## SLACKENED GROWTH IN LIQUID ASSETS

Holdings of liquid assets by individuals and businesses, which expanded rapidly during the war period, have shown little further growth since the end of 1945 . The preceding rapid expansion of these liquid assets -defined to include currency, demand and time deposits, and United States Government securities-was the result of wartime financial developments. The Government borrowed from the banks and from businesses and individuals in order to meet the excess of its wartime expenditures over tax receipts. At the same time incomes of businesses and individuals exceeded tax payments and expenditures for goods and services, and as a consequence savings were large. In the absence of alternative outlets the bulk of these savings was held in the form of bank deposits, currency, and United States Government securities. Efforts were made to encourage the purchase of securities by nonbank investors, but banks also made substantial purchases, which generated the growth in deposits and currency in the amounts that the public chose to hold.

Since the end of the war Government expenditures have been sharply reduced and tax receipts have continued at a high level. Beginning early in 1946 the Government was able not only to meet the greatly reduced expenditures without further borrowing but to use accumulated Treasury balances in a program of debt retirement. At the same
time supplies of goods and services available for purchase by individuals have increased and a larger portion of business funds has been spent on plant and equipment, to build up inventories, or for other purposes.
As a consequence of the reduced Government deficit and increased private spending, current liquid savings by individuals and businesses have been much smaller than during the war. Business holdings of Government securities have been reduced during the past year, while deposits of businesses have shown little change. The growth in individual holdings of Government securities has ceased in recent months, but

LIqUID ASSET hOLDINGS

[^1]their deposit balances have continued to expand.

In the last half of 1945 total bank deposits of individuals and businesses increased considerably, but in 1946 the growth has moderated. There has been a steady increase in time deposits and an erratic rise in demand deposits of businesses and individuals. Holdings of currency have increased only slightly since the end of the war, following a rapid wartime expansion. Regional variations in deposit expansion were reduced in 1946, as Treasuary financing operations and other special wartime influences diminished in importance, but, as in war years, deposits increased more sharply in the southern and western than in the northern and northeastern parts of the country.

## Shifts in Liquid Asset Holdings

After six years of continuous and sizable growth, total liquid asset holdings of individuals and businesses showed only a slight increase between the end of 1945 and mid1946. As of June 30, 1946, these liquid asset holdings amounted to an estimated 222 billion dollars, or about one billion above the December 1945 estimate. These estimates, by type of assets and by broad groups of holders, at half-year intervals since 1939, are published elsewhere in this Bulletin.

As is shown in the following chart, the leveling off in total liquid assets was accompanied by significant shifts among the component parts. Bank deposits, both demand and time, continued to increase at a rapid rate. Business holdings of Government securities in contrast were sharply reduced, the decline more than offsetting the increase in deposits. Holdings by business of these securities were drawn down approximately 4.6 billion dollars in the first
half of 1946, as businesses paid large tax liabilities and sought funds for capital expenditures and other production and distribution needs.

Liquid assets of businesses were still at high levels despite the over-all decline brought about by the reduction in Government security holdings. As of June 30, 1946, business liquid assets amounted to about 70 billion dollars. Business cash in the form of demand deposits, as indicated previously, increased somewhat during the first half of the year. Time deposits and currency, negligible in volume for business establishments, showed almost no change.
distribution of liquid asset holdings

Personal (including trust fund) holdings of liquid assets increased during the first six months of this year by 4.6 billion dollars to a total of nearly 152 billion. This gain was moderate as compared with previous sixmonth periods during the war years. It was associated with reduced consumer savings as the rise in consumer expenditures for goods and services, many of which had not been available during the war, exceeded the
increase in consumer incomes. Growth in individual holdings of Government securities ceased. Cash redemptions of Series E savings bonds exceeded purchases in each month from February through September of this year and there was also some decline in individual holdings of marketable securities, while purchases of Series F and $G$ savings bonds continued in substantial amounts. Time deposits held by individuals increased substantially, continuing almost the same rate of growth as during the late war years. Personal demand deposits increased further but at a reduced rate as compared with war years.

## Postwar Deposit Changes

Total deposits of individuals and businesses have shown further rapid expansion since the end of the war. Deposits held by these groups at commercial and mutual savings banks increased almost 18 billion dollars in the year ending June 1946 and rose again by over 2 billion in the following three months. More than half of this deposit expansion occurred in the last half of 1945; the growth has moderated somewhat in 1946.

Demand deposits, adjusted to exclude United States Government deposits, interbank deposits, and items in process of collection, increased by almost 12 billion dollars in the fifteen months from June 1945 through September 1946. This is a rate of growth slightly larger than the wartime average for comparable periods. In the five months June-November 1945 demand deposits rose very sharply, reflecting largely Treasury payments from war loan balances to meet the costs of war termination; they were reduced somewhat during the Victory Loan drive in December. In the first nine months of 1946 demand de-
posits increased further, although somewhat less sharply than in the last half of 1945. At the end of October adjusted demand deposits were at a record high of over 80 billion dollars.

The widespread use of time deposit accounts as media for individual savings, which revived on a broad scale during the war, has continued through the transition period. Although current net savings of individuals have fallen to less than half their wartime peak volume, time deposits increased over 8 billion dollars from June 1945 through September 1946. This is about as large an annual rate as during the last full year of the war and almost twice the average annual rate for the entire war period.

Currency has shown little growth since the end of the war. In the last half of 1945 currency in circulation continued to increase although at a reduced rate. In January, however, a substantial post-Christmas return flow of currency occurred, and in the following several months the total outstanding remained close to the end of January level. Since May currency in circulation has expanded about 600 million dollars, an amount slightly larger than the usual seasonal increase, and at the end of October was above the peak level reached in December 1945.

## Factors in Deposit Growth

The major factor in the rapid deposit growth in the last half of 1945, as is shown in the table on the following page, was the continued large war financing by the Treasury during this demobilization period and, concurrently, a further increase in bank holdings of United States Government securities. In addition, deposits were expanded somewhat as a consequence of some resurgence in the loan demand on banks for
business purposes and for purchasing or carrying securities.

Note.--Figures cover all commercial banks, mutual savings banks, and Federal Reserve Banks; interbank items are excluded.

Early in 1946 the current deficit of the Treasury was sharply reduced as a result of a rapid contraction of war expenditures and continued large tax receipts, and since that time the Treasury deficit has been less important in further deposit expansion. The debt retirement program inaugurated by the Treasury in the early spring has resulted in some increase in deposits of businesses and individuals as funds were shifted from war loan deposit accounts to private balances in connection with the redemption of securities held by nonbank investors. Most of the retired securities, however, were held by banks, and their redemption resulted in a reduction both in Treasury deposits at commercial banks and in total bank investments, with no effect on other deposits.
Bank lending to businesses and individuals
continued to increase in 1946 and has helped to sustain the growth in deposits. In the first half of the year expansion in commercial and industrial, consumer, and real estate loans at banks was almost offset by the repayment of loans for purchasing or carrying Government and other securities, with only a small increase in deposits attributable to bank loans. Since June business and consumer loans have increased sharply and are currently an important factor in deposit expansion.

## Ownership of Demand Deposits

During the war demand deposit holdings of almost all groups increased substantially. According to estimates based on Federal Reserve surveys of deposit ownership and shown in the chart, personal and trade deposits showed large sustained gains through-

OWNERSHIP OF DEMAND DEPOSITS

Estimates, based on Federal Reserve surveys of deposit ownership. Latest figures are for July 31, 1946.
out the war. Deposits of manufacturers increased sharply in the early war years when the volume of war production was expanding rapidly. In the latter part of the war period their deposits showed little change as the need for additional cash balances by these concerns was not large and new funds becoming available to them were invested largely in Government securities. Financial businesses kept their funds relatively fully invested throughout the war period and their deposits showed little change.

In the last half of 1945, a period which included the first major readjustments after the war, there was a shift of deposits from the accounts of manufacturing and mining concerns to those of other holders. This reduction in the cash position of manufacturing and mining concerns resulted from a number of special factors, such as large tax payments, special reconversion expenditures on plant and equipment, extraordinary expenses in adjusting business organizations to peacetime conditions, expansion of inventories and receivables, and some operating losses accompanying work stoppages occasioned by industrial disputes.

During the same period, deposits of wholesale and retail trade firms grew at an accelerated rate. The major part of the growth in trade balances appears to have resulted from large retained profits, accompanying a rising level of spending by consumers for available supplies of goods. Other nonfinancial business deposits, particularly those of service firms and professional groups, also expanded. The most striking growth in demand deposits in the first half year of postwar adjustment, however, occurred in personal accounts. Despite some temporary reduction in wage payments personal deposits continued to expand rapidly.

During the first half of 1946, according to estimates of demand deposit ownership based on the Federal Reserve survey as of July 31, 1946, shifts among major holder groups were less striking. As is shown in the table, demand deposits of all groups increased somewhat, the gain in nonfarm personal demand deposits being greater than for other groups.

Note.-The figures on deposit ownership are estimates of the balances as recorded by the books of all banks and as a consequence are different from figures that appear on the books of depositors The former include amounts represented by checks that have been drawn by depositors and deducted from their books but not yet charged off their balances on bank records. The latter include checks received by the payees that have been entered on their records but not yet deposited with the banks.

Estimates for prior survey dates are shown at the end of this Review.

Details may not add to totals, owing to rounding.
Although, in contrast to the previous sixmonth period, no major changes occurred in the pattern of deposit ownership, the estimates indicate the emergence of several significant tendencies. Personal deposits increased at about a third of the rate of the preceding six transition months. The rising level of consumer expenditures following

V-E day was a factor tending to dampen down the expansion of personal demand deposits, while the expansion itself was a factor in the higher levels of expenditures. These developments accompanied a high level of income payments and a large decline in savings of individuals. Even though individuals increased sharply their borrowing for consumption purposes and reduced considerably their net purchases of United States Government and other securities, they also continued to increase their time deposits.

Deposit balances of wholesale and retail trade concerns rose much more slowly in the six months ending July 1946, and the entire gain was accounted for by the change in deposits of incorporated trade companies. Inasmuch as this period appears to have been a very profitable one for most kinds of trade establishments, both large and small, entrepreneurial withdrawals from unincorporated businesses must have contributed significantly to the further rise in personal deposits. The smaller growth in trade accounts probably reflects, in addition, expenditures on merchandising facilities and equipment and a seasonal use of many retail and wholesale balances to build up inventories in preparation for the autumn bulge in sales. This year, moreover, it appears that trade firms built up their stocks more sharply than is usual. The higher level of wholesale prices prevailing during this period of inventory accumulation necessarily added to the drain on demand deposits of trade concerns.

Demand deposits of manufacturing and mining companies, following a large decline in the previous six months, showed a small rise in the period January-July 1946. To some extent this reflects the drawing to a close of the period of adjustment from war to peacetime production, when manufacturers' deposits were reduced because of
special reconversion expenditures and other outlays in advance of receipts from the sale of goods produced. Retention of earnings and other funds from operations has again contributed to growth in deposits of manufacturing and mining companies, but the increase in deposits of these concerns during the period January-July 1946 also reflects to some extent proceeds of new security issues and other borrowing. The sale of securities to nonbank investors may have restricted the increase in personal deposits and in deposits of financial businesses discussed below. Deposits of manufacturers, together with those of other groups, were also increased somewhat by Treasury cash redemption of Government securities, particularly retirement of almost half of the certificates sold in the Seventh War Loan drive and maturing on June 1, 1946.

Deposits of public utility companies, including railroads, were considerably larger at the end of July than at the end of January. Almost all of the increase occurred at banks in New York City and appears to represent largely funds obtained through financing and not yet invested either in plant and equipment or temporarily in securities.
Insurance company deposits, which showed almost no change over the entire war period, increased sharply in the six months ending July 31, mostly at New York City banks. During this period insurance companies showed a smaller increase in holdings of Government securities than they had in previous six-month periods. Deposits of other financial companies and trust fund balances increased generally throughout the country. To some extent, the large additions to these financial accounts represented readjustment of investor portfolios upon conclusion of the war financing program, but in part they also reflected a current short-
age of investment outlets considered appropriate or attractive for these funds. A special factor in the growth of deposits in financial businesses may have been the reduced investment of funds owing to uncertainty as to the future course of long-term security yields, which showed a moderate rise during the period. Accumulation of a backlog of uninvested funds in financial accounts, however, is a factor which itself tends to limit rising investment yields.

A growth in corporate balances accounted for most of the increase in business deposits from January through July 1946, as is shown in the table. This is in sharp contrast with developments in the previous six months when noncorporate deposits increased rapidly and corporate balances declined. In the recent period gains in corporate deposits occurred in all major business groups, whereas among noncorporate businesses the amounts of deposit increase were negligible except for the professional and service group and financial businesses other than insurance companies.

## Regional Differences in Postwar Deposit Expansion

In the transition year ending September 1946, as in the war period, all regions of the country and most banks showed increases in deposits held by individuals and businesses. There continued to be significant differences, however, in the rates of growth in such deposits in the various regions of the country. During the war deposits expanded more rapidly in the West and South than in other parts of the country, reflecting the concentration of special military camps and depots and the relatively greater expansion of industrial facilities in these areas, together with the very substantial rise in prices of farm products.

DEPOSIT GROWTH, 1942-1846 by federal reserve district

END OF $1941=100$

* Decline in deposits, Sentember 1945 to 1946

Demand deposits adjusted and time deposits. Central reserve city banks not shown on chart; relative figures for September 1946 were: for New York City and for Chicago 153 per cent. Corresponding figure for all member banks was 207 per cent.

This broad regional pattern of deposit growth continued in the postwar period, as is shown in the chart, although during 1946 regional differences have been less sharp. The largest postwar deposit increases have occurred in the Federal Reserve Districts of Minneapolis, Atlanta, Dallas, and San Francisco, while the smallest gains have occurred in the New York, Chicago, Cleveland, and Boston Districts.

Differences as among districts in postwar deposit growth, as in war period growth, are much greater in the case of demand than of time deposits. Increases in demand deposits in the year ending September 1946 varied from 3 per cent in the New York District to 17 per cent in the Minneapolis District, with an average for the country of 7 per cent. In all districts the increase in time deposits was close to 15 per cent, the average for the country.

During the war country banks showed somewhat larger deposit increases than city banks. This difference was accentuated in the early part of the transition period, as is shown in the following chart. In the six months September 1945 to March 1946 the growth in deposits of individuals and businesses at reserve city banks was greatly reduced in most districts and deposits actually declined in some areas. At country banks deposits continued to show large increases in all areas. In the next six months, ending September 1946, this rate of growth was maintained at country banks in most digtricts, while at city banks in almost all districts deposits expanded more rapidly than in the previous six months.

The sharp regional differences in deposit expansion that occurred in the latter part of 1945 and early 1946 continued to reflect in part the transfer of funds as a result of Treasury operations. Treasury receipts from
taxes and sales of securities were larger relative to Treasury expenditures in the northern and northeastern regions, and the withdrawal of Treasury deposits for meeting the current Treasury deficit consequently had a restraining effect on deposit expansion in these regions.

The regional variations in deposit growth during the early months following the end of the war also reflected in part a shift of funds from manufacturing concerns to trade concerns and individuals. This shift tended to reduce deposits at large banks in industrial centers, where manufacturers' accounts are of special importance, and to increase deposits at those banks where a relatively large proportion of the deposits are owned by individual and trade concerns.

In recent months the factors that resulted in large inter-regional deposit shifts during the war and immediate postwar period have become less important. Transfers originating in Treasury operations have continued, but in greatly reduced volume. Government

Total of demand deposits (adjusted to exclude U. S. Government and interbank deposits and collection items) and time deposits. Member bank data are for call dates through June 1943 and monthly averages of daily figures thereafter, with latest figures for September 1946. Insured nonmember bank data are for call dates with latest figures for June 29, 1946.
expenditures have declined, and shifts in funds arising from current Treasury budget operations have been offset in part by some return of funds to the money centers as a result of Treasury debt retirement. With
the substantial progress in industrial reconversion in the last half of 1945, deposit shifts on this account have also been smaller. Consequently, recent regional variations in deposit expansion have been less marked.

# ECONOMIC CONDITIONS AND PUBLIC POLICY 

## by

Marriner S. Eccles*

It is ten years since I had the privilege of meeting with you at a bank management conference of the New England Council. The Axis cloud was then just beginning to blacken the skies over Europe and the Orient. Few were aware of its ominous portent. We were still struggling up from the deepest depression in our economic history. A decade ago most bankers and businessmen were worried about the Federal debt, the unbalanced budget and the danger of inflation. The gross national debt had reached nearly 34 billion dollars.

No one then could have foreseen the events of the next decade. After the most devastating of all wars, we find ourselves today with a gross national debt of 265 billion dollars, or nearly eight times as much as it was ten years ago.

Today we no longer have a great slack of unemployment. We do have accumulated wants and needs beyond all past experience. The backlog of savings, available to individuals and business in the form of currency, bank deposits and Government securities, is from three to four times as great as in 1936, and current income payments are running at a rate of about 170 billion dollars a year, or more than double the highest prewar peaks of 1929 and 1940. The inflationary potential thus continues to be great-and wartime controls intended to keep the flood of money in check until production could catch up with demand have been largely abandoned.

If we are to avoid going through a painful period of readjustment of distortions in the wageprice structure, we must now rely primarily upon self-imposed restraint on the part of powerful conflicting groups in management and business, in labor and in agriculture. Responsibility for maintaining orderly economic progress, which will prevent a further inflationary development that would inevitably be followed by a decline has now largely shifted from Government to labor and management.
The unity of purpose, which enabled us to achieve a miracle of production for war and thus to hasten the victory, is gone, and with it public support of the direct controls over materials, wages,

[^4]profits and prices that prudent policy in the national interest seemed to require while inflationary forces were still dominant. Fiscal policy and scattered credit controls are about all that remain to the Government as protective measures but these, too, are beset by increasing controversy and are likewise dependent upon majority will.
Popular revulsion against direct controls and other restraints, of course, is natural in the aftermath of war. Certainly freedom of expression and the interplay of the point of view of manifold social and economic groups is the life blood of a progressive democracy. But this democratic freedom should not be a license for special interest groups to seek their own ends without regard for the public good. This spirit of unenlightened selfinterest has increasingly pervaded our national life since the end of the war. If we are to make our economic and political system function successfully we must find means of settling conflicts of interest by lawful and peaceful democratic processes, without disrupting economic stability and progress.

We see examples of conflicting interests on all sides. For instance, most cattlemen object to control of livestock prices, but want the Government to stop a railroad or coal strike if it threatens to interfere with distribution of their products; most farmers oppose ceilings on the prices of their products, but want price floors; in general, labor unions object to wage controls, but want the Government to control prices; most businessmen favor curbs on wages but not on profits; bankers want the Government to balance the budget, but many also advocate higher interest rates on the public debt ostensibly to combat inflation. And so it goes.

We must recognize the fact more than ever in this highly industrialized, interdependent age that one sector of the economy can not gain in the long run at the expense of another. Prosperous economic conditions which will benefit all groups can be secured only if the requirements of the economy as a whole are considered. Past experience has demonstrated that the maintenance of stable and prosperous conditions can not be assured by exclusive reliance upon the free play of market forces. The Government, as the collective agent of all of
us, must be, in effect, the umpire between contending pressure groups, deciding important issues on the basis of what is in the interest of the country as a whole. It is a question of the degree of Governmental action and intervention. For my part, I want as little as possible-but I want enough to minimize destructive economic conflict, and protect our national interests.

We have only to look at the world about us today to realize that there are, broadly speaking, three general types of economic order-communism, socialism which, in greater or lesser degree, prevails in England and throughout western Europe, and the democratic capitalism which we want to preserve in this country. The challenge to our system can and must be met by providing a sustained high level of production and employment. Otherwise, we shall inevitably drift towards more and more Government intervention and controls until our system has been replaced by something akin to the other two-not because our people deliberately choose it but because they would be likely to consider it the only alternative to widespread economic distress and social disorder under our own system.

With most other inflation curbs gone, attentionand criticism-will no doubt be centered more and more on fiscal and credit measures which affect about the only area left where some restraint may be exercised by the Government. Criticism has been aimed particularly at three points: (1) at the Reserve System's support of the $7 / 8$ per cent rate on Treasury certificates; (2) at the Board's fixing of margin requirements at 100 per cent; and, (3) at continuation of the Executive Order under which the Board has regulated consumer credit. Let me discuss these three subjects briefly.

## 1. Government Financing

Various bankers, dealers, insurance companies and others have recommended an increase in shortterm interest rates as a means of combating inflation. As the Board indicated in its Annual Report for 1945 , there is no reason to suppose that even if the short-term rate were increased to as high as $11 / 4$ or $11 / 2$ per cent, it would be of value in combating inflationary dangers which have arisen from two primary causes, neither of which would be corrected by higher rates. One cause is the volume of money already created, which
can not be rapidly reduced-and in fact can only be continuously reduced by having a Treasury cash surplus sufficient to continue the program of debt retirement. This surplus can come from taxes or from the sale of nonmarketable bonds to the public. The other, and by far the more important basic cause, is the insufficiency of production as yet in relation to the existing money supply.
Since most of the short-term debt, outside of the Reserve System, is held by the banks, an increase in the short-term rate would add to bank earnings, which are still at very high levels due to Government bond holdings. It would add to the cost of carrying the public debt. It would not reduce the existing money supply. It would not reduce consumption. It would add nothing to production -the basic need of the hour. It would have no real bearing as an anti-inflationary factor. We have been witnessing a rapid rise in business, consumer and mortgage credit. It is hardly reasonable to suppose that short-term rates on Government securities could be increased sufficiently to deter this private borrowing.

As for increasing the short-term rate with the idea of discouraging further monetization of the debt by the banks, it should be emphasized that the Treasury's debt-retirement program has been an effective means of accomplishing this desirable objective, and postponing need for more direct measures such as the Board outlined in its report as possible alternatives for Congress to consider.
It has been argued that a flexible policy permitting some increase in short-term rates would introduce uncertainties into the market, which would discourage banks from shifting into longerterm issues. The fact is that there could be very little uncertainty as to short-term rates in view of the large volume of securities that mature monthly. If a policy were adopted permitting short-term rates to rise without setting an upper limit, the Treasury would have difficulty in refunding its maturities, since banks and other investors would be likely to withhold funds awaiting even higher rates. The question then is not whether the shortterm rate should be pegged at $7 / 8$ per cent or permitted to fluctuate up and down, but whether it should be pegged at 1 per cent, $11 / 4$ per cent or $11 / 2$ per cent, or some other level. There is no natural level. If short-term rates were permitted to rise sharply there would also be pressure to drive long-term rates up. This would jeopardize
the savings bond sales program and cause wholesale redemptions.

There has been much discussion about the issuance of long-term, $21 / 2$ per cent marketable securities not eligible for banks. It has been said that such an issue would be anti-inflationary because it would absorb savings which could be used to retire bank debt. Some of the arguments that might be made against putting out such an issue at this time are that it would serve to increase bank credit; and insurance companies and savings banks would not only use accumulated funds for such investment but in addition would sell bankeligible issues to banks in order to raise funds with which to subscribe, or would borrow from banks. Such issues would not serve to increase savings of individuals who are the most important group from the inflation standpoint. Series E, F and G savings bonds already offer attractive investment outlets to this group.

If it should appear desirable in the future to provide an additional investment outlet for funds of insurance companies and savings banks it would be preferable to do this through the offering of long-term nonmarketable securities, the yield on which would be $21 / 2$ per cent if held to maturity. This would avoid the danger of future additions to long-term holdings of banks and it would protect the Treasury against investors who buy long-term securities for short-term holding, thus getting $21 / 2$ per cent, plus the premium as maturity is reached, on what in effect is demand money so long as the $21 / 2$ per cent rate is maintained. In my opinion this long-term rate should not be permitted to go up, and, if need be, the market must be supported by the Federal Reserve. Otherwise the cost of carrying the public debt would be increased, many outstanding savings bonds yielding lower rates would be cashed in and the funds invested in the higher-yield market issues, and heavy losses would be incurred by holders of outstanding market bonds. Confidence in the stability of the Government bond market would vanish. If long-term nonmarketable issues were offered, it might be necessary to limit subscriptions under some formula which would provide only for the investment of accumulated funds and prevent switching from present holdings, particularly the bank eligibles.

It has also been argued that the Treasury should refund short-term securities into longer-term debt to ease the refunding problem and avoid the demand liability on the Treasury. Compared to
refunding in short-term issues, this would result in an increased interest cost and in less flexibility to the Treasury in managing the debt. Commercial bank holdings of longer-term securities and commercial bank earnings would be relatively higher. As a matter of fact, to the extent that private investors continue to expand their holdings of $E, F$ and $G$ bonds, and the proceeds are applied to retiring maturing bank-held debt, the result is a refunding of short into long-term holdings. This accomplishes the desirable objective of shifting the debt out of the banks and into the hands of the general public. Also to the extent that the Treasury has a cash surplus-and it may possibly be 4 to 6 billion dollars in the first half of 1947-it can likewise be used largely to reduce short-term bankheld debt.

There is a serious question as to whether the Government should provide $21 / 2$ per cent investments for private insurance companies and savings banks at a time when the Government is not in need of new money. There would scarcely be justification for doing so except as the surplus funds, so obtained, were used to reduce a like amount of demand deposits and Government securities held by the banks. Such a refunding of short-term securities held by banks into long-term securities held by insurance companies and savings banks would cost the Government the difference between the $7 / 8$ per cent short-term and $21 / 2$ per cent long-term rates. Therefore, if such refunding were done it should accomplish the purpose of reducing demand deposits and Government securities held by commercial banks.

With commercial banks holding 75 billion dollars of Government securities out of a total marketable debt of 182 billion, a large amount of the debt should be in short-term issues. Monthly refundings create no problem. The argument that the Treasury is now faced with a large volume of demand obligations is not persuasive.

Under present conditions, the entire debt is in effect a demand obligation since the Federal Reserve assures the Treasury at all times of a ready market for its offerings on a basis of $7 / 8$ per cent on the certificates and $21 / 2$ per cent on the longest bonds. With the public debt as large as it is today-twice the entire private debt of the country-a free market is out of the question if that is taken to mean an unmanaged, unsupported market. The public interest requires a stable market for Gov-

Federal Reserve Bulletin
ernment securities. This is the responsibility of the Federal Reserve.

The Federal Reserve has worked and will continue to work in close cooperation with the Treasury. The public interest requires the closest teamwork. The Federal Reserve is in complete agreement with the Treasury's debt-management program, as well as the general fiscal policy, as outlined on several occasions by Secretary Snyder.

Beginning in March, as you know, it became possible not only to meet the greatly reduced deficit without further borrowing, but to enter upon a program of debt retirement by drawing upon accumulated cash balances. Since then, and including the projected retirement of 2 billion dollars for November 1, the Treasury redeemed for cash close to 20 billions of securities. This debt-retirement program has helped to check inflationary pressures on the monetary side.

As a result of the retirement program the enormous monetary expansion which had been in process throughout the war years and which raised the money supply from 39 billion dollars in 1940 to 102 billions in February of this year has been halted and reversed.

By imposing a drain on bank reserves, the retirement program has also exerted some brake upon further expansion of bank credit. While commercial loans and consumer credit have recently increased rapidly, security loans have declined, and, as I have indicated, the retirement program has at least temporarily discouraged further shifting by banks from short to medium and long-term Government securities.

While I would not like to see an increase in interest rates at this time, neither would I like to see a further rate reduction. The decline in the price of longer-term issues since spring and the resulting increase in yield has been altogether satisfactory as has been the general stability of security prices.
There is no need for the issuance of additional long-term marketable securities at this time, as the Government does not need new money and, as I have indicated, expects to have a cash surplus. If insurance companies, savings banks and other institutions have surplus funds there is plenty of opportunity to invest in the existing long-term issues at present favorable prices and yields. Also there is or will be an increasing opportunity to invest in mortgages and other long-term investments, including World Bank securities.

## 2. Margin Requirements

The credit policy of the Federal Reserve System, in all its aspects, should be adjusted to the general credit situation of the country. We are not justified, for example, in fixing margin requirements exclusively by reference to the movement of stock prices, as some people have suggested. The general credit situation must be the main criterion, and this in turn is an integral part of the general business situation. When margin requirements were fixed at 100 per cent, the general credit situation was highly inflationary because of the immense volume of purchasing power in the hands of investors and the general public. Indeed, there is plenty of cash today to drive stocks up very high, entirely without credit, if investors, let us say, had more confidence in the prospect for profits in business and industry and less uncertainty over the possibilities of further wage-price maladjustments. It can hardly be contended, with reason, that the credit gates should be opened now in the market in order to finance new productive enterprise and provide employment. There was a very large volume of undigested offerings in the stock market, only a part of which was for new financing. But in any case this is not a time for encouraging new issues even for productive purposes because with the scarcity of materials and labor, it would only add to the inflationary pressure.

This is not a one-way street. When the situation changes, and there is need to stimulate the use of credit for purchasing securities, it will be time to consider lowering margin requirements. This would be a time, as it seems to me, when there will be sufficient supplies of materials and labor to justify the encouragement of new issues of corporate securities, provided there is at the same time a prospect of declining production and declining employment. The time to lower the margin requirements will be one at which, in contrast to the present time, the effect will not be to add to inflationary forces but to help offset deflationary forces in the general economy.

The stock market, after a four-year rise which increased values by 150 per cent, has now experienced a decline, bringing prices down to the level at the end of the war, or about 20 per cent below their high point of last spring. I do not consider this an alarming symptom. On the contrary, to the extent that this readjustment reflects a more sober appraisal of prospects and a lessening
of the inflationary psychology, to the extent that it will tend to slow down the timing of not absolutely urgent capital expenditures and inventory accumulations, it will contribute to a balance in the economy.
One of the fortunate aspects of the situation has been the low level of stock-market credit. Such credit now outstanding is in the general neighborhood of 1 billion dollars, as compared with something like 3 billions at the prewar peak of stock prices in 1937 and more than 12 billions at the peak in 1929. Without the existence of stringent credit regulation the speculative upward movement of prices would undoubtedly have gone much further and the subsequent price decline with a concurrent forced liquidation of credit would also have gone much further, thus making for greater instability.
Over the last 40 or 50 years, the upswings and downswings of the stock market have been a decidedly unstabilizing influence in the national economy. It was in order to reduce this unstabilizing influence, particularly as it is connected with the use of credit, that Congress in 1934 vested in the Reserve Board responsibility for fixing margin requirements on listed securities but not on unlisted securities. In the late 1920's, when there were no Federal margin requirements, the upward movement in stock prices caused them to increase by more than 200 per cent and the sharp decline in 1929 was more than twice as rapid as that which took place during recent months. The recent gyrations in the cotton market, which advanced very rapidly last summer and then slumped by nearly 20 per cent in a few days are an indication of what can be expected in speculative markets which are not subject to any effective control over the use of credit.

One of the interesting consequences of the Board's margin requirements has been an almost uninterrupted reduction since the middle of last year in "the amount of stock-market credit in use, including the reduction during the period when the market was advancing-which had never happened before. There were, to be sure, some inequities and imperfections in margin requirements as a regulatory instrument including the failure of the law to cover nonlisted securities. Congress considered the question of whether unlisted securities should also be covered by the law, but concluded that it was not practical. Moreover, it is evident that control of listed securities greatly influences the
use of credit and the market for unlisted securities. On the whole, the use of margin requirements can be viewed with satisfaction. Neither the long upswing that culminated last May, nor the subsequent downswing have gone to the lengths to which they would have gone if there had been no Federal margin requirements.

The general public strongly approves of this regulation. It is not to be expected that some of those in the brokerage or security business who feel that their business is adversely affected by regulation would agree with this viewpoint.

## 3. Consumer Credit

As for consumer credit regulation, it was, as you may recall, the seventh point in the Government's wartime program for economic stabilization. The Reserve Board did not seek the task of administering this regulation. The question of whether there should be some permanent legislation covering this important segment of credit in our economy is one for Congress to determine. The Board, having had experience with the wartime regulation aimed specifically at the inflation target, would be remiss, I think, if it failed to call the attention of Congress to the need for making a decision, one way or the other. I, for one, while I certainly do not crave taking on this additional load, feel as the Board's annual report stated that serious consideration should be given by Congress to the desirability of placing authority in some Governmental body to deal with the problem-for undoubtedly the expansion and contraction of this type of credit have greatly accentuated economic upswings and downturns in the past. There is a very strong case to be made for moderating these excesses, so far as possible, in the consumer credit field.
It could be accomplished, in my opinion, by focusing regulation primarily on the major durable goods customarily sold on the instalment plan. They compose the great dollar bulk of consumer instalment credit in which the range of expansion and contraction is widest. It has been felt for some time by the Reserve Board that the present regulation could be greatly improved administratively by focusing it on the major durables, eliminating the major part of single payment loans and charge accounts from its scope, together with the soft goods and less important durables that were included when the regulation was originally drawn as an anti-inflationary device in wartime.
The Board for some time has been studying the
advisability of thus revising the existing regulation with a view to making it administratively more workable. It is felt that this can be done without a material weakening of its effectiveness as a restraining influence at this time. When inflationary pressures have passed, it would need to be revised further, assuming that Congress decides to retain it as a permanent instrument of credit regulation.

It is important, of course, to bear in mind that these selective controls, relating to listed stocks and consumer credit, can at best play only a relatively minor role in assuring stability in our economic life. Likewise, monetary policy is even more limited in its influence under present day conditions than ever before. Overshadowing all of these aspects of Governmental policy are national fiscal and budgetary measures, together with other broad policies relating to business, labor and agriculture. Not even the most ardent advocate of laissez-faire would propose that we abandon all Government regulations. It is, let me say again, a question of degree-of doing through the medium of Government what needs to be done to contribute to economic stability and progress-and doing no more than that.

Since this is a banking group, I have sought to cover three specific questions in which you have a particular interest. In conclusion, I would like to turn for a moment to the general economic situation as I see it at this time. Speaking recently at the National Outlook Conference of the Department of Agriculture, I undertook to assess in a general way the good and bad aspects of our current situation. Without recounting that appraisal of favorable and unfavorable factors, I will merely quote the conclusions that I think should be drawn from them:
"The situation calls for a budgetary surplus and continued debt retirement. Continued efforts should be made to reduce public expenditures. Taxes should not be further reduced under present conditions. It is desirable to increase tax revenues, without increasing tax rates, by increasing the national income as a result of greater productivity. Such an increase in the national income, together with decreased Federal expenditures, will bring about a budgetary surplus which will make possible tax reductions later on.
"Speaking of the general credit situation, there is no reason under present conditions for reducing margin requirements on stock-market trading or
for relaxing consumer credit restraints on durable consumer goods in short supply. Credit should be provided for productive purposes, but not for speculation. Nor is there justification for increasing interest rates which would greatly complicate the Government's problem of managing the public debt and increase the cost of carrying it, without the offsetting advantage of preventing inflation.
"At best, Government price or credit controls can only be a stopgap, and fiscal policy can deal only with the money side of the inflation problem. The overwhelmingly vital need now is for more work and more goods-for increased productivity. Whether we are to have a stable economic progress depends fundamentally now on the industrial front, on labor and management, on increasing output by increasing efficiency, eliminating bottlenecks and restrictive rules and practices, including those in the construction industry, and by avoiding strikes and shutdowns. We all know that in our interdependent economy a strike in one key industry paralyzes others-strikes even by a comparatively few workers in plants that supply others can throw many thousands out of work. More work and more goods are the basic cures for inflation. That is the only way in which labor can keep the gains from the pay increases it has received. It is the only way to safeguard the purchasing power of all wages and savings. Further wage increases for the same amount of work and output would serve only to intensify the upward pressure on prices. Increased wages that result in increased prices are self-defeating. It will be far better to hold prices down and increase productivity-to increase real wages-than to have further wage and price increases that would finally result in public resistance. For this, in turn, would upset business calculations, and all long-term commitments, thereby precipitating a recession, the severity of which would depend mainly on how long it would take to correct the distortions and maladjustments. Only by keeping prices down and maintaining the buying power of wages and savings can we have a higher standard of living.
"We have all the tangible elements of sustained prosperity-manpower, raw materials, money supply, coupled with a vast backlog of needs and wants. The intangibles, still needed, include selfrestraint, enlightened self-interest, the will and wisdom to translate the tangibles into a lasting, higher standard of living."

## ESTIMATED LIQUID ASSET HOLDINGS OF INDIVIDUALS AND BUSINESSES

Estimates of liquid asset holdings of individuals and businesses as of June 30,1946 , and for previous end-of-year and mid-year dates since December 1939, are published in the accompanying table. These estimates cover the principal assets which are most readily convertible for use and for which there are representative statistics of ownership. Currency and demand deposits are the basic forms of cash money ordinarily used, and under existing practices time deposits and also United States Government securities are readily convertible into cash. Other assets that may be commonly considered as liquid savings, such as savings and loan shares, insurance and pension reserves, and corporate and municipal securities, are excluded.

The estimates include liquid assets held by individuals (including farmers), unincorporated businesses, and corporations other than insurance companies. They do not include holdings of Federal, State, or local Governments, Government agencies, foreigners, banks, building and loan associations, insurance companies, or nonprofit associations. The estimates are approximations of amounts shown or implied in accounting records of the holders rather than those reported by banking and Treasury records, although they are derived from bank and Treasury reports. The deposit estimates, therefore, differ somewhat from the figures reported by banks and regularly published among banking statistics. ${ }^{1}$

The June 1946 figures are preliminary. Estimates for December 1945 are revisions of preliminary figures and estimates for earlier dates include some small revisions in the ownership distribution of demand deposits and United States Government securities. ${ }^{2}$ The basic classifications used and methods of estimate are the same as those employed previously. In the case of demand deposits, a correction was made in the float adjustment between individuals and businesses; a further cor-

[^5]rection was made in the distribution of deposits between corporate and noncorporate businesses. The United States Government security figures were changed to include excess profits tax refund bonds as corporate liquid assets beginning December 1945.

For corporations, other estimates of cash (including currency, and demand and time deposits) and United States Government security holdings are published quarterly by the Securities Exchange Commission in its statistical releases on the working capital of United States corporations. The SEC and the Board of Governors estimates differ partly because of differences in coverage but primarily because of differences in methodology. ${ }^{3}$ For example, in the case of demand deposits the Federal Reserve estimates of corporate deposits are derived from statistics of ownership of demand deposits reported by a sample of banks. The data reported are increased to represent corporate deposits in all banks and then adjusted to reflect the volume of deposits as they would appear on the books of the corporations holding the deposits. The SEC estimates of "cash on hand and in banks," on the other hand, are based on data submitted with corporate income tax returns and published in Treasury Department Statistics of Income for years when these data are available (currently through 1942), and for later years are derived primarily from figures covering large corporations registered with the Commission.

A national survey of liquid assets, recently completed by the Board of Governors of the Federal Reserve System, provides information on the distribution of holdings of liquid assets by individuals at the beginning of 1946 and their attitudes toward spending these assets. The survey was conducted for the Board by the Division of Program Surveys of the Bureau of Agricultural Economics, United States Department of Agriculture, and results were published in the June, July, August, and September 1946 issues of the Federal Reserve Bulletin.

[^7]During the first half of 1946, net profits of member banks after income taxes aggregated 429 million dollars, an increase of 38 million over the same period of 1945 . As is shown by the table, this was about one-half the corresponding increase recorded in each of the years 1943, 1944, and 1945. Net profits on an annual basis were 11.1 per cent of total capital accounts, virtually the same rate as in the first half of 1945. Cash dividends totaled 124 million dollars, 8 million more than during the first half of 1945.

Net current earnings before income taxes were 67 million dollars higher in the first half of 1946 than in the first half of 1945 and aggregated 482 million. The increase did not differ substantially from the corresponding amounts of increase recorded in the three preceding years. Net current earnings on an annual basis were 12.4 per cent of total capital accounts, as compared with 11.6 per cent in the first six months of 1945.

Net recoveries, profits on securities, etc., were little changed from the first half of 1945. Profits on securities sold were 9 million dollars less than in the first half of 1945 but higher than in the last half of the year.

Taxes on net income were reported as 159 million dollars, which was 21 million higher than in the first half of 1945. This was notwithstanding the repeal of the excess profits tax effective January 1, 1946.

All major items of curreft earnings were higher, including increases of 74 million dollars in earnings on securities and 64 million in earnings on loans. Two factors have moderated the effect on bank earnings of the decline in holdings of Government securities. First, banks have for some time been shifting their holdings of Governments from short-term low-yield securities to long-term high-yield securities; as a result, the average yield on holdings of United States Government securities

[^8]increased from 1.39 per cent for the year 1945 to 1.45 per cent for the first half of 1946 . Second, the spread in yield between short-term Government securities, and commercial, industrial, real estate, and consumer loans has also been an important factor in sustaining bank earnings. Holdings of short-term Government securities, which are low-yield assets, have been declining in volume, while holdings of real estate, consumer and business loans, which yield substantially higher rates, have expanded rapidly.

All major items of expense also continued to rise. Salaries and wages were 53 million dollars higher than a year ago. The sustained expansion of time deposits caused a further increase of 16 million dollars in interest payments, although the average rate paid was unchanged.

Shifts in the volume and composition of bank earning assets during the first half of 1946 have had their effect on earnings of the various classes of banks. The Treasury's debt-retirement program has affected the earning assets of large banks more than small ones. Earning assets at central reserve city banks declined by more than 3.5 billion dollars in the first half of 1946, largely because of a decline in Government securities and loans on Government securities; nevertheless, the average volume of earning assets held was practically unchanged during the first half of 1945 and of 1946. As a result, net profits of central reserve city member banks were about the same for both periods, with New York showing a slight
decrease and Chicago showing an increase. The comparison by class of bank is shown in the accompanying table.
At reserve city banks there was a decrease of earning assets of nearly 2.5 billion dollars during the first half of 1946; however, the average volume held was almost 4 billion dollars greater than in the corresponding period of last year. Net profits of these banks were 9 million dollars higher in the first half of this year than in the same period last year. The profits as a percentage of total capital accounts on an annual basis declined slightly because of the increase in capital accounts.

At country banks, instead of a decline in earning assets, there was an increase of almost 900 million dollars during the first half of 1946. Holdings of United States Government securities declined by less than 500 million dollars, while loans increased by more than a billion dollars and other securities by over 300 million dollars. The bulk of the increase in loans was in such high-yield categories as real estate and consumer loans. The average volume of earning assets held by country banks was nearly 5.5 billion dollars larger in the first six months of 1946 than in the corresponding period last year, and net profits were 26 million dollars greater. Despite an increase in capital accounts, the annual rate of profits as a percentage of capital increased to 13.2 per cent compared with 12.3 per cent in the first half of 1945.

For details of earnings, expenses, etc., in the first half of 1945 and 1946 , see page 1298 .

## LAW DEPARTMENT

Administrative interpretations of banking laws, new regulations issued by the<br>Board of Governors, and other similar material.

## Reserves

## Balances Due to or from Banks in Territories

Demand deposits of banks in territorial or insular possessions of the United States should be treated as deposits of banks in the United States and reported in condition reports submitted by State member banks under "deposits of banks in the United States" rather than under "deposits of banks in foreign countries." Balances with banks in territorial or insular possessions should also be treated as balances with banks in the United States in reports of condition and of deposits for reserve computation purposes.

## Consumer Credit

## Water Heaters

By Amendment No. 16, which became effective June 11, 1945, water heaters designed for household use, formerly listed as Item 38 under Group A in section 13 of Regulation W, were deleted from the classification of listed articles. However, the list still includes "electric appliances, not elsewhere listed, designed for household or personal use." Although this classification might possibly be regarded as including electric water heaters, the Board has ruled that all types of water heaters whether gas or electric are no longer listed articles.

## Kitchen Cabinets

The Board has been asked for advice as to whether the Board's ruling that kitchen cabinets are listed articles in the classification "Household Furniture," under section 13(a) of Regulation W, is intended to apply only to portable kitchen cabinets and not to prefabricated kitchen cabinets which are permanently installed by fastening to the wall and floor of existing structures. The inquiry was made in view of section $8(a)(2)$, as amended effective July. 5, 1946, which makes repairs, alterations, or improvements in connection with existing structures. subject to the Regulation if they incorporate any listed article. The Board's ruling was intended to apply to both types of kitchen cabinets. It is not believed practicable to distinguish between portable kitchen cabinets and prefabricated ones permanently installed, because in many cases this distinction would depend on the kind of installation, which the vendor might not know, rather than upon the design of the cabinet itself.

## "Jeep" Station Wagons

The Board has recently had its attention directed to the so-called "Jeep" station wagon and has ruled that it is to be considered an automobile for purposes of Regulation W. An earlier ruling of the Board which stated that neither military nor civilian jeeps are classified as automobiles, referred to "jeeps" as a type of vehicle (not as a trade-mark) and remains in effect.

## CURRENT EVENTS

## Changes in Board's Staff

Mr. David M. Kennedy who had been Special Assistant to the Chairman since June 1, 1946, resigned in October to become associated with the Continental Illinois National Bank and Trust Company of Chicago.

Mr. C. E. Cagle who had been Assistant Director of the Division of Examinations since May 1, 1935, resigned effective October 31, to return to private enterprise.

Effective November 1, Mr. Edwin R. Millard and Mr. George S. Sloan were appointed Assistant Directors of the Division of Examinations. Mr. Millard has been a Federal Reserve Examiner since 1932, and the Examiner in charge of the field force since 1941. Mr. Sloan has been a Federal Reserve Examiner since June 1934.

Appointment of Mr. Earhart as
President of the Federal Reserve Bank of San Francisco
Mr. C. E. Earhart, who has served as First Vice President since January 1, 1946, was appointed President of the Federal Reserve Bank of San Francisco effective October 17, 1946, to succeed Mr. Ira Clerk who died on September 28. Mr. Earhart has been a member of the Bank's staff since 1917, and has served as an officer since 1920.

## Resignation of Mr. Bryan and <br> Appointment of Mr. Clark as

First Vice President of the Federal Reserve Bank of Atlanta

Mr. Malcolm H. Bryan resigned as First Vice President of the Federal Reserve Bank of Atlanta effective October 18, 1946, to become associated with the Trust Company of Georgia. Mr. L. M. Clark, Vice President of the Bank, was appointed First Vice President effective October 19, 1946. Mr. Clark has been a member of the

Bank's staff since 1918 and has served as an officer since 1930.

## Appointments of Branch Directors

The Board of Governors of the Federal Reserve System on November 1, 1946, announced the appointment of Mr. Fred S. Wallace, Kearney, Nebraska, as a director of the Omaha Branch of the Federal Reserve Bank of Kansas City for the unexpired portion of the term ending December 31, 1946. Mr. Wallace is engaged in farming.

The Board of Governors of the Federal Reserve System on November 6, 1946, announced the appointment of Mr. Henry P. Drought, an attorney of San Antonio, Texas, as director of the San Antonio Branch of the Federal Reserve Bank of Dallas, for the unexpired portion of the term ending December 31, 1948.

## Admissions of State Banks to Membership in the Federal Reserve System

The following State banks were admitted to membership in the Federal Reserve System during the period September 16, 1946, to October 15, 1946:

Alabama
Bessemer-American Bank and Trust Company
Brewton-Farmers \& Merchants Bank, "Inc."
Florida
Miami Beach-North Shore Bank
New York
Syosset-Bank of Syosset, New York
Ohio
Millersburg-The Adams Bank
South Dakota
Pierpont-First State Bank of Pierpont
Texas
Gruver-Gruver State Bank
Houston-East End State Bank
Fidelity Bank and Trust Company

## NATIONAL SUMMARY OF BUSINESS CONDITIONS

[Compiled October 25, and released for publication October 28]

Industrial production continued with little change in September and the early part of October. Department store sales have shown no further rise from the high level reached at the end of August, although there is usually a considerable increase at this season. Wholesale prices of livestock and meats advanced sharply after the removal of price controls in the middle of October, while prices of cotton and grains declined.

## Industrial Production

The Board's seasonally adjusted index of industrial production was maintained in September at the August rate, which was 177 per cent of the 1935-39 average. Following the reestablishment of Federal price controls on livestock at the beginning of September, curtailment in marketings resulted in a sharp drop in activity at meatpacking plants; this decline offset, in the total index, further small gains in output of numerous other manufactured products and minerals. After the middle of October, when controls were removed, slaughter operations showed a sharp increase.

Output of durable manufactures rose 2 per cent in September, reflecting chiefly further gains in activity in the machinery and transportation equipment industries. Output of nonferrous metals also
continued to rise in September and was at the highest level since the end of the war. Iron and steel production was maintained at about the August rate. In the first four weeks of October activity at steel mills advanced slightly, averaging for this period a scheduled rate of 90.3 per cent of capacity. Production of lumber and other building materials continued to increase in September. Except for the sharp drop in meat production, there was little change in the output of nondurable goods.

Output of minerals rose slightly in September as increased production of coal and of metals more than offset a slight decline in output of crude petroleum.

## Construction

Value of construction contracts awarded, as reported by the F. W. Dodge Corporation, declined further in September. Nonresidential building awards dropped one-fifth to the lowest level since the end of the war, reflecting chiefly a sharp decline in contracts for factory construction. Residential awards were maintained at the high levels prevailing in July and August.

## Employment

Employment in nonagricultural establishments advanced somewhat further in September, after

Monthly figures, latest shown are for September.

Federal Reserve Bulletin
allowing for seasonal changes, reflecting continued gains in industries manufacturing durable goods and in trade and service lines. The number of persons unemployed remained at about 2 million.

## Distribution

Department store sales, which were in exceptionally large volume in August, increased by less than the usual amount in September and the early part of October. The Board's seasonally adjusted index was 269 in September as compared with 290 in August and an average level of 257 during the first 7 months of the year. Since the middle of September sales have been considerably reduced in two important areas by industrial disputes, but sales in most other districts of the country have also shown a smaller rise than is usual during this season of the year.

Loadings of most classes of railroad revenue freight were maintained at an exceptionally high rate in September and the early part of October. Shortages of freight cars persisted during this period, which is the seasonal high point of the year, limiting to some extent the distribution of commodities.

## Commodity Prices

In the middle of October Federal price ceilings were removed from livestock and meats and it was indicated that the controls remaining over most other commodities would be discontinued. During
the subsequent week prices of livestock, meats, and some other agricultural commodities showed sharp advances and exceeded the previous peaks reached during the lapse of price control in July. Wholesale prices of various other commodities, including cotton, grains, butter, and eggs, declined but were still above the levels prevailing at the end of June. Wholesale prices of industrial products have generally continued to show relatively moderate advances in recent weeks.

## Bank Credit

Member bank reserve balances in September and the first half of October showed little change in level, the fluctuation that occurred reflecting Treasury debt retirement operations and quarterly income tax collections. Required reserves increased somewhat in the first half of September and subsequently showed little change. Reserve Bank holdings of Government securities increased late in September and subsequently declined.

Commercial and industrial loans at weekly reporting banks in 101 leading cities continued to expand rapidly during September and early October. Real estate and consumer loans increased further, while loans for purchasing or carrying securities continued to decline. Holdings of Government securities were reduced considerably during the period, reflecting largely Treasury cash retirement of certificates on October 1.

MEMBER BANKS IN LEADING CITIES

Demand deposits (adjusted) exclude U. S. Government and interbank deposits and collection items. Government securities include direct and guaranteed issues. Wednesday figures, latest shown are for Oct. 23.

Current statistics for Federal Reserve chart book ..... 1294-1296
Number of banking offices in the United States ..... 1297
Member bank earnings, 1946. ..... 1298

Tables on the following pages include the principal available statistics of current significance relating to financial and business developments in the United States. The data relating to the Federal Reserve Banks and the member banks of the Federal Reserve System are derived from regular reports made to the Board; index numbers of production are compiled by the Board on the basis of material collected by other agencies; figures for gold stock, money in circulation, Treasury finance, and operations of Government credit agencies are obtained principally from statements of the Treasury, or of the agencies concerned; data on money and security markets and commodity prices and other series on business activity are obtained largely from other sources. Back figures for banking and monetary tables, together with descriptive text, may be obtained from the Board's publication, Banking and Monetary Statistics; back figures for most other tables may be obtained from earlier Bulletins.

MEMBER BANK RESERVES AND RELATED ITEMS

P Preliminary.
1 Includes industrial loans and acceptances purchased shown separately in subsequent tables.
2 End of month and Wednesday figures are estimates
Back figures-See Banking and Monetary Statistics, Tables 101-103, pp. 369-394; for description, see pp. 360-365 in the same publication.
[In effect October 31. Per cent per annum]

| Discounts for and advances to member banks |  |  |  | Advances to individuals, partnerships, or corporations other than member banks secured by direct obligations of the U. S. (last par. Sec. 13) |  |
| :---: | :---: | :---: | :---: | :---: | :---: |

${ }^{1}$ Rates shown also apply to advances secured by obligations of Federal intermediate credit banks maturing within 6 months.
Note.-Maximum maturities for discounts and advances to member banks are: 15 days for advances secured by obligations of the Federal Farm Mortgage Corporation or the Home Owners' Loan Corporation guaranteed as to principal and interest by the United States, or by obligations of Federal intermediate credit banks maturing within 6 months; 90 days for other advances and discounts made under Sections 13 and $13 a$ of the Federal Reserve Act (except that discounts of certain bankers' acceptances and of agricultural paper may have maturities not exceeding 6 months and 9 months, respectively); and 4 months for advances under Section 10(b). The maximum maturity for advances to individuals, partnerships, or corporations made under the last paragraph of Section 13 is 90 days. Back figures.-See Banking and Monetary Statistics, Tables 115-116, pp. 439-443.

## FEDERAL RESERVE BANK BUYING RATES ON BILLS

[Per cent per annum]

| Maturity | Rate on Oct. 31 | In effect be-ginning- | Previous rate |
| :---: | :---: | :---: | :---: |
| Treasury bills. | 8/8 | Apr. 30, 1942 | - |
| Bankers acceptances: $1-90 \text { days. }$ | 1 | 1Aug. 24, 1946 | 3/4 |
| 91-120 days. | 1 | 1Aug. 24, 1946 | 7/8 |
| 121-180 days. | 1 | 1Oct. 20, 1933 | $11 / 4$ |

${ }^{1}$ Date on which rate became effective at the Federal Reserve Bank of New York

Back figures.-See Banking and Monetary Siatistics. Table 117. pp. 443-445.

MEMBER BANK RESERVE REQUIREMENTS
[Per cent of deposits]

| Period in effect | Net demand deposits ${ }^{1}$ |  |  | Time deposits (all member banks) |
| :---: | :---: | :---: | :---: | :---: |
|  | Central reserve city banks | Reserve city banks | Country banks |  |
| June 21, 1917-Aug. 15, 1936.. | 13 | 10 | 7 | 3 |
| Aug. 16, 1936-Feb. 28, 1937. | $191 / 2$ | 15 | $101 / 2$ | $41 / 2$ |
| Mar. 1, 1937-Apr. 30, 1937.. | 223/4 | 171/2 | $121 / 4$ | $51 / 4$ |
| May 1, 1937-Apr. 15, 1938.. | 26 | 20 | 14 | 6 |
| Apr. 16, 1938-Oct. 31, 1941.. | 223/4 | 171/2 | 12 | 5 |
| Nov. 1, 1941-Aug. 19, 1942. | 26 | 20 | 14 | 6 |
| Aug. 20, 1942-Sept. 13, 1942. | 24 | 20 | 14 | 6 |
| Sept. 14, 1942-Oct. 2, 1942. | 22 | 20 | 14 | 6 |
| Oct. 3, 1942 and after...... | 20 | 20 | 14 | 6 |

Demand deposits subject to reserve requirements, i. e., demand deposits other than war loan deposits, minus cash items in process of collection and demand balances due from domestic banks.

## MAXIMUM RATES ON TIME DEPOSITS

Maximum rates that may be paid by member banks as established by the Board of Governors under provisions of Regulation $\mathbb{Q}$.
[Per cent per annum]

|  | Nov.1, 1933- Jan. 31, 1935 | Feb. 1, 1935Dec. 31, 1935 | $\begin{gathered} \text { Effective } \\ \text { Jan. 1, } 1936 \end{gathered}$ |
| :---: | :---: | :---: | :---: |
| Savings deposits. | 3 | 21/2 | 2 $1 / 2$ |
| Postal savings deposits. | 3 | 21/2 | $21 / 2$ |
| Other deposits payable: In 6 months or more. | 3 | 21/2 |  |
| In 90 days to 6 months. | 3 | $21 / 3$ | 2 |
| In less than 90 days. | 3 | 21/2 | 1 |

Note.-Maximum rates that may be paid by insured nonmember banks as established by the F. D. I. C., effective Feb. 1, 1936, are the same as those in effect for member banks. Under Regulation $Q$ the same as those in effect for member banks. mum rate payable by State banks or trust companies on like deposits under the laws of the State in which the member bank is located.

FEDERAL RESERVE BANK RATES ON INDUSTRIAL LOANS
AND COMMITMENTS UNDER SECTION 13b
OF THE FEDERAL RESERVE ACT
Maturities not exceeding five years
[In effect October 31. Per cent per annum]

| Federal <br> Reserve Bank | To industrial or commercial businesses |  | To financing institutions |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | On loans ${ }^{1}$ | $\underset{\substack{\text { On } \\ \text { commit- } \\ \text { ments }}}{\substack{\text { On }}}$ | On discounts or purchases |  | $\underbrace{\text { nen }}_{\substack{\text { On } \\ \text { commit- } \\ \text { ments }}}$ |
|  |  |  | Portion for which institution is obligated | Remaining portion |  |
| Boston. | 21/2-5 | 1/2-1 | ${ }^{(2)}$ | (3) | 1/2-1 |
| New York. | 21/2-5 | 1/2-1 $1 / 4$ | (2) | (3) | 1/2-1 $1 / 4$ |

[^10] ${ }^{2}$ Includes $\$ 1,800,000,000$ Exchange Stabilization Fund and $\$ 156,039,431$ held as reserve against United States notes and Treasury notes of 1890; the balance resulting from reduction in weight of the gold dollar, also included, is not shown in the circulation statement beginning July 31, 1945.
i To avoid duplication, amount of silver dollars and bullion held as security against silver certificates and Treasury notes of 1890, outstanding is not included in total Treasury currency outstanding

4 Because some of the types of money shown are held as collateral or reserves against other types, a grand total of all types has no special significance and is not shown. See note for explanation of these duplications. ${ }^{5}$ Less than $\$ 500,000$.

Note.-There are maintained in the Treasury-(i) as a reserve for United States notes and Treasury notes of $1890-\$ 156,039,431$ in gold bullion; (ii) as security for Treasury notes of 1890 -an equal dollar amount in standard silver dollars (these notes are being canceled and retired on receipt); (iii) as security for outstanding silver certificates-silver in bullion and standard silver dollars of a monetary value equal to the face amount of such silver certificates; and (iv) as security for gold certificates-gold bullion of a value at the legal standard equal to the face amoun of such gold certificates. Federal Reserve notes are obligations of the United States and a first lien on all the assets of the issuing Federa Reserve Bank. Federal Reserve notes are secured by the deposit with Federal Reserve agents of a like amount of gold certificates or of gold certificates and such discounted or purchased paper as is eligible under the terms of the Federal Reserve Act, or of direct obligations of the United
States. Federal Reserve Banks must maintain a reserve in gold certificates of at least 25 per cent, including the redemption fund which must be States. Federal Reserve Banks must maintain a reserve in gold certificates of at least 25 per cent, including the redemption fund which must be
deposited with the Treasurer of the United States, against Federal Reserve notes in actual circulation; gold certificates pledged as collateral may deposited with the Treasurer of the United States, against Federal Reserve notes in actual circulation; gold certificates pledged as collateral may
be counted as reserves. "Gold certificates" as herein used includes credits with the Treasurer of the United States payable in gold certificates. Federal Reserve Bank notes and national bank notes are in process of retirement.

${ }^{\mathbf{1}}$ For end of year figures, represents change computed on absolute amounts in first column.
Note.-For discussion of seasonal adjustment factors and for back figures on comparable basis see September 1943 Bulletin, pp. 822-826. Because of an apparent recent change in the seasonal pattern around the year end, adjustment factors have been revised somewhat for dates affected beginning with December 1942. seasonally adjusted figure for money in circulation as shown in Banking and Monetary Statistics, Table 111, p. 414, and described on p. 405, are based on an older series of adjustment factors.

${ }^{p}$ Preliminary.
${ }_{1}$ Annual figures are estimates of the United States Mint. Monthly figures are those published in table on p. 1302, adjusted to exclude Philippine Islands production received in United States.
2 Figures based on rate of $\$ 20.67$ a fine ounce in January 1934 and $\$ 35$ a fine ounce thereafter.
Includes gold in the Inactive Account amounting to 27 million dollars on Dec. 31, 1936, and 1,228 million on Dec. 31, 1937.

4 Not yet available.
${ }^{5}$ Gold held under earmark at the Federal Reserve Banks for foreign account including gold held for the account of the International Bank amounted to $4,038.7$ million dollars on Oct. 31, 1946. Gold under earmark is not included in the gold stock of the United States.
Note.-For back figures, see Banking and Monetary Statistics, Table 156, pp. 536-538, and for description of statistics see pp. 522-523 in the same publication.

## r Revised.

${ }^{1}$ National series for which bank debit figures are available beginning with 1919.
${ }^{2}$ Annual figures for 1937-1942 (old series) include 133 centers; annual figures for 1942 (new series) and subsequent figures include 193 centers.
${ }^{2}$ See page 717 of August 1943 Bulletin for description of revision beginning with May 1942; deposits and debits of new series for first four months of 1942 partly estimated.

Note.-Debits to total deposit accounts, except interbank accounts, have been reported since 1942 for 334 reporting centers; the deposits from which rates of turnover have been computed have likewise been reported by most banks and have been estimated for others. Debits to demand deposit accounts, except interbank and U. S. Government, and the deposits from which rates of turnover have been computed have been reported by member banks in 101 leading cities since 1935; yearly turnover rates in this series differ slightly from those shown in Banking and Monetary Statistics, Table 55, p. 254, due to differences in method of computation.
[Figures partly estimated. In millions of dollars]

${ }^{p}$ Preliminary. ${ }^{1}$ Includes demand deposits, other than interbank and U. S. Government, less cash items in process of collection.
${ }_{8}^{2}$ Beginning with December 1938, includes United States Treasurer's time deposits, open account.

- Beginning June 1941, the commercial bank figures exclude and mutual savings bank figures include three member mutual savings banks.

5 Includes both amounts redeposited in banks and amounts not so redeposited; excludes amounts at banks in possessions.
Note.-Except on call dates, figures are rounded to nearest 100 million dollars. See Banking and Monetary Slatistics, p. 11, for description and Tabie 9, pp. 34-35, for back figures.

${ }^{1}$ Monthly and weekly data are averages of daily figures, except for municipal bonds and for stocks, which are based on Wednesday figures ${ }^{1}$ Average of taxable bonds due or callable in 15 years and over.
; Prices derived from average yields, as computed by Standard and Poor's Corporation, on basis of a 4 per cent 20-year bond.
4 Prices derived from averages of median yields, as computed by Standard and Poor's Corporation.

- Standard and Poor's Corporation.
- Prices derived from averages of median yields on noncallable high-grade stocks on basis of a $\$ 7$ annual dividend.
- Average daily volume of trading in stocks on the New York Stock Exchange.

Back figures.-See Banking and Monetary Statistics, Tables 130, 133, 134, and 136, pp. 475, 479, 482, and 486, respectively, and the Bulletin for May 1945, pp. 483-490.

[^21]1 Estimates of new issues sold for cash in the United States.
2 Gross proceeds are derived by multiplying principal amounts or number of units by offering price.
3 Estimated net proceeds are equal to estimated gross proceeds less cost of flotation, i.e., compensation to underwriters, agents, etc., and expenses. 4 Includes repayment of other debt and other purposes.

Source.-Securities and Exchange Commission; for compilation of back figures, see Banking and Monetary Statistics (Table 138, p. 491), a publication of the Board of Governors.

1 "Net profits" and "net income" refer to income after all charges and taxes and before dividends. $\quad$ Partly estimated.

- Class I line-haul railroads, covering about 95 per cent of all railroad operations.
${ }_{5}^{4}$ Class A and B electric utilities, covering about 95 per cent of all electric power operations. Figures include affiliated nonelectric operations. pany, the greater part of whose income consists of dividends received on stock holdings in the 30 companies.
- After all charges and taxes except Federal income and excess profits taxes.

Sources. Interstate Commerce Commission for railroads; Federal Power Commission for electric utilities (nonelectric operations and quarterly figures prior to 1942 are partly estimated); Federal Communications Commission for telephone companies (except dividends); published reports for industrial companies and for telephone dividends. Figures for the current and preceding year subject to revision. For description of data and back figures, see pp. 214-217 of the March 1942 Bulletin.

1 Assets are shown on a net basis, i.e., after reserves for losses. $\quad 2$ Less than $\$ 500,000$.
Includes Agricultural Marketing Act Revolving Fund and Emergency Crop and Feed Loans.
1 Includes Rubber Development Corp. and U. S. Commercial Company, which were transferred to the Reconstruction Finance Corp. from Foreign Economic Administration under Executive Order 9630; and War Damage Corp. War Assets Corp. was dissolved on June 30 , 1946 . 5 Figures are as of May 31, 1946 (the latest available at time of publication).
Note.-This table is based on the revised form of the Treasury Statement beginning Sept. 30, 1944, which is on a quarterly basis. Quarterly figures are not comparable with monthly figures previously published. Monthly figures on the old reporting basis for the months prior to Sept 30, 1944, may be found in earlier issues of the Bulletin (see p. 1110 of the November 1944 Bulletin) and in Banking and Monetary Statistics Table 152, p. 517 .

BUSINESS INDEXES
[The terms "adjusted" and "unadjusted" refer to adjustment of monthly figures for seasonal variation]

* Revised. P Preliminary. $\quad 1$ Series included in total and group indexes but not available for publication separately.

2 This series is currently based upon man-hour statistics for plants classified in the automobile and automobile parts industries and is designed to measure productive activity during the month in connection with assembly of passenger cars, trucks, trailers, and busses; production of bodies, parts, and accessories, including replacement parts; and output of nonautomotive products made in the plants covered. Recently the level shown by this series has been much higher relative to prewar than the level shown by factory sales of new passenger cars and trucks. The difference is accounted for in part by a sharp increase in production of replacement parts and by other changes in the composition of output. It appears, however, that the series overstates the current level of total output in these industries. Sture to arrive at a more accurate measure of over-all production in these industries.

# INDUSTRIAL PRODUCTION, BY INDUSTRIES-Continued <br> (Without Seasonal Adjustment) 

[Index numbers of the Board of Governors. 1935-39 average $=100$ ]

${ }^{5}$ Revised. $\quad{ }^{p}$ Preliminary. ${ }^{1}$ Series included in total and group indexes but not available for publication separately.
${ }^{2}$ This series is in process of revision.
Note.-For description and back figures, see Bulletin for October 1943, pp. 940-984, September 1941, pp. 878-881 and 933-937, and August 1940, pp. 753-771 and 825-882.

$r$ Revised. Note.-Indexes for major groups and totals have been adjusted to final 1944 data made available by the Bureau of Employment Security of the Federal Security Agency. Back data and data for industries not here shown are obtainable from the Bureau of Labor Statis tics. Underlying figures are for pay roll period ending nearest middle of month and cover production workers only. Figures for September 1946 are preliminary.

*Less than $\$ 500,000$.
${ }^{1}$ Mortgages insured under War Housing Title VI through April 1946; figures, thereafter represent mainly mortgages insured under he Veterans Mousing Tite VI (approved May 22, 1946) but include a few refinanced mortgages originally written under the War Housing
Title VI. Note.-Figures represent gross insurance written during the period and do not take account of principal repayments on previously insured loans. Figures include some reinsured mortgages, which are shown in the month in which they were reported by FHA. Reinsured mortgages on rental and group housing (Title II) are not necessarily shown in the month in which reinsurance took place.

$r$ Revised.
Note.-For description and back data, see pp. 529-533 of the Bulletin for
June 1941. Based on daily average loadings. Basic data compiled by Associa-
tion of American Railroads. Total index compiled by combining indexes for
classes with weights derived from revenue data of the Interstate Commerce Commission.

${ }^{1}$ The 1941 average of monthly sales for each department is used as a base in computing the sales index for that department. The stocks index is derived by applying to the sales index for each month the corresponding stock-sales ratio. For description and monthly indexes of sales and stocks by department groups for back years, see pp. 856-858 of Bulletin for August, 1946 . The titles of the tables on pages 857 and 858 were reversed

2 The ratio of stocks to sales is obtained by dividing stocks at the end of the month by sales during the month and hence indicates the number of months' supply on hand at the end of the month in terms of sales for that month.
${ }^{8}$ For movements of total department store sales and stocks see the indexes for the United States on p. 1285.

p Preliminary.
${ }^{1}$ Figures include only personal instalment cash loans and retail automobile direct loans shown on the following page, and a small amount of other retail direct loans not shown separately. Other retail direct loans outstanding at the end of September amounted to 60 million dollars, and loans made during September were 12 million.
${ }^{2}$ Figures include only personal instalment cash loans, retail automobile direct loans, and other retail direct loans. Direct retail instalment loans are obtained by deducting an estimate of paper purchased from total retail instalment paper.

3 Includes only loans insured by Federal Housing Administration.

1 Includes not only loans insured by Federal Housing Administration but also noninsured loans. p Preliminary. r Revised.
${ }_{2}$ Includes both direct loans and paper purchased.

WHOLESALE PRICES, BY GROUPS OF COMMODITIES
[Index numbers of the Bureau of Labor Statistics. 1926=100]

${ }^{1}$ This subgroup is in process of revision.
Back figures.-Bureau of Labor Statistics, Department of Labor.
[Estimates of the Department of Commerce. In billions of dollars]

## ${ }^{p}$ Preliminary.

${ }^{p}$ Prevised figures. Unadjusted quarterly data have not yet been revised; unrevised data and annual totals for all components appear in BuLerin for July, 1946, p. 806.
${ }^{2}$ Based on new sources and not precisely comparable with previous years.
Less than 50 million dollars.
Note.-Detail does not always add to totals because of rounding. For a general description of above series see the Survey of Current Business or May and August 1942, and March 1943.
Back figures: For annual totals 1929 through 1938, see the Survey of Current Business, May 1942 and April 1944. For quarterly estimates 1939 through 1944, see the Survey of Current Business for April 1944 and February 1946.

${ }^{p}$ Preliminary.
${ }^{1}$. Excludes banks (shown in last column) that do not report to State banking departments, principally as follows on the latest date: 11 "cooperative" banks in Arkansas and 101 unincorporated (private) banks in Georgia, Iowa, Michigan, and Texas.

2 The State member bank figures and the insured, mutual savings bank figures both include, three member mutual savings banks. These banks
not included in the total for "Commercial banks" and are included only once in "All reporting bank." are not included in the total for "Commercial banks" and are included only once in "All reporting banks."
${ }_{3}$ Includes all branches and other additional offices at which deposits are received, checks paid, or money lent. Includes offices at military reservations, consisting mostly of "banking facilities" provided through arrangements made by the Treasury Department with banks designated as depositaries and financial agents of the Government; the number of such offices on the above dates was $40,233,308,241$, and 90 , respectively.

Note.-Prior to February 1946, statistics on number of banking offices were published quarterly. For back figures, see Banking and Monetary Statistics, Tables 1 and 14, pp. 16-17 and 52-53, and descriptive text, pp. 13-14.

| Wyoming. | 55 | 55 | 37 | 18 |  |

preliminary.
1 Represents banks on which checks are drawn, except that it excludes both member and nonmember mutual savings banks on a few of which some checks are drawn. Similar par list figures published heretofore have included member mutual savings banks and member nondeposit trust companies (three and four, respectively, on Dec, 31, 1945) on which no checks are drawn, because of the requirement that member banks remit at par for checks presented to them through the Federal Reserve Banks.

The total in this table differs from total commercial banks in preceding table because the commercial bank total excludes some banks on which checks are drawn, namely, those that do not report to State banking departments (see footnote 1 of preceding table), and includes industrial banks and nondeposit trust companies whether or not checks are drawn on them.

Note.-Prior to February 1946, statistics on the Federal Reserve par list were published annually. For back figures see Banking and Monetary Statistics, Table 15, and descriptive text, pp. 14-15.

## MEMBER BANK EARNINGS

## NATIONAL AND STATE MEMBER BANKS, FIRST HALF OF THE YEAR, 1945-1946

Figures for national banks were compiled by the Comptroller of the Currency from reports submitted by national banks.
[Amounts in thousands of dollars]

[^31]
## INTERNATIONAL FINANCIAL STATISTICS

PAGE
Gold reserves of central banks and governments. ..... 1301
Gold production ..... 1302
Gold movements ..... 1302
International capital transactions of the United States ..... 1303-1308
Central banks ..... 1309-1312
Money rates in foreign countries ..... 1313

Foreign exchange rates ..... 1315
Price movements:
Wholesale prices ..... 1316
Retail food prices and cost of living ..... 1317
Security prices ..... 1317

Tables on the following pages include the principal available statistics of current significance relating to gold, international capital transactions of the United States, and financial developments abroad. The data are compiled for the most part from regularly published sources such as central and commercial bank statements and official statistical bulletins, some data are reported to the Board directly. Figures on international capital transactions of the United States are collected by the Federal Reserve Banks from banks, bankers, brokers, and dealers in the United States in accordance with the Treasury Regulation of November 12, 1934. Back figures for all except price tables, together with descriptive text, may be obtained from the Board's publication, Banking and Monetary Statistics.

Gold production in U.S.S.S. R.: No regular Government statistics on gold production in U. S. S. R. are available, but data of percentage changes irregularly given out by officials of the gold mining industry, together with certain direct figures for past years, afford a basis for estimating annual production as follows: 1934, 135 million dollars; 1935, 158 million; 1936, 187 million; 1937, 185 million; 1938, 180 million. Corrected.
${ }^{1}$ Annual figures through 1940 are estimates of $\mathbf{U}$. S. Mint; annual figure for 1941 based on monthly estimates of American Bureau of Metal Statistics.
${ }_{2}$ Beginning April 1941, figures are those reported by American Bureau of Metal Statistics. Beginning January 1944, they represent Gold Coast only.
${ }^{4}$ Includes Philippine Islands production received in United States. Annual figures are estimates of United States Mint. Monthly figured represent estimates of American Bureau of Metal Statistics, those for 1945 having been revised by subtracting from each monthly figure $\$ 197,193$ so that aggregate for year is equal to annual estimate compiled by Bureau of the Mint.

5 Figures for Canada beginning 1945 are subject to official revision. ${ }^{6}$ Beginning April 1942, monthly figures no longer reported.
7 Gold exports, reported by the Banco Nacional de Nicaragua, which states that they represent approximately 90 per cent of total production.
3 Beginning December 1941, figures are those reported by American Bureau of Metal Statistics. For the period December 1941-December 1943 they represent total Australia; beginning January 1944, Western Australia only.

- Beginning May 1940, figures are those reported by American Bureau of Metal Statistics.

Note.-For explanation of table and sources, see Bulletin for February 1939; p. 151; July 1938, p. 621; June 1938, p. 540; April 1933, pp. 233-235; and Banking and Monetary Statistics, p. 524. For annual estimates compiled by the United States Mint for these and other countrie: in the period 1910-1941, see Banking and Monetary Siatistics, pp. 542-543.

${ }^{1}$ Prior to June 30, 1942, included under "Other Asia."
: Country breakdown not available until June 30, 1942.

Footnotes to table on p. 1306.
${ }^{1}$ Prior to Jan. 3, 1940, the figures under Asia represent Far East only, the remaining Asiatic countries being included under "All other."
2 Prior to June 30, 1942, included under "All other."
"Prior to June 30. 1942, included under "Other Latin America."

- Included "Canal Zone"' prior to June 30, 1942.

Note.- Certain of the figures are not strictly comparable with the corresponding figures for preceding months owing to changes in reporting practice of various banks. The cumulative figures in Tables 1, 2, and 3 of "Net Capital Movement to the United States" have been adjusted to exclude the unreal movements introduced by these changes. For further explanation see Banking and Monetary Statistics, pp. 578-584, and Bulletin for September 1945, pp. 967-970.

[^34]INTERNATIONAL CAPITAL TRANSACTIONS OF THE UNITED STATES—Continued SHORT-TERM FOREIGN LIABILITIES AND ASSETS REPORTED bY banks in the united states,

BY COUNTRIES-Continued
[In millions of dollars]
ASSETS--SUPPLEMENTARY DATA

[^35]
${ }^{1}$ Through February 1939. valued at legal parity of 85 shillings a fine ounce; thereafter at market price. which fluctuated until Sept. 6, 1939 , when it was officially set at 168 shillings per fine ounce; the latter rate remained in effect until June 9,1945 , when it was raised to 172 shillings and three pence.
${ }^{2}$ Securities and silver coin held as cover for fiduciary issue, the amount of which is also shown by this figure.
Notes issued less amounts held in banking department.
${ }^{5}$ On Jan. 6, 1939, 200 million pounds sterling of gold (at legal parity) transferred from Bank to Exchange Equalization Account; on Mar. 1 , 1939, about 5.5 million pounds (at current price) transferred from Exchange Account to Bank; on July 12, 1939, 20 million pounds transferred from Exchange Account to Bank; on Sept. 6, 1939, 279 million pounds transferred from Bank to Exchange Account.
${ }^{5}$ Fiduciary issue increased by 50 million pounds on June 12, 1940, Apr. 30, Aug. 30, and Dec. 3, 1941, and Apr. 22 and July 28, 1942; by 70 million pounds on Dec. 2, 1942; and by 50 million pounds on Apr. 13, Oct. 6, and Dec. 8, 1943, Mar. 7, Aug. 2, and Dec. 6, 1944, and © on May 8, July 3, and Dec. 10, 1945.

- Securities maturing in two years or less.

7 Includes notes held by the chartered banks, which constitute an important part of their reserves
${ }^{8}$ Beginning November 1944, includes a certain amount of sterling and United States dollars.

- On May 1, 1940, gold transferred to Foreign Exchange Control Board in return for short-term Government securities (see Bulletin for July 1940, pp. 677-678).

Note.-For back figures on Bank of England and Bank of Canada, see Banking and Monetary Statistics, Tables 164 and 166, pp 638-640 and pp. 644-645, respectively; for description of statistics see pp. 560-564 in same publication.

${ }^{1}$ Gold revalued on Dec. 26, 1945, on basis of $134,027.90$ francs per fine kilogram. For details on previous devaluations see Bulletin for May 1940, pp. 406-407; January 1939 , p. 29; September 1937, p. 853; and November 1936, pp. 878-880.
${ }^{2}$ For explanation of this item, see Bulletin for July 1940, p. 732
${ }^{3}$ By a series of Conventions between the Bank of France and the Treasury, dated from Aug. 25, 1940, through July 20, 1944, advances of 441,000 million francs were authorized to meet the costs of the German army of occupation.

4 Central Administration of the Reichskreditkassen.
5 In each of the weeks ending Apr. 20 and Aug. 3, $1939,5,000$ million francs of gold transferred from Exchange Stabilization Fund to Bank of France; in week ending Mar. 7, 1940, 30,000 million, in week ending Oct. 11, 1945, 10,000 million, in week ending Dec. 27, 1945, 53,000, and in week ending May 2, 1946, 35,000 million francs of cold transferred from Bank of France to Stabilization Fund.
${ }_{6}$ Includes 9,447 million francs charged to the State to reimburse the Bank for the gold turned over by it to the National Bank of Belgium on Dec. 22, 1944.

7 Forty billion francs of gold increment resulting from revaluation used to cancel an equal amount of Treasury bonds.
8 Gold not shown separately in weekly Reichsbank statement after June 15, 1939. Monetary Statistics, Tables 165 and 167, pp. 641-643 and
Note.-For back figures on Bank of France and Reichsbank, see Banking and Mol pp. 645-647, respectively; for description of statistics see pp. 562-565 in same publication.

## - Corrected.

Government decree of April 24, 1946, provided for the guarantee of all deposits registered in the name of the Central Bank.
${ }^{2}$ By decree of May 24, 1946, the Central Bank became responsible for all subsidiary money.
Includes increment resulting from gold revaluation, notes forfeited to the State, and frozen old notes and current accounts.

- Effective Jan. 1, 1946, a change in the Organic Law of the Banco Central de Bolivia divided the institution into Monetary (central banking unctions) and Commercial Banking Departments.
${ }_{5}$ Latest month available.
6 For last available report from the central bank of Bulgaria (January 1943), see Bulletin for July 1943, p. 697; of Finland (August 1943), wee Bulletin for April 1944, p. 405; of Greece (March 1941) and Japan (September 1941), see Bulletin for March 1942, p. 281; of Hungary wee Bulletin for April 1944, p. 405; of Greece (March 1941) and Japan (September 1941), see Bulletin for March 1942, p
(November 1944), see Bulletin for January 1946, p. 99 ; and of Java (January 1942), see Bulletin for March 1943 , p. 278 ,
${ }^{7}$ In December 1945, State-guaranteed German assets, formerly included in "Clearing accounts" and 'Other assets," were tramsferred to Government compensation account.

${ }^{1}$ Prior to Nov. 1, 1942, the official designation of the Brazilian currency unit was the "milreis.
${ }^{2}$ Average of daily rates for that part of the year during which quotations were certified.
Based on quotations through July 19. Official rate abolished as of July 22.

- Based on quotations through July 19 and from July 25-31.
${ }^{8}$ On July 5,1946 , Canada reduced its official buying rate for one U. S. dollar from 1.10 to 1.00 Canadian dollar.
6 Based on quotations beginning Nov. 2.
${ }^{2}$ Based on quotations beginning Feb. 5 .
${ }_{10}$ Based on quotations beginning Mar. 9.
${ }_{11}$ As of July 13, 1946, the Swedish Riksbank reduced its buying rate for one U. S. dollar from 4.20 to 3.60 kronor.
Note.-For back figures, see Banking and Monetary Statistics, Table 173, pp. 662-682. For description of statistics see pp. 572-573 in same publication, and for further information concerning developments affecting the averages during 1942 and 1943, see Bulletin for February 1943 , p. 201, and February 1944, p. 209.

${ }^{p}$ Preliminary. $r$ Revised.
1 New weighted index of 400 articles. For detailed description of the articles included and of the weight coefficients used in the index, see Maandschrift for 1941, pp. 663-664. Yearly averages 1926-1938 are calculated from old index, 1926-30=100.
${ }_{2}^{2}$ Approximate figure, derived from old index $(1913=100)$.
${ }^{3}$ Average based on figures for 5 months; no data available since May 1940, when figure was 919.
Sources.-See Bulletin for January 1941, D. 84; April 1937, p. 372; March 1937, p. 276; and October 1935, p. 678.

## FEDERAL RESERVE SYSTEM

[^0]:    A copy of the Federal Reserve Bulletin is sent to each member bank without charge. The subscription price in the United States and its possessions, Bolivia, Canada, Chile, Colombia, Costa Rica, Cuba, Dominican Republic, Ecuador, Guatemala, Haiti, Republic of Honduras, Mexico, Newfoundland (including Labrador), Nicaragua, Panama, Paraguay, Peru, E1 Salvador, Uruguay, and Venezuela, is $\$ 2.00$ per annum, or 20 cents per copy; elsewhere, $\$ 2.60$ per annum or 25 cents per copy. Group subscriptions in the United States for 10 or more copies to one address, 15 cents per copy per month, or $\$ 1.50$ for 12 months.

[^1]:    Federal Reserve estimates of liquid asset holdings of busi nesses and individuals, June 1929-1939; June and December thereafter. Latest figures are for June 1946 .

[^2]:    p Preliminary.

    * Less than 50 million dollars.
    * Owing to rounding, details may not add to totals.

[^3]:    p Preliminary. *Revised. * Not available.

[^4]:    * Address by the Chairman of the Board of Governors before the Sixteenth New England Bank Management Conference of the New England Council in Boston, Oct. 25, 1946.

[^5]:    ${ }^{1}$ A detailed description of the methods by which these estimates were made, together with the basic worksheets, may be secured from the Division of Research and Statistics, Board of Governors of the Federal Reserve System, Washington 25, D. C.
    2 See Federal Reserve Bulletins of February 1946 and June 1945 for previously published estimates.

[^6]:    ${ }^{3}$ The primary difference in coverage is the inclusion by the Board beginning December 1945, and exclusion by the SEC throughout, of excess profits tax refund bonds in holdings of U. S. Government securities by corporations.

[^7]:    $\boldsymbol{p}$ Preliminary. $\quad r$ Revised.
    ${ }^{1}$ Figures for banks, insurance companies, buiding and loan associations, nonprofit associations, and governmental bodies and agencies are not included in the totals shown.

    2 These figures are estimates of demand deposit balances as they would appear on the records of depositors. They differ from figures based on bank records such as given in regular banking statistics or in the Federal Reserve Survey of Ownership of Demand Deposits presented elsewhere in this Bulletin. Depositor-record estimates are lower than bank-record estimates; for example, total demand deposits as of June 30,1946 , on a holder-record basis (see table) amount to 62.9 billion dollars while on a bank-record basis these deposits amount to 72.8 billion. This is because checks are constantly in the mail, i. e., deducted on payor's records and not yet added on payee's records, and because checks are constantly in the process of collection. i. e., added to payee's deposits as per bank records and not yet deducted from payor's deposits as per bank records.
    ${ }^{3}$ Includes real estate companies, finance and credit companies, insurance agencies (not carriers), investment trusts, security brokers and dealers, holding companies not otherwise classified, etc.

    I Includes only amounts administered by corporate trustees.
    5 Includes holdings of farmers and professional persons.

[^8]:    ${ }^{1}$ The following changes in reporting are reflected in the annual figures beginning with 1942 and in the figures for the first half of the year beginning with 1943: (a) earnings on loans include "service charges and fees on loans," an item previously included in other eal nings; (b) taxes on net income, previously included with other taxes in expenses, are a separate item; (c) recurring depreciation on real estate previously included in losses and charge-offs is included in expenses.

    2 Includes interest on capital notes and debentures.

[^9]:    ${ }^{1}$ Includes any banks in outlying sections of reserve cities that have been given permission to carry the same reserves as country banks. been given permission to carry the same reserves as cou
    All reserve cities have a population of more than 15,000 .
    ${ }_{2}$ Includes war loan deposits, shown separately for all country banks in the table on the following page.

[^10]:    ${ }^{1}$ Outside Treasury and Federal Reserve Banks. Includes any paper currency held outside the continental limits of the United States: totals for other end-of-month dates shown in table above, totals by weeks in table on p. 1247, and seasonally adjusted figures in table on p. 1256.

[^11]:    ${ }^{1}$ Represents banks which, during the periods shown, closed temporarily or permanently on account of financial difficulties; does not include banks whose deposit liabilities were assumed by other banks at the time of closing (in some instances with the aid of Federal Deposit Insurance Corporation loans).
    ${ }^{2}$ Deposits of member banks and insured nonmember banks suspended are as of dates of suspension, and deposits of noninsured nonmember banks are based on the latest data available at the time the suspensions were reported.
    Back figures.-See Banking and Monetary Statistics, pp. 283-292; for description, see pp. 281-282 in the same publication.

[^12]:    * These figures do not include data for banks in possessions of the United States and therefore differ from those published by the Comptroller of the Currency and the Federal Deposit Insurance Corporation for national banks and insured banks, respectively

    I Beginning June 30, 1942, excludes reciprocal bank balances, which on Dec. 31, 1942, aggregated 513 million dollars at all member banks and 525 million at all insured commercial banks.
    nks aring 1941 three mutual savings banks, with total deposits of 8 million dollars, became members of the Federal Reserye System. These banks are included in both "member banks" and "insured mutual savings banks," are not included in "commercial banks," and are included only once in "all banks."
    System of one large bank with total Ioans and investments anks figures reflect principally the admission to mernbership in the Federal Reserve System of one large bank with total loans and investments aggregating 554 million dollars on Dec. $31,1942$.

    4Beginning June 30, 1442, includes Bank of North Dakota, a nonmember bank not previously included in these statistics; on Dec. 31, 1941, Its deposits, excluding interbank deposits, were $\begin{aligned} & 33 \text { million dollars, and its loans and investments } 26 \text { million. } \\ & \text { Back figures.-See Banking and Monctary }\end{aligned}$

    Back figures.-See Banking and Monetary Statistics. Tables 1-7, pp. 16-23; for description, see pp. 5-15 in the same publication.

[^13]:    p Preliminary.

    * These tigures do not include data for banks in possessions of the United States and therefore differ from those published by the Federal Deposit Insurance Corporation.
    ${ }^{1}$ During the period Dec. 31, 1942-June 30, 1945, agricultural loans included loans to dealers, processors, and farmers' cooperatives covered by purchase agreements of the Commodity Credit Corporation, which are now ciassified as commercial and industrial loans; consequently, the items for Dec. 31, 1945, may not be entirely comparable with prior figures.
    ${ }_{2}$ During 1941 three mutual savings banks with total deposits of 8 million dollars became members of the Federal Reserve System. These banks are included in "member banks" but are not included in "all insured commercial banks."
    : Central reserve city banks.

[^14]:    4 Beginning June 30, 1942, excludes reciprocal bank balances, which on Dec. 31, 1942, aggregated 513 million dollars at all member banks and 525 million at all insured commercial banks.

    Demand deposits other than interbank and U.S. Government less cash items reported as in process of collection.
    For other footnotes see page 1160 .
    Back figures.-See Banking and Monetary Statistics, Tables 18-45, pp. 72-103 and 108-113.

[^15]:    : Demand deposits other than interbank and U.S. Government, less cash items reported as in process of collection.

[^16]:    ${ }^{1}$ Demand deposits other than interbank and U. S. Government, less cash items reported as in process of collection.
    Debits to demand deposit accounts except in interbank and U. S. Government accounts.

    * See note on preceding page.

[^17]:    1 Excluding balances with reporting firms (1) of member firms of New York Stock Exchange and other national securities exchanges and (2) of firms' own partners.
    ${ }^{2}$ Includes money borrowed from banks and also from other lenders (not including member firms of national securities exchanges).
    ${ }_{3}$ As reported to the New York Stock Exchange. According to these reports, the part of total customers' debit balances represented by balances secured by U. S. Government securities was (in millions of dollars): July, 109; August 99; September, 82.

    Note.-For explanation of these figures see "Statistics on Margin Accounts" in Bulletin for September 1936. The article describes the method by which the figures are derived and reported, distinguishes the table from a "statement of financial condition," and explains that the last method by which the figures are derived and reported, det capital of the reporting firms.

    Back figures.-See Banking and Monetary Statistics, Table 143, pp. 501-502, for monthly figures prior to 1942, and Table 144, p. 503, for data in detail at semiannual dates prior to 1942.

[^18]:    ${ }^{4}$ Monthly figuresare averages of weekly prevailing rates.
    ${ }_{2}$ The average rate on 90 -day stock exchange time loans was 1.50 per cent beginning Aug. 2,1946. Prior to that date it was 1.25 per cent. Rate on new issues offered within period.
    ${ }^{4}$ From Sept. 15 to Dec. 15, 1945, included Treasury notes of Sept. 15, 1948, and Treasury bonds of Dec. 15, 1950; beginning Dec. 15, 1945, includes only Treasury bonds of Dec. 15, 1950.
    Back figures.-See Banking and Monetary Statistics, Tables 120-121, pp. 448-459, and the Bulletin for May 1945, pp. 483-490.

[^19]:    1 Monthly and weekly data are averages of daily figures, except for municipal bonds, which are based on Wednesday figures.
    :Standard and Poor's Corporation.

    - Moody's Investors Service, week ending Friday. Because of limited number of suitable issues, the industrial Aaa, Aa, and A groups have
    been reduced from 10 to 5,6 , and 9 issues, respectively, and the railroad Aaa, Aa, and A groups from 10 to 6 , 6 , and 9 issues, respectively.
    ${ }^{5}$ Beginning Dec. 15, 1945 , includes Treasury bonds of June 1952-54, June 1952-55, December 1952-54, and March 1956 -58.
    No partially tax-exempt bonds due or callable in 15 years and over.
    Back figures.-See Banking and Monetary Statistics, Tables 128-129, pp. 468-474, and the Bulletin for May 1945 , pp. 483-490.

[^20]:    1 Includes publicly offered issues of Federal credit agencies, but excludes direct obligations of U. S. Treasury.
    ${ }^{2}$ Includes issues of noncontiguous U . S. Territories and Possessions.
    Source.-For domestic issues, Commercial and Financial Chronicle; for foreign issues, U. S. Department of Commerce. Monthly figurea subject to revision.

    Back figures.-See Banking and Monetary Statistics, Table 137, p. 487.

[^21]:    r Revised.

[^22]:    * Figures include only holdings by institutions or agencies from which reports are received. Data for commercial banks, mutual savings banks, and the residual "other" are not entirely comparable from month to month. Since June 1943 the coverage by the survey of commercial banks has been expanded. Figures in column headed "other" include holdings by nonreporting banks and insurance companies as well as by other investors. Estimates of total holdings (including relatively small amounts of nonmarketable issues) by all banks and all insurance companies for certain dates are shown in the table above.
    ${ }^{1}$ Including stock savings banks. On Aug. 31, 1946, commercial banks reporting to the Treasury held 20,411 million dollars of U. S. Govern-
    ment securities due or callable within one year out of a total of 58,835 million outstanding.
    ${ }^{2}$ Including 196 million dollars of Postal Savings and prewar bonds not shown separately below.

[^23]:    - Revised. $\quad$ Preliminary. $\quad 1$ Series included in total and group indexes but not available for publication separately.
    ${ }_{2}$ This series is currently based upon man-hour statistics for plants classified in the automobile and automobile parts industries and is designed to measure productive activity done during the month in connection with assembly of passenger cars, trucks, trailers, and busses; production the level shown by this series has been much higher relative to prewar than the level shown by factory sales of new passenger cars and trucks. The difference is accounted for in part by a sharp increase in production of replacement parts and by other changes in the composition of output It appears, however, that the series overstates the current level of total output in these industries. Study is being made of production and man-

[^24]:    * Includes Contract Construction and Federal Force Account Construction. $\quad$ R Revised

    Note.-Unadjusted data compiled by Bureau of Labor Statistics. Estimates for manufacturing have been adjusted to levels indicated by final 1944 data made available by the Bureau of Employment Security of the Federal Security Agency. Estimates include all full- and part-time wage and salary workers in nonagricultural establishments employed during the pay period ending nearest the 15th of the month. Proprietors, self-employed persons, domestic servants, and personnel of the armed forces are excluded. September 1946 figures are preliminary. For back seasonally adjusted estimates see BuLLETIN for June 1944, p. 600. Back unadjusted data are available from the Bureau of Labor Statistics.

[^25]:    ${ }^{1}$ The RFC Mortgage Company, the Federal National Mortgage Association, the Federal Deposit Insurance Corporation, and the United States Housing Corporation
    ${ }_{2}$ Including mortgage companies, finance companies, industrial banks, endowed institutions, private and State benefit funds, etc.
    Note.-Figures represent gross amount of mortgages held, excluding terminated mortgages and cases in transit to or being audited at the Federal Housing Administration.

[^26]:    $p$ Preliminary, $r$ Revised ${ }^{c}$ Corrected.

[^27]:    Preliminary. Revised
    Note.-Data based on reborts from a smaller group of stores than is included in the monthly index of sales shown on D .1285.
    November 1946

[^28]:    ${ }^{p}$ Preliminary. $\quad r$ Revised.

[^29]:    ${ }^{1}$ Includes 9,000 bales grown in miscellaneous territory.
    2 Includes 14,000 bales grown in miscellaneous territory.

[^30]:    Estimated. ${ }^{p}$ Preliminary. $\quad 5$ Revised

[^31]:    ${ }^{1}$ Includes interest on capital notes and debentures.
    ${ }^{2}$ For the first half of 1945 they are averages of figures reported on Dec. 30, 1944, Mar. 20, 1945, and June 30, 1945; for the first half of 1946 they are averages of figures reported on Dec. 31, 1945, and June 29, 1946.
    ${ }_{3}$ Annual basis. $\quad 4$ Not available; for the year 1945 these ratios were 1.4 per cent.

[^32]:    ${ }^{1}$ This category made up as follows: through Sept. 21, 1938, funds held by foreign central banks at the Federal Reserve Bank of New York and Philippine accounts held with the United States Treasury; beginning Sept. 28,1938 , also funds held at commercial banks in New York City by central banks maintaining accounts at the Federal Reserve Bank of New York; beginning July 17, 1940, also funds in accounts at the Federal Reserve Bank of New York which had been transferred from central bank to government names; beginning with the new series commencing with the month of July 1942, all funds held with banks and bankers in the United States by foreign central banks and by foreign central governments and their agencies (including official purchasing missions, trade and shipping missions, diplomatic and consular establishments, etc.).

    2 The weekly series of capital movement statistics reported through July 1,1942 , was replaced by a monthly series commencing with July 1942 . Since the old series overlapped the new by one day, the cumulative figures were adjusted to represent the movement through June 30 only. This adjustment, however, is incomplete since it takes into account only certain significant movements known to have occurred on July 1 . Subsequent figures are based upon new monthly series. For further explanation, see Bulletin for January 1943 , p. 98

    3 Amounts outstanding June 30, in millions of dollars: total foreign banking funds in United States, 6,376.3, including official funds, $3,537.4$, and other funds, 2,838.9; United States banking funds abroad, 511.0; and brokerage balances (net due "foreigners"), 64.5

    Note.-Statistics reported by banks, bankers, brokers, and dealers. For full description of statistics see Banking and Monetary Statistics, pp. $558-560$; for back figures through 1941 see Tables 161 and 162 , pp. $574-637$, in the same publication, and for those subsequent to 1941 see Bulletin for September 1945, pp. 960-974.

[^33]:    ${ }^{1}$ Prior to Jan. 3, 1940, the figures under Asia represent Far East only, the remaining Asiatic countries being included under "All other."
    $=$ Inflow less than $\$ 50,000$. Outflow less than $\$ 50,000$.

[^34]:    1 Prior to Jan. 3, 1940, the figures under Asia represent Far East only, the remaining Asiatic countries being included under "All other."
    Note. -The figures in this table are not fully comparable throughout since certain changes or corrections took place in the reporting practice of reporting banks on Aug. 12, 1936, and Oct. 18, 1939. (See Banking and Monetary Statisics, Table 161 , pp. 589 and 591 .) On June 30,1942 reporting practice was changed from a weekly to a monthly basis. For further information see BulLetin for September 1945, pp. $971-974$.

[^35]:    ${ }^{1}$ Prior to June 30, 1942, included under "All other."
    2 Less than $\$ 50,000$.
    " Prior to June 30, 1942, included under "Other Latin America."
    Included "Canal Zone", prior to June $30,1942$.
    Prior to June 30, 1942, included under "Other Asia."

    - Country breakdown not available until June 30, 1942.

[^36]:    ${ }^{1}$ Includes gold, silver, and foreign exchange forming required reserve ( 25 per cent) against notes and other demand liabilities.
    ${ }^{2}$ Notes issued before October 1945 were gradually withdrawn from circulation and deposited in "blocked" accounts in accordance with the currency reform decrees effected between June and October 1945.
    ${ }^{3}$ For last available reports from the central banks of Norway (March 1940) and Yugoslavia (February 1941), see Bulletin for March 1942, p. 282; and of Rumania (June 1944), see Bulletin for March 1945, p. 286.
    ${ }^{4}$ Latest month available.
    Gold revalued in June 1946 from approximately 85 to 172 shillings per fine ounce.
    5 Valued at average cost beginning October 1940.
    Issue and banking departments consolidated.

    - Beginning October 1944, a certain amount of gold, formerly reported in the Bank's account, shown separately for account of the Government.

[^37]:    ${ }^{1}$ Through August 1939, averages of weekly figures; beginning September 1939, end-of-month figures, representing aggregates of figures reported

[^38]:    Sources.-See Bulletin for May 1942, p. 451; March 1935, p. 180; and March 1931, p. 159.

[^39]:    ${ }^{1}$ Figures represent calculated prices of a 4 per cent 20 -year bond offering a yield equal to the monthly average yield for 15 high-grade corporate bonds. Source.-Standard and Poor's Corporation; for compilations of back figures on prices of both bonds and common stocks in the United States see Banking and Monetary Statistics, Table 130, p. 475, and Table 133, p. 479.
    ${ }^{2}$ Published by the Ministry of National Economy with new base of $1938=100$. Figures are for the last Friday of each month. The number of bonds included in the new index was increased to 50 (formerly 36). The index for stocks was based on 300 issues until Dec. 6, 1945, and on 295 thereafter as a result of the nationalization of five banks. For complete information on the composition of the bond and stock indexes see "Bulletin de la Statistique Générale" December 1942, pp. 511-513, and July-August 1942, pp. 364-371, respectively. For back figures for both indexes from 1938 through 1941 on a monthly basis see "Bulletin de la Statistique Générale" for October-December 1944, pp. 274-276
    3 Since Apr. 1, 1935, the 139 bonds included in the calculation of the average price have all borne interest at $41 / 2$ per cent. The series prior to that date is not comparable to the present series, principally because the 169 bonds then included in the calculation bore interest at 6 per cent.

    4 Indexes of reciprocals of average yields. For old index $1929-1936,1929=100$ average yield in base year was 4.57 per cent. For new index beginning January 1937, Jan.-Mar. $1937=100$; average yield in base period was 3.39 per cent.
    ${ }^{5}$ This number, originally 329 , has declined as the number of securities eligible for the index has diminished. In May 1941 it was down to 287 .
    6 Average based on figures for 5 months; no data available June-Dec. 7 Average based on figures for 7 months; no data available May-Sept.
    8 Average based on figures for 9 months; no data available May-July. © Average based on figures for 10 months; no data available Jan.-Feb
    8 Average based on figures for 9 months; no data available May-July.
    10 Average based on figures for 8 months; no data available Sept.-Dec.
