## Subscription Price of Bulletin

A copy of the Federal Reserve Bulletin is sent to each member bank without charge. The subscription price in the United States and its possessions, Bolivia, Canada, Chile, Colombia, Costa Rica, Cuba, Dominican Republic, Ecuador, Guatemala, Haiti, Republic of Honduras, Mexico, Nicaragua, Panama, Paraguay, Peru, El Salvador, Uruguay, and
or 70 cents per copy. Group subscriptions in the United States for 10 more copies to one address, 50 or 70 cents per copy. Group subscriptions in the
cents per copy per month, or $\$ 5.00$ for 12 months.

## Further Economic Expansion in 1956

Total output reached new highs in 1956 in response to further expansion in demands for goods and services. Resources of manpower, materials, and plant continued to be intensively utilized and the price structure was subject to upward pressures. Strong demands for credit pressed against the supply of funds and interest rates rose to highs for the postwar period.

Gross national product in 1956 amounted to $\$ 412$ billion, $\$ 22$ billion or 5.5 per cent larger than in 1955. This compares with an increase of 8 per cent in 1955 from the slightly reduced level of the preceding year. Following an unusually rapid expansion, output began to level off late in 1955 as expenditures for automobiles and new houses were curtailed, as may be seen on the chart. Increase in gross national product in the first half of 1956 was moderate and represented largely higher prices. The sharpest rise of the year came in the fourth quarter, with most types of expenditure up; at an annual rate of $\$ 424$ billion, gross national product was 5.5 per cent larger than a year earlier. Higher prices accounted for about half of the increase.

Throughout 1956, the strongest expansive force was provided by business expenditures for plant and equipment, which totaled one-fifth more than in 1955. From the fall of 1955 to the spring of 1956 , the dollar amount of increase in such outlays about equaled the decline in spending for autos and homes. Accumulation of nonfarm business inventories in 1956 was little changed from the total for the preceding

NoTE.-Department of Commerce quarterly estimates, adjusted for seasonal variation; estimates for the fourth quarter of 1956 by the Council of Economic Advisers. Consumer and other includes consumer purchases of goods and services other than autos and parts; State and local government purchases of goods and services; net foreign investment; and busines inventory change. Plant and equipment includes producers
durable equipment and private nonresidential construction. Autos relate only to consumer expenditures for automobiles and parts.
year. Demands from abroad contributed to expansion as United States exports increased further, while imports remained near the advanced levels reached in early 1956.

Steady growth in disposable personal income in 1956 permitted increases both in total consumer expenditures for goods and services and in personal saving. Expenditures for services and most goods continued to grow as rapidly as in 1955. With purchases of automobiles down one-fifth from the record 1955 level, however, total consumer spending expanded more slowly than in the preceding year. Late in 1956, fol-
lowing introduction of the 1957 models at higher prices, seasonally adjusted automobile purchases rose markedly from the reduced summer level.

Personal saving as a proportion of disposable income rose in 1956 to slightly over 7 per cent, which was only moderately below the postwar highs of 1951-53. The increase in personal saving was closely related to the decline in consumer purchases of automobiles and the accompanying retardation in growth of outstanding instalment credit.

2 Government sales, amounting to $\$ 400$ million in the fourth ${ }^{2}$ Government sales, amounting to
uarter of 1956, have been deducted.
Note.-Estimates for the fourth quarter of 1956 by the Council of Economic Advisers; data for other quarters from the Department of Commerce. Details may not add to totals because of rounding.

Purchases of goods and services by the Federal Government, which had been fairly stable from late 1954 to mid-1956, have increased somewhat since then, reflecting larger outlays under national security programs and for soil bank payments. Federal tax receipts increased substantially, and a large cash surplus in the calendar year 1956 helped absorb inflationary pressures and permitted reduction in the Federal debt. Expenditures by State and local governments continued to expand steadily.

The moderate gain in aggregate physical output of goods and services was accompanied by a higher level of industrial production, as the chart shows. The Board's index was 143 per cent of the 1947-49 average in 1956, compared with 139 per cent in 1955. In the first half of the year industrial output fluctuated around a level slightly below the peak reached in December 1955. Following settlement of the steel strike in the late summer and the changeover to 1957 automobile models in the autumn, industrial output rose rapidly and in December was at a new high of 147 compared with 144 a year earlier. Durable goods output accounted for most of the rise.

The labor market was strong in 1956. Employment increased further and unemployment remained at low levels. In December unemployment, at 2.5 million, was about the same as a year earlier and less than 4 per cent of the civilian labor force. An increase of 1 million in employment in nonfarm establishments from December 1955 to December 1956 was concentrated in nonmanufacturing activities. In manufacturing industries, employment increased 100,000 and the average workweek in December was somewhat shorter than a year earlier. Farm employment was lower in late 1956 than a year earlier.

## SELECTED BUSINESS INDEXES

Note.-Seasonally adjusted series, except for prices. Bureau of Labor Statistics data for employment and prices, and Federal Reserve data for production. Industrial prices include those other than farm products and foods. Latest figures shown are for December.

Average hourly earnings in manufacturing increased about 12 cents, or 6 per cent, approximately the same as in 1955. With consumer prices rising, cost of living escalator clauses were included more frequently in wage contracts. According to Bureau of Labor Statistics estimates, the number currently covered by such contracts is more than twice as large as two years ago.

For the year 1956 output per man-hour for the economy as a whole apparently grew less than in most postwar years. In the latter part of the year, however, it appeared to be rising more rapidly than for some time.

Wholesale prices of industrial commodities, both materials and finished products, have been rising for about 18 months and at the end of 1956 averaged nearly 8 per cent higher than in mid-1955. Prices of farm products made some recovery in 1956 following a long period of decline.

Consumer prices, which had been fairly stable from early 1951 to the spring of 1956, have risen since then to new highs. In November the consumer price index was 2.5 per cent above a year earlier.

## BUSINESS INVESTMENT

Business investment outlays in 1956 reached a record high, well above the earlier peak in 1951. Expenditures on fixed investment increased sharply, reflecting substantial additions to productive capacity and replacement and modernization of existing facilities as well as higher prices. Nonfarm business inventories were accumulated in about the same volume as in 1955.

Businesses were under financial pressure in making these investment outlays and their liquidity as a whole declined. Corporate profits after taxes were little changed from the 1955 volume; with dividend payments rising, retained earnings were smaller than in 1955. While depreciation allowances rose further, the total amount of corporate internal funds appears to have been only slightly larger than in 1955.

Needs for external financing were large. Security flotations were in record volume and bank loans to business also increased. With demands for funds generally strong, interest rates advanced to the highest levels in many years, and other terms of borrowing, particularly prepayment options, also became less favorable to borrowers. By the end of the third quarter the liquidity ratio for corporations, that is the ratio of cash and United States Government securities to total current liabilities, was the lowest since before World War II. Some stretching out and postponement of business spending on plant and equipment may have reflected financial developments as well as shortages of steel and some other materials.

Note.-Department of Commerce quarterly estimates, adjusted for seasonal variation; estimates for the fourth quarter construction inciudes all private nonresidential construction.

Fixed investment. Expenditures for producers' durable equipment rose steadily, continuing the rapid advance which began in early 1955 . For the year, they totaled $\$ 29$ billion, and were about 20 per cent larger than in 1955. A decline in farm purchases of equipment was the only significant exception to the general advance, and even these increased in the second half of the year.

Price increases for machinery and equipment were general and substantial, but the physical volume of investment increased significantly and capacity expanded in many lines. Expansion in capacity varied widely among industries. For example, increases in 1956 are estimated at 4 per cent for steel ingots, 10 per cent for primary aluminum, and 15 per cent for cement. Electric power capacity increased almost 5 per cent.

Expenditures for private nonresidential construction advanced sharply through the
second quarter and then changed little over the remainder of the year. Although construction costs continued to rise rapidly to midsummer, the physical volume of construction was well above that for 1955. Industrial construction showed the largest rise, with an increase over 1955 of one-fourth in dollar outlays. Increases in other nonfarm categories ranged from 5 to 10 per cent. Farm construction continued the decline which began in 1952.

While all nonfarm industry groups showed increases in combined plant and equipment expenditures, differences in the year-to-year increases were marked. Railroads raised their expenditures 37 per cent, while manufacturing and mining were up 30 per cent. Smaller increases, from 10 to 15 per cent, were shown by other transportation industries, commercial and miscellaneous industries, and electric and gas utilities.

Expansion in business spending for plant and equipment appears to be continuing into this year. The Commerce-SEC Survey, taken in late October and November, indicates that business plans further to increase such spending in the current quarter, although by a smaller amount than earlier. In some important industries, including manufacturing, spending appears to be leveling off. At a seasonally adjusted annual rate of $\$ 38$ billion in the first quarter of 1957 , planned spending is $\$ 5$ billion, or one-sixth, larger than a year earlier.

The survey taken by the McGraw-Hill Publishing Company in November shows that for the full year 1957 business anticipates expenditures for fixed investment 11 per cent above the record 1956 level. These plans imply a moderate further increase in spending from the current quarter. Higher prices were expected by the respondents to absorb about half of the anticipated rise in
outlays from 1956 to 1957. While most lines are planning increased spending, some groups are showing declines, in contrast to the pattern of general increase planned a year earlier.

Inventories. The book value of nonfarm business stocks increased more than $\$ 6$ billion in the year ending November 1956. This compares with an advance of $\$ 4.5$ billion during the preceding year. Price rises, however, were a more significant influence on the value of stocks in 1956 than in 1955. Stocks expanded significantly in both durable and nondurable goods lines; in $1955 \mathrm{ac}-$ cumulation was preponderantly in durables.

The rise in the book value of stocks was largely concentrated at the manufacturing level where stocks of purchased materials, goods in process, and finished goods all increased. This contrasts with 1955, when manufacturers' stocks of finished goods changed little. Moderate accumulation in most lines of wholesale and retail trade was
about offset by substantial liquidation of dealer stocks of automobiles. New auto stocks rose after the introduction of 1957 models, but at the year-end were substantially below a year earlier.

Business sales increased less rapidly than book value of inventories, and the over-all ratio of stocks to sales rose from the low levels prevailing in the second half of 1955. Increases in stock-sales ratios were concentrated in durable goods lines, particularly at the manufacturing level. Ratios in both durable and nondurable goods lines, however, were below the averages prevailing from 1951 through 1954 and at the yearend stocks appeared to be about in line with current sales.

## RESIDENTIAL CONSTRUCTION

The number of private nonfarm dwelling units started in 1956 continued the downward trend that became pronounced in the fall of 1955. Major factors in the decline

SALES AND STOCKS

STOCK-SALES RATIOS

Note.-Department of Commerce monthly data, seasonally adjusted, for sales and inventories. Latest figures shown are for November.
were the difficulty of obtaining commitments for mortgage credit, in view of strong overall demands for long-term funds, and apparently some relaxation in consumer demands for new housing. About 1.1 million housing units were started in 1956, 16 per cent fewer than in 1955 and about the same as in 1952 and 1953.

Housing markets in 1956 were also characterized by a further rise in costs of land development and building, a trend toward construction of larger and more expensive homes, and a larger volume of expenditures for additions and alterations to existing homes. As a result, the decline of 8 per cent in the dollar value of residential construction activity from 1955 was substantially less than the decline in the number of units started. Dollar outlays in 1956 exceeded any year prior to 1955. Stability in the value of residential construction activity in the spring and summer of 1956 was followed by some further reduction.

Most of the decline in the number of dwelling units started was in houses financed by Federally underwritten mortgages. As money markets tightened and interest rates rose under the impact of strong general demands, funds for such mortgages, with their maximum permissible interest rates fixed by law, became less readily available. Steps were taken by the Federal housing agencies in September and again in December to attract more funds into this area and to encourage construction of lowcost housing. The number of units financed by conventional mortgages in 1956 was about the same as in 1955. Total mortgage debt outstanding on 1 - to 4 -family nonfarm houses rose about $\$ 11$ billion, an amount exceeded only by the $\$ 12.5$ billion increase in 1955.

## CONSUMER EXPENDITURES

For the year 1956, total consumer spending increased 4.5 per cent compared with a rise of 7.5 per cent in 1955. The different rates of growth reflect wide swings in purchases of automobiles. Excluding automobile purchases, consumer spending increased 6 per cent in both years.

In the fourth quarter of 1956, total consumer outlays showed the largest advance since mid-1955, and were 5 per cent larger than a year earlier. A sizable advance in consumer prices, beginning in the spring, accounted for much of the increase in dollar outlays. With population growing steadily, per capita real takings of goods and services rose less than 2 per cent, compared with the exceptionally large increase of 5 per cent in 1955.

Durable goods. Domestic sales of new automobiles in 1956 numbered 5.8 million

Note.-Department of Commerce quarterly estimates, adjusted for seasonal variation; estimates for the fourth quarter of 1956 by the Council of Economic Advisers.
units, compared with a record 7.4 million in 1955 and an average of 5.4 million in the preceding five years. Most of the sharp decline from the peak in the third quarter of 1955 had taken place by the spring of 1956 and, after leveling off in the summer, sales of new autos picked up in the fourth quarter. With list prices of 1957 models higher, expenditures for automobiles and parts in the fourth quarter, at an annual rate of $\$ 15.5$ billion, were almost $\$ 2$ billion above the previous quarter and $\$ 1$ billion below the level of late 1955.

Sales of automobiles in 1955 had been stimulated by a marked easing of instalment credit terms, with maturities lengthened and downpayments reduced. Although terms did not ease materially further in 1956, they continued on the liberal side. As sales of new autos declined, extensions of auto credit fell off, but less rapidly. At the same time, repayments continued to grow, reflecting the earlier upsurge in borrowing, and outstanding automobile instalment credit increased at a much slower pace than in 1955.

Consumer expenditures for furniture and household equipment rose much less sharply in 1955 than purchases of automobiles They continued to grow moderately in early 1956, and subsequently leveled off.

Nondurable goods and services. Consumer expenditures for nondurable goods continued to rise in 1956. In the fourth quarter they were 4 per cent above a year earlier. Outlays for food rose somewhat less rapidly in 1956 than in 1955. Last year, moreover, food prices increased, in contrast to the decline of 1955, and the gain in real consumption in 1956 was small. Purchases of clothing and shoes, which have long been a declining proportion of total consumer spending, increased last year at about the same rate as the total.

Consumer expenditures for services in 1956 increased by 7 per cent, the same as in 1955. In earlier postwar years, outlays for services had also tended to rise more rapidly than for goods. The increase for 1956 reflected the steady rise in prices as well as an increased volume of housing services and of household operation, medical care, and other services.

## PERSONAL INCOME AND SAVING

A major factor making for expansion in consumer spending has been the steady growth in personal income. In November personal income, at a seasonally adjusted annual rate of $\$ 334$ billion, was $\$ 19$ billion or 6 per cent above the level of a year earlier. A further increase apparently occurred in December.

Wages and salaries have risen to new
PERSONAL INCOME, COMSUMPTION, AND SAYING
Billions of dollars, annual rates

Note.-Department of Commerce quarterly estimates, adjusted for seasonal variation; estimates for the fourth quarter of 1956 by the Council of Economic Advisers.
highs in nearly every month since early 1955, when they exceeded their 1953 peak. In November 1956, they were 6 per cent above a year earlier. Increases over the year reflected larger payrolls in nearly all private industries and in State and local governments, as employment and wage rates both increased.

Realized income of farm proprietors increased somewhat in 1956, reflecting increased output, payments under the Federal soil bank program, and the firming in farm prices. The increase in farm income followed several years of decline. Further growth in transfer payments resulted mainly from increased payments under the Old-Age and Survivors Insurance program. Property incomes also continued to rise.

In marked contrast to developments in 1955, consumer expenditures for goods and services in 1956 increased much less rapidly than disposable personal income, and personal saving amounted to $\$ 21$ billion, compared with $\$ 16.5$ billion in 1955 . As a
proportion of disposable income, personal saving in 1956 was also higher than in most postwar years and only moderately below the advanced levels of 1951-53. In the fourth quarter, the saving ratio was 7.5 per cent, compared with the recent low of about 5 per cent in the first quarter of 1955.

The pattern of changes in consumer spending and income was reflected in changes in their asset and debt positions. Saving in the form of financial assets apparently exceeded the advanced level of 1955. Particularly striking was the slower rate of growth in personal debt in 1956. Consumer instalment credit, affected particularly by reduced purchases of automobiles, increased about $\$ 2.5$ billion in 1956, compared with $\$ 5.5$ billion in 1955. Outstanding residential mortgage debt also rose by a smaller amount than in 1955. On the whole, consumers' net acquisition of financial assets was larger than the increase in their debts. This was in contrast to the experience of consumers in 1955.

## Farm Loans to Finance

## Intermediate-Term Investments

Commercial bank loans to finance intermediate-term investments of farmers were outstanding in the amount of $\$ 1.7$ billion on June 30, 1956. These were loans made to finance purchases of investment items with a productive life extending over several years, excluding loans for the purchase of real estate. For purposes of the 1956 Agricultural Loan Survey, loans to finance intermediate-term investments include loans for purchasing livestock other than feeder livestock, machinery and equipment, automobiles and other consumer durable goods, and for improving land and buildings.

Intermediate-term investment has been increasing in recent years, partly in response to changes in farm technology. These changes also have increased farmers' current expenses for fertilizers, seeds and feeds, insecticides, and the like. The rate of growth has been about the same for bank loans to finance intermediate-term investments as for loans to meet current-expense needs.

[^0]Loans to finance any given type of inter-mediate-term investment may appropriately have widely varying repayment schedules. The high degree of variability in farm income that prevails in many parts of the industry should be considered in establishing repayment schedules. Sometimes it is assumed that such schedules should be based on the income anticipated from the specific assets purchased with the borrowed funds. But farmers differ greatly with respect to the income and financial reserves they have available for paying loans. A better determination of a suitable repayment schedule usually can be made by analyzing the financial condition and prospective earnings of the borrower than by estimating the useful life or contribution to earnings of the asset purchased.

Some bank loans to finance intermediateterm investments have been written on a short-term basis similar to that applied to current-expense loans. Many of these notes have then been renewed because funds for payment have not been available at maturity. Use of this method would seem unrealistic if at the time the note was made it was relatively certain that funds for payment would not be available at maturity. It appears, however, that extensive use of the note renewal method may be influenced by regional variability in income. In the Kansas City Federal Reserve District, a region where farm income fluctuates greatly, banks
reported that more than half the dollar volume of their notes for intermediate-term investment purposes (excluding demand loans) had maturities of six months or less, while in the San Francisco District, where income has been less variable, banks had a much smaller proportion of such short maturities.

## RELATIVE IMPORTANCE AND SIZE

Loans to finance intermediate-term investments accounted for one-third of the dollar volume of outstanding commercial bank loans to farmers at mid-1956. This proportion varied regionally. It was larger in the Northeast and the Minneapolis Federal Reserve District where dairying is important than it was in other areas. There was also substantial variability in average size of debt per borrower on loans to finance interme-diate-term investments among Federal Reserve districts. This average varied from a high of $\$ 2,432$ per borrower in the San Francisco District to a low of $\$ 1,151$ in the St. Louis District (Table 1).

Nearly half of all farm borrowers had loans to finance intermediate-term investments, although these loans accounted for only about a third of the dollar amount of all farm loans. The difference arises largely from the fact that some borrowers having such notes also had loans for other farm purposes. Of the farmers borrowing to finance intermediate-term investments, the 80 per cent who had no current-expense or farm real estate notes accounted for $\$ 1.3$ billion of the $\$ 1.7$ billion of inter-mediate-type debt outstanding. Probably these figures reflect in part the fact that some banks customarily write one note to cover funds used for several purposes. Respondents in the Survey were instructed to indicate the one purpose for which the largest portion of each loan was used.

The average size of note outstanding on June 30, 1956 to finance intermediate-term investments was $\$ 1,271$. The comparable figure for all other types of farm loans as a group was $\$ 1,528$ or, if loans to purchase

Note.-Details may not check because of rounding.
real estate are excluded, $\$ 1,250$. When notes to finance intermediate-term investments are classified by purpose, those written for improving land and buildings and for buying livestock averaged considerably larger than notes for other agricultural purposes, those written for buying machinery were smaller, and those for consumer durable goods were the smallest, with their outstanding balances averaging only $\$ 641$.

About half of both dollar amount and number of notes to finance intermediateterm investments were made for the purpose of buying machinery and equipment. Notes to buy livestock other than feeder stock accounted for more than one-fourth of the dollar volume and about one-sixth of the number, while notes to improve land and buildings accounted for about one-fifth of the dollar volume and one-tenth of the number (Table 2).

The average size of note outstanding for intermediate-term investment purposes was considerably larger in the San Francisco, Dallas, and Kansas City Federal Reserve Districts than in the rest of the country. The Dallas and Kansas City Districts also had a larger proportion of total notes made for the purpose of buying livestock and a smaller proportion to buy machinery than the rest of the country.

A large proportion of the notes written to finance intermediate-term investments were small in size. Almost two-thirds had outstanding balances of less than $\$ 1,000$, although in dollar volume they accounted for only one-fifth of the total. The notes were of a smaller average size if written to finance the purchase of consumer durable goods or machinery and equipment than if written to finance the purchase of livestock or to improve land and buildings.

${ }^{1}$ Less than one after rounding.
Note.-Details may not check because of rounding.
There was a tendency for notes written to finance intermediate-term investments to be relatively more important in the medium and small net worth groups. Individuals with net worths of less than $\$ 25,000$ accounted for 56 per cent of the dollar volume of these loans, but for only 48 per cent of farm loans made for all purposes.

## MATURITY AND RENEWAL

The most common maturities for notes to finance intermediate-term investments were six months and one year. About 34 per cent had maturities longer than one year as compared with 29 per cent of the dollar volume of farm notes written for all purposes.

Table 3
Maturity of Notes to Finance IntermediateTerm Investments, June 30, 1956

| [Loans outstanding at insured commercial banks] |  |  |  |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: |

[^1]Maturities tended to vary by purpose of loan within the intermediate-term investment category (Table 3). A larger proportion of the dollar volume of notes made for improving land and buildings and for buying autos and other consumer durables was written with maturities of more than a year than was the case for notes written for buying livestock. The proportion with maturities of more than a year was substantially larger for buying machinery and equipment than it was for buying livestock but somewhat smaller than for the other intermediate-term purposes.

Maturities of notes made to finance inter-mediate-term investments varied significantly by Federal Reserve district. In the northeast districts, more than a fourth of the dollar volume of all such notes was on a demand basis, and about the same proportion matured in one to six months. In the Kansas City District, more than half had maturities of one to six months, and the Dallas District also had a relatively large proportion with short maturities. In the San Francisco District, on the other hand, less than 15 per cent of the dollar volume had maturities of one to six months.

Renewals have often been used in financing projects where repayment extends over periods of more than six months or a year, especially in areas where income is more variable than is average for the nation. Of the dollar amount of intermediate-term investment financing outstanding at mid-1956, 40 per cent had been renewed one or more times. This compares with 33 per cent of all farm loans made for other than intermediateterm purposes (Table 4). Planned renewals were more important in the intermediateterm field than for the other financing-30 per cent compared with 24 per cent.

Use of renewals for financing interme-

Note.-Details may not check because of rounding.
diate-term investments tended to be more important in Federal Reserve districts where maturities were relatively short. In the Kansas City District, where short-term maturities were most prevalent, 52 per cent of the dollar volume outstanding had been renewed. In the San Francisco District, on the other hand, where maturities were relatively long, only 30 per cent of the dollar volume had been renewed. Planned renewals also were more frequent in the areas where short-term maturities predominated.

Although a considerable proportion of the loans made for financing intermediate-term investments had short maturities, a substantial number of borrowers with such loans had been in debt to the bank continuously since 1953 or earlier. Of the borrowers who at mid-1956 owed on notes made for inter-mediate-term investments (excluding borrowers who also had additional notes for real estate or current-expense purposes), about one-third had been in debt to the bank since 1953 or before; one-tenth had been in debt back to 1954; one-third had been out of debt to the bank for the last time in 1955, and only about one-fifth had been out of debt within the first half of 1956 . These
proportions were practically the same among borrowers who had current-expense loans outstanding at mid-1956. It is apparent that many farm borrowers require continuous access to credit in order to carry on their farming operations.

## METHOD OF REPAYMENT

Most farm loans outstanding on June 30, 1956-about 70 per cent of the dollar vol-ume-were made with terms specifying that they be repaid in a single payment at maturity. The remainder carried provision for repayment by instalments. By definition, a major part of the intermediate-term financing would be used to pay for durable or semidurable types of investment. Since instalment financing has been most prevalent in the durable goods field, it would be expected that provision for instalment repayment would be more prevalent among notes to finance intermediate-term investments than among notes for current-expense purposes. Of the total dollar volume of outstanding loans made for intermediateterm investments, 41 per cent provided for instalment repayment.

Instalment loans in agriculture frequently vary from the more conventional type used in the consumer credit field. Monthly repayment is not appropriate for much of agriculture outside of the dairy and egg production sectors. Payments need to be adapted to the income flow on the particular farm that is being financed. Consequently instalment loans with irregular payments are much more prevalent in agriculture than in the consumer credit field.

As would be expected, instalment loans were usually not renewed. The ones renewed, however, were larger in size than those that were not renewed. Notes payable in instalments made up a greater proportion of the large notes ( $\$ 1,000$ or more in size)

than of the small notes (\$999 or less).
The proportion of notes written with provision for instalment repayment also varied with maturity. Provision for instalment repayment was associated with notes that had long maturities. Three-fourths of the dollar volume of notes to finance intermediateterm investments made with provision for instalment repayment had maturities of 15 months or more, 18 per cent had maturities of 9 or 12 months, while 7 per cent had maturities of 6 months or less (Table 5).

## ACQUIRED LOANS

In recent years, many commercial banks have followed the practice of acquiring farmers' notes from merchants and dealers. To a large extent, these notes were originally taken by the merchant or dealer to finance the sale of some intermediate-term investment item. Twenty-three per cent of the dollar volume of all commercial bank notes made to finance intermediate-term investments outstanding at mid-1956 had been acquired from merchants and dealers. Of the acquired notes, over two-thirds of the dollar volume provided for instalment repayment (Table 6).

There was substantial variation in maturity between the notes acquired from merchants and dealers and those made direct. Almost two-thirds of the acquired notes but only slightly more than a fourth of the direct loans were written with maturities longer than one year. Acquired notes tended to be longer term instalment notes and direct

Note.-Details may not check because of rounding
loans to be shorter term notes. The latter were often renewed at maturity.

The practice of acquiring notes from merchants and dealers and the maturities of acquired notes varied among Federal Reserve districts. In the San Francisco District, more than one-third of the dollar volume of all intermediate-type notes was acquired from merchants and dealers, while in the Philadelphia, Cleveland, Kansas City, and Dallas Districts only about one-eighth of the dollar volume outstanding was so acquired. The large proportion of acquired notes in the San Francisco District may partly explain the significantly longer maturities there. However, both acquired and direct loans in that District bore longer maturities than corresponding types of loans for the country as a whole.

## BORROWER CHARACTERISTICS

Distribution of the number of borrowers according to net worth was not substantially different for those borrowing for interme-diate-term investment purposes than for borrowers for all farm purposes. However, the dollar volume tended to be relatively more important for intermediate-type loans than for all farm loans in the small and medium net worth groups, and less important in the large net worth groups. The relatively large average size of loan for purchasing real estate and feeder livestock probably caused loans for all farm purposes to be more important in the larger net worth categories.

The net worth group having the largest dollar amount of loans to finance interme-diate-term investments was the $\$ 10,000$ $\$ 24,999$ group (Table 7), which also had the largest number of the loans outstanding. The next largest number of notes was in the $\$ 3,000-\$ 9,999$ net worth group, but the dollar amount outstanding there was smaller

2 Includes $\$ 9$ million of loans to corporate farms.
3 Too few for significant average.
NOTE.-Details may not check because of rounding.
because of the smaller average size of loan. In the $\$ 25,000-\$ 99,999$ net worth bracket the number of notes outstanding was significantly smaller than for either of the two preceding brackets, but the dollar volume was large because of large average size. The average size of note for farmers in the highest net worth group was about 12 times larger than the average size for the lowest net worth group.

Within most net worth groups, notes of the younger borrowers tended to be larger. The greatest proportion of large net worths was in the age group 45 and over. The net worth of a relatively large number of farm borrowers under 35 years of age was less than $\$ 10,000$.

General type farms had the largest dollar

${ }^{1}$ See Table 7, note 1.
Note.-Details may not check because of rounding.
volume of loans for intermediate-term purposes outstanding at mid-1956 and accounted for about 35 per cent of the dollar volume of all such loans (Table 8). Dairy farms were next in importance, with 23 per cent, and meat-animal farms third, with 13 per cent. General type farms also had the largest number of notes outstanding, but meat-animal farms had the largest average size of note. Distribution of credit for financing intermediate-term investments among types of farms differed from the distribution of total farm credit in that dairy farms used relatively more credit for this purpose than other types of farms, and meat-animal, cotton, and other major product farms used relatively less.

## SECURITY

The most common type of security used in financing intermediate-term investments was the chattel mortgage. Sixty-five per cent of the number and 58 per cent of the dollar volume of such loans were thus secured. Sixteen per cent of dollar volume was secured by real estate mortgages, 16 per cent was unsecured, and 7 per cent was endorsed.

The remaining 2 per cent was secured in other ways. The average size of note varied with the type of security used. Loans secured by real estate mortgages were largest, while endorsed loans were smallest.

Of the loans for the purpose of improving land and buildings, 63 per cent of the dollar amount was secured by real estate mortgage, 22 per cent was unsecured, and the remaining 15 per cent was secured by chattel mortgage or in other ways. For each of the other purpose groups, however, the major part was secured by chattel mortgage.

## INTEREST RATES

The interest rate on outstanding loans to finance intermediate-term investments averaged 6.7 per cent, which was higher than the 6.2 per cent average for all types of farm loans. The intermediate-type loans had higher interest rates than other farm loans within each size group.

Relevant to this difference is the fact that loans to finance intermediate-term investments are often repayable in instalments. Interest on such loans is charged either on the original amount throughout the life of

Table 9

| All intermediate-term investment purposes.. | 6.7 | 8.1 | 8.1 | 7.6 | 7.3 | 6.8 | 5.9 | 5.6 | 5.4 |
| Purchase of other than feeder livestock...... Purchase of machinery and equipment...... | ${ }_{7.1}^{6.1}$ | 7.2 | 7.1 | 6.8 | 7.5 | 6.4 7.1 | 5.9 6.3 | 5.7 | 5.4 |
| Purchase of autos and other consumer durable goods. <br> Improvement of land and buildings............ | 8.5 | 10.0 7.4 | 9.8 7 | 8.8 7.4 | 8.3 6.6 | 8.2 | 5.4 | ${ }_{5}^{\text {s }}$ (2) | s.i. |

1 When originally made or (if renewed) when last renewed.
2 Too few for significant average.
the loan or on the current unpaid balance. The interest rate for instalment loans with interest charged on the original amount was 10.8 per cent, which compares with 6 per cent on instalment notes with interest charged on the unpaid balance and 6.1 per cent for single-payment notes. Inclusion of many instalment loans with interest charged on the original amount partly explains the high average interest rate on loans made for financing intermediate-term investments.

Rates averaged higher on loans for financing automobiles and other consumer durables than on loans for other interme-diate-term investment purposes (Table 9). Part of this variation can be attributed to the difference in size of note and in the proportion of loan volume that was financed by the instalment plan. Sixty-two per cent of the dollar volume of loans made to finance auto and other consumer durables was instalment financing. This compares with 48 per cent of loans made to improve land and build-
ings, 47 per cent of loans made to buy machinery and equipment, and 19 per cent of loans made to buy livestock.

Loans for intermediate-term purposes that were purchased by banks from dealers had an average interest rate of 8.3 per cent, compared with a rate of 6.2 per cent for loans for these purposes that were made direct. The difference is apparently related to the fact that more of the acquired notes had interest charged on the original amount. Forty per cent of the loans to buy autos and other consumer durable goods and machinery and equipment (which had higher average interest rates than loans for other purposes) were purchased notes, as compared with only 2 per cent of the outstanding notes held that were made for all other agricultural purposes.

The influence on interest rates of factors such as maturity, security, and net worth of the borrower will be analyzed in a subsequent article.

## Trusteeship over Money

On behalf of my associates of the Federal Reserve System I want to express our appreciation for these periodic opportunities to appear before committees of the Congress. The Congress has placed a great responsibility upon the Federal Reserve Sys-tem-a trusteeship, as I conceive of it, over money.

The Reserve System has always benefited from thoughtful inquiry. These hearings are not merely a public forum-and that is all to the good. They provide a means of keeping the monetary machinery of the country abreast of the times. The Federal Reserve Act provides that we shall report directly to Congress and thus, through it, to the country.

The task of the Federal Reserve System, under today's conditions, is to determine the volume of credit that needs to be made available in order to keep the economy running in high gear-but without overstrain. Too much credit would intensify upward pressures on prices. Too little could needlessly starve some activities. We have to rely on human judgments in this determination. There are bound to be differences in judgment-sincere differences. We do not undertake-and I do not see how it could be otherwise, short of some form of dictator-ship-to say how a given supply of credit shall be allocated.

Experience would seem to demonstrate that allocations of credit determined through the market process are to be preferred to judgments-or guesses-of public authori-
ties, however well-intentioned. I was told recently of a tongue-in-cheek sign that hung in a Washington office some years ago. It read: "Our guess is always best." It may be that collective judgments expressed through the market process are not always best, but that process is consistent with our heritage and our institutions under which direct governmental intervention in economic affairs is confined largely to broad, general policies necessary to protect and promote the public interest.

At any given time the economy is capable of producing a volume of goods and services limited by currently available resources, human and material. The difficulty throughout this year has been the attempt to crowd too much into a given time period-demand, in brief, has been pressing strongly against the supply of labor and materials.

Creating more money won't produce more things when the economy is running at peak levels. A choice has to be made-and the public in the end has to make the choice of whether we shall have more of this and less of that. We can have, in a given period, just so many houses, automobiles, household appliances, schools, manufacturing plants, and a myriad other things, including ships, planes, submarines, and other essentials of defense. Under present conditions, something has to be given up at least for a time.

[^3]Throughout this year the combined demand for funds-for credit-coming from virtually all sectors of the economy has been at an all-time high. It has outrun the available supply. Contrary to some impressions, the Reserve System has not reduced the money supply; in fact the money supply has continued to increase this year though at a lesser rate than in 1955. Moreover, the turnover-the velocity-of the existing money supply has greatly increased. Although the so-called "tightness" of credit is often attributed to an insufficient supply of money, the fact is that the tightness results from the volume and intensity of demand.

The great bulk of loanable funds represents savings of the community made available to borrowers directly or through financial institutions other than commercial banks, such as mutual savings banks, insurance companies, savings and loan associations, private and public pension funds, finance companies, corporations, and individuals. It is often forgotten that when the commercial banking system expands its loans and investments, it generates new money. When, as has been the case this year, aggregate demands for credit have exceeded savings, the only way to finance them all would be by an even greater expansion of bank credit-that is, by generating still more money. And as I have emphasized, creating more money will not create more goods. It can only intensify demands for the current supply of labor and materials. That is outright inflation.

The Reserve System-and it is a nationwide system of 12 Federal Reserve Banks with 24 branches having all told some 260 directors representing varied walks of life -is united in the conviction that the best course is to do what the System can do, to restrain excesses arising from monetary
causes. It has been estimated that a rise of only one point in the consumer price index would cost the American public two and a half billion dollars a year.

The Federal Reserve System has been devoting its efforts, through varying times and circumstances, to assuring monetary and credit conditions that would help to foster high levels of business and employment, maintain the stability of the currency, and promote sustainable growth in the economy.

The System has sought to keep constantly alert to changes in economic and financial conditions, and to adapt its operations ac-cordingly-leaning against the breezes of inflation and deflation alike, as I have put it a number of times.

Thus, when the economy had a downturn in 1953, the Reserve System acted promptly to stimulate credit expansion to help halt the decline and foster the recovery that began in 1954 and carried through into 1955. As we moved from recovery to boom in 1955 and on through 1956, and as the economy in general pressed against the limits of immediate capacity, the System took steps to keep expansion of credit within the limits of the growth in resources so as to discourage excesses that would inevitably produce higher prices and severe economic maladjustments.

Focussing more closely on the events of 1956, it was apparent there were positive inflationary dangers inherent in superimposing a massive increase in business investment on an economy already featuring high utilization of resources and upward price pressures. In this situation, to supply on easy terms all of the credit desired by prospective investors would have increased inflationary bidding for available resources, especially in the sectors of capital equipment and construction. It also would have
involved a rise in the volume of outstanding credit, and in commercial bank credit and demand deposits in particular, that would compound the threat to economic stability and sustained growth.

Despite the restraint on credit growth and spending capabilities imposed by monetary policy, demands in many sectors have risen more rapidly than was consistent with price stability. The price advances that began in 1955, after several years of stability, continued during 1956, as output in a number of key areas pressed against the limits of capacity. Price increases have been particularly marked in sectors affected by investment expenditures, in machinery and construction lines and, affected in part by them, in metals and metal products. These are the areas in which the restraint imposed upon current expenditures by monetary policy was, quite possibly, the heaviest. It is in these sectors that such additional demand as would have resulted from easier credit would have been concentrated.

Despite the strength of credit demands, growth in total commercial bank credit was limited to a moderate rate, below the average of the postwar period and somewhat lower than in the corresponding period in 1955. Thus, the increase in total loans and investments of commercial banks in the 12 months ending with October was held to 2 per cent, and growth in the privately held money supply-demand deposits and cur-rency-to about $11 / 2$ per cent.

Restraint on expansion in bank credit and the money supply this year contrasts with the rapid increase that occurred from mid-1953
through 1954, even though loan demands then were generally less active. During that period, policy was directed toward assuring ready availability of credit in the economy generally, and toward creating liquidity conditions favorable to revival and expansion. In part the developments since 1954 should be interpreted as a transition from a time of ready availability of resources, reduced demands for credit, and a monetary policy of active ease to a time of intense utilization of resources, very strong credit demands, and a monetary policy directed to restraint of inflationary forces.

Just now, the year is coming to a close with demands still out-pacing savings, with personal income at a new high annual rate of over 332 billion dollars in October-21 billion dollars above the rate a year agoand international disturbances that could add to further overstraining of our resources. It is a situation that calls for alertness, as well as prudence and restraint, on the part of Government, business, finance, labor, and agriculture.

Basically, the problem confronting us now-in contrast to that of the early 1930's -is not one of creating millions of jobs overnight to cure mass unemployment, but one of sustaining the millions of jobs we have today and fostering new opportunities for an expanding working force tomorrow.

Meeting that problem requires that the efforts of all of us be directed to preserving the stability of the economy, and the stability of the dollar that underlies it, so that we may move steadily along the road to a higher standard of living for all.

Administrative interpretations, new regulations, and similar material

## Bank Holding Company's Subsidiary Banks Owning Shares of Nonbanking Companies

The Board's opinion has been requested on the following related matters under the Bank Holding Company Act of 1956.

The question is raised as to whether shares in a nonbanking company which were acquired by a banking subsidiary of the bank holding company many years ago when their acquisition was lawful and are now held as investments, and which do not include more than 5 per cent of the outstanding voting securities of such nonbanking company and do not have a value greater than 5 per cent of the value of the bank holding company's total assets, are exempted from the divestment requirements of the Act by the provisions of section $4(c)(5)$ of the Act.

In the Board's opinion, this exemption is as applicable to such shares when held by a banking subsidiary of a bank holding company as when held directly by the bank holding company itself. While the exemption specifically refers only to shares held or acquired by the bank holding company, the prohibition of the Act against retention of nonbanking interests applies to indirect as well as direct ownership of shares of a nonbanking company, and, in the absence of a clear mandate to the contrary, any exception to this prohibition should be given equal breadth with the prohibition. Any other interpretation would lead to unwarranted results.

Although certain of the other exemptions in section 4(c) of the Act specifically refer to shares held or acquired by banking subsidiaries, an analysis of those exemptions suggests that such specific reference to banking subsidiaries was for purpose of excluding nonbanking subsidiaries from such exemptions, rather than for the purpose of providing an inclusionary emphasis on banking subsidiaries.

It should be noted that the Board's view as to this question should not be interpreted as meaning that each banking subsidiary could own up to 5 per cent of the stock of the same nonbanking
organization. In the Board's opinion the limitations set forth in section $4(c)(5)$ apply to the aggregate amount of stock held in a particular organization by the bank holding company itself and by all of its subsidiaries.

Secondly, question is raised as to whether shares in a nonbanking company acquired in satisfaction of debts previously contracted (d.p.c.) by a banking subsidiary of the bank holding company may be retained if such shares meet the conditions contained in section $4(c)(5)$ as to value and amount, nonwithstanding the requirement of section $4(c)(2)$ that shares acquired d.p.c. be disposed of within two years after the date of their acquisition or the date of the Act, whichever is later. In the Board's opinion, the 5 per cent exemption provided by section $4(c)(5)$ covers any shares, including shares acquired d.p.c., that meet the conditions set forth in that exemption, and, consequently, d.p.c. shares held by a banking subsidiary of a bank holding company which meet such conditions are not subject to the two-year disposition requirement prescribed by section 4(c)(2), although any such shares would, of course, continue to be subject to such requirement for disposition as may be prescribed by provisions of any applicable banking laws or by the appropriate bank supervisory authorities.

Finally, question is raised as to whether shares held by banking subsidiaries of the bank holding company in companies holding bank premises of such subsidiaries are exempted from the divestment requirements by section $4(c)(1)$ of the Act. It is the Board's view that section $4(c)(1)$, exempting shares owned or acquired by a bank holding company in any company engaged solely in holding or operating properties used wholly or substantially by any subsidiary bank, is to be read and interpreted, like section 4(c) (5), as applying to shares owned indirectly by a bank holding company through a banking subsidiary as well as to shares held directly by the bank holding company. A contrary interpretation would impair the right that member banks controlled by bank holding companies would otherwise have to invest,
subject to the limitations of section 24 A of the Federal Reserve Act, in stock of companies holding their bank premises; and such a result was not, in the Board's opinion, intended by the Bank Holding Company Act.

## Continental Bank and Trust Company Matter

The United States Court of Appeals for the Tenth Circuit on January 2, 1957, affirmed the decision of the District Court in the case of The Continental Bank and Trust Company vs. Emery J. Woodall. The bank had brought suit to enjoin the trial examiner from conducting an administrative proceeding instituted by the Board to determine the adequacy of the capital of the bank. The District Court had denied the injunction. In affirming this decision, the Court of Appeals granted a stay until February 4, 1957, so as to give the bank an opportunity to apply to the Supreme Court of the United States for a writ of certiorari. The opinion of the Court of Appeals is printed below.

## United States Court of Appeals <br> Tenth Circuit

January Term-1957
No. 5498
The Continental Bank and Trust Company, of Salt Lake City, Utah,

Appellant,
Emery J. Woodall, Appellee.

Filed-United States Court of Appeals, Tenth Circuit, Jan. 2, 1957, Robert B. Cartwright, Clerk.
APPEAL FROM THE DISTRICT COURT OF THE UNITED STATES FOR THE DISTRICT OF UTAH
Peter W. Billings (Albert J. Colton and Fabian, Clendenin, Moffat \& Mabey were with him on the briefs) for Appellant.

Bolling R. Powell, Jr., for Appellee.
Before Bratton, Chief Judge, and Huxman and Pickett, Circuit Judges.

## Bratton, Chief Judge:

This case presents for determination questions of law arising out of the attempt of the Board of Governors of the Federal Reserve System, hereinafter referred to as the Board, to conduct a hearing in repect to the capital adequacy or inadequacy of a State bank member of the Federal Reserve System.

Continental Bank and Trust Company, of Salt Lake City, Utah, hereinafter referred to as the Bank, is a State bank member of the Federal Reserve System. The Board issued an order for a hearing to be held at Salt Lake City for the purpose of determining the adequacy or inadequacy of the net capital stock and surplus of the Bank in relation to the character and condition of its assets and to its then present and prospective deposit liabilities and its other corporate responsibilities; determining what additional amount, if any, of capital funds were needed by the Bank to have an adequate capital structure; and determining what was a reasonable period of time to allow the bank within which to effect any increase of capital funds found to be needed to make them adequate before being required to surrender its capital stock in the Federal Reserve Bank of San Francisco and to forfeit its rights and privileges of membership in the Federal Reserve System for failure to do so. The Bank moved the Board to dismiss the proceeding upon the ground that the Board had no authority to inquire into the capital adequacy or inadequacy of a State bank member of the Federal Reserve System, or to require such a bank to acquire additional capital or forfeit its membership in the Federal Reserve System. The motion was denied. The Bank requested that the hearing be public and the Board acquiesced therein. Emery J. Woodall was designated as trial examiner to conduct the hearing and take evidence. Shortly before the hearing was scheduled to begin, the Bank instituted this action against Woodall to enjoin him from conducting the hearing upon the ground that the Board for whom he was acting had no power to conduct a hearing for such purposes. A temporary restraining order was issued. Later the restraining order was vacated and the action was dismissed. The Bank appealed.

The focus of the attack upon the judgment dismissing the action is that the Board has no power to inquire into the capital adequacy or inadequacy of a State bank member of the Federal Reserve System; that the conducting of the hearing in question would result in irreparable injury to the Bank; and that therefore the court should have enioined the holding of the hearing. The court predicated in part its dismissal of the action upon the view that the Board was an indispensable party. It is the well established rule of law that where a Federal official attempts to perform an act which is in excess of his authority or under authority not validly conferred, an equitable action will lie to restrain him without the sovereign being a party; but where he acts within the range of his authority in the exercise of a function legally delegated to him, an action to restrain him cannot be maintained without the sovereign being impleaded even though there is an assertion of error in the exercise of such power or an abuse of discretion. Larson v. Domestic and Foreign Commerce Corp., 337 U. S. 682; State of New Mexico v. Backer, 199 F. (2d) 426; Oyler v. McKay, 227 F. (2d) 604; Ogden River Water Users' Association v. Weber Basin Water Conservancy, CA-10, - F. (2d)

The action was not one to restrain the trial examiner on the ground that he was acting beyond the range of the order of the Board. The essence of the cause of action pleaded in the complaint was to restrain the trial examiner on the ground that the Board had no power to order the hearing. Section 9 of the Federal Reserve Act, as amended, makes provision for banks incorporated under State law to
become members of the Federal Reserve System. It provides that a State bank desiring to become such member may make application to the Board, under such rules and regulations as the Board may prescribe, for the right to subscribe to the stock of the Federal Reserve Bank organized within the district in which the applying bank is located; and that the Board, subject to the provisions of the Act and to such conditions as the Board may prescribe pursuant to the Act, may permit the applying bank to become a stockholder in such Federal Reserve Bank. 12 U. S. C. A. § 321. The section further provides that in acting upon the application of an applying State bank, the Board shall consider the financial condition of such bank, the general character of its management, and whether or not the corporate powers exercised are consistent with the purpose of the Act. 12 U. S. C. A. § 322. The section further provides that whenever the Board shall permit an applying bank to become a stockholder in the Federal Reserve Bank of the district, its stock subscription shall be payable on call of the Board, and stock issued to it shall be held subject to the provisions of the Act. 12 U. S. C. A. §323. The section further provides that all banks admitted to membership in the Federal Reserve System under the provisions of the section shall be required to comply with the capital and reserve requirements of the Act and to conform to those provisions of law imposed upon national banks which prohibit such banks from lending on or purchasing their own stock, which relate to the withdrawal or impairment of capital, and which relate to the payment of unearned dividends. $12 \mathrm{U} . \mathrm{S}$. C. A. § 324. The section further provides that as a condition to membership in the Federal Reserve System, such State banks shall be subject to examinations made by direction of the Board or of the Federal Reserve Bank by examiners selected and approved by the Board. 12 U. S. C. A. § 325. And the section further provides that if at any time it shall appear to the Board that a State bank member has failed to comply with the provisions of the Act, or the regulations of the Board made pursuant thereto, it shall be within the power of the Board after hearing to require such bank to surrender its stock in the Federal Reserve System and to forfeit all rights and privileges of membership. 12 U. S. C. A. § 327 . Under the clear commands of the statute, after a State bank has been admitted to membership in the Federal Reserve System it must meet certain requirements. One of such requirements is compliance with the capital and reserve exactions of the Act. Another is compliance with the restrictions and inhibitions of the Act against the impairment of the capital of the bank. And where a State bank member fails to comply with the requirements of the Act in respect to its capital and reserve, or fails to comply with the restrictions or inhibitions against the impairment of its capital, the Board is expressly vested with power after hearing to require such bank to surrender its stock in the Federal Reserve Bank and to forfeit all rights and privileges of membership in the Federal Reserve System. In respect to a State bank meeting these requirements of the Act, the duties and functions of the Board are not merely coterminous with the making of the application for membership and the admission of the applying bank into membership of the Federal Reserve System. Instead, it is the continuing duty and function of the Board to see that such bank either comply with the capital and reserve
requirements of the Act and does not suffer impairment of its capital structure or surrenders its stock in the Federal Reserve Bank and cease to be a member of the Federal Reserve System. The object and purpose of the scheduled hearing now under consideration was to inquire into the condition of the Bank in respect to whether it had suffered inadequacy of capital structure, if so what corrective procedure should be invoked, and whether the Bank should be required to surrender its stock in the Federal Reserve Bank and cease to be a member of th Federal Reserve System. And we entertain no doubt that under the provisions of the section of the Act, the Board had power to conduct the hearing for such purposes.

Section 9 of the Act does not stand alone in point of present pertinence. By section 11(i), as amended, the Board is required to perform the duties, functions, and services specified in the Act, and it is authorized to make rules and regulations necessary to enable it effectively to perform the same. 12 U. S. C. A. §248(i). The provision amounts to a general grant of power to make rules and regulations in harmony with the objects and purposes of the Act and reasonably adapted to the effective discharge of the duties and functions of the Board under the Act. The Board promulgated and for many years has maintained Regulation $H$ relating to conditions of membership of State banking institutions in the Federal Reserve System. The regulation provides among other things that such banks shall at all times conduct their business and exercise their powers with due regard to the safety of their depositors; and that the net capital and surplus funds of such banks shall be adequate in relation to the character and condition of their assets and to their deposit liabilities and other corporate responsibilities. The regulation is in harmony with the objectives and purposes of the Act. It is reasonably adapted to further the discharge of the duties and functions of the Board under the Act. And its promulgation and maintenance constitute permitted administrative action under the Act. The scheduled hearing was intended and designed to ascertain whether the Bank had failed and was continuing to fail to meet the requirements of the Act and the regulation, if so what should be done to bring its condition into compliance with the Act and the regulation in respect to capital adequacy, and in the event of continued failure to meet the requirements of he Act and the regulation whether the Bank should cease to be a member of the Federal Reserve System. That being its purpose, the hearing was within the purview of the Act and the regulation, considered in their entirety.

The Board was clothed with power to order the hearing. The authority to conduct the hearing and take the evidence was regularly delegated to the trial examiner, and the examiner was acting well within the range of authority delegated to him. In such circumstances, the Board was an indispensable party to the action to restrain the conducting of the hearing. And the Board not being a party, the court correctly entered its judgment of dismissal. Larson v. Domestic and Foreign Commerce Corp., supra; State of New Mexico v. Backer, supra; Oyler v. McKay, supra; Ogden River Water Users' Association v. Weber Basin Water Conservancy, supra.

The judgment is
AFFIRMED.

## Current Events and Announcements

## APPOINTMENTS OF CHAIRMEN, DEPUTY CHAIRMEN, AND DIRECTORS

The Board of Governors of the Federal Reserve System announced the following designations and appointments of officers and directors at the Federal Reserve Banks and branches. Names in CAPITALS indicate new appointments; all others are reappointments. Brief biographical data on newly appointed directors follow the list of appointments.

## Federal Reserve Bank of New York

JOHN E. BIERWIRTH, Cedarhurst, Long Island, New York, who has been serving as an elected director of the Federal Reserve Bank of New York since March 1953, was appointed by the Board of Governors for a three-year term beginning January 1,1957 , and was designated Chairman and Federal Reserve Agent at New York for the year 1957. Mr. Bierwirth is President of National Distillers Products Corporation, New York, New York. In his new capacities at the Reserve Bank he succeeds Mr. Jay E. Crane, Director, Standard Oil Company (New Jersey), New York, N. Y., whose terms both as Chairman and as an appointed director expired December 31, 1956.

RAYMOND E. OLSON, Rochester, New York, was appointed a director of the Buffalo Branch of the Federal Reserve Bank of New York for a three-year term beginning January 1, 1957. Mr. Olson is President of Taylor Instrument Companies, Rochester, New York. He succeeds Mr. Robert C. Tait, President, Stromberg-Carlson Company, Rochester, New York, whose term as a director of the Buffalo Branch expired December 31, 1956.

## Federal Reserve Bank of Cleveland

ARTHUR B. VAN BUSKIRK, Pittsburgh,
T. Winfred Bell, Little Rock, Arkansas.

David F. Cocks, Louisville, Kentucky.
Philip Davidson, Louisville, Kentucky. (For unexpired portion of term ending December 31, 1957.)
John D. Williams, University, Mississippi.

Carl McFarland, Missoula, Montana.

Ray Reynolds, Longmont, Colorado.
Phil H. Lowery, Loco, Oklahoma.
Manville Kendrick, Sheridan, Wyoming.
D. F. Stahmann, Las Cruces, New Mexico.
A. E. CUDLIPP, Lufkin, Texas.

Clarence E. Ayres, Austin, Texas.

William H. Steiwer, Sr., Fossil, Oregon.
Geo. W. Watkins, Idaho Falls, Idaho.
LYMAN J. BUNTING, Yakima, Washington.
Pennsylvania, who has been serving as a Boardappointed director of the Federal Reserve Bank of Cleveland since January 1956 and as its Deputy Chairman, was appointed Chairman and Federal Reserve Agent for the year 1957. Mr. Van Buskirk is Vice President and Governor of T. Mellon \& Sons, Pittsburgh, Pennsylvania. As Chairman and Federal Reserve Agent, he succeeds Mr. John C. Virden, Chairman of the John C. Virden Company, Cleveland, Ohio, whose term expired December 31, 1956.

JOSEPH THOMPSON, Willoughby, Ohio, was appointed a director of the Federal Reserve Bank of Cleveland for a three-year term beginning January 1, 1957, and as Deputy Chairman of the Bank for the year 1957. Mr. Thompson is President of The M. A. Hanna Company, Cleveland, Ohio. He succeeds Mr. John C. Virden, Chairman of the John C. Virden Company, Cleveland, Ohio, whose term as a director of the Bank expired December 31, 1956.

BEN MOREELL, Pittsburgh, Pennsylvania, was appointed a director of the Pittsburgh Branch of the Federal Reserve Bank of Cleveland for a three-year term beginning January 1, 1957. Admiral Moreell is Chairman of Jones \& Laughlin Steel Corporation, Pittsburgh, Pennsylvania. He succeeds Mr. Henry A. Roemer, Jr., President of

Forbes Steel Corporation, Canonsburg, Pennsylvania, whose term as a director of the Pittsburgh Branch expired December 31, 1956.

Federal Reserve Bank of St. Louis
PIERRE B. McBRIDE, President, Porcelain Metals Corporation, Louisville, Kentucky, was appointed a director of the Federal Reserve Bank of St. Louis for a three-year term beginning January 1, 1957, and as Chairman and Federal Reserve Agent for the year 1957. Mr. McBride has been serving since January 1951 as a director of the Bank's Louisville Branch and since January 1956 as Chairman of the Branch board. Both as Chairman and Federal Reserve Agent and as an appointed director of the St. Louis Bank he succeeds Mr. M. Moss Alexander, President, Missouri Portland Cement Company, St. Louis, Missouri, whose terms in both capacities expired December 31, 1956.

JOSEPH H. MOORE, Charleston, Missouri, who has been serving as an appointed director of the Federal Reserve Bank of St. Louis since March 1950, was appointed Deputy Chairman of the Bank for the year 1957. Mr. Moore is engaged in farming. As Deputy Chairman he succeeds Mr. Caffey Robertson, President of Caffey Robertson Company, Memphis, Tennessee, who resigned as a director of the St. Louis Bank.
J. H. LONGWELL, Dean, College of Agriculture, University of Missouri, Columbia, Missouri, was appointed a director of the Federal Reserve Bank of St. Louis for the unexpired portion of a term ending December 31, 1958. He succeeds

Mr. Caffey Robertson, President of the Caffey Robertson Company, Memphis, Tennessee, who resigned as a director of the Bank.

PHILIP DAVIDSON, President, University of Louisville, Louisville, Kentucky, was appointed a director of the Louisville Branch of the Federal Reserve Bank of St. Louis for the remainder of a term expiring December 31, 1957. Mr. Davidson succeeds Mr. Pierre B. McBride, President, Porcelain Metals Corporation, Louisville, Kentucky, who resigned as a director of the Louisville Branch in order to accept appointment as a director of the Federal Reserve Bank of St. Louis.

## Federal Reserve Bank of Dallas

A. E. CUDLIPP, Lufkin, Texas, was appointed a director of the Houston Branch of the Federal Reserve Bank of Dallas for a three-year term beginning January 1, 1957. Mr. Cudlipp is Vice President and Director of Lufkin Foundry and Machine Corp., Lufkin, Texas. He succeeds Mr. Herbert G. Sutton, of T. O. Sutton and Sons, Colmesneil, Texas, whose term as a director of the Branch expired December 31, 1956.

## Federal Reserve Bank of San Francisco

LYMAN J. BUNTING, Yakima, Washington, was appointed a director of the Seattle Branch of the Federal Reserve Bank of San Francisco for a two-year term beginning January 1, 1957. Mr. Bunting is President of Rainier Fruit Company, Yakima, Washington, and succeeds Mr. Ralph Sundquist, President and General Manager, Sundquist Fruit and Cold Storage, Inc., Yakima, Washington, whose term expired December 31, 1956.

## FEDERAL RESERVE BANK APPOINTMENTS OF BRANCH DIRECTORS ${ }^{1}$

# National Summary of Business Conditions 

Released for publication January 15

Industrial production and total construction activity continued at advanced rates in December. Nonfarm employment was maintained at record levels, incomes rose further, and retail sales changed little at high levels. In December and early January, prices of industrial commodities advanced further. Substantial expansion of bank credit in December was followed by a sharp decline in early January.

## Industrial Production

Industrial production in December, as measured by the Board's seasonally adjusted index, was 147 per cent of the 1947-49 average, up one point from the revised November figure and three points from December 1955. For the year 1956, industrial production averaged 143, four points, or 3 per cent, above 1955 .

In December, auto assemblies rose further and activity in most producers' equipment lines reached new highs. Production of household goods, which decreased in November reflecting some accumulation of inventories, apparently changed little in December. Steel output was maintained at capacity and was 3 per cent above a year ago, while production of both ferrous and nonferrous castings and forgings continued below

Federal Reserve indexes, seasonally adjusted. Monthly figures, latest shown are for December.
the levels reached in 1955. In early January, steel ingot production was scheduled at 98 per cent of 1957 capacity, which is rated 4 per cent larger than in 1956.

Following a dip in November, shown by revised figures, seasonally adjusted production of nondurable goods recovered. Output of leather, paper, chemical, and petroleum products increased. Crude oil extraction registered further gains and in early January reached new highs as export demands continued strong.

## Construction

Value of new construction rose slightly further in December to a seasonally adjusted annual rate of $\$ 44.7$ billion. Private housing starts, seasonally adjusted, showed little change and were at an annual rate of slightly more than 1 million units. Value of contract awards was down moderately, reflecting a further sharp decline in residential construction awards. For the year as a whole, the value of new construction was a record $\$ 44.3$ billion, 3 per cent above 1955. Housing starts totaled slightly more than 1.1 million units, as compared with 1.3 million the year before.

## Employment

Seasonally adjusted employment in nonfarm establishments in December continued at the record level of 52 million- 1 million above a year ago. Reflecting increases in both the workweek and hourly earnings, weekly earnings in manufacturing rose further to $\$ 84.05$, which was 5 per cent higher than a year ago. Unemployment, at 2.5 million, was little changed from a month ago and a year ago.

## Distribution

The dollar volume of department store sales, after seasonal adjustment, continued close to the record volume reached in November. With sales at most other groups of stores also strong in December, seasonally adjusted total retail sales continued at the November record and were about

4 per cent above a year ago. Dealer deliveries of new autos rose moderately further, but were below the advanced rate of December 1955; dealer stocks also increased but remained substantially below a year earlier.

## Commodity Prices

The general level of wholesale commodity prices advanced further from mid-December to mid-January and was 4 per cent above a year ago. Average prices of industrial commodities continued to rise and prices of farm products were maintained.

Prices of various steel mill products were raised and in mid-January finished steel averaged about 10 per cent above a year earlier. Crude oil prices rose 12 per cent, mainly due to export demands, and gasoline and fuel oils increased. Cement, wool textiles, floor coverings, and some appliances also advanced, while scrap metals declined. Rail freight rates were raised at the yearend, the second increase of 6 per cent in 1956.

## Bank Credit and Reserves

Total loans and investments at city banks rose $\$ 1.7$ billion in December; three-quarters of the rise was in loans, mainly to business. Sales finance companies accounted for over half the rise in business loans. Holdings of United States Government securities increased as banks purchased new Treasury tax-anticipation bills in midDecember. In early January, bank credit declined substantially.
 exclude processed foods, included in total but not shown separately. Monthly figures, latest shown: November for consumer prices, and December for wholesale prices.

Member bank borrowing from the Federal Reserve declined to an average of $\$ 645$ million in the second half of December and early January and excess reserves rose to $\$ 715$ million. In late December System purchases of Government securities and the usual year-end rise in float supplied more reserves than were absorbed by an outflow of currency, an increase in Treasury balances at the Reserve Banks, and a rise in required reserves. Subsequently, an inflow of currency and decreases in Treasury balances and required reserves were offset only in part by System sales of Government securities and a decline in float.

## Security Markets

The yield spread between intermediate- and long-term Treasury bonds narrowed substantially in late December and the first week of January; yields on long-term issues advanced steadily to about 3.5 per cent and those on intermediate issues declined from more than 3.7 per cent to just over 3.5 per cent. Subsequently, yields on all Government bonds declined. Treasury bills declined nearly 20 basis points from the midDecember seasonal high of about 3.3 per cent. On January 11 the Treasury sold $\$ 1.6$ billion of June 24 tax bills to refund the maturing special bill sold for cash in October.

Yields on corporate bonds increased further during late December and early January, while those on State and local government bonds were relatively stable. Common stock prices changed little.

Tables on the following pages include the principal statistics of current significance relating to financial and business developments in the United States. The data relating to Federal Reserve Banks, member banks of the Federal Reserve System, and department store trade, and the consumer credit estimates are derived from regular reports made to the Board; production indexes are compiled by the Board on the basis
of material collected by other agencies; figures for gold stock, currency in circulation, Federal finance, and Federal credit agencies are obtained from Treasury statements; the remaining data are obtained largely from other sources. Back figures for 1941 and prior years for banking and monetary tables, together with descriptive text, may be obtained from the Board's publication, Banking and Monetary Statistics.

2

Latest averages shown are for week ending December 26. See p. 35.

${ }^{1}$ Rates shown also apply to advances secured by obligations of Federal intermediate credit banks maturing within 6 months.
Note.-Maximum maturities. Discounts for and advances to member banks: 90 days for discounts and advances under Sections 13 and 13a of the Federal Reserve Act except that discounts of certain bankers' accept-
ances and of agricultural paper may have maturities not exceeding 6 months and 9 months, respectively, and advances secured by obligations of Federal intermediate credit banks maturing within 6 months are Section $10(\mathrm{~b})$. Advances to individuals, partnerships, or corporations under the last paragraph of Section 13: 90 days.

FEDERAL RESERVE BANK OF NEW YORK DISCOUNT RATE ${ }^{1}$

| Apr. 7. | 3 | Nov. 18 | 21/2 |
| May 26. | $21 / 2$ | 1956-Apr. 13 | $23 / 4$ |
| Oct. 20 | 2 | Aug. 24. | 3 |
| 1934 -Feb. ${ }^{2}$ | $11 / 2$ |  |  |
| 1937-Aug. 27. | 1 | In effect Jan. 1, 1957. | 3 |

1 Under Secs. 13 and 13a, as described in table above.
${ }^{2}$ Preferential rate for advances secured by Govt. securities maturing or callable in 1 year or less in effect during the period Oct. 30, 1942 Apr. 24, 1946. The rate of 1 per cent was continued for discounts of and advances secured by eligible paper.
Note.-Repurchase rate on U. S. Govt. securities. In 1955 and 1956 this rate was the same as the discount rate except in the following periods Sept. 8, 2.15; Nov. 10, 2.375; and 1956-Aug. 24-29, 2.75.

| MARGIN REQUIREMENTS ${ }^{1}$ <br> [Per cent of market value] |  |  |  |
| :---: | :---: | :---: | :---: |
| Prescribed in accordance with Securities Exchange Act of 1934 | Feb. 20, Jan 4 1955 | Jan. 4, 1955Apr. 22, 1955 | $\begin{gathered} \text { Effec- } \\ \text { tive } \\ \text { Apr. } 23, \\ 1955 \end{gathered}$ |
| Regulation T: <br> For extensions of credit by brokers and dealers on listed securities............. | 50 | 60 | 70 |
| For short sales. <br> Regulation U: <br> For loans by banks on stocks. | 50 50 | 60 60 | 70 70 |

${ }^{1}$ Regulations $T$ and $U$ limit the amount of credit that may be extended on a security by prescribing a maximum loan value, which is a specified percentage of its market value at the time of extension; margin requirements are the difference between the market value (100\%) and the maxieffective after the close of business on those dates.

KINDS OF UNITED STATES CURRENCY OUTSTANDING AND IN CIRCULATION
[On basis of compilation by United States Treasury. In millions of dollars]

1 Outside Treasury and Federal Reserve Banks. Includes any paper currency held outside the continental limits of the United States. Totals for other end-of-month dates are shown in table above; totals for Wednesday dates in table on p. 36.
${ }_{2}$ Includes $\$ 156,039,431$ held as reserve against United States notes and Treasury notes of 1890.
${ }^{3}$ To avoid duplication, amount of silver dollars and bullion held as security against silver certificates and Treasury notes of 1890 outstanding is not included in total Treasury currency outstanding.

4 Less than $\$ 500,000$.
5 Because some of the types of currency shown are held as collateral or reserves against other types, a grand total of all types has no special ignificance and is not shown. See note for explanation of duplications.
Note.-There are maintained in the Treasury-(1) as a reserve for United States notes and Treasury notes of 1890 - $\$ 156,039,431$ in gold
bullion; (2) as security for Treasury notes of 1890 -an equal dollar amount in standard silver dollars (these notes are being canceled and retired on
receipt); (3) as security for outstanding silver certificates-silver in bullion and standard silver dollars of a monetary value equal to the face amount of such silver certificates; and (4) as security for gold certificates-gold bullion of a value at the legal standard equal to the face amount of United States and a first lien on all the assets of the issuing Federal Reserve Bank. Federal Reserve notes are secured by the deposit with Federal Bank. Federal Reserve notes are secured by the deposit with Federal Reserve agents of a like amount of gold certificates or of gold certificates and such discounted or purchased paper as is eligible under the terms of the Federal Reserve Act, or of direct obligations of the United States. Each Federal Reserve Bank must maintain a reserve in gold certificates of at least 25 per cent against its Federal Reserve notes in actual circula-
tion. Gold certificates deposited with Federal Reserve agents as collateral, and those deposited with the Treasurer of the United States as a redemption fund, are counted as reserve. Gold certificates, as herein used, includes credits with the Treasurer of the United States payable in gold certificates. Federal Reserve Bank notes and national bank notes are in process of retirement.

CONSOLIDATED CONDITION STATEMENT FOR BANKS AND THE MONETARY SYSTEM ${ }^{1}$
[Figures partly estimated except on call dates. In millions of dollars]

$\quad$ P Preliminary,
1 Revised.
1 Represents all commercial and savings banks, Federal Reserve Banks,
Postal Savings System, and Treasury currency funds (the gold account,
${ }^{+}$Revised. Postal Savings System, and Treasury currency funds (the gold account, Treasury currency account, and Exchange Stabilization Fund).
${ }^{2}$ Excludes interbank time deposits; U. S. Treasurer's time deposits, ${ }^{3}{ }_{3}$ Prioc to $;$ and deposits of Postal Savings System in banks.
${ }^{3}$ Prior to June 30 , 1947 , includes a small amount of demand deposits. 4 Demand deposits other than interbank and U. S. Govt., less cash items reported as in process of collection.
${ }^{5}$ Seasonally adjusted series begin in 1947 and are available only for last Wednesday of the month. For back figures, see Bulletin for March 1955, pp. 252-255, and this table in subsequent issues.

Note.-For description of statement and back figures, see Bulletin for January 1948, pp. 24-32. The composition of a few items differs slightly from the description in the BuLLETIN article: stock of Federal
Reserve Banks held by member banks is included in other securities and Reserve Banks held by member banks is included in other securities and in capital and miscellaneous accounts, net, and balances of the Postal
Savings System and the Exchange Stabilization Fund with the U. S. Savings System and the Exchange Stabilization Fund with the U.S. Treasury are netted against capital and miscellaneous accounts, net,
instead of against U.S. Govt. deposits and Treasury cash. Total deposits instead of against U. S. Govt. deposits and Treasury cash. Total deposits
and currency shown in the monthly Chart Book excludes foreign bank deposits, net, and Treasury cash. Except on call dates, figures are rounded to nearest $\$ 100$ million and may not add to the totals.

PRINCIPAL ASSETS AND LIABILITIES AND NUMBER OF ALL BANKS, BY CLASSES 1
[Figures partly estimated except on call dates. Amounts in millions of dollars]

Preliminary. $\quad r$ Revised.
1 All banks in the United States. All banks comprise all commercial banks and all mutual savings banks. All commercial banks comprise all nonmember commercial banks and all member banks including one bank in Alaska that became a member bank on Apr. 15, 1954, and a noninsured State member nondeposit trust company, but excluding three mutual savings banks that became members in 1941. Stock savings banks. Number of banks includes a few noninsured banks for which
asset and liability data are not available. Comparability of figures for lasses of banks is affected somewhat by changes in Federal Reserv and individual banks, and by mergers etc
and indivinal banks, 30 , 942 excludes reciprocal balances, which on Dec. 31,1942 , aggregated $\$ 513$ million at all member banks and $\$ 525$ million at all insured commercial banks.

3 Includes other assets and liabilities not shown separately.
For other footnotes see following two pages.

PRINCIPAL ASSETS AND LIABLLTTES AND NUMBER OF ALL BANKS, BY CLASSES—Continued
[Figures partly estimated except on call dates. Amounts in millions of dollars]

4 Beginning with Dec. 31, 1947, the all-bank series was revised as announced in November 1947 by the Federal bank supervisory agencies with total loans and investments of about $\$ 10$ million was added, and

8 banks with total loans and investments of $\$ 34$ million were transferred from noninsured mutual savings to nonmember commercial banks 5 Less than $\$ 5$ million.
For other footnotes see preceding and opposite pages.

${ }^{e}$ Partly estimated. Figures have been rounded to the nearest $\$ 10$ million.
${ }^{1}$ All commercial banks in the United States. These figures exclude data for banks in U. S. possessions except for one bank in Alaska that became a member bank on Apr. 15, 1954. During 1941 three mutual savings banks became member banks but are not included in all insured commercial banks or all commercial banks. Comparability of figures
for classes of banks is affected somewhat by changes in Federal Reserve membership, insurance status, and the reserve classifications of cities and individual banks, and by mergers, etc.
${ }^{2}$ Beginning June 30, 1948, figures for various loan items are shown gross (i. e., before deduction of valuation reserves); they do not add to the
total and are not entirely comparable with prior figures. Total loans total and are not entirely comparable with prior figures. Total loans For to be shown ne
For other footnotes see opposite page.

${ }^{1}$ Monthly and weekly yields are averages of daily figures for U.S. Govt. and corporate bonds. Yields of State and local govt. general obligations are based on Thursday figures; of revenue bonds, on Friday figures; and of preferred stocks, on wednesday hgures. Figures For are as of the end of the period, except for annual averages
and callable after 12 years, through Sept. 30, 1955, and those due or callable in $10-20$ years, beginning Oct. 1, 1955.
1955, the 3 per cent bond of February 1995.

4 Moody's Investors Service.
5 Includes bonds rated Aa and A, data for which are not shown separately. Because of a timited number of suitable issues, the number of corporate bonds in some groups has varied somewhat.

6 Dow-Jones and Co
7 Standard and Poor's Corporation. Ratio is based on 8 median yields in a sample of noncallable issues- 12 industrial and 2 public utility. ${ }^{1} 8$ Computed by Federal Reserve from data published by Moody's Investors Service.

SECURITY PRICES ${ }^{1}$

${ }^{1}$ Monthly and weekly data for U.S. Govt. bond prices and volume of trading are averages of daily figures; for other series monthly and weekly far are bioks (Sequities and Exchange Commission) and prices for coming stices for atl others.
${ }_{2}$ Seriay compos of fully taxable,
or first callable after 12 years through Sept. $30,1 / 255$, and bends beging

Oct. 1, 1955, those due or callable in 10-20 years.
${ }^{3}$ The $31 / 4$ per cent bond of 1978-83 and, beginning Feb. 1, 1955, and 3 per cent bond of February 1995.
${ }^{4}$ Prices derived from average yields, as computed by Standard and ${ }_{5}$ A
Average daily volume of trading in stocks on the New York Stock Exchange for a five and one-half hour trading day.

${ }^{1}$ Ledger balances of member firms of the New York Stock Exchange carrying margin accounts, as reported to the Exchange. Customers' debit carrying margin accounts, as reported to the Exchange. Customers' debit firm by other member firms of national securities exchanges and balances of the reporting firm and of general partners of the reporting firm. Balof the reporting firm and of general partners of the reporting firm. Balances are net for each customer-i.e, all accounts of one customer are from other lenders except member firms of national securities exchanges. Data are as of the end of the month, except money borrowed, which is as
of the last Wednesday of the month beginning June 1955.
2 Data, except as noted below, are for all weekly reporting member banks, which account for about 70 per cent of all loans to others for purchasing or carrying securities. Figures are for the last Wednesday of the month. Some loans for purchasing or carrying U. S. Govt. securities are included in column 5 after 1952; loans for that purpose are shown separately in column 4 for all weekly reporting member banks in 1952 and for New York and Chicago banks thereafter.

Preliminary.
${ }^{1}$ Figures are for all savings and loan associations in the United States. Data beginning 1950 are based on monthly reports of insured associa-
tions and annual reports of noninsured associations. Data prior to 1950 are based entirely on annual reports.

c Corrected.
Note.-Statistics revised, beginning Mar. 31, 1956, to reflect the expanded coverage and the new classification of agencies now reported in the Treasury Bulletin. The revised statement includes a larger number of agencies, and their activities are classified according to the type of fund they represent. Funds are combined in the table above, but are shown separately in the table on the following page. Classifications by supervisory authorities are those in existence currently. Where current Treasury compilations do not provide a detailed breakdown of loans, these items have been classified by Federal Reserve on basis of information about the type of lending activity involved.

1 Figures for trust revolving funds include interagency items. For all types of funds combined, loans by purpose and agency are shown on a gross basis; total loans and all other assets, on a net basis, i.e., after reserve for losses.
${ }_{2}$ Coverage changed from preceding period (see also "Note"). ${ }^{3}$ Less than $\$ 500,000$.
${ }^{4}$ Figures represent largely the Treasury loan to the United Kingdom, and through 1952 are based in part on information not shown in Treasury compilation
${ }^{5}$ Figure not published in Treasury compilation, but derived by Federal Reserve
${ }^{6}$ Includes investment of the Agricultural Marketing Act Revolving Fund in the banks for cooperatives; Treasury compilations prior to 1956 classified this item as an interagency asset and on that basis it had been 7 Fed from this table

Figures prior to 1951 are for the Panama Railroad Company. The Panama Canal Company, established in 1951, combined the Panama Railroad Company with the business activities of the Panama Canal For other prior to that time)
For other footnotes, see opposite page.

DETAILS OF FEDERAL FISCAL OPERATIONS
[On basis of Treasury statements and Treasury Bulletin unless otherwise noted. In millions of dollars]

n.a. Not available.

1 Corporation and estate and gift taxes are from Internal Revenue Service reports prior to July 1953. Excise taxes and nonwithheld individual taxes for that period are obtained by subtracting Internal Revenue Service data from appropriate monthly Treasury statement totals.
${ }^{2}$ Represents the sum of taxes for old-age insurance, railroad retirement, and unemployment insurance.
${ }^{3}$ For a description of components, see the 1957 Budget of the United States, pp. 1093-1102 and 1164-1165.
4 Includes stockpiling and defense production expansion not shown separately.
${ }_{5}$ Monthly figures prior to May 1956 are not fully comparable to the May and June figures and the fiscal year totals. Hence the monthly figures for fiscal year 1956 do not add exactly to the totals for that fiscal year. (For description see Treasury Bulletin, Table 3 of section on budget receipts and expenditures).

[^15]panies included in the survey account for over 90 per cent of total holdings
by these institutions. Data are complete for U.S. Govt. agencies and trust funds and Federal Reserve Banks.

NEW SECURITY ISSUES ${ }^{1}$
[Securities and Exchange Commission estimates. In millions of dollars]

PRevised.
1 Estinates of new issues sold for cash in the United States
2 Gross proceeds are derived by multiplying principal amounts or num-
ber of units by offering price.
3 Includes guaranteed issues.
4 Issuos not guaranteed.
${ }^{5}$ Represents foreign government, International Bank, and domestic
eleemosynary and other nonprofit organizations.
6 Estimated net proceeds are equal to estimated gross proceeds less cost
of flotation, i.e., compensation to underwriters, agents, etc., and expenses. 7 Represents proceeds for plant and equipment and working capital. 8 Represents proceeds for the retirement of mortgages and bank debt with original maturities of more than one year. Proceeds for retirement of short-term bank debts are included under the uses for which the bank debt was incurred.

10 Represents all issues other than those for retirement of securities.

${ }^{r}$ Revised.
1 Includes 26 companies in groups not shown separately, as follows: extile mill products (10); paper and atied products (15); miscellaneous (1). 2 includes 25 companies in groups not shown separately, as follows: building materials (12); transportation equipment other than automobile (6); and miscellaneous (7).

Note.-Manufacturing corporations. Sales data are obtained from Note.-Manufacturing corporations. Sales data are obtained from
the Securities and Exchange Commission; other data from published the Securities and
Railroads. Figures are for Class I line-haul railroads (which account for 95 per cent of all railroad operations) and are obtained from reports for 95 per cent of all railroad operations)
of the Interstate Commerce Commission.
Electric power. Figures are for Class A and B electric utilities (which account for about 95 per cent of all electric power operations) and are account for about 95 per cent of all electric power operations) and are
obtained from reports of the Federal Power Commission, except that
quarterly figures on operating revenue and profits before taxes are partly estimated by the Federal Reserve to include affiliated nonelectric opera-
Telephone. Revenues and profits are for telephone operations of the Bell System Consolidated (including the 20 operating subsidiaries and the Long Lines and General departments of American Telephone and Telegraph Company) and for two affiliated telephone companies, which together represent about 85 per cent of all telephone operations. Dividends are for the 20 operating subsidiaries and the two affiliates. Data are obtained from the Federal Communications Commission.

All series. Profits before taxes refer to income after all charges and before Federal income taxes and dividends. For detailed description of pp. $215-217$ of the BuLLETIN for March 1942 (public utilities); and p. 908 pp. 215-217 of the BULLETIN for March 1942 (public
of the Bulletin for September 1944 (electric power).

${ }^{c}$ Corrected. $\quad p$ Preliminary.
${ }^{1}$ Derived figures, which include negligible amount of farm loans held by savings and loan associations.

2 Derived figures, which include debt held by Federal land banks and Farmers Home Administration.
NoTE.-Figures for first three quarters of each year are Federal Reserve estimates. Financial institutions include commercial banks (including nondeposit trust companies but not trust departments), mutual savings banks, life insurance companies, and savings and loan associations.

Federal agencies include HOLC, FNMA, and VA (the bulk of the amounts through 1948 held by HOLC, since then by FNMA). Other Federal agencies (amounts small and separate data not readily available currently) are included with individuals and others.
Sources.-Federal Deposit Insurance Corporation, Federal Home Loan Bank Board, Institute of Life Insurance, Departments of Agriculture and Commerce, Federal National Mortgage Association, Veterans Administration, Comptroller of the Currency and Federal Reserve.

1 Obtained by subtracting instalment credit repaid from instalment credit extended.
Nore.-Monthly figures for the period January 1940-August 1956 are shown on pp. 1043-1054 of the BulLETIN for October 1956.

A discussion of the composition and characteristics of the data and
description of the methods used to derive the estimates are shown
in the Bullemin for January 1954, pp. 9-17. Estimates of instalment credit extended and repaid are based on information from accounting records of retail outlets and financial institutions and often include charges records of retail outlets and financial institutions and often include charges incurred under the instalment contract. Renewals and refinancing of loans, repurchases and resales of instalment paper, and certain other transrepaid without adding to the amount of credit outstanding.

SELECTED BUSINESS INDEXES
[Indexes, $1947-49=100$. The terms "adjusted" and "unadjusted" refer to adjustment of monthly figures for seasonal variation]

INDUSTRIAL PRODUCTION

## PRODUCTION

INDUSTRIAL PRODUCTION-Continued
[Federal Reserve indexes, 1947-49 average $=100$ ]

$p$ Preliminary. $r$ Revised.
1 Publication suspended pending revision.
Note.-A number of groups and subgroups include individual series not published separately, and metal fabricating contains the ordnance group in addition to the groups shown. Certain types of combat materiel
are included in major group totals but not in individual indexes for autos, farm machinery, and some other products, as discussed in the Bulletin for December 1953 , pp. 1269-1271.
For description and back figures see Bulletin for December 1953 pp. 1247-1293 and pp. 1298-1328, respectively.

${ }^{p}$ Preliminary
1 Monthly data are seasonally adjusted totals at annual rates.
Represents compensation for injuries, employer contributions to private pension and welfare funds, and other payments.
${ }^{3}$ Represents business and professional income, farm income, and rental income of unincorporated enterprise; also a noncorporate inventory valuation adjustment.

4 Represents government social insurance benefits, direct relief, mus-tering-out pay, veterans' readjustment allowances and other payments, as
well as consumer bad debts and other business transfers. ${ }^{5}$ Prior to 1952 includes employee contributions only; beginning January 1952, includes also contributions to the old-age and survivors insurance program of the self-employed to whom coverage was extended under the Social Security Act Amendments of 1950. Personal contributions are not included in personal income.
${ }^{6}$ Represents personal income exclusive of net income of unincorporated farm enterprise, farm wages, agricultural net interest, and net dividends paid by agricultural corporations.

Tables on the following pages include the principal available statistics of current significance relating to international capital transactions of the United States, foreign gold reserves and dollar holdings, and foreign central banks. Figures on international capital transactions of the United States are collected by the Federal Reserve Banks from banks, bankers, brokers, and
dealers in the United States in accordance with the Treasury Regulation of November 12, 1934. Other data are compiled largely from regularly published sources such as central bank statements and official statistical bulletins. Back figures for 1941 and prior years, together with descriptive text, may be obtained from the Board's publication, Banking and Monetary Statistics.

1 Currencies include demand obligations held in lieu of deposits
2 Represents principal of authorized loans, less loans not yet effective, repayments, the net amount outstanding on loans sold or agreed to be sold to others, and exchange adjustment.
${ }^{3}$ Excludes uncalled portions of capital subscriptions.
4 Loans to dependencies are included with member.
5 Includes also effective loans agreed to be sold but not yet disbursed.
6 Includes $\$ 198$ million in loans not yet effective.
7 Includes $\$ 168$ million not guaranteed by the Bank.
${ }^{8}$ U. S. Treasury bills purchased with proceeds of sales of gold.
9 Countries shown are those with cumulative net drawings of $\$ 10$ million or more on the latest date.
ocal currencies, less res ion for local currencies, less repurchases of such currencies with dollars.

PRINCIPAL ASSETS AND LIABILITIES OF CENTRAL BANKS

[^27]PRINCIPAL ASSETS AND LIABILITIES OF CENTRAL BANKS—Continued

[^28]5 Includes advance of 95.3 billion francs to Stabilization Fund.
Note.-All figures, including gold and foreign exchange, are compiled from official reports of individual banks and are as of the last report date of the month. For details relating to individual items, see BULLETIN for (February 1945), see BulLETIN for December 1946, p. 1424.

PRINCIPAL ASSETS AND LIABLLITIES OF CENTRAL BANKS—Continued

I Revised. $\quad$ Latest month available.
Fund less the represents the amount of the country's subscription to the Fund less the bank's local currency liability to the Fund.
${ }^{2}$ For last available reports for Czechoslovakia and Hungary (March and February 1950, respectively) see BuLLETIN for September 1950,
pp. 1262-1263.

PRINCIPAL ASSETS AND LIABILITIES OF CENTRAL BANKS-Continued

[^29][^30]PRINCIPAL ASSETS AND LIABILITIES OF CENTRAL BANKS-Continued

## ${ }^{5}$ Revised.

${ }^{1}$ On Mar. 1, 1956, gold revalued from 0.0423177 to 0.0148112 grams of fine gold per guarani.

2 This figure represents the amount of the country's subscription to the Fund less the bank's local currency liability to the Fund.
${ }^{3}$ Includes small amount of nongovernment bonds.
Note.-All figures, including gold and foreign exchange, are compiled from official reports of individual banks and are as of the last report date of the month.

BOUNDARIES OF FEDERAL RESERVE DISTRICTS AND THEIR BRANCH TERRITORIES

Legend
——Boundaries of Federal Reserve Districts _Boundaries of Federal Reserve Branch Territories (3) Board of Governors of the Federal Reserve System
© Federal Reserve Bank Cities

- Federal Reserve Branch Cities

[^0]:    Note.-This, the second of a series of articles reporting the findings of the Agricultural Loan Survey made in 1956 by the Federal Reserve System, was prepared by Raymond J. Doll, Agricultural Economist of the Federal Reserve Bank of Kansas City. The first article was published in the Federal Reserve Bulletin for November 1956.

    Data for the Survey are from a sample of about 1,600 insured commercial banks in all major areas of the United States. Nonmember banks as well as member banks of the Federal Reserve System reported in the Survey.

[^1]:    1 Loans are classified under the nearest maturity listed-for example, 5 -month and 7 -month loans are included with 6 -month loans.

    Note.-Details may not check because of rounding.

[^2]:    ${ }^{1}$ Demand notes were all classified as single-payment notes in the

[^3]:    Note.-Statement by William McChesney Martin, Jr., Chairman, Board of Governors of the Federal Reserve System, before the Subcommittee on Economic Stabilization of the Joint Economic Committee of Congress, December 11, 1956.

[^4]:    ${ }^{1}$ Each Federal Reserve Bank has a board of directors consisting of nine members, divided into three classes, designated as Classes A, B, and C. The six A and B directors are elected by the member banks, and the three C directors are appointed by the Board of Governors. The terms of two of the elected directors and one of the appointed directors expire at the end of each year.

[^5]:    ${ }^{3}$ Federal Reserve Bank branches have either five or seven directors, of whom a majority are appointed by the Board of Directors of the parent Federal Reserve Bank, and the others are appointed by the Board of Governors of the Federal Reserve System. One of the directors appointed by the Board of Governors at each branch is designated annually as Chairman of the Board in such manner as the Federal Reserve Bank may prescribe.

[^6]:    ${ }^{1}$ For statement concerning appointment of branch directors, see page 25 , footnote 2 .

[^7]:    1 Includes $\$ 268,000$ net profits in 1956 and $\$ 506$ net losses in 1955

[^8]:    ${ }_{2}^{1}$ After deducting $\$ 16,000$ participations of other Federal Reserve Banks. ${ }^{2}$ After deducting $\$ 211,344,000$ participations of other Federal Reserve
    ${ }^{3}$ After deducting $\$ 35,557,000$ participations of other Federal Reserve Banks.

[^9]:    ${ }^{r}$ Revised.
    ${ }^{1}$ Preliminary. Boston Philadelphia Chicago Detroit, San Francisco, and Angeles.

[^10]:    2 Includes gross mortgages with no deduction for mortgage pledged shares.
    ${ }_{4}^{3}$ Net of mortgage pledged shares. investments, real estate owned and sold on contract, and office building and fixtures.

[^11]:    For other footnotes, see opposite page.
    8 Effective July 1, 1954, the public war housing program of the PHA (represented largely by land, structures, and equirment) and several small housing programs managed by the Office of the Administrator, by the Office of the Administrator of the Housing and Home Finance

[^12]:    Agency, shown under Other.
    9 signed Feb. 27, 1953, and lend-lease and surplus property balances due the United States in the principal amount of $\$ 2,254$ million.

    11 Figative figure; less than $\$ 500,000$.

[^13]:    $r$ Revised.
    Includes the Postal Savings System.
    which amound insular possessions
    which amounted to $\$ 250$ million on June $30,1956$.

[^14]:    3 Includes savings and loan associations, dealers and brokers, foreign accounts, corporate pension funds, and nonprofit institutions.
    Note.-Reported data for Federal Reserve Banks and U. S. Govt. agencies and trust funds; Treasury Department estimates for other groups.

[^15]:    ${ }^{1}$ Direct public issues.
    ${ }^{2}$ Includes minor amounts of Panama Canal and Postal Savings bonds.
    Nore.-Commercial banks, mutual savings banks, and insurance com-

[^16]:    1 Corporate and noncorporate business, excluding agriculture.

    3 Includes communications and other.
    4 Anticipated by business.

[^17]:    ${ }^{p}$ Preliminary.
    1 Represents all banks in the United States and rossessions.
    2 Includes loans held by nondeposit trust companies but exciudes holdings of trust departments of commercial banks. March and September figures are Federal Reserve estimates based on data from Member
    Bank Call Report and from weekly reporting member banks.
    ${ }^{3}$ Figures for 1941 and 1945, except for the grand total, are estimates
