

FEDERAL RESERVE BULLETIN

BOARD OF GOVERNORS
OF THE FEDERAL RESERVE SYSTEM

WASHINGTON

A copy of the Federal Reserve Bulletin is sent to each member bank without charge; member banks desiring additional copies may secure them at a special \$2.00 annual rate. The regular subscription price in the United States and its possessions, Bolivia, Canada, Chile, Colombia, Costa Rica, Cuba, Dominican Republic, Ecuador, Guatemala, Haiti, Republic of Honduras, Mexico, Nicaragua, Panama, Paraguay, Peru, El Salvador, Uruguay, and Venezuela is \$6.00 per annum or 60 cents per copy; elsewhere, \$7.00 per annum or 70 cents per copy. Group subscriptions in the United States for 10 or more copies to one address, 50 cents per copy per month, or \$5.00 for 12 months. The Bulletin may be obtained from the Division of Administrative Services, Board of Governors of the Federal Reserve System, Washington, D. C. 20551, and remittance should be made payable to the order of the Board of Governors of the Federal Reserve System in a form collectible at par in U.S. currency. (Stamps and coupons not accepted)

The Federal Reserve BULLETIN is issued monthly under the direction of the staff editorial committee. This committee is responsible for opinions expressed except in official statements and signed articles.

INTEREST RATES IN U.S. CAPITAL MARKETS

LONG-TERM interest rates in the United States rose steeply from July 1965 through August 1966. Rates on long-term bonds then declined through late October, erasing as much as a third of their earlier advance. But most recently they have turned up again.

During the earlier period of advance, increases in rates ranged up to 1¾ percentage points, and rate levels on good-quality issues reached the highest point in 40 years. At these highs, rates exceeded 6 per cent on new high-grade corporate bonds, 7 per cent on new investment-grade municipal bonds (after adjustment to a tax-equivalent-yield basis), and 7½ per cent on conventional mortgages in some parts of the country.

The upswing in rates was caused by a combination of factors. Chief among these were mushrooming demands of businesses for external financing, large Federal borrowing through agency securities and participation certificates, and a monetary policy that exerted increasing restraint on growth in the supply of funds available to meet these demands.

Business demands for funds rose when outlays for plant and equipment, inventories, and accelerated tax payments ran increasingly ahead of the supply of internal funds. At the same time, the combination of sharply rising private and governmental expenditures pressed harder on the country's resource capabilities, so that prices and wages began to rise faster. In these circumstances, the Federal Reserve gradually intensified its policy of monetary restraint.

The counterpart of these developments in financial markets was a growing shortage of funds relative to rising demands, a progres-

sive worsening of investor expectations regarding the probable course of securities prices, and a sharp increase in interest rates of all kinds.

As interest rates rose, shifts also developed in patterns of financial saving as among financial intermediaries and market securities. This added to constraints on the availability of funds in certain key markets, notably those for mortgages and State and local government securities.

Much of the decline in bond yields from late August to late October represented a reversing of the sharp late-summer rate increases that had immediately preceded the August highs. Market developments in late summer were strongly influenced by expectations of large fall credit demands in a period when available funds were expected to be restrained further. But in the early fall, events did not bear out these expectations. In addition to administration actions designed to reduce the pressure of Federal borrowing operations on interest rates, total funds raised by private borrowers declined. To some extent these lower demands for financing reflected supply constraints on funds and resources. In addition, they apparently reflected a temporary drop in financing because of

INTEREST RATES in capital markets rise steeply after mid-1965

* With call protection.

Monthly averages. Yields on FHA-insured mortgages are weighted averages of private secondary market prices of certain new-house mortgages converted to annual yield—25-year mortgages through June 1961; 30-year mortgages thereafter. Yields on State and local govt. Aaa bonds are from Moody's Investors Service, adjusted to tax equivalent basis assuming 36 per cent individual income tax rate; on corporate bonds, yields are weighted averages of new publicly offered bonds rated Aaa, Aa, and A by Moody's Investors Service and adjusted to an Aaa basis (beginning January 1966, includes only issues with 5-year call protection). Thin-portion lines for FHA-insured mortgages indicate periods of adjustment to changes in FHA ceiling on contractual rates; break for corporate new issues indicates no eligible offerings.

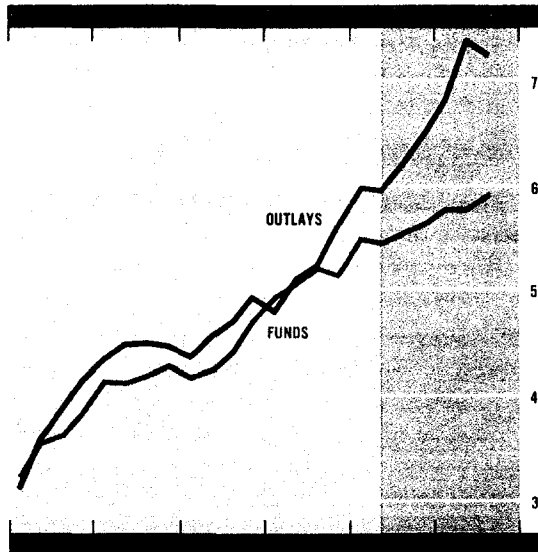

previous anticipatory borrowing and postponements of borrowing prompted by expectations that interest rates would decline further. Most recently, a resurgence of demands for long-term funds has contributed to the recent upturn in bond yields.

USERS OF LONG-TERM FUNDS

The primary demand factor accounting for the steep rise in long-term rates after mid-1965 was the sheer size and sustained intensity of business demands for external financing.

Businesses. Needs of nonfinancial corporations for external financing expanded primarily because of the record gap which opened up between capital outlays and internal sources of funds (chiefly depreciation allowances and retained earnings). After late 1964, and especially after mid-1965, dollar outlays for fixed

CHART 2 CAPITAL OUTLAYS of corporations rise more than their internal funds particularly since mid-1965

Flow of funds data for nonfinancial corporate business. Quarterly totals at seasonally adjusted annual rates. Outlays comprise fixed investment and change in inventories. Funds comprise profits, less profits-tax accruals and dividend payments, plus capital consumption allowances. Third quarter 1966, preliminary.

assets and inventories increased much more than the dollar flow of internal funds (Chart 2). During the first three quarters of 1966, such outlays exceeded internal funds by more than \$13 billion (annual rate) or 23 per cent. In the same periods of 1960 and 1957, the excess amounted to 17 per cent. Thus the gap this year has been unusually wide, even when compared with crests in previous expansion periods.

In addition to their enlarged capital outlays, corporations ex-

panded their external financing to cover extensions of credit to customers and to meet expanded tax payments required under the revised schedules for prepayment of Federal income and withheld taxes. As a result, total funds raised by nonfinancial corporations in credit and equity markets, which had totaled \$14 billion in 1964 and \$19 billion in 1965, rose to an annual rate of more than \$25 billion in the first three quarters of 1966.

Almost all of the rise in external financing requirements from 1964 to 1965 had been accommodated at commercial banks (Chart 3). Hence, net funds raised in security markets during 1965 were no larger than the \$5.4 billion raised in 1964. In 1966, on the other hand, while corporate borrowing at banks was at a record rate in the second quarter when accelerated tax payments were due, the total of such borrowing for the first three quarters as a whole was slightly below the 1965 annual rate. Thus, all of the year-to-year increase in corporate external financing for the three-quarter period was centered in securities markets and the total of such offerings rose to a seasonally adjusted annual rate of more than \$13 billion. This striking expansion in issues of nonfinancial corporations exerted strong upward pressures on long-term rates, which were offset to only a small extent by a reduction in the volume of offerings by financial corporations.

CHART 3

1966 spurt in EXTERNAL FINANCING by corporations reflects expansion in security issues

Flow of funds data for nonfinancial corporate business. Quarterly and 9-month totals at seasonally adjusted annual rates.

Third quarter 1966, preliminary.

Had U.S. corporations and their foreign affiliates not issued more than \$1 billion of securities in overseas markets during this period—chiefly to help implement the Commerce Department's program of voluntary restraints on direct investment abroad—some part of this total would undoubtedly have been financed in U.S. securities markets and would have added further to upward rate pressures in this country.

U.S. Government. In contrast with the upsurge in business financing, net funds borrowed by the Federal Government showed an increase of less than \$1 billion during the fiscal year beginning at mid-1965. This figure understates the demand pressures of Federal operations on long-term interest rates, however, for \$3 billion of Federal cash requirements in fiscal 1966 were accommodated through the sale of certificates of participation in pools of outstanding Federal loans.

CASH BORROWING BY U.S. GOVERNMENT

(Billions of dollars)

Item	July '64– June '65	July '65– June '66	Change
Net cash borrowing.....	4.3	2.6	–1.7
Pool sales ¹8	3.1	+2.3
Total.....	5.1	5.7	+.6
<i>Memo:</i> Net offerings of Federal agencies ²	1.4	4.1	+2.7

¹ Pool sales enter the Federal budget as negative expenditures and are not a part of net cash borrowing.

² Federal agency debt offerings are a part of net Federal cash borrowing.

Substitution of such "pool" sales for regular Treasury cash borrowing put greater upward pressure on long-term interest rates than would have resulted from an equivalent volume of ordinary Treasury issues. Not only was the market for participation certificates less well developed, but also the average maturity of such certificates was longer than for issues offered in other recent Treasury borrowing operations.

Moreover, \$1.8 billion of these pool sales were concentrated in the second quarter of 1966—at a time when the volume of debt offerings by Federal agencies was also rising steeply. Large net offerings of agency issues developed when weakness in the home mortgage and housing markets added abruptly to private demands

for funds from the Federal Home Loan Bank System and the Federal National Mortgage Association. This augmented the needs of these institutions for security market financing of their own. In the second quarter the combined net volume of both agency securities and participation certificates amounted to \$16 billion at a seasonally adjusted annual rate. Even though \$12 billion (annual rate) of regular short-term Treasury debt was being retired in that period, interest rates on agency issues and on participation certificates rose more steeply than those on other types of securities.

The projected Federal budget program calling for large additional pool sales in fiscal 1967 continued to exert an important impact on market expectations until early September. At that point, the President—as part of a broad program designed to reduce upward pressures on interest rates—announced that pool sales would be discontinued until market conditions were more favorable. On the other hand, with Federal cash outlays rising more rapidly because of the Vietnamese war, estimates of fourth-quarter Treasury cash borrowing needs rose to the highest level since 1959 and, during the late summer and early fall, reinforced market expectations of further general increases in rates.

Others. Both of the other two major types of borrowers in capital markets—State and local governments, and households seeking mortgage financing for homes—reduced their financing in the first three quarters of 1966 relative to 1965. The impetus for this cut-back by both types of borrowers came chiefly from restraints imposed on the supply of funds. It should be noted that since multifamily housing and commercial construction are undertaken by businesses, financing of such construction is included in the totals for nonfinancial corporations already discussed.

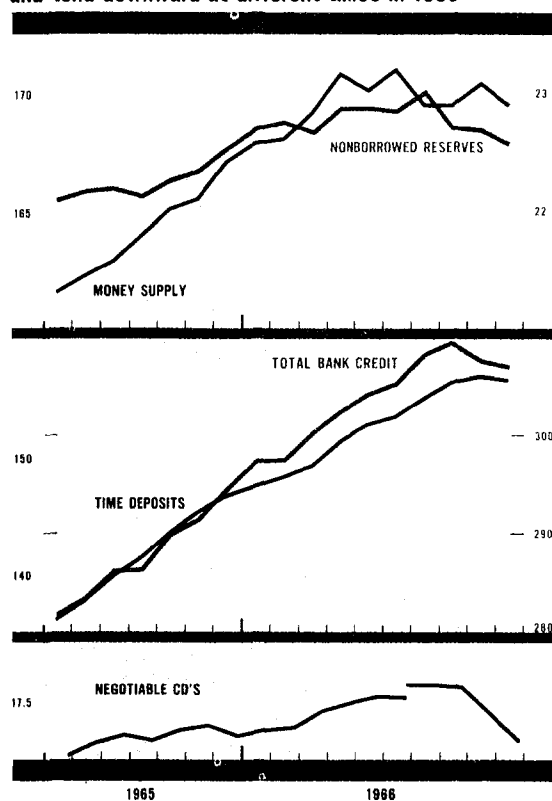

While State and local government needs for funds may have been moderated to some extent by unexpectedly large tax receipts, over-all State and local outlays have continued to grow. Thus the volume of their financing appears to have been affected most strongly by the high costs of borrowing and by the tendency for market rates to exceed rate ceilings imposed on borrowers by statute or bond authorizations.

During the latter half of 1965 home builders were expecting some rise in demands. While they anticipated no major revival, the abrupt cut-back of savings flows in 1966 to the types of lenders most active in home financing sharply curtailed the financial means for making these demands effective.

MONETARY POLICY Even before the December 1965 Federal Reserve discount rate action, a series of events including escalation of the war in Vietnam, the rapid further move of the economy toward full employment, and the sharp expansion of business demands for credit had all been widely interpreted in financial circles as presaging a period of intensified monetary restraint and higher interest rates. This combination of fact and forecast had set off a sizable—and partly anticipatory—general advance in rates even before the increase in the discount rate.

SELECTED FINANCIAL INDICATORS level off and tend downward at different times in 1966

CHART 4

Monthly averages of daily figures, except total bank credit and negotiable CD's which are last Wednesday of month figures (except June 30 and Dec. 31). All data seasonally adjusted except negotiable CD's. Latest data plotted, September.

Increased monetary restraint during 1966 reflected itself not only in a further rise in interest rates and tightening of other credit terms, which were also a result of expanded credit demands, but in changes in other financial variables as well. For example, the supply of nonborrowed reserves at member banks and the money stock both leveled off in the spring, and in the early fall both

measures tended downward. Total bank credit continued to grow until summer, but the funds financing this growth came wholly from increases in time deposits. Some of these funds in turn were bid away from nonbank intermediaries, thus adding further to constraints on other forms of credit expansion.

Since August, bank credit has contracted slightly. A major factor contributing to this change has been the net run-off of large denomination negotiable time certificates of deposit (CD's) at banks. Contraction of such CD's after mid-August reflected increases in rates on market instruments, which put CD's limited to the 5½ per cent ceiling rate at a competitive disadvantage.

SPREAD OF CREDIT RESTRAINT

The spread of credit restraint during 1965 and 1966 from the commercial banking system and the money market—where Federal Reserve actions exert their initial impact—to other types of financial institutions and to long-term markets has been characteristic of periods of monetary stringency. But the relative steepness of the rise in long-term rates after mid-1965 developed in part because of the particular institutional changes that had occurred during the preceding years of extended monetary ease. In that earlier period, interest rate relationships had encouraged an unusually rapid growth of savings at depositary-type financial intermediaries, particularly the commercial banks. Because a large part of these essentially liquid savings were then loaned by the intermediaries in long-term markets, long-term rates tended to be held down even though short-term rates rose.

During 1965 and 1966, as rates on market securities rose faster than those on claims at depositary-type institutions, savings growth at financial intermediaries slowed down. As a result, flows of institutional funds into long-term uses shrank, and long-term rates rose more relative to short-term than they had in periods of monetary restraint during the 1950's.

Bank response to monetary restraint. The combination of heavy business demands for credit and a more restrictive monetary policy exerted growing pressures on bank liquidity positions during 1965 and 1966. With business demands so large and business loans so profitable, however, bankers were naturally reluctant to turn down long-standing customers, and in many instances they could not do so because of prior commitments. To satisfy as much of the business demand as possible, bankers attempted to augment their business lending capacity by cutting back acquisitions of other assets and by continuing to bid aggressively for savings.

During the first three quarters of 1966, they liquidated \$4.5 billion of U.S. Government securities at a seasonally adjusted annual rate; their net acquisitions of municipal securities dropped to one-third the volume acquired in the comparable quarters of 1965; increases in loans to other types of borrowers—such as securities and finance companies—were cut back, in some cases drastically; and ultimately, in the face of continuing demands, many banks rationed credit to businesses. While bank extensions of mortgage credit held up surprisingly well in the first half of the year, they too dropped below the 1965 rate, particularly in the third quarter. Likewise bank extensions of consumer credit dropped below the 1965 rate in all quarters.

On the liability side, bankers attempted to match the competition of market rates with rate increases of their own on time deposits. In the spring they raised rates paid on large CD's to the 5½ per cent maximum first permitted by regulation in December 1965. And later, without reducing the rate, they shortened the maturities of new CD's to as little as 30 days. In addition, to buttress their savings flows further, they turned more actively to the promotion of smaller-denomination forms of consumer-type time deposits. Finally, banks with foreign branches added more than \$2 billion to their U.S. funds by drawing on dollars acquired by their branches in the Euro-dollar market.

As liquidation of securities, expanded competition for savings, enlarged money market borrowing, and repatriation of Euro-dollars added to the cost of bank funds, bankers took advantage of the heavy credit demands to raise their own loan charges. The prime rate on short-term business loans was increased on four occasions—from 4½ per cent in November 1965 to 6 per cent by August 1966. And some other loan charges were raised even more steeply. For example, by August some users of bank credit for stock market purposes were paying as much as 8 per cent.

Impact on securities markets. Bank operations thus had a double-barreled impact on interest rates in bond markets. On the one hand, with constraints on the growth in total bank credit forcing banks both to ration business loans and to raise their costs, the volume of business demands seeking accommodation in securities markets more than doubled relative to the first three quarters of 1965 (Chart 3). At the same time, with fewer bank funds available for investment, a rising share of security offerings had to be absorbed by other types of investors. The significance of this change was most noticeable in the market for State and local

government securities where bank takings as a share of net growth in securities outstanding dropped from more than 75 per cent in the first half of 1965 to about 40 per cent in the like period of 1966 and to only 3 per cent in the quarter ending with September. Similarly, in markets for Federal agency securities and participation certificates, the rate advance accompanying the large second-quarter expansion in net offerings would obviously have been less if the banks had had more funds to invest.

**NONFINANCIAL PUBLIC shows preference for
market securities over depositary-type claims in '66**

CHART 5

Flow of funds annual data except for 1966, which is an average of the first three quarters at a seasonally adjusted annual rate. Nonfinancial public includes households, all nonfinancial business, and State and local governments. Flows through depositary-type intermediaries are changes in time and savings deposits (including negotiable CD's) at commercial banks, deposits in mutual savings banks, and share capital at savings and loan associations and credit unions. Flows through insurance and pension fund intermediaries include reserves of life insurance companies and private pension funds, plus employee retirement funds of State and local governments. Flows through market represent direct acquisition of securities by nonfinancial public. Total flows include demand deposits and currency.

In corporate bond markets upward pressures on interest rates were created not only by the large over-all expansion in net debt offerings, already noted, but also by an increase in the proportion of new issues taking the form of public offerings. Dollar for dollar, public offerings generate stronger direct pressures on long-term rates than private placements do. While commitments on issues placed privately with institutional investors were large in late 1965 and early 1966, they dropped off sharply as the year

progressed, reflecting a growing constriction in the availability of investment funds at life insurance companies. The volume of bonds offered publicly by nonfinancial corporations in the first three quarters of 1966 was thus almost 40 per cent larger than in the like period of 1965.

The combination of greatly expanded security offerings, reduced bank takings, and growing constraints on new commitment activity at life companies could be resolved in only one way—namely, by increases in long-term rates large enough to draw funds directly from the nonfinancial public into the securities markets. The resulting redirection of savings flows was the largest experienced since 1959—the last preceding period of monetary restraint and high rates on market securities (Chart 5).

Competition among intermediaries. Increased buying of high-yielding market securities by the nonfinancial public occurred largely at the expense of depositary-type financial savings. Although all types of institutions attracting such savings have experienced a shrinkage of their inflows during 1966 (Chart 6),

**Among depositary-type institutions,
SAVINGS FLOWS down most at S & L's**

Flow of funds annual data except for 1966, which is an average of the first three quarters at a seasonally adjusted annual rate. Commercial bank flows include negotiable CD's but exclude demand deposits and currency.

over the first 7 months the shrinkage occurred mainly at savings and loan associations and mutual savings banks. While commercial banks also dropped somewhat behind the year-earlier growth rate in that period, 1965 had been their record year.

The greater relative success of commercial banks in competing

for savings during this period reflected more aggressive efforts to match rising market rates by increasing rates paid on both large CD's and consumer-type time deposits. Banks, with assets that are more diversified and of shorter average maturity than those of the savings and loan associations and mutual savings banks, found it easier to match higher costs for deposits with higher interest earnings. Moreover, banks were more successful than the other two groups in differentiating the types of claims they offered. As a result, the maximum interest rate paid by banks usually applied to a relatively small share of their total liabilities.

Finally, the freedom of the savings and loan industry to compete was further constrained by the efforts of the Federal Home Loan Bank Board to limit increases in dividend rates and borrowing by its member associations. These restraints were part of a continuing policy designed to achieve a sounder basis for growth than had occurred at some associations earlier in the 1960's, when they had promoted high dividend rates and had greatly increased borrowings from the home loan banks.

SAVINGS GROWTH AT MAJOR DEPOSITORY-TYPE INSTITUTIONS

(In per cent)

Period	Savings & loan assns.	Mutual savings banks	Commercial banks	
			Without CD's ¹	With CD's
1964.....	11.5	9.6	11.6	12.6
1965.....	8.2	7.4	14.4	15.8
1966 (seas. adj. annual rates):				
January-July.....	2.4	4.1	9.8	11.0
August-October.....	3.3	6.0	8.6	1.4

¹ Excludes CD's at weekly reporting banks.

NOTE.—Net growth of share capital at all insured savings and loan associations, savings deposits at mutual savings banks, and time and savings deposits at commercial banks as percentage of amounts outstanding at end of preceding year. August-October rates are based on preliminary October data for S & L's and mutuals.

Because savings and loan associations and mutual savings banks are the major lenders that finance homes, the sharp further shrinkage of their net savings flows—along with added pressures on the more diversified commercial bank and life insurance company lenders—led to an abrupt tightening of the home mortgage market and a steep rise in mortgage rates. During the second and third quarters, commitments to make new mortgage loans dropped to a fraction of their early pace, and as the backlog of prior loan

commitments was drawn down, housing starts declined sharply to less than their recession low of 1960.

By the summer, questions of social and economic priority were being posed by the contrast between the abrupt squeeze on home financing and the continued strong support being provided by bank credit to the business capital boom. In these circumstances, even though further advances in short-term market interest rates began to put CD rates at a competitive disadvantage, the maximum permissible deposit interest rates set by the Board's Regulation Q were not raised—as they had been on four earlier occasions in the 1960's when market rates had risen close to such ceilings. Also, when Congress acted to provide the necessary additional statutory flexibility, the maximum permissible rate payable on bank time deposits of less than \$100,000 was rolled back from 5½ to 5 per cent. This change was part of a coordinated set of rate actions by Federal supervisory agencies designed to stop the escalation of rate competition for savings among depositary-type intermediaries.

As the table shows, growth of total time deposits at banks did slow down rather abruptly from August through October. While most of this slow-down was attributable to the net liquidation of large CD's, growth of consumer-type deposits at banks also slowed.

Impact on life insurance companies. As has already been noted, changes in credit availability at life insurance companies played a part in the spread of monetary restraint. Because of their contractual character, net savings flows to life insurance companies were not greatly affected by the intensified competition for savings created by high yields on market securities. As Chart 5 suggests, the relative insensitivity of contractual savings flows to cyclical swings in interest rates is typical, and was also evident in the 1959 period of high rates.

Some life insurance companies have, nevertheless, found themselves with smaller than expected supplies of loan funds this year, because changes in interest rate relationships have caused their gross cash flows to fall short of anticipated levels. As a rule, insurance companies are able to predict their basic cash inflows with a high degree of accuracy. But this year, prepayments of mortgages dropped off with the rise in mortgage rates and the reduced turnover of existing housing. Withdrawals of policy proceeds that had been left on deposit with life companies (for a fixed rate of return) increased as rates on alternative types of financial assets rose. And policy loans—which most life companies are committed by

contract to make on the cash surrender value of their policies at rates no higher than 5 per cent—accelerated sharply, thereby preempting an unexpectedly large share of the gross cash flow.

As a result of the smaller than expected gross cash flow, some companies had a serious liquidity problem. This reflected two general characteristics of life insurance company operations, which have developed over the years: (1) Normally accurate predictions of cash flows have encouraged these companies to invest most of their available funds in illiquid, high yielding assets; and (2) their gross cash flows are so large that most companies commit a large share of funds in advance.

During the 1961-64 period when the supply of long-term funds was large relative to demands, insurance companies had substantially increased the share of anticipated cash flow being committed in advance. Late in 1965 and early in 1966 when long-term rates first began their steep rise, this back-log of outstanding commitments was expanded still further to take advantage of the higher yields.

But as 1966 progressed and it became clear that gross flows to life insurance companies were falling below projections, some companies had to resort to unusual actions in order to be in a position to meet take-downs of their outstanding commitments. Among other things they drew on their limited cash balances, liquidated securities, rescheduled acquisitions of mortgages from their servicing agents, and borrowed from banks. At the same time they began to stretch out the timing of new loan commitments, arranging for deferred delivery of a substantial part of the funds. When policy loan increases in particular continued their sharp rise, some companies most severely affected stopped making new loan commitments for the time being.

RECENT DEVELOPMENTS

During the third quarter spreading realization of the strength of prospective credit demands and of the growing effects of credit restraint created general market expectations of more sharply rising interest rates. This change in market psychology, together with the actions it both reflected and encouraged, led to an exaggerated late summer upsurge in bond yields (Chart 7).

Large city banks in particular were confronted with the prospect of a sizable net run-off of their near-dated CD maturities, as market rates rose. This prospect, occurring as it did at a time when new loan commitments were also being steeply curtailed at some life insurance companies, seemed to pose the possibility of

a serious imbalance between available funds and fall credit demands.

In these circumstances, a variety of precautionary actions were undertaken by lenders and borrowers alike. A number of money-market banks attempted to anticipate expected net September run-offs of their CD's by liquidating large blocks of municipal securities in the secondary market. But they found it difficult to attract buyers for their securities even at sharply increased yields. At the same time, a number of large corporations moved to float new security issues in the capital markets in what is usually a slack period of financing. Their purpose was to insure coverage of future needs before the cost and availability of funds tightened further. As a result, the August volume of corporate bonds offered in the public market ballooned to \$1.1 billion, the largest volume on record for a single month.

August–October decline. When events failed to confirm the extreme expectations of an early fall credit-availability crisis, the steep August advance in rates was reversed. Some of the roll-back reflected changes in administration policies in response to the August upsurge of rates. For example, President Johnson's request for special legislation to help moderate the business capital boom, along with his announcements that nonmilitary Federal spending would be cut, that the volume of anticipated Federal agency borrowing and pool sales would be reduced, and that further tax

Most of the SHARP RATE ADVANCES in late summer of '66 have been erased

Weekly averages except State and local govt., which are Thursday figures. Yields on new corporate issues for offerings with 5-year call protection only. See also notes to Chart 1.

action would be requested if needed to balance increases in spending for the Vietnamese war, all helped to calm the earlier fears of impending crisis. Fears were further alleviated when the Federal Reserve announced that its credit would be available to help banks adjust to reserve losses arising from time deposit withdrawals.

Following these early September announcements, evidence suggesting that economic and financial developments in the private sector might also not be living up to earlier market expectations reinforced the general rate decline. While bank credit expansion was small and CD's at banks experienced a net run-off of more than \$2½ billion from mid-August to the end of October, the drain was a smaller share of total CD maturities than many had feared—indicating that banks were able to encourage investors to hold CD's on other bases than strict comparison of rate spreads. Moreover, as yields on short-term Treasury bills declined, rates paid on 30-day CD maturities became competitive again.

Equally important, during September and October business capital market financing was not as large as in preceding months, even though business loan growth dropped to about one-third the rate earlier in the year. This evidence together with some other signs of a less ebullient economy raised questions among market participants whether private spending might be tapering off cyclically. With questions also being raised whether spending to support the U.S. commitment in Vietnam might rise less rapidly in 1967, market expectations about interest rates shifted, and some investors began to position bonds in anticipation of further rate declines.

Recent rate advance. Around the end of October bond yields started to reverse their course again, and by mid-November they had recovered a sizable part of their earlier fall declines—as was shown in the table on page 1575. The upturn was attributable chiefly to a resurgence of business demands for long-term funds in a period when the availability of bank credit was significantly limited. In addition, State and local government demands for funds expanded, and large borrowings by the U.S. Government in short-term markets continued to exert general upward pressures on rates. Finally, interest rate expectations were apparently being affected by an increase in the odds that market participants were placing on the chance of a further offering of Federal participation certificates and a decrease in the odds being placed on a Federal tax increase early in 1967.

STAFF ECONOMIC STUDY

TOWARD UNDERSTANDING OF THE WHOLE DEVELOPING ECONOMIC SITUATION

Frank R. Garfield—formerly of the staff of the Board of Governors

The Federal Reserve BULLETIN from time to time publishes, in full, staff studies on economic and financial subjects that are of general interest in the field of economic research.

This paper was prepared by Mr. Garfield, who was an Adviser in the Division of Research and Statistics of the Board of Gov-

ernors until his retirement on October 31, 1966. It was delivered at a seminar at the Board of Governors on October 19, 1966.

As in all staff studies, the author is responsible for the analyses and conclusions set forth, and the views expressed are not necessarily those of his colleagues or of the Board of Governors.

The brief title first considered for this paper—"Toward Understanding"—conveyed the idea of continuing inquiry but otherwise seemed rather vague. Even the present long title is subject to more than one interpretation. If someone thinks that the subject is the whole developing economic situation late in the autumn of 1966, he will be surprised to find only a long list of observations concerning understanding of developing economic situations in general.

TOWARD UNDERSTANDING

Why do some people spend most of their working lives trying to understand what goes on in the world? The justifying phrase in my academic days was "prediction and control." Neither "prediction" nor "control" proved to be a good bureaucratic word. "Control" clearly is a word to be avoided, partly because no one in this country wants a society controlled from the top, partly because the

extent of control is bound to be limited, and partly because the term implies more responsibility for the course of events than most people who have a hand in public policy-making want to assume. "Prediction" in the world of economics is obviously a very different sort of activity from prediction in the world of astronomy. Partly on this account "projections"—sometimes "A" and "B" to take care of different basic assumptions—have rather generally superseded "predictions." Paradoxical as it may appear, in the world of economics "projections" seem more scientific and therefore more persuasive than "predictions"—and at the same time are easier to live with when the facts make themselves known.

Many historians see little need to justify their search for understanding in terms of impact on policy; it is enough to be known to one's self and one's peers as an expert on what happened—what happened only yes-

terday or what happened in the olden times. One advantage of going back a way is that information on olden times is not subject to further revision—at least until someone discovers some scrolls in a cave or some new arrangements of pollen deep beneath the surface of a marsh. Another advantage in dealing exclusively with olden times is that a high degree of objectivity is less difficult to achieve; not much can be done about those times no matter how they are interpreted. Thoughtful study of the past certainly is satisfying for its own sake, and it is important as a prerequisite to understanding of the present and the future.

For many students of affairs, however, more significant as well as more exciting challenges are to be found in working at the shifting frontier of time dividing the present from the future—in deriving from preliminary information fairly objective analyses of prospects, analyses that hopefully will be serviceable in shaping current policies to achieve carefully considered goals. I have in mind especially goals for large groups, including people from many walks of life—or social strata, if you prefer.

STATING GOALS

Goals—many people's goals—are important features of the whole developing situation. But here we can honor them and pass on. Most of us want full employment, high and rising standards of living. We want an equitable distribution of income, no longer thinking much about the distribution of wealth. We want money incomes whose worth in real terms will not be jeopardized by sharp price advances. We also seek a balance of group participation and individual freedom—from government, business, or other institutional domination—

that will permit life to sparkle and encourage creative activity of many sorts, the world over. We seek—perhaps not actively enough—more peaceful relationships among nations.

To achieve such broad objectives we set up more specific goals such as maximum sustainable growth in output of goods and services; stability in broad averages of prices; and viable financial relationships within and among nations. Then we qualify these goals. We do not really want maximum output at the expense of some sort of balance between population and nonhuman resources such as air and water, and land that can be tilled or mined or subdivided. Nor do we want maximum output at the expense of a tolerable division of time between shop and family life.

Now, just one more note about goals, short-run and long-run. In a growing economy, tomorrow and the day after tomorrow will be at least as important as today. They should be so regarded today, with allowance only for different degrees of uncertainty as one plans farther into the future. In this view the Phillips trade-off between unemployment tomorrow and price advances tomorrow is a quite inadequate formulation of a problem; what about the impact of price advances tomorrow on unemployment the day after tomorrow?

DESCRIBING AND PROJECTING DEVELOPMENTS

Moving now from comment on goals to comment on description and projection, I shall keep in mind a recent professorial observation that while mathematical models usually include too little, verbal models usually include too much.

Perhaps we can simplify a little by noting that projection is only description of the future subject to less restraint of hard facts

than description of the past, and that policy formation to achieve goals may be regarded for the moment only as part of what is to be described and projected.

Also, suppose we take a short-cut, not stopping to look at and reflect on the bits and pieces of real life that we see around us—and their interactions—but rather stating observations and using selected bits and pieces as illustrative supporting evidence. Most of these observations are quite familiar, but all are, I believe, of some significance to recall in moving toward understanding.

FRAMEWORKS

1. If we are to describe and project meaningfully, we need to have one or more broad frameworks into which we organize the heterogeneous mass of detail that is economic life; we should not expect newspaper editors to do this for us. Reserving further comment until later, I hope you will be thinking about frameworks in connection with each observation along the way.

CONCEPTS

2. We need at all times to be as clear as we can on concepts, on what, specifically, we are talking about. We should try to understand, for example, such a distinction as that indicated in a *Survey of Current Business* article for November 1962, where it is said that “when the aim is to get at a measure of productive capacity, the present techniques [of measuring real capital] are not satisfactory because identical amounts of real capital as now measured will represent different capacities to produce goods and services over time.” We might also inquire what a “household” is the next time we use Census Bureau figures in analyzing housing demand. Again, although as a matter of practice we seem to find acceptable uses for

more than one loose phrase such as “economic and financial,” we should no doubt continually be searching for tighter language.

INFORMATION

3. While well-developed frameworks and concepts are necessary for good analysis, they are not sufficient; we need good data both to fill in prearranged conceptual boxes and to help determine the shape and arrangement of the boxes. And we need restraint in using poor data, not just recognition of the need for good data while reaching for whatever numbers may be readily at hand. Further, we need users of data who are not content to know that data are good for something but want to know whether the data are good for their purposes, and how good. And we need producers of data who really understand something about the uses to which the information they collect will be put. Much more needs to be written on this subject and I trust will be when projects are proposed for improving statistics by setting up various new arrangements for collecting and analyzing data.

4. We need information that cannot be fully quantified, information, for example, about the way people who make decisions think and react. We can obtain such information partly by studying opinion polls and intentions surveys, partly by being acquainted with many people, including people whose thinking is organized around problems quite different from our own.

ANALYSIS OF INFORMATION

5. In order to use numerical and other information for serviceable analysis we need first to study the information; then to apply such mathematical and other techniques as seem appropriate for adjustment and inter-

pretation; then to review preliminary results in the light of information available on related subjects; and finally to take such further steps as may be required. This may mean going over the whole study to look for significant errors in transcription or key punching; or surprising interpretations of questions asked; or unusual circumstances that make usual methods of adjustment inappropriate. To the uninitiated the idea of testing the reasonableness of methods in a particular instance by the reasonableness of the results obtained in that instance may seem to involve a sort of circularity and to open the way for abuse by analysts wishing to discard results not to their liking. But risks are everywhere and the risks associated with ready acceptance of first results or uncritical allegiance to a method seem to me very high indeed.

Among the tools essential for transforming crude data into materials useful for interpretation are electronic computers and electronic charting devices—and telephones. Now, equipped with all these, what do we study?

ECONOMIC LIFE

6. If we confine our analyses to “economic life” we need to define economic life broadly enough to include almost everything—even though we know we cannot specialize in everything to quite the same degree.

IMPACTS OF WAR

7. We cannot ignore, for example, the impacts of war or even the diplomatic activities relating to war. The record is clear that for much of the past half century—the whole life of the Federal Reserve System so far—production, employment, price, and credit developments have been profoundly affected by wars, preparations for war, and

the legacies of war. World War I and the terms of the peace that followed—including uncollectible war debts—were among the important sources of the troubles of the 1920's and 1930's although, in the light of post-World War II experience, they are not now usually put so high on the list of causes as they once were. In the past year and a half, escalation of war activities in Southeast Asia has had an important influence on new orders and expenditures, resource utilization, and speculation about a variety of future war-related developments. (I might have referred to this influence as “decisive” rather than “important” if 40 years ago Herbert Davenport had not pounded the table when he said “at the margin, not by the margin.”)

ROLE OF GOVERNMENT

8. Again, we must assess the significance in our time of government actions not associated with war, actions reflected in numerous printed forms to be used in meeting payrolls, writing purchase contracts, collecting income taxes and customs duties, and keeping track of social security affairs. Conditions in this respect are now appreciably different from those in 1913 when the Federal Reserve Act was passed. At that time total Federal outlays amounted to only \$700 million—1913 dollars—although the population was nearly half as large as it is today. Quite understandably, in writings of that time by Wesley C. Mitchell and others, profit was emphasized as even more of a central organizing force in the economy than it is now and only modest hopes were held out for dampening of cyclical fluctuations through government action. There was not much of a budget to balance or unbalance, myth or no myth.

Today the situation is different—but how

different? Are government functions now so important and government economists and administrators so well informed and so ingenious in shaping policies and gaining public support for them—especially for policies of restraint in periods of excessive demand—that only one projection has validity, a projection of steady, rapid growth? In a luncheon conversation not long ago, one man took the position that we could believe this; another talked about the recent emergence of overcapacity for the production of dacron and competitive products and the announcement of a sharp cut in the price of dacron. While attributing the price cut chiefly to overcapacity, he noted that the price cut would stimulate a number of new uses and would increase consumption in old uses. A third participant in the discussion asked how much government expenditures at large would have had to be increased to bring about absorption of this particular overcapacity without a price cut.

TECHNOLOGY

9. Still considering the wide range of subjects to be covered, we need to take account—for some countries more than for others—of the now highly organized search for better technical ways of doing things, whether in connection with business, government, academic, or other enterprises. Technological developments—in the art of making glass or selling bonds or teaching the young—all have their economic impacts, impacts on demands and the availability of resources to meet them, on costs and prices, and on saving and investment. Population forecasts these days need to recognize in one way or another the potential effects of revolutionary changes in techniques of birth control. Electric power experts are already beginning to think about problems that would develop if

individually owned electric cars were to become popular for short distance travel.

REAL AND FINANCIAL DEVELOPMENTS

10. Approaching the problem of what we are to deal with from another angle, we need information and analyses concerning the “real” world of physical production and employment, the “financial” world of transactions of the sort handled at banks and similar institutions, and the relationships among real and financial affairs. This might go without saying except that many of the early mathematical models ignored the financial world altogether and that financial analyses often have treated the intricacies of the real world rather lightly.

In the market place, real and financial affairs are intertwined; production, distribution, and consumption must be financed, and the demand for credit depends in good part on the volume of real output—and prices. If in some analyses there is still underemphasis on financial affairs, it may be partly because basic goals relate to real things such as jobs and goods and services. If in some analyses there is still underemphasis on real affairs, it may be partly because many policy actions relate directly to dollar amounts, of bank reserves to be required and provided, of tax receipts to be sought and expenditures to be made. Other policy actions relate to prices to be paid for the use of funds or, in the case of income policies, to prices to be paid for the services of workers and for currently produced goods.

PRICES, QUANTITIES, AND VALUES

11. Prices of many sorts need to be studied—prices of commodities, prices of houses, prices of high buildings on city street corners and low buildings in industrial parks, prices of government and industrial

bonds and shares in enterprises; and a variety of prices expressed as so much per time period, including rentals of houses, yields on fixed return securities over the whole range of maturities, and rates of pay for work. Prices multiplied by quantities yield values; and prices, quantities, and values together comprise an important part of the raw material of our study. (The term "quantity," incidentally, has a double usage, first as what we multiply by price to get value, and second as the value itself, which is what we intend when we speak of "the quantity of money." If, however, we say that the quantity of money is equal to its value, we find that value has a second meaning—the value of money is what in real terms a unit of currency will command now as compared with what it did command a while ago.) Now, before further aspects of subject matter are explored, attention may be directed to various types of change encountered in studying time series for prices, quantities, and values.

TYPES OF CHANGE

12. Approximate identification of several types of change that go to make up the net change reflected in time series is feasible much of the time and needs to be undertaken to facilitate understanding of the developing situation.

SEASONAL FLUCTUATIONS

13. First of all, seasonal variations—mainly repetitive from year to year but in some degree shifting over time, sometimes suddenly—need to be measured as well as may be for two purposes. The first purpose is to take account of them, as in open market operations, and the second is to eliminate them from series to permit analysis of non-seasonal movements. Recognizing the advantages of using the computer for all it is

worth in this area—and that is a great deal—I am still impressed with the need for thoughtful examination of series before they are fed to the computer and with the desirability, wherever possible, of making prior adjustments for important known irregularities. The advantages of prior adjustments were demonstrated long ago for working-day differences—now provided for in some computer programs—and have been demonstrated more recently for steel strikes. Programed procedures have not proved adequate to handle periods of sharp cyclical reversal of direction, such as the spring of 1958; this has been established for many production series by study of the results of adjustments on tier charts and by observation of the subsequent reversal of changes in the seasonal factors that might have been used.

IRREGULAR FLUCTUATIONS

14. With seasonal fluctuations taken care of, changes shown by the commonly used seasonally adjusted measures need to be interpreted in terms of three types of change that they reflect in all sorts of combinations—short-term irregular fluctuations, cyclical changes, and long-term trends. For some series the irregular changes—reflecting both the economic impact of hurricanes, strikes, new banking regulations and shifts in the timing of Treasury financing and the statistical impact of reporting and processing aberrations—are relatively unimportant. For series of this sort month-to-month or at least quarter-to-quarter changes shown by seasonally adjusted measures may be regarded as reflecting mainly cyclical changes and trends. Quarterly GNP figures and monthly figures for nonagricultural employment and industrial production might be so classified. Changes shown by series at lower levels of

aggregation or for shorter periods of time are likely to be more subject to irregular fluctuations.

When irregular fluctuations are important, their causes may be known or not known. If causes are known—and they often can be ascertained, if time does not run out on efforts to find out what happened—then approximate special allowances can be made; for a strike this may mean lowering a production series a little before and after the strike, raising it considerably during the strike.

When the causes of irregular fluctuations are not known, these fluctuations may be allowed for informally in chart reading or they may be formally suppressed, more or less, by using moving averages, with the length of the moving average depending on the relative importance of irregular fluctuations. Irregular changes are smoothed out this way in many series shown in *Business Cycle Developments*.

Useful as such smoothing often is, the curves so calculated do not come up to the last minute; to do that they would need to be based in part on assumptions as to the future. And they are averages, in which significant short-term changes may be averaged out along with the irregulars.

Partly because irregular changes include many changes from causes unknown, they are sometimes lumped together, with or without irregular changes of known origin, as “random” fluctuations. Considering the nature of many of these changes and what ought to be done about them, the term “irregular” seems to me preferable. The position might be taken that trends and cycles, while clearly not random, are in varying degree irregular and that, therefore, the term “irregular” has its limitations for use here.

TRENDS AND CYCLES

15. The trend-cycle curves that we have, once seasonal variations have been allowed for and irregulars have been brought under control, need to be studied to see how far they reflect long-term trends and how far cyclical changes. In recent years efforts to measure trend have been extended—we now have “growth triangles” that show growth rates calculated from every past year for which data are available to each later year. Meanwhile, the calculation of separate cycle curves, pushed by some analysts in the 1920's, has never regained the position lost in the 1930's. The National Bureau of Economic Research in its far-reaching study of cycles has preferred to work with “cycles of experience,” including trends within cycles, excluding shifts in level from one cycle to another.

While the basic idea of trends seems simple enough and while useful trends can be quickly established for some series in some periods, quite often great difficulties are encountered and the results need to be interpreted with great care. Trends change. Cycles, cycles of varying length, present problems in the choice of initial and terminal dates.

While the computer may be quite willing to calculate trends from any set of data, the economist needs to take care, if the returns obtained are to be meaningful. Suppose, for example, that there is a fairly long period—say 5 years—of rapid advance due partly to growth in resources and partly to transition from under-utilization of resources to nearly full utilization; suppose, further, that this period is followed by a period of less rapid advance; then, how should the two periods be characterized in terms of trends and deviations therefrom? Pushing the time horizon back a decade or so or a cycle or

two might clarify the picture somewhat and still leave some puzzling problems.

16. We need to study the fluctuations that go under the name of "business cycles" whatever we think of that term. To some people the term is objectionable because it seems to promise more than can be delivered. Cyclical fluctuations are of varying amplitude and duration and shape; the troughs of the recessions of 1954 and 1958 were well described by the letters U and V. Some periods, moreover, fit so poorly into any cyclical mold, of advance or decline, that the idea that the economy is always in one stage or another of a cycle seems open to question. Proponents of the term "business cycles" from the outset have pointed to dissimilarities as well as similarities among periods; but in computing averages of duration and other characteristics from small samples of diverse cycles they may have pushed the idea of regularity too far; averages, like aggregates, sometimes confuse rather than clarify.

Again, to some people the concept of business cycles is objectionable because it seems to imply inevitable failure of government efforts to eliminate cyclical unemployment and achieve steady growth—steady, rapid growth. While these analysts might not assert that this is a new world, they might prefer a term such as "economic fluctuations" to "business cycles." For our times "economic" may be preferable to "business." But "fluctuations" may be questioned as covering many types of change and not having one significant connotation that the term "cycles" does carry; each situation does develop out of the previous situation in a continuous process, and advances and declines are more intimately related by cumulative forces than the term "fluctuations" may seem to imply. Description, projection,

and policy-making to achieve steady, rapid growth need to take this basic idea into account.

How much help cyclical analysis of one sort or another may be in projecting the course of events or in shaping and timing policy actions is another matter. In my view cyclical analysis should not be limited to or thought of principally as leading-indicator analysis although investigation of leads and lags throughout the economy is a very important part of all analytical work. I would put much emphasis on the search for such causal interconnections as may be evident in sequences; on consideration of each cyclical fluctuation of the fairly recent past as a whole; and on assessment of the basic nature of the particular period ahead, certain to be unique in some respects, hopefully in some respects that can be discerned in advance from intensive study of recent developments.

With the necessity for understanding seasonal movements, irregular fluctuations, long-time trends, and cycles in mind, we are now in a position to consider more specifically—or less generally—what subjects we need to study, what types of data we need to obtain, and what methods we may use most advantageously in describing the past and projecting the future.

TIME PERIODS FOR FLOW INFORMATION

17. If budget messages and directives to the manager of the open market account are to be written to good purpose, those responsible for writing them, quite aware of the various types of economic change referred to above, need to have before them information and analyses for appropriate periods of time—promptly. They need specifically to have flow information for many different time intervals, including the calendar divisions of years, quarters, and months and

even some finer divisions; and also for such economic divisions of time as their views on stages of cycles or stages of growth may require.

Limiting ourselves to the calendar, we can see very quickly that annual data, serving some purposes well enough, are wholly inadequate for many other purposes. They would have been of no help in solving the problem of autumnal pressures in the London money market that intrigued W. Stanley Jevons in 1866. In a paper on this subject, he used weekly, monthly, and quarterly figures based on the Bank of England accounts as he had done 4 years earlier in his pioneering paper on the subject of seasonal variations. Edwin W. Kemmerer, in his large-scale study of seasonals in interest rates for the National Monetary Commission in 1910, had his Cornell students work from weekly figures. In 1932, with runs on banks threatened all the time and occurring all too often, the Board's staff made daily seasonal adjustments of currency in circulation.

During the 1920's increased efforts were made to obtain monthly or shorter-term data promptly in order to facilitate quick responses to economic changes. There was also a new emphasis on benchmark data, used formally at first to improve the quality of past records and analysis, but not to make advance allowances for biases in currently reported figures. For total manufacturing employment the Board's upward adjustment to levels established by the Census of Manufactures was at the rate of about 2 per cent per year after 1923.

Later, with a good many monthly data in strategic areas available—and combined into measures such as the Board's index of industrial production—and with a drive to obtain the sort of completeness of coverage for the economy represented by the national

accounts, great emphasis was put on quarterly figures. Quarterly figures have the advantage of being less difficult to estimate for areas not well covered in current reports. Also, even where reliable monthly figures are available, averaging them will suppress some irregular changes and thereby may facilitate current interpretation as well as the establishing of some relationships among series. On the other hand, certain relationships significant to know about in dealing with some types of change disappear when monthly figures are averaged; and significant monthly turning points such as that in April 1958 are often lost from view. One should not be obliged to choose between quarterly and monthly figures—or to think of the significance of the news reported every day only in terms of one particular segment of time.

RELATED STOCK AND FLOW INFORMATION

18. We need analysis and data relating not only to what happens during a period but also to conditions at the start and finish of a period. Currently, there is great emphasis on flows during a period—flows of goods and services and funds—but economic balance sheets as well as income statements are recognized as materials for study. Interest in measurement of capacity and rates of capacity utilization continues. Also, improved information on rental housing vacancies has been made available to help analyze residential real estate markets. It is true that no adequate analysis has yet been made of structural changes affecting the significance of inventory-sales ratios, and that not enough attention may be given to the amount and nature of mortgage debt outstanding; but there are plenty of neglected problems also in the area of flow analysis.

NET AND GROSS

19. We need flow data net and gross. In the consumer credit area, for example, information on changes in outstandings is useful, but analysis of such net data can be greatly improved by having gross figures on extensions and repayments. Being affected by developments in quite different time periods, extensions and repayments behave quite differently on occasion. Besides, changes in the rate of credit extensions taken separately can be compared meaningfully with current developments in retail trade, and repayments can be related usefully to disposable income.

TOTAL AND PARTS

20. Closely allied to the observation concerning net and gross is another concerning the need for data and analysis at many levels of aggregation. In the field of population, for example, one figure quite relevant for high school construction programs and related local expenditures is the number of children of high school age. For all public school construction, more age groups need to be included. In some recent periods, information on total population would have been next to worthless for either purpose; but a total population figure is useful for making broad comparisons with the past or with other countries and for computing some per capita figures that are of significance.

In the field of prices, broad averages at the retail and wholesale levels are still often used in analyses of general economic developments, and a total consumer price index is often used in wage negotiations, without analysis in terms of components. But price analysis in depth needs to deal with prices at many stages along the way from raw materials to finished products and from primary markets to retail markets. Changes in

prices of farm products and foods ordinarily reflect changes in supply factors to a greater extent than prices of industrial commodities, occur in their own good time, and often result in changes in the broad averages that are subject to misinterpretation. Prices of hogs and cattle, in particular, have their own individual swings related to short and long production cycles dependent in part on biological considerations.

Detailed price, production, and other data need to be studied to appraise fluctuations in prices for industrial commodities and their effects on expectations, new orders, and inventory accumulation, not to mention earnings, the amount of internal funds available for capital outlays, and the demands of business for short- and long-term credit.

One of the finer arts in economic analysis is to take full advantage of what can be learned from study of data at many levels of aggregation—or of “disaggregation,” if you are accustomed to thinking of the broad aggregates as the starting point for thinking.

The present leading view of one of the relationships among broad aggregates most important for making projections—the relationship between consumer expenditures and personal disposable income—seems to be that some components, notably auto sales, should be estimated separately, taking account of factors other than income. The ratio between expenditures and incomes (and the saving rate) thus should be regarded as changeable from quarter to quarter on this account as well as because of leads and lags that may appear in connection with developments such as the tax cut of 1964. Moving away from the view that the saving rate should be expected to be constant from quarter to quarter makes sense to me, especially in view of the many difficul-

ties in the way of calculating the income and expenditure figures and consequent uncertainties as to how closely they—and the difference between them—reflect what is happening. Aggregates, as sums of components, often benefit from offsets of errors of opposite direction but may still be subject to significant net inaccuracies. Thus, estimating consumption expenditures requires discretion in the handling of numbers at many points and not merely in the estimation of the “exogenous” elements so basic to income estimates—notably, defense and other government expenditures, plant and equipment outlays, residential building, and the rate of inventory change.

MULTIPLE CLASSIFICATIONS OF DATA

21. Fortunately for economic analysis, with proper care the same data can be used in different groupings to help answer many different questions. Production in one industry, for example, can be grouped with production in other industries turning out materials or finished products, as the case may be, and also with production of goods more or less durable in use. Both lines of classification are among those important for understanding differences in amplitude and timing of fluctuations. Again, production of goods can be usefully classified according to the status of principal purchasers of products, notably private producers, private consumers, and governments, national and local. These groups have different objectives, hold different positions in markets, make different credit arrangements, and alter their demands at different times. In some periods such as the present, grouping of industrial products as business equipment, defense equipment, consumer durables, and consumer staples points to important differences in rates of expansion, already long continued.

Production may also be classified as to whether it is going into business inventories or being delivered to final purchasers; the differences in behavior are often striking. The rate of accumulation and the level of holdings relative to production and sales are in themselves significant facts, and to the extent that information can be obtained concerning the areas of accumulation and the voluntary and involuntary nature of the accumulation, the full significance of inventory developments can be better appraised.

In general, at different times different lines of classification will be especially important for indicating the type of situation that may be developing.

COMPARABILITY OF GROUPINGS FOR INDUSTRY ANALYSIS

22. Unfortunately for economic analysis, while some industry groupings are closely comparable with each other—those for manufacturing employment, hours, and production, for example, all on an establishment basis—not all groupings for the same industry are closely related; profit figures, for example, are based on data for enterprises reaching far across the industry lines based on establishment data. Happily, the comparability of enterprise sales, inventory, and order data with establishment data has been improved in recent years through reporting on a divisional basis by most large enterprises whose activities cross industry lines. Also, increased efforts have been made to reconcile various types of data drawn from corporate and establishment reports. At the higher levels of aggregation, problems of this particular sort tend to be reduced.

FLEXIBILITY IN ANALYSIS

23. The usefulness of classifying and studying data for the past in trying to see

what may lie ahead depends in part on the extent of our flexibility in using what we learn to ferret out actual elements of continuity in the economy and elements of change that alter economic behavior and economic relationships. If, for example, the goal of steady growth were to be achieved, conclusions drawn from an era of cycles would need to be reexamined. This would be true whether or not earlier generalizations had been expressed in mathematical terms. That formal models of the economy—however elaborately conceived and constructed to take care of accelerators, multipliers, and the like—will be flexible enough to capture the individual peculiarity of each different period in a rapidly changing world seems much less certain than that those who construct the models will in the course of their work learn a great deal about the operation of the economy. For current analysis and current decision-making, one essential requirement I see is a degree of flexibility available only to human minds, human minds steeped in the history of economic developments—at home and abroad—and trained to make use of a variety of tools of economic analysis.

One further note about flexibility: in all research more of it is needed than is cultivated when pressure to define and test a particular hypothesis rigorously is so strong that the researcher is unable to appreciate what the data are trying to tell him about some other subject that may be just as important. (What constitutes rigorous testing is, incidentally, a subject that warrants a further sharp look.)

FRAMEWORKS

24. If, as I requested, you have been thinking all along about frameworks, where have you come out? Are you perhaps wondering how everything I have mentioned

so far as important to understanding can be brought within any single framework? So am I. How much of the whole developing situation, for example, is likely to be encompassed in study of real things such as production of goods and services, and employment? How much in study of prices for goods and services and for the use of goods and funds? How much in the study of values, particularly expenditures and incomes and flows of funds, as quantities of real things and of all sorts of claims are transferred at prevailing prices?

Perhaps, with everything related to everything else, one can go as far as one can go anyway by starting out to explain changes in quantities; or in prices; or in values. But wherever one starts, one winds up talking about all three or one is not doing much of a job of relating goals and policies and developments in the market place. All three, moreover, need enough direct attention to reveal whatever of significance they have to tell. And as a practical matter, all three need to be approached in their own ways, not in some way dictated by the desire to integrate everything into one unified system.

What are some of the problems involved in measuring and relating values, quantities, and prices and building a reasonably complete account, beginning with study of any one? In some ways the simplest broad concepts are those of total value, value of expenditures and value of income associated with production of goods and services. Conceptually, the starting point for the expenditure total is the individual sales slip for final products and such data as are needed to estimate the current dollar value of inventory change. The values on sales slips reflect quantities and prices that have already been multiplied without any averaging. In these figures, both quantities and

prices change from one period to another as they do in actual transactions. In contrast, a quantity index generally assumes constant price relationships and a price index constant quantity relationships. And quantity measures relate to goods at various stages of fabrication and distribution, not just to one. Thus, to avoid overlapping (such as occurs in shipments series), the structure in the weight year is taken as one of net output at various stages of production, and the series used to carry this structure forward through time must represent changes in net output—by what means best is one of the current issues of measurement in this area.

In practice, the sales slips needed to obtain total expenditures (current dollar GNP) are not all available; some values, as for new autos, are calculated from totals of units sold and estimates of average prices; the value of services of government employees is the sum of paychecks rather than sales slips; and estimating the value of inventory change involves many steps and more than a little uncertainty as to the results. For these and other reasons, the actual current value GNP derived from the expenditure side is not the simple aggregate that it may seem to be in broad concept.

The total value of current expenditures, no matter how well estimated at the final product level, cannot tell the whole story of economic change; it is quantity of output—output of steel in tons or “constant” dollars—that is related to all sorts of change in employment and productivity, and it is prices that are involved most directly in maintaining the value of the currency and avoiding such speculative developments as might arise from widespread price changes in one direction or the other. Also, changes throughout the economy, along vertical lines from raw material to finished product, are significant

to analyze along with horizontal differences in behavior among different groups of final products.

Recognizing the importance of quantity and price measures, is it feasible to move with assurance from measures of current values to measures of quantities and prices? The difficulties of working in the other direction—from quantity and prices indexes to value measures—are readily perceived. They include various data and other problems in quantity and price measurement already noted and also the technical problem of obtaining a value measure from quantity and price measures; base-weighted quantity and indexes of prices, when multiplied, will not yield a precise value measure, and given (changing) year weighted indexes for either have their special limitations. Problems of the same nature are inherent in any move from value to quantity or price measures and, further, any differences between current value estimates and actual values will affect quantity and price measures derived from current value estimates. Also, detail by stage of fabrication and distribution needed for analysis of changing supply and demand positions and the transmission of the impact of events through the whole economy cannot be obtained from final product figures alone.

Direct approaches to quantity and price measurement present problems of their own that should not be minimized; for many products deflation of value figures may seem to be the best way to handle baffling problems of nonhomogeneity of product. But the evidence seems to me clear that much is to be gained by approaching quantity and price as well as value measurement and analysis directly. One special advantage is that of potential improvement in quality all around that can come from approaching measurement problems from different points

of view and then comparing the results. This is one way that data limitations for example—going all the way back to the kind of records people keep and affecting analysis in different ways in different approaches—can be partially overcome.

This discussion of frameworks has focused on approaches to quantity, price, and value measurement and analysis, almost exclusively with reference to currently produced goods and services. Transactions in existing property, real and other, are also highly significant, as is readily apparent in analyzing problems relating to housing and mortgage markets and to international payment balances. And, you may have noticed, the emphasis on “real” aspects has left “financial” aspects—the financing of value transactions of all sorts—scarcely mentioned.

That, in some sense, analysis will always be incomplete seems inevitable, but that we can make further substantial progress toward a *truly comprehensive story* seems to me equally clear. We can increase the range and depth of our understanding, I think, by looking at broad problems from several points of view. “Framework” is a word that, like “cycle,” seems to me more meaningful when used in the plural.

With this comment on frameworks the discussion has returned to the point of beginning—almost.

TOWARD UNDERSTANDING—AGAIN

As already noted, I take the chief aim of working toward understanding of economic

developments to be some contribution toward policy-making—public and private. And public policy-making in the economic area I take to be aimed at the variety of purposes touched on at the beginning of this paper. They may be summarized in general terms, first as encouraging growth of a sort sustainable and consistent with various other broad goals and, second, as working actively toward meeting such major, persistent, special problems as the present 8 per cent unemployment rate for nonwhites in this country. No one set of policies—fiscal or monetary or other—has the versatility needed to handle the variety of problems to be dealt with by one means or another. Whatever the organizational arrangements for policy-making may be in the future, the need for broad understanding on the part of individuals dealing with highly specialized problems in particular areas will be very great. Policies reasonably well adapted to the situation and to each other can best be developed among people of such understanding in whatever branch or agency of the government they may be working. And such policies can be adopted and then implemented effectively only if many people throughout the country take an active interest in economic affairs and work to broaden their understanding of economic developments and economic policies, both domestic and international.

STAFF ECONOMIC STUDY

A REVISED INDEX OF MANUFACTURING CAPACITY

*Frank de Leeuw—Staff, Board of Governors
With Frank E. Hopkins and Michael D. Sherman*

The Federal Reserve BULLETIN from time to time publishes, in full, staff studies on economic and financial subjects that are of general interest in the field of economic research.

This paper was prepared by Mr. de Leeuw, a member of the staff of the Board of Governors, together with Messrs. Hop-

kins and Sherman, who were research assistants at the Board during the summer of 1966.

As in all staff studies, the author is responsible for the analyses and conclusions set forth, and the views expressed are not necessarily those of the Board of Governors or of other members of the Board's staff.

This article describes a set of estimates of capacity and capacity utilization in U.S. manufacturing industries. The estimates represent a revision of a series maintained at the Federal Reserve Board for the past 6 years.¹ They are crude and subject to much larger measurement errors than many other time series in common use. Although the estimates appear to be helpful in interpreting current economic developments, users should bear in mind that more thinking about underlying concepts, better coverage of some key manufacturing industries, and further experimentation with alternative approaches to collecting capacity information all are probably necessary before truly reliable estimates can be developed.

¹ See Frank de Leeuw, "The Demand for Capital Goods by Manufacturers," *Econometrica*, Vol. 30, No. 3, July 1962, pp. 410-11; Peter Gajewski and Frank de Leeuw, "An Index of Manufacturing Capacity," July 1964 (unpublished); and U.S. Council of Economic Advisers, *Annual Report*, 1966, p. 249.

METHODOLOGY AND USES

The method of calculating the capacity estimates, described in detail below, can be summarized in a few sentences. The general level and major movements of capacity utilization in the estimates are those that emerge from McGraw-Hill surveys of capacity utilization of manufacturing companies. Dividing these utilization rates into Federal Reserve indexes of production gives the general level and trend of the capacity estimates. The final capacity estimates are extrapolated before the first utilization survey and after the most recent one through the use of capital stock estimates and McGraw-Hill survey information on yearly capacity changes. These two sources of information are also used to smooth the capacity estimates during the period of the utilization surveys.

The meaning of "capacity" as measured in these estimates is of necessity imprecise.

The unit of measurement is output per quarter, expressed as an index on a 1957–59 base. That is, the capacity index is an estimate of the quantity of output per quarter, relative to quarterly output in 1957–59, which the current stock of plant and equipment in manufacturing industries is capable of producing. But there are many ways of interpreting the phrase “capable of producing.” It may refer to output that can be produced at minimum average cost, or it may refer to output that can be produced at anything less than prohibitively high cost; it may refer to peak seasonal output, or it

CHART 1

Backlog of appropriations is the estimated dollar volume of backlog at the end of each quarter for all manufacturing, deflated by the GNP implicit deflator for producers' durable equipment and divided by the capacity index for total manufacturing. Capacity utilization is for total manufacturing. Data are from National Industrial Conference Board, U.S. Commerce Department, and Federal Reserve.

may refer to output after adjustment for normal seasonal variation; it may refer to the sum of separate product capacities, or it may refer to some normal product-mix; it may be restricted to single-shift output, or it may include second-shift or third-shift potential. There is no information available as to exactly what respondents to capacity surveys have in mind.

The usefulness of the utilization estimates in spite of these defects, however, is illustrated by their relationship to other aggre-

gative time series. One such relationship, depicted in Chart 1, is that of capacity utilization for all manufacturing to the backlog of appropriations for new plant and equipment by manufacturers, with the latter variable expressed as a ratio to estimated capacity. Periods of high backlog follow, after a brief lag, periods of high utilization, with the 1959 peak in both cases below the 1955–56 peak and the current level. The two series diverge in recessions, probably reflecting in part the influence of financial conditions on the volume and timing of new appropriations.

CHART 2

Price change is the absolute change from a year earlier in the quarterly average of a special Federal Reserve grouping of wholesale price indexes (1957–59=100) for industrial materials. Capacity utilization is for primary processing industries. Data are from Bureau of Labor Statistics and Federal Reserve.

Price changes for industrial materials also appear to be related to estimated capacity utilization, particularly to one of the two components of the total—utilization in primary processing industries. Chart 2 illustrates the general correspondence of fluctuations in these two series. There are, of course, important forces affecting materials prices not captured in the utilization measure. At times, the influences of these other forces—for example, changes in agricultural prices and in wage levels—have prob-

ably outweighed the influence of capacity utilization.

SUMMARY OF REVISION

The changes responsible for the revision of past estimates are summarized before presentation of the new estimates in detail. The new estimates differ from the old for three reasons: (1) Separate estimates have been prepared of capacity (and of utilization) for two subgroups of manufacturing, primary processing industries and advanced processing industries. (2) On the basis of recent evidence, it is now assumed that respondents to the McGraw-Hill surveys (the most important source of information for these capacity estimates) adjust their responses for seasonal variation. And (3) in preparing the estimates additional data were used—an additional year's data for all the time series involved, and a completely different set of data for estimates of the stock of capital goods owned by manufacturers.

Estimated utilization rates for primary processing industries and advanced processing industries generally move in the same direction, as seen in Chart 3. But the two series show some significant differences during peak periods. For example, primary

processing industries reached their highest postwar utilization rate just after the outbreak of the Korean war, whereas advanced processing industries did not reach their postwar peak until near the end of that conflict. Again, in 1965 primary processing utilization was not so high as it had been in 1955–56, but advanced processing utilization was as high as in the earlier period.

Those familiar with the timing of postwar fluctuations in prices will appreciate the closer correspondence of industrial price movements with primary processing utilization than with advanced processing utilization—a correspondence to which a number of economists have referred.² The “primary processing” and “advanced processing” classifications used here are not the same as the “materials” and “finished products” classification used in the industrial production index. The ones used in the industrial production index represent broader coverage and a cleaner separation of industries producing

² See, for example, Murray Altmann, “Price Analysis and Economic Developments,” Staff Economic Study, Federal Reserve Board, 1965; and Ruth Mack, “The Destabilizing Influence of Raw Materials Prices,” in U.S. Joint Economic Committee, *The Relationship of Prices to Economic Stability and Growth*, 1958, pp. 269-84.

for further fabrication and industries producing for distributors or for final users; but data limitations make it impossible to use the production index separation in the present study.

The changed assumption about seasonal adjustment underlies the difference between earlier and current estimates of total manufacturing utilization during the past 10 years, as illustrated in Chart 4. Earlier it was assumed that the end-of-year utilization rates that companies reported to McGraw-Hill were not adjusted for seasonal variation. Because the end of the year is, on balance, a slack season for manufacturing production, our seasonally adjusted utilization rates were above the figures reported by McGraw-Hill. Now it is assumed that the rates reported to McGraw-Hill are seasonally adjusted—for reasons discussed below—and our seasonally adjusted utilization estimates are lower than they were, and no longer above the McGraw-Hill reported rates.

As for the other divergences, including the slight excess of the revised over the earlier estimates for the first few years, a great many minor changes in data are responsible and no one factor is dominant.

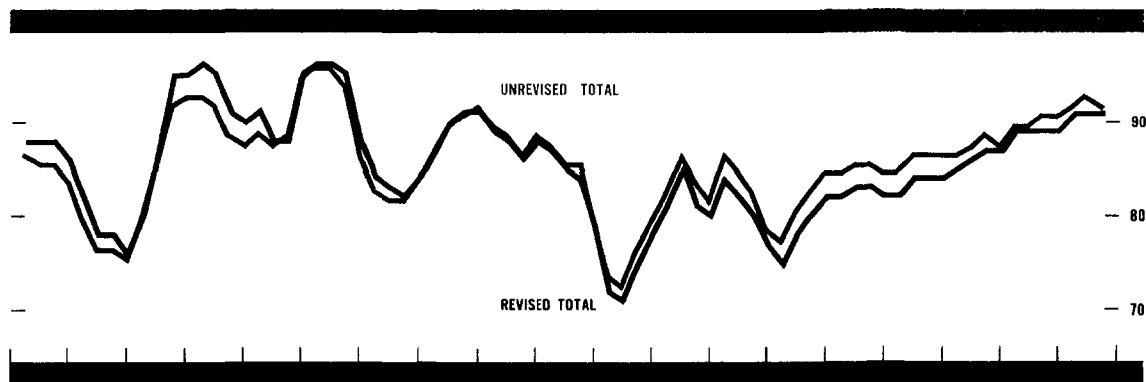

The fact that minor changes in data have caused revisions of one or two points in the utilization rate for some quarters underscores once more the large degree of uncertainty surrounding these estimates and the need for further work.

CONSTRUCTION OF THE ESTIMATES

As earlier, three kinds of series entered into the construction of capacity estimates: A perpetual inventory measure of the gross stock of capital goods, a McGraw-Hill index of capacity, and a Federal Reserve index of production divided by a McGraw-Hill rate-of-operations measure. In contrast to previous estimates, however, each of the three series was separated into two components, one for primary processing industries and one for advanced processing industries.

Stock of capital goods. The data for the construction of the gross capital stock series were obtained principally from official censuses of manufacturers and from the surveys of manufacturers published in noncensus years since 1947 (with the exception of 1948). Census data rather than Commerce-Securities Exchange Commission data for plant and equipment investment expenditures were employed because this informa-

CHART 4

Latest figures, third quarter.

tion is collected on an establishment basis (rather than by companies which often produce in several industries).

A common method for measuring perpetual inventory of gross capital stock consists of adding each year's gross investment expenditure to the previous year's stock of capital goods and subtracting from this total the gross investment expenditure of n years ago, where n is the useful life of capital goods. An implication of this method is that the change in the capital stock in the current year depends not only upon current investment expenditures, but also upon gross investment expenditures exactly n years ago. If gross investment expenditures n years ago were subject to any unusual fluctuation, the current capital stock measure would also tend to fluctuate abnormally.

In order to eliminate these echo effects, we used a technique similar to one developed by Dale Jorgenson.³ This technique consists of (1) assuming that retirement is a constant fraction of the capital stock, or in equation form

$$S_{t+1} = (1-k)S_t + I_t$$

where S_t is the stock at the start of period t , I_t is investment expenditures in period t , and k is the retirement rate; and (2) calculating the retirement rate k by averaging the common perpetual-inventory estimates of retirements as a fraction of capital stock over a period of years.

An unpublished set of capital stock estimates for industry prepared by Michael Gort were used to obtain estimates of capital stock as of the end of 1947 and estimates of k for materials and for final products. The retirement rate k was estimated

at 2.9 per cent for primary processing industries and 3.6 per cent for advanced processing industries.

The choice of a gross rather than a net measure of capital was based on the assumption that the amount of services that a capital good yields per year or per quarter during its lifetime is approximated better as a constant amount than as an amount proportional to the remaining lifespan of the capital good.

Census figures for gross investment expenditures were not available for 1948, 1965, and 1966. Thus estimates for these years were obtained by interpolative and extrapolative approximations utilizing the Commerce-SEC data. Census data do not include the sale of Government surplus capital stocks to private manufacturing industries. Because these sales were sizable in the years just after World War II, estimates utilizing data based on a study by Bert Hickman⁴ were added to the Census series to obtain the final expenditure estimates.

The two capital stock series are plotted in Chart 5, together with the other capacity indicators used in construction of the final series. Noteworthy features of their time-paths are (1) their very slight deceleration during the years 1958-62, in contrast to much more marked deceleration in some other capital stock estimates, and (2) their acceleration during the last 2 or 3 years.

McGraw-Hill capacity indexes. Annual McGraw-Hill indexes⁵ were combined into primary processing and advanced processing totals with weights based on points in the Federal Reserve index of industrial production in December 1950, the base period of

³ Dale Jorgenson, "Anticipations and Investment Behavior," in James S. Duesenberry, et. al., editors, *The Brookings Quarterly Econometric Model of the United States*, Rand McNally, 1965, pp. 51, 57.

⁵ McGraw-Hill Company, Annual Surveys (released in April).

the capacity indexes. Proportions of total capacity would be more appropriate as weights than proportions of total output would be, but only the latter are readily

split into (1) industrial chemicals (S.I.C. codes 281 and 282), assigned to primary processing industries, and (2) chemical products (S.I.C. codes 283 through 289),

CHART 5

Capital stock is in billions of 1958 dollars, output ÷ utilization is an index with 1957-59 output=100, capacity index has the end of 1950=100. All data plotted at end of year. Data

are from McGraw-Hill Company, Department of Commerce, and Federal Reserve.

available. The two aggregate indexes also appear in Chart 5.

Industries classified as "primary processing" in constructing the new capacity estimates were textiles, lumber, paper, and pulp, petroleum, rubber, stone, clay, and glass, primary metals, fabricated metals, and a portion of chemicals.

Where possible the chemical industry was

assigned to advanced processing industries. Where only a total chemicals series was available, that total chemicals series was used with an industrial chemicals weight and with a chemical products weight. In addition to chemical products, the food, beverages, tobacco, apparel, furniture, printing and publishing, leather, machinery, transportation equipment, instruments, ord-

nance, and miscellaneous industry groups were classified as "advanced processing."

Output divided by utilization. A company producing 100 units per year and operating at 80 per cent of capacity has a capacity of 100 divided by 80 or 125 units of output per year. If in a subsequent period the company produces 91 units per year and is operating at 70 per cent of capacity, its capacity has risen to 91 divided by 70 or 130 units per year. An output measure divided by a utilization measure, in other words, is one indicator of capacity. Two aggregative indexes constructed in this way, one for primary processing industries and one for advanced processing industries, were the third kind of capacity series in this study.

The output measures used for primary processing and advanced processing industries were groupings of the manufacturing component of the index of industrial production index for each December, specially calculated according to the classification described above. The utilization measures were weighted combinations of the McGraw-Hill end-of-year utilization rates.⁶ Weights for combining the utilization indexes were based on the 1957 proportions of production through 1960 and on 1963 proportions starting in 1960. There was very little difference between the two 1960 estimates. Final utilization numbers for 1960 were averages of the two weighted indexes, with 1959 and 1961 utilization rates adjusted slightly to avoid any abrupt changes due to changing weights.

Utilization rates were constructed not only for the end of each year, but also for September of each year since 1959, when

utilization reports for that month were first collected by McGraw-Hill.⁷ Besides providing an interim check on capacity levels during the year, these figures were employed to determine whether McGraw-Hill respondents, on the average, correct their responses for normal seasonal variation. September figures are useful in this determination because the level of capacity should display almost no seasonal variation, for it consists at any moment of time almost entirely of equipment installed in the past and only to a very minor extent of equipment installed since the last month or last quarter. If seasonally adjusted output divided by utilization rates displays marked seasonal vari-

CHART 6
OUTPUT/UTILIZATION

Adjusted figures are seasonally adjusted Federal Reserve indexes divided by McGraw-Hill utilization rates. Unadjusted figures are Federal Reserve indexes not adjusted for seasonal variation divided by McGraw-Hill utilization rates.

⁶ *Ibid.* These utilization rates are based on answers to the survey question, "How much of your capacity were you operating at the end of 19___?"

⁷ McGraw-Hill Company, Fall Surveys (released each November).

ation between September and December and seasonally unadjusted output divided by utilization does not, reported utilization rates are probably not corrected for seasonal variations in output. If it is the adjusted output divided by utilization which displays no seasonal variation, then reported utilization rates are likely to have been corrected for seasonal fluctuations in output.

The second of these two possibilities fits the facts much better than the first, as Chart 6 demonstrates. Unadjusted output divided by utilization rates produces a sawtooth seasonal pattern in estimated capacity and implies an actual drop in capacity from September to December each year. Adjusted output divided by utilization, in contrast, is a smooth line. Consequently the assumption that McGraw-Hill respondents adjust their replies for normal seasonal variation seems more logical. It is different from the assumption we had made in previous estimates (and one we had decided on before McGraw-Hill began its September utilization surveys), and its effect is to lower our estimates of seasonally adjusted utilization rates.

COMBINING THE THREE CAPACITY INDICATORS

As in the earlier estimates, the McGraw-Hill capacity index and the capital stock series are assumed to have a gradually shifting relationship to the desired capacity measure; many of their differences from the desired measure—in weighting, in treatment of capital retirements, and in implied treatment of quality changes—have effects that develop by degrees over time. A randomly distributed bias is assumed in the output-divided-by-utilization measure; the direct link of this measure to the output index probably prevents a major trend in its

errors (at least, relative to errors in the output index), but probably its dependence on single-month figures produces some random errors. The ratio of the output-divided-by-utilization measure to each of the other two measures should depend upon time and a random disturbance. The mathematical representation of this relationship, which was estimated in logarithmic form and calculated separately for primary processing and for advanced processing industries, appears in Equations 1 and 2 below:

$$(1) \quad X_{1/X_2} = a_1 b_1^t u_t$$

$$(2) \quad X_{1/X_3} = a_2 b_2^t v_t$$

where X_1 = Federal Reserve index of industrial production divided by McGraw-Hill estimates of end-of-year rate of operations; X_2 = McGraw-Hill capacity index; X_3 = capital stock series; a_i = the antilogarithm of the intercept regression coefficient for the i th equation ($i = 1, 2$); b_i = the antilogarithm of the time trend regression coefficient for the i th equation ($i = 1, 2$); u_t, v_t = random disturbances in the appropriate equations; and t = time in years ($1954 = 1$).

The final capacity measure was estimated by multiplying the “calculated” values in Equation 1 by X_3 and the “calculated” values in Equation 2 by X_2 and averaging these two estimates. Regression estimates of a and b for advanced processing industries follow:

- (1) Ratio of output divided by utilization to capacity index

$$\begin{aligned} a &= 0.79915 \\ b &= 0.99397 \quad (t\text{-ratio} \approx 4.21) \\ \overline{R^2} &= 0.56 \end{aligned}$$

- (2) Ratio of output divided by utilization to capital stock

$$\begin{aligned} a &= 1.6567 \\ b &= 1.01227 \quad (t\text{-ratio} \approx 8.71) \\ \overline{R^2} &= 0.86 \end{aligned}$$

These regressions indicate a downward

trend in the output-divided-by-utilization measure relative to the McGraw-Hill capacity index of about six-tenths of 1 per cent per year (because b is roughly equal to 0.994). The output-divided-by-utilization measure rose relative to the capital stock by about 1.2 per cent per year. The McGraw-Hill measure and the capital stock measure were adjusted for these differences in trends as well as for differences in level and then averaged to calculate capacity for advanced processing industries.

There was one further adjustment in the capacity index for advanced products industries—namely, a flat reduction of 1 per cent in the capacity index for each year starting at the end of 1958. The reason for this adjustment was to preserve consistency between our estimate of the end-of-year utilization rate for all manufacturing and the published McGraw-Hill end-of-year manufacturing utilization figures. In our calculations (except for the adjustment just referred to), the end-of-year utilization rate for recent years tended to be a shade below the McGraw-Hill published total figures, partly because we had to estimate some of the unpublished detail of the McGraw-Hill surveys and partly because of weighting differences. Because our method of arriving at a total utilization rate is considered no more accurate than McGraw-Hill's, and because it is a convenience to users to have the two end-of-year utilization estimates approximately equal, we made the small arbitrary adjustment referred to in order to bring the two totals closer together.

Regression estimates for primary processing industries are as follows:

- (3) Ratio of output divided by utilization to capacity index
- $$\begin{aligned} a &= 0.8450 \\ b &= 1.0008 \quad (t\text{-ratio} = .51) \\ \bar{R}^2 &= 0.19 \end{aligned}$$

[Equation not used; mean ratio of 0.8495 used instead. See below.]

- (4) Ratio of output divided by utilization to capital stock

- (a) entire period, 1954-65
- $$\begin{aligned} a &= 1.089 \\ b &= 1.01764 \quad (t\text{-ratio} = 12.63) \\ \bar{R}^2 &= 0.93 \end{aligned}$$
- (b) first 4 years, 1954-57
- $$\begin{aligned} a &= 1.13837 \\ b &= 0.99956 \quad (t\text{-ratio} = .28) \\ \bar{R}^2 &= 0.19 \end{aligned}$$
- (c) last 8 years, 1958-65
- $$\begin{aligned} a &= 1.15081 \\ b &= 1.01947 \quad (t\text{-ratio} = 9.80) \\ \bar{R}^2 &= 0.92 \end{aligned}$$

[4c used for 1958-65; mean 1954-57 ratio of 1.1369 used for earlier years. See below.]

The regressions for primary processing industries indicated no significant trend in output divided by utilization relative to the McGraw-Hill capacity index. The t -ratio of the trend term in the regression was only 0.5 and the value of R^2 only 0.19. Instead of using the regression coefficients, therefore, the McGraw-Hill index was simply multiplied by the mean ratio of X_1 to X_2 —0.8495—to form the first of the two semifinal capacity estimates for this grouping.

Output divided by utilization did display a significant upward trend relative to capital stock for primary processing industries, as regression results 4a demonstrate. However, inspection of the data revealed that there was no trend in one series relative to the other for the first few observed years and a rather sharp one in the last 8 years (see Chart 2). For this reason, regression equation 4a was not used; instead regression equation 4c was used for 1958 and subsequent years and the mean 1954-57 ratio of X_1 to X_2 —1.1369—was used in place of any regression results for 1957 and earlier years. Separate regressions for subperiods were also run and tested for significant differences in all other cases, but this was the

only one in which a significant difference emerged.

Quarterly capacity estimates are simply linear interpolations between the final end-of-year figures. Quarterly output estimates are quarterly averages of the specially calculated breakdown of manufacturing output described above. Capacity indexes for 1966 are projected on the basis of antici-

pated additions to capacity as reported to McGraw-Hill and anticipated capital spending as reported to the Commerce Department. Quarterly rates of utilization are available a month or less after the end of each quarter.⁸

⁸ Requests for the quarterly estimates should be addressed to Publications Services, Division of Administrative Services, Board of Governors of the Federal Reserve System, Washington, D.C. 20551.

^p Preliminary.

¹ When manufacturing output as shown here is divided by the capacity index shown here, the result may differ very slightly from the estimated utilization rate for total manufacturing as shown in the following table. The differences are due in part to rounding and in part to the fact that the utilization rate for manufacturing has been calculated as a weighted average of utilization for primary-

processing industries and utilization for advanced processing industries, rather than as the ratio of total manufacturing output to total manufacturing capacity. Output is seasonally adjusted.

NOTE.—Estimates based on data from Federal Reserve Board, Department of Commerce, and McGraw-Hill Economics Department.

Loan Guarantees for Defense Production

The Board of Governors has amended Regulation V entitled "Loan Guarantees for Defense Production" by adding a Supplement (section 7) containing the current maximum rates of interest, the schedule of guarantee fees, and commitment fees on V-Loans. Section 1 of the Regulation was also amended to show the current Executive Order and the present guaranteeing agencies, and section 5 was amended to contain a reference to the text of the new Supplement. The amendment reads as follows:

AMENDMENTS TO REGULATION V (32A CFR Chapter XV)

Effective September 27, 1966, sections 1, 5 and 7 are amended to read as follows:

SECTION 1. AUTHORITY

This regulation is based upon and issued pursuant to the Defense Production Act of 1950 (referred to in this regulation as the "act"), and Executive Order No. 10480, dated August 14, 1953 as amended (3 CFR 1949-1953 Comp., p. 962) (referred to in this regulation as the "order"), and after consultation with the heads of the guaranteeing agencies designated in the act and the order, namely, the Department of the Army, the Department of the Navy, the Department of the Air Force, the Department of Commerce, the Department of the Interior, the Department of Agriculture, the General Services Administration, the Atomic Energy Commission, the Defense Supply Agency, and the National Aeronautics and Space Administration.

* * *

SECTION 5. RATES AND FEES

Rates of interest, guarantee fees, commitment fees, and other charges which may be made with respect to guaranteed loans and guarantees executed through the agency of any Federal Reserve Bank under this regulation will from time to time be prescribed, either specifically or by maximum limits or otherwise, in section 7 (the Supplement) by the Board of Governors after consultation with the guaranteeing agencies.

* * *

SUPPLEMENT TO REGULATION V

SECTION 7. MAXIMUM RATES OF INTEREST, GUARANTEE FEES, AND COMMITMENT FEES

Effective September 27, 1966

Pursuant to the provisions of the Defense Production Act of 1950 and Executive Order No. 10480, dated August 14, 1953, as amended, the Board of Governors of the Federal Reserve System hereby prescribes the maximum rate of interest, guarantee fees, and commitment fees which may be charged with respect to guaranteed loans executed through the agency of any Federal Reserve Bank:

(a) *Maximum rate of interest.*—The maximum interest rate charged a borrower by a financing institution with respect to a guaranteed loan shall not exceed 7½ per cent per annum.

(b) *Guarantee fees.*—The schedule of fees with respect to guaranteed loans is as follows:

<i>Per cent of loan guaranteed</i>	<i>Guarantee fee (Per cent of interest payable by borrower on guaranteed portion of loan)</i>
70 or less	10
75	15
80	20
85	25
90	30
95	35
Over 95	40-50

In any case in which the rate of interest on the loan is in excess of 6 per cent, the guarantee fee shall be computed as though the interest rate were 6 per cent.

(c) *Commitment fees.*—In any case in which a commitment fee is charged a borrower with respect to a guaranteed loan, such fee shall not exceed ½ of 1 per cent per annum. In any such case, the financing institution will pay to the guaranteeing agency a percentage of such commitment fee, based on the guaranteed portion of the credit, equal to the same percentage of the interest payable on the loan which is required to be paid by the financing institution to the guarantor as a guarantee fee.

Calculating Deposits in Determining Aggregate Liabilities of Edge Corporations

The question has been raised as to the proper method of calculating deposits in determining aggregate liabilities for the purpose of section 211.9 (c) of Regulation K, which provides, in part, that "Except with prior Board permission, a Corporation's aggregate outstanding liabilities, on account

of acceptances, monthly average deposits, borrowings, guarantees, endorsements, debentures, bonds, notes, and other such obligations shall not exceed ten times its capital and surplus".

The Board has concluded that in determining "monthly average deposits" in calculating the limitation on aggregate outstanding liabilities in section 211.9(c), a Corporation may deduct from the amount of its gross demand deposits the amounts permitted in section 204.2(b) of Regulation D, Reserves of Member Banks.

Meaning of "obligor or maker" in Determining Limitation on Securities Investments

From time to time the New York State Dormitory Authority offers issues of bonds with respect to each of which a different educational institution enters into an agreement to make "rental" payments to the Authority sufficient to cover interest and principal thereon when due. The Board of Governors of the Federal Reserve System has been asked whether a member State bank may invest up to 10 per cent of its capital and surplus in each such issue.

Paragraph Seventh of section 5136 of the United States Revised Statutes (12 U.S.C. 24) provides that "In no event shall the total amount of the investment securities of any one obligor or maker, held by [a national bank] for its own account, exceed at any time 10 per centum of its capital stock . . . and surplus fund". That limitation is made applicable to member State banks by the twentieth paragraph of section 9 of the Federal Reserve Act (12 U.S.C. 335).

The Board considers that, within the meaning of these provisions of law, "obligor" does not include any person that acts solely as a conduit for transmission of funds received from another source, irrespective of a promise by such person to pay principal or interest on the obligation. While an obligor does not cease to be such merely because a third person has agreed to pay the obligor amounts sufficient to cover principal and interest on the obligations when due, a person that promises to pay an obligation, but as a practical matter has no resources with which to assure payment of the obligation except the amounts received from such third person, is not an "obligor" within the meaning of section 5136.

Review of the New York Dormitory Authority Act (N. Y. Public Authorities Law §§ 1675-1690), the Authority's interpretation thereof, and materials with respect to the Authority's "Revenue Bonds, Mills College of Education Issue, Series A" indicates that the Authority is not an "obligor" on those and similar bonds. Although the Authority promises to make all payments of principal and interest, a bank that invests in such bonds cannot be reasonably considered as doing so in reliance on the promise and responsibility of the Authority. Despite the Authority's obligation to make payments on the bonds, if the particular college fails to perform its agreement to make rental payments to the Authority sufficient to cover all payments of bond principal and interest when due, as a practical matter the sole source of funds for payments to the bondholder is the particular college. The Authority has general borrowing power but no resources from which to assure repayment of any borrowing except from the particular colleges, and rentals received from one college may not be used to service bonds issued for another.

Accordingly, the Board has concluded that each college for which the Authority issues obligations is the sole "obligor" thereon. A member State bank may therefore invest an amount up to 10 per cent of its capital and surplus in the bonds of a particular college that are eligible investments under the Investment Securities Regulation of the Comptroller of the Currency (12 CFR 1), whether issued directly or indirectly through the Dormitory Authority.

Financial Institutions Supervisory Act

The Act of Congress, approved October 16, 1966 (Public Law 89-695), known as the "Financial Institutions Supervisory Act of 1966", to strengthen the regulatory and supervisory authority of the several Federal agencies over insured banks and insured savings and loan associations, authorizes such agencies to institute cease and desist proceedings following prescribed determinations, and proceedings directed at the removal from office of directors or officers of institutions under their supervision. Provision is also made for temporary cease and desist and removal orders, as well as for judicial relief therefrom on petition of the affected institution or party. In addition, the Act increases from \$10,000 to \$15,000 the insurance coverage of deposits insured by the Federal Deposit Insur-

ance Corporation and accounts insured by the Federal Savings and Loan Insurance Corporation. The provisions containing the regulatory and supervisory authority are made effective only until June 30, 1972. The text of the Act (except Title I containing provisions relating entirely to the Federal Home Loan Bank Board and the Federal Savings and Loan Insurance Corporation) reads as follows:

AN ACT

To strengthen the regulatory and supervisory authority of Federal agencies over insured banks and insured savings and loan associations, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Financial Institutions Supervisory Act of 1966".

TITLE II—PROVISION RELATING TO THE FEDERAL DEPOSIT INSURANCE CORPORATION, THE BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM, AND THE COMPTROLLER OF THE CURRENCY

SEC. 201. Paragraph (6) of subsection (j) of section 7 of the Federal Deposit Insurance Act (12 U.S.C. 1817(j)(6)) is repealed and section 3 of the Federal Deposit Insurance Act (12 U.S.C. 1813) is amended by adding the following new subsection (q):

"(q) The term 'appropriate Federal banking agency' shall mean (1) the Comptroller of the Currency in the case of a national banking association or a District bank, (2) the Board of Governors of the Federal Reserve System in the case of a State member insured bank (except a District bank), and (3) the Federal Deposit Insurance Corporation in the case of a State nonmember insured bank (except a District bank)."

SEC. 202. Section 8 of the Federal Deposit Insurance Act (12 U.S.C. 1818), is amended by redesignating subsections (b), (c), and (d) thereof as (o), (p), and (q) and by adding after subsection (a) thereof the following new subsections (b) through (n), inclusive:

"(b) (1) If, in the opinion of the appropriate Federal banking agency, any insured bank or bank which has insured deposits is engaging or has engaged, or the agency has reasonable cause to believe that the bank is about to engage, in an unsafe or unsound practice in conducting the business of such bank, or is violating or has violated, or the agency has reasonable cause to believe that the bank is about to violate, a law, rule, or regulation, or any condition imposed in writing by the agency in connection with the granting of any application or other request by the bank, or any written agreement entered into with the agency, the agency may issue and serve upon the bank a notice of charges in respect thereof. The notice shall contain a statement of the facts constituting the alleged violation or violations or the unsafe or unsound practice or practices, and shall fix a time and place at which a hearing will be held to determine whether an order to cease and desist therefrom should issue against the

bank. Such hearing shall be fixed for a date not earlier than thirty days nor later than sixty days after service of such notice unless an earlier or a later date is set by the agency at the request of the bank. Unless the bank shall appear at the hearing by a duly authorized representative, it shall be deemed to have consented to the issuance of the cease-and-desist order. In the event of such consent, or if upon the record made at any such hearing, the agency shall find that any violation or unsafe or unsound practice specified in the notice of charges has been established, the agency may issue and serve upon the bank an order to cease and desist from any such violation or practice. Such order may, by provisions which may be mandatory or otherwise, require the bank and its directors, officers, employees, and agents to cease and desist from the same, and, further, to take affirmative action to correct the conditions resulting from any such violation or practice.

"(2) A cease-and-desist order shall become effective at the expiration of thirty days after the service of such order upon the bank concerned (except in the case of a cease-and-desist order issued upon consent, which shall become effective at the time specified therein), and shall remain effective and enforceable as provided therein, except to such extent as it is stayed, modified, terminated, or set aside by action of the agency or a reviewing court.

"(c) (1) Whenever the appropriate Federal banking agency shall determine that the violation or threatened violation or the unsafe or unsound practice or practices, specified in the notice of charges served upon the bank pursuant to paragraph (1) of subsection (b) of this section, or the continuation thereof, is likely to cause insolvency or substantial dissipation of assets or earnings of the bank, or is likely to otherwise seriously prejudice the interests of its depositors, the agency may issue a temporary order requiring the bank to cease and desist from any such violation or practice. Such order shall become effective upon service upon the bank and, unless set aside, limited, or suspended by a court in proceedings authorized by paragraph (2) of this subsection, shall remain effective and enforceable pending the completion of the administrative proceedings pursuant to such notice and until such time as the agency shall dismiss the charges specified in such notice, or if a cease-and-desist order is issued against the bank, until the effective date of any such order.

"(2) Within ten days after the bank concerned has been served with a temporary cease-and-desist order, the bank may apply to the United States district court for the judicial district in which the home office of the bank is located, or the United States District Court for the District of Columbia, for an injunction setting aside, limiting, or suspending the enforcement, operation, or effectiveness of such order pending the completion of the administrative proceedings pursuant to the notice of charges served upon the bank under paragraph (1) of subsection (b) of this section, and such court shall have jurisdiction to issue such injunction.

"(d) In the case of violation or threatened violation of, or failure to obey, a temporary cease-and-desist order issued pursuant to paragraph (1) of subsection (c) of this section, the appropriate Federal banking agency may apply to the United States district court, or the United States court of any territory, within the jurisdiction of which the home office of the bank is located, for an injunction to enforce such order, and,

if the court shall determine that there has been such violation or threatened violation or failure to obey, it shall be the duty of the court to issue such injunction.

"(e)(1) Whenever, in the opinion of the appropriate Federal banking agency, any director or officer of an insured State bank (other than a District bank) has committed any violation of law, rule, or regulation, or of a cease-and-desist order which has become final, or has engaged or participated in any unsafe or unsound practice in connection with the bank, or has committed or engaged in any act, omission, or practice which constitutes a breach of his fiduciary duty as such director or officer, and the agency determines that the bank has suffered or will probably suffer substantial financial loss or other damage or that the interests of its depositors could be seriously prejudiced by reason of such violation or practice or breach of fiduciary duty, and that such violation or practice or breach of fiduciary duty is one involving personal dishonesty on the part of such director or officer, the agency may serve upon such director or officer a written notice of its intention to remove him from office.

"(2) Whenever, in the opinion of the Comptroller of the Currency, any director or officer of a national banking association or a District bank has committed any violation of law, rule, or regulation, or of a cease-and-desist order which has become final, or has engaged or participated in any unsafe or unsound practice in connection with the bank, or has committed or engaged in any act, omission, or practice which constitutes a breach of his fiduciary duty as such director or officer, and the Comptroller determines that the bank has suffered or will probably suffer substantial financial loss or other damage or that the interests of its depositors could be seriously prejudiced by reason of such violation or practice or breach of fiduciary duty, and that such violation or practice or breach of fiduciary duty is one involving personal dishonesty on the part of such director or officer, the Comptroller of the Currency may certify the facts to the Board of Governors of the Federal Reserve System.

"(3) Whenever, in the opinion of the appropriate Federal banking agency, any director or officer of an insured State bank (other than a District bank), by conduct or practice with respect to another insured bank or other business institution which resulted in substantial financial loss or other damage, has evidenced his personal dishonesty and unfitness to continue as a director or officer and, whenever, in the opinion of the appropriate Federal banking agency, any other person participating in the conduct of the affairs of an insured State bank (other than a District bank), by conduct or practice with respect to such bank or other insured bank or other business institution which resulted in substantial financial loss or other damage, has evidenced his personal dishonesty and unfitness to participate in the conduct of the affairs of such insured bank, the agency may serve upon such director, officer, or other person a written notice of its intention to remove him from office and/or to prohibit his further participation in any manner in the conduct of the affairs of the bank.

"(4) Whenever, in the opinion of the Comptroller of the Currency, any director or officer of a national banking association or a District bank, by conduct or practice with respect to another insured bank or other business institution which resulted in substantial financial loss or other damage, has evidenced his personal dishonesty and unfitness to continue as a director or

officer and, whenever, in the opinion of the Comptroller, any other person participating in the conduct of the affairs of a national banking association or a District bank, by conduct or practice with respect to such bank or other insured bank or other business institution which resulted in substantial financial loss or other damage, has evidenced his personal dishonesty and unfitness to participate in the conduct of the affairs of such bank, the Comptroller of the Currency may certify the facts to the Board of Governors of the Federal Reserve System.

"(5) In respect to any director or officer of an insured State bank (other than a District bank) or any other person referred to in paragraph (1) or (3) of this subsection, the appropriate Federal banking agency may, if it deems it necessary for the protection of the bank or the interests of its depositors, by written notice to such effect served upon such director, officer, or other person, suspend him from office and/or prohibit him from further participation in any manner in the conduct of the affairs of the bank. Such suspension and/or prohibition shall become effective upon service of such notice and, unless stayed by a court in proceedings authorized by subsection (f) of this section, shall remain in effect pending the completion of the administrative proceedings pursuant to the notice served under paragraph (1) or (3) of this subsection and until such time as the agency shall dismiss the charges specified in such notice, or, if an order of removal and/or prohibition is issued against the director or officer or other person, until the effective date of any such order. Copies of any such notice shall also be served upon the bank of which he is a director or officer or in the conduct of whose affairs he has participated.

"(6) In respect to any director or officer of a national banking association or a District bank, or any other person referred to in paragraph (2) or (4) of this subsection, the Comptroller of the Currency may, if he deems it necessary for the protection of the bank or the interests of its depositors that such director or officer be suspended from office or prohibited from further participation in any manner in the conduct of the affairs of the bank, certify the facts to the Board of Governors of the Federal Reserve System.

"(7) In the case of a certification to the Board of Governors of the Federal Reserve System under paragraph (2) or (4) of this subsection, the Board may serve upon the director, officer, or other person involved, a written notice of its intention to remove him from office and/or to prohibit him from further participation in any manner in the conduct of the affairs of the bank. In the case of a certification to the Board of Governors of the Federal Reserve System under paragraph (6) of this subsection, the Board may by written notice to such effect served upon such director, officer, or other person, suspend him from office and/or prohibit him from further participation in any manner in the conduct of the affairs of the bank. Such suspension and/or prohibition shall become effective upon service of such notice and, unless stayed by a court in proceedings authorized by subsection (f) of this section, shall remain in effect pending the completion of the administrative proceedings pursuant to the notice served under the first sentence of this paragraph and until such time as the Board shall dismiss the charges specified in such notice, or, if an order of removal and/or prohibition is issued against the director or officer or other person, until the effective date of

any such order. Copies of any such notice shall also be served upon the bank of which he is a director or officer or in the conduct of whose affairs he has participated. For the purposes of this paragraph and paragraph (8) of this subsection, the Comptroller of the Currency shall be entitled in any case involving a national bank or a District bank to sit as a member of the Board of Governors of the Federal Reserve System and to participate in its deliberations on any such case and to vote thereon in all respects as a member of such Board.

"(8) A notice of intention to remove a director, officer, or other person from office and/or to prohibit his participation in the conduct of the affairs of an insured bank, shall contain a statement of the facts constituting grounds therefor, and shall fix a time and place at which a hearing will be held thereon. Such hearing shall be fixed for a date not earlier than thirty days nor later than sixty days after the date of service of such notice, unless an earlier or a later date is set by the agency at the request of (A) such director or officer or other person, and for good cause shown, or (B) the Attorney General of the United States. Unless such director, officer, or other person shall appear at the hearing in person or by a duly authorized representative, he shall be deemed to have consented to the issuance of an order of such removal and/or prohibition. In the event of such consent, or if upon the record made at any such hearing the agency shall find that any of the grounds specified in such notice has been established, the agency may issue such orders of suspension or removal from office, and/or prohibition from participation in the conduct of the affairs of the bank, as it may deem appropriate. Any such order shall become effective at the expiration of thirty days after service upon such bank and the director, officer, or other person concerned (except in the case of an order issued upon consent, which shall become effective at the time specified therein). Such order shall remain effective and enforceable except to such extent as it is stayed, modified, terminated, or set aside by action of the agency or a reviewing court.

"(f) Within ten days after any director, officer, or other person has been suspended from office and/or prohibited from participation in the conduct of the affairs of an insured bank under subsection (e) (5) or (e) (7) of this section, such director, officer, or other person may apply to the United States district court for the judicial district in which the home office of the bank is located, or the United States District Court for the District of Columbia, for a stay of such suspension and/or prohibition pending the completion of the administrative proceedings pursuant to the notice served upon such director, officer, or other person under subsection (e) (1), (e) (3), or (e) (7) of this section, and such court shall have jurisdiction to stay such suspension and/or prohibition.

"(g) (1) Whenever any director or officer of an insured bank, or other person participating in the conduct of the affairs of such bank, is charged in any information, indictment, or complaint, authorized by a United States attorney, with the commission of or participation in a felony involving dishonesty or breach of trust, the appropriate Federal banking agency may, by written notice served upon such director, officer, or other person suspend him from office and/or prohibit him from further participation in any manner in the conduct of the affairs of the bank. A copy of such notice shall also be served upon the bank. Such

suspension and/or prohibition shall remain in effect until such information, indictment, or complaint is finally disposed of or until terminated by the agency. In the event that a judgment of conviction with respect to such offense is entered against such director, officer, or other person, and at such time as such judgment is not subject to further appellate review, the agency may issue and serve upon such director, officer, or other person an order removing him from office and/or prohibiting him from further participation in any manner in the conduct of the affairs of the bank except with the consent of the appropriate agency. A copy of such order shall also be served upon such bank, whereupon such director or officer shall cease to be a director or officer of such bank. A finding of not guilty or other disposition of the charge shall not preclude the agency from thereafter instituting proceedings to remove such director, officer, or other person from office and/or to prohibit further participation in bank affairs, pursuant to paragraph (1), (2), (3), (4), or (7) of subsection (e) of this section.

"(2) If at any time, because of the suspension of one or more directors pursuant to this section, there shall be on the board of directors of a national bank less than a quorum of directors not so suspended, all powers and functions vested in or exercisable by such board shall vest in and be exercisable by the director or directors on the board not so suspended, until such time as there shall be a quorum of the board of directors. In the event all of the directors of a national bank are suspended pursuant to this section, the Comptroller of the Currency shall appoint persons to serve temporarily as directors in their place and stead pending the termination of such suspensions, or until such time as those who have been suspended, cease to be directors of the bank and their respective successors take office.

"(h) (1) Any hearing provided for in this section shall be held in the Federal judicial district or in the territory in which the home office of the bank is located unless the party afforded the hearing consents to another place, and shall be conducted in accordance with the provisions of chapter 5 of title 5 of the United States Code. Such hearing shall be private, unless the appropriate Federal banking agency, in its discretion, after fully considering the views of the party afforded the hearing, determines that a public hearing is necessary to protect the public interest. After such hearing, and within ninety days after the appropriate Federal banking agency or Board of Governors of the Federal Reserve System has notified the parties that the case has been submitted to it for final decision, it shall render its decision (which shall include findings of fact upon which its decision is predicated) and shall issue and serve upon each party to the proceedings an order or orders consistent with the provisions of this section. Judicial review of any such order shall be exclusively as provided in this subsection (h). Unless a petition for review is timely filed in a court of appeals of the United States, as hereinafter provided in paragraph (2) of this subsection, and thereafter until the record in the proceeding has been filed as so provided, the issuing agency may at any time, upon such notice and in such manner as it shall deem proper, modify, terminate, or set aside any such order. Upon such filing of the record, the agency may modify, terminate, or set aside any such order with permission of the court.

"(2) Any party to the proceeding, or any person

required by an order issued under this section to cease and desist from any of the violations or practices stated therein, may obtain a review of any order served pursuant to paragraph (1) of this subsection (other than an order issued with the consent of the bank or the director or officer or other person concerned, or an order issued under paragraph (1) of subsection (g) of this section) by the filing in the court of appeals of the United States for the circuit in which the home office of the bank is located, or in the United States Court of Appeals for the District of Columbia Circuit, within thirty days after the date of service of such order, a written petition praying that the order of the agency be modified, terminated, or set aside. A copy of such petition shall be forthwith transmitted by the clerk of the court to the agency, and thereupon the agency shall file in the court the record in the proceeding, as provided in section 2112 of title 28 of the United States Code. Upon the filing of such petition such court shall have jurisdiction, which upon the filing of the record shall except as provided in the last sentence of said paragraph (1) be exclusive, to affirm, modify, terminate, or set aside, in whole or in part, the order of the agency. Review of such proceedings shall be had as provided in chapter 7 of title 5 of the United States Code. The judgment and decree of the court shall be final, except that the same shall be subject to review by the Supreme Court upon certiorari, as provided in section 1254 of title 28 of the United States Code.

“(3) The commencement of proceedings for judicial review under paragraph (2) of this subsection shall not, unless specifically ordered by the court, operate as a stay of any order issued by the agency.

“(i) The appropriate Federal banking agency may in its discretion apply to the United States district court, or the United States court of any territory, within the jurisdiction of which the home office of the bank is located, for the enforcement of any effective and outstanding notice or order issued under this section, and such courts shall have jurisdiction and power to order and require compliance herewith; but except as otherwise provided in this section no court shall have jurisdiction to affect by injunction or otherwise the issuance or enforcement of any notice or order under this section, or to review, modify, suspend, terminate, or set aside any such notice or order.

“(j) Any director or officer, or former director or officer of an insured bank, or any other person, against whom there is outstanding and effective any notice or order (which is an order which has become final) served upon such director, officer, or other person under subsections (e) (5), (e) (7), (e) (8), or (g) of this section, and who (i) participates in any manner in the conduct of the affairs of the bank involved, or directly or indirectly solicits or procures, or transfers or attempts to transfer, or votes or attempts to vote, any proxies, consents, or authorizations in respect of any voting rights in such bank, or (ii) without the prior written approval of the appropriate Federal banking agency, votes for a director, serves or acts as a director, officer, or employee of any bank, shall upon conviction be fined not more than \$5,000 or imprisoned for not more than one year, or both.

“(k) As used in this section (1) the terms ‘cease and desist order which has become final’ and ‘order which has become final’ mean a cease-and-desist order, or an order, issued by the appropriate Federal banking agency with the consent of the bank or the

director or officer or other person concerned, or with respect to which no petition for review of the action of the agency has been filed and perfected in a court of appeals as specified in paragraph (2) of subsection (h), or with respect to which the action of the court in which said petition is so filed is not subject to further review by the Supreme Court of the United States in proceedings provided for in said paragraph, or an order issued under paragraph (1) of subsection (g) of this section, and (2) the term ‘violation’ includes without limitation any action (alone or with another or others) for or toward causing, bringing about, participating in, counseling, or aiding or abetting a violation.

“(1) Any service required or authorized to be made by the appropriate Federal banking agency under this section may be made by registered mail, or in such other manner reasonably calculated to give actual notice as the agency may by regulation or otherwise provide. Copies of any notice or order served by the agency upon any State bank or any director or officer thereof or other person participating in the conduct of its affairs, pursuant to the provisions of this section, shall also be sent to the appropriate State supervisory authority.

“(m) In connection with any proceeding under subsection (b), (c) (1), or (e) of this section involving an insured State bank or any director or officer or other person participating in the conduct of its affairs, the appropriate Federal banking agency shall provide the appropriate State supervisory authority with notice of the agency's intent to institute such a proceeding and the grounds therefor. Unless within such time as the Federal banking agency deems appropriate in the light of the circumstances of the case (which time must be specified in the notice prescribed in the preceding sentence) satisfactory corrective action is effectuated by action of the State supervisory authority, the agency may proceed as provided in this section. No bank or other party who is the subject of any notice or order issued by the agency under this section shall have standing to raise the requirements of this subsection as ground for attacking the validity of any such notice or order.

“(n) In the course of or in connection with any proceeding under this section, the agency conducting the proceeding, or any member or designated representative thereof, including any person designated to conduct any hearing under this section, shall have the power to administer oaths and affirmations, to take or cause to be taken depositions, and to issue, revoke, quash, or modify subpoenas and subpoenas duces tecum; and such agency is empowered to make rules and regulations with respect to any such proceedings. The attendance of witnesses and the production of documents provided for in this subsection may be required from any place in any State or in any territory or other place subject to the jurisdiction of the United States at any designated place where such proceeding is being conducted. Any party to proceedings under this section may apply to the United States District Court for the District of Columbia, or the United States district court for the judicial district or the United States court in any territory in which such proceeding is being conducted, or where the witness resides or carries on business, for enforcement of any subpoena or subpoena duces tecum issued pursuant to this subsection, and such courts shall have jurisdiction and power to order and require compliance therewith. Witnesses subpoenaed

under this section shall be paid the same fees and mileage that are paid witnesses in the district courts of the United States. Any court having jurisdiction of any proceeding instituted under this section by an insured bank or a director or officer thereof, may allow to any such party such reasonable expenses and attorneys' fees as it deems just and proper; and such expenses and fees shall be paid by the bank or from its assets."

SEC. 203. Subsections (b) and (c) of section 10 of the Federal Deposit Insurance Act (12 U.S.C. 1820 (b), (c)) are amended to read as follows:

"(b) The Board of Directors shall appoint examiners who shall have power, on behalf of the Corporation, to examine any insured State nonmember bank (except a District bank), any State nonmember bank making application to become an insured bank, and any closed insured bank, whenever in the judgment of the Board of Directors an examination of the bank is necessary. In addition to the examinations provided for in the preceding sentence, such examiners shall have like power to make a special examination of any State member bank and any national bank or District bank, whenever in the judgment of the Board of Directors such special examination is necessary to determine the condition of any such bank for insurance purposes. In making examinations of insured banks, examiners appointed by the Corporation shall have power on behalf of the Corporation to make such examinations of the affairs of all affiliates of such banks as shall be necessary to disclose fully the relations between such banks and their affiliates and the effect of such relations upon such banks. Each examiner shall have power to make a thorough examination of all of the affairs of the bank and its affiliates, and shall make a full and detailed report of the condition of the bank to the Corporation. The Board of Directors in like manner shall appoint claim agents who shall have power to investigate and examine all claims for insured deposits. Each claim agent shall have power to administer oaths and affirmations and to examine and to take and preserve testimony under oath as to any matter in respect to claims for insured deposits, and to issue subpoenas and subpoenas duces tecum, and, for the enforcement thereof, to apply to the United States district court for the judicial district or the United States court in any territory in which the main office of the bank or affiliate thereof is located, or in which the witness resides or carries on business. Such courts shall have jurisdiction and power to order and require compliance with any such subpoena.

"(c) In connection with examinations of insured banks, and affiliates thereof, the appropriate Federal banking agency, or its designated representatives, shall have the power to administer oaths and affirmations and to examine and to take and preserve testimony under oath as to any matter in respect of the affairs or ownership of any such bank or affiliate thereof, and to issue subpoenas and subpoenas duces tecum, and, for the enforcement thereof, to apply to the United States district court for the judicial district or the United States court in any territory in which the main office of the bank or affiliate thereof is located, or in which the witness resides or carries on business. Such courts shall have jurisdiction and power to order and require compliance with any such subpoena. For purposes of this section, the term 'affiliate' shall have the same meaning as where used in section 2(b) of the Banking Act of 1933 (12 U.S.C. 221a(b)) except that the term

'member bank' in said section 2(b) shall be deemed to refer to an insured bank."

SEC. 204. The first five sentences of section 8(a) of the Federal Deposit Insurance Act (12 U.S.C. 1818(a)) are amended to read as follows:

"SEC. 8. (a) Any insured bank (except a national member bank or State member bank) may, upon not less than ninety days' written notice to the Corporation, terminate its status as an insured bank. Whenever the Board of Directors shall find that an insured bank or its directors or trustees have engaged or are engaging in unsafe or unsound practices in conducting the business of such bank, or is in an unsafe or unsound condition to continue operations as an insured bank, or violated an applicable law, rule, regulation or order, or any condition imposed in writing by the Corporation in connection with the granting of any application or other request by the bank, or any written agreement entered into with the Corporation, the Board of Directors shall first give to the Comptroller of the Currency in the case of a national bank or a district bank, to the authority having supervision of the bank in the case of a State bank, and to the Board of Governors of the Federal Reserve System in the case of a State member bank, a statement with respect to such practices or violations for the purpose of securing the correction thereof and shall give a copy thereof to the bank. Unless such correction shall be made within one hundred and twenty days, or such shorter period not less than twenty days fixed by the Corporation in any case where the Board of Directors in its discretion has determined that the insurance risk of the Corporation is unduly jeopardized, or fixed by the Comptroller of the Currency in the case of a national bank, or the State authority in the case of a State bank, or Board of Governors of the Federal Reserve System in the case of a State member bank as the case may be, the Board of Directors, if it shall determine to proceed further, shall give to the bank not less than thirty days' written notice of intention to terminate the status of the bank as an insured bank, and shall fix a time and place for a hearing before the Board of Directors or before a person designated by it to conduct such hearing, at which evidence may be produced, and upon such evidence the Board of Directors shall make written findings which shall be conclusive. If the Board of Directors shall find that any unsafe or unsound practice or condition or violation specified in such statement has been established and has not been corrected within the time above prescribed in which to make such corrections, the Board of Directors may order that the insured status of the bank be terminated on a date subsequent to such finding and to the expiration of the time specified in such notice of intention. Unless the bank shall appear at the hearing by a duly authorized representative, it shall be deemed to have consented to the termination of its status as an insured bank and termination of such status thereupon may be ordered. Any insured bank whose insured status has been terminated by order of the Board of Directors under this subsection shall have the right of judicial review of such order only to the same extent as provided for the review of orders under subsection (h) of this section."

SEC. 205. Subsection "Fourth" of section 9 of the Federal Deposit Insurance Act (12 U.S.C. 1819 "Fourth") is amended to read as follows:

"Fourth. To sue and be sued, complain and defend, in any court of law or equity, State or Federal. All

suits of a civil nature at common law or in equity to which the Corporation shall be a party shall be deemed to arise under the laws of the United States, and the United States district courts shall have original jurisdiction thereof, without regard to the amount in controversy; and the Corporation may, without bond or security, remove any such action, suit, or proceeding from a State court to the United States district court for the district or division embracing the place where the same is pending by following any procedure for removal now or hereafter in effect, except that any such suit to which the Corporation is a party in its capacity as receiver of a State bank and which involves only the rights or obligations of depositors, creditors, stockholders, and such State bank under State law shall not be deemed to arise under the laws of the United States. No attachment or execution shall be issued against the Corporation or its property before final judgment in any suit, action, or proceeding in any State, county, municipal, or United States court. The Board of Directors shall designate an agent upon whom service of process may be made in any State, Territory, or jurisdiction in which any insured bank is located."

SEC. 206. Nothing contained in this title shall be construed to repeal, modify, or affect the provisions of section 19 of the Federal Deposit Insurance Act (12 U.S.C. 1829).

SEC. 207. Section 30 of the Banking Act of 1933 (12 U.S.C. 77) is hereby repealed.

TITLE III—INCREASE IN INSURANCE LIMIT

FEDERAL DEPOSIT INSURANCE CORPORATION

SEC. 301. (a) The first sentence of section 3(m) of the Federal Deposit Insurance Act (12 U.S.C. 1813(m)) is amended by changing "\$10,000" to read "\$15,000".

(b) The first sentence of section 7(i) of the Federal Deposit Insurance Act (12 U.S.C. 1817(i)) is amended by changing "\$10,000" to read "\$15,000".

(c) The last sentence of section 11(a) of the Federal Deposit Insurance Act (12 U.S.C. 1821(a)) is amended to read: "The maximum amount of the insured deposit of any depositor shall be \$15,000."

(d) The fifth sentence of section 11(i) of the Federal Deposit Insurance Act (12 U.S.C. 1821(i)) is amended by changing "\$10,000" to read "\$15,000".

(e) The amendments made by this section shall not be applicable to any claim arising out of the closing of a bank where such closing is prior to the date of enactment of this Act.

FEDERAL SAVINGS AND LOAN INSURANCE CORPORATION

SEC. 302. (a) Section 401(b) of title IV of the National Housing Act (12 U.S.C. 1724(b)) is amended by changing "\$10,000" to read "\$15,000" each place it appears therein.

(b) Section 405(a) of title IV of the National Housing Act (12 U.S.C. 1728(a)) is amended by changing "\$10,000" to read "\$15,000".

(c) The amendments made by this section shall not be applicable to any claim arising out of a default, as defined in section 401(d) of the National Housing Act, where the appointment of a conservator, receiver, or other legal custodian as set forth in that section becomes effective prior to the date of enactment of this Act.

ADMINISTRATIVE AUTHORITY

SEC. 303. (a) Section 3(m) of the Federal Deposit Insurance Act (12 U.S.C. 1813(m)) is amended by adding the following new sentence at the end: "For the purpose of clarifying and defining the insurance coverage under this subsection and subsection (i) of section 7, the Corporation is authorized to define, with such classifications and exceptions as it may prescribe, terms used in those subsections, in subsection (p) of section 3, and in subsections (a) and (i) of section 11 and the extent of the insurance coverage resulting therefrom."

(b) Section 405(a) of title IV of the National Housing Act (12 U.S.C. 1728(a)) is amended by adding the following new sentence at the end: "For the purpose of clarifying and defining the insurance coverage under this subsection and subsection (b) of section 401, the Corporation is authorized to define, with such classifications and exceptions as it may prescribe, terms used in those subsections and in subsection (c) of section 401 and the extent of the insurance coverage resulting therefrom."

TITLE IV—EXPIRATION

SEC. 401. The provisions of titles I and II of this Act and any provisions of law enacted by said titles shall be effective only during the period ending at the close of June 30, 1972. Effective upon the expiration of such period, each provision of law amended by either of such titles is further amended to read as it did immediately prior to the enactment of this Act and each provision of law repealed by either of such titles is reenacted.

Approved October 16, 1966.

Orders Under Bank Merger Act

The following Orders and Statements were issued in connection with actions by the Board of Governors with respect to applications for approval of the merger of banks:

DEPOSITORS TRUST COMPANY, AUGUSTA, MAINE

In the matter of the application of Depositors Trust Company, for approval of merger with First Maine Trust Company.

ORDER APPROVING MERGER OF BANKS

There has come before the Board of Governors, pursuant to the Bank Merger Act, (12 U.S.C. 1828(c), as amended by Public Law 89-356), an application by Depositors Trust Company, Augusta, Maine, for the Board's approval of the merger of that bank and First Maine Trust Company, Augusta, Maine, a newly organized bank, under the charter and title of Depositors Trust Company. Notice of the proposed merger, in form approved by the Board, has been published pursuant to said Act.

Upon consideration of all relevant material in the light of the factors set forth in said Act, including reports furnished by the Comptroller of the Currency, the Federal Deposit Insurance Corporation, and the Attorney General on the competitive factors involved in the proposed merger,

IT IS HEREBY ORDERED, for the reasons set forth in the Board's Statement accompanying its Order of this date concerning the application of Depositors Corporation, Augusta, Maine, to become a bank holding company, that said application for merger be and hereby is approved, provided that said merger shall not be consummated (a) before the thirtieth calendar day following the date of this Order or (b) later than three months after said date.

Dated at Washington, D.C., this 24th day of October, 1966.

By order of the Board of Governors.

Voting for this action: Chairman Martin, and Governors Robertson, Shepardson, Maisel, and Brimmer. Absent and not voting: Governors Mitchell and Daane.

(Signed) KENNETH A. KENYON,
Assistant Secretary.

STATEMENT

The Statement in this case was combined with the Statement accompanying the Board's Order approving an application by Depositors Corporation, Augusta, Maine, to become a bank holding company:

THE COLONIAL BANK AND TRUST COMPANY, WATERBURY, CONNECTICUT

In the matter of the application of The Colonial Bank and Trust Company for approval of merger with Puritan Bank and Trust Company.

ORDER APPROVING MERGER OF BANKS

There has come before the Board of Governors, pursuant to the Bank Merger Act, as amended (12 U.S.C. 1828(c), Public Law 89-356), an application by The Colonial Bank and Trust Company, Waterbury, Connecticut, a State member bank of the Federal Reserve System, for the Board's prior approval of the merger of that bank and Puritan Bank and Trust Company, Meriden, Connecticut, under the charter and title of The Colonial Bank and Trust Company. As an incident to the merger, the four offices of Puritan

Bank and Trust Company would become branches of the resulting bank. Notice of the proposed merger, in form approved by the Board, has been published pursuant to said Act.

Upon consideration of all relevant material in the light of the factors set forth in said Act, including reports furnished by the Comptroller of the Currency, the Federal Deposit Insurance Corporation, and the Attorney General on the competitive factors involved in the proposed merger,

IT IS HEREBY ORDERED, for the reasons set forth in the Board's Statement of this date, that said application be and hereby is approved, provided that said merger shall not be consummated (a) before the thirtieth calendar day following the date of this Order or (b) later than three months after said date.

Dated at Washington, D.C., this 31st day of October, 1966.

By order of the Board of Governors.

Voting for this action: Chairman Martin, and Governors Shepardson, Mitchell, Daane, and Brimmer. Voting against this action: Governors Robertson and Maisel.

(Signed) KENNETH A. KENYON,
Assistant Secretary.

[SEAL]

STATEMENT

The Colonial Bank and Trust Company, Waterbury, Connecticut ("Colonial Bank"), with total deposits of about \$128 million, has applied, pursuant to the Bank Merger Act (12 U.S.C. 1828(c), as amended by Public Law 89-356), for the Board's prior approval of the merger of that bank with Puritan Bank and Trust Company, Meriden, Connecticut ("Puritan Bank"), which has total deposits of about \$10 million.¹ The banks would merge under the charter and name of Colonial Bank, which is a member of the Federal Reserve System. As an incident to the merger, the four offices² of Puritan Bank would become branches of Colonial Bank, increasing the number of its offices to 16.

Competition. The head office and three branches of Colonial Bank are in Waterbury; the bank operates eight other branches within a radius

¹ Figures are as of April 5, 1966.

² Includes an authorized branch to be located in Meriden.

of 12 miles of the city. Waterbury, located about 29 miles southwest of Hartford, has a population of about 110,000, making it the fourth largest city in Connecticut. The head office and one branch of Puritan Bank are 16 miles east of Waterbury in Meriden, a community with an estimated population of 55,000. The bank also operates a branch six miles south of Meriden in Wallingford, a community with a 1960 population of about 30,000.

Puritan Bank, which has largely developed its business in the Meriden vicinity and southward, obtains very little business from the area served by Colonial Bank. Colonial Bank, which has largely developed its business to the west of the Meriden-Wallingford area, derives some deposits and loans from the area served by Puritan Bank. However, these amounts, drawn mostly from the Meriden vicinity, are equal to less than three per cent and eight per cent, respectively, of Puritan Bank's deposits and loans. Further, it appears that this business arises chiefly from customers whose needs cannot be met by Puritan Bank. The merger would eliminate the minor amount of competition that exists between Colonial Bank and Puritan Bank, but the banks draw the vast bulk of their business from separate geographical markets.

It does not appear that significant competition would develop between Colonial Bank and Puritan Bank if they did not merge. With the exception of Colonial Bank's branch office at Cheshire, which is about five miles west of Meriden and the same distance northwest of Wallingford, none of its branches is measurably nearer to Puritan Bank than is its main office. While adequate highways connect Cheshire to Meriden and Wallingford, none of these routes is a major thoroughfare. The home-office-protection feature of State law precludes Colonial Bank from establishing a *de novo* branch in Meriden and, although Colonial Bank could enter Wallingford with a *de novo* branch, that community is already served by five branch offices of four banks, so that the opportunity for establishing new branches there is limited.

The merger would have no material effect on banking competition in the area presently served by Colonial Bank; the principal effect would be in the area served by Puritan Bank. In Meriden, Puritan Bank and two other banks operate a total of seven offices; Wallingford is served by one

office of each of these three banks and by two offices of a New Haven-based bank. Puritan Bank holds about 11 per cent and 12 per cent, respectively, of the deposits and loans held by the 12 banking offices in the Meriden-Wallingford area. The other Meriden-headquartered bank holds about 37 per cent and 36 per cent, respectively, of area deposits and loans. The remaining deposits and loans in the area are held by offices of the State's second and tenth largest banks. Thus, the extension of Colonial Bank, with its greater resources than Puritan Bank, into the Meriden-Wallingford area, would tend to strengthen banking competition in that market.

It does not appear that any banking offices would be adversely affected by the merger.

The effect of the merger on competition would not be significantly adverse.

Financial and managerial resources and future prospects. The banking factors with respect to each of the banks proposing to merge are satisfactory, as they would be with respect to the resulting bank.

Convenience and needs of the communities. The banking convenience and needs of the communities presently served by Colonial Bank would not be appreciably affected by the merger. The replacement of Puritan Bank, the smallest bank in the Meriden-Wallingford area, by offices of Colonial Bank would provide the Meriden and Wallingford communities with an alternative source of full banking services and an additional facility for meeting the growing credit needs that are attendant upon the area's rapid economic development.

Summary and conclusion. In the judgment of the Board, the proposed merger would clearly benefit the banking convenience and needs of the Meriden-Wallingford area, and would not have significantly adverse effects for banking competition.

Accordingly, the Board concludes that the application should be approved.

DISSENTING STATEMENT OF GOVERNOR
ROBERTSON IN WHICH GOVERNOR
MAISEL CONCURS

In my judgment, the merger of Colonial Bank and Puritan Bank is not warranted under the standards of the amended Bank Merger Act, whether the Meriden-Wallingford area is treated

as the relevant geographical market, as it is by the majority, or whether the analysis of the merger's effects for banking competition takes into account the combined area served by the merging banks, as I think the facts require.

Potential competition and the relevant market. There is every indication that if this merger application were denied, Colonial Bank would seek other means to extend further into the Meriden-Wallingford area. Although the home-office-protection feature of State law precludes Colonial Bank from establishing a *de novo* branch in Meriden at this time, the bank can establish branches on the outskirts of Meriden. In addition, Colonial Bank can establish a *de novo* branch in Wallingford. Unlike the majority, I am not convinced that Wallingford—with a 1960 population of 30,000, reflecting an increase of 76 per cent over that of 1950 and still growing rapidly—does not (or will not soon) have adequate business to support an additional banking office.

As the majority acknowledges, Colonial Bank already draws deposits and loans from the area served by Puritan Bank that are nearly equal to three per cent and eight per cent, respectively, of the total deposits and loans of Puritan Bank. The record indicates that a large percentage of these deposit accounts are derived from residents of the Meriden-Wallingford area who commute to work in Waterbury. The development of further business of this kind seems likely. Waterbury, only 16 miles from Meriden, is the largest city in west-central Connecticut. The city has over 400 manufacturing plants as the base of its economy, and it also serves as a prominent retail trade center for an area containing about 360,000 persons. If, as the majority concludes, much of the business derived by Colonial Bank from the area served by Puritan Bank arises from customers whose needs cannot be met by Puritan Bank, it only follows that Colonial Bank is vying for business with Puritan Bank's local competitors, the Meriden-Wallingford offices of the second and tenth largest banks in Connecticut.

To facilitate the development of business in the Meriden-Wallingford vicinity, Colonial Bank established a branch at Cheshire in 1963, only about five miles equidistant from Meriden and Wallingford. The observation of the majority that Colonial Bank theretofore "largely developed its business to the west of the Meriden-Wallingford area" is immaterial; our concern ought to be with what the

bank is doing in this respect now, and with what reason dictates it will probably do in the future. In this connection, I must confess surprise at the implicit contention of the majority that the development of competition between the banking offices in Meriden, Wallingford and Cheshire is impeded by the fact that none of the routes connecting these communities is a major thoroughfare—it is necessary for the development of such competition that the communities be connected by adequate highways, and they admittedly are.

Colonial Bank seeks to enhance its position in the Meriden-Wallingford area for the simple reason that it recognizes an excellent business opportunity when it sees one. Colonial Bank and Puritan Bank serve a populous area along, and to the west of, a line between New Haven and Hartford. The area is supported by diversified industry, and the level of economic activity is high. Particularly rapid growth is, and has been, taking place along the New Haven-Hartford corridor, which includes the greater part of the area served by Puritan Bank. Colonial Bank, quite understandably—from the standpoint of its own corporate interests—wants a vantage point that will enable it to get a larger piece of the economic cake; its acquisition of Puritan Bank will serve this purpose well. But the fact that the bank has decided that it would be to its best corporate advantage to enhance its position in the Meriden-Wallingford area by the merger route is not the sole consideration; the transaction must meet the standards of the Bank Merger Act, which require that the public interest be accorded paramount consideration.

In short, the reasons advanced by the majority for according no significance to potential competition cannot withstand close examination. Colonial Bank already competes in the Meriden-Wallingford area and its proposal to acquire Puritan Bank is a plain indication that it wishes to enlarge its role in that area. This factor, the locations of the present offices of the two banks and the future branching possibilities, considered in the light of the economic character of (and orientations within) the region, as well as its excellent growth prospects, lead me to conclude that the combined area served by them is a meaningful market.

The competitive factor and the antitrust laws. The merger will eliminate Puritan Bank, a sound institution, and strengthen the already dominant position of Colonial Bank, which now holds more

than 45 per cent of the commercial banking resources in the combined Waterbury, Meriden and Wallingford area. Following the merger, Colonial Bank will hold nearly 50 per cent of the total commercial bank deposits (about 68 per cent together with the next largest bank) and about 50 per cent of the total commercial bank loans (about 68 per cent together with the next largest bank). The merger is anticompetitive within the meaning of section 7 of the Clayton Act, as construed in *United States v. Philadelphia National Bank*, 374 U.S. 321 (1963); and the legislative history of the amended Bank Merger Act makes it clear that the competitive standard to be applied in bank merger cases is that of the antitrust laws, statutes and case law.¹ In the *Philadelphia* case, the Court said:

[We] think that a merger which produces a firm controlling an undue percentage share of the relevant market [here 30% of the "commercial banking business" in the relevant area], and results in a significant increase in the concentration of firms in that market [the merger would have increased the market share of the two largest banks from 44% to 59%], is so inherently likely to lessen competition substantially that it must be enjoined in the absence of evidence clearly showing that the merger is not likely to have such anticompetitive effects. *Id.* at 363.

In addition, the Court observed that "if concentration is already great, the importance of preventing even slight increases in concentration and so preserving the possibility of eventual deconcentration is correspondingly great." *Id.* at 365 n. 42.

The competitive consequences are hardly better if the analysis centers on the Meriden-Wallingford area. Following the merger, Colonial Bank, the eighth largest commercial bank in Connecticut, together with offices of the State's tenth and second largest banks, will hold approximately 63 per cent of the total commercial bank deposits and of the loans in the Meriden and Wallingford communities. These three large banks presently hold nearly one-fourth of all the commercial bank deposits in Connecticut; these three large banks and the remaining seven of the State's 10 biggest banks hold nearly 80 per cent of all the deposits held by the 60-odd commercial banks in Connecticut. The importance of preventing even slight increases in concentration in these circumstances certainly ought to be regarded as great. But the majority, unaccountably, ignores this aspect of the case and, in-

credibly, actually concludes that the elimination of Puritan Bank will tend to strengthen banking competition.

Outweighing anticompetitive effects. This merger may not be allowed under the amended Bank Merger Act unless the diminution of competition (if not sufficient to be violative of section 2 of the Sherman Act) would be "clearly outweighed in the public interest by the probable effect of the transaction in meeting the convenience and needs of the community to be served." The comments of the principal sponsors of the bill that amended the Merger Act indicate that this requirement of the law "intentionally creates a heavy burden for the proponents of a merger, and . . . [that] very few cases [were anticipated] in which this burden could be sustained."² An example given of such a case suggests that one of the banks would have to be in difficulty with no feasible alternative solution to its problem.³ Certainly, a very rigid requirement in this respect is appropriate, for it is fundamental that a competitive banking market is the first requisite to a proper meeting of the banking convenience and needs of a community.

The "convenience and needs" factor. The majority concludes that the merger of Colonial Bank and Puritan Bank will provide the Meriden and Wallingford communities with an alternative source of full banking services and an additional facility for meeting local credit needs. In truth, the merger will eliminate Puritan Bank—which is certainly in no difficulty—as an alternative source of credit and other banking services. The Cheshire office of Colonial Bank is only five miles from Meriden and Wallingford; these two communities, only six miles apart, contain 12 banking offices, including offices of the State's second and tenth largest banks. The merger is in no way essential to the convenience and needs of the communities involved, and the majority makes no claim that it is. Even if it could be concluded that the merger is not anticompetitive within the meaning of section 7 of the Clayton Act, the adverse competitive considerations outweigh the evidence that can be marshalled to show a probable public benefit under the convenience and needs factor.

Conclusion. The evidence in this case leads inevitably to the conclusion that the merger of Colo-

¹ See H.R. Rep. No. 1221, 89th Cong., 2d Sess. 3 (1966); 112 Cong. Rec. 2233-35, 2337 (1966).

² 112 Cong. Rec. 2337 (1966); see also *Id.* at 2333-34.

³ See 112 Cong. Rec. 2338 (1966).

nial Bank and Puritan Bank contravenes section 7 of the Clayton Act. The majority does not offer a single sound reason why the merger should be permitted—indeed, I think there are none to be found. And, by permitting the merger, the majority gives its sanction to one more step in the development of a complete commercial banking oligopoly in Connecticut—exactly the kind of development the Bank Merger Act was designed to thwart.

I would deny the application.

THE BANK OF NEW YORK, NEW YORK,
NEW YORK

In the matter of the application of The Bank of New York for approval of merger with Empire Trust Company.

ORDER APPROVING MERGER OF BANKS

There has come before the Board of Governors, pursuant to the Bank Merger Act, as amended (12 U.S.C. 1828(c), Public Law 89-356), an application by The Bank of New York, New York, New York, a State member bank of the Federal Reserve System, for the Board's prior approval of the merger of that bank and Empire Trust Company, New York, New York, under the charter and title of The Bank of New York. As an incident to the merger, the two offices of Empire Trust Company would become branches of the resulting bank. Notice of the proposed merger, in form approved by the Board, has been published pursuant to said Act.

Upon consideration of all relevant material in the light of the factors set forth in said Act, including reports furnished by the Comptroller of the Currency, the Federal Deposit Insurance Corporation, and the Attorney General on the competitive factors involved in the proposed merger,

IT IS HEREBY ORDERED, for the reasons set forth in the Board's Statement of this date, that said application be and hereby is approved, provided that said merger shall not be consummated (a) before the thirtieth calendar day following the date of this Order or (b) later than three months after said date.

Dated at Washington, D. C., this 7th day of November, 1966.

By order of the Board of Governors.

Voting for this action: Chairman Martin, and Governors Shepardson, Daane, Maisel, and Brimmer.

Voting against this action: Governors Robertson and Mitchell.

(Signed) MERRITT SHERMAN,
Secretary.

[SEAL]

STATEMENT

The Bank of New York, New York, New York ("BONY"), with total deposits of about \$823 million, has applied, pursuant to the Bank Merger Act, as amended (12 U.S.C. 1828(c), Public Law 89-356), for the Board's prior approval of the merger of that bank with Empire Trust Company, New York, New York ("Empire"), which has total deposits of about \$295 million.¹ The banks would merge under the charter and title of BONY. As an incident thereto, the two offices of Empire would become branches of BONY, increasing the number of its offices to eight.

Competition. The head office of each bank is situated in the downtown financial district of New York City. The five branch offices of BONY are in the midtown section of Manhattan, as is the single branch of Empire. Both banks are essentially wholesale institutions, dealing in large loan and deposit relationships, and offering specialized services. BONY has made an effort in recent years to attract retail business, savings and special checking accounts. Empire is one of the few remaining commercial banks in the metropolitan area which confines itself to wholesale business. The retail market is considered to be preponderantly local in character, and dependent largely on branching locations, although capable of being expanded to some extent through banking by mail, specialized mobile offices, and the like. In that market, Empire and BONY are not present competitors. Nor is it probable that the two would compete in this field in the future, were the application denied, since Empire lacks resources to acquire the branches that would be needed for any important expansion into retail banking.

After consummation of the merger, both former offices of Empire would, of course, offer retail services, and the addition of two offices to its present system would make BONY a slightly stronger competitor in the retail banking field. Nevertheless, the effect on competition in the relevant market, whether regarded as the metropolitan area, the City of New York (comprising the five boroughs), or

¹ Figures are as of March 31, 1966.

the borough of Manhattan, would be minimal. The resulting bank would operate, for example, eight out of some 700 banking offices in New York City and some 350 in Manhattan or about 1 and 2 per cent, respectively. Moreover, each of the eight offices of the two banks is located in a highly competitive area with numerous offices of commercial banks in the immediate vicinity.

In the wholesale banking field, there is competition between BONY and Empire, but this competition is not regarded as important. The two institutions are relatively specialized, BONY having developed expertise and customer connections in the fields of transportation, communications, public utilities, commodities, and durable goods manufacturing, while Empire has emphasized the oil and natural gas, chemical and drug industries. Nevertheless, changes in emphasis could bring the two into more active competition in the future, if the merger did not take place. In addition, the two banks presently compete in the personal and corporate trust areas.

In the wholesale field, however, BONY and Empire compete with other institutions of comparable and larger size in a market that is far broader than New York City, that is indeed national, and at times international, in scope. In this broader market, each plays a relatively minor role. Reliable figures on the wholesale market, as such, are not readily available, but taking the relative importance of the two banks in the New York City banking structure as a rough indicator, the resultant bank would have only about 2 per cent of total deposits and would rank ninth among commercial banks headquartered in New York City, as against 1.5 per cent of such deposits and a rank of tenth for BONY at present. Accordingly, the merger would tend to create a slightly stronger competitor for the largest banks not only in New York but in other financial centers as well.

The competitive effects of the proposal would not be significantly adverse.

Financial and managerial resources and future prospects. The banking factors with respect to both BONY and Empire are satisfactory, and would be satisfactory with respect to the resulting bank.

Convenience and needs of the communities. Customers of the two banks would benefit to some extent from the availability of a larger lending limit as a result of consummation of the merger. Both BONY and Empire have experienced some

difficulty in serving customers that have grown to a size where banking prudence or statutory limits prevented one bank or the other from maintaining its "lead" position in loans to such customers. In addition, strengthening of the international department of the combined bank, as a result of the merger, would be of some benefit to that segment of the community which is interested in international trade.

Summary and conclusion. In the judgment of the Board, the effect on banking competition would not, on balance, be significantly adverse and there would be some benefit to the community as a result of the increased lending limit and improved international department of the resulting bank.

Accordingly, the Board concludes that the application should be approved.

DISSENTING STATEMENT OF GOVERNOR MITCHELL IN WHICH GOVERNOR ROBERTSON CONCURS

In the world's largest financial center the merger of two banks, one with \$932 million in resources and the other with \$341 million, is likely to be slurred over as an insignificant transaction because of the giant size of the major banks in that community. But, looking at the United States instead of New York, even the smallest of these two banks is a large bank. Each is among the 1 per cent or so of U.S. banks that control over 50 per cent of the nation's deposits. Combined, they will become the 35th or 36th largest bank in the country. No merger resulting in a \$1 billion bank can be dismissed summarily as one unlikely to have a substantial effect on banking competition.

Both banks serve some routine local needs for which there are numerous banking office alternatives, but in the aggregate these activities appear to constitute only about 10 per cent of their business. Our concern is for the particular needs of industrial or public utility-type customers in which both banks have specialized. These clients are in New York, elsewhere in the nation, and abroad. The record shows that such services are available at other large New York banks with whom the ongoing bank expects to be in more aggressive competition.

The managements of both banks clearly are of the view that their corporate interest will be served by the merger. But the Board's responsibility is to consider the implication for the public interest. Size alone, in a financial institution, is not neces-

sarily inimical to the public interest, and even if achieved by merger, the anticompetitive effects of great size can be outweighed by other factors under the statute. In this case, however, the applicant desires increased size in order more aggressively to seek out and service larger corporate customers than either of the proponent banks individually is now able to satisfy. In this frame of reference, what happens to the less formidable among their present customers? Potentially—and in our judgment—they may well get the kind of attention that goes to less-than-carload-lot customers when the same salesman handles carload lots, and sees the possibility of a trainload sale!

Many alternatives for financing and technical industrial know-how are available to our largest corporations at several large U.S. and foreign banks. The intermediate and smaller-sized company's business is not so prized. The applicant has made it plain that it seeks such business now only in default of larger accounts. It asks for approval of this merger in order to enable the on-going bank "to compete more effectively with the larger wholesale banks for a principal role in serving commercial customers [of BONY] with growing credit requirements." The applicant believes that a higher loan limit will enable the on-going bank "to compete for position as a principal bank of the large corporate customers of Empire which now use that bank chiefly for special banking and financial services and do not utilize it as one of their principal banks in New York City." In a world in which time, attention, and credit are not unlimited, the moderate-sized customers for whom each now serves as a principal bank will be left to fend for themselves as best they may.

The anticompetitive effects of the proposed merger not only are not outweighed by the probable effect of the transaction in meeting the convenience and needs of the community to be served, but are reinforced in our view by an actual detriment to present customers of both banks.

We would deny the application.

Orders Under Section 3 of Bank Holding Company Act

The Board of Governors issued the following Order extending the period of time within which a bank holding company may acquire voting shares of an additional bank, Orders and Statements approving applications for permission to become

bank holding companies, and an Order and Statement approving an application for an existing bank holding company to acquire voting shares of an additional bank:

VIRGINIA COMMONWEALTH CORPORATION, RICHMOND, VIRGINIA

In the matter of the application of Virginia Commonwealth Corporation, Richmond, Virginia, for approval of the acquisition of voting shares of The First Valley Bank, Weber City, Virginia.

ORDER EXTENDING PERIOD OF TIME PRESCRIBED BY PROVISIO IN ORDER OF APPROVAL

WHEREAS, by Order dated July 28, 1966, the Board of Governors, pursuant to section 3(a) of the Bank Holding Company Act of 1956 (12 U.S.C. 1842(a), as amended) and section 222.4 (a) of Federal Reserve Regulation Y (12 CFR 222.4(a)), approved an application on behalf of Virginia Commonwealth Corporation, Richmond, Virginia, a registered bank holding company, for the Board's prior approval of the acquisition of 80 percent or more of the voting shares of The First Valley Bank, Weber City, Virginia, a proposed new bank; and said Order was made subject to the proviso "that the acquisition so approved shall not be consummated . . . (b) later than three months after said date [of Order]", and "that The First Valley Bank shall be opened for business within six months [of the date of the Board's Order]"; and

WHEREAS, Virginia Commonwealth Corporation has applied to the Board for an extension of the time within which the approved acquisition may be consummated and within which The First Valley Bank is to be opened for business; and it appearing to the Board that reasonable cause has been shown for the extensions of time requested, and that such extensions would not be inconsistent with the public interest;

IT IS HEREBY ORDERED, that the Board's Order of July 28, 1966, as published in the Federal Register on August 4, 1966 (31 Federal Register 10485), be and it hereby is amended so that the proviso relating to the dates by which the acquisition approved shall be consummated, and The First Valley Bank opened for business, shall read: "(b) later than March 15, 1967, and provided, further, that The First Valley Bank shall be opened for business no later than April 1, 1967."

Dated at Washington, D. C., this 19th day of October, 1966.

By order of the Board of Governors.

(Signed) KENNETH A. KENYON,
Assistant Secretary.

FIRST FLORIDA BANCORPORATION,
HAINES CITY, FLORIDA

In the matter of the application of First Florida Bancorporation, Haines City, Florida, for approval of the acquisition of voting shares of 11 banks in the State of Florida.

ORDER APPROVING APPLICATION UNDER BANK
HOLDING COMPANY ACT

There has come before the Board of Governors, pursuant to section 3(a) of the Bank Holding Company Act of 1956 (12 U.S.C. 1842(a), as amended by Public Law 89-485) and section 222.4 (a) of Federal Reserve Regulation Y (12 CFR 222.4(a)), an application by First Florida Bancorporation, Haines City, Florida, for approval of action to become a bank holding company through the acquisition of a sufficient number of voting shares in each of the following banks so as to bring Bancorporation's direct ownership in each bank up to at least 51 per cent: National Bank of Melbourne and Trust Company, Melbourne; Florida State Bank of Sanford, Sanford; State Bank of Haines City, Haines City; Bank of Zephyrhills, Zephyrhills; The DeSoto National Bank of Arcadia, Arcadia; Okeechobee County Bank, Okeechobee; The First State Bank, Fort Meade; Bank of Lake Alfred, Lake Alfred; Bank of Mulberry, Mulberry; National Bank of West Melbourne, West Melbourne; and The United State Bank of Seminole, Sanford.

As required by section 3(b) of the Act, the Board notified the Comptroller of the Currency and the Comptroller of Florida of receipt of the application and requested their views and recommendations. Each of these authorities recommended approval of the application.

Notice of receipt of the application was published in the Federal Register on July 30, 1966 (31 Federal Register 10343), which provided an opportunity for submission of comments and views regarding the proposed transaction. Time for filing such views and comments has expired and all those

filed with the Board have been considered by it.

IT IS HEREBY ORDERED, for the reasons set forth in the Board's Statement of this date, that said application be and hereby is approved, provided that the acquisition so approved shall not be consummated (a) before the thirtieth calendar day following the date of this Order or (b) later than three months after said date.

Dated at Washington, D. C., this 19th day of October, 1966.

By order of the Board of Governors.

Voting for this action: Chairman Martin, and Governors Robertson, Shepardson, Maisel, and Brimmer. Absent and not voting: Governors Mitchell and Daane.

(Signed) KENNETH A. KENYON,
Assistant Secretary.

[SEAL]

STATEMENT

First Florida Bancorporation, Haines City, Florida ("Bancorporation" or "Applicant"), has requested prior approval of the Board, pursuant to section 3(a)(1) of the Bank Holding Company Act of 1956, as amended ("the Act"), of a proposal whereby Bancorporation would become a bank holding company through the acquisition of a sufficient number of voting shares in each of the following 11 banks in the State of Florida so as to bring its direct ownership in each bank up to at least 51 per cent:

National Bank of Melbourne and Trust Company, Melbourne
(deposits, \$21.9 million) ("Melbourne Bank");
Florida State Bank of Sanford, Sanford
(deposits, \$13.3 million) ("Sanford Bank");
State Bank of Haines City, Haines City
(deposits, \$9.3 million) ("Haines City Bank");
Bank of Zephyrhills, Zephyrhills
(deposits, \$11.5 million) ("Zephyrhills Bank");
The DeSoto National Bank of Arcadia, Arcadia
(deposits, \$9.3 million) ("Arcadia Bank");
Okeechobee County Bank, Okeechobee
(deposits, \$6.0 million) ("Okeechobee Bank");
The First State Bank, Fort Meade
(deposits, \$6.3 million) ("Fort Meade Bank");
Bank of Lake Alfred, Lake Alfred
(deposits, \$5.3 million) ("Lake Alfred Bank");
Bank of Mulberry, Mulberry
(deposits, \$6.0 million) ("Mulberry Bank");
National Bank of West Melbourne, West Melbourne
(deposits, \$1.2 million) ("West Melbourne Bank");
The United State Bank of Seminole, Sanford
(deposits, \$1.8 million) ("Seminole Bank").

Bancorporation is an outgrowth of the so-called "McNulty Group of Banks", which commenced operations in 1934, was incorporated in 1960, and adopted its present corporate title in March 1966. Bancorporation presently owns more than 20 per cent, but less than 25 per cent, of the outstanding voting shares of six of the banks named, and between 10 and 18 per cent of the remaining five banks. As of December 31, 1965,¹ the banks had combined total deposits of approximately \$92 million, and are organized and operated as a group under the direction of an executive committee composed of the principal executive officers of each bank. In addition, the Melbourne and West Melbourne Banks are affiliated through common stockholders, as are the two banks in Sanford, and the Haines City Bank and Lake Alfred Bank.

Views and recommendations of supervisory authorities. As required by section 3(b) of the Act, notice of receipt of the application was given to, and views and recommendations requested of, the Comptroller of the Currency and the Comptroller of Florida. Each of these authorities recommended approval of the application.

Statutory considerations. Section 3(c) of the Act, as amended, provides that the Board shall not approve this acquisition if it will result in a monopoly, or if it is in furtherance of any combination or conspiracy to monopolize or to attempt to monopolize the business of banking in any part of the United States. Nor shall the Board approve this acquisition if the effect in any section of the country may be substantially to lessen competition, or to tend to create a monopoly, or if the transaction in any other manner would be in restraint of trade, unless the Board finds that the anticompetitive effects of the proposed transaction are clearly outweighed in the public interest by the probable effect of the transaction in meeting the convenience and needs of the community to be served. The Board is required to take into consideration the financial and managerial resources and future prospects of the proposed bank holding company and the banks concerned, and the convenience and needs of the communities to be served.

Competitive effect of proposed acquisition. The 11 proposed subsidiary banks are located in six

counties in Central and South-Central Florida. Four of the banks (Lake Alfred, Haines City, Fort Meade, and Mulberry) are located in Polk County; two (Melbourne and West Melbourne) serve the same area and are both in Brevard County; and two (Sanford and Seminole) are in Seminole County and share the same service area. The Arcadia Bank, Okeechobee Bank, and Zephyrhills Bank are located, respectively, in DeSoto, Okeechobee, and Pasco Counties. The 11 banks, alone or in combination, control the following percentage of total deposits in the six counties: Brevard—14; Seminole—40; Polk—10; DeSoto and Okeechobee—100 (Applicant's proposed subsidiary is the only bank in each county); and Pasco—27. Presently, banks controlled by existing bank holding companies operate in three of the six counties in which Applicant's proposed subsidiary banks are located. In Polk County, where four of Applicant's proposed subsidiary banks are located, consummation of Applicant's proposal would result in bank holding company control (Applicant and one other holding company group) of 29 and 30 per cent, respectively, of total deposits and banking offices. In Brevard County, location of two of Applicant's proposed subsidiary banks, bank holding company banks would control 29 and 18 per cent, respectively, of total deposits and banking offices. In Seminole County, bank holding company subsidiaries would control, respectively, 73 per cent of the total deposits and operate three of the five (60 per cent) banking offices.

Upon consummation of this proposal, Applicant's 11 banks would control 2.5 per cent of the banking offices and 1 per cent of the total deposits of banks in the State. Of the eight bank holding companies operating in the State, Applicant's system would rank sixth in size of total deposits held. The eight holding companies would control 71 of the State's 443 banks (16 per cent) and would hold \$2.0 billion of deposits, representing 26 per cent of all such deposits in the State. Measured by total deposits, Applicant's system would rank fourteenth in size of the State's banking organizations. The Board concludes that consummation of Applicant's proposal would not result in a monopoly nor be in furtherance of an attempt to monopolize the business of banking in the

¹ Unless otherwise noted, all banking data are as of this date.

State of Florida, or in any part thereof served by Applicant's proposed subsidiary banks.

As to the likelihood of any substantial lessening of competition, or tendency to monopoly, as a result of this proposal, the Board is unable to conclude that either circumstance is likely to occur. The record establishes that little effective competition now exists between or among Applicant's proposed subsidiary banks. With the exception of the banks in Melbourne-West Melbourne, Sanford, and Haines City-Lake Alfred, Applicant's proposed subsidiary banks are separated by distances ranging from 19 to 148 miles. Consideration of these distances and of the size of the banks involved preclude a finding as to the existence of measurable competition between and among them, or the likelihood that significant competition will develop in the foreseeable future. A similar conclusion is warranted with respect to competition between Melbourne Bank and West Melbourne Bank, the two banks in Sanford, and Haines City Bank and Lake Alfred Bank. Although the two banks in each of the three areas are located near one another, and in two cases serve the same areas, the existing common ownership of the two banks in each of these areas negates any suggestion of existing or potential viable competition between them.

On the basis of the record before it, the Board finds unlikely any substantial lessening of competition as between Applicant's proposed subsidiaries and the banks with which they compete. Four of Applicant's proposed subsidiaries are the only banks located in their respective primary service areas. Five of the other subsidiaries have deposits ranging from \$1 million to approximately \$9 million. The proposed affiliation with Applicant will not, in the Board's judgment, offer sufficient increased competitive strength to these institutions as to constitute them an undue force with respect to banks competing in the same market areas. The largest of Applicant's proposed subsidiary banks, Melbourne Bank (\$22 million of deposits), is one of 17 banks in Brevard County. The largest bank in the county, a bank holding company subsidiary with deposits of approximately \$25.5 million, competes within Melbourne Bank's service area. Also competing with Melbourne Bank in this area are nine other banks, two of which each has deposits of about \$12 million. In Seminole County, the area primarily served by Sanford Bank (\$13

million of deposits) and Seminole Bank (\$1.8 million of deposits), there are three other banks with deposits ranging from \$12.5 to \$4 million.

Consummation of Applicant's proposal will effect in both Brevard County and Seminole County a holding company system affiliation of the largest and smallest banks, a result not likely to adversely affect the larger banks in either county, nor the smaller banks therein which are presently competing successfully against banks of a size nearly as large as or larger than that of Applicant's two proposed subsidiaries combined.

On the basis of the foregoing considerations, the Board concludes that consummation of Applicant's proposal would not have the effect of substantially lessening competition, nor tending to create a monopoly.

Financial and managerial resources and future prospects. Applicant's financial and managerial resources and its prospects are considered satisfactory. The financial and managerial resources of the proposed subsidiary banks are viewed as generally satisfactory. Assuming the continuation of the existing "group operation", the prospects of the 11 banks are also viewed as satisfactory; however, their prospects would appear somewhat more favorable if the existing affiliation were formalized pursuant to Applicant's proposal. This conclusion reflects the Board's judgment that the banks, operating under Applicant's proposed control, will be better able to raise any necessary equity capital, and to attract and retain qualified management personnel, a factor presently a problem in certain of the banks.

Convenience and needs of the communities involved. The aforementioned advantages likely to be realized by the banks when operated under Applicant's control are also a factor in the Board's analysis of the probable effect of this proposal on the convenience and needs of the communities to be served. The record in this matter does not reflect unserved major banking needs in any of the areas involved. However, in terms of more efficient, higher quality bank operations, such results with respect to certain aspects of the banks' operations appear sufficiently probable under Applicant's proposed increased ownership and control as to constitute a consideration favorable to approval of the application.

Summary and conclusion. On the basis of the findings herein, the Board concludes that consum-

mation of Applicant's proposal would not have resulting adverse competitive consequences, and that considerations relating to the banking factors involved and to the convenience and needs of the communities to be served offer some weight toward approval of the application.

In the light of the factors set forth in the Bank Holding Company Act, and on the basis of the relevant facts of record, it is the Board's judgment that the subject proposal is in the public interest and that the application should be approved.

**DEPOSITORS CORPORATION,
AUGUSTA, MAINE**

In the matter of the application of Depositors Corporation, Augusta, Maine, for approval of action to become a bank holding company through the acquisition of 100 per cent of the outstanding voting shares of Depositors Trust Company, Augusta, Maine, and at least 80 per cent of the outstanding voting shares of The Liberty National Bank in Ellsworth, Ellsworth, Maine.

**ORDER APPROVING APPLICATION UNDER
BANK HOLDING COMPANY ACT**

There has come before the Board of Governors, pursuant to section 3(a)(1) of the Bank Holding Company Act of 1956 (12 U.S.C. 1842(a)(1), as amended by Public Law 89-485), and section 222.4(a)(1) of Federal Reserve Regulation Y (12 CFR 222.4(a)(1)), an application by Depositors Corporation, Augusta, Maine, for the Board's prior approval of action whereby Applicant would become a bank holding company through the acquisition of 100 per cent of the outstanding voting shares of Depositors Trust Company, Augusta, Maine, and at least 80 per cent of the outstanding voting shares of The Liberty National Bank in Ellsworth, Ellsworth, Maine.

As required by section 3(b) of the Act, the Board notified the Bank Commissioner of the State of Maine and the Comptroller of the Currency of receipt of the application and requested their views and recommendations. The Commissioner expressed no objection to approval of the application; the Comptroller recommended its approval.

Notice of receipt of the application was published in the Federal Register on August 11, 1966

(31 Federal Register 10704), providing an opportunity for interested persons to submit comments and views with respect to the proposed transaction. Time for filing such views and comments has expired and all those received have been considered by the Board.

IT IS HEREBY ORDERED, for the reasons set forth in the Board's Statement of this date, that said application be and hereby is approved, provided that the transaction so approved shall not be consummated (a) before the thirtieth calendar day following the date of this Order or (b) later than three months after said date.

Dated at Washington, D. C., this 24th day of October, 1966.

By order of the Board of Governors.

Voting for this action: Chairman Martin, and Governors Robertson, Shepardson, Maisel, and Brimmer. Absent and not voting: Governors Mitchell and Daane.

(Signed) KENNETH A. KENYON,
Assistant Secretary.

[SEAL]

STATEMENT

Depositors Corporation, Augusta, Maine ("Applicant"), has filed with the Board, pursuant to section 3(a)(1) of the Bank Holding Company Act of 1956, as amended ("the Holding Company Act"), an application for approval of action to become a bank holding company through the acquisition of 100 per cent of the outstanding voting shares of Depositors Trust Company, Augusta, Maine ("Depositors Trust"), and at least 80 per cent of the outstanding voting shares of The Liberty National Bank in Ellsworth, Ellsworth, Maine ("Liberty National"). Incident to the holding company proposal, the Board's approval has also been requested, pursuant to the Bank Merger Act of 1960, as amended ("the Merger Act"), of the proposed merger of Depositors Trust with First Maine Trust Company, Augusta, Maine (a newly organized bank not yet in operation), under the charter and title of Depositors Trust Company. Application has also been made for the admission of First Maine Trust Company to membership in the Federal Reserve System.

Applicant is newly organized and its financial resources will consist entirely of its equity in

the capital accounts of the two proposed subsidiary banks.

Depositors Trust Company was organized in 1933 and presently operates 29 offices generally within a 45-mile radius of Augusta, Maine. With deposits of \$122 million, Depositors Trust is the largest commercial bank in the State.

Liberty National, also organized in 1933, operates three offices within a 20-mile radius of Ellsworth, Maine, and has total deposits of \$6 million. It is the smallest of the four commercial banks doing business in this area.

Views and recommendations of supervisory authorities. As required by section 3(b) of the Holding Company Act, inasmuch as both a State and nationally-chartered bank are involved, the Board notified the Bank Commissioner of the State of Maine and the Comptroller of the Currency of receipt of the application and requested their views and recommendations thereon. The Bank Commissioner offered no objection to the formation of the holding company and the Comptroller of the Currency recommended its approval.

As required by the Merger Act, the Board notified the U. S. Attorney General, the Federal Deposit Insurance Corporation, and the Comptroller of the Currency of receipt of the application and requested them to furnish reports on the competitive factors involved in the merger proposal. All three of said governmental authorities reported to the Board that competition would not be adversely affected by consummation of Applicant's merger proposal.

Statutory considerations. The statutory criteria embodied in the Holding Company Act and the Merger Act are virtually identical. Both Acts prohibit Board approval of a proposed transaction which would result in a monopoly, or further any combination, conspiracy, or attempt to monopolize the business of banking in any relevant area. Nor may approval be given where the Board finds that the effect of a proposal may be substantially to lessen competition, or in any other manner be in restraint of trade, unless such anticompetitive effects are clearly outweighed by the probable effect of the transaction in meeting the convenience and needs of the communities to be served. Both statutes require the Board to consider also the financial and managerial resources and future prospects of existing and proposed institutions,

and the convenience and needs of the communities to be served.

Since the merger proposal is primarily one of form, incidental only to the formation of the holding company, the facts pertinent to both the holding company and merger proposals are discussed in common; and while these facts have been considered in relation to the statutory criteria in both Acts, the Board's Statement herein is couched principally in terms of its consideration of the holding company proposal.

Competitive effects of the proposed transaction. Latest available banking office and deposit data reflect that Depositors Trust operates 29 banking offices in 9 of Maine's 16 counties. An additional office, to be located in Augusta, was approved by the Board on August 12, 1966. With one exception, all of the offices are within a 45-mile radius of Augusta, the head-office city. Within this area, which is Depositors Trust's primary service area, and considered by the Board to be the relevant area for purposes of competitive analysis, there are located 73 banking offices holding in the aggregate approximately \$300 million of deposits of individuals, partnerships, and corporations ("IPC deposits"). At year-end 1965, Depositors Trust's total IPC deposits of \$100 million represented, respectively, 33 per cent and 17 per cent of the total IPC deposits of all commercial banks and of all banks¹ in the aforementioned area.

Within Liberty National's primary service area there are, in addition to Liberty National's three offices, four commercial banking offices and one savings bank office. Liberty National's total IPC deposits of \$6 million represent, respectively, 27 per cent and 23 per cent of the total IPC deposits of all commercial banks and of all banks in that area. On a State-wide basis, of the \$846 million and \$1,466 million of total deposits held by commercial banks and all banks, respectively, Applicant's proposed subsidiaries combined would control 14 per cent and 8 per cent.

Little, if any, competition presently exists between the two proposed subsidiary banks. Neither bank has offices located in the primary service area of the other, nor does either bank have offices in any of the counties served by the other. Depositors Trust's Belfast office (being the nearest

¹ Reference herein to "all banks" includes mutual savings banks as well as commercial banks.

office to Liberty National) is located 18 miles from Liberty National's Bucksport office. The record before the Board reflects that neither bank derives any significant portion of its deposits or loans from the service area of the other. Nor, in the Board's judgment, is there likelihood that significant competition between the proposed subsidiary banks will evolve in the foreseeable future. This conclusion takes into account the great disparity in size of the two banks, the distance separating their closest offices, and the presence between these offices of a competing bank office. It also gives appropriate weight to the existence of a State law which has the effect of limiting the possibility of Depositors Trust's expanding its operations, through establishment of branches, into Liberty National's primary service area. Accordingly, it is concluded that consummation of Applicant's proposal will not result in the elimination of significant existing competition between its two proposed subsidiary banks, nor foreclose any real potential for future competition between them.

Regarding the probable effect of Applicant's control of Depositors Trust and Liberty National on the banks with which they are in competition, the Board concludes that the competitive force and abilities of these banks will not be adversely affected in undue measure or manner. Depositors Trust's affiliation with the \$6 million Liberty National will afford no marked competitive advantage to Depositors Trust over that it may now have with respect to its larger and smaller competitors. More significant, but in the Board's view not undue, would be the effect of the proposed affiliation on Liberty National's competitors. Liberty National is the smallest of the commercial banks operating an office within its primary service area. While its competitive force would be strengthened somewhat under Applicant's control, the resulting impact cannot be regarded as adverse to the larger banks with which it competes.

Based on the foregoing considerations, it is the Board's judgment that consummation of Applicant's proposal will not create a monopoly or tend substantially to lessen competition, nor will it be in any other manner in restraint of trade.

Financial and managerial resources and future prospects. Applicant's financial resources, to consist entirely of its equity in the capital accounts of the two proposed subsidiary banks, are considered satisfactory. The financial resources of the

subsidiary banks are regarded as only generally satisfactory, inasmuch as a strengthening of their capital structures by the addition of new capital appears warranted. Applicant's potential ability to render assistance in raising additional capital funds for both banks is a consideration consistent with approval of the application.

Applicant's management will be composed principally of the management of Depositors Trust, which is considered generally satisfactory. While the management resources of Liberty National are similarly satisfactory, existing problems related to management succession would likely find a more suitable and certain solution under Applicant's direction than would otherwise be the case. This likelihood weighs somewhat toward approval of the application.

Applicant's prospects mirror those of its proposed subsidiary banks. The record reflects that both proposed subsidiary banks have had favorable growth in assets, loans, and deposits during the past five years. Indications of favorable future economic conditions in the banks' operating areas suggest a continuation of the banks' favorable growth. Despite a favorable earnings record in Depositors Trust, it would appear that the bank has not retained earnings commensurate with its aforementioned growth. However, the prospects for improvement in earnings retention appear likely, in view of the bank's continued favorable earnings prospects, accompanied by a reduction in previously substantial transfers to certain reserve accounts.

On the basis of the foregoing, the Board concludes that Applicant's prospects are satisfactory and that the prospects of Depositors Trust and Liberty National are also satisfactory, whether the banks are operated under Applicant's control or continue operations under existing ownerships.

Convenience and needs of the areas to be served. The record establishes that the major banking needs within the service areas of both proposed subsidiary banks are presently being served, and that approval of the application would have no significant effect within either area. The benefits that Applicant asserts would be derived by and through Liberty National as a result of its affiliation with Depositors Trust, while consistent with approval of the application, offer but slight weight toward approval thereof. This for the reason that, in major respects, similar benefits would

appear to be available to and through Liberty National on a corresponding bank basis. Only with respect to Liberty National's access to Depositors Trust's data processing equipment does it appear that the proposed affiliation will contribute to the convenience and needs of Liberty National's service area beyond that bank's present potential for such contribution. Accordingly, considerations bearing on the convenience and needs of the communities to be served, while consistent with approval of the application, offer but slight weight for approval.

Summary and conclusion. On the basis of the findings herein, the Board concludes that consummation of Applicant's proposal would not have resulting adverse competitive consequences, and that considerations relating to the banking factors involved and to the convenience and needs of the communities to be served offer some weight toward approval of the application.

In the light of the factors set forth in the Holding Company and Merger Acts and on the basis of the relevant facts of record, it is the Board's judgment that the subject proposal is in the public interest and that the applications for the merger of Depositors Trust and First Maine Trust Company and for the formation of the holding company should be approved.

THE FIRST NATIONAL BANK OF TAMPA AND UNION SECURITY & INVESTMENT COMPANY, TAMPA, FLORIDA

In the matter of the applications of The First National Bank of Tampa and Union Security & Investment Company for approval of the acquisition of voting stock of First National Bank of Brooksville, Brooksville, Florida.

ORDER APPROVING APPLICATIONS UNDER BANK HOLDING COMPANY ACT

There has come before the Board of Governors, pursuant to section 3(a) of the Bank Holding Company Act of 1956 (12 U.S.C. 1842(a), as amended by Public Law 89-485), and section 222.4(a) of Federal Reserve Regulation Y (12 CFR 222.4(a)), applications on behalf of The First National Bank of Tampa and Union Security & Investment Company, both registered bank holding companies located in Tampa, Florida, for the Board's approval of the acquisition by Union Se-

curity & Investment Company of 55 per cent of the 20,000 voting shares to be issued by First National Bank of Brooksville, Brooksville, Florida, a proposed new bank.

As required by section 3(b) of the Act, the Board notified the Comptroller of the Currency of receipt of the applications and requested his views and recommendation. The Comptroller recommended approval of the applications.

Notice of receipt of the applications was published in the Federal Register on August 11, 1966 (31 Federal Register 10704), which provided an opportunity for submission of comments and views regarding the proposed acquisition. Time for filing such comments and views has expired and all those filed with the Board have been considered by it.

IT IS ORDERED, for the reasons set forth in the Board's Statement of this date, that said applications be and hereby are approved, provided that the acquisition so approved shall not be consummated (a) before the thirtieth calendar day following the date of this Order or (b) later than three months after said date, and provided further that the First National Bank of Brooksville shall be opened for business not later than six months after said date.

Dated at Washington, D. C., this 26th day of October, 1966.

By order of the Board of Governors.

Voting for this action: Chairman Martin, and Governors Robertson, Shepardson, Mitchell, and Brimmer. Absent and not voting: Governors Daane and Maisel.

(Signed) KENNETH A. KENYON,
Assistant Secretary.

[SEAL]

STATEMENT

The First National Bank of Tampa ("First National") and Union Security & Investment Company ("US & I"), both of which are registered bank holding companies located in Tampa, Florida, have filed with the Board, pursuant to section 3(a) of the Bank Holding Company Act of 1956, as amended ("the Act"), applications for approval of the acquisition of 55 per cent of the voting shares to be issued by First National Bank of Brooksville, Brooksville, Florida ("Bank"), a proposed new bank. (First National and US & I are referred to collectively herein as "Applicants".)

US & I, a majority of the stock of which is trusted for the benefit of the shareholders of First National, owns controlling stock of Broadway National Bank of Tampa and Second National Bank of Tampa. At December 31, 1965,¹ the three banks in the group had total deposits aggregating about \$197 million. Bank, a proposed new institution which will be located about 45 miles north of Tampa, is expected to have deposits of \$5 million after three years of operation.

Views and recommendation of supervisory authority. As required by section 3(b) of the Act, notice of receipt of the applications was given to, and views and recommendation requested of, the Comptroller of the Currency. The Comptroller recommended approval of the applications.

Statutory considerations. The Act prohibits Board approval of any proposed acquisition which would result in a monopoly, or further any combination, conspiracy, or attempt to monopolize the business of banking in any relevant area. Nor may approval be given where the Board finds that the effect of a proposal may be substantially to lessen competition, or in any other manner be in restraint of trade, unless such anticompetitive effects are clearly outweighed by the probable effect of the transaction in meeting the convenience and needs of the area to be served. The Board is also required to consider the financial and managerial resources and future prospects of the bank holding company and banks concerned, and the convenience and needs of the communities to be served.

Competitive effects of proposed acquisition. There are eight bank holding company groups either operating, or approved by the Board to commence operations, in the State of Florida. Combined, they control 71 banks, or 16 per cent of the banks in the State, and they hold about \$2 billion of deposits, representing 26 per cent of the deposits of all banks in the State. Applicants' holding company system controls less than 3 per cent of the total deposits in the State.

First National's service area includes generally all of Hillsborough County. The service areas of the Applicants' two subsidiary banks lie wholly within Hillsborough County. Applicants' group represents 3 of 24 banks in Hillsborough County, and controls about 32 per cent of the total deposits

of those banks. Although the proportion of deposits in the County which are under control of the Applicants is significant, the degree of concentration in that area would not be increased by the proposed acquisition inasmuch as Bank will be located some distance away, in Hernando County.

Hernando County is located to the north of Hillsborough County, and is separated from Hillsborough County by Pasco County. There are four banks presently located in Pasco County and only one bank in Hernando County, Hernando State Bank at Brooksville, which has deposits of about \$11 million. There is also a savings and loan association located in Brooksville.

Applicants propose to establish and acquire control of a new bank in an area where no holding companies are presently represented; and since there is some distance separating Bank's location from Applicants' existing subsidiaries, it is the Board's judgment that the transaction proposed would not result in a monopoly, nor does it appear to be in furtherance of any combination or conspiracy to monopolize or to attempt to monopolize the business of banking in any relevant area.

Since the proposal involves the acquisition of a new bank, no existing competition will be eliminated. Nor is there a likelihood that any significant potential competition will be foreclosed between Bank and Applicants' other subsidiaries as a result of the proposal. As before noted, Bank will be located about 45 miles from Tampa and outside the primary service areas of Applicants' banks. First National is the only one of the group's banks which derives deposits or loans from Hernando County. Such business, whether related to First National's total deposits and loans held, or to such held by Bank, is insignificant in number or amount. It is not anticipated by Applicants, nor does it appear likely in the judgment of the Board, that Bank will derive any significant amount of business from the Tampa area. On the basis of the foregoing, it is concluded that consummation of the proposal would have no significant effect on present or potential competition between the proposed new bank and the banks now comprising Applicants' group.

Referring now to the probable competitive effect on the only existing bank in Hernando County, Hernando State Bank, Brooksville, it is noted that the county has a population of nearly 13,000. The

¹ Unless otherwise indicated, all banking data noted are as of this date.

two neighboring counties of Citrus and Sumter, with respective populations of about 12,000 and 14,000, each has two banks. Pasco County, which adjoins Hernando County to the south, has four banks and a population of 40,800. The establishment of Bank in Hernando County will, in the Board's judgment, prove beneficial in that it will introduce into that County an added source of banking service, and healthy competition for Hernando State Bank, a well-established institution with \$11 million of deposits and of adequate size to compete effectively with the proposed new bank. In this regard, the president of Hernando State Bank submitted a written statement in opposition to Applicants' establishment and control of Bank, stating that Hernando State Bank would have no objection to local ownership and operation of Bank, but that it objected to the "adverse competitive position in which our bank [Hernando State] will be placed in competing with First National Bank of Tampa and its affiliates." The Board recognizes that Bank, as a subsidiary of Applicants' system, will probably exert a stronger competitive force initially than would a completely independent new bank. However, when considering that Tampa is 45 miles away, that Applicants' banks compete principally with more than 20 other banks in Hillsborough County, and that there are four banks located in Pasco County, which separates Hillsborough County from Hernando County, the Board concludes that the establishment of Bank in Brooksville, as proposed, would not be inimical to the competitive position of Hernando State Bank. There appear to be no other banks in sufficiently close proximity to Bank's proposed site as to be affected competitively to any measurable extent by the proposed establishment and operation of Bank.

It is the Board's judgment, based on the foregoing considerations, that Applicants' acquisition of Bank will not tend substantially to lessen competition nor will it in any other manner be in restraint of trade.

Financial and managerial resources and future prospects. Although Applicants' bank holding company system has been in operation only since mid-1964, US & I and each of the group's banks have been in existence for a number of years. The financial resources of Applicants and their subsidiary banks are satisfactory and, on the basis of

their past operations records, their prospects are viewed as favorable. Management of US & I is drawn from the management staff of First National and, with respect to both companies, is considered to be capable and experienced. Managements of the subsidiary banks are considered similarly satisfactory.

The pro forma financial condition of Bank is regarded as satisfactory and its prospects, viewed in light of the satisfactory economic prospects for the area it will serve, are considered favorable. The Board finds reasonable Applicant's position that consummation of the proposed acquisition will assure the placement in Bank of experienced and well-trained management.

The Board finds the "banking factors" to be consistent with approval of the application.

Convenience and needs of the area to be served. Bank's designated primary service area includes all of Hernando County. Hernando County, which is situated north of Tampa on the Gulf Coast, has a population of nearly 13,000—about double its 1950 population. Total employment in the county has increased moderately in recent years, with more than 30 per cent of the total labor force being engaged in mining activities. Personal income in Hernando County is reported to have nearly doubled between 1956 and 1964, although per capita income is still below the State average. A major portion of the County's income is derived from mining, agriculture, and fisheries. While the economy of Hernando County should continue its relatively moderate growth in the immediate future, the geographic expansion of the Tampa-St. Petersburg Metropolitan Area is expected to have, at a later date, a significantly favorable effect on the economy of Hernando County.

As earlier noted, Hernando State Bank is presently the only bank located in Hernando County. Applicants do not propose that Bank will provide services of a scope or nature different than those generally available in Bank's service area either through Hernando State Bank or other banks located in surrounding counties. However, Bank's establishment as an affiliate of Applicants will make available to the public, more immediately and more certainly than would be the case were Bank to be independently established, an alternative source of modern banking services and facilities.

Although there is no evidence in the record that major banking needs in Hernando County are going unserved or are being inadequately served, it is the Board's judgment that the installation of another banking facility in the county will prove beneficial to the convenience and needs of certain of the area's businesses and residents. It is therefore concluded that considerations relating to the convenience and needs of the area to be served provide some support for approval of the applications.

Summary and conclusion. On the basis of the record before it, the Board concludes that the acquisition of control of Bank by Applicants will

not have any significant adverse competitive consequences, and that considerations relating to the financial and managerial resources and prospects of Applicants and Bank, and to the convenience and needs of the area to be served, are consistent with approval of the applications, and in certain respects provide affirmative support for such approval.

In light of the factors set forth in the Bank Holding Company Act, and on the basis of the evidence of record, it is the Board's judgment that the proposed acquisition is in the public interest and that the applications should be approved.

ANNOUNCEMENTS

CHANGES IN THE BOARD'S STAFF

Frank R. Garfield, an Adviser in the Division of Research and Statistics, retired on November 1, 1966, after 37 years as a member of the Board's staff.

Associated with the Federal Reserve since June 1929, he began his career as a Research Assistant. In June 1946 he was made Chief of the Domestic Business Section, Division of Research and Statistics, and in January 1956 was appointed Adviser in that Division. He is a Fellow in the American Statistical Association and in the American Academy for the Advancement of Science and is a member of Phi Beta Kappa.

Mr. Garfield is known for his contributions to the development of the Federal Reserve index of industrial production, to the measurement of seasonal influences in economic time series, and to the development of audio-visual presentation of economic and statistical information.

The Board has announced the appointment of Charles C. Walcutt as Assistant Chief Federal Reserve Examiner, effective November 29, 1966. Mr. Walcutt is a graduate of Ohio State University and a Certified Public Accountant. Prior to his appointment, Mr. Walcutt was associated with the auditing firm of Haskins & Sells in New York City. He has also held positions as Assistant to the Controller at the Martin Marietta Corporation, and as a Manager in the Army Audit Agency with responsibility for audit reviews of cost systems of private firms engaged in defense contracts.

APPOINTMENT OF DIRECTOR

On November 15, 1966, the Board of Governors announced the appointment of Lawrence E. Walkley as a director of the Pittsburgh Branch of the Federal Reserve Bank of Cleveland to serve for the remainder of the term expiring December 31, 1966. Mr. Walkley is President of Westinghouse Air Brake Company, Pittsburgh, Pennsylvania. As a director of the Pittsburgh Branch he succeeds Dr. George L. Bach, former Maurice Falk Professor of Economics and Social Science,

Carnegie Institute of Technology, Pittsburgh, Pennsylvania, who had resigned.

VOLUNTARY FOREIGN CREDIT RESTRAINT PROGRAM

During the third quarter of 1966 financial institutions continued to cooperate in the voluntary foreign credit restraint program (VFCR). U.S. commercial banks helped by reducing their holdings of foreign loans and investments by almost \$300 million. As a result of the reduction, banks' holdings of such loans and investments on September 30 were more than \$375 million below the December 1964 base and about \$1.2 billion below the Federal Reserve's suggested ceiling on credits effective on that date.

The number of banks with loans in excess of the suggested target was reduced from 24 at the end of June to 13 at the end of the third quarter, and the aggregate amount by which these banks were over their targets was reduced from \$26 million to \$17 million. Both of these figures are the lowest since the beginning of the VFCR program; all of the banks involved have very small bases, and most of them are in excess of their targets because of the necessity of meeting previous commitments or requests for priority credits.

Nonbank financial institutions reduced those foreign assets for which targets were suggested by \$185 million during the first half of 1966. Most of the reduction occurred in equity investments in developed countries other than Canada and Japan. The total outflow of credit, including increased holdings of assets for which no targets were suggested, was \$173 million during the first half of 1966, which was more than accounted for by an increase in investments in Canada. This compares with a total outflow during 1965 of \$730 million.

REVISIONS IN INDUSTRIAL PRODUCTION INDEXES

The Federal Reserve indexes of industrial production have been revised back to January 1964 to incorporate revisions in seasonal adjustment factors and in data. These changes have been combined

with a reprint of the 1961-63 *Industrial Production Indexes*. This new booklet, *Industrial Production Indexes, 1961-65*, has been distributed with the November 1966 Business Indexes (G.12.3). Copies may be obtained from Publications Services, Division of Administrative Services, Board of Governors of the Federal Reserve System, Washington, D.C. 20551.

**SUPPLEMENT TO BANKING AND
MONETARY STATISTICS**

"Bank Debits," Section 5 of *Supplement to Banking and Monetary Statistics*, is now available. Bank debits and deposit turnover are shown annually and monthly for the period 1943-64, and bank debits to demand deposit accounts are shown annually. For the period 1941-64, bank debits by Federal Reserve district and by report-

ing center are shown annually. Full descriptions are provided of revisions in the series during the period covered.

Requests for copies should be sent to Publications Services, Division of Administrative Services, Board of Governors of the Federal Reserve System, Washington, D. C. 20551. Remittance should accompany order and be made payable to the order of the Board of Governors of the Federal Reserve System (prices shown on page 1734).

**ADMISSION OF STATE BANK TO MEMBERSHIP IN
THE FEDERAL RESERVE SYSTEM**

The following bank was admitted to membership in the Federal Reserve System during the period October 16 through November 15, 1966:

South Carolina

Johnsonville Johnsonville State Bank

NATIONAL SUMMARY OF BUSINESS CONDITIONS

Released for publication November 16

Industrial production and nonfarm employment rose somewhat in October but retail sales changed little and construction activity declined further. Industrial prices continued stable while prices of foodstuffs declined. Bank credit and the money supply declined. Between mid-October and mid-November yields on U.S. Government, corporate, and municipal securities declined and then rose, but on balance were about unchanged. Common stock prices advanced in this period.

INDUSTRIAL PRODUCTION

Industrial production in October was 158.6 per cent of the 1957-59 average—0.3 per cent above September and 9.0 per cent above a year earlier. Auto assemblies increased while over-all production of other consumer goods was unchanged. Output of business equipment rose slightly further but production of durable materials declined.

Auto assemblies rose sharply in October from the low September rate to 178 per cent of the 1957-59 average. Schedules for November are set at about the October level. Output of furniture and some household appliances declined but production of consumer nondurable goods was about unchanged. Output of industrial and commercial equipment rose somewhat further.

INDUSTRIAL PRODUCTION

F.R. indexes, seasonally adjusted. Latest figures shown are for October.

Production of iron and steel and construction materials declined while that of equipment parts changed little. Output of textile mill products has been declining since June and is now 4 per cent below the peak. Production of some other non-durable materials increased in October.

CONSTRUCTION

New construction outlays declined further in October and were at the lowest annual rate—\$71.8 billion—in more than a year as residential construction expenditures continued downward. Both private nonresidential and public construction expenditures remained at about their September rates.

EMPLOYMENT

Nonfarm payroll employment rose in October by 192,000, reflecting substantial increases in retail trade and services. In manufacturing, advances occurred in most durable and nondurable goods industries. Construction employment declined further to a level little higher than a year earlier. The average workweek in manufacturing was 41.3 hours, down slightly from the September level of 41.5 hours. The unemployment rate was 3.9 per cent in October, as compared with 3.8 per cent in September and 4.3 per cent a year earlier.

DISTRIBUTION

The value of retail sales in October was unchanged from September and 6 per cent higher than a year earlier. Sales at durable goods stores declined 2.5 per cent, largely because of declines in sales of new domestic autos and sales at furniture and appliance stores. Sales at nondurable goods stores rose 1 per cent and were 7.5 per cent above a year ago. In early November, sales of new domestic autos apparently increased moderately.

COMMODITY PRICES

The wholesale price index for industrial commodities was again stable from mid-September to mid-October, at a level 2 per cent higher than a year earlier, reflecting further decreases in such sensitive materials as hides and lumber and con-

tinuing increases among machinery and equipment and consumer goods. Since mid-October, prices of sensitive materials have tended to level out.

Wholesale prices of foodstuffs declined 2.5 per cent over the month to mid-October in response to expansion in supplies of meats and most other fresh foods. Since mid-October, with expansion in supplies continuing, prices of foodstuffs have declined about 1.5 per cent further.

BANK CREDIT, MONEY SUPPLY, AND RESERVES

Commercial bank credit declined somewhat further in October, following a small net reduction over the previous two months. An increase in loans was more than offset by heavy liquidation of U.S. Government securities, despite large bank subscriptions to new Treasury bills in mid-October.

The money supply declined \$900 million in October offsetting the September expansion. Since March, there has been only a small net rise in the money stock. U.S. Government deposits rose somewhat in October following declines in the

previous two months. Time deposits at commercial banks declined slightly after showing sharply reduced growth in September, reflecting in part substantial run-offs of negotiable CD's at city banks in both months.

Net borrowed reserves averaged about \$430 million over the four statement weeks ending October 26; they were relatively high early in the month but declined in the second half. Member bank borrowings averaged the same as in September but excess reserves declined somewhat. Total and required reserves also declined.

SECURITY MARKETS

Yields on U.S. Government, corporate, and municipal securities declined in the latter half of October, but subsequently turned around and were about unchanged on balance as of mid-November. The 3-month Treasury bill was bid at 5.45 per cent on November 15. Common stock prices advanced between mid-October and mid-November in moderately active trading.

PRICES

Bureau of Labor Statistics indexes. Latest figures shown for consumer prices, September; for wholesale prices, October.

INTEREST RATES

Discount rate, range or level for all F.R. Banks. Weekly average market yields for U.S. Govt. bonds maturing in 10 years or more and for 90-day Treasury bills. Latest figures shown, week ending Nov. 4.

GENERAL INFORMATION

Minus signs are used to indicate (1) a decrease, (2) a negative figure, or (3) an outflow.

A heavy vertical rule is used (1) to the right (to the left) of a total when the components shown to the right (left) of it add to that total (totals separated by ordinary rules include more components than those shown), (2) to the right (to the left) of items that are not part of a balance sheet, (3) to the left of memorandum items.

"U.S. Govt. securities" may include guaranteed issues of U.S. Govt. agencies (the flow of funds figures also include not fully guaranteed issues) as well as direct obligations of the Treasury. "State and local govt." also includes municipalities, special districts, and other political subdivisions.

In some of the tables details do not add to totals because of rounding.

The footnotes labeled NOTE (which always appear last) provide (1) the source or sources of data that do not originate in the System; (2) notice when figures are estimates; and (3) information on other characteristics of the data.

The data for F.R. Banks and member banks and for consumer credit are derived from regular reports made to the Board; production indexes are compiled by the Board on the basis of data collected by other agencies; and flow of funds figures are compiled on the basis of materials from a combination of sources, including the Board. Figures for gold stock, currency, Fed-

eral finance, and Federal credit agencies are obtained from Treasury statements. The remaining data are obtained largely from other sources. For many of the banking and monetary series back data and descriptive text are available in *Banking and Monetary Statistics* and its *Supplements* (see list of publications at end of the BULLETIN).

¹ Beginning with 1960 reflects a minor change in concept; see Feb. 1961 BULLETIN, p. 164.

² Includes industrial loans and acceptances, when held. (Industrial loan program discontinued Aug. 21, 1959.) For holdings of acceptances on Wed. and end-of-month dates, see subsequent tables on F.R. Banks. See also note 1.

³ Part allowed as reserves Dec. 1, 1959–Nov. 23, 1960; all allowed thereafter. Beginning with Jan. 1963 figures are estimated except for weekly averages.

¹ This total excludes, and that in the preceding table includes, \$51 million in balances of unlicensed banks.

NOTE.—Averages of daily figures. Monthly data are averages of daily figures within the calendar month; they are not averages of the 4 or 5 weeks ending on Wed. that fall within the month. Beginning with Jan. 1964, reserves are estimated except for weekly averages.

Total reserves held: Based on figures at close of business through Nov. 1959; thereafter on closing figures for balances with F.R. Banks and opening figures for allowable cash; see also note 3 to preceding table.

Required reserves: Based on deposits as of opening of business each day.

Borrowings at F.R. Banks: Based on closing figures.

Based upon reserve balances, including all adjustments applicable to reporting period. Carryover reserve deficiencies, if any, are deducted.

Derived from averages for individual banks for entire week. Figure each bank indicates extent to which its weekly average purchases sales are offsetting.

Federal funds loaned, net funds supplied to each dealer by clearing banks, repurchase agreements (purchases of securities from dealers to resell), or other lending arrangements.

⁴ Federal funds borrowed, net funds acquired from each dealer by clearing banks, reverse repurchase agreements (sales of securities to dealers subject to repurchase), resale agreements, and borrowings secured by Govt. or other issues.

NOTE.—Weekly averages of daily figures. For description of series and back data, see Aug. 1964 BULLETIN, pp. 944-74.

¹ Advances secured by U.S. Govt. obligations and discounts of, and advances secured by, eligible paper. Rates shown also apply to advances secured by obligations of Federal intermediate credit banks maturing within 6 months. Maximum maturity: 90 days, except that discounts of certain bankers' acceptances and of agricultural paper may have maturities not over 6 months and 9 months, respectively, and advances

secured by FICB obligations are limited to 15 days.

² Advances secured to the satisfaction of the F.R. Bank. Maximum maturity: 4 months.

³ Advances to individuals, partnerships, or corporations other than member banks secured by U.S. Govt. direct obligations. Maximum maturity: 90 days.

1962—July 28.....	(3)			(3)						

¹ When two dates are shown, the first applies to the change at central reserve or reserve city banks and the second to the change at country banks.

² Demand deposits subject to reserve requirements are gross demand deposits minus cash items in process of collection and demand balances due from domestic banks.

³ Authority of the Board of Governors to classify or reclassify cities as central reserve cities was terminated effective July 28, 1962.

⁴ On savings deposits—4 per cent; on other time deposits up to \$5 million—4 per cent; on other time deposits in excess of \$5 million—5 per cent.

⁵ On savings deposits—4 per cent; on other time deposits up to \$5 million—4 per cent; on other time deposits in excess of \$5 million—6 per cent.

NOTE.—All required reserves were held on deposit with F.R. Banks, June 21, 1917, until late 1959. Since then member banks have been allowed to count vault cash also as reserves as follows: country banks—in excess of 4 and 2½ per cent of net demand deposits, effective Dec. 1, 1959, and Aug. 25, 1960, respectively; central reserve city and reserve city banks—in excess of 2 and 1 per cent effective Dec. 3, 1959, and Sept. 1, 1960, respectively; all member banks were allowed to count all vault cash as reserves, effective Nov. 24, 1960.

¹ For exceptions with respect to foreign time deposits, see Oct. 1962 BULLETIN, p. 1279, and Aug. 1965 BULLETIN, p. 1094.

NOTE.—Maximum rates that may be paid by member banks as established by the Board of Governors under provisions of Regulation Q. Under this regulation the rate payable by a member bank may not in

any event exceed the maximum rate payable by State banks or trust cos. on like deposits under the laws of the State in which the member bank is located. Effective Feb. 1, 1936, maximum rates that may be paid by insured nonmember commercial banks, as established by the FDIC, have been the same as those in effect for member banks.

For rates for postal savings deposits, see Board's Annual Reports.

For loans by banks on stocks.....	60	70	50	70	90	70	50	70

NOTE.—Regulations T and U, prescribed in accordance with Securities Exchange Act of 1934, limit the amount of credit that may be extended on a security by prescribing a maximum loan value, which is a specified per-

centage of its market value at the time of extension; margin requirements are the difference between the market value (100 per cent) and the maximum loan value.

¹ Outside Treasury and F.R. Banks. Before 1955 details are slightly overstated because they include small amounts of paper currency held by the Treasury and the F.R. Banks for which a denominational breakdown is not available.

² Paper currency only; \$1 silver coins reported under coin.

NOTE.—Condensed from Statement of United States Currency and Coin, issued by the Treasury.

¹ Outside Treasury and F.R. Banks. Includes any paper currency held outside the United States and currency and coin held by banks. Estimated totals for Wed. dates shown in table on p. 1649.

² Includes \$156 million reserve against United States notes and \$211 million gold deposited by and held for the International Monetary Fund.

³ Consists of credits payable in gold certificates: (1) the Gold Certificate Fund—Board of Governors, FRS; and (2) the Redemption Fund for F.R. notes.

⁴ Through Dec. 31, 1965, shown separately as subsidiary silver coin and minor coin. For this breakdown see earlier BULLETINS.

⁵ Redeemable from the general fund of the Treasury.

⁶ Does not include all items shown, as some items represent the security for other items; gold certificates are secured by gold, and silver certificates by standard silver dollars and monetized silver bullion. Duplications are shown in parentheses.

NOTE.—Prepared from Statement of United States Currency and Coin and other data furnished by the Treasury. For explanation of currency reserves and security features, see the Circulation Statement or the Aug. 1961 BULLETIN, p. 936.

¹ At all commercial banks.² Effective June 9, 1966, balances accumulated for payment of personal loans were reclassified for reserve purposes and are excluded from time deposits reported by member banks. The estimated amount of such deposits at all commercial banks (\$1,140 million) is excluded from time deposits adjusted thereafter.

NOTE.—For description of revision of series and for back data beginning Jan. 1959, see Sept. 1966 BULLETIN, pp. 1303-15; for monthly data 1947-58, see June 1964 BULLETIN, pp. 679-89.

Averages of daily figures. Money supply consists of (1) demand deposits at all commercial banks other than those due to domestic commercial banks and the U.S. Govt., less cash items in process of collection and F.R. float; (2) foreign demand balances at F.R. Banks; and (3) currency outside the Treasury, F.R. Banks, and vaults of all commercial banks. Time deposits adjusted are time deposits at all commercial banks other than those due to domestic commercial banks and the U.S. Govt.

¹ Back data on member bank reserves adjusted to eliminate effects of changes in reserve requirement percentages. Series reflect current percentage reserve requirements made effective Sept. 15, 1966.² Deposits subject to reserve requirements include total time and savings deposits and net demand deposits as defined by Regulation D. Private demand deposits include all demand deposits except those due to the U.S. Govt., less cash items in process of collection and demand balances due from domestic commercial banks.³ Effective June 9, 1966, balances accumulated for repayment of personal

loans were eliminated from time deposits for reserve purposes. Time and total deposits were thereby reduced by an estimated \$850 million; this reduced member bank reserves by \$35 million.

NOTE.—For further explanation of these data, see announcement in the October 1966 Bulletin, p. 1460. Back data for the period 1948 to date may be obtained from the Banking Section, Division of Research and Statistics, Board of Governors of the Federal Reserve System, Washington, D.C. 20551.

Averages of daily figures.

¹ Beginning with data for June 29, 1966, about \$1.1 billion in "Deposits accumulated for payment of personal loans" were excluded from "Time deposits" and deducted from "Loans" at all commercial banks. These changes resulted from a change in Federal Reserve regulations.

² Series begin in 1946; data are available only last Wed. of month.

³ Other than interbank and U.S. Govt., less cash items in process of collection. ⁴ Includes relatively small amounts of demand deposits. Beginning with June 1961, also includes certain accounts previously classified as other liabilities. ⁵ Reclassification of deposits of foreign

central banks in May 1961 reduced this item by \$1,900 million (\$1,500 million to time deposits and \$400 million to demand deposits).

NOTE.—For back figures and descriptions of the consolidated condition statement and the seasonally adjusted series on currency outside banks and demand deposits adjusted, see "Banks and the Monetary System," Section I of *Supplement to Banking and Monetary Statistics*, 1962, and BULLETINS for Jan. 1948 and Feb. 1960. Except on call dates, figures are partly estimated and are rounded to the nearest \$100 million.

† See note 1 on p. 1661.

¹ Reciprocal balances excluded beginning with 1942.² Includes other assets and liabilities not shown separately.³ Figures for mutual savings banks include relatively small amounts of demand deposits. Beginning with June 1961, also includes certain accounts previously classified as other liabilities.⁴ Beginning with Dec. 31, 1947, the series was revised; for description, see note 4, p. 587 May 1964 BULLETIN.⁵ Regarding reclassification of New York City and Chicago as reserve cities, see Aug. 1962 BULLETIN, p. 993. For various changes between reserve city and country status in 1960-63, see note 6, p. 587, May 1964 BULLETIN.⁶ Beginning with May 18, 1964, one New York City country bank with loans and investments of \$1,034 million and total deposits of \$982 million was reclassified as a reserve city bank. Beginning with May 13, 1965 (Toledo, Ohio), reserve city banks with total loans and investments of

\$530 million and total deposits of \$576 million were reclassified as country banks.

NOTE.—Data are for all commercial and mutual savings banks in the United States (including Alaska and Hawaii, beginning with 1959). For definition of "commercial banks" as used in this table, and for other banks that are included under member banks, see NOTE p. 643, May 1964 BULLETIN.

Comparability of figures for classes of banks is affected somewhat by changes in F.R. membership, deposit insurance status, and the reserve classifications of cities and individual banks, and by mergers, etc.

Data for Dec. 31, 1964 and June 30, 1965 for national banks have been adjusted to make them comparable with State bank data. (Dec. 20, 1963, data also adjusted to lesser extent.)

Figures are partly estimated except on call dates.

For revisions in series before June 30, 1947, see July 1947 BULLETIN, pp. 870-71.

¹ Adjusted to exclude interbank loans.² June 30, 1966 estimated.³ Beginning June 9, about \$1.1 billion of balances accumulated for payment of personal loans were deducted as a result of a change in Federal Reserve regulations.⁴ Beginning July 13, 1966, Commodity Credit Corp. certificates of interest and Export-Import Bank portfolio fund participation certificates totaling an estimated \$1 billion are included in "Other securities" rather than "Other loans."

NOTE.—Data are for last Wed. of month except for June 30 and Dec. 31; data are partly or wholly estimated except when June 30 and Dec. 31 are call dates. For back data, see July 1966 BULLETIN, pp. 952-55. For description of seasonally adjusted series, see July 1962 BULLETIN, pp. 797-802.

¹ Beginning with June 30, 1948, figures for various loan items are shown gross (i.e., before deduction of valuation reserves); they do not add to the total and are not entirely comparable with prior figures. Total loans continue to be shown net.

² Breakdowns of loan, investment, and deposit classifications are not available before 1947; summary figures for earlier dates appear in the preceding table.

³ Beginning with Dec. 31, 1965, components shown at par rather than at book value; they do not add to the total (shown at book value) and are not entirely comparable with prior figures.

For other notes see opposite page.

⁴ Beginning with 1942, excludes reciprocal bank balances.⁵ Through 1960, demand deposits other than interbank and U.S. Govt., less cash items in process of collection; beginning with 1961, demand deposits other than domestic commercial interbank and U.S. Govt. less cash items in process of collection.⁶ For reclassification of certain deposits in 1961, see note 6, p. 589, May 1964 BULLETIN.

NOTE.—Data are for all commercial banks in the United States. (For definition of "commercial banks" as used in this table and for other banks

that are included under member banks, see NOTE, p. 589, May 1964 BULLETIN.) These figures exclude data for banks in U.S. possessions except for member banks. Comparability of figures for classes of banks is affected somewhat by changes in F.R. membership, deposit insurance status, and the reserve classifications of cities and individual banks, and by mergers, etc.

Data for Dec. 31, 1964, and June 30, 1965, for national banks have been adjusted to make them comparable with State bank data. (Data for Dec. 20, 1963, also adjusted to lesser extent.)

For other notes see opposite page.

Commercial and industrial loans—All weekly reporting banks.....	59,483	59,584	59,568	59,611	59,399	84	1,147	-441	1,153	3,152	2,011	5,163	3,782

¹ Beginning Dec. 31, 1963, bankers' acceptances for the creation of dollar exchange are excluded from commercial and industrial loans and those relating to commercial transactions are shown in a separate category. Current figures are therefore not strictly comparable with figures previously reported, but differences are relatively small.

NOTE.—About 200 of the weekly reporting member banks are included in this series; these banks classify, by industry, commercial and industrial loans amounting to about 85 per cent of such loans held by all weekly reporting member banks, and about 60 per cent of those held by all commercial banks.

¹ Includes bonds rated Aa and A, data for which are not shown separately. Because of a limited number of suitable issues, the number of corporate bonds in some groups has varied somewhat.

NOTE.—Annual yields are averages of monthly or quarterly data. Monthly and weekly yields are computed as follows: U.S. Govt. bonds: Averages of daily figures for bonds maturing or callable in 10 years or more. State and local govt. bonds: General obligations only, based on

Thurs. figures. Corp. bonds: Averages of daily figures. Both of these series are from Moody's Investors Service series.

Stocks: Standard and Poor's Corp. series. Dividend/price ratios are based on Wed. figures; earnings/price ratios are as of end of period. Preferred stock ratio is based on 8 median yields for a sample of non-callable issues—12 industrial and 2 public utility; common stock ratios on the 500 stocks in the price index. Quarterly earnings are seasonally adjusted at annual rates.

MORTGAGES: NEW AND EXISTING HOMES

(Per cent)

Period	Yield on FHA-insured	Contract interest rate on conventional first mortgages			
		FHA series		FHLBB series	
		New	Existing	New	Existing
1961.....	5.69	5.97	6.04
1962.....	5.60	5.93	5.99
1963.....	5.46	5.81	5.87	5.84	5.98

Sept.....	6.63	6.65	6.70	6.22	6.40
Oct.....	6.70	6.75

NOTE.—Annual data are averages of monthly figures. The FHA data are based on opinion reports submitted by field offices on prevailing conditions in their localities as of the first of the succeeding month. The yields are derived from weighted averages of private secondary market prices for Sec. 203, 30-year mortgages with minimum downpayments and an assumed prepayment at the end of 15 years. Gaps in the data are due to periods of adjustment to changes in maximum permissible contract interest rates. The FHA series on average interest rates on conventional first mortgages are unweighted and are rounded to the nearest five basis points. For FHLBB series, see footnote to table on Conventional First Mortgages, page 1691.

NOTE.—Annual data are averages of monthly figures. Monthly and weekly data are averages of daily figures unless otherwise noted and are computed as follows: U.S. Govt. bonds, derived from average market yields in table at bottom of preceding page on basis of an assumed 3 per cent, 20-year bond. Municipal and corporate bonds, derived from average yields as computed by Standard and Poor's Corp., on basis of a 4 per cent, 20-year bond; Wed. closing prices. Common stocks, Standard and Poor's index. Volume of trading, average daily trading in stocks on the N.Y. Stock Exchange for a 5½-hour trading day.

NOTE.—Data in first 3 cols. and last col. are for end of month; in other cols. for last Wed.

Net debit balances and broker and dealer credit: Ledger balances of member firms of N.Y. Stock Exchange carrying margin accounts, as reported to Exchange. Customers' debit and free credit balances exclude balances maintained with reporting firm by other member firms of national securities exchanges and balances of reporting firm and of general part-

ners of reporting firm. Balances are net for each customer—i.e., all accounts of one customer are consolidated. Money borrowed includes borrowings from banks and from other lenders except member firms of national securities exchanges.

Bank loans to others than brokers and dealers: Figures are for large commercial banks reporting weekly.

¹ Issues of foreign governments and their subdivisions and bonds of the International Bank for Reconstruction and Development.

NOTE.—Institute of Life Insurance data; figures are estimates for all life insurance cos. in the United States.

Year-end figures: Annual statement asset values, with bonds carried on an amortized basis and stocks at year-end market value. Month-end figures: Book value of ledger assets. Adjustments for interest due and accrued and for differences between market and book values are not made on each item separately but are included in total, in "other assets."

¹ Includes other loans, stock in the Federal home loan banks, other investments, real estate owned and sold on contract, and office buildings and fixtures.

² Before 1958, mortgages are net of mortgage-pledged shares. Asset items will not add to total assets, which include gross mortgages with no deductions for mortgage-pledged shares. Beginning with Jan. 1958, no deduction is made for mortgage-pledged shares. These have declined consistently in recent years and amounted to \$42 million at the end of 1957.

³ Consists of advances from FHLB and other borrowing.

⁴ Commitments data comparable with those shown for mutual savings banks (on opposite page) would include loans in process.

NOTE.—Federal Savings and Loan Insurance Corp. data; figures are estimates for all savings and loan assns. in the United States. Data beginning with 1954 are based on monthly reports of insured assns. and annual reports of noninsured assns. Data before 1954 are based entirely on annual reports. Data for current and preceding year are preliminary even when revised.

NOTE.—Data from Federal Home Loan Bank Board, Federal National Mortgage Assn., and Farm Credit Admin. Among the omitted balance sheet items are capital accounts of all agencies, except for stock of home loan banks. Bonds, debentures, and notes are valued at par. They include only publicly offered securities (excluding, for the home loan banks,

bonds held within the FHLB System), and are not guaranteed by the U.S. Govt.; for a listing of these securities, see table below. Loans are gross of valuation reserves and represent cost for FNMA and unpaid principal for other agencies.

NOTE.—Direct public issues only. Based on Treasury Survey of Ownership.

Data complete for U.S. Govt. agencies and trust funds and F.R. Banks but for other groups are based on Treasury Survey data. Of total marketable issues held by groups, the proportion held on latest date by those reporting in the Survey and the number of owners surveyed were: (1)

about 90 per cent by the 5,924 commercial banks, 504 mutual savings banks, and 765 insurance cos. combined; (2) about 50 per cent by the 469 nonfinancial corps. and 488 savings and loan assns.; and (3) about 70 per cent by 507 State and local govts.

"All others," a residual, includes holdings of all those not reporting in the Treasury Survey, including investor groups not listed separately.

26.....	2,367	1,992	228	98	49	948	105	781	534	208

NOTE.—The transactions data combine market purchases and sales of U.S. Govt. securities dealers reporting to the F.R. Bank of N.Y. They do not include allotments of, and exchanges for, new U.S. Govt. securities, redemptions of called or matured securities, or purchases or sales of securi-

ties under repurchase agreements, reverse repurchase (resale), or similar contracts. Averages of daily figures based on the number of trading days in the period.

DEALER POSITIONS

(Par value, in millions of dollars)

Period	U.S. Government securities, by maturity				U.S. Govt. agency securities
	All maturities	Within 1 year	1-5 years	Over 5 years	
1965—Sept.....	2,858	2,622	75	161	298

21..	2,116	1,941	108	67	298
28..	1,800	1,643	69	88	318

NOTE.—The figures include all securities sold by dealers under repurchase contracts regardless of the maturity date of the contract, unless the contract is matched by a reverse repurchase (resale) agreement or delayed delivery sale with the same maturity and involving the same amount of securities. Included in the repurchase contracts are some that more clearly represent investments by the holders of the securities rather than dealer trading positions.

Average of daily figures based on number of trading days in the period.

¹ Only bonds sold pursuant to 1949 Housing Act; secured by contract requiring the Public Housing Administration to make annual contributions to the local authority.

² Municipalities, counties, townships, school districts.

³ Excludes U.S. Govt. loans. Based on date of delivery to purchaser and payment to issuer, which occurs after date of sale.

⁴ Water, sewer, and other utilities.

⁵ Includes urban redevelopment loans.

Note.—The figures in the first column differ from those shown on the following page, which are based on *Bond Buyer* data. The principal difference is in the treatment of U.S. Govt. loans.

Investment Bankers Assn. data; par amounts of long-term issues based on date of sale unless otherwise indicated.

¹ Gross proceeds are derived by multiplying principal amounts or number of units by offering price.

² Includes guaranteed issues.

³ Issues not guaranteed.

⁴ See NOTE to table at bottom of opposite page.

⁵ Foreign governments, International Bank for Reconstruction and Development, and domestic nonprofit organizations.

⁶ Estimated gross proceeds less cost of flotation.

⁷ For plant and equipment and working capital.

⁸ All issues other than those for retirement of securities.

NOTE.—Securities and Exchange Commission estimates of new issues maturing in more than 1 year sold for cash in the United States.

¹ Includes 17 corps. in groups not shown separately.² Includes 27 corps. in groups not shown separately.

NOTE.—Manufacturing corps: Data are obtained primarily from published co. reports.

Railroads: Interstate Commerce Commission data for Class I line-haul railroads.

Electric power: Federal Power Commission data for Class A and B electric utilities, except that quarterly figures on operating revenue and profits before taxes are partly estimated by the Federal Reserve to include nonelectric operations.

Telephone: Data obtained from Federal Communications Commission on revenues and profits for telephone operations of the Bell System Consolidated (including the 20 operating subsidiaries and the Long Lines and General Depts. of American Telephone and Telegraph Co.) and for 2 affiliated telephone cos. Dividends are for the 20 operating subsidiaries and the 2 affiliates.

All series: Profits before taxes are income after all charges and before Federal income taxes and dividends.

Back data available from the Division of Research and Statistics.

¹ Commercial banks (including nondeposit trust cos. but not trust depts.), mutual savings banks, life insurance cos., and savings and loan assns.

² U.S. agencies are FNMA, FHA, VA, PHA, Farmers Home Admin., and Federal land banks, and in earlier years, RFC, HOLC, and FPMC. Other U.S. agencies (amounts small or current separate data not readily available) included with "individuals and others."

³ Derived figures; includes debt held by Federal land banks and farm debt held by Farmers Home Admin.

⁴ Derived figures; includes small amounts of farm loans held by

savings and loan assns.

⁵ Data by type of mortgage on nonfarm 1- to 4-family properties alone are shown on second page following.

NOTE.—Based on data from Federal Deposit Insurance Corp., Federal Home Loan Bank Board, Institute of Life Insurance, Depts. of Agriculture and Commerce, Federal National Mortgage Assn., Federal Housing Admin., Public Housing Admin., Veterans Admin., and Comptroller of the Currency.

Figures for first 3 quarters of each year are F.R. estimates.

¹ Includes loans held by nondeposit trust cos., but not bank trust depts.

² Data for 1941 and 1945, except for totals, are special F.R. estimates.

NOTE.—Second and fourth quarters, Federal Deposit Insurance Corp. series for all commercial and mutual savings banks in the United States

and possessions. First and third quarters, estimates based on FDIC data for insured banks for 1962 and part of 1963 and on special F.R. interpolations thereafter. For earlier years, the basis for first and third quarter estimates included F.R. commercial bank call data and data from the National Assn. of Mutual Savings Banks.

¹ Certain mortgage loans secured by land on which oil drilling or extracting operations in process were classified with farm through June 1959 and with "other" nonfarm thereafter. These loans totaled \$38 million on July 31, 1959.

NOTE.—Institute of Life Insurance data. For loans acquired, the

monthly figures may not add to annual totals and for loans outstanding, the end-of-Dec. figures may differ from end-of-year figures, because (1) monthly figures represent book value of ledger assets whereas year-end figures represent annual statement asset values, and (2) data for year-end adjustments are more complete.

¹ Monthly figures do not reflect mortgage amendments included in annual totals.² Not ordinarily secured by mortgages.³ Includes a small amount of alteration and repair loans, not shown separately; only such loans in amounts of more than \$1,000 need be secured.

NOTE.—Federal Housing Admin. and Veterans Admin. data. FHA-insured loans represent gross amount of insurance written; VA-guaranteed loans, gross amounts of loans closed. Figures do not take into account principal repayments on previously insured or guaranteed loans. For VA-guaranteed loans, amounts by type are derived from data on number and average amount of loans closed.

¹ Fees and charges—related to principal mortgage amount—include loan commissions, fees, discounts, and other charges which provide added income to the lender and are paid by the borrower. They exclude any closing costs related solely to transfer of property ownership.

NOTE.—Compiled by Federal Home Loan Bank Board in cooperation with Federal Deposit Insurance Corporation. Data are weighted averages

based on probability sample survey of characteristics of mortgages originated by major institutional lender groups (including mortgage companies) for purchase of single-family homes. Data exclude loans for refinancing, reconditioning, or modernization; construction loans to home-builders; and permanent loans that are coupled with construction loans to owner-builders. See also the table on Mortgages; New and Existing Homes, p. 1674.

¹ Holdings of financial institutions; holdings of retail outlets are included in "other consumer goods paper."

NOTE.—Consumer credit estimates cover loans to individuals for house-

hold, family, and other personal expenditures, except real estate mortgage loans. For back figures and description of the data, see "Consumer Credit," Section 16 (New) of *Supplement to Banking and Monetary Statistics*, 1965, and May 1966 BULLETIN.

¹ Includes adjustments for differences in trading days.² Net changes in credit outstanding equal extensions less repayments.

NOTE.—Estimates are based on accounting records and often include financing charges. Renewals and refinancing of loans, purchases and sales of instalment paper, and certain other transactions may increase

the amount of extensions and repayments without affecting the amount outstanding.

For back figures and description of the data see "Consumer Credit," Section 16 (New) of *Supplement to Banking and Monetary Statistics*, 1965, and May 1966 BULLETIN.

INSTALMENT CREDIT EXTENDED AND REPAYED, BY HOLDER

¹ Includes adjustments for differences in trading days.² Net changes in credit outstanding are equal to extensions less repayments except in certain months when data for extensions and repayments have been adjusted to eliminate duplication resulting from large transfers of paper. In those months the differences between extensions and re-

payments for some particular holders do not equal the changes in their outstanding credit. Such transfers do not affect total instalment credit extended, repaid, or outstanding.

See also NOTE to previous table.

¹ Employees only; excludes personnel in the armed forces.² Production workers only.³ F.R. index based on Census Bureau figures.⁴ Prices are not seasonally adjusted.⁵ For description of revisions see announcement on page 1642.

NOTE.—Data are seasonally adjusted unless otherwise noted.

Construction contracts: F. W. Dodge Co. monthly index of dollar

value of total construction contracts, including residential, nonresidential, and heavy engineering; does not include data for Alaska and Hawaii.

Employment and payrolls: Based on Bureau of Labor Statistics data; includes data for Alaska and Hawaii beginning with 1959.

Prices: Bureau of Labor Statistics data.

Freight carloadings: Based on data from Association of American Railroads.

CONSTRUCTION CONTRACTS

(In millions of dollars)

Type of ownership and type of construction	1964	1965	1965				1966								
			Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sept.

NOTE.—Beginning with 1959, Census Bureau series includes both farm and nonfarm series developed initially by the Bureau of Labor Statistics. Series before 1959 reflect recent Census Bureau revisions which are not

available by area or type of structure. Data from Federal Housing Admin. and Veterans Admin. represent units started, based on field office reports of first compliance inspections.

NOTE.—Quarterly data are seasonally adjusted totals at annual rates. For notes see p. 1529 of October 1966 BULLETIN.

FINANCIAL STATISTICS

★ INTERNATIONAL ★

Reported gold reserves of central banks and governments	1712
Gold production	1713
Net gold transactions and gold stock of the United States	1714
Foreign gold reserves and dollar holdings	1715
International capital transactions of the United States	1716
U.S. balance of payments	1726
Foreign trade	1727
Money rates in foreign countries	1728
Arbitrage on Treasury bills	1729
Foreign exchange rates	1730
Guide to tabular presentation	1646
Index to statistical tables	1737

The figures on international capital transactions are collected by the F.R. Banks from reports made on Treasury foreign exchange forms collected by the F.R. Banks in accordance with Executive Orders No. 6560, dated Jan. 15, 1934, and No. 10033, dated Feb. 8, 1949, and Treasury regulations thereunder. Other data are com-

piled largely from regularly published sources such as central bank statements and official statistical bulletins. For some of the series, back data are available in *Banking and Monetary Statistics* and its *Supplements* (see list of publications at the end of the BULLETIN).

¹ Includes reported or estimated gold holdings of international and regional organizations, central banks, and govts. of countries listed in this table and also of a number not shown separately here, and gold to be distributed by the Tripartite Commission for the Restitution of Monetary Gold; excludes holdings of the U.S.S.R., other Eastern European countries, and China Mainland.

The figures included for the Bank for International Settlements are the Bank's gold assets net of gold deposit liabilities. This procedure avoids the overstatement of total world gold reserves, since most of the gold deposited with the BIS is included in the gold reserves of individual countries.

² Beginning June 1965, excludes gold subscription payments made by

some member countries in anticipation of increase in Fund quotas; for most of these countries the increased quotas became effective in Feb. 1966.

³ Adjusted to include gold subscription payments to the IMF, except those matched by gold mitigation deposits with the United States and United Kingdom. Adjustments are as follows (in millions): 1965 Sept. +\$268; and Dec. +\$270.

⁴ Net gold assets of BIS, i.e., gold in bars and coins and other gold assets minus gold deposit liabilities.

NOTE.—For back figures and description of the data in this and the following tables on gold (except production), see "Gold," Section 14 of *Supplement to Banking and Monetary Statistics*, 1962.

¹ Includes sales of \$21 million to Lebanon and \$48 million to Saudi Arabia.² Includes sales of \$21 million to Burma, \$32 million to Lebanon, and \$13 million to Saudi Arabia.³ Payment to the IMF of \$344 million increase in U.S. gold subscription, less sale by the IMF of \$300 million (see note 4).⁴ IMF sold to the United States a total of \$800 million of gold (\$200

million in 1956, and \$300 million in 1959 and in 1960) with the right of repurchase; proceeds from these sales invested by IMF in U. S. Govt. securities.

⁵ Payment to the IMF of \$259 million increase in U.S. gold subscription, less gold deposits by the IMF.⁶ Payment to the IMF of increase in U.S. gold subscription.⁷ Represents gold deposit by the IMF; see note 2 to table below.

¹ Includes gold sold to the United States by the International Monetary Fund with the right of repurchase, which amounted to \$800 million on Oct. 31, 1966. Also includes gold deposit of IMF; see note 2.² Beginning Sept. 1965, includes gold deposited by the IMF to mitigate the impact on the U.S. gold stock of purchases by foreign countries for gold subscriptions on increased IMF quotas. Amount outstanding was \$211 million on Oct. 31, 1966. The United States has a corresponding gold liability to the IMF.³ Includes gold in Exchange Stabilization Fund.⁴ For holdings of F.R. Banks only, see pp. 1656 and 1658.⁵ Includes payment of \$344 million increase in U.S. gold subscription to the IMF.⁶ Includes payment of \$259 million increase in U.S. gold subscription to the IMF.

NOTE.—See Table 11 on p. 1723 for gold held under earmark at F.R. Banks for foreign and international accounts. Gold under earmark is not included in the gold stock of the United States.

See also NOTE to table on gold reserves.

¹ Includes, in addition to other Western European countries, unpublished gold reserves of certain Western European countries; gold to be distributed by the Tripartite Commission for the Restitution of Monetary Gold; European Fund; and the Bank for International Settlements (the figures for the gold reserves of the BIS represent the Bank's net gold assets).

² Excludes gold reserves of the U.S.S.R., other Eastern European countries, and China Mainland.

³ Includes international organizations and Latin American and European regional organizations, except the Bank for International Settlements and European Fund, which are included in "Other Western Europe."

⁴ Excludes gold subscription payments by member countries in anticipation of increase in IMF quotas. Amounts outstanding as follows (in

millions): 1965 June 30, \$259; Sept. 30, \$285; Dec. 31, \$313; 1966 Mar. 31, \$2; and June 30, \$1.

NOTE.—Gold and short-term dollars include reported and estimated official gold reserves, and official and private short-term dollar holdings (principally deposits and U.S. Treasury bills and certificates); excludes nonnegotiable, non-interest-bearing special U.S. notes held by the Inter-American Development Bank and the International Development Assn. U.S. Govt. bonds and notes are official and private holdings of U.S. Govt. securities with an original maturity of more than 1 year; excludes nonmarketable U.S. Treasury bonds and notes held by official institutions of foreign countries as shown in Table 8 on p. 1722.

See also NOTE to table on gold reserves.

¹ Excludes \$776 million letter of credit issued by the U.S. Treasury Dept. to the International Monetary Fund in payment of the dollar portion of the U.S. quota increase which became effective on Feb. 23, 1966.

² Includes Bank for International Settlements and European Fund.

NOTE.—Data represent short-term liabilities to the official institutions of foreign countries and to official international and regional organizations,

as reported by banks in the United States, and estimated foreign official holdings of marketable U.S. Govt. securities with an original maturity of more than 1 year. Data exclude nonnegotiable, non-interest-bearing special notes held by the Inter-American Development Bank and the International Development Association, and also nonmarketable U.S. Treasury notes and bonds, payable in dollars and in foreign currencies.

⁸ Represent a partial breakdown of the amounts shown in the "other" categories (except "Other Eastern Europe") in Tables 2a-2e.⁹ Includes data reported for Malawi (formerly Nyasaland) and Zambia (formerly Northern Rhodesia).

NOTE.—Short-term liabilities are principally deposits (demand and time) and U.S. Govt. securities maturing in not more than 1 year from

their date of issue; the latter, however, exclude nonnegotiable, non-interest-bearing special U.S. notes held by the International Development Assn. and the Inter-American Development Bank. For data on long-term liabilities, see Table 6. For back figures and further description of the data in this and the following tables on international capital transactions of the United States, see "International Finance," Section 15 of *Supplement to Banking and Monetary Statistics*, 1962.

¹ Not reported separately until 1963.² Includes Africa until 1963.³ Differs from December data in line above because of the exclusion as of Dec. 31, 1964, of \$58 million of short-term U.S. Govt. claims previously included; and because of the addition of \$546 million of short-term claims arising from the inclusion of claims previously held but first reported as of Dec. 31, 1964; and because of revision of preliminary data.⁴ Differs from December data in line above because of the addition of short-term claims held in custody for domestic customers, but reported by banks for the first time as of Dec. 31, 1965.⁵ Until 1963 includes Eastern European countries other than U.S.S.R., Czechoslovakia, Poland, and Rumania.⁶ Czechoslovakia, Poland, and Rumania only until 1963.⁷ Bolivia, Dominican Republic, El Salvador, and Guatemala only until 1963.⁸ Until 1963 includes also the following Latin American republics: Costa Rica, Ecuador, Haiti, Honduras, Jamaica, Nicaragua, Paraguay, and Trinidad and Tobago.⁹ Until 1963 includes also African countries other than Congo (Kinshasa), South Africa, and U.A.R. (Egypt).

NOTE.—Short-term claims are principally the following items payable on demand or with a contractual maturity of not more than 1 year: loans made to, and acceptances made for, foreigners; drafts drawn against foreigners, where collection is being made by banks and bankers for their own account or for account of their customers in the United States; and foreign currency balances held abroad by banks and bankers and their customers in the United States. Excludes foreign currencies held by U.S. monetary authorities.

See also NOTE to Table 2.

¹ Not reported separately until 1963.² Includes Africa until 1963.³ Includes claims previously held, but reported for the first time as of May 1963; on that date such claims were \$86 million. Also includes \$193 million reported for the first time as of Dec. 1963, representing in part claims previously held, but not reported by banks. Included in

this amount are claims on: Europe \$5 million, Latin America \$134 million, and Asia \$54 million.

⁴ Differs from Dec. data in line above because of the inclusion of long-term liabilities and claims previously held, but first reported as of Dec. 31, 1964, and because of revision of preliminary data.

June ⁵	186	1,209	27	170	251	205	61	217	90	90	86

¹ Until June 1963 Africa included in "All other."² Data include \$12 million of claims reported by firms reporting for the first time and claims previously held but not reported.³ As a result of an increase in the exemption level from \$100,000 to

\$500,000, data exclude \$3 million of liabilities and \$3 million of claims held by firms previously reporting but now exempt.

⁴ Data differ from that shown for December in line above because of changes in reporting coverage.

¹ On June 24, 1962, the bank rate on advances to chartered banks was fixed at 6 per cent. Rates on loans to money market dealers will continue to be .25 of 1 per cent above latest weekly Treasury bill tender average rate, but will not be more than the bank rate.

² Beginning with Apr. 1, 1959, new rediscounts have been granted at the average rate charged by banks in the previous half year. Old rediscounts remain subject to old rates provided their amount is reduced by one-eighth each month beginning with May 1, 1959, but the rates are raised by 1.5 per cent for each month in which the reduction does not occur.

³ Rate shown is for advances only.

⁴ Beginning with June 1, 1962, the rediscount rate for commercial bank loans financing the purchase of surplus agricultural commodities under U.S. Law 480 was reduced from 6 to 3 per cent; and on Aug. 22, 1962, the rediscount rate for commercial bank financing of 9 categories of development loans was reduced from 6 to 3 per cent.

⁵ Rate shown is for call loans.

NOTE.—Rates shown are mainly those at which the central bank either discounts or makes advances against eligible commercial paper and/or govt. securities for commercial banks or brokers. For countries with more than one rate applicable to such discounts or advances, the rate

shown is the one at which it is understood the central bank transacts the largest proportion of its credit operations. Other rates for some of these countries follow:

Argentina—3 and 5 per cent for certain rural and industrial paper, depending on type of transaction;

Brazil—8 per cent for secured paper and 4 per cent for certain agricultural paper;

Colombia—5 per cent for warehouse receipts covering approved lists of products, 6 and 7 per cent for agricultural bonds, and 12 and 18 per cent for rediscounts in excess of an individual bank's quota;

Costa Rica—5 per cent for paper related to commercial transactions (rate shown is for agricultural and industrial paper);

Ecuador—6 per cent for bank acceptances for commercial purposes;

Indonesia—various rates depending on type of paper, collateral, commodity involved, etc.;

Japan—penalty rates (exceeding the basic rate shown) for borrowings from the central bank in excess of an individual bank's quota;

Peru—8 per cent for agricultural, industrial, and mining paper; and

Venezuela—4 per cent for rediscounts of certain agricultural paper and for advances against govt. bonds or gold and 5 per cent on advances against securities of Venezuelan companies.

NOTE.—Treasury bills: All rates are on the latest issue of 91-day bills. U.S. and Canadian rates are market offer rates 11 a.m. Friday; U.K. rates are Friday opening market offer rates in London.

Premium or discount on forward pound and on forward Canadian dollar: Rates per annum computed on basis of midpoint quotations (between bid and offer) at 11 a.m. Friday in New York for both spot and forward pound sterling and for both spot and forward Canadian dollars.

All series: Based on quotations reported to F.R. Bank of New York by market sources.

For description of series and for back figures, see Oct. 1964 BULLETIN, pp. 1241-60. For description of adjustments to U.K. and Canadian Treasury bill rates, see notes to Table 1, p. 1257, and to Table 2, p. 1260, Oct. 1964 BULLETIN.

¹ A new markka, equal to 100 old markkaa, was introduced on Jan. 1, 1963.

² Effective Jan. 1, 1963, the franc again became the French monetary unit. It replaces, at a 1 to 1 ratio, the new franc introduced Jan. 1, 1960.

³ Quotations not available Aug. 8 and 9.

⁴ Based on quotations through Feb. 11, 1966.

⁵ Effective Feb. 14, 1966, Australia adopted the decimal currency system. The new unit, the dollar, replaces the pound and consists of 100 cents, equivalent to 10 shillings or one-half the former pound.

⁶ Effective June 6, 1966, the Indian rupee was devalued from 4.76 to 7.5 rupees per U.S. dollar. Quotations not available June 6 and 7.

NOTE.—Averages of certified noon buying rates in New York for cable transfers. For description of rates and back data, see "International Finance," Section 15 of *Supplement to Banking and Monetary Statistics*, 1962.
