FEDERAL RESERVE BULLETIN

Complying with Consumer Credit Regulations—A Challenge

The Importance of an Independent Central Bank

Changes in Time and Savings Deposits, January–April 1977

Treasury and Federal Reserve Foreign Exchange Operations

A copy of the Federal Reserve BULLETIN is sent to each member bank without charge; member banks desiring additional copies may secure them at a special \$10.00 annual rate. The regular subscription price in the United States and its possessions, and in Bolivia, Canada, Chile, Colombia, Costa Rica, Cuba, Dominican Republic, Ecuador, Guatemala, Haiti, Republic of Honduras, Mexico, Nicaragua, Panama, Paraguay, Peru, El Salvador, Uruguay, and Venezuela is \$20.00 per annum or \$2.00 per copy; elsewhere, \$24.00 per annum or \$2.50 per copy. Group subscriptions in the United States for 10 or more copies to one address, \$1.75 per copy per month, or \$18.00 for 12 months.

The BULLETIN may be obtained from the Division of Administrative Services, Board of Governors of the Federal Reserve System, Washington, D.C. 20551, and remittance should be made payable to the order of the Board of Governors of the Federal Reserve System in a form collectible at par in U.S. currency. (Stamps and coupons are not accepted.)

The Federal Reserve BULLETIN is issued monthly under the direction of the staff publications committee. This committee is responsible for opinions expressed except in official statements and signed articles. Direction for the art work is provided by Mack R. Rowe. Editorial support is furnished by the Economic Editing Unit headed by Elizabeth B. Sette.

Table of Contents

769 COMPLYING WITH
CONSUMER CREDIT REGULATIONS—
A CHALLENGE

Description of the Board's role as the primary source of regulations and interpretations that affect consumer credit; particular emphasis is placed on the importance of compliance.

775 STAFF ECONOMIC STUDY

Summary of "Greeley in Perspective" indicates that the scale of entry by bank holding companies into local banking markets affects future market structure and remains the basis for analyzing most future competition cases.

777 THE IMPORTANCE OF AN
INDEPENDENT CENTRAL BANK

Arthur F. Burns, Chairman of the Board of Governors, discusses the relationship of the Federal Reserve's independence within Government to the conduct of a meaningful anti-inflationary monetary policy.

782 CHANGES IN TIME AND SAVINGS
DEPOSITS AT COMMERCIAL BANKS,
JANUARY–APRIL 1977

During the most recent survey period, growth in total time and savings deposits at all insured commercial banks increased by about 2 per cent not seasonally adjusted—compared with 3 per cent in the preceding 3 months.

793 TREASURY AND FEDERAL RESERVE
FOREIGN EXCHANGE OPERATIONS

In the period from February through July 1977 the semiannual report on foreign exchange operations states that payments balances were shifting while the economy of the United States was expanding more rapidly than were the economies of other major industrial countries.

811 STATEMENTS TO CONGRESS

Henry C. Wallich, Member of the Board of Governors, presents the views of the Board of Governors on the recent growth of international indebtedness and some of the possible implications of this growth before the Subcommittee on International Finance of the Committee on Banking, Housing and Urban Affairs, U.S. Senate, August 29, 1977.

817 J. Charles Partee, Member of the Board of Governors, presents the reasons for the Board's unanimous support of the establishment of a Federal Bank Examination Council and for its unanimous opposition to the creation of a Federal Bank Commission before the Committee on Banking, Housing and Urban Affairs, U.S. Senate, September 16, 1977.

823 RECORD OF POLICY ACTIONS OF THE
FEDERAL OPEN MARKET COM-
MITTEE

In the meeting held on July 19, 1977, the Committee decided that

rates of growth in *M-1* and *M-2* over the July-August period at annual rates within ranges of $3\frac{1}{2}$ to $7\frac{1}{2}$ per cent and $6\frac{1}{2}$ to $10\frac{1}{2}$ per cent, respectively, would be appropriate. The Federal funds rate likely to be associated with these ranges for the monetary aggregates would be about $5\frac{3}{8}$ per cent, although the Committee agreed that it could be modified within a range of $5\frac{1}{4}$ to $5\frac{3}{4}$ per cent depending on the growth rate of the aggregates.

The Committee also reviewed its 12-month ranges for growth in the monetary aggregates. At the conclusion of the discussion, the Committee decided to reduce the lower limit of the range for *M-1* by $\frac{1}{2}$ of a percentage point and to retain the existing ranges for *M-2* and *M-3*. The ranges would therefore be 4 to $6\frac{1}{2}$ per cent for *M-1*, 7 to $9\frac{1}{2}$ per cent for *M-2*, and $8\frac{1}{2}$ to 11 per cent for *M-3*.

839 LAW DEPARTMENT

Various amendments, interpretations, and bank holding company and bank merger orders.

867 ANNOUNCEMENTS

The Board of Governors has approved actions by the directors of the 12 Federal Reserve Banks to increase the discount rate from $5\frac{1}{4}$ to $5\frac{3}{4}$ per cent.

The Consumer Advisory Council held a meeting on September 15, 1977.

An interpretation by the Board simplifies procedures under Regulation Z (Truth in Lending) for certain credit-card issuers. The Board also postponed the effective date of a section of the same regulation dealing with billing of credit transactions.

Changes in Board staff.

One State bank was admitted to membership in the Federal Reserve System.

869 INDUSTRIAL PRODUCTION

Output declined by 0.5 per cent in August.

Complying With Consumer Credit Regulations: A Challenge

This article was prepared in the Division of Consumer Affairs. All footnotes appear at the end of the article.

The Consumer Credit Protection Act, which was passed in 1968, has been the basis for more than a dozen laws and amendments designed by the Congress to help consumers in many ways: To understand the nature and cost of credit; to understand the bills received; to settle billing disputes promptly; to shield consumers from discrimination when they apply for credit; to protect them from shoddy goods and services purchased with a credit card; and to help them through large and complicated transactions such as home buying and leasing of personal property.

In most cases the Congress has directed the Board of Governors of the Federal Reserve System to write regulations with the force of law to transform the general "thou shalt" and "thou shalt not" of this legislation—as they apply to both consumers and creditors—into specific definitions, directives, and prohibitions.

In this way the Federal Reserve has become the chief source, outside of the Congress, of consumer credit protection laws. A decade ago the Federal Reserve touched the consumer only in a general way as it worked to provide a healthy economic climate; safe and sound banks; and a cheap, efficient payments mechanism. Now the Board is the primary source of regulation and interpretations reaching deep into the economic life of every consumer who uses credit.

The initial task of the Board stemming from the new consumer laws was to write regula-

tions to implement the Truth in Lending section of the Consumer Credit Protection Act of 1968. The Board's Division of Banking Supervision and Regulation drafted those regulations, as well as the many amendments and interpretations of Regulation Z that followed, after the scope and demands of the law and the need for more specific regulatory detail became evident.

By 1974, when the Fair Credit Billing Act, the Equal Credit Opportunity Act, and a substantial number of amendments to the Truth in Lending Act were moving through the Congress (with provisos for Board rulewriting), the Board created a separate office—now the Division of Consumer Affairs—to handle the new responsibilities expected to result from the pending legislation. The function of that office was to lay the groundwork for expeditious writing of the new regulations that appeared inevitable.

The Board and the Division of Consumer Affairs now face a second wave of challenges from the cascade of consumer credit protection laws enacted during the past decade—how to ensure that banks achieve compliance

Principal consumer credit laws

Act	Enacted
Truth in Lending	1968
Fair Credit Billing	1974
Equal Credit Opportunity	1974
Amendments to Truth in Lending	1974
Real Estate Settlement Procedures	1974
Federal Trade Commission Improvement ...	1975
Home Mortgage Disclosure	1976
Consumer Leasing	1976
Amendments to Equal Credit Opportunity ..	1976

with the massive body of law and regulation, and at the same time serve the objective both of consumer guidance and protection and of a continuing healthy and innovative credit industry on which consumers and the U.S. economy can depend.

THE COMPLIANCE CHALLENGE

Obviously, examiners of commercial banks could not accomplish the dual task of determining compliance with, and correcting violations of, all of this consumer legislation while still assessing the safety and soundness of banks and their compliance with other banking laws and regulations. Many banks, especially small- and medium-sized institutions, do not have sufficient resources to analyze and implement the regulations, and for this reason some of them may have been losing the opportunity to be leaders in their communities. Without such resources, they may be exposing themselves to serious risks, most important of which are monetary penalties for noncompliance and loss of community confidence. Furthermore, it has become clear that banks have not always fully carried out the intent of the Congress to grant credit on the basis of the ability to repay and to disclose to consumers the costs of credit.

To counteract these inadequacies, the System, in March 1977,¹ instituted a completely new approach to compliance. Through its Division of Consumer Affairs it put into effect a comprehensive new program of compliance examinations of State member banks. This effort was made in coordination with other Federal regulators of financial institutions that effected similar programs for the institutions under their supervision. In addition, the System has offered to all member banks an educational service to help bring them into compliance with the consumer credit protection laws and regulations.

Most of these new statutes and regulations have required changes in the methods by which banks transact business, including:

- The questions banks are permitted—or required—to ask credit applicants.
- The forms banks use.
- The records banks are required to keep.
- The disclosures banks are required to give an applicant.
- The reports banks are required to file with supervisory authorities or have available for public inspection.

These major regulatory changes have been supplemented by the Board through issuance of amendments and interpretations and through unofficial staff letters sent in response to inquiries, all of which are made available to the public. Furthermore, last year the Congress empowered the Board to authorize the staff of its Division of Consumer Affairs to issue so-called “official staff interpretations” upon which creditors can rely without fear of civil liability, and the staff has begun to issue such interpretations. The courts too have been making decisions on the acts, regulations, and interpretations; several hundred court decisions have been reported under Truth in Lending alone.² As a result of all these changes, bank management must now read, analyze, and digest a wide variety of new materials, devise new procedures, and retrain personnel.

Over the decade it has become increasingly evident that the regular examination of commercial banks does not provide the best framework for helping banks to comply with consumer laws and regulations. That examination focuses, as it must, on a bank's safety and financial soundness. Although a commercial bank examiner receives training in consumer credit and other regulations³ and is expected to be alert to signs of noncompliance, the rapid increase in the number and scope of these consumer regulations—especially with the banking business itself in a period of rapid adaptation to change—has made it extremely difficult, indeed almost impossible, for the examiner to do an adequate job. Similar difficulties have been experienced by examiners of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, and the Federal Home Loan Bank

Board.⁴ These problems of enforcement have led to a series of congressional oversight hearings and to critical reports suggesting ways by which the agencies might increase and improve their efforts.⁵

In September 1976 the Board formed a System task force to seek a solution to the problem of how examiners could deal with their new and increased responsibilities in the area of consumer credit protection. The solution adopted by the Board was the development of a two-pronged program: (1) an advisory and educational service to inform both creditors and borrowers about the provisions of consumer credit statutes and regulations; and (2) the conduct of special examinations of State member banks to determine compliance with the acts and regulations.

The task force, made up of representatives of Federal Reserve Bank and Board staffs, met throughout the fall and winter and prepared recommendations on every aspect of the consumer protection program. Meanwhile, a Compliance Section was established in the Board's Division of Consumer Affairs. Special schools for examiners were initiated. The curriculum in these schools quickly expanded from a 1-week to a 2-week session, and by the time the compliance examination program was established in March 1977, about 100 examiners had been trained. Three Federal Reserve Banks conducted experimental examinations to test the new procedures that were being established. Close coordination was maintained with the staffs of the Federal Deposit Insurance Corporation and of the Office of the Comptroller, who were also actively engaged in developing new examination procedures.

HELPING BANKS UNDERSTAND CONSUMER CREDIT REGULATIONS

The program announced in March of this year emphasized the Federal Reserve's determination to aid every member bank that asked for help in acquainting its personnel with the

consumer protection regulations and their requirements, in reviewing its forms and operations, and in bringing itself into compliance if necessary. Each Reserve Bank sent a letter to every member bank in its district explaining the service and offering to arrange for a visit by a trained staff member or members, who would spend as much time as necessary in the bank. Opportunities were also offered for bankers to meet in groups with Reserve Bank staff for discussion and for question-and-answer sessions.

In the first 4 months after the service was inaugurated, about 13 per cent of all State member banks and 9 per cent of all national banks requested help. Meetings with 269 individual banks were held within the System. These meetings, which last from ½ day to 1½ days, have been supplemented by almost 60 group meetings.

At each of these individual bank meetings, an extensive over-all review of the bank's operations is completed. Following a brief discussion with the operating officers, the bank's forms are examined. Forms represent an area in which lack of compliance is most visible. Accordingly, the visits help to ensure that banks are, or will be, using proper forms. Many of the recently enacted regulations provide sample forms, which assist with compliance. Also important is a review of Regulation Z (Truth in Lending) to ensure that there is a thorough understanding of essential aspects of the regulation, including the annual percentage rate and how it is computed, the finance charge, distinctions between open- and closed-end credit, and the right of rescission. Reserve Bank staffs also review or help in the development of a bank's written loan policies.

Responses from the banks that have been visited have been positive. One enthusiastic banker wrote, "It is one of the finest services that the Fed offers"⁶ The service is expected to be particularly helpful to banks that do not have their own in-house counsel, or perhaps have only one in-house attorney who is responsible for answering the myriad of

legal questions that face any commercial bank. Reserve Banks are honoring requests as rapidly as possible and will continue to offer the service as long as it is needed. In fact, experience shows that staff turnover as well as new regulatory developments make it necessary for banks—even those that have made a thorough effort to comply—to review their forms and procedures at least every 2 or 3 years to make sure that those forms and procedures are still correct and, even more important, that the proper procedures are still being observed.

EXAMINING FOR COMPLIANCE

From the beginning, the Board has thought that special compliance examinations should be conducted separately from regular commercial or trust examinations, but that when feasible they should be conducted at the same time to minimize disruption of bank operations. The special compliance examiners were to be drawn, whenever possible, from the ranks of commercial examiners, so that they would be thoroughly familiar with the ways in which banks operate. If persons with training in commercial examination were not readily available, training in such procedures was to be provided. All compliance examiners, however, were to be specially trained to examine for compliance with the consumer credit regulations.⁷

The compliance examination, for which an entirely new design was developed, consists of a scientific sampling of loan files for compliance with Regulation Z and a review of accepted and rejected applications for compliance with Regulation B (Equal Credit Opportunity). Special instructional manuals were developed for each regulation. An examination checklist was prepared to make the examinations more efficient and comprehensive. A special examination report was developed specifically to include each consumer law and regulation covered by the compliance examination program.⁸

Procedures were also developed for reporting and correcting violations. However, a number

of these procedures are still in the process of being defined. In general, all apparent violations are reported to an officer in charge at the Reserve Bank, who then determines, in consultation with the staff of the Board's Division of Consumer Affairs when necessary, the need for additional investigation or the appropriate corrective measures.

By the end of March 1978, each State member bank should have been examined at least once under these new compliance examination procedures. Compliance examinations at 170 banks have already been completed. During April–December 1978 additional examinations will be made of banks whose condition at the first examination indicated a need for follow-up. At the end of 1978, the program will be evaluated to determine its usefulness and how it can be modified and improved.

FURTHER PROBLEMS AND ACTIVITIES

No examination program can be regarded as fixed or final. Examination procedures are constantly being reviewed and improved as the conditions and circumstances change and as regulators develop more sophistication and expertise. For an entirely new program, such as this one, important questions are expected to remain.

Perhaps the most important problem is how to make the programs of the various supervisory agencies as comparable as possible—although all of these agencies recognize that complete comparability is virtually unattainable. For example, the Federal Trade Commission, which supervises a vast majority of creditors, does not—and could not, without radical restructuring and the creation of a formidable new bureaucracy—have a program for the examination of individual creditors. In addition, a number of other enforcement agencies do not have programs for the periodic examination of the institutions under their supervision. It is nonetheless vital for the agencies that do have an examination capability to apply the same standards and to enforce

compliance with similar sanctions. Staffs of the Federal Reserve Board of Governors, the Comptroller of the Currency, and the Federal Deposit Insurance Corporation have been in frequent contact during the development of their new compliance programs for banks. Each agency has observed experiments made by the others in order to improve its own bank examination structure.

One of the most significant experiments in achieving comparability among the various agencies supervising financial institutions relates to the sanctions that should be imposed for various violations of the regulations. In that connection difficult questions, particularly with regard to reimbursement of overcharges to consumers, have been raised; included among these questions are the following:

- Should banks be required to reimburse overcharges resulting from violations as far back as July 1, 1969, the effective date of the Truth in Lending Act, or would a more recent date be more appropriate?

- Should there be a *de minimis* rule under which reimbursement would not be required if the average amount reimbursable were so small that the administrative costs did not justify its return? What amount should this be?

- How should an incorrect disclosure with regard to credit insurance be remedied?

- How should an overcharge be reimbursed?

- Will information gathered as required by several statutes be useful as an enforcement tool; and if so, how?

These questions are but a few of many that must be answered as the consumer compliance regulatory function takes shape.

The Board and the other regulators of Federal financial institutions plan to publish proposed guidelines dealing with such questions. The guidelines are being developed with the

assistance of an interagency staff-level task force on uniform enforcement procedures. It is hoped that the guidelines can be adopted in final form soon.

To continue the emphasis on strengthening its examination program, the Board plans over the next 4 months to:

- Host the fifth session of the System Consumer Affairs School for Bank Examiners, including approximately four examiners from each Federal Reserve district (November 7-18).

- Hold a 1-week Interagency Consumer Protection Seminar (November 28-December 2). This will be the second such interagency meeting of personnel from the Federal Deposit Insurance Corporation and the Office of the Comptroller of the Currency. Like the first session held in June, it will be designed to help personnel who are not involved in direct day-to-day consumer affairs compliance examination but who need to understand the various consumer affairs statutes.

- Hold an Interagency Consumer Affairs School for Bank Examiners of the Federal bank regulators during the 2-week period beginning January 23, 1978. This will be the first such school of its kind, and the students will include both examiners and assistant examiners.

* * *

In adopting legislation to protect consumers in their credit transactions, the Congress dramatically changed the ways in which banks and creditors in general deal with consumers and with consumer credit. The challenge that remains is to ensure bank compliance with these new regulatory requirements while maintaining the safety and soundness of financial institutions.

⁷The full scope of the examination covers the following: Fair Credit Reporting Act; Fair Housing Act; Real Estate Settlement Procedures Act; Equal Credit Opportunity Act (Regulation B), 12 CFR 202; Home Mortgage Disclosure Act (Regulation C), 12 CFR 203; Truth in Lending, Fair Credit Billing, and Consumer Leasing Acts (Regulation Z), 12 CFR 226; Unfair and Deceptive Acts and Practices by Banks and Consumer Complaints (Regulation AA), 12 CFR 227; National Flood Insurance Provisions (Regulation H), 12 CFR 208; and Interest on Deposits (Regulation Q), 12 CFR 217.

⁸A copy of this report is sent to the board of directors of the State member bank under examination, and another copy to the Division of Consumer Affairs at the Board.

Staff Economic Studies

The research staffs of the Board of Governors of the Federal Reserve System and of the Federal Reserve Banks undertake studies that cover a wide range of economic and financial subjects, and other staff members prepare papers related to such subjects. In some instances the Federal Reserve System finances similar studies by members of the academic profession.

From time to time the results of studies that are of general interest to the economics profession and to others are summarized—or they may be printed in full—in this section of the Federal Reserve BULLETIN.

In all cases the analyses and conclusions set forth are those of the authors and do not necessarily indicate concurrence by the Board of Governors, by the Federal Reserve Banks, or by the members of their staffs.

Single copies of the full text of each of the studies or papers summarized in the BULLETIN are available in mimeographed form. The list of Federal Reserve Board publications at the back of each BULLETIN includes a separate section entitled “Staff Economic Studies” that enumerates the studies for which copies are currently available in that form.

STUDY SUMMARY

GREELEY IN PERSPECTIVE

PAUL SCHWEITZER AND JOSHUA GREENE—Staff, Board of Governors

Prepared as a staff paper in early 1977

The Greeley Bank case of 1973 (*United States v. First National Bancorp.*) was the first Supreme Court case to present the potential and probable future competition theories as grounds for challenging a bank holding company acquisition. These theories presuppose that the scale on which an organization enters a market significantly affects the subsequent concentration of industry resources in that market, with entry on a large scale having anticompetitive implications. While a number of studies have examined the effect of regulation on competition and entry into local banking markets, not much work has been done on the relationship between entry scale and subsequent market concentration, particularly in

banking. Consequently, little evidence can be cited in support of this relationship, although the belief that entry scale *does* affect future market structure remains the fundamental basis for analyzing most probable future competition cases.

This study is an attempt to provide empirical evidence on the relationship between entry scale and the subsequent local market structure by tracing the changes in market structure that occurred in five secondary Colorado banking markets between the time when the Greeley applicant (First National Bancorp.) announced plans to acquire banks in those markets and June 1976—the most recent date for which reliable structure data were avail-

able. As all five of these acquisitions were announced between 1970 and 1972, this approach allowed us to control for three critical variables that could have important effects on structural change in local banking markets: holding company orientation, State regulatory policy, and general economic conditions. At the same time it enabled us to analyze in more depth cases that had occurred during the initial phase of rapid holding company expansion in Colorado. This period is the time when regulatory agencies have the greatest ability to influence local market structure, so events during this phase should be of particular importance for regulatory policy.

The results of the study indicate that, to the extent that we have held constant alternative explanatory variables, the scale on which a holding company enters a market *does* appear to affect the subsequent concentration of

banking resources in the market. The study shows that the two markets that the applicant entered by acquiring relatively small banks experienced noticeable decreases in market concentration over the years following acquisition, while the three markets it entered by acquiring banks with much larger market shares exhibited either no change or a slight increase in deposit concentration. Although these results would not hold for all cases of entry into new markets, we believe they would hold for other States in which rapid holding company development is taking place. The study also indicates that relatively small-scale entry generated market deconcentration over and above any increase in the market share of the acquired bank. This finding would suggest that promoting small-scale entry may be a particularly effective means for deconcentrating local banking markets. □

The Importance of an Independent Central Bank

Today, I would like to talk to you about an issue that has been important throughout much of recorded history and which is certain to influence your lives—for better or worse. I refer to Government's management of money—a function that in our country is lodged by statute with the Federal Reserve System.

No nation whose history I am familiar with has succeeded in managing the stock of money perfectly. Few, indeed, have even managed it well. And those societies that have been least successful have paid dearly for their ineptitude. Debasement of the currency had a great deal to do with the destruction of the Roman Empire. In our own times, excessive creation of money has released powerful inflationary forces in many countries around the globe. And once a nation's money is debauched, economic stagnation and social and political troubles usually follow.

Each of you in this assemblage, whatever your age, has experienced at first hand some of the consequences of monetary stress. For a dozen years now, our Nation has been subjected to a relentless siege of inflation that has conferred undeserved windfall gains on some and undeserved hardships on others. In terms of social well-being, these capricious pluses and minuses by no means cancel out. Young people wanting to buy a home these days know that the price of decent shelter has soared almost out of reach. Parents across the country know the shocking extent to which tuition costs have ballooned. And woe to anyone who has major medical expenses and is not adequately insured.

Those, moreover, are merely among the most readily visible consequences of inflation. There are other less apparent effects that are even more pernicious. Once a nation's economy has been gripped by inflation, it becomes virtually impossible to maintain an environment in which jobs are plentiful and secure. The economic recession of 1974–75, in the course of which unemployment climbed to a level above 8 million persons, would not have been nearly so severe—and indeed might not have occurred at all—had it not been for the inflationary distortions of the preceding several years.

That is clear, I think, from the sequence of events. Double-digit inflation severely drained many family pocketbooks, reduced consumer confidence, and led to more cautious consumer spending. Businessmen, however, were slow in responding to the weakening of consumer markets. They seem to have been blinded by the dizzying advance of prices and by the effect of that advance on their nominal profits. They thus continued aggressive programs of inventory expansion and capital-goods expansion longer than was prudent, thereby causing economic imbalances to cumulate to major proportions. By the time the weakening of consumer markets was fully recognized by businessmen, the need to scale back had become enormous. The worst recession in a generation ensued.

The only positive aspect of that traumatic episode is that it finally opened the eyes of many economists and public officials to the fact that inflation and unemployment are not alternatives for our economy. The message is now clear that inflation in time causes serious unemployment. Understanding of that relationship is gradually tending, I believe, to make public policies more sensible.

NOTE.—Address by Arthur F. Burns, Chairman, Board of Governors of the Federal Reserve System, at Commencement Exercises of Jacksonville University, Jacksonville, Florida, August 13, 1977.

Some of you in this audience may be wondering, I suspect, whether the Federal Reserve may not have something to do with the inflation we have been experiencing. It may fairly be asked: Has not the Federal Reserve been creating too much money? And may not this be one of the causes of our inflation?

That question is, indeed, often put to me, and I welcome it because of the opportunity it affords to clarify the nature of the dilemma our country faces. Neither I nor, I believe, any of my associates would quarrel with the proposition that money creation and inflation are closely linked and that serious inflation could not long proceed without monetary nourishment. We well know—as do many others—that if the Federal Reserve stopped creating new money, or if this activity were slowed drastically, inflation would soon either come to an end or be substantially checked.

Unfortunately, knowing that truth is not so helpful as one might suppose. The catch is that nowadays there are tremendous nonmonetary pressures in our economy that are tending to drive costs and prices higher. This, I should note, applies not only to our country, nor is it any more just a phenomenon of wars and their aftermath as tended once to be the case. Rather, powerful upward pressures on costs and prices have become worldwide, and they persist tenaciously through peacetime periods as well as wars.

This inflationary bias reflects a wide range of developments that have been evolving over a span of decades in both governmental and private affairs. Foremost among these developments is the commitment of modern governments to full employment, to rapid economic growth, to better housing, to improved health, and to other dimensions of welfare. These are certainly laudable objectives, but they have too often caused governmental spending to outrun revenues. Other developments—such as the escalator arrangements that various economic groups have achieved through their efforts to escape the rigors of inflation—have speeded the transmission of inflationary impulses across the economy. What we as a people, along with other nations, have been tending to do is to

subject available resources to increasingly intensive demands; but we at the same time have sought to insure that incomes do not get eroded when excessive pressures on resources generate inflation. This amounts, unfortunately, to creating upward pressures on costs and prices, and then arranging to perpetuate them. That is the awesome combination that fighters against inflation have to try to counter.

Theoretically, the Federal Reserve could thwart the nonmonetary pressures that are tending to drive costs and prices higher by providing substantially less monetary growth than would be needed to accommodate these pressures fully. In practice, such a course would be fraught with major difficulty and considerable risk. Every time our Government acts to enlarge the flow of benefits to one group or another, the assumption is implicit that the means of financing will be available. A similar tacit assumption is embodied in every pricing decision, wage bargain, or escalator arrangement that is made by private parties or government. The fact that such actions may in combination be wholly incompatible with moderate rates of monetary expansion is seldom considered by those who initiate them. If the Federal Reserve then sought to create a monetary environment that seriously fell short of accommodating the nonmonetary pressures that have become characteristic of our times, severe stresses could be quickly produced in our economy. The inflation rate would probably fall in the process but so, too, would production, jobs, and profits.

The tactics and strategy of the Federal Reserve System—as of any central bank—must be attuned to these realities. With sufficient courage and determination, it is nevertheless within our capacity to affect the inflation rate significantly. We may not, as a practical matter, be able to slow monetary growth drastically within any given short time span, but we do have considerable discretion in accommodating the pressures of the marketplace less than fully. We are, indeed, often engaged in probing and testing our capacity to do just that. And while we must be cautious about moving abruptly, my colleagues and I in the Federal Reserve System are firmly committed

to a longer-term effort of gradual reduction in the rate of growth of money—something that is reflected in the progression of steps we have been taking to lower permissible growth ranges for the money supply. Slowly undernourishing inflation and thus weakening it seems the most realistic strategy open to us. We believe that such an effort—especially if the Congress becomes less tolerant of budget deficits—will ultimately create a much healthier environment for the determination of wages and prices.

The capacity of the Federal Reserve to maintain a meaningful anti-inflationary posture is made possible by the considerable degree of independence it enjoys within our Government. In most countries around the world, central banks are in effect instrumentalities of the executive branch of government—carrying out monetary policy according to the wishes of the head of government or the finance ministry. That is not the case in this country because the Congress across the decades has deliberately sought to insulate the Federal Reserve from the kind of political control that is typical abroad. The reason for this insulation is a very practical one, namely, recognition by the Congress that governments throughout history have had a tendency to engage in activities that outstrip the taxes they are willing or able to collect. That tendency has generally led to currency depreciation, achieved by stratagems ranging from clipping of gold or silver coins in earlier times to excessive printing of paper money or to coercing central banks to expand credit unduly in more modern times.

With a view to insuring that the power of money creation would not be similarly abused in our country, the Congress has given our central bank major scope for the independent exercise of its best judgment as to what monetary policy should be. In fact, the Congress has not only protected the Federal Reserve System from the influence of the executive branch; it also has seen fit to give the System a good deal of protection from transitory political pressures emanating from the Congress itself.

Probably the two most important elements

making for Federal Reserve independence are the following: First, the seven members of the Federal Reserve Board serve long and staggered terms and can only be removed for "cause." This arrangement severely limits possibilities for any "packing" of the Board and enables members of the Board to act without special concern about falling out of grace politically. Second, the Federal Reserve System finances its activities with internally generated funds and therefore is not subject to the customary appropriations process. This arrangement is intended to assure that the congressional "power of the purse" will not be used in an effort to induce System officials to pursue policies that they otherwise might consider poorly suited to the Nation's needs.

The Federal Reserve has thus been able to fashion monetary policy in an impartial and objective manner—free from any sort of partisan or parochial influence. While the long history of the Federal Reserve is not faultless, its policies have consistently been managed by conscientious individuals seeking the Nation's permanent welfare—rather than today's fleeting benefit. Significantly, this country's record in dealing with inflation—albeit woefully insufficient—has been much better generally than the record of countries with weak central banks. Indeed, I would judge it no accident that West Germany and Switzerland, which in recent years also have managed their economy better than most others, happen to have strong and independent monetary authorities like ours.

The degree of independence that the Congress has conferred upon the Federal Reserve has been a source of frustration to some Government officials since the Federal Reserve Act first became law. Certainly, from the standpoint of the executive branch, it would at times—perhaps often—be more convenient to instruct the central bank what to do than to reckon with the System's independence. In the end, however, the country would not be so well served. The Federal Reserve, it needs to be emphasized, seeks earnestly to support or to reinforce governmental policies to the maximum extent permitted by its responsibilities. When the System's actions depart,

as they occasionally have, from the way in which the executive branch would wish it to act, that is generally because the System tends to take a longer-range view of the Nation's welfare. Actually, most of the time, monetary and fiscal policies are well coordinated and mutually reinforcing; in other words, they are the product of continuing and fruitful discussions between members of the administration and Federal Reserve officials.

Not only is dialogue continuous with the executive branch of the Government, but Federal Reserve officials also appear frequently before congressional committees—something that works, on the one hand, to keep the Congress informed as to System activities and that, on the other, affords Senators and Congressmen an effective means of registering approval or disapproval of Federal Reserve policy. In practical terms, the economic policy dialogue that is always in process within our Government produces a thorough exploration of options. It may fairly be said, I believe, that the System's independence results in a more thorough discussion and thrashing out of public issues than would otherwise occur.

Despite the salutary influence that the Federal Reserve's independence has had on our Nation's economy, legislative proposals that would place the System under tighter rein keep being introduced in the Congress. The proposals that have been put forth over the years cover a wide range—for example, to enlarge the size of the Board, to shorten the terms of its members, to enable the President to remove Board members at will, to diminish or eliminate the role of Federal Reserve bank directors, and to subject the System to the congressional appropriations process or to audit by the Government Accounting Office. In recent years, there have also been proposals calling for numerical forecasts of interest rates or other sensitive magnitudes, which, if ever undertaken by the Federal Reserve, could unsettle financial markets besides misleading individuals who lack sophistication in financial matters.

The shortcomings of these individual proposals matter less, however, than what appears

to be their common objective, namely, to reduce the Federal Reserve's independence and to restrict its scope for discretionary action. That, I believe, is the real thrust of the diverse efforts to "reform" the Federal Reserve System. It is perhaps of some significance that such proposals not infrequently come from individuals who are basically dissatisfied with what they regard as excessive Federal Reserve concern with battling inflation.

The element of populism in all this is strong—particularly the preoccupation with maintaining low interest rates. It makes no difference how often Federal Reserve officials repeat that the System's continuing objective is the lowest level of interest rates compatible with sound economic conditions. That is not enough. What is desired is assurance that interest rates will be kept permanently down, or at least not be allowed to rise significantly.

The Federal Reserve cannot, of course, give that kind of assurance. In a period of rising demands for funds, a determined effort by the System to keep interest rates down could quickly turn the Federal Reserve into something akin to the engine of inflation that it was during the early Korean war period when the System unwisely tried to keep interest rates down so that the cost of financing the Federal debt would not escalate. Actually, the consequences now would almost certainly be far worse than they were a quarter century ago because the public has become far more sensitive to inflation.

Long-term interest rates, in particular, tend to respond quickly nowadays to changing inflationary expectations. Once the financial community perceived that the Federal Reserve was pumping massive reserves into commercial banks with a view to creating monetary ease, fears of a new wave of inflation would quickly spread. Potential suppliers of long-term funds would then be inclined to demand higher interest rates as protection against the expected higher rate of inflation. Borrowers, on the other hand, would be more eager to acquire additional funds since they would expect to repay their loans in still cheaper dollars.

In short, heightened inflationary expectations would soon overwhelm markets in today's inflation-conscious environment by actually causing long-term interest rates—which are generally more important to the economy than short-term rates—to rise. The policy of seeking lower interest rates by flooding banks with reserves would thus be frustrated. And I need hardly add that adverse effects on production, employment, and the dollar's purchasing power would follow.

The Federal Reserve System, I assure you, will not be deterred by the drumbeat of dubious propositions concerning money and interest rates. We are determined to continue on a path of further gradual unwinding of the inflationary tendencies that have become so deeply embedded in our economic life. We are deter-

mined to continue promoting the expansion of our economy and yet control the supply of money so as to prevent a new wave of inflation. Such a policy, I firmly believe, is the only responsible option open to us.

I hope that I have succeeded today in conveying some sense of the importance to you as individuals and to the Nation generally of the Federal Reserve's role in our Government. Fortunately, despite the criticism that is not infrequently voiced by some of its members, the Congress as a whole has kept the Federal Reserve's role in a clear perspective and has fully protected the essentials of Federal Reserve independence. That will continue to be the case only if you who are graduating today and other citizens develop a full understanding of what is at stake. □

Changes in Time and Savings Deposits at Commercial Banks, January–April 1977

Growth in total time and savings deposits at all insured commercial banks slowed moderately during the 3-month period ending April 27, 1977. This article discusses changes in the composition of such deposits by using data from the latest quarterly survey of time and savings deposits, conducted jointly by the Federal Reserve System and the Federal Deposit Insurance Corporation.¹ Total time and savings deposits increased by almost \$12 billion, or at a quarterly rate of about 2 per cent, not seasonally adjusted, compared with an increase of more than \$15 billion, or a quarterly rate of 3 per cent, in the preceding 3 months. The moderation in growth was most evident among savings deposits, which rose by \$8 billion in the interval from January to April, or 4 per cent at a quarterly rate, in contrast to the sharp \$13 billion rise in the previous 3-month interval. Meanwhile, growth in small-denomination (less than \$100,000) time deposits nearly kept pace with that of the preceding period, increasing about \$5 billion,

despite continued rate cutting in almost all maturity categories and rising market rates of interest on alternative investments. The outstanding volume of large-denomination (\$100,000 and over) time deposits fell by almost \$2 billion, prolonging the decline begun in early 1975.

SAVINGS DEPOSITS

Inflows to savings accounts at insured commercial banks totaled more than \$8 billion, not seasonally adjusted, in the January to April period, bringing the outstanding volume of such deposits to \$213 billion. Individuals and nonprofit organizations increased their holdings by more than \$7 billion, accounting for 90 per cent of the expansion. Although substantial, this increase was nearly \$3 billion less than that of the previous quarter, indicating that inflows may have been dampened by the high fuel bills resulting from severe weather conditions in early 1977. Businesses and domestic governmental units sharply reduced their savings deposit inflows. The extremely rapid growth rate in these deposits in previous quarters reflected initial build-ups in funds after these accounts first became available to governmental units in November 1974 and to businesses a year later.

During the January–April period, some small banks apparently reversed their recent reductions in offering rates on savings deposits of governmental units. Among banks with deposits of less than \$100 million, the proportion paying the ceiling rate of interest on deposits of governmental units rose 4 percentage points to 86 per cent after falling 4 points in the preceding 3 months. In contrast,

NOTE.—Rebekah F. Wright and John R. Williams of the Board's Division of Research and Statistics prepared this article.

¹Surveys of time and savings deposits (STSD) at all member banks were conducted by the Board of Governors in late 1965, in early 1966, and quarterly in 1967. In January and July 1967 the surveys also included data for all insured nonmember banks collected by the Federal Deposit Insurance Corporation (FDIC). Since the beginning of 1968 the Board of Governors and the FDIC have conducted joint quarterly surveys to provide estimates for all insured commercial banks based on a probability sample of banks. The results of all earlier surveys have appeared in previous BULLETINS from 1966 to 1977, the most recent being June 1977.

The current sample—designed to provide estimates of the composition of deposits—includes about 560 insured commercial banks. For details of the statistical methodology, see "Survey of Time and Savings Deposits, July 1976" in the BULLETIN for December 1976.

1. Types of time and savings deposits held by insured commercial banks on survey dates, October 27, 1976, January 26, 1977, and April 27, 1977

NOTE.—All banks that had either discontinued offering or never offered certain deposit types as of the survey date are not counted as issuing banks. However, small amounts of deposits held at banks that

had discontinued issuing certain deposit types are included in the amounts outstanding.

Figures may not add to totals because of rounding.

at banks with total deposits over \$100 million, the share paying the maximum rate on governmental savings deposits fell 2 percentage points to 82 per cent, following a decline of 10 percentage points between October and January. For savings accounts of businesses, the proportion of banks paying the maximum rate fell 1 percentage point in both size categories, to 89 per cent at small banks and to 87 per cent at large banks. And for savings accounts of individuals, the share of small banks paying the maximum rate was unchanged at 84 per cent and the share of large banks rose 1 percentage point, also to 84 per cent.

The average rate (weighted by the amount of deposits) paid at all banks on savings deposits acquired by individuals remained at 4.90 per cent. For businesses, the average rate fell 1 basis point to 4.93 per cent, while for

governmental units the average rate increased 4 basis points to 4.94 per cent. As a result, the weighted-average rate paid on all new issues of savings deposits remained unchanged at 4.90 per cent.

SMALL-DENOMINATION TIME DEPOSITS

Although rates on intermediate-term market instruments had risen somewhat from their January levels, they remained below commercial bank rate ceilings for all time-deposit maturities. As a result, inflows to most maturity categories of small-denomination interest-bearing time accounts continued at a pace only moderately slower than in the preceding 3 months. Such deposits grew at a 3 per cent quarterly rate to a level of \$162 billion.

2. Small-denomination time and savings deposits held by insured commercial banks on April 27 compared with January 26, 1977, by type of deposit, by most common rate paid on new deposits in each category, and by size of bank

¹ See p. A10 for maximum interest rates payable on time and savings deposits at the time of each survey. The ceiling rate is included in the rate interval in the line above.

² Less than .05 per cent.

NOTE.—All banks that either had discontinued offering or had never offered particular deposit types as of the survey date are not counted as issuing banks. Moreover, the small amounts of deposits

held at banks that had discontinued issuing deposits are not included in the amounts outstanding. Therefore, the deposit amounts shown in Table 1 may exceed the deposit amounts shown in this table.

The most common interest rate for each instrument refers to the stated rate per annum (before compounding) that banks paid on the largest dollar volume of deposit inflows during the 2-week period immediately preceding the survey date.

Figures may not add to totals because of rounding.

Domestic governmental units increased their holdings of small-denomination time deposits in all maturity categories. The 3-month rise of more than \$400 million, to a level of \$4.7 billion, was more than double the rise of the preceding 3 months. Growth was concentrated primarily among deposits maturing in less than 1 year.

Despite modest reductions in offering rates on deposits in most maturity categories, holdings of small-denomination time deposits by nongovernment entities advanced more than \$4 billion to a level of nearly \$158 billion. Growth in deposits maturing in 4 years or more accounted for 95 per cent of all growth in nongovernmental small-denomination time

3. Average of most common interest rates paid on various categories of time and savings deposits at insured commercial banks on January 26, 1977, and April 27, 1977

MEMO: Club accounts¹.....	4.11	2.69	2.91	4.80	3.91	3.83	4.27

¹ Club accounts are excluded from all of the above categories.

NOTE.—The average rates were calculated by weighting the most common rate reported on each type of deposit at each bank by the

amount of that type of deposit outstanding. All banks that had either discontinued offering or never offered particular deposit types as of the survey date were excluded from the calculations for those specific deposit types.

deposits. With about four-fifths of banks still paying the maximum rate on these long-maturity time deposits, the yields remained attractive relative to market alternatives.

OTHER TIME DEPOSITS

During the January to April period, the outstanding volume of large-denomination time deposits declined almost \$2 billion to a level of

\$123 billion. The prolonged run-off of large-denomination time deposits reflects the ability of banks to finance expanding loan demands in early 1977 through increased use of other managed liabilities, such as Federal funds and repurchase agreements, and from inflows to savings and small-denomination time accounts. The level of non-interest-bearing time deposits—principally escrow accounts and compensating balances held against loans—remained essentially unchanged from the previous quarter at \$4.9 billion. □

APPENDIX TABLES

1,000 and over	94	4	15	75	73	43,777	835	5,844	37,098	36,131

NOTES TO APPENDIX TABLES 1-16:

¹ See p. A10 for maximum interest rates payable on time and saving deposits at the time of each survey. The ceiling rate is the top of the rate interval immediately to the left.

² Omitted to avoid individual bank disclosure.

³ Less than \$500,000.

NOTE.—All banks that either had discontinued offering or had never offered particular deposit types as of the survey date are not counted as issuing banks. Moreover, the small amounts of deposits

held at banks that had discontinued issuing deposits are not included in the amounts outstanding. Therefore, the deposit amounts shown in Table 1 may exceed the deposit amounts shown in these tables.

The most common interest rate for each instrument refers to the stated rate per annum (before compounding) that banks paid on the largest dollar volume of deposit inflows during the 2 week period immediately preceding the survey date.

Figures may not add to totals because of rounding.

A2. Savings deposits issued to partnerships and corporations operated for profit

Treasury and Federal Reserve Foreign Exchange Operations

This 31st joint interim report reflects the Treasury–Federal Reserve policy of making available additional information on foreign exchange operations from time to time. The Federal Reserve Bank of New York acts as agent for both the Treasury and the Federal Open Market Committee of the Federal Reserve System in the conduct of foreign exchange operations.

This report was prepared by Alan R. Holmes, Manager, System Open Market Account, and Executive Vice President in charge of the Foreign Function of the Federal Reserve Bank of New York, and by Scott E. Pardee, Deputy Manager for Foreign Operations of the System Open Market Account and a Vice President in the Foreign Function of the Federal Reserve Bank of New York. It covers the period February 1977 through July 1977. Previous reports have been published in the March and September BULLETINS of each year beginning with September 1962.

During the 6-month period under review the exchange markets were faced with a shifting configuration of payments balances at a time when the economy of the United States was expanding much more rapidly than those of other major industrial countries.

Several countries that had been in serious current-account deficit were making clear progress, mainly through stabilization programs, in reducing domestic inflation and restoring international balance. Growing evidence of improvement helped to bolster market confidence in their currencies—particularly the pound sterling, the Italian lira, and the French franc—stimulating reversals of earlier capital outflows and previously adverse leads and lags. With these currencies

now in demand, the respective central banks took the opportunity to buy dollars in the market and to rebuild their international reserves. The stabilization measures in these countries remained in force into the summer, and domestic growth slowed significantly.

Major countries that had been in current-account surplus made little progress, however, toward their stated objective of reducing those surpluses. In particular, Japan's already massive current-account surplus widened even further in early 1977 and set the stage for a sharp rise of the yen in the exchanges. Germany's current-account surplus, while narrowing somewhat, remained large. But since it was roughly offset by capital outflows, the mark, which had already appreciated by 9 per cent since last summer, traded in a narrow range against the dollar through late spring. In general, the authorities

of surplus countries faced sluggish demand at home, and although they sought to promote more rapid expansion, they were reluctant to press too hard for fear of refueling inflation.

Meanwhile, the U.S. economy had moved into high gear in the early months of 1977. Our demand for foreign goods thus rose sharply at a time when foreign demand for American goods was growing only slightly. Consequently, our trade and current-account deficits, which emerged last year, deepened further. Inflationary pressures also picked up in the United States, although this partly reflected temporary factors like the cold weather last winter. Even so, market sentiment toward the dollar remained generally positive. Dealers responded to a continuing flow of favorable news about the underlying expansion of the U.S. economy. In addition, the market came to expect that short-term U.S. interest rates would be firming while interest rates elsewhere were flat or easing.

By the spring, however, the magnitude of the U.S. trade deficit, which reached \$30 billion at an annual rate in the first half of 1977, was becoming a matter of broader concern. In part, the deficit reflected the increasing dependence of this country on foreign sources of oil, and the administration's energy proposals making their way through the Congress were partly designed to slow the growth of oil imports over the longer term. But the deficit also reflected special circumstances in other goods markets. In the context of a growing tendency toward trade restrictions abroad, the size of the deficit contributed to protectionist sentiment in many U.S. industries and labor unions. The administration resisted this approach to curbing the deficit. At the same time, it began to urge

countries with large current-account surpluses to contribute more to the international adjustment process. In this effort, the administration put forward a broad range of possible approaches the others could take, including more rapid expansion of their economies, the opening-up of their domestic markets to foreign competition, and the elimination of controls or administrative practices that might distort currency relationships. In these discussions, it was stressed that exchange-rate appreciation for the currencies of countries in current-account surplus would contribute to international equilibrium. In the context of these discussions, the yen, in particular, staged its advance in the spring.

The markets for European currencies also responded nervously to comments on exchange policy by European or U.S. officials. But these tensions largely subsided following the London economic summit in early May since exchange rates were not mentioned in the communique. In late June, however, senior government officials meeting at the Organization for Economic Cooperation and Development (OECD) stated their agreement that countries with current-account surpluses should allow their currencies to appreciate. In subsequent interviews with the press, government officials in various countries were pressed on their interpretation of this agreement and on their views of the appropriateness of the current constellation of exchange rates. The responses of the U.S. authorities were framed in the context of the broad policy objective to achieve further payments adjustment, but as their remarks were reported

and flashed around the world by the news services, the impression was left that a concerted effort was under way to lead the market.

By early July the dollar was coming heavily on offer not only against the currencies of countries in surplus but also against nearly all major currencies. As before, the central banks of the United Kingdom, Italy, and France mopped up dollars offered against their currencies, thereby limiting the rise in their exchange rates. Other currencies were bid up sharply, however, and in order to counter disorderly conditions several central banks—including those of Japan, Germany, and Switzerland—also bought dollars. The Federal Reserve intervened on several occasions in the New York market. After late June the yen advanced 3½ per cent before leveling off. In Europe, the mark and the currencies linked to it rose by 3 to 5 per cent through late July.

In the highly speculative atmosphere that developed, U.S. Treasury officials at first sought to avoid further comment on exchange rates, but as the press and market participants continued to rehash what had already been said or was thought to have been said, it became necessary to dispel the impression that the authorities had been deliberately talking the dollar down. The effort to clear the air began in late July, when Federal Reserve Chairman Burns and Treasury Secretary Blumenthal in several statements stressed their belief in the importance of a strong dollar for the United States and the world generally. These statements sparked a turnaround in market psychology. Moreover,

interest rates in the United States began to firm, and by the end of July, dollar rates were being bid up from their latest lows against several major currencies.

In market intervention during the February–July period, the Federal Reserve sold a total of \$209.1 million of German marks, of which \$173.7 million was financed from balances and \$35.4 million from swap drawings on the German Federal Bank, which were outstanding as of July 31. Total Federal Reserve purchases of marks from correspondents and in the market for balances amounted to \$142.2 million equivalent. The System also sold \$3.3 million of Dutch guilders out of balances and purchased \$8.5 million equivalent from correspondents.

In addition, during the period the Federal Reserve repaid a further \$287.1 million equivalent of special swap indebtedness in Swiss francs and the U.S. Treasury redeemed \$171.7 million equivalent of franc-denominated securities. By July 31 the Federal Reserve's special swap debt to the Swiss National Bank had been reduced to \$705.4 million equivalent, while the Treasury's

Swiss franc-denominated obligations had been lowered to \$1,341.5 million equivalent.

As reported in June, from last year's operations the Bank of Mexico repaid in February a \$150 million swap drawing on the Federal Reserve and prepaid in April \$150 million drawn under the Exchange Stabilization Agreement with the Treasury.

Finally, in February the U.S. Treasury established short-term credit facilities for Portugal totaling \$300 million. The Bank of Portugal subsequently drew the full amount of these facilities and repaid \$85 million by August 1.

GERMAN MARK

Early in 1977 prospects for continued expansion of Germany's economy were uncertain. The worldwide lull in demand for capital goods, the deflationary measures taken in several of Germany's principal European markets, and the appreciation of the mark during 1976 had clouded the outlook for a further strong expansion in exports. At home, investment demand remained soft, and unemployment remained worrisomely high. Even so, a new round of wage negotiations had paved the way for pay increases above the government's target, and the authorities were reluctant to provide additional economic stimulus lest it be viewed as inflationary.

Meanwhile, with the relaxation of last year's tensions in the exchange markets, a flow of capital out of Germany was well under way, keeping the mark near the bottom of the European Community (EC) snake, following the October 1976 realignment, and on offer against many other currencies. The market nevertheless remained acutely sensitive to changing interest rate relationships—especially between Germany and the United States in view of the broader importance of the mark-dollar relationship in the international monetary system.

During February signs of congestion in the German capital market, generating expectations of a rise in German interest rates, coincided with concerns over the economic impli-

cations of the harsh winter in the United States. Thus, the mark came into demand and rose from \$0.4157 on February 1 to as high as \$0.4190 by the end of the month. To cushion the mark's advance, the German Federal Bank bought modest amounts of dollars in Frankfurt, while the Federal Reserve intervened on 3 days when trading became unsettled in New York, selling a total of \$20.9 million equivalent of marks from balances.

In early March expectations of a further rise in German interest rates receded, after the German Federal Bank announced an increase in its commercial bank rediscount quotas. But concern over an unexpectedly sharp rise in the U.S. trade deficit, compared with Germany's continuing trade surplus, kept dealers cautious. The mark settled around the end-of-February levels against the dollar and remained near the lower limit of the EC band through the end of March. Then on Friday, April 1, when incomplete reports of an EC snake realignment reached the New York market after the European close but before the official announcement, trading became confused. The mark was abruptly bid up to as high as \$0.4204. The Federal Reserve entered the market with moderate offers of marks, selling \$15.3 million equivalent from balances.

While the immediate nervousness surrounding the snake realignment soon passed, the market had been reawakened to the possibility of further exchange-rate adjustments within Europe and elsewhere. In addition, rumors began to circulate in the market that the question of exchange rates, particularly relating to the mark and the yen, would be pursued at the economic summit meeting in London on May 7–8. With the yen having already advanced in recent weeks, the late-April announcements of a sharp widening of the U.S. trade deficit in March and an increased German trade surplus for that month reinforced expectations of a near-term rise in the mark rate as well.

Consequently, demand for marks against sales of dollars gathered momentum in late April and carried over into early May. Moreover, strong bidding for Dutch guilders

at the top of the EC snake exerted an upward pull on the mark. As the German Federal Bank and the Netherlands Bank provided substantial support for the mark at its lower intervention limit against the guilder, the spot rate advanced to as high as \$0.4266 in Frankfurt on May 5 just ahead of the summit. To counter disorderly conditions in New York, the Federal Reserve intervened on four trading days over the period from April 15 to May 4. In all, the System sold \$34.8 million equivalent of marks. Since the mark was at the bottom of the EC snake at the time and the guilder at the top, the Federal Reserve supplemented its operations in marks with offers of guilders, selling \$3.3 million equivalent of that currency.

The broad scope of the joint communique issued from the London summit meeting, containing no reference to exchange rates, relaxed previous market concerns. Consequently, although Germany's trade surplus remained strong, reflecting continued strength in German exports and a slowing of imports, the market's attention shifted back to an assessment of the relative economic performance and interest rate outlook for Germany and the United States. German short-term rates remained soft, after the German Federal Bank reduced commercial bank reserve requirements and raised rediscount quotas effective June 1 to help tide the money market over a period of anticipated seasonal tightness. By comparison, U.S. interest rates had firmed following Federal Reserve actions to counter a sharp rise in the U.S. monetary aggregates in April.

Thus, the market generally came into better balance during May and June. On May 12, however, the wire services highlighted one aspect of a speech by International Monetary Fund (IMF) Managing Director Witteveen stating that countries in a strong balance of payments position would have to permit their currencies to appreciate. These reports triggered a burst of demand for marks that unsettled the New York market, and the Federal Reserve intervened, selling \$33.5 million equivalent of marks. Again on May 26, the announcement of another sizable U.S. trade

deficit for April generated an abrupt bidding-up of the mark, and the Federal Reserve sold \$6.4 million equivalent in steady trading. But apart from these two brief episodes, the mark traded quietly through mid-June at around \$0.4240, some 2 per cent above the early-February levels, without intervention by either the Federal Reserve or the German Federal Bank. During May and June the Trading Desk bought from correspondents moderate amounts of marks to add to working balances.

In the weeks that followed, a number of press reports were interpreted by many market participants as implying that the U.S. Government was attempting to talk the dollar down. On June 24 when trading had thinned out after the European close, the New York market was suddenly upset when the international news services reported from the OECD ministerial meeting in Paris that member countries with strong external positions were ready to see a weakening of their current-account positions and an appreciation of their currencies in response to underlying market forces. This statement was viewed by the market as going beyond the results of the May summit and sparked an immediate rise in the mark as well as the yen. The demand gathered force once market professionals were free of their quarter-end positioning requirements, and by early July each successive advance of the yen in Tokyo was matched by a strong bidding-up of the mark rate in Europe as traders built up long positions in the German currency. By July 7 the mark had advanced more than 2¼ per cent to \$0.4340, with the German Federal Bank returning to the market for the first time since March to buy dollars.

Following these operations and reports of forceful intervention by the Bank of Japan in Tokyo, the mark temporarily eased back. But market participants were soon caught up again in a crossfire of statements stemming from the news services and editorial comment on the worsening of the U.S. trade deficit, the decline of the dollar, and the administration's attitudes toward these developments. As this process was unfolding, dealers saw little im-

mediate downside risk for the mark rate, with the result that demand for marks progressively intensified.

In this speculative atmosphere, the market largely ignored the German Federal Bank's announcement on July 14 that it was reducing its Lombard rate by $\frac{1}{2}$ percentage point to 4 per cent and that it would be prepared to continue purchasing trade bills on a repurchase basis at a rate of $3\frac{3}{4}$ per cent. Instead, as generalized selling of dollars persisted, the mark was bid up to a 4-year high of \$0.4455 by July 26 in trading that became increasingly disorderly. In response, the German Federal Bank gradually stepped up its intervention, with significant dollar purchases at the daily fixings in Frankfurt. For its part, the Federal Reserve intervened in New York on nine trading days between July 8 and July 26, selling \$94.7 million equivalent of marks. The System financed these sales from existing balances and from \$35.4 million equivalent of drawings under the swap line with the German Federal Bank.

Under these circumstances, senior U.S. financial officials sought to clarify U.S. exchange-rate policy. On July 26, in answer to questions before the House Banking Committee, Chairman Burns stressed the need "to protect the integrity of our money" and observed that "depreciation of the dollar means higher prices domestically" while having "serious international repercussions." Secretary Blumenthal, in a speech in Louisville, Kentucky, emphasized that "a strong dollar is of major importance not only to the United States but also to the rest of the world." In response, dealers began to cut back their long mark positions.

The dollar's recovery continued even after a record \$2.8 billion U.S. trade deficit was announced for June. At the same time, moreover, U.S. interest rates had begun to firm as the Federal Reserve reacted to a sharp rise in the monetary aggregates in July. Thus, the mark began to move lower and reached \$0.4378 by July 29, down $1\frac{3}{4}$ per cent from its peak 3 days earlier but still up more than 5 per cent on balance for the 6 months. In further operations in the New York market

over the last days of July, the Federal Reserve sold \$3.5 million equivalent of marks and purchased \$14.8 million equivalent, on balance, gaining partial cover for the earlier \$35.4 million of swap drawings on the German Federal Bank. Germany's official reserves rose by \$848 million in July, for a net increase of \$685 million over the 6-month period.

STERLING

Late in 1976 the British Government took further steps to curb Britain's inflation rate, which remained among the highest in Europe; to redress its persistently large current-account deficit; and to stabilize sterling following its protracted decline during much of the year.

The Bank of England moved to restrict monetary expansion, partly by raising its minimum lending rate to an unprecedented 15 per cent and by reimposing an increasing marginal reserve requirement, the so-called "corset." The authorities sealed off a gap in exchange-control regulations by prohibiting the use of the pound in financing third-country trade. And, in negotiating a \$3.9 billion standby arrangement with the IMF, the government agreed to a package of fiscal restraint. As announced in December, this package included spending cuts, increased taxes, and the sale of part of the British Government's holdings in the British Petroleum Company—measures expected to reduce the public sector borrowing requirement as a share of gross domestic product from the existing 9 per cent to 6 per cent for the 1977–78 fiscal year. Meanwhile, the second 1-year phase of wage restraint, in place since July, was helping to slow the rise in labor costs.

These various measures were combined with a substantial bolstering of Britain's reserve position. The \$3.9 billion IMF standby was formally approved in early January 1977. Shortly thereafter, the U.K. authorities reached agreement with the main industrial countries over a plan, including a \$3 billion backstop facility administered by the Bank for International Settlements (BIS), to alleviate

pressures on sterling from sudden shifts out of officially held balances and to reduce those balances over the near term. Late in January the British Government announced a new \$1.5 billion Euro-currency loan from a commercial banking syndicate.

Against this background, sterling staged a dramatic turnaround in the exchanges. Beginning in late 1976, the very indications that new fiscal and monetary restraints and international credit facilities were under serious consideration had prompted bidding for pounds. With sterling recovering, the high cost of funds in London began to squeeze out short positions and to encourage the unwinding of adverse leads and lags that had built up during months of demoralization over sterling's prospects. The running-off of outstanding third-country sterling trade credits gave an added impetus to net demand for the pound well into early 1977. The growing reflux of funds into sterling thus propelled the spot rate from its record low of \$1.55 in October 1976 to just under \$1.72 by early February 1977. By then, the Bank of England was absorbing large amounts of dollars from the market to add to reserves and to prevent sterling from rising to levels that it judged might prove unsustainable once the immediate demand pressures eased.

As trading conditions gradually settled down, dealers began to focus on the positive factors for sterling. By early 1977 the flow of North Sea oil was beginning to reach sizable proportions, giving credence to forecasts that the oil would provide the basis for a swing of the U.K. current account into substantial surplus over the years ahead. Moreover, as the sterling rate stabilized, market participants came to expect an easing of British interest rates away from crisis levels. Each new issue of government debt was met with reports of sizable bidding, from foreign as well as domestic sources, to take advantage of the currently high coupon rates and the potential for capital appreciation. Consequently, the British authorities were able to sell large amounts of government debt at progressively lower rates, and sterling remained in demand in the early spring. Through April the Bank of England was able to buy large amounts of

dollars to replenish official reserves. On balance, U.K. reserves rose by some \$3 billion between the end of January and the end of April.

The movement of funds into sterling, while strong and persistent, was nevertheless interrupted by occasional outbursts of selling pressure. Thus, sterling came heavily on offer in mid-February, falling briefly to as low as \$1.6920 against the dollar, after news of a record trade deficit in January and widespread press coverage of trade union opposition to a third year of voluntary pay restraint. In mid-March another temporary spasm of selling pressure was triggered by political uncertainties that arose before the government narrowly survived a parliamentary vote of no-confidence. And in April signs of a stiffening of trade union opposition to continued wage restraint again spurred some selling of sterling. On each of these occasions, however, the Bank of England stepped in promptly to avoid a significant decline in the sterling rate. In the context of the government's broader policy commitments the market quickly stabilized. Consequently, by early May sterling continued to hold firm just below \$1.72.

In the meantime, the persistent domestic and foreign demand for British securities had resulted in a progressive decline of interest rates in London. In view of the continuing high rate of domestic inflation and the government's debt management objectives, the authorities had acted to slow the decline. Nevertheless, the drop was mirrored in successive reductions in the Bank of England's minimum lending rate to 8 per cent by mid-May—fully 7 percentage points below the crisis level of October 1976. With U.S. interest rates rising at the time, yield differentials favoring sterling placements had narrowed considerably, and the market found the scope for further capital gains on investments in British securities substantially reduced. Consequently, dealers became sensitive to the possibility of a sudden unwinding of previous capital inflows.

Moreover, the market was also aware that reversals of adverse leads and lags and unwinding of third-country trade finance that had buoyed the pound in previous months were by

now largely completed. With sterling more vulnerable to selling pressure, concerns over the outlook for inflation surfaced again—following news of a sharp rise in retail prices in April and of the trade unions' adverse reaction to the Labor government's proposed formula, stated in the March 29 budget address, for a third year of pay restraint.

In this more bearish atmosphere the pound came under a burst of largely professional selling after mid-May, particularly on May 24. The Bank of England responded with forceful intervention to limit the decline in sterling, helping to relieve the immediate pressures. Then when Britain's reserve figures for May were published early the next month, the indicated size of official support impressed the market that the U.K. authorities were prepared to use their now ample resources to keep the exchange rate steady over the near term.

Meanwhile, recent statistics had revealed that Britain's current account was improving more rapidly than had been expected. The domestic economy remained depressed, leading to a leveling-off of imports. But, in addition, increased North Sea oil production and sharp rises in tourism receipts and other invisible earnings had brought the current account into near balance by the second quarter. Moreover, capital inflows had resumed, as interest yields again looked attractive to foreign investors compared with placements elsewhere. The British Government's sale on June 27 of a portion of its British Petroleum holdings, which in the end was nearly five times oversubscribed, also drew in sizable amounts of funds from abroad.

These factors contributed to an increasingly bullish atmosphere for the pound, which remained in demand. Consequently, when the dollar came on offer against other major currencies in late June and early July, market participants began to shift into sterling as well. In meeting this "hot money" inflow, the Bank of England allowed the spot rate to edge above \$1.72, but it continued to absorb most of the excess demand through heavy purchases of dollars.

By early July, opposition within the trade unions to a third year of wage restraint had built up to the point where virtually no hope remained of winning voluntary support for a limit on negotiated wage increases for another year. The Labor government modified its wage restraint strategy to seek union agreement to space out pay negotiations over 12 months, while obtaining moderate wage increases within the public sector. This outcome led to only a brief bout of selling pressure. Instead, as the dollar continued on offer, these concerns receded into the background, and the movement of funds into sterling gathered renewed momentum.

As before, the Bank of England resumed purchases of dollars to avoid a rise of sterling, but the effect of this approach was to allow the pound to depreciate along with the dollar against the currencies of other major trading partners. Consequently, on July 27 the Bank of England shifted to an intervention approach keyed to a weighted average of major currencies.

As soon as market participants learned that the Bank of England was abandoning its strategy of holding the pound around the \$1.72 level, there was an enormous rush to buy sterling, not only out of dollars but out of other currencies as well. The pound advanced to as high as \$1.7420 against the dollar, for a net rise of about 1¼ per cent over early 1977 levels, and recouped part of its recent depreciation against other currencies. To limit the rise, the Bank of England made heavy purchases of dollars. Mainly as a result of these and earlier acquisitions by the central bank, Britain's external reserves rose \$3.6 billion during the June–July period to a record \$13.6 billion at the end of July, for an over-all rise of \$6.4 billion over the 6-month period.

SWISS FRANC

Last winter the Swiss economy was pulling out of recession only slowly. The continued weakness of domestic demand was reflected in a further moderation of inflation and a trade surplus—the first in 20 years—which together

with large interest earnings from abroad had boosted Switzerland's current-account surplus close to \$3.5 billion for 1976. To stimulate a revival of business activity while also avoiding any upward pressure on the Swiss franc that might inhibit export demand, the Swiss National Bank had provided a more accommodative monetary policy. Also, to encourage a continuing outflow of capital, the authorities reinforced their capital export conversion program, whereby the proceeds of new foreign bond issues in Switzerland are immediately converted into foreign currency at the central bank.

As Swiss monetary conditions eased, interest rates moved to levels well below those in other major countries, prompting sizable outflows of capital from Switzerland. This process was magnified by a large-scale reversal of much of the "hot money" inflows of previous months, when funds had been shifted into Swiss francs out of those currencies—sterling, the French franc, and the Italian lira—that had been under pressure during 1976. Consequently, the Swiss franc had begun an across-the-board decline that continued well into early 1977.

In February the market's view that low interest rates would be maintained hardened after the Swiss National Bank provided support to an undersubscribed Swiss Government bond issue and released commercial bank minimum reserves and sterilized deposits. Foreign investors therefore continued to shift funds out of low-yielding franc assets into other currencies, now more stable and offering significantly greater rates of return. Private forecasts of a sharply lower Swiss franc over the medium term touched off further selling of francs. As a result, the Swiss franc dropped back to as low as \$0.3893 by March 1, down by 2½ per cent against the dollar since the end of January and by 7¼ per cent from its record highs of June 1976. In the meantime, the franc also lost further ground against the German mark, for an over-all decline of 15 per cent since the June 1976 peaks.

In fact, however, the Swiss economy had begun hesitantly to respond to the stimulus of rising Swiss exports and the government's

economic policies. Moreover, the Swiss monetary aggregates were growing faster than targeted. To avoid excessive monetary growth, the National Bank absorbed domestic liquidity through net dollar sales under its capital export conversion program. Early in March, it took the opportunity to sell a small amount of dollars in the exchange market. Then, as the end of the quarter approached, the central bank announced that it would provide only limited swap assistance to the commercial banks to satisfy window-dressing needs. In response, interest rates in Switzerland turned around toward the end of the month, capital outflows tapered off, and the Swiss franc began to firm in the exchanges. As it did, the Swiss National Bank resumed dollar purchases in the market to moderate the rise.

In April, demand for Swiss francs gathered strength as traders reacted to reports that countries, such as Switzerland, with large current-account surpluses were being urged to let their currencies appreciate in response to market forces. With concern also deepening over the widening trade deficit and potential for renewed inflation in the United States, the franc continued to move up.

The rise in the franc was briefly interrupted in an initial reaction to news in mid-April that the Swiss Credit Bank had sustained substantial losses at its Chiasso branch in connection with irregularities in the handling of fiduciary deposits from Italy. Concerned that this news, together with closure of two small private banks in Switzerland, might cloud the reputation of Swiss banking, the authorities and the major banks worked out an agreement by early June on practices for accepting funds and on bank secrecy. In the meantime, the major Swiss commercial banks resumed their bidding for francs to improve their liquidity positions, both in the wake of the Chiasso affair and also in response to further signs of a somewhat more restrictive monetary stance by the Swiss authorities. As Swiss interest rates were bid up and German interest rates drifted lower, dealers covered their long mark-short franc positions. Consequently, the franc advanced against both the mark and the dollar, reaching \$0.4029 in Zurich on June

6 before the immediate demand for franc balances began to subside and Swiss money market rates eased.

In late June the Swiss franc was caught up in the general advance of European currencies against the dollar. Initially, after release of the OECD communique on June 24, it moved abruptly higher and then continued to rise during much of July, although at a somewhat slower pace than the mark. As the rate advanced, foreign companies with franc-denominated liabilities moved to acquire francs to prepay existing loans.

In order to moderate the rise in the franc, the Swiss National Bank bought substantial amounts of dollars in the market, more than offsetting dollar sales under the capital export conversion program. Also, on July 14, the Swiss authorities cut both the discount rate and the Lombard rate by $\frac{1}{2}$ of a percentage point each, to $1\frac{1}{2}$ per cent and $2\frac{1}{2}$ per cent, respectively—a move that was timed to coincide with the German Federal Bank's $\frac{1}{2}$ -percentage-point reduction in its Lombard rate. Even so, the franc advanced to a record high of \$0.4207 in European trading on July 26. Then, with the change in market sentiment toward the dollar that emerged and the firming of U.S. interest rates, the franc began easing back with other European currencies. It closed on July 29 at \$0.4162, almost 7 per cent above its March low, for a net rise of $4\frac{1}{4}$ per cent since January 31.

Meanwhile, the Federal Reserve and the U.S. Treasury continued with the program agreed to last October for an orderly repayment of pre-August 1971 franc-denominated liabilities. The Federal Reserve repaid \$287.1 million equivalent of special swap indebtedness and the Treasury redeemed \$171.7 million of Swiss franc-denominated securities by the end of July.

Most of the francs for these repayments were acquired directly from the Swiss National Bank against dollars. But the Federal Reserve also bought francs from the National Bank against the sale of \$58.9 million equivalent of German marks and \$40.3 million equivalent of French francs, which were in turn either acquired in the market or drawn from

existing balances. In addition, the System purchased \$24.9 million equivalent of Swiss francs in the market or from other correspondents mostly in late February—early March, when the franc was weakening in the exchanges. By the end of July the Federal Reserve's special swap debt to the Swiss National Bank had been reduced to \$705.4 million equivalent while the Treasury's Swiss franc-denominated obligations had been lowered to \$1,341.5 million equivalent.

FRENCH FRANC

Following recurrent bouts of selling pressure on the French franc through much of last year, the market for francs came into better balance by early 1977.

Last September the French Government introduced a wide-ranging stabilization program to deal with the underlying payments imbalance and with the adverse market psychology that had weighed on the franc. Presented by newly designated Premier Barre, the plan represented a shifting of priorities away from immediate economic stimulus toward a concerted effort to curb inflation and stabilize the exchange rate. Specific measures included a 3-month price freeze, a call for wage restraint, curbs on bank lending, and a 1-percentage-point hike in the Bank of France's discount rate to $10\frac{1}{2}$ per cent.

The market's initial response was hesitant, in view of the controversial nature of some of the measures. But by early winter the pace of price and wage increases in France had slowed markedly, and the trade deficit began to narrow. Also, tensions in markets for other major European currencies were easing, and traders became less fearful that a spillover of pressures from other currency markets would disrupt trading in francs. Consequently, as the market's previous extreme pessimism gradually lifted, market participants began bidding for francs to cover short positions or to reverse commercial leads and lags built up against the franc in previous months. The spot franc held firm around \$0.2010 against the dollar through mid-February, while strength-

ening some 1½ per cent against the German mark and other currencies in the EC snake. In the meantime, the Bank of France took advantage of the opportunity to buy dollars to add to foreign currency reserves.

Nevertheless, dealers were sensitive to political developments in France before general elections in early 1978. With the approach of municipal elections in March, for which public opinion polls projected a swing in favor of the opposition parties of the Left, the market turned cautious and the franc again came on offer. To avoid a build-up of speculative pressures, the Bank of France resumed intervention in support of the franc, selling moderate amounts of both dollars and German marks, and operated to keep French interest rates firm in the domestic money market.

Against the dollar, the spot franc eased about ½ per cent from mid-February levels to almost \$0.2000, while against the German mark and other EC snake currencies it declined about 1 per cent. Once the immediate uncertainties surrounding the municipal elections had passed, market nervousness receded and the franc gradually regained its previous buoyancy.

In the spring France's underlying payments position was clearly improving. Confidence in the country's external position was bolstered by the further favorable swing in the French trade account that nearly halved the late-1976 deficit and by expectations of a further moderation of inflation despite lifting of the price freeze. In this context, the high interest rates in France, compared with lower or declining interest rates elsewhere, attracted sizable inflows of interest-sensitive funds. Also, French public and private corporations continued to borrow abroad. At the same time, however, industrial production leveled off and unemployment rose somewhat.

Toward the end of April the market began to expect some easing of monetary policy, and the franc softened somewhat in the exchanges although the authorities introduced programs to increase employment in specific areas. These were to be financed by borrowings in the market, and interest rates were kept relatively firm. The franc quickly recovered and

remained in strong demand through May and most of June. The spot rate edged up gradually against the dollar to \$0.2025 by late June, with the Bank of France continuing to take dollars into reserves.

When the dollar came under generalized selling pressure in the exchange markets beginning in late June, the franc joined in the upswing of major European currencies. It was bid up a further 3 per cent to a late-July peak of \$0.2086, some 3¾ per cent above early-February levels, even as the Bank of France continued to buy sizable amounts of dollars to moderate the rise of the franc rate. But as the franc did not keep pace with the continued advance of the German mark, the French central bank also sold modest amounts of marks to cushion the decline in the rate against the German currency.

Toward the end of July, however, the franc began to settle back against the dollar following statements by U.S. officials emphasizing the need for a strong dollar and Premier Barre's remarks that the dollar had become undervalued vis-a-vis the French franc and other European currencies. As a result, by the end of the month, the franc rate had eased to \$0.2050, to close the 6-month period up 1⅞ per cent on balance against the dollar. Against the German mark, the franc regained some of the ground it had lost but still closed the period some 3½ per cent lower on balance.

ITALIAN LIRA

By early 1977 Italy's minority government had gathered sufficient support to implement many elements of its comprehensive stabilization program. Steps had been taken to bring the public sector deficit under control through spending cuts, tax increases, and higher prices for public services. The Bank of Italy had reinforced its restrictive monetary policy by raising its discount rate to 15 per cent and by imposing limits on bank lending. Even so, the authorities' efforts to negotiate modifications in Italy's wage indexation system—wages had risen more than 25 per cent in 1976, as against price rises of some 21 per cent—gained little

headway. Consequently, negotiations with the IMF over a new standby arrangement, which would provide Italy with \$530 million of new IMF credit and assure the availability of a further \$500 million from the EC, were delayed until more of the government's anti-inflationary package was in place.

At first the lira had been stabilized by strict exchange controls as well as by a repatriation of funds in response to an amnesty on previous illegal outflows by Italian residents. Gradually, the tight credit conditions in Italy and the greater stability of the rate following the 25 per cent depreciation in 1976 also tended to encourage flows into the lira. As demand for lire mounted, the spot rate leveled off around \$0.00134 (882 lire). The Italian authorities took the opportunity to buy dollars in the market to rebuild their foreign exchange reserves to \$3.3 billion by the end of January.

While many of these demands for lire continued into February and March, the unwinding of a 50 per cent import-deposit scheme and the dismantling of other exchange controls imposed in 1976 exposed the lira to occasional selling pressures. In late March, following the outbreak of student rioting over government policies and of workers' strikes over proposed changes in the wage indexation system, the spot rate declined by about $\frac{1}{2}$ per cent to \$0.001127 (887 lire). To contain these pressures the Bank of Italy intervened forcefully. Its official dollar sales were partly reflected in a decline of about \$300 million in exchange reserves through the end of March.

By this time the Italian Government had come closer to reaching agreement with the IMF on the terms of a letter of intent to support Italy's request for a standby facility. In this connection, the authorities extended commercial bank lending ceilings through March 1978, gained trade union and legislative approval for a compromise proposal for amending the wage indexation system, and raised indirect taxes to finance a reduction in employers' social security contributions. As released on April 14, the IMF letter of intent also projected further cuts in public spending to reduce the budget deficit, a lowering of the inflation rate to 13 per cent by March 1978,

and a swing into current-account surplus next year.

This reinforcement of Italy's stabilization effort was welcomed in the market. In late April and May, reversals of previous outflows resumed. With domestic interest rates remaining high and regulations still in force encouraging Italian exporters to seek foreign sources of finance, Italian banks and companies increased their borrowings abroad. In addition, the net reflux of "hot money" increased sharply following disclosures by Swiss banks of irregularities in dealings with Italian residents' funds. The passing of the period of seasonal weakness in current payments gave additional buoyancy to the market. Taken together, these forces generated substantial bidding for lire. The spot rate rose only slightly, however, as the Bank of Italy continued on balance to buy substantial amounts of dollars to add to reserves.

By early June the stabilization measures were clearly taking hold. The rate of inflation had moderated. The current-account deficit had narrowed significantly, albeit at the expense of a considerable slowdown in the domestic economy. Moreover, tight controls on bank credit had kept domestic lending in check. Consequently, the Bank of Italy was able to begin easing domestic interest rates from crisis levels by cutting its discount rate by 2 percentage points to 13 per cent. Interest differentials nevertheless remained favorable for Italy and a net inflow of short-term funds continued. By then, the possibility of further declines in Italian interest rates was prompting some Italian residents to repatriate funds in anticipation of capital gains on new issues of Italian Treasury bills and notes.

Beginning in late June, demand for lire swelled further, partly on the seasonal rise in tourist receipts but also in connection with the general strengthening of European currencies against the dollar. The lira rate advanced only to \$0.001135 (881 lire), however, as the Bank of Italy continued to absorb dollars. In all, from April through July, Italian exchange reserves rose by \$4.1 billion to \$7.1 billion, even with a repayment in July of previous drawings from the IMF.

EC SNAKE

Following recurrent episodes of heavy speculation throughout 1976, the countries participating in the European currency arrangement—Germany, the Benelux countries, Sweden, Denmark, and Norway—agreed in October on a realignment of exchange-rate parities whereby the German mark was adjusted upward by 2 per cent while the Scandinavian currencies were adjusted downward by 1 to 4 per cent. These readjustments to offset disparities in relative inflation rates and economic performance among the participating countries relieved market tensions and triggered a reversal of the earlier speculative flows. As a result, the German mark fell to the bottom of the EC snake, and through March 1977 the member currencies traded comfortably within the snake's $2\frac{1}{4}$ per cent limits without any particular strains.

By that time, however, the Swedish krona had eased to near the bottom of the band in response to Sweden's still relatively high inflation rate and deepening current-account deficit. As part of a program that the Swedish authorities adopted to reverse the decline in export competitiveness and to avoid an outbreak of speculative selling of Swedish kronor, a new realignment was agreed upon, implying a 6 per cent devaluation of the krona within the joint float.

As part of the realignment, the Danish and Norwegian kroner were also devalued, each by 3 per cent. When reports of this realignment leaked out on Friday afternoon, April 1, ahead of the official announcement, traders in New York were taken by surprise and became reluctant to make markets in these currencies until details of the parity changes were made available. Once trading resumed on Monday, April 4, however, the market easily adjusted to the new rate relationships. The Swedish krona, after depreciating somewhat less than the change in its central rate, began to benefit from inflows of funds and traded firmly near its new upper intervention limit against the mark, which remained at the bottom of the band. The Danish krone and Norwegian krone also stabilized in the upper half of the

realigned band, pressing at times on their upper limits against the mark when conversions of external borrowings buoyed their exchange rates.

Market participants nevertheless remained sensitive to further possible changes in exchange-rate relationships within the snake. As the May 7–8 London economic summit drew closer, dealers came increasingly to believe that a readjustment might emerge as part of a more comprehensive agreement to allow currencies bolstered by strong current accounts to appreciate. Market attention focused on the Dutch guilder, which had traded near the top of the joint float since the previous autumn and was generally expected to firm in the exchanges. The guilder came into increasingly intense demand, frequently reinforced by foreign purchases of Dutch securities, which offered yields that were relatively favorable in comparison with those available in Germany.

By late April the guilder was being pressed at its upper intervention limit against the mark, even as the mark itself was rising against the dollar. To maintain the EC snake limits, the Netherlands Bank and the German Federal Bank bought sizable amounts of marks against sales of guilders in their respective markets. The Dutch central bank also bought a large amount of dollars in Amsterdam. Trading in New York also became unsettled at times, and on May 4 the Federal Reserve supplemented its intervention in marks by selling \$3.3 million equivalent of guilders from balances.

On the following day, the Netherlands Bank responded to the build-up of speculative demand for guilders by announcing a 1-percentage-point cut in its discount rate to $3\frac{1}{2}$ per cent, a move immediately interpreted in the market as a signal of Dutch commitment to snake currency relationships at the time. Consequently, the pressures within the band began to recede. When the London summit meeting ended without any changes in exchange-rate relationships, the guilder backed away from its upper intervention limit against the mark. Later on, figures were released showing that the Netherlands' large

current-account surplus had virtually disappeared during the first quarter of 1977. Signs of some acceleration of Dutch inflation also diminished bullish market sentiment toward the guilder. Thus, as short-term interest rates in the Netherlands continued to decline to levels well below comparable rates in Germany, the guilder eased against the mark, and the entire band contracted.

Tensions re-emerged within the snake during June and July, however. Following the outcome of protracted wage negotiations in Sweden, talk intensified of a further devaluation of the krona to offset the impact of rising unit labor costs on price competitiveness. Fairly heavy selling of the Swedish krona and other Scandinavian currencies built up—especially before each weekend. The sharp rise in the German mark against the dollar that quickly gathered momentum in late June and early July exceeded that of the other joint float currencies, and the mark soon moved up to the top of the band.

The guilder and the commercial Belgian franc, pulled up by the mark's rise, traded comfortably within the EC snake. But the Scandinavian currencies, while still rising against the dollar, lagged behind. To keep their currencies above the lower limit of the snake the central banks of Sweden, Denmark, and Norway therefore continued to intervene, principally through sales of dollars in the market. Nevertheless, these pressures persisted, leading ultimately to Sweden's withdrawal from the snake and to a further realignment of the remaining currencies late in August.

JAPANESE YEN

By early 1977 Japanese exports were again rising strongly as a result of the reacceleration of economic growth in the United States and buoyant demand elsewhere for Japanese products. However, demand within Japan remained generally weak. Business investment was particularly sluggish as Japanese industrialists, still trying to come to grips with the severe dislocations of recent years, viewed the

longer-term outlook for economic growth with unusual caution. The actual and expected weakness in domestic demand, in turn, exerted a powerful drag on Japanese imports. The combination of strong exports and stagnant imports produced a further widening of Japan's trade and current-account surpluses, already at record levels last year.

The Japanese authorities had moved to stimulate the economy through some easing of fiscal policies, but they had proceeded with caution in view of the continuing high rate of domestic inflation, and the Bank of Japan had kept its discount rate at 6½ per cent. Once uncertainties in December over Japanese elections and the magnitude of a new Organization of Petroleum Exporting Countries (OPEC) oil price rise passed, market sentiment in the exchanges turned increasingly bullish toward the yen. Bolstered by the large current-account surplus and inflows of interest-sensitive funds from abroad, the yen rebounded sharply from its December lows. After having intervened forcefully to support the yen in its previous decline, the Japanese authorities refrained from intervention as the rate rose by about 3 per cent against the dollar to \$0.003470 (288 yen) at the end of January.

By early February the magnitude of Japan's current-account surplus was attracting international attention. Statements by Japanese government officials, as well as by economists and officials abroad, had already focused on the need for global adjustment of current-account imbalances. In addition, the press reported that some countries were taking steps to limit imports of specific Japanese products. In this environment dealers moved to lengthen yen positions, and commercial leads and lags shifted more heavily in Japan's favor on expectation of a further rise in the yen. As a result, the yen advanced strongly, breaking through the 280-yen level following the March 19–20 weekend meeting between Prime Minister Fukuda and President Carter. Further public statements by Japanese officials assured the market that the authorities would continue to intervene only to counter erratic fluctuations in the exchange rate. Consequently, the yen was bid up further, to as high as \$0.003700

(270.3 yen) by April 12, even as the Bank of Japan intervened increasingly forcefully.

With the yen now at a 3-year high, dealers became increasingly cautious. At that time, the U.S. Customs Court ordered the Treasury to impose import duties on Japanese electronic products (a decision that was appealed) and the British Government imposed a provisional tariff on certain types of steel from Japan. Moreover, the boost of the Japanese economy provided during the first quarter by the buoyant export sector had failed to spark a broadly based and self-sustaining recovery.

Consequently, when the Bank of Japan acted to provide further impetus to the economy by cutting the discount rate, for the second time in 2 months, to 5 per cent, effective April 19, dealers began to take profits on their yen positions. The subsequent lowering of short-term money market rates and commercial bank prime rates reduced incentives for further short-term flows into Japan. Commercial leads and lags were reversed, and Japanese borrowings abroad tapered off. Thus, the yen eased to as low as \$0.003593 (278.3 yen) on April 26, while the Bank of Japan sold dollars to moderate the decline. The yen firmed slightly ahead of the May 7-8 London summit. Thereafter, with U.S. money market rates now having risen somewhat, the yen settled back in subdued trading through late May.

In June the Japanese Finance Ministry announced a gradual liberalization of Japanese exchange controls governing flows both into and out of Japan. With respect to inflows, the authorities eased limitations on conversions of foreign funds and increased the accessibility of the Japanese money market to foreign investors. With respect to outflows, controls were lifted on short-term overseas lending by Japanese banks and Japanese resident purchases of foreign currency bonds. The amount of foreign currency that Japanese tourists may take abroad was raised. Also, regulations governing foreign bond issues in Tokyo were liberalized. Initially, the market's response to the changes in capital controls was muted. But by mid-June Japanese interest rates had begun edging back up from the lows reached in May

while U.S. short-term interest rates had leveled off. Thus, as the yen began to move up again, the market came to the view that the liberalization of exchange restrictions would permit larger inflows of capital to Japan.

Against this background, the OECD meeting and subsequent communique on June 24 provided the catalyst for a renewed surge in the yen rate. Reports that the finance ministers had agreed that countries with current-account surpluses were ready to see an appreciation of their currencies in response to underlying market forces triggered an immediate demand for yen. Subsequent statements by government officials in the United States and Japan were interpreted as confirming this view. In addition, rumors circulated in the Tokyo market that Japan might accept the U.S. Treasury's suggestion at the OECD meeting and sell its interest earnings on existing reserves in the exchanges.

Propelled by professional and commercial demand from around the world, the yen continued to advance through late June and early July to as high as \$0.003800 (263 yen) on July 11. By that time, however, Japanese businessmen were expressing concern over the rise in the rate. Moreover, the Bank of Japan had re-entered the market to purchase a substantial amount of dollars to check a further sharp appreciation of the yen. Thereafter, the yen rate settled back in quieter trading to \$0.003754 (266.4 yen) by the month-end, for a net rise of 8 per cent over the 6-month period and 11¼ per cent from its lows of last December. Japanese official reserves rose by some \$1¼ billion to a level of nearly \$18 billion from the end of January to the end of July.

CANADIAN DOLLAR

Throughout 1976 Canadian economic policy had been directed at curbing inflationary pressures, while permitting expansionary forces to work through the economy gradually. By early 1977 broad monetary and fiscal restraint, together with a wage-price control program, had helped to bring the underlying rate of inflation down toward the declared

target of 6 per cent. But opposition to the government's wage-price program was gathering strength in both business and labor circles, and the immediate prospects for a further reduction in the inflation rate were clouded by sharply rising food prices.

At the same time, economic recovery in Canada had come to a virtual standstill. As a result, the rate of unemployment had begun to edge up again, particularly in areas like Quebec and the Maritime Provinces. Moreover, the growth in monetary aggregates had fallen below the Bank of Canada's targets and short-term interest rates were progressively lowered, narrowing the favorable interest rate differential relative to the United States. Successive cuts in the Bank of Canada's discount rate to 8 per cent by February 1 were viewed as confirming the downtrend in Canadian short-term interest rates.

In addition, the election last November of a Separatist Party government in Quebec committed to establishing independence for the French-speaking province raised doubts about the receptiveness of new Canadian bond issues, particularly those of Quebec, in international capital markets. Foreign placements had been expected to reach levels that would more than offset Canada's continuing current-account deficit of some \$4 billion per annum. But in early 1977 the two major bond-rating agencies in the United States were reassessing their evaluations of certain Quebec borrowers. In the interim, some scheduled Canadian issues in the New York bond market were either withdrawn or postponed. With the prospects for conversions of borrowing proceeds correspondingly scaled down, the Canadian dollar became vulnerable to adverse swings in market sentiment.

In this unsettled market atmosphere, the Canadian dollar, which had already dropped some 4¼ per cent in just 3 months, again came on offer in late January and then fell off sharply during February. In the absence of any sizable conversions of foreign issues by Canadian borrowers, the decline met little resistance in the market. Thus, the downslide quickly accelerated as commercial leads and lags gradually shifted against the Canadian

dollar, and market professionals built up substantial short positions against the currency. Concern that the government's April 1 budget would be more expansionary to address the unemployment problem and publication of private forecasts suggesting a sharply lower Canadian dollar rate magnified the selling pressure even more. Consequently, the Canadian dollar dropped 4 per cent, from \$0.9825 at the end of January to as low as \$0.9430 by April 1. The Bank of Canada intervened on both sides of the market to maintain orderly trading conditions, with official reserves declining by \$585 million during February and March.

In April market pessimism lifted somewhat as it became clear from the Federal budget that the government was not significantly loosening the restrictive tone of fiscal policy. By this time, too, Moody's Investors Service had announced that it was maintaining its current rating on Quebec bonds. In the wake of that announcement, indications of a pick-up in foreign borrowings by Canadian provinces and public authorities began to emerge, including a \$300 million credit raised by the Province of Quebec in the Euro-currency market.

In addition, figures were released showing a strong trade surplus for Canada in the first quarter, as Canadian exports benefited from the vigorous expansion of the U.S. economy. Thus, the Canadian dollar market gradually came into better balance. The spot rate edged up to trade narrowly around \$0.9535 through mid-May. The Bank of Canada therefore operated less heavily than before, taking in dollars on balance as reflected in the \$137 million reserve increase during April-May.

During the remainder of the period, however, underlying concerns over Canada's political outlook and economic performance dominated market psychology. Market participants followed closely the debate over the issue of Quebec separatism. At the same time, with the unemployment rate still hovering around 8 per cent, the market expected the Canadian authorities to adopt more stimulative policies even though inflation was starting to pick up again. Interest rate differ-

entials favoring Canada had by then narrowed significantly following another ½-percentage-point cut in the Canadian discount rate and the run-up of short-term U.S. interest rates in early May. Moreover, estimates of the volume of new Canadian issues abroad were scaled down.

In this atmosphere a gradual build-up of professional selling, combined with the end-of-June clustering of royalty and debt service payments to nonresidents, pushed the spot rate down to \$0.9425 where it traded somewhat unsteadily through mid-July. In late July the Canadian dollar again came on offer. By that time, U.S. short-term interest rates were beginning to rise. Moreover, on July 25, the Canadian Government indicated that its 6 per cent per annum target for inflation apparently would not be met. In a renewed burst of commercial and professional selling, the spot rate fell to just above \$0.9350. On balance, the Canadian dollar declined by some 4¾ per cent between the end of January and the end of July, thereby extending the decline that had begun late in 1976 to 9 per cent. Over the 6 months, Canadian reserves had declined by a net \$670 million.

MEXICAN PESO

By early 1977 Mexico was beginning to recover from the financial crisis of the previous autumn, which had resulted in a precipitous drop of the peso in the exchange markets. Following the inauguration of President Lopez Portillo in December, the new administration sought to revive public confidence, pledging to reduce the government deficit and to encourage the growth of the private sector. An important agreement that limited the rise in wages in 1977 was struck with the trade unions. The Mexican authorities also ratified the agreement made in October 1976 with the IMF that could provide Mexico with more than \$600 million in credits over a period of 3 years.

These initial efforts were welcomed by the business and financial community in Mexico and abroad, leading to a reflux of funds into

the peso. Nevertheless, the reversal was incomplete, as many market participants awaited firmer evidence of improvement in the underlying situation. By early February the peso had settled at around \$0.0450 in New York, some 44 per cent below the prefloat level.

Coming into the spring, Mexico's economic indicators showed that the painful process of adjustment was under way. The burst of inflation of late last year, due in part to the sharp decline of the peso, was tapering down. Imports were at a lower level than before the peso depreciation, reflecting largely a contraction of industrial production and a slow-down in public investment spending.

At the same time, export receipts were rising in response to the speed-up of growth in the United States, the increasing flow of Mexican oil production into world markets, and higher coffee and other agricultural prices abroad. As a result, Mexico's trade and current-account deficits narrowed markedly, reducing the need for new international borrowing by Mexican entities. With the market thus in better balance, the peso continued to move narrowly. The Bank of Mexico liquidated at maturity the \$150 million drawn under the swap line with the Federal Reserve in November 1976. In April it repaid the remaining \$150 million in drawings under the Exchange Stabilization Agreement with the U.S. Treasury.

Through the spring and early summer, the Mexican authorities reinforced the stabilization program by means of a series of financial and administrative reforms to improve the efficiency of the banking system and to strengthen monetary control. In April the structure of differential reserve requirements was simplified, with the effect of lowering the net reserve requirement and providing the commercial banks with increased lending capacity.

In May the previous system of administered interest rates was replaced by rate ceilings, which were set above the earlier levels, and the Bank of Mexico pledged to seek to encourage interest rate levels compatible with underlying economic forces. In July the au-

thorities began to introduce a program in which companies would be able to borrow pesos from Mexican commercial banks against the collateral of an interest-bearing dollar deposit with the lending bank. The central bank would impose a 100 per cent reserve requirement on this deposit while re-discounting the peso loan. This program was thus a means of expanding credit to the private sector and at the same time replenishing international reserves.

Meanwhile, although market concerns over the outlook for the peso surfaced from time to time, the exchange rate held fairly steady. By summer, Mexico's economic performance continued to show signs of improvement, as

industrial production was beginning to revive and exports remained strong. Moreover, a scaling-up of estimates of Mexico's proven oil reserves strengthened expectations that rising oil exports would substantially improve Mexico's current-account position.

As investor caution gradually receded, new Mexican foreign borrowings linked to the development of oil resources were well received in international capital markets. Thus by the end of July the peso held at \$0.0437 for little net change over the 6-month period. Reflecting the improving sentiment for the peso during that time, the discount on 3-month forward pesos in New York narrowed from some 37 per cent to 20 per cent. □

Statements to Congress

Statement by Henry C. Wallich, Member, Board of Governors of the Federal Reserve System, before the Subcommittee on International Finance of the Committee on Banking, Housing and Urban Affairs, U.S. Senate, August 29, 1977.

I appreciate this opportunity to present the views of the Board of Governors of the Federal Reserve System before your subcommittee on recent growth of international indebtedness and some of the possible implications of this growth. In this testimony, I shall focus primarily on: (1) the major characteristics of the growth in international indebtedness and its potential associated risks, with special reference to developing countries, (2) new sources of financing for future balance of payments needs of deficit countries, and (3) improvements in the assessment of country creditworthiness and in the supervision of U.S. bank lending to foreign countries.

DIMENSIONS OF INDEBTEDNESS

Recent large increases in global external indebtedness are in part traceable to the major oil-price increases in 1973 and 1974 and the associated need for many developed and developing countries to finance the resulting large expansion in their current-account deficits. But external indebtedness of many developing countries, in particular, has expanded also because they borrowed heavily during the commodity boom of the early 1970's to launch ambitious new development programs and later, to sustain these programs in the face of reduced export revenues during the 1974-75 recession.

The flow of official financing, for both balance of payments and aid purposes, has

grown at a much slower pace than global current-account deficits. Consequently, a major portion of the increase in these deficits has been financed through private capital markets, particularly banks. The rapid change in the size and composition of external borrowing has given rise to concern about the ability of some borrowing countries to continue servicing their external indebtedness and about the corollary increase in risk for private lending institutions.

DEBT TO BANKS

Data on private bank foreign lending recently have been improved, although information on the current level of external indebtedness of many countries is still incomplete. According to figures compiled by the Bank for International Settlements (BIS), total short- and long-term commercial bank claims on countries other than the Group of Ten (G-10) major industrial countries and offshore banking centers reached \$193 billion at the end of the first quarter of 1977, an increase of \$44 billion or 30 per cent from a year earlier. During the same period, total U.S. bank claims on the same group of countries rose by \$18 billion to \$78 billion, or also a 30 per cent increase. (The share of U.S. bank claims in total claims on these countries is overstated by these statistics since the BIS data do not include claims held by non-U.S. bank branches operating in non-G-10 countries.)

FOUNDATIONS FOR CONFIDENCE

It should be observed, in the first place, that world trade has increased at a rapid rate in recent years, although at a slower rate than the growth in recorded external indebtedness. As a result, debt service ratios (the ratios of

interest and amortization payments to exports) hardly deteriorated in the aggregate over this period, although some deterioration may still lie ahead. Furthermore, these capital flows served to sustain productive investment in the recipient countries, which otherwise might have dropped significantly in the face of world recession. These developments were made possible by the great expansion of international capital markets, especially in the form of bank credit.

There are also substantial grounds for confidence concerning the recent increase in international indebtedness, particularly with respect to non-OPEC (Organization of Petroleum Exporting Countries) developing countries whose total external indebtedness has been estimated at between \$140 billion and \$180 billion at the end of 1976. Through a combination of improved export earnings and a slower growth of imports, non-OPEC developing countries reduced their current-account deficits in the aggregate by about \$12 billion in 1976. Although their aggregate deficit in 1977 is expected to remain virtually unchanged from the approximately \$26 billion deficit in 1976, the distribution of this deficit among debtor countries is expected to be more in keeping with these countries' financial strength. External credits arranged for non-OPEC developing countries in the first half of 1977 only moderately exceeded the volume of credits arranged for the same period a year earlier and were sharply lower than in the second half of 1976.

A significant portion of recent borrowing by non-OPEC less developed countries (LDC's), moreover, may have served the purpose of building up international reserves to meet future needs. In fact, the official international reserves of six major non-OPEC LDC borrowers—Argentina, Brazil, Mexico, the Philippines, South Korea, and Taiwan—that account for three-fourths of total claims of U.S. banks on all non-OPEC developing countries increased in 1976 by an amount equal to about two-thirds of the Euro-credits arranged for them in the same period. Their reserves appear to have risen substantially further in the first half of 1977.

Eastern bloc countries, whose total borrowings from banks are substantially less than those of non-OPEC developing countries and where the involvement of U.S. banks is relatively small, also have reduced somewhat their aggregate trade deficit and related external financing needs. In contrast, some smaller developed countries have increased their rate of external borrowing to finance expanding current-account deficits.

It is important to recognize that much of U.S. international bank lending has been financed through deposits and other funds from non-U.S. sources. In fact, the United States itself is currently a net borrower of foreign funds as evidenced by a net inflow of private and official capital in our international transactions.

NEW FINANCING FACILITIES

Despite recent improvements in the international debt situation, the need to finance current-account deficits will remain large at least until the OPEC surplus is significantly reduced. Recognition of this fact gave impetus to the Witteveen Facility, which Under Secretary Solomon has discussed in detail with you. Although commercial banks have provided large amounts of additional financing in recent years, increases in other sources of financing are desirable for several reasons.

Banks have tended to lend to industrial and higher-income developing countries, whereas many middle- to lower-income developing countries have had to rely mostly on official sources of development aid and balance of payments financing to cover their deficits.

In addition, developing countries have need for long-term capital that cannot be met by banks.

Some banks may have reached prudent limits in extending credits to individual countries and may be reluctant to increase their exposure in those countries further, although they may consider loans designed to achieve broader diversification as still appropriate.

Moreover, some countries have reached levels of debt where further increases in bank

debt appear feasible only if accompanied by improved fiscal and monetary policies. Some countries have spontaneously adopted such policies—often followed by a notable improvement in their balance of payments. Some countries have taken appropriate measures in connection with International Monetary Fund (IMF) standby arrangements.

Commercial banks are not in as good a position as international agencies to influence the policies of countries suffering from current-account imbalances to bring about needed adjustment through improved economic and financial policies. International lending agencies can more appropriately exert such a constructive influence in conjunction with their lending activities.

EXPANSION OF IMF RESOURCES

In this regard, agreement on the IMF Supplementary Financing Facility (Witteveen Facility) is a most encouraging development supplementing the increase in IMF quotas approved by the Congress last fall and expected to become effective shortly. With substantial increases in its resources, the IMF will be better able to assist countries to meet their balance of payments needs. Moreover, these resources will lend the Fund's views greater force with members who in the past may have been reluctant to submit to IMF conditions because of the small amount of credit available to them from this source relative to their financing needs. The Board of Governors of the Federal Reserve System urges the Congress to give sympathetic and prompt attention to the legislation approving the U.S. contribution to the new IMF facility when it shortly comes before you.

EXPANSION IN RESOURCES OF OTHER INTERNATIONAL LENDING AGENCIES

Proposed increases in resources for the World Bank group and for the regional development banks should enhance the capacity of these institutions to meet the longer-run capital needs of developing countries on terms and

maturities more suitable to prevailing conditions in those countries.

Moreover, these institutions, with specialized staffs and intimate knowledge of developing countries, can provide technical assistance and influence the formulation of sound projects and development programs in ways not available to commercial banks.

These institutions also finance projects yielding long-run benefits to borrowing countries that fall beyond the normal scope of private capital markets.

COFINANCING

Cofinancing is one new technique for cooperation between the World Bank and regional lending institutions, on the one hand, and private banks, on the other hand, that merits careful attention as a means of channeling additional financial resources to developing countries. Cofinancing encourages private banks to participate in the financing of projects in developing countries by giving them protection through cross-default clauses and providing them access to information that is available to these international lending institutions regarding the viability and risk associated with proposed projects. Such information is often very difficult or expensive for the commercial banks to develop on their own. Moreover, countries borrowing through cofinancing arrangements may obtain funds on more favorable terms, particularly with respect to maturities.

Another noteworthy recent development has been the reluctance of commercial banks to provide additional financing to countries with serious balance of payments problems in the absence of assurances that the borrowing country is following sound economic policies provided under an IMF standby arrangement. Thus, some countries are finding that IMF approval of their economic and financial policies through a standby arrangement is becoming a precondition for maintaining their access to private capital markets. This development has been salutary in reducing the possibility that bank lending could frustrate Fund efforts to encourage countries to adopt

better stabilization policies. The Fund is also in a position to supply information to private lenders within the limits imposed by the confidentiality of its relations with member countries. There is no indication, however, that the Fund would be prepared to become directly involved in evaluating or approving private loans.

DEBT RENEGOTIATIONS

Despite the somewhat improved outlook for many countries that have incurred large increases in external indebtedness in recent years, some individual countries may encounter difficulties in servicing their external debt and may require some refinancing or rescheduling. This topic has been covered in greater detail in Under Secretary Cooper's testimony and I will only add a few general observations.

OFFICIAL RESCHEDULING

Reschedulings of debts of governments to other governments have taken place periodically since World War II under Paris Club and similar arrangements. Since 1956 there have been close to 40 international agreements providing debt relief for roughly a dozen countries. These exercises, which have been conducted under a case-by-case approach, have generally aimed at encouraging debtor countries to undertake measures to reduce the underlying sources of their difficulties while providing debt relief that would enable them to move toward financial recovery and permit a resumption of normal capital inflows. Private debts usually have not been rescheduled in this context, in part because the amounts involved have in the past been relatively small compared with official claims.

PRIVATE RESCHEDULING

Workouts of debt to private creditors have been much more infrequent and have tended to take the form of refinancing rather than rescheduling of existing debt. Nevertheless, as

a consequence of the rapid expansion in international bank lending in recent years, banks now hold a growing proportion of the external debt of a larger number of borrowing countries, often in the form of syndicated credits. In the event that severe debt problems should precipitate debt renegotiations for any of these countries, care will have to be taken that private and official creditors receive equitable treatment. While governments should avoid exerting pressure on private banks to influence the outcome of the banks' negotiations with debtor countries, official debt relief should not be looked to as a bailout for private banks.

GENERALIZED DEBT RELIEF

Some developing countries have advocated the idea of generalized debt relief or automatic criteria for debt rescheduling as a method of dispensing aid. Such generalized debt rescheduling is highly undesirable. It would, for one thing, be certain to reduce the access of developing countries to private external capital by calling into question their future creditworthiness. Furthermore, proposals for generalized debt rescheduling, if implemented, would prove very inefficient economically since the aid they imply would be channeled on the basis of past borrowing rather than to countries with the greatest current needs. Finally, such a mechanism would create disincentives to the pursuit of economic and financial policies designed to promote economic stability and the most efficient utilization of resources.

ASSESSMENT OF COUNTRY RISK

Let me turn next to the problem of the assessment of creditworthiness of individual borrowing countries. Despite the rapid growth and current size of their international lending, U.S. banks' loss ratios on international credits have continued substantially below loss ratios on domestic credits. We know, however, that past history may be a poor guide to the future.

There are risks to be guarded against. Consequently, the Federal Reserve has been active in improving the flow of data needed by lending banks to assess creditworthiness of international borrowers and has been reviewing better ways to incorporate the concept of country risk into the supervisory process.

The Federal Reserve has taken several steps to provide new or improved sources of data useful for assessing country risk.

As part of a data-gathering operation sponsored by the BIS, the Federal Reserve conducted a special survey of foreign lending by U.S. banks at the end of 1976, which provided for the first time information on maturity structure, guarantee status, and commitments to lend by country. It is anticipated that the BIS effort will be repeated in December 1977.

The Federal Reserve is also cooperating with other U.S. bank regulatory agencies in collecting similar information on U.S. banks' country exposure as of June 1977. I should also note that in an ongoing revision of a number of Federal Reserve and Treasury reports received from banks, special attention has been given to improving the usefulness of international data derived from these reports.

In addition to the improvement in banking statistics, the BIS, at Chairman Burns' suggestion, is developing a list of information that borrowing countries would be encouraged to provide to commercial banks, and the banks would be encouraged to ask for, as an important step in loan negotiations. Work is now going forward in examining what types of information are most in need of improvement in order to serve banks in evaluating country risk. More complete data on the amount of external borrowing by the private sectors of individual countries should be one useful outcome of these efforts.

INFORMATION FROM INTERNATIONAL LENDING AGENCIES

International lending agencies could also make a contribution to improving the flow and quality of economic and financial information on individual countries. The IMF and the World Bank, as well as regional lending organiza-

tions, have developed considerable knowledge about and expertise on individual countries. If some of this factual information, particularly of the kind contained in their country reviews, were to be made available to the private market on an up-to-date basis, it would represent an important contribution toward improving risk evaluations. Such sharing of information must be done in a way, however, that would not reveal sensitive material and judgments, or reduce the explicit and frank nature of the discussion and analysis. Otherwise, the usefulness of such reports for the countries and official lending institutions themselves might be impaired.

FEDERAL RESERVE SYSTEM COMMITTEE ON FOREIGN LENDING

The Federal Reserve System Committee on Foreign Lending is considering the treatment of country risk in bank examinations. As part of its work, the Committee has conducted an informal survey of the methods used by major U.S. banks to define, monitor, and analyze country exposure. That survey indicated that while U.S. banks differ somewhat in their approaches to these questions, the major U.S. banks that are active in international lending have well-developed systems of country risk analysis. Moreover, these banks are devoting considerable resources to improving their country analysis.

Judging the degree of risk attached to foreign borrowers and making effective use of this judgment present problems for both banks and supervisory authorities. While it is important to delineate problem areas to banks in the examination process, bank regulators need to be sensitive to the fact that admonishments to banks can result in damages to the creditworthiness of borrowing countries. As a possible way of dealing with this potential problem, the Federal Reserve is exploring a supervisory approach that would focus on the degree of country concentration of foreign loans in portfolios of individual banks, and on the quality of information possessed by banks in assessing the degree of risk attached to their international loans.

PROPOSALS FOR LIMITING PAYMENTS IMBALANCES

In his statement announcing these hearings, Senator Stevenson has noted several possible methods by which international payments imbalances, which have given rise to the large accumulations of international debt over the past several years, might be reduced in the future.

ECONOMIC AND FINANCIAL POLICIES

An essential first step in correcting imbalances is to ensure that countries with large balance of payments deficits move to adopt sound monetary, fiscal, and balance of payments policies. An important mechanism for encouraging countries to pursue policies that facilitate adjustment is the conditionality attached to drawings under IMF standby arrangements. And, as noted earlier, a substantial increase in IMF resources should enhance the Fund's leverage in encouraging better adjustment policies.

EXCHANGE-RATE POLICIES

It should be recognized that realistic exchange rates are a necessary ingredient in balance of payments adjustment policies. Under the current exchange-rate regime, the IMF is charged with the responsibility for surveillance of individual countries' exchange-rate policies to discourage the maintenance of exchange rates at variance with underlying economic and financial conditions.

Substantial official intervention and capital market controls both tend to result in exchange rates different from those that would be determined by basic market forces. Some official intervention may reflect a desire on the part of authorities to counteract private speculation or, in some cases, may reflect commitments to the IMF. However, it must be recognized that private speculation often merely

stems from an effort to avoid losses. Whatever its purpose, speculation that leads to greater stability in exchange rates should not be discouraged. The best means of achieving stable exchange rates is the pursuit of monetary and fiscal policies that contribute to domestic stability.

TRADE LIBERALIZATION

A smoother, more effective adjustment process will also require that all countries avoid protectionist trade policies and restrictions that lead to global economic inefficiency and frustrate the adjustment process. Protectionism not only inhibits countries in deficit from expanding exports in order to reduce their current-account deficits but, in the form of capital controls, protectionism can also retard movements in foreign exchange rates that may be necessary to achieve and sustain a better global payments position.

CONCLUSION

In summary, the surge in external country indebtedness that has accompanied a large increase in world payments imbalances since 1973, while attracting substantial attention, does not seem to pose any imminent threat to the stability of the world economic and financial system. We must nevertheless take measures to meet evolving situations lest the potential sources of instability that exist eventually develop into real threats. The Federal Reserve, in exercising its supervisory role, must keep in mind both the necessity of a sound and stable U.S. banking system and the positive role our banks play in meeting the financing needs of other countries. The Federal Reserve will also maintain an active role in seeking greater cooperation between banks and official lending institutions and in supporting new mechanisms that can contribute to sound and lasting international economic growth and stability. □

Statement by J. Charles Partee, Member, Board of Governors of the Federal Reserve System, before the Committee on Banking, Housing and Urban Affairs, U.S. Senate, September 16, 1977.

I appreciate the opportunity to appear before this distinguished committee today to present the views of the Board of Governors of the Federal Reserve System on S. 684 and S. 711. My testimony will develop the reasons for the Board's unanimous support for S. 711, the bill that would establish a Federal Bank Examination Council, and for its unanimous opposition to the creation of a Federal Bank Commission as proposed in S. 684.

The establishment of a Federal Bank Examination Council, we believe, would represent a constructive evolutionary step toward formalizing the existing cooperative arrangements among the Federal bank regulatory agencies. But in the Board's judgment, complete centralization of bank supervision at the Federal level, as envisioned in S. 684, would constitute an unnecessary, disruptive, counterproductive change. In the short run it would almost certainly produce confusion and significant operating inefficiencies. And in the longer run it might adversely affect both the quality of banking supervision and the performance of the banking industry. Such a restructuring, moreover, would tend to isolate bank supervisory policy from the monetary policy function, to the detriment of both. In short, the Board can find no compelling arguments for the proposed regulation of the Nation's banks by a single Federal agency that overcome the practical shortcomings and prospective loss of policy integration that this approach entails.

The Board's position on these bills is founded on our belief that the banking system currently is in sound condition, which reflects in no small part the substantial efforts of both the bankers and the bank regulators over the last several difficult years. I make this statement even though it is well known that some banks encountered serious problems during the recent recession and that a few failed to weather the storm. The number of banks on the Federal agency "problem" lists—that is,

banks requiring unusual amounts of supervisory attention—increased considerably over the 1975–76 period, and these included some of our very large banks. But continued favorable earnings flows, more conservative bank management policies, and effective supervisory oversight—all in the environment of an improving economy—combined to forestall any important adverse economic or financial developments that might have arisen.

Today it is apparent, even to the casual observer, that there has been a strengthening in the condition of the banking industry. The number of banks experiencing increased difficulties has declined dramatically over the past year or so. Total bank net income for 1976 rose by more than 8 per cent from the year before and was about 11 per cent above the 1974 level. The ratio of total bank capital to total assets improved to 7.15 per cent at year-end 1976 from 7.11 and 6.86 per cent, respectively, in the two preceding years. Banks also have buttressed their liquidity positions by adding greatly to their holdings of liquid assets and by paying off some money market sources of funds. In short, the financial position of banks has improved markedly over this period.

The volume of assets classified by examiners remains higher than any of us would like to see, although indications from 1977 examinations are that they are now beginning to decline. But bankers and regulators both learned hard lessons from the experience of the recession, and there is every prospect of continued good progress in the reduction of problem bank assets. The working out of problem loans is a lengthy and laborious process, so loan classifications are necessarily a lagging indicator of banking conditions. The improvement in financial ratios that I have noted, however, leaves little doubt that the Nation's banking system has been coping successfully with its problems and is in a favorable position to handle the credit needs of an expanding economy.

Against this record of achievement, it is not clear to the Board why consolidation of the three Federal bank regulators is now being proposed, for there appears to be no compelling reason to replace the present system with

one that is untried and unproven. The existing structure of Federal supervision of the banking system has evolved over a very long period, dating from establishment of the Office of the Comptroller of the Currency in 1863, the Federal Reserve System in 1913, and the Federal Deposit Insurance Corporation in 1933. The division of duties and responsibilities among these agencies can seem confusing to the uninitiated and, at times, even to the well informed. But this structure of bank regulation has worked reasonably well, as evidenced by the stability of the U.S. banking system over the last several decades. During the recent period of severe economic and financial strains, the Federal bank supervisors, working together, were able to arrange takeovers of almost all of the failing banks by healthy ones, thereby permitting uninterrupted service to bank customers. Public confidence in the banking system has been maintained in no small part because of the combined efforts of the three Federal bank regulatory agencies.

These agencies have been criticized from time to time for not anticipating the banking problems of the 1970's and for failing to take measures to avoid them. As with any event, the advantage of hindsight always provides a much sharper perspective on alternative courses of action that might have been taken. But I believe that decisive efforts were made by the Federal Reserve as soon as the prospective problems were clearly identified. Our actions have been described to this committee in other testimony, and I will not dwell on them here. But I would note for the record that, beginning in April 1973, the Federal Reserve took steps to slow and discipline the unsustainable growth of banking assets and liabilities. It employed supervisory tools ranging from "moral suasion" concerning the lending practices of individual institutions to a "go-slow" policy regarding approvals for the expansion of bank holding company and international activities. These measures did have an impact and helped persuade many institutions to adopt more realistic plans for expansion. In their absence the recession might well have taken a greater toll on the Nation's banks.

To be sure, the supervisory system could

have worked better in some respects, and our recent experience has helped identify areas of needed improvement. The banking agencies have recognized these needs and are taking appropriate steps to improve supervisory performance. We are now engaged in a re-evaluation and updating of examination procedures and other supervisory techniques, about which I will comment later in more detail. It must be recognized, however, that there will always be some banks that require special supervisory attention. Making loans is an inherently risky business, and banks must accept a measure of risk if they are to play their part in financing a dynamic growing economy. It should not be the purpose of bank supervision to prevent such functional risk-taking, but rather to guard against unusual or excessive risk concentrations and banking practices that may undermine an institution's viability. The bank supervisory agencies must also be alert to the spread of problems from one institution to another and must strive to prevent any large-scale adverse effects on either the local or the national economy. Viewed from this perspective, the Federal bank regulatory agencies have performed quite well.

Thus, before moving from the present structure of Federal bank regulation to the single agency concept proposed in S. 684, the Board would urge the Congress to weigh carefully the potential for damage that could accompany such wholesale reform. There are a variety of shortcomings and possible difficulties that we foresee.

First, it needs to be recognized that such an agency is unlikely to bring greater operating efficiencies. Indeed, after reviewing the existing structure of Federal bank regulation, the Comptroller General concluded in congressional testimony early this year that a single agency would not provide any cost savings.

Second, the creation of a single banking agency, whose mission is tied exclusively to a single industry, would increase the risk that regulatory policy could be shaped to an undue degree by the special interests of the industry. This has been a major congressional concern, at least in other sectors.

Third, with a single Federal bank super-

visor, the banking industry could be more exposed to the possibility of extreme shifts in the regulatory climate. Continuous consultation and cooperation among the three independent Federal banking agencies, on the other hand, provides a system of checks and balances that tends to attenuate marked shifts in regulatory policy with their potentially destabilizing ramifications.

Fourth, centralization of the bank supervisory function could have the undesirable effect of suppressing innovation and healthy competition in the industry. Since FDIC insurance is a virtual necessity in today's environment, creation of a single Federal agency would mean that practically every bank in the country—whether nationally or State chartered—would have to follow the guidelines set forth by that one supervisor, and the impetus to effect changes could be stifled.

Fifth, there would undoubtedly be significant transition problems associated with the organization of a new agency. In the Board's judgment, the Nation should not be needlessly exposed to the risk of a discontinuity in bank supervision while a new Federal bank regulatory agency organized, grappled with the inevitable administrative problems, and began to establish its operating rationale.

Sixth, the proposed Federal Bank Commission at the regional level would supplant many of the regulatory functions now provided by the Federal Reserve Banks. The important role of these Banks in the supervisory process is, I believe, often overlooked. They contribute a depth of understanding of local and regional economic, banking, and financial conditions that is unlikely to be equaled by an agency devoted solely to bank regulation. And I find it doubtful that the authority of a regional administrator of the proposed Commission would often approach that of a Federal Reserve Bank president, who deals with local banking institutions over a wide-ranging variety of issues and has responsibilities on the national credit scene as well.

Finally, and most importantly, the Board remains gravely concerned that the removal of its supervisory and regulatory responsibilities,

as called for in S. 684, would work adversely on the Board's effectiveness in carrying out its monetary policy function. We also believe that the quality of bank regulation would suffer. Our view continues to be that the conduct and formulation of monetary policy and the supervision and regulation of banking are so closely related functionally that they should not be determined in isolation. If supervisory standards for bank performance are independently set, there is the very real risk that bank regulation could frustrate the objectives of monetary policy. Above all, a recurrence of the situation of the mid-1930's is to be avoided, when overly conservative bank regulatory standards tended to inhibit needed extensions of credit by banks and thus to slow the financing of economic recovery.

Although S. 684 would place a Board member on the Federal Bank Commission, our judgment is that this would not provide adequate coordination with, or a sufficient depth of information to, the Board. All of the Board members are now involved on a continuing basis with both monetary policy formulation and the setting of bank supervisory policies. From this vantage point, the Board gains direct knowledge about how changes in monetary policy affect the condition of banks. And because of this dual responsibility, the Board members are well apprised of the impact of changing banking supervisory policies on banking and financial markets and the implications for monetary policy. With a Federal Reserve Board member on the commission, it is true that information could be transmitted back and forth. If the new system worked ideally, this would include not only data on statistical trends but also qualitative insights into new banking practices and procedures. Even so, the advantages currently gained from the deliberations of seven persons with first-hand knowledge in all of the relevant areas would be lost.

The benefits that flow from integration of the monetary policy and bank supervisory and regulatory policy functions may be illustrated by citing a few of the situations in which such integration is needed. For example, careful attention must be given to the financial

strength of banks during periods when monetary restraint is being applied. In such periods interest rates typically are high, by historical standards, and trending upward. This can result in substantial declines in the market value of certain bank assets—among them long-term securities and mortgage loans—and place a premium on the maintenance of ample ready liquidity. In addition, a restrictive monetary policy often requires relatively substantial adjustments in certain sectors of the economy and in some local credit markets. As a result, bank loans in these sectors may be exposed to deterioration in quality. In implementing a restrictive monetary policy, therefore, consideration of the likely impact on the condition of banks and other financial intermediaries is essential.

Another source of potential difficulty in periods of high economic activity is the tendency to accumulate large backlogs of unused bank loan commitments—that is, promises to lend money on request—which are made chiefly to business customers. During the early 1970's, the bulge in bank loan commitments created problems for both monetary policy and bank regulation. It was clear that the overhang of outstanding commitments was slowing the restraining effects of monetary policy; and there was a danger that under continued conditions of monetary restraint, some banks might have insufficient liquidity to meet their commitments. Under those circumstances, the Federal Reserve—with responsibilities for both monetary and bank regulatory policy—took the lead in exerting pressure on bankers to bring their commitment activity under better control.

A traditional responsibility of the central bank is to serve as a lender of last resort. While the purpose of this function is to cushion the financial dislocation that might threaten when general monetary restraint reduces the over-all liquidity of the economy, its implementation involves actions to bolster the financial condition of individual banks—in particular their liquidity positions. In providing such support, the Federal Reserve draws heavily on the expertise provided by its staff of bank supervisors. If such expertise could be

obtained only from a separate bank regulatory agency, the Federal Reserve might find it difficult to act quickly and appropriately to forestall a developing regional or national financial squeeze.

Finally, the supervision and regulation of international banking activities is an area that requires especially close coordination with monetary policy. U.S. banks are active participants in foreign exchange markets and international lending, and these activities influence foreign exchange rates, international capital flows, and trade balances, all of which are of direct concern to monetary policy. Also, Federal Reserve monetary actions may affect international financial markets, and these effects can have important implications for bank regulation and supervision, especially as they pertain to the operations of the Nation's largest banks. Through its contacts with foreign central banks and international institutions, the Federal Reserve has available more complete international economic information than would be likely for an agency whose sole responsibility is bank supervision. I cannot stress enough the importance of first-hand knowledge in this complex, critical area.

Just as bank supervision and regulation is interrelated with the monetary policy and credit functions of the Federal Reserve, so is it strongly related to the deposit insurance function of the FDIC and the national bank chartering function of the Comptroller of the Currency. Through cooperation and coordination among the three agencies, the examination and supervision of the Nation's banks has been divided so that each bank has only one primary Federal bank supervisor. Thus, duplication of effort on the part of both the banks and the agencies has been avoided, and a full exchange of information among the Federal bank regulators has been promoted.

The relationship of bank holding company supervision to the other functions of each of the three Federal bank supervisors is less well defined. A single primary Federal bank holding company supervisor is not always readily identifiable. For example, a holding company may have several bank subsidiaries, each of which is responsive to a different primary

supervisor. Or it may have a variety of non-bank affiliates, the supervision of which is not readily integrated with the normal bank supervisory process.

The Board therefore would urge the Congress to maintain the bank holding company regulatory function in a single agency. Among the existing Federal bank supervisors, the central bank is best qualified to fill that role. In support of its monetary policy function, the System has insight into the operations of domestic and international financial markets and the workings of the economy generally. Such information is vital to the effective supervision of bank holding companies—and, in particular, to the regulation of nonbank affiliate activities at home and abroad.

With respect to its regulatory functions, I think the record shows that the System has not been a complacent supervisor, either of member banks or of bank holding companies. In testimony on S. 2298 before your Committee in December 1975, Governor Holland reported the major steps that the Federal Reserve had taken in recent years. Since that time improvements have been made in the training program for System bank examiners. Increased attention has been given to loan and credit analysis, as well as compliance with regulations. Special schools have been established for examiners in the area of consumer credit statutes and regulations and in the complexities of holding company supervision and regulation. In addition, a new bank holding company inspection report is being developed in order to standardize the examination process and to enhance the System's ability to identify and supervise those holding companies that fail to act as a source of strength to their subsidiaries. Improvements are also being made in our examinations of foreign branches and Edge Act corporations in order to better monitor and supervise the international activities of these banking organizations.

The Federal Reserve's supervisory capability is being augmented also by the development of a computer-based surveillance system, which screens information collected periodically from banks and bank holding

companies for any signs indicating a deterioration in condition. Early identification of potential problem organizations should aid in the System's effort to give especially close supervisory attention where it appears most warranted.

In addition, I would note that the System has not hesitated to apply supervisory sanctions. In October 1974 the Board's request for cease-and-desist authority over bank holding companies was granted by the Congress. Since that time, 43 cease-and-desist orders have been issued or written agreements negotiated, and 29 of these involved bank holding companies. And of course there are literally hundreds of cases where bank holding companies and banks, in response to supervisory criticism, have committed themselves in writing to take appropriate corrective action.

The Federal bank regulatory agencies have a long history of cooperation and coordination on supervisory matters, and efforts are being made to strengthen the ties. A recent development is the establishment in February of this year of the Interagency Supervisory Committee. This new standing committee of agency officers will deal exclusively with bank supervisory matters of a technical nature. The Supervisory Committee's immediate mission is to achieve coordination among the agencies with respect to bank examination policies and procedures.

During this initial year, the Supervisory Committee has developed—and the agencies have adopted—uniform policies on the definition and identification of concentrations of credit. At the committee's recommendation, the agencies agreed to a survey of the level and types of risk being taken by U.S. banks as a result of their international lending. The committee is also studying the feasibility of adopting a uniform bank rating system and a uniform approach to the treatment of nonaccruing loans.

S. 711 has our full support because it would build upon these existing cooperative arrangements and would provide an evolutionary framework for more effective interaction and coordination among the three Federal

banking agencies. This bill, which closely parallels legislation that the Board proposed earlier this year, would require a Federal Bank Examination Council to focus on the matters most in need of attention now—the development of better and more uniform standards and procedures for the examination of banks. The proposed council would conduct schools for examiners of all the Federal agencies, which would also be open to enrollment by employees of State bank supervisory agencies. The council would develop uniform reporting systems for banks, bank holding companies, and nonbank subsidiaries. The council would also be authorized to make recommendations for uniformity in other supervisory matters and would be provided with a forum—through its annual reports—to propose legislative initiatives to the Congress. These are all steps in the right direction.

In addition, the Board welcomes the provision of S. 711 for participation by State bank supervisors. Section 7 of the bill provides that the council shall establish a liaison committee, composed of five representatives of State

bank supervisory agencies, that is to meet at least twice a year with the council. This arrangement would foster more coordination with the State agencies, with the prospect of developing uniformity in examinations on a mutually cooperative basis by State and Federal agencies.

In the Board's view, the council's responsibilities are modest but reasonable. Moreover, in the fulfillment of these responsibilities, significant progress could be made in a manner not disruptive to the continuing performance of the three existing agencies. Experience with the council might well lead to the conclusion that some further coordination among or consolidation of certain functions of the bank regulatory authorities would be desirable. But in that event, such a finding would be based on a practical awareness of the difficulties that would have to be overcome.

The Board believes that it is much the wiser course to proceed in this manner, on the basis of demonstrated need, and that S. 711—the Federal Bank Examination Council Act—provides just the mechanism for doing so.

Record of Policy Actions of the Federal Open Market Committee

MEETING HELD ON JULY 19, 1977

Domestic Policy Directive

The information reviewed at this meeting suggested that growth in real output of goods and services in the second quarter had been close to the pace in the first quarter, indicated by estimates of the Commerce Department to have been at an annual rate of 6.9 per cent. The rise in average prices—as measured by the fixed-weighted price index for gross domestic business product—appeared to have been somewhat faster than the annual rate of 6.5 per cent estimated for the first quarter, owing in large part to substantial increases in prices of foods. Staff projections suggested that the rate of growth in real GNP would be less rapid in the second half of 1977 than in the first and that it would slow somewhat further into 1978. The projections also suggested that the rate of increase in prices would moderate from that in the first half but would remain high.

In the second quarter, according to the latest staff estimates for the expenditure components of real GNP, growth in personal consumption expenditures had slowed appreciably from the high rate in the first quarter. Moreover, expansion in business fixed investment had been substantially below the rapid pace in the first quarter, reflecting recovery from strikes. On the other hand, residential construction activity had expanded very sharply, in part because of recovery from the effects of severe winter weather in the first quarter; State and local government purchases of goods and services had turned up; and the rate of business inventory accumulation had increased considerably further.

Staff projections for the second half of the year were virtually the same as those made a month earlier. They suggested that growth in consumption expenditures would slow somewhat further and that the pace of expansion in residential construction would moderate. At the same time, however, it was expected that increases in Federal purchases of goods and services would be substantial; that growth in

State and local government purchases would be sustained at a high rate; that expansion of business investment would remain relatively strong; and that the rate of inventory accumulation would rise further, although by much less than in the first half.

In June industrial production rose 0.7 per cent, following gains of 0.7 and 1.0 per cent in April and May, respectively. Much of the June advance was accounted for by increases in output of automotive products—following 2 months of declines—and in production of business equipment and durable goods materials. Output of nondurable consumer goods and of nondurable goods materials changed little. Over the period from March to June, when the over-all index rose 2½ per cent, output of business equipment expanded about 5 per cent and production of consumer goods about 1¼ per cent.

The rate of capacity utilization for the materials-producing industries remained near 83 per cent in June, compared with about 81½ per cent in March. For durable goods materials and nondurable goods materials, respectively, the rates were about 80½ and 87½ per cent in June, compared with 78 and 87 per cent in March.

Expansion in employment moderated in June. Payroll employment in nonfarm establishments rose by 135,000 persons, less than half the average monthly increase in the preceding 5 months. Employment in manufacturing—after vigorous expansion earlier in the year—declined slightly in June, reflecting reductions in a number of nondurable goods industries. The unemployment rate rose from 6.9 to 7.1 per cent, reflecting an increase in the number of persons seeking part-time jobs—mainly teenagers and adult women. The civilian labor force continued to grow at a rapid pace. Since December 1976, when the unemployment rate was 7.8 per cent, the civilian labor force had risen by about 1¾ million persons. Teenagers and adult women accounted for about three-fourths of that increase.

Personal income expanded considerably less in April and May than in the preceding 2 months when increases had been especially large owing to the rebound in wage and salary payments from the weather-reduced level in January and to large increases in transfer payments. Wage and salary payments rose about 1 per cent in both April and May, close to the average monthly increase for the first quarter. For June the employment statistics suggested a smaller increase in wage and salary payments.

Retail sales in June remained at about the level reached in March; however, the total for the second quarter was about 2 per cent above the first-quarter level. In June sales declined at general merchandise stores for the second consecutive month and fell sharply at apparel stores, but they rose appreciably at furniture and appliance stores and continued to expand at food stores. Sales of new automobiles—at an advanced annual rate of 11.8 million units—were close to the level of April and May and about 5 per cent above the average for the first quarter.

The book value of inventories in manufacturing and trade rose sharply in May, and the rate of increase over the first 2 months of the second quarter was moderately higher than that for the first quarter. In manufacturing, the rate of increase over the April–May period was almost twice as fast as in the first quarter, and for nondurable goods industries alone it was more than three times as fast.

The number of private housing units started in June had not been made public by the time of this meeting. In April and May starts were at an annual rate of about 1.9 million units—about 10 per cent above the average for both the first quarter of 1977 and the fourth quarter of 1976. Sales of new homes declined in May for the third consecutive month and were 16 per cent below the advanced rate for the first quarter. However, sales of existing homes rose in May to a near-record rate that was 7 per cent above the first-quarter average.

New orders for nondefense capital goods were unchanged in May, after having expanded about 6 per cent on balance over the preceding 4 months. Shipments of such goods continued to change little in May, and unfilled orders rose further to a level nearly 4 per cent higher than at the end of 1976. Contract awards for commercial and industrial buildings—as measured in terms of floor space—fluctuated widely during the first 5 months of 1977, but the April–May average was about 3½ per cent higher than the average for the first quarter.

As had been reported before the June meeting of the Committee, the latest Commerce Department survey of business plans suggested that in the third and fourth quarters of 1977 increases in spending for plant and equipment would be small—perhaps no more than the rise in prices for such goods. According to the survey, businesses would spend 12.3 per cent more for plant and equipment in 1977 than they had in 1976.

The index of average hourly earnings for private nonfarm production workers rose at an annual rate of 3.7 per cent in June. The rate of advance over the first 6 months of 1977 was 6.7 per cent, compared with an increase of 6.9 per cent during 1976. Over the first half of 1977, however, relatively greater growth of employment in higher-wage industries and an increase in hours of overtime had resulted in a faster rate of advance in actual average hourly earnings than in the index, which is adjusted to exclude the effects of fluctuations in overtime in manufacturing and also the effects of changes in the proportion of workers in high-wage and low-wage industries.

The wholesale price index declined in June, after having risen much less in May than in the preceding 3 months. Average prices for farm products fell sharply further in June, and those for processed foods also declined. As in May, average prices of industrial commodities rose appreciably less than in earlier months of 1977.

The consumer price index rose 0.6 per cent in May—a little less than in April and the same as in March. Retail prices of foods increased 0.7 per cent in May—about half as much as in April—while commodities other than foods and services rose 0.4 per cent and 0.7 per cent, respectively.

The average value of the dollar against leading foreign currencies declined by more than 1 per cent over the inter-meeting period, following more than a year of relative stability. Over the 4-week period, moreover, foreign central banks intervened in the exchange markets to purchase, on balance, a substantial amount of dollars. The downward pressure on the dollar intensified at the end of June when public statements by some government officials fostered market expectations that the currencies of countries with large surpluses in their current accounts would appreciate. Declines in the dollar, which occurred against almost all major currencies, were especially marked against the Japanese yen, the German mark, and the Swiss franc.

The U.S. foreign trade deficit diminished somewhat in May from the high average during the preceding 4 months. In May imports of petroleum declined, and exports of agricultural commodities increased sharply, reflecting chiefly a rise in exports of soybeans. Exports of nonagricultural commodities were virtually unchanged; since the third quarter of 1976 they had been stable, on balance, in

association with only moderate expansion in economic activity in major industrial countries marked by sluggishness in capital investment.

At U.S. commercial banks, growth in total credit slowed somewhat further in June and was slightly below the average for the first 5 months of the year. The slowing in June reflected declines in net acquisitions of Treasury and other securities. Growth of real estate loans accelerated to a near-record pace, and growth of most other major categories of loans was substantial. However, nonbank financial institutions reduced their outstanding bank loans, as they raised a record volume of funds in the commercial paper market.

Business credit demands—which had fallen off in May—rebounded in June, apparently in part because of borrowing by corporations to finance a record amount of Federal income tax payments due at midmonth. Business loans at banks and the outstanding volume of commercial paper issued by nonfinancial corporations both expanded at relatively high rates. Over the first half of the year, growth in business loans (excluding bankers acceptances) and in outstanding commercial paper was substantially faster than over the fourth quarter of 1976.

The narrowly defined money stock (*M-1*), after having risen at an exceptionally rapid rate in April and having increased little in May, grew at a moderate pace in June. On a quarterly-average basis, *M-1* grew at an annual rate of 8.5 per cent in the second quarter, compared with 4.2 per cent in the first quarter.

Growth in the more broadly defined measures of money (*M-2* and *M-3*) also was moderate in June. Inflows to banks of the time and savings deposits included in *M-2* picked up somewhat, after having slackened for a number of months, and inflows to nonbank thrift institutions remained sizable. On a quarterly-average basis, *M-2* and *M-3*, respectively, grew at annual rates of 9.2 and 10.0 per cent in the second quarter, compared with 9.9 and 11.3 per cent in the first quarter.

At its June meeting the Committee had decided that operations in the period immediately ahead should be directed toward maintaining about the prevailing money market conditions, as represented by a weekly-average Federal funds rate of $5\frac{3}{8}$ per cent, provided that *M-1* and *M-2* appeared to be growing over the June–July period at annual rates within ranges of $2\frac{1}{2}$ to $6\frac{1}{2}$ per cent and 6 to 10 per cent,

respectively. Throughout the inter-meeting period, incoming data suggested that over the June–July period *M*-1 and *M*-2 would grow at rates within those ranges. Accordingly, the Manager of the System Open Market Account sought to maintain the Federal funds rate around 5¾ per cent.

In association with the stability in the Federal funds rate, market interest rates in general changed little during the inter-meeting period despite some increase in over-all credit demands. Rates on Treasury bills edged up—although the Treasury continued to redeem bills in its regular auctions—as the market apparently began to adjust to the anticipated near-term cessation of large redemptions. Changes in rates on private short-term instruments and on longer-term issues were small.

Treasury public sales and redemptions of securities were about in balance during the inter-meeting interval. For the second quarter as a whole, the Treasury made net repayments of marketable securities of \$5 billion, in contrast with net borrowings of \$14 billion during the first quarter. It was anticipated that the Treasury would raise a substantial amount of new money in conjunction with its mid-August refunding of \$3.3 billion of maturing securities held by the public; it was expected that the terms of the financing would be announced on July 27.

In the corporate bond market the volume of new securities offered to the public increased in June, reflecting a relatively large volume of new issues by public utilities and financial concerns. For the second quarter as a whole, however, offerings were below the volume for the previous quarter, and those by industrial corporations were at the lowest level in more than 3 years.

Offerings of State and local government bonds rose to a record in June, raising the second-quarter volume to an unprecedented \$13.4 billion, following \$10.7 billion in the first quarter. As in other recent months, demands for these securities were strong from property-casualty insurance companies, commercial banks, and individuals—both directly and through municipal bond investment companies.

The volume of mortgage lending remained large in June at commercial banks as well as at savings and loan associations. Estimates for the second quarter indicated an acceleration from the high rate for the first quarter. While issues of GNMA-guaranteed, mortgage-backed securities declined from the strong first-quarter

pace, net acquisitions of mortgages by FNMA expanded substantially. Average interest rates on new commitments for conventional home mortgages continued to edge higher in late June and early July, and yields in the secondary mortgage market changed little on balance.

In their discussion of the economic situation, members of the Committee agreed with the general outlines of the staff projections, which were described as presenting a fairly optimistic picture of prospective developments. Despite the broad consensus on the outlook, several members suggested that expansion in some sectors of demand might prove to be less strong than expected by the staff and that growth in real GNP was more likely to fall short of than to exceed the projected rates.

With respect to the immediate situation, attention was called to the rate at which inventories had accumulated in some sectors. The view was expressed that a minor adjustment of inventories—similar to although smaller than the one in the latter part of 1976—had been under way for the past 2 months or so and had already affected production and employment in nondurable goods industries. It was observed that businesses appeared to adjust inventory imbalances more promptly now than they had in the past; that such minor adjustments tended to forestall the development of a need for major adjustment; and that the adjustment that appeared to be in process was healthy in that it would serve to make the business expansion more sustainable. A question was raised as to whether the staff projections for the very near term adequately reflected the adjustment in inventories that appeared to be under way.

Questions were also raised about the staff projections for sales of new automobiles and for residential construction. It was suggested that auto sales might be reduced from the advanced level of recent months by two influences: one, increases in prices, not only for domestic models but also for imports because of the substantial appreciations of the Japanese yen and the German mark against the dollar; and two, the high level of consumer debt. With respect to residential construction, two members felt that the expansion in that sector might slow sooner than projected; in support of this view, it was suggested that the rise in prices for new homes had diminished the ability of consumers to buy them.

Despite the questions about certain aspects of the staff pro-

jections, a number of reasons were advanced for viewing the prospective course of economic activity with some confidence: The trend of retail sales was basically upward—even though sales had leveled off on a high plateau in recent months—and the minor inventory imbalance was being corrected; any falling off in sales of automobiles that might develop was likely to be accompanied—as often in the past—by more rapid growth in sales of consumer nondurable goods; the expansion in business capital expenditures was gaining momentum; and purchases of goods and services by State and local governments would be a source of increasing strength in over-all activity. It was suggested, moreover, that a gradual slowing of growth in real GNP toward its long-term trend was desirable as rates of resource utilization approached their practical limits.

Although the outlook for plant and equipment expenditures was viewed as favorable, concern was expressed that the lag in growth of productive facilities so far in this business expansion might result in the development of pressures against available capacity while the unemployment rate was still relatively high. At the same time, it was noted that economists in general believed that the unemployment rate consistent with the goal of full employment was appreciably higher now than it had been some years earlier. The observation was made that the unemployment rate had remained comparatively high despite the extraordinary growth in employment so far in this business expansion mainly because women—and to a lesser extent, teenagers—had entered the labor force in unusually large numbers. It was suggested that many women sought part-time jobs—in some cases because of the effects of inflation—and that even though businesses had been adapting to this change in the labor market, the increase in the number of part-time jobs available had been far from sufficient.

Some members commented on pending legislation to increase the minimum wage. The view was expressed that an increase in the minimum tended to raise the whole structure of wages and that it had adverse effects on employment, particularly of teenagers, and on prices.

Finally, some members of the Committee expressed concern about the possible effects of developments abroad on the U.S. economy. Specifically, they observed that in some major countries

the outlook for economic activity did not appear to be particularly strong and that continued sluggishness abroad had adverse implications for the U.S. trade balance, already heavily in deficit.

At this meeting the Committee reviewed its 12-month ranges for growth in the monetary aggregates. At its April meeting the Committee had specified the following ranges for growth over the period from the first quarter of 1977 to the first quarter of 1978: *M*-1, $4\frac{1}{2}$ to $6\frac{1}{2}$ per cent; *M*-2, 7 to $9\frac{1}{2}$ per cent; and *M*-3, $8\frac{1}{2}$ to 11 per cent. The associated range for growth in the bank credit proxy was 7 to 10 per cent. The ranges being considered at this meeting were for the period from the second quarter of 1977 to the second quarter of 1978.

In the discussion of the ranges for growth in the aggregates over the year ahead, most members of the Committee expressed the belief that a small downward adjustment should be made. All but one of these members supported a proposal to reduce the lower limit of the range for *M*-1 by $\frac{1}{2}$ of a percentage point while retaining the existing ranges for *M*-2 and *M*-3; one member favored small reductions in the ranges for *M*-2 and *M*-3 as well as the $\frac{1}{2}$ -point decrease in the lower limit of the range for *M*-1. Other Committee members advocated more of a downward adjustment in the ranges; specifically, they favored a reduction of $\frac{1}{2}$ of a percentage point in both the upper and the lower limits of the range for *M*-1, and these members in general favored some decrease in the ranges for *M*-2 and *M*-3 as well.

In support of the proposal to make some downward adjustment, several Committee members suggested that it would be desirable to take another step in the gradual process of bringing the longer-run ranges for growth in the monetary aggregates down to rates compatible with general price stability. Moreover, it was observed that the annual rate of growth in *M*-1 from the first to the second quarter of 1977 had exceeded the range adopted by the Committee at its meeting in April; that despite the gradual reduction of projected ranges of growth for the aggregates during the past 2 years, no meaningful reduction had as yet occurred in actual rates of growth; that the outlook for growth in real GNP was relatively good; and that the rate of inflation had intensified somewhat during the first half of 1977.

One member of the Committee favored a reduction of $\frac{1}{2}$ of a percentage point in the upper, as well as the lower, limit of the range

for *M-1* while retaining the existing ranges for *M-2* and *M-3*, with the objective of realigning the ranges in view of the increasing importance of new means of payment as substitutes for demand deposits. Other members argued, on the other hand, that any downward adjustment in the range for *M-1* should be limited to the lower limit. It was noted that while second-quarter growth for that aggregate had been relatively high, growth in the first quarter had been low in relation to the Committee's longer-run range. In view of prospective developments—including, specifically, increases in prices attributable to such exogenous forces as increases in energy costs and in the minimum wage—it was suggested that a reduction of $\frac{1}{2}$ of a percentage point in the upper as well as in the lower limit of the range for *M-1* might run the risk of undesirable pressures in financial markets, a principal effect of which would be to slow growth in real GNP more than projected.

Three members of the Committee advocated a reduction of $\frac{1}{2}$ of a percentage point in both limits of the range for *M-1* and also some reduction in the ranges for the broader monetary aggregates. Their reasons for this position are contained in the statements of dissent below.

At the conclusion of its discussion the Committee decided to reduce the lower limit of the range for *M-1* by $\frac{1}{2}$ of a percentage point and to retain the existing ranges for *M-2* and *M-3*. The ranges thus were 4 to $6\frac{1}{2}$ per cent for *M-1*, 7 to $9\frac{1}{2}$ per cent for *M-2*, and $8\frac{1}{2}$ to 11 per cent for *M-3*. The associated range for the rate of growth in commercial bank credit was 7 to 10 per cent.¹ It was agreed that the longer-run ranges, as well as the particular aggregates for which such ranges were specified, would be subject to review and modification at subsequent meetings. It was also understood that short-run factors might cause growth rates from month to month to fall outside the ranges contemplated for the year ahead.

The Committee adopted the following ranges for rates of growth in monetary aggregates for the period from the second quarter of 1977 to

¹At this meeting the Committee decided to replace the bank credit proxy with a broader measure of all commercial bank credit. In recent years the proxy—which is based solely on data for member banks—has become increasingly less representative of total bank credit, in part because of the growth in importance of nonmember banks and in part because the proxy does not include certain borrowings by banks from the nonbank public.

the second quarter of 1978: *M*-1, 4 to 6½ per cent; *M*-2, 7 to 9½ per cent; and *M*-3, 8½ to 11 per cent.

Votes for this action: Messrs. Burns, Volcker, Gardner, Guffey, Lilly, Mayo, Morris, Partee, and Wallich. Votes against this action: Messrs. Coldwell, Jackson, and Roos.

Mr. Coldwell dissented from this action because he thought that liquidity was high; that less rapid growth in real GNP was now necessary in order to sustain the expansion later on; and that action to reduce the rate of growth in the aggregates might lessen upward pressures on prices, improve the U.S. foreign trade position, and strengthen the dollar. Mr. Jackson dissented because he believed that it was important to reduce the upper limit of the range for *M*-1 so that the Committee would take action to avoid a higher rate of growth, and that it was a logical consequence of that position to favor reductions also in the ranges for the broader aggregates. Mr. Roos, who also dissented, held the view that the retention of the existing upper limit of the range for *M*-1 following the overshoot of growth in that aggregate from the first to the second quarter of 1977 might result in too rapid monetary growth over the five-quarter period ending in the second quarter of 1978 and therefore lead to a probable acceleration of the rate of inflation.

As to policy for the period immediately ahead, members of the Committee did not differ greatly in their preferences for ranges of growth for the monetary aggregates over the July–August period. Most of them favored ranges of 3½ to 7½ per cent and 6½ to 10½ per cent for the annual rates of growth in *M*-1 and *M*-2, respectively. One member suggested that the Committee specify somewhat wider ranges around the same midpoints of those ranges because of greater-than-usual uncertainty about projections of monetary growth for the period just ahead. Also, some sentiment was expressed for slightly higher, and some for slightly lower, ranges.

All members favored a return to basing decisions for open market operations in the period immediately ahead primarily on the behavior of the monetary aggregates. At its meeting in June the Committee had decided to give greater weight than usual to money market conditions in conducting operations in the period until this meeting.

Almost all members favored directing operations initially toward the objective of maintaining the Federal funds rate at its current level of 5½ per cent, but a few members suggested that operations be directed toward achieving a slightly higher rate within a short time. With respect to the degree of leeway for operations during the inter-meeting period should the aggregates appear to be deviating significantly from the midpoints of the specified ranges, most members advocated retaining the range for the Federal funds rate of 5¼ to 5¾ per cent that had been specified at the two preceding meetings. A few members suggested that it would be appropriate to specify a wider range for the funds rate in association with the return to conducting operations on the basis of the behavior of the monetary aggregates; ranges of 5¼ to 6 per cent, 5 to 6 per cent, and 5 to 5¾ per cent were suggested.

At the conclusion of the discussion the Committee decided that growth in *M-1* and *M-2* over the July–August period at annual rates within ranges of 3½ to 7½ per cent and 6½ to 10½ per cent, respectively, would be appropriate. It was understood that in assessing the behavior of the aggregates, the Manager should give approximately equal weight to the behavior of *M-1* and *M-2*.

In the judgment of the Committee, such growth rates of the aggregates were likely to be associated with a weekly-average Federal funds rate of about 5¾ per cent. The Committee agreed that if growth rates of the aggregates over the 2-month period appeared to be deviating significantly from the midpoints of the indicated ranges, the operational objective for the weekly-average Federal funds rate should be modified in an orderly fashion within a range of 5¼ to 5¾ per cent.² As customary, it was understood that the Chairman might call upon the Committee to consider the need for supplementary instructions before the next scheduled meeting if significant inconsistencies appeared to be developing among the Committee's various objectives.

The following domestic policy directive was issued to the Federal Reserve Bank of New York:

The information reviewed at this meeting suggests that real output of goods and services grew in the second quarter at about the rapid

²Subsequently, as described on p. 836, the Committee modified the range by increasing the upper limit to 6 per cent.

rate of the first quarter. In June industrial output continued to expand at a substantial pace. The rise in employment moderated, and the unemployment rate edged up from 6.9 to 7.1 per cent. Total retail sales remained at about the level reached in March; for the second quarter as a whole, however, sales were moderately above the first-quarter level. The wholesale price index for all commodities declined in June, owing to sharp decreases among farm products and foods; as in May, average prices of industrial commodities rose appreciably less than in earlier months of 1977. The index of average hourly earnings rose over the first half of the year at about the same pace that it had on the average during 1976.

The average value of the dollar against leading foreign currencies has declined more than 1 per cent over the past month; the declines were especially marked against the Japanese, German, and Swiss currencies. In May the U.S. foreign trade deficit diminished somewhat from the high rate in the first 4 months of the year.

M-1, after rising at an exceptionally rapid rate in April, increased little in May and grew at a moderate pace in June. Growth in *M-2* and *M-3* also was moderate in June. Inflows to banks of time and savings deposits included in *M-2* picked up somewhat, after having slackened for a number of months, and inflows to nonbank thrift institutions remained sizable. Business short-term borrowing expanded sharply in June. Market interest rates in general have changed little in recent weeks.

In light of the foregoing developments, it is the policy of the Federal Open Market Committee to foster bank reserve and other financial conditions that will encourage continued economic expansion and help resist inflationary pressures, while contributing to a sustainable pattern of international transactions.

Growth in *M-1*, *M-2*, and *M-3* within ranges of 4 to 6½ per cent, 7 to 9½ per cent, and 8½ to 11 per cent, respectively, from the second quarter of 1977 to the second quarter of 1978 appears to be consistent with these objectives. These ranges are subject to reconsideration at any time as conditions warrant.

The Committee seeks to encourage near-term rates of growth in *M-1* and *M-2* on a path believed to be reasonably consistent with the longer-run ranges for monetary aggregates cited in the preceding paragraph. Specifically, at present, it expects the annual growth rates over the July–August period to be within the ranges of 3½ to 7½ per cent for *M-1* and 6½ to 10½ per cent for *M-2*. In the judgment of the Committee such growth rates are likely to be associated with a weekly-average Federal funds rate of about 5¾ per cent. If, giving

approximately equal weight to *M-1* and *M-2*, it appears that growth rates over the 2-month period will deviate significantly from the midpoints of the indicated ranges, the operational objective for the Federal funds rate shall be modified in an orderly fashion within a range of $5\frac{1}{4}$ to $5\frac{3}{4}$ per cent.

If it appears during the period before the next meeting that the operating constraints specified above are proving to be significantly inconsistent, the Manager is promptly to notify the Chairman who will then decide whether the situation calls for supplementary instructions from the Committee.

Votes for this action: Messrs. Burns, Volcker, Coldwell, Gardner, Guffey, Jackson, Lilly, Mayo, Morris, Partee, Roos, and Wallich. Votes against this action: None.

Subsequent to the meeting, on August 4, nearly final estimates indicated that in July *M-1* had grown at an annual rate of about $18\frac{1}{2}$ per cent and *M-2* at a rate of about $16\frac{1}{2}$ per cent. For the July–August period staff projections suggested that the annual rates of growth for both aggregates would be well above the upper limits of the ranges specified by the Committee in the next-to-last paragraph of the domestic policy directive issued at the July meeting.

The Federal funds rate had averaged 5.80 per cent in the statement week ended August 3, up from 5.45 per cent in the week ended July 27 and 5.35 per cent in the preceding 3 weeks. The Manager of the System Open Market Account was currently aiming at a funds rate of $5\frac{3}{4}$ per cent, the upper limit of the inter-meeting range specified in the directive.

Against that background, Chairman Burns recommended on August 4 that the upper limit of the range for the Federal funds rate be increased to 6 per cent so that the Manager might have some additional leeway for operations, while continuing to take account of the current Treasury financing and financial market developments. He further recommended that this additional leeway be used very gradually, and only in the event that the aggregates continued to register values far beyond the Committee's objectives.

On August 5, 1977, the Committee modified the inter-meeting range for the Federal funds rate specified in the next-to-last paragraph of the domestic policy directive issued on July 19, 1977, by increasing the upper limit from $5\frac{3}{4}$ to 6 per cent.

Votes for this action: Messrs. Burns, Jackson, Mayo, Morris, Partee, Roos, Wallich, Balles, and Timlen. Votes against this action: None. Absent and not voting: Messrs. Coldwell, Gardner, Guffey, Lilly, and Volcker. (Messrs. Balles and Timlen voted as alternates for Messrs. Guffey and Volcker, respectively.)

Statutes, regulations, interpretations, and decisions

MEMBERSHIP OF STATE BANKING INSTITUTIONS IN THE FEDERAL RESERVE SYSTEM

The Board of Governors has amended its Regulation H to require State member banks, and their subsidiaries, departments, and divisions, that are municipal securities dealers to file with the Board information about persons who are associated with them as municipal securities principals or municipal securities representatives.

Effective October 31, 1977, a new paragraph (j) is added to section 208.8 as set forth below.

Pursuant to sections 15B(c)(5), 17, and 23 of the Securities Exchange Act of 1934 (15 U.S.C. §§ 78o-4(c)(5), 78q, and 78w and section 11(a) of the Federal Reserve Act (12 U.S.C. § 248(a)), the Board amends Regulation H (12 CFR 208) by adding a new paragraph (j) to section 208.8 as set forth below:

SECTION 208.8—BANKING PRACTICES

* * * * *

(g) [Reserved]

(h) [Reserved]

(i) [Reserved]

(j) STATE MEMBER BANKS, AND SUBSIDIARIES, DEPARTMENTS, AND DIVISIONS THEREOF, WHICH ARE MUNICIPAL SECURITIES DEALERS.

(1) For purposes of this paragraph, the terms herein have the meanings given them in section 3(a) of the Securities Exchange Act of 1934 (15 U.S.C. § 78c(a)) and the rules of the Municipal Securities Rulemaking Board. The term *Act* shall mean the Securities Exchange Act of 1934 (15 U.S.C. § 78a et seq.).

(2) On and after October 31, 1977, a State member bank of the Federal Reserve System, or a subsidiary or a department or a division thereof, that is a municipal securities dealer shall not permit a person to be associated with it as a municipal securities principal or municipal securities repre-

sentative unless it has filed with the Board an original and two copies of Form MSD-4, "Uniform Application for Municipal Securities Principal or Municipal Securities Representative Associated with a Bank Municipal Securities Dealer,"* completed in accordance with the instructions contained therein, for that person. Form MSD-4 is prescribed by the Board for purposes of paragraph (b) of Municipal Securities Rulemaking Board Rule G-7, "Information Concerning Associated Persons."

(3) Whenever a municipal securities dealer receives a statement pursuant to paragraph (c) of Municipal Securities Rulemaking Board Rule G-7, "Information Concerning Associated Persons," from a person for whom it has filed a Form MSD-4 with the Board pursuant to subparagraph (2) of this paragraph, such dealer shall, within ten days thereafter, file three copies of that statement with the Board accompanied by an original and two copies of a transmittal letter which includes the name of the dealer and a reference to the material transmitted identifying the person involved and is signed by a municipal securities principal associated with the dealer.

(4) Within thirty days after the termination of the association of a municipal securities principal or municipal securities representative with a municipal dealer that has filed a Form MSD-4 with the Board for that person pursuant to subparagraph (2) of this paragraph, such dealer shall file an original and two copies of a notification of termination with the Board on Form MSD-5, "Uniform Termination Notice for Municipal Securities Principal or Municipal Securities Representative Associated with a Bank Municipal Securities Dealer,"* completed in accordance with instructions contained therein.

(5) A municipal securities dealer that files a Form MSD-4, Form MSD-5, or statement with the Board under this paragraph shall retain a copy of

*Printed copies of Forms MSD-4 and MSD-5 are available from the Board of Governors or from the Federal Reserve Banks.

each such Form MSD-4, Form MSD-5, or statement until at least three years after the termination of the employment or other association with such dealer of the municipal securities principal or municipal securities representative to whom the form or statement relates.

(6) The date that the Board receives a Form MSD-4, Form MSD-5, or statement filed with the Board under this paragraph shall be the date of filing. Such a Form MSD-4, Form MSD-5, or statement which is not prepared and executed in accordance with the applicable requirements may be returned as unacceptable for filing. Acceptance for filing shall not constitute any finding that a Form MSD-4, Form MSD-5, or statement has been completed in accordance with the applicable requirements or that any information reported therein is true, current, complete, or not misleading. Every Form MSD-4, Form MSD-5, or statement filed with the Board under this paragraph shall constitute a filing with the Securities and Exchange Commission for purposes of section 17(c)(1) of the Act (15 U.S.C. § 78q(c)(1)) and a "report," "application," or "document" within the meaning of section 32(a) of the Act (15 U.S.C. § 78ff(a)). (15 U.S.C. §§ 78o-(c)(5), 78q, and 78w and 12 U.S.C. § 248(a).)

The Board of Governors has also delegated certain of its functions in connection with the administration of Municipal Securities Rulemaking Board rules to the Director of the Division of Banking Supervision and Regulation. These delegations were made to expedite and facilitate the Board's administration of Municipal Securities Rulemaking Board rules.

Effective September 1, 1977, section 265.2 of the Board's Rules Regarding Delegation of Authority, is amended by adding a new subparagraph (24) to paragraph (c) as follows:

**SECTION 265.2—SPECIFIC
FUNCTIONS DELEGATED TO BOARD
EMPLOYEES AND TO FEDERAL RESERVE BANKS**

* * * * *

(c) THE DIRECTOR OF THE DIVISION OF BANKING SUPERVISION AND REGULATION (or, in the Director's absence, the Acting Director) is authorized:

* * * * *

(24) Pursuant to section 23 of the Securities Exchange Act of 1934 (15 U.S.C. 78w) (i) to grant or deny requests for waiver of examination and

waiting period requirements for municipal securities principals and municipal securities representatives under Municipal Securities Rulemaking Board Rule G-3, (ii) to grant or deny requests for a determination that a natural person or municipal securities dealer subject to a statutory disqualification is qualified to act as a municipal securities principal or municipal securities representative or municipal securities dealer under Municipal Securities Rulemaking Board Rule G-4, and (iii) to approve or disapprove clearing arrangements under Municipal Securities Rulemaking Board Rule G-8, in connection with the administration of Municipal Securities Rulemaking Board rules for municipal securities dealers for which the board is the appropriate regulatory agency under section 3(a)(34) of the Securities Exchange Act of 1934 (15 U.S.C. 78c(a)(34)). (15 U.S.C. 78w and 12 U.S.C. 248.)

TRUTH IN LENDING

The Board of Governors has postponed the October 28, 1977, date for full implementation of § 226.7(k)(3)(ii) of Regulation Z, as reflected in § 226.7(k)(7)(i), until March 28, 1978. During the period of the postponement a creditor may comply with the requirements for identifying nonsale credit transactions on or with open-end credit periodic statements either by use of the methods prescribed in § 226.7(k)(3), by use of the alternatives prescribed in § 226.7(k)(4) or § 226.7(k)(7)(i), or by use of a combination of those methods.

RULES REGARDING DELEGATION OF AUTHORITY

The Board of Governors has amended its Rules Regarding Delegation of Authority to expand the authority of the Secretary of the Board to approve on the Board's behalf certain applications to establish branches overseas.

Therefore, under the authority of 12 U.S.C. § 248(k), 12 CFR Part 265 is amended, effective immediately, by revising paragraph (a)(8) of § 265.2 to read as follows:

**SECTION 265.2—SPECIFIC
FUNCTIONS DELEGATED TO BOARD
EMPLOYEES AND FEDERAL RESERVE BANKS**

* * * * *

(a) THE SECRETARY OF THE BOARD (or, in the Secretary's absence, the Acting Secretary) is authorized:

(8) Under the provisions of sections 25 and 25(a) of the Federal Reserve Act and Parts 211 and 213 of this chapter (Regulations K and M), to approve the establishment, directly or indirectly, of a foreign branch or agency by a member bank or corporation organized under section 25(a) (an "Edge" corporation) or operating under an agreement with the Board pursuant to section 25 (an "Agreement" corporation) if all the following conditions are met:

(i) the appropriate Reserve Bank recommends approval.

(ii) the relevant divisions of the Board's staff recommend approval.

(iii) no significant policy issue is raised by the proposal as to which the Board has not expressed its view.

(iv) the application is not one for the applicant's first full-service branch in a foreign country.

INTERPRETATION OF REGULATION B

In order to provide guidance concerning the intended coverage of § 202.8(a)¹ of Regulation B, the Board interprets a term used in that section as follows: A credit program is considered to be "expressly authorized by Federal or State law" if it is authorized by the terms of a Federal or State statute or by a regulation lawfully promulgated by the administering agency (i.e., the agency responsible for implementing the program).

It is the responsibility of the administering agency to ensure that implementing regulations are consistent with applicable Federal and State law. A creditor participating in a loan program expressly authorized by Federal or State law will not violate Regulation B by complying in good faith with the law authorizing a program or with a regulation promulgated by an administering agency to implement a program that the agency has determined is a special purpose credit program under § 202.8(a)(1) of Regulation B.

In addition, the Board announces that it will not make determinations as to whether particular programs benefit an "economically disadvantaged class of persons." The Board believes that such a determination is more properly made by the agency

charged with the administration of the loan program.

INTERPRETATION OF REGULATION Z

It has come to the Board's attention that certain credit cards are issued, the card issuer and the seller being the same person or related persons, in connection with which no finance charge is imposed and customers are billed in full for each use of the card on a transaction-by-transaction basis by means of an invoice or other statement reflecting each use of the card. No cumulative account which reflects the transactions by each customer during a period of time, such as a month, is maintained.

Section 103(f) of the Act requires *all* credit card issuers to comply with certain provisions, even though those provisions are generally applicable only to creditors of open-end credit plans, and requires the Board to apply these provisions to all card issuers "to the extent appropriate." The question arises as to which of those provisions, as implemented by this Part, appropriately apply to such card issuers.

Such card issuers may bill customers on a transaction-by-transaction basis and need not maintain a cumulative account for each customer for which a periodic statement must be sent.

Prior to the first use of the credit card, the card issuer shall provide the customer with a statement setting forth the disclosures required by § 226.7(a)(9) and, as applicable, § 226.7(a)(6) and § 226.7(a)(7). The disclosure required by § 226.7(a)(6) shall be limited to those charges that are or may be imposed as a result of the deferral of payment by use of the card, such as late payment or delinquency charges. Such card issuers need not provide the disclosure required by § 226.7(a)(8).

The disclosures required by § 226.7(b)(1)(i), (iii) and (ix) need not be given by such credit card issuers. The requirements of § 226.7(b)(1)(ii) and § 226.7(b)(1)(x) are applicable to such card issuers, and compliance may be achieved by placing the required disclosures on the invoice or statement sent to the customer for each transaction. Section 226.7(b)(2) does not apply to these credit card issuers.

The provisions of § 226.7(c), including those which permit certain required disclosures to be made other than on the front of a periodic statement, shall apply. All references to the "periodic statement" in § 226.7(c) shall be read to indicate the invoice or other billing document sent to the customer for each transaction.

¹Standards for programs. Subject to the provisions of subsection (b), the Act and this Part are not violated if a creditor refuses to extend credit to an applicant solely because the applicant does not qualify under the special requirements that define eligibility for the following types of special purpose credit programs:

(1) any credit assistance program expressly authorized by Federal or State law for the benefit of an economically disadvantaged class of persons;

The provisions of § 226.7(d) shall apply to such credit card issuers. Compliance therewith may be achieved (1) by mailing or delivering the statement required by § 226.7(a)(9) to each customer who receives a transaction invoice during a one-month period chosen by the card issuer which meets the timing requirements of § 226.7(d)(2), (3), and (4); or (2) by sending either the statement prescribed by § 226.7(a)(9) or the statement prescribed by § 226.7(d)(5) with each invoice sent to a customer.

The provisions of § 226.7(f) apply to these credit card issuers, except that (1) notice of the change in terms shall be given at least 15 days prior to the date upon which the change takes effect, rather than 15 days prior to the beginning date of the billing cycle in which it takes effect, and (2) the card issuer need notify cardholders in advance of only those changes in terms which, if undertaken by creditors of open-end credit plans generally, would necessitate notice to all customers prior to imposing the change on their accounts.

The provisions of § 226.7(g) shall apply to such credit card issuers if the credit card plan includes the possible imposition of a specific charge for late payment, default, or delinquency. Otherwise, they do not apply to such credit card issuers.

The provisions of § 226.7(h) shall apply to such credit card issuers, except that all requirements to credit amounts to an account may be complied with by other reasonable means, such as a credit memorandum. Since no periodic statements are provided or required for the credit card systems subject to this interpretation, a notice of excess payment should be sent to the customer within a reasonable period of time following its occurrence unless a refund of the excess payment is mailed or delivered to the customer within 5 business days of its receipt by the card issuer.

The card issuer shall comply with all the provisions of § 226.13, including § 226.13(i) and (j) to the extent that they are applicable to the credit card plan, except that § 226.13(k) is inapplicable.

The card issuer shall comply with the provisions of § 226.14, as applicable. All references in § 226.14 to the "periodic statement" shall be read to indicate the invoice or other statement for the relevant transaction. All actions referenced in § 226.14 with regard to correcting and adjusting a customer's account may be taken by issuing a refund or a new invoice, or by other appropriate means consistent with the purposes of the section.

BANK HOLDING COMPANY AND BANK MERGER ORDERS ISSUED BY THE BOARD OF GOVERNORS

ORDERS UNDER SECTION 3 OF BANK HOLDING COMPANY ACT

Ark Valley Bankshares, Inc.,
La Junta, Colorado

Order Approving Formation of Bank Holding Company

Ark Valley Bankshares, Inc., La Junta, Colorado, has applied for the Board's approval under § 3(a)(1) of the Bank Holding Company Act (12 U.S.C. § 1842(a)(1)) of formation of a bank holding company by acquiring 83 per cent of the voting shares of The La Junta State Bank, La Junta, Colorado ("La Junta Bank"), and 56 per cent of the voting shares of The Empire State Bank, Rocky Ford, Colorado ("Empire Bank").

Notice of the application, affording opportunity for interested persons to submit comments and views, has been given in accordance with § 3(b) of the Act. The time for filing comments and views has expired, and the Board has considered the applica-

tion and all comments received in light of the factors set forth in § 3(c) of the Act (12 U.S.C. § 1842(c)).

Applicant is a nonoperating corporation organized for the purpose of becoming a bank holding company. La Junta Bank and Empire Bank have aggregate deposits of \$14.2 million, representing 0.17 per cent of the total deposits in commercial banks in Colorado.¹ Approval of the application would not increase significantly the concentration of banking resources in Colorado.

La Junta Bank (\$9.2 million in deposits) is the second largest of seven banks operating in the relevant market, which is approximated by Otero County, while Empire Bank (\$5.0 million in deposits), located 11 miles away in Rocky Ford, is the sixth largest bank in that same market. Applicant, upon consummation, would control approximately 24 per cent of total deposits in commercial banks in

¹All banking data are as of December 31, 1976.

the relevant market, and would be the second largest of the six remaining banking organizations.

No existing competition would be eliminated by this proposal, however. Both banks are commonly owned and managed by principals of Applicant, who purchased a majority of the shares of both banks during 1975. In a case where a prior purchase by an applicant's principals eliminates substantial competition between two banks, the Board is reluctant to approve the formation of a bank holding company, even though such a formation, on its face, would appear to eliminate no existing competition.² However, in this instance, the two banks have been under common ownership and control since the formation of Empire Bank in 1949, and therefore the 1975 purchase of both banks by principals of Applicant was not anticompetitive. While approval of the proposal would further solidify the long-existing relationship between these two banks and reduce the likelihood that they would become independent competitors in the future, it is the Board's view that consummation of this proposal would not have any significant adverse effect on existing or potential competition in view of the small size of Empire Bank and the significant number of remaining banking alternatives given the size of the market. Several principals of Applicant are also principals of G. S. Bancshares, Inc., Goodland, Kansas, a one-bank holding company; the bank controlled by that holding company does not compete in the Otero County banking market, and approval of this proposal would eliminate no existing competition among these three banks. Accordingly, on the basis of the facts of record, the Board concludes that consummation of the proposal would not have any significantly adverse effect on competition.

The financial and managerial resources and future prospects of Applicant and both banks are considered to be satisfactory and are consistent with approval of the application. Although Applicant will incur debt in connection with the proposal, it appears to have the necessary financial resources available to service the debt without impairing the financial condition of either bank. While there will be no immediate increase in the services offered by either bank as a result of the proposed transaction, the considerations relating to the convenience and

needs of the community to be served are consistent with approval of the application. It is the Board's judgment that the proposed transaction would be consistent with the public interest and that the application should be approved.

On the basis of the record, the application is approved for the reasons summarized above. The transaction shall not be made (a) before the thirtieth calendar day following the effective date of this Order or (b) later than three months after the effective date of this Order, unless such period is extended for good cause by the Board, or by the Federal Reserve Bank of Kansas City pursuant to delegated authority.

By order of the Board of Governors, effective August 10, 1977.

Voting for this action: Chairman Burns and Governors Wallich, Coldwell, Jackson, Partee, and Lilly. Absent and not voting: Governor Gardner.

(Signed) GRIFFITH L. GARWOOD,
Deputy Secretary of the Board.

Central Bancompany,
Jefferson City, Missouri

Order Approving Acquisition of Bank

Central Bancompany, Jefferson City, Missouri, a bank holding company within the meaning of the Bank Holding Company Act, has applied for the Board's approval under § 3(a)(3) of the Act (12 U.S.C. § 1842(a)(3)) to acquire all of the voting shares of The First National Bank of Mexico, Mexico, Missouri ("Bank").

Notice of the application, affording opportunity for interested persons to submit comments and views, has been given in accordance with § 3(b) of the Act. In response to the large number of comments received in opposition to the application from various individuals including Bank's President ("Protestant"), the Board ordered an Oral Presentation which was held at the Federal Reserve Bank of St. Louis on June 14, 1977.¹ The Board has considered the application, all written comments received and the testimony presented at the Oral Presentation in light of the factors set forth in § 3(c) of the Act (12 U.S.C. § 1842(c)).

Applicant, the eighth largest banking organization in Missouri, controls four banks with aggregate

² See the Board's Order of May 11, 1977, denying the application of Mahaska Investment Company, Oskaloosa, Iowa, to become a bank holding company (63 Federal Reserve BULLETIN 579 (1977)).

¹ See the Board's Order of April 11, 1977 (63 Federal Reserve BULLETIN 493).

deposits of \$374.4 million, representing 2 per cent of the total deposits in commercial banks in the State.² Acquisition of Bank, which holds deposits of \$15.2 million, would increase Applicant's share of Statewide commercial bank deposits by less than 0.1 per cent and would have no appreciable effect upon the concentration of banking resources in the State.

Bank is the third largest of six banking organizations in the Mexico banking market and controls approximately 17.1 per cent of the total deposits in commercial banks in the market.³ Applicant's nearest subsidiary bank is located approximately 40 miles west of Bank. In view of the distance between Bank and Applicant's nearest banking subsidiary, and other facts of record, no significant competition exists between Bank and Applicant's banking subsidiaries.⁴ Furthermore, the Mexico banking market is not considered attractive for *de novo* entry in view of the declining population within the market.⁵ The deposits per banking office ratio of \$9.1 million for the market is substantially below the State average of \$16.6 million. Thus, competition does not appear likely to develop in the future.

Protestant claims that consummation of the proposal would result in 83 per cent of the total bank assets in Audrain County and 100 per cent of the bank assets in Mexico being owned by bank holding companies. Protestant contends that this would amount to an undue concentration of banking resources and a loss of competition within the relevant market.⁶ The Board has reviewed the submissions and testimony of Protestant and is unable to agree with this conclusion.

Section 3(c) of the Act requires the Board to consider whether a proposed acquisition would have adverse effects upon competition within a

relevant banking market. This analysis relates primarily to the number of existing or potential banking organizations competing in a market. There is nothing in the legislative history of the Act in this regard that indicates that the Board is to consider whether a banking organization is independently owned or owned by a multibank holding company to be in and of itself a competitive factor. Ownership and management do, of course, enter into the convenience and needs factors, as discussed below. It appears that the acquisition of Bank by Applicant would result in the introduction of a significant multibank holding company into the market and would stimulate competition between Bank and the two other banks in the market controlled by major bank holding companies.⁷ Accordingly, the Board finds that consummation of the proposal would neither eliminate any significant existing or potential competition nor increase the concentration of banking resources in any relevant market and that competitive considerations are consistent with approval of the application.

Protestant maintains that the manner in which Applicant secured tender offers for a majority of Bank's stock reflects so adversely upon Applicant's management as to warrant denial of the application. As further support for a denial of the application due to managerial considerations, Protestant claims that the price Applicant offered for the shares of Bank was unconscionably low, that Applicant lacks the managerial resources to replace Bank's management which has threatened to resign if the application is approved, and that Applicant violated the Act when one of its subsidiary banks acquired sole discretionary authority to exercise voting rights with respect to 100 shares of Bank placed in trust with one of Applicant's subsidiary banks. On the basis of the complete record on the application, the Board makes the following findings.

The three largest shareholders of Bank are Bradford Brett, President of Bank and owner of 255 shares representing 25.5 per cent of Bank's stock; Ms. Anne Parry, a cousin of Bradford Brett and owner of 210 shares representing 21 per cent of Bank's stock, and Mrs. Miriam Edmonston, a sister of Anne Parry and owner of 240 shares representing 24 per cent of Bank's stock. During 1974 and 1975, Ms. Parry indicated to Mr. Brett that she and her

² All banking data are as of December 31, 1976.

³ The Mexico market is approximated by Audrain County plus the town of Auxvasse in adjoining Callaway County.

⁴ At the Oral Presentation, Bank's President conceded that there was no significant competition between Bank and Applicant (Transcript p. 117-118).

⁵ Population data and estimates from the Bureau of the Census show that the market population declined 2.7 per cent from 1960-70 relative to a gain of 8.3 per cent for the State and it is estimated that the market did not grow from 1970-74 (25,362 to 25,300), relative to an estimated gain of 2.1 per cent for the State during this period.

⁶ Protestant contends that the fact that 83 per cent of the banking assets in the relevant market will be controlled by multibank holding companies constitutes an undue concentration of banking resources. This analysis is incorrect. The Board must consider the percentage of the market's banking deposits controlled by each banking organization, not by multibank holding companies as a group or independent banks as a group.

⁷ We note as an aside that in any event, three independent banks will remain in the market as alternatives for those individuals who prefer to deal with a bank that is not affiliated with a holding company.

sister, Mrs. Edmonston, were considering selling their Bank stock and requested Mr. Brett's assistance in facilitating a sale. Ms. Parry indicated that she needed more income than the dividends paid on Bank's stock were providing her at that time. Ms. Parry indicated her belief that \$1000 per share was an acceptable price for Bank's stock; however, Mr. Brett indicated to her that it was unlikely that he could obtain more than \$600 per share for Bank's stock. Book value of the stock at that time was about \$1200 per share. It appears that neither Ms. Parry nor Mrs. Edmonston was successful in selling her Bank stock.

On July 27, 1976, Mrs. Edmonston mentioned to Mr. R. B. Price, the President of Applicant's subsidiary bank located in Columbia, Missouri, that she and her sister were considering an offer by an individual in Seattle, Washington, to purchase their Bank stock for \$1500 per share. On July 30, 1976, Mrs. Edmonston met with representatives of Applicant and Mr. Price to discuss a possible sale of her Bank stock to Applicant. Negotiations ensued and on August 1, Mrs. Edmonston, Ms. Parry, and another shareholder of Bank, Mr. Stephenson, tendered their shares representing a majority of Bank's stock to Applicant for \$2000 per share. Mr. Brett was not consulted until August 2, 1976, when Mr. Quigg, representing Applicant, informed Mr. Brett of the tender offer and offered to purchase his shares of Bank. Shortly after the meeting, Mr. Brett undertook a campaign to rally public support for his opposition to the proposed acquisition. On August 16, 1976, representatives of Applicant met with the Board of Directors of Bank. A copy of the statement made by Applicant's representatives at that meeting shows that they expressed a desire to operate Bank as a local bank, to retain the officers and employees of Bank, to retain the directors of Bank and to purchase the outstanding shares of Bank at the same price per share that Applicant had agreed to pay for the controlling block of stock already tendered. Bank's Board of Directors apparently rejected Applicant's offers and threatened to resign *en masse* if the proposal were approved.

The Board is unable to agree with Protestant that Applicant's acquisition of tender offers for a majority of Bank's stock reflects adversely on managerial factors. It appears that the initial contact was initiated by Bank's majority shareholders. Further, Bank's remaining shareholders were offered the opportunity to sell their shares at the same price as Bank's majority shareholders. Applicant had no legal duty to inform the management of Bank that

an offer for a majority of Bank's stock was outstanding. The majority shareholders of a bank do not have an obligation to perpetuate the management of a bank or advise management of plans to sell their stock. On the contrary, the obligations and responsibilities run in the opposite direction; management owes a fiduciary duty to all of the shareholders of a bank.

With respect to Protestant's assertion that the price of \$2000 per share is so low as to be unconscionable, the Board notes that at the Oral Presentation Mr. Brett estimated that the shares of Bank stock were worth a minimum of \$2500 (Transcript p. 98). This difference of \$500 per share between Protestant's valuation and Applicant's offer does not appear to support Protestant's claim that \$2000 is an unconscionably low offer in light of the fact that the \$2000 per share price is 1.6 times the book value of Bank's stock and was freely arrived at by Bank's shareholders and Applicant after extensive negotiations.⁸

With respect to the threatened resignations of Bank's officers and directors, Applicant has indicated, and the Board finds, that Applicant has adequate experienced personnel to assume control of the daily operations and the management of Bank were such action necessary. Moreover, several of the directors who testified at the Oral Presentation, including Mr. Brett himself, indicated that they might remain as directors even if the application is approved and have indicated that they are aware of their fiduciary duties to the shareholders who elected them in the event minority shareholders remain.

Finally, Protestant contends that Applicant may have violated the Act when its subsidiary bank in Columbia, Missouri, established a trust for one of Bank's shareholders in December 1976, a part of the corpus of which was 100 shares of Bank. Applicant's subsidiary acquired sole discretionary voting authority over those Bank shares. Protestant contends alternatively that those shares of Bank were not acquired by Applicant's subsidiary bank in good faith, as required by § 3(a) of the Act, or if acquired in good faith, Applicant failed to make proper application to the Board within 90 days to

⁸It appears that in early 1976, Mr. Brett proposed an exchange of stock with Ms. Parry. Mr. Brett's own valuation of Ms. Parry's Bank stock for purposes of an exchange for unrelated securities held by Mr. Brett was \$600 per share. Mr. Brett stated at the hearing that there were no changes that would give rise to a significant increase in the value of Bank's stock in the 18 months since Mr. Brett's exchange offer. (Transcript p. 120-121)

retain the shares as required in § 3(a) of the Act. On the basis of a review of the facts surrounding the formation of the trust, the documents evidencing the trust and the affidavits of the parties to the transaction, it appears that the transaction was not an attempt to evade the Act, that the Federal Reserve Bank of St. Louis was made fully aware of the circumstances surrounding creation of the trust within 90 days of Applicant's acquisition of sole discretionary voting authority over the shares of Bank, and that the shares of Bank were acquired in good faith in a fiduciary capacity. Applicant has indicated that if its present application is denied it will accept that determination by the Board as a determination that it may not retain the 100 shares of Bank's stock held in trust and will divest of those shares in compliance with the two-year statutory requirement in § 3(a) of the Act. In view of the foregoing, the Board finds that Applicant's conduct with respect to the shares held in trust has not been such as would require denial of this application.

Considerations relating to the financial resources of Bank and Applicant are consistent with approval of the application. The financial resources of Applicant and its subsidiaries are considered satisfactory. Although Applicant would incur some debt in connection with its acquisition of Bank, Applicant has stated that all indebtedness related to Bank's acquisition could be retired within four years.

Protestant contends that the future prospects of Bank and the convenience and needs of the community would be adversely affected by approval of this application. Protestant points to a petition signed by over 6000 local residents supporting Mr. Brett and his effort to keep Bank an "independent" bank. Protestant contends that the future prospects of Bank would be adversely affected by the combination of a loss of Bank's current management and a withdrawal of deposits by citizens opposing the acquisition. The Board has reviewed the complete record and finds that, although some of Bank's management may leave as a result of this acquisition, Applicant has sufficient managerial resources to fill any vacancies that may occur. Moreover, most of Bank's officers, including Mr. Brett, are over 65 years old and would be likely to retire soon in any case. Bank's management presently has no plans for management succession and to that end, Applicant's ability to provide successor management lends some weight toward approval of this application. In addition, the 6000 signatures Protestant has collected do not indicate an intent on the part of the signatories to terminate their business

relationships with Bank. The petitions do not name Applicant or the proposed acquisition. The petitions merely express support for Mr. Brett to do his best to keep Bank an independent bank.

Protestant alleges that independent banks serve their communities better than banks owned by bank holding companies. Moreover, Protestant contends that people within a community should have a choice between doing business with an independent bank and a subsidiary bank of a bank holding company. The Board regards these arguments as being relevant only to the extent that they reflect upon the convenience and needs of the relevant community to be served in each application. The record in this application shows that the Mexico banking market is not a highly competitive banking market.⁹ The Comptroller of the Currency has noted in his comments upon this application that "Applicant appears to possess the financial and managerial resources necessary to aid Bank in becoming a more aggressive competitor and a more meaningful banking alternative."

Applicant has stated that it will provide a variety of new or expanded services, including \$200 minimum balance free checking, maximum interest rates on customers' savings, expanded operating hours, improved drive-in facilities, trust services, improved data processing services for Bank, direct equipment leasing and an automobile leasing program. Thus, considerations relating to the convenience and needs of the community to be served lend some weight toward approval of the application. The Board finds that approval of the proposed application would be in the public interest and that the application should be approved.

On the basis of the complete record, the application is approved for the reasons summarized above. The transaction shall not be made (a) before the thirtieth calendar day following the effective date of this Order or (b) later than three months after the effective date of this Order, unless such period is extended for good cause by the Board, or by the Federal Reserve Bank of St. Louis pursuant to delegated authority.

By order of the Board of Governors, effective August 11, 1977.

⁹It appears that the other bank located in Mexico is the only subsidiary bank of the third largest holding company in Missouri that does not offer free checking services. Bank does not offer free checking services to its customers either.

Voting for this action: Chairman Burns and Governors Wallich, Coldwell, Jackson, Partee, and Lilly. Absent and not voting: Governor Gardner.

Huntington Bancshares Incorporated,
Columbus, Ohio

Order Approving Acquisition of Bank

Huntington Bancshares Incorporated, Columbus, Ohio ("Applicant"), a bank holding company within the meaning of the Bank Holding Company Act, has applied for the Board's approval under § 3(a)(3) of the Bank Holding Company Act (12 U.S.C. § 1842(a)(3)) to acquire 100 per cent of the voting shares (less directors' qualifying shares) of the successor by merger to Bellefontaine National Bank, Bellefontaine, Ohio ("Bank"). The bank into which Bank is to be merged has no significance except as a means to facilitate the acquisition of the voting shares of Bank. Accordingly, the proposed acquisition of shares of the successor organization is treated herein as the proposed acquisition of the shares of Bank.

Notice of the application, affording opportunity for interested persons to submit comments and views, has been given in accordance with § 3(b) of the Act. The time for filing comments and views has expired, and the Board has considered the application and all comments received, including those of the Department of Justice, in light of the factors set forth in § 3(c) of the Act (12 U.S.C. § 1842(c)).

Applicant, the seventh largest banking organization in Ohio, controls twelve banking subsidiaries with aggregate deposits of approximately \$1.4 billion, representing 4.1 per cent of total commercial bank deposits in Ohio.¹ Acquisition of Bank (\$29.9 million in deposits) would increase Applicant's share of Statewide commercial bank deposits by only 0.2 per cent and would have no appreciable effect upon the concentration of banking resources in Ohio.

Bank is the largest of seven banking organizations located in the Logan County banking market,²

and controls approximately 35.6 per cent of the total deposits in commercial banks in the market. Applicant's closest subsidiary bank, Huntington First National Bank of Kenton, ("Kenton Bank"), is located in the separate Hardin County banking market, which adjoins Logan County to the north. Bank operates four offices, the closest of which is located in Belle Center and is 13.3 miles from the nearest Kenton Bank office and in a different banking market. In light of all the evidence of record, including the fact that Bank and Kenton Bank are located in separate banking markets, it appears that no meaningful amount of existing competition would be eliminated. Furthermore, acquisition of Bank would not have any significant adverse effects upon potential competition, since it is unlikely Applicant would enter the Logan County banking market *de novo*, and after consummation of this proposal four independent banks would remain as entry vehicles for outside bank holding companies. Accordingly, on the basis of the above and other facts of record, it is concluded that consummation of the proposed transaction would not have any significant adverse competitive effect.

In arriving at this conclusion, the Board has also considered the comments by the Department of Justice that consummation would have adverse competitive effects. While consummation of the proposal may have some slight adverse effects on potential competition, in light of the Board's findings described above, it does not appear that such effects would be significant, and, balanced against the convenience and needs considerations discussed below, the Board is of the view that denial of the subject application is not warranted.

Considerations relating to the financial and managerial resources and future prospects of Bank and Applicant and its subsidiaries are regarded as satisfactory. Managerial succession at Bank will be furnished by Applicant; therefore, banking factors are consistent with approval.

Applicant has indicated that affiliation will enable Bank to increase services currently offered to its customers, including business checking accounts, expanded checking services to include Applicant's "All-in-One Account", bank credit card services, data processing services, and specialized commercial loan services and overdraft protection. Considerations relating to the convenience and needs of the community to be served lend some weight toward approval of the application and outweigh any slightly adverse competitive effects that approval may have. Accordingly, it has been determined that the proposed acquisition would be in the

¹ All banking data are as of December 31, 1976, and reflect bank holding company formations and acquisitions approved as of June 30, 1977.

² The relevant geographic market for purposes of analyzing the competitive effects of the proposed transaction is approximated by Logan County, Ohio.

public interest and that the application should be approved.

On the basis of the record, and for the reasons summarized above, the application is approved. The transaction shall not be made (a) before the thirtieth calendar day following the effective date of this Order or (b) later than three months after the effective date of this Order, unless such period is extended for good cause by the Board, or by the Federal Reserve Bank of Cleveland pursuant to delegated authority.

By order of the Board of Governors, effective August 31, 1977.

Voting for this action: Vice Chairman Gardner and Governors Wallich, Coldwell, Jackson, Partee, and Lilly. Absent and not voting: Chairman Burns.

(Signed) ROBERT E. MATTHEWS,
Assistant Secretary of the Board.

[SEAL]

Manchester Financial Corp.,
St. Louis, Missouri

Order Approving Acquisition of Bank

Manchester Financial Corp., St. Louis, Missouri, a bank holding company within the meaning of the Bank Holding Company Act, has applied for the Board's approval under § 3(a)(3) of the Act (12 U.S.C. § 1842(a)(3)) to acquire all of the voting shares, less directors' qualifying shares, of Manchester Bank West County, Maryland Heights, Missouri ("Bank"), a proposed *de novo* bank.

Notice of the application, affording opportunity for interested persons to submit comments and views, has been given in accordance with § 3(b) of the Act. The time for filing comments and views has expired, and the Board has considered the application and all comments received including those of the Plaza Bank of West Port, St. Louis, Missouri ("Plaza Bank"), and of the Missouri Association of Community Organizations for Reform Now, in light of the factors set forth in § 3(c) of the Act (12 U.S.C. § 1842(c)).

Applicant controls two banks with total deposits of \$140.9 million, representing approximately 0.7 per cent of the total deposits in commercial banks in Missouri.¹ Since the application involves the acquisition of a proposed *de novo* bank, consummation of the proposal would not immediately increase Applicant's share of commercial bank deposits in Missouri.

Bank is to be located in the St. Louis banking market,² the same market in which Applicant's two existing subsidiary banks are located. Applicant is the thirteenth largest banking organization in the St. Louis banking market, with 1.7 per cent of total deposits in commercial banks in the market. Applicant's share in this banking market would not change initially as a result of approval. The proposed site of Bank is Maryland Heights, a suburban area in west St. Louis County, with the closest banking office of any subsidiary of Applicant³ located approximately 17 miles southeast of Bank. The expected primary service area ("PSA") of Bank does not include any portion of the PSA's of Applicant's subsidiary banks, although the subsidiaries currently do derive some business from Bank's expected PSA. One other bank, Plaza Bank (\$38.2 million in deposits), is located in Bank's PSA and seven other banks (none of them subsidiaries of Applicant) are located within six miles of Bank. Since Bank is a *de novo* bank, there will be no elimination of existing or potential competition. There would appear to be, therefore, no adverse competitive effects that would derive from consummation of this proposal.

The financial and managerial resources and future prospects of Applicant and its subsidiary banks are regarded as satisfactory. Bank, as a proposed *de novo* bank, has no financial or operating history; however, its prospects as a subsidiary of Applicant appear favorable.

Establishment of Bank would provide an additional source of banking service to the community. Bank would offer a full range of banking services, including data processing, commercial and consumer loans, construction and real estate loans, and savings plans. Bank will have access to Applicant's financial and managerial resources and the capability of selling loan participations in excess of \$1,000,000 to Applicant's subsidiary banks, thereby meeting the larger credit needs of the community.

The Board has received comments in opposition to the proposal that relate to convenience and needs factors. Plaza Bank, the only other commercial bank located in Bank's projected primary service area, suggests that the growth of the proposed service area has leveled off since 1970 and that,

²The St. Louis banking market includes all of the city of St. Louis and St. Louis County, portions of St. Charles and Jefferson Counties in Missouri, and portions of Madison and St. Claire Counties in Illinois.

³The National Bank of Affton, Affton, Missouri.

¹All deposit data are as of December 31, 1976.

therefore, the area cannot support a *de novo* bank at the present time. In support of this, Plaza Bank submitted economic statistics that forecast slower rates of growth for the proposed service area of the new bank by 1980.

Bank will be located in the St. Louis County portion of the St. Louis banking market. This area has been one of the fastest growing counties in the St. Louis Standard Metropolitan Statistical Area ("SMSA"). During the 1960-70 decade, the population of St. Louis County increased 35.3 per cent relative to an increase of 11.2 per cent for the St. Louis SMSA and 8.0 per cent for the State.⁴ For the period 1970-75, the population of St. Louis County increased approximately 3.9 per cent relative to a 1.8 per cent increase for the population of the State. St. Louis County is projected to grow an additional 3.8 per cent in population by 1980.

The population growth of the proposed PSA of Bank exceeded that of St. Louis County from 1960 to 1975. For example, population for the PSA increased 168.3 per cent (12,300 to 33,000) from 1960 to 1970 and an additional 30.3 per cent (33,000 to 43,000) from 1970 to 1975. As Plaza Bank suggests, it may be difficult for this area to maintain this high rate of population growth in future years; however, there is nothing in the record to indicate that this area will not continue to experience growth or that the area is unable to support a new bank.

Bank will be located in a new shopping center, one mile west of the largest industrial district in northwest St. Louis County. It is estimated that there are approximately 1,100 firms in the PSA, employing 17,000 persons. In addition, a multifaceted business, retail, and entertainment complex lies within the PSA. There are no local conditions apparent at this time that would adversely affect the future of Bank.

From 1970 to 1976, total deposits increased 78.1 percent for the banks in St. Louis County relative to 56.5 per cent deposit growth for all the banks in the SMSA and 66.6 per cent for the State. In addition, Plaza Bank moved to its present location in April 1975, presumably finding that relocation, which is near the site of Bank and within Bank's PSA, to be responsive to a need for banking services in that area. From June 1975 to December 1976 in this new location, Plaza Bank's deposit base

increased substantially and at a greater rate than the aggregate deposit growth of all banks in St. Louis County. In the Board's view, this area can support an additional bank and the Board, therefore, agrees with the Missouri Commissioner of Banking that the formation of a new bank in this area would significantly enhance the convenience and serve the needs of the community.

The Board has received the views of the Missouri Association of Community Organizations for Reform Now ("ACORN") relating to the convenience and needs of the communities to be served. ACORN asserts that Applicant's larger subsidiary bank, Manchester Bank of St. Louis, St. Louis, Missouri ("Manchester Bank", total deposits of \$126.6 million) follows a practice of disinvestment in the city of St. Louis. Specifically, ACORN alleges that in 1975, the Manchester Bank made only 11 mortgage loans in the entire City of St. Louis, totalling \$78,000 or 7.6 per cent of the total mortgage dollars lent by Manchester Bank, while "three wealthy suburbs received \$539,000 in mortgage loans or 52.8 per cent of the 1975 total."

ACORN further alleges that during the period from January to June 1976, Manchester Bank made 20 home mortgage loans totalling \$889,000, only four of which were made in the city, totalling \$51,000, or less than 6 per cent of the total. From July to December of 1976, \$851,100 in mortgage loans were made by Manchester Bank, nine of which (comprising 13 per cent of the total dollars) were made within the city, according to ACORN. Yet, during the year only two mortgage loans totalling \$10,500 were made in "the Manchester-Tower Grove area" in which Manchester Bank is located, according to ACORN.

Finally, ACORN asserts that from July to December of 1976, Manchester Bank made 100 home improvement loans totalling \$216,433 and that only two of these loans—totalling, \$8,976—were made in the Bank's immediate area. ACORN urges the Board to consider the alleged community disinvestment practices of Manchester Bank in its decision on this application.

Applicant has responded to ACORN's assertions by citing Manchester Bank's "extensive involvement in recent years in efforts to redevelop areas of the City of St. Louis, including the area immediately surrounding the Bank. . . ."

In evaluating ACORN's comments, it is significant that it relates to only one type of banking service. An examination of one service alone does not produce an accurate view of a bank's overall

⁴All population data are from the Bureau of the Census. Population projections are from the St. Louis Chapter, American Statistical Association.

ability to meet the convenience and needs of its community. ACORN focuses primarily upon the origination of residential real estate loans, and ignores the many other types of services and loans offered by Manchester Bank. As of December 31, 1976, 11.5 per cent (\$7.7 million) and 1.0 per cent (\$0.7 million) of Manchester Bank's total loan portfolio were loans secured by mortgages on 1-4 family residential properties and home improvement loans, respectively. It appears from the record that Manchester Bank emphasizes loans to businesses, that is, commercial real estate loans (\$8.7 million, 12.9 per cent of total loans) and commercial and industrial loans (\$36.8 million, 54.5 per cent of total loans) over residential mortgage loans. The balance of Manchester Bank's loans are in the consumer area (approximately \$13.6 million, 20.1 per cent). As the Board has indicated on previous occasions, commercial banks are multiproduct firms that offer a broad range of services to the community. As the Board has previously stated:

"bank managements should and do have a range of discretion as to the types of loans they will make and the degree of risk they will assume." AS&T may reasonably choose to minimize or to emphasize a particular type of lending, and it would not be appropriate to assess AS&T's performance in satisfying the convenience and needs of the community by focusing on only two of the many services it offers.⁵

To evaluate a bank's performance with respect to serving the convenience and needs of the community solely on the basis of only one of the services a bank may offer overlooks entirely the interests of the many other customers a bank may serve through a broad range of services denominated as "commercial banking." For instance, it appears that Manchester Bank has invested more funds in redevelopment bonds than its total mortgage lending volume during the July to December 1976 period cited by ACORN. These bonds, issued by the Planned Industrial Expansion Authority of the City of St. Louis, Missouri, are earmarked for commercial development in the very area as to which ACORN has alleged disinvestment. Instead of this

focus on a limited area, the Board looks to the aggregate of all the commercial banking services provided by a bank in evaluating what weight should be accorded the convenience and needs considerations in connection with a particular application.

In this case, the data submitted to the Board by ACORN, when considered in the context of Manchester Bank's aggregate investment and loan portfolio and the variety of other services offered by that institution, do not, in the Board's judgment, establish probable cause to believe that Manchester Bank has failed to serve the needs of the community in which it operates, nor that Bank, as a subsidiary of Applicant, will not be in a position to serve the convenience and needs of the community in which it will be operating.

Finally, Plaza Bank has argued here that the method of Bank's incorporation represents a violation of a provision of Missouri State law⁶ that should prevent the Board from approving the proposal. Plaza's argument rests on two premises: (1) that the Board is required to consider issues of State law such as that presented by this proposal in deciding whether to approve or deny the subject application; and (2) that the chartering of Bank was invalid under § 362.015 of the Statutes of Missouri.⁷

Pursuant to the Supreme Court's holding in *Whitney National Bank of Jefferson Parish v. Bank of New Orleans and Trust Company*,⁸ the Board may "not approve a holding company arrangement involving the organization and opening of a new bank if the opening of the bank, by reason of its ownership by a bank holding company, would be prohibited by a valid State law."⁹ The *Whitney* case involved a bank holding company acquisition of a

⁶MO. ANN. STAT § 362.015 (Vernon, 1968).

⁷Section 362.015 of the Statutes of Missouri (MO. ANN. STAT. § 362.015 (Vernon 1968)) provides that "any five or more persons who shall have associated themselves by articles of agreement in writing, as provided by law, for the purpose of establishing a bank or trust company may be incorporated under any name or title designating such business." This provision has been interpreted by Missouri State courts as prohibiting a corporation from acting as the principal named incorporator of a bank, *Mark Twain Cape Girardeau Bank v. State Banking Board*, 528 S.W. 2d 443 (Mo. App. 1975); *Mark Twain Bancshares, Inc., v. Kostman*, 541 S.W. 2d (Mo. App. 1975). Plaza Bank contends that the five individual incorporators of Bank (who presently serve in the capacity of officers and/or directors in Applicant and/or Applicant's subsidiary banks) are not "persons" within the meaning of § 362.015 because, Plaza Bank argues, the individuals are acting in the capacity of agents of Applicant and a corporation should not be able to do indirectly what it is prohibited from doing directly.

⁸379 U.S. 411 (1963).

⁹*Id.* at 419.

⁵Board's Order of February 19, 1976 approving the application of American Security Corporation, to acquire the successor by merger to American Security and Trust Company, both of Washington, D.C., 62 Federal Reserve BULLETIN 255, 258 (1976), citing the Board's Order of November 19, 1975, approving the acquisition and merger applications of Marine Midland Bank, Inc., Buffalo, New York, 61 Federal Reserve BULLETIN 890, 893 (1975).

new bank that, the plaintiff contended, would in actuality function as a branch bank in a State in which branch banking was prohibited by State law. Thus, it was asserted, Board approval of an application to acquire such a bank would have enabled the bank holding company to enter into a *de facto* branch banking arrangement that was prohibited by State law and, in effect, would have constituted Board approval of unlawful conduct. Since the holding in *Whitney*, the Board has resolved issues of State law where they directly pertain to the question of whether the acquisition of a bank by a bank holding company would result in a violation of State law.¹⁰ In the facts presented by the instant application, however, the violation, if any, of Missouri law occurred upon the issuance of the charter for Bank by the Missouri Commissioner of Finance. Approval of the instant application would constitute an approval of Applicant's acquisition of shares of Bank, not approval of the chartering of Bank. Thus, the Board, by approving the instant application, would not approve assertedly unlawful conduct.

The Board has never presumed to review the incorporation or chartering procedures defined by State statutes and administered by State banking officials. Instead, the Board merely requires evidence of the issuance of the necessary charter or its conditional or preliminary approval and solicits the comments of the appropriate banking authority.¹¹ Here, Bank's charter has been granted by the Missouri Finance Commissioner and, absent a judicial determination to the contrary, the Board presumes that the charter was granted lawfully. Since the effectiveness of the chartering action has not been stayed, the pending litigation in the Missouri State courts does not act as a bar to the Board's action on this application.¹²

¹⁰See Intermountain Bankshares Co., 61 Federal Reserve BULLETIN 442 (1975) (West Virginia statute arguably prohibiting the formation of bank holding companies in the State); Northwest Bancorporation, 38 Fed. Reg. 21530 (1973) (Iowa statute restricting acquisition of Iowa Bank by out-of-State bank holding companies); and Valley View Bancshares, Inc., 61 Federal Reserve BULLETIN 676 (1975) (Kansas statute prohibiting formation of multi-bank holding companies).

¹¹The Board's practice of not examining the validity of State banking charters is consistent with Missouri State law which provides that the exclusive proceeding by which competing banks may challenge a bank charter is by appealing the issuance of that charter in State court, pursuant to §§ 361.094 and 361.095, Missouri Statutes.

¹²Plaza Bank has challenged the charter in several State administrative and judicial actions, some of which are still pending; however, to date the Bank's charter has not been stayed. The Board's approval, of course, does not preclude Plaza Bank from continuing to pursue its remedies in the Missouri State courts.

Based on the foregoing and the facts of record, the Board concludes that there would be no adverse competitive effects resulting from consummation of the proposal and that considerations relating to banking factors and convenience and needs of the community to be served are consistent with approval of the application. It is the Board's judgment that the proposed acquisition is in the public interest and that the application should be approved.

On the basis of the record, the application is approved for the reasons summarized above. The transaction shall not be made (a) before the thirtieth calendar day following the effective date of this Order or (b) later than three months after that date, and (c) Manchester Bank of West County, Maryland Heights, Missouri, shall be opened for business not later than 6 months after the effective date of this Order. Each of the periods described in (b) and (c) may be extended for good cause by the Board, or by the Federal Reserve Bank of St. Louis, pursuant to delegated authority.

By order of the Board of Governors, effective August 15, 1977.

Voting for this action: Governors Wallich, Coldwell, Jackson, Partee, and Lilly. Absent and not voting: Chairman Burns and Governor Gardner.

Metropolitan Bank and Trust Company,
Philippine Securities Corporation and
Tytana Corporation,
Makati, Rizal, Philippines

*Order Approving
Formation of Bank Holding Companies*

Metropolitan Bank and Trust Company ("Metropolitan"), Philippine Securities Corporation ("PSC"), and Tytana Corporation ("Tytana"), all of Makati, Rizal, Philippines (referred to collectively as "Applicants"), have applied for the Board's approval under § 3(a) (1) of the Bank Holding Company Act (12 U.S.C. § 1842 (a) (1)) of formation of bank holding companies by acquiring directly or indirectly up to 35 per cent of the voting shares of International Bank of California, Los Angeles, California ("Bank").

Notice of the applications, affording opportunity for interested persons to submit comments and views, has been given in accordance with § 3(b) of the Act. The time for filing comments and views has expired, and the Board has considered the

applications and all comments received in light of the factors set forth in § 3(c) of the Act (12 U.S.C. § 1842(c)).

Metropolitan (deposits of approximately \$165.3 million)¹ was organized in 1962 as a Philippine commercial bank. It presently operates 86 branches in the Philippines, a branch in Taiwan, and an agency in Los Angeles, California. PSC is principally engaged in the real estate business as a direct investor and dealer. PSC's application to become a bank holding company is necessitated by the fact that it exercises a controlling influence over the management or policies of Metropolitan.² Tytana is a Philippine investment company that directly or indirectly owns 27.7 per cent of the voting shares of Metropolitan and thus is deemed to control Metropolitan pursuant to § 2(a)(2)(A) of the Act. With the exception of Metropolitan's Los Angeles agency, neither Metropolitan, PSC, nor Tytana is engaged in any activities directly or indirectly in the United States.

Bank (deposits of approximately \$4.4 million)³ ranks 96th out of 98 banking organizations in the relevant banking market and has only a .01 per cent share of market deposits.⁴ Metropolitan's Los Angeles agency is not authorized to accept domestic deposits, and it does not appear from the facts of record that any meaningful competition between Bank and the agency would be eliminated as a result of this proposal. In view of Bank's size and its rank in the market, the Board believes that its acquisition by Metropolitan, a major Philippine commercial bank, should have a salutary effect on competition by enhancing Bank's competitive capabilities relative to the other banks in the mar-

ket. Therefore, on the basis of the record, the Board concludes that consummation of the proposal would not have a significant adverse effect on existing or potential competition, nor would it have a significant effect on the concentration of banking resources, in any relevant area. Competitive considerations are, therefore, consistent with approval of the applications.

The financial and managerial resources and future prospects of Applicants are considered generally satisfactory; and, in view of Applicants' intention to strengthen the management of Bank, the same considerations appear to be generally satisfactory with respect to Bank. Accordingly, banking factors are consistent with approval of the subject applications. Although there would be no immediate increase in the services offered by Bank as a result of the proposed transaction, the considerations relating to the convenience and needs of the community to be served are consistent with approval of the applications. In particular, Bank's affiliation with Metropolitan will result in another international banking link between the Philippines and the United States. It is the Board's judgment that the proposed transactions would be consistent with the public interest and that the applications should be approved.

On the basis of the record, the applications are approved for the reasons summarized above. The transactions shall not be made (a) before the thirtieth calendar day following the effective date of this Order or (b) later than three months after the effective date of this Order, unless such period is extended for good cause by the Board, or by the Federal Reserve Bank of San Francisco pursuant to delegated authority.

By order of the Board of Governors, effective August 10, 1977.

Voting for this action: Chairman Burns and Governors Wallich, Coldwell, Jackson, Partee, and Lilly. Absent and not voting: Governor Gardner.

(Signed) GRIFFITH L. GARWOOD,
Deputy Secretary of the Board.

Northwest Bancorporation,
Minneapolis, Minnesota

Order Granting Reconsideration

Northwest Bancorporation, Minneapolis, Minnesota ("Northwest"), has requested reconsideration of the Order of May 2, 1977 (63 Federal Reserve BULLETIN 585 (1977)), whereby the Board

¹ As of January 31, 1977.

² PSC owns approximately 18.8 per cent of the voting shares of Metropolitan. In addition, PSC's principals own approximately 35.6 per cent of the voting shares of Metropolitan and three of PSC's officers or directors also serve as officers or directors of Metropolitan. PSC has previously been advised that in the view of the Board's staff the rebuttable presumption of control contained in § 225.2(b)(2) of Regulation Y [12 CFR § 225.2(b)(2)] would apply to PSC's relationship with Metropolitan if Metropolitan were to become a bank holding company. By virtue of its filing the subject application to become a bank holding company, PSC acknowledges that it would exercise a controlling influence over Metropolitan and thereby waives the notice and opportunity for hearing requirements of § 2(a)(2)(C) of the Act. In connection with its consideration of PSC's application, the Board has determined that PSC exercises a controlling influence over the management or policies of Metropolitan and thus would become a bank holding company upon consummation of the subject proposal.

³ As of December 31, 1976.

⁴ The relevant banking market is approximated by Orange and Los Angeles Counties.

of Governors denied the application of Northwest for prior approval of the acquisition of First National Bank, Fort Dodge, Iowa, pursuant to section 3(a)(3) of the Bank Holding Company Act of 1956, as amended (12 U.S.C. § 1842(a)(3)).

The request for reconsideration is filed pursuant to section 262.3(g)(5) of the Board's Rules of Procedure (12 CFR § 262.3(g)(5)), which provides that the Board will not grant any request for reconsideration "unless the request presents relevant facts that, for good cause shown, were not previously presented to the Board, or unless it otherwise appears to the Board that reconsideration would be appropriate." The Board finds that the request for reconsideration presents relevant facts and issues which appear appropriate in the public interest for the Board to consider. Accordingly, the request for reconsideration is hereby approved.

In order to facilitate such consideration, comments regarding the proposed acquisition may be filed with the Board not later than September 23, 1977. Communications should be addressed to the Secretary, Board of Governors of the Federal Reserve System, Washington, D.C. 20551. The application, as supplemented by Northwest's request for reconsideration, may be inspected at the offices of the Board of Governors or at the Federal Reserve Bank of Minneapolis.

By order of the Board of Governors, effective August 29, 1977.

Voting for this action: Vice Chairman Gardner and Governors Wallich, Jackson, and Partee. Present and abstaining: Governor Lilly. Absent and not voting: Chairman Burns and Governor Coldwell.

(Signed) GRIFFITH L. GARWOOD,
[SEAL] *Deputy Secretary of the Board.*

Southern Bank Holding Company,
Savannah, Georgia

*Order Approving Formation
of Bank Holding Company*

Southern Bank Holding Company, Savannah, Georgia ("Applicant"), has applied for the Board's approval under § 3(a)(1) of the Bank Holding Company Act (12 U.S.C. § 1842(a)(1)) ("Act") of the formation of a bank holding company through acquisition of 54.7 per cent or more of the voting shares of Southern Bank and Trust Company, Savannah, Georgia ("Bank").

Notice of the application, affording opportunity for interested persons to submit comments and

views, has been given in accordance with § 3(b) of the Act. The time for filing comments and views has expired, and the Board has considered the application and all comments received in light of the factors set forth in § 3(c) of the Act (12 U.S.C. § 1842(c)).

Applicant is a nonoperating corporation organized for the purpose of becoming a bank holding company by acquiring Bank, which holds deposits of \$3.9 million.¹ Upon acquisition of Bank, Applicant would control one of the smaller commercial banking organizations in the State of Georgia, holding approximately 0.03 per cent of total deposits in commercial banks in that State.

Bank is the 10th largest commercial banking organization in the relevant banking market and holds approximately 0.78 per cent of the total commercial bank deposits in the market.² Since Applicant has no subsidiaries and Applicant's principals do not control any other banks, it appears unlikely that consummation of the proposal would have any adverse effect upon existing or potential competition or increase the concentration of banking resources in any relevant area.³ Thus, the Board concludes that the competitive effects of the proposal are consistent with approval of the application.

The financial resources and future prospects of Applicant and Bank are generally satisfactory. Since the proposed transaction will be accomplished through an exchange of stock, there is no acquisition debt associated with the proposal.

Bank was originally chartered as a building and loan association by the State of Georgia with the name Southern Savings and Loan Company ("Southern Savings"). Approximately 40 per cent of that institution's outstanding voting shares were owned directly and indirectly by Atlantic Insurance and Investment Company, Savannah, Georgia ("Atlantic"). Atlantic's principal officers are also principal officers of Applicant and Atlantic's five largest stockholders will become Applicant's principal owners as a result of the proposed transaction.⁴

¹All banking data are as of December 31, 1976.

²The relevant banking market is approximated by all of Chatham and Effingham Counties, Georgia, and those portions of Liberty and Bryan Counties, Georgia, east of Fort Stewart.

³Applicant's principals do control several nonbanking corporations. However, none of these corporations is engaged to any significant extent in the provision of any of the services provided by Bank.

⁴Atlantic's direct and indirect interest in Bank will be transferred to Atlantic's shareholders as part of the proposed transaction. Atlantic's shareholders will then exchange those and other shares of Bank for the Applicant's shares. The Board's approval of the instant application does not represent a determination that the proposed transaction will terminate Atlantic's control of Bank.

In May of 1975 Southern Savings was granted a commercial banking charter by the State and its name was changed to that of Bank. The conversion of Southern Savings' charter may have caused Atlantic to become a bank holding company without the Board's prior approval in contravention of section 3(a)(1) of the Act. However, in a recently filed request for a "prior certification" under the Bank Holding Company Tax Act of 1976 (26 U.S.C. § 1101 *et seq.*), Atlantic contends that Southern Savings was a "bank" within the meaning of section 2(c) of the Act since at least as early as July 7, 1970. The Board does not decide this issue at this time, but rather reserves it for consideration in the context of Atlantic's tax certification request. In considering Applicant's managerial resources, the Board does note, however, that even Atlantic's view of the law and the facts would compel the conclusion that Atlantic has violated the Act in that it would have become a bank holding company upon the enactment of the 1970 amendments to the Act and thereafter have failed to register as a bank holding company as required by section 5(a) of the Act. Accordingly, the Board concludes that Atlantic has violated the Act without reaching the issue of whether section 3(a)(1) or section 5(a) of the Act has been violated.

It is the Board's view, however, on the basis of the facts and circumstances of the subject application, that Atlantic's violation of the Act was inadvertent. Additionally, the Board notes that Atlantic, upon becoming aware of the existence of the violation, took steps to conform its operations to the Act by agreeing to terminate its direct and indirect ownership of Bank's shares. The officers of Atlantic and Applicant have taken steps to prevent further violations from occurring by establishing procedures for centralized internal review of all of Applicant's and Atlantic's activities for compliance with the substantive and procedural requirements of the Act and the Board's Regulation Y. The Board expects that these actions will assist Applicant and Atlantic in avoiding a recurrence of similar violations. In consideration of the above and other information in the record of this application, the Board has determined that the circumstances of the above violations do not warrant denial of the application.

Considerations relating to the convenience and needs of the community to be served are consistent with approval. It is the Board's judgment that consummation of the proposed transaction would be consistent with the public interest and the application should be approved.

On the basis of the record, the application is approved for the reasons summarized above. The transaction shall not be made (a) before the thirtieth calendar day following the effective date of this Order or (b) later than three months after the effective date of this Order, unless such period is extended for good cause by the Board, or by the Federal Reserve Bank of Atlanta pursuant to delegated authority.

By order of the Board of Governors, effective August 31, 1977.

Voting for this action: Vice Chairman Gardner and Governors Wallich, Coldwell, Jackson, Partee, and Lilly.
Absent and not voting: Chairman Burns.

(Signed) ROBERT E. MATTHEWS,
[SEAL] *Assistant Secretary of the Board.*

ORDER UNDER SECTIONS 3 AND 4 OF THE BANK HOLDING COMPANY ACT

First Guthrie BancShares, Inc.,
Guthrie, Oklahoma

Order Approving Formation of Bank Holding Company and Engaging in Insurance Agency Activities

First Guthrie BancShares, Inc., Guthrie, Oklahoma, has applied for the Board's approval under § 3(a)(1) of the Bank Holding Company Act (12 U.S.C. § 1842(a)(1)) of formation of a bank holding company by acquiring 80 per cent or more of the voting shares of The First National Bank of Guthrie, Guthrie, Oklahoma ("Bank").

Applicant has also applied for the Board's approval, pursuant to § 4(c)(8) of the Act (12 U.S.C. § 1843(c)(8)) and § 225.4(b)(2) of the Board's Regulation Y (12 CFR § 225.4(b)(2)), to acquire 100 per cent of the beneficial interest of a proposed business trust, First Guthrie Business Trust, Guthrie, Oklahoma, which will in turn own 100 per cent of First Guthrie Insurance Agency, Guthrie, Oklahoma ("Insurance"), a company that will engage in the activities of offering credit life insurance and credit accident and health insurance in connection with extensions of credit by Bank. Such activities have been determined by the Board to be closely related to banking (12 CFR § 225.4(a)(9)).

Notice of the applications, affording opportunity for interested persons to submit comments and views on the applications, has been given in accordance with §§ 3 and 4 of the Act (42 *Federal Register* 31838). The time for filing comments and views has

expired, and the Board has considered the applications and all comments received in light of the factors set forth in § 3(c) of the Act and the considerations specified in § 4(c)(8) of the Act.

Applicant is a non-operating corporation organized for the purpose of becoming a bank holding company by acquiring Bank, which holds deposits of \$24.7 million.¹ Upon acquisition of Bank, Applicant would control the 99th largest commercial banking organization in the State of Oklahoma and approximately 0.2 per cent of total deposits in commercial banks in that State.

Bank is the largest of seven banks in the relevant banking market, which is approximated by Logan County, and holds approximately 43.5 per cent of the total commercial bank deposits in that market. Since Applicant has no other banking subsidiaries and Applicant's principals do not control any other banks, consummation of the proposal would not have any adverse effects upon either existing or potential competition nor would it increase the concentration of banking resources in any relevant area. Thus, the Board concludes that the competitive effects of the proposal are consistent with approval of the application.

The financial and managerial resources and future prospects of Applicant, which are dependent upon those of Bank and Insurance, appear satisfactory and are regarded as being consistent with approval of the application to become a bank holding company. The debt to be incurred by Applicant in connection with this proposal appears to be serviceable without having adverse effects on the financial condition of either Bank or Insurance. Therefore, considerations relating to banking factors are regarded as being consistent with approval. While no major changes are contemplated in Bank's services, considerations relating to convenience and needs of the community to be served are also consistent with approval. Accordingly, it is the Board's judgment that Applicant's proposal to form a bank holding company would be consistent with the public interest and that the application should be approved.

In connection with its application to become a bank holding company, Applicant has also applied for approval to acquire 100 per cent of the beneficial interest in First Guthrie Business Trust, which in turn would own 100 per cent of the voting shares of Insurance. Insurance would engage *de novo* in the sale of credit life and credit accident and health

insurance in connection with the extensions of credit by Bank. Under Oklahoma State law, financial institutions may not act as agent for the sale of credit-related insurance, nor may an insurance agency pass its income on to any corporation not licensed as an agent. The Oklahoma Attorney General has ruled, however, that the prohibition of Oklahoma insurance statutes do not apply to a business trust. Approval of the application would provide a convenient source of credit-related insurance, and the Board views this as being in the public interest. It does not appear that Applicant's engagement in these activities would have any significant adverse effects on competition. Furthermore, there is no evidence in the record indicating that consummation of the proposal would result in any undue concentration of resources, unfair competition, conflicts of interests, unsound banking practices or other adverse effects on the public interest.

Based on the foregoing and other considerations reflected in the record, the Board has determined that the considerations affecting the competitive factors under § 3(c) of the Act and the balance of the public interest factors the Board must consider under § 4(c)(8) of the Act both favor approval of Applicant's proposals.

Accordingly, the applications are approved for the reasons summarized above. The acquisition of Bank shall not be made before the thirtieth calendar day following the effective date of this Order. The acquisition of Bank and the commencement of the above-described insurance agency activities shall be made not later than three months after the effective date of this Order, unless such period is extended for good cause by the Board or by the Federal Reserve Bank of Kansas City pursuant to delegated authority. The approval of Applicant's credit-related insurance activities is subject to the conditions set forth in § 225.4(c) of Regulation Y and to the Board's authority to require reports by, and make examinations of, holding companies and their subsidiaries and to require such modification or termination of the activities of a bank holding company or any of its subsidiaries as the Board finds necessary to assure compliance with the provisions and purposes of the Act and the Board's regulations and orders issued thereunder or to prevent evasion thereof.

By order of the Board of Governors, effective August 23, 1977.

Voting for this action: Vice Chairman Gardner and Governors Wallich, Jackson, Partee, and Lilly. Absent and not voting: Chairman Burns and Governor Coldwell.

(Signed) GRIFFITH L. GARWOOD,
Deputy Secretary of the Board.

PETITION OF INVESTMENT COMPANY
INSTITUTE FOR RECONSIDERATION AND
RECISION OF A REGULATION OF THE BOARD,
12 C F R § 225.4(a)(5)(ii)

Order

On January 29, 1972, the Board promulgated a regulation, 12 C F R § 225.4(a)(5)(ii), and interpretive ruling, 12 C F R § 225.125, by which it determined that the activity of serving as an investment advisor, as defined in § 2(a)(20) of the Investment Company Act of 1940, to an investment company registered under that Act is closely related to banking and thus a permissible activity for bank holding companies to engage in, subject to the procedures set out in the Board's Regulation Y, 12 C F R § 225.37 *Federal Register* 1463-1464 (1972). Notice of the rulemaking had been duly given in the *Federal Register* on August 25, 1971, 36 *Federal Register* 16695, and on September 1, 1971, 36 *Federal Register* 17514; and a public hearing on the matter was held on November 12, 1971.

On December 12, 1973, the Investment Company Institute ("ICI"), Washington, D.C., the national association for the American mutual fund industry, filed with the Board a petition for reconsideration and rescision of 12 C F R § 225.4(a)(5)(ii). The Board duly considered ICI's petition and, by letter dated March 8, 1974, the Board denied the petition and responded in detail to the arguments that ICI had raised. ICI thereafter sought judicial review of the Board's order denying its petition for reconsideration. However, the United States District Court for the District of Columbia dismissed ICI's petition for review in an order dated July 30, 1975, 398 F. Supp. 725; and the Court of Appeals subsequently affirmed the District Court's order of dismissal for lack of subject matter jurisdiction, 551 F.2d 1270 (D.C. Cir. 1977). Nevertheless, the Court of Appeals, having determined that the state of the law of jurisdiction was not clear at the time ICI filed its previous petition, determined that ICI should have the opportunity to file a second petition for reconsideration and rescision of the Board's regulation.

Pursuant to the Court's order ICI has filed a second petition for reconsideration and rescision with the Board. The petition is accompanied by a memorandum containing ICI's legal arguments and by affidavits setting out facts in support of the petition. In addition, ICI has requested that the Board convene a formal hearing pursuant to the Administrative Procedure Act and that ICI's most recent petition be determined on the record of such a hearing. ICI has not protested or filed comments

with respect to any application by a bank holding company for permission to engage in the activity described in 12 C F R § 225.4(a)(5)(ii).

The additional facts presented by ICI with the present petition are to the same effect as the facts presented with ICI's previous petition for reconsideration: A number of banking organizations are giving investment advice to investment companies registered under the Investment Company Act of 1940. However, as with ICI's previous petition to the Board, most of the investment advisors identified by ICI are commercial banks, as distinguished from bank holding companies, which did not seek the Board's prior approval pursuant to 12 U.S.C. § 1843(c)(8) and 12 C F R § 225 before commencing the subject investment advisory activities.¹ The Board's regulation governs the investment advisory activities of bank holding companies and their non-banking subsidiaries. The conduct of commercial banks in this area is subject to administrative sanction at the Federal level by the Comptroller of the Currency (as to national banks) and the Board (as to State member banks); but such supervision is exercised without regard to the Bank Holding Company Act or the challenged regulation. ICI and courts before which ICI has argued have recognized these distinctions in *Investment Company Institute v. Camp*, 401 U.S. 617 (1971) and in *New York Stock Exchange and Investment Company Institute v. Robert Bloom*, No. 76-1235 (D.C. Cir., decided July 19, 1977). Although the national banking organizations in those cases, whose activities were alleged to be in violation of the Glass-Steagall Act, were holding company subsidiaries, it is clear that the courts as well as ICI viewed the Comptroller as the appropriate regulatory authority to consider the Glass-Steagall Act questions. Nevertheless, ICI asks the Board to rescind its regulation although the activity being complained of is being conducted chiefly by banks and the Board was not asked to approve, and in fact did not approve the activity pursuant to Regulation Y.²

¹All seven of the open-end funds identified on page 12, footnote 6 of ICI's Memorandum are advised by banks; and the Board has no record of the filing of any application under the Bank Holding Company Act relating to these activities. In addition, 8 of 12 funds identified on page 7, footnote 2 of ICI's Memorandum are advised by banks or subsidiaries of banks.

²ICI claims that the Board's previously expressed position that the challenged regulation and interpretation do not cover the activities of commercial banks "involves, as a practical matter, an illusory distinction." However, as the United States Court of Appeals in the District of Columbia Circuit stated with respect to the Board's determination that a certain other activity is closely related to banking, "[t]he order under review does not itself authorize any particular bank holding company to engage in

ICI's most recent petition also suggests that the Board consider the circumstances surrounding the formation of certain open-end funds which purport to be sponsored by brokerage organizations and to receive only investment advice from various bank affiliates of bank holding companies; the circumstances surrounding the organization and subsequent open-end conversion of Advance Investors Corporation; the feasibility as a commercial matter that investment funds can and will select banks as advisors without bank participation in the creation of the fund; and the desirability of regulating and prohibiting certain relationships between bank holding company affiliates and firms which sponsor or administer funds, such as the placement of brokerage, extensions of credit, and business referrals.

In presenting the above suggestions of topics to be considered by the Board, ICI does not raise issues of material fact that are appropriate for resolution by the Board in this proceeding. ICI notes that at least seven open-end investment companies created since ICI's previous petition are advised by commercial banks and that such banks have undertaken to restrict their activities with respect to such funds to the giving of investment advice. But ICI, which suggests the banks may have illegally sponsored these funds and indicates the banks place brokerage with the nominal sponsors, does not indicate that these activities are being engaged in pursuant to the Board regulation here challenged by ICI. All seven investment advisors named are banks, and no applications for prior approval of these activities were filed with or considered by the Board under § 4(c)(8) of the Bank Holding Company Act and the related regulations.³

courier activities." *National Courier Association v. Board of Governors*, 516 F.2d 1229, 1233 n. 4 (D.C. Cir. 1975). To give investment advice pursuant to the challenged regulation, a company must file an application pursuant to 12 CFR § 225. That the commercial bank advisors identified by ICI have failed to do so merely evidences the fact that their activities are not subject to the regulation and are not being engaged in pursuant thereto. The fact that some of the investment funds thus advised cite the Board's interpretation in their securities registration statements may indicate an acceptance of the Board's distinction between open-end and closed-end companies for purposes of determining whether affiliated investment companies "engaged principally" or "primarily engaged" in the securities business and thus whether sections 20 and 32 of the Glass-Steagall Act were violated. The logic of ICI's position would require approval under the Bank Holding Company Act of almost all corporate activities carried out by banks directly. This Congress clearly did not intend.

³Although some of the named banks are State member banks, the Board has not been asked by ICI to determine whether such banks are violating the Glass-Steagall Act through the named activities, but only whether their activities can be viewed as closely related to banking under a statute, section 4(c)(8) of the Bank Holding Company Act, on which they have not relied in commencing these activities.

ICI also reiterates its previous position that bank holding companies should not be permitted to sponsor closed-end funds. However, in support of its contention ICI indicates that a certain closed-end fund recently converted itself into an open-end fund. ICI argues that if the bank sponsor intended to open-end the fund from the day the fund was created, sections 16 and 21 would have been violated; but ICI admits "we presently have no reason to suspect that the foregoing is what actually happened."

As set forth more fully below, the Board has determined that a formal hearing is not required or appropriate in the present case. Neither the Administrative Procedure Act, U.S.C. § 551, *et seq.*, nor the Bank Holding Company Act, 12 U.S.C. § 1841 *et seq.*, requires that the Board's rulemaking proceedings be governed by formal procedures such as those used in judicial trials and administrative adjudications. In fact the latter statute has been amended by Congress to provide that the Board's proceedings need not be held "on the record"; and this amendment has the effect of preserving the Board's ability to use informal rulemaking procedures. See, e.g., *Independent Bankers Association of Georgia v. Board of Governors*, 516 F.2d 1206 (D.C. Cir. 1975).

The Board has also determined that informal hearing procedures, like those used by the Board when it considered adoption of the challenged regulation in 1971, are not required for full and fair disposition of ICI's most recent petition for reconsideration and rescission of 12 CFR § 225.4(a)(5)(ii). ICI fully participated in the hearing held in this matter prior to adoption of the regulation. The question raised by ICI—whether the challenged regulation and interpretive ruling allow bank holding companies to violate sections 16 and 21 of the Glass-Steagall Act, 12 U.S.C. §§ 24 and 378—is a legal question and was considered in the Board's deliberations leading to adoption of the regulation and in response to ICI's previous petition for reconsideration. Finally, ICI has presented no new facts which raise issues of material fact for resolution by the Board; and as discussed hereinafter the Board has concluded that the factual inquiries suggested by ICI are best left for later adjudicatory proceedings which may, depending on the circumstances, require use of formal or informal hearing procedures. Such adjudicatory proceedings must be held before any bank holding company may engage in the activity described by 12 C F R § 225.4(a)(5)(ii). See generally 12 C F R § 225.4.

In support of its request for a hearing, ICI cites several judicial decisions in which courts of appeal

have determined that hearings were appropriate on applications by bank holding companies for permission to engage in activities previously determined by the Board to be closely related to banking. *Alabama Association of Insurance Agents v. Board of Governors*, 533 F.2d 224 (5th Cir., 1976); *Independent Bankers Association of Georgia v. Board of Governors*, 516 F.2d 1206 (D.C. Cir. 1975). ICI argues that it would be entitled to a hearing were it opposing such an application, and that it should have a hearing in this case because the Court of Appeals recognized that ICI's interest in the Board's regulation extends beyond the facts of any particular application. However, these cases and ICI's argument appear to support the Board's conclusion that ICI's proposed factual inquiries should be resolved in later adjudicatory proceedings.

ICI apparently recognizes that the Board must determine two questions with respect to section 4(c)(8) and that the second question, the "public benefits" question, is the one that creates the need for a factual inquiry. Memorandum in Support of Petition for Reconsideration, pp. 32-33. In discussing its proposed factual inquiries, ICI states:

We submit, therefore, that Section 225.4(a)(5)(ii) requires reconsideration not only to prevent the direct sponsorship of closed-end funds in violation of the Glass-Steagall Act, as we have previously contended, but also to avoid another problem: that is, situations involving open-end funds which may not on their face demonstrate Glass-Steagall violations, but which *depending on the facts*, may indeed involve violations. In any event, these situations also present the possibility of a clear conflict with the Board's responsibilities under the Bank Holding Company Act to avoid 'undue concentration of resources, decreased or unfair competition [or] conflicts of interest. . . .' 12 U.S.C. § 1843(c)(8) [Emphasis supplied]

Memorandum, pp. 20-21. It is thus clear that ICI is asking the Board to apply the "public benefits" test of section 4(c)(8) in the context of an industry-wide rulemaking. ICI's allegations, however, go to the facts of particular operations by individual companies and how they bear on the public benefits aspects. See *National Courier Association v. Board of Governors*, 516 F.2d at 1233. Moreover, it is not clear whether the banking organizations identified in ICI's most recent petition would intervene in any hearing convened by the Board at this time, since most such organizations are not engaging in investment advisory activities pursuant to 12 C F R § 225.4(a)(5)(ii); and it is not apparent how the factual inquiries proposed

by ICI can be pursued absent such intervention. None of these organizations intervened in the lawsuit that preceded ICI's filing of the present petition. The present petition for reconsideration of a rule does not involve "resolution of conflicting private claims to a valuable privilege." *Action for Children's Television v. United States*, No. 74-2006 (D.C. Cir., decided July 1, 1977). For the foregoing reasons, the request for a hearing should be, and it hereby is, denied.⁴

The next question presented for the Board's consideration is whether the Board should reconsider and rescind 12 C F R § 225.4(a)(5)(ii). ICI argues that the challenged regulation and interpretation authorize bank holding companies to violate sections 16 and 21 of the Glass-Steagall Act. Among other things, ICI claims that bank holding companies and their banking subsidiaries are single entities, and that sections 16 and 21 are violated by the activities of such companies engaged in pursuant to the Board's regulations.

In its previous orders in this matter—37 *Federal Register* 1463-1464; letter of March 8, 1974, from the Board's Secretary to ICI's counsel—the Board dealt with ICI's contentions on the merits in considerable detail. After due consideration of the present petition and of those previous orders, and of the entire record that has been made in this proceeding, the Board believes its previous orders were legally and factually correct. Accordingly, the Board hereby reaffirms its previous orders in this matter and incorporates both orders by reference herein.

In what appears to be ICI's principal attempt to present "any relevant information which is developed in the interim" (since the Board's consideration of ICI's first petition for reconsideration), as suggested by the Court of Appeals, ICI alludes to information which suggests banks acting

⁴ICI indicates it is aware of the Board's weekly press release (Form H.2) and *Federal Register* notice summarizing each action taken and application received by the Board during the week covered by these notices. See above Memorandum in Support of Petition for Reconsideration, p. 10. ICI may challenge any application to the Board for permission to advise open-end or closed-end funds by responding to such notices or to the *Federal Register* or publication notices given on each such application to the Board. If any activity previously authorized by the Board has led to Glass-Steagall Act violations in spite of the safeguards and restrictions in 12 C F R § 225.125, ICI may petition the Board to institute cease and desist proceedings pursuant to 12 U.S.C. § 1818, or may refer alleged criminal violations of the Act directly to the appropriate United States Attorney, or may simply itself sue the offending banking organization. *New York Stock Exchange and Investment Company Institute v. Robert Bloom*, No. 76-1235 (D.C. Cir., decided July 19, 1977).

as investment advisors regularly place brokerage transactions with the brokerage houses which have been designated as the sponsors of the funds that they advise (Memorandum, pages 19-22). ICI then proceeds to argue that this may involve "undue concentration of resources, decreased or unfair competition [or] conflicts of interest. . ." which are factors that the Board must consider under section 4(c)(8). ICI thereupon states "If the Board were to prohibit or restrict the placement of brokerage by a bank holding company subsidiary with a firm which sponsors a mutual fund for which the subsidiary acts as investment advisor and otherwise regulate or prohibit transactions between the two entities, it would be possible to be far more confident that the selection and retention of banks as investment advisors to funds they allegedly do not 'sponsor' will be based upon proper competitive considerations."

In the Board's view ICI's argument in this regard is without merit. In the passage just cited, it would appear that ICI is admitting that the new open-end funds are sponsored and controlled by the brokerage firms, rather than the bank advisors.⁵ Furthermore, the obligations of a fund's directors with respect to selection of its investment advisor are clearly spelled out in the Investment Company Act of 1940 and Congress recently considered at length and enacted legislation dealing with the question of selection of brokerage firms by money managers as part of the Securities Acts Amendments of 1975 (15 U.S.C. 28(e)(1)); (Sen. Rep. 94-75, pp. 69-71). Accordingly, the Board believes that this subject matter is fully covered by existing law and that it would serve no useful purpose to consider the matter at this time in discharging its responsibilities under the Bank Holding Company Act.

The Board has placed conditions upon the investment advisory activities of bank holding companies and their nonbanking subsidiaries designed to prevent the occurrence of Glass-Steagall Act violations as a result of such activities. 12 CFR § 225.125. For example, bank holding companies may advise but may not sponsor open-end investment companies because such companies may be said to

be "engaged principally" or "primarily engaged" in the securities business through the issuance of securities on a more or less regular basis. Moreover, bank holding companies may affiliate with closed-end investment companies only "as long as such companies are not primarily or frequently engaged in the issuance, sale and distribution of securities." This is consistent with—and even stricter than—the provision of section 20 of the Glass-Steagall Act which merely prohibits affiliations with a member bank where a company is "engaged principally" in securities activities.

In addition, the Board stated in its interpretive ruling that the provisions of the Glass-Steagall Act are not affected by the Bank Holding Company Act Amendments of 1970 (84 Stat. 1760), and that the Board's regulation and the interpretive ruling are consistent "with the spirit and purpose of the Glass-Steagall Act. . . ."

It is clear from the legislative history of the Bank Holding Company Act Amendments of 1970 (84 Stat. 1760) that the Glass-Steagall Act provisions were not intended to be affected thereby. Accordingly, the Board regards the Glass-Steagall Act provisions and the Board's prior interpretations thereof as applicable to a holding company's activities as an investment advisor. Consistently with the spirit and purpose of the Glass-Steagall Act, this interpretation applies to all bank holding companies registered under the Bank Holding Company Act irrespective of whether they have subsidiaries that are member banks.

12 CFR 225.125(b). The Board also stated that bank holding companies may not undertake any activity prohibited by the Glass-Steagall Act:

The Board intends that a bank holding company may exercise all functions that are permitted to be exercised by an "investment advisor" under the Investment Company Act of 1940, except to the extent limited by the Glass-Steagall Act provisions, as described, in part, hereinafter.

12 CFR 225.125(d). Pursuant to U.S.C. § 1818, the Board may issue cease and desist orders to restrain violations of law by bank holding companies, including violations of the Glass-Steagall Act. The Board is prepared to use this authority where it appears that a bank holding company has violated or is violating 12 CFR § 225.4(a)(5)(ii) or any of the limitations on investment advisory activities specified in 12 CFR § 225.125. If ICI is aware of any such violations of law which merit investigation by the Board or the institution of cease and desist proceedings pursuant to 12 U.S.C. § 1818, it should

⁵In addition, on page 20 of its Memorandum, ICI also states "Thus, while the ranks of directors and officers of the new open-end funds may be dominated by personnel associated with the brokerage house and not with the bank, some doubt arises as to the practical likelihood that the decision to retain the bank as investment advisor to the fund will in all instances be made objectively on the basis of capabilities and performance, without consideration of the substantial benefits which the bank is in a position to confer upon the brokerage house."

advise the Board accordingly. In addition, ICI may seek intervention in any future proceeding arising out of an application by a bank holding company for permission to give investment advice pursuant to 12 CFR § 225.4(a)(5)(ii), if it believes the applicant bank holding company may violate the Glass-Steagall Act. ICI thus has the same remedies available to it in this case as it has with respect to the bank investment service activities that it challenged in *New York Stock Exchange and Investment Company Institute v. Robert Bloom*, No. 76-1235 (D.C. Cir., decided July 19, 1977), as well as the additional remedy of being able to seek intervention in future adjudicatory proceedings under the challenged regulation.

For the foregoing reasons, ICI's petition for reconsideration and rescission of 12 CFR § 225.4(a)(5)(ii) should be, and it hereby is, denied.

By order of the Board of Governors, effective August 31, 1977.

Voting for this action: Vice Chairman Gardner, and Governors Wallich, Jackson, Partee, and Lilly. Absent and not voting: Chairman Burns and Governor Coldwell.

(Signed) THEODORE E. ALLISON,
Secretary of the Board.

ORDER UNDER BANK MERGER ACT

Davenport Bank and Trust Company,
Davenport, Iowa

Order Approving Acquisition of Assets

Davenport Bank and Trust Company, Davenport, Iowa, a State member bank of the Federal Reserve System, has applied, pursuant to the Bank Merger Act (12 U.S.C. 1828(c)), for the Board's prior approval to acquire certain assets and assume certain liabilities of Donahue Savings Bank, Donahue, Iowa (\$5 million in deposits¹), and, as an incident thereto, to operate the present office of Donahue Savings Bank as a branch office.

Published notice of the proposed acquisition of assets and assumption of liabilities and requests for reports on the competitive factors involved therein have been dispensed with as authorized by the Bank Merger Act.

The Board has considered all relevant material contained in the record in the light of the factors set forth in the Act, including the effect of the proposal

on competition, the financial and managerial resources and prospects of the banks involved, and the convenience and needs of the communities to be served and finds that:

On the basis of the information before the Board, it is apparent that an emergency situation exists so as to require that the Board act immediately pursuant to the provisions of the Bank Merger Act in order to safeguard depositors of Donahue Savings Bank.

Such anticompetitive effects as may be attributable to consummation of the transaction are clearly outweighed in the public interest by considerations relating to and involved in the emergency situation found to exist. From the record in the case, it is the Board's judgment that any disposition of the application other than approval would be inconsistent with the best interests of the depositors of Donahue Savings Bank, and the Board concludes that the proposed transaction should be approved on a basis that would not delay consummation of the proposal.

It is hereby ordered, on the basis of the record, that the application be and hereby is approved and that the acquisition of assets and assumption of liabilities and the establishment of a branch office may be consummated immediately but in no event later than three months after the date of this Order unless such period is extended for good cause by the Board, or by the Federal Reserve Bank of Chicago pursuant to delegated authority.

By order of the Board of Governors, effective August 29, 1977.

Voting for this action: Vice Chairman Gardner and Governors Jackson, Partee, and Lilly. Absent and not voting: Chairman Burns and Governors Wallich and Coldwell.

(Signed) THEODORE E. ALLISON,
Secretary of the Board.

PRIOR CERTIFICATIONS PURSUANT TO THE BANK HOLDING COMPANY TAX ACT OF 1976

Republic of Texas Corporation,
Dallas, Texas

[Docket No. TCR 76-107]

Republic of Texas Corporation, Dallas, Texas ("Republic") has requested a prior certification pursuant to § 6158(a) of the Internal Revenue Code (the "Code"), as amended by § 3(a) of the Bank Holding Company Tax Act of 1976 (the "Tax Act"), that the proposed sale by The Howard

¹Deposit data are as of December 31, 1976.

Corporation ("Howard") of certain of its nonbanking assets, which assets are described in Schedule A hereto (the "Howard Assets"), is necessary or appropriate to effectuate § 4 of the Banking Holding Company Act (12 U.S.C. § 1843) ("BHC Act").

In connection with this request, the following information is deemed relevant for purposes of issuing the requested certification:¹

1. On July 7, 1970, Republic National Bank of Dallas ("Old Republic Bank"), a national banking association, indirectly controlled 29.9 per cent of the voting shares of Oak Cliff Bank and Trust Company, Dallas, Texas ("Oak Cliff Bank").

2. On July 7, 1970, Old Republic Bank indirectly controlled, through Howard, a trustee affiliate, property, including the Howard Assets, the disposition of which would have been necessary or appropriate to effectuate § 4 of the BHC Act if Old Republic Bank were to have continued to be a bank holding company beyond December 31, 1980, which property was "prohibited property" within the meaning of §§ 6158(f)(2) and 1103(c) of the Code.

3. Old Republic Bank became a bank holding company on December 31, 1970, as a result of the 1970 Amendments to the BHC Act, by virtue of its indirect control at that time of more than 25 per cent of the outstanding voting shares of Oak Cliff Bank, and it registered as such with the Board on September 24, 1971. Old Republic Bank would have been a bank holding company on July 7, 1970, if the BHC Act Amendments of 1970 had been in effect on such date, by virtue of its indirect control on that date of more than 25 per cent of the outstanding voting shares of Oak Cliff Bank.

4. Republic is a corporation that was organized under the laws of the State of Delaware on July 12, 1972, for the purpose of effecting the reorganization of Old Republic Bank into a subsidiary of Republic.

5. On September 10, 1973, the Board ruled that in the event Republic were to become a bank holding company through the acquisition of the successor by merger to Old Republic Bank, Republic would not be regarded as a "successor" to Old Republic Bank as defined in § 2(e) of the BHC Act for the purposes of § 2(a)(6) of the BHC Act, or as a "company covered in 1970," as that term is defined in the BHC Act, and that Republic was

not entitled to the benefit of any grandfather privileges that Old Republic Bank may have possessed pursuant to the proviso in § 4(a)(2) of the BHC Act.

6. By Order dated October 25, 1973, the Board approved Republic's application under § 3(a)(1) of the BHC Act to become a bank holding company through the acquisition of 100 per cent of the voting shares (less directors' qualifying shares) of the successor by merger to Old Republic Bank and the indirect acquisition of control of 29.9 per cent of the voting shares of Oak Cliff Bank. Pursuant to the provisions of § 4(a)(2) of the BHC Act, Republic was required by that order to divest itself, within two years from the date as of which it would become a bank holding company, of the impermissible nonbanking interests that would be directly or indirectly controlled by the successor by merger: to Old Republic Bank, including such impermissible interests held by Howard.

7. On May 9, 1974, in a transaction described in § 368(a)(1)(A) and § 368(a)(2)(D) of the Code, Old Republic Bank was merged into the present Republic National Bank of Dallas ("New Republic Bank"), a national banking association that was a wholly-owned subsidiary (except for directors' qualifying shares) of Republic. New Republic Bank thereby acquired substantially all of the properties of Old Republic Bank and Republic thereupon became a bank holding company. By virtue of two one-year extensions granted by the Board, Republic presently has until May 9, 1978, to complete the divestitures required by the Board's Order of October 25, 1973.

8. As part of the same transaction by which Republic became a bank holding company, in a transaction to which § 351 of the Code applied, Republic acquired beneficial interests in the shares of Howard held by trustees for the benefit of shareholders of New Republic Bank, which shares are shares described in § 2(g)(2) of the BHC Act.

9. The Howard Assets are a part of the property of Howard in which Republic acquired a beneficial interest pursuant to § 2(g)(2) of the BHC Act.

10. By a Purchase Agreement dated as of February 1, 1977 (the "Purchase Agreement"), Howard proposes to sell the Howard Assets, as well as certain other assets acquired by Howard after July 7, 1970, to AA Development Corporation ("Development"), a Texas consuming assets corporation. All of the outstanding voting shares of Development, consisting of 100,000 shares of common stock, are owned and controlled by American Airlines, Inc. ("AA"). As consideration for the pur-

¹This information derives from Republic's correspondence with the Board concerning its request for this certification, Republic's Registration Statement filed with the Board pursuant to the BHC Act, as well as the Registration Statement of Republic National Bank and other records of the Board.

chase of the Howard Assets and the other assets to be sold pursuant to the Purchase Agreement, Development will pay Howard \$52,825,654 in cash, and will assume various liabilities and obligations of Howard with respect to all the assets to be sold pursuant to the Purchase Agreement. As additional consideration for the purchase, Development will, simultaneously with the purchase of the Howard Assets, sell to Republic for \$500,000 in cash a warrant to purchase all of the 5,000 authorized shares of Development's preferred stock (the "Warrant"). By its terms, the Warrant may be exercised for a period of 18 months after the occurrence of certain events specified in the Purchase Agreement. Simultaneously with the purchase of the Warrant by Republic, Data Center, Inc. ("Data"), a corporation formed under the laws of the State of Delaware all of the outstanding voting shares of which are owned and controlled by AA, will execute an Agreement for the Purchase and Sale of Warrant (the "Warrant Agreement"), under which, during the period the Warrant is exercisable, Republic will have the right to require Data to purchase the Warrant, and Data will have the right to require Republic to sell the Warrant to it. The purchase price to be paid for the Warrant by Data in the event either Republic or Data exercises its rights under the Warrant Agreement, is to be determined at a future date in accordance with a formula described in the Warrant Agreement. Republic has committed to the Board by letter dated May 24, 1977, that under no circumstances will it exercise the Warrant.

On the basis of the foregoing information, and in light of Republic's commitment to the Board with respect to the exercise of the Warrant, it is hereby certified that:

(A) Prior to May 9, 1974, Old Republic Bank was a "qualified bank holding corporation," within the meaning of subsection (b) of § 1103 of the Code, and satisfied the requirements of that subsection;

(B) New Republic Bank is a corporation that acquired substantially all of the properties of a qualified bank holding corporation, and as such is treated as a qualified bank holding corporation for the purposes of § 1103(b) and § 6158 of the Code, pursuant to § 3(d) of the Tax Act;

(C) Republic is a corporation in control (within the meaning of § 2(a)(2) of the BHC Act) of New Republic Bank, and as such is treated as a qualified bank holding corporation for the purposes of § 1103(b) and § 6158 of the Code, pursuant to § 3(d) of the Tax Act;

(D) Howard is a subsidiary (within the meaning

of § 2(d) of the BHC Act) of Republic, and as such is treated as a qualified bank holding corporation for the purposes of § 1103(b) and § 6158 of the Code, pursuant to § 3(d) of the Tax Act;

(E) Each of the Howard Assets described in Schedule A hereto is "prohibited property" for the purposes of § 6158 of the Code; and

(F) The sale of each of the Howard Assets is necessary or appropriate to effectuate § 4 of the BHC Act.

This certification is based upon the representations and commitment made to the Board by Republic and upon the facts set forth above. In the event the Board should hereafter determine that facts material to this certification are otherwise than as represented by Republic, or that Republic has failed to disclose to the Board other material facts, or has failed to meet its commitment, it may revoke this certification.

By order of the Board of Governors acting through its General Counsel, pursuant to delegated authority (12 CFR § 265.2(B)(3)), effective May 25, 1977.

(Signed) RUTH A. REISTER,
[SEAL] *Assistant Secretary of the Board.*

Schedule A
Republic of Texas Corporation
[Docket No. TCR 76-107]

The following is a summary description of the Howard Assets to be sold to AA to which this prior certification relates. These assets are described in detail in Schedule II to the Purchase Agreement,² and in an Instrument of Conveyance and Assignment dated as of May 26, 1977 from Howard to Development ("Conveyance Instrument"),³ each of which is incorporated here to by reference insofar as it relates to the Howard Assets. For the purposes of this certification, the term "Howard Assets" refers to those assets described below only to the extent that such assets were either (1) acquired by Howard on or before July 7, 1970, or (2) acquired by Howard after July 7, 1970, under circumstances described in § 1101(c) of the Code such that the

²A complete copy of the Purchase Agreement and the Schedules thereto is on file with the Board.

³A complete copy of the Conveyance Instrument is on file with the Board.

assets could be distributed without recognition of gain pursuant to § 1101(a)(1) of the Code.

1. Certain oil and gas interests, each of which is more particularly described in the Conveyance Instrument.

2. Real property described in Schedule II to the Purchase Agreement (excluding Town and Country Shopping Center, Midland, Texas and Uptown Shopping Center, Shreveport, Louisiana for which prior certifications have already been issued in connection with sales to parties other than Development).

3. Properties known as "The Walker-Louisiana Properties" that are more particularly described in the Conveyance Instrument.

The Wachovia Corporation,
Winston-Salem, North Carolina
[Docket No. TCR 76-104]

The Wachovia Corporation, Winston-Salem, North Carolina ("Wachovia") has requested a prior certification pursuant to § 6158(a) of the Internal Revenue Code (the "Code"), as amended by § 3(a) of the Bank Holding Company Tax Act of 1976 (the "Tax Act"), that its sale on April 30, 1976 of all the 20,000 issued and outstanding shares of common stock of Wachovia Insurance Agency, Inc., Winston-Salem, North Carolina ("Agency"), then held by Wachovia was necessary or appropriate to effectuate § 4 of the Bank Holding Company Act (12 U.S.C. § 1843) ("BHC Act"). The shares of Agency were sold by Wachovia to Alexander & Alexander, Inc., Baltimore, Maryland ("A&A"), in exchange for 130,000 shares of common stock of Alexander & Alexander Services, Inc. ("Services"), the parent company of A&A.¹

In connection with this request, the following information is deemed relevant for purposes of issuing the requested certification:²

1. Wachovia is a corporation organized under the laws of the State of North Carolina in September

1968 to acquire and hold all the shares of Wachovia Bank and Trust Company, N.A. ("Bank").

2. On December 31, 1968, Wachovia acquired ownership and control of all of the outstanding voting shares (less directors' qualifying shares) of Bank.

3. Wachovia became a bank holding company on December 31, 1970, as a result of the 1970 Amendments to the BHC Act, by virtue of its ownership and control at that time of more than 25 per cent of the outstanding voting shares of Bank, and it registered as such with the Board on January 20, 1972. Wachovia would have been a bank holding company on July 7, 1970, if the BHC Act Amendments of 1970 had been in effect on such date, by virtue of its ownership and control on that date of more than 25 per cent of the voting shares of Bank. Wachovia presently owns and controls 100 per cent (less directors' qualifying shares) of the outstanding voting shares of Bank.

4. Agency was organized in January 1969 as a wholly-owned subsidiary of Wachovia to engage in the business of acting as agent for the sale of all types of insurance, including fire, casualty and marine insurance, fidelity and surety bonds and group accident and health coverage. On April 30, 1976 Wachovia owned and controlled the 20,000 issued and outstanding shares of common stock of Agency, all of which it acquired before July 7, 1970.

5. Wachovia did not file an application with the Board, and did not otherwise obtain the Board's approval, pursuant to § 4(c)(8) of the BHC Act to retain the shares of Agency or engage in the activities carried on by Agency.³

¹Pursuant to § 3(e)(2) of the Tax Act, in the case of any sale that takes place on or before December 31, 1976 (the 90th day after the date of the enactment of the Tax Act), the certification described in § 6158(a) shall be treated as made before the sale if application for such certification was made before the close of December 31, 1976. Wachovia's application for such certification was received by the Board on November 19, 1976.

²This information derives from Wachovia's correspondence with the Board concerning its request for this certification, Wachovia's Registration Statement filed with the Board pursuant to the BHC Act and other records of the Board.

³Although Wachovia did not seek Board approval to retain Agency, some or all of Agency's activities may be among those activities that the Board has previously determined to be closely related to banking, under § 4(c)(8). See 12 CFR §§ 225.4(a)(9) and 225.128; *Alabama Association for Insurance Agents et al. v. Board of Governors of the Federal Reserve System*, 544, 2d 572 (1977). Under the Board's present procedures, however, the question whether, or to what extent, Wachovia would have been permitted to retain these activities would not have been determinable unless and until Wachovia filed an application for permission to retain the activities. In passing upon such an application the Board would have been required to apply the second test set forth in § 4(c)(8) and to determine whether the performance of these activities by a subsidiary of Wachovia "can reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interest, or unsound banking practices." In the absence of favorable action on such an application Wachovia would have had no authority for retaining Agency beyond December 31, 1980, if it continued to be a bank holding company beyond that date. The legislative history of the Tax Act does not indicate a Congressional intent that

6. On April 30, 1976 Wachovia sold the shares of Agency to A&A in exchange for 130,000 shares of common stock of Services, which shares represented 2.4 per cent of the outstanding voting shares of Services. On August 2, 1976 Wachovia sold the Services shares and it presently holds no interest in Services or any subsidiary of Services.

On the basis of the foregoing information it is hereby certified that:

(A) On April 30, 1976 Wachovia was a qualified bank holding corporation, within the meaning of § 6158(f)(1) and subsection (b) of section 1103 of the

Code, and satisfied the requirements of that subsection;

(B) The shares of Agency that were sold by Wachovia on April 30, 1976 were "prohibited property" within the meaning of §§ 6158(f)(2) and 1103(c) of the Code; and

(C) The sale of the shares of Agency was necessary or appropriate to effectuate § 4 of the BHC Act.

This certification is based upon the representations made to the Board by Wachovia and upon the facts set forth above. In the event the Board should hereafter determine the facts material to this certification are otherwise than as represented by Wachovia, or that Wachovia has failed to disclose to the Board other material facts, it may revoke this certification.

By order of the Board of Governors acting through its General Counsel, pursuant to delegated authority (12 CFR § 265.2(b)(3)), effective July 12, 1977.

(Signed) RUTH A. REISTER,
[SEAL] *Assistant Secretary of the Board.*

companies subject to such a divestiture requirement exhaust the possibilities for retaining the activity before being eligible for tax relief, and in view of the paramount purpose of § 4 of the BHC Act, that "banking and commerce should remain separate," S. Rep. No. 1084, 91st Cong., 2d Sess. 12 (1970), it would appear that the disposition of a potentially permissible activity, without first seeking approval for retention, is at least "appropriate" to effectuate § 4.

ORDERS APPROVED UNDER BANK HOLDING COMPANY ACT

BY THE BOARD OF GOVERNORS

During August 1977, the Board of Governors approved the applications listed below. The orders have been published in the Federal Register, and copies are available upon request to Publications Services, Division of Administration Services, Board of Governors of the Federal Reserve System, Washington, D.C. 20551.

*This list of pending cases does not include suits against the Federal Reserve Banks in which the Board of Governors is not named a party.

†Decisions have been handed down in these cases, subject to appeals noted.

‡The Board of Governors is not named as a party in this action.

Announcements

CHANGE IN DISCOUNT RATE

The Board of Governors of the Federal Reserve System has announced the approval of actions by the directors of the Federal Reserve Banks of Philadelphia, Cleveland, Atlanta, Chicago, and St. Louis increasing the discount rate of those banks from $5\frac{1}{4}$ per cent to $5\frac{3}{4}$ per cent, effective August 30. Subsequently the Board announced the approval of similar actions by the directors of the Federal Reserve Banks of Richmond and Minneapolis effective August 30, by the directors of the Federal Reserve Bank of New York effective August 31, and by the directors of the Federal Reserve Banks of Boston, Kansas City, Dallas, and San Francisco effective September 2.

The Board's action was taken to reduce the incentive for member banks to borrow from the Federal Reserve. Such borrowing has increased rapidly in recent weeks.

The Board stated that this action is intended as a technical move for the purpose of bringing the discount rate into better alignment with other short-term interest rates and that it has no monetary policy implications.

In taking the action, the Board noted that member bank borrowings averaged about \$1.7 billion in the statement week ending August 24 compared with \$295 million 4 weeks earlier.

During this period, the Federal Reserve discount rate has remained at the $5\frac{1}{4}$ per cent level established in November 1976 while interest rates that banks must pay for other short-term money market funds have risen considerably. The discount rate is the interest rate charged member commercial banks when they borrow from their district Federal Reserve Bank.

In the Board's view the recent surge in member bank borrowing has resulted mainly from the divergence between the unchanged discount rate and current market interest rates.

Under the terms of the Board's Regulation A relating to extensions of credit by Federal Reserve Banks, member banks have ready access to the discount window if they have not recently made excessive use of this privilege. Because member

bank borrowing was quite limited until early August, the vast majority of banks are now in this position. Of these, a small but increasing number of banks are meeting a larger share of their borrowing needs at the discount window in order to take advantage of the relatively low level of the discount rate.

CONSUMER ADVISORY COUNCIL: Meeting

The Board of Governors announced a meeting of its Consumer Advisory Council on September 15, 1977.

The Council considered consumer credit regulatory and legislative actions since its last meeting, June 2, and heard a staff report of proposals for joint action by the Federal Reserve Board, Comptroller of the Currency, Federal Home Loan Bank Board, and the Federal Deposit Insurance Corporation on compliance with consumer credit laws by financial institutions. The Council also discussed legislation that would prohibit discrimination in the granting of credit based upon residential location.

REGULATION Z: Interpretation and Action

The Board of Governors has approved an interpretation of Regulation Z (Truth in Lending) simplifying procedures for credit-card issuers that bill customers in full on a transaction-by-transaction basis and impose no finance charges.

Most credit cards extend open-end credit, such as the credit available with a bank credit card or a department store card, and customers are billed, usually monthly, for their purchases. A debt balance may be left after the customer makes a payment. Certain credit-card issuers, however, such as some automobile rental companies, require payment in full for each transaction, and send bills only when there has been a transaction. No finance charges are imposed.

The interpretation permits such credit-card issuers to continue sending bills to their customers only when a transaction has occurred. The interpretation also requires such card issuers to conform only to provisions of Regulation Z that are clearly consistent with their type of billing.

In addition the Board on September 2, 1977, announced that it had postponed the effective date of a section of Regulation Z (Truth in Lending) dealing with rules for the billing of credit transactions, such as cash advance checks.

The section of the regulation involved (226.7(k)(3)(ii)) had been scheduled to go into effect October 28, 1977. The date for full implementation of this section of the regulation has been postponed to March 28, 1978.

The announcement said the action was taken because the Board is considering proposals designed to facilitate compliance with the regulation by creditors, while maintaining requirements for description of transactions adequate to allow customers to identify them.

At present, full implementation of this part of Regulation Z calls for the creditor to send a bill to the customer showing the date of the transaction or the date on the credit document (such as a cash advance check), the amount of the transaction, and a statement as to what type of nonsale credit transaction is involved, such as a cash advance check, an overdraft credit, or other.

Until full implementation on March 28, 1978, creditors may substitute for the transaction date or the date on the credit document the date the transaction is debited to the customer's account, or the creditor may omit any of the required information that is not available and treat any resulting inquiry from the customer as a billing error, triggering the billing error requirements of Regulation Z.

CHANGES IN BOARD STAFF

The Board of Governors has announced the appointment of John L. Grizzard as Assistant Director in the Division of Administrative Services, effective September 19, 1977.

Mr. Grizzard, formerly Project Engineer with Deleuw, Cather & Company of Washington, D.C., holds a B.S. from Virginia Polytechnic Institute and is a graduate of the Industrial College of the Armed Forces.

The Board has also announced the promotion of John J. Mingo, Associate Research Division Officer, to Senior Research Division Officer in the Division of Research and Statistics, effective September 19, 1977, and the retirement of Reed J. Irvine, Senior International Division Officer, on September 30, 1977.

REVISED SERIES

The industrial production indexes have been revised back to January 1976. Revised data for this series and for capacity utilization appear in the Board's statistical releases G.12.3 (September 16, 1977) and G.3 (September 19, 1977). Tables 2.11 and 2.13 on pp. A46 and A48-49, respectively, incorporate these revisions.

System Membership: Admission of State Bank

The following bank was admitted to membership in the Federal Reserve System during the period August 16, 1977, through September 15, 1977:

Utah

Sandy-----Sandy State Bank

Industrial Production

Released for publication September 16

Industrial production declined by an estimated 0.5 per cent in August to 138.2 per cent of the 1967 average. This was the first drop in the index since the weather-related reduction in January 1977. Declines in output were widespread but were concentrated in auto production and electric utility power generation, both of which had increased sharply in July. The drop in production was associated with declines in employment, with a generally shortened workweek in manufacturing industries, and to a limited extent, with a strike in the iron ore industry.

Output of consumer durable goods declined 1.7 per cent in August. Seasonally adjusted auto assemblies dropped to an annual rate of 9.4 million units, after allowance for model changeover, following the very high rate of 10.0 million units in July. Production of home goods such as appliances and furniture decreased slightly, while output of consumer nondurable goods declined 0.7 per cent. Production of business equipment was reduced 0.4 per cent.

Output of durable goods materials declined slightly, as small increases in raw steel and equipment parts were more than offset by strike-reduced iron ore production. Nondurable materials production was almost unchanged.

(Earlier published indexes for 1976 and 1977 have been revised. The new indexes are available in the Board's G.12.3 statistical release for September 16, 1977.)

F.R. indexes, seasonally adjusted. Latest figures: August.

¹ Includes securities loaned—fully guaranteed by U.S. Govt. securities pledged with F.R. Banks—and excludes (if any) securities sold and scheduled to be bought back under matched sale-purchase transactions.

² Includes certain deposits of foreign-owned banking institutions

voluntarily held with member banks and redeposited in full with Federal Reserve Banks.

NOTE.—For amounts of currency and coin held as reserves, see Table 1.12.

¹ Adjusted to include waivers of penalties for reserve deficiencies in accordance with Board policy, effective Nov. 19, 1975, of permitting transitional relief on a graduated basis over a 24-month period when a nonmember bank merges into an existing member bank, or when a

nonmember bank joins the Federal Reserve System. For weeks for which figures are preliminary, figures by class of bank do not add to total because adjusted data by class are not available.
² Based on closing figures.

¹ Based on reserve balances, including adjustments to include waivers of penalties for reserve deficiencies in accordance with changes in Board policy effective Nov. 19, 1975.

² Derived from averages for individual banks for entire week. Figure for each bank indicates extent to which the bank's average purchases and sales are offsetting.

³ Federal funds loaned, net funds supplied to each dealer by clearing banks, repurchase agreements (purchases from dealers subject to resale), or other lending arrangements.

⁴ Federal funds borrowed, net funds acquired from each dealer by clearing banks, reverse repurchase agreements (sales of securities to dealers subject to repurchase), resale agreements, and borrowings secured by U.S. Govt. or other securities.

NOTE.—Weekly averages of daily figures. For description of series, see Federal Reserve BULLETIN for August 1964, pp. 944-53. Back data for 46 banks appear in the Board's *Annual Statistical Digest, 1971-1975*, Table 3.

¹ Discounts of eligible paper and advances secured by such paper or by U.S. Govt. obligations or any other obligations eligible for F.R. Bank purchase.

² Advances secured to the satisfaction of the F.R. Bank. Advances secured by mortgages on 1- to 4-family residential property are made at the Section 13 rate.

³ Applicable to special advances described in Section 201.2(e)(2) of Regulation A.

⁴ Advances to individuals, partnerships, or corporations other than member banks secured by direct obligations of, or obligations fully guaranteed as to principal and interest by, the U.S. Govt. or any agency thereof.

⁵ Rates under Secs. 13 and 13a (as described above). For description and earlier data, see the following publications of the Board of Governors: *Banking and Monetary Statistics, 1914–1941*, *Banking and Monetary Statistics, 1941–1970*, and *Annual Statistical Digest, 1971–75*.

	Minimum		Maximum	
Net demand:				
Reserve city banks.....	10		22	
Other banks.....	7		14	
Time.....	3		10	

¹ For changes in reserve requirements beginning 1963, see Board's *Annual Statistical Digest, 1971-1975* and for prior changes, see Board's *Annual Report for 1976*, Table 13.

² (a) Requirement schedules are graduated, and each deposit interval applies to that part of the deposits of each bank. Demand deposits subject to reserve requirements are gross demand deposits minus cash items in process of collection and demand balances due from domestic banks.

(b) The Federal Reserve Act specifies different ranges of requirements for reserve city banks and for other banks. Reserve cities are designated under a criterion adopted effective Nov. 9, 1972, by which a bank having net demand deposits of more than \$400 million is considered to have the character of business of a reserve city bank. The presence of the head office of such a bank constitutes designation of that place as a reserve city. Cities in which there are F.R. Banks or branches are also reserve cities. Any banks having net demand deposits of \$400 million or less are considered to have the character of business of banks outside of reserve cities and are permitted to maintain reserves at ratios set for banks not in reserve cities. For details, see the Board's Regulation D.

(c) Member banks are required under the Board's Regulation M to maintain reserves against foreign branch deposits computed on the basis of net balances due from domestic offices to their foreign branches and against foreign branch loans to U.S. residents. Loans aggregating \$100,000 or less to any U.S. resident are excluded from computations, as are total loans of a bank to U.S. residents if not exceeding \$1 million. Regulation D imposes a similar reserve requirement on borrowings from foreign banks by domestic offices of a member bank. A reserve of 4 per cent is required for each of these classifications.

³ Negotiable orders of withdrawal (NOW) accounts and time deposits such as Christmas and vacation club accounts are subject to the same requirements as savings deposits.

⁴ The average of reserves on savings and other time deposits must be at least 3 per cent, the minimum specified by law.

NOTE.—Required reserves must be held in the form of deposits with F.R. Banks or vault cash.

1.16 MAXIMUM INTEREST RATES PAYABLE on Time and Savings Deposits at Federally Insured Institutions

Per cent per annum

13 Individual retirement accounts and Keogh (H.R. 10) plans ⁵	7¾	7/6/77	(8)		7¾	7/6/77	(8)	

¹ For authorized States only. Federally insured commercial banks, savings and loan associations, cooperative banks, and mutual savings banks were first permitted to offer NOW accounts on Jan. 1, 1974. Authorization to issue NOW accounts was extended to similar institutions throughout New England on Feb. 27, 1976.

² For exceptions with respect to certain foreign time deposits see the Federal Reserve BULLETIN for October 1962 (p. 1279), August 1965 (p. 1094), and February 1968 (p. 167).

³ A minimum of \$1,000 is required for savings and loan associations, except in areas where mutual savings banks permit lower minimum denominations. This restriction was removed for deposits maturing in less than 1 year, effective Nov. 1, 1973.

⁴ \$1,000 minimum except for deposits representing funds contributed to an Individual Retirement Account (IRA) or a Keogh (H.R. 10) Plan established pursuant to the Internal Revenue Code. The \$1,000 minimum requirement was removed for such accounts in December 1975 and November 1976, respectively.

⁵ 3-year minimum maturity.

⁶ July 1, 1973, for mutual savings banks; July 6, 1973, for savings and loan associations.

⁷ Oct. 1, 1966, for mutual savings banks; Jan. 21, 1970, for savings and loan associations.

⁸ No separate account category.

⁹ Between July 1, 1973, and Oct. 31, 1973, there was no ceiling for certificates maturing in 4 years or more with minimum denominations of \$1,000; however, the amount of such certificates that an institution could issue was limited to 5 per cent of its total time and savings deposits. Sales in excess of that amount, as well as certificates of less than \$1,000, were limited to the 6½ per cent ceiling on time deposits maturing in 2½ years or more.

Effective Nov. 1, 1973, the present ceilings were imposed on certificates maturing in 4 years or more with minimum denominations of \$1,000. There is no limitation on the amount of these certificates that banks can issue.

NOTE—Maximum rates that can be paid by Federally insured commercial banks, mutual savings banks, and savings and loan associations are established by the Board of Governors of the Federal Reserve System, the Board of Directors of the Federal Deposit Insurance Corporation, and the Federal Home Loan Bank Board under the provisions of 12 CFR 217, 329, and 526, respectively. The maximum rates on time deposits in denominations of \$100,000 or more were suspended in mid-1973. For information regarding previous interest rate ceilings on all types of accounts, see earlier issues of the Federal Reserve BULLETIN, the Federal Home Loan Bank Board Journal, and the Annual Report of the Federal Deposit Insurance Corporation.

1.161 MARGIN REQUIREMENTS

Per cent of market value; effective dates shown.

Type of security on sale	Mar. 11, 1968	June 8, 1968	May 6, 1970	Dec. 6, 1971	Nov. 24, 1972	Jan. 3, 1974
1 Margin stocks.....	70	80	65	55	65	50
2 Convertible bonds.....	50	60	50	50	50	50
3 Short sales.....	70	80	65	55	65	50

NOTE.—Regulations G, T, and U of the Federal Reserve Board of Governors, prescribed in accordance with the Securities Exchange Act of 1934, limit the amount of credit to purchase and carry margin stocks that may be extended on securities as collateral by prescribing a maximum loan value, which is a specified percentage of the market value of the collateral at the time the credit is extended. Margin requirements are the

difference between the market value (100 per cent) and the maximum loan value. The term "margin stocks" is defined in the corresponding regulation.

Regulation G and special margin requirements for bonds convertible into stocks were adopted by the Board of Governors effective Mar. 11, 1968.

¹ Both gross purchases and redemptions include special certificates created when the Treasury borrows directly from the Federal Reserve, as follows (millions of dollars): 1974, 131; 1975, 3,549; and 1976 to present, none.

² In 1975, the System obtained \$421 million of 2-year Treasury notes in exchange for maturing bills. In 1976 there was a similar transaction

amounting to \$189 million. Acquisition of these notes is treated as a purchase; the run-off of bills, as a redemption.

NOTE.—Sales, redemptions, and negative figures reduce holdings of the System Open Market Account; all other figures increase such holdings. Details may not add to totals because of rounding.

¹ Effective Jan. 1, 1977, Federal Reserve notes of other Federal Reserve Banks were merged into the liability account for Federal Reserve notes.

² Includes securities loaned—fully guaranteed by U.S. Govt. securities pledged with F.R. Banks—and excludes (if any) securities sold and scheduled to be bought back under matched sale-purchase transactions.

³ Includes certain deposits of domestic nonmember banks and foreign-

owned banking institutions voluntarily held with member banks and redeposited in full with F.R. Banks.

NOTE.—Beginning Jan. 1, 1977, "Operating equipment" was transferred to "Other assets."

25 U.S. Govt. deposits (all commercial banks).....	6.3	4.9	4.1	4.7	4.4	4.5	5.6	3.8	5.2	3.9

¹ Composition of the money stock measures is as follows:

M-1: Averages of daily figures for (1) demand deposits of commercial banks other than domestic interbank and U.S. Govt., less cash items in process of collection and F.R. float; (2) foreign demand balances at F.R. Banks; and (3) currency outside the Treasury, F.R. Banks, and vaults of commercial banks.

M-2: M-1 plus savings deposits, time deposits open account, and time certificates of deposit (CD's) other than negotiable CD's of \$100,000 or more of large weekly reporting banks.

M-3: M-2 plus the average of the beginning- and end-of-month deposits of mutual savings banks, savings and loan shares, and credit union shares (nonbank thrift).

M-4: M-2 plus large negotiable CD's.

M-5: M-3 plus large negotiable CD's.

For a description of the latest revisions in the money stock measures see "Money Stock Measures: Revision" on pp. 305 and 306 of the March 1977 BULLETIN.

Latest monthly and weekly figures are available from the Board's H.6 release. Back data are available from the Banking Section, Division of Research and Statistics.

² Negotiable time CD's issued in denominations of \$100,000 or more by large weekly reporting commercial banks.

³ Average of the beginning- and end-of-month figures for deposits of mutual savings banks, for savings capital at savings and loan associations, and for credit union shares.

NOTES TO TABLE 1.23:

¹ Adjusted to exclude domestic commercial interbank loans.

² Loans sold are those sold outright to banks' own foreign branches, nonconsolidated nonbank affiliates of the bank, the banks' holding company (if not a bank), and nonconsolidated nonbank subsidiaries of the holding company. Prior to Aug. 28, 1974, the institutions included had been defined somewhat differently, and the reporting panel of banks was also different. On the new basis, both "Total loans" and "Commercial and industrial loans" were reduced by about \$100 million.

³ Reclassification of loans reduced these loans by about \$1.2 billion as of Mar. 31, 1976.

⁴ Data beginning June 30, 1974, include one large mutual savings bank that merged with a nonmember commercial bank. As of that date there were increases of about \$500 million in loans, \$100 million in "Other" securities, and \$600 million in "Total loans and investments."

As of Oct. 31, 1974, "Total loans and investments" of all commercial banks were reduced by \$1.5 billion in connection with the liquidation of one large bank. Reductions in other items were: "Total loans," \$1.0 billion (of which \$0.6 billion was in "Commercial and industrial loans"), and "Other securities," \$0.5 billion. In late November "Commercial and industrial loans" were increased by \$0.1 billion as a result of loan reclassifications at another large bank.

NOTE.—Data are for last Wednesday of month except for June 30 and Dec. 31; data are partly or wholly estimated except when June 30 and Dec. 31 are call dates.

1.22 AGGREGATE RESERVES AND DEPOSITS Member Banks

Billions of dollars, averages of daily figures

U.S. Govt.....	5.0	3.4	3.1	3.3	2.9	3.1	3.2	4.0	2.5	3.7	2.6

¹ Series reflects actual reserve requirement percentages with no adjustment to eliminate the effect of changes in Regulations D and M. There are breaks in series because of changes in reserve requirements effective Dec. 12, 1974; Feb. 13, May 22, and Oct. 30, 1975; Jan. 8, and Dec. 30, 1976. In addition, effective Jan. 1, 1976, statewide branching in New York was instituted. The subsequent merger of a number of banks raised required reserves because of higher reserve requirements on aggregate deposits at these banks.

² Includes total time and savings deposits and net demand deposits as defined by Regulation D. Private demand deposits include all demand deposits except those due to the U.S. Govt., less cash items in process of collection and demand balances due from domestic commercial banks.

NOTE.—Back data and estimates of the impact on required reserves and changes in reserve requirements are shown in Table 14 of the Board's *Annual Statistical Digest, 1971-1975*.

¹ Includes items not shown separately.

Effective Mar. 31, 1976, some of the item "reserve for loan losses" and all of the item "unearned income on loans" are no longer reported as liabilities. As of that date the "valuation" portion of "reserve for loan losses" and the "unearned income on loans" have been netted against "other assets," and against "total assets" as well.

Total liabilities continue to include the deferred income tax portion of "reserve for loan losses."

² Effective Mar. 31, 1976, includes "reserves for securities" and the contingency portion (which is small) of "reserve for loan losses."

³ Figures partly estimated except on call dates.

NOTE.—Figures include all bank-premises subsidiaries and other significant majority-owned domestic subsidiaries.

Commercial banks: All such banks in the United States, including member and nonmember banks, stock savings banks, nondeposit trust companies, and U.S. branches of foreign banks, but excluding one national bank in Puerto Rico and one in the Virgin Islands.

Member banks: The following numbers of noninsured trust companies that are members of the Federal Reserve System are excluded from member banks in Tables 1.24 and 1.25 and are included with noninsured banks in Table 1.25: 1974—June, 2; December, 3; 1975—June and December, 4; 1976 (beginning month shown)—July, 5, December, 7; 1977—January 8.

128 Other time deposits	22,155	18,685	4,299	1,231	8,565	4,589	3,470
128 Number of banks	14,405	5,737	12	9	154	5,562	8,678

¹ Member banks exclude and nonmember banks include 10 noninsured trust companies that are members of the Federal Reserve System, and member banks exclude 2 national banks outside the continental United States.

² Demand deposits adjusted are demand deposits other than domestic commercial interbank and U.S. Govt., less cash items reported as in process of collection.

NOTE.—Data include consolidated reports, including figures for all bank-premises subsidiaries and other significant majority-owned domestic subsidiaries. Securities are reported on a gross basis before deductions of valuation reserves. Holdings by type of security will be reported as soon as they become available.

Back data in lesser detail were shown in previous BULLETINS. Details may not add to totals because of rounding.

¹ Averages of the most representative daily offering rate quoted by dealers.² Averages of the most representative daily offering rates published by finance companies for varying maturities in this range.³ Beginning Aug. 15, 1974, the rate is the average of the midpoint of the range of daily dealer closing rates offered for domestic issues; prior data are averages of the most representative daily offering rate quoted by dealers.⁴ Weekly figures are 7-day averages of daily effective rates for the week ending Wednesday; the daily effective rate is an average of the rates on a given day weighted by the volume of transactions at these rates.⁵ Weekly figures are 7-day averages of the daily midpoints as determined from the range of offering rates; monthly figures are averages of total days in the month.⁶ Posted rates, which are the annual interest rates most often quoted on new offerings of negotiable CD's in denominations of \$100,000 or more. Rates prior to 1976 not available. Weekly figures are for Wednesday dates.⁷ Averages of daily quotations for the week ending Wednesday.⁸ Except for new bill issues, yields are computed from daily closing bid prices. Yields for all bills are quoted on a bank-discount basis.⁹ Unweighted averages for all outstanding notes and bonds in maturity ranges shown, based on daily closing bid prices. "Long-term" includes all bonds neither due nor callable in less than 10 years.¹⁰ Yields on the more actively traded issues adjusted to constant maturities by the U.S. Treasury, based on daily closing bid prices.¹¹ General obligations only, based on figures for Thursday, from Moody's Investors Service.¹² Twenty issues of mixed quality.¹³ Averages of daily figures from Moody's Investors Service.¹⁴ Compilation of the Board of Governors of the Federal Reserve System.

Issues included are long-term (20 years or more). New-issue yields are based on quotations on date of offering; those on recently offered issues (included only for first 4 weeks after termination of underwriter price restrictions), on Friday close-of-business quotations.

¹ Effective July 1976 includes a new financial group, banks and insurance companies. With this change the index includes 400 industrial stocks (formerly 425), 20 transportation (formerly 15 rail), 40 public utility (formerly 60), and 40 financial.

² Based on trading for a 5½-hour day.

³ Margin credit includes all credit extended to purchase or carry stocks or related equity instruments and secured at least in part by stock. Credit extended by brokers is end-of-month data for member firms of the New York Stock Exchange; June data for banks are universe totals; all other data for banks are estimates for all commercial banks based on data from a sample of reporting banks.

In addition to assigning a current loan value to margin stock generally, Regulations T and U permit special loan values for convertible bonds and stock acquired through exercise of subscription rights.

⁴ A distribution of this total by equity class is shown below.

⁵ Nonmargin stocks are those not listed on a national securities exchange and not included on the Federal Reserve System's list of over-the-counter margin stocks. At banks, loans to purchase or carry nonmargin stocks are unregulated; at brokers, such stocks have no loan value.

⁶ Free credit balances are in accounts with no unfulfilled commitments to the brokers and are subject to withdrawal by customers on demand.

⁷ Each customer's equity in his collateral (market value of collateral less net debit balance) is expressed as a percentage of current collateral values.

⁸ Balances that may be used by customers as the margin deposit required for additional purchases. Balances may arise as transfers based on loan values of other collateral in the customer's margin account or deposits of cash (usually sales proceeds) occur.

NOTE.—For table on "Margin Requirements" see p. A-10, Table 1.161.

¹ Effective June 1977, earned income credit payments in excess of an individual's tax liability, formerly treated as outlays, are classified as income tax refunds retroactive to January 1976.

² Outlay totals reflect the reclassification of the Export-Import Bank from off-budget status to unified budget status.

³ Export-Import Bank certificates of beneficial interest (effective July 1, 1975) and loans to the Private Export Funding Corp. (PEFCO), a wholly owned subsidiary of the Export-Import Bank are treated as debt rather than asset sales.

⁴ Half years calculated as a residual of total surplus/deficit and trust fund surplus/deficit.

⁵ Includes Pension Benefit Guaranty Corp., Postal Service Fund, Rural

Electrification and Telephone Revolving Fund, Rural Telephone Bank, and Housing for the Elderly or Handicapped Fund.

⁶ Includes: Public debt accrued interest payable to the public; deposit funds; miscellaneous liability (including checks outstanding) and asset accounts; seignorage; increment on gold; net gain/loss for U.S. currency valuation adjustment; net gain/loss for IMF valuation adjustment.

⁷ Excludes the gold balance but includes deposits in certain commercial depositories that have been converted from a time deposit to a demand deposit basis to permit greater flexibility in Treasury cash management.

SOURCE.—“Monthly Treasury Statement of Receipts and Outlays of the U.S. Government,” *Treasury Bulletin*, and *U.S. Budget, Fiscal Year 1978*.

NOTES TO TABLE 1.38

¹ Stock of the Federal Home Loan Bank Board (FHLBB) is included in “other assets.”

² Includes net undistributed income, which is accrued by most, but not all, associations.

³ Excludes figures for loans in process, which are shown as a liability.

⁴ Includes securities of foreign governments and international organizations and non-guaranteed issues of U.S. Govt. agencies.

⁵ Excludes checking, club, and school accounts.

⁶ Commitments outstanding (including loans in process) of banks in New York State as reported to the Savings Banks Assn. of the State of New York.

⁷ Direct and guaranteed obligations. Excludes Federal agency issues not guaranteed, which are shown in this table under “business” securities.

⁸ Issues of foreign governments and their subdivisions and bonds of the International Bank for Reconstruction and Development.

NOTE.—*Savings and loan associations*: Estimates by the FHLBB for all associations in the United States. Data are based on monthly reports of Federally insured associations and annual reports of other associations.

Even when revised, data for current and preceding year are subject to further revision.

Mutual savings banks: Estimates of National Association of Mutual Savings Banks for all savings banks in the United States. Data are reported on a gross-of-valuation-reserves basis.

Life insurance companies: Estimates of the Institute of Life Insurance for all life insurance companies in the United States. Annual figures are annual-statement asset values, with bonds carried on an amortized basis and stocks at year-end market value. Adjustments for interest due and accrued and for differences between market and book values are not made on each item separately but are included, in total, in “other assets.”

Credit unions: Estimates by the National Credit Union Administration for a group of Federal and State-chartered credit unions that account for about 30 per cent of credit union assets. Figures are preliminary and revised annually to incorporate recent benchmark data.

¹ Effective June 1977, earned income credit payments in excess of an individual's tax liability, formerly treated as outlays, are classified as income tax refunds retroactive to January 1976.

² Old-age, disability and hospital insurance, and Railroad Retirement accounts.

³ Supplementary medical insurance premiums, Federal employee retirement contributions, and Civil Service retirement and disability fund.

⁴ Deposits of earnings by F.R. Banks and other miscellaneous receipts.

⁵ Outlay totals reflect the reclassification of the Export-Import Bank from off-budget status to unified budget status. Export-Import Bank

certificates of beneficial interest (effective July 1, 1975) and loans to the Private Export Funding Corp. (PEFCO), a wholly owned subsidiary of the Export-Import Bank, are treated as debt rather than asset sales.

⁶ Effective September 1976, "Interest" and "Undistributed Offsetting Receipts" reflect the accounting conversion for the interest on special issues for U.S. Govt. accounts from an accrual basis to a cash basis.

⁷ Consists of interest received by trust funds, rents and royalties on the Outer Continental Shelf, and U.S. Govt. contributions for employee retirement.

¹ Includes \$1.1 billion of non-interest-bearing debt (of which \$611 million on August 31, 1977, was not subject to statutory debt limitations).

² Includes (not shown separately): Securities issued to the Rural Electrification Administration and to State and local governments, depositary bonds, retirement plan bonds, and individual retirement bonds.

³ These nonmarketable bonds, also known as Investment Series B Bonds, may be exchanged (or converted) at the owner's option for 1½ per cent, 5-year marketable Treasury notes. Convertible bonds that have been so exchanged are removed from this category and recorded in the notes category above.

⁴ Nonmarketable certificates of indebtedness, notes, and bonds in the Treasury foreign series and foreign-currency series.

⁵ Held only by U.S. Govt. agencies and trust funds.

⁶ Data for F.R. Banks and U.S. Govt. agencies and trust funds are actual holdings; data for other groups are Treasury estimates.

⁷ Consists of the investments of foreign balances and international accounts in the United States. Beginning with 1974, the figures exclude non-interest-bearing notes issued to the International Monetary Fund.

⁸ Includes savings and loan associations, nonprofit institutions, corporate pension trust funds, dealers and brokers, certain Govt. deposit accounts, and Govt.-sponsored agencies.

NOTE.—Gross public debt excludes guaranteed agency securities and, beginning in July 1974, includes Federal Financing Bank security issues.

Data by type of security from *Monthly Statement of the Public Debt of the United States*, U.S. Treasury Dept.; data by holder from *Treasury Bulletin*.

NOTE.—Direct public issues only. Based on Treasury Survey of Ownership from *Treasury Bulletin* (U.S. Treasury Dept.).

Data complete for U.S. Govt. agencies and trust funds and F.R. Banks, but data for other groups include only holdings of those institutions that report. The following figures show, for each category, the number and proportion reporting as of July 31, 1977: (1) 5,492 commercial

banks, 466 mutual savings banks, and 727 insurance companies, each about 90 per cent; (2) 441 nonfinancial corporations and 486 savings and loan assns., each about 50 per cent; and (3) 496 State and local govts., about 40 per cent.

"All others," a residual, includes holdings of all those not reporting in the Treasury Survey, including investor groups not listed separately.

¹ Includes—among others—all other dealers and brokers in commodities and securities, foreign banking agencies, and the F.R. System.

NOTE.—Averages for transactions are based on number of trading days in the period.

Transactions are market purchases and sales of U.S. Govt. securities dealers reporting to the F.R. Bank of New York. The figures exclude allotments of, and exchanges for, new U.S. Govt. securities, redemptions of called or matured securities, or purchases or sales of securities under repurchase, reverse repurchase (resale), or similar contracts.

¹ All business corporations except commercial banks and insurance companies.

² Net amounts (in terms of par values) of securities owned by nonbank dealer firms and dealer departments of commercial banks on a commitment, that is, trade-date basis, including any such securities that have been sold under agreements to repurchase. The maturities of some repurchase agreements are sufficiently long, however, to suggest that the securities involved are not available for trading purposes. Securities owned, and hence dealer positions, do not include securities purchased under agreements to resell.

³ Total amounts outstanding of funds borrowed by nonbank dealer

firms and dealer departments of commercial banks against U.S. Govt. and Federal agency securities (through both collateral loans and sales under agreements to repurchase), plus internal funds used by bank dealer departments to finance positions in such securities. Borrowings against securities held under agreement to resell are excluded where the borrowing contract and the agreement to resell are equal in amount and maturity, that is, a matched agreement.

NOTE.—Averages for positions are based on number of trading days in the period; those for financing, on the number of calendar days in the period.

27 Other.....		356	1,134	5,254	5,507	5,993	5,271	5,001	4,060

¹ Consists of mortgages assumed by the Defense Department between 1957 and 1963 under family housing and homeowners assistance programs.² Includes participation certificates reclassified as debt beginning Oct. 1, 1976.³ Off-budget Aug. 17, 1974 through Sept. 30, 1976; on-budget thereafter.⁴ Consists of debentures issued in payment of Federal Housing Administration insurance claims. Once issued, these securities may be sold privately on the securities market.⁵ Certificates of participation issued prior to fiscal 1969 by the Government National Mortgage Association acting as trustee for the Farmers Home Administration; Department of Health, Education, and Welfare; Department of Housing and Urban Development; Small Business Administration; and the Veterans Administration.⁶ Off-budget.⁷ Unlike other Federally sponsored agencies, the Student Loan Marketing Association may borrow from the Federal Financing Bank (FFB) since its obligations are guaranteed by the Department of Health, Education, and Welfare.⁸ The FFB, which began operations in 1974, is authorized to purchase or sell obligations issued, sold, or guaranteed by other Federal agencies. Since FFB incurs debt solely for the purpose of lending to other agencies, its debt is not included in the main portion of the table in order to avoid double counting.⁹ Includes FFB purchases of agency assets and guaranteed loans; the latter contain loans guaranteed by numerous agencies with the guarantees of any particular agency being generally small. The Farmers Home Administration item consists exclusively of agency assets, while the Rural Electrification Administration entry contains both agency assets and guaranteed loans.

¹ Par amounts of long-term issues based on date of sale.² Only bonds sold pursuant to the 1949 Housing Act, which are secured by contract requiring the Housing Assistance Administration to make annual contributions to the local authority.³ Figures, which represent gross proceeds of issues maturing in more than 1 year, sold for cash in the United States, are principal amount or number of units multiplied by offering price. Excludes offerings of less

than \$100,000, secondary offerings, undefined or exempted issues as defined in the Securities Act of 1933, employee stock plans, investment companies other than closed-end, intracorporate transactions, and sales to foreigners.

SOURCES.—State and local government securities, Securities Industry Association; corporate securities, Securities and Exchange Commission.

¹ Weighted averages based on sample surveys of mortgages originated by major institutional lender groups. Compiled by the Federal Home Loan Bank Board in cooperation with the Federal Deposit Insurance Corporation.

² Includes all fees, commissions, discounts, and "points" paid (by the borrower or the seller) in order to obtain a loan.

³ Average effective interest rates on loans closed, assuming prepayment at the end of 10 years.

⁴ Average contract rates on new commitments for conventional first mortgages, rounded to the nearest 5 basis points; from Dept. of Housing and Urban Development.

⁵ Average gross yields on 30-year, minimum-downpayment, Federal Housing Administration-insured first mortgages for immediate delivery in the private secondary market. Any gaps in data are due to periods of adjustment to changes in maximum permissible contract rates.

⁶ Average net yields to investors on Government National Mortgage Association-guaranteed, mortgage-backed, fully-modified pass-through

securities, assuming prepayment in 12 years on pools of 30-year FHA/VA mortgages carrying the prevailing ceiling rate. Monthly figures are unweighted averages of Monday quotations for the month.

⁷ Average gross yields (before deduction of 38 basis points for mortgage servicing) on accepted bids in Federal National Mortgage Association's auctions of 4-month commitments to purchase home mortgages, assuming prepayment in 12 years for 30-year mortgages. No adjustments are made for FNMA commitment fees or stock related requirements. Monthly figures are unweighted averages for auctions conducted within the month.

⁸ Includes some multifamily and nonprofit hospital loan commitments in addition to 1- to 4-family loan commitments accepted in FNMA's free market auction system, and through the FNMA-GNMA Tandem plans.

⁹ Mortgage amounts offered by bidders are total bids received.

¹⁰ Includes participations as well as whole loans.

¹¹ Includes conventional and Government-underwritten loans.

¹ Includes loans held by nondeposit trust companies but not bank trust departments.

² Outstanding principal balances of mortgages backing securities insured or guaranteed by the agency indicated.

³ Other holders include mortgage companies, real estate investment trusts, State and local credit agencies, State and local retirement funds, noninsured pension funds, credit unions, and U.S. agencies for which amounts are small or separate data are not readily available.

NOTE.—Based on data from various institutional and Govt. sources, with some quarters estimated in part by Federal Reserve in conjunction with the Federal Home Loan Bank Board and the Dept. of Commerce. Separation of nonfarm mortgage debt by type of property, if not reported directly, and interpolations and extrapolations where required, are estimated mainly by Federal Reserve. Multifamily debt refers to loans on structures of 5 or more units.

¹ Excludes 30-day charge credit held by retailers, oil and gas companies, and travel and entertainment companies.

² Mutual savings banks, savings and loan associations, and auto dealers.

³ Net change equals extensions minus liquidations (repayments, charge-offs, and other credits); figures for all months are seasonally adjusted.

NOTE.—Total consumer noninstalment credit outstanding—credit scheduled to be repaid in a lump sum, including single-payment loans, charge accounts, and service credit—amounted to \$38.7 billion at the end of 1976, \$35.7 billion at the end of 1975, and \$33.8 billion at the end of 1974. Comparable data for Dec. 31, 1977, will be published in the BULLETIN for February 1978.

NOTES BY LINE NO.

1. Line 2 of p. A-44.
2. Sum of lines 3-6 or 7-10.
6. Includes farm and commercial mortgages.
11. Credit market funds raised by Federally sponsored credit agencies, and net issues of Federally related mortgage pool securities. Included below in lines 3, 13, and 33.
12. Line 1 less line 2 plus line 11. Also line 19 less line 26 plus line 32. Also sum of lines 27, 32, 39, and 44.
17. Includes farm and commercial mortgages.
25. Lines 39 plus 44.
26. Excludes equity issues and investment company shares. Includes line 18.
28. Foreign deposits at commercial banks, bank borrowings from foreign branches, and liabilities of foreign banking agencies to foreign affiliates.

29. Demand deposits at commercial banks.

30. Excludes net investment of these reserves in corporate equities.

31. Mainly retained earnings and net miscellaneous liabilities.

32. Line 12 less line 19 plus line 26.

33-37. Lines 13-17 less amounts acquired by private finance. Line 37 includes mortgages.

45. Mainly an offset to line 9.

46. Lines 32 plus 38 or line 12 less line 27 plus line 45.

47. Line 2/line 1.

48. Line 19/line 12.

49. Lines 10 plus 28.

50, 52. Includes issues by financial institutions.

NOTE.—Full statements for sectors and transaction types quarterly, and annually for flows and for amounts outstanding, may be obtained from Flow of Funds Section, Division of Research and Statistics, Board of Governors of the Federal Reserve System, Washington, D.C. 20551.

¹ Ratios of indexes of production to indexes of capacity. Based on data from Federal Reserve, McGraw-Hill Economics Department, and Department of Commerce.

² Index of dollar value of total construction contracts, including residential, nonresidential, and heavy engineering, from McGraw-Hill Information Systems Company, F. W. Dodge Division.

³ Based on data in *Employment and Earnings* (U.S. Dept. of Labor). Series covers employees only, excluding personnel in the Armed Forces.

⁴ Based on data in *Survey of Current Business* (U.S. Dept. of Commerce). Series for disposable income is quarterly.

⁵ Based on Bureau of Census data published in *Survey of Current Business* (U.S. Dept. of Commerce).

⁶ Data without seasonal adjustment, as published in *Monthly Labor Review* (U.S. Dept. of Labor). Seasonally adjusted data for changes in the price indexes may be obtained from the Bureau of Labor Statistics, U.S. Dept. of Labor.

NOTE.—Basic data (not index numbers) for series mentioned in notes 3, 4, and 5, and indexes for series mentioned in notes 2 and 6 may also be found in the *Survey of Current Business* (U.S. Dept. of Commerce).

¹ Persons 16 years of age and over. Monthly figures, which are based on sample data, relate to the calendar week that contains the 12th day; annual data are averages of monthly figures. By definition, seasonality does not exist in population figures. Based on data from *Employment and Earnings* (U.S. Dept. of Labor).

² Includes self-employed, unpaid family, and domestic service workers.

³ Data include all full- and part-time employees who worked during, or received pay for, the pay period that includes the 12th day of the month, and exclude proprietors, self-employed persons, domestic servants, unpaid family workers, and members of the Armed Forces. Data are adjusted to the February 1977 benchmark. Based on data from *Employment and Earnings* (U.S. Dept. of Labor).

2.13 INDUSTRIAL PRODUCTION Indexes and Gross Value

Monthly data are seasonally adjusted.

^r 1972 dollars.

NOTE.—Published groupings include some series and subtotals not shown separately. For summary description and historical data, see BULLETIN for June 1976, pp. 470-79. Availability of detailed descriptive and historical data will be announced in a forthcoming BULLETIN.

The industrial production indexes have been revised back to January 1976, on the basis of more complete information now available. A complete set of the revised 1976 series is attached to the September G.12.3 release which may be obtained from the Publications Section, Board of Governors of the Federal Reserve System, Washington, D.C. 20551.

2.14 HOUSING AND CONSTRUCTION

¹ Not at annual rates.² Not seasonally adjusted.³ Value of new construction data in recent periods may not be strictly comparable with data in prior periods due to changes by the Bureau of the Census in its estimating techniques. For a description of these changes see *Construction Reports* (C-30-76-5), issued by the Bureau in July 1976.⁴ Beginning Jan. 1977 Highway imputations are included in Other.

NOTE.—Census Bureau estimates for all series except (a) mobile homes, which are private, domestic shipments as reported by the Manufactured Housing Institute and seasonally adjusted by the Census Bureau, and (b) sales and prices of existing units, which are published by the National Association of Realtors. All back and current figures are available from originating agency. Permit authorizations are for 14,000 jurisdictions reporting to the Census Bureau.

2.15 CONSUMER AND WHOLESALE PRICES

Percentage changes based on seasonally adjusted data, except as noted.

MEMO ITEMS:								
Changes in official assets:								
47 U.S. official reserve assets (increase, -).....	-1,434	-607	-2,530	-773	-1,578	-407	228	-388
48 Foreign official assets in the U.S. (increase, +).....	10,257	5,259	13,007	2,323	3,308	1,251	6,125	4,847
49 Changes in OPEC official assets in the U.S. (part of line 27 above).....	10,841	7,092	9,324	3,482	3,263	1,774	805	3,178
50 Transfers under military grant programs (excluded from lines 1, 4, and 9 above).....	1,817	2,217	386	50	86	156	94	32

¹ Seasonal factors are no longer calculated for lines 13 through 50.² Data are on an international accounts (IA) basis. Differs from the Census basis primarily because the IA basis includes imports into the U.S. Virgin Islands, and it excludes military exports, which are part of Line 4.³ Differs from the definition of "net exports of goods and services" in the national income and product (GNP) account. The GNP definition

excludes certain military sales to Israel from exports and excludes U.S. Govt. interest payments from imports.

⁴ Primarily associated with military sales contracts and other transactions arranged with or through foreign official agencies.⁵ Consists of investments in U.S. corporate stocks and in debt securities of private corporations and state and local governments.NOTE.—Data are from Bureau of Economic Analysis, *Survey of Current Business* (U.S. Department of Commerce).

3.11 U.S. FOREIGN TRADE

Millions of dollars; monthly data are seasonally adjusted.

Item	1974	1975	1976	1977						
				Jan.	Feb.	Mar.	Apr.	May	June	July
1 EXPORTS of domestic and foreign merchandise excluding grant-aid shipments.....	97,908	107,130	114,802	9,599	9,808	10,072	9,970	10,395	10,112	10,150
2 GENERAL IMPORTS including merchandise for immediate consumption plus entries into bonded warehouses.....	100,252	96,115	120,678	11,269	11,674	12,459	12,593	11,616	12,932	12,476
3 Trade balance.....	-2,344	+11,014	-5,876	-1,670	-1,866	-2,387	-2,623	-1,221	-2,820	-2,326

NOTE.—Bureau of Census data reported on a free-alongside-ship (f.a.s.) value basis. Before 1974 imports were reported on a customs import value basis. For calendar year 1974 the f.a.s. import value was \$100.3 billion, about 0.7 per cent less than the corresponding customs import value. The international-accounts-basis data shown in Table 3.10 adjust the Census basis data for reasons of coverage and timing. On the export side, the largest adjustments are: (a) the addition of exports to Canada not covered in Census statistics, and (b) the exclusion of military

exports (which are combined with other military transactions and are reported separately in the "service account"). On the import side, the largest single adjustment is the addition of imports into the Virgin Islands (largely oil for a refinery on St. Croix), which are not included in Census statistics.

SOURCE.—U.S. Dept. of Commerce, Bureau of the Census, Summary of U.S. Export and Import Merchandise Trade (FT 900).

3.12 U.S. RESERVE ASSETS

Millions of dollars, end of period

Type	1974	1975	1976	1977						
				Feb.	Mar.	Apr.	May	June	July	Aug. ^p

5 Convertible foreign currencies.....	5	80	320	262	261	106	95	92	55	55

¹ Gold held under earmark at F.R. Banks for foreign and international accounts is not included in the gold stock of the United States; see Table 3.24.

² Includes allocations by the International Monetary Fund of SDR's as follows: \$867 million on Jan. 1, 1970; \$717 million on Jan. 1, 1971; and \$710 million on Jan. 1, 1972; plus net transactions in SDR's.

³ Beginning July 1974, the IMF adopted a technique for valuing the

SDR based on a weighted average of exchange rates for the currencies of 16 member countries. The U.S. SDR holdings and reserve position in the IMF also are valued on this basis beginning July 1974. At valuation used prior to July 1974 (SDR1 = \$1.20635) total U.S. reserve assets at end of July amounted to \$19,210; SDR holdings, \$2,578, and reserve position in IMF, \$4,919.

15 Marketable U.S. Treasury bonds and notes ³	151	331	3,033	3,294	4,067	3,819	2,427	2,135	2,456	2,586

¹ Includes Bank for International Settlements.² Includes Treasury bills as shown in Table 3.15.³ Derived by applying reported transactions to benchmark data.⁴ Excludes notes issued to foreign official nonreserve agencies.⁵ Includes long-term liabilities reported by banks in the United States and debt securities of U.S. Federally sponsored agencies and U.S. corporations.⁶ Includes short-term liabilities payable in foreign currencies to commercial banks abroad and to other foreigners.⁷ Includes marketable U.S. Treasury bonds and notes held by commercial banks abroad and other foreigners.⁸ Principally the International Bank for Reconstruction and Development and the Inter-American and Asian Development Banks.

NOTE.—Based on Treasury Dept. data and on data reported to the Treasury Dept. by banks (including Federal Reserve banks) and brokers in the United States. Data exclude the holdings of dollars of the International Monetary Fund derived from payments of the U.S. subscription, and from the exchange transactions and other operations of the IMF. Data also exclude U.S. Treasury letters of credit and nonnegotiable, non-interest-bearing special U.S. notes held by nonmonetary international and regional organizations.

¹ Includes Surinam until January 1976.² Comprises Bahrain, Iran, Iraq, Kuwait, Oman, Qatar, Saudi Arabia, and United Arab Emirates (Trucial States). Data not available until 1975.³ Comprises Algeria, Gabon, Libya, and Nigeria. Data not available until 1975.⁴ Estimated official and private holdings of marketable U.S. Treasury securities with an original maturity of more than 1 year. Data are based on a benchmark survey of holdings as of Jan. 31, 1971, and monthly transactions reports. Excludes nonmarketable U.S. Treasury bonds and notes held by official institutions of foreign countries.

3.24 FOREIGN OFFICIAL ASSETS HELD AT FEDERAL RESERVE BANKS

Millions of dollars, end of period

Assets	1974	1975	1976	1977

¹ Profits after taxes unadjusted are as reported by the individual companies. These data are not adjusted to eliminate differences in accounting treatments of special charges, credits, and other nonoperating items.

² Includes 21 corporations in groups not shown separately.

³ Includes 25 corporations in groups not shown separately.

NOTE.—Data are obtained from published reports of companies and reports made to the Securities and Exchange Commission. Sales are net

of returns, allowances, and discounts, and exclude excise taxes paid directly by the company. Total revenue data include, in addition to sales, income from nonmanufacturing operations and nonoperating income. Profits are before dividend payments and have been adjusted to exclude special charges and credits to surplus reserves and extraordinary items not related primarily to the current reporting period. Income taxes (not shown) include Federal, State and local government, and foreign.

Previous series last published in June 1972 BULLETIN, p. A-50.

Board of Governors of the Federal Reserve System

ARTHUR F. BURNS, *Chairman*
HENRY C. WALLICH
PHILIP C. JACKSON, JR.

J. CHARLES PARTEE

STEPHEN S. GARDNER, *Vice Chairman*
PHILIP E. COLDWELL
DAVID M. LILLY

OFFICE OF STAFF DIRECTOR FOR MANAGEMENT

JOHN M. DENKLER, *Staff Director*
ROBERT J. LAWRENCE, *Deputy Staff Director*
DONALD E. ANDERSON, *Assistant Director for Construction Management*
GORDON B. GRIMWOOD, *Assistant Director and Program Director for Contingency Planning*

DIVISION OF DATA PROCESSING

CHARLES L. HAMPTON, *Director*
BRUCE M. BEARDSLEY, *Associate Director*
UYLESS D. BLACK, *Assistant Director*
GLENN L. CUMMINS, *Assistant Director*
ROBERT J. ZEMEL, *Assistant Director*

DIVISION OF PERSONNEL

DAVID L. SHANNON, *Director*
CHARLES W. WOOD, *Assistant Director*

OFFICE OF BOARD MEMBERS

THOMAS J. O'CONNELL, *Counsel to the Chairman*
MILTON W. HUDSON, *Assistant to the Chairman*
JOSEPH R. COYNE, *Assistant to the Board*
KENNETH A. GUENTHER, *Assistant to the Board*
JAY PAUL BRENNEMAN, *Special Assistant to the Board*
FRANK O'BRIEN, JR., *Special Assistant to the Board*
JOSEPH S. SIMS, *Special Assistant to the Board*
DONALD J. WINN, *Special Assistant to the Board*

LEGAL DIVISION

JOHN D. HAWKE, JR., *General Counsel*
BALDWIN B. TUTTLE, *Deputy General Counsel*
ROBERT E. MANNION, *Assistant General Counsel*
ALLEN L. RAIKEN, *Assistant General Counsel*
CHARLES R. MCNEILL, *Assistant to the General Counsel*

OFFICE OF STAFF DIRECTOR FOR MONETARY POLICY

STEPHEN H. AXILROD, *Staff Director*
ARTHUR L. BROIDA, *Deputy Staff Director*
MURRAY ALTMANN, *Assistant to the Board*
PETER M. KEIR, *Assistant to the Board*
STANLEY J. SIGEL, *Assistant to the Board*
NORMAND R. V. BERNARD, *Special Assistant to the Board*

DIVISION OF RESEARCH AND STATISTICS

JAMES L. KICHLIN, *Director*
JOSEPH S. ZEISEL, *Deputy Director*
EDWARD C. ETTIN, *Associate Director*
JOHN H. KALCHBRENNER, *Associate Director*
JOHN J. MINGO, *Senior Research Division Officer*
ELEANOR J. STOCKWELL, *Senior Research Division Officer*
JAMES R. WETZEL, *Senior Research Division Officer*
ROBERT A. EISENBEIS, *Associate Research Division Officer*
J. CORTLAND G. PERET, *Associate Research Division Officer*

Guide to Tabular Presentation and Statistical Releases

GUIDE TO TABULAR PRESENTATION

SYMBOLS AND ABBREVIATIONS

p	Preliminary	SMSA's	Standard metropolitan statistical areas
r	Revised	REIT's	Real estate investment trusts
rp	Revised preliminary	*	Amounts insignificant in terms of the particular unit (e.g., less than 500,000 when the unit is millions)
e	Estimated		(1) Zero, (2) no figure to be expected, or (3) figure delayed or, (4) no change (when figures are expected in percentages).
c	Corrected		
n.e.c.	Not elsewhere classified		
Rp's	Repurchase agreements		
IPC's	Individuals, partnerships, and corporations		

GENERAL INFORMATION

Minus signs are used to indicate (1) a decrease, (2) a negative figure, or (3) an outflow.

"U.S. Govt. securities" may include guaranteed issues of U.S. Govt. agencies (the flow of funds figures also include not fully guaranteed issues) as well as direct

obligations of the Treasury. "State and local govt." also includes municipalities, special districts, and other political subdivisions.

In some of the tables details do not add to totals because of rounding.
