Subscription Price of Bulletin

A copy of the Federal Reserve Bulletin is sent to each member bank without charge. The subscription price in the United States and its possessions, Bolivia, Canada, Chile, Colombia, Costa Rica, Cuba, Dominican Republic, Ecuador, Guatemala, Haiti, Republic of Honduras, Mexico, Nicaragua, Panama, Paraguay, Peru, El Salvador, Uruguay, and Venezuela is \$6.00 per annum or 60 cents per copy; elsewhere \$7.00 per annum or 70 cents per copy. Group subscriptions in the United States for 10 or more copies to one address, 50 cents per copy per month, or \$5.00 for 12 months.

Business Financing in Early 1957

BUSINESS SPENDING AND BORROWING have continued at high levels in the first half of 1957, but the composition of outlays and the patterns of financing have changed. While expenditures for plant and equipment have been maintained, purchasing for inventories has been curtailed, and corporate income tax payments have been smaller than in early 1956. Profits and depreciation allowances have provided a larger share of the funds needed to finance outlays, and borrowing in capital markets, at record levels in early 1957, has also been a more important source of business funds than last year. Borrowing from banks, on the other hand, has moderated, and reductions in corporate liquid asset balances have been smaller than a year ago.

Outlays for modernization and expansion of production facilities have continued close to the record rate reached late last year, and about one-ninth larger than in early 1956. Spending plans reported to the Department of Commerce and the Securities and Exchange Commission suggest a high level of such expenditures over the balance of 1957.

Outlays for additions to inventories have been small, however, in contrast to the substantial increase in inventories in early 1956. Payments of Federal income taxes have been heavy, as is usual in the first half of the year, but have exerted less pressure on available corporate funds than a year ago. While tax liabilities showed little change from 1955 to 1956, an increased share of the taxes owed on 1956 incomes was paid in

September and December of last year, in accordance with the schedule of accelerated tax payments adopted by the Federal Government in 1954.

Shifts in the composition of business outlays have been accompanied by increased reliance on funds available from current

CORPORATE NEW CAPITAL ISSUES
Half-years, in billions of dollars

NOTE.—Securities and Exchange Commission estimates except for 1957, which includes a Federal Reserve estimate for the second quarter. New capital issues include all offerings other than those for retirement of securities.

operations and on funds obtained through long-term borrowing in capital markets. Profits have remained close to the very high levels reached in the fourth quarter of 1956, and depreciation allowances have continued to grow. Corporate flotations of securities for new capital have been in larger volume than last year, as may be seen in the chart. In contrast, the expansion of business loans at commercial banks in the first five months of 1957 was much smaller than a year ago, and reductions in corporate holdings of cash

and United States Government securities were more moderate than in early 1956.

BUSINESS INVESTMENT

Business expenditures on new plant and equipment are estimated at \$18.2 billion in the first half of 1957, compared with \$16.3 billion in the same period of 1956. Most major industrial groups have spent more this year, with the sharpest increases reported by public utilities, railroads, and industries producing primary metals, machinery, transportation equipment other than motor vehicles, and chemicals. All of these industries had increased their outlays for facilities substantially in 1956, and many of them are engaged in long-range expansion programs that call for a high level of capital expenditures for some time to come.

More moderate increases have occurred in other industries, such as paper and paper products, where expansion programs last year appear to have brought capacity into better balance with current demand. Motor vehicles producers, whose capital outlays rose sharply last year, have spent less this year for new plant and equipment, as have textile producers and commercial establishments.

In contrast to the continued high rate of spending for fixed capital, the rate of additions to business inventories has decreased substantially. A number of the incentives which stimulated inventory accumulation in early 1956 appear to have been less strong this year. Continued expansion of plant has required some further growth in stocks, and the possibility of price increases for some basic materials may again be influencing purchasing decisions. Supply shortages are apparently not widely expected, however, and financing of inventory additions has become more expensive.

Reflecting changes in demand and supply pressures, manufacturers of durable goods reduced their stocks of purchased materials in the first quarter of 1957, compared with an increase a year ago. Their inventories of finished goods and goods in process of fabrication, however, continued to rise, as can be seen from the table, with the increase somewhat more rapid than in early 1956.

BOOK VALUE OF MANUFACTURING AND TRADE INVENTORIES

[Seasonally unadjusted, in billions of dollars]

Trade				
Wholesale.....	13.1	—0.2	0.3	—0.3
Retail.....	24.3	1.9	2.1	—1.0

NOTE.—Department of Commerce data, without adjustment to remove seasonal variation or the effect of price changes on inventory values. Details may not add to totals because of rounding.

Additions to retail inventories, although substantial, were slightly less than is usual at this time of year and wholesale inventories declined, in contrast to the rise in the first quarter of 1956. These inventory trends continued through April. Manufacturing and trade inventories at the end of the month were virtually unchanged from the March level, compared with a rise of \$800 million in April 1956.

Seasonal needs and rising prices appear to have accounted for all of the increase in book values of business inventories this year. Department of Commerce estimates indicate that, after allowance for price changes and usual seasonal variations, the physical volume of nonfarm business inventories declined in the first quarter of 1957, the first reduction in physical stocks since late 1954.

OTHER OUTLAYS

Federal income tax payments, a major use of corporate funds in the first half of the year, have been about one-tenth smaller in 1957 than a year ago. The reduction reflects changes in the tax payment schedule, rather than a decline in total tax liabilities. Under the present schedule, most corporations paid 20 per cent of their tax liabilities on last year's incomes in the second half of 1956, leaving 80 per cent to be paid in March and June of this year. At the beginning of 1956, 90 per cent of the liabilities on the previous year's income remained to be paid. Corporate payments of Federal income taxes, which amounted to almost \$9 billion in the first three months of 1956, totaled a little over \$8 billion in the same period of this year.

Customer financing appears also to have been a somewhat smaller drain on corporate funds this year. Although some businesses have increased the trade credit extended to business customers, financing of consumer purchases by merchants and by finance companies has expanded less rapidly than in 1956.

Dividend payments have been larger than in early 1956, but the rate of increase has slowed appreciably. Payments in the first four months of this year were 4 per cent larger than a year ago; payments in the

same period of last year were 15 per cent higher than in early 1955.

FINANCING FROM INTERNAL SOURCES

Funds from operations, that is, profits before taxes and depreciation allowances, have supplied a greater proportion of corporate financing needs this year than they did in early 1956. A smaller volume of funds, however, has been obtained from reductions in corporate holdings of cash and United States Government securities. Corporate liquidity has declined this year, but the drop has been more moderate than in the first half of 1956.

Corporate profits. Profits in early 1957 were about 6 per cent larger than a year earlier. Increases were reported in almost all industrial groups, with the sharpest gains among producers of electrical equipment, machinery, transportation equipment other than motor vehicles, and petroleum. Lower profits were reported in the textile, paper, and building materials industries and by air transport companies. For all corporations combined, profits before taxes are estimated to have been at a seasonally adjusted annual rate of \$46.5 billion in the first quarter of the year, close to the high levels reached in the final months of 1956, as may be seen in the chart on the following page. •

The sharp rise in profits in the fourth quarter of last year, following a decline over the first three quarters, reflected improvements in sales and in profit margins from reduced third quarter levels. The most marked improvement was in manufacturing industries, where both sales and profits in the third quarter had been adversely affected by the steel strike and by curtailment of automobile production. For the year 1956, profits of manufacturing companies as a

CORPORATE PROFITS BEFORE TAXES

Billions of dollars

NOTE.—Seasonally adjusted annual rates. Department of Commerce estimates except first quarter of 1957, which is estimated by the Council of Economic Advisers.

group were slightly larger than in the previous year.

According to data compiled by the Federal Trade Commission and the Securities and Exchange Commission, the ratio of profits after taxes to sales for manufacturing corporations was slightly less last year than in 1955, but was higher than in any other year since 1950. Declines in profit margins from 1955 to 1956 were reported mainly in industries in which production was curtailed either because of work stoppages, such as occurred in the iron and steel and electrical machinery industries, or because of reduced consumer buying, such as affected the motor vehicles and certain building materials industries.

Reflecting the predominance of large producing units in most industries where profit margins declined last year, the ratio of profits to sales declined for large manufacturing corporations as a group. Profit margins for small manufacturing companies, in contrast, increased. Data now available for the first quarter of 1957 indicate that

profit margins of manufacturing corporations continued at the levels of late 1956.

Liquid assets. With Federal income tax payments concentrated in March and June, corporations in recent years have reduced their holdings of cash and United States Government securities in the first half of the year, and added to them in the second half. Reductions in liquid asset balances in 1957 appear to have been moderate, especially in comparison with the decline of nearly \$8 billion in the first half of 1956. Corporate accumulation of liquid assets in the second half of 1956 was also smaller than a year earlier. In part, more moderate seasonal fluctuations in corporate liquid asset holdings over the past twelve months reflect the trend toward a more even distribution of scheduled tax payments.

Corporate liquidity, as measured by the ratio of cash and United States Government securities to total current liabilities, has probably declined somewhat further since the end of 1956. In the first half of last year, the ratio fell sharply, from 54 to 48 per cent.

EXTERNAL FINANCING

Total business borrowing has continued in large volume this year, as a rise in financing through security flotations has offset the reduction in borrowing from commercial banks. The volume of corporate security issues was nearly one-third larger in the first half of 1957 than the previous record volume of a year ago. Business loans at commercial banks, on the other hand, rose only \$100 million in the first five months of 1957, compared with an increase of \$1.6 billion in the same months of 1956. In many earlier years, business loans had declined over these months.

Bank loans. In early 1957, as in early 1956, business loans at commercial banks declined in January and rose sharply around the corporate income tax payment date in March. The decline in January this year, which followed a large increase in loans in December, was more than double the decline a year earlier. Loan expansion in March 1957, while substantial, was somewhat less than in March 1956, when corporate income tax payments were larger. Business loans declined slightly in April and May this year, in contrast to an increase over this two-month period in each of the two preceding years.

Moderate growth in bank loans to business this year reflects reduced use of bank credit by most major industrial groups. Information available from a sample of weekly reporting banks, shown in the chart, indicates that metal manufacturers borrowed only two-thirds as much this year as in the first five months of 1956, when substantial inventory accumulation, sharp increases in capital spending, and a record volume of tax payments exerted heavy pressure on available funds. Petroleum, chemical, and rubber companies borrowed only one-third as much as last year. Reduced loan expansion has been accompanied by a larger volume of security issues in these industries.

Among industries that generally repay bank debt in the early months of the year, such as food processors and commodity dealers, loan repayments were exceptionally heavy this year. Seasonal borrowing by these industries in late 1956 was also much larger than usual.

Public utilities borrowed less from banks around the March income tax date this year than in 1956, but over the full five month period, January-May, their bank loan ex-

BUSINESS LOANS OF BANKS

Cumulative change during year, millions of dollars

NOTE.—Monthly changes in large loans reported by a sample of more than 200 weekly reporting banks. Changes in 1956 are cumulative from Dec. 28, 1955; in 1957, from Dec. 26, 1956.

pansion was about one-tenth greater than last year. Sales finance companies have also increased their use of bank credit in 1957. In the early months of 1956, finance companies repaid bank debt, on balance.

Security issues. Corporate security issues for new capital in the first six months are estimated at a record volume of about \$6.5 billion, compared with \$5 billion in the same months of 1956. The volume of new issues was particularly heavy in the first quarter of this year, when almost \$3.5 billion of new securities were offered. In recent months, the new issue volume has been somewhat smaller, though still large in comparison with earlier periods.

Financing by public utility industries has accounted for almost half of all corporate security offerings this year, a greater proportion than in 1955 or 1956. Reflecting a sharp expansion in planned capital spending programs of utility companies, as well as their practice of financing a major share of capital outlays through security issues, the volume of new securities offered by utility companies has been half again as large as in 1956.

Security flotations by manufacturing companies have also exceeded last year.

Large increases in capital market financing have occurred in the metals and petroleum industries where bank loan expansion has been more moderate than in 1956. Finance companies, on the other hand, have reduced the volume of their security flotations, and met more of their financing needs this year through bank loans.

As has been typical of corporate financing throughout the postwar period, flotations of debt securities have accounted for the bulk of all new security offerings thus far in 1957. Offerings of common stock have been in larger volume than last year, and have accounted for a greater proportion of all security flotations, but offerings of preferred stock have been relatively less important than a year ago. All of the increase in new corporate bond issues has been in issues offered for public sale, rather than in securities placed directly with institutional investors.

Despite the record volume of publicly offered debt this year, market yields on corporate bonds declined in January and February and did not return to their previous peaks until early June. In part, the excellent market reception accorded corporate bond flotations in the early months of 1957

STOCK AND BOND YIELDS

Per cent per annum

NOTE.—Moody's Investor Service data for 200 common stocks and 30 Aaa corporate bonds. Stock yields are as of

the end of the month. Bond yields are monthly averages of daily figures. Annual data shown are for December.

reflected the availability of a large volume of funds withdrawn from other investments. Net redemptions of United States savings bonds, for example, amounted to \$700 million, compared with \$200 million in the first quarter of last year. The narrow spread between stock and bond yields also encouraged the flow of investment funds into the corporate bond market.

At the beginning of the year, the spread between bond and stock yields was the narrowest in the postwar period, as can be seen from the chart. The spread widened over the first quarter of the year, as yields on high-grade outstanding corporate bonds

dropped from 3.79 to 3.66 per cent, while yields on common stocks increased.

Since March, the yield spread has narrowed again. Renewed optimism in the stock market has resulted in an increase in common stock prices and a decline in common stock yields. At the same time, continued heavy flotations of corporate bonds have pressed against the available supply of investment funds, and yields on new bond issues have risen sharply. Yields on outstanding bonds have also increased, and reached a new postwar peak in mid-June, but the spread between new and outstanding bonds has widened considerably.

Survey of Common Trust Funds, 1956

THE AGGREGATE MARKET VALUE of the investment holdings of 243 common trust funds at the end of 1956 was \$1,974 million. Holdings increased \$106 million during the year, or less than half the growth in the preceding 12-month period. The smaller expansion in 1956 resulted from smaller additions from new participations, larger withdrawals, and from a net decline in the market value of investments in contrast with appreciation in 1955. These are the findings of the second Annual Survey of Common Trust Funds conducted by the Board of Governors of the Federal Reserve System as part of a program to provide information concerning the uses made of principal accumulations of savings.¹

The 1956 Survey was expanded to include all common trust funds operated by banks and trust companies in the United States and possessions administered under subsection (c) of Section 17 of Regulation F; complete coverage was obtained. Funds not included in the 1955 Survey—the 24 funds in operation less than 12 months on January 31, 1956, and two Hawaiian funds—have been included in the 1956 Survey.

The terminal date for each fund in the current Survey was the valuation date falling in the fourth quarter of the calendar year. Accordingly, figures for 51 funds that reported as of their January 1956 valuation date in the 1955 Survey cover only a nine-month period in the current Survey. In

¹ This article was prepared by Robert L. Hill of the Board's Division of Bank Operations with the collaboration of the Division of Examinations. Results of the first Survey appeared in the BULLETIN for August 1956, pp. 800-805.

future surveys the reporting period of funds other than new ones will cover 12 months. Holdings of funds that began operations during 1956 are included in tabulations of end-of-year figures and also in the tabulations of purchases and sales; the cash and United States Government nonmarketable securities contributed by the participating accounts on the starting date of the new funds are included in the tabulations of net additions to principal.

For classification purposes, a discretionary common trust fund is one in which all investments are made in the discretion of the trustee. Such investment power may be derived from a State statute (e.g., based on the prudent-man principle) or from the instruments creating the individual fiduciary accounts investing in the common trust fund. A legal common trust fund is one in which all or part of its investments are restricted to specific investments or classes of investments designated by a State statute as legal for the investment of trust funds, or one in which investment in nonlegal securities is limited by statute to a given percentage of the fund. The limitations on their investments in nonlegal securities range from 30 per cent to 50 per cent of the market value (in one State, inventory value) of the fund.² The majority of the funds classi-

² There are only two funds in the Survey operating under statutes requiring a minimum of 50 per cent of the investments to be in legal investments. These funds are classified as legal although technically 50 per cent of such funds may be invested in the discretion of the trustee; to insure compliance with the law, over half of the assets of such funds are held in legal investments.

¹ Survey of common trust funds operated under Sec. 17(c) of Regulation F of Board of Governors. Except for funds that reported as of a January 1956 valuation date in the 1955 Survey and funds beginning operation during 1956, data are for 12 months; terminal dates range from Oct. 1, 1956, through Dec. 31, 1956. The 1955 figures shown above include data for funds excluded from end-of-period figures published in the 1955 Survey (funds in operation less than 12 months on Jan. 31, 1956, and funds in United States possessions) and minor statistical revisions.

² Nonmarketable U. S. Government securities are valued at cost and other holdings at market value. Purchases are shown at cost

and sales at proceeds realized. Conversions and exchanges of securities are treated as sales of securities surrendered and purchases of securities received. Stock rights held at beginning or end of reporting period are included in appropriate investment category at market value. Proceeds from sales of such rights are included in proceeds from sales of securities during period. Details may not add to totals because of rounding.

³ Quasi-Government agencies, and Canadian government and corporations.

⁴ Less than .05 of one per cent.

⁵ Less than \$50,000.

fied as legal in this Survey are of the limited type. A special common trust fund is one that is restricted by plan or institutional policy to one type or class of investment, i.e., fixed-income investments, bonds, or common stocks; it may be either discretionary or legal.

INVESTMENT ACTIVITY

Gross investment transactions of common trust funds, shown in Table 1, totaled \$603

million in 1956 as compared with \$578 million in 1955; purchases were practically unchanged, but sales and redemptions were larger than in the preceding year. There was a decline in the activity or turnover of the aggregate portfolio, although bond turnover was greater than during the earlier period.⁸ The higher turnover of

⁸ For this purpose, activity or turnover is measured by dividing the average of gross purchases and gross sales by the average of holdings at the beginning and end of the reporting period.

bonds resulted largely from the practice of using United States Government securities as temporary investments; however, there also appeared to be some movement out of United States Government securities into

other classes of investment, as indicated by the estimated distribution of new money coming into the funds during 1956.

The net amount of new money coming into the common trust funds during 1956

was \$119 million, \$26 million less than in the preceding period. It is estimated that 55 per cent of this new money was invested in bonds, 16 per cent in common stocks, 17 per cent in preferred stocks, and 6 per cent in real estate loans and savings accounts, while 5 per cent was held in cash. Compared with 1955, this represented a decline in the proportion invested in bonds and an increase in cash holdings, real estate loans, and savings accounts; proportions invested in preferred and common stocks remained approximately the same.

GROWTH

New funds were started during 1956 in five States—Arizona, Arkansas, North Dakota, Rhode Island, and South Carolina—that previously had no common trust funds. Throughout the United States 21 new funds were created during the year, as shown in Table 4; their aggregate holdings at the year-

end amounted to \$20 million. On December 31, 1956, there were 243 funds operating in 40 of the 49 jurisdictions (47 States, the District of Columbia, and Hawaii) that permit common trust funds. The number of fiduciary accounts that have been invested in these common trust funds increased approximately 8,000 during the year and totaled nearly 93,000 at the end of the period.

The size of individual funds, in general, changed little during 1956, although the market value of a larger number of funds decreased during 1956 than in 1955. This was due largely to the decline in market value of fixed-income assets as evidenced by the relatively larger decrease in market value of legal funds. Most legal funds are restricted by State law in the amount that may be invested in common stocks; on the other hand, discretionary funds are without statu-

³ See Table 1, note 2.

tory limitation. In the aggregate, common stocks accounted for 32 per cent of the assets of diversified legal funds as compared with 54 per cent of the assets of diversified discretionary funds.

In recent years eight banks have established "dual funds," one of which is invested primarily in fixed-income assets and the other in common stocks. Such arrangements permit participation in either or both funds in accordance with the needs and requirements of the individual fiduciary accounts. Dual funds are classified as special funds in the Survey.

DISTRIBUTION

During the two years covered by the Surveys, the number of common trust funds

increased in all geographic sectors. During 1956 the largest numbers of new funds—seven and five—were started in Pennsylvania and California, respectively.

Approximately 60 per cent of the common trust fund assets are held by funds in the Boston, New York, and Philadelphia Federal Reserve Districts; these funds comprise 44 per cent of the total number of funds, as shown in Table 6. In a dollar-size ranking of States, Pennsylvania is largest, with common trust fund assets totaling \$567 million; New York second, with \$430 million; and Massachusetts third, with \$175 million. These three States rank in the same order in terms of number of funds—with 38, 37, and 17 funds, respectively, as shown in Table 7.

1957 Survey of Consumer Finances

Housing and Durable Goods

CONSUMERS PURCHASED about as many new and existing houses in 1956 as in 1955, but somewhat fewer major household goods, according to the Survey of Consumer Finances. Purchases of new and used automobiles declined sharply from the record levels established in 1955, but exceeded those in any earlier year. In dollar amounts, purchasers of houses, automobiles, and major household equipment spent more in 1956 on the average than a year earlier.¹

The number of consumers owning homes and automobiles increased from 1955 to 1956, continuing the steady rise that has prevailed throughout most of the postwar period. The number of home owners increased about two-fifths from early 1949 to early 1957, and the proportion of all spending units owning homes increased from 44 to 54 per cent.²

Automobile ownership has also become

more widespread. The proportion both of spending units owning one car and of those owning two or more cars increased substantially from early 1949 to early 1957. Early this year, consumers not only owned a larger number of cars, but owned on the average much newer and better equipped cars than in early 1949.

Consumer purchases of homes, automobiles, and household durable goods during the last decade have been accompanied by a sharp rise in consumer debt. The proportion of all spending units with mortgage debt increased from one-fifth to three-tenths from early 1949 to early 1957, while the proportion with short- and intermediate-term consumer instalment debt rose from one-fifth to almost one-half. The average debt owed also rose markedly.

HOUSES

About 5 per cent of all nonfarm spending units purchased houses for their own occupancy in 1956, according to the Survey of Consumer Finances. Two-thirds of these purchases were existing houses. One-third of the consumers who bought new and existing houses in 1956 sold another house at the time of the purchase. These consumers bought higher priced houses than other purchasers. As might be expected, the proportion that sold another house at time of purchase increased with the age and income of the head of the spending unit.

The median (middlemost) income of

¹ This is the second of a series of articles presenting the findings of the 1957 Survey of Consumer Finances conducted by the Board of Governors of the Federal Reserve System in cooperation with the Survey Research Center of the University of Michigan. The first article appeared in the March Federal Reserve BULLETIN. The present article was prepared by Alfred P. Johnson of the Consumer Credit and Finances Section of the Board's Division of Research and Statistics. Work at the Survey Research Center was under the supervision of James N. Morgan.

² A spending unit, as defined in the Survey, consists of all related persons living together who pool their incomes. Husband and wife and children under 18 living at home are always considered to be members of the same spending unit. Other related persons in the household are separate spending units if they earn more than \$15 per week and do not pool their incomes.

purchasers of new and existing homes in 1956 was \$5,640. Purchasers paid a median price of \$12,000, compared with a median price of \$10,000 in 1955. As in other recent years, more than four-fifths of the purchasers incurred mortgage debt. In early 1957, the median mortgage debt of 1956 purchasers who used credit was \$8,500.³

Changes in the market for houses. Throughout most of the period since World War II the demand for housing has been at high levels. One factor underlying this demand has been the backlog of housing needs carried over from the depressed 1930's and the war years of the 1940's. Population increases, a high rate of family formation, mobility of families, movement to larger, better equipped homes, access to mortgage credit on liberal terms, and rising consumer incomes have also been important.

TABLE 1

INCOME OF NONFARM SPENDING UNITS AND HOUSE PURCHASERS, 1947-49 AND 1954-56

[Percentage distribution]

Income before taxes in 1954-56 dollars ¹	Spending units		House purchasers ²

All income groups.	100	100	100	100
Median ³	\$4,140	\$3,210	\$5,740	\$4,060

¹ Income refers to total money income before taxes. Figures are based on average income for 1947-49 and for 1954-56, with those for 1947-49 converted to 1954-56 dollars by adjusting reported incomes in accordance with changes in the Bureau of Labor Statistics index of consumer prices.

² Includes purchases of new and existing houses.

³ Interpolated from bracket amounts.

³ It should be emphasized that the data relating to house purchasers in 1956 are based on an extremely small sample and, therefore, that the sampling errors associated with these estimates are relatively large.

The upward shift in income distributions of all nonfarm spending units and of house purchasers, shown in Table 1, has been associated with the general rise in consumer income. After allowing for changes in the level of consumer prices, the proportion of all nonfarm spending units receiving the equivalent of \$5,000 or more in 1954-56 dollars increased from one-fifth in 1947-49 to almost two-fifths in 1954-56.

Purchasers of nonfarm houses in the 1954-56 period also had substantially larger incomes than their counterparts in the early postwar period, measured in terms of 1954-56 dollars. The proportion of house purchasers with incomes, thus measured, of \$5,000 and over increased from one-third in 1947-49 to three-fifths in 1954-56.⁴

Prices (in current dollars) of new and existing houses have increased markedly since the early postwar period. Table 2 shows that only one-fourth of the spending units that purchased houses in 1947-49 paid \$10,000 or more, compared with about three-fifths of all nonfarm spending units that purchased houses during 1954-56. The price advance has differed for new and existing houses. In the new house market, higher prices have reflected steady increases in construction costs, which totaled about one-fourth between 1948 and 1956, and the building of larger, better equipped houses. For existing houses, most of the price rise occurred between 1947 and 1952; since then existing house prices have shown relatively little change.

⁴ House purchase estimates for any one year are subject to relatively large sampling errors because of the small number of house purchasers included in the Survey sample for each year. In order to reduce sampling errors somewhat, data for house purchasers were combined and averages for two periods—1947-49 and 1954-56—were used. The house purchase estimates were based on about 450 cases in each 3-year period.

TABLE 2

HOUSE PURCHASES CLASSIFIED BY PRICE AND MORTGAGE DEBT, 1947-49 AND 1954-56 ¹

[Percentage distribution of new and existing nonfarm houses purchased]

All cases.....	100	100	100	100
Median ⁴	\$11,390	\$6,970	\$7,920	\$5,070

¹ Figures are based on averages of estimates of new and existing house prices and mortgage debt in 1947-49 and 1954-56. Debt is mortgage debt outstanding at time of interview (early in the year following year of purchase).

² No cases reported or less than one-half of 1 per cent.

³ Amount assigned, not determined in interview.

⁴ Interpolated from bracket amounts.

Larger mortgage debts were incurred by nonfarm house purchasers in 1954-56 than in 1947-49. About three-fourths of the purchasers in the recent period incurred mortgage debt of \$10,000 or more, compared with less than one-tenth in the earlier period. The expansion in the amount of mortgage debt incurred is related to the increase in house prices as well as to the more liberal downpayment and maturity provisions in effect during the recent period.

Changes in housing status. The large number of houses constructed and sold during recent years has brought about a marked change in the housing arrangements of consumers. The proportion of all nonfarm spending units owning homes increased from 44 per cent in early 1949 to 54 per cent in early 1957, and the number of homes owned rose from 20 to 28 million.⁵

⁵ After allowing for conceptual differences, the Survey of Consumer Finances estimate of the proportion of all spending units owning homes in early

The recent growth in home ownership was concentrated largely among spending units with incomes of \$5,000 or more in 1956 dollars. In early 1957, 79 per cent of all nonfarm spending units with incomes of \$7,500 or more, and 64 per cent of those with incomes of \$5,000-\$7,499, were home owners, as shown in the chart. The corresponding figures in early 1949 were 69 per cent and 55 per cent. In part as a result of the movement of spending units into higher income groups from early 1949 to early 1957, consumers with incomes of \$5,000 or more owned more than one-half of all nonfarm houses early this year, compared with only three-fourths in the earlier period.

HOME OWNERSHIP

Percentage of income group
(income before taxes in 1956 dollars)

NOTE.—Income refers to total money income before taxes in year preceding the Survey. Income for 1949 converted to 1956 dollars by adjusting reported incomes for changes in the Bureau of Labor Statistics index of consumer prices.

Home ownership, in general, is related to age as well as to level of income. Home ownership increased from early 1949 to early 1957 in all groups headed by persons over 24 years of age. In the group headed by persons 25-34 years of age the propor-

1957 corresponds closely with the proportion of household units owning homes estimated in a survey conducted by the Bureau of the Census in the summer of 1956. For a presentation of the findings of the Census survey, see Consumer Instalment Credit Series, Pt. 1, *Growth and Import*, vol. 2, supp. IV.

tion of home owners increased over this period from 3 to 4 in 10. A large proportion of the purchasers in this group were married couples with young children who had been renting. This group also includes a large proportion of veterans who have been able in recent years to finance house purchases on very favorable terms.

Home ownership in the group headed by persons 35 to 44 years of age increased from about 5 to 6 in 10 from early 1949 to early 1957. This growth reflects in part the satisfying of a backlog demand. Many of the purchasers in this age group had been unable to purchase houses earlier because of depression or war.

Spending units headed by persons 55 or more years of age also increased their ownership of homes. About 7 in 10 of these spending units reported owning a home in early 1957, compared with about 6 in 10 in early 1949. Growth in ownership among this group probably reflects some expansion in purchases as well as the retention of homes for longer periods by spending units who were already owners.

The increase in home ownership has been accompanied by a decline in the proportions of all nonfarm spending units renting or living with relatives. In early 1957, 33 per cent of all nonfarm spending units rented, compared with 38 per cent in early 1949. The proportion of nonfarm spending units living with relatives declined from 14 to 9 per cent over this period. These changes are significant in view of the fact that undoubling was more important in the immediate postwar period than after 1949; by the early 1950's it had ceased to be a major factor in the demand for housing.

Mortgage debt outstanding. In early 1957, 56 per cent of all home owners had mortgage debt, compared with 45 per cent in

early 1949 (see Supplementary Table 2). Over this period the number of mortgaged owner-occupied houses increased from 9 million to 16 million, and average mortgage debt from \$3,700 to \$6,100. As indicated earlier, the increase in mortgage debt reflects the higher prices of houses in recent years and the more liberal terms on which purchases were made.

Mortgages have increased in size more rapidly than house values. In early 1957, almost 5 in 10 mortgages equaled 50 per cent or more of the owners' estimates of home value in contrast with less than 4 in 10 in early 1949.

The presence or absence of mortgage debt is related to period of ownership; and if there is debt, the ratio of debt to value is also related to period of ownership. The length of the period of ownership, in turn, is related to the age of the owner. In early 1957 more than four-fifths of the home owners under 35 years of age had a mortgage, and seven-tenths of those with a mortgage had debt-value ratios of 50 per cent or more. The frequency of mortgage debt and the ratio of debt to value declined as the age of the owner increased. Only one-sixth of the owners 65 or more years of age had mortgage debt, and most of these had debt-value ratios of 50 per cent or less.

The fact that consumers in the upper age brackets have little or no debt reflects several factors. Older persons have generally owned their homes for some time and have therefore retired a larger proportion of their debt than younger owners. Those who have only recently purchased homes had frequently sold homes in conjunction with the new purchases. Also, older purchasers may have greater difficulty in obtaining long-term credit.

AUTOMOBILES

Consumers purchased a substantially smaller number of cars in 1956 than in 1955 but more than in any other year. Purchases of used cars declined somewhat less than purchases of new automobiles, but the decline in both segments of the market was widespread (see Supplementary Table 9). Consumer expenditures for automobiles declined less from 1955 to 1956 than the number of units sold, however, as a result of a moderate increase in the mean (average) expenditure per new automobile.

Purchases. About 9 per cent of all spending units purchased new cars, and 15 per cent purchased used cars in 1956, according to the Survey of Consumer Finances.⁶ The mean price reported by purchasers of new cars increased from \$2,940 in 1955 to \$3,070 in 1956. The mean price reported by used car purchasers—\$800—was only slightly higher than in 1955.⁷

Over four-fifths of all new car purchasers and one-half of all used car purchasers traded in or sold cars in conjunction with their 1956 purchases.⁸ The differential between new and used car purchasers in the

frequency of trade-ins reflects in part a difference in the age of the purchasers. Only 5 per cent of the new car purchasers in 1956 were between the ages of 18 and 24, whereas about 20 per cent of the used car purchasers were in this age group. Many of the younger purchasers were probably entering the market for the first time and had no car to trade in.

The mean net outlay—that is, purchase price minus allowance for the trade-in—of all used car purchasers was \$620 in 1956, about the same as in the preceding year. The mean net outlay of all new car purchasers, however, rose from \$1,900 to \$2,010.

PURCHASES AND EXPENDITURES FOR AUTOMOBILES

The net outlay of all new car purchasers has increased steadily since 1951, as shown in the chart. The rise in mean net outlay of approximately 40 per cent over this period reflects consumer purchases of cars with additional optional equipment, trading up to higher priced models, and increases in prices of equivalent cars. The mean net outlay of used car buyers increased only 10 per cent from 1951 to 1956.

⁶ Excluded are purchases by transients, residents of institutions, and personnel living on military bases as well as purchases by business and government. Cars purchased during 1956 but disposed of before interview time are also excluded. In instances in which a consumer purchased more than one car during the year and retained two or more, only the most expensive car purchased was included in these Survey purchase tabulations.

⁷ Survey data on car prices are based on amounts reported as being paid by car purchasers. Such prices often overstate the prices actually effective because of the widespread practice of dealers of "over-allowing" on cars traded in. For a discussion of over-allowances on trade-ins in the 1954 and 1955 new car market, see Consumer Instalment Credit Series, Pt. IV, *Financing New Car Purchases*.

⁸ In order to simplify discussion, the term "trade-ins" as used here should be interpreted to mean sales of previously owned cars as well as trade-ins. The same usage applies in the discussion of purchases of household equipment.

Method of financing. In 1956 about three-fifths of the buyers of new and used cars financed their purchases in part by some form of credit, as shown in Table 3. The proportion of credit buyers of both new and used cars increased sharply throughout the early postwar period. Since 1953, the proportion of credit buyers has increased somewhat further for new cars, while for used cars it has remained relatively stable at about 60 per cent.⁹

¹ Includes credit purchases for which details were not ascertained.
² Includes cases in which automobiles were received as gifts or as payment in kind.

The number of spending units with automobile debt increased about one-third from early 1954 to early 1957. This increase reflects in part the liberal credit terms and the high rates of automobile sales

⁹ Survey of Consumer Finances data relating to year-to-year changes in the proportion of new and used car buyers using credit are subject to relatively large sampling errors. The estimates for any one year, however, provide an approximation of the proportion of car buyers using credit, and correspond generally with data from other sources.

in 1955 and 1956. The increased number of consumers with auto debt, combined with a higher average debt, has been reflected in a substantial rise in the volume of automobile credit outstanding, particularly in 1955.

Cash and credit purchasers of new cars. In 1956 cash purchasers of new cars reported paying a mean price of \$3,380, compared with \$3,000 for credit buyers. The differential in prices of cars purchased reflects in part differences in incomes. Almost one-half of all cash purchasers had incomes of \$10,000 or more, but only one-tenth of the credit purchasers had such incomes.

About 8 in 10 of the cash buyers and about 9 in 10 of the credit buyers of new cars traded in cars at the time of their 1956 purchases. Cash buyers of new cars reported receiving on the average about \$1,500 for their trade-ins, compared with \$1,075 for credit purchasers. Even after deducting the amount allowed on their trade-ins, about three-fifths of all cash purchasers of new cars reported net outlays of \$2,000 or more, compared with two-fifths of the credit purchasers of new cars.

For about one-half of the credit purchasers with trade-ins, the car traded in apparently met the dealer's downpayment requirement and no cash payment was made. The other credit purchasers made additional cash downpayments averaging \$600. About one-third of the spending units that purchased new cars on credit last year reported that the original amount of debt incurred was \$2,000 or more.

Cash and credit purchasers of used cars. In 1956 cash purchasers of used cars reported paying a mean price of \$560, compared with \$980 for credit buyers. The incomes of cash and credit purchasers of used cars differed only slightly. About three-

fifths of both the cash and credit buyers of used cars had incomes of less than \$5,000, and about one-fourth had incomes of less than \$3,000. The lower price reported for cash purchases of used cars reflects the older average age of the cars purchased.

About 7 in 10 of the credit purchasers and 4 in 10 of the cash purchasers of used cars traded in cars at the time of their 1956 purchases. Credit buyers of used cars who traded in cars reported receiving on the average about \$340 for their trade-ins, which was slightly more than cash buyers received.

In 1956 about two-fifths of the credit purchasers and seven-tenths of the cash purchasers of used cars reported net outlays of less than \$500. Two-fifths of the cash purchasers, moreover, reported net outlays of less than \$250. Spending units without trade-ins had smaller net outlays on the average than those with trade-ins. This would indicate that most of the cash purchasers of used cars without trade-ins bought very old cars. The undesirability of these older cars as collateral, in combination with the low incomes of many of the purchasers, tends to limit the availability of credit on reasonable terms.

About one-half of the credit buyers of used cars made no cash payment at time of purchase. Almost all such purchasers, however, traded in a car. Credit purchasers who made a cash downpayment paid on the average about \$200. About one-half of the credit buyers of used cars reported original debt amounting to less than \$500.

Maturities. According to the Survey of Consumer Finances, about one-fifth of the spending units that incurred instalment debt on new automobiles during 1956 reported original maturities of 31-36 months, two-fifths reported maturities of 25-30 months,

and one-third reported maturities of 24 months or less. The average maturity was somewhat longer in 1956 than in 1955. Other sources indicate that maturities increased only slightly in 1956, after lengthening considerably during 1955.

Maturities on instalment contracts are considerably shorter for used cars than for new cars. About two-fifths of the buyers that incurred debt on used cars during 1956 reported original maturities of 12 months or less, one-half reported maturities of 13-24 months, and only one-tenth reported maturities over 24 months.

The frequency of credit use as well as the original maturity associated with instalment debt incurred on used cars in 1956 varied with the price of the car and the age of the purchaser. Only three-tenths of all purchasers of used cars priced under \$500 used instalment credit, compared with more than three-fourths of those who purchased cars priced at \$1,000 or more. Almost two-thirds of instalment credit contracts on cars priced under \$500 had original maturities of 12 months or less, compared with less than one-tenth on cars priced at \$1,000 or more. Maturities generally tended to be shorter for buyers in the youngest age brackets, reflecting the lower prices and older age of the cars purchased. The shorter maturities also reflected the lower average income of this group compared with other groups.

Automobile ownership. The high level of production and sales of new automobiles since World War II has expanded greatly the ownership of automobiles. According to Survey data, consumers owned about 46 million cars in early 1957, compared with 27 million in early 1949. In early 1957 about 72 per cent of all spending units

owned at least one automobile, and 10 per cent owned two or more. The corresponding figures for early 1949 were 51 per cent and 3 per cent.¹⁰

All income groups have increased their ownership of automobiles over this period. The proportion of spending units owning at least one automobile increased somewhat more among consumers with incomes of less than \$7,500 than among consumers with incomes above that level, where the incidence of ownership was already high. The proportion of spending units with incomes of \$7,500 or more owning two or more cars increased from 18 to 30 per cent from early 1949 to early 1957.

The growth in automobile ownership from early 1949 to early 1957 has been accompanied by a decline in the average age of cars owned. Early this year, almost one-half of the cars owned were 4 years old or less, and only one-tenth were 10 or more years old. In contrast, three-tenths of the automobiles owned in early 1949 were 4 years old or less, and one-half were 10 or more years old. The older average age of cars in early 1949, compared with early 1957, was due mainly to the limitations on production of automobiles during the war and early postwar years.

About two-thirds of the cars owned by consumers with incomes of \$7,500 or more were 4 years old or younger in both early 1949 and early 1957. Early this year all lower income groups, however, owned substantially larger proportions of cars in this age group. In both early 1949 and early 1957, most of the cars 10 years of age and over were owned by spending units with

incomes of less than \$3,000. About one-fifth of the cars owned by consumers in this group were 10 or more years old in early 1957 compared with three-fifths in early 1949.

HOUSEHOLD DURABLE GOODS

During 1956 an estimated 24 million units or about 43 per cent of all spending units purchased at least one major household durable good. The estimated total spent on such goods in 1956 was somewhat higher than in the preceding year. The rise in these expenditures reflected an increase in the average expenditure per purchaser that more than offset a moderate decline in the number of consumers purchasing furniture and major household appliances.

Almost all income groups reported fewer purchases of household durable goods in 1956 than in the preceding year. The proportion of all spending units reporting purchases of washing machines in 1956 was somewhat larger than in 1955, but the proportions purchasing furniture, television sets, and refrigerators declined (see Supplementary Table 19).

Average amounts paid for refrigerators, washing machines, and furniture rose somewhat from 1955 to 1956. The median expenditure reported for television sets, however, declined to a new low.

Data relating to consumers' net outlays for household durable goods are presented for the first time in the 1957 Survey. The difference between the total expenditure and net outlay by purchasers of household durable goods is relatively small. This is understandable, however, since only about one-fifth of all buyers reported that a trade-in was associated with a purchase, and the amount received by consumers with trade-

¹⁰ Data include only automobiles owned by consumers in the Survey population; cars owned by transients, military personnel, business, and government are excluded.

ins was typically small relative to total expenditures.²¹

Characteristics of purchasers. As in other years, income, age, and marital status were among the most significant factors influencing both the frequency and size of consumer expenditures on household durable goods. The importance of the latter two characteristics is apparent when consumers are classified according to number of years married.

**PURCHASES OF
HOUSEHOLD DURABLE GOODS, 1956**
Percentage of spending units in group

NOTE.—Net outlay is the amount spent after deduction for trade-in or sale. Not married refers to spending units headed by persons unmarried, widowed, separated, or divorced.

Persons recently married bought durable goods with greater frequency and in larger volume than other consumers, as shown in the chart. Recently married couples, as they establish new households, frequently make substantial purchases of basic equipment such as furniture, refrigerators, and

stoves. About two-thirds of the couples married less than three years bought at least one major household item and two-fifths of the buyers reported net outlays of \$500 or more.

Demand for household durable goods remains high for a relatively long period after marriage, although there are changes in the types of goods purchased. More than one-half of the consumers married between 3 and 20 years purchased at least one durable good, but only one-fourth of the buyers had net outlays of \$500 or more. Persons married more than 20 years purchased less frequently. At this point, needs tend to diminish as children marry or depart from the household for other reasons. Older married consumers, moreover, probably own many items of household equipment. If income declines, as it frequently does when retirement is reached, consumers may not replace some household goods even though they are not in the best state of repair.

Persons not married bought major durable goods less frequently than any other group and spent less for such goods. Many persons in this group either live with relatives or occupy furnished quarters, and have little need for many types of household goods.

The frequency of purchase of major household goods and the average net outlay increased as income increased. About one-fifth of the spending units with incomes of less than \$2,000 purchased one or more items of household equipment, compared with one-half of the units with incomes from \$5,000 to \$6,000, and almost three-fifths of those with incomes of \$10,000 and over. The average net outlay ranged from \$230 for purchasers in the lowest bracket (under \$2,000) to \$600 for consumers in the highest bracket (\$10,000 and over).

²¹ It is difficult to determine whether, for identical items of household equipment, the net outlays of consumers with trade-ins are less than those without trade-ins. Prices for comparable items may vary considerably, and the seller may be willing to dispose of his product at any one of a number of prices. Trade-in allowances probably reflect in part discounts from original asking prices.

Financing of selected household goods. Cash and credit purchasers of television sets, washing machines, and refrigerators were about evenly divided, as shown in Table 4. About one-fourth of the purchasers of washing machines and refrigerators reported a trade-in, compared with only about one-sixth of the purchasers of television sets. On the average, consumers trading in washing machines received somewhat less (\$50) than those trading in television sets (\$60) or refrigerators (\$75).

TABLE 4
METHOD OF FINANCING SELECTED HOUSEHOLD
DURABLE GOODS, 1956
[Percentage distribution of purchasers]

Credit plus cash.....	24	24	21
Credit plus trade-in or sale and cash...	4	7	6
Not ascertained.....	3	5	7
All purchases.....	100	100	100

About two-fifths of the credit buyers of television sets made no cash outlay; of these, only about one-third reported a trade-in at the time of the purchase. Of the credit purchasers who paid some cash, two-thirds paid \$50 or less, and most of the others paid between \$50 and \$100. About one-fifth of all television purchasers who bought on credit incurred debt of less than \$150, while two-thirds incurred debt of \$150-\$299, and one-tenth incurred debt of \$300 and over.

Consumers' financing of washing machines and refrigerators followed a somewhat similar pattern.

CONSUMER DEBT

Consumer indebtedness has risen sharply in the postwar period. Major factors in this expansion have been the large volume of consumer purchases of houses and other durable goods, accompanied by more widespread use of credit and larger debts.

About two-thirds of all spending units reported that they owed some debt other than charge accounts in early 1957, according to the Survey of Consumer Finances. About 8 per cent owed mortgage debt only, 23 per cent owed mortgage and personal debt, and 36 per cent owed personal debt only. Mortgage debt was owed by a large proportion of spending units with incomes of \$7,500 or more, while personal debt was owed most frequently by consumers with incomes of \$3,000 to \$10,000. Personal debt covered by the Survey includes all short- and intermediate-term instalment and non-instalment debt, except charge accounts.

Almost one-half of all spending units reported owing some instalment debt early this year. Most of the instalment debt outstanding had been incurred in connection with purchases of automobiles and household durable goods. These obligations, together with those for home improvement and maintenance and for miscellaneous purposes, were payable in regular monthly or weekly instalments.

Instalment debts for two or more purposes were owed by about one-fifth of all spending units. One-tenth owed auto debt only, and the same proportion owed household durables debt only (see Supplementary Table 18).

In early 1957 about one-third of the spending units with instalment debt had scheduled repayments equal to less than 10 per cent of their disposable income. Another third had repayments equal to 10-

19 per cent, while most of the remaining one-third were obligated to make repayments amounting to 20-40 per cent of their disposable income. These proportions were about the same as a year earlier.

TECHNICAL NOTE

Approximate sampling errors of percentages based on Survey information are given in the accompanying tables. They reflect computations of sampling errors for specific statistics from the 1953 and 1954 Surveys of Consumer Finances. The values in the tables are conservative: they are larger than specific sampling errors of many types of Survey data.

Sampling errors represent only one source of error that may affect Survey estimates.¹ Nonsampling errors, such as reporting and nonresponse errors, while not readily measurable, may equal or exceed sampling errors.

A discussion of the factors affecting sampling errors in the Survey of Consumer Finances is available on request from the Division of Research and Statistics, Board

APPROXIMATE SAMPLING ERRORS OF SURVEY FINDINGS

The chances are 95 in 100 that the value being estimated lies within a range equal to the reported percentage plus or minus the number of percentage points shown below.

¹ Payments are on a monthly basis. Payments of home owners include taxes and insurance if included in regular mortgage payment; payments of renters include charges for heat, gas, and electricity if included in regular rental payment.

² The spending unit containing the owner or lessee of the dwelling is the primary spending unit.

³ Includes some spending units of types not covered in separate categories or for which information was not obtained.

⁴ Insufficient number of cases to distribute.

⁵ No cases reported or less than one-half of 1 per cent.

SUPPLEMENTARY TABLE 5
PRICES PAID FOR NONFARM HOUSES¹
 [Percentage distribution of purchasers]

Price	1956	1955	1954	1950
Under \$5,000.....	8	17	26	28

¹ Includes spending units planning definitely, probably, or possibly to buy and those having already bought in Survey year.² Includes nonfarm spending units only.³ Based on spending units that have bought, will buy, or will probably buy automobiles, and spending units that have bought, will buy, will probably, or will possibly buy other items. These

medians differ from those shown in the "Preliminary Findings" published in the March BULLETIN. The medians shown in this table were computed from complete listings; those in the March article were interpolated from bracket amounts, and in addition, the 1957 data were not based on the full sample.

⁴ Data not available.

Credit Extended by Banks to Real Estate Mortgage Lenders

CREDIT EXTENDED to real estate mortgage lenders by weekly reporting member banks as of May 15, 1957, amounted to \$1,075 million, \$202 million less than reported at the previous survey on February 13, 1957; this was a continuation of a \$249 million decline reported during the previous quarter. Commitments to extend additional credit to these lenders declined \$33 million to \$754 million.

Loans to mortgage companies secured by the pledge of real estate mortgage loans owned by the borrowers amounted to \$690 million and ac-

counted for \$155 million of the decrease since February. Real estate mortgage loans purchased from real estate mortgage lenders under resale agreement accounted for an additional \$36 million of the decrease.

The foregoing information was obtained by a special survey of all types of credit extended by commercial banks to real estate mortgage lenders. Results of previous surveys were published in the March 1957 and earlier Federal Reserve BULLETINS.

ments at Aug. 10, 1955, and Aug. 8, 1956, were not asked to report in other surveys, but their Aug. 10, 1955, figures are included in the May 16, 1956, data and their Aug. 8, 1956, figures are included in Feb. 13, and May 15, 1957, figures for comparative purposes. Details may not add to totals due to rounding.

Regulation of Consumer Instalment Credit

Views of the Board of Governors

EARLY IN 1956 the President, through the Council of Economic Advisers, requested the Board of Governors of the Federal Reserve System to undertake a broad study of consumer instalment credit. When this request was made a record-breaking year of expansion of this credit had just been completed. The ability of the Government to discharge its responsibilities under the Employment Act of 1946 was felt by some to be jeopardized by this development, since credit expansion in this special sector seemed unresponsive to the general monetary actions that were then being taken to restrain inflationary pressures.

The Board had been concerned with instalment credit developments for some time, and had initiated an inquiry into the effects of general credit policy on consumer instalment credit as early as 1953. While neither the Council of Economic Advisers nor the Board of Governors felt that conditions prevailing early in 1956 warranted a request at that time for authority to regulate consumer instalment credit, they agreed that a background study of the part played by consumer credit in economic instability was needed and would be timely. The Chairmen of the Banking and Currency Committees of both Houses of the Congress and the

Chairman of the Joint Economic Committee concurred in the desirability of such a study.

The circumstances occasioning the study warranted intensive and comprehensive investigation. Accordingly, the Board of Governors directed its research staff to plan a survey that would examine the entire record of instalment financing in this and other countries. Academic scholars also participated in the study under the auspices of the National Bureau of Economic Research. In addition, the survey employed the facilities of the Bureau of the Census and a private survey organization. The assistance of Federal Reserve Bank research staffs was enlisted, as well as that of foreign central banks. A survey of trade and other opinion was conducted under the direction of a special consultant to the Board.

On March 15 of this year, five of the six volumes reporting this study were transmitted to the interested Congressional Committees and agencies of Government and released to the public. The final volume was transmitted and released about six weeks later.

The members of the Board of Governors of the Federal Reserve System have individually studied the report and have carefully considered the entire subject. Based on this study and discussion, the Board finds that:

(1) The use of consumer instalment credit for the purchase of costly durable

NOTE.—Statement transmitted by the Board of Governors on May 24, 1957, to the Chairmen of the Senate and House Banking and Currency Committees, of the Joint Economic Committee, and of the Council of Economic Advisers.

goods and in the management of family finances has penetrated a widening range of income receivers and social groups. The pace of penetration, however, has been sporadic.

(2) In the past, the rate at which consumer instalment credit was granted varied considerably. These variations tended to coincide with general fluctuations in economic activity.

(3) Though of recognizable importance as a factor of instability, fluctuations in consumer instalment credit have been generally within limits that could be tolerated in a rapidly growing and dynamic economy.

(4) A possible exception to the third finding occurred during the 1954-56 upswing in economic activity. The rapid expansion of consumer instalment credit in 1955, with its accompanying secondary impacts on capital investment, contributed to the emergence of inflationary pressures. This expansion, however, combined with real estate mortgage and other types of credit expansion in producing this sequence of developments.

(5) Since early 1956, expansion in total instalment credit has moderated, in part as a result of general monetary restraints and in part as a result of reduced demand for automobiles and other consumer durable goods commonly financed by instalment credit.

(6) Liberalization of instalment credit terms and standards from mid-1954 through 1955, which was particularly marked in connection with the purchase of new automobiles, contributed to the further widening of the practice of instalment buying and

borrowing and to the very great expansion in instalment credit outstanding that occurred. Some of the forces making for this rapid widening of the market for consumer credit were temporary. Also, this drastic liberalization of credit terms and standards exposed consumer lenders to increased risks. On both counts, the forces making for credit liberalization in that period were to an extent transient and self-limiting.

(7) Because of economic and social factors likely to affect the future of instalment credit, its growth in the years ahead may be at a slower pace than in the past. The volatility of consumer instalment credit in the past was to some extent related to its rapid growth. If future growth is slower, the potential instability of this factor may be contained within tolerable margins.

(8) Under peacetime conditions, special regulation of consumer instalment credit would inevitably present problems of compliance to the financing and business concerns subject to it, and of administration and enforcement to the agency of Government responsible for the regulation.

On the basis of the foregoing findings, the Board of Governors believes that a special peacetime authority to regulate consumer instalment credit is not now advisable. The Board feels that the broad public interest is better served if potentially unstabilizing credit developments are restrained by the use of general monetary measures and the application of sound public and private fiscal policies.

The Board of Governors and its staff will continue to follow closely developments in the use of consumer instalment credit.

Economic Trends as a Basis of Policy

THIS COMMITTEE and the Board of Governors share a common concern: that the operations of both monetary and fiscal policy be directed—in the words of a report issued by your Committee in January 1956—to “maintaining a steady and sustainable rate of economic progress.”

On behalf of the Board of Governors, I should like to outline some measures which we believe would contribute to the achievement of this common objective.

Events have moved swiftly since passage of the Employment Act of 1946. Congressional debate and expert opinion preceding passage of that Act were in close agreement in pointing to unemployment of men and machines as the primary threat to the national economy. The history of the period since the war, both in this country and abroad, however, has demonstrated that the primary danger was not one of idle men but was one of too much money.

Almost everywhere in the world, pressure on resources has been intense. The necessity of preventing competing claims for scarce resources from resulting in general price increases has been a major problem. Defense needs have been a major claimant. Other demands on resources have been bolstered by pressing individual and community needs, on the one hand, and by large financial assets, strong liquidity positions, and rapidly rising current incomes, on the

other. Even so, the opportunities for vigorous growth and accelerated technological progress resulting in sharply rising standards of living and increased security, especially for those in the lower and middle income groups, have been very great. Even greater opportunities lie ahead, ready to be realized if the threat of international conflict can be reduced and the insidious inroads of inflation curbed.

Inflation is never harmless, even in its mild or “creeping” form. Neither is it inevitable. Given appropriate monetary and fiscal policies, reasonable restraint by consumers and businesses in their spending decisions, and continuing keen competition, price stability with a rising standard of living can reasonably be expected. On the other hand, acceptance of the gradually rising price theory carries with it a widening expectation of further rise. This leads in turn to financial overcommitments, speculation, misdirected expansion of capacity, slackened efficiency, erosion of existing savings and discouragement of new savings, and an ultimate reaction of a serious nature.

For about two years we have been experiencing an intensified demand for funds and, although the supply of savings and the volume of bank credit have both increased, expanding demands have outpaced their availability to potential users except at rising interest rates. Consequently, the price of money has risen. If bank credit had been allowed to increase more rapidly under these circumstances, prices of goods and services, including those purchased by Federal, State

NOTE.—Statement of William McChesney Martin, Jr., Chairman, Board of Governors of the Federal Reserve System, before the Subcommittee on Fiscal Policy of the Joint Economic Committee, June 14, 1957.

and local governments, would have risen further under the stimulus of inflationary credit pressures. How much further no one can say, but the strength of inflationary forces has been and is still formidable.

An increase in the volume of savings is the most effective way to deal with a situation whose inflationary potential would only be aggravated by an excessive use of credit. As these savings are made available to meet demands for more housing, schools, and other public improvements, as well as expansion of new business plant and equipment, they provide the resources for stable economic growth. To the extent that fiscal policy results in a budgetary surplus and the Federal debt is reduced, the supply of savings is increased and the need for monetary restraint lessened. This is because maintenance of a surplus permits funds to be channeled through Government debt retirement into the capital markets where they would be available to meet private demands and demands of State and local governments for funds to carry through their projects for needed community facilities.

A reduction in taxes would bring welcome relief to millions of taxpayers. Such action, however, without a corresponding curtailment in Federal expenditures, would reduce or eliminate the budget surplus, and tend to stimulate increased total spending in the economy. At the same time the supply of funds made available to the capital markets through Federal debt retirement would be reduced.

As a number of witnesses who appeared before this Committee have pointed out, the general economic situation is still one of very active demands, intensive utilization of resources and continuing pressure toward higher prices for goods and services. They have also noted the declines in residential

building and some consumer durable goods, the slight falling off in total industrial production and the drop in prices of some sensitive commodities. However, the general economy is still being stretched by record levels of plant and equipment outlays, rising demands for State and local government projects, further increases in consumer buying, and continued need for large-scale defense spending. On balance, the situation does not seem to us to reflect a basic weakening that would call for relaxation in efforts to curb inflationary pressures.

Your Committee has indicated an interest in the consideration given to current and prospective economic trends in the formation of Federal Reserve policy. Since Federal Reserve System operations reflect to some degree all phases of the nation's economic life and have a pervasive influence on it, they must be adjusted on a day-to-day basis to the ever changing situation. Hence, the System has need for as much current and background economic information as it can assemble.

Efforts are directed toward bringing together, and combining as background for our decision-making the best available statistical information and the best informed impressions and judgments that can be obtained from businessmen, bankers, agricultural experts, labor leaders, and from others both in and out of government. We also depend on information collected and compiled by other agencies of the Federal Government. For this reason it is important to the proper formulation of monetary policy that the statistical facilities of the Federal Government be well manned.

In our appraisal of economic developments maximum use is made of the decentralized structure of the Federal Reserve System. Through the 12 Federal Reserve

Banks and their 24 branches, in business and financial centers all over the United States, and especially because of the caliber and experience of men who serve as the directors and officers of these institutions, the Federal Reserve is in close touch with current and prospective developments throughout the country.

In accordance with provisions of the Federal Reserve Act the Board meets frequently with Presidents of the Federal Reserve Banks, who serve as members and alternates, on the Federal Open Market Committee. The Act also provides for quarterly meetings with the Federal Advisory

Council, composed of representatives of the member banks in each district. These occasions make it possible to study continuously underlying developments in all parts of the country and all sectors of the economy.

Much of the statistical data and other information we collect for our own policy decisions is also made available to the public in general. We believe this is as important as its internal use, because it helps to provide a basis for better public understanding and more accurate appraisal of credit and monetary problems and of policy actions designed to deal with them.

Current Events and Announcements

PUBLICATION OF ANNUAL REPORT

The Forty-third Annual Report of the Board of Governors of the Federal Reserve System, covering operations for the calendar year 1956, is available for distribution. Copies may be obtained upon request from the Board's Division of Administrative Services, Washington 25, D. C.

FEDERAL RESERVE MEETINGS

Meetings of the Federal Open Market Committee were held in Washington on May 28 and June 18, 1957.

A meeting of the Presidents of the Federal Reserve Banks was held on June 17, 1957, and on June 18 the Presidents met with the Board of Governors.

RESIGNATION OF BRANCH DIRECTOR

On June 17, 1957, the Board of Governors accepted the resignation of Mr. Edward W. Carter, President, Broadway-Hale Stores, Inc., Los Angeles, California, as a director of the Los Angeles Branch of the Federal Reserve Bank of San Francisco. Mr. Carter had served the Branch as a director since January 29, 1957.

ADMISSIONS OF STATE BANKS TO MEMBERSHIP IN THE FEDERAL RESERVE SYSTEM

The following State banks were admitted to membership in the Federal Reserve System during the period April 16, 1957 to May 15, 1957:

Georgia

Griffin The State Bank

Iowa

Manchester First State Bank

National Summary of Business Conditions

Released for publication June 17

Economic conditions generally remained strong in May. Industrial production declined slightly further, but construction activity, nonfarm employment, personal incomes, and retail sales were maintained at record levels. Industrial commodity prices continued stable in May and early June and farm prices advanced somewhat. Bank credit increased slightly and interest rates rose substantially.

INDUSTRIAL PRODUCTION

The Board's preliminary seasonally adjusted index of industrial production in May was 143 per cent of the 1947-49 average, one point below the revised figure for April and two points below the revised March level. A year ago the index was 141.

Output of durable goods declined further in May. Steel mills were operated at 87 per cent of capacity compared with 90 per cent in April; in early June the operating rate increased slightly to 88 per cent. Activity in some producers' equipment lines—farm machinery, aircraft, and industrial and commercial machinery—was curtailed. Auto assemblies were maintained in May at the reduced April rate, and increased mod-

erately in early June. Television production, which had been sharply curtailed, showed some recovery in May and output of other major household goods changed little. Construction materials have shown little change in recent months as lumber production has leveled out and output of stone, clay, and glass products has continued stable.

Production of nondurable goods was maintained in May, following some decline in April which reflected decreases for textiles, apparel, and rubber products. Activity in the paper and printing, chemical, and leather products industries has been generally sustained. The April-May level of minerals output was 4 per cent below the record March level, reflecting curtailed crude oil extraction and coal and metal mining.

CONSTRUCTION

Private housing starts rose somewhat further in May, to a seasonally adjusted annual rate of close to 1 million units. While 14 per cent below a year ago, starts were the highest since December. Seasonally adjusted construction activity changed little at a record level. Contract awards in April were below the very high March rate, but the total for the first four months of 1957 equaled the record of the year-earlier period.

EMPLOYMENT

Seasonally adjusted nonfarm employment in May remained at the record high of recent months, despite further decreases in manufacturing employment. Unemployment changed little and, at 2.7 million, was about the same as a year ago. The factory workweek declined slightly, to an average of 39.7 hours, but hourly earnings were maintained and average weekly earnings changed little at a level 4 per cent higher than in May 1956.

DISTRIBUTION

Seasonally adjusted value of retail sales in May continued at about the record level established

INDUSTRIAL PRODUCTION
1947-49=100

Federal Reserve indexes, seasonally adjusted. Monthly figures, latest shown are for May.

last December and was 4 per cent above a year earlier. Unit sales of new autos rose somewhat, to the year-ago rate. Sales at department stores recovered moderately, while volume at some other retail outlets apparently declined slightly.

COMMODITY PRICES

The general level of wholesale commodity prices advanced somewhat from mid-May to mid-June, reflecting mainly substantial increases in prices of meats and livestock. Industrial commodities continued to change little at the advanced level reached earlier this year. Steel scrap rose sharply further, to a level only moderately below the very advanced peak of last December, while there were additional reductions in prices of lead and zinc.

Consumer prices rose further in April and were up 4 per cent from early last year when the advance began. Retail as well as wholesale prices of meats have advanced since April.

BANK CREDIT AND RESERVES

Total credit outstanding at city banks increased slightly between early May and early June. U. S.

Government security holdings rose in late May when banks purchased new Treasury tax anticipation bills. Total loans declined over the period, reflecting mainly decreases in business loans, including continued net repayments by seasonal borrowers and reductions in loans to sales finance companies.

Member bank borrowing from the Federal Reserve averaged about \$450 million more than excess reserves in the four weeks ending June 12, slightly more than in the preceding four week period. Reserves accruing to banks, mainly through gold purchases, were more than offset by currency outflows and declines in System holdings of Government securities.

SECURITY MARKETS

Yields on all types of bonds and short-term securities increased sharply from mid-May to mid-June, in most cases to levels above the highs reached around the turn of the year. The average issuing rate in the Treasury bill auction of June 3 rose to 3½ per cent, a new postwar high. Common stocks prices rose further, to a level exceeding the earlier 1957 high in January, but they were still below the 1956 peak.

LOANS AND INVESTMENTS — MEMBER BANKS IN LEADING CITIES

^p Preliminary.¹ Averages of daily closing figures for reserves and borrowings and of daily opening figures for other items, inasmuch as reserves required are based on deposits at opening of business.² Weekly figures of required, excess, and free reserves of all member

banks and of country banks are estimates.

³ Demand deposits subject to reserve requirements, i. e., gross demand deposits minus cash items reported as in process of collection and demand balances due from domestic banks.⁴ Free reserves are excess reserves less borrowings.

FEDERAL RESERVE BANK DISCOUNT RATES

[Per cent per annum]

Federal Reserve Bank	Discounts for and advances to member banks						Advances to individuals, partnerships, or corporations other than member banks secured by direct obligations of the U. S. (last par. Sec. 13)

¹ Under Secs. 13 and 13a, as described in table above.

² Preferential rate for advances secured by Govt. securities maturing or callable in 1 year or less in effect during the period Oct. 30, 1942—Apr. 24, 1946. The rate of 1 per cent was continued for discounts of and advances secured by eligible paper.

NOTE.—*Repurchase rate on U. S. Govt. securities.* In 1955 and 1956 this rate was the same as the discount rate except in the following periods (rates in percentages): 1955—May 4-6, 1.65; Aug. 4, 1.85; Sept. 1-2, 2.10; Sept. 8, 2.15; Nov. 10, 2.375; and 1956—Aug. 24-29, 2.75.

MARGIN REQUIREMENTS¹

[Per cent of market value]

Prescribed in accordance with Securities Exchange Act of 1934	Feb. 20, 1953—Jan. 4, 1955	Jan. 4, 1955—Apr. 22, 1955	Effective Apr. 23, 1955
Regulation T:			
For extensions of credit by brokers and dealers on listed securities.....	50	60	70
For short sales.....	50	60	70
Regulation U:			
For loans by banks on stocks.....	50	60	70

¹ Regulations T and U limit the amount of credit that may be extended on a security by prescribing a maximum loan value, which is a specified percentage of its market value at the time of extension; margin requirements are the difference between the market value (100%) and the maximum loan value. Changes on Feb. 20, 1953, and Jan. 4, 1955, were effective after the close of business on those dates.

¹ Loans made by private financing institutions and guaranteed by Government procurement agencies, pursuant to the Defense Production Act of 1950. Federal Reserve Banks act as fiscal agents of the guaranteeing agencies in these transactions, and the procedure is governed by Regulation V of the Board of Governors.

NOTE.—The difference between guaranteed loans authorized and sum of loans outstanding and additional amounts available to borrowers under guarantee agreements outstanding represents amounts repaid, guarantees authorized but not completed, and authorizations expired or withdrawn.

BANK DEBITS**FEDERAL RESERVE BANK RATES ON INDUSTRIAL LOANS¹**

[In effect May 31. Per cent per annum]

Federal Reserve Bank	To industrial or commercial businesses		To financing institutions		
	On loans ²	On commitments	On discounts or purchases		On commitments
			Portion for which institution is obligated	Re-main-ing portion	
Boston	4-5½	1½-1½	(3)	(4)	1½-1½
New York	3¾-5½	1½-1½	(3)	(4)	1½-1½
Philadelphia	2½-6	1½-1½	(3)	(4)	1½-1½
Cleveland	3½-5½	1½-1½	(3)	(4)	1½-1½
Richmond	2½-5	1½-1½	(3)	(4)	1½-1½
Atlanta	3¾-5½	1-1½	(3)	(4)	(6)
Chicago	3-5½	1¼-1½	3-5½	3-5½	1¼-1½
St. Louis	3½-5½	1½-1½	3-3½	(4)	1¼-1½
Minneapolis	3-5½	1½-1½	(3)	(4)	1½-1½

¹ Outside Treasury and Federal Reserve Banks. Includes any paper currency held outside the continental limits of the United States. Totals for other end-of-month dates are shown in table above; totals for Wednesday dates in table on p. 530.

² Includes \$156,039,431 held as reserve against United States notes and Treasury notes of 1890.

³ To avoid duplication, amount of silver dollars and bullion held as security against silver certificates and Treasury notes of 1890 outstanding is not included in total Treasury currency outstanding.

⁴ Less than \$500,000.

⁵ Because some of the types of currency shown are held as collateral or reserves against other types, a grand total of all types has no special significance and is not shown. See note for explanation of duplications.

NOTE.—There are maintained in the Treasury—(1) as a reserve for United States notes and Treasury notes of 1890—\$156,039,431 in gold bullion; (2) as security for Treasury notes of 1890—an equal dollar amount in standard silver dollars (these notes are being canceled and retired on

receipt); (3) as security for outstanding silver certificates—silver in bullion and standard silver dollars of a monetary value equal to the face amount of such silver certificates; and (4) as security for gold certificates—gold bullion of a value at the legal standard equal to the face amount of such gold certificates. Federal Reserve notes are obligations of the United States and a first lien on all the assets of the issuing Federal Reserve Bank. Federal Reserve notes are secured by the deposit with Federal Reserve agents of a like amount of gold certificates or of gold certificates and such discounted or purchased paper as is eligible under the terms of the Federal Reserve Act, or of direct obligations of the United States. Each Federal Reserve Bank must maintain a reserve in gold certificates of at least 25 per cent against its Federal Reserve notes in actual circulation. Gold certificates deposited with Federal Reserve agents as collateral, and those deposited with the Treasurer of the United States as a redemption fund, are counted as reserve. Gold certificates, as herein used, includes credits with the Treasurer of the United States payable in gold certificates. Federal Reserve Bank notes and national bank notes are in process of retirement.

^p Preliminary.¹ Represents all commercial and savings banks, Federal Reserve Banks, Postal Savings System, and Treasury currency funds (the gold account, Treasury currency account, and Exchange Stabilization Fund).² Excludes interbank time deposits; U. S. Treasurer's time deposits, open account; and deposits of Postal Savings System in banks.³ Prior to June 30, 1947, includes a small amount of demand deposits.⁴ Demand deposits other than interbank and U. S. Govt., less cash items reported as in process of collection.⁵ Seasonally adjusted series begin in 1947 and are available only for last Wednesday of the month. Seasonal adjustment factors have been revised for the period 1950 to date. These factors, together with the

seasonally adjusted data, will be published in the BULLETIN for July 1957.

NOTE.—For description of statement and back figures, see BULLETIN for January 1948, pp. 24–32. The composition of a few items differs slightly from the description in the BULLETIN article: stock of Federal Reserve Banks held by member banks is included in other securities and in capital and miscellaneous accounts, net, and balances of the Postal Savings System and the Exchange Stabilization Fund with the U. S. Treasury are netted against capital and miscellaneous accounts, net, instead of against U. S. Govt. deposits and Treasury cash. Total deposits and currency shown in the monthly Chart Book excludes foreign bank deposits, net, and Treasury cash. Except on call dates, figures are rounded to nearest \$100 million and may not add to the totals.

³ Breakdown of loan, investment, and deposit classifications is not available prior to 1947; summary figures for earlier dates appear in the preceding table.

⁴ Central reserve city banks.

⁵ Beginning June 30, 1942, excludes reciprocal bank balances, which on

Dec. 31, 1942, aggregated \$513 million at all member banks and \$525 million at all insured commercial banks.

⁶ Demand deposits other than interbank and U. S. Govt., less cash items reported as in process of collection.

For other footnotes see opposite page.

¹ Data for a sample of about 210 banks reporting changes in their larger loans; these banks hold over 90 per cent of total commercial and industrial loans of all weekly reporting member banks and nearly 70 per cent of those of all commercial banks.

² Figures for periods other than weekly are based on weekly changes.

³ Includes machinery and transportation equipment.

⁴ Prior to week ending Jan. 11, 1956, included changes in agricultural loans.

⁵ Includes increase of \$318 million resulting from errors disclosed incident to survey of credit extended to real estate mortgage lenders.

¹ Monthly and weekly yields are averages of daily figures for U. S. Govt. and corporate bonds. Yields of State and local govt. general obligations are based on Thursday figures; of revenue bonds, on Friday figures; and of preferred stocks, on Wednesday figures. Figures for common stocks are as of the end of the period, except for annual averages.² Consists of fully taxable, marketable 2½ per cent bonds due or first callable after 12 years, through Sept. 30, 1955, and those due or callable in 10-20 years, beginning Oct. 1, 1955.³ Consists of the 3¼ per cent bond of 1978-83 and, beginning Feb. 1, 1955, the 3 per cent bond of February 1995.⁴ Moody's Investors Service.⁵ Includes bonds rated Aa and A, data for which are not shown separately. Because of a limited number of suitable issues, the number of corporate bonds in some groups has varied somewhat.⁶ Dow-Jones and Co.⁷ Standard and Poor's Corporation. Ratio is based on 8 median yields in a sample of noncallable issues—12 industrial and 2 public utility.⁸ Computed by Federal Reserve from data published by Moody's Investors Service.⁹ Series discontinued as of Mar. 15, 1957.

* New series.

¹ Monthly and weekly data for (1) U. S. Govt. bond prices, Standard and Poor's common stock indexes, and volume of trading are averages of daily figures; for (2) municipal and corporate bond prices are based on Wednesday closing prices; and for (3) the Securities and Exchange Commission series on common stock prices are based on weekly closing prices.

² Series composed of fully taxable, marketable 2½ per cent bonds due

or first callable after 12 years through Sept. 30, 1955, and, beginning Oct. 1, 1955, those due or callable in 10-20 years.

³ The 3¼ per cent bond of 1978-83 and, beginning Feb. 1, 1955, and 3 per cent bond of February 1955.

⁴ Prices derived from average yields, as computed by Standard and Poor's Corporation, on basis of a 4 per cent, 20-year bond.

⁵ Average daily volume of trading in stocks on the New York Stock Exchange for a 5½-hour trading day.

¹ Ledger balances of member firms of the New York Stock Exchange carrying margin accounts, as reported to the Exchange. Customers' debit and free credit balances exclude balances maintained with the reporting firm by other member firms of national securities exchanges and balances of the reporting firm and of general partners of the reporting firm. Balances are net for each customer—i. e., all accounts of one customer are consolidated. Money borrowed includes borrowings from banks and from other lenders except member firms of national securities exchanges.

Data are as of the end of the month, except money borrowed, which is as of the last Wednesday of the month beginning June 1955.

² Data, except as noted below, are for all weekly reporting member banks, which account for about 70 per cent of all loans to others for purchasing or carrying securities. Figures are for the last Wednesday of the month. Some loans for purchasing or carrying U. S. Govt. securities are included in column 5 after 1952; loans for that purpose are shown separately in column 4 for all weekly reporting member banks in 1952 and for New York and Chicago banks thereafter.

^p Preliminary.¹ Figures are for all savings and loan associations in the United States. Data beginning 1950 are based on monthly reports of insured associations and annual reports of noninsured associations. Data prior to 1950 are based entirely on annual reports.² Includes gross mortgages with no deduction for mortgage pledged shares.³ Net of mortgage pledged shares.⁴ Includes other loans, stock in the Federal home loan banks and other investments, real estate owned and sold on contract, and office building and fixtures.

NOTE.—Statistics beginning Mar. 31, 1956, reflect the expanded coverage and the new classification of agencies now reported in the *Treasury Bulletin*. The revised statement includes a larger number of agencies, and their activities are classified according to the type of fund they represent. Funds are combined in the table above, but are shown separately in the table on the following page. Classifications by supervisory authorities are those in existence currently. Where current Treasury compilations do not provide a detailed breakdown of loans, these items have been classified by Federal Reserve on basis of information about the type of lending activity involved.

A few major activities and several minor ones, first reported for June 30, 1956, are not included for later dates, because they are not reporting on a quarterly basis.

*Adjusted totals; these reflect exclusion of data for agencies reporting other than quarterly, the latest data for which are shown at the bottom of the table on the opposite page.

¹ Figures for trust revolving funds include interagency items. For all types of funds combined, loans by purpose and agency are shown on a gross basis; total loans and all other assets, on a net basis, i. e., after reserve for losses.

² Coverage changed from preceding period (see also NOTE).

³ Adjusted figures; for amounts reported for this date but excluded from this figure, see BULLETIN for May 1957, p. 550, note 3.

⁴ Less than \$500,000.

⁵ Figures represent largely the Treasury loan to the United Kingdom, and through 1952 are based in part on information not shown in Treasury compilation.

⁶ Figure derived by Federal Reserve.

⁷ Includes investment of the Agricultural marketing revolving fund in the banks for cooperatives; Treasury compilations prior to 1956 classified this item as an interagency asset.

⁸ Figures prior to 1951 are for the Panama Railroad Company. The Panama Canal Company, established in 1951, combined the Panama Railroad Company with the business activities of the Panama Canal (not reported prior to that time).

⁹ Includes \$1,000 million due under the agreement with Germany signed Feb. 27, 1953, and lend-lease and surplus property balances due the United States in the principal amount of \$2,161 million.

PRINCIPAL ASSETS AND LIABILITIES OF FEDERAL BUSINESS-TYPE ACTIVITIES

[Based on compilation by Treasury Department. In millions of dollars]

^p Preliminary.^r Revised.

¹ Consist primarily of interest payments by Treasury to trust accounts and to Treasury by Govt. agencies, transfers to trust accounts representing Budget expenditures, and payroll deductions for Federal employees retirement funds.

² Small adjustments to arrive at this total are not shown separately.

³ Consist primarily of (1) intra-Governmental transactions as described in footnote 1, (2) net accruals over payments of interest on savings bonds

and Treasury bills, (3) Budget expenditures involving issuance of Federal securities, (4) cash transactions between Intl. Monetary Fund and the Treasury, (5) reconciliation items to Treasury cash, and (6) net operating transactions of Govt. sponsored enterprises.

⁴ Primarily adjustments 2, 3, and 4 described in footnote 3.

⁵ Excludes net transactions of Govt. sponsored enterprises, which are included in the corresponding columns above.

n.a., Not available.

² Revised.¹ Corporation and estate and gift taxes are from Internal Revenue Service reports prior to July 1953. Excise taxes and nonwithheld individual taxes for that period are obtained by subtracting Internal Revenue Service data from appropriate monthly Treasury statement totals.² Represents the sum of taxes for old-age insurance, railroad retirement, and unemployment insurance.³ Beginning February 1957, includes transfers to Federal disability insurance trust fund.⁴ For more details, see the 1958 *Budget of the United States*, pp. 1076-84 and 1149-50.⁵ Includes stockpiling and defense production expansion not shown separately.⁶ Monthly figures prior to May 1956 are not fully comparable with subsequent months nor with the fiscal year totals. (For description see *Treasury Bulletin*, table 3 of section on Budget receipts and expenditures).

¹ Revised.² Estimates of new issues sold for cash in the United States.³ Gross proceeds are derived by multiplying principal amounts or number of units by offering price.⁴ Includes guaranteed issues.⁵ Issues not guaranteed.⁶ Represents foreign government, International Bank, and domestic eleemosynary and other nonprofit organizations.⁷ Estimated net proceeds are equal to estimated gross proceeds less cost of flotation, i.e., compensation to underwriters, agents, etc., and expenses.⁸ Represents proceeds for plant and equipment and working capital.⁹ Represents proceeds for the retirement of mortgages and bank debt with original maturities of more than one year. Proceeds for retirement of short-term bank debts are included under the uses for which the bank debt was incurred.¹⁰ Less than \$500,000.¹¹ Represents all issues other than those for retirement of securities.

* Revised. Revisions for the third and fourth quarters of 1955 and for the year 1955 are for most of the figures shown.

¹ Includes 26 companies in groups not shown separately, as follows: textile mill products (10); paper and allied products (15); miscellaneous (1).

² Includes 25 companies in groups not shown separately, as follows: building materials (12); transportation equipment other than automobile (6); and miscellaneous (7).

NOTE.—*Manufacturing corporations.* Sales data are obtained from the Securities and Exchange Commission; other data from published company reports.

Railroads. Figures are for Class I line-haul railroads (which account for 95 per cent of all railroad operations) and are obtained from reports of the Interstate Commerce Commission.

Electric power. Figures are for Class A and B electric utilities (which account for about 95 per cent of all electric power operations) and are

obtained from reports of the Federal Power Commission, except that quarterly figures on operating revenue and profits before taxes are partly estimated by the Federal Reserve to include affiliated nonelectric operations.

Telephone. Revenues and profits are for telephone operations of the Bell System Consolidated (including the 20 operating subsidiaries and the Long Lines and General departments of American Telephone and Telegraph Company) and for two affiliated telephone companies, which together represent about 85 per cent of all telephone operations. Dividends are for the 20 operating subsidiaries and the two affiliates. Data are obtained from the Federal Communications Commission.

All series. Profits before taxes refer to income after all charges and before Federal income taxes and dividends. For detailed description of series, see pp. 662-666 of the BULLETIN for June 1949 (manufacturing); pp. 215-217 of the BULLETIN for March 1942 (public utilities); and p. 908 of the BULLETIN for September 1944 (electric power).

¹ Reflects cash transactions only. As contrasted with data shown on p. 684, new issues exclude foreign and include offerings of open-end investment companies, sales of securities held by affiliated companies or RFC, special offerings to employees, and also new stock issues and cash proceeds connected with conversions of bonds into stocks. Retirements include the same types of issues, and also securities retired with internal funds or with proceeds of issues for that purpose shown on p. 684.CURRENT ASSETS AND LIABILITIES OF CORPORATIONS¹

^p Preliminary.¹ Derived figures, which include negligible amount of farm loans held by savings and loan associations.² Derived figures, which include debt held by Federal land banks and Farmers Home Administration.

NOTE.—Figures for first three quarters of each year are Federal Reserve estimates. Financial institutions include commercial banks (including nondeposit trust companies but not trust departments), mutual savings banks, life insurance companies, and savings and loan associations.

Federal agencies include HOLC, FNMA, and VA (the bulk of the amounts through 1948 held by HOLC, since then by FNMA). Other Federal agencies (amounts small and separate data not readily available currently) are included with individuals and others.

Sources.—Federal Deposit Insurance Corporation, Federal Home Loan Bank Board, Institute of Life Insurance, Departments of Agriculture and Commerce, Federal National Mortgage Association, Veterans Administration, Comptroller of the Currency and Federal Reserve.

^p Preliminary.¹ Represents all banks in the United States and possessions.² Includes loans held by nondeposit trust companies but excludes holdings of trust departments of commercial banks. March and September figures are Federal Reserve estimates based on data from Member Bank Call Report and from weekly reporting member banks.³ Figures for 1941 and 1945, except for the grand total, are estimates

based on Federal Reserve preliminary tabulation of a revised series of banking statistics. March and September figures are Federal Reserve estimates based in part on data from National Association of Mutual Savings Banks.

Sources.—All-bank series prepared by Federal Deposit Insurance Corporation from data supplied by Federal and State bank supervisory agencies, Comptroller of the Currency, and Federal Reserve.

NOTE.—For loans acquired, the monthly figures may not add to annual totals, and for loans outstanding, the end-of-December figures may differ from end-of-year figures, because monthly figures represent book value of ledger assets whereas year-end figures represent annual statement asset

values, and because data for year-end adjustments are more complete.

Source.—Institute of Life Insurance; end-of-year figures are from *Life Insurance Fact Book*, and end-of-month figures from the *Tally of Life Insurance Statistics* and *Life Insurance News Data*.

¹ Monthly figures do not reflect mortgage amendments included in annual totals.² These loans are not ordinarily secured by mortgages.³ Includes a small amount of alteration and repair loans, not shown separately; only such loans in amounts of more than \$1,000 need be secured.

NOTE.—FHA-insured loans represent gross amount of insurance written; VA-guaranteed loans, gross amount of loans closed. Figures do not take account of principal repayments on previously insured or guaranteed loans. For VA-guaranteed loans, amounts by type are derived from data on number and average amount of loans closed.

Sources.—Federal Housing Administration and Veterans Administration.

¹ Represents all consumer instalment credit extended for the purpose of purchasing automobiles and other consumer goods, whether held by retail outlets or financial institutions. Includes credit on purchases by individuals of automobiles or other consumer goods that may be used in part for business.

² Represents repair and modernization loans held by financial institutions; holdings of retail outlets are included in other consumer goods paper.

NOTE.—Monthly figures for the period December 1939 through 1947 and a general description of the series are shown on pp. 336-354 of the BULLETIN for April 1953. Revised monthly figures for the period January 1948–August 1956, together with a description of the revision, are shown on pp. 1031-1042 of the BULLETIN for October 1956. A detailed description of the methods used to derive the estimates may be obtained from Division of Research and Statistics.

¹ Obtained by subtracting instalment credit repaid from instalment credit extended.

NOTE.—Monthly figures for the period January 1940–August 1956 are shown on pp. 1043–1054 of the BULLETIN for October 1956.

A discussion of the composition and characteristics of the data and a description of the methods used to derive the estimates are shown in the BULLETIN for January 1954, pp. 9–17. Estimates of instalment

credit extended and repaid are based on information from accounting records of retail outlets and financial institutions and often include charges incurred under the instalment contract. Renewals and refinancing of loans, repurchases and resales of instalment paper, and certain other transactions may increase the amount of both credit extended and credit repaid without adding to the amount of credit outstanding.

¹ Data on extensions and repayments for retail outlets and commercial banks have been adjusted to avoid duplications resulting from large transfers of other consumer goods paper. As a result, the differences between extensions and repayments for these institutions do not equal the changes in outstanding credit.

² Obtained by subtracting instalment credit repaid from instalment credit extended, except as indicated in note 1.

NOTE.—Monthly figures for the period January 1940–August 1956 are shown on pp. 1043–1054 of the BULLETIN for October 1956.

A discussion of the composition and characteristics of the data and a description of the methods used to derive the estimates are shown in the BULLETIN for January 1954, pp. 9–17. Estimates of instalment credit extended and repaid are based on information from accounting records of retail outlets and financial institutions and often include charges incurred under the instalment contract. Renewals and refinancing of loans, repurchases and resales of instalment paper, and certain other transactions may increase the amount of both credit extended and credit repaid without adding to the amount of credit outstanding.

SELECTED BUSINESS INDEXES

[Indexes, 1947-49= 100. The terms "adjusted" and "unadjusted" refer to adjustment of monthly figures for seasonal variation]

Year or month	Industrial production (physical volume)*						Construction contracts awarded (value) ¹			Employment and payrolls ²			Freight car-loadings*	Department store sales* (retail value)	Consumer prices ²	Wholesale commodity prices ²

* Estimated. P Preliminary. * Revised.

n.a. Not available.

* Average per working day.

¹ Three-month moving average, based on F. W. Dodge Corporation data. A description of the index may be obtained from the Division of Research and Statistics.

² The indexes of employment and payrolls, wholesale commodity prices, and consumer prices are compiled by the Bureau of Labor Statistics. Nonagricultural employment covers employees only and excludes personnel in the armed forces. The figures on employment and payrolls incorporate revisions to first-quarter 1956 bench-mark levels. The consumer price index is the revised series, reflecting, beginning January 1953, the inclusion of some new series and revised weights; prior to January 1953, indexes are based on the "interim adjusted" and "old" indexes converted to the base 1947-49= 100.

NOTE.—A number of groups and subgroups include individual series not published separately, and metal fabricating contains the ordnance group in addition to the groups shown. Certain types of combat materiel

are included in major group totals but not in individual indexes for autos, farm machinery, and some other products, as discussed in the BULLETIN for December 1953, pp. 1269-1271.

For description and back figures, see BULLETIN for December 1953 pp. 1247-1293 and pp. 1298-1328, respectively.

¹ Includes self-employed, unpaid family, and domestic service workers.² Beginning 1957 persons waiting to start new wage and salary jobs and those on temporary layoff, previously considered as employed (with a job but not at work), are classified as unemployed, and a small group in school and waiting to start new jobs (previously included as employed) are classified as *not* in the labor force. May 1957 data comparable to May

1956 shown above are: Labor force, 70,777; employment—total 65,467; nonagricultural, 58,804; agricultural, 6,663; and unemployment, 2,489.

NOTE.—Information relating to persons 14 years of age and over is obtained through interviews of households on a sample basis. Monthly data relate to the calendar week that contains the twelfth day; annual data are averages of monthly figures.

^p Preliminary.^r Revised.

¹ These figures are *not* estimates for all department stores in the United States. They are the actual dollar amounts reported by a group of department stores located in various cities throughout the country. In 1956, sales by these stores accounted for about 50 per cent of estimated total department store sales.

² Derived from the reported figures on sales and stocks.

³ Derived from receipts and reported figures on outstanding orders.

⁴ The first three ratios are of stocks and/or orders at the end of the month to sales during the month. The final ratio is based on totals of sales and receipts for the month.

NOTE.—For description and monthly figures for back years, see BULLETIN for October 1952, pp. 1098–1102.

^p Preliminary.¹ Monthly data are seasonally adjusted totals at annual rates.² Represents compensation for injuries, employer contributions to private pension and welfare funds, and other payments.³ Represents business and professional income, farm income, and rental income of unincorporated enterprise; also a noncorporate inventory valuation adjustment.⁴ Represents government social insurance benefits, direct relief, mustering-out pay, veterans' readjustment allowances and other payments, as well as consumer bad debts and other business transfers.

well as consumer bad debts and other business transfers.

⁵ Prior to 1952 includes employee contributions only; beginning January 1952, includes also contributions to the old-age and survivors' insurance program of the self-employed to whom coverage was extended under the Social Security Act Amendments of 1950. Personal contributions are not included in personal income.⁶ Represents personal income exclusive of net income of unincorporated farm enterprise, farm wages, agricultural net interest, and net dividends paid by agricultural corporations.

¹ Includes figures for all banks that were members of the Federal Reserve System at the end of the year (including those becoming members during the year whose returns may cover operations for only part of the year); and in addition includes appropriate adjustments for member banks in operation during part of the year but not at the end of the year. Data may not add to totals because of rounding.

² Includes interest on capital notes and debentures.

³ Not available on the 13-month basis used for all member banks. See Note on following page.

For other footnote see following page.

Number of banks.....	9	10	8	23	25	21	71	20	9	41	26	26

* Not including central reserve city banks.

NOTE.—The figures of assets, deposits, and capital accounts are averages of the amounts reported for the call dates at the beginning, middle, and end of each year, plus the last-Wednesday-of-the-month figures for the 10 intervening months. The number of officers, employees, and banks

are as of the end of the year. Cash assets are comprised of cash, balances with other banks (including reserves balances), and cash items in process of collection. Total capital accounts are comprised of the aggregate book value of capital stock, capital notes and debentures, surplus, undivided profits, reserves for contingencies, and other capital reserves.

For other footnotes see preceding page.

¹ Net losses is the excess of (a) actual losses charged against net profits plus losses charged against valuation reserves over (b) actual recoveries and profits credited to net profits plus recoveries credited to valuation reserves; net recoveries and profits is the reverse. Transfers to and from valuation reserves are excluded.

NOTE.—The ratios in this and the following three tables were computed from the dollar aggregates shown in preceding tables. Many of these ratios vary substantially from the average of individual bank ratios, which are shown on pp. 720-722 of this BULLETIN, in which each bank's figures—regardless of size or amount—are weighted equally and in general

have an equally important influence on the result. In the ratios based on aggregates presented here, the experience of those banks in each group whose figures are largest have a much greater influence than that of the many banks with smaller figures. (For example, the 120 largest member banks have total earnings which, combined, are larger than those of all the other member banks, numbering about 6,340.) Ratios based on aggregates show combined results for the banking system as a whole, and, broadly speaking, are the more significant for purposes of general analyses of credit and monetary problems, while averages of individual ratios are useful primarily to those interested in studying the financial results of operations of individual banks.

¹ Excludes three mutual savings banks and for 1955 and 1956 a non-insured nondeposit trust company; these are State member banks of the Federal Reserve System and are included in member banks figures on preceding pages.

² Includes interest on capital notes and debentures.

NOTE.—The figures of assets, deposits, and capital accounts are averages of the amounts reported for call dates at the beginning, middle, and end of each year. The number of officers, employees, and banks are as of the end of the each year.

¹ Net losses is the excess of (a) actual losses charged against net profits plus losses charged against valuation reserves over (b) actual recoveries and profits credited to net profits plus recoveries credited to valuation reserves. Transfers to and from reserves are excluded.

² Banks with no time deposits, or no trust department earnings, as the case may be, were excluded in computing this average.

³ The ratios for 57 member banks in operation at the end of 1956 were excluded from the compilations because of unavailability of data covering the complete year's operations, certain accounting adjustments, lack of comparability, etc. One member bank in Alaska also excluded.

NOTE.—These ratios, being arithmetic averages of the operating ratios of individual member banks, differ in many cases from corresponding ratios computed from aggregate dollar amounts shown on pp. 715-718 of this BULLETIN. Such differences result from the fact that each bank's figures have an equal weight in calculation of the averages whereas the figures of the many small and medium-sized banks have but little influence on the aggregate dollar amounts. Averages of individual ratios are

useful primarily to those interested in studying the financial results of operations of individual banks, while ratios based on aggregates show combined results for the banking system as a whole and, broadly speaking, are the more significant for purposes of general analyses of credit and monetary problems.

Figures of earnings, expenses, etc., used in the calculations were taken from the annual earnings and dividends reports for 1956. Balance sheet figures used in the compilations were obtained by averaging the amounts shown in each bank's official condition reports submitted for Dec. 31, 1955, and June 30 and Sept. 26, 1956 (and Apr. 10 and Dec. 31, 1956, for the New York District), except for a limited number of banks for which all reports were not available; such reports as were available were used in those instances. Savings deposits are included in the time deposit figures used in these tables. Banks with no time deposits (208 in number) are included with the banks having ratios of time to total deposits of less than 25 per cent.

Tables on the following pages include the principal available statistics of current significance relating to international capital transactions of the United States, foreign gold reserves and dollar holdings, and foreign central banks. Figures on international capital transactions of the United States are collected by the Federal Reserve Banks from banks, bankers, brokers, and

dealers in the United States in accordance with the Treasury Regulation of November 12, 1934. Other data are compiled largely from regularly published sources such as central bank statements and official statistical bulletins. Back figures for 1941 and prior years, together with descriptive text, may be obtained from the Board's publication, *Banking and Monetary Statistics*.

^p Preliminary.^r Revised.

n.a. Not available.

¹ Short-term liabilities reported in these statistics represent principally deposits and U. S. Govt. obligations maturing in not more than one year from their date of issue, held by banking institutions in the United States; small amounts of bankers' acceptances and commercial paper and of liabilities payable in foreign currencies are also included.

² Includes International Bank for Reconstruction and Development, International Monetary Fund, and United Nations and other international organizations. Excludes Bank for International Settlements, reported under Other Europe.

³ Represents funds held with banks and bankers in the United States (and in accounts with the U. S. Treasury) by foreign central banks and by foreign central governments and their agencies (including official purchasing missions, trade and shipping missions, diplomatic and consular establishments, etc.).

⁴ Includes for the first time certain accounts previously classified as "private."

⁵ These data are based on reports by banks in the Second (New York) Federal Reserve District and include funds held in an account with the U. S. Treasury. They represent a partial breakdown of the amounts shown in the "other" categories in tables 1a-1c.

⁶ Based on reports by banks in all Federal Reserve districts.

NOTE.—Statistics on international capital transactions of the United States are based on reports by banks, bankers, brokers, and dealers. Beginning with the BULLETIN for June 1954 (as explained on p. 591 of that issue), tables reflect changes in reporting forms and instructions made as of Mar. 31, 1954, as well as changes in content, selection, and arrangement of material published. For discontinued tables and data reported under previous instructions, see BULLETIN for May 1954, pp. 540-545.

¹ Short-term claims reported in these statistics represent principally the following items payable on demand or with a contractual maturity of not more than one year: loans made to and acceptances made for foreigners; drafts drawn against foreigners that are being collected by banking institutions on behalf of their customers in the United States; and foreign currency balances held abroad by banking institutions and their customers in the United States. Claims on foreigners with a contractual maturity of more than one year reported by U. S. banking institutions

(excluded from these statistics) amounted to \$808 million on Mar. 31, 1957. The term foreigner is used to designate foreign governments, central banks, and other official institutions as well as banks, organizations, and individuals domiciled outside the United States, including U. S. citizens domiciled abroad and the foreign subsidiaries and offices of U. S. banks and commercial firms.

² Less than \$500,000.³ Includes transactions of international institutions.

¹ Gold exports, representing about 90 per cent of total production.

Sources.—World production: estimates of U. S. Bureau of Mines. Production reported monthly: reports from individual countries except

Ghana, Belgian Congo, and India, data for which are from American Bureau of Metal Statistics. For the United States, annual figures through 1955 are from the U. S. Bureau of the Mint and figures for 1956 and 1957 are from American Bureau of Metal Statistics.

NET GOLD PURCHASES BY THE UNITED STATES, BY COUNTRIES

¹ Includes sales of gold to Belgian Congo as follows (in millions): 1949, \$2.0; 1950, \$3.0; 1951, \$8.0; 1952, \$2.0; and 1953, \$9.9.
² Less than \$50,000.

³ Includes sale of \$114.3 million of gold to Italy.

⁴ Includes sale of \$43.1 million of gold to Thailand.

⁵ Includes sales of gold to Indonesia as follows: 1950 \$29.9 million; and 1951, \$45.0 million.

⁶ Includes sales of gold to Egypt as follows: 1950 \$44.8 million and 1951, \$76.0 million.

⁷ Represents purchase of gold from International Monetary Fund.

^p Preliminary.^r Revised.

¹ Represents reported gold holdings of central banks and governments and international institutions, unpublished holdings of various central banks and governments, estimated holdings of British Exchange Equalization Account based on figures shown below under United Kingdom, and estimated official holdings of countries from which no reports are received.

² Includes gold in Exchange Stabilization Fund. Gold in active portion of this Fund is not included in regular statistics on gold stock (Treasury gold) used in the Federal Reserve statement "Member Bank Reserves,

Reserve Bank Credit, and Related Items" or in the Treasury statement "United States Money, Outstanding and in Circulation, by Kinds."

³ Represents holdings of Bank of France (holdings of French Exchange Stabilization Fund are not included).

⁴ Exchange Equalization Account holdings of gold and of United States and Canadian dollars, as reported by British Government. (Gold reserves of Bank of England have remained unchanged at \$1 million since 1939, when Bank's holdings were transferred to Exchange Equalization Account.)

^p Preliminary.^r Revised.¹ Excludes gold holdings of French Exchange Stabilization Fund.² Less than \$500,000.³ Includes latest available figure (Jan. 31) for gold reserves.⁴ Includes Yugoslavia, Bank for International Settlements (both for its own and European Payments Union account), gold to be distributed by the Tripartite Commission for Restitution of Monetary Gold, and unpublished gold reserves of certain Western European countries.⁵ Excludes gold reserves of the U. S. S. R.⁶ Represents International Bank for Reconstruction and Development,

International Monetary Fund, and United Nations and other international organizations.

NOTE.—Gold and short-term dollars include reported and estimated official gold reserves, and total dollar holdings as shown in Short-term Liabilities to Foreigners Reported by Banks in the United States, by Countries (tables 1 and 1a-1d of the preceding section). U. S. Govt. bonds and notes represent estimated holdings of such securities with original maturities of more than one year; these estimates are based on a survey of selected U. S. banks and on monthly reports of security transactions. For back figures see BULLETIN for March 1956, pp. 304-305.

Footnotes to tables on international institutions:

- ¹ Currencies include demand obligations held in lieu of deposits.
² Represents principal of authorized loans, less loans not yet effective, repayments, the net amount outstanding on loans sold or agreed to be sold to others, and exchange adjustment.
³ Excludes uncalled portions of capital subscriptions.
⁴ Loans to dependencies are included with member.
⁵ Includes also effective loans agreed to be sold but not yet disbursed.
⁶ Includes \$59 million in loans not yet effective.
⁷ Includes \$182 million not guaranteed by the Bank.
⁸ U. S. Treasury bills purchased with proceeds of sales of gold.
⁹ Countries shown are those with cumulative net drawings of \$15 million or more on the latest date.
¹⁰ Represents sales of U. S. dollars by Fund to member countries for local currencies, less repurchases of such currencies with dollars.

Footnotes to central bank table on this and opposite page:

¹ Notes issued, less amounts held in banking department.² Gold was transferred on May 1, 1940, to Foreign Exchange Control Board in return for short-term Govt. securities (see BULLETIN for July 1940, pp. 677-678).³ Beginning 1950, includes ECA.⁴ Less than 50 million francs.⁵ Includes advance of 6.8 billion francs to Stabilization Fund.

NOTE.—All figures, including gold and foreign exchange, are compiled from official reports of individual banks and are as of the last report date of the month. For details relating to individual items, see BULLETIN for April 1955, p. 443. For last available report from the Reichsbank (February 1945), see BULLETIN for December 1946, p. 1424.

¹ Rates shown represent mainly those at which the Central bank either discounts or makes advances against eligible commercial paper and/or government securities for commercial banks or brokers. For countries with more than one rate applicable to such discounts or advances, the rate shown is the one at which the largest proportion of central bank credit operations is understood to be transacted. In certain cases other rates for these countries are given in the following footnote.

² Discounts or advances at other rates include: *Japan*—various rates dependent on type of paper or transaction and extent of borrowing from central bank, including 8.40 per cent for discount of paper related to domestic commercial transactions (rate shown is for advances on commercial paper and miscellaneous collateral); *Chile*—rates in excess of 6 per cent

are applied to rediscounts in excess of 50 per cent of the rediscounting bank's capital and reserves; *Indonesia*—various rates dependent on type of paper, collateral, commodity involved, etc.; *Costa Rica*—5 per cent for paper related to commercial transactions (rate shown is for agricultural and industrial paper); *El Salvador*—3 per cent for agricultural and industrial paper; and *Peru*—4 per cent for industrial, and mining paper and 3 per cent for most agricultural paper.

³ Since Nov. 1, the discount rate is set each week at ¼ per cent above the latest average tender rate for Treasury bills.

⁴ Since May 16, this rate applies to advances against commercial paper as well as against government securities and other eligible paper.
