to those he possesses. In either case, his credit needs are enhanced.
Thus, aside from the attitude that may be taken toward this matter from the civic point of view, the Council endeavored to set up an effective obstacle to these practices, since they have a natural tendency to aggravate the price situation for the community while they are attempting to mitigate its consequences for the individual.
Beside this first danger, there is a second and more subtle one: if credit were to be extended to satisfy an entirely unrestricted demand, and solely
according to the ability of the customers to repay, it is certain that borrowers would be enabled to keep up indefinitely with the rise of prices, and would therefore never come to oppose it. This process would favor those concerns whose credit standing and ability for self-financing were the best. In a certain number of cases, moreover, the profits earned during the war and since the Liberation have been invested in various types of assets such as real estate, recreation facilities, land, cattle, agricultural implements, securities, gold, or exchange. A larger or smaller part of these investments may be in excess of actual needs, being merely a hedge against monetary depreciation. Granting all credit requested by such borrowers, without requiring them to start liquidating at least a part of these surplus assets, would give artificial support to excessive prices, and put a premium on speculation.

Special vigilance must be exercised on this score in the case of medium-term credits designed to finance capital equipment: such credit makes it possible for businesses to distribute immediately disposable incomes while the output of consumer goods offered on the market is not correspondingly increased.
Even the discount of true commercial paper involves some danger. The paper originates in a bona fide sale of goods and the discount, accordingly, encourages the "unloading" of goods. But the seller of the goods has made provision for the price rise in his bill. When he discounts it he exerts an inflationary pressure on the volume of credit, which is the more automatic because the transaction does not lend itself in principle to discussion.

Thus, whatever technical department of credit is concerned, the danger of inflation is present in different degrees, and the National Credit Council considers it essential that this danger be fully realized: it is important indeed, that the distributors of credit should combat this general danger while making clear their motives to businesses which are individually interested in an expansion of credit.

The National Credit Council recognizes that the risk of an excessive development of credit is grave and that its symptoms must be scrutinized closely in order that it may be checked in time-the present report will explain later the measures put in effect for this purpose as well as the results ob-tained-but the Council also recognizes the danger which would result from an excessive limitation of credit. Placing these two opposite risks on the same level of importance, it has always declared that in its estimation, so long as the present shortages of goods continue, production should not be hampered by insufficiency in the total supply of credit. In other words, any available resources
which it is physically possible to put into operation -raw materials, power, labor, transportation, foreign exchange--should not remain unused for lack of bank credit.
Even on this point there has been no lack of controversy, and certain people have pointed out that if credit were always available at the proper moment to permit the immediate absorption of every offer of goods or services at prices tending to rise, it would become useless to hope for a leveling off, to say nothing of a definite reversal.
Without losing sight of this aspect of the question, the National Credit Council has maintained its position and, even in the cases where it has been persuaded to recommend a relative stabilization of certain factors of the credit aggregate, it has stipulated that this stabilization should not constitute an obstacle to the future progress of production, but should be achieved by a compensation between the supplying of credit necessary to this progress and the reductions possible in other sectors of economic activity having less immediate importance.
Accordingly the Council has continued to pay special attention to concrete data showing this activity, such as the indices and forecasts of production and sales in each principal branch and in all the sectors of the economy, the level of employment of labor, the number of new business firms, the number and types of bankruptcies, etc. Without ignoring the imperfections of these data, without denying the empirical character of its activities-a necessary character since in such an undertaking it is safer to be guided by experience than by a preconceived "truth"-the Council believes it may assert that its opinions or decisions rest on increasingly stable bases.
Finally, in adopting a flexible policy in accordance with developments in business or in the trend of economic policy, the Council has held firmly to the purpose of strengthening the economy, on the basis of the new considerations which it thought necessary to introduce in the field of credit allocation. The banks are directed to base their operations not only, as in the past, on safety, which is at the same time a function of the prestige or profitability of the business and of the degree of certainty of the results, but also on the double assurance that the funds are indispensable and that the use to which they will be put is desirable for the country as a whole. Finally, in cases where this double assurance is furnished, while the risk involved in the operation is out of proportion to the resources of the enterprise, the Council considers that such a combination of factors entitles the applicant to receive, in the absence of other support, aid from the public authorities in the form of a guarantee.

As the law authorizes, the Council has continued to entrust the Bank of France with the practical application of these instructions, which are presented and analyzed in the following pages. The Bank has cooperated effectively in the execution of this policy, both through its studies and individual controls and by supplying funds through rediscounts or directly through the money market. These operations compensated for the insufficiency of new deposits while remaining moderate enough to exercise the restraint which was occasionally needed.

## Methods of Application

The application of credit policy in 1947, based on the principles and data set forth above, was provided for by adopting a set of regulations covering the whole field of credit operations to replace the special rulings adopted by the National Credit Council in the earliest months of its existence. For the most part the regulations pertain to the extension of credits and control measures, but they provide for sanctions if necessary. Establishment and application of the rules and regulations were made possible only by the improvement of the means of information and investigation at the disposal of the National Credit Council.

Rules relative to the extension of credit. In 1946 the National Credit Council had already formulated, for the guidance of bankers, a certain number of recommendations relating principally to the necessity of refusing applications for credit manifestly intended for speculative purposes and designed especially to facilitate the building up of abnormally large stocks or to permit postponement of repatriation of exchange earned by exporters.

However, it was the general decision taken by the National Credit Council at its meeting on January 9,1947 , and completed later by the instructions of October 10, which promulgates in full detail the rules relative to the extension of credit.

By the terms of this decision, every application for credit (other than bank guarantee, bank acceptance, and discount of public bills or of bills of a purely commercial character) involving an amount subject to declaration at the Central Service of Risks must be accompanied by supporting data.

These data must include a statement of the financial situation of the enterprise and show the intended use of the borrowed funds, the term of repayment and the resources available for the purpose, the proportion between the applicant's own funds, the anticipated volume of business, and the credit requested, and finally the inability of the concern making the application to obtain all or part of the funds required, either by liquidation of some of its surplus assets or by recourse to discounting commercial bills. It is only after study of
these statements-which the Bank of France can always require to be supplied-that the banker may make his decision on granting the credit.
Any credit request exceeding a certain amount (first fixed at 30 million francs and raised to 50 million at the beginning of 1948), or bringing the total of credits already granted by one or several banks to a single enterprise beyond this amount, cannot be granted by the banker concerned except with the approval of the bank of issue. The statement of this rule shows, along with the traditional requirements of safety and profitability of banking transactions, the new standards based on the degree of economic utility and the indispensability of a resort to credit. On the conjunction of these three criteria must depend, in the current period, a distribution of credit which is discriminatory but not systematically restrictive.

The criterion of security and profitability. In the absence of any regulation, a banker, when approached with a request for credit, undertakes to evaluate exactly the advantages and the risks which the proposed transaction entails for him, from the triple point of view of his remuneration, his security, and the liquidity of his portfolio. His decision will depend both on the material or personal guarantees existing at the time of the loan, and on the anticipated outcome of the transaction resulting from an improvement of productivity, from saving in costs, and from development of markets. Thus the banker plays to some extent the role of accelerator of production, and while assuring prudent management of the funds entrusted to him, contributes to economic progress. In any case, the banker's decision rests with him alone. The law of December 2, 1945, in no wise restricted this principle which was formally reaffirmed by the National Credit Council on January 9, 1947. The banker thus remains entirely free to choose his clientèle and to refuse applications for credit addressed to him on the grounds that the security offered seems inadequate, or that the amount or the terms of the credit requested seem to him incompatible with the maintenance of the necessary liquidity of his assets.
This does not imply that the safe placement of banking funds remains a secondary consideration for the authorities responsible for the direction of credit. To the contrary, a number of safety measures have been adopted, as much in the interest of the banks as in that of their depositors. Thus for two years past the lending banker has been able, thanks to the centralization of banking risks, to learn more exactly the total debtor position of the borrower. The centralization of unpaid bills, tried out by the Bank of France in certain of its branches, may introduce a new and interesting element of
credit judgment. Moreover, in connection with certain credits, the bankers have the benefit of supplementary guarantees and facilities for mobilizing their funds.

Finally, the Banking Control Commission, in the desire to safeguard the banks against the danger of illiquid positions, has just decided to require commercial banks to maintain a minimum ratioat present 60 per cent-between the total of their short-term liabilities and the amount of their liquid and realizable assets. Aside from public bills or purely commercial bills originating in a genuine transaction in goods or services, the realizable assets include only credits covered by an agreement granting rediscount facilities at the Bank of France. The consequent need for the banker to submit to the examination of the bank of issue a considerable part of his portfolio has the indirect result of reinforcing his own safety, as well as that of his depositors.

The criterion of economic utility. In an economy where a certain degree of scarcity still exists, all activities are not entitled to the same treatment. Priorities must be reserved for certain branches of the economy, particularly with respect to the allocation of raw materials and of credit, because of the indispensable character of their production and of the necessities of foreign trade.

The National Credit Council has endeavored to give due consideration to the requirements of basic economic activities defined by the National Planning Commission (Commissariat général au Plan) and the instructions addressed on October 10, 1947, to banking organizations have made clear the preferential character of credits intended for productive activities which are indispensable to the life of the country. These include the production and importation of staple foods as well as the key industries and are largely the equivalent of the group of "basic economic activities" defined by the Planning Commission.

As regards the relative degree of urgency of the applications for capital equipment credit, which are almost unavoidably accompanied by requests for allocation of machinery or raw materials, the Ministry of Economic Affairs has this year supplied a summary classification of the various branches of economic activity to the agencies charged with the distribution of credit. This classification takes account of the economic importance of each branch, and of its general financial situation. Interpreted with the necessary flexibility, and always subject to revision, it is utilized for the preliminary authorization of medium-term credits and of issues of stocks and bonds submitted to the Ministry of Finance for consideration.

Within the framework of an economy which has been progressively freed from controls, it is unusually difficult to submit the judgment of applications for short-term bank credit to a standard as definite as that of economic utility. This or that type of production, conversion, or transaction is not the less lawful because its necessity has not been made convincingly clear, and as soon as it becomes lawful for an enterprise to obtain raw materials or to sell its products, it may be considered as participating in the economic life of the country. Consequently, and provided that it does not misuse credit for speculative price operations and for hoarding materials, it may utilize credit as it uses other factors of production which the public authorities do not deny to it (electricity, coal, transportation, labor, etc.).
Nevertheless, even in the domain of short-term credit, large credit applications receive especially careful examination, and those whose economic utility can be judged only by reference to governmental policy (for example, accumulation of foodstuffs) are studied by the Bank of France in collaboration with the ministerial departments concerned.

The criterion of need of funds. Whatever may be the economic utility of the activities financed, the applicant for credit must prove that it is necessary for him to resort to bank credit.
Consequently, a credit cannot be granted unless the need of credit appears irreducible and urgent and unless the applicant proves that it is impossible for him to obtain by other means the funds which he is trying to borrow from the banks.
The instructions addressed to the banks under date of October 10,1947 , specify a certain number of cases in which credit applications that do not fulfill these conditions must be refused. The cases specified are those in which the credit would increase the amount of private investments (purchases of real estate, of existing firms, participations in capital, and purchases of shares), or enable entrepreneurs of businesses which are inadequately capitalized to avoid risking their private funds.
The National Credit Council has also specified, in connection with the uneasiness aroused at the end of last year by the "capital levy," that banks approached for credit should compare the total requirements presented by their customers, without excluding any on a priori grounds, with their total cash or readily available assets. Thus, a pressing payment coming due, however urgent it might be, would not be favorably considered if examination of the balance sheet revealed the possibility of raising the necessary funds by the liquidation of stocks or of other superfluous assets, by repatriation of foreign exchange or by more economical operation.

The banker's control must cover not only the immediate need of credit but also the period for which accommodation is desired. The National Credit Council has repeatedly advised bankers to limit their credits to the period strictly necessary and even to curtail their assistance upon any slackening of activity, even if such slackening is beyond the customer's control.
Putting the emphasis on the criterion of necessity, the National Credit Council has not limited itself to making regulations for new credits. The decision of January 9 included transitory measures which necessitated the reviewing of credit authorizations previously granted.

Practical application of control. The control of credit operations which has been outlined may appear fairly rigid. Actually, however, the present organization shows a high degree of flexibility. Every order issued by the National Credit Council insists on the necessity of placing no obstacles in the way of expansion of production. Moreover, and this must be emphasized, there is no over-all limit on credit, the volume of which rose in 1947 from 308 to 484 billion francs. The policy of discrimination is designed solely to reserve for the most useful activities the facilities which might have been supplied, with no benefit to the national interest, to sectors of secondary importance.

Those enterprises whose products represent an undeniable economic utility certainly have nothing to fear from the effects of the credit policy defined above. Even if their financial situation is not such as to furnish all possible assurance to the banker, they can take advantage of wide benefits in the form of guarantees and facilities for mobilizing their assets as provided by the State or by the public credit agencies.

Finally, it should be noted that the procedure of authorization for the extension of credits does not apply to the discount of public bills or to the discount of commercial paper. In conformance with traditional business practice, businesses can therefore draw on a large reservoir of funds.

The reasons which prompted the privileged treatment reserved for public bills and for commercial paper are of a different nature.
The necessity confronting the State of finding purchasers for its short-term bills implies that their issue must be accompanied by ample facilities for mobilization. As to the acceptances of the Crédit National, they are assimilated to Treasury bills as concerns the decisions of the National Credit Council. The discount or pledging of these instruments is thus exempt from the prescribed formalities for the extension of credits.
As regards commercial paper, it seemed advantageous for the economy in general to encourage a
credit procedure that would help to place goods in circulation since one of the principal aims of the Government's economic policy has been to combat the hoarding of goods. Like the National Credit Council, the Bank of France has endeavored to provide privileged treatment for discounts of bills originating in deliveries of goods. Such discounts enjoy the lowest rate of discount.
It must be remembered, however, that in a period of rising prices, even the discounting of commercial bills may promote inflation. It is to be feared, moreover, that some concerns may be tempted to seek, through the discount of bills whose commercial character is debatable, credit facilities which would be refused them otherwise. This risk is being carefully watched by the authorities responsible for the distribution of credit.
Measures of control. Until the month of January 1947, the activities of each bank in the distribution of credit were known only from the communications addressed to the Commission of Control and to the Central Service of Risks. Such indications were of an informational character and were submitted too late to constitute an effective operational control. While the submission of such documents has improved during the year, they can still serve only for verifications carried out a posteriori. To remedy this defect the National Credit Council has drawn up new measures to permit fuller supervision over credit operations. These measures have been discussed above; it seems desirable nevertheless to mention them again in order to show the entire range of controls at the command of the authorities charged with the direction of credit.
As indicated above, the decision of January 9, 1947, makes the granting of credits which must be reported to the Central Service of Risks, contingent upon examination by the banker of a dossier making possible an estimate of their practical justification in terms of the various criteria. Furnishing of this dossier may be required for examination by the Bank of France. All credits which would have the effect of raising to more than 50 million francs the total aid granted to a particular enterprise, by one or more banks, must, moreover, receive preliminary authorization from the bank of issue.
These measures constitute the natural complement of the supervision exercised by the Bank of France on the occasion either of the examination of bills offered for rediscount or of the study of applications for medium-term credits submitted for its approval.
The supervision of credit operations was tightened temporarily when the risk of a dangerous inflationary spurt appeared in October 1947. In order to follow closely the observance of its instructions dated October 10, the National Credit

Council asked the principal banks to furnish to the Central Service of Risks a monthly statement showing total aid granted to priority enterprises, on the one hand, and nonpriority enterprises on the other hand, compared with the total credits outstanding. The National Credit Council was thus in a position to control, with sufficient frequency and speed, the course followed by each of the banks interrogated. The application of this temporary measure came to an end in January. While it is out of the question to extend it and to impose on the banks permanently a supplementary task of this scope, the National Credit Council can nevertheless profit by the experience gained. It knows now that it has a practical means of carrying out genuinely effective investigations.

Sanctions. The authorities responsible for credit now have at hand important means of control which, to be fully effective, must have the support of
sanctions. This necessity has not been overlooked by the National Credit Council, as is indicated in its circular letter of October 10:
"All banks must understand that those among them which do not observe scrupulously the disciplines imposed by the National Credit Council will make themselves liable to be deprived of the usual facilities for obtaining accommodation at the Bank of France."

The enforcement of this sanction would be particularly embarrassing to the banker, since the abovementioned slowing-down in the formation of deposits forces him to resort to the Bank of France for the funds he needs.

This measure completes the means of action available to the Banking Control Commission, under present legislation, in dealing with offending bankers.

## CONCLUSION

Throughout the year 1947, as well as during the two preceding years, the authorities charged with the distribution of credit were guided by their desire to do everything in their power to assist the French recovery effort, the twofold object of which is to increase production and to restore the productive capacity of the nation. It is no doubt unnecessary to recall the disastrous economic situation in which France found herself after the Liberation. The progress made in the course of three years is sufficient to prove the reality of the French effort. The National Credit Council has always considered it essential that no systematic restriction of credit should be set up in hindrance to this effort. Such a restriction, which was sometimes advocated, would in effect have served no better purpose than to provoke an artificial and dangerous crisis-artificial, and after all futile, because at a time when scarcity and want were the first ills to be attacked, it would have led, through the withholding of funds, to the nonemployment of the means for increasing production; dangerous, and no doubt fatal for the currency, because it would have resulted in an immediate decrease in production, in unemployment, and disaster to the public finances. Thus it would have risked bringing on a general paralysis of our economy and hopelessly jeopardizing the chances for recovery.

The credit policy therefore had to weigh most carefully the demands of the economy with respect to current production as well as with respect to the restoration, expansion, or modernization of plant and equipment. The last chapter of the present report shows that the credit support customarily furnished to productive activities was not withheld in
1947. It cannot be charged that, because of a lack of credit, useful products were not manufactured or necessary investment was not carried out.

Doubtless the distribution of credit has not been free from controls. But it should be clearly understood that it could not be otherwise.

The inflationary trend, discussed at length in this report, has manifested itself in two important results:
(1) At all times the French banks have supported the activity of business. Until 1940, however, they contributed chiefly to the acceleration of this activity by financing in particular operations of a commercial nature, principally short-term. The discounting of bills was the most customary form of their support. Overdrafts scarcely did more than cover the temporary cash needs. They did not involve the banks in a permanent financing of production. The banks were most careful not to become tied up in the very life of business enterprises.

Since the Liberation, the credit establishments found themselves facing the very serious problems of adapting working capital to the ever changing situation of production and prices. Business enterprises cannot make such an adjustment except at a rather slow rate, by utilizing their profits or by increasing their capital. In the meantime, however, they sought and received from the banks support in larger amount and of a less temporary nature than before the war. Today credit establishments are involved to a greater extent and at their own risk in business enterprises.

The banks have understood and accepted the necessity for adjustments to new requirements re-
sulting from economic conditions. This is proot of the intelligent vitality of a banking system founded on experience. But this new character of banking policy could not be without influence on the relations between the credit institutions and their borrowers. For the latter, credit is only one of the factors of production, and it is understandable that the heads of business insist that this fact be not disputed. But for the banks, credit represents the use of their deposits, i.e., the use of funds for which they are responsible to third parties. Therefore it is natural that at a time when the banks accept the prospect of greater participation in the risks of business which they finance, they should study carefully, within the framework defined by the National Credit Council, the situation of these enterprises and keep their support within reasonable limits.
(2) It is known, moreover, that in 1947 bank deposits have not increased in the same proportion as credits granted by the banks. The latter, to a very significant extent, had to have recourse to the bank of issue for rediscounts. Bank credits therefore gave rise to an increase in note circulation and not simply to the creation of deposits. It was therefore natural that, because of the influence it exerts at present on the fiduciary circulation, the distribution of credit should be placed under the control of the Bank of France in close collaboration with the banking institutions.

Although distributed without any predetermined limit on its total volume, credit could not, in the past year, be granted in complete freedom; its distribution had to conform to the rules of a necessary discipline, the justifications for which are too clear and too sound not to be accepted by all concerned. Such is the spirit of the discriminatory policy in the distribution of credit, defined by the Council and put into effect by the banks and the bank of issue, the maintenance of which will be necessary, on principle, so long as France is not finally freed from the dangers of inflation.

At the end of a year that no doubt will rank as one of the most difficult in monetary history, France nevertheless sees more clearly revealed each day the still slender, but very evident, possibilities for a restoration of her prosperity. The patiently pursued effort for monetary and financial reform is beginning to bear fruit and to justify a return of confidence. The promise of a more abundant harvest forecasts a marked increase in food supplies and a stabilization in food prices, which is the basis for a general price and monetary stabilization. Supplies of coal, electric power, and steel are increasing month after month; imports are becoming more regular because of a general world-wide re-
turn to peace-time conditions of production and trade and because of American aid. The need for consumer goods, unsatisfied during the six war years, is gradually being filled through greater production with better quality and greater variety. No doubt much wreckage is still to be rebuilt, many privations are to be compensated, but it is not forbidden to think that the year 1948 in this respect will mark the turning point in French recovery.

If domestic and foreign political conditions do not upset the favorable prospects taking shape in the spring of 1948 , if the anxiously hoped-for monetary stabilization is maintained, French production undoubtedly will be able to take care of the considerable needs for reconstruction, reequipment, and current consumption. Only then will it be possible, in the field of credit, to take the full measure of the problems posed by the effects of war and the debasement of the currency.

One hundred and ten years of monetary stability through the ninetcenth century and the earliest years of the twentieth century had made of France one of the richest nations of the world. A strong monetary system had permitted the accumulation of considerable savings which gave to the French banks and the French financial market an exceptional place in the world.

Thirty years of instability and depreciation of the currency, added to the destruction of two successive wars, have seriously reduced France's wealth, destroyed thrift, and weakened the capital position of all enterprises. The machinery of credit distribution has seen its power considerably decline. Doubtless the French banks, by the ease with which they have overcome the unprecedented difficulties of two wars, a serious economic crisis, and a persistent monetary instability, have given proof of the value of their administrative methods and have amply justified the soundness of their credit; but the fact remains that the monetary insecurity which has persisted for ten years has weakened their own resources and hindered the building up of deposits, thus reducing the assistance which they are able to render to the economy.

If the year 1948 is to mark the first year of a return to more stable economic conditions, this longdesired return must not cause any illusions as to the ruins which any monetary inflation leaves in its wake, nor as to the problems involved in the aftermath.

These problems, the solution of which will encounter arduous and multiple difficulties, may be expressed in very simple terms:

To revive "credit"" i.e., essentially the confidence of the saving public and of the investor in the permanence of their holdings;

To restore the traditional and tried methods of
financing, in order to facilitate the investment of individual savings in such a way as to promote the modernization of the nation's productive system and the expansion of production and of the general welfare;

To encourage the progressive application of banking resources-capital and deposits-to the new demands of economic development.

There can be no doubt that after the various and at the same time discouraging experiences of the last fifteen years, the vast majority of the

French population will attempt to regain, by work and thrift, the well-being of a former period. This widespread ambition is the necessary but not the sufficient condition for an eventual return of French prosperity. If it is to have its full effect, the uncertainties of the future and the anxieties caused by the political situation must be lessened. Then only will exist the conditions most favorable to the success of a credit policy adequate to cope with the problems which France must solve in order to complete her recovery.

## CURRENT EVENTS AND ANNOUNCEMENTS

## Changes in Board's Staff

Effective August 13, Mr. Frederic Solomon and Mr. John C. Baumann were appointed by the Board as Assistant General Counsel. Mr. Solomon and Mr. Baumann have been Assistant Counsel in the Legal Division of the Board of Governors for a number of years past.

## Appointment of Branch Director

On August 17, 1948, the Board of Governors announced the appointment of Mr. J. Hillis Miller, President, University of Florida, Gainesville, Florida as a director of the Jacksonville Branch of the Federal Reserve Bank of Atlanta for the unexpired portion of the term ending December

31, 1948. Mr. Miller succeeds Mr. Charles S. Lee, a planter and cattle raiser of Oviedo, Florida, who resigned.

Appointment of Class C Director
The Board of Governors on July 26, 1948, announced the appointment of Mr. Ames Stevens of Lowell, Massachusetts, as a Class C Director of the Federal Reserve Bank of Boston for the unexpired portion of the term ending December 31, 1948. Mr. Stevens is Treasurer and a director of the Ames Worsted Company. He succeeds Mr. Donald K. David, Dean, Graduate School of Business Administration, Harvard University, Boston, Massachusetts, who resigned.

## NATIONAL SUMMARY OF BUSINESS CONDITIONS

[Compiled July 22 and released for publication July 24]

Total output at factories and mines showed little change in June and the early part of July after allowance for seasonal influences. Department store sales were at record levels for this season. Prices of meats and steel increased sharply in July, while cotton and grains declined.

## Industrial Production

Industrial production in June continued close to the May level, and the Board's seasonally adjusted index was 192 per cent of the 1935-39 average as compared with 191 in May and 188 in April, when output was reduced by a strike at bituminous coal mines.

Output of durable goods increased further in June, reflecting mainly larger production of automobiles following settlement of an industrial dispute at the plants of a leading producer. Activity in the automobile industry reached earlier postwar peak rates in the first half of July.

Steel production in June continued at the May rate. Output of open hearth steel was slightly smaller, while electric steel production increased further by 5 per cent to a new record level, exceeding the wartime peak. Output of nonferrous metals was reduced somewhat owing largely to a curtailment of aluminum production during the Columbia River floods.

Production of nondurable goods in June continued at a seasonally adjusted level of 178 per cent of the 1935-39 average. This level has prevailed, with slight variations, since the beginning of the

year. Cotton consumption and paperboard production declined somewhat in June. Meat production, however, increased substantially following the end of a labor dispute which had curtailed packing operations since the middle of March. Activity in most other nondurable goods industries was maintained at the May rate or advanced slightly.
Minerals output declined 2 per cent from the exceptionally high May rate, as bituminous coal output was reduced owing to the beginning of the miners' 10 -day holiday on June 26 . Crude petroleum production continued to advance.

## Construction

About 93,500 dwelling units were started in June, according to preliminary estimates of the Bureau of Labor Statistics. This number was somewhat smaller than the postwar high of 97,000 in May, but still considerably larger than the 77,000 units started in June 1947. Dollar volume of all new construction put in place, according to joint estimates of the Departments of Commerce and Labor, continued to increase in June and reached a record amount of 1,600 million dollars.

## Distribution

Value of department store sales showed about the usual seasonal decline in June and the first half of July. The Board's adjusted index remained around a record level of 310 per cent of the 1935-39 average, which was about 7 per cent higher than in

F. W. Dodge Corporation data for 37 Eastern States. Other includes nonresidential buildings and public works and utilities. Monthly figures, latest shown are for June.
the corresponding period a year ago.
Rail shipments of grain and forest products were in substantially larger volume in June, while loadings of most other classes of freight declined somewhat from the May rate after allowance for seasonal changes. Total loadings in the first half of July were above the same period a year ago, reflecting mainly a larger volume of coal shipments.

## Agriculture

Production of crops this year, as indicated by July 1 conditions, will be substantially larger than in 1947 and in record volume. The most important increase is forecast for corn, output of which is expected to be about 40 per cent larger than last year's drought-damaged crop. Estimated wheat production, although smaller than last year's crop of 1.4 billion bushels, would still be the second largest crop on record. Cotton acreage is officially estimated to be up 10 per cent from last year. Marketings of livestock have expanded following the end of the packing strike but the volume has remained 5 to 10 per cent below year-ago levels.

## Commodity Prices

The general wholesale price level rose further in July, reflecting sharp increases in prices of meats and steel products. Meat and livestock prices in mid-July were about 25 per cent higher than a year ago. Prices of most other farm products and foods continued to show little change or declined in July. Cotton and grain prices were somewhat below year-ago levels.
Prices of most iron and steel products were raised by 10 per cent or more in July. Coal prices were

Bureau of Labor Statistics' indexes. "All items" includes housefurnishings, fuel, and miscellaneous groups not shown separately. Midmonth figures, latest shown are for June.
also advanced, while prices of petroleum products eased and prices of cotton goods declined somewhat further.

## Bank Credit

Quarterly income tax payments by businesses and individuals during the last half of June substantially increased Treasury deposits at Reserve Banks and reduced commercial bank reserves and deposits. Banks met the drain on reserve funds largely through sales of Government securities to the Reserve Banks and through reductions in their excess reserves. During the first three weeks of July, reserves at banks increased somewhat. The Treasury drew down its balances to retire bills. Federal Reserve Bank holdings of bills were thereby reduced, but the System made net market purchases of Government securities in approximately equal volume and thereby supplied banks with additional reserves.
Commercial and industrial loans increased moderately in banks in leading cities during June and the first half of July. Consumer and real estate loans continued to expand. Banks reduced further their holdings of Government securities.

## Security Markets

Common stock prices declined sharply in the third week of July, following four weeks of relatively little change. A substantial portion of the mid-March ot mid-June gain in prices was lost.

Prices of Government bonds changed little in the first three weeks of July, following some decline in June, but prices of corporate bonds declined further.

Weekly average of daily figures compiled by Federal Reserve from data reported by U. S. Treasury Department, latest shown are for week ending July 28.

Tables on the following pages include the principal available statistics of current significance relating to financial and business developments in the United States. The data relating to the Federal Reserve Banks and the member banks of the Federal Reserve System are derived from regular reports made to the Board; index numbers of production are compiled by the Board on the basis of material collected by other agencies; figures for gold stock, money in circulation, Treasury finance, and operations of Government credit agencies are obtained principally from statements of the Treasury, or of the agencies concerned; data on money and security markets and commodity prices and other series on business activity are obtained largely from other sources. Back figures for banking and monetary tables, together with descriptive text, may be obtained from the Board's publication, Banking and Monetary Statistics; back figurcs for most other tables may be obtained from earlier Bulletins.

MEMBER BANK RESERVES, RESERVE BANK CREDIT, AND RELATED ITEMS

${ }^{1}$ Averages of daily closing figures for reserves and borrowings and of daily opening figures for other columns, inasmuch as reserves required are based on deposits at opening of business.
${ }^{2}$ Demand deposits subject to reserve requirements, i. e., gross demand deposits minus cash items reported as in process of collection and mand balances due from domestic banks.

Includes some interbank and U. S. Government time deposits; the amounts on call report dates are shown in the Member Bank Call Report
NoTE.-Demand deposits adjusted (demand deposits other than interbank and U. S. Government, less cash items reported as in process of collection) of all member banks estimated at 70.450 million dollars in the frst half and 70,350 million in the second half of June.

${ }^{1}$ Outside Treasury and Federal Reserve Banks. Includes any paper currency held outside the continental limits of the United States; totals for other end-of-month dates shown in table above, totals by weeks in table on $p$. 965 , and seasonally adjusted figures in table on 9 . 974 .
${ }^{2}$ Includes $\$ 156,039,431$ held as reserve against United States notes and Treasury notes of 1890 .
${ }^{3}$ To avoid duplication, amount of silver dollars and bullion held as security against silver certificates and Treasury notes of 1890 outstanding is not included in total Treasury currency outstanding.

* Because some of the types of money shown are held as collateral or reserves against other types, a grand total of all types has no special significance and is not shown. See note of explanation of these duplications.

Note.-There are maintained in the Treasury-(i) as a reserve for United States notes and Treasury notes of $1890-\$ 156,039,431$ in gold bullion; (ii) as security for Treasury notes of $1890-$ an equal dollar amount in standard silver dollars (these notes are being canceled and retired on receipt); (iii) as security for outstanding silver certificates-silver in bullion and standard silver dollars of a monetary value equal to the face amount of such silver certificates; and (iv) as security for gold certificates-gold bullion of a value at the legal standard equal to the face amount of such gold certificates. Federal Reserve notes are obligations of the United States and a first lien on all the assets of the issuing Federal Reserve Bank. Federal Reserve notes are secured by the deposit with Federal Reserve agents of a like amount of gold certificates or of gold certificates and such discounted or purchased paper as is eligible under the terms of the Federal Reserve Act, or of direct obligations of the United States. Federal Reserve Banks must maintain a reserve in gold certificates of at least 25 per cent, including the redemption fund, which must be deposited wedt the Treasurer of the Inited States, against Federal Reserve notes in actual circulation; gold certificates pledged as collateral may be counted as reserves. "Gold certificates" as herein used includes credits with the Treasurer of the United States payable in gold certificates. Federal Reserve Bank notes and national bank notes are in process of retirement.

${ }^{1}$ For end of year figures, represents change computed on absolute amounts in first column.

Note.-For discussion of seasonal adjustment factors and for back figures on comparable basis see September 1943 Bul.ETIN, pp. 822-826. Because of an apparent recent change in the seasonal pattern around the year end, adjustment factors have been revised somewhat for dates affected, beginning with December 1942; seasonally adjusted figures for money in circulation, as shown in Banking and Monetary Statistics, Table 111, p. 414, and described on p. 405, are based on an older series of adjustment factors.

Preliminary. $r$ Revised.
${ }^{1}$ Annual figures are estimates of the United States Mint. For explanation of monthly figures see table on p .1025.
${ }^{2}$ Includes gold in the Inactive Account amounting to 1,228 million on Dec. 31, 1937.

8 Change includes transfer of 687.5 million dollars gold subscription to International Monetary Fund.

Not yet available
C Gold held under earmark at the Federal Reserve Banks for foreign account, including gold held for the account of international institutions, amounted to $3,990.0 \mathrm{million}$ dollars on July 31, 1948. Gold under earmark is not included in the gold stock of the United States.
Note.-For back figures, see Banking and Moneiary Statistics, Table 156, pp. 536-538, and for description of statistics see pp. 522-523 in the same publication.

${ }^{r}$ Revised
${ }_{2}^{1}$ National series for which bank debit figures are available beginning with 1919.
2 Number of centers reduced from 193 to 192 beginning December 1947, when one reporting bank was absorbed by a reporting bank in another city. ${ }^{8}$ Weekly reporting member bank series.

1. Deposits and debits for first four months are partly estimated

5 Statistics for banks in leading cities revised beginning July 3, 1946; for description of revision and for back figures see Bulletins for June 1947 (pp. 692-693) and July 1947 (pp. 878-883) respectively; deposits and debits of the new series for first six months of 1946 are estimated.

NOTE.-Debits to total deposit accounts, except interbank accounts, have been reported for 334 centers from 1942 through November 1947 and for 333 beginning December 1947; the deposits from which rates of turnover have been computed have likewise been reported by most banks and have been estimated for others. Debits to demand deposit accounts, except interbank and U. S. Government, and the deposits fiom which rates of turnover have been computed have been reported by member banks in leading cities since 1935 ; yearly turnover rates in this series differ slightly from those shown in Banking and Monetary Statistics, Table 55, p. 254, due to differences in method of computation.

$p$ Preliminary.
${ }^{1}$ Includes demand deposits, other than interbank and U. S. Government, less cash items in process of collection.
2 Beginning with December 1938 , includes United States Treasurer's time deposits, open account.
Time deposits adjusted exclude interbank time deposits; United States Treasurer's time deposits, open account; and postal savings redeposited in banks.

1 Beginning June 1941 , the commercial bank figures exclude and mutual savings bank figures include three member mutual savings banks.

- Prior to June 30, 1947, includes a relatively small amount of demand deposits.
${ }^{3}$ Includes both amounts redeposited in banks and amounts not so redeposited; excludes amounts at banks in possessions.
Note.-Except on call dates, figures are rounded to nearest 100 million dollars. See Banking and Monelary Slatistics, p. 11 , for description Table 9, pp. 34-35, for back figures.

## $\Rightarrow$ Preliminary.

1 Outstanding principal, represented by certificates of deposit.
${ }^{2}$ Includes working cash with postmasters, 5 per cent reserve fund and miscellaneous working funds with Treasurer of United States, accrued interest on bond investments, and accounts due from late postmasters.
Back figures.-See Banking and Monetary Statistics, p. 510; for description, see p. 508 in the same publication.

BANK SUSPENSIONS ${ }^{1}$

|  |  |
| ---: | ---: | ---: | ---: | ---: | ---: |

[^30] porarily or permanently on account of financial difficulties; does not include banks whose deposit liabilities were assumed by other banks at the time of closing (in some instances with the aid of Federal Deposit Insurance Corporation loans).
${ }^{2}$ Deposits of member banks and insured nonmember banks suspended are as of dates of suspension, and deposits of noninsured nonmember banks are based on the latest data available at the time the suspensions were reported.
Back figures.-See Banking and Monetary Statistics, pp. 283-292; for description, see pp. 281-282 in the same publication.

S June 30,1947 figures are consistent (except that they exclude possessions) with the revised all bank series announced in November 1947 by the Federal bank supervisory agencies, but are not entirely comparable with prior figures shown above; a net of 115 noninsured nonmember commercial banks with total loans and investments of approximately 110 million dollars was added, and 8 banks with total loans and investments of 34 million were transferred from noninsured mutual savings to nonmember commercial banks.

Back figures.-See Banking and Monetary Siatistics, Tables 1-7, pp. 16-23; for description, see pp. 5-15 in the same publication. For revisions in series prior to June 30, 1947, see pp. 870-871 of the BULLETIN for July 1947.

For other footnotes see preceding page.

: Beginning June 30, 1942, excludes reciprocal bank balances, which on Dec. 31, 1942, aggregated 513 million dollars at all member banks and 525 million at all insured commercial banks.

4 Demand deposits other than interbank and U.S. Government, less cash items reported as in process of collection.
For other footnotes see preceding page.
Back figures.-See Banking and Monetory Statistics, Tables 18-45, Fp. 72-103 anci08-113.
[Monthly data are averages of Wednesday figures. In millions of dollars]

${ }^{1}$ Beginning June 30, 1948, figures for various loan items are shown gross (i. e., before deduction of valuation reserves); they do not add to the total and are not entirely comparable with prior figures. Total loans continue to be shown net.
${ }^{2}$ including guaranteed obligations.
Back figures.-For description of revision beginning July 3, 1946, see Bulletin for June 1947, p. 692, and for back figures on the revised basis, see Bulletin for July 1947, pp. 878-883; for old series, see Banking and Monetary Statistics, pp. 127-227.

${ }^{1}$ Excluding balances with reporting firms (1) of member firms of New York Stock Exchange and other national securities exchanges and (2) of firms' own partners.

2 Includes money borrowed from banks and also from other lenders (not including member firms of national securities exchanges).
${ }^{2}$ As reported to the New York Stock Exchange. According to these reports, the part of total customers' debit balances represented by balances secured by U. S. Government securities was (in millions of dollars): April, 66; May, 69.

Note.-For explanation of these figures see "Statistics on Margin Accounts" in Bulletin for September 1936. The article describes the method by which the figures are derived and reported, distinguishes the table from a "statement of financial condition," and explains that the last column is not to be taken as representing the actual net capital of the reporting firms.

Back figures.-See Banking and Monetary Statistics, Table 143, pp. 501-502, for monthly figures prior to 1942, and Table 144, p. 503, for data in detail at semiannual dates prior to 1942.

1 Monthly and weekly data are averages of daily figures, except for municipal bonds and for stocks, which are based on Wednesday figures.
2 Average of taxable bonds due or callable in 15 years and over.
3 Prices derived from average yields, as computed by Standard and Poor's Corporation, on basis of a 4 per cent $20-\mathrm{year}$ bond.
${ }^{4}$ Prices derived from average yields, as computed by Standard and Poor's Corporation. 5 Standard and Poor's Corporation.
${ }^{6}$ Prices derived from averages of median yields on noncallable high-grade stocks on basis of a $\$ 7$ annual dividend.
${ }^{7}$ Average daily volume of trading in stocks on the New York Stock Exchange.
Back figures.-See Banking and Monetary Statistics, Tables 130, 133, 134, and 136, pp. 475, 479. 482, and 486, respectively, and Butletins for May 1945, pp. 483-490, and October 1947, pp. 1251-1253.

* Includes certain business type activities of the U. S. Government.

Assets are shown on a $n$ et basis ie after reserve for losses.
2 Includes investment of the United States in international institutions as follows (in millions of dollars): Stock of the International Bank for Reconstruction and Development-476, 635, 635, 635, and 635 on Mar. 31, June 30. Sept. 30. Dec. 31, 1947, and Mar. 31, 1948, respectively; International Monetary Fund Quota-2,750 on Mar. 31, June 30. Sept. 30, Dec. 31, 1947, and Mar. 31, 1948.

Deferred charges included under "Other assets" prior to Mar. 31. 1947.
${ }^{4}$ Federal land banks are excluded beginning June 30, 1947; U. S. Government interest in these banks was liquidated June 26, 1947.
${ }^{5}$ Less than $\$ 500,000$. ${ }^{8}$ Includes U. S. Commercial Co. and War Damage Corp. ${ }^{2}{ }^{7}$ Figures are for Mar. 31, 1947 . ${ }_{9}{ }^{8}$ Figures are for Feb. 28, 1947, except for lend-lease and UNRRA activities, which are for Mar. 31. 1947. ${ }^{2}$ Figures for two small agencies included herein are for dates other than Mar. 31.

Note.-This table is based on the revised form of the Treasury Statement beginning Sept. 30, 1944, which is on a quarterly basis. Quarterly figures are not comparable with monthly figures previously published. For monthly figures prior to Sept. 30, 1944, see earlier issues of the Bulletin (see p. 1110 of the November 1944 Bulletin) and Banking and Monetary Statistics. Table 152, p. 517.

Note.-Indexes shown here for major groups and totals have been adjusted to final 1946 data made available by the Bureau of Employment Security of the Federal Security Agency. Indexes for individual industries, with the exception of those in the Transportation Equipment group, have been adjusted to final 1945 data. Back data and data for industries not here shown are obtainable from the Bureau of Labor Statistics.
Underlying figures are for pay roll period ending nearest middle of month and cover production workers only. Figures for Jume 1948 are preliminary.

${ }^{1}$ The ratio of stocks to sales is obtained by dividing stocks at the end of the month by sales during the month and hence indicates the number of months' supply on hand at the end of the month in terms of sales for that month.
${ }_{2}$ The 1941 average of monthly sales for each department is used as a base in computing the sales index for that department. The stocks index is derived by applying to the sales index for each month the corresponding stocks-sales ratio. For description and monthly indexes of sales and stocks by department groups for back years, see pp. 856-858 of Bulletin for August 1946. The titles of the tables on pp. 857 and 858 were reversed.

For movements of total department store sales and stocks see the indexes for the United States on p. 1003.
I Index numbers of sales and stocks for this department are not available for publication separately; the department, however, is included in group and total indexes. - Data not available.

Note.-Based on reports from a group of large department stores located in various cities throughout the country. In 1947, sales and stocks at these stores accounted for about 50 per cent of estimated total department store sales and stocks. Not all stores report data for all of the departments shown; consequently, the sample for the individual departments is not so comprehensive as that for the total.

$r$ Revised.
${ }^{1}$ Less than 50 million dollars.
Includes employee contributions to social insurance funds.
I Includes noncorporate inventory valuation adjustment.
Note.-Details may not add to totals because of rounding.
Source.-Figures in this table are the revised series. For an explanation of the revisions and a detailed breakdown of the series for the period 1929-43, see National Income Supplement to the Survey of Current Business, July 1947, Department of Commerce. For the detailed breakdown for the period 1944-47, see Survey of Current Business. July 1948. For a discussion of the revisions, for annual data for the period 1929-43, and for quarterly data for 1939, 1940, and 1941, see also pp. 1105-1114 of the Bulletin for September 1947; quarterly data for 1945 shown in that issue of the Bulletin have since been revised.
[Estimates of the Department of Commerce. In billions of dollars]

BANK CREDIT, MONEY RATES, AND BUSINESS *--Continued

For footnotes see p. 1016

For footnotes see p. 1016

## - Estimated. $\quad$ Preliminary. $\quad$ Revised

${ }^{1}$ For charts on pp. 28, 33, 35, 36, and 39, figures for a more recent period are available in the regular Bulletin table that show those series Because the Chart Book is usually released for duplication some time after the Bulletin has gone to press, most weekly charts and several monthly charts include figures for a more recent date than are shown in this table
${ }^{2}$ Figures for other than Wednesday dates are shown under the Wednesday included in the weekly period.
${ }^{3}$ Less than 5 million dollars.
4 Beginning June $\mathbf{3 0}$, individual loan items are reported gross, i. e., before deduction of valuation reserves, instead of net as previously reported; total loans are still reported on a net basis.

5 Revised. See pp. 933-937 of this Bulbeis.
6 Adjusted for seasonal variation
As of Mar 31, 1948
${ }^{8}$ Estimates for July-Sept. 1948 quarter are (in billions of dollars): All business, 4.6; manufacturing and mining, railroads and utilities, 3.1 ; manufacturing and mining. 2.0

Revised figures as published in Survey of Current Business, July 1948
10 Member bank holdings of State and local government securities on Oct. 6, 1947, and on Apr. 12, 1948, were 4.22 and 4.45 billion dollars respectively, and of other securities were 3.08 and 3.02 bilion dollars, respectively; data for other series are available for June and December dates only.

* Monthly issues of this edition of the Chart Book may be obtained at an annual subscription rate of $\$ 9.00$; individual copies of monthly issues, at $\$ 1.00$ each.

## CURRENT STATISTICS FOR FEDERAL RESERVE CHART BOORS—Continued <br> CONSUMER CREDIT*

P Preliminary. ${ }^{1}$ Annual figures for charts on pp. 9-19, inclusive, are published as they become available.
ithe figures shown here are cumulative totals, not aggregates for the individual components. Aggregates for each component may be derived by subtracting from the figure shown, the total immediately following it. Totals revised to include new estimates of instalment loans of commercial banks and credit unions and of single-payment loans. For description and back figures see pp. 933-937 of this Bulletin.
${ }^{3}$ Figures for this series are in process of revision and will not be available for several months.

* Copies of the Chart Book may be obtained at a price of 50 cents.

Tables on the following pages include the principal available statistics of current significance relating to gold, international capital transactions of the United States, and financial developments abroad. The data are compiled for the most part from regularly published sources such as central and commercial bank statements and official statistical bulletins, some data are reported to the Board directly. Figures on international capital transactions of the United States are collected by the Federal Reserve Banks from banks, bankers, brokers, and dealers in the United States in accordance with the Treasury Regulation of November 12, 1934. Back figures for all except price tables, together with descriptive text, may be obtained from the Board's publication, Banking and Monetary Statistics.

Gold production in U.S.S. R.: No regular Government statistics on gold production in U. S. S. R. are available, but data of percentage changes irregularly given out by officials of the gold mining industry, together with certain direct figures for past years, afford a basis for estimating annual production as follows: 1934, 135 million dollars; 1935, 158 million; 1936, 187 million; 1937, 185 million; 1938, 180 million.
${ }_{i}{ }^{5}$ Revised.
${ }^{1}$ Estimates of United States Bureau of Mines.
2 Beginning 1942, figures reported by American Bureau of Metal Statistics. Beginning 1944, they are for Gold Coast only.
${ }^{3}$ Reported by American Bureau of Metal Statistics. figures are estimates of American Bureau of Metal Statistics, those for 1947 having been revised by subtracting from each monthly figure $\$ 452,705$ so that aggregate for the year is equal to the annual estimate compiled by the United States Mint.
${ }^{6}$ Gold exports, reported by the Banco
${ }^{T}$ Monthly figures reported by the American Bureau of Metal Statistics.
Note.-For explanation of table and sources, see Bulletin for June 1948, p. 731; February 1939, p. 151; July 1938, p. 621; June 1938, p. 540; April 1933, pp. 233-235; and Banking and Monetary Statistics, p. 524. For annual estimates compiled by the United States Mint for these and other countries in the period 1910-1941, see Banking and Monetary Statistics, pp. 542-543.

## ${ }^{r}$ Revised.

${ }^{1}$ This category made up as follows: through Sept. 21, 1938, funds held by foreign central banks at the Federal Reserve Bank of New York and deposit accounts held with the U. S. Treasury; beginning Sept. 28, 1938, also funds held at commercial banks in New York City by central banks maintaining accounts at the Federal Reserve Bank of New York; beginning July 17, 1940, also funds in accounts at the Federal Reserve month of July 1942, all funds held with banks and bankers in the United States by foreign central banks and by foreigu central governments and their agencies (including official purchasing missions, trade and shipping missions, diplomatic and consular establishments, etc.).
${ }^{2}$ The weekly series of capital movement statistics reported through July 1, 1942, was replaced by a monthly series commencing with July 1942. Since the old series overlapped the new by one day, the cumulative figures were adjusted to represent the movement through June 30 only. This adjustment, however, is incomplete since it takes into account only certain significant movements known to have occurred on July 1 . Subsequent figures are based upon new monthly series. For further explanation, see BULLETIN for January 1943, p. 98.

2 Includes outfow of $\$ 249,300,000$ resulting from the sale of debentures in the United States by the International Bank for Reconstruction and Development. (Of the total issue of $\$ 250,000,000, \$ 700,000$ was sold directly to Canadian purchasers.)

- Includes inflow of 74.5 million dollars resulting from purchase of domestic securities by international institutions.

Note.-Statistics reported by banks, bankers. brokers, and dealers. For full description of statistics see Banking and Monetary Statistics. pp. 558-560; for back figures through 1941 see Tables 161 and 162, pp. 574 -637, in the same publication, and for those subsequent to 1941 see Bulletin for September 1945, pp. 960-974.

# INTERNATIONAL CAPITAL TRANSACTIONS OF THE UNITED STATES-Continued <br> NET GAPITAL MOVEMENT TO UNITED STATES SINCE JANUARY 2, 1935-Continued

$r$ Revised.
1 Total capital movement by countries differs from total capital movement in Table 1 by reason of exclusion of international institutions;
"Prior to Jan. 3, 1940, the figures under Asia represent Far East only, the remaining Asiatic countries being included under "All other."
See Table 1, footnote 3.
See Table 1, footnote 4.
[Net movement from United States, ( - ). In millions of dollars]

${ }^{r}$ Revised.
${ }^{5}$ Beginning with January 1948, includes Pakistan, Burma, and Ceylon, previously included with India.
Footnotes to table on preceding page.

- Revised.
${ }^{1}$ Country breakdown is for "Official and private."
${ }^{2}$ Prior to Jan. 3, 1940, the figures under Asia represent Far East only, the remaining Asiatic countries being included under "All other."
Report dates for these years are as follows: 1938-Jan. 4, 1939; 1939-Jan. 3, 1940; and 1940-Jan. 1, 1941.
- Official Canadian holdings of U. S. dollars on Dec. 31, 1946, amounted to 686.2 million dollars, according to the annual report of the Foreign Exchange Control Board of Canada for 1946.

Note.-Certain of the figures are not strictly comparable with the corresponding figures for preceding months owing to changes in reporting practice of various banks. The cumulative figures in Tables 1, 2, and 3 of "Net Capital Movement to United States" have been adjusted to exclude the unreal movements introduced by these changes. For further explanation see Banking and Monetary Statistics, pp. 578-584, and BulleTIN for March 1947, p. 339, and September 1945, pp. 967-970.

[^51]
${ }^{1}$ Securities maturing in two years or less.
${ }_{3}^{2}$ Includes notes held by the chartered banks, which constitute an important part of their reserves.
${ }^{3}$ Beginning November 1944, includes a certain amount of sterling and United States dollars.
${ }^{4}$ On May 1, 1940, gold transferred to Foreign Exchange Control Board in return for short-term Government securities (see Bulletin for July 1940, pp. 677-678).
${ }^{5}$ Less than $\$ 50,000$.
${ }^{6}$ Gold revalued on Dec. 26, 1945, on basis of $\mathbf{1 3 4 , 0 2 7 . 9 0}$ francs per fine kilogram. For details on previous devaluations and other changes in the gold holdings of the Bank of France, see Bulletin for May 1948, p. 601; May 1940, pp. 406-407; January 1939, p. 29; September 1937. p. 853; and November 1936, pp. 878-880.
${ }^{7}$ For explanation of this item, see Bulletin for July 1940, p. 732.
${ }^{8}$ By a series of Conventions between the Bank of France and the Treasury, dated from Aug. 25, 1940, through July 20, 1944, advances of 441,000 million francs were authorized to meet the costs of the German army of occupation.

9 From Dec. 28, 1944, through Nov. 20, 1947, includes 9,447 million francs charged to the State to reimburse the Bank for the gold turned over by it to the National Bank of Belgium on Dec. 22,1944. During the week ending Nov. 27, 1947, this amount was reduced to 5.039 million francs by a payment from the State to the Bank.
${ }^{10}$ Central Administration of the Reichskreditkassen.
${ }_{11}$ Includes a noninterest loan to the Government, which was raised from 10,000 million to 50,000 million francs by law of Mar. 29, 1947.
12 Publication of Bank's statement suspended from Jan. 22 until Mar. 4, 1948.
Nore. For back figures on Bank of Canada and Bank of France, see Banking and Monetary Statistics, Tables 166 and 165, pp. 644-645 and pp. 641-643, respectively: for description of statistics, see pp. 562-564 in same publication. For last available report from the Reichsbank (February 1945), see Bulletin for December 1946, p. 1424.

- Corrected.

Government decree of Apr. 24, 1946, provided for the guarantee of all deposits registered in the name of the Central Bank.
By decree of May 24, 1946, the Central Bank became responsible for all subsidiary money.
This figure represents the amount of the bank's subscription to the Fund less the bank's local currency liability to the Fund. Until such time as the Fund engages in operations in this currency, the "net claim" will equal the country's gold contribution.
${ }^{4}$ Includes increment resulting from gold revaluation, notes forfeited to the State, and frozen old notes and current accounts.
${ }^{6}$ For last available report (January 1943), see Bulletin for July 1943, p. 697

- Beginning January 1948, gold valued at 31 pesos per U. S. dollar, while previously it was valued at 4.855 pesos per dollar.

7 Gold not reported separately beginning May 31, 1948.
8 Gold not reported separately beginning Dec. 31,1946
${ }^{2}$ Change due to transfers in accordance with the law of July 2, 1947, relating to the Monetary Liquidation Fund.

## 1 Latest month available

${ }_{2}$ For last available report (January 1942), see Bulletin for March 1943, p. 278.
8 Includes gold. silver, and foreign exchange forming required reserve ( 25 per cent) against notes and other demand liabilities.
4 Less than 500,000 guilders.

r Revised.
1 This figure represents the amount of the bank's subscription to the Fund less the bank's local currency liability to the Fund. Until such time as the Fund engages in operations in this currency, the "net claim" will equal the country's gold contribution.
${ }^{2}$ For last available report from the central bank of Rumania (June 1944), see Bulletin for March 1945, p. 286 ; and of Yugoslavia (Fet ruary 1941), see Bulletin for March 1942, p. 282.

3 Gold revalued in June 1946 from approximately 85 to 172 shillings per fine ounce.
4 Includes small amount of non-Government bonds.
Gold revalued on Sept. 9, 1946, from $1,406.58$ to $3,150.77$ Turkish pounds per fine kilogram.
${ }^{6}$ Beginning October 1944, a certain amount of gold formerly reported in the bank's account shown separately for account of the Government.
${ }^{7}$ See Bulcetin for December 1936, p. 1025.

${ }^{p}$ Preliminary. - Corrected.
${ }^{1}$ The old index (July $1914=100$ ) was terminated on June 17 , and this date was used in computing the June figure. June 17, $1947=100$ is also the base period used for the new weighted so-called "interim" index. For a description of this index see Ministry of Labour Gazelle, August 1947, p. 255.
are 203 for retail food prices and 166 for cost of tiving

## FEDERAL RESERVE SYSTEM

[^0]:    * Presented by Thomas B. McCabe, Chairman, Board of Governors of the Federal Reserve System.

[^1]:    *Statement by R. M. Evans, member of the Board of Governors of the Federal Reserve System, before the House Banking and Currency Committee, Aug. 2, 1948.

[^2]:    ${ }^{1}$ This article was prepared by Duncan McC. Holthausen and Irving Schweiger of the Board's Division of Research and Statistics. It is the fourth in a series to be issued presenting the results of the Board's 1948 Survey of Consumer Finances. The first three articles appeared in the June and July Bulletins and one other article will appear in a succeeding issue.

    From the Survey Research Center, University of Michigan, Rensis Likert, Director, and Angus Campbell, Assistant Director, were in general charge of the survey. Responsibility for detailed planning and supervision of the survey, including inter. viewing, editing, tabulation of survey results, and preparation of survey studies was carried by George Katona in collaboration with Miss Janet Austrian. Charles F. Cannell served as head of the field staff and Roe Goodman as head of the sampling section of the Center.
    From the Board of Governors, general supervision of the survey has been under the direction of Woodlief Thomas, Director, and Ralph A. Young, Associate Director, of the Division of Research and Statistics. Mr. Holthausen has been in charge of the anaylsis of the data and the preparation of reports.
    ${ }_{2}$ The second survey was made for the Board of Governors early in 1947 by the Survey Research Center and the results of that survey were reported in 1947 in the June, July, and August issues of the Bulletin. The first survey was made for the Board of Governors early in 1946 by the Division of Program Surveys, Bureau of Agricultural Economics, U. S. Department of Agriculture. The Survey Research Center staff currently in charge of the survey work was associated with the Division of Program Surveys at the time of the first survey. Results of that survey were reported in 1946 in the June, July, and August issues of the Bulletin under the general title National Survey of Liquid Assets.

[^3]:    ${ }^{3}$ For additional information on survey techniques and design, see the June 1948 Bulletin, pp. 643-46.

[^4]:    ${ }^{4}$ See the appendix to this article, p. 928 , for a more complete discussion of the method of estimating saving.

[^5]:    ${ }^{1}$ This table includes only those spending units that were positive savers, i. e., units with money incomes in excess of expenditures. For similar 1946 data, see Federal Reserve Bulletin, August 1947, Table 5, p. 956 . See general footnote to Table 2 in this article and also the appendix for a discussion of the comparability of these data.

[^6]:    ${ }^{5}$ Family Spending and Sasing in Wartime, Bureau of Labor Statistics, Bulletin No. 822, 1945.

[^7]:    "See Buldetrn, Jume $19+8$, Table 4 , p. 640.

[^8]:    ${ }^{7}$ The U. S. Department of Commerce, in estimating disposable income for its national income series, deducts from income actual Federal personal income tax payments (not liabilities), including taxes on capital gains and losses, as well as other tax and nontax receipts, chief of which are Federal estate and gift taxes and State and local personal tax and nontax receipts.

[^9]:    ${ }^{8}$ The estimates of "other consumer expenditures" are residual estimates, and thus any inaccuracies, to the extent that they are not offsetting, in the reported figures for income, saving, durable goods expenditures or estimated figures for Federal income taxes, would affect the "other consumer expenditures" estimate. In connection with the Federal tax liability estimates, tax payments during 1947 may have differed somewhat from tax liability for the year, but this discrepancy would have only, a minor effect on the volume of "other consumer expenditures" estimated for individual spending units or groups of spending units.
    ${ }^{9}$ Selected durable goods include automobiles, furniture, radios television sets, refrigerators, ranges, washing machines, and other appliances.

[^10]:    ${ }^{1}$ The definition of saving used in the Survey of Consumer Finances differs from the definition of personal saving in the national income series of the U. S. Department of Commerce. Among the chief differences are the inclusion of the following items as saving in survey data: payments in connection with government life insurance and retirement funds, excluding social-security payments, and the excess of premium payments over the increase in reserves of private life insurance payments over the increase in reserves of private hite insurance
    and retirement systems. The saving concept in the national income series excludes the above items and, in addition, includes come series excludes the above items and, in addition, includes
    the following items not considered saving in the Consumer the following items not considered saving in the Consumer Finances Survey: depreciation on farm and nonfarm homes, changes in assets of trust funds, changes in farm inventories, and changes in personal currency holdings. In addition to the differences in definition listed above, the universe of the survey excludes certain groups which are included in the Commerce saving aggregate. These excluded groups are: nonprofit insti tutions, persons living outside the continental United States and members of the armed forces living at military reservations, residents in hospitals and other institutions, and the floating population (residents in hotels, tourist camps, large boarding houses).

[^11]:    ${ }^{2}$ Acknowledgment is made of the assistance of members of the Division of Tax Research, Treasury Department, in formulating the method of estimate.

[^12]:    ${ }^{1}$ Positive saving comprises the saving of all family units with money incomes in excess of expenditures, negative saving comprises the dissaving of all family units with expenditures in excess of money incomes, and net saving (plus or minus) is positive of money incomes, and net saving (plus or minus) is
    saving less negative saving for all family units combined.

[^13]:    ${ }^{1}$ Money income after deduction of estimated Federal personal income tax liability. See appendix, pp. 930 to 932 , for method of estimating disposable income. Money income figures exclude capital gains or losses and tax estimates do not make any allowcapital gains or losses and tax
    ance for such gains or losses.

[^14]:    ${ }^{p}$ Preliminary

[^15]:    ${ }^{2}$ For a description of method used in adjusting to year-end data, see Federal Reserve Bulletin, July 1947, p. 833.

[^16]:    ${ }^{8}$ For a description of the procedure used in obtaining estimates of single-payment loans, see Federal Reserve Bulletin, January 1945, p. 27.

[^17]:    ${ }^{1}$ A monthly series on loans made is not available prior to 1939.

[^18]:    ${ }^{1}$ These figures include revised estimates for commercial banks and credit unions shown in the table on page 934.

[^19]:    ${ }^{1}$ At the request of the Philippine Government, the Board of Governors of the Federal Reserve System made the services of Mr. Grove and Mr. Exter available to assist the Philippine authorities in the formulation of this Act. Mr. Grove and Mr Exter are economists in the Board's Division of Research and Statistics.
    \& Report and Recommendations of the Joint PhilippineAmerican Finance Commission, June 7, 1947 (H. Doc. No. 390, 80 th Cong., 1st sess.).

[^20]:    ${ }^{3}$ The reserve against savings deposits could be held in Philippine or United States Government Bonds, as well as in cash.

[^21]:    ${ }^{4}$ All Philippine notes and coins now in circulation will become a liability of the Central Bank. In return for assuming this liability the Central Bank will acquire the bulk of the assets of the Treasury Certificate Fund and the Exchange Standard Fund, which are the two Funds in which the Philippine Treasury has kept the monetary reserves. These Funds will be liquidated.

[^22]:    ${ }^{5}$ To be obtained from the Exchange Standard Fund when it is liquidated.

[^23]:    ${ }^{6}$ See "Gold and Foreign Exchange Reserve Requirements of Foreign Central Banks,' Federal Reserve Bulletin, January 1948, pp. 33-38.

[^24]:    ${ }^{7}$ As a special exception until June 30, 1951, however, the transitory provisions of the Act authorize direct advances to the Government up to an amount of 200 million pesos. Such advances may be made only when the Monetary Board considers the international reserve to be adequate to meet all foreseeable demands on it and when the advances are consistent with domestic monetary stability. Furthermore, these advances may be made only for productive and income-producing projects or for made only for productive and income-producing projects or for the repayment or servicing of external obligations of the Govern-
    ment. The advances are to be made against Government securi. ment. The advances are to be made against Governnent secury. ties having denominations and interest rates which w make them attractive to the banks and the public. Their maturities
    may not exceed fifteen years.

[^25]:    ${ }^{8}$ But, insofar as reserve requirements against existing liabilities are concerned, at a rate not exceeding 4 per cent per month and only after giving the banks notice reasonably in advance of the date on which the increase is to become effective (Section 104).
    ${ }^{\circ}$ For a discussion of the use of capital-asset ratios, see David L. Grove, "New Guatemalan Bank Law," Federal Reserve Bulletin, April 1947, pp. 398-401.

[^26]:    Note.-A pamphlet containing the text of the Philippine Central Bank Act and a reprint of this article, will be available in tral Bank Act and a reprint of this article, will be avalable in
    a few weeks upon request from the Division of Administrative a few weeks upon request from the Division of Administrative
    Services, Board of Governors of the Federal Reserve System, Services, Board of Gov
    Washington 25, D. C.

[^27]:    ${ }^{1}$ A translation of this law was published in the Bulletin for May 1946, pp, 483-88.
    2 The excerpts are translations from Deuxicme Rapport An nuel du Conseil National du Crédit, 1947 (Paris, 1948). The parts given here correspond to the following parts of the original document: Economic Development in 1947, Part One Ch. II, Sec. 2, pp. $35-38$; Bank Credit Policy, Part Two, Ch. III, pp. 49-63; Conclusion, pp. 123-26.

[^28]:    Regulations $T$ and $U$ limit the amount of credit that may be extended on a security by prescribing a maximum loan value, which is a specified percentage of its market value at the time of the extension; the "margin requirements" shown in this table are the difference between margin requirements shown in this table are the differe
    Back figures.--See Banking and Monetary Statislics, Table 145, p. 504, and Bulletin for March 1945, p. 235.

[^29]:    1 Total of amounts of coin and paper currency shown by denominations less unassorted currency in Treasury and Federal Reserve Banks.
    : Includes unassorted currency held in Treasury and Federal Reserve Banks and currency of unknown denominations reported by the Treasury as destroyed. $\quad 3$ Paper currency only; $\$ 1$ silver coins reported under coin.

[^30]:    ${ }^{1}$ Represents banks which, during the periods shown, closed tem-

[^31]:    - Partly estimated.
    * "All banks" comprise "all commercial banks" and "all mutual savings banks." "All commercial banks" comprise "all nonmember commercial banks" and "all member banks" with exception of three mutual savings banks that became members in 1941. Stock savings banks and nondeposit trust companies are included with "commercial" banks. Number of banks includes a few noninsured banks for which asset and liability data are not available.
    million at all insured commercial banks.
    For other footnotes see following page.

[^32]:    * These figures do not include data for banks in possessions of the United States. During 1941 three mutual savings banks became members of the Federal Reserve System; these banks are included in "member banks" but are not included in "all insured commercial banks."

    1 During the period Dec. 31, 1942-June 30, 1945 . agricultural loans included loans to dealers, processors, and farmers' cooperatives covered by purchase agreements of the Commodity Credit Corporation, which are now classified as commercial and industrial loans; consequently, beginning Dec. 31, 1945, these items may not be entirely con parable with prior figures.

    2 Central reserve city banks.

[^33]:    ${ }^{1}$ Demand deposits other than interbank and U. S. Government, less cash items reported as in process of collection.
    2 Monthly and weekly totals of debits to dem and deposit accounts except interbank and U. S . Government accounts

[^34]:    ${ }^{1}$ See note on preceding table.
    Including guaranteed obligations

    * Separate figures for New Xork City are shown in the immediately preceding table and for the City of Chicago in this table. The figures for the New York and Chicago Districts, as shown in this table, include New York City and Chicago, respectively.

[^35]:    $r$ Revised.
    ${ }^{1}$ Monthly and weekly data are averages of daily figures, except for municipal bonds, which are based on Wednesday figures.
    ${ }^{3}$ Standard and Poor's Corporation. ${ }^{3}$ U.S. Treasury Department.
    Moody's Investors Service, week ending Friday. Because of limited number of suitable issues, the industrial Aaa and Aa groups have been reduced from 10 to 5 and 6 issues, respectively, and the railroad Aaa, Aa, and A groups from 10 to 5,6 , and 8 issues, respectively.

    Back figures.-See Banking and Monetary Statistics, Tables 128-129, pp. 468-474, and Bulletins for May 1945, pp. 483-490, and October 1947, pp. 1251-1253.

[^36]:    $r$ Revised.
    Estimates of new issues sold for cash in the United States
    ${ }^{2}$ Gross proceeds are derived by multiplying principal amounts or number of units by offering price.
    ${ }^{3}$ Estimated net proceeds are equal to estimated gross proceeds less cost of flotation, i.e., compensation to underwriters, agents, etc., and expenses. $\quad$ Includes repayment of other debt and other purposes.

    Source.-Securities and Exchange Commission; for compilation of back figures, see Banking and Monetary Statistics (Table 138, p. 491), a publication of the Board of Governors.

[^37]:    " "Net profits" and "net income" refer to income after all charges and taxes and before dividends.
    ${ }^{2}$ Includes 29 companies engaged in wholesale and retail trade (largely department stores), 13 in the amusement industry, 21 in shipping and ransportation other than railroads (largely airlines), and 11 companies furnishing scattered types of service.
    Net profits figures for the year 1946 include, and those for the fourth quarter exclude, certain large extraordinary year-end profits in the ollowing amounts (in millions of dollars) : 629 company series-total, 67 ; machinery, 49 ; other durable goods, 18 ; 152 company series-total, 49.

    4 Partly estimated. ${ }^{5}$ Class I line-haul railroads, covering about 95 per cent of all railroad operations.
    ${ }^{6}$ Class A and B electric utilities, covering about 95 per cent of all electric power operations. Figures include affiliated nonelectric operations.
    1 Thirty large companies, covering about 85 per cent of all telephone operations. Series excludes American Telephone and Telegraph Company, the greater part of whose income consists of dividends received on stock holdings in the 30 companies.
    ${ }^{8}$ After all charges and taxes except Federal income and excess profits taxes.
    Sources.-Interstate Commerce Commission for railroads; Federal Power Commission for electric utilities (quarterly figures on operating revenue and on income before income tax are partly estimated); Federal Communications Commission for telephone companies (except dividends); revenue and on income before income tax are partly estimated); Federal Communications Commission for telephone companies (except dividends); published reports for industrial companies and for telephone dividends, Figures for the current and preceding year subject to revision. For
    description of data and back figures, see pp. $214-217$ of the Bulletin for March 1942 and also p. 1126 of the Bulletin for November 1942 (telephone companies) and p. 908 of the Bulletin for September 1944 (electric utilities).

[^38]:    Including amounts held by Government agencies and trust funds, which aggregated 5,401 million on June 30 , 1948.
    2 Total marketable public issues includes Postal Savings and prewar bonds, and total nonmarketable public issues includes adjusted service, depositary, Armed Forces Leave bonds, and $21 / 2$ per cent Treasury investment bonds, series A-1965, not shown separately.

[^39]:    *Figures include only holdings by institutions or agencies from which reports are received. Data for commercial banks, mutual saving banks and the residual "other" are not entirely comparable from month to month. Figures in column headed "other" include holdings by nonreporting banks and insurance companies as well as by other investors. Estimates of total holdings (including relatively small amounts of nonmarketable issues) by all banks and all insurance companies for certain dates are shown in the table above.

    Including stock savings banks.
    Including Postal Savings and prewar bonds and a small amount of guaranteed securities, not shown separately below.

    Series included in total and group indexes but not available for publication separately.

[^42]:    p Preliminary. $r$ Revised. ${ }^{1}$ Series included in total and group indexes but not available for publication separately.
    : This series is in process of revision.
    Note.-For description and back figures see Bulletin for October 1943, pp. 940-984, September 1941, pp. 878-881 and 933-937, and August 1940, pp. 753-771 and 825-882.

[^43]:    $p$ Preliminary. $\quad$ Revised. ${ }^{1}$ Series included in total and group indexes but not available for publication separately.
    ${ }^{2}$ This series is in process of revision.
    Note.-For description and back figures, see Bulletin for October 1943, pp. 940-984, September 1941, pp. 878-881 and 933-937, and August 1940, pp. 753-771 and 825-882.

[^44]:    ${ }^{1}$ Includes self-employed, unpaid family, and domestic service workers.
    Annual averages for 1940 include an allowance for January and February inasmuch as the monthly series began in March 1940.

    * Beginning in June 1947, details do not necessarily add to group totals.

    Note.-Information on the labor force status of the population is obtained through interviews of households on a sample basis. Data relate to the calendar week that contains the eighth day of the month. Back data are available from the Bureau of the Census.

[^45]:    Preliminary. ${ }^{1}$ Revised. For descrintion and back figures see pp. 933-937 of this Bulietin.
    ${ }^{2}$ Figures include only personal instalment cash loans and retail automobile direct loans shown on the following page, and a small amount of other retail direct loans not shown separately. Other retail direct loans outstanding at the end of June amounted to 110 million dollars, and loans made during June were 15 milion.
    : Figures include only personal instalment cash loans, retail automobile direct loans, and other retail direct loans. Direct retail instalment loans are obtained by deducting an estimate of paper purchased from total retail instalment paper.

    - Includes only loans insured by Federal Housing Administration.

[^46]:    ${ }^{1}$ As revised in July 1948.

[^47]:    Preliminary
    ${ }^{1}$ Excludes mutual savings banks, on a few of which some checks are drawn.
    :Includes branches and other additional offices at which deposits are received, checks paid, or money lent, including "banking facilities" at military reservations (see footnote 4, p. 241, of the BuLletin for February 1948).

    Back figures.-See Banking and Monetary'Statistics, Table 15, and Annual Reports.

[^48]:    ${ }^{1}$ Banks with no time deposits, or no trust department earnings, as the case may be, were excluded in computing this average.
    2 The ratios for 68 member banks in operation at the end of 1947 were excluded from the compilations because of unavailability of data covering the complete year's operations, certain accounting adjustments, lack of comparability, etc.

    Note.-These ratios, being arithmetic averages of the operating ratios of individual member banks, differ in many cases from corresponding ratios computed from aggregate dollar amounts shown in the May 1948 issue of the Bulletin. Such differences result from the fact that each bank's figures have an equal weight in calculation of the averages whereas the figures of the many small-and medium-sized banks have but little influence on the aggregate dollar amounts. No figures are shown for groups of less than three banks. Ratios of less than . 05 are shown as . 0 .

    Figures of earnings, expenses, etc., used in the calculations were taken from the annual earnings and dividends reports for 1947 . Balance sheet figures used in the compilations were obtained by averaging the amounts shown in each bank's official condition reports submitted for Dec. 31,1946 , and June 30 and Oct. 6,1947 , except for a limited number of banks for which all three reports were not available; such reports as were 31, 1946, and June 30 and Oct. 6,1947 , except for a limited number of banks for which all three reports were not available; such reports as were
    available were used in those instances. Savings deposits are included in the time deposit figures used in these tables. Banks with no time deposits available were used in those instances. Savings deposits are included in the time deposit figures used in these
    ( 409 in number) are included with the banks having ratios of time to total deposits of less than 25 per cent.

[^49]:    ${ }^{1}$ Prior to Jan. 3, 1940, the figures under Asia represent Far East only, the remaining Asiatic countries being included under "All other."
    I Includes outflow of $\$ 249,300,000$ resulting from the sale of debentures in the United States by the International Bank for Reconstruction and Development. (Of the total issue of $\$ 250.000,000, \$ 700,000$ was sold directly to Canadian purchasers.)
    : Includes inflow of 74.5 million dollars resulting from purchase of domestic securities by international institutions.
    Amounts outstanding Mar. 31 (in millions of dollars) : foreign brokerage balances in United States, 93.7; United States brokerage balances abroad, 27.3.

[^50]:    ${ }^{1}$ Prior to Jan. 3, 1940, the figures under Asia represent Far East only, the remaining Asiatic countries being included under "All other."
    Note.-The figures in this table are not fully comparable throughout since certain changes or corrections took place in the reporting practice of reporting banks on Aug. 12, 1936, and Oct. 18, 1939. (See Banking and Monetary Statistics, Table 161, pp. 589 and 591.) On June 30, 1942, reporting practice was changed from a weekly to a monthly basis. For further information see Bulletin for September 1945, pp. 971-974.

[^51]:    ${ }^{1}$ Through February 1939, valued at legal parity of 85 shillings a fine ounce; thereafter at market price, which fuctuated until Sept. 6, 1939, when it was officially set at 168 shillings per fine ounce; the latter rate remained in effect until June 9,1945 , when it was raised to 172 shillings and three pence.

    2 Securities and silver coin held as cover for fiduciary issue, the amount of which is also shown by this figure.
    8 Notes issued less amounts held in banking department.
    4 On Jan. 6, 1939, 200 million pounds sterling of gold (at legal parity) transferred from Bank to Exchange Equalization Account; on Mar. 1 , 1939, about 5.5 million pounds (at current price) transferred from Exchange Account to Bank; on July 12, 1939, 20 million pounds transferred from Exchange Account to Bank; on Sept. 6, 1939, 279 million pounds transferred frn n Bank to Exchange Account.
    ${ }^{5}$ Fiduciary issue decreased by 50 million pounds each on Jan. 7, Feb. 4, and Mar. 3, 1948. For details on previous changes in the fiduciary issue see Bulletin for February 1948, p. 254.

    Nore.-For back figures on Bank of England, see Banking and Monetary Statistics, Table 164, pp. 638-640; for description of statistics. see pp. $560-561$ in same publication.

[^52]:    ${ }^{1}$ From September 1939 through November 1946, this table represents aggregates of figures reported by individual banks for days, varying from bank to bank, toward the end of the month. After November 1946, figures for all banks are compiled on the third Wednesday of each month, except in June and December, when the statements will give end-of-month data.
    ${ }^{2}$ Represent six-month loans to the Treasury at $11 / 8$ per cent through Oct. 20, 1945, and at $8 / 8$ per cent thereafter.
    Note.-For back figures and figures on German commercial banks, see Banking and Monetary Statistics, Tables 168-171, pp. 648-655, and for description of statistics see pp. 566-571 in same publication.

[^53]:    Through June 22, 1948, shown as official rate.
    ${ }^{2}$ Through June 22, 1948, shown as special export rate
    ${ }^{3}$ Prior to Nov. 1, 1942, the official designation of the Brazilian currency unit was the "milreis."
    Average of daily rates for that part of the year during which quotations were certified
    At the end of June 1945 official rates for the Australian and British pounds were abolished, and after this date quotations are buying rates in the New York market. The rates shown represent averages for the second half of 1945 and are comparable to those quoted before 1940 .
    ${ }^{5}$ The rate quoted after July 22, 1946, is not strictly comparable to the "free" rate shown before that date. The average for the "free" rate for July $1-19$ is 5.1902 , and for Jan. 1 -July $19,5.1860$, while the average for the new rate for July $25-31$ is 5.3350 , and for July 25-Dec. $31,5.3955$.
    ${ }_{9}$ Based on quotations through June 22. 8 Based on quotations beginning July 15
    $\begin{array}{ll}9 \text { Based on quotations through Jan. 23. } & \begin{array}{l}10 \text { Based on quotations beginning Feb. } 10 \\ 12\end{array} \\ & 12 \text { Based on quotations through June } 10 .\end{array}$
    is Temporarily omitted. $\quad{ }^{14}$ Based on quotation through July 21.

[^54]:    p Preliminary. $\quad$ Revised.
    Approximate figure, derived from old index ( $1913=100$ ).

[^55]:    Preliminary.
    New series beginning 1947, derived from average yields of 12 bonds on basis of a $2 \%$ per cent 30 -year bond. Annual average published ( 1947 (121.5) and figures for years prior to 1947 are derived from average of 5 median yields in a list of 15 issues on basis of a per cent 20-year bond. Source.-Standard and Poor's Corporation; for compilations of back figures on prices of both bonds and common stocks In the United States see Banking and Monetary Statistics, Table 130, p. 475, and Table 133, p. 479.
    2 This index is based on one 15-year 3 per cent theoretical bond. Yearly averages for 1939 and 1940 are based on monthly averages and thereafter on the capitalized yield as calculated on the 15 th of every month.
    ${ }_{3}$ This index represents the reciprocals of average yields for 13 issues, including government, provincial, municipal, mortgage, and industrial bonds. The average yield in the base period (January-March 1937) was 3.39 per cent.
    ${ }^{4}$ This index is based on 95 common stocks through 1944, and on 100 stocks thereafter.
    ${ }_{5}$ This index is based on 95 common stocks through 1944 , and on 100 stocks thereafter. 1946 this index was revised to include 185 metropolitan issues, 90 issues of colonial France, and 20 issues of French companies abroad. See "Bulletin de la Statistique Générale." September-November 1946, p. 424.
    ${ }^{6}$ This is a new Index for 37 Netherlands issues( 27 industrial, 5 banking, and 5 shipping shares) and represents an unweighted monthly average of daily quotations. The figures are not comparable with data for previous years shown in earlier Bulletins.
    ${ }^{7}$ Average based on figures for 5 months; no data available June-December.
    ${ }^{8}$ Average based on figures for 10 months; no data available January-February.
    Sources.-See Bulletin for June 1948, p. 747; March 1947, p. 349; November 1937, p. 1172; July 1937, p. 698; April 1937, p. 373; June 1935, p. 394; and February 1932. p. 121.

[^56]:    * A more complete list, including periodical refeases and reprints, appeared on pp. 750-53 of the June 1948 Bulletin.
