NUMBER 10

BANK CREDIT DEVELOPMENTS

Inflationary pressures have continued dominant in the economy notwithstanding measures of restraint in the credit field that have been adopted since mid-1947. Continuing expansion of bank credit for private purposes during the past fifteen months has been a contributing factor to, as well as an effect of, prevailing inflationary tendencies. Business outlays for plant and equipment and consumer expenditures for homes and for other goods and services have mounted further over the period. In addition, foreign aid and military expenditures of the Federal Government have been substantially enlarged, and public works expenditures of State and local governments have increased significantly.

Financing of the nation's growing volume of expenditures has been possible from rising personal incomes, business profits, and governmental revenues, supplemented by reductions of liquid asset holdings by many businesses and individuals and by growth in private and State and local government debt, including indebtedness to commercial banks. With output of commodities and services close to maximum levels and undergoing only moderate further growth, over-all demand has continued to exceed available supply. As a consequence, strong upward pressure on wholesale and consumer prices has persisted.

Expansion in the volume of privately held

deposits and currency has been smaller over the past twelve months as a whole than in other comparable periods since the war. In the fall of 1947 the rapid growth in bank loans and a large gold inflow sharply increased the volume of deposits and currency. Subsequently, however, a Treasury cash surplus drained a substantial amount of funds out of private accounts. In recent months deposit expansion has been resumed. The further growth of bank deposits has been the result of additional bank loan expansion and of sales of Government bonds by non-bank investors to the Federal Reserve, the proceeds of which have been used to make business or real estate loans or to buy corporate securities.

In the period since mid-1947 a moderate restraint on bank credit expansion has been achieved by use of Treasury surplus funds to retire securities held by the Federal Reserve Banks. Drains on bank reserves achieved in this way have been the most important means of restraint on bank credit expansion. Reductions in taxes effective in May and increased Government expenditures for defense and foreign aid, however, reduce and may eliminate the Treasury cash surplus available to exert this restraining influence.

Supplementing the restraining effect of the Treasury surplus, action has been taken to increase rates on short-term Government

securities. This has raised the cost of reserves to banks and at the same time made it more attractive to banks and others to hold these securities. Other short-term money rates have shown a corresponding rise.

In addition, a large amount of bank reserves, or assets potentially convertible into reserves, has been immobilized through action of the Board increasing reserve requirements of member banks. Increases were imposed on central reserve city banks in New York and Chicago in February and June 1948 on the basis of then existing statutory authority. In September the Board made use of new powers, granted in August in a special session of Congress, to increase reserve requirements for all member banks. The latter increase, which absorbed into required reserves a total of about 2 billion dollars, corresponded approximately to net Federal Reserve purchases of Government securities from nonbank investors in recent months, and necessitated little or no decline in the total of bank loans and investments from the level prevailing three months earlier.

BANK CREDIT EXPANSION

The continuing inflationary tendencies and the large aggregate expenditures for goods and services that have characterized the economic situation during the past year have been fed by a total loan expansion at commercial banks of over 6 billion dollars in the twelve months ending June 30. In addition, commercial bank investments in securities other than those of the United States Government increased about 700 million dollars during this period. Private bank credit expansion was larger than in any similar past period except the previous year. This expansion occurred at banks located in all sections of the country and at banks of all sizes, but particularly at banks in rural areas and small

cities. Since June of this year private bank credit expansion has followed a pattern similar to, but somewhat smaller than, that of a year ago. Expansion has occurred in all credit categories except loans on securities, and during September it gained considerable momentum.

Business credit. Businesses as a group have sought a particularly heavy volume of funds from banks since mid-1947. The outstanding business loans of banks rose about 4 billion dollars from mid-1947 through the third quarter of 1948. Business demand for bank credit has stemmed from continued large-scale operations under conditions of steadily rising prices. Funds have been sought for inventory accumulation and plant and equipment expenditures, as well as for higher day-to-day expenses and an increase in customer financing. Demand has been widespread and pervasive, coming from small as well as large companies in many industrial lines. Insurance companies and some other nonbank lenders have also increased considerably their loans to business enterprises.

Business loan demand at banks in recent years, as can be seen from the accompanying chart, has exhibited a marked seasonal character, increasing sharply during the last half of each year, with a small increase, or even a slight decrease, occurring during the first half of the year. During the past fifteen months, there has been an increase of near-record proportions in the last half of 1947, a slight decrease in the first half of 1948, and since mid-June, according to data for member banks in leading cities, a growth that has proceeded at a somewhat slower rate than last year.

Corporations have also satisfied a significant portion of their demand for new funds during the past year by issuing new securities, largely bonds. Commercial bank hold-

ings of corporate securities increased only slightly in this period, the bulk of the offerings being absorbed by insurance companies and other nonbank investors, including individuals.

All insured commercial banks in the United States. Commercial loans include commercial and industrial loans, open-market commercial paper, and acceptances. Latest figures are for June 30, 1948.

For member banks in leading cities figures on commercial loans include commercial, industrial, and agricultural loans, open-market commercial paper, and acceptances. Latest figures are for September 22, 1948.

Agricultural credit. Farmers, despite continued high incomes, have also borrowed considerable amounts from banks and other lenders in the past fifteen months, principally to finance expanded operations and larger acquisitions of farm machinery and other goods purchased at higher prices.

The short-term debt of farmers, which in recent years has been at a low level, has increased by more than 25 per cent since mid-1947. Loans to farmers by commercial banks and the production credit associations have shown similar percentage increases during this period. In view of the large crop

surpluses this year, short-term loans to farmers guaranteed by the Commodity Credit Corporation under the Federal farm price support program may be expected to increase substantially this fall.

Farm mortgage debt, on the other hand, has risen only slightly this past year. Commercial banks, insurance companies, and other private investors have increased their holdings of farm mortgages, but those of public lending agencies have decreased.

Consumer credit. Consumers have also sought substantial amounts of credit since mid-1947, largely to make additional purchases of automobiles, home furnishings, and other durable goods. The increase in consumer debt has occurred in spite of rising incomes and larger aggregate consumer holdings of liquid assets.

Total short-term consumer credit outstanding has increased approximately $3\frac{1}{2}$ billion dollars during the past fifteen months. Commercial banks have accounted for about one-half of this increase. In addition, a part of the increase in business loans at banks represents advances to other consumer financing institutions, which in turn have loaned to individuals or bought consumer credit paper from dealers.

The increase in consumer credit since mid-1947 has reflected primarily growth in instalment credit for the purchase of durable goods, as contrasted with such types as charge accounts and single payment loans, which have been leveling off. Expansion of consumer credit has added to buying power in the face of a limited supply of goods.

Mortgage credit. Rising expenditures on newly constructed housing and a high turnover of existing home properties have encouraged a further expansion in urban real estate loans by banks and other lenders over the past fifteen months. The aggregate out-

standing mortgage debt on 1- to 4-family houses, for example, is estimated to have risen by more than 7 billion dollars or about 25 per cent during this period. Commercial banks in the aggregate have made only a slightly smaller proportion of the new mortgage loans in recent months than they did in the earlier postwar periods, even though real estate loan portfolios of a growing number of individual banks are approaching the limits relative to liability and capital structures that are set by statute for national and some State banks. Savings and loan associations, insurance companies, and saving banks, have also been important investors in real estate mortgages.

Estimates for new residential construction and for consumer housing expenditures indicate that a large volume of urban real estate mortgages will continue to be available to banks and other lenders. The recent actions taken by the Congress in the housing field will also tend to strengthen the demand for houses and for mortgage credit.

Security loans. The only significant decrease in the loan portfolios of banks during the past year has been in loans for purchasing or carrying securities. This decline, however, has been more gradual than in the early postwar period and has not been large enough to dampen noticeably the increase in total bank loans.

State and local government securities. State and local governments have sold a sizable volume of new securities during the period under review to finance numerous construction projects for schools, highways, and other public works, as well as to provide funds for State bonus payments to veterans. Total outstanding State and local government debt increased about 1½ billion dollars from mid-1947 to the end of September 1948. Commercial banks, principally the

medium-size and smaller ones, absorbed about half of this increase.

GROWTH IN MONEY SUPPLY

Expansion in privately held deposits and currency was considerably less rapid over the 12-month period ending last June than in the preceding postwar period. Total time and demand deposits, excluding interbank and United States Government deposits, were 2.3 billion dollars larger at mid-1948 than at mid-1947. This compares with a deposit growth of 6.5 billion dollars in the 12 months ending June 1947. Currency in the hands of individuals and businesses declined about 700 million dollars. Almost the entire increase in deposits in the 12-month period, July 1947-June 1948, occurred in time deposits, as is shown in the chart. Privately held demand deposits expanded only 600 million dollars as compared with 2.7

BANK DEPOSITS AND CURRENCY

Figures are partly estimated. Deposits are for all banks in the United States. Demand deposits adjusted exclude U. S. Government and interbank deposits and items in process of collection. Time deposits include deposits in the Postal Savings System and in mutual savings banks. Figures are for December 1940; June and December, 1941-1942; end of month, 1943-1946; last Wednesday of month 1947 and 1948. Figures subsequent to December 1947 are preliminary; latest figures are for August.

BANK CREDIT DEVELOPMENTS

billion dollars in the preceding 12 months.

During the third quarter of 1948, deposit growth was substantial. The increase was due in large part to Federal Reserve support purchases of restricted long-term Government securities sold by insurance companies and other nonbank holders and in part to bank loan expansion. These factors were partly offset in their effect on the total money supply by large nonbank purchases of short-term Government securities, as well as by Treasury retirement of bank-held Government securities. Nevertheless, all market transactions in Government securities by nonbank investors tended to expand the money supply by about 1.5 billion dollars in this three-month period.

Treasury cash receipts continued in excess of expenditures in the third quarter, and in addition there were large sales of savings bonds to certain institutional investors in the July drive. Part of these funds were drained out of private deposit accounts, and the deposit expansion was smaller because of this. However, some of the funds made available to the Treasury from sales of savings bonds to banks and nonbank investors were obtained by these investors, either at the time or shortly thereafter, through their sales of other Government securities to the Reserve Banks.

Dampening in the rate of private deposit growth since mid-1947 reflected primarily the large drain on private balances from an excess of Treasury receipts over expenditures, as is shown in the table. Purchases from banks of short-term Government securities, especially by corporations and nonprofit associations, also tended to reduce deposits. Bank loan expansion and the gold inflow were largely responsible for the moderate growth in deposits that occurred. Deposits were also created as a result of sales by non-

bank investors of long-term Government securities, which were purchased for Federal Reserve account in support of the market.

Monetary expansion had been very substantial in the second half of 1947. Accelerated commercial bank loan expansion, a large gold inflow, and some nonbank selling of Government securities to the Federal Reserve Banks all tended to add to the volume of deposits and currency. A Treasury cash surplus provided some offset to these expansive factors, but the growth in the money supply was nonetheless nearly 6 billion dollars.

¹ Figures for July-September 1948 are preliminary estimates.

² Net sales.

Although bank loan expansion and gold inflow continued as an expanding force on the private money supply in the first half of 1948, deposits and currency declined 4.3 billion dollars. This drop was due almost entirely to a large Treasury cash surplus which was used to retire bank-held securities or to increase Treasury deposit balances. In

addition, nonbank investors purchased short-term Government securities in the market directly or indirectly from the banking system. These purchases were in excess of sales of long-term restricted Government securities to the Reserve Banks, and accordingly the Government security market transactions of nonbank investors as a group tended to reduce the private deposit and currency supply.

INCREASED USE OF MONEY

The increase in expenditures of all private groups in the economy have in the aggregate been greater than the moderate growth in the privately held money supply. This development reflects an increase in the average rate at which money is being used. As is shown in the chart, the annual rate of turnover of demand deposits at banks in leading cities has been rising significantly since the end of the war. Demand deposit turnover

at banks in leading cities outside New York, which was comparatively low from 1943 to the end of 1947, was about the same on a seasonally adjusted basis in the first nine months of 1948 as it was on an average over the four-year prewar period 1938-41.

The wartime growth of the money supply was more rapid than the growth in the use of money, but more recently, with a diminished rate of growth in total amount, the turnover of the available supply has expanded. On the basis of an even more rapid use of money, a substantial further inflation could be supported even without additional deposit creation through credit expansion. Any further growth in the volume of deposits and currency accompanied by continued increases in the rate of use of money would intensify the inflationary pressures.

AVAILABILITY OF BANK RESERVES

Liquidity positions of commercial banks are currently strong enough to insure their capacity to meet any part of the prospective loan demand that banks may be disposed to satisfy. Although banks have only a moderate operating volume of excess reserves, they hold about 65 billion dollars, or over 40 per cent of their total assets, in United States Government securities. About 20 billion dollars of these securities mature or are callable in less than one year and over 50 billion in less than five years. Maturing securities may be turned in for cash. Others may be sold in the market and, if no other buyers come forward, may be purchased by the Federal Reserve System, in accordance with the System's policy of maintaining an orderly and stable market for Government securities. Federal Reserve purchases increase bank reserves and provide the basis for a multiple expansion of bank credit. Banks are therefore in a position, on the basis of present

Data are quarterly averages of monthly figures, adjusted for seasonal variation, and relate to total demand deposits, except interbank and U. S. Government deposits, at weekly reporting member banks in New York City and in other leading cities. Latest figures are for the third quarter of 1948.

BANK CREDIT DEVELOPMENTS

resources, to make further large increases in their loans.

Effect of Treasury operations. Throughout the period since mid-1947, a principal objective of fiscal and debt management operations has been to restrain bank credit expansion by draining off bank reserves. Surplus funds of the Treasury have been applied principally to retirement of Government securities held by the Reserve Banks.

Current cash receipts by the Treasury from taxes and other sources over the 15-month period ending September 30 have exceeded expenditures by about 10 billion dollars, as is shown in the table. These surplus receipts were supplemented by about 2.8 billion dollars from net sales of nonmarketable savings and investment bonds, including sales through special offerings in October 1947 and again in July 1948. Part of the Treasury's surplus cash funds—over 4 billion dollars—was used for retirement of maturing securities held by commercial banks and nonbank investors; in addition, about 1.5 billion dollars was used to build up Treasury accounts at commercial banks. These funds remained with commercial banks. The bulk of the surplus funds, however, were withdrawn from commercial banks and used to retire securities held by the Federal Reserve or to build up Treasury deposits at the Reserve Banks.

In each of the five quarters since mid-1947, Treasury operations exerted a contractive force on bank reserves ranging in amount from a few hundred million dollars in some quarterly periods to nearly 5 billion dollars in the first quarter of 1948. For the entire 15-month period since mid-1947, this reserve drain has totaled 7 billion dollars.

Gold inflow. Banks have been supplied with large amounts of reserves throughout the postwar period as a result of a substantial

inflow of gold. This inflow, which has been received in partial settlement of the country's large excess of exports over imports, has amounted to 2.6 billion dollars since mid-

1947—an average of over 150 million dollars a month. Although in recent months the increase in the gold stock has moderated somewhat, as gold resources of foreign countries have diminished, the gold inflow has been adequate to supply the additional reserves for supporting the bank credit and

deposit expansion which has taken place.

Nonbank sales of Government securities. Shifting by financial institutions other than commercial banks, particularly insurance companies, mutual savings banks, and savings and loan associations, out of long-term United States Government securities and into other assets, especially private loans and investments, has been a major factor tending to ease bank reserve positions since late 1947. In less than a year nonbank holders have sold in the market over 5 billion dollars of long-term Government securities, largely for the purpose of acquiring funds to expand credit to other borrowers. In support of the market the Federal Reserve System purchased most of these securities and in the process supplied a corresponding amount of reserves to the commercial banking system.

In recent months sales by insurance companies, and to a lesser extent by other types of institutions, of Government securities bought during the war loan drives have been in especially large volume. Reductions in total holdings of Government securities by insurance companies alone probably have been in excess of one billion dollars in the last three months. Substantial support purchases of long-term Government securities by the System have been required to maintain orderly and stable market conditions. The resulting expansion in bank reserves has more than offset a moderate reserve contraction effected by Treasury operations, with the outcome a significant easing in bank reserve positions.

Credit policies. Since the war, and particularly since mid-1947, Federal Reserve credit policies and the Treasury fiscal and debt management program have had as a major objective as much restraint on monetary and credit expansion as was consistent with maintenance of orderly and stable con-

ditions in the market for Government securities. Action toward this objective on the basis of existing powers included focus of the Treasury program of debt retirement on securities held by the Reserve Banks; upward adjustment of rates on short-term Government securities and in the Federal Reserve discount rate; reduction in Federal Reserve support prices for medium-term and long-term Government securities; increase in reserve requirements on demand deposits of member banks in New York City and Chicago. During September, in accordance with additional powers granted to the Federal Reserve Board in August by the recent special session of Congress, control over the down-

payment and repayment terms for consumer instalment credit was reimposed and reserve requirements on demand and time deposits were increased at all classes of member banks.

Major factors affecting the volume of bank reserves and the demand for Federal Reserve credit are summarized for the period since mid-1947 in the table.

INCREASE IN MONEY RATES

Beginning in mid-1947 and throughout the last half of that year, the Treasury and the Federal Reserve System acted in cooperation to permit an increase in yields on short-term Government securities. As a result, rates on Treasury bills rose from $\frac{3}{8}$ per cent in mid-1947 to one per cent in the early part of 1948. Concurrently, yields on 12-month certificates increased from $\frac{7}{8}$ per cent to $1\frac{1}{8}$ per cent. Yields on other short-term paper in the market promptly adjusted to these changes in rates on Treasury issues.

In January 1948 the Federal Reserve Banks increased their rediscount rates from one to $1\frac{1}{4}$ per cent.

These upward movements in short-term yields, together with strong demands for investment funds, were accompanied by increasing yields and declining prices of longer-term securities during the last half of 1947. In the fall of 1947 there began large-scale selling of medium-term and long-term Government securities, principally by nonbank investors, and the Federal Reserve System entered the market to cushion the resulting decline in prices. On December 24 downward adjustments in support prices for these securities were made in order that Reserve Bank credit might not be obtained through their sale at the premium prices previously prevailing.

The increases in yields on short-term Government securities in the last half of 1947 were permitted to occur in order to raise the cost of reserve funds to banks and to increase the attractiveness of these securities to banks and to nonbank investors. Some measure of success for the latter objective is indicated by the fact that during 1948 nonbank investors have made substantial market purchases of short-term Government securities.

In the case of insurance companies and some other financial institutions, market purchases of short-term Government securities probably reflected only the temporary investment of funds acquired by the sale of long-term Government securities to the Federal Reserve Banks. On the other hand, purchases of short-term issues by nonfinancial corporations and associations were considerably greater than their sales of long-term Government securities. These purchases may have reflected an increased tendency for such institutions to hold temporarily idle funds in short-term securities instead of cash

YIELDS ON TREASURY AND CORPORATE SECURITIES

For Treasury bills, rate is average discount on new issue offered during week. In general 3-to-5 year Treasury securities are represented by Treasury notes maturing within that range; however, selected issues of notes or bonds were substituted during periods when they were considered more representative. Latest figures are for week ended September 22, 1948.

as the rate on these securities became more attractive.

There was no further rise in short-term interest rates between January and August of this year. During this period a considerable volume of maturing Government securities was refunded into one-year certificates, bearing $1\frac{1}{8}$ per cent coupons, and Treasury bill rates were held at about one per cent. Yields on long-term Government bonds have remained at or close to those reached on December 24, except for a slight temporary decline in May and June. Shortly after the first of the year, yields on medium-term Government bonds declined somewhat from the peak of December 24, and they dropped sharply in May following the Treasury announcement of the refinancing at $1\frac{1}{8}$ per cent of certificates maturing in July.

In August the Treasury announced the offering of $1\frac{1}{4}$ per cent one-year certificates in exchange for the certificates maturing on October 1, and of $1\frac{3}{8}$ per cent, $1\frac{1}{2}$ -year notes in exchange for notes maturing on September 15. Announcement of these issues was followed by an increase in Federal Reserve Bank rediscount rates to $1\frac{1}{2}$ per cent. Market rates on outstanding certificates rose accordingly and rates on 90-day Treasury bills advanced to 1.09 per cent. Other short-term market rates moved into alignment. Medium-term Government bond yields adjusted upward to the higher short-term rates, while yields on long-term Government securities were held firm at support levels.

RESTORATION OF INSTALMENT CREDIT CONTROLS

Pursuant to temporary legislative authority granted in August, the Board of Governors of the Federal Reserve System reinstituted controls on down payment and maturity terms of consumer instalment credit, effective

on September 20, 1948. Consumer instalment credit controls were first imposed in 1941 as an anti-inflationary measure. They expired in November 1947, when the Board's authority to regulate consumer credit terms was terminated as a result of legislative action. With the restoration to the System of this instrument of credit restraint, some check has been placed on further extension of consumer instalment credit by banks, finance companies, and other institutions operating in this field. A discussion of recent trends in consumer instalment credit was presented in the BULLETIN for August.

INCREASE IN RESERVE REQUIREMENTS

In February and again in June of this year, the Board of Governors raised by 2 percentage points the reserve requirements on net demand deposits at New York and Chicago banks. These actions increased by about one billion dollars the amount of reserves that these banks were required to maintain. To meet the increases the banks had to sell Government securities to the Federal Reserve Banks and thereby reduced the supply of their assets which might be used to provide the basis for further credit expansion. Increases in reserve requirements in the first half of 1948 were necessarily limited to New York and Chicago banks, since the requirements for other classes of member banks were at the maximums permitted by law.

Legislation enacted in August granted additional temporary authority to the Board to increase reserve requirements of member banks by 4 percentage points for net demand deposits and $1\frac{1}{2}$ percentage points for time deposits. Effective September 16 for banks outside reserve cities and September 24 for reserve city and central reserve city banks, the Board raised reserve requirements 2 percent-

age points on demand deposits and 1½ percentage points on time deposits.

This action was taken in part to absorb the large volume of reserves flowing to banks as a result of sales of restricted Government bonds by insurance companies and other nonbank investors and their purchase by the Federal Reserve System in support of the market. It was also an objective of the action to continue moderate pressure on bank reserve positions and thereby make it necessary for them to sell some part of their Government securities, particularly to the extent that they increased loans or other investments. Reserves supplied to banks since June through Federal Reserve purchases of Government securities from nonbank investors and further gold inflow appear to have been about equal to the 2 billion dollar increase in required reserves due to the higher percentage requirements set in September.

Although liquidity positions of banks continue strong, as stated earlier, they are not now as strong as in mid-1947. Banks have reduced their holdings of Government securities to meet drains on their reserve balances resulting from use of the Treasury cash surplus to retire securities held by Federal Reserve Banks. Additional Government securities have been sold or presented for cash redemption in order to meet increases in required reserves resulting from deposit expansion or from the administrative raises in the reserve percentages. Thus, while banks as a group have maintained a high degree of liquidity and are able to obtain readily any funds needed, the intensity of their lending programs may be increasingly affected by changes in their reserve positions.

BANK EARNINGS

Earnings at member banks on loans and investments and from bank services increased

further in the first half of 1948. Gains in interest income from loans were substantial, reflecting continued loan expansion and an increase in average interest rates charged. Earnings from bank services also continued to increase. Member bank earnings from Government securities declined as their portfolios were reduced. The growth in earnings was substantially larger than the small further increase in bank expenses, and net current earnings rose sharply.

Net profits for the first half of 1948 were little changed from those of the previous six months and somewhat below profits in the first half of 1947. This decline reflects the fact that banks have set aside from their current earnings substantial amounts in reserves for bad debt losses on loans, as authorized late last year by the Bureau of Internal Revenue.

PROSPECTIVE CREDIT DEVELOPMENTS

Factors underlying the strong demand for credit by businesses, real estate buyers, consumers, and State and local governments have shown little tendency to abate. Business plans for expansion of plant and equipment indicate further substantial demand for external funds. Encouragement given to mortgage lenders and borrowers by recent liberalization of Government guarantee provisions will tend to stimulate continuation of a large volume of such financing. Although a check has been placed on instalment credit growth by the recent reimposition of the Board's regulation, continued large sales of durable goods will assure some additional credit expansion in this area.

Part of the large potential credit demand may be satisfied by nonbank financing institutions such as insurance companies, building and loan associations, and savings banks. As has been indicated previously, these agen-

cies have been shifting out of long-term United States Government securities and into private credits. Funds from the sale of these Government securities have been supplied by the Federal Reserve System, which in the absence of other buyers has purchased them in support of their market price. This process of shifting out of Government securities results in the creation of bank deposits and bank reserves and is just as inflationary as bank credit expansion.

Should sales of Government securities by nonbank investors continue, banks would be able, in the absence of further restraining action, to accommodate a very large loan demand without reducing their own holdings of Government securities. Banks may

also receive reserve funds from a gold inflow and could obtain any additional amounts desired by selling some of their large holdings of Government securities.

In the recent postwar period credit developments have been an important influence in the continuation of inflationary pressures, notwithstanding the gradual satisfaction of some of the acute shortages of goods and the substantial Treasury surplus. Because of this situation, the Federal Reserve authorities have taken action to restrain credit expansion by permitting a rise in short-term interest rates, raising Reserve Bank discount rates, placing limitations on the terms of consumer instalment credits, and increasing reserve requirements at member banks.

POLICIES AND ACTIVITIES OF THE INTERNATIONAL MONETARY FUND, 1947-48

The following address was delivered by M. Camille Gutt, Managing Director of the International Monetary Fund, on the occasion of the presentation of the Third Annual Report to the Board of Governors of the Fund on September 28, 1948, in Washington, D. C.

The report, covering the year ending April 30, 1948, deals particularly with the experience of the Fund in pursuance of its stated purposes, to promote exchange stability, to maintain orderly exchange arrangements among members, and to avoid competitive exchange depreciation. Statements embodying policy decisions by the Fund and issued during the year as press releases are added as appendices to the report. A detailed record of exchange transactions on behalf of the members of the Fund is given, both for the year under review and for the entire period since the beginning of operations. The opening chapter of the report reviews briefly recent progress toward world recovery and restoration of international balance, with special reference to the European Recovery Program. Copies of the report may be obtained from the International Monetary Fund, 1818 H Street, N. W., Washington 25, D. C.

The Annual Report of the Executive Directors of the International Monetary Fund, which is now before you, gives the views of the Executive Board on the international payments problems which confront nearly all countries.

If there was any widespread feeling of optimism that postwar economic problems could be solved without great and new sacrifices, the experience of the past few years should be enough to dissipate it. Our danger today is rather that countries will fall into a fateful pessimism. There is no reason for assuming that, because these problems are difficult, they cannot be solved. In fact, as the report points out, very considerable progress has been made in building up production. The investment that is now going on in all parts of the world offers promise that the expansion of production will continue. We have good reason to expect that the time will come when countries will be able to provide for their needs with their own output. We have good reason to hope that the time will come when international payments can be balanced in a satisfactory

manner by exports and international investment, without further reducing already depleted monetary reserves or depending on continued grants. All this will take time, but it can be done.

The basic job of placing each country in a position to restore its international payments is one for which the government of each country has the primary responsibility. That government alone can take the measures to expand its output and to place production on an efficient basis. That government alone can put its domestic finances in order, and thus prevent a chronic dependence on excessive imports or a chronic difficulty in supplying adequate exports. This is the job that each government can and must do for itself. No one else can do it. I know from discussions with our members that they realize this.

There is another side to the problem. International payments are an international responsibility. If the whole world economy is disordered, it will be impossible for some countries to restore their payments in a way that will assure them a tolerable level of imports. This international responsibility, in which all countries share, has been generally recognized. It has been recognized in a concrete way by the aid that the Western Hemisphere countries have given to other regions of the world. It has been recognized by the aid that the European countries have given to each other and to some countries overseas. In truth, there are few countries which have not, directly or indirectly, put at the disposal of those with whom they trade, at one time or another, the facilities within their capacity, however modest. This has made it possible to continue essential trade while steps are being taken to restore a balanced world economy.

Inevitably, because the need for aid has required the provision of very large resources, this is the phase of international cooperation which has hitherto been, and for some years will continue to be, the most important. But we must not forget that there is another form of international responsibility which has been recognized through the institutions that have been set up to deal with the problems of a world economy. The International Monetary Fund is one of these institutions. It is

particularly concerned with the problem of international payments, monetary reserves, and exchange policy. It has been established as a permanent institution, because these are continuing international problems that will require continued cooperation.

In carrying out its international responsibility, the Fund can succeed only to the extent that its members genuinely believe in international cooperation and agree, without reservation, to submit their exchange problems to international jurisdiction. Each country has to realize how intimately its well-being is related to the successful operation of the Fund. The more this concept becomes part of the basic policy of every member government, the more effective an institution the Fund will be.

This is the fact which you, Gentlemen—the financial leaders of your countries—must stress to your governments and to your peoples. They must be aware at all times of the absolute necessity for a coordinated international effort to surmount our economic difficulties. Separately, indifferent to the effect of their foreign exchange policies on each other, their prospects would appear to be very poor indeed. Only together may they hope to make rapid progress in measuring the forces arrayed against them and overcoming them.

The experience of the past few years has shown that the Fund is not subject to the will of any one country. It is a genuinely international institution. It has no other purpose than to work with and through its members in establishing a world economy in which all countries can have a chance to place their international payments in order. The achievement of this purpose depends largely upon the willingness of our members to work wholeheartedly with each other, through the Fund. I emphasize this necessity because I believe the time has come when international cooperation should be a more active concept; because I believe that the Fund can better help its members if the work of the Fund brings them into more continuous and even closer relationship with each other, and with the Fund, in dealing with their exchange and payments problems.

The various measures that have been taken in the past year to meet the critical payments situation, particularly the inauguration of the European Recovery Program, will give our members an opportunity to work out their problems without the serious handicap that would be imposed upon them by a sharp reduction of essential imports of food,

raw materials and equipment. These measures do not obviate the need for the nations to work together. They intensify it. The problems our members will face on international payments, on monetary reserves, and on exchange policies will become increasingly important. The best way to meet these problems is through self-help and mutual aid, by intensification of the collaboration of all countries through the Fund and through the other international institutions.

I should like to take this opportunity to comment on two misconceptions which have to some extent found their way into public opinion. A number of criticisms have been directed against the Fund. The happy side of this situation is that, in general, they contradict each other.

It has been said in some quarters that the policy of the Fund is unrealistic, that it tries to impose rigid par values, not in keeping with the actual position of the countries concerned. In other quarters, on the contrary, the view is expressed that the Fund has been remiss in its duty because it has sponsored exchange practices contrary to its avowed aim of exchange stability. To the first criticism, there is ample reply in the Fund's annual report. I would refer particularly to the beginning of the second part devoted to an examination of the concept of exchange stability versus exchange rigidity. Therefore I shall not elaborate upon it. But I should like to answer the second one.

I have stressed that there has to be full cooperation between the members and the Fund. And I must also stress that full cooperation means cooperation that runs in both directions. When a member seeks the advice of the Fund, the Fund cannot limit itself to giving this advice on a "take it or leave it" basis, irrespective of consequences or reactions. It may well happen that the member country concerned may find it impossible to follow the Fund's advice. Ought the Fund at that juncture adopt an attitude of aloofness and condemn any solution other than the one it has advocated? We have never thought so. We have always been ready to examine the considerations put forward by the member, since we have always been eager to take into account the realities and the practicalities of the situation. And sometimes, recognizing these practical considerations, we have not objected, in the end, to solutions which did not constitute the immediate application of the policy we had recommended.

Did this mean that we were acting illogically?

That we were sponsoring a system in contradiction with the very principle which we were set up to promote? Not in the least. It meant, first, that the road to exchange stability is sometimes a long and hard one; second, that, without losing sight of the ultimate goal to be reached, we realize that in given cases it is materially or psychologically possible to reach it by successive stages only. Thirdly, it meant that when what we thought to be the best plan, had been rejected as impossible of immediate accomplishment, we preferred to have a country choose a second best scheme rather than do nothing and thus worsen its predicament.

This is, I think, a realistic attitude, in keeping with our duty both to our members and to the spirit of the Fund Agreement. People seem often to forget that, even at the Bretton Woods conference in 1944, it was evident that provision would have to be made for a postwar transitional period during which certain leeway in applying the Fund's principles should be allowed. Hence, Article XIV of the Fund Agreement, which permits members to apply temporarily certain measures of exchange restriction. Of course, in their foreign exchange policy, these members must have continuous regard to the purposes of the Fund; but they can use the leeway thus given them in this very difficult time.

Our members are assured that in their dealings with the Fund they can expect a practical approach to their problems. They know that no attempt will be made to fit them into a standardized mold, unsuited to their economies. They realize that the way of the Fund in dealing with a member is to look at the member's situation from the member's point of view, and to provide such advice and such assistance of a practical kind as will enable it to work out its own problems. The essential duty of the Fund is to see that the measures taken by a member, first, are suitable to its problems, and second, that they will not inflict damage on the economy of other countries.

Another general misconception with which I should like to deal relates to the usefulness of the Fund. There, too, opinions are varied and contradictory, according to people and to countries. Some argue that the Fund was not intended to function in a period of profound disequilibria such as the one in which we are living. For some others the Fund, although equipped with the necessary powers, has seemed too cumbersome to be efficient.

Again, I think such conceptions are belied by reality. As to the period in which we are living, to my mind it has in some respects exceeded, in some other respects disappointed, the hopes which were entertained at the time of the Bretton Woods conference. It has certainly exceeded them from the material point of view. I think that, had we been told at Bretton Woods that four years after the cessation of hostilities, despite the immense and incredibly thorough destruction of wealth and human lives which had taken place throughout the world during the five preceding years, the world's material recovery would have reached the stage described in the first part of the Fund's current annual report, we should hardly have believed it. In other fields events have not measured up to our expectations. The completion of recovery is being delayed by a number of political difficulties, some internal, most of them international, which have manifested themselves since the end of the war, which still remain unsolved, and which weigh heavily upon us.

Are these reasons why the Fund should do nothing? As long as two years ago, in the letter transmitting to you the Fund's first annual report, I said "no"—that the Fund must move, even in difficult times. Since then, the Fund has continuously been acting in its dual capacity of monetary advisor and financial help. It has been in close touch with most of its members, either through its Executive Directors, or through its staff or its Managing Director. It has studied their problems and has provided technical assistance when asked to. It has sold over 633 million dollars of foreign exchange. It has adjusted its policy to changing circumstances and new facts, amongst which the European Recovery Program stands as a major factor.

In the light of what the Fund has done, I do not think it fair to say that it has proved a cumbersome machinery. It has been aware of the problems of its members. In many instances it has called the attention of members to the necessity of meeting these problems. It has given prompt consideration, and thorough consideration, to the exchange policy proposals of its members. On all exchange transactions, it has acted with dispatch. No normal request for exchange has had to wait more than the three working days provided for by our regulations. When some exceptional case arose, the discussions took place at once and were pursued until we came to a conclusion.

There are always, of course, some people who feel that, because the present critical situation in international payments could not be avoided, the Fund, as well as other international institutions, has failed in its task. By such an illogical test everything, everywhere, would stand condemned today. The Fund could not prevent some difficult problems from arising. The Fund alone could not solve them. But this is far from saying that the Fund, and other international institutions, have been unequal to their task. The Fund, although it can not itself meet the entire payments problem, has a job to do. I believe that, considering the limitations

purposely set by the Charter of the Fund to its activities; considering the difficult circumstances in which this activity was started, the Fund has done this job and done it efficiently.

People often recall the famed words of William the Silent: "Hope is not necessary to undertake, nor success to persevere." I would not apply those words to the Fund. We undertook our task because we earnestly hoped to fulfill it. And we shall persevere because, all things considered, without either undue pride or false modesty, we think that we have thus far succeeded.

REPORT OF THE INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT

On September 27, 1948, the Third Annual Report of the International Bank for Reconstruction and Development was submitted to the Board of Governors of the Bank by Mr. John J. McCloy, President. The report covers the period during which the Bank's first credits for development purposes were authorized. It discusses the prospects and potentialities of further Bank-financed development projects in various parts of the world, and the relation of the Bank to the financial problems of Europe. It also discusses the sources of the Bank's

funds, including the sale of bonds in the United States and abroad. Throughout the report the activities of the Bank and its relationship to other international organizations are identified with international efforts to achieve rehabilitation and long-range economic development throughout the world.

A copy of the report may be obtained upon request from the International Bank for Reconstruction and Development, 1818 H Street, N. W., Washington 25, D. C.

ANNUAL REPORT OF THE BANK FOR INTERNATIONAL SETTLEMENTS

The Eighteenth Annual Report of the Bank for International Settlements, covering the year ending March 31, 1948, was submitted to the annual general meeting at Basle on June 14, 1948 by the General Manager, M. Roger Auboin. Selections from the report, with a minimum of textual changes, are given herewith.

The year 1947 saw the beginning of the European Recovery Program, which had its origin in Mr. Marshall's address at Harvard University on June 5, 1947. Never before had a speech led to so much comment and so much action within so short a time. On July 12, 1947 a conference of 16 countries was already at work in Paris on the drafting of a European programme setting out—as suggested by Mr. Marshall—the requirements of the situation and the part which participating countries could themselves play in giving proper effect to whatever action might be taken by the Government of the United States. Thus the Committee of European Economic Cooperation came into being, and on September 22, 1947 its report (in two parts) was signed in Paris by (in most cases) the Foreign Ministers of the countries represented.

Even before the signature of this report, investigations of the European problem had been taken in hand, in the United States, by committees appointed by the President and by delegations nominated by Congress. In the autumn, steps were already being taken to arrange for "interim aid" of 522 million dollars to France, Italy and Austria; such aid was granted by Congress in a session specially convened for that purpose, additional aid being voted at the same time for China (18 million). And on April 3, 1948 the President signed the "Foreign Assistance Act of 1948," envisaging a total appropriation of 6,098 million dollars, including an allocation of 5,300 million for European recovery, to be expended partly in the form of grants and partly in the form of loans in the period up to the end of March 1949. An allocation was also made for China, together

NOTE.—The selected passages given here represent about one-fifth of the text of the report and include portions of seven chapters. The four chapters omitted are entitled Recovery and Setbacks in 1947; Price Movements; Production and Movements of Gold; and Current Activities of the Bank.

Selections from the Bank's first Annual Report were published in the Federal Reserve BULLETIN for July 1931 and the series was continued through the Twelfth Report—see BULLETIN for January 1943, pp. 15-41. A reprint of brief sections of the Thirteenth Report was issued in pamphlet form by the Board of Governors in November 1944. For selections from the Fourteenth and Seventeenth Annual Reports, see BULLETIN for September 1945, pp. 874-901, and October 1947, pp. 1228-50, respectively.

with additional appropriations for special aid programmes in Greece and Turkey and for the International Children's Emergency Fund of the United Nations, as well as for assistance to Trieste and the occupied areas.

The machinery set up to handle the European Recovery Program is known as the Economic Cooperation Administration. Mr. Paul G. Hoffman is at the head of it with Mr. W. Averell Harriman as an Ambassador-at-large specially charged with the representation of the United States in negotiations inside Europe.

In Europe itself an organisation for permanent economic cooperation by the 16 nations was set up under a special charter signed in Paris on April 16, 1948. This organisation embraces 17 European countries (including western Germany), with a total population of about 270 million.

Its main organs are a Council composed of all the members, this being the body (with a Chairman and two Vice-Chairmen) from which all decisions derive; an Executive Committee consisting of seven members, to be designated annually by the Council; and a Secretary General, assisted by a first and second Deputy Secretary General, all three appointed by the Council.

This gives a bare outline of the funds made available and the machinery set up. The European Recovery Program represents a new departure in the field of international cooperation, confined, for the time being, to the United States and the participating countries in Europe but open, for adherence, to other countries also; it is not intended that the new machinery shall replace the peace structure of a more general character set up at the end of the war. In the Special Report, issued in May 1948 by the National Advisory Council on International Monetary and Financial Problems (with its seat in Washington), on the operational policies of the International Bank for Reconstruction and Development and the International Monetary Fund, it is thus expressly stated that the "measures of special United States assistance are not intended to supersede the activities of the International Monetary Fund and the International Bank, which will continue to operate along the lines originally laid down." On the contrary, the Bank and the Fund both welcomed the European Recovery Program. While the Bank did not feel that it would be in a position to assume the risks involved for more than a small proportion of that part of the Program which would be placed on a

loan basis, it was emphatically of the opinion that, in so far as the Program satisfied the need of the participating countries for foreign exchange with which to purchase foods, feeding stuffs, clothing, fuel and raw materials, it would improve their balance-of-payments positions and make it easier for the Bank to negotiate long-term loans, such loans contributing, in their turn, to the successful outcome of the European Recovery Program. And the International Monetary Fund noted that the participating countries should have little occasion to require U. S. dollar assistance from it, save under unforeseen and exceptional circumstances. Non-European countries would also benefit from the Recovery Program, since dollars would become available to them from the payments for goods procured outside the United States for the purpose of the Program. Consequently, aid under this Program would make it easier to preserve the resources of the Fund for the post-transitional period, when they could be used more directly and effectively for the attainment of exchange stability and the elimination of discriminatory currency practices.

The European Recovery Program was, indeed, born of the imperative need for immediate measures pending the long-term results which European countries might be expected to produce in the field of reconstruction, by their own efforts or with the aid of the operations of the International Bank for Reconstruction and Development and the International Monetary Fund. The United States alone was in a position to provide immediate and decisive aid. The most urgent task was to furnish European countries with sufficient resources to enable them to continue their purchases, in the United States and elsewhere, of vital goods and especially of foodstuffs and raw materials, these purchases having already been so greatly compressed by the depletion of the importing countries' gold and dollar reserves that there was a serious danger of slowing down the recovery of Europe. It was, therefore, natural that in the earlier examinations of the problem the main accent should be placed on deliveries of foodstuffs and raw materials to be furnished as part of the Program, though in the original speech made by Mr. Marshall on June 5, 1947 not only the material but also the financial and monetary aspects of the problem had already received due recognition.

At their meetings in Basle the central banks naturally consulted one another with regard to these questions, and then the Bank for International Settlements was able to make its contribution by clarifying certain aspects of the problem closely connected with its own activities and experience. Emphasis was thus laid on the impossibility of separating the question of commodity shortages (food,

fuel, etc.) from the financial and monetary aspects of the general situation, especially since the shortages of goods and services were to some extent a direct result of financial and monetary instability, including the inflationary tendencies persisting in many European countries. It was not only that distrust in the national currency gave rise to widespread hoarding of gold and foreign exchange and to the accumulation of hidden stocks of foodstuffs and manufactured articles (which farmers and others hesitated to sell for money in which they had no confidence), but also that the inflationary expansion of purchasing power at home acted as a magnet for imports and as a brake on exports, with dwindling monetary reserves as a result. For the central banks it was natural to stress the intimate relation which existed between methods of internal financing and the state of the balance of payments, and to urge the elaboration of a really comprehensive programme of financial and monetary reconstruction, including the establishment of an adequate degree of budgetary equilibrium, the adjustment of investments to available resources and the restoration of balance in the cost and price structure, together with a repayment of government debt to the central bank itself, whenever this was necessary in order to fortify its position.

As a practical contribution to the continuing work of the Committee of European Economic Cooperation, which met in Paris in the summer of 1947, the Bank for International Settlements acceded to a request made to it to act as technical Agent under the Agreement on Multilateral Monetary Compensation, which had been signed in Paris on November 18, 1947 by the Governments of Belgium (acting also for Luxemburg), France, Italy and the Netherlands. As described more fully on pages 1232-1236, the scheme for multilateral monetary compensation has been put into operation. Although the volume of compensations arranged during the early months has not been considerable in itself, the scheme may be regarded as the germ of something more useful which may develop in the future, and its operation has, moreover, made it possible to gain a new insight into the working of the monetary system under the difficult circumstances of present-day Europe.

Moreover, the Bank for International Settlements has continued and developed its cooperation with the International Bank for Reconstruction and Development. This cooperation, which was first established between the research departments of the two institutions, has been gradually extended to include technical assistance given to officials of the International Bank who had been sent to Europe in order to examine the situation of particular countries. And in the spring of 1948 the Bank

for International Settlements was able to assist in the issue of 17 million Swiss franc bonds, which allowed the International Bank for Reconstruction and Development to lay greater stress on the international character of its operations, especially with regard to the placing of its securities.

Between the Research Department of the International Monetary Fund and the Monetary and Economic Department of the Bank for International Settlements documents have been exchanged and contact and consultation established through mutual visits of officials, etc.

In the spring of 1948 the Bank for International Settlements obtained a final and satisfactory settlement of certain outstanding questions to which the war had given rise. One of these questions concerned the Bank's assets in the United States, which had been blocked by the United States authorities in 1941 (at the same time as similar assets of other holders on the continent of Europe); another question referred to gold which had been received by the Bank for International Settlements as payment from Germany during the war and which the Bank had subsequently been able to identify as having been looted in countries occupied by Germany.

Work preparatory to a solution of these questions had been in progress since the end of the war. After a preliminary exchange of letters between the Secretary of the Treasury of the United States and the Chairman of the Board of Directors of the Bank for International Settlements, the latter paid a visit to Washington, accompanied by the General Manager of the Bank, and concluded two final agreements, both signed on May 13, 1948.

One of these agreements, concluded between the Treasury Department of the United States and the Bank for International Settlements, concerned the unblocking of the Bank's funds in the United States. As a result, all the funds in question belonging to the Bank itself, as well as funds corresponding to deposits of which the beneficiaries are no longer blocked, were finally released and exempted from any restriction.

On the other hand, funds corresponding to deposits of which the beneficiaries are still blocked have been segregated in a special account with the Federal Reserve Bank of New York, and this account cannot be drawn upon without the consent of the competent United States authorities, the amount involved being, however, very small.

The other agreement was concluded between, on the one hand, the Government of the United States, the British Government and the French Government and, on the other hand, the Bank for International Settlements. The three governments acted on their own behalf and on behalf of all the other governments signatory to the Paris Agreement of

January 14, 1946 and of the banks of issue of the signatory governments.

This agreement finally fixed at 3,740 kilogrammes the amount of gold which the Bank places at the disposal of the three governments, the gold in question having been received from Germany during the war and subsequently identified as looted. The amount thus defined includes, to the extent of 10 per cent, gold received by the Bank for account of a third party (another central bank). Consequently, the sum to be restituted by the Bank for its own account amounts to 3,366 kilogrammes of fine gold.

Such payments as were received by the Bank for International Settlements from Germany during the war were—as previously reported—connected with operations carried out by the Bank in 1930-31 in application of the Hague Agreements,¹ the Bank then acting in virtue of the Trust Agreement through which it was associated with the creditor governments recipients of the annuities under the Young Plan. These operations gave rise to a series of investments, the origin and nature of which were described in the seventeenth Annual Report (page 160). During the war the Reichsbank continued to effect transfers in the form of remittances of gold or Swiss francs (against Reichsmarks) corresponding to the interest earned on these investments together with a very limited redemption of capital.

The Bank was obviously not in a position to refuse these payments, which were in accordance with the contractual obligations governing the investments. It was, indeed, incumbent upon the Bank to do its utmost to secure the payments in question, since any interruption in the transfers would have led to an increase in its holdings in Reichsmarks and that would have been tantamount to economic assistance to the market of a belligerent country, which would have been contrary to the rules of strict neutrality laid down in the Bank's declaration of December 18, 1939.

When receiving the payments from Germany, the Bank had to run the risk of taking over gold which might not be the lawful property of the Reichsbank. It did all it could to avoid receiving such gold in that it asked for assurances, on each occasion, that the gold had belonged to the Reichsbank itself since before the war. The gold which the Bank for International Settlements received was taken from the Reichsbank deposit with the Swiss National Bank and placed by the latter at the disposal of the Bank for International Settlements on instructions from the Reichsbank.

It was obviously not possible either for the Bank for International Settlements or for the Swiss Na-

¹ See BULLETIN for April 1930, pp. 172-249.

tional Bank to ascertain what was the origin of the gold in question. As early as September 1945 the Bank for International Settlements offered, however, to cooperate unreservedly with such central banks as had notified it that they were looking for monetary gold of which Germany had deprived them during the occupation of their respective countries. For its own part, the Bank for International Settlements arranged for a technical examination of the question; thanks to the work thus undertaken, it was possible to produce a complete list of all the bars received from Germany during the war and full particulars of their characteristics.

At the same time, considerable work was being done by the Allied authorities in Germany to trace, from the bookkeeping records of the various German institutions, the monetary gold that had been seized in the occupied countries.

The Bank for International Settlements was able, after a close examination of the facts, in collaboration with the Bank of France and the National Bank of Belgium in 1946 and with the Nederlandsche Bank in 1947, to prepare detailed minutes relating to monetary gold which might have been looted in occupied countries. Moreover, the Board of Directors of the Bank for International Settlements decided, as early as 1946, to authorise the restitution of all gold with regard to which it could be proved by reasonably convincing evidence that it represented looted monetary gold within the meaning of Part III of the Paris Agreement on Reparations dated January 14, 1946.

During the conversations in Washington, the technical experts of the Allied Governments and the Bank for International Settlements were able to examine and compare all the available documents. On the basis of these records, the amount to be restored was finally fixed at 3,740 kilogrammes of fine gold. This gold is now at the disposal of the Allied Governments for distribution among the rightful claimants by the Brussels Tripartite Commission for the Restitution of Monetary Gold, created for that purpose in 1946.

RESTORATION OF MONETARY ORDER

No country—belligerent or neutral—was able either in the first or in the second world war to finance its current expenditure without some resort to inflationary measures. As a result, all countries have, since the end of the last war, been faced with a number of financial problems, which may be conveniently grouped as follows:

1. In occupied as in other countries the war left behind it a redundant supply of money in the form of notes in circulation, deposits in banks and other liquid resources such as Treasury bills, savings certificates, etc. Thus, whenever prices could

be prevented from rising steeply, there was as a rule a dangerous tension between the volume of monetary purchasing power and the current supply of goods and services.

2. With the cost of living going up (as it did everywhere) and wages lagging behind, workers and others would naturally seek to regain their old standard of living. If the simple expedient of raising money wages was resorted to before more goods became available, the lack of balance not only continued but might even be intensified, since goods would often be kept back by farmers and other producers and not reach the market. It was obviously necessary to find some means of arresting the zigzag increase so harmful to the economy.

3. As long as heavy budget deficits continued to be financed by recourse to central banks, the methods of war financing were in fact maintained, fresh money being pumped into the economy. For balance to be restored these practices had to cease.

4. In addition to investments for the repair of war damage, for reconstruction and for reconversion, there was in all countries a vast accumulated need of investments for housing, etc., while the volume of current savings would generally tend to fall when, more goods being available, people were once more in a position to satisfy, up to a point, their consumption requirements. A lack of balance would then be apt to arise between savings and investments, with an inflationary effect.

5. Countries experiencing a scarcity of goods in relation to the supply of monetary purchasing power would find their imports apt to increase, while their exports would lag behind or even dwindle, the result being a widening gap in their balances of payments. With costs and prices rising at home more than on the world markets, their officially fixed exchange rates might soon be out of touch with realities.

Under the difficulties of the moment, measures had often to be taken in a piecemeal fashion, it being understood that, before full monetary order could be restored, much more comprehensive programmes would have to be adopted and applied.

PRICE MOVEMENTS

With the continuance of a general rise in prices, there has been wide-spread discussion of what can be done by individual countries to bring the upward surge to an end. At the same time, dread of a fall in prices is by no means extinct, it being feared that this might prove the starting point for a real depression. Whenever prices have weakened in any sector of the economy, there have been signs of concern, not only among those engaged in the particular trade or industry, but also in govern-

ment circles, the "authorities" being increasingly regarded as responsible for the course which business takes. Something approaching alarm was aroused in February 1948—the most anxious period through which the international commodity markets have passed since the end of the war. By February 20, wheat and maize had fallen about 30 per cent from the peak price reached some weeks earlier, and the majority of other agricultural commodities had also gone down in price, although not to the same extent as the leading cereals.

But the "fears" of a general fall in prices, with untoward effects on current business, soon proved to be without foundation. While the setback on the agricultural markets had a certain psychological influence on trading in other staples (the temporary result being an all-round slackening in demand), it had no influence whatever on prices of non-agricultural products. Moreover, the decline from the high level to which wheat and maize prices had climbed during the typical boom in foodstuffs must be regarded as a healthy reaction. By the end of 1947 prices for raw materials were, on an average, two to three times as high as before the war, while the prices of the most important foodstuffs had risen five to six times. Even after the recession, agricultural commodities continued to be relatively dearer than raw materials.

The adjustment of relative prices to a more normal pattern after the wartime dislocation is bound to cause some disturbance; but, provided that the general price level remains comparatively stable while the adjustment is in progress, the process should not be too difficult and, in any case, it is unavoidable. The period from the beginning of 1947 to the spring of 1948 has seen considerable progress in reconversion from war to peace conditions in practically all commodity trades, with production approaching the prewar level or even exceeding it, especially as regards oil (for which commodity, however, a rise by 50 per cent above the 1938 output has not been large enough to meet the extraordinary expansion in demand).

In contrast to what happened in connection with the first world war, the second world war did not lay the foundation for a large-scale expansion of raw materials production. As a matter of fact, actual warfare, this time, damaged many producing areas (especially in the East) which had been untouched by the first world war. To meet the growing demand due, *inter alia*, to a 6 per cent increase in the world population since 1938, both potential and actual production of primary commodities must be expanded, and that will require new investments on a large scale and additional workers of all grades. The facile assumptions of an all-round abundance which were entertained in the thirties,

and never well founded even then, have now given place to a more realistic but also a more constructive attitude.

THE TENSE POSITION OF INTERNATIONAL TRADE

Never, perhaps, since the exhortations of the mercantilists in the seventeenth century, have countries been more preoccupied than in 1947 with the anxieties of an adverse balance of trade or, to use a more modern expression, with the problem of meeting a growing deficit in the balance of payments. During the war, lend-lease and mutual aid were sufficient to cover immediate needs, and in the first two years after the war the same purpose was served by assistance from UNRRA, special loans and the use of accumulated reserves. As these resources began to run out, however, practically all countries (the United States and Switzerland being almost the only exceptions) had to concern themselves increasingly with the lack of balance in their foreign accounts.

Since more and more administrations have resumed the issue of their regular trade statistics and are also making careful estimates of other items in their balances of payments, a fairly complete picture can be formed of the network of international payments. The following table gives prewar and post-war trade figures for 43 countries responsible, in 1938, for about two-thirds of the total foreign commerce of the world and, in 1947, when Germany and Japan had almost dropped out, for four-fifths of world trade.

The monthly turnover of the foreign trade of the 43 countries was equal to about 6.1 billion dollars in 1929 but only 2.4 billion in 1938 (when, however, dollar prices were about 20 per cent lower than in the boom year 1929). After the war, the monthly turnover reached 6.5 billion dollars in July 1947 and exceeded 7 billion in the following December. By the end of the year, prices were probably some 120 per cent higher than in 1938, account being taken of the effect of freights on import prices. On this basis, 7 billion dollars a month corresponds to about $3\frac{1}{4}$ billion a month at 1938 prices, and this would make the volume of foreign trade of the 43 countries larger than in 1938, but not yet up to the 1929 level. Account being taken of the virtual disappearance of the foreign trade of Germany and Japan, the recovery is less pronounced than the above figures suggest; and, of course, the loss suffered by those two countries has also an effect on the real-income position of their previous trade partners. It is, moreover, one of the changes that have enhanced the importance of the United States in world trade at the expense of Europe.

¹ According to League of Nations monthly tables of "world trade," covering 76 countries.

The decline in the volume of trade which European countries carry on with one another (so-called "intra-European trade") is even more striking: its share in world trade fell from 30 per cent in 1938 to about 18 per cent in 1947. Here the disappearance of Germany's trade makes itself particularly felt, since Germany accounted for about 20 per cent of intra-European trade before the war but only 4 per cent in 1947.

Volume of World Trade, monthly, in millions of dollars.

Expressed in terms of real values, the trade of European countries with one another in 1947 represented only 56 per cent of the prewar volume, while Europe's trade with non-European countries amounted to 78 per cent as regards exports and 106 per cent as regards imports—owing, in particular, to the magnitude of imports from the United States.

In 1947, European exports covered not quite one-half of the continent's imports. With the United States alone the position was even less favourable for Europe, exports covering only one-sixth of

imports. If account is taken of the rise in prices, it will be found that Europe's exports to the United States totalled perhaps two-thirds of prewar, but Europe's exports to other areas were nearer to the prewar level. There was thus a shift in the current of European exports which has certainly not been the result of any deliberate move, since countries have been anxious to earn dollars.

In relation to the gross national product of the United States, imports into that country were in 1947 proportionately somewhat larger than in 1946 but not as large as in the two boom years 1929 and 1937.

It is somewhat surprising to find that, in relation to the gross national product, exports from the United States were slightly larger in the years immediately after the first world war than in the corresponding period after the second world war. But, in dollars, the export surplus of 10 billion in 1947 represents the highest total of any peacetime year. The increase in exports particularly affected such lines as machinery and vehicles during the first half of 1947 and food and farm products towards the end of that year. Since the figure for commodity imports was only 17 per cent higher in 1947 than in the previous year but prices of imported goods were 21 per cent higher, the actual volume of imports was smaller in 1947 than in 1946.

With regard to service items, the United States had, on balance, a substantial amount to its credit both in 1946 and 1947, owing to the fact that not only income from investments but also the other items yielded a surplus in those years.

While the income of the United States from foreign investments is likely to increase, there should be a reverse movement as regards the remaining items. The proportion of exports carried in American ships fell from 60 per cent in 1946 to 50 per cent in 1947; and the number of American tourists coming to Europe promises to establish a new record in 1948.

The table on page 1227 shows, for a number of countries, the balance of trade and also the net balance of service items (including net income from investments) together with the net surplus or deficit on the current account of the balance of payments. The export of newly-mined gold by any country is usually regarded as forming part of ordinary exports; the shipment of gold from monetary reserves, however, is regarded not as a current item but as the employment of a capital asset for the settlement of a balance on foreign account. On the other hand, the import of gold—except when clearly for industrial purposes—is left outside the current account, being regarded as a balancing item of a capital nature.

¹ Excluding exports for reparation payments and commodities surrendered in compensation for German assets.² At June 1946 purchasing power.³ F. o. b. imports.

As monetary reserves became more and more depleted in the course of 1947 and countries had increasingly to apply measures of control, it was generally feared that the cumulative effect would be a sharp contraction in the volume of foreign trade. The most recent statistics indicate, however, that very little contraction, if any, has occurred and an explanation must be sought for this somewhat surprising result. Not one but several factors would seem to have kept the flow of trade from ebbing. In the first place, the need to maintain health and efficiency has forced a number of countries to allow

an even increased supply of foodstuffs to come in, and thus left them no opportunity of saving much on this account. Secondly, the movement of goods has been kept up by the continued granting of American aid in cases of special urgency (including interim aid under the European Recovery Program). Thirdly, imports of raw materials have usually been maintained, the governments being anxious not to imperil the attainment of full employment, having committed themselves most strongly to such a policy. To pay for these imports, drafts have been made, when necessary, on what

remained of the monetary reserves. Fourthly, many ready-made articles have continued to be imported, especially such as were not obtainable from domestic sources. Fifthly, orders already placed abroad with official approval could not, as a rule, be cancelled all at once; trade cannot simply be curtailed overnight.

Finally, with regard to articles which were of a luxury character or could be dispensed with for other reasons, it was not always possible to stop the granting of new licences. A country would usually want to sell some of its own products of a luxury character and, in order to do so, it would often have to accept luxury articles from its trading partners in return. In bilateral negotiations much time was often taken up in the settlement of such questions, the result usually being that a large volume of trade was maintained—fortunately, one might add; for it would be of little benefit to the European economy if what ought to be merely a temporary difficulty were allowed to force fundamental structural changes upon the countries concerned (as might happen, for instance, if no consideration were shown to Dutch bulb-growing and certain branches of the Swiss textile trade). Even more than immediate unemployment and the resulting charge upon the budget, such a contingency would be likely to impair the future economic strength of Europe.

It is also generally realised that the entry of goods of all kinds helps to hold back inflation. Assuming that a country has succeeded in curtailing imports, it is most unlikely that the purchasing power which would have bought the goods thus kept out will remain unused (and take the form of increased saving). Instead, such purchasing power is likely to turn, for the most part, to domestic goods and services and, in doing so, it withdraws productive power from manufacture for export, especially at a time of full employment, and thus tends to reduce exports. It is, therefore, anything but surprising that the trade control of recent years has, in many cases, signally failed even to compress the deficit in the balance of trade, let alone to do away with it.

It is true that, under the totalitarian régime in Germany, control of external trade seemed to be successful in maintaining equilibrium in the country's foreign commerce, even though the monetary purchasing power was expanded and interest rates reduced. But it should be remembered that, at the time, Germany was gradually introducing a war economy (with increasing stress on armaments) and, to that end, enforced control all along the line, including such measures as the wage-stop and official direction of labour. Moreover, despite all export premiums, there was a shrinkage in Germany's foreign trade, accompanied by a reduction

in the standard of living, the bulk of the population having to subsist on a bare sufficiency with very few frills. Full employment was kept up by means of heavy state investment and continuous monetary stimulus; but the control grew tighter and tighter, and in the end it was found that—even during the war—efficiency could not hold its own against the industrial expansion in the Anglo-Saxon countries. Thus the German system by no means invites imitation. And experience shows that it will not do to adopt some of its less objectionable features, in the hope of succeeding in the field of trade regulation, while leaving out the more comprehensive control. The continent of Europe has not yet recovered from the low level to which trade was reduced by the war and its consequences. In 1947 the danger was that exhaustion of foreign resources would force upon that continent another reduction in trade and thus upset and retard recovery at a time when production was getting quite well under way.

One of the blessings that may be hoped for from the European Recovery Program is that it will make it unnecessary to contract imports, driving trade down into a deep valley out of which it would be most difficult to climb. An easing of monetary restrictions—not least between the countries in Europe—is an indispensable part of the solution which has to be found for the problem of maintaining and developing a flourishing foreign trade; but the question has other aspects which must not be neglected. Should the individual countries fail to establish internally an adequate balance between the volume of purchasing power (especially as manifesting itself in the flow of current incomes) and the supply of goods and services, monetary reserves, if they were replenished, would soon be depleted again. Moreover, as regards production and trade, Europe has several weak spots, Germany being one of the most obvious. Certain commodities are still in particularly short supply and require the taking of special action. It should, for instance, be possible, by judicious investment in certain specific branches (such as the cutting of timber), to obtain relatively quick results in the form of increased supplies of particularly scarce products.

As a wider problem, mention may be made of investments in colonial possessions, both in order to procure direct supplies for Europe and in order to foster triangular trade. The task of making European countries self-supporting again is partly bound up with the success attending schemes put into operation outside Europe. Stimulation of foreign investment is part of the problem and, as a rule, the provision of capital must be combined with the supplying of technical knowledge and organisation under conditions which promise a fair return

ANNUAL REPORT OF THE BANK FOR INTERNATIONAL SETTLEMENTS

on the amounts invested, especially since a surplus of income cannot, as a rule, be expected during the first few years.

In regard to commercial policy, one of the first objectives will no doubt be the abolition of quantitative restrictions—a job successfully tackled in the twenties, after the first world war. In addition, there is the most intricate but very important question whether a greater commercial cohesion in Europe can be furthered by the formation of one or more customs unions or, in cases where such a solution appears impracticable, by the establishment of low-tariff areas (in which, for instance, protective duties might not generally exceed, say, 15 per cent ad valorem). These questions are not made easier by the fact that commercial problems cannot be solved without taking into account the allegiance of a political character which binds some European countries to one another or to countries outside Europe.

The result of the efforts to be made should be a greater freedom from the obstacles which now stand in the way of the interchange of goods and services. Production is increasing up to, and beyond, prewar levels. But, when trade is hampered, coun-

tries do not get the same benefit from their production as would be the case if they could buy and sell freely in relation to other countries. No small weight must be attached to the time and energy lost in dealing with all the formalities which are nowadays so often required. "Dispatch is the soul of business," Lord Chesterfield wrote to his son, in the middle of the eighteenth century—and, when rules and regulations are being drafted, it would be well to remember this, not only in order to ease the task of the business man but because all waste of time and effort has to be paid for ultimately by the consumer, in the form of higher prices and a correspondingly lower standard of living.

FOREIGN EXCHANGE RATES

Despite the great strain on monetary reserves which characterised the year 1947 and the opening months of 1948, an examination of the relevant facts shows that in this period some progress was nevertheless made towards a better exchange equilibrium. Only in a few countries was this the result of alterations in official exchange rates; in general, it was the outcome of a whole series of movements affecting the international relation between cost-

⁶ Including the supplementary premiums. ⁷ The new leu was introduced on Aug. 15, 1947 and was equal to 20,000 old lei.

⁸ Revaluation in July 1946. ⁹ Official rates, excluding premiums.

¹⁰ Official rate, fixed at the time of the unification of the currency. ¹¹ Free market.

¹² Official rate. ¹³ Official rate (Central Bank selling rate).

and-price levels, coupled with an improvement internally in the financial and credit position of a number of countries.

Only three countries included in the table, viz. France, Italy and Roumania, show any significant change in their official quotation of the dollar between the end of March 1947 and the end of March 1948. In France and Italy, systems of exchange rates, some of which are flexible, have been applied in order to establish, under the play of market forces, a series of more appropriate exchange relations.

In countries which have permitted the quotation of fluctuating rates as part of their exchange régime, the purpose has been to arrive at rates at which goods would be imported and exported, and services paid for, on a basis more in conformity with the economic realities of the situation. But, even so, the countries in question have generally continued to use official rates for certain purposes, applying them, for instance, to the cession of part of the foreign exchange received from exports, and to the import of essential commodities, e. g. foodstuffs and raw materials (often paid for by means of foreign grants or credits). It was felt that, at any rate for the time being, it would be hazardous to leave payments for essential imports (with all the influence which such payments exert on the cost of living and the cost of production) to the sway of free market rates; and it was also felt that the government should secure a minimum supply of foreign exchange for itself.

But it was further thought that, as soon as the situation became more consolidated, it should be possible to apply a greater uniformity of rates all round. In Italy, which has had considerable experience of the system of multiple rates, with, for some time, a great disparity between the various rates, it was soon found that such a system involved many inconveniences and dangers; when the supply of goods became more normal again and general financial safeguards could be more effectively applied, action was taken to establish a more uniform rate-structure, without losing touch with the forces operating in the free market.

Events of outstanding importance in the foreign exchange field were the re-establishment of the convertibility of sterling on July 15, 1947 (in accordance with the Anglo-American Loan Agreement of December 6, 1945) and its suspension as from August 21 of the same year. As part of the preparation for sterling convertibility and especially in order to lessen the shock which it might produce, the United Kingdom had entered into a series of payments agreements with individual countries. On the date when general convertibility was due to become effective, there were still 14 agreements in

course of negotiation, and the authorities of the United States granted a respite of two months, to give these agreements time to become operative.

In addition, the United Kingdom had negotiated a number of trade agreements all aiming at a certain equilibrium in the balance of payments with the partner countries. The fact that, notwithstanding these precautions, convertibility could not be maintained is evidence of the great lack of balance—a legacy from the war—affecting the United Kingdom as well as other countries.

Since the suspension of convertibility, the British system of payments has undergone a number of changes:

1. As regards the dollar-area countries, there has been no variation in relation to the convertibility and transferability of the so-called "American accounts," apart from a general endeavour on the British side to reduce the deficit in the balance of payments with the western hemisphere.

2. Inside the sterling area, some agreements have been concluded for the purpose of limiting freedom of drawing on the dollar pool and of providing better regulations for the blocking of sterling balances. A case in point is the agreement with Eire, in which it is stipulated that the amount of dollars which that country can draw from the pool, above the amount earned by means of exports, shall not exceed 14 million pounds sterling (the agreement remaining in force from October 1, 1947 until the end of June 1948). By an agreement of November 1947, expiring in June 1948, Iraq is allowed to draw dollars up to the equivalent of 5.8 million pounds sterling—inclusive of export earnings. An agreement was concluded with South Africa in October 1947, under which South Africa lent the United Kingdom gold up to an amount of 80 million pounds sterling in 1948, while, at the same time, undertaking to meet its own dollar requirements. Another interesting feature is that the two governments decided to prohibit such capital movements from the United Kingdom to South Africa as are not considered necessary, this being the first agreement in which restrictions have been imposed on the free movement of capital inside the sterling area.

Among other sterling-area countries, India and Pakistan concluded financial agreements with the United Kingdom, ceilings being fixed, in both cases, for the drawing of dollars on the blocked-sterling-balance accounts.

Egypt left the sterling area in July 1947 and Palestine at the end of February 1948. Under agreements with the United Kingdom, they are allowed to convert part of their sterling balances into gold and dollars.

3. As regards countries outside the dollar and sterling areas, many agreements have been concluded, representing either a new departure or a modification of agreements already in operation. An attempt has been made, on the one hand, to render the British currency more widely acceptable by increasing the number of countries for which transferable-sterling accounts have been opened but, on the other hand, to reduce to a minimum the possibility for the countries in question to come into possession—through the transfer of sterling balances so large as to exceed the inconvertibility limit generally fixed in the agreements. Thus, the benefit of transferable accounts has been withdrawn from certain countries and replaced by a restricted form of transferability in which, for instance, a special authorisation from the United Kingdom Control is necessary (as explained more fully in another section of this Report—see pages 1232-1237). These are the so-called “bilateral countries” and include Italy, Belgium, Portugal and some Latin American countries such as the Argentine, Brazil and Uruguay. On the other hand, recent agreements with Poland and the U.S.S.R. have brought these two countries into the “transferable-account group.”

By the end of March 1948, for purposes of the British foreign exchange regulations, countries having trading and financial relations with Great Britain could be grouped as follows:

- (a) **STERLING-AREA OR SCHEDULED TERRITORIES:**
British Empire (with the exception of Canada and Newfoundland), Cameroons, Nauru, New Guinea, South West Africa, Tanganyika, Togoland, Western Samoa, Burma, Iraq, Iceland and the Faroe Islands.
- (b) **DOLLAR-AREA OR AMERICAN-ACCOUNT COUNTRIES:**
United States, Philippines and territories under the sovereignty of the United States, Bolivia, Chile, Colombia, Costa Rica, Cuba, Dominican Republic, Ecuador, Guatemala, Haiti, Honduras, Mexico, Nicaragua, Panama, Peru, El Salvador and Venezuela.
- (c) **TRANSFERABLE-ACCOUNT COUNTRIES:**
The Argentine,* Brazil,* Czechoslovakia, Dutch monetary area, Egypt, Ethiopia, Finland, Iran, Norway, Poland, Siam, Spanish monetary area, Anglo-Egyptian Sudan, Sweden and U.S.S.R.
- (d) **BILATERAL COUNTRIES:**
Austria, Belgian monetary area, Bulgaria, Can-

ada, Newfoundland, China and Formosa, Denmark, French monetary area, Greece, Hungary, Italy, Japan, Palestine, Paraguay, Portuguese monetary area, Roumania, Switzerland, Transjordan, Turkey, Uruguay and Yugoslavia.

(e) **OTHER COUNTRIES:**

Among these are Afghanistan, Albania, Nepal, Saudi Arabia and Yemen. For this residual group there is quite a wide range of transferability of sterling claims within the group and with the sterling area.

While the suspension of the convertibility of sterling was a result of the strained conditions in the field of foreign exchange generally, it added to the existing tension and necessitated the making of new arrangements as regards the foreign exchange position in relation to various countries.

The failure of sterling convertibility drives home the lesson of the fundamental importance of first achieving a real balance in the economy of each country and in the relations of the countries with one another. But, if full convertibility is not always practicable, other possibilities must be developed. As shown in the section “European Payments Agreements, Multilateral Compensation and the European Recovery Program,” new methods are being tried, involving the extension of transferability (sometimes on a limited scale) to an increasing number of countries, together with arrangements for compensation. In this way real progress may be made in facilitating commercial relations, the work gaining new impetus from the contacts and cooperation initiated under the European Recovery Program.

INTERNAL CREDIT CONDITIONS AND THE TREND OF INTEREST RATES

The year 1947 produced a display of central banks and finance ministries bowing to the inevitable—with varying degrees of grace and reluctance. The movement away from artificially low interest rates (for which strong arguments had been advanced in connection with war-financing) spread from the United States over the greater part of the world, irrespective, one might add, of differences in monetary theory and practice.

The urgent need for reconstruction and restocking, with booming business activity and high commodity prices, provided the basic conditions for full employment of current savings, pressure being put on the banking mechanism for further facilities, thus provoking a widespread tightening of money markets and upward adjustments of interest rates. The increases have been usually on a moderate scale and have tended to restore healthier market conditions, bringing a better balance between the

* Transferred to the group of bilateral countries at the end of May 1948.

supply of and demand for disposable funds. Most central banks would, indeed, subscribe to the statement made by the Governor of the Reserve Bank of India at the annual general meeting held in August 1947, when he said:

"It is being increasingly recognised that, beyond a certain limit, cheap money not only ceases to be beneficial but, in certain conditions, . . . becomes positively harmful to the economy. It would seem that that limit has already been reached in many countries."

A survey of monetary and credit conditions in the world leaves an impression of all-round reaction against an extreme ease of money—with only one or two obvious exceptions. More attention has been paid to monetary means of control in addition to those direct physical controls already in existence; budget surpluses are beginning to appear in a number of countries and, in any case, serious efforts are being made to discontinue government borrowing at the central banks. In pressing for a sounder policy, the central banks have often been able to exert a wholesome influence. They have generally given warnings to commercial banks to exercise restraint in the granting of new credits to the private economy and have made such recourse to credit more expensive by raising bank rates.

The increases in interest rates recorded in this section are moderate and cannot be considered inappropriate in the present atmosphere of full employment, with production reaching the limits of capacity; but the danger of further inflation is by no means completely overcome and the falling-off of "small savings" in a number of countries is not the least significant warning that private thrift needs to be encouraged and that an essential factor in a healthy economy must always be an adequate formation of genuine savings out of current income.

EUROPEAN PAYMENTS AGREEMENTS, MULTILATERAL COMPENSATION AND THE EUROPEAN RECOVERY PROGRAM

In the course of 1947 the payments difficulties of European countries further increased, not only in relation to overseas countries but also amongst themselves. The specifically European aspects of these problems were considered by the Committee on Payments Agreements, a prolongation of the Committee of Financial Experts which met in Paris in the summer of 1947, as part of the Committee of European Economic Cooperation. Thanks to the helpful attitude adopted by the monetary authorities in the countries concerned, it proved possible for the first time to collect comprehensive statistics on the working of the European payments agreements. Further, the Committee drafted the First Agree-

ment on Multilateral Monetary Compensation, which was signed in Paris on November 18, 1947.

There has been much criticism of the whole system of payments agreements, but only now have the data become available for a comprehensive view to be taken of the position. As a background for an appraisal of the efforts now being made to arrive at a more multilateral system, in connection with the European Recovery Program, it is useful briefly to review the evolution over the past few years.

Payments agreements had their origin in methods of financing adopted during the war, but they first became an important factor in the system of European payments after the cessation of hostilities, when the network of agreements spread more particularly over western Europe (with important links with eastern Europe and also with some extra-European countries). The partners to the agreements had, as a rule, quite inadequate gold reserves, which forced them to continue the application of exchange control and also to enter into bilateral arrangements.

It cannot be too strongly emphasised that, in the situation which prevailed at the end of hostilities in Europe, the credits granted under bilateral agreements—reciprocal rights to overdrafts—served as much-needed oil in the European payments mechanism, without which it would have proved far more difficult to get trade going again after the disruption of the war. The agreements were usually concluded between governments, according to a fairly uniform pattern: the central banks, as technical agents, supplied their own currency at a fixed rate of exchange against that of their partner up to a certain limit, which was often referred to as the "swing," since it was intended to afford room for minor fluctuations in commercial deliveries between the two countries; beyond the limit thus fixed settlements had generally to be made in gold or convertible currency.

In 1945, during the first phase of their operation, the payments agreements had, indeed, the great virtue of making commercial relations possible on a scale that could not otherwise have been achieved; they got goods moving between countries which, in many cases, had been physically severed from each other for many years. They helped to establish a uniform and smoothly working payments mechanism with a series of reasonable and consistent exchange rates and with relatively flexible controls. They made it possible to economise the use of gold and international exchange and to develop export capacities. As a result, there was a widespread revival of intra-European trade after the barren years of war.

Source.—Report of Committee on Payments Agreements, October 1947. The statistics apply only to countries participating in E. R. P.

Nevertheless, a second phase soon appeared in which the payments agreements began to show their fundamental weaknesses. Since they had been intended to cover current transactions only (hardly any European country being in a position to grant long-term credits), there was an absence of adequate provision for capital movements or non-seasonal deficits. Further, the agreements were essentially bilateral; but, if the free flow of productive energies is allowed to develop along natural lines, trade between two countries (or trading areas) is rarely, and only exceptionally, balanced bilaterally. Moreover, European countries were weakened and exhausted in varying degrees, with an uneven development in their productive capacity. For these reasons the "swings" on the payments accounts developed, in a number of cases, into

semi-permanent credits and became enlarged out of proportion to the original intentions.

During 1946, as these tendencies became pronounced, a number of special steps were taken to bring in, for instance, particular *ad-hoc* "balancing" items of a capital nature (such as the proceeds of requisitioned securities) or to consolidate, in the currency of the creditor country, the whole or part of the credits which had been granted voluntarily or involuntarily. It became evident, however, that trade would have to be controlled if the volume of credit accommodation was to be kept within tolerable bounds; so a fresh start was made, and the bilateral agreements were reconsidered in conjunction with trade negotiations inspired by the inescapable need for a greater bilateral balance.

It was at this time that the United Kingdom

consolidated about 100 million pounds sterling—the equivalent of part of the French francs which had come into the possession of the Bank of England against sales of sterling to the Bank of France. Belgium also consolidated debts which had been run up by the Netherlands, and Sweden granted further credits on commercial account, particularly to Finland, but also to the Netherlands and Norway, and consolidated 80 million Swedish kronor due by France. These consolidations, together with the granting of new credits, afforded temporary relief to the debtors; but they did not—indeed, could not—alter the fundamental fact that the normal pattern of trade is not bilateral, it being thus against the nature of things to try to solve the payments relations of the various countries on a purely bilateral basis.

The third phase developed as the “dollar shortage” made itself more acutely felt (this was the case particularly in 1947 and especially after the suspension of the sterling convertibility on August 20). As the creditors in intra-European trade found it increasingly difficult to supply dollars and gold to meet their payments in the United States, they found themselves less in a position to extend further credits inside Europe. As a rule, each country had to confine any further credit accommodation to what was compatible with its own economic capacity; for the debtor countries on the intra-European account, this often meant that an increasing proportion of their exports had to be allocated to the reduction of earlier debts, although they could ill afford to do so.

Although statistics are not complete, it is clear that, since the end of the war, the total of the intra-European credits on payments agreements has amounted to some 1,500 million dollars in the aggregate. The jam into which the bilateral mechanism has run is, therefore, at least partly connected with the very considerable volume of intra-European aid already granted. As pressure from outside the continent has been growing, it is not surprising that European self-help in its present form seems to be reaching its practical limits.

¹ Working accounts reported for purposes of the multilateral compensation.

The distortion of bilateral relations has led to a situation such that, inside Europe, countries tend to become wholly debtors or wholly creditors. The bilateral system itself contains no natural checks and balances ensuring a more or less automatic adaptation, as was the case under the gold standard.

Moreover, as the credit limits have been reached and become rigid, they act virtually as gold points at which gold movements actually take place, any further excess purchases by the debtor country thus being covered up to 100 per cent in gold or dollars. In this way the weaker currencies in Europe are struggling under the burden of convertibility into gold and dollars, with the result that useful imports are being inhibited in one direction while economically unwarranted exports may be forced in some other direction.

This situation was already evident when the Committee on Payments Agreements met in Paris in October 1947. As the Committee explained in its report,

“... the inadequacy of the system of bilateral agreements... has led to increasingly serious drawbacks. In particular, the margins of credit possible under the payments agreements concluded by some countries are almost exhausted, and this is a quasi-permanent situation. For the expansion of trade to the extent which is possible, increasingly numerous gold payments would be necessary. This situation risks hampering not only the development of trade, but actually its maintenance at the present level. . . In these circumstances, the Committee considers that greater flexibility in the present payments system is more than ever necessary.”

While the Committee considered that, as an emergency measure, the existing credit margins might temporarily be enlarged, it felt that the countries concerned could make further progress only by taking “definite steps for the organisation of their mutual payments on a multilateral basis.”

But the Committee explained that “an integral multilateral system presupposes a certain number of conditions which are not at present fulfilled and several of which depend upon external assistance.” These conditions are:

“Firstly, the production of each of the European countries must have reached a point where it will be able to provide the material for a sufficient flow of trade.

“Secondly, conditions of monetary stability, where they have not already been achieved, must be established in the participating countries. This, for some of them, implies the reorganisation of their public finances.

“Thirdly, the participating countries must be able to dispose of more abundant foreign currency re-

sources to enable them to effect the settlement required.

"As shown by the work of the Committee of European Economic Cooperation, the fulfilment of these three conditions mainly depends upon the efforts of the European countries themselves. But it also depends, in varying degrees, upon adequate external assistance.

"Moreover, for such external assistance to be fully effective, an expansion of European economic activity must be furthered by an increasingly flexible and ever-widening system of payments."

The Committee, therefore, recommended that the return to full convertibility should be made in several stages, beginning with some simple steps which could be taken without further ado. "These recommendations," said the Committee,

"appear to conform to the general principles of the International Monetary Fund and of the future International Trade Organisation. It is unnecessary to emphasise that any steps taken to apply these recommendations will remain in harmony with these principles and will promote their development."

As an immediate practical measure, the Committee drafted the First Agreement on Multilateral Monetary Compensation, which was signed in Paris by the Governments of Belgium (acting also for Luxemburg), France, Italy and the Netherlands on November 18, 1947. Soon after that date practically all countries participating in the European Recovery Program adhered to the Agreement, the complete list of the members being as follows:

PERMANENT MEMBERS

Belgium (and Luxemburg)
France
Italy
Netherlands
Bi-Zone of Germany

OCCASIONAL MEMBERS

Austria
Denmark
Greece
Norway
Portugal
Sweden
United Kingdom
French Zone of Germany

The "permanent" members are those which accept the automatic application of simple offsetting operations amongst themselves; "occasional" members are open to propositions from the Agent, but reserve the right, on each occasion, to accept or

reject such propositions, according to whether or not they consider them desirable.

Among the countries participating in the European Recovery Program, the only ones not on this list are Iceland (which has only one payments agreement, with France), Eire (with no payments agreement), Switzerland and Turkey; but the two last-mentioned countries, although not taking part in the actual compensations, cooperate by furnishing statistics and sending observers to the Committee of Delegates.

The Committee of Delegates and Representatives, appointed for the application of the Agreement of November 18, 1947, has continued in another form the work begun by the Committee on Payments Agreements. It is made up of representatives of all countries participating in the compensations; at four meetings (one in Brussels and three in Basle) it has drawn up "regulations" for the application of the Agreement, which give wide powers to the Agent to carry out the compensations.

The Bank for International Settlements has been acting as Agent (under Art. 5) since the Agreement was signed. The work of the Agent is confined to the technical operation of the compensations, *inter alia* the collection and analysis of statistics on payments agreements, such statistics being received each month from the technical institution in each of the participating countries. These technical institutions are generally the central banks, with which the Bank for International Settlements has been on terms of close collaboration for many years—a circumstance which has undoubtedly facilitated the work and incidentally made possible the raising of bank secrecy necessary for the reporting of the figures and the smooth working of the technical side of the compensations. The Bank for International Settlements, as Agent, has been authorised to debit or credit the payments-agreements accounts for the purpose of compensations.

The Agreement of November 18 came into force on the date of signature and the technical organisation was set up with such speed that it was possible to start practical compensation operations from the end of December 1947, since when they have taken place regularly at the end of each month.

The Agreement made the following distinction between two classes of compensation, those of the first category and those of the second category:

First-category compensations involve only a reduction of existing balances ("balances" in this context covering both debit and credit accounts). Such operations imply a "closed circuit" of countries each of which is debtor to its immediately preceding partner, while it is itself a creditor of its succeeding partner, the last country in the chain

being the creditor of the first country, thus closing the circuit.

These operations are partially automatic (in so far as the "permanent" countries are concerned) and partially optional (in so far as they apply to "occasional" members). To obtain the optimum results from closed circuits of reductions, a mathematical system is applied by the Agent on the basis of the statistics received at the end of each month. Second-category operations are those which produce one or more increases of balances, or the formation of new balances, in a given circuit. All member countries may participate; those countries which are wholly debtor or wholly creditor, and are automatically excluded from first-category operations, may take an active part in the second category. Such operations are entirely optional and each country enters with the rights of an "occasional" member, i.e. it may refuse any proposition. The theoretical possibilities of second-category operations are great and they cannot, by their nature, be reduced to a mathematical formula; they are, however, subject to practical limitations, some of which are discussed below.

The working accounts of the European payments agreements show debts (and credits) entering into the compensations to the equivalent of over 700 million dollars. About 400 million of this total is net debt (or credit) which cannot be offset. Of the 300 million which can be subject to compensation in theory, experience has shown that, at the present time, the maximum possibilities of the first category alone amount to about 30-50 million. From this it follows that the possibilities for the reduction of debts (and credits) by operations of the second category are some ten times as great as those of the first category. The possible "turnover" of such compensations is much greater still.

The actual results attained so far are limited but they are, nevertheless, of importance for more general reasons. A mechanism has been set up, and this in itself required the surmounting of a number of obstacles (such as traditional banking secrecy); the task was carried through with a high degree of European cooperation and the mechanism already functioning is capable of adaptation and growth to meet new developments.

European transferability and the exchange controls. The term "multilateral compensation" covers two quite separate conceptions:

(a) The simple offsetting (or "compensation par-faite") of the first category, which can lead only to reductions of outstanding debts (and credits) and presents no particular difficulties—except that, in some cases, countries may for one reason or an-

other desire to maintain certain balances in one or more particular markets and thus are unwilling to reduce them, and,

(b) the transferability of currencies involved in second-category operations, which are considered more fully in the following paragraphs.

A "second-category operation" may be defined as a payment made by one country to another by utilising the currency of a third country. A simple example would be the payment of a Norwegian debt to the Netherlands in sterling. It is evident that such a transaction involves a limited transferability of sterling; the Netherlands, creditor of both countries, has exchanged Norway as its debtor for the United Kingdom, to the extent that Norway's debt is repaid in sterling. Other transactions may be envisaged which produce a similar degree of transferability as regards any other currency.

Thus, second-category operations, unlike the simple offset of the first category, clearly presuppose the transferability of at least one of the currencies involved in any "circuit" of compensation. In this way the compensation is brought into direct contact with the foreign exchange policy of the countries concerned, finding its expression in the foreign exchange control, of which the payments agreements are a part. The strict bilateral application of the payments agreements may, indeed, be modified by the administration of the exchange control, and such considerations are of great significance for the working of the compensations.

European transferability and the European Recovery Program. The multilateral compensation is the logical outcome of the European Recovery Program. Europe suffered greater devastation and dislocation during the war than any other closely populated area and the resulting disequilibrium inside the area and in relation to the world is probably the greatest. It is logical that it is precisely in this most difficult area that a special effort at collaboration in the form of the multilateral compensation should be made under the European Recovery Program, which aims at restoring equilibrium in western Europe. Sterling convertibility, while it lasted, was backed by "external aid," and it was particularly after August 20, 1947 that an acute need was felt to provide some new mechanism.

Some system of multilateral payments in Europe is thus essential to a proper working of the European Recovery Program. In Paris, last summer, the participating countries drew up their production figures for various products and added them together before estimating the requirements from outside Europe. This procedure was followed for

many groups of commodities: food, coal, steel, timber, etc. As is well known, however, the present dislocation in this field is such that trade movements, essential for the carrying out of the European Recovery Program, are not taking place—that, amongst many examples, Norwegian reconstruction has been held up for lack of Belgian steel, simply because it could not be paid for.

The urgency of the need to introduce more flexibility into the present bilateral payments system is well understood in Europe itself, the intense discussion of these problems being a sign of the awareness in Europe of this essential problem. Likewise, the policy of the British Control is to extend the field of transferability of sterling as widely and quickly as circumstances permit.

Further, the countries participating in the European Recovery Program—the group which began with the first step represented by the multilateral compensation—adopted a Charter on April 16, 1948, of which Article 4 reads as follows:

“The Contracting Parties will develop, in mutual cooperation, the maximum possible interchange of goods and services. To this end they will continue the efforts already initiated to achieve as soon as possible a multilateral system of payments among themselves, and will cooperate in relaxing restrictions on trade and payments between one another, with the object of abolishing as soon as possible those restrictions which at present hamper such trade and payments.

“In the application of this article, the Contracting Parties will take due account of the necessity that they should, collectively and individually, correct or avoid excessive disequilibrium in their financial and economic relations, both among themselves and with non-participating countries.”

Although breaking new ground, the attempt at multilateral compensation is but a modest step in the direction of freer exchanges; but the various discussions and the practical experience gained month by month in working the compensation system may, if a reasonable amount of outside aid is forthcoming, lead to an easing of the present restrictions and, with it, an opportunity of erecting a new and stronger monetary structure, better suited to intra-European trade and to relations with other continents.

CONCLUSION

It is often difficult to discern behind the toil and strain of everyday work the more deep-seated tendencies of one's own times, or even to recognise what are the real achievements and, maybe, the dangerous developments in the economic life of the nations. This is especially true with regard to the present complex situation in Europe. On the

one hand, there are all the difficulties and dangers brought to our notice with such appalling regularity; in parts of this continent there is still widespread hunger and distress, which lowers efficiency and is in itself a cause of further unrest. Means of transport may have been repaired but frontiers are not easily crossed either by goods or by men when, in addition to all other obstacles, foreign exchange is in short supply and strictly rationed for payments or journeys abroad. This means not only a loss of trade but a danger of moral isolation through reduced contacts, particularly regrettable at a time when Europeans ought to draw closer together.

In other respects, however, impressive progress has been made. With the exception of a few (though not unimportant) areas, the volume of industrial output has almost regained and (in some countries) even exceeded the prewar level. But for the hazards of the weather, which was the main reason why the 1947 harvest yield was barely two-thirds of normal, many European countries would have come out well indeed, as far as their volume of production was concerned. Financially also, progress has been made: more and more budgets have been balanced, the remaining deficits being met, as a rule, without resort to the central banks; the abundance of money left over from the war, and often added to even when the war was over, has been reduced in several countries by monetary reforms and has, moreover, been increasingly kept under control by a fairly general tightening of conditions on the money markets. Notwithstanding the strain which arose through the gradual depletion of gold and dollar reserves, considerable progress has been made in establishing more realistic rates between the various currencies, partly by the adoption of new exchange régimes and partly owing to the fact that, in 1947, the rise in costs and prices was more pronounced in the United States than in most European countries.

In one respect Europe, in its efforts, has clearly overreached itself: naturally desirous of repairing war damage, building houses and renewing and modernising industrial plant and equipment, many countries pushed investment in capital assets beyond the extent warranted by current savings and such foreign resources as were available. While this investment activity on a larger scale than could be afforded placed a strain upon the balance of payments and led to other difficulties, it nevertheless produced some capital assets which will be of permanent benefit to the countries concerned.

Two particular conclusions emerge from an examination of the European situation. In the first place, the progress made in Europe is sufficient proof of the fact that the aid so far received through

UNRRA and otherwise (mostly coming from the United States) has not been wasted. Without the food, the fuel and the industrial materials received from abroad, Europe could not possibly have attained the present volume of output, which in the countries concerned, forms the basis of the national income and, with it, the means of restoring sufficient budgetary equilibrium for inflation to be arrested. Secondly, the fact must not be overlooked that the recovery of Europe is still largely conditional upon the amount of aid received, so that if the aid were suddenly to cease a number of countries would be faced with almost overwhelming difficulties even in trying to secure a minimum of food and materials. They would incur the danger of widespread unemployment, a consequent decline in the national income and very likely a reappearance of budget deficits—a train of events which could not happen without a general weakening of the social and political fabric. After the first world war, it took several years to regain a balanced position, and the second world war spread much greater havoc and undoubtedly left behind it greater real needs. Even so, the effort this time compares not unfavourably with that of a quarter of a century ago.

Since physical damage can be fairly quickly repaired in most cases (given the facilities of modern technique), disorganisation has proved to be the great lingering injury caused by war. It is essentially to provide time for reorganisation that further aid is required, and it is only if this remains its chief purpose that such aid will be put to the best use. Obviously, "reorganisation" must not mean simply an attempt to restore the situation obtaining before the war—a mere return to prewar conditions (this being the meaning generally given to the word "reconstruction" after the first world war). In quite a new sense, the process of reorganisation must aspire to a "refashioning" of a great many aspects of present-day economic life, first as regards the internal conditions of each individual country (often much in need of modernisation) but also in the community of nations and then with special reference to Europe, whose prosperity and dignity can be secured only by increased cooperation.

The greatest mistake of all, however, would be to imagine that peacetime reorganisation could be achieved simply by perpetuating the often improvised methods of the war economy. These methods, which consist in the use of physical controls (over raw materials, prices, wages, movements of labour, investments, etc.) and seem always to involve a strong admixture of inflation, had obviously to be employed so long as the war lasted, and they survived in the immediate postwar period during which the countries still had to take many emergency measures. But an undue prolongation of the

use of these methods would be even more dangerous than an indiscriminate return to the prewar modes of economic life.

With a new start in economic reorganisation, the time is now ripe for a genuine overhauling of the methods of official intervention in economic life. The criterion should be the effectiveness of the whole range of measures from the standpoint of the peacetime aims of restoring prosperity and stability. It will then be imperative not merely to think in terms of immediate results but to pay most careful attention to possible secondary effects, which may well be harder to foresee but may ultimately be of much more importance. In any case, it will be necessary to base the economy on a firmer foundation than pretence and, indeed, to be aware of the fact that pretence in its various forms is generally self-defeating in the end.

It is, for instance, no use pretending that price control was effective when, as happened in several countries, more than one-half (and sometimes more than three-quarters) of all actual transactions took place in black or grey markets. In such circumstances it is not surprising to find that prices generally rose, no matter what form of so-called control was administratively in force.

Another example may be chosen from the money and capital markets. No doubt "the authorities" have certain possibilities of influencing the level of interest rates (by limiting, for instance, the demand for capital on the part of official agencies or by the use to which official funds are put). If the markets fall into line (and whether that will happen depends largely on the total volume of investments and on the flow of money savings), then the official policy is a success. Should that not be the case, and should the authorities decide to keep interest rates down by means of large-scale purchases of market securities by the central bank, then a new factor—the use of central-bank funds—has been brought into play, with consequences which may go far beyond the results contemplated in the first instance.

Something similar may happen with regard to the balance of payments. Through control of trade, an attempt may be made to reduce a surplus of imports over exports; but, here again, it may often be found that the import surplus stubbornly refuses to be compressed. Should that be the case, the control will have failed; but the surplus imports will still have to be paid for and, in the absence of foreign aid, this will lead to drafts on the monetary reserves, which may be brought near to vanishing point.

It is obvious that, for the establishment of balanced conditions—and for the harder task of maintaining them when established—more effective means than physical control are required. It then

becomes necessary to have recourse to those essentially financial types of control which, in conjunction with the price mechanism, have repeatedly proved their usefulness in adjusting the balance of payments and in giving stability to the national currency. The point is to control the total volume of monetary purchasing power and especially the size of money incomes, which chiefly determines the volume of demand for goods and services. Expenditure in all its different forms—whether for current consumption, for the upkeep of the government or for investment purposes—must be related to the available volume of goods and services, with special attention to the flow of savings (including such aid as is received from abroad). The principle of balancing the budget is subordinate to the more general rule that the money income received by producers of all kinds should correspond to the real value of their output of goods and services (less taxes and other charges required for the upkeep of government establishments, etc.). In other words, there must be no dilution by issues of money having no counterpart in additions to the volume of goods and services, and, accordingly, the central banks must once more be in a position to exert their influence on the volume of currency and credit.

The boom conditions at present obtaining de-

mand a curb on the creation of new money, though in times of depression a different policy may be justified. There is, indeed, a danger that ideas which were born during the great depression of the thirties may still retain their sway over people's minds and be allowed to influence practical action in entirely changed conditions. The actual course of events in many countries unmistakably points to the conclusion that, for peacetime reconstruction to rest on a firm foundation, measures of financial control must again be applied—adapted, maybe, to the circumstances of each particular country but without detriment to their effectiveness. It will then be found that a most useful step has been taken on the road to international cooperation. By their very nature most physical controls (and not least trade and exchange controls) tend to intensify the trend towards nationalistic insulation. As a matter of fact, a wider application of appropriate financial controls should permit the abolition of many existing hindrances and thus help to strengthen the ties of free international intercourse. Such application would, moreover, be consonant with the present-day orientation of ideas and action towards a system which combines close cooperation with the greatest possible freedom for the individual countries.

CURRENT EVENTS AND ANNOUNCEMENTS

Federal Reserve Meetings

The Federal Advisory Council held meetings in Washington on September 19-21, 1948, and met with the Board of Governors of the Federal Reserve System on September 21, 1948.

The Conference of Presidents of the Federal Reserve Banks met in Washington on October 1 and 2, 1948. The Presidents met with the Board of Governors of the Federal Reserve System on October 5, 1948.

A meeting of the Federal Open Market Committee was held in Washington on October 4, 1948.

Resignation of the President of the Federal Reserve Bank of Boston

Mr. Laurence F. Whittemore resigned as President of the Federal Reserve Bank of Boston effective October 4, 1948, in order to become President of the New York, New Haven and Hartford Railroad Company. Mr. Whittemore had served as President of the Bank since March 1, 1946, and as a Class B director from September 7, 1944 to February 28, 1946.

Change in Board's Staff

Mr. Bonnar Brown resigned as Assistant Director of the Board's Division of Research and Statistics effective October 15, 1948, to resume his residence in the West. On October 1, 1937, Mr. Brown

was employed as a member of the staff of the Board's Division of Security Loans and served as Assistant Director of that division from July 1, 1944, until October 19, 1947, when he was appointed Assistant Director of the Division of Research and Statistics. Prior to his association with the Board he had been on the staff of the Federal Reserve Bank of San Francisco.

Admissions of State Banks to Membership in the Federal Reserve System

The following State banks were admitted to membership in the Federal Reserve System during the period August 16, 1948 to September 15, 1948:

Connecticut

Windsor—The Windsor Trust Company

Idaho

Boise—Continental State Bank

New York

Waddington—The Waddington Bank

Ohio

Metamora—The Metamora State Bank

Wisconsin

Sparta—Monroe County Bank

Wyoming

Basin—Security State Bank of Basin

LAW DEPARTMENT

Administrative interpretations of banking laws, new regulations issued by the Board of Governors, and other similar material.

Consumer Instalment Credit

Transactions Initiated Before Effective Date of Regulation

The Board has been asked about the application of Regulation W to extensions of credit where arrangements of some kind for the instalment sale of an article subject to the regulation were made prior to September 20, 1948, the effective date of the regulation, but where the transaction was not actually completed in all respects until after that date.

The regulation by its terms applies to extensions of credit made on or after September 20. Accordingly its applicability depends upon the date the extension of credit is made, not the date arrangements for the credit are made.

There are many circumstances in which the question can arise and the determination of the date of extension of credit would depend on the circumstances of the case. The most frequent inquiry has been in connection with instances in which all details of an instalment sale of an article subject to the regulation have been completed before September 20 except delivery of the article. In such a case where delivery is the only uncompleted detail, the credit would have been extended prior to September 20 if the seller, prior to that date had physical or constructive possession of the particular automobile, refrigerator, or other item, and had set it aside, or identified it on inventory records or otherwise, as the article involved in the deal in question. The postponement of delivery may have occurred for any of a number of reasons such as the customer's desire to have the article delivered later to a home which he did not then occupy or the time necessary for the seller to deliver the article from the warehouse on his regular delivery schedule.

Another type of inquiry related to instances in which a particular article in the seller's possession has been identified or set aside as the one involved in the transaction and all other details have been completed before September 20 except the down payment which the seller required under his own

credit terms before he would go ahead with the deal and make delivery. In this case, the extension of credit would not have been made before September 20 and it would be subject to the regulation.

Automobile Appraisal Guides

Under Regulation W as recently issued effective September 20, 1948, the credit value of any automobile is based on the lower of either (1) the cash price or (2) the average retail value stated in one of the used-car price guides designated by the Board of Governors of the Federal Reserve System.

The Board has now determined which appraisal guides are to be designated at present for the purposes of this rule, and these are shown on the list published below. Detailed information as to which of these publications have been designated for any particular territory may be obtained from any Federal Reserve Bank or branch. A dealer is not required to use any particular automobile appraisal guide but, for purposes of complying with Regulation W, may use quotations from the current edition of any of the publications that are designated for use in his territory.

The automobile models for which designations will initially apply are limited to used cars of model years 1938 to 1948, inclusive. In the case of these cars, the maximum credit value on and after September 20, 1948, will be the specified percentage (now $66\frac{2}{3}$ per cent) of whichever is the lower of (1) the cash purchase price or (2) the "appraisal guide value" (as determined from any designated guide). For those automobiles which do not have an "appraisal guide value" (new automobiles, used 1949 models, and used cars of 1937 and older models) the maximum credit value will be the specified percentage of the cash purchase price.

The "appraisal guide value" to be used for the purposes of Regulation W does not include any added value for cars equipped with a radio or heater, but it may include the added value specified in the appraisal guide for cars having an overdrive or automatic transmission as extra equipment.

Foreign Funds Control

Executive Order Transferring Jurisdiction to Attorney General

There is set forth below the text of an Executive Order issued by the President on August 20, 1948, transferring jurisdiction over the foreign property and interests remaining blocked on September 30, 1948, to the Attorney General:

EXECUTIVE ORDER 9989

TRANSFERRING JURISDICTION OVER BLOCKED ASSETS TO THE ATTORNEY GENERAL

WHEREAS with the successful termination of hostilities, there has been a gradual release from control by the Treasury Department over foreign property and interests which had been blocked to prevent their looting by the Axis and their use in ways harmful to the war effort of the United States; *and*

WHEREAS certain of such foreign property and interests have not yet been unblocked; *and*

WHEREAS it is now necessary and desirable to place the jurisdiction over the assets remaining blocked on September 30, 1948, in the same agency which is administering the program of alien property control initiated under Executive Order No. 9095 of March 11, 1942, as amended, which program is presently being administered by the Attorney General:

NOW, THEREFORE, by virtue of the authority vested in me by the Constitution and the laws of the United States, including the Trading With the Enemy Act of October 6, 1917, as amended, and as President of the United States, it is hereby ordered as follows:

1. The Attorney General is hereby authorized and directed to take such action as he may deem

necessary with respect to any property or interest of any nature whatsoever in which any foreign country designated in Executive Order No. 8389 of April 10, 1940, as amended, or any national thereof has any interest (including property subject to the proviso of paragraph (a) of General License No. 94, as amended (31 C.F.R., 1947 Supp., 131.94), and including any Scheduled Securities within the meaning of General Ruling No. 5, as amended (31 C.F.R., 1947 Supp., 131, App. A), both issued by the Secretary of the Treasury) which on September 30, 1948, is not unblocked or otherwise removed from the restrictions of the said Executive Order No. 8389, as amended, by any order, regulation, ruling, instruction, license, or other action issued or taken by the Secretary of the Treasury. In the performance of his duties under this order, the Attorney General or any officer, person, agency, or instrumentality designated by him, may exercise all powers and authority vested in the President by sections 3(a) and 5(b) of the Trading With the Enemy Act, as amended. As used herein, the terms "national" and "foreign country" shall have the meanings prescribed in Executive Order No. 8389, as amended.

2. With respect to the property and interests referred to in section 1 hereof, all orders, regulations, rulings, instructions, or licenses issued by the Secretary of the Treasury under the authority of Executive Order No. 8389, as amended, and Executive Order No. 9095, as amended, and in force on September 30, 1948, shall continue in full force and effect except as amended, modified, or revoked by the Attorney General.

3. It is the policy of this order that administrative action under paragraph 1 hereof shall be taken by the Attorney General or any officer, person, agency, or instrumentality designated by him. However, nothing in this order shall be deemed to limit or remove any powers heretofore conferred upon the Secretary of the Treasury or the Attorney General by statute or by Executive order. No person affected by any order, regulation, ruling, instruction, license, or other action issued or taken by either the Secretary of the Treasury or the Attorney General may challenge the validity thereof or otherwise excuse his actions, or failure to act, on the ground that pursuant to the provisions of this Executive order, such order, regulation, ruling, instruction, license, or other action was within the jurisdiction of the

Attorney General rather than the Secretary of the Treasury or *vice versa*.

4. This order shall become effective as of midnight, September 30, 1948.

THE WHITE HOUSE,

August 20, 1948

HARRY S. TRUMAN

Treasury Department Releases

The following releases relating to transactions in foreign exchange, etc., in addition to those heretofore published in the Federal Reserve BULLETIN, have been issued by the Office of the Secretary of the Treasury under authority of the Executive Order of April 10, 1940, as amended, and the Regulations issued pursuant thereto:

Treasury Department
FOREIGN FUNDS CONTROL
August 31, 1948

AMENDMENT TO PUBLIC CIRCULAR No. 37

*Under Executive Order No. 8389, as amended, Executive Order No. 9193, as amended, Sections 3(a) and 5(b) of the Trading With the Enemy Act, as amended by the First War Powers Act, 1941, relating to foreign funds control.**

Section 6 of Part 131 Appendix B, Public Circular No. 37 is hereby amended as follows:

Sec. 6. Manner in which Form TFR-600 should be filed. As indicated in Sec. 4(B), reports on Form TFR-600 shall be prepared in quadruplicate. Three copies shall be sent in a set, on or before July 15, 1948, to Unit 600, Foreign Funds Control, Treasury Department, Washington 25, D. C. (Reports covered by the same certification shall be transmitted together.)

If between the date of reporting and October 1, 1948, any property reported shall have been unblocked pursuant to Treasury license, the reporter shall make a brief endorsement to that effect on the bottom of page 2 of the fourth copy of the report or on a separate sheet of paper which he shall attach securely to the fourth copy of the report. His endorsement shall consist of a brief description of the property released, a statement of its value, and a statement of the authority under which it was unblocked, e.g., certification under General License No. 95, special license from the Treasury Department, etc. On or before October 10, 1948,

* Appendix B; issued under Sec. 3(a), 40 Stat. 412, Sec. 5(b), 40 Stat. 415, 966, Sec. 2, 48 Stat. 1, 54 Stat. 179, Sec. 301, 55 Stat. 839; 50 U.S.C. App. 3(a), 12 U.S.C. 95a, 50 U.S.C. App. Supp., 5(b); E.O. 8389, April 10, 1940, as amended by E.O. 8785, June 14, 1941, E.O. 8832, July 26, 1941, E.O. 8963, Dec. 9, 1941, and E.O. 8998, Dec. 26, 1941, E.O. 9193, July 6, 1942, as amended by E.O. 9567, June 8, 1945; 3 CFR, Cum. Supp., 10 F.R. 6917; Regulations, April 10, 1940, as amended June 14, 1941, February 19, 1946, and June 28, 1946 and January 1, 1947; 31 CFR, Cum. Supp., 130.1-7, 11 F.R. 1769, 7184, 12 F.R. 6.

LAW DEPARTMENT

the fourth copy appropriately endorsed shall be sent to Section 601, Office of Alien Property, Department of Justice, Washington 25, D. C. If none of the property reported on Form TFR-600 has been unblocked between the date of reporting and October 1, 1948, the fourth copy of the report may be retained by the reporter or may be destroyed.

JOHN W. SNYDER,
Secretary of the Treasury.

Treasury Department
FOREIGN FUNDS CONTROL
September 2, 1948

AMENDMENT TO GENERAL LICENSE NO. 53

Under Executive Order No. 8389, as amended, Executive Order No. 9193, as amended, Section 5(b) of the Trading With the Enemy Act, as amended by the First War Powers Act, 1941, relating to foreign funds control.†

Paragraph (4)(a) of General License No. 53 (Paragraph (d)(1) of § 131.53) is hereby amended to read as follows:

§ 131.53 * * *

† Sec. 5(b), 40 Stat. 415, 966, sec. 2, 48 Stat. 1, 54 Stat. 179, sec. 301, 55 Stat. 839; 12 U.S.C. 95a, 50 U.S.C. App. Supp., 5(b); E.O. 8389, April 10, 1940, as amended by E.O. 8785, June 14, 1941, E.O. 8832, July 26, 1941, E.O. 8963, Dec. 9, 1941, and E.O. 8998, Dec. 26, 1941, E.O. 9193, July 6, 1942, as amended by E.O. 9567, June 8, 1945; 3 CFR, Cum. Supp., 10 F.R. 6917; Regulations, April 10, 1940, as amended June 14, 1941, February 19, 1946, June 28, 1946, and January 1, 1947; 31 CFR, Cum. Supp., 130.1-7, 11 F.R. 1769, 7184, 12 F.R. 6.

(4) As used in this general license:

(a) The term "generally licensed trade area" shall include all foreign countries except the following:

(i) Germany and Japan;

(ii) Bulgaria, Hungary, Rumania, and Italy;

(iii) Sweden, Switzerland and Liechtenstein;

(iv) France (including Monaco), Belgium, Norway, Finland, the Netherlands, Czechoslovakia, Luxembourg, Denmark, Greece, Poland, Estonia, Latvia, Lithuania, and Austria, but not including any colony or other non-European territory subject to the jurisdiction of any such country except French West Africa, Algeria, Tunisia, and French Morocco.

JOHN W. SNYDER,
Secretary of the Treasury.

REVOCATION OF GENERAL LICENSE NO. 70

Under Executive Order No. 8389, as amended, Executive Order No. 9193, as amended, Section 5(b) of the Trading With the Enemy Act, as amended by the First War Powers Act, 1941, relating to foreign funds control.†

General License No. 70 (Section 131.70) is hereby revoked.

JOHN W. SNYDER,
Secretary of the Treasury.

NATIONAL SUMMARY OF BUSINESS CONDITIONS

[Compiled September 26 and released for publication September 28]

Industrial output in August and the early part of September regained most of the decline which occurred in July. Department store sales showed about the usual marked seasonal increase. Prices of some additional industrial products were raised, while prices of farm products and foods generally declined somewhat from the beginning of August to the latter part of September.

INDUSTRIAL PRODUCTION

The Board's seasonally adjusted index of industrial production was 190 per cent of the 1935-39 average in August, as compared with 186 per cent in July and 192 per cent in June. Most of the increase in August reflected larger output of nondurable goods, but activity in these lines was about 2 per cent below the June rate.

Steel production increased in August and was at a rate of 93 per cent of capacity. During September steel mill activity has been scheduled at a somewhat higher rate. Output of lumber and of stone, clay and glass products was somewhat larger in August than in the preceding month. Activity in the automotive industry, however, decreased in August and in the early part of September, primarily as a result of work stoppages at plants of parts suppliers and shortages of sheet steel. Output of most other durable goods continued in August at about the July rate.

Production in nondurable goods industries in August recovered most of the decline shown in July, when plant-wide vacations sharply reduced output of textiles, leather, paper, and some other

products. Cotton consumption rose 11 per cent in August but was at a rate somewhat below the same month a year ago. Shoe production showed a marked seasonal gain in August, according to trade estimates. Activity also increased in the paper and printing, chemicals, and rubber products industries. Output of manufactured foods, on the other hand, declined in August, reflecting mainly a further sharp reduction in the volume of meat production and a less than seasonal rise in the canning industry.

Production of fuels increased in August and was at a rate 7 per cent above the same period a year ago. Output at metal mines remained at the July rate. In the early part of September crude petroleum output declined somewhat as a result of a West Coast refinery strike.

CONSTRUCTION

Value of construction contracts awarded in August, according to reports of the F. W. Dodge Corporation, declined moderately from the high levels of recent months. The number of new nonfarm dwelling units started in August was 83,000, as compared with 94,000 in July and a peak of 98,800 in April, according to preliminary estimates of the Bureau of Labor Statistics. Value of construction activity on jobs under way continued to increase during August.

DISTRIBUTION

Department store sales during August and the

Federal Reserve indexes. Monthly figures, latest shown are for August.

EMPLOYMENT IN NONAGRICULTURAL ESTABLISHMENTS

Bureau of Labor Statistics' estimates adjusted for seasonal variation by Federal Reserve. Proprietors and domestic servants are excluded. Midmonth figures, latest shown are for August.

NATIONAL SUMMARY OF BUSINESS CONDITIONS

first half of September showed about the usual marked seasonal expansion and the Board's adjusted index for the third quarter is likely to be slightly higher than the level during the second quarter, when the index was 309 per cent of the 1935-39 average.

Loadings of railroad revenue freight increased in August, largely as a result of increased loadings of coal and miscellaneous merchandise. Shipments of grain decreased somewhat from the high July level, and livestock shipments increased less than normally for this season.

COMMODITY PRICES

The general wholesale price index declined 1 per cent in the latter part of August but advanced again in the middle of September, reflecting chiefly fluctuations in meat prices. In the latter part of September wholesale prices of farm products and foods, including meats, were somewhat lower than in the early part of August, while average prices of industrial products were higher.

The consumers' price index increased further by one-half per cent from mid-July to mid-August, reflecting advances in prices of all major groups of items except foods. Retail food prices, following a rise of 7 per cent from March to July, have apparently shown little change since that time.

BANK CREDIT

Federal Reserve System support purchases of United States Government bonds sold by insurance companies and other nonbank investors continued heavy in August and the first half of September. System sales of short-term Government securities

both to banks and others were also large, and the total portfolio of Government securities was little changed. In the first half of September bank reserves were substantially increased by a decline in Treasury balances at the Reserve Banks, but in the third week of the month these balances were rebuilt by large tax receipts.

In the early part of September the Board of Governors announced an increase in reserve requirements of 2 percentage points on net demand deposits and 1½ percentage points on time deposits, effective September 16 for member banks outside reserve cities and September 24 for reserve city and central reserve city banks. This action increased by 2 billion dollars the amount of reserves that member banks are required to hold.

Pursuant to legislative authority granted in August, the Board of Governors reinstituted the regulation of consumer instalment credit, effective September 20.

Commercial and industrial loans increased by 700 million dollars at banks in leading cities in August and the first half of September. Real estate and consumer loans also expanded further. Bank holdings of Government securities were little changed, despite the retirement for cash of about 400 million dollars of bank-owned Government bonds on September 15.

INTEREST RATES AND SECURITY MARKETS

Interest rates showed little further change in the first three weeks of September, following a rise in short-term money market rates in August. Common stock prices showed further moderate weakness, but prices of high-grade corporate and municipal bonds changed only slightly.

CONSUMERS' PRICES

Bureau of Labor Statistics indexes. "All items" includes housefurnishings, fuel, and miscellaneous groups not shown separately. Midmonth figures, latest shown are for August.

MEMBER BANK RESERVES AND RELATED ITEMS

Wednesday figures, latest shown are for September 29.

Tables on the following pages include the principal available statistics of current significance relating to financial and business developments in the United States. The data relating to the Federal Reserve Banks and the member banks of the Federal Reserve System are derived from regular reports made to the Board; index numbers of production are compiled by the Board on the basis of material collected by other agencies; figures for gold stock, money in circulation, Treasury finance, and operations of Government credit agencies are obtained principally from statements of the Treasury, or of the agencies concerned; data on money and security markets and commodity prices and other series on business activity are obtained largely from other sources. Back figures for banking and monetary tables, together with descriptive text, may be obtained from the Board's publication, *Banking and Monetary Statistics*; back figures for most other tables may be obtained from earlier BULLETINS.

MEMBER BANK RESERVES, RESERVE BANK CREDIT, AND RELATED ITEMS

FEDERAL RESERVE BANK DISCOUNT RATES

[In effect September 30, Per cent per annum]

Federal Reserve Bank	Discounts for and advances to member banks				Advances to individuals, partnerships, or corporations other than member banks secured by direct obligations of the U. S. (last par. Sec. 13)	
	Advances secured by Government obligations and discounts of and advances secured by eligible paper (Secs. 13 and 13a) ¹		Other secured advances [Sec. 10(b)]			
	Rate	Effective	Rate	Effective	Rate	Effective
Boston	1½	Aug. 13, 1948	2	Aug. 13, 1948	2½	Jan. 14, 1948
New York	1½	Aug. 13, 1948	2	Aug. 13, 1948	2½	Apr. 6, 1946
Philadelphia	1½	Aug. 23, 1948	2	Aug. 23, 1948	2½	Aug. 23, 1948
Cleveland	1½	Aug. 13, 1948	2	Aug. 13, 1948	2½	Aug. 13, 1948
Richmond	1½	Aug. 13, 1948	2	Aug. 13, 1948	2½	Mar. 16, 1946
Atlanta	1½	Aug. 13, 1948	2	Aug. 13, 1948	2½	Jan. 24, 1948
Chicago	1½	Aug. 13, 1948	2	Aug. 13, 1948	2½	Aug. 13, 1948
St. Louis	1½	Aug. 19, 1948	2	Aug. 19, 1948	2½	Jan. 12, 1948
Minneapolis	1½	Aug. 13, 1948	2	Aug. 13, 1948	2½	Aug. 23, 1948
Kansas City	1½	Aug. 16, 1948	2	Aug. 16, 1948	2½	Jan. 19, 1948
Dallas	1½	Aug. 13, 1948	2	Aug. 13, 1948	2½	Feb. 14, 1948
San Francisco	1½	Aug. 13, 1948	2	Aug. 13, 1948	2½	Apr. 25, 1946

¹Rates shown also apply to advances secured by obligations of Federal intermediate credit banks maturing within 6 months.

NOTE.—Maximum maturities for discounts and advances to member banks are: 15 days for advances secured by obligations of the Federal Farm Mortgage Corporation or the Home Owners' Loan Corporation guaranteed as to principal and interest by the United States, or by obligations of Federal intermediate credit banks maturing within 6 months; 90 days for other advances and discounts made under Sections 13 and 13a of the Federal Reserve Act (except that discounts of certain bankers' acceptances and of agricultural paper may have maturities not exceeding 6 months and 9 months, respectively); and 4 months for advances under Section 10(b). The maximum maturity for advances to individuals, partnerships, or corporations made under the last paragraph of Section 13 is 90 days. *Back figures.*—See *Banking and Monetary Statistics*, Tables 115-116, pp. 439-443.

FEDERAL RESERVE BANK EFFECTIVE MINIMUM BUYING RATES ON BANKERS' ACCEPTANCES

[Per cent per annum]

Maturity	Rate on Sept. 30	In effect beginning—	Previous rate
1-90 days.....	1½	¹ Aug. 13, 1948	1½
91-120 days.....	1½	¹ Aug. 13, 1948	1½
121-180 days.....	1½	¹ Aug. 13, 1948	1½

¹Date on which rate became effective at the Federal Reserve Bank of New York. The same rates generally apply to any purchases made by the other Federal Reserve Banks.

Back figures.—See *Banking and Monetary Statistics*, Table 117, pp. 443-445.

Sept. 16-24, 1948 and after ² ..	26	22	16	7½

¹Demand deposits subject to reserve requirements, i. e., total demand deposits minus cash items in process of collection and demand balances due from domestic banks (also minus war loan and series E bond accounts during the period Apr. 13, 1943-June 30, 1947, and all U. S. Government demand accounts Apr. 24, 1917-Aug. 23, 1935).

²Change effective Sept. 16 at country banks; Sept. 24 at other classes.

MAXIMUM RATES ON TIME DEPOSITS

Maximum rates that may be paid by member banks as established by the Board of Governors under provisions of Regulation Q.

[Per cent per annum]

	Nov. 1, 1933- Jan. 31, 1935	Feb. 1, 1935- Dec. 31, 1935	Effective Jan. 1, 1936
Savings deposits.....	3	2½	2½
Postal savings deposits.....	3	2½	2½
Other deposits payable:			
In 6 months or more.....	3	2½	2½
In 90 days to 6 months.....	3	2½	2
In less than 90 days.....	3	2½	1

NOTE.—Maximum rates that may be paid by insured nonmember banks as established by the F. D. I. C., effective Feb. 1, 1936, are the same as those in effect for member banks. Under Regulation Q the rate payable by a member bank may not in any event exceed the maximum rate payable by State banks or trust companies on like deposits under the laws of the State in which the member bank is located.

FEDERAL RESERVE BANK RATES ON INDUSTRIAL LOANS AND COMMITMENTS UNDER SECTION 13b OF THE FEDERAL RESERVE ACT

Maturities not exceeding five years

[In effect September 30, Per cent per annum]

Federal Reserve Bank	To industrial or commercial businesses		To financing institutions		
	On loans ¹	On commitments	On discounts or purchases		On commitments
			Portion for which institution is obligated	Re-maining portion	
Boston.....	2½-5	½-1½	(9)	(9)	½-1½
New York.....	2½-5	½-1½	(9)	(9)	½-1½
Philadelphia.....	2½-5	½-1½	(4)	(9)	½-1½
Cleveland.....	2½-5	½-1½	(9)	(9)	½-1½
Richmond.....	2½-5	½-1½	(9)	(9)	½-1½
Atlanta.....	2½-5	½-1½	(9)	(9)	½-1½
Chicago.....	2½-5	½-1½	2½-5	2½-5	½-1½
St. Louis.....	3-5	½-1½	1½-2	(9)	½-1½
Minneapolis.....	2½-5	½-1½	(9)	(9)	½-1½
Kansas City.....	2½-5	½-1½	(9)	(9)	½-1½
Dallas.....	2½-5	½-1½	(9)	(9)	½-1½
San Francisco.....	2½-5	½-1½	(9)	(9)	½-1½

¹Including loans made in participation with financing institutions.

²Rate charged borrower less commitment rate.

³Rate charged borrower.

⁴Rate charged borrower but not to exceed 1 per cent above the discount rate.

⁵Charge of ¼ per cent is made on undisbursed portion of loan.

Back figures.—See *Banking and Monetary Statistics*, Table 118, pp. 446-447.

MARGIN REQUIREMENTS¹

[Per cent of market value]

Prescribed in accordance with Securities Exchange Act of 1934	July 5, 1945- Jan. 20, 1946	Jan. 21, 1946- Jan. 31, 1947	Effective Feb. 1, 1947
Regulation T:			
For extensions of credit by brokers and dealers on listed securities.....	75	100	75
For short sales.....	75	100	75
Regulation U:			
For loans by banks on stocks.....	75	100	75

¹Regulations T and U limit the amount of credit that may be extended on a security by prescribing a maximum loan value, which is a specified percentage of its market value at the time of the extension; the "margin requirements" shown in this table are the difference between the market value (100%) and the maximum loan value.

Back figures.—See *Banking and Monetary Statistics*, Table 145, p. 504, and BULLETIN for March 1945, p. 235.

¹ Averages of daily closing figures for reserves and borrowings and of daily opening figures for other columns, inasmuch as reserves required are based on deposits at opening of business.

² Demand deposits subject to reserve requirements, i. e., gross demand deposits minus cash items reported as in process of collection and demand balances due from domestic banks.

³ Includes some interbank and U. S. Government time deposits; the amounts on call report dates are shown in the *Member Bank Call Report*.

NOTE.—Demand deposits adjusted (demand deposits other than interbank and U. S. Government, less cash items reported as in process of collection) of all member banks estimated at 70,650 million dollars in the first half and 70,900 million in the second half of August.

¹ Total of amounts of coin and paper currency shown by denominations less unassorted currency in Treasury and Federal Reserve Banks.

² Includes unassorted currency held in Treasury and Federal Reserve Banks and currency of unknown denominations reported by the Treasury as destroyed.

³ Paper currency only; \$1 silver coins reported under coin.

Back figures.—See *Banking and Monetary Statistics*, Table 112, pp. 415-416.

UNITED STATES MONEY, OUTSTANDING AND IN CIRCULATION, BY KINDS

Aug. 31, 1947.....	(⁴)	22,823	1,323	17,719	3,808			28,434 ⁴

¹ Outside Treasury and Federal Reserve Banks. Includes any paper currency held outside the continental limits of the United States; totals for other end-of-month dates shown in table above, totals by weeks in table on p. 1249, and seasonally adjusted figures in table on p. 1258.

² Includes \$156,039,431 held as reserve against United States notes and Treasury notes of 1890.

³ To avoid duplication, amount of silver dollars and bullion held as security against silver certificates and Treasury notes of 1890 outstanding is not included in total Treasury currency outstanding.

⁴ Because some of the types of money shown are held as collateral or reserves against other types, a grand total of all types has no special significance and is not shown. See note of explanation of these duplications.

⁵ Less than \$500,000.

NOTE.—There are maintained in the Treasury—(i) as a reserve for United States notes and Treasury notes of 1890—\$156,039,431 in gold bullion; (ii) as security for Treasury notes of 1890—an equal dollar amount in standard silver dollars (these notes are being canceled and retired on receipt; (iii) as security for outstanding silver certificates—silver in bullion and standard silver dollars of a monetary value equal to the face amount of such silver certificates; and (iv) as security for gold certificates—gold bullion of a value at the legal standard equal to the face amount of such gold certificates. Federal Reserve notes are obligations of the United States and a first lien on all the assets of the issuing Federal Reserve Bank. Federal Reserve notes are secured by the deposit with Federal Reserve agents of a like amount of gold certificates or of gold certificates and such discounted or purchased paper as is eligible under the terms of the Federal Reserve Act, or of direct obligations of the United States. Federal Reserve Banks must maintain a reserve in gold certificates of at least 25 per cent, including the redemption fund, which must be deposited with the Treasurer of the United States, against Federal Reserve notes in actual circulation; gold certificates pledged as collateral may be counted as reserves. "Gold certificates" as herein used includes credits with the Treasurer of the United States payable in gold certificates. Federal Reserve Bank notes and national bank notes are in process of retirement.

MONEY IN CIRCULATION WITH ADJUSTMENT FOR SEASONAL VARIATION

[Outside Treasury and Federal Reserve Banks. In millions of dollars]

Date	Amount— unadjusted for seasonal variation	Amount— adjusted for seasonal variation	Change in seasonally adjusted series ¹

August.....	27,977	28,118	+107
September.....	28,152	28,208	+90

¹ For end of year figures, represents change computed on absolute amounts in first column.

NOTE.—For discussion of seasonal adjustment factors and for back figures on comparable basis see September 1943 BULLETIN, pp. 822-826. Because of an apparent recent change in the seasonal pattern around the year end, adjustment factors have been revised somewhat for dates affected, beginning with December 1942; seasonally adjusted figures for money in circulation, as shown in *Banking and Monetary Statistics*, Table 111, p. 414, and described on p. 405, are based on an older series of adjustment factors.

¹ Preliminary.

² Annual figures are estimates of the United States Mint. For explanation of monthly figures see table on p. 1307.

³ Includes gold in the Inactive Account amounting to 1,228 million dollars on Dec. 31, 1937.

⁴ Change includes transfer of 687.5 million dollars gold subscription to International Monetary Fund.

⁵ Not yet available.

⁶ Gold held under earmark at the Federal Reserve Banks for foreign account, including gold held for the account of international institutions amounted to 3,832.3 million dollars on Sept. 30, 1948. Gold under earmark is not included in the gold stock of the United States.

NOTE.—For back figures, see *Banking and Monetary Statistics*, Table 156, pp. 536-538, and for description of statistics see pp. 522-523 in the same publication.

¹ Revised.

² National series for which bank debit figures are available beginning with 1919.

³ Number of centers reduced from 193 to 192 beginning December 1947, when one reporting bank was absorbed by a reporting bank in another city.

⁴ Weekly reporting member bank series.

⁵ Deposits and debits for first four months are partly estimated.

⁶ Statistics for banks in leading cities revised beginning July 3, 1946; for description of revision and for back figures see BULLETINS for June 1947 (pp. 692-693) and July 1947 (pp. 878-883) respectively; deposits and debits of the new series for first six months of 1946 are estimated.

NOTE.—Debits to total deposit accounts, except interbank accounts, have been reported for 334 centers from 1942 through November 1947 and for 333 beginning December 1947; the deposits from which rates of turnover have been computed have likewise been reported by most banks and have been estimated for others. Debits to demand deposit accounts, except interbank and U. S. Government, and the deposits from which rates of turnover have been computed have been reported by member banks in leading cities since 1935; yearly turnover rates in this series differ slightly from those shown in *Banking and Monetary Statistics*, Table 55, p. 254, due to differences in method of computation.

DEPOSITS AND CURRENCY—ADJUSTED DEPOSITS OF ALL BANKS AND CURRENCY OUTSIDE BANKS

^p Preliminary.

¹ Includes demand deposits, other than interbank and U. S. Government, less cash items in process of collection.

² Beginning with December 1938, includes United States Treasurer's time deposits, open account.

³ Time deposits adjusted exclude interbank time deposits; United States Treasurer's time deposits, open account; and postal savings redeposited in banks.

⁴ Beginning June 1941, the commercial bank figures exclude and mutual savings bank figures include three member mutual savings banks.

⁵ Prior to June 30, 1947, includes a relatively small amount of demand deposits.

⁶ Includes both amounts redeposited in banks and amounts not so redeposited; excludes amounts at banks in possessions.

NOTE.—Except on call dates, figures are rounded to nearest 100 million dollars. See *Banking and Monetary Statistics*, p. 11, for description and Table 9, pp. 34–35, for back figures.

* Partly estimated.

* "All banks" comprise "all commercial banks" and "all mutual savings banks." "All commercial banks" comprise "all nonmember commercial banks" and "all member banks" with exception of three mutual savings banks that became members in 1941. Stock savings banks and nondeposit trust companies are included with "commercial" banks. Number of banks includes a few noninsured banks for which asset and liability data are not available.

¹ Beginning June 30, 1942, excludes reciprocal balances, which on Dec. 31, 1942, aggregated 513 million dollars at all member banks and 525 million at all insured commercial banks.

* June 30, 1947 figures are consistent (except that they exclude possessions) with the revised all bank series announced in November 1947 by the Federal bank supervisory agencies, but are not entirely comparable with prior figures shown above; a net of 115 noninsured nonmember commercial banks with total loans and investments of approximately 110 million dollars was added, and 8 banks with total loans and investments of 34 million were transferred from noninsured mutual savings to nonmember commercial banks.

Back figures.—See *Banking and Monetary Statistics*, Tables 1-7, pp. 16-23; for description, see pp. 5-15 in the same publication. For revisions in series prior to June 30, 1947, see pp. 870-871 of the BULLETIN for July 1947.

ALL INSURED COMMERCIAL BANKS IN THE UNITED STATES, BY CLASSES*

LOANS AND INVESTMENTS

^c Corrected.

¹ Beginning June 30, 1948, figures for various loan items are shown gross (i. e., before deduction of valuation reserves); they do not add to the total and are not entirely comparable with prior figures. Total loans continue to be shown net.

² Including guaranteed obligations.

¹ Excluding balances with reporting firms (1) of member firms of New York Stock Exchange and other national securities exchanges and (2) of firms' own partners.

² Includes money borrowed from banks and also from other lenders (not including member firms of national securities exchanges).

³ As reported to the New York Stock Exchange. According to these reports, the part of total customers' debit balances represented by balances secured by U. S. Government securities was (in millions of dollars): June, 68; July, 74; August, 54.

NOTE.—For explanation of these figures see "Statistics on Margin Accounts" in BULLETIN for September 1936. The article describes the method by which the figures are derived and reported, distinguishes the table from a "statement of financial condition," and explains that the last column is not to be taken as representing the actual net capital of the reporting firms.

Back figures.—See *Banking and Monetary Statistics*, Table 143, pp. 501-502, for monthly figures prior to 1942, and Table 144, p. 503, for data in detail at semiannual dates prior to 1942.

OPEN-MARKET MONEY RATES IN NEW YORK CITY

[Per cent per annum]

¹ Revised.

² Monthly and weekly data are averages of daily figures, except for municipal bonds, which are based on Wednesday figures.

³ Standard and Poor's Corporation. ⁴ U. S. Treasury Department.

⁵ Moody's Investors Service, week ending Friday. Because of limited number of suitable issues, the industrial Aaa and Aa groups have been reduced from 10 to 5 and 6 issues, respectively, and the railroad Aaa, Aa, and A groups from 10 to 5, 6, and 8 issues, respectively.

⁶ Beginning Sept. 15, includes only 2 1/4 per cent bonds of September 1956-59.

Back figures.—See *Banking and Monetary Statistics*, Tables 128-129, pp. 468-474, and *BULLETINS* for May 1945, pp. 483-490, and October 1947, pp. 1251-1253.

¹ Revised.

² Monthly and weekly data are averages of daily figures, except for municipal bonds and for stocks, which are based on Wednesday figures.

³ Average of taxable bonds due or callable in 15 years and over.

⁴ Prices derived from average yields, as computed by Standard and Poor's Corporation, on basis of a 4 per cent 20-year bond.

⁵ Prices derived from average yields, as computed by Standard and Poor's Corporation. ⁶ Standard and Poor's Corporation.

⁷ Prices derived from averages of median yields on noncallable high-grade stocks on basis of a \$7 annual dividend.

⁸ Average daily volume of trading in stocks on the New York Stock Exchange.

Back figures.—See *Banking and Monetary Statistics*, Tables 130, 133, 134, and 136, pp. 475, 479, 482, and 486, respectively, and *BULLETINS* for May 1945, pp. 483-490, and October 1947, pp. 1251-1253.

¹ Includes publicly offered issues of Federal credit agencies, but excludes direct obligations of U. S. Treasury.

² Includes issues of noncontiguous U. S. Territories and Possessions.

³ Includes 244 million dollars of issues of the International Bank for Reconstruction and Development, which are not shown separately.

Source.—For domestic issues, *Commercial and Financial Chronicle*; for foreign issues, U. S. Department of Commerce. Monthly figures subject to revision. Back figures.—See *Banking and Monetary Statistics*, Table 137, p. 487.

¹ Revised.

² Estimates of new issues sold for cash in the United States.

³ Gross proceeds are derived by multiplying principal amounts or number of units by offering price.

⁴ Estimated net proceeds are equal to estimated gross proceeds less cost of flotation, i.e., compensation to underwriters, agents, etc., and expenses.

⁵ Includes repayment of other debt and other purposes.

Source.—Securities and Exchange Commission; for compilation of back figures, see *Banking and Monetary Statistics* (Table 138, p. 491), a publication of the Board of Governors.

¹ Revised.

² "Net profits" and "net income" refer to income after all charges and taxes and before dividends.

³ Includes 29 companies engaged in wholesale and retail trade (largely department stores), 13 in the amusement industry, 21 in shipping and transportation other than railroads (largely airlines), and 11 companies furnishing scattered types of service.

⁴ Net profits figures for the year 1946 include, and those for the fourth quarter exclude, certain large extraordinary year-end profits in the following amounts (in millions of dollars): 629 company series—total, 67; machinery, 49; other durable goods, 18; 152 company series—total, 49.

⁵ Partly estimated.

⁶ Class A and B electric utilities, covering about 95 per cent of all electric power operations. Figures include affiliated nonelectric operations.

⁷ Thirty large companies, covering about 85 per cent of all telephone operations. Series excludes American Telephone and Telegraph Company, the greater part of whose income consists of dividends received on stock holdings in the 30 companies.

⁸ After all charges and taxes except Federal income and excess profits taxes.

Sources.—Interstate Commerce Commission for railroads; Federal Power Commission for electric utilities (quarterly figures on operating revenue and on income before income tax are partly estimated); Federal Communications Commission for telephone companies (except dividends); published reports for industrial companies and for telephone dividends. Figures for the current and preceding year subject to revision. For description of data and back figures, see pp. 214–217 of the BULLETIN for March 1942 and also p. 1126 of the BULLETIN for November 1942 (telephone companies) and p. 908 of the BULLETIN for September 1944 (electric utilities).

* Figures include only holdings by institutions or agencies from which reports are received. Data for commercial banks, mutual savings banks and the residual "other" are not entirely comparable from month to month. Figures in column headed "other" include holdings by non-reporting banks and insurance companies as well as by other investors. Estimates of total holdings (including relatively small amounts of non-marketable issues) by all banks and all insurance companies for certain dates are shown in the table above.

¹ Including stock savings banks.² Including Postal Savings and prewar bonds and a small amount of guaranteed securities, not shown separately below.

Less: Reserve for losses.....	15	(*)	1	20	1	279	3			49	7	9	384	395
Total loans receivable (net)...	86	432	242	260	785	270	451	295	374	911	2,097	3,930	10,134	9,714

* Includes certain business type activities of the U. S. Government.

¹ Assets are shown on a net basis, i.e., after reserve for losses.

² Includes investment of the United States in international institutions as follows (in millions of dollars): Stock of the International Bank for Reconstruction and Development—476, 635, 635, and 635 on Mar. 31, June 30, Sept. 30, Dec. 31, 1947, and Mar. 31, 1948, respectively; International Monetary Fund Quota—2,750 on Mar. 31, June 30, Sept. 30, Dec. 31, 1947, and Mar. 31, 1948.

³ Deferred charges included under "Other assets" prior to Mar. 31, 1947.

⁴ Federal land banks are excluded beginning June 30, 1947; U. S. Government interest in these banks was liquidated June 26, 1947.

⁵ Less than \$500,000.

⁶ Includes U. S. Commercial Co. and War Damage Corp.

⁷ Figures are for Mar. 31, 1947.

⁸ Figures are for two small agencies included herein

NOTE.—This table is based on the revised form of the Treasury Statement beginning Sept. 30, 1944, which is on a quarterly basis. Quarterly figures are not comparable with monthly figures previously published. For monthly figures prior to Sept. 30, 1944, see earlier issues of the BULLETIN (see p. 1110 of the November 1944 BULLETIN) and *Banking and Monetary Statistics*, Table 152, p. 517.

BUSINESS INDEXES

[The terms "adjusted" and "unadjusted" refer to adjustment of *monthly* figures for seasonal variation]

* Average per working day.

† Preliminary.

* Revised.

¹ For indexes by groups or industries, see pp. 1278-1281. For points in total index, by major groups, see p. 1300.

² Based on F. W. Dodge Corporation data; for description, see p. 358 of BULLETIN for July 1931; by groups, see p. 1285 of this BULLETIN.

³ The unadjusted indexes of employment and pay rolls, wholesale commodity prices, and consumers' prices are compiled by or based on data of the Bureau of Labor Statistics. Nonagricultural employment covers employees only and excludes personnel in the armed forces.

⁴ For indexes by Federal Reserve districts and other department store data, see pp. 1287-1290.

Back figures in BULLETIN.—For industrial production, August 1940, pp. 825-882, September 1941, pp. 933-937, and October 1943, pp. 958-984; for department store sales, June 1944, pp. 549-561.

¹ Includes Federal Force Account Construction.

NOTE.—Estimates include all full- and part-time wage and salary workers in nonagricultural establishments employed during the pay period ending nearest the 15th of the month. Proprietors, self-employed persons, domestic servants, and personnel of the armed forces are excluded. August 1948 figures are preliminary. Back unadjusted data are available from the Bureau of Labor Statistics; seasonally adjusted figures beginning January 1939 may be obtained from the Division of Research and Statistics.

¹ Includes self-employed, unpaid family, and domestic service workers.

² Annual averages for 1940 include an allowance for January and February inasmuch as the monthly series began in March 1940.

NOTE.—Details do not necessarily add to group totals. Information on the labor force status of the population is obtained through interviews of households on a sample basis. Data relate to the calendar week that contains the eighth day of the month. Back data are available from the Bureau of the Census.

¹Net proceeds to borrowers. ²Mortgages insured under War Housing Title VI through April 1946; figures thereafter represent mainly mortgages insured under the Veterans' Housing Title VI (approved May 22, 1946) but include a few refinanced mortgages originally written under the War Housing Title VI. Beginning with December 1947 figures include mortgages insured in connection with sale of Government owned war housing, and beginning with February 1948 include insured loans to finance the manufacture of housing.

³Less than \$500,000.

NOTE.—Figures represent gross insurance written during the period and do not take account of principal repayments on previously insured loans. Figures include some reinsured mortgages, which are shown in the month in which they were reported by FHA. Reinsured mortgages on rental and group housing (Title II) are not necessarily shown in the month in which reinsurance took place.

¹ Figures for sales are the average per trading day, while those for stocks are as of the end of the month or the annual average.

NOTE.—For description and monthly indexes for back years for sales see BULLETIN for June 1944, pp. 542-561, and for stocks see BULLETIN for June 1946, pp. 588-612.

¹ The ratio of stocks to sales is obtained by dividing stocks at the end of the month by sales during the month and hence indicates the number of months' supply on hand at the end of the month in terms of sales for that month.

² The 1941 average of monthly sales for each department is used as a base in computing the sales index for that department. The stocks index is derived by applying to the sales index for each month the corresponding stocks-sales ratio. For description and monthly indexes of sales and stocks by department groups for back years, see pp. 856-858 of BULLETIN for August 1946. The titles of the tables on pp. 857 and 858 were reversed.

³ For movements of total department store sales and stocks see the indexes for the United States on p. 1287.

⁴ Index numbers of sales and stocks for this department are not available for publication separately; the department, however, is included in group and total indexes. ⁵ Data not available.

NOTE.—Based on reports from a group of large department stores located in various cities throughout the country. In 1947, sales and stocks at these stores accounted for about 50 per cent of estimated total department store sales and stocks. Not all stores report data for all of the departments shown; consequently, the sample for the individual departments is not so comprehensive as that for the total.

¹ Preliminary. ² Includes construction expenditures for crude petroleum and natural gas drilling.

³ Consists of sales abroad and domestic sales of surplus consumption goods and materials. ⁴ Less than 50 million dollars.

⁵ Total wage and salary receipts, as included in "Personal income," is equal to total disbursements less employee contributions to social insurance. Such contributions are not available by industries.

⁶ Includes compensation for injuries, employer contributions to private pension and welfare funds, and other payments.

⁷ Includes business and professional income, farm income, and rental income of unincorporated enterprise; also a noncorporate inventory valuation adjustment.

⁸ Includes government social insurance benefits, direct relief, mustering out pay, veterans' readjustment allowances and other payments, as well as consumer bad debts and other business transfers.

⁹ Includes personal income exclusive of net income of unincorporated farm enterprise, farm wages, agricultural net rents, agricultural net interest, and net dividends paid by agricultural corporations.

Note.—Details may not add to totals because of rounding.

Source.—Figures in this table are for the revised series. ¹ Figures include only personal instalment cash loans and retail automobile direct loans shown on the following page, and a small amount of other retail direct loans not shown separately. Other retail direct loans outstanding at the end of August amounted to 112 million dollars, and loans made during August were 14 million.

² Figures include only personal instalment cash loans, retail automobile direct loans, and other retail direct loans. Direct retail instalment loans are obtained by deducting an estimate of paper purchased from total retail instalment paper.

³ Includes only loans insured by Federal Housing Administration

BANK CREDIT, MONEY RATES, AND BUSINESS *—Continued

* Estimated. † Preliminary. ‡ Revised. § Corrected.

¹ For charts on pp. 26, 28, 33, 35, 36, and 39, figures for a more recent period are available in the regular BULLETIN table that show those series. Because the Chart Book is usually released for duplication some time after the BULLETIN has gone to press, most weekly charts and several monthly charts include figures for a more recent date than are shown in this table.

² Figures for other than Wednesday dates are shown under the Wednesday included in the weekly period.

³ Less than 5 million dollars.

⁴ Adjusted for seasonal variation.

⁵ Revised series.

⁶ As of May 31, 1948.

⁷ Estimates for Oct.-Dec. 1948 quarter are (in billions of dollars): All business, 4.7; manufacturing and mining, railroads and utilities, 3.2; manufacturing and mining, 2.1.

⁸ Member bank holdings of State and local government securities on Oct. 6, 1947, and on Apr. 12, 1948, were 4.22 and 4.45 billion dollars, respectively, and of other securities were 3.08 and 3.02 billion dollars, respectively; data for other series are available for June and December dates only.

⁹ Beginning June 30, 1948, individual loan items are reported gross, i. e., before deduction of valuation reserves; previously they were reported net of such reserves.

* Monthly issues of this edition of the Chart Book may be obtained at an annual subscription rate of \$9.00; individual copies of monthly issues, at \$1.00 each.

* Preliminary. ¹ Annual figures for charts on pp. 9–19, inclusive, are published as they become available.
² The figures shown here are cumulative totals; not aggregates for the individual components. Aggregates for each component may be derived by subtracting from the figure shown, the total immediately following it.
³ Figures for this series are in process of revision and will not be available for several months.
* Copies of the Chart Book may be obtained at a price of 50 cents.

Tables on the following pages include the principal available statistics of current significance relating to gold, international capital transactions of the United States, and financial developments abroad. The data are compiled for the most part from regularly published sources such as central and commercial bank statements and official statistical bulletins, some data are reported to the Board directly. Figures on international capital transactions of the United States are collected by the Federal Reserve Banks from banks, bankers, brokers, and dealers in the United States in accordance with the Treasury Regulation of November 12, 1934. Back figures for all except price tables, together with descriptive text, may be obtained from the Board's publication, *Banking and Monetary Statistics*.

¹ Preliminary.

² Estimated dollar values derived by converting gold at home in amounts up to 1,224.4 million pesos at the rate of 3.0365 pesos per U. S. dollar and all other gold at the rate of 3.5447 pesos per U. S. dollar.

³ On May 1, 1940, gold belonging to Bank of Canada transferred to Foreign Exchange Control Board. Gold reported since that time is gold held by Minister of Finance, except for December 1945, December 1946, December 1947 when gold holdings of Foreign Exchange Control Board are included also.

⁴ Total gold holdings are not available. Beginning April 1946, the series is new and represents gold held as reserve (25 per cent minimum) less gold in foreign currency liabilities.

⁵ Figures relate to last official report dates for the respective countries, as follows: Java—Jan. 31, 1942; Poland—July 31, 1939; Yugoslavia—Feb. 28, 1941.

⁶ Figure for February 1941; beginning Mar. 29, 1941, gold reserves no longer reported separately.

⁷ Beginning December 1943, includes gold holdings of Swiss Government.

⁸ For list of countries included, see BULLETIN for June 1947, p. 755, footnote 7.

⁹ Gold holdings of Bank of England reduced to nominal amount by gold transfers to British Exchange Equalization Account during 1939.

NOTE.—For gold holdings of International Fund and Bank, see p. 1314. For back figures, see *Banking and Monetary Statistics*, Tables 156–160, pp. 536–555, and for a description of figures, including details regarding special internal gold transfers affecting the reported data, see pp. 524–535 in the same publication.

¹ Reported at infrequent intervals or on delayed basis: U. S.—Exchange Stabilization Fund (Special A/c No. 1); U. K.—Exchange Equalization Account; France—Exchange Stabilization Fund and Rentes Fund; Belgium—Treasury.

² Figure for end of September.

³ Reported figure for total British gold reserves on Aug. 31, 1939, less reported holdings of Bank of England on that date.

⁴ Figure for first of month.

⁵ Gross official holdings of gold and U. S. dollars as reported by British Government; total British holdings (official and private) of U. S. dollars, as reported by banks in the United States are shown in table on p. 1311.

NOTE.—For details regarding special internal gold transfers affecting the British and French institutions, see p. 1314, footnote 4, and p. 1315, footnote 6. For available back figures see *Banking and Monetary Statistics*, p. 526, and BULLETIN for November 1947, p. 1433; June 1947, p. 755; February 1945, p. 109.

¹ Revised.

Gold production in U. S. S. R.: No regular Government statistics on gold production in U. S. S. R. are available, but data of percentage changes irregularly given out by officials of the gold mining industry, together with certain direct figures for past years, afford a basis for estimating annual production as follows: 1934, 135 million dollars; 1935, 158 million; 1936, 187 million; 1937, 185 million; 1938, 180 million.

² Estimates of United States Bureau of Mines.

³ Beginning 1942, figures reported by American Bureau of Metal Statistics. Beginning 1944, they are for Gold Coast only.

⁴ Reported by American Bureau of Metal Statistics.

⁵ Includes Philippine production received in United States through 1945. Annual figures are estimates of United States Mint. Monthly figures are estimates of American Bureau of Metal Statistics, those for 1947 having been revised by subtracting from each monthly figure \$452,705 so that aggregate for the year is equal to the annual estimate compiled by the United States Mint.

⁶ Gold exports, reported by the Banco Nacional de Nicaragua, which states that they represent approximately 90 per cent of total production.

⁷ Beginning 1946, subject to revision.

⁸ Monthly figures reported by the American Bureau of Metal Statistics.

NOTE.—For explanation of table and sources, see BULLETIN for June 1948, p. 731; February 1939, p. 151; July 1938, p. 621; June 1938, p. 540; April 1933, pp. 233-235; and *Banking and Monetary Statistics*, p. 524. For annual estimates compiled by the United States Mint for these and other countries in the period 1910-1941, see *Banking and Monetary Statistics*, pp. 542-543.

* Corrected.

¹ This category made up as follows: through Sept. 21, 1938, funds held by foreign central banks at the Federal Reserve Bank of New York and deposit accounts held with the U. S. Treasury; beginning Sept. 28, 1938, also funds held at commercial banks in New York City by central banks maintaining accounts at the Federal Reserve Bank of New York; beginning July 17, 1940, also funds in accounts at the Federal Reserve Bank of New York which had been transferred from central bank to government names; beginning with the new series commencing with the month of July 1942, all funds held with banks and bankers in the United States by foreign central banks and by foreign central governments and their agencies (including official purchasing missions, trade and shipping missions, diplomatic and consular establishments, etc.).

² The weekly series of capital movement statistics reported through July 1, 1942, was replaced by a monthly series commencing with July 1942. Since the old series overlapped the new by one day, the cumulative figures were adjusted to represent the movement through June 30 only. This adjustment, however, is incomplete since it takes into account only certain significant movements known to have occurred on July 1. Subsequent figures are based upon new monthly series. For further explanation, see BULLETIN for January 1943, p. 98.

³ Includes outflow of \$249,300,000 resulting from the sale of debentures in the United States by the International Bank for Reconstruction and Development. (Of the total issue of \$250,000,000, \$700,000 was sold directly to Canadian purchasers.)

⁴ Includes inflow of 74.5 million dollars resulting from purchase of domestic securities by international institutions.

NOTE.—Statistics reported by banks, bankers, brokers, and dealers. For full description of statistics see *Banking and Monetary Statistics*, pp. 558-560; for back figures through 1941 see Tables 161 and 162, pp. 574-637, in the same publication, and for those subsequent to 1941 see BULLETIN for September 1945, pp. 960-974.

¹ Beginning with January 1948, includes Pakistan, Burma, and Ceylon, previously included with India.

Footnotes to table on preceding page.

¹ Country breakdown is for "Official and private."

² Prior to Jan. 3, 1940, the figures under Asia represent Far East only, the remaining Asiatic countries being included under "All other."

³ Report dates for these years are as follows: 1938—Jan. 4, 1939; 1939—Jan. 3, 1940; and 1940—Jan. 1, 1941.

⁴ Official Canadian holdings of U. S. dollars on Dec. 31, 1946, amounted to 686.2 million dollars, according to the annual report of the Foreign Exchange Control Board of Canada for 1946.

⁵ Beginning March 1947, figures include balances in accounts opened by occupation authorities for foreign trade purposes.

NOTE. Certain of the figures are not strictly comparable with the corresponding figures for preceding months owing to changes in reporting practice of various banks. The cumulative figures in Tables 1, 2, and 3 of "Net Capital Movement to United States" have been adjusted to exclude the unreal movements introduced by these changes. For further explanation see *Banking and Monetary Statistics*, pp. 578-584, and *BULLETIN* for March 1947, p. 339, and September 1945, pp. 967-970.

¹ Prior to Jan. 3, 1940, the figures under Asia represent Far East only, the remaining Asiatic countries being included under "All other."

NOTE.—The figures in this table are not fully comparable throughout since certain changes or corrections took place in the reporting practice of reporting banks on Aug. 12, 1936, and Oct. 18, 1939. (See *Banking and Monetary Statistics*, Table 161 pp. 589 and 591.) On June 30, 1942, reporting practice was changed from a weekly to a monthly basis. For further information see *BULLETIN* for September 1945, pp. 971-974.

¹ Through February 1939, valued at legal parity of 85 shillings a fine ounce; thereafter at market price, which fluctuated until Sept. 6, 1939, when it was officially set at 168 shillings per fine ounce; the latter rate remained in effect until June 9, 1945, when it was raised to 172 shillings and three pence.

² Securities and silver coin held as cover for fiduciary issue, the amount of which is also shown by this figure.

³ Notes issued less amounts held in banking department.

⁴ On Jan. 6, 1939, 200 million pounds sterling of gold (at legal parity) transferred from Bank to Exchange Equalization Account; on Mar. 1, 1939, about 5.5 million pounds (at current price) transferred from Exchange Account to Bank; on July 12, 1939, 20 million pounds transferred from Exchange Account to Bank; on Sept. 6, 1939, 279 million pounds transferred from Bank to Exchange Account.

⁵ Fiduciary issue decreased by 50 million pounds each on Jan. 7, Feb. 4, and Mar. 3, 1948. For details on previous changes in the fiduciary issue see BULLETIN for February 1948, p. 254.

NOTE.—For back figures on Bank of England, see *Banking and Monetary Statistics*, Table 164, pp. 638-640; for description of statistics, see pp. 560-561 in same publication.

¹ Securities maturing in two years or less.

² Includes notes held by the chartered banks, which constitute an important part of their reserves.

³ Beginning November 1944, includes a certain amount of sterling and United States dollars.

⁴ On May 1, 1940, gold transferred to Foreign Exchange Control Board in return for short-term Government securities (see BULLETIN for July 1940, pp. 677-678).

⁵ Less than \$50,000.

⁶ Gold revalued on Dec. 26, 1945, on basis of 134,027.90 francs per fine kilogram. For details on previous devaluations and other changes in the gold holdings of the Bank of France, see BULLETIN for May 1948, p. 601; May 1940, pp. 406-407; January 1939, p. 29; September 1937, p. 853; and November 1936, pp. 878-880.

⁷ For explanation of this item, see BULLETIN for July 1940, p. 732.

⁸ By a series of Conventions between the Bank of France and the Treasury, dated from Aug. 25, 1940, through July 20, 1944, advances of 441,000 million francs were authorized to meet the costs of the German army of occupation.

⁹ From Dec. 28, 1944, through Nov. 20, 1947, includes 9,447 million francs charged to the State to reimburse the Bank for the gold turned over by it to the National Bank of Belgium on Dec. 22, 1944. During the week ending Nov. 27, 1947, this amount was reduced to 5,039 million francs by a payment from the State to the Bank.

¹⁰ Central Administration of the Reichskreditkassen.

¹¹ Includes a noninterest loan to the Government, which was raised from 10,000 million to 50,000 million francs by law of Mar. 29, 1947.

¹² Publication of Bank's statement suspended from Jan. 22 until Mar. 4, 1948.

NOTE.—For back figures on Bank of Canada and Bank of France, see *Banking and Monetary Statistics*, Tables 166 and 165, pp. 644-645 and pp. 641-643, respectively; for description of statistics, see pp. 562-564 in same publication. For last available report from the Reichsbank (February 1945), see BULLETIN for December 1946, p. 1424.

¹ Government decree of Apr. 24, 1946, provided for the guarantee of all deposits registered in the name of the Central Bank.

² By decree of May 24, 1946, the Central Bank became responsible for all subsidiary money.

³ This figure represents the amount of the bank's subscription to the Fund less the bank's local currency liability to the Fund. Until such time as the Fund engages in operations in this currency, the "net claim" will equal the country's gold contribution.

⁴ Includes increment resulting from gold revaluation, notes forfeited to the State, and frozen old notes and current accounts.

⁵ For last available report (January 1943), see BULLETIN for July 1943, p. 697.

⁶ Beginning January 1948, gold valued at 31 pesos per U. S. dollar, while previously it was valued at 4.855 pesos per dollar.

⁷ Gold not reported separately beginning May 31, 1948.

⁸ Latest month available.

⁹ Gold not reported separately beginning Dec. 31, 1946.

¹ This figure represents the amount of the bank's subscription to the Fund less the bank's local currency liability to the Fund. Until such time as the Fund engages in operations in this currency, the "net claim" will equal the country's gold contribution.

² Less than 500,000.

³ For last available report (January 1942), see BULLETIN for March 1943, p. 278.

⁴ Includes gold, silver, and foreign exchange forming required reserve (25 per cent) against notes and other demand liabilities.

¹ Revised.

² This figure represents the amount of the bank's subscription to the Fund less the bank's local currency liability to the Fund. Until such time as the Fund engages in operations in this currency, the "net claim" will equal the country's gold contribution.

³ For last available report from the central bank of Rumania (June 1944), see BULLETIN for March 1945, p. 286; and of Yugoslavia (February 1941), see BULLETIN for March 1942, p. 282.

⁴ Gold revalued in June 1946 from approximately 85 to 172 shillings per fine ounce.

⁵ Includes small amount of non-Government bonds.

⁶ Gold revalued on Sept. 9, 1946, from 1,406.58 to 3,150.77 Turkish pounds per fine kilogram.

⁷ Beginning October 1944, a certain amount of gold formerly reported in the bank's account shown separately for account of the Government.

⁸ See BULLETIN for December 1936, p. 1025.

¹ From September 1939 through November 1946, this table represents aggregates of figures reported by individual banks for days, varying from bank to bank, toward the end of the month. After November 1946, figures for all banks are compiled on the third Wednesday of each month, except in June and December, when the statements will give end-of-month data.

² Represent six-month loans to the Treasury at 1½ per cent through Oct. 20, 1945, and at ½ per cent thereafter.

NOTE.—For back figures and figures on German commercial banks, see *Banking and Monetary Statistics*, Tables 168-171, pp. 648-655, and for description of statistics see pp. 566-571 in same publication.

¹ Through June 22, 1948, shown as official rate.

² Through June 22, 1948, shown as special export rate.

³ Prior to Nov. 1, 1942, the official designation of the Brazilian currency unit was the "milreis."

⁴ Average of daily rates for that part of the year during which quotations were certified.

⁵ At the end of June 1945 official rates for the Australian and British pounds were abolished, and after this date quotations are buying rates in the New York market. The rates shown represent averages for the second half of 1945 and are comparable to those quoted before 1940.

⁶ The rate quoted after July 22, 1946, is not strictly comparable to the "free" rate shown before that date. The average for the "free" rate for July 1-19 is 5.1902, and for Jan. 1-July 19, 5.1860, while the average for the new rate for July 25-31 is 5.3350, and for July 25-Dec. 31, 5.3955.

⁷ Based on quotations through June 22.

⁸ Based on quotations beginning July 15.

⁹ Based on quotations through Jan. 23.

¹⁰ Based on quotations beginning Feb. 10.

¹¹ Excludes Pakistan.

¹² Based on quotations through June 10.

¹³ Temporarily omitted.

¹⁴ Based on quotations through July 21.

¹⁵ As of Aug. 19, the New Zealand Government increased the value of its currency, placing it on a par with the British pound.

^p Preliminary.

¹ Revised index from March 1936 (see BULLETIN for April 1937, p. 373).

² This average is based on figures for the new index, beginning June. The averages for the old index, based on figures for January-June 17, are 203 for retail food prices and 166 for cost of living.

Sources.—See BULLETIN for July 1947, p. 935; May 1942, p. 451; October 1939, p. 943; and April 1937, p. 373.

^p Preliminary.

^r Revised.

¹ New series beginning 1947, derived from average yields of 12 bonds on basis of a 2½ per cent 30-year bond. Annual average for the old series for 1947 (121.5) and figures for years prior to 1947 are derived from average of 5 median yields in a list of 15 issues on basis of a 4 per cent 20-year bond. Source.—Standard and Poor's Corporation; for compilations of back figures on prices of both bonds and common stocks in the United States see *Banking and Monetary Statistics*, Table 130, p. 475, and Table 133, p. 479.

² This index is based on one 15-year 3 per cent theoretical bond. Yearly averages for 1939 and 1940 are based on monthly averages and thereafter on the capitalized yield as calculated on the 15th of every month.

³ This index represents the reciprocals of average yields for 13 issues, including government, provincial, municipal, mortgage, and industrial bonds. The average yield in the base period (January-March 1937) was 3.39 per cent.

⁴ This index is based on 95 common stocks through 1944, and on 100 stocks thereafter.

⁵ In September 1946 this index was revised to include 185 metropolitan issues, 90 issues of colonial France, and 20 issues of French companies abroad. See "Bulletin de la Statistique Générale," September-November 1946, p. 424.

⁶ This is a new index for 37 Netherlands issues (27 industrial, 5 banking, and 5 shipping shares) and represents an unweighted monthly average of daily quotations. The figures are not comparable with data for previous years shown in earlier BULLETINS.

⁷ Average based on figures for 5 months; no data available June-December.

⁸ Average based on figures for 10 months; no data available January-February.

Sources.—See BULLETIN for June 1948, p. 747; March 1947, p. 349; November 1937, p. 1172; July 1937, p. 698; April 1937, p. 373; June 1935, p. 394; and February 1932, p. 121.
