#### Subscription Price of Bulletin

The Federal Reserve BULLETIN is issued Monthly by the Board of Governors of the Federal Reserve System. It is sent to member banks without charge. The subscription price in the United States and its possessions, Canada, Chile, Colombia, Costa Rica, Cuba, Dominican Republic, Eccuador, Guatemala, Haiti, Republic of Honduras, Mexico, Newfoundland (including Labrador), Nicaragua, Panama, Paraguay, Peru, El Salvador, Uruguay, and Venezuela, is \$2.00 per annum, or 20 cents per copy. Gisewhere, \$2.60 per annum or 25 cents per copy. Group subscriptions for 10 or more copies, in the United States, 15 cents per copy per month, or \$1.50 for 12 months.

# OWNERSHIP OF BANK DEPOSITS

Both business and individual deposits have been swollen to record levels by developments of the past few years. Business and individual demand deposits, which recently totaled 56 billion dollars, were only 28 billion in 1939 and 21 billion in 1929. The question of who owns these deposits is of major importance for future economic developments and for the formulation of banking and fiscal policies. The Board has therefore recently made two surveys of the ownership of deposits, as of March 31 and July 31, 1943. Estimates based on the results of the July survey indicate that demand deposits belonging to businesses, incorporated and unincorporated, amounted to 39 billion dollars at the end of July, while demand deposits of individuals totaled about 14 billion dollars. Business deposits thus account for nearly 70 per cent of all demand deposits, other than Government and interbank deposits, while individuals hold about 25 per cent of the The remainder belongs to nonprofit total. organizations and to foreigners. These estimates are in harmony with the results of the March survey and indicate a larger amount of business deposits and a smaller volume of deposits belonging to individuals than had previously been estimated from the limited data available.

No strictly comparable estimates are available for the division of deposits between business and personal accounts for previous years. The evidence of the present

OCTOBER 1943

surveys suggests that the recent accumulation of deposits has been predominantly in business holdings, with both incorporated and unincorporated businesses showing very rapid increases. While the results of the March deposit survey, which contained some information about the ownership of deposits at the end of 1941, were necessarily tentative because of the preliminary nature of the inquiry and the incomplete sample obtained, the joint evidence of the two surveys indicates that perhaps three-fourths of the nearly 18 billion dollar total increase in business and individual demand deposits since the end of 1941 may have been in business accounts. A large part of the dollar increase in business deposits has been in large accounts, although smaller-sized balances have also shown large percentage increases. The total amount of deposits held in very large accounts of individuals has apparently decreased somewhat.

It should be remembered, however, that these figures cover only demand deposits of individuals and businesses and thus include only a portion of the total money supply outstanding. Such evidence as is available indicates that individuals hold the bulk of both the 19 billion dollars of currency now outstanding and the 31 billion dollars of time deposits in commercial and savings banks and in the Postal Savings System. Thus cash holdings of individuals, including currency and time deposits, substantially exceed those of businesses. While time deposits are probably for the most part intended as relatively long-term savings, currency holdings, which have increased rapidly in recent years, are probably at least as volatile as demand deposits, and consideration of these other forms of money is essential to a complete picture of the cash position of businesses and individuals.

#### PRINCIPAL GROUPS OF OWNERS

The estimated ownership of demand deposits of businesses and individuals at all banks in the United States on July 31, based on the survey results, is shown in the table. Deposits owned by individuals are estimated at 14.3 billion dollars, or 26 per cent of the total, and deposits of domestic businesses at 38.7 billion, or 70 per cent of the total. Holdings of nonprofit associations, such as churches, eleemosynary institutions, and labor organizations, totaled 1.4 billion, and deposits of foreign holders were 1.2 billion.

ESTIMATED OWNERSHIP OF DEMAND DEPOSITS OF INDI-VIDUALS AND BUSINESSES AT ALL BANKS, JULY 31, 1943

Type of depositor	Amounts (in billions of dollars)	Per cent of total
Total domestic business	38.7	69.6
Nonfinancial business-total	32.8	58.9
Manufacturing and mining—total Metal mining and metal manufacturing, including machinery and transportation	18.4	33.1
All other manufacturing and mining Public utilities, transportation, and com-	10.1 8.3	18.2 14.9
Retail and wholesale trade and dealers in	3.4	6.1
All other nonfinancial business, including	7.5	13.4
construction and services	3.5	6.3
Financial business-total	6.0	10.7
Insurance companies Trust funds of banks All other, including investment, loan, and	1.3	3.2 2.4
real estate companies, etc	2.9	5.1
Personal, including farmers	14.3	25.7
Nonprofit associations, clubs, churches, etc	1.4	2.5
Foreign businesses and individuals	1.2	2.2
Total demand deposits of individuals, part- nerships, and corporations	55.6	100.0

The 18.4 billion dollars of deposits of manufacturing and mining concerns dominate the business accounts and represent one-third of all holdings of both individuals and businesses. Metal manufacturing and mining concerns alone held over 10 billion of deposits while other manufacturing concerns accounted for 8.3 billion. Businesses engaged in wholesale and retail trade rank next in importance with over 7 billion of deposits, followed by public utilities, other nonfinancial businesses, and insurance companies.

### SIGNIFICANCE OF RESULTS

Recent developments have combined to make businesses in a sense the residual holders of much of the increased money supply generated by wartime deficit financing through the banks. In the war economy which now prevails, the total increase in deposits and currency is determined fundamentally by the volume of Government securities taken into the banking system. The division of this total between businesses and individuals, however, depends on the decisions businesses and individuals make as to the use of their incomes. Consumer expenditures have risen rapidly since prewar years and even now show no appreciable decline. Coupled with drastic restrictions on ordinary business uses of funds and large Government expenditures, this heavy consumer spending has transferred a considerable volume of deposits into business balances, where they have tended to pile up. To the extent that businesses invest their surplus balances in Government securities. business deposit holdings are reduced and the amount of new Government financing necessary through banks is decreased. If the present rate of consumer spending continues, however, when the Government spends these funds they will again gravitate toward business balances.

With such a large volume of demand deposits held by all types of businesses, the uses made of such deposits in the future will depend more largely on business policies than on those of individuals. Even now, business in the aggregate may be approaching a position where its reconversion and immediate postwar expansion needs can be financed with a minimum of reliance on bank loans and other external financing. Rapidly growing Government security portfolios held by businesses strengthen this financial independence, and continued financing of Government war expenditures through borrowing rather than taxes will continue to build up liquid accumulations. It may be significant that the largest deposit accumulations are occurring generally in metal manufacturing and trade, which are the lines of business where postwar reconversion and inventory accumulation needs are apt to be greatest. But it must be remembered that even when business in the aggregate has an unusual degree of liquidity, many individual firms or even entire groups may still find themselves short of funds. As is indicated later, business balances are heavily concentrated in large accounts; this is particularly true in manufacturing and mining, less so in trade and other nonfinancial businesses. This distribution of deposits may provide evidence as to the location of business reconversion needs for "outside" financing.

Individual cash holdings, when currency and time deposits are taken into account along with demand deposits, will also be unprecedentedly large by the war's end, even though personal demand deposits are smaller than previously supposed. Here, too, huge holdings of salable or cashable Government securities greatly increase total liquid holdings. Thus, a very high volume of *consumer* expenditures, as well as of busi-

OCTOBER 1943

ness expenditures, can be financed out of accumulations alone if individuals make these expenditure decisions.

The highly liquid position of both businesses and individuals raises important questions as to methods of fiscal and credit control that may be effectively used in promoting economic stability in the future. A smooth rate of expenditures out of these liquid accumulations might prove a welcome addition to the regular volume of consumer and business expenditures over the postwar period. On the other hand, concentrated use of any substantial portion of the balances for consumer expenditures or for business materials and inventory accumulation in the immediate postwar period before output of peace goods is well under way could easily result in disastrous inflationary pressure.

The results of the deposit surveys help to explain the large volume of corporation subscriptions to new Treasury issues in the War Loan Drives. In so far as individuals spend, rather than save, a large proportion of their incomes under present conditions, the Treasury can reach accumulated funds in large amounts by sales of securities to business concerns. However, this fact in no way lessens the importance of drastically increased security sales or taxes to absorb a larger portion of current consumer income and thereby to reduce the heavy pressure of consumer spending on finished goods prices, which constitutes the core of the present inflationary problem.

## LARGE GROWTH IN BUSINESS DEPOSITS

Viewed more narrowly from the side of business income and outlay, the recent very large increases in cash holdings of businesses reflect a wide variety of war-period influences. Perhaps most important, private business capital outlays have been greatly lessened by Government action in providing plant and equipment and by drastic restrictions on private capital expansion and replacement, in a period when business operating income has increased unprecedentedly. Apparently a substantial portion of these funds which would normally have been spent for capital replacement and expansion is being held in the form of cash, part of which represents reserves set up to meet reconversion needs. Ordinary sources of short-term business funds have also been heavily augmented by direct and indirect financing provided by the Government.

The peak levels of wartime production require greatly increased working capital funds in many lines. This factor is of major importance for manufacturing concerns where war production is concentrated.

While total business inventories have increased considerably in recent years and have not as yet been seriously depleted, inventories of consumers goods, both in process and on dealers shelves, have been substantially reduced. Part of the funds obtained in this liquidation may be held in the form of cash. This factor is important especially in the case of wholesale and retail trade concerns, whose balances have now apparently reached levels far above those of any earlier period.

Accrued tax liabilities have reached unprecedented levels and, while holdings of tax notes and other Government securities have risen rapidly, it may be that part of the increase in cash is intended as a reserve against tax liabilities. Business profits after taxes and dividends have increased rapidly, especially in transportation and trade, and in almost all fields are at relatively high levels. Part of these earnings are being retained in a liquid form to augment postwar reserves or simply because of unavailability of normal expenditure outlets. Although the September War Loan Drive was still six weeks distant on the survey date, many businesses had probably begun by the end of July to accumulate special cash holdings with a view to large September security purchases. This factor had less influence on results of the present survey, however, than in the case of the previous survey, which was made as of March 31, immediately preceding the April Drive. This difference is especially evident in the case of insurance companies, whose balances on July 31 were less than 1.8 billion compared with well over 2 billion at the end of March, contrary to the general trend.

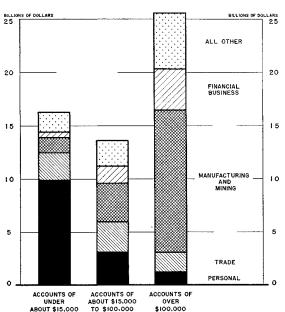

This combination of factors increasing the flow of funds to businesses and restricting the normal outlets for funds has combined to produce the large increases reported in business cash. The sharp deposit decline involved in heavy security purchases by corporations in the April War Loan Drive had been more than replaced by the end of July, and apparently all types of holders except some financial businesses had gained some portion of the 2.5 billion dollar net deposit increase over the four months.

## Deposit Ownership by Size of Account

Information obtained in the July survey throws light on the ownership of deposits in different-sized accounts and in large and small banks, as well as in the aggregate. Estimates of deposit ownership by size of account reveal the overwhelming predominance of business accounts in very large deposits and the relatively greater importance of personal deposits in small accounts. As indicated by the accompanying chart showing the ownership of deposits in different-sized accounts, nearly 90 per cent of the 26 billion dollars in accounts having balances of over \$100,000 each are funds of domestic business concerns. Manu-

FEDERAL RESERVE BULLETIN

facturing and mining accounts of over \$100,000 total 13.4 billion dollars, with concerns producing metals and allied products holding over 8 billion, or about onethird of all deposits in these large accounts. Personal deposits in this group are only 1.3 billion. Individuals, however, hold much larger portions of the deposits in smaller accounts, and own nearly twothirds of all deposits under \$15,000. Wholesale and retail trade concerns also bulk relatively larger among smaller accounts, and services, such as restaurants, movies, hotels, etc., account for much of the rest of these small deposits.

OWNERSHIP OF DEMAND DEPOSITS, JULY 31, 1943 BY SIZE OF ACCOUNT

Note.—Includes only demand deposits of individuals, partnerships, and corporations. Most banks classified separately accounts of between \$10,000 and \$100,000, but many classified those of between \$25,000 and \$100,000. Hence \$15,000 is used as an approximate dividing line between columns 1 and 2.

Substantial differences were found in the size of accounts held by concerns in different lines of business. About 46 per cent of all deposits are in accounts of over \$100,000 each, while less than 30 per cent are in accounts below about \$15,000. As might be expected, industries made up mostly of large

OCTOBER 1943

concerns hold their funds in large balances, while balances of smaller-scale businesses and personal deposits are primarily in smaller accounts. Around 80 per cent of all deposits of public utilities, metal manufacturing and mining concerns, and insurance companies are in accounts of over \$100,000 each. Concerns engaged in trade and other nonfinancial activities, on the other hand, have substantially larger portions of their deposits in medium-sized and small accounts, with only about one-fourth of their funds in accounts of over \$100,000. Less than 10 per cent of all personal deposits are in these very large accounts, while 70 per cent are in the smallest-sized group. A table showing estimates of the amount held by each type of depositor in each size of account is published in the article, "Statistics of Deposit Ownership," on page 935 of this BULLETIN.

#### Deposit Ownership at Large and Small Banks

As might be expected, the ownership of deposits varies widely as between larger and smaller banks, reflecting somewhat the same characteristics as ownership classified by size of account. Business deposits dominate the picture at very large banks, averaging around 80 per cent of all funds at banks having demand deposits of businesses and individuals in excess of 100 million dollars each. In these very large banks manufacturing and mining concerns alone own between 40 and 50 per cent of all business and individual deposits, and personal accounts average only around 15 per cent of the total. At smaller banks, however, a much larger portion of total deposits belong to individuals, rising to about 50 per cent for banks having total business and individual deposits of less than 5 million dollars, and about 40 per cent of all personal deposits are in banks of this

size. Most of the deposits of concerns engaged in trade and in nonfinancial activities other than manufacturing and public utilities are also found in medium- and smallsized banks. Detailed estimates of deposit holdings for different-sized banks are shown in the article, "Statistics of Deposit Ownership," on page 936.

#### COVERAGE OF SURVEY

Nearly 1,650 banks cooperated in the July survey, compared with about 700 in March. The banks reporting in July held demand deposits of businesses and individuals totaling over 35 billion dollars, or about 64 per cent of the 55.6 billion of such deposits at all banks in the United States on July 31. Reporting institutions included nearly all very large banks in the United States, the bulk of other large banks in the country, and a wide sample of small banks having demand deposits of individuals and businesses of less than 5 million dollars. Moreover, the banks in all size groups were well diversified as to type of business and geographical location. There is reason to believe, therefore, that the over-all estimates derived from the survey and here presented are reasonably accurate. Details of the sample and a brief description of the method used in estimating all-bank figures from the sample, together with a comparison of this method with that used in compiling other estimates of individual and business cash holdings, are given on pages 930-936.

92.2

# LAW DEPARTMENT

Administrative interpretations of banking laws, new regulations issued by the Board of Governors, and other similar material.

#### Amendment to Regulation K

The Board of Governors, effective as of November 1, 1943, amended section IX of Regulation K entitled "Banking Corporations Authorized to Do Foreign Banking Business under the Terms of Section 25(a) of the Federal Reserve Act," commonly known as "Edge Act Corporations," so as to make it necessary for such corporations to obtain the Board's consent in each case before investing in the stock or certificates of ownership of other corporations of the kind specified in that section. The text of section IX as thus amended reads as follows:

#### Section IX. Investments in the Stock of Other Corporations

"With the consent of the Board of Governors of the Federal Reserve System first obtained, a Corporation may purchase and hold stock, or other certificates of ownership, of any other corporation organized—

"(a) Under the provisions of section 25(a) of the Federal Reserve Act;

"(b) Under the laws of any foreign country or a colony or dependency thereof;

"(c) Under the laws of any State, dependency, or insular possession of the United States;

"Provided, first, That such other corporation is not engaged in the general business of buying or selling goods, wares, merchandise, or commodities in the United States; and second, that it is not transacting any business in the United States except such as in the judgment of the Board of Governors of the Federal Reserve System may be incidental to its international or foreign business.

"Except with the approval of the Board of Governors of the Federal Reserve System first obtained, no Corporation shall invest an amount in excess of 15 per cent of its capital and surplus

OCTOBER 1943

in the stock of any corporation engaged in the business of banking, or an amount in excess of 10 per cent of its capital and surplus in the stock of any other kind of corporation.

"No Corporation shall purchase, own, or hold any stock or certificates of ownership in any other corporation organized under the terms of section 25(a) of the Federal Reserve Act or under the laws of any State, which is in substantial competition therewith, or which holds stock or certificates of ownership in corporations which are in substantial competition with the purchasing Corporation."

## Foreign Funds Control Treasury Department Releases

The following releases relating to transactions in foreign exchange, etc., in addition to those heretofore published in the Federal Reserve BULLETIN, have been issued by the Office of the Secretary of the Treasury under authority of the Executive Order of April 10, 1940, as amended, and the Regulations issued pursuant thereto:

Treasury Department

Foreign Funds Control

August 20, 1943

GENERAL RULING NO. 16

Under Executive Order No. 8389, as Amended, Executive Order No. 9193, Sections 3(a) and 5(b) of the Trading with the Enemy Act, as Amended by the First War Powers Act, 1941, Relating to Foreign Funds Control.\*

Regulations Relating to Safe Deposit Boxes Leased to Nationals of Blocked Countries or Containing Property in Which Nationals of Blocked Countries Have an Interest.

(1) Except as hereinafter authorized or as specifically licensed or authorized by the Secretary of the Treasury, no person shall be granted access to any safe deposit box within

<sup>\*</sup> Sec. 5(b), 40 Stat. 415 and 966; Sec. 2, 48 Stat. 1; 54 Stat. 179; Public No. 354, 77th Congress, 55 Stat. 838; Ex. Order 8389, April 10, 1940, as amended by Ex. Order 8785, June 14, 1941, Ex. Order 8892, July 26, 1941, Ex. Order 8963, December 9, 1941, and Ex. Order 8998, December 26, 1941; Ex. Order 9193, July 6, 1942; Regulations, April 10, 1940, as amended June 14, 1941, and July 26, 1941.

the United States leased to any blocked country or national thereof or containing any property in which any blocked country or national thereof has any interest or which there is reasonable cause to believe contains property in which any blocked country or national thereof has an interest.

(2) (a) Access to any safe deposit box leased to a blocked country or national thereof or containing property in which any blocked country or national thereof has an interest, and the deposit therein or removal therefrom of any property, is hereby authorized provided all the following conditions are complied with:

(i) Access shall be permitted only in the presence of an authorized representative of the lessor of such box;

(ii) In the event that any property in which any blocked country or national thereof has any interest is to be removed from such box, access shall be permitted only in the presence of an authorized representative of a banking institution within the United States, which may be the lessor of such box, which (subject to any applicable rules, regulations, and orders of the Office of the Alien Property Custodian) shall receive such property into its custody immediately upon removal from such box and which shall hold the same in a blocked account under an appropriate designation indicating the interests therein of blocked countries or nationals thereof;

(iii) In the event that there is to be removed from any such box any property in which a designated enemy country or a national of a designated enemy country has an interest, access shall not be permitted except in the presence of, or with the consent of, a duly authorized agent or representative of the Office of the Alien Property Custodian;

(iv) Access to any safe deposit box leased to a designated enemy country or a national of a designated enemy country shall not be permitted except in the presence of, or with the consent of, a duly authorized agent or representative of the Office of the Alien Property Custodian.

The above conditions (i) through (iv) shall not apply to access granted to a representative of the Office of the Alien Property Custodian pursuant to any rule, regulation or order of such Office.

(b) The lessee or other person granted access to any safe deposit box under this general ruling (except an agent or representative of the Office of the Alien Property Custodian) shall furnish to the lessor a certificate in triplicate that he has filed or will promptly file a report on Form TFR-300 with respect to such box, if leased to a national of a foreign country, and with respect to all property contained in the box to which access is had in which any foreign country or national thereof has an interest. The lessor shall deliver two copies of such certificate to the Federal Reserve Bank of the District in which the box is located. The certificate is required only on the first access to the box and need not be furnished if a certificate had been filed pursuant to General License No. 12 prior to the revocation thereof. In case a report on Form TFR-300 has not been made before August 20, 1943, a report is hereby required to be filed on Series L in accordance with the provisions of Public Circular No. 4C, excluding Section II-D thereof, which shall be inapplicable, but any reports required under Public Circular No. 4 and not already rendered, shall also be filed. When no other date is applicable the effective date of reporting for Series L shall be the date of access. If none of the entries specified by Section IV-5-(c) is applicable, the phrase "General Ruling No. 16, access to box on \_\_\_\_\_\_, 1940" shall be entered in Part A.

(3) As used in this general ruling, the term "designated enemy country" and the term "national of a designated enemy country" shall have the meaning prescribed in Executive Order No. 9193 of July 6, 1942.

> RANDOLPH PAUL, Acting Secretary of the Treasury.

Treasury Department

Foreign Funds Control

September 3, 1943

GENERAL RULING NO. 4, AS AMENDED

Under Executive Order No. 8389, as Amended, Executive Order No. 9193, Sections 3(a) and 5(b) of the Trading with the Enemy Act, as Amended by the First War Powers Act, 1941, Relating to Foreign Funds Control.\*

Except as specifically provided herein or otherwise, all definitions appearing in Executive Order No. 8389 of April 10, 1940, as amended, and the Regulations issued thereunder, shall apply to the terms employed in all rulings, licenses, instructions, etc., and, in addition, the following definitions and rules of interpretation are prescribed:

(1) The term "Order" shall mean Executive Order No. 8389, as amended.

(2) The term "license" shall mean a license issued under the Order.

(3) The term "interest" when used with respect to property shall mean an interest of any nature whatsoever, direct or indirect.

(4) The term "blocked country" shall mean any foreign country designated in the Order.

(5) The term "Netherlands East Indies" shall mean the following: Java and Madura, Sumatra, Riouw-Lingga archipelago, Banka, Billiton, Celebes, Borneo (West, South and East Divisions), Timor archipelago, Bali and Lombok, Lesser Sunda Islands and Dutch New Guinea.

(6) The term "Netherlands West Indies" shall mean the following: Dutch Guiana, Dutch St. Martin, Curacao, Bonaire, Aruba, St. Eustatius and Saba.

(7) Any person licensed as a "generally licensed national" shall, while so licensed, be regarded as a person within the United States who is not a national of any blocked country; *provided*, *however*, that the licensing of any person as a "generally licensed national"

<sup>\*</sup> Sec. 3(a), 40 Stat. 412; Sec. 5(b), 40 Stat. 415 and 966; Sec. 2, 48 Stat. 1; 54 Stat. 179; 55 Stat. 838; Ex. Order 8389, April 10, 1940, as amended by Ex. Order 885, June 14, 1941, Ex. Order 8832, July 26, 1941, Ex. Order 9193, July 6, 9141, and Ex. Order 8998, Dec. 26, 1941; Ex. Order 9193, July 6, 1942; Regulations, April 10, 1940, as amended June 14, 1941, and July 26, 1941.

shall not be deemed to suspend in any way the requirements of the Order and Regulations relating to reports, and the production of books, documents, records, etc. (see section 4 of the Order and section 130.4 of the Regulations).

(8) The term "blocked account" shall mean an account in which any blocked country or national thereof has an interest, with respect to which account payments, transfers or withdrawals or other dealings may not be made or effected except pursuant to a license authorizing such action. The term "blocked account" shall not be deemed to include free dollar accounts of the type referred to in General License No. 32, as amended, or the accounts of generally licensed nationals.

(9) The term "banking institution" shall have the meaning prescribed in Section  $_{5}F$  of the Order.

(10) The term "domestic bank" shall mean any branch or office within the United States of any of the following which is not a national of any blocked country: any bank or trust company incorporated under the banking laws of the United States or of any state, territory, or district of the United States, or any private bank or banker subject to supervision and examination under the banking laws of the United States or of any state, territory or district of the United States. The Treasury Department may also authorize any other banking institution to be treated as a "domestic bank" for the purpose of this definition or for the purpose of any license, ruling, or instruction.

(11) The term "national securities exchange" shall mean an exchange registered as a national securities exchange under section 6 of the Securities Exchange Act of 1934 (48 Stat. 885, U.S.C., title 15, sec. 78f).

(12) Reference to any general license or general ruling which has been amended shall be deemed to refer to such license or ruling as amended.

(13) Any person who by virtue of any definition in the Order is a national of more than one blocked country shall be deemed to be a national of each of such blocked countries.

(14) In any case in which a person is a national of two or more blocked countries, a license with respect to nationals of one of such blocked countries shall not be deemed to include such person unless a license of equal or greater scope is outstanding with respect to nationals of each other blocked country of which such person is a national.

(15) The Secretary of the Treasury reserves the right to exclude from the operation of any license or from the privileges therein conferred or to restrict the applicability thereof with respect to, particular persons, transactions or property or classes thereof. Such action shall be binding upon all persons receiving actual notice thereof, or constructive notice if in any case notice is filed pursuant to the provisions of the Federal Register Act (49 Stat. 500, as amended by 50 Stat. 304; U.S.C., Sup. V, title 44, sec. 301 et seq).

OCTOBER 1943

(16) No license shall be deemed to authorize any transaction prohibited by reason of the provisions of any law, proclamation, order or regulation, other than the Order and Regulations.

(17) Any amendment, modification, or revocation of any order, regulation, ruling, instruction, or license issued by or under the direction of the Secretary of the Treasury pursuant to sections 3(a) or 5(b) of the Trading with the enemy Act, as amended, shall not be deemed to affect any act done or omitted to be done, or any suit or proceeding had or commenced in any civil or criminal case, prior to such amendment, modification, or revocation, and all penalties, forfeitures, and liabilities under any such order, regulation, ruling, instruction, or license shall continue and may be enforced as if such amendment, modification, or revocation had not been made.

(18) No license or other authorization issued by or under the direction of the Secretary of the Treasury pursuant to the Order or sections 3(a) or 5(b) of the Trading with the enemy Act, as amended, shall be deemed to authorize or validate any transaction effected prior to the issuance thereof, unless such license or other authorization specifically so provides.

> RANDOLPH PAUL, Acting Secretary of the Treasury.

#### GENERAL RULING NO. 5, AS AMENDED

Under Executive Order No. 8389, as Amended, Executive Order No. 9193, Sections 3(a) and 5(b) of the Trading with the Enemy Act, as Amended by the First War Powers Act, 1941 Relating to Foreign Funds Control.\*

General Ruling No. 5, as amended, is hereby further amended to read as follows:

Regulations Relating to Importation of Securities and Currency. (1) Prohibition with Respect to Importation of Securities or Currency. Except as authorized herein, or as authorized by a license or other authorization of the Secretary of the Treasury, the sending, mailing, importing, or otherwise bringing into the United States from any foreign country of any securities or currency, or the receiving or holding in the United States of any securities or currency sent, mailed, imported, or otherwise brought into the United States from any foreign country is prohibited.

(2) Declaration and Surrender of Securities and Currency by Persons Entering the United States. Any individual entering the United States from any foreign country shall declare and surrender to the collector of customs or his representative at the port of entry, before the examination of his baggage or

<sup>\*</sup> Sec. 3(a), 40 Stat. 412; Sec. 5(b), 40 Stat. 415 and 966; Sec. 2, 48 Stat. 1; 54 Stat. 179; 55 Stat. 838; Ex. Order 8389, April 10, 1940, as amended by Ex. Order 8785, June 14, 1941, Ex. Order 8823, July 26, 1941, Stat. Order 8998, Dec. 26, 1941; Ex. Order 9193, July 6, 1942; Regulations, April 10, 1940, as amended June 14, 1941, and July 26, 1941.

effects has begun (or, if his baggage is not subject to examination, before customs clearance), all securities and currency which he has on his person or in any of his baggage or effects. If the port of entry is in the Panama Canal Zone, such securities and currency shall be declared and surrendered to the customs officer or other representative of the Governor of the Panama Canal Zone at such port. Securities and currency so declared and surrendered shall not be deemed to have been imported or brought into the United States in violation of this general ruling, but nevertheless shall be subject to all other provisions hereof.

(3) Inspection by Customs Officers and Postal Employees. Any articles sent, mailed, imported, or otherwise brought into the United States from any foreign country which, in the opinion of customs officers or postal employees contain any securities or currency, shall be subjected to customs inspection in accordance with the Customs Regulations of 1943 (or, if arriving in the Panama Canal Zone, in accordance with customs regulations in effect in the Panama Canal Zone) and the Postal Laws and Regulations of 1940. Any securities or currency found in any article opened by, or under the supervision of, a customs officer or postal employee shall be taken up by or surrendered forthwith to such customs officer or postal employee. Any securities or currency contained in any article sent or mailed to the United States, otherwise than as baggage, shall not be deemed to have been sent or mailed in violation of this general ruling if the outermost wrapper or container in which they are enclosed is labeled in such a manner as to notify the customs officers or postal employees of its contents, or if the attendant circumstances otherwise disclose or indicate that no attempt has been made to avoid customs inspection of such securities or currency. Such securities and currency nevertheless shall be subject to all other provisions hereof.

(4) Delivery of Imported Securities and Currency to Federal Reserve Bank or Governor of Territory or Possession of the United States: Duty of Federal Reserve Bank or Governor.

(a) Customs officers and postal employees shall deliver any securities or currency taken up by or surrendered to them pursuant to this general ruling to a Federal Reserve Bank or to the governor of a territory or possession of the United States. Except as otherwise instructed by the Treasury Department, any Federal Reserve Bank to which, or governor of a territory or possession of the United States to whom, securities or currency are delivered pursuant to this general ruling shall hold such securities and currency until the Treasury Department is satisfied that no blocked country or national thereof has, at any time on or since the effective date of the Order, had any interest therein. Applications for release of securities or currency so held may be filed with the Federal Reserve Bank or the governor of the territory or possession of the United States holding such securities or currency.

(b) The Federal Reserve Banks shall act only as fiscal agents of the United States hereunder, and shall receive and hold securities and currency delivered to them pursuant to this general ruling as such fiscal agents, subject to the further order of the Secretary of the Treasury. The governors of the territories and possessions of the United States shall act as the agents of the Secretary of the Treasury in receiving and holding, subject to the further order of the Secretary of the Treasury, securities and currency delivered to them pursuant to this general ruling, and are authorized to take appropriate measures, by rules, regulations, or otherwise, for the enforcement of the general ruling in their respective jurisdictions.

(5) Duty of Persons Receiving Imported Securities or Currency. Securities or currency sent, mailed, imported, or otherwise brought from a foreign country to the United States and delivered to any person in the United States under circumstances which do not clearly disclose or indicate that such securities or currency have been delivered for examination, pursuant to this general ruling, to a Federal Reserve Bank or governor of a territory or possession of the United States shall be forwarded by the person receiving them, within five days after receipt thereof, to a Federal Reserve Bank or governor of a territory or possession of the United States, together with a statement in triplicate setting forth:

- (a) His name and address;
- (b) A complete description of the securities and currency;
- (c) The name and address of the person from whom he received the securities or currency; and
- (d) The reasons why the provisions of General Ruling No. 5 are considered applicable to such securities or currency.

Securities or currency forwarded to a Federal Reserve Bank or governor of a territory or possession of the United States in compliance with this paragraph shall not be deemed to have been received or held in violation of this general ruling by the person forwarding such securities or currency. Such securities or currency nevertheless shall be subject to all other provisions hereof.

(6) Exceptions. The provisions of this general ruling shall not apply to:

- (a) Securities or currency sent or mailed to the United States from Great Britain, Canada, Newfoundland, or Bermuda;
- (b) Securities or currency carried on the person or in the baggage or effects of any individual arriving in the United States from Great Britain, Canada, Newfoundland, or Bermuda who has not passed through any other foreign country en route to the United States.

This exception shall not apply to any securities or currency which there is reasonable cause to believe were sent, mailed, exported, or otherwise brought from Great Britain, Canada, Newfoundland, or Bermuda in violation of the laws thereof.

- (7) Definitions. As used herein:
  - (a) The term "securities" shall include all securities and evidences thereof;
  - (b) The term "currency" shall include United States and foreign currency, including coins (other than gold coins).

RANDOLPH PAUL, Acting Secretary of the Treasury.

#### GENERAL RULING NO. 11, AS AMENDED

Under Executive Order No. 8389, as Amended, Executive Order No. 9193, Sections 3(a) and 5(b) of the Trading with the Enemy Act, as Amended by the First War Powers Act, 1941, Relating to Foreign Funds Control.\*

General Ruling No. 11 is hereby amended to read as follows:

#### Regulations Relating to Trade or Communication with or by an Enemy National.

(1) Trade and Communication with an Enemy National Probibited. Unless authorized by a license expressly referring to this general ruling, no person shall, directly or indirectly, enter into, carry on, complete, perform, effect, or otherwise engage in, any trade or communication with an enemy national, or any act or transaction which involves, directly or indirectly, any trade or communication with an enemy national.

(2) Acts and Transactions by an Enemy National Probibited. Unless authorized by a license expressly referring to this general ruling, no enemy national who is within the United States shall, directly or indirectly, enter into, carry on, complete, perform, effect, or otherwise engage in, any financial, business, trade, or other commercial act or transaction.

(3) Certain Transactions Licensed Under Section 3(a). Every act or transaction prohibited by section 3(a) of the Trading with the enemy Act, as amended, is hereby licensed thereunder unless such act or transaction is prohibited by paragraph (1) or paragraph (2) hereof or otherwise prohibited pursuant to section 5(b) of that Act and not licensed by the Secretary of the Treasury. Attention is directed to the fact that the General License under section 3(a) of the Act,

OCTOBER 1943

issued by the President on December 13, 1941, does not license any act or transaction not authorized hereunder.

(4) Definitions. As used in this general ruling and in any other rulings, licenses, instructions, etc.:

- (a) The term "enemy national" shall mean the following:
  - (i) The Government of any country against which the United States has declared war (Germany, Italy, Japan, Bulgaria, Hungary, and Rumania) and any agent, instrumentality, or representative of the foregoing Governments, or other person acting therefor, wherever situated (including the accredited representatives of other governments to the extent, and only to the extent, that they are actually representing the interests of the Governments of Germany, Italy, and Japan and Bulgaria, Hungary, and Rumania);
  - (ii) The government of any other blocked country having its seat within enemy territory, and any agent, instrumentality, or representative thereof, or other person acting therefor, actually situated within enemy territory;
  - (iii) Any individual within enemy territory, except any individual who is with the armed forces of any of the United Nations in the course of his service with such forces or who is accompanying such armed forces in the course of his employment by any of the Governments of the United Nations or organizations acting on their behalf;
  - (iv) Any partnership, association, corporation or other organization to the extent that it is actually situated within enemy territory;
  - (v) Any person whose name appears on The Proclaimed List of Certain Blocked Nationals, and any person to the extent that he is acting, directly or indirectly, for the benefit or on behalf of any such person; *provided* that no person so acting shall be deemed to be an enemy national if he is acting pursuant to license issued under the Order or expressly referring to this general ruling; and
  - (vi) Any person to the extent that he is acting, directly or indirectly, for the benefit or on behalf of an enemy national (other than a member of the armed forces of the United States captured by the enemy) if such enemy national is within any country against which the United States has declared war; *provided* that no person so acting shall be deemed to be an enemy national if he is acting pursuant to license issued under the Order or expressly referring to this general ruling.
  - (b) The term "enemy territory" shall mean the following:
    - (i) The territory of Germany, Italy, Japan, Bulgaria, Hungary, and Rumania; and

<sup>\*</sup> Sec. 3(a), 40 Stat. 412; Sec. 5(b), 40 Stat. 415 and 966; Sec. 2, 48 Stat. 1; 54 Stat. 179; 55 Stat. 838; Ex. Order 8389, April 10, 1940, as amended by Ex. Order 8785, June 14, 1941, Ex. Order 8832, July 26, 1941, and Ex. Order 8998, Dec. 26, 1941; Ex. Order 9193, July 6, 1942; Regulations, April 10, 1940, as amended June 14, 1941, and July 26, 1941.

- (ii) The territory controlled or occupied by the military, naval, or police forces or other authority of Germany, Italy, or Japan. The territory so controlled or occupied shall be deemed to be the territory of Albania; Austria; that portion of Belgium within continental Europe; Bulgaria; that portion of Burma occupied by Japan; that portion of China occupied by Japan; Czechoslovakia; Danzig; that portion of Denmark within continental Europe; Estonia; that portion of France within continental Europe, including Monaco and Corsica; French Indo-China; Greece; Hong Kong; Hungary; Latvia; Lithuania; Luxembourg; British Malaya; that portion of the Netherlands within continental Europe; that portion of the Netherlands East Indies occupied by Japan; Norway; that portion of the Philippine Islands occupied by Japan; Poland; Rumania; San Marino; Thailand; that portion of the Union of Soviet Socialist Republics occupied by Germany; Yugoslovia; and any other territory controlled or occupied by Germany, Italy or Japan.
- (c) The term "The Proclaimed List of Certain Blocked Nationals" shall mean The Proclaimed List of Certain Blocked Nationals, as amended and supplemented, promulgated pursuant to the President's Proclamation of July 17, 1941.
- (d) The term "trade or communication with an enemy national" shall mean any form of business or commercial communication or intercourse with an enemy national after March 18, 1942, including, without limitation, the sending, taking, obtaining, conveying, bringing, transporting, importing, exporting, or transmitting, or the attempt to send, take, obtain, convey, bring, transport, import, export, or transmit,
  - (i) Any letter, writing, paper, telegram, cablegram, wireless message, telephone message, or other communication, whether oral or written, of a financial, commercial, or business character: or
  - (ii) Any property of any nature whatsoever, including any goods, wares, merchandise, securities, currency, stamps, coin, bullion, money, checks, drafts, proxies, powers of attorney, evidences of ownership, evidences of indebtedness, evidences of property, or contracts;

directly or indirectly to or from an enemy national after March 18, 1942; provided, however, that with respect to any government or person becoming an enemy national after March 18, 1942, the date upon which such government or person became an enemy national shall be substituted for the date March 18, 1942.

The major results of the second Federal Reserve survey of the ownership of bank deposits are summarized and discussed in the Review of the Month, on pages 917-922 of this BULLETIN.<sup>1</sup> In obtaining these summary results, a considerable amount of more detailed information than that shown in the Review was compiled. Some of these more detailed statistics on deposit ownership are presented below, together with the actual data reported by the cooperating banks and a brief summary of the method used in estimating all bank totals from the sample data received.

#### NATURE OF SURVEY SAMPLE

Demand deposits of individuals, partnerships, and corporations were classified as to ownership by 1,649 banks in the July Federal Reserve survey. The ownership of deposits at these reporting banks, together with their relation to deposits at all banks in the United States on July 31 is indicated by Table 1. Table 2 on the next page shows the ownership of reported deposits separately for each Federal Reserve district. Deposits at reporting banks were 64 per cent of deposits at all banks in the country, and 72 per cent of all deposits at reporting banks were classified as to ownership. In general, all accounts of over \$100,000 each were classified at banks having total business and individual demand deposits of over 500 million dollars; all of over \$10,000 or \$25,000 at banks having between 100 million and 500 million of such deposits; all of over \$10,000 at banks having between 5 million and 100 million of such deposits; and all of over \$3,000 or \$10,000 at smaller banks, although some banks in the largest group classified accounts of less than \$100,000 each. Deposits

not classified as to ownership at reporting banks were those under these limits.

Table 3 shows the reported sample for each of these four size groups of banks (labeled Groups 1 to 4, respectively), together with the

<sup>1</sup> Includes 6 banks sending reports too late to be included in Tables

<sup>1</sup> Includes 6 banks sending reports too late to be included in Tables <sup>2</sup> and 3. <sup>3</sup> Deposits classified as to ownership generally include all those in accounts of over \$100,000 at 16 banks having over \$500,000,000 of de-mand deposits of individuals, partnerships, and corporations on July 31; in accounts of over \$25,000 or \$10,000 at 41 banks having from \$100,000,000 to \$500,000,000 of deposits; in accounts of over \$10,000 at 449 banks having from \$5,000,000 to \$100,000,000 of deposits; and in accounts of over \$3,000 or \$10,000 at 1,143 banks having less than \$5,000,000 of deposits. Where two lower limits are indicated, approxi-mately half the reporting banks used each. <sup>3</sup> Subgroups not reported by some smaller banks. Hence subgroups do not add to totals. <sup>4</sup> Estimated.

proportion the sample is of all banks for each size group.<sup>2</sup> Thus, reporting banks in Group 1 held 85 per cent of the deposits of all banks of

<sup>&</sup>lt;sup>1</sup> Results of the March survey, which were very tentative because of the preliminary nature of the survey and the smaller sample used, were published in the August BULLETIN, pp. 713-716. In both surveys figures were collected by the Federal Reserve Banks; reported data for the country as a whole were assembled and estimates of the distribution of national totals were compiled by the Division of Re-search and Statistics of the Board of Governors. G. L. Bach of that Division is primarily responsible for that work and for the preparation of the summary of the findings.

<sup>&</sup>lt;sup>2</sup> It should be observed that total deposits of banks in these various groups are substantially more than demand deposits of individuals and businesses. Many banks in Group 2, for example, may have more than 500 million total deposits, including deposits of other banks and of governmental bodies, even though they have less than 500 million of demand deposits of individuals and businesses.

OCTOBER 1943

this size, those in Group 2, 62 per cent, in Group 3, 68 per cent, and in Group 4, 19 per cent. Reporting banks in Groups 2 and 3, and some in Group 1, further subdivided their accounts so as to classify separately the ownership of accounts of over and under \$100,000 each, and Group 4 banks classified separately accounts of over and under \$10,000 each, although this detail is not shown in Table 3.

#### ESTIMATING PROCEDURE

The estimated ownership of deposits at all banks was obtained by stratifying the reporting sample into the four bank size groups indicated and into three groups by size of account within each of the four groups of banks. The percentage distribution of accounts among different owners in each of these stratified groups was then computed and applied to deposits at all commercial banks in each of these twelve deposit groups, to obtain the estimates of ownership for all commercial banks. A detailed description of the estimating procedure will later be made available in mimeographed form. The following general steps were involved.

(1) Total demand deposits of individuals, partnerships, and corporations at all banks in the United States were estimated for July 31 and this total was subdivided among banks in the four size groups on the basis of call report figures for June 30.

(2) Demand deposits at each of the four bank size groups were divided into three subgroups by size of account, on the basis of this division at reporting banks. At reporting Group 4 banks, for example, 42 per cent of all deposits were in accounts of over \$10,000 each, 20 per cent in accounts between \$3,000 and \$10,000, and the remainder in accounts under \$3,000. These percentages were applied to the total amount of deposits at all Group 4 banks, and a similar procedure was followed for the other three groups. This procedure gave the volume of deposits in each of 12 size groups, 3 within each of the four bank size groups.

(3) The percentage distribution of accounts

by type of owner was computed for each size of deposit group for which the sample provided data. This gave percentage breakdowns for 8 of the 12 size groups. The other 4 size groups comprised the unclassified portion of deposits for each group of banks. The ownership of this portion was estimated at Group 4 banks as being virtually all personal, although little concrete evidence is available as to the ownership of these very small deposits at small banks, and at the other 3 groups primarily on the basis of the distribution of reported deposits among the smaller sized accounts in the banks in the next smaller size group.

(4) The percentage distribution of accounts by type of owner for each of the 12 account groups was applied to the all-bank dollar total for each group. Addition of the results for the 12 groups gave the estimates shown for deposit ownership at all banks.

#### COMPARISON WITH SAVINGS ESTIMATES

Estimates of "individual" savings, which include the savings of both individuals and unincorporated business, are made quarterly by the Department of Commerce and by the Securities and Exchange Commission. The S.E.C. subdivides this total into types of savings, giving estimates for savings in the form of cash, both for "individuals" and for corporations. The regular S.E.C. estimates show quarterly changes in liquid holdings, as a reflection of current savings. The Commission, however, has recently estimated that the cash holdings of domestic corporations (including small amounts of currency and time deposits) outstanding on June 30, 1943, amounted to about 22 billion dollars. This would indicate that demand deposits of individuals and unincorporated businesses, after deducting deposits of foreigners and items in process of collection between banks ("interbank float"), were close to 30 billion dollars. These estimates of the S.E.C. may be compared with the Board's estimates, presented in this article, of 39 billion dollars of demand deposits of domestic businesses, incorporated and

FEDERAL RESERVE BULLETIN

*unincorporated*, and of 14 billion dollars of personal deposits at the end of July. A substantial part, though not all, of the discrepancies between the two sets of figures are due to differences in the methods used in compiling the estimates.

(1) In the Federal Reserve estimates the figure for business deposits includes funds of all businesses, incorporated and unincorporated, whereas in the S.E.C. estimates unincorporated business deposits are grouped with those of individuals, and a separate figure is given for corporations. This is the most important factor accounting for the discrepancy in the business estimates, and precise reconcilement is not possible because no satisfactory data are available as to the amount of deposits of unincorporated business.

(2) The published S.E.C. figures on "cash" savings include changes in time deposits and currency, as well as demand deposits, whereas the present Federal Reserve figures cover only demand deposits.

(3) The different handling of "float" substantially affects the estimates of cash holdings made by the two methods. It is not, however, a major source of discrepancy in figures showing *changes* in cash holdings from one date to another, since the volume of float apparently varies only moderately as between different month-end dates.

The S.E.C. corporation cash figures exclude both interbank and intercustomer float, while the Federal Reserve figures include both. The Federal Reserve figures include all business and individual demand deposits on the books of banks on the reported date. They therefore include deposited items for which banks have given credit to depositors but which are in transit between banks and have not yet been deducted from accounts of the drawers of the checks. Deduction of this interbank float would reduce the Federal Reserve total deposit figure by around 3 billion dollars, but since there is no precise way of allocating the float between the various types of depositors, the deposit figures including float are used. The S.E.C. corporation cash estimates, on the other hand,

October 1943

are based on reports received from a sample of corporations. Since the corporations report balances as shown by their books on the report date, this reported figure *excludes* checks written by corporations but not yet received by the payee of the check and hence not reported by him as funds on hand. The cash figure reported by corporations also *excludes* float between banks (the interbank float included in the Federal Reserve figures) because the corporation writing a check immediately deducts the amount from its own books, even though its bank account may not actually be debited for several days.

The S.E.C. estimate of "individual" cash savings for any period is obtained by subtracting the increase in corporate cash from the total business and personal increase, excluding interbank float. The lowering of the corporate figure by the exclusion of intercustomer float is, therefore, reflected in a higher residual for "individual" savings, which tends to raise the estimate for individual as against corporation savings, as compared to the Federal Reserve method. In summary, therefore, the S.E.C. figures for total corporate and individual cash are lower than those of the Federal Reserve by the amount of interbank float, while the S.E.C. handling of intercustomer float tends to lower further its estimated corporation balances and to raise individual balances relative to the Federal Reserve method. Interbank float generally amounts to between 3 and 4 billion dollars on month-end dates; the amount of intercustomer float is uncertain.

(4) Trust funds of banks are included under financial business accounts in the Federal Reserve figures but are included with individual balances in the S.E.C. figures.

(5) Deposits of nonprofit associations are reported independently in the Federal Reserve survey, while these balances are included with individuals by the S.E.C.

These factors are of substantial importance in explaining the apparent differences between the Federal Reserve and the S.E.C. estimates. It would appear, however, that they do not explain the entire discrepancy, and even after adjustment for these methodological differences the Federal Reserve figures would show a smaller amount belonging to individuals and larger business deposits than the estimates of the S.E.C. In view of the importance of the volume and changes in business and individual cash holdings for current and future economic developments and policies, further study of the figures and of the best methods to be used is in progress. It is hoped that regular semiannual surveys by the Federal Reserve System, which are now contemplated, will help to establish a more seasoned statistical measure of changes in individual and business ownership of deposits.

# Deposit Ownership by Size of Account and Size of Bank

Because the cooperating banks reported separately the ownership of different-sized accounts, it was possible to estimate the ownership of deposits at all banks in different sizes of accounts. It was also possible to estimate separately the ownership of deposits for banks in each of the four bank size groups indicated, since a satisfactory sample was obtained for each of these groups. The tables on pages 935–936 show the estimates made of deposit ownership in different-sized accounts and at different-sized banks.

Table 4 shows the estimated ownership of deposits in three different sizes of accounts, together with the percentage distribution of deposits in each size group.<sup>3</sup> The second column, covering nearly 26 billion dollars, includes all accounts having balances of over \$100,000 each. The third and fourth columns show the ownership of smaller deposits. In reporting, some banks classified separately accounts of from \$25,000 to \$100,000 and others accounts of from \$10,000 to \$100,000. Thus, because of the nature of the sample, no clear size division of accounts of under \$100,000 can be estimated. By throwing these reporting groups together, however, a very rough division of such accounts can be obtained, with the dividing line averaging between \$10,000 and \$25,000-perhaps around \$15,000.4 The second column thus shows the estimated ownership of deposits in accounts of less than \$100,000 but over \$10,000 or \$25,000 each, and the third column includes estimates of the ownership of all smaller deposits. Of all demand deposits of businesses and individuals, about 46 per cent are in accounts of over \$100,000 each, 25 per cent in accounts under \$100,000 but over \$10,000 or \$25,000, and the remaining 30 per cent in accounts under \$10,000 or \$25,000. Comparison of this estimated distribution of deposits with earlier data indicates, as would be expected, that the proportion of total deposits held in large accounts is continuing to increase as the volume of deposits expands.5

A further analysis of deposit ownership by size of account may be made by comparing the total amount of funds held by each type of depositor in different-sized accounts. This is done in Table 5, which, using the same dollar figures as Table 4, shows the per cent of deposits of each group of owners held in very large, large, and smaller accounts.

The differing ownership of deposits at large and small banks is shown in Table 6 on page 936. This table gives estimates of deposit ownership for banks in each of the four size groups, together with the percentage distribution of deposits within each group.

 $<sup>^{3}</sup> The figures in this table are the basis for the chart on page 921 of the Review of the Month.$ 

<sup>&</sup>lt;sup>4</sup> Both as to number of banks and to dollar amounts covered, the banks reporting accounts down to \$10,000 were the more important. <sup>5</sup> Surveys made by the Federal Deposit Insurance Corporation on September 24, 1941, and September 21, 1938, divided deposits into four size groups (under \$5,000, \$5,000-\$10,000, \$10,000-\$25,000, and over \$25,000), although no information was obtained on deposit ownership. The F. D. I.C. surveys, which also covered a period of expansion in the total volume of demand deposits of individuals, partnerships, and corporations, showed that the proportion of such deposits in accounts of \$25,000 or more increased from 44 per cent of the total in 1938 to 61 per cent of the total in 1941, while those in accounts of from \$10,000 to \$25,000 amounted to a little less than 10 per cent of the total in both years.

# CURRENT EVENTS

#### Federal Advisory Council

The third meeting of the Federal Advisory Council during the current year was held in Washington on September 19–20, 1943. The Council met with the Board of Governors on September 20, 1943.

#### Appointment of Class C Director

The Board of Governors of the Federal Reserve System on September 14, 1943 announced the appointment of Mr. Robert D. Calkins, Dean of the School of Business of Columbia University, New York City, as Class C Director of the Federal Reserve Bank of New York for the unexpired portion of the term ending December 31, 1943.

The Board also announced that Mr. William I. Myers of Ithaca, New York, a Class C Director, had been designated Deputy Chairman of the Federal Reserve Bank of New York for the remainder of the current year.

#### Appointment of Branch Director

The Board of Governors of the Federal Reserve System on September 24, 1943 announced the appointment of Mr. John Davidson Clark, Dean, College of Business Administration, University of Nebraska, Lincoln, Nebraska, as a director of the Omaha Branch of the Federal Reserve Bank of Kansas City for the unexpired portion of the term ending December 31, 1943.

#### Announcement of Changes at the Houston and San Antonio Branches

In September the by-laws of the Houston and San Antonio Branches were amended to eliminate the position of Manager and to permit the appointment of a Vice President of the Federal Reserve Bank of Dallas to serve as the managing officer of each of those branches.

The former Managers were elected Vice Presidents of the Federal Reserve Bank of Dallas and will continue as the managing officers.

#### Admissions of State Banks to Membership in the Federal Reserve System

The following State banks were admitted to membership in the Federal Reserve System during the period August 16, 1943 to September 15, 1943, inclusive:

#### Indiana

Columbus-Irwin-Union Trust Company Sunman-Peoples Bank and Trust Company

#### Kansas

Holyrood-The Bank of Holyrood

#### Michigan

Centreville-The Wolf Bros. State Bank, Centreville, Michigan

#### Mississippi

Hattiesburg-Citizens Bank of Hattiesburg

#### New Jersey

Paterson—United States Trust Company of Paterson, New Jersey

#### New York

Lockport-Lockport Exchange Trust Company

#### Obio

Hamler—The Hamler State Bank Sunbury—The Farmers Bank

OCTOBER 1943

# NATIONAL SUMMARY OF BUSINESS CONDITIONS

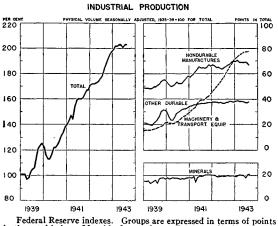

Compiled September 20 and released for publication September 22. Figures shown on charts may differ from preliminary figures used in text.

Industrial activity and war expenditures were maintained in August at a high level. Commodity prices showed little change. Retail trade continued in large volume.

#### INDUSTRIAL PRODUCTION

Output of manufactures and minerals showed little change in August and the Board's seasonally adjusted total index of industrial production remained at the July level. Production of durable manufactures increased. Output of iron and steel continued to advance and reached the peak levels achieved earlier this year. There were further slight increases in activity at war plants in the transportation equipment industries. Output of other durable products showed little change.

Production of nondurable goods declined in August, reflecting further decreases in output of textile, leather, and food products. Cotton consumption in August was about 15 per cent lower than the same period a year ago and was at the lowest level since the beginning of 1941. Leather output has also declined in recent months and is currently close to prewar levels. Activity at meat packing plants showed the usual seasonal decline in August but preliminary

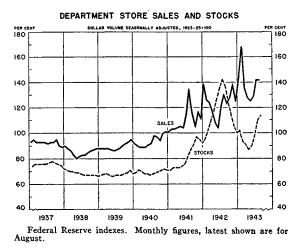

figures indicate that output was about one-fifth larger than a year ago. Output of most other manufactured foods declined somewhat further. Production of petroleum, coke, and rubber products continued to advance in August while chemical production showed little change. Production of crude petroleum continued to rise and in August was in the largest volume on record. Lake shipments of iron ore likewise reached a record level. Production of coal and metals was maintained in large volume.

#### Distribution

Department store sales continued large in August and the first half of September. Increases during this period were less than seasonal, however, following maintenance of sales at a comparatively high level during July. For the year to date value of sales at department stores has been about 13 per cent greater than in the corresponding period last year, reflecting in part price increases. Inventories at department stores have increased in recent months and are now somewhat higher than at the beginning of this year, indicating that receipts of new merchandise have been in excess of the value of goods sold.

FEDERAL RESERVE BULLETIN

938

Total carloadings were maintained in large volume during August and the first half of September. Shipments of grain showed a less than seasonal decline from the July peak.

#### Commodity Prices

The general level of wholesale commodity prices continued to show little change in August and the early part of September. Prices of lumber and newsprint were increased, while prices of fruits and vegetables showed declines.

In retail food markets prices of apples and fresh vegetables decreased further from mid-July to mid-August. The Bureau of Labor Statistics cost of living index declined one-half of one per cent as decreases in foods were partly offset by small increases in retail prices of other goods and services.

#### Agriculture

General crop prospects declined slightly in August according to official reports. The forecast for corn production was raised by 3 per cent to almost 3 billion bushels, while prospects for other feed crops declined. Production of cotton indicated on September 1 was 11.7 million bales as compared with a crop of 12.8 million last season. Milk production in August was estimated to be 2 per cent smaller than output a year ago, while marketings of most other livestock products were larger.

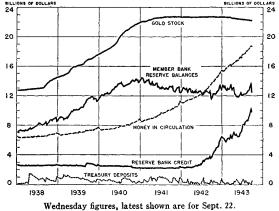

#### BANK CREDIT

In mid-September excess reserves of member banks rose sharply to about 2 billion dollars from the average level of about 1.1 billion which had prevailed in the latter part of August and early in September. This increase was due in part to the fact that the Treasury was making disbursements out of temporary borrowing from Reserve Banks on special certificates in anticipation of tax collections and receipts from the Third War Loan Drive. It also reflected in part a substantial decrease in required reserves at the middle of the month when funds from individual and corporate deposits were transferred to Government loan accounts which are not

OCTOBER 1943

subject to reserve requirements. During the four weeks ended September 15 the Reserve System holdings of Government securities increased by about 1 billion dollars in addition to the special certificates taken directly from the Treasury. Most of the increase was in the form of Treasury bills sold to the Reserve Banks with sellers retaining the option to repurchase. Over this four-week period currency in circulation increased by about 560 million dollars to a total of 18.8 billion outstanding.

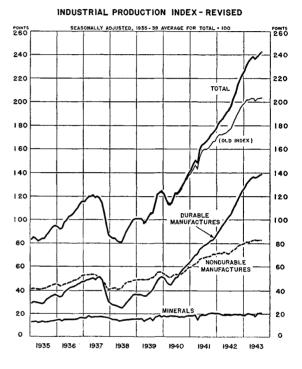

In the last two weeks of August and the first week of September, reporting member banks in 101 leading cities showed a net decline in security holdings as a result of the sale of bills to the Reserve System. In the week ending September 15, however, some nonbanking holders sold securities to the banks in anticipation of purchases during the Drive, and bank holdings also increased through repurchase of bills from the Reserve System.

Commercial loans, which had expanded by 100 million dollars in July and in August, increased by 250 millions during the week ending September 15. This increase in commercial loans was shared by both New York and other reporting member banks. In the week ending the 15th, loans to brokers and dealers in New York City increased 370 million dollars, most of which was for purchasing and carrying Government securities, and there was also an increase in loans on securities to others.

## **REVISION OF INDUSTRIAL PRODUCTION INDEX**

Expansion of the military program since the United States entered the war has been so rapid and far-reaching in its effects on manufacturing activity and has so greatly affected the statistics used to measure output as to require a broad revision of the Board's index of industrial production. Output has increased further to a level more than twice that of 1939; additions to capacity through new plant construction have been extremely large; more workers have been employed, at longer hours; production processes in many lines have been reorganized; and activity has been shifted to the manufacture in great volume of finished products previously produced only on a small scale or not at all. These developments greatly increased the difficulty of maintaining accurate measures of physical output and, whereas the total index had reflected most of the rise in output from 1939 to the end of 1941, it understated the rise in 1942 and this year by a substantial amount. As a result of this revision, covering the period since the beginning of 1939, the index has been raised to a level 8 points or 5 per cent higher than the old index in the latter part of 1941 and about 36 points or 18 per cent higher than the old index at the present time. The revised index for July stood at 239 per cent of the 1935-39 average and the indexes for August and September, as indicated on the chart, are estimated at 241 and 243.

The new figures indicate that total output of factories and mines has doubled since the inception of the defense program in June 1940, and has risen 130 per cent since the outbreak of the European war in the summer of 1939. Since the early part of this year the rise in industrial activity has been at a reduced rate as output in leading war industries has risen less rapidly than before and activity in most other industries has declined or shown little change. The wartime rise in industrial production, particularly in manufacturing, has been much greater than the increase in most other major lines of economic activity because war production is largely of an industrial character.

#### GENERAL NATURE OF REVISIONS

Composition of the index, which was first published in 1927, was drastically changed in 1940 and at that time some changes were also made in methods of computation. The present revision largely reflects the insertion of new and revised series, developed from new data which have become available during the past year. Some of these series represent products previously not covered directly and others replace less satisfactory series previously used. Weights have been revised only within groups and only to the extent necessary to take account of the series added. New seasonal adjustment factors have

FEDERAL RESERVE BULLETIN

Note.—The work on this revision has been organized and conducted by Clayton Gehman, John M. Crawford, and Lorman Trueblood, under the general supervision of Frank R. Garfield, head of the Domestic Business Conditions Section of the Division of Research and Statistics. This article has been prepared by Mr. Gehman and Mr. Garfield. In the early stages, Paul Simpson, now an Ensign in the Navy, contributed substantially to the revision.

been computed where necessary. The general method of computing the index is unchanged.<sup>1</sup>

The index is an overall measure of changes in the physical volume of production of manufactures and minerals; it does not cover other types of goods and services and it does not reflect changes in prices. As now revised the index is derived from about 100 individual series, 20 more than heretofore. These 100 series, distributed among 16 groups of manufacturing industries and two groups of mining industries, are listed and described in the table on pages 953-957.

Some of the individual series are based on statistics of monthly output of materials or finished products while other series relate to consumption or shipments of materials, machinery hours active, or man-hours worked. Statistics of man-hours worked in a number of lines are adjusted to allow for broad changes in output per man-hour, as measured by other data not suitable for use in a monthly production index. Many of the other series are also adjusted to more accurate physical volume figures not available monthly, such as census statistics. All principal groups of industries in manufacturing and in mining are directly represented in the index at some stage in the production process.

Peacetime classifications and titles are retained in this revision but for a number of series, especially machinery and transportation equipment, the titles are no longer accurately descriptive of the output of the plants covered.

Discontinuance of the collection of certain benchmark data like those provided by the biennial Census of Manufactures has operated to make problems of measurement more difficult, particularly as to level, and results less accurate. On the other hand, the development of new and

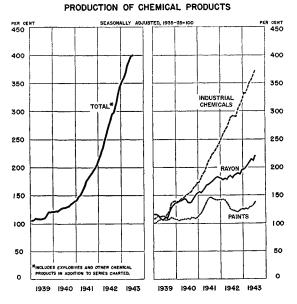

OCTOBER 1943

more comprehensive statistics as a result of the war program has permitted a very considerable improvement in the production series for a number of industries.

This revision brings the index more closely into line with employment and income statistics as now compiled for manufacturing and mining.

#### PRINCIPAL REVISIONS IN SERIES

The upward revision of 36 points in the current level of the index reflects principally sharp revisions in the figures for output in the chemical, transportation equipment, and machinery industries, but there were important

revisions also in certain smaller groups, especially nonferrous metals, rubber products, and petroleum products. The large upward revision in chemicals, previously covered only broadly by a group index of man-hours adjusted to census levels of output through 1937, resulted mainly from the use for recent years of new production data relating to various parts of the group and especially to industrial chemicals and to explosives and ammunition. Adjustment of the old chemicals index for 1939 to a higher level indicated by Census figures for that year contributed to the upward revision of the chemicals index for the entire period.

94<sup>1</sup>

<sup>&</sup>lt;sup>1</sup>Earlier articles in Federal Reserve BULLETINS for recent years dealing with problems relating to the index of industrial produc-tion are listed below. The first four are available as reprints. "New Federal Reserve Index of Industrial Production," by

<sup>&</sup>quot;New Federal Reserve Index of Industrial Production," by Maxwell R. Conklin, August 1940 "Measurement of Production," by Woodlief Thomas and Maxwell R. Conklin, September 1940 "Adjustment for Seasonal Variation," by H. C. Barton, Jr., June 1941 "General Indexes of Business Activity," by Frank R. Garfield,

June 1940 "The Rise in the Federal Reserve Index of Production,"

Cotober 1940 "Revision in the Index of Industrial Production," by Frank R. Garfield and Paul M. Simpson, September 1941 "Industrial Production Index Under War Conditions," July 1942

Higher figures for production in the transportation equipment and machinery industries were the result of study of a variety of information on production in these groups. New more comprehensive employment figures were available and there were also more data to indicate the extent of changes in output per manhour. Revisions in the nonferrous metals index were made possible by new production data. In the rubber products group a man-hour series was substituted for the series on rubber consumption, obsolete as a measure for that group; and in petroleum refining the old series were supplemented by new series and reweighted, chiefly to give proper consideration to aviation gasoline and other special war products of the petroleum refining industry.

The effects of various revisions on the total index are summarized in the table by major groups of industries affected. Revisions are shown in terms of points in the total index.

INDUSTRIAL PRODUCTION INDEX REVISIONS BY MAJOR GROUPS

[Increases over old index in points in total index---decreases indicated by minus signs]

	July 1943	1942 aver- age	1941 aver- age	1940 aver- age	1939 aver- age
Chemical products Transportation equipment Machinery Nonferrous metals	11.1 9.9 8.3 2.1	6.4 4.1 5.2 .7	2.3 1.2 1.2 .2	1.0 .2 .1 .1	.5 .0 .0 .0
Rubber products Petroleum products Stone, clay, and glass Manufacturing arsenals	1.2	1.3 .5 .2	.2 .1 .3 .1	.0 .1 .1 .0	0. 0. 0.
Textiles and products Paper and products Leather products. Metal mining. Food products	.1 .1 2	.2 .1 .1 -1.0	.1 .3 .0 .0 1	.0 .0 .0 .0 1	0. 0. 0. 0.
Total index	35.7	18.4	6.0	1.5	.5

Note.—Revisions in annual level were limited to the years beginning with 1940, except for the chemicals group. The old series for that group showed a decline from 1937 to 1939 whereas a comprehensive physical volume index, developed from the biennial Census of Manufactures by Solomon Fabricant of the National Bureau of Economic Research, showed an increase. It seemed necessary, mainly for the purpose of showing an improved chemical group series, to revise this series upward in 1939 by a substantial amount. With this revision the Board's index of total manufacturing rose 25 per cent from 1935 to 1939 as compared with an increase of 24 per cent shown by Fabricant. The Board's index and declined somewhat more from 1937 to 1939.

These various revisions raised both the durable and nondurable manufactures groups substantially, while for minerals the only change made was a minor one, replacement of iron ore shipment figures by iron ore production data since January 1943.

Revisions of the index were for the most part in series reflecting output for war purposes; the output of customary peacetime products was reasonably well measured by the old index. As a consequence, the revised index shows a larger proportion of industrial production for war purposes than was estimated on the basis of the old index.

It appears that currently about 70 per cent of industrial production is going for war purposes, including munitions and supplies used by the armed forces, exports under Lend-Lease, and also the industrial equipment and materials produced to make these finished products. The remaining 30 per cent of total industrial output constitutes goods produced for civilians; this proportion of the present greatly enlarged output, however, represents as much as 70 per cent of average production for civilians in 1935-39.

The table on pages 944 and 945 summarizes all revisions made at this time in individual series and groups, except for changes in seasonal adjustment factors. New seasonal factors are shown on pages 959–962.

All series—new, revised, and unrevised—that can be individually published are shown back to January 1939 in tables on pages 964–984. Major groupings of the series, expressed as points in the total index, are shown for the same period in a table on page 963. The series are all described briefly on pages 953–957, in a table which shows the basic data and their sources, the relative importance of each series in the base period, the daily average base, and the year in which the series first appears in the index.

Several of the new series, such as those for production of explosives and aluminum, can not be published at this time for reasons of national security. New series will be shown separately, however, for industrial chemicals and a number of other products.

All important new and revised series not con-

fidential are shown through July in the accompanying charts.<sup>2</sup>

#### Measurement of Peacetime and Wartime Production

The problem of developing accurate over-all measures of changes in output, especially of fabricated products, was difficult enough during peacetime. The great volume of new, highly processed products turned out during the war has very considerably increased that problem. Also, during peacetime the displacement of old plant and equipment by more efficient facilities and the development of new industries and processes were relatively gradual from year to year and changes in total industrial capacity were small over short periods.

Even then continuous attention had to be given to the production index to maintain and improve its accuracy. It was necessary to adjust current sample data to comprehensive benchmark data and to take account, in the construction of the index, of industries previously not adequately represented, developing new methods of current measurement where they yielded more accurate results. After the comprehensive 1940 revision, however, the adjustments necessary under peacetime conditions would have been relatively small, at least over short periods. The most important new technique developed at that time was the direct measurement of activity in fabricating industries by means of man-hour data adjusted to levels of production indicated by various available measures of production. This practice has in fact proved very useful under war conditions, providing a much better representation of the growth in such activity than would have resulted from continued use of production and consumption of data on materials.

Another of the special devices introduced at that time to maintain the current accuracy of the index was the use of allowances estimated in advance for regularly recurring adjustments required by various series. For example, allowances were often made for anticipated changes in coverage of sample series, and, in the case of series based currently on man-hours worked, for probable changes in output per man-hour. These techniques developed for peacetime conditions have proved essential, but they have not been adequate to maintain the production index without large revision in even a short period of sweeping wartime changes in the economy.

In wartime the urgency of expanding production is greater than in peacetime and, as a result, productive processes, particularly for critical products, are much more quickly reorganized. Existing plant is more fully utilized and plant capacity is rapidly increased. Mass production methods are extended to new products with all that that involves in the way of standardization of products, a breakdown of labor tasks, and specialized plant operations.

In addition to these influences of war, particularly this war, in stimulating as much production as possible with all available resources, there has been a special influence affecting the basic composition of industrial production. The war program has greatly accelerated the general drift in our industrial economy toward greater output of highly processed goods. The finished products of war are generally more complex and more highly fabricated than peacetime products so that actually there is much more processing activity per unit of material consumed. For the greater part war products are designed to perform complex functions and to operate under extremely difficult and varied conditions. Manufacturing standards are set high, and inspections are more rigorous than they generally are for peacetime products. War products are designed to take as little space as possible and to be as light as possible in view of the functions to be performed. All this means use of higher grade materials and a great deal more fabrication. Moreover, conservation of materials has been stimulated by shortages, contributing to the higher indicated amount of fabrication per unit of material used.

<sup>&</sup>lt;sup>2</sup> This broad revision of the index has made necessary a new edition of Federal Reserve Chart Book II, which will show all series not confidential. This will probably be available about the end of this year. The price will be the same as that charged heretofore, \$1.00 per copy.

#### Types of Wartime Revisions

The changes wrought by the huge expansion in war production since the last revision of the Board's index, announced in the September 1941 BULLETIN, have affected the adequacy of previous measures of output in three important ways. In the first place, the building of so much new manufacturing capacity for the production of finished war products and critical materials, some of which were previously unimportant and not directly represented in the index, has made certain of the old measures obsolete; and time has been required to develop new series or revised

SUMMARY OF OCTOBE	1943 CHANGES IN INDUSTRI	AL PRODUCTION SERIES
-------------------	--------------------------	----------------------

Series	Date revision began	Changes made in series (Sources and descriptions shown in table on pp. 953–957)
Industrial Production—Total	Jan. 1939	See durable and nondurable manufactures and minerals.
Durable Manufactures	Jan. 1939	Revisions made in machinery, manufacturing arsenals, all transportation equipment series, copper fabricating, lead refining, and tin consumption. New series added for smelting and refining aluminum, magnesium, and tin; for manufacture of various products in the stone, clay, and glass group; and for aluminum and magnesium fabricating.
Machinery	Jan. 1939	Revisions made in Federal Reserve adjusted man-hour series partly to take account of new data on employment described in January 1943 Federal Reserve BULLETIN, p. 13.
Manufacturing Arsenals and Depots	Jan. 1939	Same as machinery. Confidential.
Transportation Equipment	Jan. 1939	All series revised.
Aircraft	Jan. 1939	Similar to machinery, but Federal Reserve adjustments for man-hour series revised considerably. Confidential beginning January 1942.
Automobiles	Jan. 1939	Same as machinery.
Railroad cars	Jan. 1939	Same as machinery. Confidential beginning January 1942.
Locomotives	Jan. 1939	ditto
Shipbuilding	Jan. 1939	Same as aircraft. Series for private shipyards confidential, beginning January 1942.
Nonferrous Metals and Products	Jan. 1939	New and revised series for aluminum, copper, lead, magnesium, and tin. Weights for series revised and the "other" special series discontinued.
Smelting and refining	Jan. 1939	New series added for aluminum, magnesium, and tin; and lead series changed.
Lead refining	Jan. 1939	New series for refinery lead production supersedes former series on receipts of lead ore at smelters. Confidential beginning June 1942.
Aluminum	Jan. 1939	New series added for primary aluminum production. Confidential.
Magnesium	Jan. 1939	New series added for primary magnesium production. Confidential.
<b>Tin</b>	Apr. 1942	New series for domestic production of refined tin from foreign ores. Confidential.
Fabricating	Jan. 1939	New subgroup includes old series for lead and zinc shipments; revised series for copper and tin; and new series added for aluminum and magnesium fabricating.
Copper products	Jan. 1942	Revised series based on shipments of copper products by processors. Confidential.
Aluminum products	Jan. 1939	New series added on shipments of aluminum products by processors. Confidential.
Magnesium products	Jan. 1939	New series added on shipments of magnesium products by processors. Confidential.
Tin consumption	Jan. 1939	Revised Federal Reserve series excluding tin consumed in the manufacture of tin plate and terneplate. Confidential.
Stone, Clay, and Glass Products	Jan. 1939	New Federal Reserve series added for clay products, gypsum and plaster products, and abrasive and asbestos products; also for other stone and clay products (not published). Weights for all series revised and "other" special series discontinued.
Glass products	Jan. 1939	New subgroup combining glass containers and plate glass.
Clay products	Jan. 1939	New Federal Reserve series, monthly changes estimated from man-hour data.
Gypsum and plaster products	Jan. 1939	ditto
Abrasive and asbestos products	Jan. 1939	ditto

Nore.—Other changes made in series prior to October 1943 and since the 1941 revision have been as follows: new confidential series for "industrial alcohol produced in the beverage industry" included in the nondurable manufactures group and total index; and subgroups computed for "metals other than gold and silver," "woolen and worsted yarn" and "coal." Automobile factory sales series dropped beginning December 1941 and weight transferred to automobile bodies, parts and assemblies series. In this revision same change made for period beginning January 1939.

#### **REVISION OF INDUSTRIAL PRODUCTION INDEX**

measures to replace or supplement the old. For example, as regards new series, comparable monthly reports on production of aluminum and magnesium and their primary products began to be available only about a year ago; and after the current reporting of these production data had been placed on a regular basis, it was necessary to develop comparable annual data for earlier years back to 1935 and monthly estimates for a considerable period. The new series so derived are now being introduced into the index beginning with January 1939. They

Series	Date revision began	Changes made in series (Sources and descriptions shown in table on pp. 953-957)
Nondurable Manufactures	Jan. 1939	Revised series for leather, silk, "other manufactured foods," paperboard containers petroleum refining, chemicals, and rubber products.
Textiles and Products	May 1940	Revised silk series.
Textile fabrics	May 1940	ditto
Nylon and silk consumption.	May 1940	New Federal Reserve series compiled by adding estimated nylon yarn consumption to old series for silk deliveries. Confidential.
Leather and Products	Jan. 1939	New series added for sheep and lamb leather production.
Leather tanning	Jan. 1939	New series added for sheep and lamb leather production and weight of goat and kid leather series reduced.
Sheep and lamb leathers	Jan. 1939	New series.
Manufactured Food Products	Jan. 1939	New series added for processed fruits and vegetables, confectionery, and other food products formerly covered by "other manufactured foods" series. Revised wheat flour series.
Wheat flour	Dec. 1942	Revised series based on more comprehensive production data.
Other manufactured foods	Jan. 1939	New Federal Reserve subgroup based on new series shown below.
Processed fruits and vegetables	Jan. 1939	New Federal Reserve series, monthly changes estimated from man-hour data.
Confectionery	Jan. 1939	New Federal Reserve series based on pounds of candy sold by manufacturers.
Other food products	Jan. 1939	New Federal Reserve series, monthly changes estimated from man-hour data.
Paper and Paper Products	Mar. 1940	Revised paperboard container series.
Paperboard containers	Mar. 1940	Federal Reserve series for paperboard production substituted for old series on paper- board container production.
Petroleum and Coal Products	Jan. 1939	Revised petroleum refining subgroup.
Petroleum refining	Jan. 1939	New series added for "other" petroleum products previously not adequately repre- sented. Weights revised for regular petroleum products.
Other petroleum products	Jan. 1939	New Federal Reserve series. Confidential.
Chemical Products	Jan. 1939	New Federal Reserve series developed for paints; soap; rayon; industrial chemicals; explosives and ammunition; and other chemical industries (not published). Note that new group index is higher than old index in 1939; index published for 1938 and earlier years is not entirely comparable.
Paints	Jan. 1939	New Federal Reserve series, monthly changes estimated from man-hour data.
Soap	Jan. 1939	ditto
Rayon	Jan. 1939	ditto
Industrial chemicals	Jan. 1939	New Federal Reserve series, monthly changes estimated from man-hour data. Con fidential.
Explosives and ammunition	Jan. 1939	New Federal Reserve series, monthly changes estimated from man-hour data. Con- fidential.
Rubber Products	Mar. 1941	New Federal Reserve series based on man-hour data.
Minerals	Jan. 1943	Revised series for iron ore.
Metals	Jan. 1943	ditto
Metals other than gold and silver	Jan. 1943	ditto
Iron ore	Jan. 1943	New series for iron ore production substituted for former series on iron ore shipments

See note on opposite page.

#### October 1943

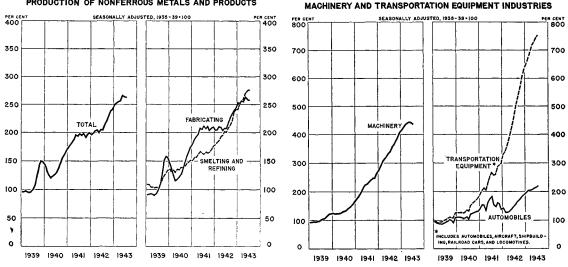

contributed to improvement in both the smelting and fabricating components of the nonferrous metals group, for which new figures are shown in the chart.

Improving the accuracy of various existing series, relating for the most part to fabricated products, presented more important difficulties than the introduction of series for new materials. A number of the series for fabricated products were based upon current data for man-hours worked in particular industries with adjustments for estimated changes in output per man-hour. The reporting of basic employment data for these series was greatly complicated by the building of new plants, the conversion of old plants, and the entrance of new companies into manufacturing. All these developments made it much more difficult to maintain adequate coverage and comparability, requiring considerable revisions when later and more complete reports were compiled. These new data published in December 1942, with some revisions later, showed employment had increased more than previous figures had indicated in several important manufacturing lines, especially in the automobile industry and in other industries of the transportation equipment group. In certain important branches of the chemical industry,

also, current reports for a time did not show the full rise in man-hours worked.

The new Bureau of Labor Statistics employment figures, used in this revision, are adjusted to the 1939 Census of Manufactures and include for major industrial groups special adjustments to more comprehensive data provided by Social Security records. At the present time these latter adjustments have been carried through using final data for 1941 and preliminary data through the second quarter of 1942. As later benchmark data become available, final adjustments to the levels of 1942 and subsequent periods will be incorporated in the Bureau's employment statistics.

In the second place, the upward adjustments made earlier for estimated changes in output per man-hour proved to be considerably too small for some industries because of the substantial increases in efficiency accompanying the rapid growth of these industries to large-scale operations with new facilities. This was particularly true for the aircraft and shipbuilding industries. Consequently large upward revisions were required in these productivity adjustment factors. Determination of new factors for the war period was complicated by the fact that employment data necessarily continued to be reported by

PRODUCTION IN THE MACHINERY AND TRANSPORTATION EQUIPMENT INDUSTRIES

FEDERAL RESERVE BULLETIN

plants classified in particular industries according to the principal prewar product; while information becoming available on war production was reported on the basis of finished war products---whether manufactured in new plants or in old, in one industry or many.

Finally, some series not involving the use of man-hour data were invalidated by conversion of existing plants to new products after the United States entered the war. Rubber consumption, for example, no longer was even reasonably satisfactory as the principal measure of activity at factories in the rubber products group. In this revision a series based on man-hours worked in plants in the rubber products industry was introduced at the level reached by the old series in the early part of 1941.

In some instances, like refined petroleum products, the former series were too low owing to a combination of several wartime influences. In the exceptional case of chemicals there was the additional factor that the preliminary production data for 1939, to which the current series were linked, proved to be considerably too low.

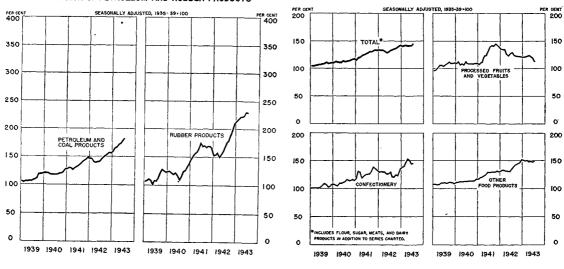

Meanwhile, collection of new types of industrial data and improvement in coverage of reports for some industries has made possible the introduction of new measures of activity for certain industries not mainly engaged in war production, as in the case of manufactured food products.

While the revision was under way, the opportunity was taken also to revise various seasonal adjustment factors. Seasonal variation has been greatly reduced or eliminated in some industries during the war years by such factors as the exceptional volume of demand and various Federal production regulations. Seasonal factors were revised in September 1941 and February 1943 to take account of these changes. In the present revision all the seasonally adjusted series have been reviewed again and revised where necessary.

Owing to the greatly increased need for speed in output and growing shortages of labor, workweeks have been extended and there has not been the usual observance of holidays. Some of these changes had already been allowed for, however, and it seemed hardly worth while to undertake further revisions at this time.

#### Further Revisions in War and Early Postwar Periods

Further revisions of the index for the war period should be small—but not too much reliance should be placed on forecasts of this sort.

PRODUCTION OF PETROLEUM AND RUBBER PRODUCTS

PRODUCTION OF MANUFACTURED FOOD PRODUCTS

OCTOBER 1943

New war plant construction has been largely completed and so have conversions. Also, the advantages of large-scale operations have been achieved in considerable part. With the economy now closer to its over-all limits of manpower, materials, and plant capacity than two years ago, much less actual expansion in total industrial output can be expected. Also, there has been an improvement in the current data available and in the technique of currently estimating industry and group totals from some of the sample series used in compiling the index. The principal developments that may affect the accuracy of the index in the near future and call for further revision will be such changes as occur in the amount of physical output per man-hour apart from those for which allowances are made. It is not likely that extensive improvements in basic production and employment data, which have contributed greatly to the current revision, will be so important again in the near future. Further intensive study will be necessary, however, as new current production data become available in such lines as textiles and paper and as new benchmark data are compiled, particularly when another Census of Manufactures is taken. Such study will relate to the weighting of various series as well as to the series themselves.

It is expected that the revised measures of output adopted at this time and earlier to measure war production will provide a more accurate index during the period of industrial conversion to peacetime production than would have existed otherwise. But at best only certain of the problems that will arise with important new developments in economic affairs or in statistical information can be taken care of in advance and in due course it will be necessary again to make revisions. Already it is evident that there will be important classification problems which it is not possible to handle in advance at this time. Also, present estimates of changes in productive efficiency for some important lines of activity must be regarded as tentative for the recent past as well as the near future until a review of the

changes over a longer period can be made and until some of the classification problems are clarified and more comprehensive data on physical volume of output are assembled and integrated.

#### Special Problems in Measuring Wartime Output

The revised index of total industrial production is still a less accurate measure in wartime than in peacetime, and many of the group and individual indexes have lost much of their usual meaning because of the widespread shifts that have occurred in the type of manufactured goods produced in plants grouped together in the statistics. It is confusing, for example, to have a series entitled automobile production when more than half of the products covered by it currently are aircraft, aircraft parts, guns and other products not manufactured by the industry in peacetime.

It is, moreover, difficult to judge how much output of war products in an industry corresponds to a given output of peacetime products. This problem of changing products exists to some degree in peacetime as the composition of output shifts within an industry, but the changes are far greater in the transition from peace to war production. Shifts occasioned by the widespread transition to manufacture of different products are extremely complex, with marked changes in the types and proportion of materials used and especially in the amount of processing applied to these materials. There is no wholly satisfactory way of showing what happens to production (value added in terms of constant prices) as industry goes on a wartime basis.

The problem of changing products is particularly important in the metal fabricating industries. Figures on the consumption of metals, even if available for the various metal fabricating industries, would be far from accurate in many cases as a measure of processing activities, particularly because these figures would give no clue to the extent of changes in the amount of processing per unit of material. Actually such

information on consumption generally is not available for measuring current changes or determining production levels in particular lines. In some cases, however, as in the nonferrous metals group, measures reflecting consumption are available, appear to be reasonably accurate as measures of fabrication in certain stages of manufacture, and are used in the index.

A more direct measure of processing activity is provided by man-hour figures and these figures are now available in more accurate and detailed form than ever before. In general—not in every case—workers of fairly similar skills are employed in an industry in the transition to war production and it is possible to make rough estimates of the changes in productivity arising from changed conditions. It is easy to see the difficulties involved in such estimates even when all collateral information on production is taken into account; it is difficult to suggest alternative methods of measuring production where shifts from peacetime to wartime products are great.

The primary aim, where man-hour data are used, is to make an independent determination of production for various periods and to use manhours to interpolate. For simplicity's sake the ratios between the man-hours and these determinations of level have been described as productivity adjustments. Continuous attention has been given both in peacetime and wartime to the problem of determining changes in output per man-hour. Current information on this point is much better in some lines than in others and consequently certain of the adjustments for productivity are fairly accurate while others are only very rough approximations. These problems are discussed somewhat further in a later section.

Data on value added by manufacture, used in the calculation of weights to be assigned in combining the various series, relate to the prewar situation (1937) and are, like some of the old series, less satisfactory for wartime use. One of the difficulties is that rapid increases in efficiency, mainly in industries where output has risen sharply, are likely to lead to decreases in value added per unit of the new items, relative

OCTOBER 1943

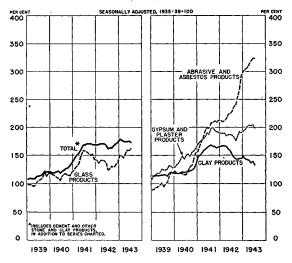

to the other items, thus creating problems as to the appropriateness of the weights. There are, however, certain offsetting developments such as more rapid increases in average hourly wage payments in some of these rapidly expanding industries. Further consideration of weight problems will be necessary later, when more information becomes available, but probably will not affect the level of the total index very significantly.

#### Selective Use of Adjusted Man-Hour Data

In this revision use of adjusted man-hour series to show current monthly changes in production in various fabricating industries has been continued and even increased somewhat; it should be noted, however, that in more lines than before, adjustment to benchmark production data can now be made quarterly or annually so that dependence on man-hour data has in some respects been diminished rather than increased. Previously, adjusted man-hour data were used to measure current monthly changes for series which in 1935-39 represented 32 per cent of the total index and by June 1943 accounted for 50 per cent of the index. This rise reflected the fact that the most rapidly growing industries generally were covered by man-hour series. In the revised index the corresponding percentage for the current period is 58. For the most part the higher share covered currently by adjusted manhour data, 58 per cent as compared with 50 per cent, reflects greater upward revisions in the adjusted man-hour series than in other series, but in part it is due to inclusion of new man-hour series for the rubber products group and for part of the stone, clay, and glass group.

The use of adjusted man-hour data has been continued, and extended somewhat, simply because such series seem to provide the best available measures of current activity in the industries concerned. It is believed that the defects of such data have been overemphasized in some discussions and that the limitations of alternative measures have not been sufficiently recognized. Questions have arisen partly because of misunderstanding as to how the man-hour data have been handled in constructing the adjusted man-hour series included in the index.

Man-hour data have been used in many cases just to show month-to-month movements in series whose level has been determined wholly or in large part by other measures of production. For the new rayon series in the index, data on filament yarn and staple fiber output were available only by quarterly periods; so monthly manhour data were used to interpolate. For a number of other series, including processed fruits and vegetables and abrasive and asbestos products, adequate production data were available only for annual periods. In the case of industrial chemicals annual output figures were used for early periods in deriving the new series shown in the index and since the latter part of 1941 quarterly data have been reported and used in the determination of levels to which man-hour figures were adjusted. For still other series benchmark production data are scanty, in part because there was no biennial Census of Manufactures for 1941, and more basically because of difficulties in measurement of production of fabricated products.

PRODUCTION OF STONE, CLAY, AND GLASS PRODUCTS.

In a few cases man-hour data have been used without any adjustment for level where the changes that they show seem to be reasonable. One such use was in the new series for clay products. Here, in the absence of over-all production figures for pottery products since 1939, unadjusted monthly man-hour figures for the pottery industry were combined with adjusted monthly man-hour figures for various structural clay products. Also, no adjustments were made in the man-hours figures used in representing activity in the rubber products group since the early part of 1941. After the factories in this industry converted to war production they were making such a diverse list of new products that their output could hardly be summarized in the usual terms. Figures on the value of the industry's shipments of manufactured products were subject to conflicting interpretation for this purpose, partly because they were reported on a corporate rather than a plant classification basis. It is anticipated that when synthetic or natural rubber becomes available in sufficient quantities so as to permit the production of customary rubber products on a large scale, adjustments for the man-hour series can be determined on a better basis or another type of measurement can be used for this industry.

Whenever man-hour data have been used the basic aim has been to represent physical production of goods, not the lapse of workers' time. The so-called "productivity factors" are really adjustment factors used to relate current monthly man-hour data to levels of output determined on the basis of all available information relating to production. At times these factors show changes which represent technical adjustments to reconcile man-hour and production figures and are not related to any changes in industry itself.

In carrying forward the adjusted man-hour series currently it is necessary to accept temporarily the new levels they indicate, but checks can be made from time to time against other data that may be available, such as those relating to the number of units of major products completed, value of shipments, consumption of materials and the like, to see whether the series are getting far out of line. It may be noted,

however, that in each case the aim is to measure the production process as a whole rather than the initial processing of materials or the final assembly of finished products; and in the checking process due allowance must be made for differences in timing of fluctuations at different stages of the production process.

To the extent that man-hours are used simply to determine monthly changes for production data, which are adequate except that they are available only quarterly, or annually, or even less often, the only question is whether the timing of the production process is properly represented. In cases where the production process is long—as in shipbuilding, for example—man-hours are more accurate for measuring current changes in activity than are data on completions. Man-hour figures are also especially useful in indicating current changes in output where an industry produces a wide variety of products, particularly if they are not highly standardized.

In using man-hour figures one of the first problems is to select from various series available for similar lines the most appropriate for estimating month-to-month changes in production series whose level has been established as indicated. Often annual data on the output of a number of products are assembled and a weighted annual production series is derived. Then monthly changes are estimated for this series on the basis of man-hour data which appear to be most representative. The man-hour series used may be based on data for a single industry or for a composite of several industries. In other instances, because of the lack of correspondingly detailed or comprehensive data, there is little choice as to the series to be used.

As indicated earlier in this section, questions as to the comparability of man-hours for industry or product coverage from one period to another are not quite as decisive as has sometimes been thought in appraising the accuracy of production series in which they are used, because production levels are determined as far as possible on the basis of other information. Nevertheless, it is important in developing

OCTOBER 1943

monthly series and carrying series forward that man-hour data used for these purposes should be reasonably comparable for short periods.

In connection with the use of man-hour data, it should be noted that the man-hour figures and the allowances for changes in output per manhour are applicable to particular industries. The question then is not how output per man-hour varies in manufacturing as a whole, but how it varies in shipyards or in the aircraft industry or in the automobile industry. That problem is difficult enough, but at least it is more tangible than the question of productivity at large. The greatest difficulties arise where there is a large amount of conversion. The automobile industry is a case in point and there little allowance has been made for increased productivity. For the shipbuilding and aircraft industries the allowances are considerably larger although still less than 25 per cent since the base period, 1935-1939. The allowance for the machinery industry, which includes production of aircraft engines, is also fairly substantial. In some of the lines where satisfactory production data are available on a quarterly or annual basis, indicated increases in productivity are very large, as in the case of industrial chemicals; in others little change is shown. In general, the industries showing no increase or some decline in productivity are lines in which little new equipment has been installed or special circumstances prevail; and they can not be regarded as typical of all manufacturing or of that part of manufacturing represented in the index by adjusted manhour data.

Second, the question is one of output per manhour, not one of labor productivity. Output per man-hour may increase because existing equipment is more fully utilized; because more modern machinery is installed; because a new management arranges the flow of materials more evenly; because products are standardized; because transport and other factors outside the plant contribute to smoother functioning of operations; because more skilled workers are employed; because those on the job work harder. All these and more factors may contribute to increases in output per man-hour, and the number of developments that may lead to decreases in output per man-hour is also large. In times such as these, more inexperienced workers are employed; hours are lengthened, sometimes to a point where average output per hour is reduced; temporary bottlenecks due to lack of materials or component parts appear; in some instances there is hoarding of labor; changes in design may disrupt the continuous flow of materials and parts so requisite to the success of mass production technique; and where there is extensive conversion output of new products may involve less use of factors of production other than labor. To arrive at adjustment factors solely by assessing and combining each of these factors for each industry would be difficult indeed and to draw conclusions from estimates of any one or two factors would not yield very good results. But it is possible, at least in some lines, to make the sort of checks discussed earlier

with regard to production and then to consider the possible reliability of the results indicated for output per man-hour under the circumstances prevailing in a particular industry.

In peacetime the record of the past offers considerable guidance and the changes in output per man-hour to be dealt with are generally fairly small and somewhat similar in related industries. In wartime the problems are much more difficult. The past is a less reliable guide and changes are both large and varied. It may be that a reluctance to show too much change from past conditions has had an influence on the results of this revision; if so, it is probably in the direction of showing too little rather than too much rise in output per man-hour, as was the case in some of the preliminary figures worked out in 1940 for 1939 and later years. In any event the upward revision in the index at this time is due largely to the use of new data in determining levels of production.

952

		[As revised	October 19	943]
Series*	Propor- tion of total index in 1935-1939	Daily average base	Initial date of series in index	Source and description**
Industrial Production-Total	100.00			
Manufactures—Total	84.80			
Durable Manufactures	37.93			
Iron and Steel Pig iron	11.00 1.70	85,000 net tons	1919	American Iron and Steel Institute, production of pig iron includ- ing ferromanganese and spiegel.
Steel				Computed by using the following series and weights: open hearth steel (4.27) and electric steel (.60).
Open hearth steel	8.70	125,333 net tons	1919	American Iron and Steel Institute, production of open hearth and Bessemer steel ingots and steel for castings.
Electric	.60	2,198 net tons	1940 <sup>1</sup>	American Iron and Steel Institute, production of electric steel ingots and steel for castings.
Machinery	10.81	(8)	1923	Based on man-hour data for electrical machinery, other machinery, and aircraft engine industries and for ordnance industries not elsewhere represented in the production index. Adjustments for estimated changes in output per man-hour based on biennial index of output of machinery industries estimated from Census of Manufactures data. (Description of method may be ob- tained from Division of Research and Statistics.) Beginning in 1940 adjustments extrapolated by use of machinery manu- facturers' shipments, aircraft engine production, and other benchmark data.
Manufacturing Arsenals and Depots	( <sup>8</sup> )		1939	Based on estimated man-hours in U.S. Government manufactur-

Based on estimated man-hours in U. S. Government manufactur-ing arsenals and depots. Adjustments for estimated changes in output per man-hour same as machinery. Confidential. 1939

Based on man-hour data; employment figures adjusted for recent periods. Adjustments for changes in output per man-hour estimated from confidential production or delivery data in terms of various units of measurement, as compiled by war agencies; and also by use of confidential studies relating man-hours worked to comparable output statistics. Before 1940 adjust-ments were estimated from Census of Manufactures and other benchmark data. Confidential after 1941. 19321

1919	Based on man-hour data for factories in the automobile industry
	group, adjusted for changes in output per man-hour by use of
	National Research Project and Bureau of Labor Statistics
	studies. Before 1935: Bureau of Census, automobile factory
	sales. Computed by using a daily average base of 15,107 pas-
	senger cars and trucks, and weight of 4.79. 1935-1938: man-
	hour series for automobile bodies, parts and assembly industry
	assigned a weight of 4.31; remainder of weight (.48) assigned
	to automobile factory sales series.
1923	Based on man-hour data. Adjustments for changes in output

per man-hour before 1940 estimated from general measures of productivity for manufacturing industries compiled by Na-tional Research Project and Bureau of Labor Statistics; adjust-ments extrapolated for recent years from general data for mu-nitions and metal-working industries. Confidential after 1941. Same as railroad cars. Confidential after 1941. (<sup>2</sup>) 1923 (2) 1923 (2)

Same as aircraft except that before 1940 adjustments for changes in output per man-hour estimated similarly to those for railroad cars. Confidential after 1941. Based on man-hour data for ship construction and ordnance work and part of ship service and repair activity in U.S. Navy yards. Before 1940 adjustments for changes in output per man-hour estimated similarly to those for railroad cars. Adjust-ments for recent years estimated similarly to those for aircraft and private shipbuilding. Confidential. 1935

Before 1939: Computed by using the following series and weights: nonferrous metal smelting (.41), copper deliveries (.44), lead shipments (.15), zinc shipments (.21), tin consumption (.20), and "other" (1.40). Latter series derived by adjusting the total of the individual series in this group to the general level shown by Census of Manufactures data for the group.
Before 1939: Computed by using the following series and weights: copper smelting (.21), lead production (.07), and zinc smelt-ing (.13). Nonferrous Metals and Products<sup>4</sup>. 2.81 Smelting and refining... .81 ing (.13). Current: Copper Institute, total mine and smelter production and custom intake of U. S. duty-free copper. Monthly figures Aug.-Dec. 1939 estimated. Before July 1933: Based on data from American Bureau of Metal Statistics and unpublished figures. Confidential after May 1942. Copper smelting... .36 2.027 net tons 1919

\* Certain of the titles, which are based on 1937 Census of Manufactures, are not accurately descriptive of wartime activities.
 \*\* Series derived by Federal Reserve unless otherwise noted. Estimates and adjustments referred to were made by Federal Reserve. Bureaus listed as sources (except American Bureau of Metal Statistics and Hughes Statistical Bureau) are in United States Government agencies. Man-hour figures in recent years compiled by Federal Reserve from Bureau of Labor Statistical Bureau) are in United States Government agencies. Man-hour figures 'Monthly figures available only from date shown. Unpublished monthly estimates used to obtain group and total indexes for years back to 1923.
 \* Bases are shown only for those series for which indexes can be computed directly from regularly published data.
 \* Gonfidential. For method of including activity in manufacturing arsenals and Government shipyards in group and total indexes, see description in Federal Reserve BULLETIN for September 1941, p. 880.
 \* Proportions of total index shown for component parts of this group are approximate.

Series*	Propor- tion in 1935–1939	Daily average base	Initial date in index	Source and description**
Nonferrous Metals and Products-Cont.				
Smelting and refining—Continued Lead refining	.12	1,273 net tons	1921	Current: American Bureau of Metal Statistics, production of refined lead from domestic and foreign ore and secondary material. Before 1939: Lead production, same series as used for her in mineral memory of the leafer Merican.
Zinc smelting	.23	1,391 net tons	1920	for lead in minerals group. Confidential after May 1942. American Zinc Institute, output of slab zinc of all grades, includ- ing production from foreign ores beginning Jan. 1940. Confi- dential after May 1942.
Aluminum	.11	(2)	1939	Current: War Production Board, production of primary
Magnesium	.004	(2)	1939	Current: War Production Board, production of magnesium. 1935-1939: Bureau of Mines, annual figures before 1939 based on quantities sold or used. Monthly figures estimated for 1939 and 1940. Confidential.
Tin	( <sup>3</sup> )	(2)	1942	War Production Board, domestic production of refined tin from foreign ores beginning Apr. 1942. Confidential.
Fabricating <sup>4</sup> Copper products	2.00 .92	(*)	1923	Current: War Production Board, shipments of fabricated copper products by wire mills, brass mills, foundries, and other copper processors. Aug. 1933-1941: Copper Institute, deliveries of U. S. duty-free refined copper for domestic consumption, in- cluding deliveries of foreign copper for domestic consumption beginning Mar. 1941. Monthly figures AugDec. 1939 esti- mated. Before Aug. 1933: American Bureau of Metal Statistics. Three-month moving average placed at last month for period
Lead shipments	.28	1,623 net tons	1929 <sup>1</sup>	before 1942. Confidential after 1941. American Bureau of Metal Statistics, shipments of domestically refined lead. Beginning Oct. 1940, adjusted to include imports for consumption of pig lead. Three-month moving average placed at last month. Confidential after 1941.
Zinc shipments	.41	1,683 net tons	1923	placed at last month. Condential after 1941. American Zinc Institute, domestic shipments of slab zinc. Three-month moving average placed at last month. Confiden- tial after May 1942.
Aluminum products.	.21	(2)	1939	Current: War Production Board, shipments of aluminum products fabricated from primary and secondary metal. 1935-1941: Annual forures based on Bureau of Mines data: monthly for
Magnesium products	.004		1939	ures estimated from man-hour data. Confidential. Current: War Production Board, shipments of magnesium products fabricated from primary and secondary metal. 1935- 1941: Annual figures based on Bureau of Mines data for appa- rent consumption of primary magnesium metal; monthly fig
Tin consumption	18	140.95 long tons	1919	rent consumption of primary magnesium metal; monthly fig- ures estimated. Confidential. Current: War Production Board, domestic consumption of primary and secondary tin, adjusted to exclude tin used in tin- plate and terneplate. 1939-1941: Bureau of Mines, monthly figures for 1939 estimated. 1935-1939: American Bureau of Metal Statistics, total tin consumption. Before 1935: Com- modity Exchange, Inc., deliveries of tin, three-month moving average placed at last month. Confidential after 1941.
Lumber and Products Lumber	4.39 2.90		1919	Based on board feet cut by major regions estimated from data published by the National Lumber Manufacturers Association and regional lumber associations. Adjusted by use of Census of Manufactures and other benchmark data. (Description may be obtained from Division of Research and Statistics.)
Furniture	1.49		1923	Based on man-hour data for furniture industry. Adjustments for changes in output per man-hour estimated from National Research Project and Bureau of Labor Statistics data.
Sione, Clay, and Glass Products <sup>4</sup>	3.00			Before 1939: Computed by using the following series and weights cement (.40), bricks (.12), glass containers (.35), plate glass (.12), and "other" (2.01). Latter series derived by adjusting the total of the individual series in this group to the leve shown by Census of Manufactures data for the group. Brick series based on Bureau of Census data and prior to 1933 American Face Brick Association data also used. Adjusted to Census of Manufactures data.
Glass products Plate glass	.98 .21	546,900 sq. ft.	1923	Hughes Statistical Bureau (formerly Plate Glass Manufacturers
Glass containers	.77	(2)	1925 <sup>1</sup>	of America), production of polished plate glass. Based on Glass Container Association data on total shipments o
Cement Clay products	.54 .62	291,700 barrels ( <sup>2</sup> )	1919 1939	glass containers. Adjusted to Census of Manufactures data Bureau of Mines, production of finished Portland cement. Annual figures based on weighted indexes of (1) output of brick and tile, estimated from Bureau of Census data; (2) output o clay refractory products, estimated from Bureau of Mine data; and (3) man-hours worked in the pottery industry Monthly changes estimated from man-hour data for brick
Gypsum and plaster products	.25		1939	tile, and terra-cotta and for pottery industries. Annual figures based on weighted indexes of output of the gyp sum, lime, wallboard, and mineral wool industries, estimate from Bureau of Mines data. Monthly changes estimated from man-hour data for above industries.
Abrasive and asbestos products	.30		1939	Annual figures based on weighted index of output of abrasiv materials, estimated from Bureau of Mines data; and on inde of man-hours worked in the asbestos products industry Monthly changes estimated from man-hour data for abrasiv
Other stone and clay products	.31		1939	wheels and asbestos products industries. Based on man-hours worked in the stone, clay, and glass product group not elsewhere represented in the index. Adjustment for changes in output per man-hour estimated on the basis o selected data for related series. Unpublished.

Nondurable Manufactures	46.87			
Textiles and Products Textile fabrics	11.22			Computed by using the following series and weights: cotton con- sumption (2.92), rayon deliveries (.77), nylon and silk consump- tion (.84), and wool textiles (1.82).
Cotton consumption .	4.78	26,069 bales	1919	Bureau of the Census, cotton consumed in running bales, round
Rayon deliveries.	2.06	( <sup>2</sup> )	1923	Bureau of the Census, cotton consumed in running bales, round as half bales, and foreign in equivalent 500-pound bales. Based on a weighted average of rayon filament yarn and staple fiber. Derived from Textile Economics Bureau, Inc. data deliveries to mills by domestic producers, plus imports for con
Nylon and silk consumption	1.00		1919	<ul> <li>deliveries to mills by domestic producers, plus imports for consumption. Three-month moving average placed at last month Current: Based on consumption of nylon yarn and raw silk estimated from confidential data. Before May 1940: Silk deliveries only. Reported by Commodity Exchange, Inc., 1934-1941, and National Federation of Textiles, Inc., and Silk Association of America for earlier periods, adjusted to exclude re-exports Three-month moving average placed at last month with a daily average base of 1,641 bales. Confidential after 1941.</li> <li>Computed by using the following series and weights: carpet woo consumption (.29), apparel wool consumption (.16), woolen and worsted yarn (.77), and woolen and worsted cloth (.60).</li> </ul>
Wool textiles.				Computed by using the following series and weights: carpet wooi consumption (.29), apparel wool consumption (.16), woolen and worsted varn (.77). and woolen and worsted cloth (.60).
Carpet wool consumption.	.29	375,700 pounds	1919	Bureau of the Census, raw wool consumed (scoured basis), carpet class—free foreign wools.
Apparel wool consump- tion	.16	1,100,800 pounds	1919	Bureau of the Census, raw wool consumed (scoured basis), apparel class-domestic and duty paid foreign wools.
Woolen and worsted yarn Woolen yarn	.77 .45	( <sup>2</sup> )	1919	Based on Bureau of the Census data on number of woolen spin- ning spindle hours operated. Adjusted for estimated changes
Worsted yarn.	.32		1919	in output per active spindle hour. Based on Bureau of the Census data on number of worsted spin- ning spindle hours operated. Adjusted for estimated changes
Woolen and worsted cloth.	2.16		1919	in output per active spindle hour. Based on Bureau of the Census data on number of broad loom hours operated. Adjusted for estimated changes in output per active loom hour.
Leather and Products Leather tanning	2.28 .92		1	Before 1939: Computed by using the following series and weights
Cattle hide leathers.	.54	85,140 hides	1922	cattle hides (.54), calf and kip (.16), and goat and kid (.22). Current: Tanners Council of America. Before May 1932: Bureau
Calf and kip leathers	.16	52,230,skins 169,000 skins	1922 1922	of the Census. ditto
Goat and kid leathers. Sheep and lamb leathers. Shoes	.13 .09 1.36	141,000 skins 1,585,000 pairs	1922 1939 1919	ditto Tanners Council of America. Current: Bureau of the Census, production of boots, shoes, and slippers, other than rubber. Before 1921 estimated.
Manufactured Food Products . Wheat flour	10.92 .53	350,300 barrels	1919	Food Research Institute, Stanford University. Currently based
Cane sugar meltings.	.23	17,888 net tons	1 <b>91</b> 9	Food Research Institute, Stanford University. Currently based on <i>The Northwestern Miller</i> and Bureau of Census data. Current: Bureau of Agricultural Economics. Before 1935: Based on Willett & Gray weekly figures.
Manufactured dairy products. Butter	1.07 .33	4,616,000 pounds	1923	U. S. Department of Agriculture, factory production of creamery
Cheese	.07	1,818,300 pounds	1923	butter (including whey butter). U. S. Department of Agriculture, factory production of all cheese excluding cottage, not and bakers' cheese
Canned and dried milk.	.18	9,238,000 pounds	1923	b. S. Department of Agriculture, lactory production of an cheese excluding cottage, pot, and bakers' cheese. Based on U. S. Department of Agriculture data on factory production of all canned, dried, and concentrated milk products. Adjusted to include factory production of cottage, pot, and bakers' cheese. Currently estimated from reports on production of evaporated and condensed milk (case goods) and se lested dried milk products.
Ice cream	.49	689,400 gallons	1923	lected dried milk products. U. S. Department of Agriculture, production of ice cream in wholesale plants. Currently estimated from International Asso- ciation of Ice Cream Manufacturers data on sales by United States producers.
Meat packing Pork and lard	1.15	20,910,000 pounds	1919	U. S. Department of Agriculture, dressed weight of animals slaughtered under Federal inspection. Adjustments for cer tain periods in years 1933-36 to include slaughtering under Fed eral emergency programs.
Beef. Veal	.43 .06	17,226,000 pounds 2,187,000 pounds	1919 1919	ditto
Lamb and mutton		2,473,000 pounds	1919 1919 1923	ditto ditto Before 1939: Based on man-hour series for baking, beet sugar canning and preserving, confectionery, and all other manufac tured food industries not elsewhere represented in the index Adjustments for changes in output per man-hour estimate from biennial production data compiled by the National Bureau of Economic Research.
Processed fruits and vege- tables	1.43		1939	Current: Annual figures based on weighted indexes of output of canned, frozen, and dehydrated vegetables; canned, frozen and dried fruits; and canned fruit juices estimated from con fidential data compiled by Bureau of Foreign and Domesti Commerce and Bureau of Agricultural Economics. Monthly changes estimated from man-hour data for canning and pre serving industry. 1935-1939: Annual figures estimated from Census of Manufactures data and other sources.

For footnotes, see p. 953.

## October 1943

Paper Paperboard	2.16 .72	(*)	1919	Same as groundwood through Dec. 1933 and National Paperboard
Fine paper	.24	(2)	1919	Association data 1934 to date. Adjusted to Bureau of Censu data. Based on Federal Trade Commission data through May 1923 American Paper and Pulp Association data since May 1923
Printing paper	.44	(2)	1923	Adjusted to Bureau of Census data. Same as fine paper.
Tissue and absorbent paper	.21	( <sup>2</sup> ) ( <sup>2</sup> ) ( <sup>2</sup> )	1923	ditto
Wrapping paper Newsprint	.46 .09	8	1919 1919	ditto Based on Federal Trade Commission data through May 1923 Newsprint Service Bureau data since May 1923.
Paperboard containers.	.64	(²)	1923	Current: Same series as used for paperboard. Before Mar. 194 based on production of paperboard containers estimated from National Container Association data, 1933-Feb. 1940, and Paperboard Industries Association data, 1923-1933.
nting and Publishing		(*)	1919	American Newspaper Publishers Association data. Adjustment
Printing paper production	3.22	(3)	1923	in most back years. Same series described in paper and paper products group.
Petroleum and Coal Products Petroleum refining	1.86			Before 1939: Computed by using the following series and weights gasoline (1.16), fuel oil (.41), lubricating oil (.20), and kero sene (.09).
Gasoline Fuel oil Lubricating oil Kerosene.	(3) (3) (3) (3)	1,464,300 barrels 1,176,300 barrels	1919 1919	Bureau of Mines. ditto
Lubricating oil Kerosene	(3) (3)	87,600 barrels 169,900 barrels	1919 1919	ditto ditto

For footnotes, see p. 953.

Series*	Propor- tion in 1935–1939	Daily average base	Initial date in index	Source and description**
Petroleum and Coal Products—Cont. Petroleum refining—Continued Other petroleum products.	(3)	(2)	1939	Based on weighted index of refinery output of aviation gasolin and of miscellaneous finished products. Aviation gasoline 1939-Nov. 1941, Census of Manufactures and Bureau J Mines beginning in Dec. 1941, monthly figures estimated from confi dential data. For computation of petroleum refining inde refinery output of gasoline adjusted to exclude aviation gaso
Coke Byproduct coke Beehive coke	.28 .27 .01	110,900 net tons 4,420 net tons	1919 1919	line. Miscellaneous finished products: Bureau of Mines. Bureau of Mines. ditto
Chemical Products <sup>4</sup> .	6.27		1923	Before 1939: Based on man-hours worked in the chemical product group adjusted to annual levels of production estimated from
Paints.	.78		1939	National Bureau of Economic Research data. Annual figures based on output of paint estimated from data c sales of paint manufacturers, Bureau of the Census; consum tion of fats and oils in paint, Bureau of Agricultural Econom ics; and pigments used in paint, Bureau of Mines. Month
Soap.	.45		1939	changes estimated from man-hour data for paint industry. Annual figures based on output of soap estimated from quarterl data on manufacturers' sales of soap, Association of America Soap and Glycerin Producers; and data on consumption of fa and oils in soap, Bureau of Agricultural Economics. Monthl
Rayon.	.60	(²)	1939	changes estimated from man-hour data for soap industry. Based on weighted indexes of quarterly output of rayon filamer yarn and staple fiber, Textile Economics Bureau, Inc. Monthl
Industrial chemicals	1.71	(*)	1939	changes estimated from man-hour data for rayon industry. Based on weighted indexes of output of chemicals in the "chemi cals not elsewhere classified," group of the 1939 Census of Manufactures, plastic materials, crude and intermediate coo tar products, and compressed and liquefied gases. Annual fig ures estimated from confidential data compiled by U. S. Tari Commission, War Production Board, Bureau of Foreign an Domestic Commerce, and Bureau of the Census. Quarterl figures from the latter source, available for recent periods, als used. Monthly changes estimated from man-hour data fo
Explosives and ammunition	(3)	(2)	1939	"chemicals" and compressed gases industries. Based on man-hour data for the explosives, small-arms ammuni tion and fireworks industries adjusted to annual productio
Other chemical products	(3)	(?)	1939	levels estimated from confidential data, War Production Board Based on the following unpublished weighted production indexes with monthly changes estimated from selected man-hour data (1) drugs and cosmetics—annual output of drugs estimate from drug wholesalers' sales and inventories, Bureau of th Census, and man-hours worked in the perfume and cosmetic industry; (2) cottonseed oil, cake, and meal and other relate oil seed products, Bureau of the Census; (3) fertilizer—annua figures based on data for fertilizer consumption, Nationa Fertilizer Association, and production of fertilizer materials Bureau of the Census and United States Potash Institute (4) other chemical products group not elsewhere represented i the index, with adjustments for changes in output per man hour based on other chemical series. Unpublished.
Rubber Products	1.39		1925 <sup>1</sup>	Current: Based on man-hour data for rubber products group wit no adjustment for changes in output per man-hour. Befor Mar. 1941: Computed using the following series (compiled b Rubber Manufacturers Association), weights, and daily averag bases: rubber consumption—including one-half of reclaime rubber—(1.25), 2,129 long tons; pneumatic tires (.12), 201,30 casings; and inner tubes (.02), 192,300 tubes.
Minerals—Total	15.20			
Fuels. Coal. Bituminous coal. Anthracite. Crude petroleum.	13.01 4.31 3.44 .87 8.70	1,300,000 net tons 168,400 net tons 3,206,000 barrels	1919 1919 1919	U. S. Solid Fuels Administration, bituminous coal and lignite. Bureau of Mines, Pennsylvania anthracite. Bureau of Mines, domestic production of crude petroleum.
Metals	2.19 1.27			
Iron ore	.59	142,049 net tons	1919	Current: Bureau of Mines, production of total usable iron ore Before 1943: Based on Lake Superior Iron Ore Association dat
Copper.	.44	1,761 net tons	1919	for iron ore shipments from United States upper lake ports. Same as copper smelting, adjusted to exclude custom intake o secondary copper. Confidential after May 1942
Lead	.12	1,066 net tons	1921	Same as copper simplify, adjusted to exclude custom intake of secondary copper. Confidential after May 1942. American Bureau of Metal Statistics, recoverable lead content of domestic ore receipts by United States smelters. Confider
Zinc	.12	1,545 net tons	1920	tal atter Apr. 1942. Current: Bureau of Mines, mill output of zinc concentrates i terms of recoverable zinc. Before 1941: Monthly changes esti mated from American Zinc Institute data on production o domestic slab zinc; Bureau of Mines annual figures. Confiden
Gold	.72	( <sup>2</sup> )	1932 <sup>1</sup>	tial after 1941. Based on data from American Bureau of Metal Statistics sinc 1932 and on data from Bureau of the Mint in earlier years
Silver	. 20	157,200 fine ounces	1921	Three-month moving average placed at second month. American Bureau of Metal Statistics, domestic production o commercial silver bars, 999 fine. Three-month moving aver age placed at second month from Jan. 1932 to date.

For footnotes, see p. 953.

<sup>1</sup> No allowance made; basic series refer, mainly, to week ending nearest 15th of month.
 <sup>2</sup> These are approximations for the industry as a whole. In the actual calculations the allowances used differ somewhat as between regions.
 <sup>3</sup> The additional holidays in February and November are Feb. 12 (Lincoln's Birthday) and Nov. 11 (Armistice Day). For Good Friday a full day allowance is made in nylon and silk consumption and a half day in rayon deliveries.
 <sup>4</sup> The allowances shown are approximations for 1942 and vary fractionally from time to time. The holiday observed in April is April 1 (Eight Hour Day)

In the allowances shown are approximated by  $1.2 \pm 1.0 \pm 1.$

## INDUSTRIAL PRODUCTION—SEASONAL ADJUSTMENT FACTORS FOR RECENT YEARS

\* Constant of 100 beginning in this month. <sup>1</sup> These series are composites of individual series, for which separate seasonal adjustment factors are computed and used. The factors shown are derived by dividing the index for the composite series, without seasonal adjustment, by the corresponding seasonally adjusted index. NOTE.—This table shows all factors revised since the publication of "Seasonal Adjustment Factors for New Federal Reserve Index of Industrial Pro-duction" in December 1941.

#### INDUSTRIAL PRODUCTION—SEASONAL ADJUSTMENT FACTORS FOR RECENT YEARS—Continued [As revised October 1943]

possessions, June 30, 1943, Dec. 31, and June 30, 1942	1031							

Tables on the following pages include the principal available statistics of current significance relating to financial and business developments in the United States. The data relating to the Federal Reserve Banks and the member banks of the Federal Reserve System are derived from regular reports made to the Board; index numbers of production are compiled by the Board on the basis of material collected by other agencies; figures for gold stock, money in circulation, Treasury finance, and operations of Government credit agencies are obtained principally from statements of the Treasury, or of the agencies concerned; data on money and security markets and commodity prices and other series on business activity are obtained largely from other sources. Back figures may in most cases be obtained from earlier BULLETINE and from Annual Reports of the Board of Governors for 1937 and earlier years.

September 1943

## MEMBER BANK RESERVES, RESERVE BANK CREDIT, AND RELATED ITEMS

[In millions of dollars]

<sup>1</sup> Includes industrial advances shown separately in subsequent tables. <sup>2</sup> End of month and Wednesday figures estimated. NOTE.—For description of figures in this table and discussion of their significance, see BULLETIN for July 1935, pp. 419–429. Reprints of article, together with available back figures, may be obtained upon request. Back figures are also shown in Annual Report for 1937 (tables 3 and 4) and for excess reserves in BULLETIN for August 1935, pp. 499–500.

<sup>1</sup> Rates shown also apply to advances secured by obligations of Federal Intermediate Credit Banks maturing within 6 months. NOTE.—Maximum maturities for discounts and advances to member banks are: 15 days for advances secured by obligations of the Federal Farm Mort-gage Corporation or the Home Owners' Loan Corporation guaranteed as to principal and interest by the United States, or by obligations of Federal Inter-mediate Credit Banks maturing within 6 months; 90 days for other advances and discounts made under Sections 13 and 13a of the Federal Reserve Act (except that discounts of certain bankers' acceptances and of agricultural paper may have maturities not exceeding 6 months and 9 months respectively); and 4 months for advances under Section 10(b). The maximum maturity for advances to individuals, partnerships, or corporations made under the last paragraph of Section 13 is 90 days.

#### FEDERAL RESERVE BANK BUYING RATES ON BILLS

[Per cent per annum]

Maturity	Rate on	In effect be-	Previous
	September 30	ginning	rate
Treasury bills <sup>1</sup> Bankers' acceptances: <sup>2</sup>	3/8	Apr. 30, 1942	_
1- 90 days	3⁄4	Oct. 20, 1933	1
91-120 days		do	1
121-180 days		do	1¼

1 Established rate at which Federal Reserve Banks stand ready to buy 11 Treasury bills offered. 2 Minimum buying rates on prime bankers' acceptances. all

#### MEMBER BANK RESERVE REQUIREMENTS [Per cent of deposits]

	Net d	lemand de	posits <sup>1</sup>	Time deposits
	Central reserve city banks	Reserve city banks	Country banks	(all member banks)

<sup>1</sup> Gross demand deposits minus demand balances with domestic banks (except private banks and American branches of foreign banks) and cash items in process of collection.

#### MARGIN?REQUIREMENTS<sup>1</sup> [Per cent of market value]

Prescribed by Board of Governors of the Federal Reserve System in accordance with Securities Exchange Act of 1934	Apr. 1, 1936- Oct. 31, 1937	Effective Nov. 1, 1937
For extensions of credit by brokers and dealers on listed securities, under Regulation T For short sales, under Regulation T For loans by banks on stocks, under Regulation U	55 3 <sup>(2)</sup> 355	40 50 40

<sup>1</sup> Regulations T and U limit the amount of credit that may be extended on a security by prescribing a maximum loan value, which is a specified percentage of its market value at the time of the extension; the "margin requirements" shown in this table are the difference between the market value (100%) and the maximum loan value. <sup>2</sup> Requirement under Regulation T was the margin "customarily re-quired" by the broket. <sup>3</sup> Regulation U became effective May 1, 1936. NOTE.—Regulations T and U also provide special margin requirements on "omnibus" accounts and loans to brokers and dealers.

Including loans made in participation with financing institutions.
 Rate charged borrower less commitment rate.
 Rate charged borrower.
 May charge same rate as charged borrower by financing institution, if

lower. <sup>6</sup> Financing institution is charged ¼ per cent on undisbursed portion of

#### MAXIMUM RATES: ON TIME DEPOSITS

Maximum rates that may be paid by member banks as established by the Board of Governors under provisions of Regulation Q

[Per cent per annum ]

	Nov. 1, 1933–	Feb. 1, 1935-	Effective
	Jan. 31, 1935	Dec. 31, 1935	Jan. 1, 1936
Savings deposits Postal savings deposits Other deposits payable:	3 3	21/2 21/2	21/2 21/2
In 6 months or more	3	$2\frac{1}{2}$	21/2
In 90 days to 6 months.	3	$2\frac{1}{2}$	2
In less than 90 days	3	$2\frac{1}{2}$	1

NOTE.—Maximum rates that may be paid by insured nonmember banks as established by the F. D. I. C., effective Feb. 1, 1936, are the same as those in effect for member banks. Under Regulation Q the rate payable by a member bank may not in any event exceed the maximum rate payable by State banks or trust companies on like deposits under the laws of the State in which the member bank is located.

<sup>1</sup> Includes any banks in outlying sections of reserve cities which have been given permission to carry the same reserves as country banks. All reserve cities have a population of more than 15,000. <sup>2</sup> The series published through April 1943 included interbank deposits. The amount of such deposits for the current month at all country banks can be derived by comparison with the first table above; banks in the small centers held 216 million dollars during the last half of April 1943. Figures in this table include war loan deposits, shown separately for all country banks in table above.

<sup>p</sup> Preliminary. <sup>1</sup> Weekly figures of excess reserves of all member banks and of country banks are estimates.

<sup>P</sup> Preliminary. <sup>f</sup> Figure carried forward.
<sup>A</sup> Annual figures are estimates of the United States Mint. Monthly figures are those published in table on p. 1035, adjusted to exclude Philippine Islands production received in United States.
<sup>2</sup> Figures based on rate of \$20.67 a fine ounce in January 1934, and \$35 a fine ounce thereafter.
<sup>3</sup> Includes gold in the Inactive Account amounting to 27 million dollars on Dec. 31, 1936, and 1,228 million on Dec. 31, 1937.
<sup>4</sup> The net gold import figures for months subsequent to December 1941 have not been released for publication.
<sup>5</sup> Gold held under earmark at Federal Reserve Banks for foreign account amounted to 3, 225.1 million dollars on Aug. 31, 1943. NOTE.—For back figures through 1937, see Annual Report for 1937 (table 29).

1 National series for which bank debit figures are available beginning

<sup>1</sup> National series for which dank debit ugures are avanable beginning with 1919. <sup>2</sup> Figure for 1929 includes 128 centers; for 1937-1942 annual figures include 133 centers; monthly figures include 193 centers. Nore. – See p. 717 of August 1943 BULLETIN for description of revision beginning with May 1942. *Back figures*.—Annual Report for 1937, p. 157. Annual totals, beginning with 1919, by Federal Reserve districts and for individual centers, are available for distribution and will be furnished upon request.

#### ALL BANKS IN THE UNITED STATES

Comprises all national banks in the continental United States and all State commercial banks, trust companies, mutual and stock savings banks and such private and industrial banks as are included in abstracts issued by State banking departments. Also includes, during the period June 1934-June 1935, private banks which, pursuant to the provisions of sec. 21 (a) of the Banking Act of 1933, submitted condition reports to the Comptroller of the Currency. Under the amended provision of sec. 21 (a) private banks no longer report to the Comptroller of the Currency. For comparative figures of private banks included in the figures from June 1934 to December 1935, see Federal Reserve BULLETIN for December 1935, p. 883, and July 1936, p. 535. Figures for nonmember banks are for dates indicated or nearest thereto for which figures are available.

Corrected.

<sup>6</sup> Corrected. <sup>1</sup> Prior to December 1933, member bank figures include interbank deposits not subject to immediate withdrawal, which aggregated \$103,000,000 on that date. Prior to June 1940, the nonmember bank figures on some call dates included some interbank deposits not shown separately in a few State bank abstracts. <sup>2</sup> Includes, beginning June 30, 1941, two mutual savings banks in Wisconsin and one in Indiana. <sup>3</sup> One bank (with deposits, excluding interbank deposits, of \$90,000,000 and total loans and investments of \$96,000,000 on Dec. 30, 1939) which, up to and including Dec. 30, 1939, was classified as a mutual savings bank, is now included in figures in the "Other nonmember banks" column. <sup>4</sup> Prior to December 1938 the figures include loans and investments indirectly representing bank premises or other real estate, now reported sepa-rately in condition reports. The amounts of such loans and investments in December 1938 were approximately \$50,000,000 and \$100,000,000, respec-tively.

<sup>1</sup> torely in controls reports a resonance of the second se

[Member firms of New York Stock Exchange. Ledger balances in millions of dollars]

\* Estimated. Complete reports now collected semiannually; monthly figures for three items estimated on basis of reports from a small number of

<sup>•</sup> Estimated. Complete reports now collected semianneary, monthly against to three terms defined and the reporting firms (1) of member firms of New York Stock Exchange and other national securities exchanges and (2) of firms' <sup>•</sup> Includes money borrowed from banks and also from other lenders (not including member firms of national securities exchanges). <sup>•</sup> Nore.—For explanation of these figures see "Statistics on Margin Accounts" in BULLETIN for September 1936. The article describes the method by which the figures are derived and reported, distinguishes the table from a "statement of financial condition," and explains that the last column is not to be taken as representing the actual net capital of the reporting firms. *Back figures.*—See BULLETIN for March 1938, p. 196, and (for data in detail) Annual Report for 1937 (table 69).

<sup>1</sup> Monthly and weekly data are averages of daily figures, except for municipal bonds and for stocks, which are based on Wednesday figures. <sup>2</sup> Prices derived from average of yields on all outstanding partially tax-exempt U. S. Government bonds due or callable in more than 12 years on basis of a 2% per cent, 16-year bond. Prices expressed in decimals. <sup>3</sup> Prices derived from averages yields, as computed by Standard and Poor's Corporation, on basis of a 4 per cent 20-year bond. <sup>4</sup> Prices derived from averages of median yields, as computed by Standard and Poor's Corporation. <sup>6</sup> Standard and Poor's Corporation. <sup>6</sup> Prices derived from averages of median yields on noncallable high-grade stocks on basis of a \$7 annual dividend. <sup>7</sup> Average daily volume of trading in stocks on the New York Stock Exchange. *Back figures.*—For United States Government bonds, see November 1940 BULLETIN; for municipal bonds, see Annual Report for 1937 (table 79).

<sup>1</sup> Estimates of new issues sold for cash in the United States. <sup>2</sup> Gross proceeds are derived by multiplying principal amounts or number of units by offering price.
 <sup>3</sup> Estimated net proceeds are equal to estimated gross proceeds less cost of flotation, i.e., compensation to underwriters, agents, etc., and expenses.
 <sup>4</sup> Includes repayment of other debt and other purposes. Source.—Data published by Securities and Exchange Commission. For a description of data, see pp. 217-19 of the March 1942 BULLETIN.

<sup>\*</sup> Revised.
<sup>\*</sup> "Net profits" and "net income" refer to income after all charges and taxes and before dividends.
<sup>\*</sup> Class I line-haul railroads.
<sup>\*</sup> Series excludes American Telephone and Telegraph Company, the greater part of whose income consists of dividends received on stock-holdings in the 32 companies. Dividend payments shown here include amounts paid to parent companies, as well as to the public.
<sup>\*</sup> After all charges and taxes except Federal income and excess profits taxes.
<sup>6</sup> Quarterly dividend data are not available for all companies in the group and, therefore, do not add to the yearly totals shown.
<sup>6</sup> Not available.
<sup>7</sup> Partly estimated.
<sup>8</sup> Unlike other industrial groups in this table, deductions for Federal income and excess profits taxes in the first three quarters of 1942 were at rates specified in the Revenue Act of 1941. Most of the increase in taxes for the year is therefore reflected in the fourth quarter figure. Sources.—Interstate Commerce Commission for relearl Communications for Federal Communications for the fourth quarter figure.
Sources.—Interstate Companies. Figures for the current and preceding year subject to revision, especially for war producers whose contracts are under renegotiation. For description of data and back figures, see pp. 214-217 of the March 1942 BULLETIN.

Figures include only holdings by institutions or agencies from which reports are received; the number reporting varies slightly from month to month.
 Figures in column headed "other" include holdings by nonreporting banks and insurance companies as well as by other investors. Estimates of total holdings (including relatively small amounts of nonmarketable issues) by all commerical banks, all mutual savings banks, and all insurance companies for certain dates are shown in the table above.
 1 On July 31, 1943, commercial banks reporting to the Treasury held \$18,939,000,000 of United States Government securities due or callable within one year out of a total of \$36,083,000,000 outstanding.
 2 Including \$196,000,000 of Postal Savings and prewar bonds not shown separately below.

P Preliminary. \* Average per working day. \* Revised. \* Estimated. 1 Department of Commerce series on value of payments to individuals.
 \* Revised series. For description and back figures see pp. 940-984. For unrevised indexes by groups or industries see pp. 1014-1017.
 \* Based on F. W. Dodge Corporation data; for description, see p. 358 of BULLETIN for July 1931; by groups, see p. 1020 of this BULLETIN.
 \* The unadjusted indexes of employment and pay rolls, wholesale commodity prices, and cost of living are compiled by or based on data of the Bureau of Labor Statistics. Figures prior to 1939 for factory employment and pay rolls and nonagricultural employment are adjusted to level through 1937; the 1938 figures and the 1939 base period averages applied to earlier data are preliminary. Figures since 1939 are adjusted to Social Security data. Non-agricultural employment covers employment see pp. 1022-1023 of this BULLETIN.
 \* For sales comparisons by cities and by departments see pp. 1022-1023 of this BULLETIN.
 \* Buck figures in BULLETIN.—For industrial production, August 1940, pp. 825-882 and September 1941, pp. 933-937; for factory employment and pay-rolls, October 1938, pp. 839-866, February 1941, p. 166, and January 1943, p. 13; for department store sales, October 1938, p. 918, and January 1941, p. 65.

<sup>7</sup> Revised.
 <sup>9</sup> Preliminary.
 <sup>\*</sup> Included in total and group indexes but not available for publication separately.
 <sup>1</sup> Beginning in January 1942 includes industrial alcohol produced in the alcoholic beverage industry. Figures not available for publication separately.

## INDUSTRIAL PRODUCTION, BY INDUSTRIES-Continued

<sup>\*</sup> Revised. <sup>\*</sup> Preliminary. <sup>\*</sup> Included in total and group indexes but not available for publication separately.
 <sup>1</sup> Includes also paperboard container production held constant, on a seasonally adjusted basis, at 128 since July 1940 when figures were last reported.
 <sup>2</sup> Includes also printing paper production shown under "Paper."
 Norz.—For description and back figures see BULLETIN for September 1941, pp. 878-881 and 933-937, and August 1940, pp. 753-771 and 825-882.

<sup>\*</sup>Revised. Nore.—Figures for August 1943 are preliminary. Indexes for major groups and totals have been adjusted to final data for 1941 and preliminary data for the second quarter of 1942 made available by the Bureau of Employment Security of the Federal Security Agency. Back data and data for industries not here shown are obtainable from the Bureau of Labor Statistics. Underlying figures are for pay roll period ending nearest middle of month and cover wage earners only. FEDERAL RESERVE BUILLETIN

<sup>7</sup> Revised. Seasonal adjustment factors revised for the series indicated: coal, May 1941; coke, January 1941; grain, January 1939; livestock, June 1939; ore, January 1939; miscellaneous, January 1939. Back figures may be obtained from the Division of Research and Statistics. Nore.—For description and back data, see pp. 529-533 of the BULLETIN for June 1941. Based on daily average loadings. Basic data compiled by Associa-tion of American Railroads. Total index compiled by combining indexes for classes with weights derived from revenue data of the Interstate Commerce Commission.

Nore.—Group totals include sales in departments not shown separately. Figures for basement store are not strictly comparable with those for main store owing chiefly to inclusion in basement of fewer departments and somewhat different types of merchandise. The ratio of stocks to sales is obtained by dividing stocks at the end of the month by sales during the month and hence indicates the number of months' supply on hand at the end of the month in terms of sales for that month.

<sup>P</sup> Preliminary.
 <sup>\*</sup> Revised.
 <sup>\*</sup> Includes repair and modernization loans.
 <sup>\*</sup> An estimated total of noninstalment consumer loans; i.e., single-payment loans of commercial banks and loans by pawnbrokers.
 <sup>\*</sup> An estimated total of noninstalment consumer loans; i.e., single-payment loans of commercial banks and loans by pawnbrokers.
 <sup>\*</sup> Norte.—National estimates of consumer short-term credit for the period from January 1929 through August 1942 were prepared by the Bureau of Foreign and Domestic Commerce, United States Department of Commerce, and published in the November 1942 issue of the Survey of Current Business with a description of sources of data and methods of estimation.
 <sup>\*</sup> Matter estimates, comparable with those formerly published by the Department of Commerce, were made at the Board of Governors of the Federal Reserve System.

<sup>1</sup> Banks are classed according to the reserves which they are required to carry (see p. 988). Some banks classed as "country banks" are in outlying sections of reserve cities or central reserve cities, and some banks classed as "reserve city banks" are in outlying sections of central reserve cities. Figures for each class of banks include assets and liabilities of their domestic branches, whether located within or outside the cities in which the parent banks are located. <sup>2</sup> Demand deposits other than interbank and United States Government, less cash #tems reported as in process of collection.

Gold reserves of central banks and governments	1034
Gold production	1035
Gold movements	1035
Net capital movements to United States since January 2, 1935	1036
Central banks 1037-	-1040
Money rates in foreign countries	1041
Commercial banks	1042
Foreign exchange rates	1043
Price movements:	
Wholesale prices	1044
Retail food prices and cost of living	1045
Security prices	1045

Tables on the following pages include the principal available statistics of current significance relating to gold, international capital transactions of the United States, and financial developments abroad. The data are compiled for the most part from regularly published sources such as central and commercial bank statements and official statistical bulletins; some data are reported to the Board directly. Figures on international capital transactions of the United States are collected by the Federal Reserve Banks from banks, bankers, brokers, and dealers in the United States in accordance with the Treasury Regulation of November 12, 1934. Back figures may in most cases be obtained from earlier BULLETINS and from Annual Reports of the Board of Governors for 1937 and earlier years.

<sup>P</sup> Preliminary. <sup>†</sup> Revised. <sup>e</sup> Corrected.
 <sup>1</sup> Beginning April 1940, reports on certain Argentine gold reserves no longer available.
 <sup>2</sup> Change from previous December due largely to inclusion of gold formerly not reported.
 <sup>3</sup> On May 1, 1940, gold belonging to Bank of Canada transferred to Foreign Exchange Control Board. Gold reported since that time is gold held by Minister of Finance.
 <sup>4</sup> Figures relate to last official report dates for the respective countries, as follows: Greece—Mar. 31, 1941; Java—Jan. 31, 1942; Norway—Mar. 30, 1940; Poland—July 31, 1939; Yugoslavia
 <sup>6</sup> Figures for December 1936 and December 1937 are those officially reported on Aug. 1, 1936, and Apr. 30, 1938, respectively.
 <sup>6</sup> Figures for December 1936 and December 1937 are those officially reported on Aug. 1, 1936, and Apr. 30, 1938, respectively.
 <sup>6</sup> Figures for December 1941; beginning Mar. 29, 1941, gold reserves no longer reported separately.
 <sup>7</sup> These countries are: Albania, Algeria, Australia, Austria through Mar. 7, 1938, Belgian Congo, Bolivia, China, Costa Rica beginning July 1943, Danzig through Aug. 31, 1939, Ecuador, El Salvador, Sicura Rica beginning for certain of these countries have been carried forward from last previous official report.
 <sup>8</sup> Gold holdings of Bank of England reduced to nominal amount by gold transfers to British Exchange Equalization Account during 1939.
 <sup>9</sup> Beginning December 1940, figure also includes gold reserves of new Central Bank only.
 <sup>10</sup> Beginning December 1940, figure also includes gold reserves of National Bank of Costa Rica.

NOTE.—For description of table and back figures see BULLETIN for September 1940, pp. 925-934 and pp. 1000-1007; details regarding special internal gold transfers affecting the reported figures through April 1940 appear on p. 926 in that issue.

Gold production in U. S. S. R.: No regular Government statistics on gold production in U. S. S. R. are available, but data of percentage changes irregularly given out by officials of the gold mining industry, together with certain direct figures for past years, afford a basis for estimating annual production as follows: 1934, 135 million dollars; 1935, 158 million; 1936, 187 million; 1937, 185 million; 1938, 180 million. <sup>P</sup> Preliminary. <sup>F</sup> Figure carried forward. <sup>T</sup> Revised. <sup>1</sup> Annual figures through 1940 are estimates of U. S. Mint; annual figure for 1941 based on estimates of American Bureau of Metal Statistics. <sup>2</sup> Beginning April 1941, figures are those reported by American Bureau of Metal Statistics. <sup>3</sup> Beginning May 1940, monthly figures no longer reported. Annual figure for 1940 estimated at three times production for first four months of the year. <sup>4</sup> Includes Philippine Islands production received in United States. Annual figures are estimates of United States Mint. Monthly figures represent estimates of the American Bureau of Metal Statistics, those for 1942 having been revised by adding to each monthly figure \$359,634 so that aggregate for 1942 is equal to annual estimate for the year compiled by Bureau of Mint in cooperation with Bureau of Mines. <sup>5</sup> Figures for Canada beginning 1943 are subject to official revision. <sup>6</sup> Beginning April 1942, figures no longer reported. Annual figure for 1942 is rough estimate based on reported production of \$7,809,000 in first three months of year.

<sup>6</sup> Beginning April 1942, agues no longer reported. Annual agare to be the state of

" Revised.

July 31....

July 31. Aug. 31. Sept. 30. Oct. 31. Nov. 30. Dec. 31.

June 30.

1943—Jan. 30... Feb. 27... Mar. 31... Apr. 30... May 29... June 30.

<sup>7</sup> Revised.
 <sup>1</sup> This category made up as follows: through Sept. 21, 1938, funds held by foreign central banks at the Federal Reserve Bank of New York; beginning Sept. 28, 1938, also funds held at commercial banks in New York City by central banks maintaining accounts at the Federal Reserve Bank of New York; beginning July 17, 1940, also funds in accounts at the Federal Reserve Bank of New York; beginning july 17, 1940, also funds in accounts at the Federal Reserve Bank of New York; beginning with the new series commencing with the month of July 1942, all funds held with banks and bankers in the United States by foreign central banks and by foreign central governments and their agencies (including official purchasing missions, trade and shipping missions, diplomatic and consular establishments, etc.).
 <sup>2</sup> Reported figures for capital movement through July 1 have been adjusted to represent the movement through June 30 on the basis of certain significant provements known to have occurred on July 1. Subsequent figures are based upon new monthly statistical series. For further explanation, see BULLETIN for January 1943, p. 98.
 <sup>3</sup> Revised figures for amounts outstanding in millions of dollars: official funds—Apr. 30, 2,424.0, May 29, 2,489.2, and other funds—Apr. 30, 1,933.6, 'A mounts outstanding onJune 30, in millions of dollars: total foreign banking funds in United States, 4,669.8, including official funds, 2,689.0, and other funds, 1,980.9; United States banking funds abroad, 238.6; and brokerage balances (net due "foreigners") 35.3.
 NOTE—Statistics reported by banks, bankers, brokers, and dealers. Data by countries and geographic areas through December 1941, have been published in earlier BULLETINS for all types of capital movement in the above table (except columns 3 and 4), and for outstanding short-term liabilities of capital movement in the above table (except columns 3 and 4), and for outstanding short-tem liabilities of capital movement in

<sup>1</sup> Aug. 01. <sup>1</sup> Job 1939, 27 Job 1939, valued at legal parity of 85 shillings a fine ounce; thereafter at market price, which fluctuated until Sept. 6, 1939, when it was officially set at 168 shillings per fine ounce.
 <sup>2</sup> Securities and silver coin held as cover for fiduciary issue, the amount of which is also shown by this figure.
 <sup>3</sup> Notes issued less amounts held in banking department.
 <sup>4</sup> On Jan. 6, 1939, 200 million pounds stering of gold (at legal parity) transferred from Bank to Exchange Equalization Account; on Mar. 1, 1939, about 5.5 million pounds (at current price) transferred from Exchange Account to Bank; on July 12, 1939, 20 million pounds transferred from Exchange Account.
 <sup>5</sup> Fiduciary issue increased by 50 million pounds on June 12, 1940, Apr. 30, Aug. 30, and Dec. 3, 1941, and Apr. 22 and July 28, 1942; by 70 million pounds on Apr. 13, 1943.
 <sup>6</sup> Securities maturing in two years or less.
 <sup>7</sup> Includes notes held by the chartered banks, which constitute an important part of their reserves.
 <sup>8</sup> On May 1, 1940, gold transferred to Foreign Exchange Control Board in return for short-term Government securities (see BULLETIN for July 1940, pp. 677-678).
 Nore. —For further explanation of table for Bank of England see BULLETIN for February 1931, pp. 81-83. The headings in the table for the Bank of Canada correspond to the items in that Bank's statements.

<sup>c</sup> Corrected. <sup>1</sup> Separate figures for National Bank of Belgium not available. The Bank of Issue of Brussels was founded by the German Military Administration on June 27, 1940; it has no note issue, drawing its resources principally from advances from the National Bank and deposits by the Postal Checking Office. <sup>2</sup> Latest month for which report is available for this institution. <sup>3</sup> For last available reports from the central banks of Bulgaria (January 1943) and Egypt (December 1942), see BULLETIN for July 1943, p. 697; and from Greece (March 1941), see BULLETIN for March 1942, p. 281. <sup>4</sup> Represents Bank's claim on the Government for the Bank's foreign exchange losses resulting from the revaluation of the krone on Jan. 23, 1942. <sup>5</sup> The Central Bank of Ireland began operations on Feb. 1, 1943. The text of the Central Bank Act is given in the BULLETIN for February 1943, pp. 122-127.

<sup>1</sup> Through August 1939, averages of weekly figures; beginning September 1939, end-of-month figures, representing aggregates of figures reported by individual banks for days, varying from bank to bank, toward the end of the month.
 <sup>2</sup> Represent six-month loans to the Treasury at 1½ per cent, callable by the banks in emergency at a discount equal to the Bank of England rate.
 <sup>3</sup> Through December 1937, excludes deposits in offices outside England and Wales which are included in total.
 <sup>4</sup> Figures for three banks only. Data for Crédit Industriel et Commercial not available September 1940-March 1941. NOTE.—For other back figures and explanation of tables, and for figures for German commercial banks, see BULLETIN for June 1941, p. 596; August 1939, p. 699; June 1935, pp. 388-390; and October 1933, pp. 641-646.

<sup>p</sup> Preliminary

<sup>9</sup> Preliminary.
 1 Figures represent calculated prices of a 4 per cent, 20-year bond offering a yield equal to the monthly average yield for 15 high-grade corporate bonds for the series beginning 1937 and for a varying number of high-grade bonds for the series prior to that date. The yearly average for 1937 is the same for both series. Source.—Standard and Poor's Corporation.

 <sup>2</sup> Since Apr. 1, 1935, the 139 bonds included in the calculation of the average price have all borne interest at 4½ per cent. The series prior to that date is not comparable to the present series, principally because the 169 bonds then included in the calculation bore interest at 6½ per cent. The series prior to that date is not comparable to the present series, principally because the 169 bonds then included in the calculation bore interest at 6 per cent.
 <sup>3</sup> Indexes of reciprocals of average yields. For old index, 1929–1936, 1929 = 100; average yield in base year was 4.57 per cent. For new index beginning January 1937, Jan.-Mar. 1937 = 100; average yield in base period was 3.39 per cent.
 <sup>4</sup> This number, originally 320, has declined as the number of securities eligible for the index has diminished. In May 1941, it was down to 287.
 <sup>4</sup> Average May-Dec. only; exchange closed Jan. 1-Apr. 11.
 <sup>6</sup> Average based on figures for 5 months; no data available June-Dec.
 <sup>8</sup> Average based on figures for 10 months; no data available May-July.
 <sup>10</sup> Average based on figures for 10 months; no data available Jan.-Feb.
