## Expansion in Industrial Production

Industrial production reached a new high in the summer of 1973. The large and sustained expansion since the cyclical low in late 1970 has reflected widespread increases in demands: an upsurge of consumer buying, especially of durable goods; strong demands for business equipment to modernize and enlarge capacity; large increases in residential and commercial construction activity; and an accompanying rise in output of industrial materials and construction products.

The rate of increase in industrial production this year has been fairly rapid-a 7.5 per cent annual rate from last December to July-but was appreciably less than the 12 per cent rate during 1972. In August the index edged off because of a temporary sharp drop in auto and truck production. Moderation of the expansion this year reflects in part constraints placed on production by high rates of capacity utilization in a number of industries, particularly those producing fuels and materials for further processing. But it

1 IINDUSTRIAL PRODUCTION and the major MARKET GROUPINGS are at new highs

Seasonally adjusted. Latest data, August.
has also resulted, in part, from some easing of demand pressures in important sectors. Hence, consumer purchases of goods in constant dollars have changed relatively little from the advanced first-quarter level, and both housing starts and the volume of residential construction activity have been drifting down this year. On the other hand, the physical volume of exports of nonagricultural products has been rising rapidly and in the first half of this year was up more than one-fifth from a year earlier, reflecting both the devaluation of the U.S. dollar and strong economic expansion abroad. U.S. imports have risen much less rapidly than exports over this interval.

The labor market has continued strong, with the unemployment rate in August at 4.8 per cent compared with 5.6 per cent a year earlier. Growth in employment, however, has moderated from the exceptionally rapid rate that had prevailed in the second half of 1972 and in early 1973, and manufacturing employment has shown little change since June. The average workweek in manufacturing in the first 8 months of 1973 was above the corresponding period of 1972, but it has edged down since last spring.

Following a 2 -year period of strong gains, increases in industrial productivity slowed in the first half of 1973 and continued relatively moderate in July and August. The reduced rate of productivity growth coupled with increasing labor compensation resulted in sharply higher unit labor costs in the first half of this year.

The wholesale price index, which had increased 6.5 per cent during 1972, rose at an annual rate of 25 per cent after Phase III controls replaced Phase II in January. This extremely rapid increase was led by an extraordinary 83 per cent annual rate of advance in prices of farm products, but the 11 per cent rate for industrial commodities was also exceptionally large. Prices of farm products rose further by a record amount from mid-July to midAugust, but much of this advance had been reversed by early September. The consumer price index followed the pattern shown by wholesale prices before and after the termination of Phase II, but the increases were less sharp. Retail food prices increased at an annual rate of 17 per cent between January and July of this year, and all items less foods rose at a 4 per cent annual rate.

A general price freeze imposed on June 13 was partially removed from most foods on July 18, and on September 10 was replaced by Phase IV controls, which are somewhat more rigorous than those of Phase II. But industrial prices, as expected, rose rapidly after the end of the freeze.

CONSUMER GOODS Production of consumer goods in August was 16 per cent above the 1969 pre-recession peak-reflecting a sharp increase in output of durable goods and a smaller growth in nondurable goods that

account for a larger part of the total. By the second quarter of 1973, however, the expansion in total output of consumer goods had begun to slow as production of some durable goods was at or near capacity levels and demands were showing indications of easing. In August output of consumer goods declined, primarily because of special temporary circumstances in the auto industry; in mid-September, there was a short strike at a major auto producer, which was settled by a tentative agreement subject to union ratification. Consumer durable stocks have been increasing this year, moving toward the earlier record levels of 1971 (Chart 2).

Automobiles. Unit sales of domestic-type autos this year have remained close to the record rate reached in the first quarter, as may be seen in Chart 3. August sales were at a seasonally adjusted annual rate of 9.7 million units compared with the record rate of 10.3 million units in the first quarter. Purchases of imported cars also peaked in the first quarter and then declined as stocks already in this country at the time of the February dollar-devaluation were run down. It appears that concerns about gasoline shortages have kept sales of imported cars higher this summer than had been expected and have strengthened demand for domestic-type small cars.

With auto plants operating at close to capacity levels, domestic output was virtually unchanged in the first half of 1973 following a 25 per cent increase during 1972 to an advanced rate at the year-end. With sales off somewhat from their highs, dealer inven-
tories of new domestic autos have been accumulating and by mid-1973 had risen 15 per cent from the third quarter of 1972. In August, output was a fifth below the scheduled pace because of parts shortages and plant closings due to extreme heat; however, stocks remained at the end-of-the-second-quarter level and by August 31 were equivalent to a 49 selling-day supply.
$3 \left\lvert\, \begin{aligned} & \text { Sales and output of DOMESTIC AUTOS } \\ & \text { begin to ease; stocks start to climb }\end{aligned}\right.$

Seasonally adjusted. Sales and output at annual rates; stocks are index numbers. Quarterly averages except stocks, end of quarter. Latest data, Q3 estimated.

Home goods. Output of appliances, radios, television sets, carpets, and furniture-extending a period of growth that had started in early 1971-reached a new high in the second quarter of 1973, although production was off slightly by August. Retail sales, which include imports, also continued to rise. Nevertheless, the rate of growth tapered off after the first quarter as completion rates for new housing, including mobile homes, have leveled off. Retail and factory stocks of home goods, which include imports as well as domestic production, have increased in 1973 and by August were 7 per cent above the level at the end of 1972.

Production of home appliances and sales to dealers of these goods rose only slightly in the second quarter after a substantial rise in the previous two quarters and were down somewhat in July and

August. Factory and dealer stocks leveled off in the second quarter after a 25 per cent increase over the preceding six quarters ending in March; in August they were up again.

Domestic production of television sets and home audio equipment increased substantially in the first half of 1973 after a year of rather stable production in 1972. The expansion reflected in part the continued increase in demand for color TV sets-a higher percentage of which are produced in the United States-and in part adjustments in foreign exchange rates, which made imports more expensive here. By August, factory sales of television sets to dealers were only 2 per cent above a year earlier while factory and wholesale distributors' stocks were up 14 per cent. The inventory mix was changing, however, as stocks of monochrome units decreased, reflecting their declining market share, while inventories of color sets increased.

Nondurable consumer goods. Over-all production of nondurable consumer goods in August was 4 per cent above a year earlier. Since the first quarter, however, growth has leveled off as a decline in residential utilities has about offset increases in consumer chemicals. Output of processed foods and consumer paper products has changed little during 1973.

Production of the cyclically sensitive apparel group, which had been rising steadily since late 1970, has leveled off since March of this year. Over the two quarters ending in March, retail sales of apparel increased 12 per cent in value terms, but in the second quarter of 1973 they declined 2 per cent. The dollar value of apparel sales in recent months has reflected increases in prices, which rose sharply in the first half of 1973 following a slower but steady rate of increase from mid-1971.

## BUSINESS EQUIPMENT

The renewed expansion in business equipment production, which began in mid-1971, has continued into the third quarter of this year. However, the rate of expansion has slackened since February, reflecting in part capacity output in some business-equipmentproducing industries and also delays in delivery of intermediate goods and raw materials to equipment producers. Output of business equipment has risen at about a 10 per cent annual rate since February as compared with 20 per cent in the preceding 12 -month period. In August, output was at a new record, about 12 per cent above its 1969 peak and 30 per cent above its trough in May 1971. As may be seen from Chart 4, the cyclical movement in business equipment production in the 1969-73 period was more pronounced than that for total industrial production, which is typical of business cycles.

Fluctuations in production of manufacturing equipment-over the period September 1969 to October 1972-contributed to the pronounced cyclical movement in total business equipment pro-
$4 \begin{aligned} & \text { BUSINESS EQUIPMENT recovers dramatically } \\ & \text { with upswing in industrial production }\end{aligned}$
Seasonally adjusted. Latest data, August.
duction (Chart 5). After having reattained its 1969 peak in October 1972, manufacturing equipment output has risen to its highest postwar level. The sharp recovery to a new high reflects the sharp increase in investment in the manufacturing sector (Chart 6)-encouraged by such developments as expanding sales of manufactured goods, strains on capacity in some industries, and the investment tax credit.

The expansion in output of manufacturing equipment has apparently resulted in less expansion in manufacturing capacity than has been usual in cyclical upswings, in part because of urgent needs to modernize existing facilities and to adapt older plants to conform with pollution control standards. According to the results of Mc-Graw-Hill's recent survey of business capital expenditures, the distribution of capital expenditures by manufacturing between expansion and modernization shifted in the direction of modernization in 1971 and 1972. Prior to 1971, this distribution had been relatively stable for a number of years.

This diversion of investment resources to needs other than capacity expansion appears to have been especially pronounced in the major materials industries where growth in capacity has been slow in spite of sharply rising investment levels (August 1973 Bulletin, pages 564-66). Such major materials-supplying industries as paper, cement, and steel are prime examples of industries that have severe pollution problems, and they are among those that are devoting significant amounts of new equipment to pollution abatement. For example, the American Paper Institute reports that about 40 per cent of the paper industry's investment in 1972 was for pollution control.

There was also a pronounced cyclical movement in the production of transportation equipment in the 1969-73 period. After a peak in July-September 1969, output of such equipment declined

## 5 EQUIPMENT PRODUCTION is up

Seasonally adjusted. Latest data, August.
to a low level in November 1970. At that point, production was further depressed by a strike at a major auto and truck producer. Production has since recovered but is not yet back to the levels attained in 1969, inasmuch as aircraft output, an important component, remains substantially below its peak levels. Output of commercial aircraft declined by about one-half from July 1969 to July 1971 and has shown only moderate recovery since then.

The recovery in transportation equipment production was spearheaded by near-capacity output of trucks in the first half of 1973. Truck production in August was down sharply, however, because of parts shortages and because of plant closings occasioned by extremely hot weather. Production of truck trailers also has increased strongly this year. Commercial ship production has been at about its 1969 level after an intervening decline and partial recovery. Production of railroad equipment remains well below the previous cycle peak as problems in the railroad industry, principally
in the Northeast, have limited the carriers' ability to finance new equipment.

Production of farm equipment has recovered sharply since its July 1971 low. The upswing, fueled by the tremendous increase in domestic and foreign demands for U.S. farm products and the consequent high prices of farm products, has carried the index substantially above the previous high of August 1969.

Output of building and mining equipment has made a strong recovery from its recession low in July 1971. The index is currently well above the level of the previous peak in November 1968. Production of construction equipment has been buoyed by the dramatic upswing in private housing construction, which began early in 1970. Although new housing starts have been drifting downward this year, they have remained at a high level. Demand for construction equipment has also been stimulated by a recovery in 1972 and 1973 in activity in the private nonresidential sector. From a cyclical low of $\$ 24.3$ billion (annual rates, 1958 dollars), expenditures for nonresidential structures rose to an estimated $\$ 27.1$ billion in the second quarter of 1973.

Production of power and commercial equipment showed less cyclical movement in 1969-73 than that experienced in the other sectors. The relatively steady growth in the output of power equipment reflects the noncyclical nature of the utility business, which in turn reflects the generally sustained growth in use of energy by both industrial and nonindustrial consumers. Commercial equipment production (Chart 5) declined moderately from late 1969 to early 1971 and subsequently rose to new high levels. This class of equipment includes computers and other office and store machines whose applications in various sectors of the economy have continued to expand rapidly.

Various indicators suggest that considerable strength remains in the investment sector. Both new and unfilled orders of nondefense capital goods industries have continued to rise sharply this year, as have plant and equipment expenditures (Chart 6). Appropriations for new plant and equipment spending by the manufacturing sector in the second quarter were sharply higher than the cyclical low in the comparable quarter of 1971. The Conference Board reports that the recent slowing in the rate of increase of appro-priations-from 17 per cent in the first quarter of 1973 to 11 per cent in the second quarter-was due to supply limitations. Backlogs of unspent appropriations this year showed their largest gain yet recorded. High levels of new appropriations and backlogs of unspent appropriations constitute the potential for continued in-vestment-and for output of business equipment as well-at high and possibly rising levels. The recent Commerce Department survey, taken mostly in August, indicates that manufacturers plan to spend 19 per cent more for plant and equipment in 1973 than in

Seasonally adjusted. Latest data, Q3 estimated.
1972 and that nonmanufacturing industries plan to spend 10 per cent more than in 1972.

DEFENSE AND SPACE EQUIPMENT

Output of defense and space equipment remains well below the peak rate reached in 1968. This reduced level reflects the U.S. withdrawal from an active military role in Southeast Asia and the reduction in space exploration activity since the completion of the Apollo program.

INTERMEDIATE Intermediate products-such as construction products, farm chemiPRODUCTS cals, and fuels for commercial uses-are produced in the industrial sector for use mainly outside the sector. With the sharp rise in construction activity in 1972, output of construction products advanced rapidly during the year. During the first half of 1973, however, output of these products showed little further gain, in part because of capacity limitations in some industries and in part because of a drifting down in new private housing starts since late 1972. Production of general business supplies, reflecting the rise in the over-all economy, advanced during 1972 and then was maintained at record levels during the first half of 1973.

MATERIALS FOR Fluctuations in production of materials used for industrial processPROCESSING ing are usually wider than those for final products for two reasons. One is that they reflect fluctuations in a very sensitive component of business inventories. The other is that, in recent years, short-run shifts in foreign trade have been large for materials.

The rise in output of industrial materials that began in early 1972 and continued into mid-1973 has reflected a variety of influences: an increased demand for, and output of, consumer goods

Materials OUTPUT rises faster than PRODUCTS as UTILIZATION RATE of major materials increases; although SUPPLIES build up further, PRICES still rise rapidly

Seasonally adjusted except prices. Price index, F.R. grouping of BLS data. Utilization rate, F.R. Supplies, net imports plus projections of 1963 output-inventory relationships based on industrial production indexes for materials and final products
(net imports compiled by F.R. from Dept. of Commerce data; duties and freight on imports, F.R. estimates). Latest data, August or Q3 estimated.
and business equipment; a build-up of inventories of these goods-apparently induced to a significant extent by an upward spiral in prices-as a partial hedge against expectations of continued price advances; and in recent months, an increase in exports of industrial materials in response to the devaluation of the dollar and to tighter supplies in other countries.

The 1972-73 upswing in output of industrial materials has brought to a new high the capacity utilization rate in major materials industries and an indicated increase in the rate of inventory accumulation of industrial materials. Stocks of materials probably have been built up enough to prevent development of serious general shortages of materials even though their production is near capacity. However, this does not preclude the development of shortages of specific materials. For example, some parts of the country and several types of industrial users have been affected by limited supplies of fuels this year, and in August, auto and truck assemblies were curtailed, in part, because of a lack of components.

The most volatile of the materials are those used in durable goods manufacturing. This category includes basic metals and the various semifinished products that are further processed into final durable consumer goods and business equipment. Output of these materials showed a rapid growth during 1972—over one-fifth—followed by a slowing down in the rate of increase in 1973.

Output of iron and steel, which had been cut back sharply following the wage contract settlement in mid-1971, advanced strongly in 1972 and reached a peak in December 1972. It has shown little change since then as steel mill operations have been at or near capacity levels. Inventories of steel products at producing mills declined sharply in the first half of 1973. Meanwhile, stocks increased at steel-consuming plants, but they were not excessive because output of consumer durable goods and business equipment continued at record levels. Imports of steel mill products have augmented domestic supplies, but the volume of imports has been declining as foreign steel demands have generally increased.

Production of nonferrous metals and products also increased sharply in 1972; like steel, it reached a peak at the end of the year with little change since then. Among other industrial materials, those for use in processing of durable consumer goods and business equipment showed large advances in 1972. While output of these goods has continued to increase since January, the rate of increase has been at a slower pace.

Over-all production of nondurable industrial materials is typically more stable and less influenced by cyclical changes than output of durable materials, and this has been especially true in the past several years. However, two of the major components of nondurable materials, which had shown a consistent expansion in production over the years until they reached a peak in 1970, have shown little further advance since then. Within these two sectors crude oil extraction and coal mining have declined in recent years and output of natural gas and gas liquids has remained stable. Output of electricity for industrial use, however, has continued to expand. In contrast, production of textile, paper, and chemical industrial materials is considerably more sensitive to cyclical fluctuations. Following large increases of output of these materials in 1971 and 1972, production continued to rise in mid-1973 but at a much slower pace than earlier.

All major sectors, apart from defense equipment, have contributed to the large rise in industrial production since the 1969-70 downturn-consumer goods, business equipment, and materials. However, further gains in industrial output in the months ahead may be limited because of several factors: a slowing of the rise in consumer demands for goods, reflecting in part the recent rapid increase in prices; a decline in residential construction reflecting in part reduced availability and higher costs of mortgage financing; and the high rates of capacity utilization of industrial materials and parts, which are currently limiting expansion in some finished goods industries.

# Treasury and Federal Reserve Foreign Exchange Operations 

#### Abstract

This twenty-third joint interim report reflects the Treasury-Federal Reserve policy of making available additional information on foreign exchange operations from time to time. The Federal Reserve Bank of New York acts as agent for both the Treasury and the Federal Open Market Committee of the Federal Reserve System in the conduct of foreign exchange operations.

After consultations with the major trading partners of the United States, Treasury Secretary Schultz announced on the evening of February 12,1973 , that the dollar would be devalued by 10 per cent. Almost all of the developed nations maintaining par or central values left them unchanged, thus bringing about a uniform realignment of their exchange rates reflecting the full devaluation of the dollar. In the case of Japan, the yen was allowed to float temporarily to permit an additional appreciation vis-a-vis the dollar. Sterling and the Swiss franc remained on the floating basis initiated in earlier months and were joined by the Italian lira.

While there was some initial profit-taking, new flows of funds into marks and other foreign currencies soon resumed. Despite the major adjustment in exchange rates resulting from the dollar devaluation, there continued to be widespread discussion of the possibility of a joint float of the European Community (EC) currencies in the event of renewed dollar inflows. Market worries were further exacerbated by the speculative buoyancy of the floating Swiss franc, which had appreciated significantly more than other European currencies.

In short, the markets remained entirely unconvinced that the crisis was over, and by February 23 the dollar had fallen to its new floor against the mark, French franc, guilder, and Belgian franc. Then on Thursday, March 1, in a sudden new flight from the dollar, more than $\$ 3.6$ billion was dumped on the European central banks. That night the European authorities

This report was prepared by Charles $A$. Coombs, Special Manager, System Open Market Account, and Senior Vice President in charge of the Foreign Department of the Federal Reserve Bank of New York. It covers the period March through July 1973. Previous reports have been published in the March and September Bulletins of each year beginning with September 1962.
closed their exchange markets until further notice.

Emergency meetings of the EC and Group of Ten (G-10) Finance Ministers quickly got under way and yielded two major policy decisions. On March 11, five members of the ECGermany, France, Belgium, the Netherlands, and Denmark-agreed to maintain fixed ex-change-rate relationships among themselves within a 2.25 per cent band, which would be permitted to float as a bloc against the dollar. Norway and Sweden subsequently joined this bloc. In conjunction with this EC decision to establish a fixed-rate bloc, the German authorities revalued the mark by 3 per cent. As further protection against new speculative inflows of funds, most countries participating in the EC bloc tightened and extended their existing exchange controls. The Japanese yen, Swiss franc, sterling, and the Italian lira each continued to float independently.

The EC decision to engage in a joint float against the dollar left open a major question whether such a float would be "clean" or subject to intervention by the Federal Reserve and the EC central banks at their discretion. This policy issue was taken up by the Paris meeting of the G-10 Finance Ministers, including Secretary Schultz, who issued on March 16 a communique reiterating their determination to ensure jointly an orderly exchange-rate system. They agreed in principle that official intervention in the exchange markets might be useful at appropriate times to facilitate the maintenance
of orderly conditions. Each nation represented stated that it would be prepared to intervene at its initiative in its own market in close consultation with the countries whose currencies were being traded. To ensure adequate resources for such official exchange operations, it was envisaged that some of the existing swap facilities would be enlarged.

With these new rules of the game, the markets were officially reopened on March 19 and over the next 6 weeks the dollar improved hesitantly as earlier adverse leads and lags were partially unwound. Despite an improving trend in the U.S. balance of payments and the frequently voiced view that the dollar was now undervalued, there was no large sustained covering of short dollar positions, or reflow of funds. Indeed, the market became increasingly concerned over the worsening U.S. inflation, forecasts of vastly higher energy imports, and the possible ramifications of the Watergate affair.

While the dollar remained strong against the currencies of this country's two major trading partners-Japan and Canada-a tendency to shift out of dollars in favor of European currencies resumed in early May. By midmonth a new speculative attack had broken out in which soaring gold prices, sliding Wall Street stock prices, and a weakening dollar fed upon each other. Pressure on the dollar was further intensified by the progressive tightening of German monetary and fiscal policies, as the sharp rise of the German mark began to pull up the other EC currency rates against the dollar.

In June and early July, the dollar was driven down in recurrent bursts of heavy selling to levels unjustified and undesirable on any reasonable assessment of the outlook for the U.S. payments position. As these pressures reached a climax on July 6, the German mark had been bid up by some 30 per cent above the central rate established in February, and the French franc and other currencies in the EC bloc by 18 to 21 per cent, while the price of gold on the London market had shot back up to $\$ 127$. Meanwhile, trading conditions in the exchange markets had become increasingly disorderly, and by Friday, July 6, a number of New York banks were refusing to quote rates on certain European currencies. Exchange trading was grinding to a standstill.

Such excessive depreciation of the dollar was simultaneously generating further hectic speculation in the international commodity markets and otherwise seriously intensifying inflationary pressures in the United States. Those countries whose currency rates were moving down with the dollar suffered the same inflationary impact while, conversely, those countries whose currencies were appreciating excessively visualized a major and unjustifiable threat to their competitive position in world markets. This was a dangerous situation from almost every point of view and was recognized as such by press commentary around the world.

At a meeting of the Bank for International Settlements (BIS) group of central banks on the following weekend, Federal Reserve representatives wound up earlier negotiations providing for major increases in the Federal Reserve swap lines as well as for new arrangements covering exchange risks on floating rates. On Sunday night, July 8, the governors of the BIS central banks issued a statement noting that the necessary technical arrangements were now in place to implement the Paris agreement of March 6 regarding exchange market intervention to maintain orderly markets. On the following Monday afternoon, in agreement with the U.S. Treasury, a telephone conference of the Federal Open Market Committee approved a resumption of exchange operations, to be financed if necessary by drawings on the swap lines.

The exchange markets were meanwhile anticipating such action and by the following Tuesday afternoon, when the Federal Reserve announced an increase in the swap network from $\$ 11.7$ billion to nearly $\$ 18$ billion (Table 1, p. 639), a strong recovery of the dollar against most of the European currencies already had occurred. Against the mark, for example, the dollar had rocketed up by 7 per cent from the all-time low reached on the preceding Friday. In large part, the steep rise of dollar rates seemed to reflect market hedging against the possibility of sudden, massive intervention by the Federal Reserve. When intervention on such a scale did not immediately materialize, dollar rates began to slip back and were further seriously depressed during the rest of July by a progressive tightening of the German money
markets. On July 26 the call money rate in Frankfurt rose to 38 per cent.

Market intervention by the Federal Reserve was in fact initiated on July 10 and was continued through the end of the month. Rather than the massive action envisaged by some traders, the Federal Reserve pursued the less dramatic path of trying to assist the market in finding a solid footing from which a strong recovery might then develop once the German credit crunch was relieved, and prospectively good trade figures for the United States for June were released. In this stabilizing effort, the Federal Reserve through frequent intervention in the New York market sold $\$ 220$ million of German marks, $\$ 47$ million of French francs, and $\$ 6$ million of Belgian francs-an intervention total of $\$ 273$ million-all financed by drawings on the swap lines with the foreign central banks concerned. These drawings increased the System's swap debt from $\$ 1,555$ million to $\$ 1,828$ million by the end of July (Table 2, p. 640). Federal Reserve operations in New York were strongly reinforced by coordinated purchases of dollars by the German Federal Bank in Frankfurt totaling somewhat more than $\$ 300$ million.

In late July, the market stabilized well above the lows reached earlier in the month. Then, as the German Federal Bank took action to relieve the German credit squeeze, the New York money market tightened, and the June trade figures for the United States showed considerable improvement, the dollar recovered strongly through the first 2 weeks of August. Since then the exchange markets have been functioning in more orderly fashion in a much calmer atmosphere. Bid and offer spreads are moving back toward normal, and daily swings in market rates are somewhat less volatile. In early September, dollar rates against the mark and French franc, for example, were some 10 per cent and $115 / 8$ per cent above their July 6 lows. After the shocks to confidence in recent years, however, the healing process is bound to take some time, and much will depend on emerging trends in the U.S. balance of payments and on the degree of success in holding inflation in check in this country. Meanwhile, the market is aware of the joint statement made on July 18 by Chairman Burns and Secretary Schultz that active intervention will take place
in the future at whatever times and in whatever amounts are appropriate for maintaining orderly market conditions.

## GERMAN MARK

By early 1973 Germany's economic expansion had accelerated and the rate of inflation had reached the highest level in more than two decades. In attempting to curb this inflation, the German authorities were relying heavily on monetary policy instruments̀ and, consequently, were concerned over simultaneously attracting renewed flows into marks from abroad. Therefore, the German Government had erected various barriers to ward off capital inflows and to protect the economy from the expansionary impact of such inflows as did occur. These controls could not be airtight, however, and in January and early February of this year, a combination of developments in Europe and the United States had touched off a rush into marks, which thereafter broadened into a full-scale attack on the U.S. dollar.

In conjunction with the February 12 devaluation of the dollar, the German authorities immediately set a new central rate of $\$ 0.3448$ for the mark, corresponding in full to the change in the value of the dollar in Special Drawing Rights (SDR's). When regular exchange trading resumed after a 2 -day closure of the markets, the mark-dollar market was subjected to strong crosscurrents. On the one hand, many holders of dollars decided that they were no longer prepared to hold dollar assets. Some foreigners simply sold dollars to return to their own currencies, but many others, including some central banks, shifted from dollars into German marks and other European currencies. This process added substantially to the demand for marks, not only in February but also, in varying volume, virtually through spring and early summer.

On the other hand, there remained the massive positions-short of dollars and long of marks-on which profits had yet to be taken. Therefore, after the German Federal Bank acted to neutralize the monetary impact of the buildup of mark balances by imposing a 100 per cent reserve requirement on excess balances of nonresidents, and often the German banks had responded by selectively imposing negative interest charges on nonresident balances, reflows

1 |THE DOLLAR-MARK RATE

out of marks developed. The spot mark eased, and by February 19 the mark reached its new floor against the dollar. Over the next few days the German Federal Bank was able to release to the market some $\$ 1$ billion of its previous dollar intake, and as part of this operation it sold to the Federal Reserve sufficient marks to repay the full $\$ 105$ million of Federal Reserve swap drawings incurred before the February devaluation of the dollar.

These reflows out of marks quickly dried up, however, and the balance of forces in the market swung sharply the other way. With the dollar weakening across the board at a time when European officials were openly discussing the possibility of a joint float against the dollar, few traders were willing to take up the heavy volume of dollars being offered in the exchanges. In the 2 days February 22 and 23 , the mark rose from its floor to its new upper limit and traded near that level through the end of the month. The continuing discussion on both sides of the Atlantic of the exchange-rate question-whether the dollar's devaluation had been enough or whether there might be a joint float of the European currencies-kept the market anxious. Pressures came to a head on March 1, when massive amounts of dollars were dumped on the exchanges and the German Federal Bank alone
took in a record $\$ 2.6$ billion. The German and other European exchange markets were then closed and official international discussions to resolve the crisis began.

As the market awaited the outcome of these negotiations, the mark fluctuated erratically before drifting back somewhat in very thin trading. On March 11 Common Market officials announced that Germany and four of its EC partners would keep their exchange-rate relationships fixed against each other within a 2.25 per cent band while suspending the intervention limits against the dollar. As part of this agreement the German authorities revalued the mark vis-a-vis the SDR and other participating currencies by about 3 per cent. On March 16, in Paris, the U.S. authorities joined in a broader agreement incorporating these moves and recognizing that official intervention in the exchange markets may be useful at appropriate times to facilitate the maintenance of orderly market conditions.

When the markets were formally reopened on March 19, traders remained in a state of shock over the events of the previous 2 months. Moreover, the vast uncertainties over how well the market would function under the new ar-rangements-a mixture of fixed and floating exchange rates plus a spate of new capital con-trols-initially had paralyzing effect. As a result, the market was quiet, trading was thin, turnover was small, and day-to-day movements in the mark rate continued to be abnormally wide. Over the previous 2 months most market participants had satisfied their normal demand for marks for some time to come, leaving an absence of routine demand for marks once the markets reopened. In addition, some of the long positions in marks were being cut out, as the interest costs of maintaining those positions mounted.

Consequently, the mark settled just below its effective central rate of $\$ 0.3551$ against the dollar and slipped to the bottom of the EC band, where it required support against those currencies at the top of the joint float. Except for a brief reversal in mid-April on a temporary tightening of monetary conditions in Germany, the mark continued to drift lower against the dollar and to exert a drag on other EC currencies through early May.

In May, a new series of events broke the surface calm of the exchange markets and set off a progressive rise of the mark that continued virtually uninterrupted through early July. The precipitous rise in the mark reflected developments in Germany and the United States as well as the dynamics of the exchange market itself. In Germany, the Federal Bank had been striving to maintain its firm grip on domestic liquidity through higher reserve requirements, cuts in discount quotas, hikes in discount and Lombard rates, and limits on access to the Lombard facility. These measures, and expectations in the market that further tightening would be forthcoming, tended to reinforce the demand for marks in the exchanges at a time when the German Government also was developing a program of anti-inflationary fiscal measures. At first there were rumors that this program would be accompanied by a further revaluation of the mark, which led to renewed speculative demand for marks. When the fiscal program was announced, however, there was no revaluation, and speculation subsided for the time being.

## 2A | MOVEments in exchange rates

[^1]Meanwhile, the United States was suffering from a daily diet of bad news about escalating prices and the Watergate affair. Coupled with successive sharp jumps in the price of gold and repeated declines in prices on Wall Street throughout May, these factors brought frequent sharp declines in the dollar.

Against this background, the announcement of a small U.S. trade surplus for April gave the dollar only a brief lift in late May, and a renewed scramble for marks began following the Federal Bank's announcement of a further 1 percentage point increase in the discount and Lombard rates and the subsequent suspension of the Lombard facility on May 30. By June 5, the spot mark had climbed to $\$ 0.3864$ nearly 9 per cent above its central rate-and had moved up from the bottom of the European "snake," where it had traded since mid-March, almost to the top.

Shortly thereafter, reports of an impending new U.S. anti-inflation program, and later the Federal Bank's move to moderate the impact of its May measures by reopening a special discount facility against commercial bills, helped to turn the mark rate down briefly. But the 60 -day price freeze announced for the United States disappointed the market. Then on June 26 traders were further disturbed by the U.S. trade figures for May, which showed a moderate deficit rather than the sizable surplus that many had been expecting, and by the Federal Bank's announcement of another move to tighten domestic liquidity-a 25 per cent cut in the reserve base for foreign deposits. That day, heavy demand for marks drove the spot rate up almost 2.5 per cent in 4 hours, to a level 12.5 per cent above the March central rate.

The mark was now spearheading the rise of the Community currencies against the dollar, and substantial intervention in marks by EC central banks was required on June 27 to keep the bloc together. On June 28 the mark was driven up another 3 per cent against the dollar, and the central banks participating in the fixedrate bloc had to supply very large amounts of marks against EC currencies, bringing the 12day total to $\$ 1.5$ billion equivalent. On June 29 the German Government announced a further revaluation of the mark by 5.5 per cent in SDR terms.

This move relieved the immediate tensions within the snake but gave little pause to the slide of the dollar vis-a-vis the mark. In the first week of July the mark rose each day to record levels, which market professionals agreed were absurdly high. Nevertheless, efforts of traders to sell dollars against marks and other European currencies intensified, soon reaching panic proportions. By July 6 the markets had fallen into such disarray that spreads between bid and offer rates widened almost to 1 per cent, and several New York banks refused to deal in marks at all. At its high of $\$ 0.4525$ that day, the mark had gained more than 9.5 per cent since June 29 and stood some 30 per cent above its February central rate, 45.75 per cent above the previous Smithsonian central rate, and fully 65.5 per cent above its parity before May 1971.

Following the regular monthly meeting of central bankers in Basle that weekend, reports circulated that an increase in the Federal Reserve swap lines was in the offing, and as the market developed exaggerated expectations of massive intervention to be launched in support of the dollar, the mark dropped off sharply. By the time the increases in swap lines were confirmed on July 10, the spot rate had fallen by about 7 per cent. On that day the Federal Reserve began intervention in the New York market, using marks drawn under the swap line with the German Federal Bank, and following up with simultaneous intervention in French francs and Belgian francs, which also were at or near the top of the EC band.

The intervention was less dramatic than the market had expected, however, being intended primarily to help the markets regain some sense of balance and stability. Thus, although trading did become more orderly as the Federal Reserve continued to intervene and the Federal Bank began to intervene by buying dollars openly in Frankfurt, the earlier recovery of the dollar was not fully sustained.

After midmonth, German money market conditions came to dominate the exchange market; as banks found themselves short of liquidity, their efforts to meet their reserve requirements touched off renewed heavy bidding for marks. This liquidity squeeze persisted over several days, even though the Federal Bank provided a substantial amount of assistance to
the domestic market and intervened in the exchange market to avoid a sharp decline in the dollar rate. The Federal Reserve intervened in New York while, at the same time, other central banks were obliged to intervene to maintain the margins of the snake.

On July 26 the squeeze came to a head, and a combined amount of $\$ 350$ million equivalent of marks was provided through central bank intervention in limiting the rise of the mark, which nevertheless reached $\$ 0.4390$, some 17 per cent above its central rate. The liquidity squeeze then passed and German money rates fell off. At the same time, U.S. interest rates were rising and improved trade figures were released. As the spot mark eased, the Federal Reserve applied gradual pressure, selling marks to keep the rate moving. By the end of July Federal Reserve intervention in marks had amounted to $\$ 220.5$ million equivalent, while the Federal Bank bought some $\$ 300$ million for its own account in support of the dollar.

## FRENCH FRANC

Following the announcement on February 12 that the dollar would be devalued, the French authorities reaffirmed the gold parity of the French franc, thereby establishing a par value against the dollar which fully reflected the dollar's devaluation. As the dollar soon came under renewed attack in the exchange markets, the franc rose with most other currencies, touching its new ceiling on February 23. In the general selling of dollars that developed in early March, the Bank of France was obliged to take in some $\$ 500$ million at the upper limit before the Paris exchange market officially closed on March 2.

In subsequent days, with all the major European currencies effectively floating during negotiations to resolve the exchange crisis, the franc rate rose more than 2 per cent above its new ceiling in exceedingly thin trading. During the negotiations, the French authorities agreed to participate in a collective EC float against the dollar while at the same time announcing a barrage of new regulations designed to ward off speculative inflows. These included a ban on interest for nonresident deposits, a 100 per cent marginal reserve requirement on those deposits, prohibition on the use of financial francs
for nonresident purchases of short-term financial assets, and limitations on certain forward currency transactions by French banks.

When the Paris exchange market was officially reopened on March 19, trading was light as market participants tried to assess how these new controls would affect their individual operations. For their part, French banks soon responded to the 100 per cent marginal reserve requirement by selectively imposing a charge similar to a negative interest rate on nonresident balances. By and large, the controls had their desired effect, as no new rush into francs developed and, indeed, the franc soon began to ease in response to the downward pull of the German mark.

Among the EC currencies, however, the franc remained fairly buoyant. By early spring the French trade balance was strong, thanks to both the competitive edge France had gained through earlier exchange-rate realignments and to steady improvements in industrial productivity within France. Thus, as the dollar generally strengthened in late March and through much of April, the commercial franc declined more slowly than its partner EC currencies. The French franc was, therefore, at the top of a fully stretched European snake, with modest sales of francs required to maintain the limits.

As the dollar came under renewed pressure in Europe just before mid-May, the commercial franc joined the other continental currencies in setting new highs against the dollar almost every day. Speculative demand focused more heavily on the German mark, however, and although the franc rose steadily, by June it was superseded by the mark as the leader of the snake.

At this point monetary conditions remained more comfortable in France than in several EC countries where monetary policies had been drastically tightened. In addition, French Government officials spoke out repeatedly and in strong terms against further appreciation of the franc. Nevertheless, the franc was pulled up further in the wake of other currencies in the common EC float, and as speculation on the mark accelerated in June, the spot rate shot up against the dollar to $113 / 4$ per cent above its par value. By this time, heavy demand for marks had put intense pressure on the snake and market professionals, who were coming to question the
viability of the fixed-rate band and the commitment of the European banks to support the arrangement, were switching funds from France and other EC countries into Germany. On June 27 and 28, the French franc required heavy intervention to stay within its EC lower limit against the German mark.

The June 29 revaluation of the mark relieved the immediate pressure on the EC band but did nothing to stem the growing pressure on the dollar. Early in July the French Government introduced a broad range of credit measures designed both to counter domestic inflation and to bring French money market conditions more in line with those elsewhere in the EC. These measures bolstered the franc against other European currencies as well as against the dollar in an exchange market that was becoming increasingly disorderly day by day. On July 6, as the crisis came to a head, the franc was bid upward against the dollar to a high of $\$ 0.2626$, almost 21 per cent above its par value. On that day the commercial franc moved exceptionally widely, and spreads between bid and offer quotations widened to more than 1 per cent. French Government spokesmen expressed strong concern about both the level to which the franc had been pushed and the demoralization of the markets.

Following the July 8 communique from the BIS meeting in Basle, the market turned around abruptly on rumors of imminent official intervention on behalf of the dollar. Over the next 2 days, the franc dropped back more than $71 / 2$ per cent, in part on reports-confirmed on July 10 -of substantial increases in the Federal Reserve swap lines. The Federal Reserve in fact resumed intervention the same day, and through July 19 the New York Federal Reserve Bank had sold $\$ 47.0$ million of French francs in the New York market in conjunction with operations in German marks and Belgian francs. These sales were covered by corresponding drawings on the swap line with the Bank of France.

By late July capital outflows were depressing the financial franc rate and as it fell, it dragged the commercial rate along with it. Consequently, the commercial rate sank to the bottom of the EC snake where it required modest support to remain within the band.

## 2B MOVEMENTS IN EXCHANGE RATES

*Upper and lower intervention limits established in Dec. 1971.
**For France, upper and lower intervention limits around new par value established on Feb. 14, 1973; suspended on Mar. 2. For Switzerland, limits suspended on Jan. 23, 1973.

For Note see Chart 2A, p. 626.

## SWISS FRANC

Late in January the Swiss authorities had decided to permit the Swiss franc to float so as to prevent their restrictive monetary policy from being compromised by renewed speculative inflows from abroad. By the time the proposed devaluation of the dollar was announced on February 12, the floating Swiss franc had been pushed up in heavy demand to nearly 8 per cent above its Smithsonian central rate. Unlike Switzerland's major trading partners, the Swiss Government did not set a new central rate and intervention limits based on the U.S. devaluation but decided to allow the franc to continue on a floating basis until the markets settled down.

As trading resumed after announcement of the dollar's devaluation, the Swiss market contin-
ued to await anxiously indications of the Swiss National Bank's intervention policy. The next week, when the Swiss authorities reiterated their decision not to fix new benchmarks for the franc, the market vigorously bid the franc up to almost 15 per cent above its Smithsonian central rate in a speculative rush that soon spilled over into other European markets. Although the Swiss National Bank intervened in the spot and forward markets to the extent of $\$ 700$ million, the speculative onslaught continued. On March 1 the franc was driven up still further to $\$ 0.3247$, almost 25 per cent above the Smithsonian central rate. At this level, the Swiss franc had appreciated some 7 per cent against the German mark.

Following the Paris accord of March 16, the Swiss authorities reconfirmed their intention to maintain the independent float of the Swiss franc rather than to affiliate themselves with the joint float of the EC countries. Nevertheless, as the Swiss National Bank provided some of the quarter-end liquidity needs of Swiss banks by way of $\$ 500$ million of swaps and additional money market assistance, normal quarter-end exchange-market pressures were blunted, and the Swiss franc began to ease as the currencies in the EC float moved lower. By early April the Swiss franc had come down to $\$ 0.3060$, still 17.5 per cent above the Smithsonian rate.

Throughout the rest of the early spring the franc market remained in rough balance, as Swiss banks found themselves more liquid than at any time since the introduction of Switzerland's restrictive monetary policy of late 1972. The banks were feeling the impact of quantitative limits on the growth of bank credit imposed the previous winter; with their ability to lend heavily constricted, they cut deposit rates by $1 / 4$ to $1 / 2$ of a percentage point and reduced their dependence on the exchange market for additional funds. Although the authorities provided some liquidity to the domestic market during April, the National Bank was not called upon to provide month-end swaps or other direct month-end assistance to the banks for the first time since November 1972.

Around the middle of May, a convergence of troublesome events disrupted the earlier steadiness in the Swiss franc market. The renewed surge of inflation in the United States,
concern about the Watergate investigations, and the soaring price of gold touched off vigorous bidding for the Swiss franc, along with other European currencies. By late May the franc had advanced to $\$ 0.3245$, moving up along with the EC joint float.

At that point, the market began to question whether the rise in the franc relative to other European currencies, particularly the German mark, had not been overdone. As market attention shifted to the severe tightening of the German money market during June, the rise in the franc lagged behind that of the mark. With the strong rise in the mark exerting a mounting strain on the EC band, speculative money was switched out of Swiss francs into marks at an increasing pace to take advantage of any possible breakdown in the European common float.

The revaluation of the mark on June 29 failed to quiet the speculative turmoil. Trading conditions in the exchanges deteriorated alarmingly in the first week of July, as the market lost all confidence in its ability to assess the near-term prospects for dollar rates. Moreover, those who had taken advantage of the relatively low Swiss interest rates in recent years urgently bid for francs to cover their short franc positions, and the spot franc surged to new highs each day in increasingly volatile and disorderly trading. By July 6 the franc was quoted at \$0.3774, 45 per cent above its Smithsonian central rate. Swiss National Bank Director-General Leutwiler in a public statement that day described the foreign exchange market as being "completely out of control."

After the July 7-8 central bank meeting at the BIS, talk of imminent U.S. intervention appeared in the Zurich market and soon spread to other financial centers. With the market now hopeful that the dollar would be supported in the exchanges, the franc came on offer both in Switzerland and in New York. By the time the Federal Reserve announced the increase in the swap network on July 10, the Swiss franc dropped almost 7.5 per cent from its high on July 6.

The initial burst of enthusiasm—prompted by hopes of massive official intervention-wore off quickly, however, and although exchangemarket conditions generally improved, the Swiss franc began to rise again along with other

European currencies. A severe stringency then developed in the German money market, prompting unprecedented increases in German interest rates and a renewed strong rise of the mark which pulled other European currency rates, including the Swiss franc, along in its wake. After German monetary conditions eased in late July, the spot franc followed the mark down against the dollar. By the end of July the franc stood 34.25 per cent above its Smithsonian central rate.

## STERLING

During the period under review, the pound sterling was caught up both in the shifting tides of the United Kingdom's domestic and international position and in the speculative storms that swept through the world monetary system. At home, inflation continued to be a major concern and, increasingly, the decline of the sterling rate last year was seen as intensifying the upward pressure on prices. The substantial competitive advantage gained for the British economy vis-a-vis other industrial countries through depreciation of the floating pound since June 1972 had not as yet been translated into an improvement in the trade balance, while the worsening terms of trade and boom in commodity prices had escalated import costs. Moreover, the market remained pessimistic over the prospects for Britain's price and wage policies. Abroad, events strongly and unpredictably influenced the sterling rate from time to time, as the market struggled to interpret the implications for sterling of the dollar's weakness and recurrent strains within the EC band. Thus, depending on how these factors interacted, sterling would on some occasions tend to move in parallel with the dollar, and on others to reflect more closely the movements of EC countries.

Following the February 12 announcement of the devaluation of the dollar, the British Government indicated that sterling would continue to float for the time being. Soon after the London exchange market reopened on February 13, the pound was quoted at $\$ 2.473 / 4$, up almost 5 per cent from levels in early February. Although this rise was less than that for those European currencies with new fixed rates against the dollar, sterling was soon pulled along with the

## 2C MOVEMENTS IN EXCHANGE RATES

For Note see Chart 2A, p. 626.
general advance of the continental European currencies against the dollar late in February. By March 1, the pound had climbed to $\$ 2.513 / 4$ as a renewed flight from the dollar climaxed.

The next day, in line with actions taken by their EC partners, the British authorities formally closed the London foreign exchange market while permitting normal trading to continue. That weekend, Chancellor of the Exchequer Barber met with his counterparts from other EC countries in an effort to forge a European solution to the continuing currency crisis. Agreement was reached on some issues but not on the terms and conditions under which sterling might cease to float against the other EC currencies.

As reports of this impasse reached the market early on March 6, the pound was marked down to $\$ 2.461 / 4$. Later that day, however, the market turned around in response to the Chancellor's annual budget message. Although strongly stimulative, the new budget was less expansionary than the market had feared and also contained provisions to encourage public-sector borrowing in international markets-a measure designed to relieve pressure on Britain's capital market and to bolster Britain's official reserves. This proved reassuring to the market, and there was no adverse reaction to the British Government's confirmation that sterling would continue to float independently.

With the formal reopening of the European exchange markets on March 19, sterling, unlike the continental currencies, was relatively free of exchange controls against inflows of funds
from abroad. High rates on short-term sterling assets became increasingly attractive to those who had been holding continental currencies in forms that were becoming either increasingly expensive or difficult to maintain. In addition, several favorable developments on the labor front lightened some of the market's pessimism over the prospects for success of Phase Two of the Government's incomes policy.

By April, sterling was also benefiting from growing expectations that the U.K. Government was prepared to support the exchange rate in order to protect the British economy from a further deterioration of the country's terms of trade. Thus, the $\$ 1$ billion Euro-bond issue by the Electricity Council and the sizable amounts of additional borrowings abroad by the U.K. local authorities, all of which would be converted into sterling at the Bank of England under the exchange cover provision outlined in the March budget, were seen as bolstering reserves to permit a defense of the exchange rate despite an expected worsening of the trade accounts.

Consequently, the inflow of funds into London that began in mid-March accelerated even as money market rates in Britain backed off their peak levels. Recipients of sterling payments became more inclined to hold on to these balances while traders were increasingly willing to take on positions in sterling. Even release of figures showing a sharp worsening in the U.K. trade deficit in March failed to arrest sterling's progressive strengthening, and the spot rate advanced to the $\$ 2.48^{1 / 2}$ level by mid-April and to $\$ 2.501 / 2$ by early May. In mid-May, the intensifying speculative pressures against the dollar propelled the pound almost to $\$ 2.58$, and as sterling moved to the highest level since June 1972, the Bank of England entered the market to moderate the pace of its advance. The pound briefly turned lower in response to another set of disappointing British trade figures and subsequent announcement of a substantial U.S. trade surplus for April. But, as the dollar weakened still further in late May and early June, the spot rate was bid up above the $\$ 2.58$ level.

Meanwhile, however, the steady decline of London money market rates, contrasted with rising rates elsewhere, had eliminated most of the interest incentive for moving into sterling. Moreover, in view of the widely held expecta-
tion that the strong upswing in economic activity in Britain would lead to a further deterioration in the external payments position, the market was beginning to question whether current rates for sterling could be maintained. Consequently, the rise in sterling against the dollar in late May had already been less pronounced than the sharp increase in continental European rates, thereby producing a further substantial depreciation of sterling against the EC currencies.

During June, the outlook for sterling became increasingly uncertain, especially as it seemed more likely that the Government would face stiff union resistance to plans for Phase Three of its incomes policy. Also, London interest rates were continuing to fall, to levels that created strong interest incentives to move out of sterling. As increasingly chaotic trading conditions developed in exchange markets everywhere during the first week of July, sterling was hit by speculative selling. Even as the dollar dropped sharply vis-a-vis continental European currencies, sterling declined still further, and when the dollar began to rally, the pound lagged behind.

Then, later in the month sterling again began to slide in a sell-off which soon led to a drop in the rate to below $\$ 2.50$ on July 26. As market sentiment turned against the pound, the British authorities took strong and decisive action to deal with the build-up of speculative pressures and outflows of funds prompted by a credit squeeze in Germany. To arrest an easing in the banks' reserve positions and to bring British interest rates more into line with those elsewhere, on July 19 the Bank of England called for additional special deposits for the first time since December 1972, requesting British banks to place on deposit 1 per cent of the banks' total liabilities.

This measure was followed by increases in the Bank of England's minimum lending rate from $71 / 2$ to 9 per cent on July 20 and then to $11 \frac{1}{2}$ per cent only 1 week later. Meanwhile, the Bank of England was strongly supporting sterling by intervening in dollars. On Friday, July 27, Chancellor of the Exchequer Barber asserted that sterling had become undervalued and that "I would not hesitate to use our ample reserves to protect our economy." As the British authorities thus made clear their intent to
avoid a further severe decline of sterling and the German Federal Bank relieved the money market stringency in Germany, the market pressures eased, and so by the end of July sterling was trading above $\$ 2.50$.

## BELGIAN FRANC

For Belgium, the exchange market upheaval of late January and early February, leading to the devaluation of the dollar on February 12, occurred at a time of growing concern over domestic inflation. Consequently, from a monetary policy point of view, the heavy inflows of funds at that time were far from welcome. Following the announcement of the U.S. devaluation, the Belgian Government established a new central rate corresponding to $\$ 0.024793$ for the franc, allowing it to appreciate by the full 11.1 per cent change in the dollar parity. Shortly thereafter, the authorities introduced an anti-inflationary package featuring limits on credit expansion. As a result, the franc was already firming when the renewed run on the dollar developed in late February, and by early March the National Bank was obliged to intervene at the new ceiling, taking in an additional $\$ 125$ million.

After the official closing of the Belgian market on March 2, trading remained nervous, as the authorities began to devise new regulations to prevent a further accumulation of nonresident commercial balances with Belgian banks. By the time the market was officially reopened, the authorities had established a negative interest charge of $1 / 4$ per cent per week on any excess of nonresident balances above normal levels. Holders of francs unloaded some balances subject to this charge-thereby pushing down the spot rate-while maintaining their long position in francs by purchasing forward francs-thereby widening the forward premium.

Once this adjustment had been completed, the spot franc moved more or less in line with the other EC currencies in late March and early April. Since liquidity conditions were somewhat tighter in Brussels than in Amsterdam, the franc tended to hold firmer than the guilder so that, while the two currencies eased progressively against the dollar through early May, there was occasional moderate intervention to maintain the $11 / 2$ per cent Benelux band.

Early in May, the National Bank hiked its discount rate by $1 / 2$ of a percentage point to $51 / 2$ per cent, and so the franc had already begun to firm when the new rush out of the dollar began in midmonth. By early June, the franc was some 9 per cent above its central rate, but already trailing behind the German mark which had become the focus of speculation. By June 27, as the demand for marks intensified, the franc joined the other currencies requiring substantial support at the bottom of the EC band, while rising to more than 12 per cent above its central rate.

## 2D MOVEMENTS IN EXCHANGE RATES

[^2]The June 29 mark revaluation resolved temporarily the strains on the snake, but in the week that followed there were enormous new pressures on the dollar in all continental markets. Thus, by July 5 traders were finding it nearly impossible to get quotations or to do normal
business. In just 1 week of extremely heavy demand, the franc had been pushed up some 6 per cent to reach $\$ 0.029200$ in New York, almost 18 per cent above its central rate.

The market in Brussels turned dramatically around early the next week, as it did in other financial centers, following the meeting of central bank governors in Basle over the weekend of July 7 and 8. By the time the Federal Reserve's swap-line increases were formally announced on July 10, the Belgian franc had dropped 5.75 per cent from its July 6 highs. In conjunction with intervention in German marks and French francs, this Bank began to sell Belgian francs, at first to consolidate the earlier gains and then to provide resistance to sharp reversals in the dollar rate. Over several days the Federal Reserve sold $\$ 6.0$ million equivalent of francs, which were obtained by drawings under the swap line with the National Bank. These sales were on a much smaller scale than those of other currencies, reflecting the relatively small volume of trading in Belgian francs in the New York market. When the franc moved away from its upper range of the European band, the Federal Reserve suspended its intervention in francs.

## NETHERLANDS GUILDER

In the aftermath of the February dollar devaluation, the Dutch authorities set a new central rate of $\$ 0.3424$, and the guilder quickly moved up to trade near this level. The market remained badly shaken by the dollar's second devaluation, however, and when another rush out of dollars developed at the end of February, bids for guilders again flooded the market as traders took advantage of the relatively free access to the Amsterdam market at a time when other centers were being closed off by progressively tighter restrictions. The Netherlands Bank, once again obliged to absorb dollars, took in more than $\$ 750$ million by the time the authorities officially closed the market on March 1.

Then, as negotiations to devise a European solution to the exchange crisis proceeded, the guilder market turned extremely thin. With traders hesitant to deal in the face of uncertainty over the outcome of these discussions and over possible new exchange controls in the Netherlands, even very small trades provoked wide
rate fluctuations. Against this background, the guilder spurted up on the news of another mark revaluation in connection with establishment of a collective EC float against the dollar. Traders soon became convinced, however, of the Dutch Government's resolve, in view of the persistently high domestic unemployment, not to revalue the guilder. Moreover, the Dutch authorities, to curb potential speculative inflows, announced that a $1 / 4$ per cent per week commission would be imposed on further increases in nonresident guilder deposits. As a result, the guilder was already falling back when the market was officially reopened on March 19. Nonresidents, moving to avoid the special commission but reluctant to unwind their positions, sought to switch out of spot and into forward guilders. Consequently, the spot rate soon fell to 1 per cent below its new central rate while the forward premium widened sharply.

Even when the bulk of this repositioning had been completed, the guilder maintained its easier tone. By early spring the expansionary effect of the huge first-quarter inflows had brought short-term money rates down to virtually nil in Amsterdam and less than 2 per cent in the Euro-guilder market. The Dutch authorities took successive steps to neutralize part of the monetary impact of the earlier inflows by raising the cash reserve ratio to 7 per cent and by open market transactions. Nevertheless, they proceeded carefully so as not to hamper a reflow of funds. Therefore, as the immediate strains of the February-March currency crisis receded, funds were increasingly pulled out of Amsterdam by more attractive yields in other European financial centers. In addition, some earlier leads and lags in favor of the guilder were being unwound. These short-term capital outflows more than offset the continuing strength of the underlying payments position and the guilder slid to the bottom of both the EC snake and the narrower Benelux band by early April, requiring support under both arrangements. As nonresident balances subsequently declined to pre-February levels, the Netherlands Bank lifted the special commission.

In May and early June the guilder strengthened against the dollar, although it remained weak relative to other currencies in the EC joint float and continued to require support. With the
mark at the top of the EC band, pressure on the guilder intensified. Therefore, even though Dutch interest rates were now noticeably firming following an increase of $1 / 2$ of a percentage point in the Netherlands Bank's discount rate, the guilder required increasing support to maintain the EC margins as the snake rose rapidly against the dollar. By late June, intervention against marks swelled to major proportions. In the 4 days prior to the June 29 mark revaluation, the Netherlands Bank was obliged to sell some $\$ 400$ million equivalent of marks to stay within the band. Meanwhile, the guilder had been pulled up to $\$ 0.3831$, almost 12 per cent above its February central rate.

Following the mark revaluation, the guilder market settled down only briefly, and in the first week in July the guilder was again caught up in the speculative onslaught against the dollar. By July 5, trading had become tumultuous, as the market was flooded with rumors of another mark revaluation, a guilder revaluation, and a third dollar devaluation. As traders rushed from dollars into the European currencies, the guilder was pushed up above $\$ 0.4000$ on July 6. In the chaotic market conditions prevailing that day, many New York banks refused to trade guilders and quotations were little better than indications, with bid-offer spreads exceeding $1 / 2$ per cent at times.

Release of the Basle communique that weekend and subsequent reports of expanded Federal Reserve swap lines helped reassure the market. The guilder dropped back to $\$ 0.3765$ on hopes of large-scale U.S. intervention and traded quietly around this level for several days. This relative calm was then interrupted as the German liquidity crunch built up. As the mark moved 2.25 per cent above the guilder the Netherlands Bank again provided support against the German currency.

By the time the German money squeeze abated just before the end of July, the cumulative outflows from the Netherlands had worked to tighten domestic liquidity and thereby to encourage a firming of Dutch interest rates which the Netherlands Bank validated by progressively raising its discount rate to $61 / 2$ per cent. As monetary conditions firmed and shortterm capital outflows subsided, the strength of the Dutch current account reemerged and the
guilder, while easing nearly 2 per cent against the dollar, began to move toward the top of the 2.25 per cent EC band.

## ITALIAN LIRA

Coming into 1973 the Italian economy was beset by sluggish growth and high unemployment coupled with rising inflation. This economic situation, against a background of political uncertainties and social unrest, provoked leads and lags against the lira and outright capital flight. After a long series of speculative attacks on the lira, on January 22 the Italian authorities had introduced a two-tier market for the lira, split between a commercial market in which the authorities would continue to intervene in support of the Smithsonian limits and a financial market where the lira would float freely. In the ensuing upheavals in the exchanges in late January and early February, the commercial lira remained under selling pressure, while the financial lira moved to a substantial discount.
The Italian authorities responded to the February 12 announcement of the proposed devaluation of the dollar by allowing the commercial lira to float, thereby withdrawing for the time being from the joint EC snake arrangement. When trading resumed on February 14, the commercial rate-at $\$ 0.001765$-was some $25 / 8$ per cent above its abandoned Smithsonian central rate; at this level it had appreciated far less than the currencies of Italy's major European trading partners, which had moved up by 10 per cent or more. At the same time the discount on the financial lira narrowed somewhat.

When the dollar fell under attack again in late February, the outlook for the lira was still beclouded by concern over the domestic labor situation. But as the rush out of dollars reached a climax on March 1, the lira also came into demand, and the commercial rate briefly rose as far as 9 per cent above its Smithsonian central rate. This advance was not sustained, however, when in the subsequent negotiations it became apparent that Italy would not join the common European float against the dollar but would continue to float independently. Consequently, by mid-March, the lira had slipped back to some 2.25 per cent above the Smithsonian level for a further net depreciation against most European currencies.

Except for a temporary boost late in March, the lira remained vulnerable to renewed selling pressure and it weakened early in April on release of figures showing a further widening in the trade deficit in January and February. With concern over the Italian economic and political situation continuing to overhang the market, the lira did not participate in the sharp upsurge of European rates against the dollar in early May. Indeed, the Bank of Italy continued to operate intermittently to keep the commercial rate from depreciating further against the currencies of its EC partners.

Toward the end of May and the first week of June the atmosphere in Italy's exchange market had turned even more sour. The longsimmering Government crisis came to a head almost simultaneously with release of April balance of payments figures showing a sharp and contraseasonal deterioration in the over-all current account. The Bank of Italy intervened only occasionally in the market, and in 7 trading days the commercial rate tumbled about 7 per cent while the financial lira fell even more sharply as capital outflows from Italy swelled.

On June 18, the caretaker Government announced a package of credit measures designed to restore confidence in the lira and to reduce the Italian inflation rate to levels prevailing in the rest of Europe without choking off Italy's incipient industrial recovery. These measures included a steep increase in the penalty charge for repeated use of the Bank of Italy's discount facility. And, to redirect longer-term investment into the securities markets, Italian commercial banks were instructed to invest no less than 6 per cent of deposits at the end of 1972 in designated public and private bonds in 1973.

While making these announcements, the Government noted the size of net official reserves and possible credits available under the EC and Federal Reserve swap networks. In addition, it announced supplementary central bank facilities and indicated that there would be further borrowing by state enterprises in the international markets. As a result, the market became persuaded that the Bank of Italy, its resources now bolstered by the additional credit facilities, would shortly resume intervention in support of the lira, and the spot rate strengthened along with other European currencies into

early July. Meanwhile, the political situation had stabilized with the formation of a new coalition government under Premier Mariano Rumor. In addition, the Italian Foreign Exchange Office decided to unwind dollar swaps with the commercial banking system instead of renewing them as had been expected, a move which both underscored the magnitude of the exchange resources available and tightened domestic liquidity. Nevertheless, the Bank of Italy continued to intervene heavily in the market to keep the lira in line with other European currencies.

In late July, the Rumor Government announced details of its new anti-inflation program, including a 3 -month freeze on selected food and industrial prices, and ceilings on the growth of bank loans for certain categories of clients. Also featured in the package was a massive $\$ 2$ billion long-term Euro-dollar borrowing by several Italian public institutions that was designed to bolster official reserves. New exchange controls were also introduced to discourage destabilizing speculation in the ex-
change. The controls required that Italian residents put up to 50 per cent of any foreign investment in a non-interest-bearing account with the authorities, that prepayment for imports be financed in foreign exchange, and that commercial banks maintain not only a balanced foreign exchange position over all, but separate balanced positions in U.S. dollars, EC currencies, and other currencies. The market reacted favorably to these announcements, and the lira soon began to improve in the exchanges.

## CANADIAN DOLLAR

In February, heavy demand for Canadian dollars erupted at the time of the devaluation of the U.S. dollar, but once that episode passed, the market relationship between the two North American currencies remained largely free of the speculative influences that afflicted other exchange markets. In fact, during the period under review, the spot Canadian dollar moved roughly in line with the U.S. dollar vis-a-vis European currencies.

In general, the underlying forces affecting Canada's payments position were in rough balance, as a rise in imports stemming from more rapid expansion of the domestic economy was largely offset by a surge of exports, mainly commodities and raw materials. As a result, movements of the exchange rate over the spring and early summer reflected mainly shifting interest rate differentials in the nexus of Canadian and U.S. financial markets and the Euro-currency markets. Consequently, the Canadian dollar traded generally around $\$ 1.00$ through early July. Then following the particularly sharp run-up of interest rates in the United States in late July and early August, which was not matched in Canada, the spot rate eased to around the $\$ 0.991 / 2$ level.

## JAPANESE YEN

When the dollar was devalued on February 12, the Japanese authorities announced that they would permit the yen to float temporarily. The authorities nevertheless remained prepared to moderate rate movements in the Tokyo exchange market. Soon after trading resumed on February 14, the yen was in heavy demand and the spot rate was driven up to a level more than

17 per cent above the Smithsonian central rate. Activity then subsided, and the yen edged lower through the end of February. When heavy pressure against the dollar reemerged in Europe, the Japanese authorities, acting in concert with the Europeans, decided to close the Tokyo market on March 2.

## 2 | MOVEments in exchange rates

[^3]With the markets closed during the first half of March, there were no interbank transactions in Tokyo either in spot or in forward dealings. Following the March 16 Paris communique of the Group of Ten Finance Ministers, normal trading in yen was resumed and a strong reversal of earlier speculation in favor of the yen started to emerge. By late March the dollar had strengthened in Toyko in response to a variety of factors.

The rapid expansion of the Japanese economy and the 1971 revaluation of the yen had already stimulated import demand, particularly for raw materials and industrial commodities, and the boom in world commodity prices produced a further escalation in the cost of Japanese imports. At the same time, various official limits on export growth instituted last year were beginning to have a restrictive effect. Moreover, the leads and lags built up in the months prior to the floating of the yen were now being unwound, a sign that the market did not expect a further sharp rise of the yen rate in the near future. Furthermore, long-term capital outflows swelled, as Japanese interests stepped up their participation in international financial markets, as nonresidents liquidated a sizable amount of
their investments, and as Japanese firms also increased their direct investment abroad. All of these factors combined to generate a persistent demand for dollars in Tokyo, and the Bank of Japan, intervening at some 16 per cent above the Smithsonian central rate, sold about $\$ 4$ billion of reserves between mid-March and the end of June.

These shifts in the Japanese payments position so dominated developments in the Tokyo market that there was little response to a series of discount rate increases by the Bank of Japan, which brought the rate to 6 per cent from $41 / 4$ per cent by early summer. Furthermore, there was only a slight reaction to the build-up of pressures on the dollar in Europe in May. Dealers expressed concern over the implications for the yen of the June 29 revaluation of the mark, but the Japanese authorities quickly responded by emphasizing that the German action, designed to correct an isolated problem within Europe, should have no impact on the yen.

When the dollar came under pressure early in July, however, the yen market became fearful of the threat posed by deteriorating market conditions elsewhere and the spot yen was bid up as much as 5 per cent. Trading then settled down following the BIS communique and subsequent enlargement of the Federal Reserve swap network. The yen then backed off to earlier levels, and over the remainder of July, the Bank of Japan resumed its dollar sales in the exchange market.

## EURO-DOLLAR

The deepening crisis in the exchanges early this year, not unlike monetary disturbances in the past, left a distinct mark on supply and demand patterns as well as on rates in the Euro-dollar market. As traders and investors in many parts of the world increasingly covered their dollar exposure by means of forward sales, banks in Europe and elsewhere that had purchased those forward dollars from their customers sought to even out their positions by borrowing Eurodollars and selling the spot proceeds in the exchanges. Speculative borrowing of dollars for conversion into stronger currencies was also an important market factor early this year. In addition, some Euro-dollar investors, notably in less

3

Euro-dollars are weekly averages of daily rates; CD's, Wednesday data.
developed countries without well-functioning forward markets for their own currencies, decided to reduce their stake in the market by sizable amounts.

These changes in the pattern of supply and demand, together with rising U.S. money market rates, drove Euro-dollar rates steadily higher. By the end of February, the 1 -month Euro-dollar rate was above 9.5 per cent, up from about 6 per cent at the beginning of the year. The currency crisis, in turn, induced a massive movement of funds from the United States into the market, as foreign banks withdrew balances previously placed and borrowed heavily on outstanding credit lines with U.S. banks or from their agencies, branches, and other affiliated institutions in this country. At the same time, these foreign subsidiary institutions in the United States and, to a lesser extent, U.S. banks repaid large amounts of maturing dollar borrowings that they had previously drawn from the market. Supplies in the market were also enlarged by additional deposits, particularly from governments and central banks in several developing countries.

In the wake of the February crisis and the dollar's devaluation, the authorities of several continental European countries introduced a variety of regulations in defensive moves to deter further speculative inflows into their countries.

Some of them imposed stiffer reserve requirements and even negative interest charges on increments to nonresidents' deposits at domestic banks. Several governments, moreover, imposed additional restrictions on corporate borrowings from the Euro-dollar market and in some cases prohibited such borrowings altogether, forcing banks that were operating in the market to seek new customers aggressively in other overseas loan markets. In the process they not only relaxed already low credit standards but also permitted interest rate margins to narrow further.

Substantial demands for Euro-dollar loan facilities continued to originate among traditional users-with large amounts being employed for the financing of trade with eastern Europe and for British direct portfolio investment abroad. In the spring and summer these borrowings were augmented when both the British and Italian Governments, to cushion balance of payments pressures, encouraged public bodies in their countries to draw very large amounts from the market. In the United Kingdom the Chancellor of the Exchequer announced in his budget statement of early March that certain public bodies would again be allowed official exchange cover facilities for foreign currency borrowings. As a result, local authorities and public corporations began to enter into very heavy bor-

## 4

YIELD COMPARISONS 3-MONTH MATURITIES

Weekly averages of daily rates.
rowing commitments, the Electricity Council alone contracting for a $\$ 1$ billion 10 -year loan. Similarly, several Italian state institutions raised very large loans in the medium-term Euro-dollar market. These borrowings served to replenish monetary reserve holdings in the two countries.

In the United States the Board of Governors of the Federal Reserve System made several regulatory changes that are now beginning to affect the demand of banks in the United States for Euro-dollar balances. In mid-May the Board amended Regulations D and $M$ to reduce from 20 to 8 per cent the reserve requirements applicable to certain foreign borrowings of U.S. banks to the extent that they exceeded the applicable reserve-free base of each bank. In addition, the reserve-free bases would be phased out.

On June 1 the Board requested the agencies, branches, and nonmember bank subsidiaries of foreign banks to maintain voluntary reserves of 8 per cent against any increases above the May level in net funds obtained from banks abroad, including their head offices and other directly related institutions. The revision in the rules for U.S. banks and the reemergence of a market incentive for U.S. banks to acquire Euro-dollars in lieu of purchasing Federal funds contributed to a step-up in their borrowings from their foreign branches.

Euro-dollar rates, which had been surprisingly stable during the period of exchange-rate disturbances in the spring and early summer, began to escalate again late in July as exceptionally high money-market rates in Germany exerted a strong pull on rate levels in other money markets. Moreover, money-market rates in this country were also rising to very high levels. Throughout August, rates for 3 -month Euro-dollars remained in the $11 \frac{1}{4}$ to $11 \frac{3}{4}$ per cent range.

The international monetary uncertainties, together with soaring interest rates in the short end of the Euro-currency market, resulted in a severe contraction of the Euro-bond market, most notably its dollar-denominated segment. Indeed, during the periods of greatest currency unrest it became extremely difficult, if not impossible, to offer successfully to the public even mark-denominated issues. On balance, however, the pressure on the dollar seemed to have encouraged a further expansion of the role of other currencies in this market. Moreover, many of the needs of traditional Euro-bond borrowers are now being met by the medium-term Eurocurrency market.

## Rates on Consumer Instalment Loans

Interest rates on most key types of consumer instalment loans at commercial banks and finance companies have shown considerable stability throughout the period of the current economic stabilization program. For example, rates charged to new-car purchasers on contracts acquired from dealers by the major automobile finance companies moved within a range of only 27 basis points between August 1971 and July 1973, according to a survey conducted by the Federal Reserve System. This stability is in sharp contrast to the wide swings in interest rates on most other kinds of credit during that 2 -year period.

Information on interest rates and other terms for selected types of consumer instalment credit has been collected by the Federal Reserve since late 1971 at the request of the President's Committee on Interest and Dividends (CID). In 1971 aggregate measures of consumer finance rates were virtually nonexistent, and so a new system for collecting such information had to be established.

## AVAILABILITY OF RATE INFORMATION

Reliable data on consumer instalment loan rates have become more readily available in recent years, in part because of the provisions of the Federal Truth in Lending Act. That act, which became effective on July 1, 1969, requires disclosure of the effective annual percentage rate of interest on most instalment credit contracts. Before this legislation was enacted, finance rates, if disclosed, had generally been quoted as either an 'add-on'" or a 'discount'" rate of interest-which approximated only about onehalf of the effective annual percentage rate. Lenders were not required to inform consumer borrowers of the interest rates that they were actually being charged.

Note.-David Hull and Linda Davidson of the Board's Division of Research and Statistics prepared this article.

Because rates are now stated on a uniform basis in each instalment loan contract and because Truth in Lending regulations require lenders to keep records of disclosure statements, it has become feasible for the major types of financial institutions that make consumer loans-commercial banks and finance compa-nies-to provide meaningful data on selected types of credit.

Banks. At commercial banks, loans made directly to individuals account for the bulk of the consumer credit extended. Therefore, the rate survey for banks was confined to these loans. A representative panel of about 370 banks was asked to provide the "most common rate" as well as the range of rates charged during the first week of each month on five specified types of consumer instalment loans:

1. New-car loans with 36 -month maturities.
2. Mobile home loans with 84 -month maturities.
3. Other consumer goods loans with 24 month maturities.
4. Personal loans with 12 -month maturities.
5. Bank credit-card plans.

Regular reporting of this information began in January 1972. Certain banks in the group, however, had been requested to supply information on consumer loan rates for the period immediately before and shortly after the August 15, 1971, freeze on prices, wages, and rents. Such data have been used in this article to supplement those reported regularly.

Finance companies. In the case of finance companies, two survey approaches were used in order to accommodate the structure of the industry and differences in data availability. One was devoted to companies that specialize in auto financing, and the other dealt with companies specializing in nonautomobile credit.

A major part of consumer automobile financing involves purchases of contracts from dealers by a limited number of national finance companies. Detailed records on each contract acquired
were maintained by the data processing facilities of these companies, and back data were available in consistent form beginning with June 1971. With special computer programming, each of the major automobile finance companies was able to provide weighted monthly averages of the customer finance rates for all contracts acquired during the entire period on both new and used passenger cars and light trucks. In addition, they supplied the weighted averages of contract maturities and the ratios of amounts financed to value. For new cars, amounts financed are related to dealer cost, whereas for used cars they are related to average wholesale value.

Finance rates and other terms are collected on a bimonthly schedule for mobile home contracts and other consumer goods instalment credit contracts that have been purchased by finance companies; similar data are collected for personal cash instalment loans made directly by finance companies. Reports are obtained from nearly all of the major independent companies, from most of the manufacturers' affiliated companies, and from a number of small companies.

In order to reflect company specialization, separate reporting panels have been established for each type of credit. Each panel accounts for a substantial proportion of the volume of credit extended. Rate and maturity data are reported by approximately 20 companies for purchased mobile home contracts, by about 40 companies for other consumer goods, and by more than 85 companies for direct personal lending activity. Some companies are included in more than one panel.

Because of the diversity of accounting and record-keeping procedures among nonautomotive finance companies, the reporting companies were offered alternative procedures for supplying the needed data. Most large companies have electronic-data-processing facilities that enable them to report aggregate weighted averages of rate and maturity data for all contracts acquired or loans made during a reporting month; smaller companies generally prefer to provide individual contract data on worksheets. In many instances all loans are reported, but in others the data are for a sample of loans.

## SURVEY RESULTS

Results of the various surveys have been published on a regular basis by the Board of Governors in a series of statistical releases. ${ }^{1}$
Banks. The Federal Reserve monthly G. 10 release summarizes the "most common', rate data for five major categories of consumer instalment loans made directly by commercial banks. It also provides rate information on selected types of small business loans and on agricultural loans. As Table 1 shows, month-

[^4]NOTE-Rates are reported on an annual percentage rate basis as specified in the Federal Reserve Board's Regulation Z (Truth in Lending).
to-month changes in consumer loan rates have been quite small, and the cumulative changes since the inception of the stabilization program have been modest. These findings-although admittedly for a relatively short period-tend to support a common impression that consumers are not likely to encounter large cyclical swings

[^5]in interest rates on instalment loans. Therefore, the chief rationing mechanism for consumer lending does not seem to be rates, but rather nonrate terms and the availability of funds from lending institutions.

Although the magnitude of the decline was quite small, consumer rates on bank loans appeared to follow the downward course of other market rates of interest between the summer of 1971 and the spring of 1972. On the other hand, increases in instalment loan charges lagged considerably the upturn in rates in nonconsumer markets-which had begun during the summer of 1972 and has accelerated sharply this year. For example, from their 1972 lows through early July 1973, rates on direct new-car loans rose only 14 basis points, whereas the bank prime rate on short-term loans to large businesses rose 325 basis points.
Two factors may have helped to hold down rate increases on instalment loans during this period. One was that lenders had been asked
by the CID to exercise special moderation and restraint in adjusting their lending rates on consumer, home mortgage, small business, and farm loans. The other was that since April 16, 1973, commercial banks have been subject to special guidelines issued by the CID requiring that increases in rates on these types of loans be cost-justified.

Finance companies. Table 2 shows summary data on finance rates and other terms of consumer instalment lending at finance companies. Monthly figures for new and used cars, although not published on the Federal Reserve G. 11 release until July 1972, are presented here from the beginning of the series in June 1971; bimonthly data for other types of lending by finance companies, which are shown on the Board's J. 3 statistical release, were first reported for March 1972.

Average interest rates charged by finance companies have moved somewhat more irregularly since 1971 than the most common rate on

Note.-Rates are reported on an annual percentage rate basis as specified in the Federal Reserve Board's Regulation Z (Truth in Lending). Data on the amount financed exclude finance charges.
consumer lending at commercial banks. Despite the greater irregularities, which may reflect to some extent changes in the composition of loans made at finance companies, average rates at these companies and at banks have shown much the same pattern-a moderate downtrend until late 1972 or early 1973 with some upward movement since then.

It should be noted, however, that the levels of rates reported for finance companies are not directly comparable with those for commercial banks. The series for banks measures only the most common rate-which may involve a judgmental factor-for direct consumer loans with specified maturities. In contrast, the finance company series for new and used cars, mobile homes, and other consumer goods relate to data on loan contracts that are made by sellers of the merchandise and then sold to finance companies. In these cases, the summary statistics are derived from actual data on all contracts purchased in each reporting month-except for those companies that employ contract-sampling. Even where contract-sampling is used, the sample figures are adjusted to approximate company totals in order to compile weightedaverage industry aggregates.

There is a somewhat greater degree of comparability between banks and finance companies in figures for personal cash instalment loans, because in both of these instances only direct lending is measured. Nevertheless, the rate concepts used are different; banks report the most common rate whereas finance companies report a weighted average. In addition, the maturity that is specified in the reporting form for banks- 12 months-is much shorter than the actual weighted-average maturity of finance company loans, which has ranged between 32 and 34 months.

Factors other than the disparity of the statistical techniques cited above probably have an even more important bearing on differences in rate levels between commercial banks and finance companies. The levels of acceptable borrower risk are thought to be quite dissimilar between the types of financial institutions, and, in addition, there are differences in the cost of processing and handling consumer loan appli-
cations and contracts, the amount of service rendered, the relative convenience to the consumer of alternative sources of financing, and the competitive situation among lenders within a geographic area.

## NONRATE DATA

Measurable differences in nonrate terms are also important to the levels of interest rates. Chief among these are the maturity of the loan and the ratio of the loan to the value of the collateral. On contracts for new cars and for mobile homes-types in which the amount of the loan tends to be moderate in relation to the value of the collateral-finance company rates have been considerably lower than rates for used cars, for other consumer goods (mainly furniture and appliances), or for personal loans-where the company's exposure to loss is higher. Table 2, for example, shows that for used cars the average loan in July- $\$ 1,820$, excluding finance charges-is approximately equal to the average wholesale value of the car. In other words, the only effective downpayment that dealers have been obtaining on such transactions has been the margin between the wholesale value and the retail price of the unit. On oldermodel used cars-where interest rates are substantially higher than the average for all used cars-the ratio of amount financed to wholesale value sometimes ranges as high as 140 per cent. Immediate losses would result to the lender if a buyer were to default on a typical contract for an older-model unit.

Instalment financing of mobile homes has grown substantially at both banks and finance companies in recent years. In part, the growth at finance companies has reflected the efforts of many large independent companies to divert their activities from the highly competitive automobile market, where profit margins are relatively low. Over the period covered by the survey, the average amount financed on mobile home contracts has shown a rapid increase-to $\$ 6,618$ in May-and the weighted-average maturity has lengthened to 115.3 months. In view of these changes total finance charges on the average contract, at a 12.72 per cent annual rate,
are $\$ 4,865$, or only $\$ 1,753$ less than the average amount financed.

Rates on personal loans at finance companies have tended to edge lower during the past year, reflecting to some extent a modest increase in maturities and an 8.7 per cent expansion in the average amount financed. In States where lenders are making personal loans at maximum allowable rate ceilings, any State-authorized increase in maturity or in size of loan may result in a lower effective rate to the borrower, since legal rate maximums are often so scaled that small, short-term loans carry higher rates than large, long-term loans. This is what happened recently, for example, in New York State. Ef-
fective July 1 that State raised maximum allowable loan amounts for all maturities up to and including 36 months. As a result of this action, it is now possible to obtain a 36 -month personal loan for as much as $\$ 2,500$. The previous maximum had been $\$ 1,400$. Whereas the effective rate on a $\$ 1,400$ loan is still 20.21 per cent per year, the rate on a $\$ 2,500$ loan is 18.18 per cent. Had the maximum loan been held constant and the term to maturity been lengthened, the effect would have been similar. Other States have made changes in maximum loan amounts and maturities that are reflected in the recent downward movements in rates on personal loans.

# Credit-Card and Check-Credit Plans at Commercial Banks 

A recent study of credit-card and check-credit plans at commercial banks shows, among other developments, that-

- Six of every ten commercial banks in the United States provided credit-card services to their customers at the end of 1972, and one in ten operated a check-credit plan.

TABLE 1
BANK CREDIT-CARD AND CHECK-CREDIT PLANS: SUMMARY STATISTICS

Data for December 31, 1972, unless otherwise indicated

| BANK CREDIT-CARD PLANS |  |
| :---: | :---: |
| Number of banks with plans | 8,574 |
| Single-plan banks | 6,812 |
| Principal banks. | 930 |
| Simple agent banks | 5.410 |
| Participating agent banks | 472 |
| Multiplan banks ${ }^{\text {I }}$ | 1,762 |
| Principal for all plans | 29 |
| Simple agent for all plans | 1,533 |
| Participating agent for all plans | 9 |
| Principal bank and simple agent | 59 |
| Principal bank and participating agent | 11 |
| Simple and participating agent | 121 |
| Credit outstanding (millions of dollars) | 5,408 |
| Credit extended during 1972 (millions of dollars) | 10,145 |
| Retail volume . . . . . . . . . . . . . . . . . . . . | 9,029 |
| Cash advance volum | 1,116 |
| Average sales draft during 1972 (dollars) | 19 |
| Average cash advance during 1972 (dollars) | 128 |
| Cards outstanding (in thousands) | 55,547 |
| Cardholder accounts (in thousands) | 33,870 |
| Accounts with balances (in thousands) | 20,586 |
| Average balance per active account (dollars) | 263 |
| Merchant agreements (in thousands) | 1,346 |
| BANK CHECK-CREDIT PLANS ${ }^{2}$ |  |
| Number of banks with plans | 1,621 |
| Credit outstanding (millions of dollars) | 1,775 |
| Credit extended during 1972 (millions of dollars) | 2,517 |
| Accounts with balances (in thousands) | 2,950 |
| Average balance per active account (dollars) | 602 |

[^6][^7]- The amount of credit that banks advanced under these programs came to $\$ 12.6$ billion during 1972-about a fifth of total consumer instalment credit extended by commercial banks.
- Banks of all sizes participate in the creditcard industry; large banks are more likely to be principals-which hold credit-card bal-ances-whereas small banks usually operate as agents. Many large banks also operate checkcredit plans, but relatively few small banks do.
- All of the States and three-fourths of the counties in the United States have banks with credit-card plans, but-despite recent substantial increases-only a fifth of the counties have banks that offer check-credit plans.
- Extensive principal-agent arrangements have been developed to extend the areas covered by bank credit-card plans.
- Most credit-card banks are associated with one or both of the two major bank credit-card systems, which provide for national interchange of sales slips and cash advances.

Availability of new types of information in the Bank Report of Condition for the end of $1972^{1}$ has made possible this study of recent developments in bank credit-card and checkcredit plans. ${ }^{2}$

[^8]
## RECENT GROWTH

Commercial bank credit-card and check-credit plans both expanded greatly over the 5 years ending 1972, as shown in Table 2. Of the two types of bank revolving credit, card credit has grown more in terms of both dollar amount and the number of banks holding credit. ${ }^{3}$ The rate of growth in card credit has slowed in the last few years, following a tremendous expansion during 1969 and early 1970. The growth rate of check credit, which had been declining since 1968, has picked up recently. As a result, the amount of credit outstanding under each plan increased by about 20 per cent in 1972-a year when bank loans of all types increased by 18 per cent.

Between 1967 and 1972, credit outstanding under bank credit-card and check-credit plans expanded more rapidly than that under other selected kinds of credit plans with which they compete (Table 3). The gain in the banks' share of this market reflects the fact that most types of retailers have supplemented or replaced their own credit plans with bank credit-card plans. The major holdouts from bank credit cards have been large department stores, which have generally preferred to maintain direct customer

[^9]contact through their own credit plans, and supermarkets, which often have mark-ups insufficient to cover the discounts of bank creditcard plans.

Over the same 5 -year period, the two types of bank revolving credit have increased in importance relative to all kinds of consumer instalment credit at commercial banks. Creditcard and check-credit plans together rose from 9 per cent of total bank instalment extensions in 1967 to more than 20 per cent in 1972 (Table 4). This change reflects, in part, the substitution of bank card and check credit for certain types of instalment loans, particularly unsecured personal or furniture and appliance loans. Some banks have actively encouraged such shifts by opening a credit-card account or overdraft plan for qualified loan applicants, especially in the case of smaller loans, in order to cut down on handling expenses.

With the growth in bank credit-card and check-credit plans, consumers have assumed more control over the management of their debt. Both types of plans provide prearranged revolving lines of credit instantly available to the borrower, and both allow the borrower to decide upon the pattern of debt repayment within broad limits set by the bank. In many instances consumers use credit cards as a convenient substitute for cash or checks in transactions. About one-third of all bank credit-card accounts are, in fact, repaid within the interest-free period.

| 1970 | $\cdots$ | 6,768 | 1,937 | 15.8 |
| 1972 | $\cdots$ | 8,275 | 2,076 | 16.2 |

## BANK CREDIT-CARD AFFILIATIONS

A major development in the bank credit-card industry over the past several years has been the increased use of principal-agent arrangements. Another has been the growing participation of banks in national credit-card interchange systems, which have supplanted regional networks. These two developments have facilitated the expansion of the industry into all parts of the country and have given more consumers ready access to some kind of bank revolvingcredit arrangement.

Principal-agent arrangements. Banks may be affiliated with credit-card plans as principals or as agents. When they act as principals, banks hold all the receivables generated by their cardholding customers. A principal bank may enlist other banks to act as agents. The principal bank
then holds all or part of the receivables generated by the customers of its agents. Agent banks may be either "simple agents," in which case the principal bank holds all the receivables, or "participating agents," which share in the financing of the accounts according to a prearranged ratio.

About four-fifths of the credit-card banks operated as simple agents at the end of 1972. Of these, 5,410 were simple agents for a single card plan, and 1,533 for two or more plans (Table 1). For the banks with card credit outstanding, almost two-thirds were principals and the rest were participating agents. Most participating agents held 50 per cent or less of the outstanding credit owed by their cardholding customers, and a very few held more than 75 per cent. Few banks were principals for more than one plan.

Interchanges. Most credit-card banks are now principals or agents affiliated with one or both of the two major bank credit-card sys-tems-National BankAmericard Incorporated and Interbank Card Association (which includes Master Charge). At the end of 1972, nearly 95 per cent of all bank card credit outstanding had been generated through cards carrying the BankAmericard or Interbank trademark.

These systems do not issue cards or extend credit, but they entitle affiliated banks to use their trademarks and provide services such as interchange and authorization systems. The interchange feature permits cardholders to make purchases from participating merchants any-
where in the country or to obtain cash at any affiliated bank and have all such transactions consolidated in a single monthly bill. Almost one-third of the bank card credit extended during 1972 was from purchases made or cash advances obtained by cardholders outside the market areas of their home banks and was processed through one of the interchange systems.

## SIZE OF BANK AND SIZE OF PLAN

Prior to the rapid expansion of the last few years, there had been concern about the competitive position of small banks in the creditcard market. However, with the growth of the national credit-card systems and the increasing use of agency arrangements, small as well as large banks have become active in this market

TABLE 5
BANKS WITH CREDIT-CARD AND CHECK-CREDIT PLANS, BY SIZE-OF-BANK CLASS,
DECEMBER 31, 1972

| Size class (total deposits in millions of dollars) | Percentage of all banks with- |  | Percentage of credit-card banks with credit outstanding |
| :---: | :---: | :---: | :---: |
|  | Credit-card plans* | Check-credit plans |  |
| Less than 2 | 24.7 | 1.9 | . 5 |
| 2-5 | 35.0 | 1.9 | 4.4 |
| 5-10 | 54.1 | 3.9 | 7.9 |
| 10-25 | 75.8 | 10.1 | 14.2 |
| 25-50 | 81.6 | 22.3 | 24.9 |
| 50-100 | 85.5 | 33.7 | 41.1 |
| 100-500 | 82.4 | 50.8 | 63.2 |
| 500-1,000 | 89.4 | 67.0 | 88.1 |
| 1,000 and over | 83.3 | 81.9 | 96.7 |

*Includes principals and agents.
Size of bank. Although commercial banks of all sizes are affiliated with credit-card plans, large institutions are more often principal banks, while small ones usually act as agents. This occurs because of heavy start-up costs and the consequent need to generate a large volume of business. In the group of 72 banks with more than $\$ 1$ billion in deposits at the end of 1972, 60 were affiliated with plans, 58 held credit outstanding, and 54 were principals. But 99 per cent of credit-card banks with deposits of less than $\$ 2$ million acted as agents (Table 5).

Many of the small banks that do hold credit act as participating agents of larger banks. Some others have chosen to be principals under an "association" form of organization in order to minimize start-up and operating costs. Under such arrangements, banks purchase accounting and data processing services from other banks or from credit-card associations. The fees they pay are based on the amount of credit-card activity.

Many small banks that have entered the credit-card field act as simple agents for two or more plans, usually handling cards in both of the nationwide card systems. Multiplan arrangements are an advantage to an agent bank in attracting merchant accounts since merchants like to offer their customers as many plans as possible but dislike having to maintain a separate account for each plan.

At one time check-credit plans were thought to provide an attractive alternative to credit cards, especially for the smaller banks that could not afford to operate a full credit-card plan. In practice, however, small banks have chosen to become agents for one or more credit-card plans rather than operate a check-credit plan. Whereas more than 2,800 small banks (deposits of less than $\$ 10$ million) were agent banks for creditcard plans at the end of 1972, fewer than 200 small banks operated a check-credit plan. At the same time, more than 75 per cent of those small banks that operate check-credit plans also have one or more credit-card plans.

Size of plan. Only 1,631 of the 8,574 banks affiliated with credit-card plans at the end of 1972 held credit outstanding, ranging from a few thousand dollars to about $\$ 450$ million. Amounts outstanding were highly concentrated in the largest plans; the top 1 per cent of the plans held about 35 per cent of all card credit outstanding (Table 6).

Concentration of amounts outstanding is also quite pronounced in bank check credit. The lower half of the distribution of plans held only 3 per cent of total check credit at year-end 1972, whereas the top 1 per cent of the plans held more than 40 per cent of the total.

The concentration of amounts outstanding under the two types of credit reflects a close relationship between size of bank and size of

TABLE 6
CUMULATIVE DISTRIBUTIONS OF NUMBERS OF BANKS WITH CREDIT OUTSTANDING AND AMOUNTS OUTSTANDING, BY SIZE OF CREDIT-CARD OR CHECK-CREDIT PLAN, DECEMBER 31, 1972

In per cent

| Size of plan (credit outstanding in millions of dollars) | Bank credit cards |  | Bank check credit |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Number of banks | $\left\lvert\, \begin{gathered} \text { Credit } \\ \text { out- } \\ \text { standing } \end{gathered}\right.$ | Number of banks | $\left\lvert\, \begin{gathered} \text { Credit } \\ \text { out- } \\ \text { standing } \end{gathered}\right.$ |
| Less than: |  |  |  |  |
|  | 46.4 | 8 | 65.7 | 3.7 |
|  | 61.7 | 2.3 | 80.0 | 7.7 |
| 1.0 | 71.3 | 4.4 | 86.0 | 11.5 |
| 5.0 | 86.9 | 15.1 | 95.9 | 32.1 |
| 10.0 | 93.1 | 28.4 | 97.8 | 43.7 |
| 20.0 | 96.3 | 42.2 | 99.0 | 58.5 |
| 50.0 | 98.9 | 64.2 | 99.7 | 78.9 |
| All plans | 100.0 | 100.0 | 100.0 | 100.0 |

plan. With credit cards, another contributing factor is the agency arrangements whereby principal banks hold all or part of the amounts outstanding generated by agents.

## GEOGRAPHIC SCOPE

Principal banks have been able to expand the market areas served by their credit-card plans through the use of agency networks, and consumers in almost every part of the country now have bank credit-card plans available to them. Fewer areas of the country have banks with check-credit plans, but coverage appears to be improving.

Market areas for bank credit-card plans. In general, banks are not prohibited from offering credit-card services directly to merchants and consumers outside their normal marketing areas. However, in practice, principal banks have often found it more practical to extend their credit-card operations through agent banks. About seven-eighths of all credit-card-agent banks were located in different counties from their principal banks at the end of 1972. Furthermore, about a sixth of the agents were located in different States from their principals.

Additional banks may readily enter market areas where plans are already being operated. The national credit-card systems will license a card-issuing bank even if another bank is already offering the same type of card in that
market area. Furthermore, banks may not prohibit their cardholders or merchants from signing up with other bank credit-card plans. Even banks offering the same bank credit card (for example, BankAmericard or Master Charge) may compete with each other for both merchant and customer accounts.

Credit-card coverage. Credit-card plans are now available in almost all localities of the country. All of the States and 75 per cent of the counties have banks with plans, and some of the remaining counties have branches of banks with plans. However, coverage varies considerably among States. In nearly a third of the States plans are available in 90 per cent or more of the counties in the State, but there are some States with credit-card operations in no more than 20 per cent of the counties. There are also marked differences among States in the proportion of affiliated banks that actually hold card credit.

State laws covering branch banking appear to have influenced the development of bank credit-card plans. While branching regulations have apparently had little effect on the proportion of banks that are affiliated with credit-card plans, they have influenced the incidence of agency arrangements (Table 7). In States where statewide branching is permitted, a much larger proportion of credit-card banks operate as principals, since branching permits principal banks to reach a large market area without entering into contract arrangements with agent banks.

It is often assumed that State laws governing the maximum interest rate that may be charged cardholders can-depending on the level estab-lished-influence the development of the credit-card industry. Most States permit banks to charge cardholders annual percentage rates up to 18 per cent, but in 1972 there were 11 States that had ceilings of between 10 and 15 per cent. Even in these States, however, card plans had been expanding. Almost half of the banks in the 11 States were affiliated with credit-card plans and a tenth of these were principals. In fact, in unlimited branching States, the proportion of credit-card banks acting as principals is larger in States where the rate ceiling is less than 18 per cent than where

TABLE 7
BANK CREDIT-CARD PLANS RELATED TO RATE CEILINGS AND EXTENT OF BRANCHING PERMITTED IN STATE, DECEMBER 31, $1972^{1}$

| States with— | Number of <br> States ${ }^{2}$ | Banks with <br> credit-card plans ${ }^{2}$ | Per cent of <br> credit-card <br> banks |
| :---: | :---: | :---: | :---: | :---: |

| principals |  |  |  |

${ }^{1}$ The rate ceiling assigned to a State and expressed as an annual percentage rate is the top bracket rate applicable to purchases of goods and services on bank cards at the beginning of 1972 . This rate either is contained in legislation specifically regulating bank card programs or is the maximum rate allowed in States where instalment Ioan acts, retail instalment sales acts, small loan laws, or Comptrollers' opinions apply.
${ }^{2}$ Includes the District of Columbia.
${ }^{3}$ Includes principals and agents.
it is not. This would suggest that plans of sufficient size can operate successfully despite the lower permitted interest return.

In this connection it should be noted that finance charges are not the only source of income for credit-card plans. Nearly one-fourth of the income, on the average, comes from merchant discounts, which may differ greatly from State to State. In low-rate States, merchant discounts may be high enough to make income to the plan from all sources about the same as in the high-rate States. In this case, the finance charge might be included in the price of the goods, with cash buyers helping to subsidize credit-card plans. Another possible source of income is an annual membership fee charged cardholders. Despite widespread discussion of this source of income, banks have generally avoided using it, though a large bank in Minne-
sota-a State with a 12 per cent ceiling-recently instituted such a fee.

Principal banks in high-interest-rate States have in some cases signed banks in low-rate States as credit-card agents. About one-sixth of all agent banks are located in States other than the principal, and one-fifth of that number are affiliated with principals in higher-rate States. In such situations, the interest rates charged the customers of the agent bank have sometimes been those of the principal bank. However, problems have arisen in connection with some of the out-of-State agent arrangements. A fundamental issue is the site of the loan transaction in the case of credit-card purchases. Some States adhere to a sales finance theory, under which credit is granted by the merchant at the time of the transaction. Other States subscribe to a direct loan theory and specify that credit is extended directly by the principal bank.

Check-credit coverage. Check-credit plans are not nearly so widespread as bank credit-card plans. Only one-fifth of all counties in the country now have banks that offer check credit. Early interest in check-credit plans was centered mainly in the Northeast and Far West. At the end of 1967, most of the banks operating plans were located in these areas, and the geographic structure of the industry has not changed greatly since that time. However, there appears to be a resurgence of interest in check-credit plans. The number of banks with such plans rose by 156 in the second half of 1972-the largest 6 -month increase on record.

State branching and interest rate regulations do not appear to have been major factors in the development of bank check credit. A bank need not have branches to operate an overdraft plan profitably since a large volume of credit extensions is not required to cover the relatively small start-up and fixed costs involved. The interest rate ceilings covering check-credit plans are the same in most States as for bank credit cards, although some States have lower ceilings for the former. And while merchant discounts are not involved in check-credit transactions, there is usually no interest-free period. Also, checkcredit plans generally provide for advances in fixed increments-most often $\$ 100$-when the borrower overdraws his account by as little as
\$1, and additional amounts are extended in the same fixed increments up to the credit limit. Interest may be incurred on the entire balance, even if the borrower does not use it all.

## PROFITS AND LOSSES ON BANK CREDIT-CARD PLANS

Credit-card plans have posed a number of operational problems for banks. In order to generate a sufficient volume of business for a profitable operation, a card-issuing bank must attract enough merchants to make it worthwhile for individuals to accept and use the credit cards while simultaneously attracting enough cardholders to interest merchants in the plan. In order to establish a cardholder base rapidly, some banks have used mass mailings of unsolicited cards. This was true particularly in the latter part of the 1960 's. Widespread credit and fraud losses resulted in some instances, however, and in 1970 the Congress passed legislation prohibiting unsolicited distribution of credit cards.

Development of national credit-card interchanges, increased use of agent banks, and greater public interest in credit cards have simplified the solicitation of merchants and cardholders for principal banks. Moreover, the 1970 legislation mentioned above limits the legal liability of an individual cardholder to $\$ 50$ in the case of loss or theft, and this feature has facilitated public acceptance of credit cards.

Despite the increased use of bank credit cards, profits have been low or nonexistent for many plans. According to Federal Reserve data, average gross rates of return were much higher in 1972 on bank credit-card plans than on other selected categories of bank loans, but average net rates of return were lower (Table 8).

Operating expenses-the costs of making, carrying, and collecting credit-card loans-accounted for the major part of the difference between gross and net yields on credit-card plans; such expenses accounted for almost 70 per cent of gross income. Net charge-offs were also relatively high-about 10 per cent of gross income-on credit-card plans. After allowing for the cost of money, the 1972 average net rate of return for the credit-card plans partici-

| All types- |  |  |  |
| Gross yield ... | 8.3 | 8.0 | 7.8 |
| Net yield ..... | 2.5 | 2.5 | 2.4 |

Note--From the Federal Reserve Functional Cost Analysis; 1972 Average Banks, based on data furnished by 945 participating banks in 12 Federal Reserve Districts. Yields are calculated as ratios of gross or net income to average outstandings for the year, and are expressed as percentages.
pating in the Federal Reserve Functional Cost Analysis was close to zero. Rising costs of funds to banks squeeze the profits of bank credit-card departments because rates charged cardholders are generally at State-imposed ceilings.

The performance of bank credit-card plans, however, appears to improve with experience. Heavy start-up costs may be recovered within a few years after a plan is begun. More efficient accounting, authorization, and billing techniques may be introduced, inactive accounts and low-volume merchants may be dropped, and credit limits may be raised for established users. Gross and net charge-offs also tend to decline as the length of time a bank has operated a credit-card plan increases (Table 9). As experience is gained, banks may improve their techniques for selecting cardholders and merchants and for managing accounts. Furthermore, fraud losses can be lessened by developing better systems to detect stolen or counterfeit cards. Even so, fraud losses currently account for an estimated 15 to 20 per cent of total charge-offs on bank credit-card plans.

Not all of the benefits to a bank from operating a credit-card plan show up in the revenues generally allocated to the credit-card function.

| 1969 | 752 | 1,763 | 32.6 | 3.76 | 2.65 |
| 1970 | 204 | 330 | 6.1 | 5.25 | 4.51 |
| 1971 | 106 | 54 | 1.0 | 6.38 | 4.92 |
| 1972 | 92 | 16 | . 3 | 8.13 | 6.35 |
| All banks | 1,631 | 5,408 | 100.0 | 3.23 | 2.32 |

${ }^{1}$ Date from which a card program has remained continuously in effect.
${ }^{2}$ Net charge-offs are gross charge-offs less recoveries.
NOTE-The charge-off rates are calculated as ratios of gross and net charge-offs for 1972 to average credit-card outstandings for the year, and are expressed as percentages. For banks starting in 1972, the partial year flows have been converted to annual rates.

Credit-card plans provide a means of penetrating new consumer and merchant markets and thereby increase opportunities for promoting other banking services. Furthermore, by shifting small consumer loans to revolving-credit accounts, some banks have reduced the over-all cost of making consumer loans.

Finally, indirect benefits may accrue over the longer run because bank credit cards are likely
to play an integral part in the electronic funds transfer system that is now emerging. Some banks have instituted card plans principally to be in a position to take advantage of such a system. Nationwide credit-card authorization and clearing systems, possibly linked to point-of-sale terminals, may provide for transfers of funds for a wide range of transactions and over large geographic areas.

# Objectives and Responsibilities of the Federal Reserve System 

#### Abstract

Following is an excerpt from an address by Arthur F. Burns, Chairman, Board of Governors of the Federal Reserve System, at dedication ceremonies for a new building at the Federal Reserve Bank of Minneapolis, September 8, 1973:

$$
\dot{\psi} \dot{\xi} \hat{j} \hat{j}
$$

Monetary policy in this country carries a heavy burden of responsibility for the maintenance of economic stability. Actually, our Nation sometimes expects more from the Federal Reserve than we can reasonably expect to accomplish in view of the imperfect tools with which we work and the complex problems that our Nation faces.

During the past decade our Nation has generally experienced prosperity, but the prosperity has been marred for many of our people by persistent and rapid inflation. Many factors are responsible for this unhappy development -among them, a protracted and unpopular war and abuses of market power by some of our business firms and trade unions. But I believe that the most important underlying cause has been the looseness of our Federal fiscal policies. Federal spending has been rising with disconcerting speed during the past decade. Despite the costly war in Vietnam, new governmental programs have been enacted at a dizzy pace, almost without regard to their cost or to the state of public revenues.

Deficits have therefore mounted in both good years and bad. In fiscal 1965, a year of rapidly advancing prosperity, the Federal deficit came to $\$ 1.6$ billion. In fiscal 1973, a similarly prosperous year, the deficit amounted to $\$ 14.4$ billion. In three of the past six years, the deficit came close to-or actually reached- $\$ 25$ billion. Nor do even these figures tell the full story of how much Federal money has been paid out
to the public beyond what the Government collected in taxes. Governmentally sponsored corporations, such as the Federal National Mortgage Association and the Federal home loan banks, have also gone heavily into debt and poured out additional billions that are excluded from the budgetary totals. In the fiscal year just ended, the net borrowing by Federally sponsored agencies exceeded $\$ 11$ billion.

The continuance of large Federal deficits at a time of rapid resurgence of the economy has inevitably stimulated private spending and aggravated upward pressures on the level of prices. In fact, our economy is suffering at present from stronger inflationary pressures than at any time since the outbreak of the Korean war. Prices have risen sharply since the beginning of this year, and they are continuing to rise.

In view of the huge expansion in production and employment that we have experienced during the past year, it would have been difficult to avoid an appreciable upward movement of the price level even with a balanced Federal budget. But as the Fates would have it, several unusual factors combined to impart a new dimension to our inflationary problem this year. First, the devaluation of the dollar not only resulted in higher prices of imported goods, but also affected our price level by leading to some substitution of domestic for foreign products and by imparting a sharp impetus to foreign demand for our products. Second, our economic expansion has been accompanied by rapid expansion in virtually every other industrial country. The worldwide demand for capital equipment and industrial materials-goods for which the United States is a major supplier-has therefore burgeoned. Third, our current ability to expand output of basic industrial materials is narrowly limited-in large part because investment by producers of key materials has been held back in recent years by unsatisfactory profits and new
environmental controls. Fourth, bad weather in a number of countries severely restricted agricultural production last year-at the very time when the demand for foodstuffs was rising rapidly in response to the worldwide expansion of incomes and employment. The concatenation of these special factors has played a decisive role in driving up prices this year.

The inflationary problem we are dealing with today is therefore quite complex, and we must be prepared for a further rise in prices in the months ahead. The resulting damage can be minimized, however, if aggregate monetary demand is restrained. The inflationary forces that now plague us will then have a better chance to burn themselves out.

The Federal Reserve is pursuing a course of monetary policy that is designed to minimize the threat of excess demand by restricting the growth of the monetary and credit aggregates. Monetary policy began to move in this direction in the spring of 1972, but at a pace that may appear in retrospect to have been too gradual. In any event, restrictive actions have multiplied in both frequency and impact in recent months. By now even skeptics in the financial community should be convinced that the Federal Reserve will not flinch in its determination to moderate substantially the pace at which money and credit supplies have been expanding.

A restrictive monetary policy cannot be carried out without causing difficulty for some business firms or households that seek additional credit. The homebuilding industry, in particular, is very sensitive to the level of interest rates and the availability of mortgage money. In view of the outflow of funds from thrift institutions into higher-yielding market instruments, mortgage commitments have been diminishing, and this is bound to affect homebuilding adversely in the months immediately ahead.

Early in 1970 anticipating precisely the kind of development that is now under way in the housing field, the Board of Governors of the Federal Reserve System undertook a comprehensive study of the ways in which the chronic fluctuations of housing construction may best be moderated. Two years later, in March 1972, the Board presented its report to the Congress. The Board's recommendations for legislative action
deserve more careful consideration than they have yet received. If the needed reforms come too late to help in the present difficulty, they can still serve the larger purpose of stabilizing housing finance over the long future. Meanwhile, the several housing agencies, which have been softening the impact of credit shortages on homebuilding activity, are in a position to continue to do so. And the Federal Reserve System, as the lender of last resort, will, of course, honor its obligation to provide emergency credit in the event of need. I might add that it appears unlikely that such a need will arise.

The time will surely come when monetary policy can again be less restrictive, but that time has not yet arrived. At present there is no real alternative to a restrictive monetary policy. To be sure, if we permitted money and credit to expand at a more rapid pace, short-term interest rates would decline for a brief period. But in so doing we would be adding fuel to the inflationary fires now raging. Before very long interest rates would rise again, and probably well beyond their present level, as both lenders and borrowers adjusted to the quickened pace of inflation. The simple and inescapable truth is that inflation and high nominal interest rates go together.
The Federal Reserve must therefore persevere in its present policy. Fortunately, there are some signs that our efforts are bearing fruit. For example, the narrowly defined money supplythat is, currency plus demand deposits-grew at an annual rate of 6 per cent during the first half of 1973, compared with a growth rate of $71 / 2$ per cent during 1972 . In recent weeks the growth rate has slowed further. During July and August the money stock rose at an annual rate of only about 2 per cent. These signs of better control over the growth of the money supply are encouraging, but the Federal Reserve will need more convincing evidence on moderation of the monetary and credit aggregates before it can responsibly relax its pressure on the monetary brake.

Of late there have also been encouraging developments with respect to our international balance of payments. Our competitive position in world markets has dramatically improved
over the past year, and the deficit in our trade accounts that was for some time a source of great concern has now all but vanished. In fact, we enjoyed a modest trade surplus in the month of July, and the outlook for our exports continues to be very promising. These developments have not gone unnoticed in the financial world, and the dollar has strengthened markedly in recent weeks in foreign exchange markets. Intervention in these markets by the Federal Reserve has helped to bring about this turn in the dollar's value. However, a more basic factor in the recent improvement in the value of the dollar relative to other currencies is the increasing recognition abroad that the American people are determined to bring inflation under control and that they will support any reasonable policy that promotes this objective.

Governmental efforts to stabilize the general price level must therefore persist until the forces of inflation are fully dissipated. Since direct controls over wages and prices in the present environment can provide only limited benefits, primary reliance in this struggle must be placed on monetary and fiscal policies.

Clearly, monetary policy must play a major role in the fight against inflation, but we should not expose the economy to unnecessary risks by overburdening this tool of policy. Additional restraint through fiscal policy, in the form of reduced Government spending or increased taxes, would be helpful even now. Particularly appropriate would be fiscal measures that could be quickly reversed if economic activity began to weaken, as sometimes happens after a prolonged period of economic expansion.

We also need to improve our instruments of monetary policy to gain better control over the monetary aggregates. More precise management of money and credit supplies could be achieved if the reserve requirements that apply to demand deposits of Federal Reserve member banks were extended to all commercial banks.

The present limitation of the reserve require-
ments imposed by the Federal Reserve to the System's member banks, apart from being inequitable, weakens monetary control. All demand deposits are a part of the Nation's money supply, and they should be treated equally from the standpoint of reserve requirements. The difficulties already imposed on monetary policy as a result of the unequal treatment of demand deposits at member and nonmember banks will become more acute in the years ahead in the absence of corrective legislation. The Federal Reserve must therefore urge the Congress to give this problem its earnest consideration. The solution that we shall propose will not infringe in any significant way on our dual banking system, and yet it will enable the monetary authority to achieve more precise control over the monetary aggregates.

I need hardly say, in closing my remarks, that there is much unfinished business to attend to in our struggle to control inflation, to manage the Nation's money supply, to stabilize housing construction, and to deal with a host of other economic and financial problems. I am optimistic, however, about the future of our Nation's economy. Progress in moving toward equilibrium in our international payments accounts has been encouraging. So also has the recent evidence of moderation in the growth of monetary aggregates. And agricultural production in this region of our Nation and elsewhere is now on the increase, offering hope that food supplies will soon be more plentiful.

The principal source of my optimism, however, lies not in these general indicators of progress in dealing with economic and financial problems, but in my faith in our Nation and its good people. Our country has been blessed with rich natural resources and our people have been endowed with the vision and energy to strive for a better life. Let us dedicate the new Federal Reserve building today to the brighter future that is the hope and dream of every American.

## Statement to Congress

Statement by Arthur F. Burns, Chairman, Board of Governors of the Federal Reserve System, before the Committee on Banking and Currency, House of Representatives, September 12, 1973.

I appreciate the opportunity to discuss with you the problems that have developed of late in the markets for mortgage credit and housing.

Early this year, as the committee is well aware, building permits for private housing units began to decline, and so did the number of new housing starts. With mortgage credit supplies shrinking, a significant further drop in residential building activity may lie ahead.

Recent developments in housing finance are a matter of concern to the Federal Reserve as well as to this committee. A practical solution to the recurring problems of housing finance will be found only if the forces presently operating to depress residential construction are clearly understood. Let me therefore try to put recent events in perspective.

In the early months of 1970 activity in the residential building industry began to recover from its slump in 1969. This upturn was the beginning of a surge in housing activity that lasted for 3 years, and proved to be the strongest homebuilding boom of the postwar period. In the year 1972 alone, construction was started on 2.4 million conventional dwelling units; in addition, nearly 600,000 mobile homes were produced. Both in 1971 and 1972 the total production of new dwelling units exceeded by a substantial margin the national housing goals established by the Congress in 1968.

The booming volume of residential construction could not long be sustained by the basic demand for housing. During the year ending last March, 1.6 million new households were established in the United States. The number of new housing units produced during that year, however, was nearly twice as large. Inventories of unsold houses began to rise as
early as 1971 , and they are now almost twice as high, relative to sales, as they were 2 years ago. Vacancy rates for rental units have also crept up in many sections of the country, and they may well increase further as the completion of large apartment buildings now under construction adds to available rental units.

Besides outstripping the basic demand for housing, the boom in residential building played havoc with costs and prices. Prices of lumber, plywood, and other building materials skyrocketed, land values soared, and wages in the construction industry rose for a time at an annual rate of about 10 per cent.

Of late construction costs have come under better control. Thanks to the vigilance of the Construction Industry Wage Stabilization Committee, increases of wage rates have moderated appreciably. Upward pressure on prices of building materials, especially lumber and plywood, has also diminished in recent months. Nevertheless, the median price of new singlefamily homes is now more than a third higher than in October 1969.

By late 1972 overbuilding and high prices had set the stage for a downturn in residential construction. The ensuing decline in housing starts got under way long before supplies of mortgage credit had begun to affect homebuilding adversely.

One factor that contributed to overbuilding during the housing boom was the liberal supply of mortgage credit. The specialized mortgage lending institutions-that is, the savings and loan associations (S\&L's) and the mutual savings banks-were well supplied with loanable funds over a prolonged period. Their total deposits, which had risen 7 per cent in 1970, increased 17 per cent in 1971 and 17 per cent again in 1972. Inflows of consumer savings deposits at commercial banks also rose rapidly, from 11 per cent in 1970 to an average of 15 per cent in 1971 and 1972.

These three classes of depositary institutions
together added $\$ 11$ billion to their residential mortgage portfolios in 1970. As their deposit inflows moved up, their net acquisition of mortgages rose to $\$ 30$ billion in 1971 and then to $\$ 43$ billion in 1972 . In the second quarter of this year these institutions were still acquiring new residential mortgages at an annual rate of $\$ 48$ billion.

Mortgage credit supplies during this period were so large that, despite soaring demands for mortgage credit, interest rates on mortgages actually declined between the late summer of 1970 and the spring of 1972 and then remained quite stable over the rest of 1972.

Developments in other financial markets last year, however, carried an ominous significance for housing finance. In the spring of 1972 short-term market interest rates began to rise, and their upward movement accelerated toward the close of the year. By now, as this committee knows, interest rates on most short-term market securities have risen above the previous high peaks of late 1969 or early 1970. Long-term interest rates have also advanced, but their rise has been less pronounced.

The fundamental reasons for this rise in interest rates should, I think, be evident to any thoughtful observer. With economic expansion proceeding at a vigorous rate since late 1971, the accompanying demand for credit has been very strong. The revival of fears that inflation has become endemic served further to enhance the demand for credit. These developments account for the mounting pace of private credit demands. Between the first half of 1972 and the first half of 1973 the rate of private credit expansion increased by more than a third, or about three times as fast as the percentage increase in the gross national product.

Continuing large drains on the money and capital markets by the Federal sector added, of course, to the upward pressure on interest rates. Total borrowing by the Federal Govern-ment-including the Federally sponsored credit agencies-amounted to almost $\$ 33$ billion in fiscal 1973. It is well to bear in mind that Federal deficits augment private disposable income and thereby tend to increase private spending and borrowing. The impact of Federal deficits on interest rates therefore goes beyond
the direct effects that stem from the addition of Federal borrowing to other credit demands. These deficits have contributed powerfully to the mounting pressures in financial markets since the spring of 1972.

During this period monetary policy has tolerated the higher interest rates that resulted from the rapidly rising demands for credit. Supplies of money and credit were allowed to expand, but not by enough to satisfy each and every demand for credit at the going level of interest rates. If a more expansive monetary policyaimed primarily at holding down interest rates-had been followed, the resulting increase in supplies of money and other liquid assets would have added enormously to the potential for inflation. Before long, as both lenders and borrowers adjusted their behavior to the quickened pace of inflation, interest rates would have risen sharply despite the outpouring of newly created money, and by now they would probably be even higher than they in fact are. Inflation and rising interest rates go together, and both lead to serious difficulties for the housing industry.

Signs of developing problems in housing finance became evident early in 1973 when the inflow of consumer savings to commercial banks began to shrink. In the second quarter of the year, savings inflows to nonbank thrift institutions also weakened, falling to an annual growth rate of 9 per cent, compared with 17 per cent in 1972. Mortgage lenders, therefore, became less energetic in committing funds for housing, and interest rates on mortgage loans began to advance.

The threat to homebuilding activity posed by such developments becomes all the more serious when residential construction is beginning to weaken as a result of overbuilding, as was the case in early 1973. By the middle of this year, housing production thus appeared to be on the verge of yet another downswing in the feast-and-famine cycle that has long characterized this industry.

These recurring cycles have been of great concern to the Board of Governors of the Federal Reserve System. You may recall that in my testimony before this committee on February 7, 1970-my first appearance before a congres-
sional committee as Chairman of the Federal Reserve Board-I indicated that the Federal Reserve staff would undertake a thorough search for ways of moderating the short-term swings in the availability of mortgage credit. Upon completion of that study, the Federal Reserve Board submitted its report to Congress on March 3, 1972. Our most important recommendation was a proposal for a more flexible use of fiscal policy to smooth out the fluctuations in business fixed investment so that dependence on credit restraint to achieve economic stability could be reduced. Other proposals were aimed at stabilizing the flow of funds to financial intermediaries.

While the Board's report was submitted at a time when commercial banks and other thrift institutions were enjoying strong deposit gains, it pointed out that these inflows would probably shrink when yields on market securities again rose. The Board therefore urged the Congress to take the opportunity afforded by conditions then existing in the mortgage and housing fields to strengthen the ability of our Nation's depositary institutions to function effectively in an environment of fluctuating interest rates.

The fundamental reason why the stream of savings into the specialized mortgage lending institutions-especially the S\&L's-dries up periodically lies in the asymmetry between their assets and liabilities. Their assets consist chiefly of mortgages with a long average life, and their earnings rates are therefore rather inflexible. Their liabilities, on the other hand, consist of passbook accounts that in practice are payable on demand or of time deposits with relatively short maturities. These forms of savings are rather close substitutes for short-term market securities, on which yields are highly variable. When yields on competing market instruments rise, a strong tendency develops to divert savings from the thrift institutions to market securities.

The Board's report set forth proposals to deal with this problem. To achieve greater flexibility in the earnings of S\&L's so that they could compete more effectively against market securities, the Board suggested that perhaps 10 per cent of their earning assets might be placed in consumer loans. More importantly, we recom-
mended that consideration be given to enabling all depositary institutions to offer mortgages with variable interest rates, subject to regulatory safeguards.

The Board hopes that its report will assist the Congress in its search for ways to deal with the problem of cyclical instability in housing finance. But the necessary ameliorative measures have not yet been adopted. As a result, the Nation's housing industry may now have to bear once again a disproportionate share of the burden of policies to moderate the expansion of aggregate demand. Fiscal policy has not yet been made a flexible tool for economic stabilization. And monetary and credit policies are still serving as the primary line of defense against excess aggregate demand although we know from experience that general monetary restraints affect housing more than other industries.

As recent experience again indicates, our depositary institutions, particularly the S\&L's, have great difficulty in coping with rising market interest rates. Over the past several years, the structure of deposits at the S\&L's has changed substantially. Nearly all of the growth in their savings capital has come from special deposits with a fixed term to maturity. A large part of these special deposits, however, have rather short maturities. By actively encouraging growth of such accounts, it appears that the S\&L's have attracted a substantial amount of interest-sensitive funds, thereby aggravating their problem of deposit instability.

The Federal Reserve has been troubled by this development for some time. During the spring of this year some depositary institutions began losing funds to market securities, on which interest rates were rising rapidly, and it seemed likely that the diversion of individual savings to market instruments would accelerate after the midyear interest-crediting period. More freedom for depositary institutions to bid for funds thus became urgent. On July 5 the Federal Reserve joined with the other regulatory agencies to allow commercial banks and other thrift institutions to offer higher yields on consumer-type time and savings deposits.

The new ceilings on interest rates paid by commercial banks were again set at lower levels than for other thrift institutions. In the case of

S\&L's and mutual savings banks, the largest increases in ceiling rates were made for special accounts--that is, accounts other than passbook savings. This approach was adopted to enable these institutions to utilize the limited increase of their earnings in recent years to best advantage in attracting or holding on to savings customers.

At the same time, ceiling rates on consumertype certificates of deposit (CD's) with maturities of 4 years or longer, when sold in denominations of $\$ 1,000$ or more, were suspended for all depositary institutions. The objective of this action was to increase the ability of these institutions to compete with market instruments and at the same time achieve greater stability of deposits.

In taking these several steps, the Board and the other regulatory agencies kept in mind the need for greater equity for savers. Whatever advantages the housing industry and the institutions that finance it may derive from rate ceilings, these ceilings clearly discriminate against individuals who are able to accumulate only modest amounts of savings or who lack sophistication with regard to investment alternatives. In determining rate ceilings and in related actions, such as establishing minimum denominations in which Federal securities are sold, public policy must balance the needs of housing finance against equity for the small saver. One result of deposit rate ceilings and large minimum denominations of Treasury issues has been to deny small savers the opportunity of benefiting from competitive rates of return on their funds. This may help to sustain homebuilding, but we need to explore other, more equitable, ways of promoting that objective. Suspension of deposit rate ceilings in limited areas, subject to safeguards, is one such avenue of exploration.

The precise details of the liberalized ceiling rates that became effective on July 5 were designed with an eye to minimizing shifts of funds among depositary institutions. We soon discovered, however, that S\&L's in a few metropolitan areas were losing funds to some commercial banks that were merchandising aggressively the new, no-ceiling 4 -year certificate. The Board of Governors of the Federal Reserve System and
the Federal Deposit Insurance Corporation (FDIC) responded promptly to this development by limiting the amount of such deposits that a commercial or mutual savings bank may accept to 5 per cent of its total time and savings accounts. A similar restriction had previously been imposed on S\&L's by the Federal Home Loan Bank Board (FHLBB).

Other steps have also been taken recently by the regulatory agencies to achieve uniformity among competing financial institutions with regard to penalties for early withdrawal of time deposits, and to ensure that savers who may wish to switch into higher-yielding CD's understand how such penalties will affect their interest earnings.

These regulatory actions have clearly improved the ability of depositary institutions to compete with market securities for the savings of individuals. The further rise of market interest rates since early July has, however, blunted this achievement. With relatively short-term Treasury securities or Federal agency issues now offering yields of 8 or 9 per cent, the purchase of such securities by individuals has been rising rapidly of late.

In July deposit outflows amounted to about $\$ 300$ million at S\&L's and to about $\$ 600$ million at mutual savings banks. In August mutual savings banks fared somewhat better. On the other hand, deposit outflows at S\&L's accelerated, if we may judge from the data now available. The larger commercial banks, in their turn, reported a loss of $\$ 200$ million in consumer time and savings deposits over the 4 weeks ended August 29, compared with an increase of $\$ 300$ million in the previous 5 weeks.

The contrasting experience of commercial banks and S\&L's since midyear has suggested to some observers that many banks may be attracting funds from S\&L's through aggressive marketing of the new certificates with a maturity of 4 years or longer. The Federal Reserve has been investigating this question carefully.

An overwhelming proportion of the banks appear to be handling prudently the no-ceiling 4 -year certificates. Less than 40 per cent of all insured commercial banks were offering these certificates at the end of July, and of those that did, only about 1 of 20 paid a rate in excess
of $71 / 2$ per cent. The rates offered by commercial banks were broadly similar to those offered by S\&L's and mutual savings banks. In general, since savers would not have gained interest income by switching funds from nonbank thrift institutions to commercial banks, it appears that the bulk of the funds lost by S\&L's and savings banks during July and August did not move to commercial banks, but that the money went elsewhere-probably into market securities.

This, however, is not as yet a firm conclusion. In any event, even if valid on a nationwide basis, it may not apply to some individual communities. The Federal Reserve Board, working cooperatively with other regulatory agencies, will therefore continue to give this problem close attention and draw upon whatever new information becomes available. A few days ago the FHLBB and the FDIC liberalized their regulations so that the S\&L's and mutual savings banks will be able to issue the no-ceiling 4 -year certificates up to 10 per cent of their deposits. If further regulatory actions offer promise of diminishing turbulence in the markets for consumer savings and mortgage credit, the Federal Reserve Board-and I'm sure also the other regulatory agencies-will not hesitate to adopt them.

In all candor, however, I must acknowledge that I see no easy way out of our current dilemma. Competition among the thrift institutions could be restrained by reverting entirely to the former ceilings or by imposing a modest ceiling on the new 4 -year certificates. But in that event the loss of funds by depositary institutions to market instruments would probably increase greatly. Alternatively, ceilings could be liberalized further so as to give the thrift institutions more freedom to compete with market securities. But many S\&L's are not in a position to pay appreciably higher rates, and their future would be in jeopardy if they tried to do so. In either case, the availability of mortgage credit might be affected very adversely.

It thus appears that mortgage loans will remain in relatively short supply in the months immediately ahead, particularly in States with low usury ceilings, and that the volume of residential construction will consequently suffer. There is reason to believe, however, that
the contraction in housing activity that we now face will be milder than the declines of 1966 or 1969.

A number of structural changes in housing finance during recent years have reduced the dependence of the housing industry on mortgage loans from nonbank thrift institutions. For one thing private sources of funds for mortgage credit have been broadened. Thus, the mortgage bonds guaranteed by the Government National Mortgage Association (GNMA) now attract private pension funds and other investors who previously had stayed out of the mortgage market; at present, some $\$ 10$ billion of such bonds are outstanding. Real estate investment trusts have also been growing. In the second quarter of this year they supplied mortgage credit at an annual rate of $\$ 4$ billion. Commercial banks now furnish a larger share of residential mortgage credit-more than 20 per cent in the first half of this year, compared with about 15 per cent in the decade of the 1960's. Moreover, mortgages have generally become more attractive to private investors because of the growth of opportunities to insure conventional mortgages and the enlargement of secondary market facilities.

The capability of Federal agencies to come to the aid of housing in times of difficulty has also been bolstered. The Federal National Mortgage Association (FNMA) and the Federal Home Loan Mortgage Corporation are now authorized to buy conventional mortgages as well as Government-guaranteed mortgages so that their efforts to support housing activity can be broadly based. The financial position of FNMA has become stronger in recent years, and its security issues are widely regarded as an attractive investment medium. So also are the securities issued by the Federal home loan banks to obtain funds for lending to savings institutions. Advances from the Federal home loan banks through August of this year total $\$ 5.5$ billion, and they can be increased substantially further, if that should be necessary.

The Federal Reserve, on its part, has made plans for providing emergency credit to S\&L's and mutual savings banks in the unlikely event that such a need arises. We have also sought to improve the market for the securities issued
by the Federal housing credit agencies. Since September 1971, when we began making outright purchases and sales of agency issues, the spread between the yields on these obligations and those of the Treasury has narrowed, particularly for the shorter maturities. Our acquisitions were not the only reason for the lower spread, but I believe they made a constructive contribution.

Of greater importance, the Federal Reserve Board in May raised from 5 to 8 per cent the reserve requirement applicable to increases in the amount of large-denomination CD's outstanding at the larger banks. This step increased the cost to banks of the funds that they principally use to finance business loans. Last Friday the incremental reserve requirement against CD's was raised again, this time to 11 per cent. To the extent that this new reserve requirement restrains bank lending to the business sector, it should help to relieve pressures on residential mortgage credit.

In view of the structural changes in housing finance and related developments, I believe that the housing industry is in a better position now than it was a few years ago to weather the pressures of financial restraint. But additional actions are needed to achieve an acceptable degree of stability in housing finance and construction.
For the immediate future, the single most constructive step that could be taken by the Congress would be to increase the degree of fiscal restraint on aggregate demand. I for one would support stronger efforts to cut governmental expenditures, or actions to increase taxes. Particularly appropriate would be fiscal measures that could be quickly reversed if economic activity began to weaken. Steps to increase fiscal restraint now could have dramatic effects on financial markets, with substantial benefits for the supply of mortgage credit and housing.
I would also urge the Congress to abolish altogether the present ceiling rates of interest on Federal Housing Administration (FHA) and Veterans Administration (VA) loans. True, these ceiling rates have not been a significant impediment to mortgage credit supplies this year, but that is only because the Department
of Housing and Urban Development and the VA have acted rather promptly to keep the ceilings in line with market rates of interest. In some States usury ceilings have dried up the supply of mortgage credit almost completely. If the Congress acted decisively on FHA and VA ceilings, State legislators would be more inclined to raise or eliminate the usury ceilings that are presently curtailing residential building in their area.

This committee could also be of great service to the housing industry by supporting reforms to moderate short-term swings in the supply of mortgage credit and home construction. Some of the measures needed are relatively noncontroversial, could be acted on quickly, and would improve the outlook for housing finance even in the short run. The Board's earlier recommendations to remove the legal restrictions on real estate loans by national banks, and to permit the Federal Reserve to lend to member banks on any sound collateral, including mortgages, fall into this category. Other measures will need to be debated at greater length, and it is therefore all the more urgent that the Congress initiate constructive deliberation of basic reforms. The highest priority should be given to making fiscal policy a more flexible tool for economic stabilization. A promising way to accomplish this, as the Board indicated in its housing report in early 1972, would be to make the investment tax credit variable over the business cycle.

If the tax credit for business investment were lowered during economic booms and raised in periods of slack, the rate of business capital spending would be more stable and so would interest rates and the flow of funds into housing. The Board recommends again, therefore, that the President be authorized to propose changes in the tax credit-within a range of perhaps 3 to 12 or 15 per cent-subject to congressional approval or disapproval under special procedures to assure prompt consideration.

Better control of the Federal budget would also be of great value. The Board welcomes the efforts of the Joint Study Committee on Budget Control, the Rules Committee of the House, and the Government Operations Committee of the Senate to reform budgetary procedures by fixing firmly the expenditure total for a fiscal year and
then establishing congressional priorities within that total.

Reforms are also needed to improve the ability of depositary institutions to compete for individual savings in periods of rising interest rates. The Board would urge once again the adoption of legislation to encourage a moderate amount of investment by S\&L's in consumer loans so that their earnings rates would be more flexible. A more significant contribution to this objective would come from the use by depositary institutions of mortgage loans with variable
interest rates to finance the purchase of homes and apartment buildings.
The thoughts I have put before this committee today are confined to the problem of cyclical swings in housing. This is a critical current problem. That is why I have emphasized not only the desirability of changes in the structure of housing finance, but also the importance of basic reforms in fiscal policy. Once fiscal reforms are carried out, there will be less need to depend upon monetary restraint in the course of a business-cycle expansion.

## Record of Policy Actions

of the Federal Open Market Committee

Records of policy actions taken by the Federal Open Market Committee at each meeting, in the form in which they will appear in the Board's Annual Report, are released approximately 90 days following the date of the meeting and are subsequently published in the Federal Reserve Bulletin.

The record for each meeting includes the votes on the policy decisions made at the meeting as well as a résumé of the basis for the decisions. The summary descriptions of economic and financial conditions are based on the information that was available to the Committee at the time of the meeting, rather than on data as they may have been revised since then.

Policy directives of the Federal Open Market Committee are issued to the Federal Reserve Bank of New York-the Bank selected by the Committee to execute transactions for the System Open Market Account.

Records of policy actions have been published regularly in the Bulletin beginning with the July 1967 issue, and such records have continued to be published in the Board's Annual Reports.

The records for the meetings held in 1973 were published in the Bulletins for April, pages 286-92; May, pages 345-51; June, pages 435-44; July, pages 513-20; and August, pages 574-80. The record for the meeting held on June 18-19, 1973, follows:

## MEETING HELD ON JUNE 18-19, $1973^{1}$

## 1. Domestic policy directive

The information reviewed at this meeting suggested that real output of goods and services, which had expanded at an annual rate of 8 per cent in both the last quarter of 1972 and the first quarter of 1973, was growing at a less rapid pace in the current quarter. Staff projections continued to suggest that growth would moderate further in the second half of the year.

In May industrial production continued to rise-reflecting for the most part further gains in output of consumer goods and business equipment-but the pace of expansion was less rapid than it had been earlier in the year. The value of new construction put in place in both April and May changed little from the monthly average for the first quarter. Growth in nonfarm payroll employment slowed from the high rate in the first quarter of the year, but the unemployment rate remained at 5 per cent. Retail sales rose in May, according to the advance report, after having declined more sharply in April than had been reported earlier; the average for the 2 months was close to the average for the first quarter.

The advance in average hourly earnings of production workers on nonfarm payrolls, which had been moderate in the first 4 months of 1973, remained so in May. However, this year's upward spiral in the wholesale price index continued, reflecting another substantial rise in prices of industrial commodities as well as a large increase in prices of farm and food products. In April the uptrend in the consumer price index was sustained at about the fast pace of the preceding 3 months. On June 13 the President announced that prices of all goods and services-except for rents and for prices of raw agricultural commodities sold at the farm level-would be frozen for a period not to exceed 60 days while a new and more effective system of controls was being devised to replace the economic stabilization program's third phase, which had been introduced in mid-January. Wages, profit margins, dividends, and

[^10]interest rates remained subject to the controls that had existed under Phase III.

The latest staff projections for the second half of 1973 were very similar to those of 4 weeks earlier, although business fixed investment now was expected to expand at a somewhat less rapid pace, as suggested by the latest Department of Commerce survey of business spending plans. It was still anticipated that residential construction outlays would decline appreciably, that business inventory investment would increase less rapidly, and that the rise in disposable income and consumption expenditures would slow considerably.

In foreign exchange markets, the dollar came under strong selling pressure in early May, chiefly against those continental European currencies that were jointly floating against the dollar. Speculative demands were reflected in appreciation of those currencies floating against the dollar rather than in additions to foreign official holdings of dollars. By the date of this meeting, several of the European currencies had appreciated by as much as 7 to 10 per cent since early May.

The U.S. merchandise trade balance, which had improved substantially in March, was in surplus in April for the first time in about a year and a half. Exports of nonagricultural goods rose further while those of agricultural goods were near the high level reached in March. The value of imports declined, even though import prices rose sharply as a result largely of the devaluation of the dollar in February.

At U.S. commercial banks, total loans expanded sharply further in May, reflecting large increases in business loans and in loans to nonbank financial institutions. Banks' holdings of securities rose somewhat, although their holdings of U.S. Government securities declined appreciably. Faced with strong demands for loans and with rising market interest rates, banks raised the prime rate applicable to large corporations in three steps of $1 / 4$ of a percentage point each, from $63 / 4$ per cent at the end of April to $71 / 2$ per cent in early June.

Growth in the narrowly defined money stock $\left(M_{1}\right),{ }^{2}$ which had been very slow in the first quarter of the year and had picked up in April, was rapid in May and early June. The more broadly

[^11]defined money stock $\left(M_{2}\right)^{3}$ also grew in May at a faster pace than it had earlier, reflecting solely the accelerated expansion in $M_{1}$; inflows of time and savings deposits other than large-denomination CD's were about the same as in April. However, growth in the bank credit proxy ${ }^{4}$ continued to moderate as the outstanding volume of large-denomination CD's grew less rapidly than it had earlier in the year. It appeared that over the first half of 1973, $M_{1}, M_{2}$, and the credit proxy would grow at annual rates of about 5.5 , 7.5 , and 13.0 per cent, respectively. ${ }^{5}$

Inflows of savings to nonbank thrift institutions-which had slowed considerably in April, in part because of earlier increases in market interest rates-picked up somewhat in May. Mortgage interest rates continued to edge up.

System open market operations since the meeting on May 15 had been guided by the Committee's decision to seek bank reserve and money market conditions consistent with somewhat slower growth in the monetary aggregates over the months immediately ahead than had occurred on average in the preceding 6 months. Operations had been directed toward fostering growth in reserves available to support private nonbank deposits (RPD's) at an annual rate in a range of 9 to 11 per cent in the May-June period, while avoiding marked changes in money market conditions.

Soon after the May meeting, it had appeared that in the May-June period the monetary aggregates would grow at rates in excess of acceptable ranges and that RPD's would grow at an annual rate above the range that the Committee had specified. Consequently, the System had acted promptly to resist the expansion in RPD's, and the Federal funds rate rose from around $73 / 4$ per cent in the days before the May meeting to an average slightly above 8 per cent in the statement week ending May 23. On May 24 and again on June 8, a majority of the Committee members concurred in recommendations by the Chairman that money market conditions should be permitted to tighten still further if necessary to limit

[^12]growth in RPD's, and the Federal funds rate rose to around $81 / 2$ per cent in the days before this meeting. In the 5 weeks ending June 13, member bank borrowings averaged about $\$ 1,855$ million, up from about $\$ 1,715$ million in the preceding 4 weeks.

In the inter-meeting period, short-term market interest rates advanced considerably further as money market conditions continued to firm and private credit demands remained strong. On May 16, moreover, imposition of marginal reserve requirements on large-denomination CD's was announced and the remaining Regulation $Q$ ceilings on such CD's were suspended. The yield on 3 -month Treasury bills-which had been relatively low, for the most part because of a shortage of bills in the market-rose more than other short-term rates as the market supply increased, mainly because of System sales of bills for its own account and that of foreign central banks; the market rate on such bills advanced from 6.17 per cent on the day before the May meeting to 7.20 per cent on the day before this meeting. Federal Reserve discount rates were raised $1 / 2$ percentage point, to $61 / 2$ per cent, at 10 Reserve Banks on June 11 and at the remaining two Banks by June 15.

In long-term markets, increases in interest rates were moderate, despite the further tightening of money market conditions and further increases in short-term interest rates. The over-all volume of new public offerings of corporate and State and local government bonds had changed little in May, and although a rise was in prospect for June, the volume for the second quarter as a whole appeared to be low for that season of the year.

The Committee agreed that the economic situation and prospects called for somewhat slower growth in monetary aggregates over the months immediately ahead than appeared indicated for the first half of the year. A staff analysis suggested that expansion in the demand for money was likely to slow considerably from the high rate indicated for the second quarter in response to the anticipated moderation in GNP growth, to the sharp rise in short-term interest rates that had occurred in recent months, and to the running down of the deposits that had been built up in association with the unusually large refunds of Federal income taxes in the second quarter. Moreover, net expansion in consumer-type time and savings deposits at commercial banks was expected to slow appreciably as a consequence of the recent rise in short-term market interest
rates. It was noted, however, that projections of the demand for money were subject to more uncertainty than usual because of the unknown effects of the short-term freeze on prices and the lack of information concerning the elements of the price and wage stabilization program to follow.

The staff analysis also indicated that demands for bank credit were likely to remain strong and that banks probably would continue to add substantial amounts to the outstanding volume of large-denomination CD's. Therefore, a relatively rapid rate of growth in RPD's in the June-July period-at an annual rate in a range of 9.5 to 11.5 per cent-was projected to be consistent with somewhat slower growth in the monetary aggregates over the months immediately ahead than appeared indicated for the first half of the year. The analysis suggested that such a rate of growth in RPD's might be associated with little change in money market conditions but that short- and long-term market interest rates in general might be subject to additional upward pressures in further adjustment to the firming in money market conditions that had occurred in recent weeks.

In view of the rapid monetary expansion in the second quarter and uncertainty about the demand for money in the months ahead, the Committee agreed that the lower end of the range specified for the annual rate of RPD growth in the June-July period should be lower than that projected in the staff analysis. Specifically, the members decided that operations should be directed at fostering RPD growth during that period at an annual rate within a range of 8 to 11.5 per cent. They agreed that money market conditions might be permitted to vary somewhat more in the inter-meeting period than had been contemplated at other recent meetings, if such variation appeared indicated in the conduct of operations directed toward achieving RPD growth in the desired range.

The members also agreed that, in the conduct of operations, account should be taken of international and domestic financial market developments and of deviations in monetary growth from an acceptable range. It was understood that the Chairman might call upon the Committee to consider the need for supplementary instructions before the next scheduled meeting if significant inconsistencies appeared to be developing among the Committee's various objectives and constraints.

The following domestic policy directive was issued to the Federal Reserve Bank of New York:

The information reviewed at this meeting, including recent developments in industrial production, employment, and retail sales, suggests that growth in economic activity is slowing in the current quarter from an exceptionally rapid pace in the two preceding quarters. The unemployment rate has remained at 5 per cent. Wage rates have advanced moderately thus far this year, but the rise in both wholesale and retail prices has been exceptionally rapid. On June 13 the President announced that prices will be frozen for a maximum of 60 days while a new and more effective system of controls is developed. Phase III controls affecting wages, profit margins, dividends, and interest rates remain in effect. In foreign exchange markets, several European currencies have appreciated against the dollar by 7 to 10 per cent since early May. The U.S. merchandise trade balance continued to improve in April, as exports other than agricultural products increased sharply further and imports dipped.

Following relatively slow growth earlier in the year, the narrowly defined money stock rose sharply in May and early June. Growth in consumer-type time and savings deposits changed little, while banks' net sales of large-denomination CD's declined further. On May 16 marginal reserve requirements were imposed on large-denomination CD's and the remaining Regulation $Q$ ceilings on such CD's were suspended. Business loan demands have remained strong, and since mid-May short-term market interest rates have advanced considerably further. Interest rates on long-term market securities in general have risen somewhat. On June 11 Federal Reserve discount rates were raised one-half point to $61 / 2$ per cent.

In light of the foregoing developments, it is the policy of the Federal Open Market Committee to foster financial conditions conducive to abatement of inflationary pressures, a more sustainable rate of advance in economic activity, and progress toward equilibrium in the country's balance of payments.

To implement this policy, while taking account of international and domestic financial market developments, the Committee seeks to achieve bank reserve and money market conditions consistent with somewhat slower growth in monetary aggregates over the months immediately ahead than appears indicated for the first half of the year.

Votes for this action: Messrs. Burns, Brimmer, Bucher, Daane, Francis, Holland, Mayo, Mitchell, Morris, Sheehan, Clay, and Debs. Votes against this action: None.<br>Absent and not voting: Messrs. Balles and Hayes. (Messrs. Clay and Debs voted as alternates for Messrs. Balles and Hayes, respectively.)

Subsequent to the meeting it appeared that in the June-July period the annual rate of growth in RPD's would be above 11.5 per cent and that growth in the monetary aggregates would exceed an acceptable range, even though money market conditions had continued to tighten. On July 6, 1973, a majority of the members concurred in a recommendation by the Chairman that money market conditions should be permitted to tighten still further if necessary to limit growth in RPD's.

## 2. Authorization for domestic open market operations

On July 6, 1973, Committee members voted to increase from $\$ 2$ billion to $\$ 3$ billion the limit on changes between Committee meetings in System Account holdings of U.S. Government and Federal agency securities specified in paragraph 1(a) of the authorization for domestic open market operations, effective immediately, for the period ending with the close of business on July 17, 1973.

Votes for this action: Messrs. Burns, Balles, Brimmer, Francis, Holland, Mitchell, Sheehan, Debs, and Winn. Votes against this action: None.

Absent and not voting: Messrs. Bucher, Daane, Hayes, Mayo, and Morris. (Messrs. Debs and Winn voted as alternates for Messrs. Hayes and Mayo, respectively.)

This action was taken on recommendation of the System Account Manager. The Manager had advised that a substantial volume of open market purchases of securities had been required in the period since the Committee's meeting on June 19 in order to offset the reserve absorption caused by a rise in Treasury balances at Federal Reserve Banks, an increase in currency in circulation, and a decline in Federal Reserve float, and he further advised that a temporary
increase in the leeway for System purchases appeared desirable in light of the prospective near-term needs to supply reserves.

## 3. Authorization for foreign currency operations

Effective July 10, 1973, the table contained in paragraph 2 of the authorization for foreign currency operations was amended to reflect increases in most of the System's swap arrangements. With these changes, paragraph 2 read as follows:

The Federal Open Market Committee directs the Federal Reserve Bank of New York to maintain reciprocal currency arrangements ("swap" arrangements) for the System Open Market Account for periods up to a maximum of 12 months with the following foreign banks, which are among those designated by the Board of Governors of the Federal Reserve System under Section 214.5 of Regulation N, Relations with Foreign Banks and Bankers, and with the approval of the Committee to renew such arrangements on maturity:
Amount of
Foreign bank arrangement (millions of dollars equivalent)
Austrian National Bank ..... 250
National Bank of Belgium ..... 1,000
Bank of Canada ..... 2,000
National Bank of Denmark ..... 250
Bank of England ..... 2,000
Bank of France ..... 2,000
German Federal Bank ..... 2,000
Bank of Italy ..... 2,000
Bank of Japan ..... 2,000
Bank of Mexico ..... 180
Netherlands Bank ..... 500
Bank of Norway ..... 250
Bank of Sweden ..... 300
Swiss National Bank ..... 1,400
Bank for International Settlements:
Dollars against Swiss francs ..... 600
Dollars against other European currencies ..... 1,250

The increases-ranging in size from $\$ 250$ million to $\$ 1$ bil-lion-in the swap arrangements with the Bank for International Settlements and with the central banks of Belgium, Canada, France, Germany, Italy, Japan, the Netherlands, and Switzerland were made pursuant to an action the Committee had taken by unanimous vote at its meeting on March 20, 1973. In that action, the Special Manager was authorized to undertake negotiations looking toward increases in System swap lines not exceeding $\$ 6$ billion in the aggregate, on the understanding that increases in individual lines, and the corresponding amendments to the foreign currency authorization, would become effective upon approval by Chairman Burns, after consultation with the U.S. Treasury. The remaining in-creases-of $\$ 50$ million each-in the swap arrangements with the central banks of Austria, Denmark, Mexico, Norway, and Sweden were authorized by unanimous vote of the Committee at its meeting on June 19, 1973, on the understanding that they would become effective on the same date as the swap line increases for which negotiations had been authorized on March 20.

This expansion of the System's swap network was carried out in conformity with the policy that had been agreed to at the meeting of Finance Ministers and central bank governors in Paris on March 16, 1973.

## Law Department

Statutes, regulations, interpretations, and decisions

## RESERVES OF MEMBER BANKS

The Board of Governors has increased the marginal reserve requirement from 8 to 11 per cent, subject to the proviso that in no event shall the reserves required of a member bank on its aggregate amount of time and savings deposits exceed 10 per cent.

## AMENDMENT TO REGULATION D

Effective October 4, 1973, section 204.5(a) (1)(ii) and (2)(ii) of Regulation $D$ is amended to read as follows:

## SECTION 204.5 RESERVE REQUIREMENTS

(a) Reserve percentages. Pursuant to the provisions of section 19 of the Federal Reserve Act and § 204.2(a) and subject to paragraph (c) of this section, the Board of Governors of the Federal Reserve System hereby prescribes the following reserve balances that each member bank of the Federal Reserve System is required to maintain on deposit with the Federal Reserve Bank of its district:
(1) If not in a reserve city-
(ii) 3 per cent of its other time deposits up to $\$ 5$ million, plus 5 per cent of such deposits in excess of $\$ 5$ million: Provided, however, That a member bank shall maintain a reserve balance equal to 11 per cent of the amount by which the daily average amount of time deposits of the types hereinafter specified exceeds either the daily average amount of such time deposits outstanding during the computation period ending May 16 , 1973 , or $\$ 10$ million, whichever is greater, and such 11 per cent reserve percentage shall apply with respect to time deposits of the following types:
(a) time deposits of $\$ 100,000$ or more; and
(b) time deposits represented by promissory notes, acknowledgments of advance, due bills, or similar obligations issued by a member bank's affiliate, as provided in § 204.1(f); and
(c) time deposits represented by bank acceptances, as provided in $\$ 204.1(f)$;
Provided further. That in no event shall the reserves required on its aggregate amount of time and savings deposits exceed 10 per cent; and * * *
(2) If in a reserve city (except as to any bank located in such a city that is permitted by the Board of Governors of the Federal Reserve System, pursuant to $\S 204.2(\mathrm{a})(2)$, to maintain the reserves specified in subparagraph (I) of this paragraph)-

*     *         * 

(ii) 3 per cent of its other time deposits up to $\$ 5$ million, plus 5 per cent of such deposits in excess of $\$ 5$ million: Provided, however, That a member bank shall maintain a reserve balance equal to 11 per cent of the amount by which the daily average amount of time deposits of the types hereinafter specified exceeds either the daily average amount of such time deposits outstanding during the computation period ending May 16 , 1973, or $\$ 10$ million, whichever is greater, and such 11 per cent reserve percentage shall apply with respect to time deposits of the following types:
(a) time deposits of $\$ 100,000$ or more; and
(b) time deposits represented by promissory notes, acknowledgments of advance, due bills, or similar obligations issued by a member bank's affiliate, as provided in § 204.1(f); and
(c) time deposits represented by bank acceptances, as provided in $\$ 204.1$ (f);
Provided further, That in no event shall the reserves required on its aggregate amount of time and savings deposits exceed 10 per cent; and * * *

## INTEREST ON DEPOSITS

The Board of Governors has amended Regulation $Q$ to treat as a payment of a time deposit before maturity any amendment to the time deposit contract that results in either an increase in interest rate or a change in the maturity of the deposit. Such treatment would mean that the penalty for early withdrawals, provided in $\S 217.4$ (d) of Reg-
ulation $Q$, would apply at the time of any such amendment to the contract.

## AMENDMENT TO REGULATION Q

Effective September 10, 1973, section 217.4(d) of its Regulation Q ( 12 CFR 217) is amended by adding a new sentence at the end thereof to read as follows:

## SECTION 217.4 PAYMENT OF TIME DEPOSITS BEFORE MATURITY

(d) Penalty for early withdrawals. * * *

Any amendment of a time deposit contract that results in an increase in the rate of interest paid or in a change in the maturity of the deposit constitutes a payment of the time deposit before maturity.

## INTERPRETATION OF REGULATION Z

PREPAID FINANCE CHARGES; ADD-ONS AND DISCOUNTS

Sections 226.8(c)(6), 226.8(d)(2) and 226.8(e) (1) require that certain finance charges be disclosed
as "prepaid finance charges." They also require that such prepaid finance charges be excluded or deducted from the credit extended in arriving at the "amount financed." The question arises whether add-on, discount or other precomputed finance charges which are reflected in the face amount of the debt instrument as part of the customer's obligation, but which are excluded from the 'amount financed,'’ must be labeled as "prepaid" finance charges.

The concept of prepaid finance charges was adopted to insure that the "amount financed", reflected only that credit of which the customer had the actual use. Precomputed finance charges which are included in the face amount of the obligation are not the type contemplated by the "prepaid" finance charge disclosure concept. Although such precomputed finance charges are not to be included in the "Amount financed," they need not be regarded as finance charges "paid separately" or "withheld by the creditor from the proceeds of the credit extended" within the meaning of $\S 226.8(\mathrm{e})$ to require labeling "prepaid" under §§ 226.8(c)(6) and 226.8(d)(2). They are "finance charges', of course, to be disclosed under §§ $226.8(\mathrm{c})(8)$ and $226.8(\mathrm{~d})(3)$.

## BANK HOLDING COMPANY AND BANK MERGER ORDERS ISSUED BY THE BOARD OF GOVERNORS

## ORDERS UNDER SECTION 3 OF BANK HOLDING COMPANY ACT

## CEGROVE CORPORATION, WAYNE TOWNSHIP, NEW JERSEY

## Order Denying Acquisition of Bank

Cegrove Corporation, Wayne Township, New Jersey, a bank holding company within the meaning of the Bank Holding Company Act, has applied for the Board's approval under § 3(a)(3) of the Act ( 12 U.S.C. 1842 (a)(3)) to acquire 100 per cent of the voting shares (less directors' qualifying shares) of The Ramapo Bank, Wayne Township, New Jersey ('Bank").

Notice of the application, affording opportunity for interested persons to submit comments and views, has been given in accordance with § 3(b) of the Act. The time for filing comments and views has expired, and the Board has considered the application and all comments received in light of the factors set forth in $\S 3(c)$ of the Act ( 12 U.S.C. 1842(c)).

Applicant controls one bank, Pilgrim State Bank, Cedar Grove, New Jersey, with deposits of $\$ 5$ million which represents approximately 0.1
per cent of deposits in commercial banks in the Greater Newark market. Bank, with deposits of approximately $\$ 35$ million, operates three branches and is the 22nd largest of 35 organizations operating in the market approximated by the Paterson, New Jersey, SMSA. (All deposit data are as of December 31, 1972, and all market data are as of June 30, 1972.)

The Willowbrook office of Bank is separated from Pilgrim's office by only five miles, but penetration data show that neither bank derives a significant amount of business from the service area of the other and it appears that this proposal would not eliminate significant competition. There has been close cooperation in the management and operation of the two banks and it seems unlikely that future competition will develop. Apparently, consummation of the proposal would not appreciably raise the barriers to entry in any relevant area nor affect adversely the competitive situation in any relevant area, and there remains available a significant number of potential 'foothold" acquisitions to afford entry into the relevant markets. Competitive considerations are regarded as consistent with approval.

In regard to financial considerations, Bank's net income decreased from $\$ .45$ per share in 1971 to $\$ .41$ per share in 1972. Bank's recent six months' figures indicate earnings per share of $\$ .20$. Pilgrim State Bank opened in March of 1971 and has never listed a profit, and it is questionable that it could turn a profit for 1973. Both banks have an aggressive loan posture and there is some evidence of a strain on Bank's capital. The proposal contemplates an undertaking by Applicant of $\$ 1.5$ million in debt. On the record herein, the Board regards it as unlikely that cash derived from operations of the proposed expanded holding company system would be sufficient to service the debt without creating an undue strain on the capital of both banks involved.

Moreover, in light of the earnings picture and Applicant's proposed debt positions of the companies involved, it is not unreasonable to conclude that outside investors would not be attracted to the holding company. The Board has serious reservations as to the ability of Applicant to service the debt or raise additional capital. As the Board has stated many times, a holding company should be a source of strength for its subsidiary banks rather than vice versa. Applicant, a highly leveraged holding company, does not appear to be in a position to assist both Bank and Pilgrim Bank, the newly formed and as yet unprofitable bank in the system. In these circumstances, and in view of the entire record, the Board views the uncertain financial prospects as considerations weighing against approval of this transaction.

It should be emphasized that there is no evidence that the present financial condition of Bank or Applicant is unsound. The Board is concerned here only with a proposed expansion of a holding company and the problems related to acquisition debt and the capital structure of the proposed expanded institution.

Applicant proposes to offer services that are not currently offered by the banks involved. There is no evidence that the relevant markets are not adequately served at the present time. Considerations relating to the convenience and needs of the community to be served are regarded as consistent with, but lend no weight toward, approval. Managerial resources of Applicant, its subsidiary bank, and Bank are regarded as adequate but these considerations do not lend weight toward approval.

In light of the entire record, it is the Board's judgment that the proposed transaction would not be in the public interest and should be, and hereby is, denied.

By order of the Board of Governors, effective August 31, 1973.

Voting for this action: Vice Chairman Mitchell and Governors Daane, Brimmer, Sheehan, Bucher, and Holland. Absent and not voting: Chairman Burns.
(Signed) Theodore E. Allison, [sEal] Assistant Secretary of the Board.

## FINANCIAL GENERAL BANKSHARES, INC., WASHINGTON, D.C.

## Order Conditionally Approving Acquisition of Bank

Financial General Bankshares, Inc., Washington, D.C., a bank holding company within the meaning of the Bank Holding Company Act, and its two-wholly owned subsidiaries, The Morris Plan Corporation and Virginia Bankshares, Inc., both of Washington, D.C. (collectively referred to as "Applicants"), have applied for the Board's approval under § 3(a)(3) of the Act ( 12 U.S.C. 1842(a)(3)), to acquire 17,000 or more, but not to exceed 80 per cent, of the voting shares of Clarendon Bank \& Trust, Fairfax County, Virginia ('Bank").

Notice of the application, affording opportunity for interested persons to submit comments and views, has been given in accordance with § 3(b) of the Act. The time for filing comments and views has expired and the Board has considered the application and all comments received in light of the factors set forth in § 3(c) of the Act (12 U.S.C. 1842(c)).

On January 10, 1973, the Federal Deposit Insurance Corporation approved the merger of Woodlawn National Bank, Alexandria, Virginia (deposits of $\$ 11.5$ million), into Bank (deposits of $\$ 154$ million). Prior to that merger, Applicants owned 141,800 (or 55.12 per cent) of the outstanding shares of Bank. As a result of the merger, Applicants' ownership has dropped to 44.7 per cent. Although it is acknowledged that effective control still exists, the purpose of the instant proposal is to increase Applicants' degree of control of Bank to at least its former level of more than 50 per cent, and would have no effect on existing or future competition. The Board concludes that competitive considerations are consistent with approval of the application.
The financial and managerial resources and future prospects of Applicants are generally satisfactory and consistent with approval of the application. Applicants propose to acquire up to 80 per cent of the outstanding shares of Bank by means of a cash offer of $\$ 55$ per share to all minority
shareholders. A pro rata adjustment will be made, whereby Applicants will take a proportionate number of shares from each tendering stockholder; in the event that acceptance of the number of shares tendered would increase Applicant's percentage of ownership to more than 80 per cent. The Board has previously determined such a purchase procedure to be equitable to minority shareholders and a reasonable means of protecting both the offeror and the offeree. (See 1967 Federal Reserve Bulletin 1567, 1570). Considerations relating to the convenience and needs of the community to be served are also consistent with approval of the application. Control by International Bank, Washington, D.C., (which is engaged in non-banking business) over Financial General is a matter of concern to the Board. To the extent that International Bank controls or exercises controlling influence over Financial General, an acquisition by Financial General would be regarded by the Board as an acquisition by International Bank under the provisions of the Bank Holding Company Act. Accordingly, approval of the application is hereby conditioned upon prior termination by International Bank of any such control or controlling influence over Financial General. It is the Board's judgment that consummation of the proposed acquisition would be in the public interest and that the application should be approved provided that such control by International Bank is terminated.

On the basis of the record, the application is approved for the reasons summarized above and upon the condition that no shares of Bank may be acquired under this Order prior to the date on which the Board concludes that International Bank does not control nor exercise a controlling influence over Applicant. The transaction shall not be consummated (a) before the thirtieth calendar day following the effective date of this Order or (b) later than 180 days after the effective date of this Order unless such period is extended for good cause by the Board or by the Federal Reserve Bank of Richmond pursuant to delegated authority.

By order of the Board of Governors, effective August 31, 1973.

[^13](Signed) Theodore E. Allison, [SEAL] Assistant Secretary of the Board.

## FINANCIAL GENERAL BANKSHARES, INC., WASHINGTON, D.C.

## Order Conditionally Approving Acquisition of Bank

Financial General Bankshares, Inc., Washington, D.C., a bank holding company within the meaning of the Bank Holding Company Act, has applied for the Board's approval under § 3(a)(3) of the Act ( 12 U.S.C. 1842(a)(3)) to acquire 50 per cent plus one share or more of the voting shares of Second National Bank of Richmond, Richmond, Virginia.

Notice of the application, affording opportunity for interested persons to submit comments and views, has been given in accordance with §3(b) of the Act. The time for filing comments and views has expired, and those received have been considered in light of the factors set forth in § 3(c) of the Act (12 U.S.C. 1842(c)).

Applicant, holds interests in 25 banks in seven States, the District of Columbia, and the Virgin Islands. The operations of Applicant's banking subsidiaries were principally conducted in the State of Virginia on July 1, 1966, the date on which Applicant became a bank holding company. Therefore, the effect of section 3(d) of the Act is to prohibit the Board from approving an application by Applicant for the direct or indirect acquisition of voting shares of any additional bank not located in the State of Virginia. Applicant is the seventh largest banking organization in Virginia, controlling eight banks in Virginia with aggregate deposits of $\$ 573$ million representing 5.3 per cent of all deposits of commercial banks in the State. ${ }^{1}$ Acquisition of Bank (deposits of $\$ 30.7$ million) would constitute Applicant's initial entry into the Richmond banking market (approximated by the city of Richmond and the counties of Chesterfield, Hanover, and Henrico) and would not change Applicant's ranking among banking organizations in the State.

As of June 30, 1972, Bank was the eighth largest of 14 banks in the Richmond banking market, controlling 1.5 per cent of total deposits in that market. Applicant's nearest subsidiary office to Bank is more than 100 miles distant. It appears that no meaningful competition exists between Bank and any of Applicant's subsidiary banking offices. Further, it seems unlikely that meaningful competition would develop in the future between Bank and Applicant in light of the

[^14]facts presented, notably, the distances separating these banks and the Virginia statutes prohibiting Applicant's subsidiaries from de novo branching into the Richmond banking market. It appears that acquisition of Bank would not have a significantly adverse effect on the remaining banks in the relevant market. Furthermore, entry by Applicant may have a procompetitive effect by enabling Bank to compete more effectively with the four largest banks in the Richmond market which together controlled approximately 82 per cent of market deposits on June 30, 1972. On the basis of the record before it, the Board concludes that consummation of the proposal herein would not have an adverse effect on competition in any relevant area.

The financial condition, managerial resources and future prospects of Applicant and its subsidiary banks appear satisfactory. Bank's financial and managerial resources and future prospects are regarded as satisfactory and the ability of Applicant to strengthen Bank's capital position lends weight toward approval of the application. Considerations relating to the convenience and needs of the community to be served are consistent with approval of the application. Control by International Bank, Washington, D.C., (which is engaged in nonbanking business) over Applicant is a matter of concern to the Board. To the extent that International Bank controls or exercises controlling influence over Applicant, an acquisition by Applicant would be regarded by the Board as an acquisition by International Bank under the provisions of the Bank Holding Company Act. Accordingly, approval of the application is hereby conditioned upon prior termination by International Bank of any such control or controlling influence over Applicant. It is the Board's judgment that consummation of the proposed acquisition would be in the public interest and that the application should be approved provided that such control by International Bank is terminated.

On the basis of the record, the application is approved for the reasons summarized above and upon the condition that no shares of Bank may be acquired under this Order prior to the date on which the Board concludes that International Bank does not control nor exercise a controlling influence over Applicant. The transaction shall not be consummated (a) before the thirtieth calendar day following the effective date of this Order, or (b) later than 180 days after the effective date of this Order, unless such period is extended for good cause by the Board.

By order of the Board of Governors, effective August 31, 1973.

Voting for this action: Vice Chairman Mitchell and Governors Daane, Brimmer, Sheehan, Bucher, and Holland. Absent and not voting: Chairman Burns.
(Signed) Theodore E. Allison, [SEAL] Assistant Secretary of the Board.

## MULTIBANK FINANCIAL CORP., BOSTON, MASSACHUSETTS

## Order Approving Acquisition of Bank

Multibank Financial Corp., Boston, Massachusetts, a bank holding company within the meaning of the Bank Holding Company Act, has applied for the Board's approval under § 3(a)(3) of the Act (12 U.S.C. 1842(a)(3)) to acquire 80 per cent or more of the voting shares of B.M.C. Durfee Trust Company, Fall River, Massachusetts ("Bank’’).

Notice of the application, affording opportunity for interested persons to submit comments and views, has been given in accordance with § 3(b) of the Act. The time for filing comments and views has expired, and the Board has considered the application and all comments received in light of the factors set forth in $\$ 3(c)$ of the Act ( 12 U.S.C. 1842(c)).

Applicant controls five banks with total deposits of $\$ 446.9$ million, representing approximately four per cent of the total deposits of commercial banks in the State, and is the sixth largest banking organization in Massachusetts. (All banking data are as of December 31, 1972.) The acquisition of Bank ( $\$ 56$ million in deposits) would increase Applicant's share of the total State deposits by 0.45 per cent, and it would remain the sixth largest banking organization in Massachusetts. Bank is the second largest of six commercial banking organizations in the Fall River banking market ${ }^{1}$ which is deemed the relevant market. If the five mutual savings banks located in the market are also considered, Bank is the fifth largest of eleven banking organizations in the market. Bank's market share is 30.2 per cent when only the commercial banks in the market are considered, but drops to 13.3 per cent if all banking organizations in the market are considered. The five mutual savings

[^15]banks in the Fall River market hold aggregate deposits greater than those held by the six commercial banks in the market, and their competition with the commercial banks is likely to increase in the future through their solicitation and acceptance of accounts subject to negotiable orders of withdrawal (NOW accounts). The proposed acquisition would represent Applicant's initial entry into this market.

Applicant's banking subsidiary nearest to Bank is located approximately 12 miles away in northern Bristol County in the Attleboro market, a separate market area. There presently exists no meaningful competition between Bank and that subsidiary. Although Applicant's banking subsidiary and Bank may each lawfully open branch offices in the respective market areas of the other under Massachusetts law, consummation of the proposed transaction would not have a significant adverse effect on the development of future competition. It is not expected that, absent such consummation, Applicant's banking subsidiary would avail itself of the opportunity to open branch offices in the Fall River market in view of the present economic condition of that market. The population growth of the Fall River SMSA between 1960 and 1970 was 8.6 per cent, compared to growth of 12.1 per cent by the entire State over the same period. The population per banking office in the SMSA is below that of the State, and, with deposits per banking office of $\$ 7.0$ million, the SMSA is substantially below the State average of $\$ 13.3$ million. Further, the Greater Fall River area has been classified as a substandard employment area by the Economic Development Administration. Similarly, although Bank recently branched into the fringe of the market area of Applicant's closest banking subsidiary, future branch expansion in that market by Bank in the near future is considered unlikely in view of its limited capital base and the fact that both the population per banking office and deposits per banking office of the Attleboro area are substantially below State averages.

Should the proposed transaction be consummated, Bank would become Applicant's second banking subsidiary in Bristol County; however, there would remain seven independent banks which offer holding company access to the County. Even if Bristol County should be considered the relevant market, consummation of this proposal would not increase the level of concentration of banking resources in the County to a degree that would endanger competition since Applicant would hold thereafter only 16.5 per cent
of total commercial bank deposits therein. Further, the significant role of mutual savings banks in the County, holding, as they do, aggregate deposits of $\$ 834$ million compared to aggregate deposits of commercial banks amounting to approximately $\$ 522$ million, mitigates the significance of the 16.5 per cent figure. The Board concludes that the acquisition would have no significant adverse effect on the competitive situation or the concentration of banking resources in the area.

Applicant has agreed to inject capital into certain of its subsidiary banks. In that light, the Board finds the financial condition and managerial resources of the Applicant, its subsidiaries, and Bank satisfactory; and prospects for each are favorable.

Applicant intends to have Bank offer certain services not presently offered by Bank, principally equipment leasing and accounts receivable financing, as well as to implement a capital improvement program for Bank. The communities to be served should also benefit from larger lending limits and the expertise of specialized personnel in the holding company organization to become available to Bank as a result of consummation of the proposed transaction. Accordingly, considerations relating to convenience and needs of the communities to be served are consistent with approval. It is the Board's judgment that consummation of the proposed acquisition would be in the public interest and that the application should be approved.

Bank's sole subsidiary engages in the operation of a commercial parking lot on land owned by the subsidiary. Operation of a commercial parking lot is not an activity that is "closely related to banking", and Bank, as a subsidiary of a bank holding company, may not continue to engage in that activity either on the basis of section 4(c)(8) or section 4(c)(5) of the Act (12 U.S.C. 1843(c)(8) and (c)(5)). It is therefore expected that Bank, preferably prior to consummation of the proposed transaction, but in any event within a reasonable time after such consummation, will divest itself of that subsidiary, and approval of this application is conditioned upon such divestiture.

On the basis of the record, the application is approved for the reasons summarized above. The transaction shall not be consummated (a) before the thirtieth calendar day following the effective date of this Order or (b) later than three months after the effective date of this Order, unless such period is extended for good cause by the Board, or by the Federal Reserve Bank of Boston pursuant to delegated authority.

By order of the Board of Governors effective August 31, 1973.

Voting for this action: Chairman Burns and Governors Sheehan, Bucher, and Holland. Voting against this action: Governor Brimmer. Absent and not voting: Governors Mitchell and Daane.
(Signed) Theodore E. Allison, [SEAL] Assistant Secretary of the Board.

## Dissenting Statement of Governor Brimmer

I would deny this application. Consummation of the transaction would adversely affect future competition throughout Bristol County and unduly increase the level of concentration of commercial banking resources in that County.

The majority concentrates on the issue of whether Applicant's Attleboro subsidiary or Bank would branch into one another's market areas. By so doing, they ignore the high probability that Bank and Applicant's subsidiary would confront one another in other market areas within Bristol County-if this application were denied. Since both are limited to geographic expansion within the boundaries of the County by Massachusetts law, it is highly likely that the two would eventually establish branch offices in competition with one another. In fact, Bank has already branched into Taunton, and it appears likely that in time significant competition would develop between the two.

The majority dismisses the likelihood that future competition in the Attleboro and Fall River areas would develop between Bank and Applicant's subsidiary. It concludes that Bank would not branch into the Attleboro area (this despite the fact that Bank has already opened a branch office on the fringe of that area) in the belief that Bank lacks the capital necessary to support geographic expansion. The majority also suggest that the Attleboro area is not an attractive area for de novo branching. I believe they are wrong on both grounds.

The majority ignores the fact that Bank has pursued an aggressive branching policy-having opened three branch offices outside of Fall River in the last four years. There is no evidence to suggest that this policy would be abandoned if the proposed transaction were not approved. Further, the population growth of northwest Bristol County (where Attleboro is located) has considerably outpaced that of the rest of the County. Between 1960 and 1970 , it increased by 26.9 per cent while the population of the County as a whole rose by only 11.5 per cent. With an estimated unemployment
rate of 3.2 per cent, Attleboro possesses a strong economy. Nor is the attractiveness of the Attleboro area for de novo branching lessened by its population per banking office ratio which the majority notes is below the State average. The ratio is deceptive unless considered against the background of the substantial commuting into Attleboro for employment and shopping by residents of the surrounding towns-some of which have high population to banking office ratios. Contrary to the majority's conclusions, the Attleboro area is quite attractive for de novo branching entry, and Bank is quite likely to pursue such entry absent consummation of the proposed transaction.

I also cannot agree with the majority's conclusion that Applicant's Attleboro subsidiary would not establish a branch office in the Fall River market. The majority, noting the depressed status of the economy of Fall River, fails to recognize that the Fall River market extends beyond the boundaries of the City of Fall River. All of the market's population growth between 1960 and 1970 occurred in the suburbs of Fall River. That growth apparently represents a reversal of the long-run downward trend of the market's economy. The market's unemployment rate, although undesirably high, has declined in recent years, reinforcing the conclusion that the decline of the Fall River area may be reversing itself. However, the attractiveness of the Fall River market for de novo entry by branching is best demonstrated by the fact that the largest commercial bank located in Bristol County recently received regulatory approval to establish a new branch office in the City of Fall River.

In assessing the competitive effects of this application, I believe that the majority, rather than looking to the medium-term and long-term adverse effects of the acquisition, has focused its concern exclusively on banking competition in Massachusetts today. I would not so limit my consideration. The competitive standard set forth in the Act "requires not merely an appraisal of the immediate impact of [an acquisition] upon competition, but a prediction of its impact upon competitive conditions in the future." I would arrest the anticompetitive tendencies of this proposed transaction at the outset.

In conclusion, I find that the anticompetitive effects of the proposed acquisition are not clearly outweighed in the public interest by the effect of the transaction on the convenience and needs of the community to be served. I would deny the application.

## AFFILIATED BANKSHARES OF COLORADO,

 INC., BOULDER, COLORADO
## Order Approving Merger of Bank Holding Companies

Affiliated Bankshares of Colorado, Inc. ("Affiliated''), Boulder, Colorado, a bank holding company within the meaning of the Bank Holding Company Act, has applied for the Board's approval under $\S 3(\mathrm{a})(5)$ of the Act ( 12 U.S.C. 1842(a)(5)) to merge with First Colorado Bankshares, Inc. ('First Colorado'’), Littleton, Colorado, under the certificate of incorporation and name of Affiliated Bankshares of Colorado.

Notice of receipt of the application, affording an opportunity for interested persons to submit comments and views, has been given in accordance with $\S 3(b)$ of the Act. The time for filing comments and views has expired. The Board has considered the application and all comments received in the light of the factors set forth in § 3(c) of the Act ( 12 U.S.C. 1842(c)) and finds that:

Affiliated, having 14 subsidiary banks with total deposits of $\$ 378$ million, is the fourth largest banking organization in Colorado and controls 6.4 per cent of the total commercial bank deposits in the State. (Unless otherwise indicated, banking data are as of June 30, 1972, adjusted to reflect acquisitions approved by the Board through May 31, 1973.) First Colorado controls four banks (in and around the City of Denver) with total deposits of $\$ 234$ million and ranks as the State's seventh largest banking organization controlling about 4 per cent of the total deposits in the State. As a result of consummation of the proposal, Affiliated would control 10.3 per cent of the total deposits in commercial banks in Colorado and would become the State's third largest banking organization. The first, second, and third largest banking organizations in the State now control, respectively, about 16,15 , and 9 per cent of the total commercial bank deposits.

Affiliated's present subsidiary banks are all located along the populous Eastern Slope of the Rocky Mountains, and operate variously in each of four major banking markets in the State. Affiliated is the only large banking organization in Colorado not now represented in the Denver area. In the Colorado Springs market, where there are 20 banks with $\$ 476$ million in total deposits, Applicant is the largest banking organization with three subsidiary banks holding 31 per cent of the deposits. Applicant is also the largest banking organization in the Boulder market where Appli-
cant's four subsidiary banks hold 35 per cent of the total of $\$ 280$ million in deposits held by the 14 banks operating there. In the Greeley market, Applicant's four subsidiary banks hold 39 per cent of the total of $\$ 220$ million in deposits held by the 16 banks there, making Applicant the largest banking organization in that market. Applicant is the third largest banking organization in the Fort Collins market with its three subsidiary banks holding about 21 per cent of the $\$ 219$ million in deposits held by the 11 banks there.

In contrast to Affiliated, First Colorado operates solely in the Denver area, with its four subsidiary banks accounting for 6.4 per cent of the over $\$ 3$ billion in deposits of the 64 commercial banks operating there. Except for one of Affiliated's subsidiaries in Boulder, which derives a little more than $\$ 1$ million in deposits from the Denver area, there is no existing competition between the subsidiary banks of Affiliated and of First Colorado. The closest banking offices of any subsidiary of either are more than 25 miles apart. It appears, therefore, that no significant existing banking competition would be eliminated as a result of consummation of the proposal.

Affiliated has a mortgage banking subsidiary making $1-4$ family mortgage loans and construction loans in the Denver market, as does First Colorado. However, the amount of competition between the two mortgage companies is not regarded as being substantial. The combined share of the two institutions in the 1-4 family mortgage market represents less than 5 per cent of such mortgages in the Denver market. Furthermore, there are some 20 mortgage companies, 17 savings and loan associations, and 63 commercial banks engaged in mortgage lending in the Denver market. In view of the small market share of the two institutions and the large number of competitors in the market, the Board does not consider the amount of existing competition that would be eliminated on 1-4 family residential mortgages to be significant. In addition, since combined they made less than $\$ 50$ million in the construction loans during 1972 and since the market for construction loans is considered to be regional in scope, the amount of existing competition in this product area that would be eliminated as a result of the proposal is minimal.

In commenting on the subject proposal, the Department of Justice indicated that some existing banking competition and some competition in mortgage lending in the Denver area would be eliminated. It further expressed the view that consummation of the proposal would eliminate sig-
nificant potential competition since Affiliated and First Colorado may be regarded as significant potential entrants into markets which they both do not presently serve. In particular, the Department indicated that First Colorado was a significant potential entrant into the Boulder, Colorado Springs, Greeley, and Fort Collins banking markets, and that consummation of the proposal would thus eliminate substantial potential competition between Affiliated and First Colorado in those markets. The Department noted also that the number of significant banking organizations in Colorado would be reduced from eight to seven as the result of the removal of First Colorado as an independent banking organization. As discussed more fully above, the Board does not consider the effects of the proposal on existing competition to be significant. Moreover, as discussed below, in the Board's judgment consummation of the proposal would not have adverse effects on potential competition.

First Colorado was originally formed in 1962 with three subsidiary banks. It established its fourth subsidiary bank de novo in 1963, and has not made any acquisitions since that time. Furthermore, taking into account the financial and managerial resources of First Colorado and its subsidiaries, which are discussed below, it is doubtful that it possesses the necessary financial resources or inclination to alter its present status as a Denver area holding company. In view of these considerations, it is unlikely that the Board would approve a plan by First Colorado to expand its operations, even if one were to be submitted, unless extensive measures were adopted to strengthen and improve the financial condition and management of First Colorado.

With respect to the prospect of Affiliated expanding into the Denver area, Affiliated does possess both the financial and managerial resources for such expansion, either de novo or through a foothold acquisition, and to that extent some potential competition between the bank holding companies in the Denver area would be eliminated as a result of this proposal. However, the Board does not regard this elimination of such potential competition to be significant, inasmuch as First Colorado does not appear to be an aggressive competitor in the Denver market, holding only 6.4 per cent of the total deposits in the Denver area.

As a result of the consummation of the proposal, competition in the Denver area should be enhanced since First Colorado's subsidiary banks in Denver, which are not presently significant competitors due to their size and their impaired financial condition, should become more effective competitors as a
result of increased financial resources which would be available from Affiliated. This will create a stronger alternative to the four largest Denver banking organizations which control over 60 per cent of market deposits. The proposal should also promote overall banking competition in the State since entrance into Denver, the financial and commercial center of the State, through the subject acquisition should enhance Affiliated's competitive position and make it comparable in size to the State's two larger bank holding companies already headquartered in Denver.

On the basis of the foregoing and the facts of record, it appears that consummation of the proposal would not substantially lessen competition in any relevant area nor have a significantly adverse effect on existing competition, nor foreclose the development of significant competition in any relevant area. The Board concludes, therefore, that competitive considerations are consistent with approval of the application.

The financial conditions of Affiliated and each of its subsidiaries are regarded as generally satisfactory and the prospects of the group appear favoarble. As noted previously in connection with the Board's assessment of the prospects of First Colorado expanding into other markets, the financial condition of First Colorado and its subsidiaries is not regarded as strong and is less than the Board* regards as desirable for a bank holding company. At the present time three of First Colorado's subsidiary banks are in need of additional capital to service present operations, as well as to support future expansion, which capital First Colorado is unable to provide without borrowing and increasing its already high level of debt. In addition, First Colorado lacks the managerial resources to adequately staff its present banking subsidiaries. Absent approval of the present proposal, the Board considers First Colorado's future prospects to be only fair. As a result of the consummation of this proposal, Affiliated will be able to provide management personnel for First Colorado's banking subsidiaries. Moreover, Affiliated plans to raise \$6 million for recapitalization of the banks being acquired and for the future expansion of the banking premises of those banks. Implementation of these plans should strengthen and improve the financial condition of First Colorado's subsidiaries and enhance the prospects of the banks for the future. Therefore, the Board finds that considerations relating to financial and managerial resources lend some weight for approval of the application.

There is no evidence indicating that the major banking needs of the areas served by the subsidiary
banks of Affiliated or of First Colorado are not being met by the existing institutions. However, as a result of this proposal, the present subsidiaries of First Colorado should become more effective competitors in the Denver market because of their improved financial conditions. Affiliated would also be in a position to develop an effective correspondent banking division in Security National Bank (First Colorado's subsidiary bank in downtown Denver), and thus provide an additional source for such services to Colorado banks. Furthermore, as a result of the acquisition of First Colorado, Affiliated should be able to broaden and generally improve its banking services throughout Colorado, as well as providing larger overall lending limits to meet the needs of larger borrowers. These considerations relating to convenience and needs are regarded as being consistent with, and lending some weight toward, approval of the application.

On the basis of the record, the application is approved for the reasons summarized above. The transaction shall not be consummated (a) before the thirtieth calendar day following the effective date of this Order or (b) later than three months after the effective date of this Order, unless such period is extended for good cause by the Board, or by the Federal Reserve Bank of Kansas City pursuant to delegated authority.

By order of the Board of Governors, effective August 9, 1973.
Voting for this action: Vice Chairman Mitchell and Governors Sheehan, Bucher, and Holland. Voting against this action: Governor Brimmer. Absent and not voting: Chairman Burns and Governor Daane.

## Dissenting Statement of Governor Brimmer

I would deny this application. This proposal would merge two viable bank holding companies in a State whose banking structure is already highly concentrated. The only public benefit that could possibily come from the merger is the strengthening of one of First Colorado's four banks in the Denver banking market. The evidence shows clearly that its other subsidiaries are performing well, and their prospects are quite promising. This minor benefit is by no means sufficient to outweigh the serious adverse effects produced by the elimination of significant potential competition and the further increase in the concentration of banking resources in Colorado.

The crucial issue here is the way in which potential competition is perceived. The majority agrees that Affiliated Bankshares is likely to enter the Denver banking market eventually. However, it seems to believe that-by hastening its entry through sanctioning the present anticompetitive merger-Affiliated will be able to compete more effectively with the State's largest banking organizations. Unfortunately, this view gives too little weight to the fact that First Colorado is already competing successfully in the Denver market. In fact, one can think of First Colorado as a strong, local organization that is providing a generally efficient (and profitable) banking service in rapidly growing sectors of the Denver market. The fact that First Colorado is not likely to become a strong, State-wide competitor is not sufficient reason to allow it to disappear. On the contrary, there is no compelling reason why every bank holding company should be expected to develop a Statewide network. Some will be regional in scope, and others (because of branching restrictions) will operate a small number of banks in local markets. These small and medium-size holding companies can also play an effective role as elements in a progressive banking structure. By sanctioning this merger, the majority has limited significantly chances for such a structure to evolve in Colorado.

The long range effect of the proposal will be to foreclose the development of significant potential competition between the two holding companies involved. Affiliated Bankshares has the financial resources, managerial capability, and the desire to enter the Denver banking market. Prior to the submission of the present proposal, Affiliated attempted to negotiate the acquisition of two other Denver banks, but each of those efforts eventually proved unsuccessful. If the present proposal were denied, I have no doubt whatsoever that Affiliated would promptly initiate steps to acquire some other bank in the Denver market. If those efforts failed, I believe it would establish a bank de novo. Such foothold or de novo entry by Affiliated is clearly preferable from a competitive standpoint to the present proposal.

While First Colorado would perform a useful role even if it confined its efforts mainly to the Denver market, it also appears to have the capacity to extend its reach into several other markets in eastern Colorado now served by subsidiaries of Affiliated. In comments filed with the Board, the Department of Justice concluded that First Colorado was a significant potential entrant into the Boulder, Colorado Springs, Greeley, and Fort

Collins markets-each of which is now served by one or more subsidiary banks of Affiliated. In view of Affiliated's respective market position in each of those markets (the largest banking organization in Boulder, Colorado Springs, and Greeley and third largest in Fort Collins), the Department concluded that the proposal would eliminate potential competition in the Fort Collins market and substantial potential competition in Boulder, Colorado Springs, and Greeley. Although First Colorado may not have pursued a course of expansion in the past (apparently due to the need to stabilize and improve its overall financial position), it has the capacity to become a viable competitor in the four markets cited above either through a foothold acquisition or de novo. However, as a result of the Board's action today, the alternative is now lost for all time and with it the hope for the development of significant competition between the two institutions.

In addition to having seriously adverse effects on potential competition, consummation of the proposal would aggrevate the already highly concentrated banking structure in Colorado. The five largest banking organizations in the State now control slightly less than 50 per cent of the State's total deposits. The combination of Affiliated (the State's fourth largest banking organization with 6.4 per cent of the deposits) and First Colorado (the State's seventh largest banking organization with 3.9 per cent of deposits) would advance Affiliated to the third position and give it control over 10 per cent of the total deposits in the State. The five largest banking organizations would then control about 55 per cent of total deposits. Any hope for deconcentration of such a concentrated banking structure must necessarily lie-to a large extent -in preserving a number of viable, me-dium-size banks or bank holding companies such as First Colorado. But, as a result of the Board's action, a meaningful alternative competitor is eliminated from the Colorado banking structure, and the prospects for deconcentration of banking resources in the State are seriously diminished.

## ATLANTIC BANCORPORATION, JACKSONVILLE, FLORIDA

## Order Approving Merger of Bank Holding Companies

Atlantic Bancorporation, Jacksonville, Florida ("Atlantic"), a bank holding company within the meaning of the Bank Holding Company Act, has applied for the Board's approval under § 3(a)(5) of the Act (12 U.S.C. 1842(a)(5)) to merge with

Citizens Bancshares of Florida, Inc., Hollywood, Florida ("Citizens'), under the charter and title of Atlantic.

Notice of receipt of the application, affording an opportunity for interested persons to submit comments and views, has been given in accordance with § 3(b) of the Act. The time for filing comments and views has expired, and the Board has considered the application and all comments received in light of the factors set forth in § 3(c) of the Act (12 U.S.C. 1842(c)).

Atlantic controls 23 banks with aggregate deposits of approximately $\$ 856$ million representing 4.3 per cent of deposits of commercial banks in Florida, and is the sixth largest banking organization and bank holding company in the State. ${ }^{1}$ Citizens controls five banks with total deposits of about $\$ 114$ million representing 0.6 per cent of aggregate deposits in the State, and is Florida's 23rd largest banking organization and bank holding company. Consummation of the proposed merger would result in Atlantic's control of 4.9 per cent of total State deposits, leaving unchanged its ranking as a banking organization or bank holding company in the State.

All of Atlantic's present subsidiary banks (except for its existing West Palm Beach subsidiary) are located in the northern two-thirds of Florida, and it is represented in several of the major banking markets in that portion of the State. It is dominant in none. Citizens, on the other hand, is concentrated in southern Florida. Four of its subsidiaries are located in the Greater Miami banking market approximated by Dade County and the southern third of Broward County, where it is the eleventh largest banking organization holding approximately 2 per cent of deposits; its remaining subsidiary, a newly-established bank, is located in the nearby Fort Lauderdale area. Since the closest subsidiary banks of the proponents are over 40 miles apart and the remaining subsidiaries are more than 125 miles apart, consummation of the proposal will not eliminate any significant amount of existing competition.

The Board recognizes that consummation of the proposal would foreclose the possibility that Citizens would expand to become a Statewide competitor of Atlantic. However, considering the financial resources and capital position of Citizens, and the nature of Citizens' ownership, we do not believe that the record in this case refic a prob-

[^16]ability that, absent this proposal, Citizens would expand to become a Statewide competitor of Atlantic in the reasonably foreseeable future. In a recent action involving a similar proposal between two bank holding companies, the Board noted that a substantial adverse effect on potential competition occurs only where there is a probability rather than a possibility that substantial competition would develop between the banking organizations involved absent the proposed affiliation. ${ }^{2}$

With respect to the Greater Miami banking market, the Board believes that, absent this proposal, it is probable that Atlantic would enter de novo or through the acquisition of an existing bank in that market. However, due to the structure of banking in that market we do not believe that the foreclosure of Atlantic's entry as an independent competitor would have any substantial adverse effects on competition in that market. Banking in the Miami market is becoming more and more competitive. While the largest banking organization in the market-which is also the largest banking organization in Florida-holds approximately 23 per cent of market deposits, the next ten banking organizations hold market shares ranging from approximately 9 per cent to approximately 2 per cent.

While consummation of the present proposal would eliminate Atlantic as another potential entrant, the retail banking customers in the Greater Miami banking market are presently served by 40 banking organizations. Foreclosure of the possibility of a 41st could hardly have adverse effects on competition for retail business. As to the customer in need of wholesale and regional banking services, the proposal, rather than being anticompetitive, should in fact be procompetitive by creating another institution in the Greater Miami market with already established relationships in other parts of the State and with aggregate resources of nearly $\$ 1$ billion.

The financial conditions and managerial resources of Atlantic, Citizens, and their respective groups of banks are generally satisfactory and their prospects appear favorable. These considerations are consistent with approval of the application. The primary banking needs of the areas served by both holding companies appear to be adequately met at the present time. However, consummation of the proposal would create another regional organization with resources more appropriate to meeting inter-regional needs. In addition, affilia-

[^17]tion with Atlantic will enable customers of Citizens' banks to have immediate access to trust department services, credit cards, and international banking. Considerations relating to the convenience and needs of the communities to be served lend some weight toward approval. It is the Board's judgment that the proposed transaction is in the public interest and should be approved.

On the basis of the record, the application is approved for the reasons summarized above. The transaction shall not be consummated (a) before the thirtieth calendar day following the effective date of this Order or (b) later than three months after the effective date of this Order, unless such period is extended for good cause by the Board, or by the Federal Reserve Bank of Atlanta pursuant to delegated authority.

By order of the Board of Governors, effective August 1, 1973.

Voting for this action: Chairman Burns and Governors Daane, Sheehan, Bucher, and Holland. Voting against this action: Governor Brimmer. Absent and not voting: Governor Mitchell.

## (Signed) Chester B. Feldberg, Secretary of the Board.

## Dissenting Statement of Governor Brimmer

I would deny this application. As recently as February 16, 1973, I dissented from the Board's action approving the application of First Florida Bancorporation (59 Federal Reserve Bulletin 183, at 185). This dissent reflected my concern that Board action approving the merger of two holding companies evidenced the end of a Board policy followed consistently over the last several years which sought to develop a well-balanced and competitive banking system in Florida. Today's action is a further indication that the Board-in fact-has ceased to pursue this policy.

In judging the competitive effects of this acquisition, the proposal ought to be viewed as essentially an effort to acquire a banking organization with a "main office" and "branches" all operating in the same market-the Greater Miami banking market. Approval of such an acquisition constitutes, I believe, a departure by the Board from its previous well defined position emphasizing foothold entry for the large Florida banking insitutions. Citizens is a viable local banking institution which has continued to grow and develop in its own market. Seen in this light, Citizens obviously is not a proper vehicle for foothold entry.

In view of the rapid growth of multi-bank holding companies in Florida, reflecting their desire
to enter the State's principal banking markets, it is reasonable to expect Atlantic to enter the Miami market-a likelihood conceded by the Board's majority. However, Citizens has no prospects, at the present time, of becoming a Statewide competitor. But this fact alone is not a sufficient reason to support its absorption. After all there is nothing inherent in the Florida banking structure that requires every viable bank to be part of a Statewide system. At the same time, I believe that a market extension by Atlantic into the Miami area would occur regardless of the Board's action in this case. Only Atlantic's means of entry appear s undecided: de novo or foothold.

I do not regard as a foothold acquisition the proposed merger of a $\$ 100$ million banking organization. Neither did the Board until its action in the First Florida case. For the period 1969-72, the Board approved two acquisitions in which the banks that were taken over had deposits in excess of $\$ 100$ million, and it denied an equal number. In the Miami banking market, there are undoubtedly less anticompetitive points of entry.
The proposed merger offers no public benefits sufficient to outweigh the likely adverse competitive effects. The private benefits flowing to Citizens' stockholders as a result of this proposal are not the types of benefits the Board may properly weigh under the Bank Holding Company Act. The parties do not claim that the merger would bring new services not already available in the Miami banking market. Those new services proposed for Citizens' customers through the merger (trust services and credit card services among others) can be developed through correspondent banks. Citizens is at no measurable competitive disadvantage with respect to holding company subsidiaries in its markets. Moreover, its ability to compete is the same as that of large, independent banks and other small holding companes.

In my judgment, the potentially adverse effects are not outweighed by any public benefits that have been cited as likely to result from the merger of Citizens with Atlantic. I believe this application should be denied.

## ORDERS UNDER SECTION 4(c)(8) OF BANK HOLDING COMPANY ACT

## BANKAMERICA CORPORATION, SAN FRANCISCO, CALIFORNIA

Order Granting Request for Reconsideration and Approving Acquisition of GAC Finance, Inc.

BankAmerica Corporation, San Francisco, California, a bank holding company within the meaning of the Bank Holding Company Act, has applied for the Board's approval, under $\S \S 4(\mathrm{c})(8)$ and (13) of the Act and § 225.4(b)(2) of the Board's Regulation Y, to acquire voting shares of GAC Finance, Inc., Allentown, Pennsylvania. GAC Finance, Inc. through its subsidiaries engages in the activities of making direct loans to consumers; purchasing sales finance paper; financing inventory of distributors of, and dealers in, various consumer durable goods through agreements with manufacturers in the case of distributors and with distributors in the case of dealers; servicing manufacturer-funded receivables arising from inventory financing by certain manufacturers of consumer durable goods; rediscount financing for non-affiliated consumer sales finance companies; and sale to its direct consumer borrowers of credit life and credit health and accident insurance and of insurance coverage against damage to personal property securing extensions of credit made by the subsidiary to its direct consumer borrowers. Such activities have been specified by the Board in § 225.4(a) of Regulation Y as permissible for bank holding companies, subject to Board approval of individual proposals in accordance with the procedures of § 225.4(b).

Notice of the application, affording opportunity for interested persons to submit comments and views on the public interest factors, has been duly published (38 Federal Register 6103). The time for filing comments and views has expired, and the Board has considered all comments received, including those of the Department of Justice, in the light of the public interest factors set forth in § 4(c)(8) of the Act (12 U.S.C. 1843(c)(8)).

By Order dated July 27, 1973 the Board denied the application, the statement of reasons therefor to be issued at a later date. ${ }^{1}$ On August 3, 1973 Applicant filed a request for reconsideration of the Board's Order of denial, predicated upon more current information with respect to the financial condition of Finance and upon commitments to divest substantially more assets and offices of Finance than originally proposed.

Reconsideration was granted pursuant to § 262.3(f)(6) of the Board's Rules of Procedure ( 12 CFR 262.3(f)(6)) and the Board's Order of July 27,1973 is hereby vacated.

[^18]During the course of its initial consideration of this application the Board received adverse comments and a request for a formal hearing from a member of the public. The request for hearing was denied by the Board, based on its conclusion that Protestant had failed to allege the existence of material factual issues particular to the application and for other reasons communicated to Protestant. An invitation was extended to Protestant to submit further written comments on the application for the Board's consideration, but Protestant failed to respond. Subsequent to the Board's action denying the application, and while Applicant's request for reconsideration was pending, Protestant again wrote to the Board urging that it either reaffirm its denial or grant a formal hearing on the application. This request for hearing, in the Board's view, did not present any relevant facts or considerations not presented in earlier correspondence from this Protestant. Accordingly, the request was denied.

After reconsideration of the entire record in this matter and for the reasons summarized in the Board's Statement of this date, the $\S 4(\mathrm{c})(8)$ application is hereby approved on condition that Applicant cause Finance to accomplish the following plan of divestiture at the earliest practicable time and, in any event, within the time periods set forth below:

1. Finance will cause to be liquidated and paid, on the date of consummation of the proposed transaction, all receivables from GAC Corporation and its retained subsidiaries.
2. Finance will sell within one year, as going concerns, all of its consumer loan offices located in the States of California, Oregon, Washington, Arizona, New Mexico, Montana, Wyoming, Idaho, North Dakota, South Dakota, Colorado and Texas and will not reenter the consumer loan business in any of these States until such withdrawal from all has been fully consummated. Any such reentry would require the Board's prior approval pursuant to § $4(\mathrm{c})(8)$ of the Bank Holding Company Act.
3. Finance will sell within one year, as a going concern, its business of rediscounting receivables of smaller finance companies.
4. Finance will sell, within one year, the business and receivables of its Albuquerque, New Mexico, sales finance office and will close this office.
5. Finance will, within 18 months, dispose of an additional $\$ 25$ million in sales finance receivables.
6. Finance will sell or otherwise dispose of, within two years, the business and assets of Trailer

Industries, Inc., and all of the receivables of Finance's Business Finance and Lease Division.
7. Finance will segregate on its books as soon as possible after consummation of this proposal all of the receivables subject to disposition in paragraphs 4,5 , and 6 .
8. Finance will file a written report with the Board not later than six months following consummation of this proposal and further written reports at not more than six month intervals thereafter, setting forth all dispositions accomplished during the preceding period and dispositions then under negotiation.

The acquisition shall not be consummated later than three months after the effective date of this Order, unless such period is extended for good cause by the Board. This approval is subject further to the Board's authority to require reports by, and make examinations of, holding companies and their subsidiaries and to require such modification or termination as the Board finds necessary to assure compliance with the provisions and purposes of the Act and the Board's regulations and orders issued thereunder, or to prevent evasion thereof. Applicant's application to acquire the foreign offices of Finance under §4(c)(13) and § 225.4(f) of Regulation Y is also approved subject to the condition that its subsidiaries shall confine their activities to international or foreign banking and other international or foreign financial operations.

By order of the Board of Governors, effective August 14, 1973.

Voting for this action: Chairman Burns and Governors Mitchell, Daane, Brimmer, Sheehan, Bucher, and Holland.
(Signed) Chester B. Feldberg,
[SEAL] Secretary of the Board.

## Statement

BankAmerica Corporation, San Francisco, California, a bank holding company within the meaning of the Bank Holding Company Act, has applied for the Board's approval, under $\S \S 4(\mathrm{cc})(8)$ and (13) of the Act and §225.4(b)(2) of the Board's Regulation Y, to acquire voting shares of GAC Finance, Inc., Allentown, Pennsylvania ('Finance'"). Finance, through its subsidiaries, engages in the activities described in the Board's Order of this date, which activities have been specified by the Board in § 225.4(a) of Regulation Y as permissible for bank holding companies, subject to Board approval of individual proposals in accordance with the procedures of § 225.4(b).

Notice of the application, affording opportunity for interested persons to submit comments and views on the public interest factors, has been duly published ( 38 Federal Register 6103) and the time for filing comments and views has expired.

In its Order of July 27, 1973, the Board denied Applicant's application to acquire Finance and stated that its reasons for the denial would be set forth in a Statement to be issued at a later date. Subsequently, on August 3, 1973, prior to issuance of the Statement, Applicant filed a request for reconsideration by the Board of its application to acquire Finance, proposing a plan of divestiture of certain additional assets and businesses of Finance within stated time periods if the application, on reconsideration, was approved by the Board. On August 8, 1973, the Board granted Applicant's request for reconsideration and vacated its Order of July 27 denying Applicant's proposed acquisition of Finance. The Board has reconsidered this application, all original and supplementary materials received in connection therewith and all comments received, including those of the Department of Justice, in the light of the public interest factors set forth in § 4(c)(8) of the Act (12 U.S.C. 1843(c)(8)).

Applicant is a one-bank holding company controlling the largest commercial bank in the world, Bank of America NT\&SA, San Francisco, California ("Bank'). As of December 31, 1972, Bank had total domestic deposits of $\$ 23.4$ billion, representing 36.6 per cent of the total deposits in commercial banks in California, and an additional $\$ 12$ billion in foreign deposits. Applicant currently has nonbanking subsidiaries engaged principally in computer services, software and leasing activities, investment advisory services, issuance and sale of travelers checks and mortgage banking. Applicant does not currently have a consumer finance subsidiary. Finance had total assets of more than $\$ 719$ million as of December 31, 1972, and operates 459 offices in 41 States and four offices in Canada. As measured by total assets, Finance is the eleventh largest independent finance company in the United States.

In connection with its analysis of the original proposal, the Board had taken into account comments received from the United States Department of Justice concerning the proposed transaction. In its comments, Justice concluded that, even considering Finance's proposed divestiture of its California consumer loan offices, discussed below, the transaction would have an adverse effect on existing competition in the State of California. The Justice Department further found that the proposal
would have possible adverse effects on potential competition between Finance and Bank in the consumer finance field. Additionally, the Department viewed the proposal with concern as to its effects on concentration of resources. In its analysis, the Department found that these adverse effects were not outweighed by an affirmative showing of positive public benefits.

It appears that Applicant and Finance engage in only a minimal amount of direct competition outside the State of California. With the exception of Applicant's recently established de novo mortgage banking subsidiaries in Colorado and Texas, Applicant does not presently engage, to any significant extent, in consumer oriented financing at locations outside the State of California. Applicant does, however, have five Edge Corporations scattered throughout the country. Within California, Finance operates 36 consumer loan offices and two sales finance offices. In its original proposal, Applicant committed Finance to divest the 36 consumer loan offices to an outside party promptly after consummation of the proposal. Applicant proposed, however, to acquire and retain the two California sales finance offices offering dealer floor plan financing. The Department of Justice, in commenting on the application, stated that in its opinion, the proposal could have an adverse effect on competition in California, even assuming the divestiture, because a sale of such offices to a substantial bank or nonbank competitor could lead to similar competitive problems. Divestiture to a smaller nonbank or banking organization might decrease the competitive presence of Finance's offices in California. The Board concluded that the proposed initial divestiture would eliminate most of the adverse competitive consequences of the initial proposal in the consumer finance product market. The two California "private brands'" sales finance offices of Finance compete to a very limited extent with Applicant's banking subsidiary in making floor plan loans to finance household items. This is due to the fact that the private brand contracts entered into by these two offices are generally on a nationwide basis and thus only a very small volume of the California receivables represents direct competition between Applicant and such offices.

The Board next considered the question whether consummation of the original proposal would eliminate any significant competition in the future between Applicant, its subsidiaries and Finance. As indicated above, Finance is one of the nation's significant competitors in the consumer finance industry, having a competitive presence in 41

States. Applicant has recently established a presence in home mortgage lending outside the State of California in the States of Colorado and Texas. Moreover, Bank has a long tradition of significant innovation in the consumer credit field in California. An analysis of its deposits and loans shows that, among United States banks, it is more heavily consumer oriented than any other bank with over $\$ 10$ billion in assets. It thus appears quite possible in the light of its traditional service emphasis as well as its size and competitive ability, that Applicant would, absent this proposal, commence an expansion into other States in the consumer lending field, either through establishment of consumer finance offices de novo or through means of foothold entry. Moreover, the likelihood would seem to be greatest in the western part of the United States, in those States in close proximity to California. The Board concluded that consummation of the initial proposal would have eliminated a substantial possibility that Applicant, its subsidiaries and Finance would compete in various markets outside California in the future. The Board further concluded that this constituted a possible adverse effect to be considered under § 4(c)(8). However, with respect to any individual market, the Board cannot determine that such entry is probable or that the market is sufficiently concentrated that the elimination of the possibility of such entry would have substantially adverse effects. Further, the Board does not regard the consumer finance industry as so lacking in competition across the nation that it supports the judgment that any acquisition can be presumed per se to affect competition adversely.

In addition to the above possible adverse effects of the original proposal, the Board was deeply concerned with the question of whether an undue concentration of resources would result from approval of this application. The Conference Report accompanying the 1970 Amendments, in discussing this factor, states:

The danger of undue concentration of economic resources and power is one of the factors which led to the enactment of this legislation, and constitutes a significant threat to the continued healthy evolution of our free economy. American trade has always operated on the principle that relationships between businessmen, large and small, should be founded on economic merit rather than monopoly power. Our national policies of limited governmental regulation and interference in trade and commerce, however, do make it possible for undue concentrations of resources and economic power to override fundamental fairness and economic merit when responding to the profit motive. This possibility is enhanced when concentrations of power are centered about money, credit and other financial areas, the common denominators of the economy. . . The dangers of undue concentration of resources include, but are not limited to, specific competitive effects, which are themselves relevant factors under the Act. It should be clear
that this legislation directs the Board to consider all reasonable ramifications of the concentration of resources in fulfilling its responsibilities under section $4 .{ }^{2}$

Congress did not provide specific criteria with respect to the size of acquisitions which should be disallowed to avoid an undue resources concentration. Rather, it has pointed to the dangers involved, particularly those involving concentration of power relating to money and credit, and has directed the Board to consider "all reasonable ramifications', in applying the standard of § 4(c)(8). It was the Board's judgment that approval of the original application, involving acquisition by the nation's largest bank holding company of a major consumer finance company with a nationwide network of offices, although a close question, raised issues of concentration in credit-granting resources that were inconsistent with the intent of Congress in enacting the 1970 Amendments. The expression of legislative intent contained in the Conference Report, measured against the facts of record in the case, warranted the conclusion that the concentration of resources in this instance weighed against approval of the original application.

In support of the application, Applicant contended that consummation of the proposal would produce public benefits in the form of significant improvements to Finance's consumer credit services. Among such public benefits would be an overall strengthening and revitalization of Finance as a consumer lending institution resulting in an increase in competition in that market. Because of the financial strength of Applicant, a proposed expansion of Finance's lending services could be expected in such areas as small business loans, loans to municipalities, financial counseling and loans to professionals and students. Other stated public benefits include possible reduction in certain loan rates due to Applicant's easier access to funds, probably at lower cost. Information reaching the Board suggested that Finance was in serious financial difficulties, and that its ability to continue operations was in some question if it were not to become affiliated with a financially strong organization. The Board judged that while most of the benefits cited would affirmatively serve the public interest, the same benefits should be achieved through a proposal which did not evidence the possible adverse effects inherent in the original proposal. The Board concluded, applying the balancing test of § $4(\mathrm{c})(8)$, that Applicant's showing of public benefits had not outweighed the

[^19]possible adverse effects of the proposed acquisition and that, therefore, the application should be denied.

Subsequent to the issuance of the Board's Order and prior to release of the Statement, Applicant petitioned the Board for reconsideration of its original Order. Applicant submitted a plan it believed to be more acceptable to the Board, proposing divestiture of certain assets, offices and businesses of Finance substantially beyond that in the initial proposal. The plan contemplates a divestiture by Finance within the time periods following consummation as set forth below:

1. Finance will cause to be liquidated and paid, on the date of consummation of the proposed transaction, all receivables from GAC Corporation and its retained subsidiaries.
2. Finance will sell within one year, as going concerns, all of its consumer loan offices located in the States of California, Oregon, Washington, Arizona, New Mexico, Montana, Wyoming, Idaho, North Dakota and South Dakota and will not reenter the consumer loan business in any of these States until such withdrawal has been fully consummated.
3. Finance will sell within one year, as going concerns, 15 of its 31 consumer loan offices located in the State of Texas and 8 of its 16 consumer loan offices located in the State of Colorado, the offices to be divested in each State to be selected so as to assure that the receivables being divested represent not less than one-half of the receivables of all of Finance's consumer loan offices in each State as of June 30, 1973.
4. Finance will sell within one year, as a going concern, its business of rediscounting receivables of smaller finance companies.
5. Finance will sell within one year the business and receivables of its Albuquerque, New Mexico, sales finance office and will close this office.
6. Finance will, within 18 months, dispose of an additional $\$ 25$ million in sales finance receivables.
7. Finance will sell or otherwise dispose of within two years the business and assets of Trailer Industries, Inc., and all of the receivables of Finance's Business Finance and Lease Division.
8. Finance will segregate on its books as soon as possible after consummation of this proposal all of the receivables subject to disposition in paragraphs 5, 6 and 7.
9. Finance will file a written report with the Board not later than six months following consummation of this proposal and further written reports at not more than six month intervals there-
after setting forth all dispositions accomplished during the preceding period and dispositions then under negotiation.

Applicant has requested that its petition for reconsideration be taken up by the Board on an emergency basis because of the exigent financial condition of Finance. In responding to the comments of the Department of Justice, Applicant pointed to the fact that its position in the consumer loan industry has seriously eroded in recent years, with the company experiencing substantial declines in assets, net income and shareholders' equity during the period from 1970 to 1972. More recent data confirm that the trend has continued to the present as earnings for the first five months of 1973, compared to the same period in 1972, are down sharply. Of greater immediate consequence has been the downgrading of credit ratings on debt issues of Finance by two national creditrating agencies since the Board's denial of the original application. The credit rating of Finance's senior debentures was lowered by one agency because of inadequate earnings protection for bond holders and lack of financial flexibility while, in a separate action, a second agency withdrew its "prime" rating for commercial paper issued by Finance. The latter action is of particular significance to the financial condition of Finance since many corporate and municipal investors either cannot or will not purchase commercial paper not carrying a prime rating. Finance's financial condition and its ability to meet its near term obligations is further impaired by excessive lending to its parent organization in an attempt to ameliorate the parent's cash flow problems. This sequence of events, together with other financial information brought to the Board's attention concerning Finance and its parent organization, evidences the fact that Finance must be sold for cash, and sold promptly, to a buyer of considerable financial strength to avoid the collapse of Finance and its parent, and possibly serious financial repercussions of a more general nature. The Board regards these circumstances to be of a sufficiently serious nature as to warrant immediate consideration of Applicant's revised proposal. The Board therefore granted reconsideration under $\S 262.3(f)(6)$ of its Rules of Procedure.

To aid in its analysis and determination on the revised proposal, the Board asked the Department of Justice for its comments. The Department continued to oppose the proposal, submitting that it involves potential adverse competitive and concentration of resources considerations and is lacking in significant public benefits. However, it ap-
pears that the Department was not fully aware of the immediate financial emergency confronting Finance and its possible consequences.

Applicant's proposal to sell within one year all consumer loan offices of Finance in nine western States besides California and one-half of Finance's consumer loan offices in the States of Colorado and Texas in large measure eliminates the Board's earlier expressed concern over the question of probable future competition between Applicant, its subsidiaries and Finance. Applicant must be regarded as a likely entrant into the consumer finance industry and this is particularly true in those States closest to California where the competitive presence of Applicant's banking subsidiary is most keenly felt. While this proposal substantially diminishes the Board's concerns regarding adverse competitive effects, retention of any offices in Colorado or Texas would continue to raise competitive problems due to Applicant's present competitive presence in those States exemplified by Applicant's present mortgage subsidiaries in those States. Divestiture of all consumer loan offices held by Finance in California and in all 11 western States closest to California, including all such offices in Colorado and Texas, would achieve a significant geographic separation between Applicant and the office facilities of the company to be acquired. Therefore, consummation of the proposal on condition that a divestiture of this nature takes place would reduce substantially the possible adverse effect on probable future competition as a factor to be considered under $\S 4$ (c)(8). Furthermore, the Board believes that such a divestiture is practical as finance company offices and their assets are more readily marketable than banks, for example.

In its consideration of the original proposal, the Board was also concerned with the question of undue concentration of resources. The initial proposal, if approved, would have permitted affiliation of Applicant's banking subsidiary, which operates more than 1,000 branches in California, with a company retaining 423 consumer loan offices in 40 States from coast to coast. The instant proposal constitutes a substantial reduction in the resources to be acquired by Applicant; it will accomplish significant geographic separation of office facilities and significant reductions in both assets and offices acquired by Applicant. As conditioned by the Board's Order of this date Applicant must sell, as going concerns, all of Finance's 128 consumer loan offices in 12 western States and must close its sales finance offices in New Mexico. In addition, Applicant will be required
to sell, as a going concern, the entire rediscount business of Finance and to divest an additional $\$ 25$ million in sales finance receivables and approximately $\$ 77$ million in commercial financing receivables. As a consequence of these actions, Finance's total net receivables, using June 30, 1973, data, will be reduced from $\$ 575.7$ million to $\$ 296$ million and its national rank, in terms of total net receivables, among all independent finance companies would drop from eleventh to twentieth position. In light of the extensive divestitures to be accomplished by Applicant in this case, the possible dangers of an undue concentration of resources are significantly lessened and the Board no longer views this factor as warranting the degree of adverse weight initially assigned.

The public benefits reasonably expected to result from approval of the revised proposal remain essentially the same as when first considered by the Board with the exception of those related to the condition of Finance and its parent. Developments in the intervening days have demonstrated the validity of the previously expressed fears as to the fragility of the structure of borrowed funds relied upon by Finance. It is imperative that Finance be sold immediately to avoid possible severe economic consequences and to insure its continuation as a viable competitor. Acquisition and subsequent partial divestiture by Applicant will insure that survival as well as preserve the existing number of possible competitors in the western United States. Additionally, entry of Applicant with its record of innovation in the consumer field should produce public benefits in the eastern United States. The Board concludes that the reasonably expected public benefits from this revised proposal outweigh possible adverse effects.

## Concurring Statement of Governors Mitchell, Dafe and Sheehan

We have joined our colleagues in voting to approve the amended proposal, but our approval of the original proposal indicates that we found no adverse effects and substantial public benefits associated with it.
The Board's Statement in this matter indicates that the divestiture of the California offices of Finance was sufficient to remove any question of elimination of direct competition that might have existed. Neither the original nor the revised proposal raised any substantial questions in this regard.

Our colleagues reserved their greatest concern for the issue of undue concentration and it is on
that issue that we differ most sharply with them. As the majority Statement indicates, the legislative history provides little guidance as to the meaning of the term "undue concentration of resources." However, what little discussion of the term took place appears to have been concerned with concentration in particular product lines an d particular markets rather than generalized bigness per se. The record in this case does not reflect, and the Board's decision is not premised upon, a high degree of concentration in any particular market but appears premised upon the absolute size of Applicant.

Applicant has worldwide gross resources of $\$ 40.8$ billion. However, Applicant's size on a worldwide or a nationwide basis is not really relevant to a geographic expansion of its activities in the consumer credit field. Moreover, Applicant's size must be considered in the light of the structure of the commercial banking industry. As an industry it is relatively unconcentrated with many large units competing actively in numerous financial markets for the business of individual, corporate and governmental customers. In terms of total U.S. banking deposits, Applicant has 3.3 per cent of the business; the four largest companies account for only 9 per cent of business; the eight largest for 14 per cent; and the 20 largest for only 21 per cent. Similar ratios for the top 20 firms in numerous major industries are well in excess of 50 per cent. The consumer finance industry, interestingly enough, is more concentrated than commercial banking, and one consequenc e of Applicant's entry outside the State of California would be to lessen concentration in an industry where the four largest firms control 38 per cent of the business.

With respect to the consumer credit product line, the result of the proposal will be far from creation of an undue concentration. While Bank of America had $\$ 1.8$ billion in consumer credit outstanding as of December 31, 1972, most of it was California business. Any concentration problem arising from Applicant's share of the consumer finance industry is limited to California, and any possible aggravation of that problem by the proposed acquisition was taken care of by the initial proposed divestiture of Finance's California operations. The Applicant's share of the nation's consumer instalment business was 1.4 per cent and the addition of Finance's 0.2 percentage points is an insignificant addition to this total.

A distinct lack of concentration is evident in most consumer markets. In each of these markets other finance companies, commercial banks, and
to some degree sales finance companies, retailers, and savings and loans are competing. In these local arenas competition is ordinarily vigorous and individual market shares modest. While the market may be structured by risk, size and type of loan, so that not all of these competitors confront one another, in our judgment the record does not reflect concentration in any particular market.

In short, we concluded that consummation of the original proposal would have had no substantial adverse effects on competition nor, in our view, would it have created an undue concentration of resources. Against this lack of adverse effect we concluded that consummation of the original proposal would have had very substantial, reasonably expected, benefits to the public.

As the Board's Statement reflects, Bank of America has a long and excellent record of innovation and high standards in the provision of services to consumers. For example, it pioneered in perfecting the bank credit card for consumers and was one of the earliest bank lenders to consumers for the purchase of automobiles and other consumer durables. It is one of the most highly consumer oriented of the large commercial banks. Its present volume of instalment loans is 12.8 per cent of its total loans outstanding and compares to an average of 7.3 per cent for banks with deposits in excess of $\$ 10$ billion.

A proposal such as the present one allows Applicant to meaningfully expand its services to consumers outside the State of California and there is every reason to expect that Applicant would prove to have a beneficial effect upon the industry. For example, Applicant has committed itself to explore every possibility for the reduction of loan rates charged to certain classes of borrowers. It appears that a reasonable estimate of the percentage of loans at the typical finance company which would be considered 'bankable'" is 30 to 50 per cent or more. While a consumer finance company in many instances charges up to 36 per cent for such a loan, the typical bank rate would be 12 to 14 per cent. Any such reductions by Applicant would surely have a competitive impact, and, when one considers that the total credit outstanding by consumer finance companies exceeds $\$ 32$ billion, even a small reduction in rates would have a substantial beneficial impact upon consumers.

In addition to Applicant's record of innovation in consumer-oriented services, we believe that bank holding company entry into the consumer finance industry can reasonably be expected to produce increased benefits to the public. These include the ability to provide capital to strengthen
consumer finance competition and the ability to obtain a more stable flow of funds at lower interest rates than are presently available to many consumer finance companies. Both of these attributes should permit benefits in the form of lower interest rates for customers of consumer finance companies.

These are the public benefits to which we gave weight for approval of the initial proposal. As we found no adverse effects emanating from the initial proposal, we approve the amended application with the judgment that while the impact of another effective competitor-Bank of America-has been removed in several States, it will still be of public benefit in those States where the majority has given its approval.

## BANKERS TRUST NEW YORK CORPORATION, NEW YORK, NEW YORK

Order Denying Acquisition of Public Loan
Bankers Trust New York Corporation, New York, New York, a bank holding company within the meaning of the Bank Holding Company Act, has applied for the Board's approval, under section 4(c)(8) of the Act (12 U.S.C. 1843(c)(8)), and § 225.4(b)(2) of the Board's Regulation Y, to acquire all of the voting shares of Public Loan Company, Inc., Binghamton, New York ('"Public Loan'’). Public Loan, operating through its subsidiaries, engages in making consumer finance and sales finance loans (including the purchase of retail instalment contracts). Also, through two whollyowned subsidiaries, Empire Life Insurance Company ('Empire Life'") and Commonwealth Life Insurance Company ('Commonwealth Life"), both located in Wilmington, Delaware, Public Loan is engaged in underwriting, as reinsurer, credit life and credit accident and health insurance in connection with loans made to Public Loan's borrowers. Such activities have been determined by the Board to be closely related to banking ( 12 CFR 225.4(a)(1) and (10)). Thrift Credit Corp., a wholly-owned subsidiary of Public Loan engaged in commercial lending and equipment leasing, will be disposed of prior to the acquisition of Public Loan by Applicant.

Notice of the application, affording opportunity for interested persons to submit comments and views on the public interest factors, has been duly published (38 Federal Register 5206). The time for filing comments and views has expired, and
the Board has considered all comments received in light of the public interest factors set forth in section 4(c)(8) of the Act (12 U.S.C. 1843(c)(8)).

Applicant controls nine banks, with aggregate deposits of $\$ 8.0$ billion, representing 7.4 per cent of the total deposits in commercial banks in New York State, and is the sixth largest banking organization and bank holding company in the country. ${ }^{1}$ Within New York State, Applicant is the fifth largest banking organization. Applicant's lead bank, Bankers Trust Company of New York, has deposits of $\$ 7.4$ billion and is the seventh largest bank in the United States. In addition to its banking subsidiaries, Applicant's six nonbanking subsidiaries are engaged in mortgage banking, real estate investment trust management, equipment leasing and brokering, small business investing, and extension of credit through use of a credit card.

Public Loan, established in 1933, is a familyheld small loan company, with total assets of approximately $\$ 72$ million and net receivables of $\$ 54$ million (as of June 30, 1972). Ranked by total capital funds, Public Loan is the 66th largest finance company and 40th largest noncaptive finance company in the country. Headquartered in Binghamton, New York, it controls nine whollyowned subsidiaries, operates 28 small loan offices in New York, 32 in Pennsylvania, and one in New Jersey. Other activities engaged in by Public Loan are the following: Sales financing, engaged in by two subsidiaries, Beacon Discount Company and Public Discount Company, which business is being discontinued; commercial lending and equipment leasing, through another wholly-owned subsidiary, Thrift Credit Corporation, which will be sold or liquidated before Public Loan is acquired; and reinsuring credit life insurance and credit health and accident insurance covering the borrowers of Public Loan. Applicant proposes that Public Loan's activities would be confined to its small loan business with related credit life reinsurance.

A threshold question in the consideration of this application is whether consumer finance companies compete with commercial banks in the area of small loans to individuals. It has been contended that there are principally two factors which reflect an absence of competition between these types of organizations: (1) different statutory limitations

[^20]with respect to the size of loan that can be made; ${ }^{2}$ and (2) a different clientele being served by each type of organization. Our experience, however, in applying section $4(\mathrm{c})(8)$ of the Bank Holding Company Act to the many consumer finance applications processed since enactment of the 1970 Amendments leads us to conclude that the acquisition of a consumer finance company by a commercial banking organization may result in the elimination of existing competition in those geographic markets in which both compete.

The statutory lending limit, $\$ 1,400$ for consumer finance companies in New York State, allows for direct competition between consumer finance companies and commercial banks. The $\$ 1,400$ limit, however, masks the fact that the actual amount of credit obtained may be higher by a customer borrowing from more than one licensed lender, a practice known as "doubling up', Also, in this instance, a borrower living in the Binghamton area may choose to secure credit in Pennsylvania, as from Public Loan's Montrose office, which has a $\$ 3,500$ limit. These facts, among others of record, lead us to conclude that finance companies are an alternative credit source for personal loans, as well as loans to finance the purchase of automobiles and home improvements and other loans traditionally made by commercial banks.

The contention that commercial banks serve a different clientele from finance companies is becoming less and less valid as commercial banks place more emphasis on retail banking and seek to attract a greater diversity of customers. There appears to be a substantial class of customers being served by both institutions, consisting of the highrisk margin clientele of commercial banks and the low-risk margin customers in the case of finance companies. A few consumer finance companies, which confine their operations to small loans made to the very high risk sector of the market, would not generally be regarded as competing with commercial banks. Public Loan, however, is not of this category. Its very favorable loan write-off experience shows that Public Loan does not serve the high-risk market, but rather, lends to many of the same clientele as are served by Applicant's banking subsidiaries.

[^21]The relevant product markets in which the Board analyzes the competitive aspects of the proposed transaction are: (1) personal loans of $\$ 1,400$ or less, and (2) all direct consumer instalment loans, the latter including personal loans and automobile, mobile home, and home improvement and modernization loans.

While Applicant and Public Loan compete for consumer loans (which includes both personal loans and consumer instalment loans) in several markets in New York State, where Public Loan is the sixth largest licensed lender as of year-end 1971, the Board is concerned with the consequences resulting from affiliation only in the Binghamton and Jamestown markets. It is only in these markets that the competitive effects are sufficiently serious as to represent an adverse factor weighing against approval of the proposed transaction.

The Binghamton market ${ }^{3}$ encompasses the Triple Cities Area of Binghamton, Endicott, and Johnson City. Competing in that market are 33 lending institutions ( 15 commercial banks, 7 finance companies, and 11 credit unions), including the main office and two branches of Applicant's Binghamton banking subsidiary and six offices of Public Loan. Public Loan's Montrose, Pennsylvania, office is also included in the Binghamton market. In terms of personal loans under $\$ 1,400$, Public Loan was the largest lender in the market with $\$ 5.2$ million in loans outstanding and 18.6 per cent of the market; Bankers Trust of Binghamton was the 15 th largest, with $\$ 327,000$ and 1.2 per cent of the market. Upon consummation, Applicant would control 19.8 per cent of the market and be nearly equal in size to the next two largest competitors, both of which are commercial banks. In terms of all direct consumer instalment loans, Public Loan and Bankers Trust of Binghamton are the third and fourth largest competitors in the market (the first two competitors are banks) and hold 7.2 per cent ( $\$ 5.6$ million) and 6.2 per cent ( $\$ 4.9$ million), respectively. If approved, Applicant would be the second largest supplier of such loans in the market.

The second geographic market in which there will result a loss of existing competition is the Jamestown market. ${ }^{4}$ Bankers Trust of Jamestown

[^22]operates its head office and seven branches in this market, while Public Loan has one office, at Lakewood. Public Loan's service area is encompassed by the service area of Bankers Trust of Jamestown. Suppliers of credit in this market also number 33 lending institutions ( 4 commercial banks, 4 finance companies, and 25 credit unions). With respect to personal loans under $\$ 1,400$, Public Loan ranked third in the market with 13.9 per cent of market loans ( $\$ 1.4$ million) while Bankers Trust of Jamestown was fourth with 10.1 per cent ( $\$ 1.0$ million). Upon consummation, Applicant would be the largest supplier of funds and would account for 24 per cent of the small personal loan business-nearly 50 per cent more than the next largest competitor in the market. Three of the five largest competitors in this market are commercial banks. With respect to all direct consumer instalment loans outstanding, Bankers Trust's subsidiary is the largest in the market with 19.8 per cent of market loans ( $\$ 4.7$ million); Public Loan ranks fifth with an even 6 per cent ( $\$ 1.4$ million). After consummation, Applicant's banking subsidiary would continue to rank first with nearly 26 per cent of all direct consumer instalment loans. Commercial banks are also heavily represented in this product market as the three largest competitors are of this category.

Because of the elimination of substantial existing competition in both the Binghamton and Jamestown markets, it is the Board's judgment that these competitive consequences are an adverse factor weighing against approval of the proposed transaction. Further, while the consumer finance industry is characterized by ease of entry, the proposed acquisition would solidify the market positions of Applicant and Public Loan in the Binghamton and Jamestown markets. Neither market has shown rapid growth and neither is particularly attractive for de novo entry in view of anticipated moderate population growth. In Jamestown, the acquisition would eliminate the only possible vehicle for entry by acquisition because the remaining consumer finance companies are national firms and presumably not interested in being acquired by a potential entrant. Accordingly, approval would serve to foreclose market entry by outside organizations.

Section 4(c)(8) of the Bank Holding Company Act requires the Board to find that the performance by Public Loan as an affiliate of Applicant "can reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency that outweigh possible adverse effects, such as undue concentra-
tion of resources, decreased or unfair competition, conflicts of interests or unsound banking practices." The basic balancing test of section 4(c)(8) requires a showing of positive public benefits that outweigh the adverse effects of the proposed acquisition described above. Applicant must bear the burden of demonstrating that the proposed nonbanking activity will be in the public interest. ${ }^{5}$ In seeking to meet this burden, Applicant has claimed that consummation of the proposal would produce the following benefits:
(1) ready access to funds by Public Loan at competitive rates and with greater assurance of availability;
(2) replacement of family management by an aggressive corporate management interested in expanding the volume, scope, and character of their services to the public;
(3) referral of customers for small loans to Public Loan and of those requiring loans in excess of $\$ 1,400$ to Applicant's banking subsidiaries;
(4) expansion in types of insurance offered and reduction in the cost of credit insurance offered through Applicant's banking subsidiaries; and
(5) reduction in cost of credit insurance to customers of Public Loan.

The public benefits claimed by Applicant, in the Board's view, fall short of outweighing the adverse competitive effects which would result from approval of the proposed transaction. Public Loan appears to be of adequate size and financial soundness to obtain necessary financing at competitive rates. Moreover, any difference in the cost of funds to Applicant and to Public Loan would probably not be large enough to have a significant effect on the rates charged to customers of Public Loan. With respect to the management of Public Loan, there is no evidence of record to demonstrate that family management has in any way lessened the ability of the company to grow and prosper.

The proposed referral system cited by Applicant, in practice, may have quite the opposite effect to that expected by the Board when a bank holding company is permitted to acquire a consumer finance company. The Board expects that the acquisition of a consumer finance company by

[^23]a bank holding company will result in positive benefits to the public such as greater availability of consumer credit and a lowering of the finance rates previously charged by the acquired consumer finance company. The use of referrals may, however, instead of benefitting the public, have the contrary effect of enabling Applicant to divert eligible bank borrowers to Applicant's consumer finance subsidiary.

Applicant proposes upon approval of this application to expand the quality and range of insurance coverage available to customers of its subsidiary banks as well as to reduce rates on credit insurance. The provision of these benefits, however, is not dependent upon consummation of the Public Loan acquisition. Applicant can expand the quality and range of credit insurance presently made available to its customers and at lower premium rates without the affiliation of Public Loan.

A final benefit cited by Applicant results from the underwriting activity of Public Loan, as reinsurer, of credit life and credit accident and health insurance which is directly related to its extensions of credit. Applicant has indicated that the proposed underwriting activities would include underwriting such insurance for its banking subsidiaries as well. Applicant does not presently engage in insurance underwriting activities and the proposed affiliation with Applicant would appear to have no significant effects on competition within the industry.

In adding credit life to the list of permissible activities for bank holding companies, the Board stated that:

To assure that engaging in the underwriting of credit life and credit accident and health insurance can reasonably be expected to be in the public interest, the Board will only approve applications in which an Applicant demonstrates that approval will benefit the consumer or result in other public benefits. Normally such a showing would be made by a projected reduction in rates or increase in policy benefits due to bank holding company performance of this service. (12 CFR 225.4(a)(10))

Applicant has stated that upon consummation of the proposed acquisition, the rate reductions for accident and health insurance in Pennsylvania, New York, and New Jersey, which have among the lowest rate ceilings in the nation, would range from approximately 3 per cent in Pennsylvania on policies for less than 3 years to 2 per cent in New York and New Jersey. In the credit life insurance area, the rates presently charged will be reduced by Applicant by amounts varying from approximately 1 per cent to 6 per cent in the various states. Additionally, Applicant would waive the suicide clause with respect to policies taken out in Pennsylvania. To the extent such reductions occur and
improvements in policy terms occur, the public benefits.

It is the Board's judgment, applying the balancing test under section $4(\mathrm{c})(8)$ of the Act, that Applicant has failed to meet the burden of demonstrating that benefits to the public would outweigh the adverse effects which would result from approval of the application. For the most part, the benefits cited are not supported by objective facts of record or backed by firm policy commitments on the part of Applicant. Accordingly, since the public interest factors do not outweigh the possible adverse effects, the application is hereby denied.

By order of the Board of Governors, effective August 3, 1973.

Voting for this action: Chairman Burns and Governors Mitchell, Brimmer, Sheehan, Bucher, and Holland. Voting against this action: Governor Daane.

## (Signed) Chester B. Feldberg, Secretary of the Board.

 [SEAL]
## Dissenting Statement of Governor Daane

I dissent from the majority's action denying the acquisition of Public Loan by Applicant. In my estimation, the lack of significant competition between banks and consumer finance companies such as Public Loan, the large number of lenders in the geographic areas where Applicant and Public Loan both make consumer loans, and the small proportion of Public Loan's business derived from Binghamton and Jamestown make the possible adverse effects far too small to outweigh the public benefits that would derive from the acquisition.

Although consumer finance companies and commercial banks both offer direct instalment loans to consumers, they may, and frequently do, serve different types of customers. In this case Public Loan can make direct instalment loans only up to $\$ 1,400$. Most automobile loans and mobile home loans are for amounts greater than $\$ 1,400$. Small loan companies, such as Public Loan, specialize in the lending of small amounts of money and they are permitted to charge much higher interest rates than banks. Commercial banks may be reluctant to make small consumer loans because of the cost of making and servicing such loans in relation to the interest rates they are permitted to charge. Applicant has stated that as a matter of policy its banking subsidiaries do not make consumer instalment loans below $\$ 800$.

While I am aware of the competition figures cited by the majority, I am unable to conclude that approval of this proposal would result in an
appreciable elimination of competition since Jamestown and Binghamton are both served by 33 lending entities including banks, finance companies and credit unions. Furthermore, the bulk of Public Loan's loans (approximately 90 per cent) are outstanding in areas apart from Jamestown and Binghamton.

Under these circumstances, it is my opinion that the public interest would be served by approval of the acquisition of Public Loan by Applicant. Applicant is interested in expanding the volume, scope, and character of the services offered and in assuring an increased availability of funds to Public Loan and its customers at competitive rates. This should benefit customers throughout the areas served by Public Loan, including the areas now served by Applicant's present banking offices.

## CHEMICAL NEW YORK CORPORATION, NEW YORK, NEW YORK

## Order Denying Acquisition of CNA Nuclear Leasing, Inc.

Chemical New York Corporation, New York, New York, a bank holding company within the meaning of the Bank Holding Company Act, has applied for the Board's approval, under § 4(c)(8) of the Act and § 225.4(b)(2) of the Board's Regulation Y , to acquire voting shares of CNA Nuclear Leasing, Inc. ("Company"), Boston, Massachusetts, a company that is engaged in full-payout leasing of personal property and equipment. Such activity has been determined by the Board to be closely related to the business of banking ( 12 CFR 225.4(a)(6)). Applicant has also applied for authority of Company to engage in financing the acquisition of coal piles and other natural resource financings as an activity closely related to the business of banking pursuant to 12 CFR 225.4(a)(1).

Notice of the application, affording opportunity for interested persons to submit comments and views on the public interest factors, has been duly published ( 29 Federal Register 8099). The time for filing comments and views has expired, and all those received have been considered.

Applicant, the fourth largest banking organization in New York, controls four banks with aggregate domestic deposits of $\$ 9.8$ billion, representing approximately 9 per cent of the total deposits in commercial banks in the State. (All banking data are as of December 31, 1972.) Applicant also has a nonbanking subsidiary engaged in extending short-term land development and construction loans to borrowers and providing ad-
visory and loan servicing facilities to Applicant.
Company, organized in 1969, is presently engaged in leasing nuclear fuel cores and capital equipment, including production machinery, fleets of trucks and automobiles, electronic data processing equipment and noncommercial aircraft. Company generally leases such equipment for a noncancellable term of one year, with monthly renewals thereafter. ${ }^{1}$ It appears that such leases would not be in compliance with the Board's leasing regulation and interpretation, which require the lessor to recover in full its acquisition cost of leased equipment through rentals, estimated salvage value, and estimated tax benefits during the initial term of the lease ( 12 CFR 225.4(c)(6) and 225.123(d)). However, Company's leases further provide that in the event the lease is terminated prior to full-payout recovery, the equipment is sold and the lessee is obligated to reimburse Company for any deficiency between the sale price and the unrecovered portion of the acquisition cost of the leased equipment. Where there is such an unconditional obligation, guaranteeing full-payout recovery, by a bona-fide lessee which clearly has the financial resources to meet such obligation, as in the case of Company's lessees, the Board will permit reliance on such obligation in determining whether a lease transaction meets the full-payout requirement of the Board's leasing regulation and interpretation.

Company also proposes to engage in coal and other natural supply financing agreements whereby company would purchase coal or other natural resources at the direction of a utility company and the utility company would, each month, pay Company the amount of the acquisition cost of the coal or other natural resources estimated to be consumed by the utility during the month plus a financing charge, adjusted to reflect any excess or deficiency between the amount estimated to be consumed and the amount actually consumed in the preceding month. Based on the foregoing and other conditions contained in the agreement the Board considers such coal or other natural resource agreements to be a form of extension of credit permissible under § 225.4(a)(1) of Regulation Y.

[^24]Applicant, through its lead subsidiary bank, is engaged in personal property leasing activities primarily in the metropolitan New York area and also nationwide. Company is engaged in leasing equipment nationwide. Although there is some competitive overlap between Company's leasing business and that of Applicant's lead subsidiary bank, the Board finds that consummation of this proposal would not eliminate any significant existing or potential competition due to the somewhat different nature of the leasing activities engaged in by Applicant's lead subsidiary bank and Company, the relatively low barriers to entry into this business, the large number of competitors, and the small market shares held by Applicant and Company.

In its consideration of an application to acquire a nonbanking company under $\S 4(c)(8)$ of the Act, the Board is required to consider whether performance of the activity by an affiliate of a holding company can reasonably be expected to produce benefits to the public such as greater convenience, increased competition, or gains in efficiency that outweigh possible adverse effects such as undue concentration of resources, decreased or unfair competition, conflicts of interest, or unsound banking practices.

Company has grown rapidly since its inception, increasing its total assets from approximately $\$ 35$ million at year-end 1970 to approximately $\$ 210$ million at year-end 1972. However, Company has a very high level of debt in relation to equity capital. As of December 31, 1972 total liabilities were 74 times total equity. Because of its low equity capital base and consequent severe limitations on its capacity to absorb any losses, the investment community has apparently been unwilling to finance Company's operations at the prime commercial paper rate without the guarantee of its parent, CNA Financial Corporation. ${ }^{2}$ As of December 31, 1972, the total amount of Company's outstanding commercial paper so guaranteed was $\$ 175$ million. Upon acquisition by Applicant, Applicant would advance funds to Company to finance its existing lease pottfolio as Company's outstanding commercial paper matures.

These advances would be financed on a short term basis by the issuance of Applicant's own commercial paper. Applicant estimates that Company's lease portfolio would grow from $\$ 205$

[^25]million to $\mathbf{\$ 2 5 0 - \$ 3 0 0}$ million during 1973. By the end of 1974 , at which time Company projects its lease portfolio will have grown to $\$ 350-\$ 400$ million, Applicant anticipates that it will reduce its direct financial support to Company. Applicant expects that Company will be free of all need for financial support from Applicant within eight years, by which time its lease portfolio could expand to as much as $\$ 750$ million. Even assuming Applicant's favorable projections, it is clear that the acquisition of Company would require Applicant to commit substantial and continuing amounts of funds to support Company's growth.

The proposal involves a method of financing comparatively long-term assets with short-term debt. As discussed above, due to the low equity base of Company, the market will not finance its commercial paper obligations at a rate which makes the proposal economically viable without a guarantee. In fact, Company is being sold by its present parent due to the large amounts of financing required, limitations on the amount of commercial paper it could issue, and the cost of back-up bank lines of credit to support such paper. Thus, success of the proposal requires directly the backing of the assets of Applicant and indirectly the strength and reputation of its major subsidiary, Chemical Bank.

The Board has on numerous occasions stated that one of the primary purposes of a holding company is to serve as a source of financial strength for its subsidiary banks. In the Board's judgment a proposal such as the present to acquire an extremely leveraged company with very heavy requirements for funds could seriously impair that ability. With respect to the instant application, Company's need for funds, even assuming no growth, will require Applicant to increase its short-term borrowing by a substantial amount, i.e. to the point where Applicant's current liabilities would exceed current assets by a considerable margin if subsidiary banks are not consolidated. Chemical Bank has experienced rapid growth. Between year-end 1970 and year-end 1972 its assets increased from $\$ 11.0$ billion to $\$ 15.3$ billion. Even assuming that there is little growth in nonbanking activities in its system, such growth in the future will require Applicant to supply additional capital to its banks. An application such as the present, which substantially reduces the margin between debt use and debt capacity, would impair the ability to provide such capital.

The Board recognizes the public benefits that attach to the availability of suitable financing for nuclear fuel cores. However, the Board finds that
there are a number of firms presently offering nuclear core financing and that there are no reasonably expected public benefits in this particular case such as greater convenience, increased competition, or gains in efficiency that outweigh the aforementioned possible adverse effects.

Based upon the foregoing and other considerations reflected in the record, the Board has determined that the public interest benefits that the Board is required to consider under § $4(\mathrm{c})(8)$ do not outweigh possible adverse effects. Accordingly, the application is hereby denied.

By order of the Board of Governors, effective June 29, 1973.

Voting for this action: Chairman Burns and Governors
Mitchell, Daane, Brimmer, Sheehan, Bucher, and Holland.
(Signed) Chester B. Feldberg, [seal] Assistant Secretary of the Board.

## TENNESSEE NATIONAL BANCSHARES, INC., MARYVILLE, TENNESSEE

Order Denying Acquisition of Maryville Savings and Loan Corporation
(AN INDUSTRIAL LOAN AND THRIFT COMPANY)
Tennessee National Bancshares, Inc., Maryville, Tennessee, a bank holding company within the meaning of the Bank Holding Company Act, has applied for the Board's approval, under § 4(c)(8) of the Act and § 225.4(b)(2) of the Board's Regulation Y, to acquire 90 per cent or more of the voting shares of Maryville Savings and Loan Corporation (an industrial loan and thrift company), Maryville, Tennessee ('‘Company'’), a company that engages in the activities of an industrial loan company, including the making of loans, the sale of credit life insurance and credit accident and health insurance in connection therewith, the sale of comprehensive physical damage insurance on certain personal property taken as security in connection with loans, and the borrowing of funds at interest as provided by the applicable law. Such activities have been determined by the Board to be closely related to banking (12 CFR 225.4(a)(2) and (9)(ii)(a)).

Notice of the application, affording opportunity for interested persons to submit comments and views on the public interest factors, has been duly published ( 38 Federal Register 10679). The time for filing comments and views has expired, and none has been timely received.

Applicant controls two banks with aggregate deposits of $\$ 56.3$ million, representing 0.5 per cent of total commercial bank deposits in the

State. ${ }^{1}$ Applicant's lead bank, The Blount National Bank of Maryville ('‘Bank'’), Maryville, Tennessee (deposits of $\$ 50.9$ million), is the smaller of two banks in Blount County and controls 45.5 per cent of bank deposits therein. Both of the banks in Blount County are located in Maryville, a town of approximately 14,000 persons, situated 15 miles south of Knoxville, Tennessee and falling within the Knoxville SMSA. Bank had outstanding consumer instalment loans of the types made by consumer finance companies of $\$ 1.6$ million as of June 30, 1972, representing 12.2 per cent of outstanding consumer loans held by banks and consumer finance companies located in Blount County as of that date.

Contrary to the implications contained in its corporate title, Company (assets of $\$ 1.6$ million) does not operate as a savings and loan association. It is an industrial loan and thrift company and has so served the Maryville area for over 40 years. Company issues "certificates of indebtedness" and with funds derived thereby makes signature, personal property, co-signor, and second mortgage loans. Company operates out of a single office in Maryville and had outstanding consumer loans of $\$ 939$ thousand as of December 31, 1972. Company is the third largest of 10 consumer finance companies in Blount County with 12.7 per cent of the outstanding loans of the consumer finance companies. As Company's sole office is located only several blocks from the main office of Bank, both offices draw customers from the same local service area. Approval of this transaction would increase Applicant's share of outstanding consumer loans made in the Maryville area from approximately 12 per cent to approximately 19 per cent, remove an alternative source of consumer credit, and eliminate direct competition for consumer loans between Applicant's lead bank and Company. Accordingly, the Board finds that the proposed acquisition would have adverse effects on competition.

Section 4(c)(8) of the Bank Holding Company Act requires the Board to find that performance by Company as an affiliate of Applicant "can reasonably be expected to produce benefits to the public such as greater convenience, increased competition, or gains in efficiency that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interest or unsound banking practices.' The basic balancing test of § $4(\mathrm{c})(8)$ re-

[^26]quires a showing of positive public benefits that outweigh the adverse effects of the proposed acquisition described above. Applicant has the burden of demonstrating that the proposed acquisition will be in the public interest. In seeking to meet this burden, Applicant indicates that affiliation would increase the financial resources available to Company. Also, Applicant anticipates establishing additional offices for Company. However, upon consideration of the aforementioned anticompetitive factors, the Board finds that the public benefits to be derived from this affiliation do not outweigh the adverse competitive effects of the proposal.

Based on the foregoing and other considerations reflected in the record, the Board has determined that public interest benefits which the Board is required to consider under $\S 4(c)(8)$ of the Act do not outweigh the adverse effects. Accordingly, the acquisition is hereby denied.

By order of the Board of Governors, effective August 21, 1973.

Voting for this action: Chairman Burns and Governors Mitchell, Brimmer, Sheehan, and Bucher. Absent and not voting: Governors Daane and Holland.
(Signed) Theodore E. Allison, [SEAL] Assistant Secretary of the Board.

## NORTHWEST BANCORPORATION, MINNEAPOLIS, MINNESOTA

## Order Conditionally Approving Acquisition of T. G. Evensen \& Associates, Inc.

Northwest Bancorporation, Minneapolis, Minnesota, a bank holding company within the meaning of the Bank Holding Company Act, has applied for the Board's approval, under section 4(c)(8) of the Act and § 225.4(b)(2) of the Board's Regulation Y , to acquire all of the voting shares of T. G. Evensen \& Associates, Inc., Minneapolis, Minnesota ('"Evensen'’), a company that engages in the activity of providing financial advice to State and local governmental units. Such activity has been determined by the Board to be closely related to banking (12 CFR 225.4(a)(5)).

Notice of the application, affording opportunity for interested persons to submit comments and views on the public interest factors, has been duly published ( 37 Federal Register 5775). The time for filing comments and views has expired, and the Board has considered all comments received, including those received at an oral presentation on the application, held at the Federal Reserve Bank of Minneapolis on October 17, 1972, in the light of the public interest factors set forth in section 4(c)(8) of the Act ( 12 U.S.C. 1843(c)).

Applicant controls 79 banks ${ }^{1}$ located in Minnesota, Montana, Nebraska, North Dakota, South Dakota, Wisconsin, and Iowa, with aggregate deposits of $\$ 4.8$ billion. Forty-nine of the banks are located in the State of Minnesota and together hold total deposits amounting to $\$ 2.78$ billion or approximately 24 per cent of total commercial bank deposits in the State. ${ }^{2}$ Applicant is the second largest banking organization in the State of Minnesota.

Evensen advises State and local governmental units in Minnesota, Wisconsin, North Dakota, South Dakota, Iowa, and Nebraska. More than 70 per cent of its business derives from clients in the State of Minnesota, and, during 1971, Evensen advised on 20.8 per cent of the bonds issued by State and local government units in Minnesota, based on the face amount of such bond issues. Evensen, with gross receipts of $\$ 315,000$ for its fiscal year ended September 30, 1971, ranks as the largest such bond adviser in Minnesota.

Although subsidiaries of Applicant engage in the underwriting of certain State and local government bond issues and the provision of related services to issuers of such securities, neither Applicant nor any of its subsidiaries engage in the business of providing advice concerning bond issuance to State and local governments. Evensen does not engage in the underwriting of bond issues nor any other activity engaged in by Applicant. Accordingly, consummation of the proposed transaction would have no adverse effect on existing competition in any line of commerce. To the contrary, such consummation may have a beneficial effect on existing competition by foreclosing the possibility of a merger of Evensen with one of its existing competitors. Each of Evensen's principal competitors, prior to the making of this application, separately offered to acquire the shares that Applicant here seeks to acquire.

In the Board's opinion, Applicant is not a likely de novo entrant into State and local governmental bond issuance advising. The economic incentive for such entry is not great, as may be adduced from the fact that there are only six firms in the nation engaged solely in this line of commerce. Evensen itself has been in the business for fortyfour years and is considered a major bond consultant in the Minneapolis area. Yet, its average

[^27]annual earnings over the last five years approximate only $\$ 47,000$. The barriers to entry into the bond consultant business are high, not in terms of capital and licenses, but rather in terms of the degree of highly-specialized expertise necessary to properly advise State and local governmental units on the issuance of bonds. It appears that successful advising requires a combination of skills in the assessment of financial needs of clients, familiarity with public finance and tax laws, and a thorough and current knowledge of bond markets. In brief, considerably more is required of a qualified bond adviser than is required of a bond salesman. The Board has no doubt that Applicant has the financial and managerial resources to eventually develop the required expertise within its own organization. However, absent the hiring away of qualified personnel from existing firms, it may take a considerable time to do so and significant losses may be expected to be incurred during the start-up period. Given the lack of significant profit potential described above, it is the Board's judgment that the likelihood that Applicant will pursue the de novo route is remote.
Three competitors of Evensen and one bank engaged in the underwriting of State and local governmental bond issues (hereinafter collectively referred to as "the protestants") have opposed the subject application asserting that consummation of the proposed transaction would have the possible adverse effects of conflicts of interests, misuse of confidential information, and unfair competition. However, the protestants have expressly indicated that they in no way question the ethics or integrity of either Applicant or Evensen, which are of the highest order. Rather, their concern, as is that of the Bank Holding Company Act, is with "possible adverse effects." Briefly stated, the protestants contend that any affiliation between a bond issuance adviser and a bank holding company creates conflicts of interests, primarily between the advisory role and the roles of subsidiaries of the holding company as potential underwriters, paying agents, depositories of bond proceeds, and investment outlets for bond proceeds. In the case of any such affiliation, they contend, and economic incentive is present for the affiliated adviser to falsify, distort or withhold information from, and color or frame advice to, State and local governmental units in such a way as to encourage those clients either to utilize the services of the affiliates of the adviser where independent advice and information would suggest otherwise or to take those services on terms or conditions less favorable to the client than might be obtainable by the client
were it to receive objective advice. The protestants further contend that, as a result of the affiliation, Applicant's subsidiaries possibly would have access to confidential information, provided to Evensen by State and local governments, and that access to such information could give Applicant's subsidiaries unfair advantages over their competitors, particularly in the area of bidding on bond issues and the formation of underwriting syndicates. The consequence of such possibilities, should they come to fruition, would enable Applicant to subsidize the fees of Evensen with the revenues derived from such activities, according to the protestants, with the ultimate consequence of threatening the survival of the protestants that compete with Evensen. Thus, they contend, the affiliation creates a possibility for unfair competition.

Section 4(c)(8) of the Act directs the Board to consider "possible" adverse effects of proposed acquisitions. However, the amount of weight to be accorded to "possible" adverse effects in the balancing process that is contemplated by section $4(\mathrm{c})(8)$ depends directly upon the likelihood of the occurrence of such effects. ${ }^{3}$ Presumably the business ethics of both Evensen and Applicant and the likelihood, attested to by both sides of the instant controversy, that, should an affiliated adviser engage in any of the questionable practices asserted by the protestants, its reputation would be so damaged as to bring into question its future business survival, ${ }^{4}$ lessen the likelihood that possible conflicts of interests would be realized.

Of the more than 2500 issues on which Evensen has advised over the past 43 years, 98 per cent were sold on the basis of published invitation for competitive sealed bids. The competitors of Evensen that have objected to this application have admitted that they have had a similar experience. In fact, even where competitive bids are not required by law, it is Evensen's general practice, as well as that of the adviser industry generally, to recommend the use of competitive bid procedures in the case of all issues with general market appeal. Where such procedures are used, the ability of the adviser to unfairly influence the issuer in the selection of an underwriter is therefore

[^28]considerably diminished. However, where competitive bid procedures are not used, that is, where issues are sold by negotiation between the issuer and possible underwriters, the possibility of undue influence by the adviser is both obvious and real. The Board, therefore, in approving this application, conditions such action on Applicant and its subsidiaries refraining from participation in the sale of Evensen-advised issues that are not sold pursuant to competitive bids. In addition, in order to ensure the confidentiality of information in Evensen's possession, the Board conditions its approval on Evensen refraining from making any information with respect to its clients available to Applicant or its subsidiaries not available at the same time to others.

Conflicts of interests between Applicant's dual role as adviser-paying agent, adviser-depository, and adviser-investment outlet may arise if Evensen, as a subsidiary of Applicant, advises issuers as to the selection of paying agents, depositories, or investment outlets. However, it is Evensen's general practice and that of the adviser industry, generally, to recommend that the purchaser of the bonds, rather than the issuer, designate the paying agent. This being the case, it appears that Evensen has no influence over such designation. Similarly, it is Evensen's general practice to refrain from participation in the selection of depositories for the proceeds of bond issues, and, rather than recommend a particular interim investment for the proceeds of an issue until needed, to recommend that the issuer seek informal competitive bids for such proceeds and accept that bid providing the highest return. However, there is nothing to assure that Evensen's present practices in these regards would continue if the proposed transaction is consummated. Therefore, the Board conditions its approval of the instant application upon the continuation of these practices. Further, the Board believes that prospective clients should be alerted to the affiliation of Evensen and Applicant and also conditions its approval upon the requirement that such affiliation be clearly disclosed on all advertising and letterheads. In addition, in order to obviate any possibility that Evensen will compete unfairly with its other competitors, the Board conditions its approval upon the requirement that Evensen shall continue to offer its services on an explicit fee basis.

In accordance with the Congressional directive contained in section 4(c)(8), the Board has examined the public benefits that may be expected to result from approval of the application and finds that they outweigh any "possible adverse effects",
especially in view of the conditions that the Board is imposing as part of its approval. In the Board's judgment, Applicant's acquisition of Evensen will enable Evensen to geographically expand into areas where issuers are not presently served by advisers. The benefit to the public from sound financial management of State and municipal finances is obvious, and needs no detailed explanation here; an expansion in the supply of competent financial advice to meet such needs is, therefore, a strong public benefit. Furthermore, consummation would make available to Evensen capital and other resources to maintain and increase Evensen's specialized staff, improve and expand its product market and, in some measure, provide an orderly solution to a management succession problem occasioned by the age of Evensen's founder and sole owner.

Before, during, and after the oral presentation held at the Federal Reserve Bank of Minneapolis, referred to above, protestants raised two procedural objections to the Board's processing of this application: (1) They contended the Board should have held a formal trial-type hearing with right to cross-examine and subpoena witnesses; and (2) that the Board's regulation (section 225.4(a)(5) of Regulation Y ) which permits bank holding companies, subject to the provisions of section 225.4(b), to provide financial advice to State and local governments, was improperly adopted and should be declared invalid. The Board believes that both of such contentions are without substance and, for the reasons hereinafter stated, protestants' requests that a formal hearing be held and for invalidation of section 225.4(a)(5) are denied.

Prior to 1970, section 4(c)(8) permitted the Board to act only "after due notice and hearing, and on the basis of the record made at such hearing by order . . .". That section was specifically amended by the Bank Holding Company Act Amendments of 1970 to delete the requirement that the Board act only after a hearing and "on the basis of the record"' at such hearing. Accordingly, since the hearing requirements of the Administrative Procedure Act apply only to a "case of adjudication required by statute to be determined on the record" (5 U.S.C. 554(a)), the Board does not believe a formal trial-type hearing is required where protests are filed to an application under section $4(\mathrm{c})(8)$ of the Act. Further, a review of the 196-page transcript of the oral presentation that was held at the Federal Reserve Bank of Minneapolis and the voluminous additional exhibits and briefs submitted by participants leads the Board to conclude that the Board's pro-
cedures in this case met the Congressional intention of providing "opportunity for hearing" in section 4(c)(8) of the Act and did not deprive the protestants of their "due process of law" rights provided by the Fifth Amendment to the United States Constitution. Commercial National Bank of Little Rock v. Board of Governors of the Federal Reserve System, 451 F. 2d 86 (8th Cir. 1971); Kirsch v. Board of Governors of the Federal Reserve System, 353 F. 2d 353 (6th Cir. 1965); and Northwest Bancorporation v. Board of Governors of the Federal Reserve System, 303 F. 2d 832 (8th Cir. 1962). In addition, protestants misconstrue the Board's Rules of Practice for Formal Hearings (12 CFR 263) as authorizing subpoena of witnesses. Those Rules ( 12 CFR 263.7) authorize the subpoena of witnesses only where the statute, pursuant to which a formal hearing is held, authorizes subpoena of witnesses; the Bank Holding Company Act contains no such authorization.

The Board has also considered protestants' claim that they need the right of cross-examination to bring out certain information with respect to the application (transcript pages 157-59, and 172; protestants' Memorandum in Opposition to Application, pages 8, 13, and 19). The Board concluded that such issues are either immaterial to the Board's decision, are not susceptible to cross-examination, or have been rendered moot in light of the Board's conditional approval.

In sum, the Board concludes that protestants were given ample opportunity to be heard, that their views were fully considered and understood by the Board in reaching its decision, that they are not legally entitled to a formal trial-type hearing, and that it would have served no useful purpose to hold such a hearing in connection with this application.

In addition, protestants question the validity of the Board's action of June 6, 1972 (37 F.R. 11771) when it amended section 225.4(a)(5) of Regulation Y to, inter alia, specifically provide that bank holding companies may, subject to the procedures of section 225.4(b), ' act as investment or financial adviser to the extent of . . . (v) providing financial advice to State and local governments, such as with respect to the issuance of their securities', (Emphasis added) Prior to the amendment, the Regulation was more generally worded and contained the word "including" after "acting as investment or financial adviser" rather than the more limiting term "to the extent of". At the time of the 1972 amendment, the Board stated that its purpose was "to indicate in more
precise terms [the Board's] intent in permitting bank holding companies to act 'as investment or financial adviser'" and that the Administrative Procedure Act requirements of notice and public participation "were not followed with respect to this matter because it clarifies rather than changes a substantive rule". A review of the history of this regulatory provision indicates that the requirements of the Administrative Procedure Act for notice and public comment and hearing were clearly followed by the Board with respect to the adoption of section 225.4(a) in 1971 and that the regulation, as then adopted, would have permitted the activity in question. Accordingly, and for other reasons, the Board is of the opinion that its 1972 action was within the exemption provided by section 553(b) of the Administrative Procedure Act for "interpretive rules" and that prior notice and public participation was unnecessary. Continental Oil Co. v. Burns, 317 F. Supp. 194 (D. C. Del. 1970); Garelick Mfg. Co. v. Dillon, 313 F. 2d 899 (D. C. D. C. 1963); Sav-On Drugs, Inc. v. Cunes, 12 P \& F Admin. Law 2d 848 (D. C. N. J. 1962). Furthermore, even assuming arguendo that the Board's 1972 action was invalid, protestants may not be heard to complain because the Board has the authority to proceed with respect to applications under section 4(c)(8) "by order or regulation" and, as indicated above, protestants have had ample opportunity to participate in this proceeding.

Based upon the foregoing and other considerations reflected in the record, the Board has determined that the balance of the public interest factors the Board is required to consider under section $4(\mathrm{c})(8)$ is favorable. Accordingly, the application is hereby approved, provided; (1) Evensen shall not make available to Applicant or its other subsidiaries any information with respect to its clients not available at the same time to others; (2) the affiliation of Evensen and Applicant shall be clearly disclosed on all advertising and letterheads; (3) Evensen shall continue to offer its services on an explicit fee basis; (4) where Even-sen-advised issues are not to be sold pursuant to competitive bids, Applicant and its other subsidiaries may not participate in their sale; and (5) Evensen shall continue its practices of (i) recommending that the purchaser of the bonds be authorized to name the paying agent; (ii) refraining from participation in the selection of a depository for the bond proceeds; and (iii) recommending that the issuer obtain bids before selecting an interim investment outlet for bond proceeds. This order is also subject to the conditions set forth in section
225.4(c) of Regulation $Y$ and to the Board's authority to require such modification or termination of the activities of a holding company or any of its subsidiaries as the Board finds necessary to assure compliance with the provisions and purposes of the Act and the Board's regulations and orders issued thereunder, or to prevent evasion thereof. The transaction shall not be consummated later than three months after the effective date of this Order, unless such period is extended for good cause by the Board, or by the Federal Reserve Bank of Minneapolis, pursuant to delegated authority granted herewith.

By order of the Board of Governors, effective August 16, 1973.
Voting for this action: Chairman Burns and Governors Daane, Sheehan, Bucher, and Holland. Voting against this action: Governor Brimmer. Absent and not voting: Governor Mitchell.

## (Signed) Chester B. Feldberg, Secretary of the Board.

[SEAL]

## Dissenting Statement of Governor Brimmer

I would deny this application. Northwest Bancorporation is a well-established multi-bank holding company with excellent management and large financial resources. It is the second largest banking organization in the State of Minnesota and also controls banks in Montana, Nebraska, North Dakota, South Dakota, Wisconsin and Iowa. I share the views of the majority that there are possible
adverse effects from consummation of this acquisition (and I concur in their efforts to minimize such possible adverse effects). However, I disagree with my colleagues as to their conclusion that the benefits to the public would outweigh such adverse effects.

In my opinion, Applicant has the financial and managerial resources to commence this activity de novo. Further, if it is to pursue the acquisition route, it should not be permitted to acquire the largest independent firm in the market. Either the de novo route or the acquisition of a less prominent firm would have a more beneficial effect on competition for these services than is presented by the present application. As Congress has recognized:

> One of the asserted justifications for permitting bank holding companies to engage in activities that the Board has determined independently to be closely related to banking, is to permit the introduction of new innovative and competitive vigor into those markets which could benefit therefrom. Where a bank holding company enters a market through acquisition of a major going concern, it may not have the incentive to compete vigorously, thereby bringing the possible benefits into play, as it would immediately succeed to what it might consider its fair share of the market. On the other hand, where a bank holding company enters a new market de novo. or through acquisition of a small firm, as opposed to acquisition of a substantial competitor, its desire to succeed in its new endeavor is more likely to be competitive. (H. Rep. No. 1747, 91st Cong., 2 d Sess. at page 17)

In the delicate weighing process that the Board is compelled to undertake in an application of this kind, I do not find that the public benefits present in this application are strong enough to sustain its approval.

## ORDERS NOT PRINTED IN THIS ISSUE

During August 1973, the Board of Governors approved the applications listed below. The orders have been published in the Federal Register, and copies of the orders are available upon request to Publications Services, Division of Administrative Services, Board of Governors of the Federal Reserve System, Washington, D.C. 20551.

## Announcements

## CHANGES IN BOARD STAFF

The Board of Governors of the Federal Reserve System announced the following promotions and appointment to the official staff of the Division of International Finance, effective September 10, 1973:

Helen B. Junz and George B. Henry have been promoted from Assistant Advisers to Associate Advisers.

Norman S. Fieleke, Vice President and Economist, Federal Reserve Bank of Boston, has taken a leave of absence from the Bank to accept a temporary appointment as an Assistant Adviser. Mr. Fieleke, who holds a Ph. D. degree from Harvard University, joined the Bank's research staff in September 1967.

## MARGINAL RESERVE REQUIREMENTS ON LARGE CD'S

In a further move to curb the rapid expansion in bank credit, the Board of Governors announced on September 7, 1973, an increase in its marginal reserve requirements on large-denomination certificates of deposit.

The action increased the marginal reserve requirement from 8 per cent to 11 per cent, effective September 20.

The growth this year in bank credit has been financed in large part by bank sales of certificates of deposit of $\$ 100,000$ and over, and similar money market instruments. Total bank loans have increased at a more than 20 per cent annual rate since midyear and bank loans to business firms have increased even more rapidly during this interval.

On May 16, the Board imposed an 8 per cent marginal reserve requirement-the regular 5 per cent plus a supplemental 3 per cent-on further increases in (1) time deposits in denominations of $\$ 100,000$ and over and (2) bank-related commercial paper. Similar reserve requirements were subsequently applied to funds raised by banks through the sale of finance bills.

Banks have been required to maintain this added reserve requirement beginning with the week of

June 21-27, based on total deposit levels 2 weeks earlier. The marginal reserve does not apply to deposits of these types totaling less than $\$ 10$ million, which are still subject to the regular reserve requirement.

The 11 per cent marginal reserve require-ment-the regular 5 per cent plus a supplemental 6 per cent-applies to increases in the level of affected deposits since the week ending May 16.

Since that time, commercial banks have increased their holdings of large CD's, bank-related commercial paper, and finance bills by about $\$ 15$ billion. An increase in the marginal reserve requirement to 11 per cent means that banks with these deposits are required to maintain about $\$ 450$ million in additional reserve requirements.

Member banks will be required to maintain the 11 per cent marginal reserve requirement during the week of October 4-10, based on deposit levels 2 weeks earlier.

## AMENDMENTS TO REGULATION Q

The Board of Governors has announced two amendments to Regulation Q. Regulation Q deals with the payment of interest on deposits at Federal Reserve member banks.

The first action, effective September 10, defines any amendment to a time deposit contract that results in an increase in the interest rate, or a change in the maturity of the deposit, as a withdrawal of funds subject to penalty.

The amendment to Regulation Q would treat any change in a time deposit contract-generally, certificates of deposit-that results in an increase in the rate of interest to be paid, or that changes the maturity of the deposit, as a withdrawal before maturity. The penalty for early withdrawal of deposits would therefore apply.

The early withdrawal penalty differs according to the date on which the time deposit contract was entered into:

For time deposit contracts entered into, or amended, or renewed after July 5, 1973 (when a new schedule of maximum interest rates on time deposits went into effect), the penalty is
in two parts: (a) a reduction of the rate of interest paid to the maximum permissible passbook rate for the entire time the deposit has been held, and (b) a loss of 3 months' interest.

For all other time deposits, the old penalty rule applies. This states that a bank may pay a time deposit before maturity only in an emergency where early withdrawal is necessary to prevent great hardship to the depositor, plus forfeiture of up to 3 months' accrued, unpaid interest.

The second amendment, which went into effect on September 18, relates to disclosure of the penalty provision for early withdrawal of time deposits. It requires member banks to:

1. Disclose in advertising regarding interest paid on time deposits that Federal law and regulation prohibit the payment of a time deposit prior to maturity unless substantial interest is forfeited. The following language is suggested for this statement:
"Federal law and regulation prohibit the payment of a time deposit prior to maturity unless three months of the interest thereon is forfeited and interest on the amount withdrawn is reduced to the passbook rate."
For radio or television commercials, the following language is suggested:
"Substantial interest penalty is required for early withdrawal."
2. Give to each bank customer who enters into a time deposit contract a written statement specifying that the customer has contracted to keep funds on deposit for a fixed period of time, and describing how the early withdrawal penalty applies to time deposits, in the event the bank permits payment before maturity.

The early withdrawal penalty subject to the disclosure provision is in two parts-(a) a reduction of the rate of interest paid to the maximum permissible passbook rate for the period the deposit is held, and (b) a loss of 3 months' interest.

## OVERSEAS BRANCHES OF MEMBER bANKS: ASSETS AND LIABILITIES

Total assets of the overseas branches of member banks increased by $\$ 10.4$ billion, or 15 per cent, during 1972 to a total of $\$ 77.4$ billion, the Board of Governors announced in releasing data showing balance sheet items of overseas branches at the beginning and end of the year. At the end of 1972, 627 branches were in operation in foreign countries and overseas territories, an increase of 50 branches during the year.

The tabulations (which are available upon request) show as separate items the amounts due from and due to other overseas branches of the same bank. Omitting these offshore interoffice claims, assets of the branches increased by $\$ 17.1$ billion, or 31 per cent. This growth was again principally accounted for by branches in Europe (particularly those in London) and in the Bahamas.

Loans at overseas branches expanded by $\$ 8.6$ billion, or 31 per cent, during 1972. In addition, cash assets increased by $\$ 9.8$ billion ( 48 per cent), again reflecting continued expansion of time placements with other banks in Eurocurrency markets.

The data are derived from reports of condition filed at the end of the year with the Comptroller of the Currency and the Federal Reserve System and differ in certain respects from other statistical reports covering aspects of overseas branch operations. The assets and liabilities shown are payable in U.S. dollars as well as in currencies of the countries where the branches are located and in other foreign currencies.

## ADMISSION OF STATE BANK TO MEMBERSHIP in the federal reserve system

The following bank was admitted to membership in the Federal Reserve System during the period August 16, 1973, through September 15, 1973:

## Florida

Bradenton
First Security Bank

# Industrial Production 

## Released for publication September 14

Industrial production declined 0.2 per cent in August and, at 126.2 per cent of the 1967 average, was 8.5 per cent above a year earlier. The August decline reflected a sharp curtailment in production of auto and truck assemblies due to special factors. Apart from autos and trucks, the index increased by 0.5 per cent.

Auto assemblies for August were scheduled at 610,000 units-an annual rate of 10.3 million units and the same as in July-but parts shortages, plant shutdowns because of extreme heat, and some work stoppages curtailed actual production to 470,000 cars, an annual rate of 8.0 million units. In early September, output of autos and trucks increased sharply.

Output of consumer durable goods declined due to a drop in auto production, while a rise in business equipment was slowed by the decline in truck output. Production of auto and truck assemblies combined was down 23 per cent during August. Production of industrial materials rose only slightly further. Output of household appliances, television sets, and furniture was maintained at record levels, while production of nondurable consumer goods advanced further.

F.R. indexes, seasonally adjusted. Latest figures: August.

Exclusive of trucks, output of business equipment rose about 1.5 per cent. The increase in total business equipment was 0.3 per cent, reflecting a 25 per cent drop in truck assemblies. Output of construction products increased, but production of steel, other durable goods materials, and nondurable materials was up only marginally.

Statistical Releases
LIST PUBLISHED SEMIANNUALLY, WITH LATEST BULLETIN REFERENCE

1 Includes Federal agency issues held under repurchase agreements as of Dec. 1, 1966, and Federal agency issues bought outright as of Sept. 29, 1971.
${ }_{2}$ Beginning with 1960 reflects a minor change in concept; see Feb. 1961 Bulletin, p. 164
${ }^{3}$ Beginning Apr. 16, 1969, "Other F.R. assets" and "Other F.R. liabilities and capital" are shown separately; formerly, they were netted together and reported as "Other F.R. accounts."
4 Includes industrial loans and acceptances until Aug. 21, 1959, when
industrial loan program was discontinued. For holdings of acceptances on Wed. and end-of-month dates, see tables on F.R. Banks on following pages. See also note 2 .
${ }^{5}$ Includes certain deposits of domestic nonmember banks and foreignowned banking institutions held with member banks and redeposited in full with Federal Reserve Banks in connection with voluntary participation by nonmember institutions in the Federal Reserve System's program of credit restraint.

Notes continued on opposite page.

[^29]included are (beginning with first statement week of quarter): Q1, \$279 million; $\mathrm{Q} 2, \$ 172$ million; $\mathrm{Q} 3, \$ 112$ million.

8 Includes securities loaned-fully secured by U.S. Govt. securities pledged with F.R. Banks.

9 Includes securities loaned-fully secured by U.S. Govt. securities pledged with F.R. Banks. Also reflects securities sold, and scheduled to be bought back, under matched sale/purchase transactions.

For other notes see opposite page.

[^30]parallel the previous "Reserve city" and "Country" categories, respectively (hence the series are continuous over time).

Note.-Monthly and weekly data are averages of daily figures within the month or week, respectively. Beginning with Jan. 1964 reserves are estimated except for weekly averages.

Borrowings at F.R. Banks: Based on closing figures.
Effective Apr. 19, 1973, the Board's Regulation A, which governs lending by Federal Reserve Banks, was revised to assist smaller member banks to meet the seasonal borrowing needs of their communities.

NoTE.-Rates under Secs. 13 and 13a (as described in table and notes above). For data before 1955, see Banking and Monetary Statistics, 1943, pp. 439-42, and Supplement to Section 12, p. 31.

## RESERVE REQUIREMENTS ON DEPOSITS OF MEMBER BANKS

(Deposit intervals are in millions of dollars. Requirements are in per cent of deposits.)

1 When two dates are shown, the first applies to the change at reserve city banks and the second to the change at country banks. For changes prior to 1963 see Board's Annual Reports.
2 (a) Demand deposits subject to reserve requirements are gross demand deposits minus cash items in process of collection and demand balances due from domestic banks.
(b) Requirement schedules are graduated, and each deposit interval applies to that part of the deposits of each bank.
(c) Since Oct. 16,1969 , member banks have been required under Regulation M to maintain reserves against foreign branch deposits computed on the basis of net balances due from domestic offices to their foreign branches above a specified base and against foreign branch loans to U.S. residents, which until June 21, 1973, were also maintained above a specified base. The reserve-free base relating to net balances due from domestic banks to foreign branches is being reduced gradually beginning July 5, 1973, and will be eliminated by April 1974. The applicable reserve percentage, originally 10 per cent, was increased to 20 per cent on Jan. 7,197 , and effective June 21, 1973, was reduced to 8 per cent. Regulation $O$ imposes a similar reserve requirement on borrowings above a specified base from foreign banks by domestic offices of a member bank. The reserve-free base related to this type of borrowings is being reduced gradually and will be eliminated by April 1974. Fcr details, see Regulations D and M and appropriate supplements and amendments thereto.
${ }^{3}$ Effective Jan. 5, 1967, time deposits such as Christmas and vacation club accounts became subject to same requirements as savings deposits. For other notes see 2(b) and 2(c) above.
4 Effective Nov. 9, 1972, a new criterion was adopted to designate reserve cities, and on the same date requirements for reserves against net demand deposits of member banks were restructured to provide that each member bank will maintain reserves related to the size of its net demand deposits. The new reserve city designations are as follows: A bank having net demand deposits of more than $\$ 400$ million is considered to have the
character of business of a reserve city bank, and the presence of the head office of such a bank constitutes designation of that place as a reserve city. Cities in which there are F.R. Banks or branches are also reserve cities. Any banks having net demand deposits of $\$ 400$ million or less are considered to have the character of business of banks outside of less are considered to have the character of business of banks outside of reserve cities and are permitted to maintain reserves at ratios set for banks
not in reserve cities. For details, see Regulation $D$ and appropriate supnot in reserve cities. For d
plements and amendments.
lements and amendmen
$\$$ Reserve city banks.
${ }^{6}$ Except as noted below, member banks are subject to an 8 per cent marginal reserve requirement against increases in the aggregate of (a) outstanding time deposits of $\$ 100,000$ and over, (b) outstanding funds obtained by the bank through issuance by a bank's affiliate of obligations subject to the existing reserve requirements on time deposits, and (c) funds from sales of finance bills. The 8 per cent requirement applies to balances above a specified base, but is not applicable to banks that have obligations of these types aggregating less than $\$ 10$ million. This requirement became effective for (a) and (b) on June 21 1973-except that for the period June 21 to August 30, 1973, (a) includes only singlematurity time deposits-and for (c) on July 12, 1973. For details, see maturity time deposits-and for (c) on July 12, 1973. For
Regulation D and appropriate supplements and amendments.
7 The $161 / 2$ per cent requirement applied for one week, only to former reserve city banks. For other banks, the 13 per cent requirement was continued in this deposit interval.
${ }_{9}^{8}$ See preceding columns for earliest effective date of this rate.
${ }^{9}$ For changes effective Sept. 20.1973, see "Announcements."
Note.-All required reserves were held on deposit with F.R. Banks June 21, 1917, until Dec. 1959. From Dec. 1959 to Nov. 1960, member banks were allowed $t$ ) count part of their currency and coin as reserves; effective Nov. 24, 1960, they were allowed to count all as reserves. For further details, see Board's Annual Reports.

${ }^{1}$ For exceptions with respect to certain foreign time deposits, see Bulletin for Feb. 1968, p. 167.

2 Multiple-maturity time deposits include deposits that are automatically renewable at maturity without action by the depositor and deposits that are payable after written notice of withdrawal.
${ }^{3}$ No ceiling for certificates with minimum denomination of $\$ 1,000$. Amount of such certificates that a bank may issue is limited to 5 per cent of its total time and savings deposits. Any sales in excess of that amount are subject to the $61 / 2$ per cent ceiling that applies to time deposits maturing in $21 / 2$ years or more.

4 Suspended as of this date.

Note.-Maximum rates that may be paid by member banks are established by the Board of Governors under provisions of Regulation Q ; however, a member bank may not pay a rate in excess of the maximum however, a member bank may not pay a rate in excess of the maximum
rate payable by State banks or trust companies on like deposits under rate payable by State banks or trust companies on like deposits under the laws of the State in which the member bank is located. Beginning
Feb. 1, 1936, maximum rates that may be paid by nonmember insured Feb. 1, 1936, maximum rates that may be paid by nonmember insured
commercial banks, as established by the FDIC, have been the same as commercial banks, as established
those in effect for member banks.

For previous changes, see earlier issues of the Bulletin.

Note.-Composition of the money stock measures is as follows:
$M_{1}$ : Averages of daily figures for (1) demand deposits of commercial banks other than domestic interbank and U.S. Govt., less cash items in process of collection and F.R. float; (2) foreign demand balances at F.R. Banks; and (3) currency outside the Treasury, F.R. Banks, and vaults of commercial banks
$M_{2}$ : Averages of daily figures for $M_{1}$ plus savings deposits, time de-
posits open account, and time certificates other than negotiable CD's of $\$ 100,000$ of large weekly reporting banks.
$M_{3}: M_{2}$ plus the average of the beginning- and end-of-month figures for deposits of mutual savings banks and for savings capital of savings and loan associations
For description and back data, see "Revision of the Money Stock Measures and Member Bank Reserves and Deposits" on pp. 61-79 of the Feb. 1973 Bulletin.

See also Note above.

AGGREGATE RESERVES AND MEMBER BANK DEPOSITS
(In billions of dollars)

1 Averages of daily figures. Member bank reserve series reflects actual reserve requirement percentages with no adjustment to eliminate the effect of changes in Regulations $D$ and $M$. Required reserves were ineffect of changes in Regulations $D$ and $M$. Required reserves were inOct. 16, 1969; were reduced by $\$ 500$ million (net) effective Oct. $1,1970$. Required reserves were reduced by approximately $\$ 2.5$ billion, effective Nov. 9,1972 ; by $\$ 1.0$ billion, effective Nov. 15 ; and increased by $\$ 300$ million effective Nov. 22.

2 Reserves available to support private nonbank deposits are defined as (1) required reserves for (a) private demand deposits, (b) total time and savings deposits, and (c) nondeposit sources subject to reserve requirements, and (2) excess reserves. This series excludes required reserves for net interbank and U.S. Govt. demand deposits.

3 Averages of daily figures. Deposits subject to reserve requirements include total time and savings deposits and net demand deposits as defined by Regulation D. Private demand deposits include all demand deposits
except those due to the U.S. Govt., less cash items in process of collection and demand balances due from domestic commercial banks.
${ }_{4}$ Total member bank deposits subject to reserve requirements, plus Euro-dollar borrowings, bank-related commercial paper, and certain other nondeposit items. This series for deposits is referred to as "the adjusted bank credit proxy."
Note.-For description of revised series and for back data, see article "Revision of the Money Stock Measures and Member Bank Reserves and Deposits" on pp. 61-79 of the Feb. 1973 Bulletin.

Due to changes in Regulations $M$ and $D$, member bank reserves include reserves held against nondeposit funds beginning Oct. 16, 1969. Back data may be obtained from the Banking Section, Division of Research and Statistics, Board of Governors of the Federal Reserve System, Washington, D.C. 20551.

PRINCIPAL ASSETS AND LIABILITIES AND NUMBER, BY CLASS OF BANK—Continued
(Amounts in millions of dollars)

1 Beginning June 30, 1966 , loans to farmers directly guaranteed by CCC were reclassified as securities, and Export-Import Bank portfolio fund participations were reclassified from loans to securities. This reduced "Total loans" and increased "Other securities" by about \$I billion. "Total loans" include Federal funds sold, and beginning with June 1967 securities loans" include Federal funds sold, and beginning with June 1967 securities purchased under resale agreements, fi
"Federal funds sold, etc."' on p. A-22. Home Administration notes are Beginning June 30 , 1971 , Farmers Home Administration notes are
classified as "Other securities" rather than "Loans." As a result of this change, approximately $\$ 300$ million was transferred to "Other securities" for the period ending June 30, 1971, for all commercial banks.

See also table (and notes) at the bottom of p. A-30.
2 See first two paragraphs of note 1 .
3 Reciprocal balances excluded beginning with 1942.
4 Includes items not shown separately. See also note 1 .
5 See third paragraph of note 1 above.
6 Beginning with Dec. 31, 1947, the series was revised; for description, see note 4, p. 587 , May 1964 Bulletin.

7 Figure takes into account the following changes beginning June 30, 1969: (1) inclusion of consolidated reports (including figures for all bankpremises subsidiaries and other significant majority-owned domestic subsidiaries) and (2) reporting of figures for total loans and for individual categories of securities on a gross basis-that is, before deduction of valuation reserves-rather than net as previously reported.

8 Beginning Nov.9,1972, designation of banks as reserve city banks for reserve-requirement purposes has been based on size of bank (net demand deposits of more than $\$ 400 \mathrm{million}$ ), as described in the BULLETIN for July 1972, p. 626. Categories shown here as "Large" and "All other" paral-
lel the previous "Reserve city" and "Country" categories, respectively (hence the series are continuous over time).

9 Regarding reclassification as a reserve city, see Aug. 1962 Bulletin, p. 993. For various changes between reserve city and country status in 1960-63, see note 6, p. 587, May 1964 Bulletin. (See also note 8.)

10 Beginning May 6, 1972 , two New York City country banks, with deposits of $\$ 1,412$ million, merged and were reclassified as a reserve city bank. (See also note 8.)

Note.-Data are for all commercial banks in the United States (including Alaska and Hawaii, beginning with 1959). Commercial banks represent all commercial banks, both member and nonmember; stock savings banks; and nondeposit trust companies.

For the period June 1941-June 1962 member banks include mutual savings banks as follows: three before Jan. 1960, two through Dec. 1960, and one through June 1962. Those banks are not included in insured commercial banks.

Beginning June 30,1969 , commercial banks and member banks exclude a small national bank in the Virgin Islands; also, member banks exclude, and noninsured commercial banks include, through June 30, 1970, a small member bank engaged exclusively in trust business.

Comparability of figures for classes of banks is affected somewhat by changes in F.R. membership, deposit insurance status, and the reserve changes in F.R. membership, deposit insurance status, and the
classifications of cities and individual banks, and by mergers, etc.
Dassifications of cities and individual banks, and by mergers, etc.
Dat national banks for Dec. 31,1965 , have been adjusted to make them comparable with State bank data.

Figures are partly estimated except on call dates.
For revisions in series before June 30, 1947, see July 1947 Bulletin, pp. 870-71.

1 Beginning with June 30, 1948, figures for various loan items are shown gross (i.e., before deduction of valuation reserves); they do not add to the total and are not entirely comparable with prior figures. Total loans continue to be shown net. See also note 10 .

2 Includes securities purchased under resale agreements. Prior to June 30, 1967, such securities were included in loans-for the most part in loans to "Banks." Prior to Dec. 1965, Federal funds sold were included with "Total" loans and loans to "Banks."
${ }^{3}$ See table (and notes), Deposits Accumulated for Payment of Personal Loans, p. A-30.

4 Breakdowns of loan, investment, and deposit classifications are not available before 1947; summary figures for 1941 and 1945 appear in the table on pp. A-18-A-21.
${ }^{5}$ Beginning with June 30 , 1966, loans to farmers directly guaranteed by CCC were reclassified as "Other securities," and Export-Import Bank portfolio fund participations were reclassified from loans to "Other securities." This increased "Other securities" by about $\$ 1$ billion.
6 Beginning with Dec. 31, 1965, components shown at par rather than at book value; they do not add to the total (shown at book value) and are not entirely comparable with prior figures. See also note 10.

Notes continued on opposite page.

[^38]parallel the previous "Reserve city" and "Country" categories, respectively (hence the series are continuous over time).

Note.-Data are for all commercial banks in the United States; member banks in U.S. possessions were included through 1968 and then excluded.

For the period June 1941 -June 1962 member banks include mutual savings banks as follows: three before Jan. 1960, two through Dec. 1960, and one through June 1962. Those banks are not included in all insured or total banks.
A small noninsured member bank engaged exclusively in trust business is treated as a noninsured bank and not as a member bank for the period June 30, 1969 -June 30, 1970.

Comparability of figures for classes of banks is affected somewhat by changes in F.R. membership, deposit insurance status, and the reserve classifications of cities and individual banks, and by mergers, etc.

For other notes see opposite page.

${ }^{1}$ Beginning Nov. 9, 1972, designation of banks as reserve city banks for reserve-requirement purposes has been based on size of bank (net demand deposits of more than $\$ 400$ million), as described in the Bulletin for July 1972, p. 626. Categories shown here as "Other large" and "All other member"' parallel the previous "Reserve City" (other than in New York City and the City of Chicago) and "Country" categories, respectively (hence the series are continuous over time).

NoTE.-These hypothecated deposits are excluded from "Time deposits" and "Loans" at commercial banks, as shown in the tables on pp. A-18, A-19, and A-24-A-28 (consumer instalment loans), and in the table at the bottom of p. A-17. These changes resulted from a change in Federal Reserve regulations. See June 1966 Bulletin, p. 808.
These deposits have not been deducted from "Time deposits" and Loans" for commercial banks as shown on pp. A-20 and A-21 and on pp. A-22 and A-23 (IPC only for time deposits).

Note.-Amounts sold under repurchase agreement are excluded. Figures include small amounts sold by banks other than large weekly reporting banks.

COMMERCIAL AND FINANCE COMPANY PAPER AND BANKERS' ACCEPTANCES OUTSTANDING
(In millions of dollars)

[^41]PRIME RATE CHARGED BY BANKS
(Per cent per annum)

Note.-Beginning Nov. 1971, several banks adopted a floating prime rate keyed to money market variables. - denotes the predominate prime rate quoted by commercial banks to large businesses.

Effective Apr. 16, 1973, with the adoption of a two tier or "dual prime rate," this table shows only the "large-business prime rate," which is the range of rates charged by commercial banks on short-term loans to large businesses with the highest credit standing.

Note.-Beginning Feb. 1971 the Quarterly Survey of Interest Rates on Business Loans was revised. For description of revised series see pp. 46877 of the June 1971 Bulletin.

## MONEY MARKET RATES

(Per cent per annum)

${ }^{1}$ Averages of the most representative daily offering rate quoted by dealers.
${ }_{2}$ Averages of the most representative daily offering rate published by finance companies, for varying maturities in the 90-179 day range.
${ }^{3}$ Seven-day averages for week ending Wednesday. Beginning with statement week ending July 25, 1973, weekly averages are based on the daily average of the range of rates on a given day weighted by the volume of transactions at these rates. For earlier statement weeks, the averages were based on the daily effective rate-the rate considered most repre-
sentative of the day's transactions, usually the one at which most transactions occurred.
${ }^{4}$ Except for new bill issues, yields are averages computed from daily closing bid prices.

5 Bills quoted on bank-discount-rate basis
6 Certificates and selected note and bond issues.
7 Selected note and bond issues.
Note.-Figures for Treasury bills are the revised series described on $p$. A-35 of the Oct. 1972 BULLETIN.

## BOND AND STOCK YIELDS

(Per cent per annum)

${ }^{1}$ Includes bonds rated $A$ a and $A$, data for which are not shown sep. arately. Because of a limited number of suitable issues, the number of corporate bonds in some groups has varied somewhat. As of Dec. 23, 1967, there is no longer an Aaa-rated railroad bond series.
${ }^{2}$ Number of issues varies over time; figures shown reflect most recent count.

Note.-Annual yields are averages of monthly or quarterly data. Bonds: Monthly and weekly yields are computed as follows: (1) U.S. Govt.: Averages of daily figures for bonds maturing or callable in 10 years or more; from Treasury Dept. (2) State and local govt.: General obligations
only, based on Thurs. figures; from Moody's Investor Service. (3) Corporate: Rates for "New issue" and "Recently offered" Aaa utility bonds are weekly averages compiled by the Board of Governors of the Federal Reserve System. Rates for seasoned issues are averages of daily figures from Moody's Investors Service.

Stocks: Standard and Poor's corporate series. Dividend/price ratios are based on Wed. figures; earnings/price ratios are as of end of period. Preferred stock ratio is based on eight median yields for a sample of noncallable issues- 12 industrial and 2 public utility; common stock ratios on the 500 stocks in the price index. Quarterly earnings are seasonally adjusted at annual rates.

Notes to tables on opposite page:

## Security Prices:

${ }^{1}$ Begins June 30,1965 , at 10.90 . On that day the average price of a share of stock listed on the American Stock Exchange was $\$ 10.90$.

Note.-Annual data are averages of monthly figures. Monthly and weekly data are averages of daily figures unless otherwise noted and are computed as follows: U.S. Govt. bonds, derived from average market yields in table on p. A- 34 on basis of an assumed 3 per cent, 20-year bond. Municipal and corporate bonds, derived from average yields as computed by Standard and Poor's Corp., on basis of a 4 per cent, 20 year bond; Wed. closing prices. Common stocks, derived from component common stock prices. Average daily volume of trading, normally conducted 5 days per week for $51 / 2$ hours per day, or $271 / 2$ hours per week. In recent years shorter days and/or weeks have cut total weekly trading to the following number of hours: 1967-Aug. 8-20, 20; July--Jan. 22-
Mar. 1, 20 ; June 30-Dec. 31, 22; 1969-Jan. 3-July 3, 20; July Mar. 1, 20; June 30-Dec. 31, 22 ;
2970-Jan. 2 -May 1, 25.

## Terms on Mortgages:

1 Fees and charges-related to principal mortgage amount-include loan commissions, fees, discounts, and other charges, which provide added income to the lender and are paid by the borrower. They exclude any closing costs related solely to transfer of property ownership.
${ }^{2}$ Series revised beginning Jan. 1973; hence data are not strictly comparable with earlier figures.

Note.-Compiled by Federal Home Loan Bank Board in cooperation with Federal Deposit Insurance Corporation. Data are weighted averages based on probability sample survey of characteristics of mortgages originated by major institutional lender groups (including mortgage companies) for purchase of single-family homes. Data exclude loans for refinancing, reconditioning, or modernization; construction loans to homebuilders; and permanent loans that are coupled with construction loans to owner-builders. Series beginning 1965, not strictly comparable with earlier data. See also the table on Home-Mortgage Yields, p. A-53.

${ }^{1}$ Margin credit includes all credit extended to purchase or carry stocks or related equity instruments and secured at least in part by stock (see Dec. 1970 BulleTin). Credit extended by brokers is end-of-month data for member firms of the New York Stock Exchange. June data for banks are universe totals; all other data for banks represent estimates for all commercial banks based on reports by a reporting sample, which accounted for 60 per cent of security credit outstanding at banks on June 30 , 1971.

2 In addition to assigning a current loan value to margin stock generally,

Regulations T and U permit special loan values for convertible bonds and stock acquired through exercise of subscription rights.
3 Nonmargin stocks are those not listed on a national securities exchange and not included on the Federal Reserve System's list of Over the Counter margin stocks. At banks, loans to purchase or carry nonmargin stocks are unregulated; at brokers, such stocks have no loan value.

4 Includes loans to purchase or carry margin stock if these are unsecured or secured entirely by unrestricted collateral (see Dec. 1970 Bulletin).
${ }^{5}$ Free credit balances are in accounts with no unfulfilled commitments to the brokers and are subject to withdrawal by customers on demand.

## SPECIAL MISCELLANEOUS ACCOUNT BALANCES AT BROKERS, BY EQUITY STATUS OF ACCOUNTS

(Per cent of total, except as noted)

| End of period | Net credit status | Equity class of accounts in debit status |  | Total balance (millions of dollars |
| :---: | :---: | :---: | :---: | :---: |
|  |  | 60 per cent or more | Less than 60 per cent |  |
| 1972-July. | 34.4 | 55.2 | 11.4 | 5,930 |
| Aug. | 33.4 | 55.2 | 11.4 | 5,990 |
| Sept. | 33.7 | 53.8 | 12.5 | 6,000 |
| Oct. . | 33.3 | 53.4 | 13.3 | 5,950 |
| Nov. | 33.6 | 54.5 | 11.8 | 6,140 |
| Dec. | 34.4 | 52.9 | 12.7 | 6,100 |
| 1973-Jan | 35.1 | 51.7 | 13.1 | 5,850 |
| Feb. | 35.8 | 49.8 | 14.4 | 5,770 |
| Mar. | 36.3 | 47.9 | 15.7 | 5,790 |
| Apr. | 35.3 | 46.9 | 18.0 | 5,660 |
| May. | 35.8 | 45.0 | 19.1 | 5,670 |
| June. | 35.8 | 43.5 | 20.7 | 5,750 |
| July . | 35.9 | 46.7 | 17.4 | 5,740 |

NoTE.-Special miscellaneous accounts contain credit balances that may be used by customers as the margin deposit required for additional purchases. Balances may arise as transfers based on Ioan values of other collateral in the customer's margin account or deposits of cash (usually sales proceeds) occur.

${ }^{1}$ Also includes securities of foreign governments and international organizations and nonguaranteed issues of U.S. Govt. agencies.

2 Beginning with data for June 30, 1966, about $\$ 1.1$ billion in "Deposits accumulated for payment of personal loans" were excluded from "Time deposits" and deducted from "Loans" at all commercial banks. These changes resulted from a change in Federal Reserve regulations. See table (and notes), Deposits Accumulated for Payment of Personal Loans, p. A-30. the Savings Banks Assn. of the State of New York. Data include building loans beginning with Aug. 1967.
${ }^{4}$ Balance sheet data beginning Jan. 1972 are reported on a gross-of-valuation-reserves basis. The data differ somewhat from balance sheet data previously reported by National Assn. of Mutual Savings Banks which were net of valuation reserves. For most items, however, the differences are relatively small.

NoTE.-NAMSB data; figures are estimates for all savings banks in the United States and differ somewhat from those shown elsewhere in the Bulletin; the latter are for call dates and are based on reports filed with U.S. Govt. and State bank supervisory agencies.

1 Issues of foreign governments and their subdivisions and bonds of the International Bank for Reconstruction and Development.

Note.-Institute of Life Insurance estimates for all life insurance companies in the United States.

Figures are annual statement asset values, with bonds carried on an amortized basis and stocks at year-end market value. Adjustments for interest due and accrued and for differences between market and book values are not made on each item separately but are included, in total in "Other assets."

1 Investment securities included U.S. Govt. securities only through 1967. Beginning 1968 the total reflects liquid assets and other investment securities. Included are U.S. Govt. obligations, Federal agency securities, State and local govt. securities, time deposits at banks, and miscellaneous securities, except stock of the Federal Home Loan Bank Board. Compensating changes have been made in "Other assets."

2 Includes other loans, stock in the Federal home loan banks, other investments, real estate owned and sold on contract, and office buildings and fixtures. See also notes 1,5 , and 6 .
${ }^{3}$ Includes net undistributed income, which is accrued by most, but not all, associations.

4 Consists of advances from FHLBB and other borrowing.
5 Data comparable with those shown for mutual savings banks (on preceding page) except that figures for loans in process are not included above but are included in the figures for mutual savings banks.
${ }^{6}$ Beginning Jan. 1973, participation certificates guaranteed by the Federal Home Loan Mortgage Corporation, loans and notes insured by the Farmers Home Administration and certain other Governmentinsured mortgage-type investments, previously included in mortgage loans, are included in other assets. The effect of this change was to reduce the mortgage total by about $\$ 0.6$ billion.

Also, GNMA-guaranteed, mortgage-backed securities of the passthrough type, previously included in cash and investment securities are included in other assets. These amounted to about $\$ 2.4$ billion at the end of 1972 .

NOTE.-FHLBB data; figures are estimates for all savings and loan assns, in the United States. Data are based on monthly reports of insured assns. and annual reports of noninsured assns. Data for current and preceding year are preliminary even when revised.

Note.-Data from Federal Home Loan Bank Board, Federal National Mortgage Assn., and Farm Credit Admin. Among omitted balance sheet items are capital accounts of all agencies, except for stock of FHLB's. Bonds, debentures, and notes are valued at par. They include only publicly
offered securities (excluding, for FHLB's, bonds held within the FHLB System) and are not guaranteed by the U.S. Govt.; for a listing of these securities, see table on opposite page. Loans are gross of valuation reserves and represent cost for FNMA and unnaid principal for other agencies.

[^42]FEDERAL FISCAL OPERATIONS: SUMMARY
(In millions of dollars)

${ }^{1}$ Equals net expenditures plus net lending.
2 The decrease in Federal securities resulting from conversion to private ownership of Govt.-sponsored corporations (totaling $\$ 9,853$ million) is not included here. In the bottom panel, however, these conversions decrease the outstanding amounts of Federal securities held by the public mainly by reductions in agency securities. The Federal National Mortgage Association (FNMA) was converted to private owership in Sept. 1968 and the Federal intermediate credit banks (FICB) and banks for cooperatives in Dec. 1968.
3 Represents non-interest-bearing public debt securities issued to the International Monetary Fund and international lending organizations. New obligations to these agencies are handled by letters of credit.

4 Includes accrued interest payable on public debt securities, deposit funds, miscellaneous liability and asset accounts, and seigniorage.

5 As of Jan. 3, 1972, the Treasury operating balance was redefined to exclude the gold balance and to include previously excluded "Other depositaries" (deposits in certain commercial depositaries that have been converted from a time to a demand basis to permit greater flexibility in Treasury cash management).
6 Includes debt of Federal home loan banks, Federal land banks, R.F.K. Stadium Fund, FNMA (beginning Sept. 1968), and FICB and banks for cooperatives (both beginning Dec. 1968).

Note.-Half years may not add to fiscal year totals due to revisions in series that are not yet available on a monthly basis.

## FEDERAL FISCAL OPERATIONS: DETAIL

(In millions of dollars)

1 Old-age, disability, and hospital insurance (including premiums for uninsured effective July 1, 1973, as provided for in Public Law 92-603), and Rairoad Retirement accounts.
${ }^{2}$ Supplementary medical insurance premiums (including premiums for disabled effective July 1, 1973, as provided for in Public Law 92-603), and Federal employee retirement contributions.
${ }_{3}$ Deposits of earnings by Federal Reserve Banks and other miscellaneous receipts.
${ }_{4}^{4}$ Consists of Government contributions for employee retirement and of interest received by trust funds.
${ }^{5}$ Estimates presented in the Jan. 1974 Budget Document. Breakdowns do not add to totals because special allowances for contingencies, and Federal pay increase (excluding Department of Defense), totaling $\$ 1,750$ million pay increase (excluding Departm
for fiscal 1974, are not included.
for fiscal 1974, are not included.
6 Outlays of $\$ 6,786$ million in 1973 contain retroactive payments of $\$ 2,600$ million for fiscal 1972.
Note.-Half years may not add to fiscal year totals due to revisions in series that are not yet available on a monthly basis.

${ }^{1}$ Consists of investments of foreign and international accounts in the United States.
${ }_{2}$ Consists of savings and loan assns., nonprofit institutions, corporate pension trust funds, and dealers and brokers. Also included are certain Govt. deposit accounts and Govt.-sponsored agencies.
Note.-Reported data for F.R. Banks and U.S. Govt. agencies and trust funds; Treasury estimates for other groups.

4 Nonmarketable certificates of indebtedness, notes, and bonds in the Treasury foreign series and foreign currency series issues.

5 Held only by U.S. Govt. agencies and trust funds and the Federal home loan banks.

Note.-Based on Daily Statement of U.S. Treasury. See also second paragraph in Note to table below.

OWNERSHIP OF MARKETABLE SECURITIES, BY MATURITY
(Par value, in millions of dollars)

Note.-Direct public issues only. Based on Treasury Survey of Ownership.
Data complete for U.S. Govt. agencies and trust funds and F.R. Banks but for other groups are based on Treasury Survey data. Of total marketable issues held by groups, the proportion held on latest date by those reporting in the Survey and the number of owners surveyed were: (1)
about 90 per cent by the 5,609 commercial banks, 479 mutual savings banks, and 739 insurance companies combined; (2) about 50 per cent by the 463 nonfinancial corporations and 486 savings and loan assns.; and (3) about 70 per cent by 504 State and local govts.
"All others," a residual, includes holdings of all those not reporting in the Treasury Survey, including investor groups not listed separately.

1 Since Jan. 1972 has included transacticns of dealers and brokers in securities other than U.S. Govt.

NOTE.-The transactions data combine market purchases and sales of U.S. Goyt. securities dealers reporting to the F.R. Bank of New York.

They do not include allotments of, and exchanges for, new U.S. Govt. securities, redemptions of called or matured securities, or purchases or sales of securities under repurchase agreement, reverse repurchase (resale), or similar contracts. Averages of daily figures based on the number of trading days in the period.

## DAILY-AVERAGE DEALER POSITIONS

(Par value, in millions of dollars)

Note.-The figures include all securities sold by dealers under repurchase contracts regardless of the maturity date of the contract, unless the contract is matched by a reverse repurchase (resale) agreement or delayed delivery sale with the same maturity and involving the same amount of securities. Included in the repurchase contracts are some that more clearly represent investments by the holders of the securities rather than dealer trading positions.

Average of daily figures based on number of trading days in the period.

1 Only bonds sold pursuant to 1949 Housing Act, which are secured by contract requiring the Housing Assistance Administration to make annual contributions to the local authority.
${ }^{2}$ Municipalities, counties, townships, school districts.
${ }^{3}$ Excludes U.S. Govt. loans. Based on date of delivery to purchaser and payment to issuer, which occurs after date of sale.

4 Water, sewer, and other utilities.
$s$ Includes urban redevelopment loans.
Note.-The figures in the first column differ from those shown on the following page, which are based on Bond Buyer data. The principal difference is in the treatment of U.S. Govt. loans.
Investment Bankers Assn. data; par amounts of long-term issues based on date of sale unless otherwise indicated.
Components may not add to totals due to rounding.

1 Commercial banks (including nondeposit trust companies but not trust depts.), mutual savings banks, life insurance companies, and savings and loan assns.

2 U.S. agencies include former Federal National Mortgage Assoc. and, beginning fourth quarter 1968, new Government National Mortgage Assoc. as well as Federal Housing Admin., Veterans Admin., Public Housing Admin., Farmers Home Admin. They also include U.S. sponsored agencies-new FNMA, Federal land banks, GNMA (Pools), and the Federal Home Loan Mortgage Corp. Other U.S. agencies (amounts small or separate data not readily available) included with "individuals and others.'
${ }^{3}$ Derived figures; includes debt held by Federal land banks and farm debt held by Farmers Home Admin.
${ }_{5}^{4}$ For multifamily and total residential properties, see tables below.
${ }^{5}$ Derived figures; includes small amounts of farm loans held by savings and loan assns.
6 Data by type of mortgage on nonfarm 1- to 4-family properties alone are shown in table below.

Note.-Based on data from Federal Deposit Insurance Corp., Federal Home Loan Bank Board, Institute of Life Insurance, Depts. of Agriculture and Commerce, FNMA, FHA, PHA, VA, GNMA, FHLMC, and Comptroller of the Currency.

Figures for first three quarters of each year are F.R. estimates.

## MORTGAGE DEBT OUTSTANDING ON NONFARM 1- to 4-FAMILY PROPERTIES

Note,-American Life Insurance Association data for new commitments of $\$ 100,000$ and over each on mortgages for multifarmily and nonresidential nonfarm properties located largely in the United States. The 15 companies account for a little more than one-half of both the total assets and the nonfarm mortgages held by all U.S. life insurance companies. Averages, which are based on number of loans, vary in part with loan composition by type and location of property, type and purpose of loan, and loan amortization and prepayment terms. Data for the following are

## MORTGAGE ACTIVITY OF SAVINGS AND LOAN ASSOCIATIONS

(In millions of dollars)

|  | 525.0 | 223.8 | 8.95 | 171.3 | 77.2 | 9.27 |

Note.-Average secondary market yields are gross--before deduction of 38 basis-point fee paid for mortgage servicing. They reflect the average accepted bid yield for home mortgages assuming a prepayment period of 12 years for 30 -year loans, without special adjustment for FNMA commitment fees and FNMA stock purchase and holding requirements. Since Oct. 18, 1971, the maturity on new short-term commitments has been extended 4 months. Mortgage amounts offered by bidders are total eligible bids received.

| July. | 215.7 | 384.7 |  |

Note.-GNMA data. Under the Mortgage-Backed Security Program, GNMA guarantees the timely payment of principal and interest on both pass-through and bond-type securities, which are backed by a pool of mortgages insured by FHA or Farmers Home Admin. or guaranteed by VA and issued by an approved mortgagee. To date, bond-type securities have been issued only by FNMA and FHLMC.

Note.-Annual data are averages of monthly figures. The Housing and Urban Development (FHA) data are based on opinion reports submitted by field offices on prevailing local conditions as of the first of the succeeding month. Yields on FHA-insured mortgages are derived from weighted averages of private secondary market prices for Sec . 203, 30 -year mortgages with minimum downpayment and an assumed prepayment at the end of 15 years. Any gaps in data are due to periods of adjustment to changes in maximum permissible contract interest rates. The HUD (FHA) interest rates on conventional first mortgages in primary markets are unweighted and are rounded to the nearest 5 basis points. The FHLBB effective rate series reflects fees and charges as well as contract rates (as shown in the table on conventional first-mortgage terms, $p$. A-35) and an assumed prepayment at end of 10 years.

${ }^{1}$ Monthly figures do not reflect mortgage amendments included in annual totals.
2 Not ordinarily secured by mortgages.
${ }_{3}$ Includes refinancing loans, mobile home loans and also a small amount of alteration and repair loans, not shown separately; only such loans in amounts of more than $\$ 1,000$ need be secured.

Note.-FHA and VA data. FHA-insured loans represent gross amount of insurance written; VA-guaranteed loans, gross amounts of loans closed. Figures do not take into account principal repayments on previously insured or guaranteed loans. For VA-guaranteed loans, amounts by type are derived from data on number and average amount of loans closed.

1 Includes adjustments for differences in trading days.
2 Net changes in credit outstanding are equal to extensions less repayments.

Nore.-Estimates are based on accounting records and often include financing charges. Renewals and refinancing of loans, purchases and
sales of instalment paper, and certain other transactions may increase the amount of extensions and repayments without affecting the amount outstanding.

For back figures and description of the data, see "Consumer Credit," Section 16 (New) of Supplement to Banking and Monetary Statistics, 1965, and Bulletins for Dec. 1968 and Oct. 1972.

## INSTALMENT CREDIT EXTENDED AND REPAID, BY HOLDER

1 Includes adjustments for differences in trading days.
2 Net changes in credit outstanding are equal to extensions less repayments, except in certain months when data for extensions and repayments have been adjusted to eliminate duplication resulting from large transfers of paper. In those months the differences between extensions and repayments for some particular holders do not equal the changes in
their outstanding credit. Such transfers do not affect total instalment credit extended, repaid, or outstanding.

Note.-Other financial lenders include credit unions and miscellaneous lenders. See also NOTE to preceding table and footnote 1 at bottom of $p$. A- 54 .

## INDUSTRY GROUPINGS

Note.-Pages A-58 and A-59 include revisions stemming from changes in seasonal adjustment factors, and pages $A-60$ and $A-61$ include revisions in some series that are not seasonally adjusted, beginning in March 1972 in both instances. Data for the complete year of 1972 are available in a pamphlet Industrial Production Indexes 1972 from Pub-
lications Services, Division of Administrative Services, Board of Governors of the Federal Reserve System, Washington, D.C. 20551.

Published groupings include series and subtotals not shown separately. Figures for individual series and subtotals are published in the monthly Business Indexes release.

${ }^{1}$ Employees only: excludes personnel in the Armed Forces.
2 Production workers only.
${ }^{2}$ F.R. index based on Census Bureau figures.
4 Prices are not seasonally adjusted. Latest figure is final.
Note.-All series: Data are seasonally adjusted unless otherwise noted.

Capacity utilization: Based on data from Federal Reserve, McGrawHill Economics Department, and Dept. of Commerce. Construction contracts: F. W. Dodge Co. monthly index of dollar value of total construction contracts, including residential, nonresidential, and heavy engineering; does not include data for Alaska and Hawaii. Employment and payrolls: Based on Bureau of Labor Statistics data; includes data for Alaska and Hawaii beginning with 1959. Prices: Bureau of Labor Statistics data.

[^47]Note.-Dollar value of construction contracts as reported by the F. W

Dodge Co. does not include data for Alaska or Hawaii. Totals of monthly data exceed annual totals because adjustments-negative-are made in accumulated monthly data after original figures have been published.

Private housing units authorized are Census Bureau series for 14,000 reporting areas with local building permit systems; 1971 data are for 13,000 reporting areas.

Notes
Line

1. Line 2 of page A-71.1.
. Sum of lines 3-6 or 7-10
2. Includes farm and commercial mortgages.
3. Credit market funds raised by Federally sponsored credit agencies Included below in lines 13 and 33. Includes all GNMA-guaranteed security issues backed by mortgage pools.
4. Line 1 less line 2 plus line 11. Also line 19 less line 26 plus line 32. Also sum of lines 27, 32, 39, and 44.
5. Includes farm and commercial mortgages.
6. Lines $39+44$.
7. Excludes equity issues and investment company shares. Includes line 18
8. Foreign deposits at commercial banks, bank borrowings from foreign branches, and liabilities of foreign banking agencies to foreign affiliates.
9. Demand deposits at commercial banks.
10. Excludes net investment of these reserves in corporate equities.
11. Mainly retained earnings and net miscellaneous liabilities.
12. Line 12 less line 19 plus line 26.

33-37. Lines 13-17 less amounts acquired by private finance. Line 37 includes mortgages.
$39+44$. See line 25 .
45. Mainly an offset to line 9
46. Lines 32 plus 38 or line 12 less line 27 plus line 45 .
47. Line 2 line 1 .
48. Line 19 /line 12 .
49. Lines 10 plus 28.

## Corporate equities

Line 1 and 3 Includes issues by financial institutions.

Note.-Data revised for all periods; 1973 H1 based on preliminary and incomplete information.

## Notes to Table 4

## Households

1 Imputed saving associated with growth of government life insurance and retirement reserves.

2 From open-end investment companies.
${ }^{3}$ Excludes corporate equities.
4 Policy loans, hypothecated deposits, and U.S. Govt. loans to nonprofit organizations.

## Business

${ }^{1}$ Excludes imputed rental income from owner-occupied houses.
2 Change in work in process.
${ }^{3}$ After inventory valuation adjustment.
4 Includes corporate farms.
5 Noncorporate net income is treated as payment in full to proprietors in the household sector. Gross saving consists of capital consumption allowances plus, in farm business, corporate farm retained profits.

6 Shares in FICB's, Banks for Coops, and land banks.
${ }^{7}$ Loans from U.S. Govt., commercial loans from finance companies, and bankers' acceptances.
${ }^{8}$ Includes earnings retained in business; see note 5 above.
9 Loans to commercial banks.
10 Foreign investment excludes amounts financed by bond issues abroad, and bond issues outside the U.S. are excluded from financial sources of funds above.

## Governments

1 Retirement funds are on p. A-71.11.
2 Unified budget basis for all years. Excludes sponsored agencies shown below.
${ }^{3}$ Govt. life insurance, employee retirement, and R.R. retirement programs.
${ }_{5}^{4}$ Securities of sponsored credit agencies only.
5 Mainly official foreign exchange and IMF position of Treasury. Includes net purchases of Special Drawing Rights, which are assets of the Exchange Stabilization Fund. 1970-72 allocations of SDR's are excluded, however, from these tables on transactions. Includes trade credit (advances and prepayments) to corporate business.

6 Loan participation certificates and securities issued by Export-Import Bank, GNMA, CCC, Federal Housing Administration, Postal Service, and TVA. Includes mortgage liabilities of Defense Dept. and Coast Guard and Farmers Home Administration insured notes.

7 Includes net sales of SDR certificates to Federal Reserve System.
8 Home Ioan banks, land banks, intermediate credit banks, banks for cooperatives, Federal National Mortgage Association (before 1969, sec-
ondary market operations only), and mortgage pools issuing GNMAguaranteed securities.

## Banking

${ }^{1}$ Federal Reserve System plus those Treasury accounts included in "Member Bank Reserves, Federal Bank Credit, and Related Items" (p. A-4). Excludes Exchange Stabilization Fund, which is in U.S. Govt. accounts.
2 Includes F.R. holdings of foreign currencies. On Special Drawing Rights, see notes 5 and 7 to Governments table. SDR certificates as assets of the Federal Reserve are on line 4 of this table.

3 Includes vault cash of nonmember banks.
${ }^{3}$ Includes vault cash of nonmem.
5 Combined statement for all commercial banks as reported on $p$. A-20, their domestic affiliates as reported on p. A-31 for loans sold and commercial paper issued, Edge Act corporations, U.S. agencies of foreign banks, and banks in U.S. possessions overseas. The figures consolidate commercial banks, but claims between commercial banks and the other groups included in the sector are shown in both lending and borrowing in the statement.
${ }_{7}^{6}$ Net of F.R. float, shown separately in line 31.
7 Net issues of bonds and equities, commercial paper of bank affiliates, borrowings from nonbank lenders in security RP's, and bank loans to foreign banking agencies.

Nonbank finance
${ }^{1}$ Excludes deposits at FHLB, which are included in Miscellaneous, line 9 .

2 Federal funds and other loans to commercial banks.
3 Used as a measure of net increase in liabilities to households.
${ }_{4}$ Includes retained capital gains dividends.

## Rest of the world

${ }^{1}$ The current balance is shown here from the viewpoint of the rest of the world and is thus opposite in sign from U.S. balance of payments statements and U.S. national income accounts. Excludes capital transfers to U.S., for SDR allocations.

2 Net purchases of gold and Special Drawing Rights from the U.S. only. Excludes acquisitions of gold from outside the U.S. Also excludes 1970-72 allocations of SDR's.
${ }^{3}$ Net of U.S. issues in foreign markets to finance U.S. investment abroad.
${ }_{5}{ }^{3}$ Bankers' acceptances and loans from U.S. Government.
${ }^{5}$ Errors and omissions in U.S. balance of payments statement.

Digitized for FR NOTE.—Quarterly figures and background information concerning these tables are available on request to
the Flow of Funds Section, Board of Governors of the Federal Reserve System, Washington, D.C. 20551.
5. FINANCIAL ASSETS AND LIABILITIES, DECEMBER 31, 1972
(Amounts outstanding in billions of dollars)
(A) All sectors

For notes see facing page.
(Amounts outstanding in billions of dollars)
(B) Private nonbank financial institution

[^54] end investment companies for amounts outstanding.
3 Includes savings bonds other nonmarketable debt held by the public, issues by agencies in the
budget (CCC, Export-Import Bank, GNMA, TVA, FHA) and by sponsored credit agencies in Financial sectors, and loan participation certificates. Postal savings systen deposits are included 4 Busine
form to quarterly flow tables.

# 6. SUMMARY OF CREDIT MARKET DEBT OWED BY NONFINANCIAL SECTORS ${ }^{1}$

[^61]
## ${ }^{3}$ Sum of unadjusted figures.

Note.-Bureau of the Census data. Details may not add to totals because of rounding.

## 3. U.S. NET MONETARY GOLD TRANSACTIONS WITH FOREIGN COUNTRIES AND INTERNATIONAL ORGANIZATIONS

(Net sales [-] or net acquisitions; in millions of dollars at $\$ 35$ per fine troy ounce until May 8,1972 , and at $\$ 38$ per fine troy ounce thereafter)

[^62]U.S. payment of increases in its gold subscription to IMF, gold deposits by the IMF (see note l (b) to Table 4), and withdrawal of deposits. The first withdrawal ( $\$ 17$ million) was made in June 1968 and the last withdrawal ( $\$ 144$ million) was made in Feb. 1972.

IMF sold to the United States a total of $\$ 800$ million of gold ( $\$ 200$ million in 1956, and $\$ 300$ million in 1959 and in 1960 ) with the right of repurchase; proceeds from these sales invested by IMF in U.S. Treasury securities. IMF repurchased $\$ 400$ million in Sept. 1970 and the remaining $\$ 400$ million in Feb. 1972.

6 Payment to the IMF of $\$ 259$ million increase in U.S. gold subscription less gold deposits by the IMF.

## Notes to Table 5 on opposite page:

${ }^{1}$ Represents net IMF sales of gold to acquire U.S. dollars for use in IMF operations. Does not include transactions in gold relating to gold deposit or gold investment (see Table 6).
${ }^{2}$ Positive figures represent purchases from the IMF of currencies of other members for equivalent amounts of dollars; negative figures represent repurchase of dollars, including dollars derived from charges on purchases and from other net dollar income of the IMF. The United States has a commitment to repurchase within 3 to 5 years, but only to States has a commitment to repurchase within 3 to 5 years, but only to the extent that the holdings of dollars of the IMF exceed 75 per cent of
the U.S. quota. Purchases of dollars by other countries reduce the U.S. the U.S. quota. Purchases of dollars by other countr
3 Includes dollars obtained by countries other than the United States from sales of gold to the IMF.
${ }^{4}$ Represents the U.S. gold tranche position in the IMF (the U.S. quota minus the holdings of dollars of the IMF), which is the amount that the United States could purchase in foreign currencies automatically
if needed. Under appropriate conditions, the United States could purchase additional amounts equal to its quota.
${ }^{5}$ Includes $\$ 259$ million gold subscription to the IMF in June 1965 for a U.S. quota increase, which became effective on Feb. 23, 1966. In figures published by the IMF from June 1965 through Jan. 1966, this gold subscription was included in the U.S. gold stock and excluded from the reserve position.

6 Includes $\$ 30$ million of Special Drawing Rights.
7 Represents amount payable in dollars to the IMF to maintain the value of IMF holdings of U.S. dollars.

Note.-The initial U.S. quota in the IMF was $\$ 2,750$ million. The U.S quota was increased to $\$ 4,125$ million in 1959 , to $\$ 5,160$ million in Feb 1966, to $\$ 6,700$ million in Dec. 1970, and to $\$ 7,274$ million in May 1972 as a result of the change in par value of the U.S. dollar. Under the Articles of Agreement, subscription payments equal to the quota have been made 25 per cent in gold and 75 per cent in dollars.

## 4. U.S. RESERVE ASSETS

${ }^{1}$ Includes (a) gold sold to the United States by the IMF with the right of repurchase, and (b) gold deposited by the IMF to mitigate the impact on the U.S. gold stock of foreign purchases for the purpose of making gold subscriptions to the IMF under quota increases. For corresponding liabilities, see Table 6.
2 Includes gold in Exchange Stabilization Fund.
3 The United States has the right to purchase foreign currencies equivaent to its reserve position in the IMF automatically if needed. Under appropriate conditions the United States could purchase additional amounts equal to the U.S. quota. See Table 5.
4 Includes allocations by the IMF of Special Drawing Rights as follows: $\$ 867$ million on Jan. 1, 1970; \$717 million on Jan. 1, 1971; and \$710 million on Jan. 1, 1972; plus net transactions in SDRs.

5 For holdings of F.R. Banks only, see pp. A-12 and A-13.
6 Reserve position includes, and gold stock excludes, $\$ 259$ million gold subscription to the IMF in June 1965 for a U.S. quota increase which
became effective on Feb. 23, 1966. In figures published by the IMF from June 1965 through Jan. 1966, this gold subscription was included in the June 1965 through Jan. 1966, this gold subscription was
.S. gold stock and excluded from the reserve position.
7 Includes gain of $\$ 67$ million resulting from revaluation of the German mark in Oct. 1969, of which $\$ 13$ million represents gain on mark holdings at time of revaluation.
8 Includes $\$ 28$ million increase in dollar value of foreign currencies revalued to reflect market exchange rates as of Dec. 31, 1971.

Total reserve assets include an increase of $\$ 1,016$ million resulting from change in par value of the U.S. dollar on May 8, 1972; of which, total gold stock is $\$ 828$ million (Treasury gold stock $\$ 822$ million), reserve position in IMF $\$ 33$ million, and SDR's $\$ 155$ million.

Note.-See Table 24 for gold held under earmark at F.R. Banks for foreign and international accounts. Gold under earmark is not included in the gold stock of the United States.
5. U.S. POSITION IN THE INTERNATIONAL MONETARY FUND
(In millions of dollars)

For notes see opposite page.

## 6. U.S. LIQUID AND OTHER LIABILITIES TO FOREIGN OFFICIAL INSTITUTIONS, AND LIQUID LIABILITIES TO ALL OTHER FOREIGNERS

1 Includes (a) liability on gold deposited by the IMF to mitigate the impact on the U.S. gold stock of foreign purchases for gold subscriptions to the IMF under quota increases, and (b) U.S. Treasury obligations at cost value and funds awaiting investment obtained from proceeds of sales of gold by the IMF to the United States to acquire income-earning assets.

2 Includes BIS and European Fund.
3 Derived by applying reported transactions to benchmark data; breakdown of transactions by type of holder estimated 1959-63.

4 Excludes notes issued to foreign official nonreserve agencies.
5 Includes long-term liabilities reported by banks in the United States and debt securities of U.S. Federally-sponsored agencies and U.S. corporations.

6 Includes short-term liabilities payable in dollars to commercial banks abroad and short-term liabilities payable in foreign currencies to commercial banks abroad and to "other foreigners."
7 Includes marketable U.S. Treasury bonds and notes held by commercial banks abroad.

8 Principally the International Bank for Reconstruction and Development and the Inter-American and Asian Development Banks. From Dec 1957 through Jan. 1972 includes difference between cost value and face value of securities in IMF gold investment account.

9 Data on the two lines shown for this date differ because of changes in reporting coverage. Figures on first line are comparable with those shown for the preceding date; figures on second line are comparable with those shown for the following date.

10 Includes $\$ 101$ million increase in dollar value of foreign currency
liabilities resulting from revaluation of the German mark in Oct. 1969 as follows: liquid, $\$ 17$ million, and other, $\$ 84$ million.

11 Data on the second line differ from those on first line because certain accounts previously classified as "official institutions" are included with "banks"; a number of reporting banks are included in the series for the first time; and U.S. Treasury securities payable in foreign currencies issued to official institutions of foreign countries have been increased in value to reflect market exchange rates as of Dec. 31, 1971 .
${ }_{12}$ Includes $\$ 15$ million increase in dollar value of foreign currency liabilities revalued to reflect market exchange rates.
${ }^{13}$ Includes $\$ 147$ million increase in dollar value of foreign currency liabilities to official institutions of foreign countries revalued to reflect market exchange rates as follows: short-term liabilities, $\$ 15$ million; nonmarketable convertible U.S. Treasury boncis and notes, $\$ 113$ million; and nonmarketable nonconvertible U.S. Treasury tonds and notes, $\$ 19$ million.

Note.-Based on Treasury Dept. data and on data reported to the Treasury Dept. by banks and brokers in the United States. Data correspond generally to statistics following in this section, except for the exclusion of nonmarketable, nonconvertible U.S. Treasury notes issued to foreign official nonreserve agencies, the inclusion of investments by foreign official reserve agencies in debt secu-ities of U.S. Federally-sponsored agencies and U.S. corporations, and minor rounding differences. Table excludes IMF "holdings of dollars," and holdings of U.S. Treasury letters of credit and non-negotiable, non-interest-bearing special U.S. notes held by other international and regional organizations.

## 7. U.S. LIQUID AND OTHER LIABILITIES TO OFFICIAL INSTITUTIONS OF FOREIGN COUNTRIES, BY AREA

${ }^{1}$ Includes Bank for International Settlements and European Fund.
2 Includes countries in Oceania and Eastern Europe, and Western European dependencies in Latin America.
${ }^{3}$ See note 9 to Table 6.
4 Includes $\$ 101$ million increase in dollar value of foreign currency iabilities resulting from revaluation of the German mark in Oct. 1969.

5 Data on second line differ from those on the first line because certain accounts previously classified as "Official institutions" are included in "Banks"; a number of reporting banks are included in the series for the first time: and U.S. Treasury liabilities payable in foreign currencies to official institutions of foreign countries have been increased in value by $\$ 110$ million to reflect market exchange rates as of Dec. 31, 1971.
${ }^{6}$ Includes $\$ 15$ million increase in dollar value of foreign currency liabilities revalued to reflect market exchange rates.
7 Includes $\$ 147$ million increase in dollar value of foreign currency liabilities revalued to reflect market exchange rates.

Note.-Data represent short- and long-term liabilities to the official institutions of foreign countries, as reported by banks in the United States; foreign official holdings of marketable and nonmarketable U.S. Treasury securities with an original maturity of more than 1 year, except for nonmarketable notes issued to foreign official nonreserve agencies; and investments by foreign official reserve agencies in debt securities of U.S. Federally-sponsored agencies and U.S. corporations.

${ }^{1}$ Data exclude "holdings of dollars" of the IMF.
2 Excludes negotiable time certificates of deposit, which are included in "Other."
3 Includes nonmarketable certificates of indebtedness issued to official institutions of foreign countries.

4 Principally bankers' acceptances, commercial paper, and negotiable time certificates of deposit. See also note 8(a).
5 U.S. Treasury bills and certificates obtained from proceeds of sales of gold by the IMF to the United States to acquire income-earning assets. Upon termination of investment, the same quantity of gold was reacquired by the IMF
6 Principally the International Bank for Reconstruction and Development and the Inter-American Development Bank.
Includes difference between cost value and face value of securities in IMF gold investment account.

7 Data on the two lines shown for this date differ because of changes in reporting coverage. Figures on the first line are comparable in coverage with those shown for the preceding date; figures on the second line are comparable with those shown for the following date.
${ }^{8}$ Data on second line differ from those on first line because (a) those liabilities of U.S. banks to their foreign branches and those liabilities of
U.S. agencies and branches of foreign banks to their head offices and foreign branches, which were previously reported as deposits, are included in "Other short-term liabilities"; (b) certain accounts previously classified as "Official institutions" are included in "Banks"; and (c) a number of reporting banks are included in the series for the first time.

9 Includes $\$ 15$ million increase in foreign currency liabilities to official institutions of foreign countries revalued to reflect market exchange rates. ${ }^{10}$ Foreign central banks and foreign central govts. and their agencies, and Bank for International Settlements and European Fund.

11 Excludes central banks, which are included in "Official institutions."
NoTE.-"Short term" refers to obligations payable on demand or having an original maturity of 1 year or less. For data on long-term liabilities reported by banks, see Table 10. Data exclude the "holdings of dollars" of the International Monetary Fund; these obligations to the IMF constitute contingent liabilities, since they represent essentially the amount of dollars available for drawings from the IMF by other member countries. Data exclude also U.S. Treasury letters of credit and non-negotiable, non-interest-bearing special U.S. notes held by the Inter-American Development Bank and the International Development Association.

## 9. SHORT-TERM LIABILITIES TO FOREIGNERS REPORTED BY BANKS IN THE UNITED STATES, BY COUNTRY

(End of period. Amounts outstanding; in millions of dollars)

## ${ }^{1}$ Includes Bermuda through Dec. 1972.

Note.-Short-term claims are principally the following items payable on demand or with a contractual maturity of not more than 1 year: loans made to, and acceptances made for, foreigners; drafts drawn against
foreigners, where collection is being made by banks and bankers for their own account or for account of their customers in the United States; and foreign currency balances held abroad by banks and bankers and their customers in the United States. Excludes foreign currencies held by U.S. monetary authorities.

## 20. FOREIGN CREDIT AND DEBIT BALANCES IN BROKERAGE ACCOUNTS

(Amounts outstanding; in millions of dollars)

| End of period | Credit balances (due to foreigners) | Debit balances (due from foreigners) |
| :---: | :---: | :---: |
| 1970-June. | 334 | 182 |
| Sept. | 291 | 203 |
| Dec. | 349 | 281 |
| 1971-Mar. | 511 | 314 |
| June. | 419 | 300 |
| Sept. | 333 | 320 |
| Dec.. | 311 | 314 |
| 1972-Mar. | 325 | 379 |
| June. | 312 | 339 |
| Sept. | 286 | 336 |
| Dec. ${ }^{\text {r }}$. | 372 | 405 |
| 1973-Mar. | 310 | 364 |
| June ${ }^{p}$. | 315 | 242 |

Note--Data represent the money credit balances and money debit balances appearing on the books of reporting brokers and dealers in the United States, in accounts of foreigners with them, and in their accounts carried by foreigners.

Notes to Tables 21a and 21b on following pages:
${ }^{1}$ Total assets and total liabilities payable in U.S. dollars amounted to $\$ 13,600$ million and $\$ 13,913$ million, respectively, on May 31 , 1973 .

Note.-Components may not add to totals due to rounding.

For a given month, total assets may not equal total liabilities because some branches do not adjust the parent's equity in the branch to reflect unrealized paper profits and paper losses caused by changes in exchange rates, which are used to convert foreign currency values into equivalent dollar values.

## 21a. ASSETS OF FOREIGN BRANCHES OF U.S. BANKS

Note.-Rates shown are mainly those at which the central bank either discounts or makes advances against eligible commercial paper and/or govt. securities for commercial banks or brokers. For countries with govt. securities for commercial banks or brokers. For countries with
more than one rate applicable to such discounts or advances, the rate more than one rate applicable to such discounts or advances, the rate
shown is the one at which it is understood the central bank transacts shown is the one at which it is understood the central bank transacts
the largest proportion of its credit operations. Other rates for some of these countries follow:
Argentina-3 and 5 per cent for certain rural and industrial paper, depending on type of transaction;
Brazil- 8 per cent for secured paper and 4 per cent for certain agricultural paper;
Chile-Various rates ranging from 1 per cent to 17 per cent; 20 per cent for loans to make up reserve deficiencies.
Colombia- 5 per cent for warehouse receipts covering approved lists of Colombia- 6 per cent for warehouse receipts covering approved lists of
products, 6 and 7 per cent for agricultural bonds, and 12 and 18 per cent products, 6 and 7 per cent for agricultural bonds, and 12
Costa Rica-5 per cent for paper related to commercial transactions (rate shown is for agricultural and industrial paper);
Ecuador- 5 per cent for special advances and for bank acceptances for agricultural purposes, 7 per cent for bank acceptances for industrial purposes, and 10 per cent for advances to cover shortages in legal reserves; Ethiopia- 5 per cent for export paper and 6 per cent for Treasury bills.
Honduras-Rate shown is for advances only.
Indonesia-Various rates depending on type of paper, collateral, com-Indonesia-Various ra
Japan-Penalty rates' (exceeding the basic rate shown) for borrowings from the central bank in excess of an individual bank's quota;

Morocco-Various rates from 3 per cent to 4.6 per cent depending on type of paper, maturity, collateral, guarantee, etc.
Peru-3.5,5, and 7 per cent for small credits to agricultural or fish production, import substitution industries and manufacture of exports; 8 per cent for other agricultural, industrial and mining paper;
Philippines- 6 per cent for financing the production, importation, and distribution of rice and corn and 7.75 per cent for credits to enterprises engaged in export activities. Preferential rates are also granted on credits to rural banks; and
$\dagger$ United Kingdom-On Oct. 9, 1972, the Bank of England announced: "With effect from Friday October 13th the Bank's minimum lending rate will until further notice be the average rate of discount for Treasury bills established at the most recent tender plus one half percent rounded to the nearest one quarter percent above. Although the rate will therefore be natomatically determined by this formula it will for convenience be made automatically determined by this formula it will for convenience be made
known each Friday afternoon concurrently with and in the same manner known each Friday afternoon concurrently with and in the same manner
as the results of the Treasury bill tender. The regular weekly bank rate as the results of the Treasury bill tender. The regular weekly bank rate
announcement will be discontinued from now on." Therefore, the minimum lending rate as of last Friday of the month will be carried in place of Bank rate.
Venezuela-2 per cent for rediscounts of certain agriculture paper, $41 / 2$ per cent for advances against government bonds, and $51 / 2$ per cent for rediscounts of certain industrial paper and on advances against promissory notes or securities of first-class Venezuelan companies.
Vietnam- 10 per cent for export paper; treasury bonds are rediscounted at a rate 4 percentage points above the rate carried by the bond; and at a rate 4 percentage points above the rate carried by the bond, and
there is a penalty rate of 24 per cent for banks whose loans exceed quantitative ceilings.

${ }^{1}$ Includes reported or estimated gold holdings of international and regional organizations, central banks and govts. of countries listed in this table, and also of a number not shown separately here, and gold to be distributed by the Tripartite Commission for the Restitution of Monetary Gold; excludes holdings of the U.S.S.R., other Eastern European countries, and China Mainland.
The figures included for the Bank for International Settlements are the Bank's gold assets net of gold deposit liabilities. This procedure avoids the overstatement of total world gold reserves since most of the gold deposited with the BIS is included in the gold reserves of individual countries.
${ }_{2}$ Adjusted to include gold subscription payments to the IMF made by
some member countries in anticipation of increase in Fund quotas, except those matched by gold mitigation deposits with the United States and United Kingdom; adjustment is \$270 million.
${ }^{3}$ Excludes gold subscription payments made by some member countries in anticipation of increase in Fund quotas: for most of these countries the increased quotas became effective in Feb. 1966.
${ }^{4}$ Net gold assets of BIS, i.e., gold in bars and coins and other gold assets minus gold deposit liabilities.

Note.-For back figures and description of the data in this and the following tables on gold (except production), see "Gold," Section 14 of Supplement to Banking and Monetary Statistics, 1962.

## INDEX TO STATISTICAL TABLES

(For list of tables published periodically, but not monthly, see page A-3)

Acceptances, bankers', 11, 31, 33
Agricultural loans of commercial banks, 22, 24
Arbitrage, 93
Assets and liabilities (See also Foreigners):
Banks, by classes, $18,22,23,24,37$
Federal Reserve Banks, 12
Nonfinancial corporations, current, 48
Automobiles:
Consumer instalment credit, 54, 55, 56
Production index, 58, 59

Bank credit proxy, 17
Bankers' balances, 23, 26
(See also Foreigners, claims on, and liabilities to)
Banks for cooperatives, 38
Bonds (See also U.S. Govt. securities):
New issues, 45, 46, 47
Yields and prices, 34, 35
Branch banks:
Assets, foreign branches of U.S. banks, 86
Liabilities, U.S. banks to foreign branches, $28,87,88$
Brokerage balances, 85
Business expenditures on new plant and equipment, 48
Business indexes, 62
Business loans (See Commercial and industrial loans)

Capacity utilization, 62
Capital accounts:
Banks, by classes, 18, 23, 28
Federal Reserve Banks, 12, 13
Central banks, 92,94
Certificates of deposit, 28
Coins, circulation, 15
Commercial and industrial loans:
Commercial banks, 17, 22, 31
Weekly reporting banks, 24, 29
Commercial banks:
Assets and liabilities, 17, 18, 22, 23, 24
Consumer loans held, by type, 55
Deposits at, for payment of personal loans, 30
Loans sold outright, 31
Number, by classes, 18
Real estate mortgages held, by type, 50
Commercial paper, 31, 33
Condition statements (See Assets and liabilities)
Construction, 62, 63
Consumer credit:
Instalment credit, 54, 55, 56, 57
Noninstalment credit, by holder, 55
Consumer price indexes, 62,66
Consumption expenditures, 68, 69
Corporations:
Profits, taxes, and dividends, 48
Security issues, 46, 47
Security yields and prices, 34,35
Cost of living (See Consumer price indexes)
Currency and coin, 5, 9, 23
Currency in circulation, 5, 15, 16
Customer credit, stock market, 36
Debits to deposit accounts, 14
Debt (See specific types of debt or securities)
Demand deposits:
Adjusted, commercial banks, 14, 17, 23
Banks, by classes, 18, 23, 27

Demand deposits-Continued
Ownership by individuals, partnerships, and corporations, 30
Subject to reserve requirements, 17
Turnover, 14
Deposits (See also specific types of deposits):
Accumulated at commercial banks for payment of personal loans, 30
Banks, by classes, 18, 23, 27, 37
Euro-dollars, 88
Federal Reserve Banks, 12, 13, 88
Postal savings, 23
Subject to reserve requirements, 17
Discount rates (See Interest rates)
Discounts and advances by Reserve Banks (See Loans)
Dividends, corporate, 48
Dollar assets, foreign, 75, 81
Earnings and hours, manufacturing industries, 65
Employment, 62, 64, 65
Euro-dollar deposits in foreign branches of U.S. banks, 88
Farm mortgage loans, 49, 50
Federal agency obligations, $11,12,13,14$
Federal finance:
Receipts and outlays, 40, 41
Treasury operating balance, 40
Federal funds, 7, 22, 24, 28, 33
Federal home loan banks, 38, 39, 51
Federal Home Loan Mortgage Corporation, 53
Federal Housing Administration, 49, 50, 51, 52, 53
Federal intermediate credit banks, 38, 39
Federal land banks, 38, 39
Federal National Mortgage Assn., 38, 39, 52
Federal Reserve Banks:
Condition statement, 12
U.S. Govt. securities held, 4, 12, 14, 42, 43

Federal Reserve credit, 4, 6, 12, 14
Federal Reserve notes, 12, 13, 15
Federally sponsored credit agencies, 38, 39
Finance companies:
Loans, 24, 54, 55, 57
Paper, 31, 33
Financial institutions, loans to, 22, 24
Float, 4
Flow of funds:
Financial assets and liabilities, 71.14
Saving and financial flows, 70
Foreign:
Currency operations, $11,12,13,75,81$
Deposits in U.S. banks, 5, 12, 13, 23, 27, 88
Exchange rates, 91
Trade, 73
Foreigners:
Claims on, $82,83,88,89,90$
Liabilities to, $28,76,77,79,80,81,88,89,90$

[^0]:    The Federal Reserve BULLETIN is issued monthly under the direction of the staff editorial committee. This committee is responsible for opinions expressed except in official statements and signed articles. Direction for the art work is provided by Mack Rowe.

[^1]:    *Upper and lower intervention limits established in Dec. 1971.
    **Upper and lower intervention limits around new central rate established on Feb. 13, 1973, following proposed devaluation of U.S. dollar. Limits suspended on Mar. 1, 1973.

    Note.-Movements in exchange rates are measured as percentage deviations of weekly averages of New York noon offered rates from the middle or central rates established under the Smithsonian Agreement of Dec. 18, 1971.

[^2]:    *Upper and lower intervention limits established in Dec. 1971.
    ** Upper and lower intervention limits around new central rate established on Feb. 14, 1973. Limits suspended on Mar. 1, 1973.

    For Note see Chart 2A, p. 626.

[^3]:    *Upper and lower intervention limits established in Dec. 1971.
    **Intervention limits suspended on Feb. 14, 1973.
    For Note see Chart 2A, p. 626.

[^4]:    ${ }^{1}$ Data derived from an experimental survey and are not strictly comparable with 1972-73.

[^5]:    ${ }^{1}$ Copies may be obtained by writing Publications Services, Division of Administrative Services, Board of Governors of the Federal Reserve System, Washington, D.C. 20551.

[^6]:    ${ }^{1} 1,718$ banks had two plans and 44 banks were affiliated with three plans.
    ${ }^{2}$ Figures include some amounts arising from joint plans with travel-and-entertainment card companies.

[^7]:    Note.-David Seiders of the Board's Division of Research and Statistics prepared this article. Kay Oliver provided research assistance.

[^8]:    ${ }^{1} \mathrm{~A}$ special credit-card and check-credit supplement to that report provided statistics about operating arrangements among credit-card banks, bank affiliations with more than one plan, the role of banks of various sizes in the credit-card industry, the geographic coverage of this industry, and profitability of bank credit-card plans. This study focuses on developments in some of the major areas discussed in Bank Credit-Card and Check-Credit Plans (Board of Governors of the Federal Reserve System, July 1968).
    ${ }^{2}$ Detailed data in the form of supplementary tables are available on request from Publications Services, Division of Administrative Services, Board of Governors of the Federal Reserve System, Washington, D.C. 20551.

[^9]:    ${ }^{3}$ There is no comprehensive historical information available on other measures of growth, such as agent banks, numbers of cards, accounts, and merchant agreements.

[^10]:    ${ }^{1}$ This meeting was held over a 2-day period beginning on the afternoon of June 18, 1973, in order to provide more time for the staff presentation concerning the economic situation and outlook and the Committee's discussion thereof.

[^11]:    ${ }^{2}$ Private demand deposits plus currency in circulation.

[^12]:    ${ }^{3} M_{1}$ plus commercial bank time and savings deposits other than large-denomination CD's.
    ${ }^{4}$ Daily-average member bank deposits, adjusted to include funds from nondeposit sources.
    ${ }^{5}$ Growth rates cited are calculated on the basis of the daily-average level in the last month of the period relative to that in the last month preceding the period.

[^13]:    Voting for this action: Vice Chairman Mitchell and Governors Daane, Brimmer, Sheehan, Bucher, and Holland. Absent and not voting: Chairman Burns.

[^14]:    ${ }^{1}$ All banking data are as of December 31, 1972.

[^15]:    ${ }^{1}$ The Fall River banking market is approximated by the Fall River Standard Metropolitan Statistical Area which includes the City of Fall River and the Towns of Somerset, Swansea, Westport, and Dighton in southern Bristol County, Massachusetts, and Tiverton, Little Compton, and Portsmouth in Newport County, Rhode Island.

[^16]:    ${ }^{1}$ Banking data are as of December 31, 1972, and reflect bank holding company formations and acquisitions approved by the Board through May 31, 1973.

[^17]:    ${ }^{2}$ See Application of First Florida Bancorporation, 59 Federal Reserve Bulletin, 183, at 184.

[^18]:    ${ }^{1}$ Voting for that action: Chairman Burns and Governors Brimmer, Bucher, and Holland. Voting against that action: Governors Mitchell, Daane and Sheehan.

[^19]:    ${ }^{2}$ H.R. Report No. $91-1747$, p. 17.

[^20]:    ${ }^{1}$ All banking data are as of December 31, 1972, and reflect bank holding company formations and acquisitions approved by the Board through June 30, 1973. All other data are as of December 31, 1971, unless otherwise indicated.

[^21]:    ${ }^{2}$ In New York, Public Loan can make consumer instalment loans up to $\$ 1,400$; in Pennsylvania, the limitation is $\$ 600$ under a small loan license or $\$ 3,500$ under a consumer discount license. Commercial banks in New York State can make instalment loans up to $\$ 10,000$; in Pennsylvania, up to $\$ 5,000$. (As of December 31, 1971, commercial banks in New York State were subject to a $\$ 5,000$ ceiling.)

[^22]:    ${ }^{3}$ Approximated by Broome and Tioga Counties plus the Town of Green in Chenango County and the northern half of Susquehanna County in Pennsylvania.
    ${ }^{4}$ Approximated by the southern half of Chautaugua County and the southwestern third of Cattaraugus County, in effect, the Jamestown banking market.

[^23]:    ${ }^{5}$ The House Conference Report on the 1970 Amendments to the Act (Report No. 91-1747) states at page 19:
    "In connection with the overall application of the public benefits test, it is important to emphasize that the bank holding company making application under section $4(\mathrm{c})(8)$ must bear the burden of proof in showing that its carrying on of a particular nonbank activity would produce benefits to the public that outweigh any adverse effects.",

[^24]:    ${ }^{1}$ No opinion has been obtained from the Internal Revenue Service that these leases would be characterized as a "lease" rather than a "conditional sale" for tax purposes. However, since Company does not take accelerated tax depreciation on its leased property and the investment tax credit for such property is passed through to the lessees, it is represented that the Company's federal income tax liability would appear to be substantially identical whatever the characterization. Furthermore, even if viewed as a "conditional sale" the activity would be permitted under § 225.4(a)(1) of Regulation Y.

[^25]:    ${ }^{2}$ The risk involved is that of default and liquidity since the payments on the leases vary with the interest rate on the commercial paper.

[^26]:    ${ }^{1}$ All banking data and data pertaining to Company are as of December 31, 1972, unless otherwise indicated.

[^27]:    ${ }^{1}$ There is presently pending before the Board an application by Applicant to acquire one bank located in the State of Iowa, with aggregate deposits of approximately $\$ 75$ million. Applicant recently received approval to acquire two other banks in Iowa with deposits of $\$ 43$ million.
    ${ }^{2}$ Deposit data are as of December 31, 1972.

[^28]:    ${ }^{3}$ Statement of Board accompanying Order Conditionally Approving Proposal of NCNB Corporation to Operate a Trust Company in South Carolina, 1973 Federal Reserve Bulletin 305, at 306 (March 9, 1973).
    ${ }^{4}$ This may account for the fact that, despite the provision of advice to tax-exempt bond issuers by many municipal bond underwriters, the protestants, under direct questioning at the oral presentation, cited no actual instance of the abuses alleged.

[^29]:    6 Part allowed as reserves Dec. 1, 1959-Nov. 23, 1960; all allowed thereafter. Beginning with Jan. 1963, figures are estimated except for weekly averages. Beginning Sept. 12, 1968, amount is based on close-of-business figures for reserve period 2 weeks previous to report date.

    7 Beginning with week ending Nov. 15, 1972 , includes $\$ 450$ million of reserve deficiencies on which F.R. Banks are allowed to waive penalties for a transition period in connection with bank adaptation to Regulation $\mathbf{J}$ as a mended effective Nov. 9, 1972. Beginning 1973, allowable deficiencies

[^30]:    ${ }^{1}$ Beginning with week ending Nov. 15, 1972, includes $\$ 450$ million of reserve deficiencies on which F.R. Banks are allowed to waive penalties for a transition period in connection with bank adaptation to Regulation $J$ as amended effective Nov. 9, 1972. Beginning 1973, allowable deficiencies as amended effective Nov. 9, 1972. Beginning 1973, allowable deficiencies
    included are (beginning with first statement week of quarter): Q1, $\$ 279$ included are (beginning with first statement
    million; Q2, $\$ 172$ million; Q3, $\$ 112$ million.
    ${ }_{2}$ Beginning Nov. 9, 1972, designation of banks as reserve city banks for reserve-requirement purposes has been based on size of bank (net demand deposits of more than $\$ 400$ million), as described in the Bulletin for July 1972, p. 626. Categories shown here as "Large" and "All other"

[^31]:    ${ }^{1}$ Based upon reserve balances, including all adjustments applicable to the reporting period. Prior to Sept. 25, 1968, carrycver reserve deficiencies, if any, were deducted. Excess reserves for later periods are net of all carryover reserves.
    over reserves.
    2 Derived
    from averages for individual banks for entire week. Figure for each bank indicates extent to which the bank's weekly average pur-
    chases and sales are offsetting.
    ${ }^{3}$ Federal funds loaned, net funds supplied to each dealer by clearing

[^32]:    ${ }^{1}$ Discounts of eligible paper and advances secured by such paper or by U.S. Govt. obligations or any other obligations eligible for F.R. Bank purchase. Maximum maturity: 90 days except that discounts of certain bankers' acceptances and of agricultural paper may have maturities not bankers' acceptances and of agricultural $p$.
    over 6 months and 9 months, respectively.
    2 Advances secured to the satisfaction of the F.R. Bank. Maximum maturity: 4 months.
    ${ }_{3}^{3}$ Advances to individuals, partnerships, or corporations other than member banks secured by direct obligations of, or obligations fully

[^33]:    Note.-Regulations G, T, and U, prescribed in accordance with the Securities Exchange Act of 1934, limit the amount of credit to purchase and carry margin stocks that may be extended on securities as collateral by prescribing a maximum loan value, which is a specified percentage of the market value of the collateral at the time the credit is extended; margin requirements are the difference a specified percentage of the market value of the collateral at the time the credit is extended; margin requirements are the difference
    between the market value ( 100 per cent) and the maximum loan value. The term margin stocks is defined in the corresponding regulation. Mar. 11, 1968.

[^34]:    ${ }^{1}$ See note 8 on p. A-5.
    2 After deducting $\$ 3$ million participations of other Federal Reserve Banks.
    ${ }_{3}$ After deducting $\$ 190$ million participations of other Federal Reserve
    Banks.

[^35]:    ${ }^{1}$ Negotiable time certificates of deposit issued in denominations of $\$ 100,000$ or more by large weekly reporting commercial banks.
    2 Average of the beginning and end-of-month figures for deposits of mutual savings banks and savings capital at savings and loan associations.

[^36]:    ${ }^{1}$ Adjusted to exclude domestic commercial interbank loans. See also note 3 .
    ${ }_{2}$ Loans sold are those sold outright by commercial banks to own subsidiaries, foreign branches, holding companies, and other affiliates.
    ${ }^{3}$ Beginning June 30, 1971, Farmers Home Administration insured notes totaling approximately $\$ 700$ million are included in "Other securities" rather than in "Loans."
    4 Beginning June 30, 1969, data revised to include all bank-premises subsidiaries and other significant majority-owned domestic subsidiaries; subsidiaries and other significant majority-owned domestic subsidiaries;
    earlier data include commercial banks only. Also, loans and investments are now reported gross, without valuation reserves deducted, rather than net of valuation reserves as was done previously. For a description of the revision, see Aug. 1969 Bulletin, pp. 642-46. Data shown in above table have been revised to include valuation reserves.

[^37]:    For notes see p. A-21.

[^38]:    7 Beginning with 1942 , excludes reciprocal bank balances.
    8 Through 1960 demand deposits other than interbank and U.S.
    Govt., less cash items in process of collection; beginning with 1961, demand deposits other than domestic commercial interbank and U.S. Govt., less cash items in process of collection.
    ${ }^{9}$ For reclassification of certain deposits in 1961, see note 6, p. 589, May 1964 BULLETIN.
    10 Beginning June 30, 1969, reflects (1) inclusion of consolidated reports (including figures for all bank-premises subsidiaries and other significant majority-owned domestic subsidiaries) and (2) reporting of figures for total loans and for individual categories of securities on a gross basis-that is, before deduction of valuation reserves. See also notes 1 and 6 .
    is, before deduction of valuation reserves. See also notes 1 and 6 . reserve-requirement purposes has been based on size of bank (net demand deposits of more than $\$ 400$ million), as described in the BULLETIN for July 1972, p. 626. Categories shown here as "Large" and "All other"

[^39]:    Includes securities purchased under agreements to resell
    Includes official institutions and so forth.
    Includes short-term notes and bills.
    ${ }^{3}$ Includes short-term no
    5 Federal agencies only.
    6 Includes U.S. Govt. and foreign bank deposits, not shown separately.
    7 Includes securities sold under agreements to repurchase.

[^40]:    Note.-About 160 weekly reporting banks are included in this series; these banks classify, by industry, commercial and industrial loans amounting to about 90 per cent of such loans held by all weekly reporting banks and about 70 per cent of those heid by all commercial banks.
    For description of series see article "Revised Series on Commercial and Industrial Loans by Industry," Feb. 1967 Bulletin, p. 209.

[^41]:    ${ }^{1}$ As reported by dealers; includes finance company paper as well as other commercial paper sold in the open market.
    ${ }_{2}$ As reported by finance companies that place their paper directly with investors.

[^42]:    Note.-These securities are not guaranteed by the U.S. Govt.; see also note to table at bottom of opposite page.

[^43]:    Note.-Investment Company Institute data based on reports of members, which comprise substantially all open-end investment companies registered with the Securities and Exchange Commission. Data reflect newly formed companies after their initial offering of securities.

[^44]:    ${ }^{1}$ Includes trade, service, construction, finance, and insurance.
    2 Anticipated by business.
    Note.-Dept. of Commerce and Securities and Exchange Commission estimates for corporate and noncorporate business; excludes agriculture, real estate operators, medical, legal, educational, and cultural service, and nonprofit organizations.

[^45]:    1 Finance companies consist of those institutions formerly classified as sales finance, consumer finance, and other finance companies. Miscellaneous lenders include savings and loan associations and mutual

[^46]:    1 Service station and miscellaneous credit-card accounts and home-heating-oil accounts. Bank-credit-card accounts outstanding are included in estimates of instalment credit outstanding.

    See also Note to table at top of preceding page.

[^47]:    ${ }^{1}$ Because of improved procedures for collecting data for 1 -family homes, some totals are not strictly comparable with those prior to 1968 . To improve comparability, earlier levels may be raised by approximately 3 per cent for total and private construction, in each case, and by 8 per cent for residential building.

[^48]:    units under FHA, based on field office reports of first compliance inspections. Data may not add to totals because of rounding.
    Mobile home shipments are as reported by Mobile Homes Manufacturers Assn.

[^49]:    Note--Dept. of Commerce estimates. Quarterly data are seasonally

[^50]:    Note.-Data revised for all periods: 1973 H1 based on preliminary and incomplete information. For other notes see p. A-71.13.

[^51]:    Note.-Data revised for all periods; 1973 Hl based on preliminary and incomplete information. For other notes see p. A-71.13.

[^52]:    Nore.-Data revised for all periods; 1973 HI based on preliminary and incomplete information. For other notes see p. A-71.13.

[^53]:    NOTF,--Data revised for all periods; 1973 H 1 based on preliminary and incomplete information. For other notes see p. A-71.13.

[^54]:    1 Excess of total assets over liabilities consists of gold (row 3) and corporate shares (row 17) othe han investment co. shares less total discrepancies (row 1), which are not included in sector assets. a Assets shown market value, ionbank finance liabinty is redemption value of shares of open

[^55]:    1 Where not shown separately, loan participations are included with agency issues.

    These issues are outside the budget and outside the U.S. Government

[^56]:    1 Excludes corporate equities.

[^57]:    1 Employee retirement funds are on page $\mathrm{A}-71.26$. ${ }^{2}$ This group consists of Federal home loan banks, Federal National
    Mortgage Association, Federal intermediate credit banks, banks for co-

[^58]:    1 Monetary gold stock and F.R. holdings of foreign currencies. Exchange Stabilization Fund holdings of gold and foreign exchange are in U.S. Govt. account, p. A-71.22.

    2 Consists of chartered commercial banks, their domestic affiliates Edge Act corporations, agencies of foreign banks, and banks in U.S.

[^59]:    possessions. Edge Act corporations and agencies of foreign banks appear together in these tables as "foreign banking agencies."

    Gross of bad debt reserves.
    4 At par value.

[^60]:    For notes see end of table.

[^61]:    ${ }^{1}$ Exports of domestic and foreign merchandise; excludes Dept. of Defense shipments of grant-aid military equipment and supplies under Mutual Security Program.
    2 General imports including imports for immediate consumption plus entries into bonded warehouses.

[^62]:    1 Includes purchase from Denmark of $\$ 25$ million
    2 Includes purchase from Kuwait of $\$ 25$ million.
    ${ }^{3}$ Includes sales to Algeria of $\$ 150$ million in 1967 and $\$ 50$ million in 1968.

    4 Data for IMF include the U.S. payment of $\$ 385$ million increase in its gold subscription to the IMF and gold sold by the IMF to the United States in mitigation of U.S. sales to other countries making gold payments to the IMF. The country data include U.S. gold sales to various countries in connection with the IMF quota payments. Such U.S. sales to countries and resales to the United States by the IMF total $\$ 548$ million each.
    5 Includes IMF gold sales to and purchases from the United States,

[^63]:    ${ }^{1}$ Excludes central banks, which are included with "Official institutions."

[^64]:    1 Represents gross liabilities of reporting banks to their branches in foreign countries.
    ${ }^{2}$ For period Jan. 27, 1971 through Oct. 20, 1971, includes U.S. Treasury Certificates Eurodollar Series and special Export-Import Bank securities held by foreign branches. Beginning July 28, 1971, all of the securities held were U.S. Treasury Certificates Eurodollar Series.

[^65]:    ${ }^{1}$ Negotiable and other readily transferable foreign obligations payable on demand or having a contractual maturity of not more than 1 year from the date on which the obligation was incurred by the foreigner.
    ${ }^{2}$ Data on the two lines for this date differ because of changes in reporting coverage. Figures on the first line are comparable in coverage with those shown for the preceding date; figures on the second line are comparable with those shown for the following date.

    Note.-Data represent the liquid assets abroad of large nonbanking concerns in the United States. They are a portion of the total claims on foreigners reported by nonbanking concerns in the United States and are included in the figures shown in Tables 26 and 27.

[^66]:    1 Data on the two lines shown for this date differ preceding date; figures on the second line are compabecause of changes in reporting coverage. Figures on rable with those shown for the following date.

[^67]:    *On leave of absence.
