VOLUME 72 □ NUMBER 9 □ SEPTEMBER 1986

FEDERAL RESERVE BULLETIN

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM, WASHINGTON, D.C.

Publications Committee

Joseph R. Coyne, *Chairman* □ Michael Bradfield □ S. David Frost □ Griffith L. Garwood □ James L. Kichline □ Edwin M. Truman

The Federal Reserve Bulletin is issued monthly under the direction of the staff publications committee. This committee is responsible for opinions expressed except in official statements and signed articles. It is assisted by the Economic Editing Section headed by Mendelle T. Berenson, the Graphic Communications Section under the direction of Peter G. Thomas, and Publications Services supervised by Linda C. Kyles.

Table of Contents

603 MONETARY POLICY REPORT TO THE CONGRESS

Sharp contrasts among sectors and regions of the economy characterized economic developments during the first half of 1986; on balance, real gross national product remained on a rather sluggish growth path.

618 PROFITABILITY OF U.S.-CHARTERED INSURED COMMERCIAL BANKS IN 1985

After a five-year decline, the aggregate profitability of insured commercial banks turned up somewhat in 1985; notwithstanding the improvement in the overall profit picture, however, a record 118 insured commercial banks failed last year.

633 INDUSTRIAL PRODUCTION

Industrial production decreased an estimated 0.5 percent in June after having declined 0.4 percent in May.

635 STATEMENT TO CONGRESS

Paul A. Volcker, Chairman, Board of Governors, reports on the conduct of monetary policy in the larger context of the performance of the U.S. and the world economy, before the Senate Committee on Banking, Housing, and Urban Affairs, July 23, 1986. [Chairman Volcker presented identical testimony before the House Committee on Banking, Finance and Urban Affairs on July 29, 1986.]

643 ANNOUNCEMENTS

Change in the discount rate.

Change in reporting of yields on certain Treasury securities.

Publication of new pamphlet, "A Guide to Business Credit and the Equal Credit Opportunity Act."

Data from Call Report to be available from NTIS.

Issuance of revised list of OTC stocks subject to margin regulations.

Extension of comment period on amendments to Regulation D; comment requested on proposal to allow the head offices of the Federal Reserve Banks of Minneapolis and Kansas City to continue a tiered-pricing structure for check collection services.

Admission of six state banks to membership in the Federal Reserve System.

646 RECORD OF POLICY ACTIONS OF THE FEDERAL OPEN MARKET COMMITTEE

At its meeting on May 20, 1986, the Committee adopted a directive that called for no change in the existing degree of pressure on reserve positions. The members expected such an action to be associated with a deceleration in monetary growth over the balance of the second quarter. Because such growth had been rapid thus far in the quarter, the members anticipated faster growth of the monetary aggregates, especially M1, than was expected at the time of the April 1 meeting. The members recognized that the behavior of M1 remained subject to unusual uncertainty, but they agreed that its growth might be in the area of 12 to 14 percent for the period from March to June, assuming some decline over the balance of the quarter. For the same period, M2 and M3 were now expected to expand at annual rates of around 8 to 10 percent. The members agreed that if the anticipated slowing in monetary growth did not occur, somewhat greater reserve pressure would be acceptable in the context of a pickup in the expansion of economic activity with account being taken of conditions in domestic and international financial markets and the behavior of the dollar on foreign exchange markets. On the other hand, somewhat lesser reserve restraint might be acceptable in the event of pronounced sluggishness in the performance of the economy in association with a marked slowing in monetary growth.

The Committee agreed that the current intermeeting range for the federal funds rate should be reduced by 1 percentage point to 5 to 9 percent. The reduction was intended as a purely technical adjustment in the context of an unchanged degree of reserve availability and its purpose was to provide a more symmetrical range around the lower federal funds rate that had prevailed for some time. The members regard the federal funds range as a mechanism for initiating Committee consultation when its boundaries are persistently exceeded.

Monetary Policy Report to the Congress

Report submitted to the Congress on July 18, 1986, pursuant to the Full Employment and Balanced Growth Act of 1978.¹

MONETARY POLICY AND THE ECONOMIC OUTLOOK FOR 1986 AND 1987

Sharp contrasts among sectors and regions of the economy characterized economic developments during the first half of 1986. Reflecting in substantial part continuing strong competitive pressures from abroad and large spending cutbacks in the oil industry in response to sharply declining prices, industrial and investment activity were restrained. In contrast, activity continued to expand rather strongly in housing, the financial sector, and the broad service area of the economy. On balance, real gross national product remained on a rather sluggish growth path.

Although there are substantial uncertainties about the degree and timing of a pickup in economic activity, a number of positive economic and financial developments have occurred that should provide the basis for somewhat faster economic growth and some reduction in unemployment over the year ahead. Interest rates have moved lower, and, reflecting the decline of the dollar on foreign exchange markets, U.S. industry is in a stronger competitive position internationally. Also, inflation has remained subdued, reflecting not only declines in the prices of energy and other basic commodities but also continued restraint on wages in many sectors. Much of the uncertainty about a pickup in growth turns on the strength of economic performance in other industrialized countries, and there is also some concern over the transitional effects of tax reform legislation.

What monetary policy has been able to do, during a period of greater overall price stability and adequate capacity relative to the demands actually placed upon it, is to accommodate demands for money and credit, helping to facilitate further declines in interest rates. Monetary policy by itself cannot eliminate or deal with the sectoral imbalances that are still troubling the economy. A reduction of the large deficit in the nation's external accounts is of critical importance over time, and this reduction will be difficult to achieve in an orderly way without faster growth in key foreign economies. Agreement on tax reform also would remove a major source of uncertainty that probably has inhibited growth in the first half of the year; over time, substantial progress toward eliminating federal budget deficits is essential to achieving better balance in the U.S. and world economies. Overall, prospects for the economy appear to be favorable, but much will depend on the evolution of policy, both in this country and abroad.

Economic and Financial Background

The first half of this year saw a continuation of the reduced pace of economic growth that has prevailed since the middle of 1984. Although the service industries have been strong, manufacturing activity has been relatively sluggish in the face of strong foreign competition, and some sectors, such as energy and agriculture, are under strong pressure. The economy has generated a substantial number of new jobs this year, but the labor force also has grown rapidly and the unemployment rate has remained around 7 percent.

Perhaps the most significant economic event in the first half of 1986 was the plunge in world crude oil prices. Despite the potential longerterm benefits from this development, the initial impact on the U.S. economy was negative as,

^{1.} The charts to the report are available on request from Publications Services, Board of Governors of the Federal Reserve System, Washington, D.C. 20551.

with less of an incentive to search for new sources of supply, oil exploration activity was cut back sharply. However, falling crude oil prices have been translated quickly into lower rates of inflation for a time, and in addition, they have damped expectations about future price increases. Consumer confidence has been high, and with purchasing power boosted by the decline in energy prices, consumer spending has been strong. By damping inflation expectations, the drop in world oil prices also spurred a rally in credit markets, further extending the decline in interest rates that began in mid-1984.

Against the background of relatively slow economic growth and little overall price pressure, monetary policy basically has accommodated strong demands for reserves to back deposits thus far in 1986, while responding to and facilitating the drop in market interest rates with three half-point cuts in the discount rate. At the same time, with the dollar under downward pressure in foreign exchange markets during most of the period and the economies of other key industrial countries somewhat weak early in the year, international economic and financial developments remained an important consideration in the conduct of monetary policy. Similar official changes in interest rates in several major foreign countries, where growth also has been slower than expected, took place around the time of the first two discount rate reductions by the Federal Reserve this spring. The coordinated cuts helped avoid the potential for disturbing exchange market conditions.

Reductions in other short-term rates were generally in line with the total decline of $1\frac{1}{2}$ percentage points in the discount rate since the end of last year. Yields on long-term credit market instruments fell as much as $2\frac{1}{4}$ percentage points, encouraged not only by the revision of inflation expectations that seemed to be keyed to falling energy prices but also by the sluggish performance of the economy and, early in the year, by the restraining effect of the Gramm-Rudman-Hollings legislation on expected federal budget deficits.

These and earlier declines in market rates had a particularly strong effect on the narrow monetary aggregate. By June, M1 had grown at an annual rate of 123/4 percent from its fourth-

quarter 1985 level, well in excess both of its target range of 3 to 8 percent and of the growth in the economy. Over the first half of the year, the velocity of the aggregate appears to have declined at a faster rate than the postwar record decline in 1985. The interaction of lower interest rates with the changed composition of M1 since deposit deregulation explains a good portion of this rapid decline of velocity. The public apparently has been shifting a considerable amount of its savings into the negotiable order of withdrawal (NOW) account component of the aggregate in response to relatively large declines in rates on competitive outlets for liquid funds. Growth in demand deposits also has been quite strong, likely related to the effect of lower interest rates on the balances that businesses must hold to compensate for banking services, as well as to a surge in financial market activity. Even after taking account of these factors, however, the strength of M1 appeared extraordinary in the first half.

The broader aggregates grew more moderately, ending the first half near the middle of their respective target growth ranges of 6 to 9 percent. Nevertheless, the strong demand for liquid assets, generated by the relatively large declines in long-term rates, was evident not only in soaring M1 balances but also in the composition of the broader aggregates. For example, the more liquid components of M2 grew rapidly, while its time-deposit component increased only marginally. Over the same period, the debt of domestic nonfinancial sectors is estimated to have remained somewhat above its monitoring range, growing well in excess of GNP.

The substantial decline in long-term interest rates since the middle of last year has helped buoy interest-sensitive sectors of the economy. Activity in the housing market was quite strong in the first half of 1986, supported by the lowest level of mortgage rates in more than seven years. The reduction in interest rates also was a factor in the strength of consumer spending, both by reducing the overall cost of credit and by raising the value of the household sector's security holdings.

Although the foreign exchange value of the dollar has fallen a third from its 1985 peak, the depreciation apparently has not yet produced a

substantial increase in the volume of exports or a reduction in the volume of imports. Adjustments of trading patterns to exchange rate movements take place over a number of years, and it is not surprising that a dramatic improvement in our large merchandise trade deficit has yet to occur. However, progress has been somewhat slower than might have been expected, partly because of the slow growth in other major industrialized countries. The continuing appreciation of the dollar against the currencies of many developing nations also has been a factor.

The influence of strong foreign competition remains pervasive. Agricultural products are in ample supply worldwide, reducing the export opportunities of our producers. In manufacturing, many industries continue to face weak foreign orders, while an increasing portion of domestic demand has been met from abroad in spite of price increases on some competing foreign products. With little observed pickup in demand, many firms have scaled back their expenditure plans, and capital spending remains weak as a result.

Ranges for Money and Debt Growth in 1986 and 1987

The FOMC reaffirmed the 1986 ranges of 6 to 9 percent that had been established in February for M2 and M3; as noted above, the broader monetary aggregates ended the first half of the year near the middle of those target ranges. For 1987, the Committee tentatively decided that, consistent with its intention to achieve money growth at a rate consistent with maintaining reasonable price stability and sustainable economic expansion, the target growth ranges for both M2 and M3 would be lowered ½ percentage point, to 5½ to 8½ percent, measured from the fourth quarter of 1986 to the fourth quarter of 1987. Those ranges were felt to be consistent with a pickup in economic growth.

The rapid rise in M1 over the first half of the year underscored the degree of uncertainty surrounding the behavior of the aggregate and, in particular, about its behavior relative to GNP. The nature of the relationship among M1, income, and interest rates appears to have been

significantly altered by the changed composition of the aggregate in recent years, as well as by the prospects for greater price stability. The precise implications of these developments for the future are not yet clear, given the limited experience to date. In these circumstances, the Committee decided that growth of M1 in excess of the previously established range of 3 to 8 percent for 1986 would be acceptable and growth in that aggregate over the balance of the year would continue to be evaluated in light of the behavior of the other monetary aggregates. Developments in all the aggregates will be judged against the background of developments in the economy and financial markets and potential price pressures.

With respect to 1987, the Committee expressed the preliminary view that the current range for M1—3 to 8 percent—should provide for adequate money growth to support continued economic expansion, assuming that a greater stability reemerges in the link between M1 and income in a more stable economic, price, and interest rate environment than has existed in recent years. However, in the context of the experience of the past several years and keeping in mind the exceptional uncertainties in predicting the behavior of M1, the Committee at the end of this year will review with particular care the appropriate range and weight to be placed on M1 in 1987.

As shown in the accompanying table, the FOMC did not change the 1986 "monitoring" range for the credit market debt of domestic nonfinancial sectors and tentatively retained the same range for next year. It was anticipated that the debt aggregate might exceed the monitoring range of 8 to 11 percent for 1986 as a whole,

Ranges of growth for monetary and debt aggregates Percent change, fourth quarter to fourth quarter

Aggregate	1986	Tentative for 1987
M1	[3 to 8] ¹ 6 to 9	[3 to 8] ² 5½ to 8½
M3	6 to 9 8 to 11	5½ to 8½ 8 to 11

^{1.} While no new range was specified for 1986, growth in excess of the established range would be acceptable.

^{2.} Indicative of likely range if more stable velocity behavior shows signs of reemerging.

given its rapid growth around the beginning of the year, but as in the past, the Committee felt that raising the target would create an inappropriate benchmark for evaluating longer-term trends in debt growth.

Economic Projections

The Committee believes that the monetary objectives it has set are supportive of a strengthening of economic activity in the second half of the year. However, the uncertainties associated with the economic outlook appear to be quite large, and continued vigilance and flexibility in the conduct of policy clearly are needed. As summarized in the table on economic projections, the central-tendency forecast of Committee members and nonvoting Reserve Bank Presidents is for growth of 2½ to 3 percent in real GNP this year. Such an increase in output would be expected to generate appreciable further gains in employment, but the unemployment rate might not drop below 7 percent before year-end. With the decline in energy prices more than offsetting effects from the depreciation of the dollar and with pressure from domestic labor and product markets restrained, the inflation rate for the year is generally projected at between 21/4 and 23/4 percent, as measured by the implicit deflator for GNP.

In 1987, which would be the fifth year of the current expansion, real GNP is projected by most participants to increase 3 to 3½ percent, and unemployment is expected to decline moderately. A significant portion of the increase in production next year is expected to come from the external sector, with the lower value of the dollar expected to restrain the growth of imports and to stimulate exports. However, with energy prices leveling off, exchange-rate-related increases in import prices are expected to cause an acceleration in inflation to a range of 3 to 4 percent next year.

The forecasts of the Committee members and nonvoting Reserve Bank Presidents assume that the Congress will seek to achieve the Gramm-Rudman-Hollings deficit reduction targets. Progress in reducing the federal deficit is seen as crucial in maintaining financial conditions condu-

Economic projections for 1986 and 1987

^{1.} The administration has yet to publish its mid-session budget review document, but spokesmen have indicated that there will be revisions to earlier forecasts. As a consequence, the customary comparison of FOMC forecasts and administration economic goals has not been included in this report.

cive to balanced growth and to an improved pattern of international transactions.

A number of factors point toward a reacceleration in growth, although the exact degree and timing remain uncertain. Despite their initial effects on investment, lower energy prices should help support economic activity, primarily by bolstering real consumer income. The lower level of interest rates also is expected to give some impetus to consumption while, at the same time, maintaining the strength in the housing market. Business spending on new plant and equipment is projected to pick up somewhat over time, but the degree of improvement will depend in part on the character of tax reform legislation.

A critical element in the expected improvement in economic performance is progress toward reducing the size of the merchandise trade deficit. As previously noted, with import prices rising as a result of the depreciation of the dollar, the growth in imports is expected to slow, and the increased price competitiveness of U.S. goods should bolster export growth. However, a substantial improvement in our trade perfor-

mance will require satisfactory growth of demand in other countries. Moreover, such an improvement will require open access to foreign markets, which underscores the critical importance of avoiding protectionist measures here and abroad.

THE PERFORMANCE OF THE ECONOMY DURING THE FIRST HALF OF 1986

The economy continued to expand in the first half of 1986, but apparently no more rapidly than in 1985. The overall increase in output during the first six months of the year generated slightly more than 1 million new jobs, and the civilian unemployment rate held near 7 percent. At the same time, the dramatic decline in world crude oil prices caused a substantial slowing in inflation.

The combination of the lingering effects of the high foreign exchange value of the dollar during 1984 and 1985, the slow growth abroad, and the initial impact of lower crude oil prices played a key role in inhibiting any acceleration in overall economic activity. Industrial output declined noticeably over the first half, with activity reflecting the continuing intense competition from foreign producers in the manufacturing sector and also the sharp cutbacks in energy-related investment. U.S. agriculture confronts growing world supplies of many farm products, and many farmers continue to be squeezed by a heavy debtservicing burden and falling land values. The drop in oil prices has caused substantial adjustment problems in the short run. Oil drilling has been reduced drastically, and a number of highcost wells have been capped. More than 100,000 jobs have been lost in the oil industry since the beginning of the year.

At the same time, however, some of the benefits from the drop in oil prices did begin to emerge in the first half. The lower price of crude oil was reflected fairly quickly in the prices of finished energy products, which caused consumer prices to register their largest three-month decline since the beginning of 1949. This lower price level has given a substantial boost to the purchasing power of consumers and has helped to support higher levels of spending. Although

the volume of oil imports will rise, the sharper decline in price is an aid in reducing the large deficit in our trade account.

A potentially more significant longer-term influence on our balance of trade is the lower value of the dollar. The prices of foreign goods are rising in dollar terms and should begin to shift expenditures from imports to domestic products. At the same time, U.S. goods are more competitive on world markets, although we have yet to experience a sustained improvement in exports. The rather moderate improvement in export volume to date reflects, in part, the effects of the dollar's earlier rise and the slow pace of economic activity abroad. Growth in the major industrialized nations was particularly weak in the first quarter of 1986, although there appears to have been some rebound in the second quarter. Meanwhile, the drop in oil revenues reduced import demand in some developing countries, most importantly Mexico.

Another factor affecting the economy this year has been the changing fiscal-policy environment. It now appears that the deficit in the current fiscal year may exceed earlier plans, but the Congress has moved to implement the spirit of the deficit targets contained in the Gramm-Rudman-Hollings legislation in acting on its fiscal 1987 budget. The prospect of lower federal budget deficits in the years ahead, coupled with the drop in oil prices, encouraged sizable reductions in long-term interest rates at the beginning of 1986, which have begun to stimulate the interestsensitive sectors of the economy. The most notable result has been in the housing sector in which lower mortgage rates have led to substantial gains in building activity. Investment in new plant and equipment has not shown a similarly positive response to lower interest rates, however; apart from the negative effects of the oil drilling decline, business spending has been damped by the existence of a sizable overhang of office and factory space and by continuing uncertainties about sales trends and tax reform.

With the decline in energy prices, further progress has been made in reducing the inflation rate. Continued moderation in wage increases and abundant supplies of agricultural commodities and industrial raw materials also were important factors in restraining price increases in

the first half of 1986. These favorable developments worked to offset the inflationary tendencies associated with the depreciation of the dollar and the continued rapid rise in the prices of services.

The Household Sector

Consumer expenditures were quite strong in the first half of 1986, supported in part by rapid income growth. Real disposable income increased at about 5½ percent at an annual rate, boosted by high levels of farm subsidy payments and the energy-related slowdown in inflation. In addition, survey information indicates that consumer confidence remains high, and many households consider it to be a good time to purchase big-ticket items such as a car or a new home. Under these circumstances, consumers have been willing to spend the bulk of their income gains, and the personal saving rate has remained at a historically low level.

The increase in consumer spending was wide-spread. Purchases of nondurable goods, such as apparel, were particularly strong in the first quarter, while outlays for services also grew briskly. The demand for new automobiles also remained quite high after the large sales increase in 1985. New cars sold at an annual rate of 11 million units in the first six months of this year, with important support coming from a series of below-market finance incentive programs for many domestic models. Foreign automobiles continued to sell at a fast pace even though sticker prices generally have increased more than 10 percent in response to the exchange rate changes.

Activity in the housing sector also has been strong this year. Stimulated by the decline in mortgage rates, sales of new single-family homes hit a record high in March and remained generally strong throughout the second quarter. Production responded to this increase in demand, and during the first half, single-family units were begun at a rate of 1½ million units, the highest since 1979. Despite elevated rental vacancy rates, construction apparently was maintained in the multifamily sector by the large volume of mortgage revenue bonds issued by many state

and local governments at the end of last year. However, as these tax-exempt funds were depleted, activity in the multifamily market began to taper off in the spring. In addition, concerns about the treatment of income properties under tax reform may have begun to restrain the construction of multifamily dwellings.

Indicators of the financial position of the household sector were mixed in the first half of the year. Although the growth in consumer credit slowed from its rapid pace in 1985, the ratio of consumer installment debt to disposable income edged up to a new high. The rallies in the stock and bond markets strengthened the asset side of the household sector balance sheet, and many homeowners took the opportunity presented by the decline in interest rates to ease their debt-servicing burdens by refinancing mortgage loans. However, increased strains also were evident, as personal bankruptcies rose to record levels and mortgage delinquency rates remained historically high.

The Business Sector

The financial position of the business sector improved a bit in the aggregate during the early part of 1986, albeit with considerable diversity across industries. Economic profits in the corporate sector rose at an \$11 billion annual rate in the first quarter, and the share of after-tax economic profits in GNP remained at the highest level since the late-1960s. Financial conditions in agriculture and manufacturing remained weak, however. Agriculture continued to be hurt by excess supply conditions worldwide, and farm loan delinquencies rose to a postwar high. In manufacturing, intense price competition from foreign sources squeezed profit margins, and with little growth in demand, capacity utilization moved lower.

Business spending on plant and equipment was weak in the first half of the year. This poor performance partly reflected a "payback" after very strong capital spending in the fourth quarter of 1985. Firms apparently accelerated their spending at the end of last year to take advantage of investment incentives that were targeted for scaling back or elimination under proposed tax

reform legislation; expenditures then dropped off in the first quarter of 1986. In addition to these tax-anticipation effects, the demand for computers and other high-technology equipment remained subdued, after increasing rapidly in the first two years of the recovery. Spending on nonresidential structures was down substantially, partly as a result of the cutback in oil and gas well drilling, which was large enough to reduce real GNP growth 1/2 percentage point in the first quarter and perhaps more in the second quarter. However, a correction also began in the construction of office buildings in response to past overbuilding and high vacancy rates.

Much of the change in business inventories in the first half of this year was associated with fluctuations in automobile dealers' stocks. Domestic car production outpaced sales in the first quarter, and this resulted in a substantial buildup of auto inventories. Assembly schedules were scaled back in the spring, which helped dealers reduce their excess inventories, although stocks remained high. Outside the auto area, inventory investment remained moderate overall, but the pattern differed markedly between manufacturing and trade. Manufacturers continued to trim their stocks, preferring to keep inventories lean until there was firm evidence of a resurgence in demand. In contrast, inventory investment picked up at trade establishments, even though merchants continued to hold a historically high level of stocks relative to sales.

With the declines in capital spending and the slow pace of inventory investment, internal funds in the aggregate were adequate to meet almost all of the basic financing needs of nonfinancial corporations. However, the drop in longterm interest rates to the lowest levels since 1978 prompted businesses to issue massive amounts of bonds; the proceeds were used not only to finance new investment but also to retire outstanding bonds and stocks and to pay down short-term debt.

The Government Sector

Despite congressional action to slow the growth of spending, the size of the federal budget deficit in fiscal 1986 may match or exceed the record \$212 billion of fiscal 1985. Revenue growth has slackened in association with the slower pace of nominal income growth. Expansion of corporate tax receipts has slowed significantly, while excise tax revenues also are down as lower oil prices virtually have eliminated the receipts from the "windfall profits" tax.

Federal purchases of goods and services fluctuated widely in the first half of 1986. They dropped substantially in the first quarter, in part reflecting a slowing in the purchases of farm products by the Commodity Credit Corporation (CCC), after a record increase in the fourth quarter of 1985. Excluding CCC purchases, real federal outlays were down slightly, as a result of lower defense spending.

Purchases of goods and services by state and local governments in real terms increased at an annual rate of 2.8 percent in the first quarter of 1986, about the same pace as in 1985. After a large increase in the first quarter, construction spending remained strong in the spring, while employment rose further. However, a number of states, particularly those dependent on agriculture and the oil industry, continued to experience a substantial deterioration in their financial condition. A significant portion of tax revenues in many oil-producing states are tied directly to the value of oil output, and the drop in oil prices has induced a concomitant decline in receipts. In addition, the secondary effects on energy-related businesses are tending to reduce revenues further. To restore fiscal balance, many states have announced expenditure cuts or tax increases.

The External Sector

Continuing the decline that began early last year, the dollar depreciated further against the currencies of foreign industrial countries during the first half of 1986. On balance, the trade-weighted value of the dollar has fallen more than 30 percent from its February 1985 peak, about onethird of which has occurred this year. Associated with the depreciation was a narrowing in inflation-adjusted interest rate differentials between the United States and the other major industrialized countries, as interest rates declined both here and abroad.

Although a substantial correction has occurred in the dollar's value, at least against the currencies of the major industrialized countries, the nation's current account deficit was unchanged in the first quarter from the high rate of \$135 billion in the fourth quarter of 1985. This lack of improvement was the result of large increases in nonpetroleum imports while exports grew more slowly. The failure to date of the dollar's decline to slow import growth reflects, in part, the relatively slow pass-through of the depreciation into import prices. Because profit margins of foreign exporters expanded during the period of dollar appreciation, they are able, for a time, to absorb the reduced receipts without raising prices; slack markets at home also have held down price increases. In addition, the dollar has continued to rise against the currencies of many developing countries, which account for about one-quarter of U.S. nonpetroleum imports. However, nonpetroleum import prices now are increasing, led by large increases for automobiles, other consumer items, and capital equipment.

The decline in the dollar also improved the price competitiveness of U.S. goods in foreign markets. However, exports have been slow to pick up, in important part because of the sluggish pace of foreign economic activity. Real gross national product declined in both Japan and West Germany in the first quarter, but economic growth appears to have been somewhat stronger in the spring.

Economic growth also has been sluggish among many of our major trading partners in the developing world. Like other oil-producing countries, Mexico is adjusting its spending to lower oil revenues, and this adjustment has reduced the demand for U.S. products. Falling world commodity prices also have aggravated the financial difficulties of other developing nations, including members of the Organization of Petroleum Exporting Countries.

Reflecting these influences, the volume of U.S. merchandise imports rose 1½ percent in the first quarter of 1986, as nonpetroleum imports continued to grow rapidly while oil imports declined. The largest increases were in machinery, with smaller advances registered for some consumer goods. The volume of merchandise ex-

ports was up somewhat in the first quarter, with a decline of $3\frac{1}{2}$ percent in exports of agricultural products offset by increased U.S. nonagricultural exports.

Labor Markets

Nonfarm payroll employment expanded in the first half at an average pace of roughly 175,000 per month on a strike-adjusted basis, down from 230,000 in 1985. Continuing the trend of the past few years, gains at trade and service establishments were quite strong and accounted for most of the overall employment increase. Hiring also was brisk at construction sites through much of the period, buoyed by the strength in homebuilding. However, manufacturing payrolls contracted somewhat, with weakness in the motor vehicle, metals, and machinery industries.

The civilian unemployment rate averaged somewhat higher over the first half of the year than at the end of 1985. The continued expansion of job opportunities about matched the rise in the number of individuals entering or reentering the workforce, and labor force participation reached a new high by midyear. However, the weakness in the industrial sector was reflected in a rise in the number of workers separated from their last job.

In view of the continued slack in labor markets as well as lower price inflation, wage growth remained moderate. The employment cost index, a broad measure of overall compensation trends, rose 3¾ percent in the 12 months ending in March, down from 4½ percent over the year ended in March 1985. Most of the slowing was the result of smaller increases in the cost of employee benefit programs, reflecting in part efforts to contain medical insurance expenses, while wages and salaries rose at about the rate of 4 percent experienced in 1985. Continued moderation in union wage gains also was evident in the collective bargaining agreements reached in the first half of 1986.

After declining at the end of 1985, labor productivity in the nonfarm business sector rebounded in the first quarter of 1986. However, the gain largely reflected erratic movements in hours worked by self-employed workers, and

productivity has been essentially flat over the past year after rising substantially early in the recovery. Productivity in manufacturing has increased somewhat faster during this expansion, as intense import competition has forced many producers to modernize their factories and streamline work rules. As a result of the firstquarter bounce back in productivity, unit labor costs in the nonfarm business sector fell during that period, but they were still up about 3 percent from a year earlier.

Price Developments

Falling energy prices were largely responsible for a significant slowing in measures of aggregate inflation during the first half of 1986. A broad measure of prices-the fixed-weighted price index for GNP—increased at a 2½ percent annual rate in the first quarter, down from a rise of 31/2 percent in 1985. Consumer prices actually declined over the February-to-April period, but they still were up 1½ percent over the 12-month period ended in May. The drop in prices was greater at the wholesale level, where weakness in the industrial sector added to the downward pressure from energy prices.

The speed and magnitude of the decline in world crude oil prices this winter were dramatic. Over the January-to-April period, crude oil prices fell more than \$15 per barrel to their lowest level since 1978. Prices of refined petroleum products responded quickly to the drop in crude oil prices, and retail gasoline prices fell 25 percent, or about 28 cents a gallon, over the January-to-May period. Charges for electricity and natural gas, which compete with fuel oil as a power source, responded more slowly to the lower crude oil prices but by the end of May had fallen about 1 percent.

The prices of industrial raw materials continued to decline in the first half. Prices were depressed by abundant world supplies of many primary commodities; debt-servicing obligations led many developing countries to maintain or expand their output. Sluggish industrial activity in the United States and other large economies contributed to the softness of commodity markets.

Outside the energy area, further progress was

made in reducing the inflation rate during the first half of the year. Retail food prices rose at an annual pace of only 1 percent through May, held down by falling meat prices. A small decline in the prices of consumer goods was responsible for the slowdown in the consumer price index (CPI), excluding food and energy, to an annual rate of increase of 3½ percent from its 4½ percent rise during 1985. In contrast, the prices of nonenergy services continued to increase at an annual rate of 6 percent, boosted by rising housing costs and by higher premiums for most types of insurance.

MONETARY POLICY AND FINANCIAL MARKETS IN THE FIRST HALF OF 1986

The Federal Open Market Committee at its meeting in February of this year established target growth ranges, measured from the fourth quarter of 1985 to the fourth quarter of 1986, of 3 to 8 percent for M1 and 6 to 9 percent for both M2 and M3. The associated monitoring range for growth of the debt of domestic nonfinancial sectors was set at 8 to 11 percent. As compared with the ranges for 1985, the M2 target was unchanged, the upper limit for M3 was reduced ½ percentage point, and the debt range was lowered 1 full percentage point; the M1 target remained the same as that set last July for the second half of 1985. It was expected that growth of money and credit within these ranges would be adequate to encourage sustainable economic expansion consistent with progress over time toward reasonable price stability and an improved pattern of international transactions.

In retaining the comparatively wide target range for M1, the FOMC recognized continuing uncertainties about the behavior of that aggregate. Moreover, the Committee agreed that, in view of these uncertainties and the unexpectedly rapid growth of M1 relative to GNP in recent years, the behavior of the narrow money stock would be evaluated in light of growth in the broader monetary aggregates, developments in the economy and financial markets, and the potential for inflationary pressures.

In the event, rapid M1 growth reemerged early this spring, and by June the aggregate was far above its range. M2 and M3, however, ended the first half near the middle of their 1986 target ranges. This disparate pattern of money growth, as well as the modest expansion in economic output, ebbing inflation, and continuing downward pressure on the dollar in foreign exchange markets, provided the setting for policy during the first six months of this year. In general, monetary policy was accommodative. As an operational matter, the degree of pressure on reserve positions of depository institutions remained limited, and the discount rate was lowered twice in the first half of the year, ½ percentage point each time, in the context of sizable declines in market interest rates and similar actions by some other industrial countries. In early July, the discount rate was cut another ½ point, to 6 percent.

Money, Credit, and Monetary Policy

In 1985, M1 grew at a rate substantially above its target growth range in the first half, and it continued to do so over the remainder of the year, even after the range had been rebased and widened in July. Instead of the return to more normal behavior that the FOMC had looked for, M1 velocity—the ratio of nominal GNP to M1 balances—fell even more rapidly in the second half of the year than it had in the first. Taking the prevailing economic and financial conditions into account, the Committee decided in the latter part of 1985 that above-target M1 growth would be acceptable.

In light of the uncertainties surrounding the behavior of M1, in February of this year the FOMC set a 1986 target range for the aggregate that, while not providing for a drop in velocity as large as the 6 percent decline posted in 1985, was wide enough to allow for appreciable variation in velocity relative to historical trends. Nevertheless, the Committee recognized that the relationship of M1 to income had become increasingly difficult to predict, owing importantly to the changing composition of M1. An important share of the aggregate now consists of interest-bearing deposits, which are potentially an attractive repository for savings as well as transaction balances, introducing an additional source of sensitivity to changes in interest rates and other economic variables. In these circumstances, the Committee emphasized that policy implementation would involve a continuing appraisal of trends in all of the money and credit measures, as well as of indicators of economic activity and prices, and conditions in credit and foreign exchange markets. Within this framework for policy and against a background of incoming data indicating moderation of inflationary pressures and a relatively slow pace of economic expansion—including weakness in some important goods-producing sectors—the Federal Reserve basically accommodated the demands for re-

e Estimated.

serves associated with strong M1 growth over the first half of 1986.

Early in the year, reserves were provided slightly more freely, continuing the trend toward easier reserve conditions that had developed late last year. In the initial months of 1986, growth of M1 dropped off sharply from its rapid 1985 pace. and growth of M2 also slowed substantially, to a rate below its annual target range. There were signs of some sluggishness in economic activity, and steep declines in oil prices, which were improving the outlook for inflation, contributed importantly to a rally in long-term credit markets that picked up momentum in mid-February. At the same time, short-term interest rates edged a little lower, but the federal funds rate remained significantly above the Federal Reserve's discount rate.

In this context, a cut in the discount rate would complement the thrust of open-market operations and would accommodate the market tendency toward lower interest rates. However, an important consideration in the timing and extent of any rate cut was the risk posed by an excessive reaction in the foreign exchange markets, when the dollar remained under downward pressure during much of the period. Ultimately, on March 7, the Federal Reserve cut the interest rate charged for discount window borrowings ½ percentage point to 7 percent, and the central banks of Japan, Germany, and several other industrial nations took similar actions around that time.

Short-term rates in U.S. markets fell throughout March and much of April. Interest rates in long-term markets continued to benefit from the favorable effect of slumping oil prices on inflation expectations, as well as improvements in the federal budget outlook, with the Gramm-Rudman-Hollings legislation beginning to bite and official projections of the deficit being revised sharply downward. To an extent, declining rates also reflected the optimism present in the markets that, with economic growth remaining moderate, there was potential for a further easing of monetary policy. M1 accelerated markedly moving above its target range in March—apparently in response to lower interest rates, but M2 and M3 growth were rather restrained, with M2 remaining below the lower end of its range throughout the first quarter.

On April 18, the Federal Reserve announced another reduction in the discount rate, to 61/2 percent. This change served primarily to catch up with and validate declines that already had taken place in market rates. Exchange rates and international interest rate considerations again played a role, and our discount rate cut coincided with a rate cut by the Bank of Japan.

By this time, market interest rates in the United States had fallen 1 to 2 percentage points since December, to their lowest levels in eight or nine years. Both short- and long-term rates then turned higher for a time, as some indications of stronger economic growth seemed to be developing and prospects for a further easing of monetary policy receded. Supporting the market's changed outlook were an acceleration in the monetary aggregates, strength in some incoming economic indicators, and the dollar's slide on foreign exchange markets, which continued through mid-May. The dollar subsequently recovered a bit, but most of the increase both in the exchange rate and in U.S. market interest rates was reversed before the first half ended, as indications of an expected strengthening of economic activity failed to materialize. With market interest rates falling, price pressures remaining subdued, and the economies of the United States and other industrial countries growing relatively slowly, the Federal Reserve again reduced the discount rate ½ percentage point, to 6 percent, effective July 11.

On balance since the end of 1985, the dollar has declined more than 10 percent, and shortterm rates, about 1½ percentage points. Longterm Treasury yields fell as much as 21/4 percentage points, but yields on other long-term securities fell less; corporate and tax-exempt bond yields dropped about 1 point, and fixed-rate mortgages fell just ½ percentage point. The smaller declines in these other markets were due in part to the massive issuance of these obligations (including a large volume of refinancings) elicited by the drop in rates over recent quarters, to investor desires for call protection, and in the case of tax-exempt securities, to concerns about tax reform.

Lower market interest rates have been an important factor in the rapid growth of M1 this year. The strong response of M1 to the decline in rates has reflected in part the cumulative effect of the deposit deregulation of recent years. In the first half of 1986, the final two installments of deregulation—the removal of minimum balance requirements on money market deposit accounts and Super NOWs on January 1 and the lifting of the ceiling on passbook savings rates on April 1—appear to have had little immediate effect on the growth of M1 or the other aggregates because relatively few institutions actually changed their deposit pricing practices. But the advent and expansion of interest-bearing checking accounts over the years have attracted more savings-type balances and have increased the responsiveness of M1 to interest rate changes. Since rates on the interest-bearing M1 accounts have adjusted sluggishly to changes in market rates, relatively wide swings in the incentives to hold these deposits have resulted.

Growth in NOW accounts surged in the first half of 1986, reaching an annual rate of around 25 percent in the second quarter, as it responded to the lower overall level of market interest rates and the narrower spread between long- and short-term rates. The latter development seemed to spur shifts of funds from time deposits into shorter-term accounts, including NOW counts. Demand deposit growth also strengthened as interest rates declined. In part, lower rates prompted increases in the compensating balances that businesses needed to hold in the form of demand deposits to pay for bank services. In addition, deposit levels may have been boosted to an extent by a sizable increase in financial transactions in the first half of the year, especially soaring mortgage prepayments and originations, which was stimulated by lower rates.

The velocity of M1 fell only moderately in the first quarter, but as money growth picked up and nominal GNP apparently failed to accelerate, velocity dropped at an extraordinary pace in the second quarter, resulting in a first-half rate of decline in M1 velocity that probably was somewhat faster than the average over 1985. Although the rapid M1 growth and falling velocity stemmed in large measure from interest rate declines, the size of the M1 increase was distinctly larger than what would have been expected based on historical relationships among money, income, and interest rates.

In contrast to M1, which grew at an annual

rate of 12³/₄ percent through June and exceeded its target by a large margin, both M2 and M3 grew moderately in the first half of the year and in June were near the middle of their respective ranges. Some of the more liquid components of the broader monetary aggregates, however, increased very rapidly, as part of the larger shift in investor portfolios toward short-term assets. This shift had much less effect on M2 or M3 than on M1, because the reallocation of funds took place largely within these broader aggregates. In addition to transaction deposits, money market deposit accounts, money market mutual funds, and ordinary savings deposits all expanded strongly during the first half of the year, while small time deposits grew only slightly.

Investors looked not only to the shorter-term components of the monetary aggregates, but also to stock and bond mutual funds (not included in the aggregates), which posted very attractive returns as a result of ongoing market rallies. Flows into such funds probably depressed M2 growth somewhat in the first half of this year, as they had in 1985. Even so, lower market interest rates and strong demands for short-term assets lifted M2 in excess of income, leading to an appreciable further decline in M2 velocity over the first two quarters of 1986. While M2 showed a fair amount of volatility in the first half, growth of M3 was comparatively steady from month to month, as banks varied their issuance of managed liabilities to compensate for fluctuations in core deposit inflows.

The debt of domestic nonfinancial sectors is estimated to have expanded at a more moderate rate over the first six months of 1986 than it had in some time, although still well in excess of the growth in income.² Bond issuance had surged in December in advance of the possible effective date of some provisions of tax-reform legislation, lifting the first-quarter level of the debt aggregate. Hence, when measured from its fourth-quarter-average base, the growth of domestic nonfinancial sector debt has remained above its monitoring range, coming in at an annual rate of 12³/₄ percent through June. Measured from its level at the end of December, however, debt

^{2.} The appendix reviews some aspects of the recent behavior of the debt aggregate.

grew at an annual rate of 101/4 percent through the end of June.

To an extent, the lower rate of debt growth since the end of December represented a reaction to the inflated borrowing just before the end of last year, when special factors applying to particular sectors combined to boost debt issuance tremendously, far in excess of normal credit needs. For example, the pronounced slowdown of federal borrowing in the first quarter reflected the drawdown of substantial cash balances built up by the government before year-end. Indeed. federal borrowing picked up again in the second quarter, and, for the year as a whole, the huge federal deficit is likely to make a strong contribution to aggregate debt growth, as it has for the past several years.

Following the surge in their borrowing late last year, state and local governments showed a sharp drop in debt growth. This earlier borrowing and continued uncertainty about tax reform restrained tax-exempt debt growth in early 1986. Beginning in March, however, public-purpose and refunding issues increased again as rates declined further and views changed about the likely form and effective date of restrictions proposed in tax-reform legislation.

Borrowing by the household sector also eased somewhat from the heavy pace of recent years. After a surprising slowdown early in the year, net residential mortgage borrowing apparently expanded rapidly in the second quarter. Over the entire period, lower mortgage rates spurred a substantial pickup in total mortgage originations, but the high volume of refinancings reportedly strained the ability of lenders to process real estate transactions. Consumer credit growth rates this year have been substantially below those of last year, though still outpacing the growth of income. An increasing number of consumers seem to be experiencing difficulty in making timely payments on outstanding credit; delinquencies on consumer loans other than credit cards have risen moderately, but those on bank credit cards have surged in the past two years, and personal bankruptcy rates have soared.

The smallest degree of deceleration occurred in the debt of the nonfinancial business sector, which continued to be boosted by the wave of corporate mergers, acquisitions, and share repurchases. While the stock market rally helped spur a substantial rise in gross equity issuance, net stock issuance remained decidedly negative because of the mergers and restructurings. Most notable so far this year, however, was the strength of long-term debt issuance by businesses in response to steeply falling long-term rates; gross issuance of corporate bonds, especially strong in March and April, ran far in excess of previous records. Nonfinancial firms increased their short-term debt only slightly, however, and this was reflected in a decline in their commercial paper outstanding, as well as in slow business loan growth at banks.

The stresses evident in many parts of the economy left their mark on the books of banks and other financial institutions. Asset quality deteriorated as a consequence of the sharp drop in oil prices and associated dislocations in the energy sector, overbuilding in commercial real estate, and the continuing distress in agriculture. Banks with relatively large amounts of farm loans outstanding, as well as other agricultural lenders, have been particularly hard hit recently; loan losses at these institutions have soared and their profitability has continued to slide. While banks in regions with economies heavily dependent on energy production were among the most strongly capitalized and profitable earlier, their financial position has eroded under pressure of surrounding economic difficulties. Bank failures in the first half of this year continued to run at about the rapid pace of 1985, with agricultural banks again accounting for a disproportionate share.

Overall bank earnings began to improve in 1985, and the industry has added significantly to its capital and loss reserves, although the explosion in off-balance-sheet commitments and the clouded outlook surrounding the repayment of many bank loans may have made it more difficult to assess the level of risk in the banking industry. At savings and loan associations, overall profitability appears to be improving as interest rates have declined and mortgage origination activity has surged. However, a substantial number of these institutions continue to have severe problems owing primarily to losses on weak assets, prompting proposals to add to the financial resources of the Federal Savings and Loan Insurance Corporation.

Concerns over loans to certain developing countries came to the forefront again this year as Mexico began to grapple with the additional economic and financial problems brought on in large part by dramatically lower oil prices. Banks have remained cautious lenders in the face of ongoing concerns about the economic and financial prospects of these countries. However, despite the weakness of global demand, some prog-

ress has been made in implementing appropriate macroeconomic policies and policies of internal structural reform. Financial support for such policies both from multilateral lending institutions and private creditors has been provided or is being negotiated along the lines proposed by Secretary of the Treasury Baker in Seoul last fall.

APPENDIX: SOME ASPECTS OF THE BEHAVIOR OF DOMESTIC NONFINANCIAL SECTOR DEBT

After moving in rather close alignment for about a quarter of a century, debt growth in recent years has far outpaced expansion of nominal GNP. The ratio of debt outstanding to GNP began climbing late in 1981 and subsequently soared well above the range that had prevailed since the early 1950s, a development that extended through the first half of 1986.

The debt aggregate is derived from the Federal Reserve's Flow of Funds accounts. It contains the credit market debt of domestic nonfinancial sectors—households, nonfinancial businesses, state and local governments, and the federal government—whose spending accounts for the vast bulk of income and production. It excludes debt of the financial sector because funds raised by financial intermediaries are already counted in the debt aggregate at the point they are channeled to nonfinancial sectors. To include financial sector debt would lead to double counting.

Nonfinancial sectors also behave to a degree as financial intermediaries, raising funds in credit markets and using the proceeds, at least for a while, to acquire credit market claims on other nonfinancial units. In such cases, "double counting" may be said to exist, because the initial borrowing appears as debt of a domestic nonfinancial unit, and the financial asset acquired has as its counterpart, either directly or indirectly, debt of another nonfinancial unit. For example, a substantial portion of the funds raised by state and local governments in 1985 was used to acquire claims on the federal government or mortgage claims on households. The federal government also issues debt and uses the proceeds

to extend loans to private borrowers—obligations that appear elsewhere in the debt aggregate.

While nonfinancial sectors engage to some degree in these intermediary functions on a regular basis, a marked increase in such activity can act to boost measured growth in the debt aggregate. This was the case last year, when the proceeds of a large volume of debt issued by state and local governments with the intention of retiring outstanding obligations at a later time were placed largely in special nonmarketable securities of the federal government. In addition, debt growth has been lifted in recent years by a wave of corporate mergers, acquisitions, and share repurchases that has resulted in a massive retirement of equity, financed with credit.

To assess the degree to which this double counting and corporate substitution of debt for equity have acted to boost debt growth, the behavior of an adjusted debt measure and of an equity-augmented measure was examined. The adjusted debt measure excludes readily identifiable double counting-in particular, that associated with the aforementioned state and local and federal government borrowing as well as with credit extended by nonfinancial businesses to the household sector. The resulting measure of adjusted debt is noticeably smaller in relation to GNP, but it has behaved quite similarly to the regular debt measure, rising sharply relative to GNP in recent years to well above the range prevailing since the 1950s.

The adjusted debt measure can be augmented by the accumulated net issuance of equity so that it encompasses funds raised in all markets. Although increasing less rapidly than debt or adjusted debt—for example, it rose 12½ percent in 1985 on an end-of-period basis, as compared

with 14½ percent for adjusted debt and 15 percent for debt-the augmented measure also has risen rapidly in recent years in relation to GNP, indicating that borrowing to retire equity explains only a small portion of the increase in the debt-GNP ratio. From a longer perspective, this measure has remained within its historical range, and its recent rise returns it, in relation to GNP, to the levels prevailing in the 1950s and early 1960s.

The evidence thus suggests that unusual behavior of the debt aggregate relative to GNP in recent years is related more to changes in underlying behavior than to the special factors just discussed. The unusual rise in debt relative to GNP in recent years has been in both the federal and nonfederal components of the aggregate. Growth in federal debt strengthened in the early 1980s and soared in 1982 with the widening of the budget deficit. After 1982, growth of federal debt slowed a bit in percentage terms while continuing to increase in dollar amounts and relative to GNP. Rising federal budget deficits have been associated with rising current account deficits and a growing gap between domestic purchases and output as net exports have contracted sharply. From one perspective, the growing federal deficit can be viewed as being financed by an inflow of funds from abroad—the counterpart to our current account deficit-which has enabled the federal government to increase its borrowing without curbing private spending and credit use to the extent that would be necessary in the absence of those external funds.3 However, the erosion of our international competitive position, which is reflected in the current account deficit, certainly has greatly affected individual industries.

Debt of each of the nonfederal sectors—households, nonfinancial businesses, and state and local governments—also has increased relative to economic activity, even after removing the types of double counting mentioned above. In the case of households, the exceptional growth of debt has been evident in both mortgage and

consumer debt and has been accompanied by a spectacular buildup of financial assets and a low personal saving rate. In other words, the household sector has been "grossing up" its balance sheet in recent years by heavy financial asset accumulation and borrowing. Financial deregulation and competition for household assets likely have contributed to this process by expanding access to market-related yields on deposits and other financial assets, while growing competition among lenders for market share and the trend toward securitization have added to sources of credit and put downward pressure on household borrowing costs. The corresponding narrowing of the spread between borrowing and deposit rates adds to the willingness of households to borrow rather than draw down liquid assets when spending rises relative to income. Demographic factors also appear to have contributed to household debt growth as the baby boom generation has moved further into the age bracket in which spending on housing and durables and borrowing tend to be high. In addition, households have benefited from the runup in stock market prices in recent years, and this boost to their net worth may have encouraged more borrowing. Even so, household debt growth has outstripped increases in net worth.

For nonfinancial corporations, most of the advance in indebtedness relative to output in recent years stems from the substitution of debt for equity, previously discussed. The unevenness of the current economic expansion also appears to have boosted corporate borrowing because some industries—especially those dependent on export markets and those competing with imports—have experienced protracted weakness, even though overall cash flows have been strong; thus, working capital and investment needs have been less closely matched with cash flows among firms than is typical, contributing to more rechanneling of funds through credit markets and more corporate borrowing. Finally, state and local government borrowing was especially heavy in 1985, even after removing the double-counting factors already mentioned, as lower interest rates and the anticipation of tax reform also fueled a surge in tax-exempt bond issuance for purposes other than advance refunding and mortgage acquisitions.

^{3.} Not shown in the charts to the appendix is the relation between debt measures and domestic spending (GNP less net exports). In recent years, debt growth has been somewhat more in line with growth in domestic purchases than output, but this ratio, too, has risen sharply.

Profitability of U.S.-Chartered Insured Commercial Banks in 1985

Deborah J. Danker and Mary M. McLaughlin of the Board's Division of Research and Statistics prepared this article. Rachel Valcour provided research assistance.

After a five-year decline, the aggregate profitability of insured commercial banks turned somewhat higher in 1985. The industry's return on assets rose to 0.70 percent and its return on equity to 11.33 percent, but both were still well below their 1979 peaks. Lower market interest rates contributed to a widening of net interest margins last year and enabled banks to realize gains on securities from their investment portfolios, thereby more than offsetting the effects of a continued deterioration in asset quality that was apparent in increased loan-loss provisions. As shown in table 1, interest margins have been generally well maintained in recent years; however, loan-loss provisions have soared, reflecting stresses in a number of key sectors of the domestic economy and in developing countries. Notwithstanding the improvement in the overall profit picture, however, a record 118 insured commercial banks failed last year.

Whether 1985 represents an isolated interruption in the general downtrend of bank profitability in the 1980s or marks a longer-run turning point remains to be seen. On the one hand, either of two special factors-neither of which is sustainable at its current pace over the long run could be credited solely with the improvement in profits last year. First, the banking industry realized capital gains of \$1.5 billion on securities in 1985, a sizable swing from the small net capital loss posted the previous year. And second, a single bank reported a huge year-to-year change. as Continental Illinois returned to profitability after experiencing a loss of nearly \$1 billion in 1984. Moreover, loan losses continued to rise, and the sharp drop in oil prices and associated dislocations in the energy sector, as well as continuing weakness in agriculture and overbuilding in commercial real estate, all point to

^{1.} Assets are fully consolidated and net of loss reserves. Data are based on averages for call dates in December of the preceding year and in June and December of the current year. In 1984 data are based on averages for call dates at the beginning and end of the year only.

Includes all taxes estimated to be due on income, extraordinary gains, and security gains.

^{3.} For each bank with profits before tax greater than zero, income from state and local obligations was increased by [t/(1-t)] times the lesser of profits before tax or interest earned on state and local obligations (t is the marginal federal income tax rate). This adjustment approximates the equivalent pretax return on state and local obligations.

lingering—and possibly worsening—problems with asset quality for many banks.

On the other hand, a rosier picture of net income would have emerged last year but for banks' efforts to increase their loss reserves. This prudent step was complemented by an increase in retained earnings, as the industry added to capital with both internal and external funds. The ability of the banking system to build reserves and capital and to improve profitability suggests considerable resiliency as the industry continues to adjust to disinflation, the deregulation of deposit rates, and the underlying economic difficulties and imbalances that have impaired the quality of many bank assets.

INTEREST EXPENSE

With market rates in 1985 about 2 percentage points below their year-earlier levels, commercial bank interest expense fell to the lowest point since the late 1970s. The drop in interest expense resulted not only from the general decline in rates, but also from the ongoing change in the composition of bank liabilities that over the past several years has lessened the importance of money market liabilities in funding bank assets. Deregulated retail-type deposits have been replacing more expensive wholesale money. In 1985, this trend away from money market liabilities was most apparent at the larger banks. Combined with the sharper decline in rates paid on wholesale liabilities, which continue to account for a much higher share of liabilities than at smaller banks, this sizable shift into lower-cost retail-type deposits led the larger banks to post declines in interest expense that were on average half again as large as those recorded at banks with less than \$1 billion in assets.

Last year's declines in market rates were reflected to varying degrees in the interest rates paid on bank liabilities, as shown in table 2. The sharpest decreases were evident in the wholesale liability categories, such as federal funds purchased and deposits in foreign offices. By contrast, the rate on "other deposits," which in table 2 include all interest-bearing retail-type deposits, fell less than 1 percentage point. The sluggish adjustment of rates on these deposits, and especially on the more liquid accounts, at

times has led to strong deposit inflows when market rates have fallen.

In 1985, retail-type deposits again funded more of commercial bank assets, with increases both in interest-bearing checkable accounts and in other retail deposits, which include savings, small time deposits, and MMDAs. For the first time in at least 10 years, these interest-bearing retail-type deposits significantly exceeded the money market liabilities of banks, accounting for 37.5 percent of consolidated assets while money market liabilities totaled 34.9 percent. The decline in the importance of wholesale liabilities last year occurred despite a special factor that worked to boost certain borrowings. Specifically, partly in response to regulators' urgings, commercial banks have been adding to capital, and various types of subordinated notes (included in table 3 as "other borrowings" and "money market liabilities") are considered either primary or secondary capital for regulatory purposes. Consequently, concerns about capital adequacy may have motivated a portion of the increase in other borrowings, while yield considerations and slowing asset growth restrained issuance of other types of money market liabilities, including large time deposits and deposits booked in foreign

The decline in interest expense was most pronounced at the larger banks, which derive a higher proportion of their funding from wholesale sources with market-related rates of return.

The nine largest banks in the country saw the average rate paid on their interest-bearing liabilities drop nearly 2 percentage points last year. This figure was larger than that for any other group of banks, despite the fact that the nine money center banks tended to post the smallest decline in rates on any given category of liability; for example, the largest banks dropped their average rate on retail-type deposits just 43 basis points last year—less than half the average decline elsewhere. This paradox is explained in the composition of their liabilities: the largest banks financed 57.7 percent of their consolidated assets with money market liabilities, on which rates adjust quite promptly to declines in market rates, while the rest of the industry financed a little more than a quarter of its assets this way. Moreover, the trend toward lower interest expense at the nine money center banks was reinforced by a favorable shift in the structure of their liabilities away from the wholesale money that provides the bulk of their financing and toward lower-cost retail-type deposits. Nevertheless, the average interest expense at these very large banks remained the highest in the industry, owing to the continued importance of wholesale liabilities on their balance sheets and the relatively high rates they apparently paid for those liabilities.

The group of large banks other than money center banks also reduced their interest expense by a substantial amount last year, to the lowest among the size categories. Not only did these

- 4. Large time deposits issued by domestic offices, deposits issued by foreign offices, repurchase agreements, gross federal funds purchased, and other borrowings.

other large banks start out with a lower cost structure of liabilities than did the money center banks, they also experienced a more sizable improvement in 1985 in their liability composition, as the share of retail-type deposits rose 2.5 percentage points, to account for more than onethird of consolidated assets.

The small and medium-sized banks did not do as well in reducing their interest expense and ended up with expenses somewhat above those at large banks other than money center banks. The small banks, although starting with a favorable structure of liabilities, saw that position deteriorate somewhat last year. Unlike the rest of the banking industry, they increased the share of their assets funded by money market liabilities, stepping up their issuance of large time deposits. In addition, they continued to face a significant runoff of demand deposits. Although small banks gained some interest-bearing retail deposits, the increase was less than half the average at other banks, and small banks continued to have to pay a higher average rate on these deposits than did other banks. (Data on balance sheet composition, earnings, and rates paid and earned are displayed in appendix table A.2, disaggregated by bank size.)

INTEREST INCOME

The lower market rates in 1985 also affected commercial bank interest income, which in the

aggregate dropped 84 basis points to 9.39 percent of total net assets. As in the case of interest expense, shifts in balance sheet composition influenced the pass-through of lower interest rates to profit-and-loss statements. The decline in interest income was moderated, and thus net income was bolstered, by a shift in bank portfolios in the aggregate away from relatively low-yielding assets, such as U.S. government securities and interbank deposits, and toward loans and tax-exempt securities, which were quite attractive on a taxable-equivalent basis last year (see table 4).

Loans rose to more than 58 percent of consolidated bank assets last year, as increases in consumer and real estate loans more than made up for sluggish farm and commercial and industrial (C&I) loans. While consumer loans continued to increase at about the rapid rate typical of

the current economic expansion, lower interest rates encouraged stepped-up real estate borrowing last year, but reduced C&I loan growth. Business borrowing was diverted to the longterm markets, where corporations took advantage of rates that had fallen to the lowest level since the start of the 1980s. The largest banks experienced a substantial drop in the proportion of C&I loans in their portfolios. Not only are their customers most likely to include those businesses that would have ready access to bond markets, but these top banks also continued to record significant sales of C&I loan participations. In contrast, small and medium-sized banks, which hold relatively low proportions of business loans in their portfolios, experienced some increases in these shares last year.

Overall, securities increased slightly as a share of consolidated bank assets in 1985. As shown in table 5, this small net change masked a decrease in the importance of U.S. government securities that about offset strength in state and local obligations. The upturn in the share of these taxexempt securities was the first in nearly 15 years, spurred in part by reactions to congressional tax reform proposals that specified January 1, 1986, as the effective date for eliminating the tax deductibility of carrying costs on such securities. State and local issuers raised a massive volume of funds last year, in response both to the tax reform proposals and to the lower level of interest rates. This bloated supply helped keep taxexempt yields high relative to other interest rates, contributing to the attractiveness of state and local bonds late last year. Only small banks devoted a reduced share of their assets to these

obligations, probably because deteriorating profits left them with less need for tax shelters. A decline in tax-exempt securities as a share of assets was most noticeable at small agricultural and energy banks, whose earnings have been under particular pressure.1

As with interest expense, the decline in interest income last year was sharpest at the larger banks. The interest income of smaller banks tends to be less variable because they have assets with longer average maturities; they hold, for example, a far higher proportion of securities than do the largest banks. Last year, additional downward pressure on interest income at the nine money center banks arose from a substantial decline in loans as a share of their assets: these higher-yielding loans were replaced in part by sales of federal funds and reverse repurchase agreements.

NET INTEREST MARGIN

In the aggregate, insured commercial banks increased their net interest margin 10 basis points in 1985, to 3.36 percent of total net assets (see chart 1). The nine largest banks, which form the group with the lowest interest margin, were the only size class of bank to post a decline on average in that margin. This decline, however, was more apparent than real because the drop was caused by a reallocation of assets toward tax-exempt securities, which generally carry lower rates than do taxable assets; adjusting for this influence, the interest margin of money center banks increased 9 basis points. On this taxable-equivalent basis, the only category of banks to experience a narrowing of its interest margin in 1985 was the group of smaller banks that do a relatively large amount of energy lending. At the other extreme, the large banks, excluding the top nine, posted an increase of 23 basis points in their taxable-equivalent interest margin. A sizable shift toward tax-exempt securities and consumer and real estate loans helped

1. Excluding loss provisions.

support income at these banks, while a shift away from money market liabilities helped control their expenses; both of these shifts were larger (as a share of assets) than at any other size class.

This group of large banks, however, did not show the same kind of dominance in securities gains. While these banks registered a rise in their taxable-equivalent interest margin that was double that for the rest of the industry, their increase in capital gains was equal to the industry average. In the aggregate, commercial banks took advantage of lower interest rates to sell securities from their investment portfolios last year, realizing capital gains, expressed as a percentage of their consolidated net assets, of 6 basis points contrasting with a small loss on such transactions in 1984. (This increase in securities gains was equal to the rise in overall commercial bank net income last year.) Capital gains were widespread, varying little from size group to size

^{1.} Agricultural banks are defined as those at which the ratio of total farm loans to total loans is above the unweighted average of such ratios at all banks. Energy banks include generally those with energy loans and leases in excess of 25 percent of primary capital.

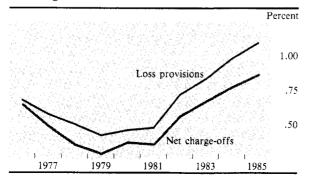

group, with slightly larger gains at banks suffering more pressure on earnings.

LOAN LOSSES

The upturn of profitability in 1985 occurred despite the continuing rise in loan-loss provisions. The industry as a whole increased additions to loss reserves 10 basis points to 0.66 percent of average net assets—nearly triple the level at the beginning of the decade (see chart 1). These provisions represent current revenues that commercial banks have diverted from profits to raise or replenish their reserves for loan and lease losses. The loan-loss reserve, in turn, is a balance sheet item that must be maintained at a level adequate to absorb anticipated losses, and it may not be allowed to dip below zero when bad loans are charged off against it. Recent experience with loan-loss provisions has shown them to be closely related to same-period charge-offs of loans. And charge-offs, which generally had been related to the cyclical position of the economy, have risen without interruption so far in the 1980s, despite the fact that 1985 was the third year of an economic expansion.

These two measures of portfolio quality are displayed in chart 2, expressed as a proportion of total loans. Charge-offs of bad loans, net of recoveries, rose to 0.86 percent of average loans. The higher level and faster growth of loss provisions relative to charge-offs imply that bank reserves against losses have been bolstered. Indeed, a memo item in appendix table A.2 shows loss reserves growing from 0.55 percent of average consolidated net assets in 1981 to 0.79 per-

Net loan losses and provisions as a percent of average loans

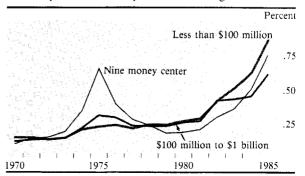

cent last year. Since loan-loss reserves are counted as primary capital for regulatory purposes, incentives to improve capital-to-asset ratios may have been a minor consideration motivating additions to these reserves. For the industry as a whole, the charge-offs taken last year lowered somewhat the proportion of loans on nonaccrual status, to 2.2 percent by the end of the year. The proportion of loans that were delinquent, whether still accruing interest or not, also declined during 1985.

The steep upturn in loan-loss provisions in the 1980s was spread across all size classes of banks. Unlike the period from 1973 to 1975, in which loan-loss increases were sharper at larger banks. small banks posted as large a rise in loan-loss provisions after the latest recession as did money center banks (chart 3). Last year, as shown in table 6, loan-loss provisions at small banks and at the largest banks rose most quickly. The deterioration of asset quality at small banks was particularly marked at banks with heavier concentrations of lending to farmers and energy-related businesses. Loan-loss provisions as a share of net assets at those banks rose especially steeply, to more than double the national average. Small agricultural banks charged off in excess of 2 percent of their loans and small energy banks, 2½ percent. Moreover, these charge-offs are likely to be followed by more, for-unlike the rest of the industry—both groups showed large increases in the proportion of their loans placed on nonaccrual status.

Banks with assets between \$100 million and \$1 billion exhibited fewer problems. Their loan-loss provisions and net charge-offs grew more than the industry average, but the levels of both ratios

remained slightly below the averages for all banks. The proportion of loans at these mediumsized banks that were delinquent rose somewhat, but remained below that for any other category of banks.

Data for the large banks other than money center banks improved, although the results were dominated by the turnaround at Continental Illinois. At these banks, provisions for loan losses declined 8 basis points to 0.56 percent of net assets, and charge-offs declined to 0.69 percent of loans. Excluding Continental Illinois from the calculations results in both of these ratios remaining about unchanged last year relative to the preceding year-which still is better than for the remainder of the banking industry. The large banks other than money center banks also recorded a significant improvement in the ratio of delinquent loans to total loans. The drop in the ratio at this group accounted for most of the improvement industrywide last year.

As mentioned earlier, money center banks sharply increased their provisions for loan losses, to 0.74 percent of net assets, and also increased their charge-offs at a faster rate than did other banks. These top nine banks indicated that half of their loss provisions were attributable to international operations. Indeed, last year, C&I loans to non-U.S. addressees were charged off at a higher rate, 1.3 percent of such loans, than were loans to U.S.-domiciled businesses,

preceding year and in June and December of the current year. In 1984 data are based on averages for call dates at the beginning and end of the year only.

0.9 percent. Although the delinquency rate reported by the money center banks declined from 1984, it remained slightly above the industry average, and the share of loans that were classified as nonaccruing increased.

OTHER NONINTEREST EXPENSES AND NONINTEREST INCOME

The margin between noninterest income and expenses at commercial banks was little changed last year, in keeping with its trendless behavior in recent years (see chart 1). Noninterest income rose 13 basis points relative to assets to 1.31 percent of net assets, while noninterest expenses (excluding loan-loss provisions) rose 12 basis points to 3.17 percent of net assets.

Unlike the rest of the industry, the money center banks improved their net performance on noninterest items 15 basis points. They posted a very large increase in noninterest income, which came about equally from gains on trading account securities and from the undifferentiated "other noninterest income." Noninterest expenses also grew relatively rapidly at these largest banks, but were more than offset by the income gains. Other banks experienced smaller increases in both noninterest income and expenses, but for each size class of bank, the growth of expenses outpaced income, leading to

^{2.} Data are based on averages for call dates in December of the

a deterioration in the noninterest margin at these other banks. For both income and expenses, the rises were evident primarily in the "all other" categories. Although detailed information is not directly available, "all other" noninterest income likely was lifted by fees and service charges (other than those on deposit accounts). as banks continued to unbundle financial services and increasingly charged explicitly for such services. Large banks apparently derived income from such off-balance-sheet activities as loan participations, interest rate swaps, and issuance of standby letters of credit. "All other" noninterest expenses probably were boosted by the costs of marketing, data processing, and new product development.

PROFITABILITY. DIVIDENDS, AND CAPITAL

Insured commercial banks reversed a five-year trend and showed an improvement in aggregate profits last year. The return on average net assets rose 6 basis points to 0.70 percent; similarly, the return on equity rose 73 basis points to 11.33 percent. In both cases the gains were more than accounted for by the group of large banks other than money center banks, which posted an increase of 24 basis points in its return on assets last year (see table 7). About half the improvement at this group—and all of the improvement for the industry—could be credited to the return to profitability of Continental Illinois in 1985.

Chart 4 shows the movement in return on assets of each size group since 1970. At money center banks the return on assets slipped 7 basis points last year, and these nine banks showed the largest decline in return on equity, more than 1.8 percentage points, as they added significantly to capital. Medium-sized banks showed a small decline in both ratios. But the problems of energy and farm lenders were clear in the results for small banks. The return on assets at small agricultural banks dropped 17 basis points to 0.57 percent, and their return on equity fell almost 2 percentage points to 6.26 percent. Small energy banks fared worse; as a group, these 334 banks posted a net loss last year, with their return on equity having sunk 4.4 percentage points since the previous year, to a negative 1.26 percent. The 260 U.S.-chartered commercial banks with foreign offices, which generally are large banks, showed a gain of 0.16 percent in return on assets. This improvement occurred despite a decline in their net income from international operations, which fell to 18 percent of their total profits, down from 30 percent in 1984, as increased provisions for loan losses attributable to international operations were not offset by better performance in other aspects of that business.

The overall proportion of income distributed as dividends changed little in 1985: it remained at

4. Return on assets

about half. And despite the disparity in profits among size classes, the path traced by dividends was about the same, rising slightly for each group. The only exception was agricultural banks, which decreased dividends 3 basis points relative to assets; even the small energy banks, despite their poor performance, kept up their dividends. Large banks other than money center banks retained virtually all of the increase in their profits last year, adding almost two-thirds of their aftertax net income to retained earnings, while other banks retained only about 45 percent of net income. Small agricultural banks retained less than one-third of their profits; and energy banks with assets of less than \$1 billion paid dividends out of equity on average. About onethird of these energy banks refrained from distributing dividends, but almost a quarter paid out

dividends in excess of income—or despite net losses. For the industry as a whole, however, retained income funded a larger share of the increase in equity capital (see table 8), reversing the decline registered for the two previous years.

The primary capital-to-asset ratio of commercial banks rose again in 1985, to almost 7½ percent by the end of the year. Large banks raised their ratio ½ percentage point to about 6¾ percent; money center banks accomplished this primarily by issuing mandatory convertible debt and adding to their loan-loss reserves, while other large banks bolstered shareholder equity. Medium-sized banks increased their ratio mainly through equity capital, and the more limited increase at small banks came equally from greater shareholder equity and loan-loss reserves.

The improvement in profitability for the industry as a whole did not appear to continue into the early part of 1986. The average return on assets was 3 basis points lower in the first quarter of this year than during the corresponding period in 1985. The net interest margin showed no change, as both interest income and expense declined 70 basis points as a share of net assets. The margin between noninterest income and expenses improved somewhat, and banks realized larger gains on securities. However, these two factors were outweighed by the continued escalation of provisions for losses, up 11 basis points relative to assets over the year-earlier period.

Industrial Production

Released for publication July 15

Industrial production decreased an estimated 0.5 percent in June after having declined 0.4 percent in May and having increased 0.6 percent in April. About one-half of the June decrease was related to strikes affecting the output of business equipment, construction supplies, and durable materials; the remainder reflected declines

among a wide variety of products and materials, with only autos and transit equipment showing any significant gain. Industrial output in the second quarter dropped about 3 percent at an annual rate from the preceding quarter. At 124.1 percent of the 1977 average, the total index was slightly below that of a year earlier.

In market groups, output of durable consumer goods edged up in June after having declined 2.4

Note. Indexes are seasonally adjusted.

percent in May. Autos were assembled at an annual rate of 8.0 million units in June, up from a rate of 7.6 million in May. Output of nondurable consumer goods was virtually unchanged again and has, on average, changed little since last December. Production of home goods weakened further and in June was about 5 percent below the December high; appliance output has fallen especially sharply. Production of business equipment declined about 1 percent in June, with reductions in all major categories except transit equipment. Within the business equipment group, the largest drop last month was for output of commercial equipment, which reflected a strike-related decline in communication equipment. Output of defense and space equipment edged up in June after a gain of 0.4 percent in May.

Production of construction supplies declined

1.0 percent, owing in part to a strike in the lumber industry. In June, output of materials fell about ½ percent, with durable and energy materials reduced further. Output of metals, in particular, was weak—exacerbated by a strike-related reduction in aluminum production. Output of nondurable goods materials was unchanged, but remained about 4 percent higher than it was a year earlier.

In industry groups, manufacturing output in June declined 0.5 percent, as durables fell 0.8 percent and nondurables were unchanged. Output at mines decreased 1.5 percent in June following a similar decline the preceding month. Oil and gas well drilling, which has accounted for most of the loss in mining output in 1986, declined further in June, but less rapidly than in preceding months. Utilities output rose 0.3 percent following a decrease of 1.1 percent in May.

Statement to Congress

Statement by Paul A. Volcker, Chairman, Board of Governors of the Federal Reserve System, before the Committee on Banking, Housing, and Urban Affairs, U.S. Senate, July 23, 1986.

I appreciate the opportunity to report once again on the conduct of monetary policy. I would first like to place that matter in the larger context of the performance of the U.S. and the world economy.

As you know, there have been marked contrasts in the economic performance of different sectors and regions of this country. Consumption has been strongly maintained, and there have been large increases in employment in the broad service sector. Housing is being built at a high rate. But industrial activity and business investment, which had leveled off last year, have declined over the last six months, and the agricultural and energy industries are under strong pressure. As a consequence, activity in some areas of the country has advanced rather strongly, while severe adjustments are taking place in the energy and agricultural belts.

The net result is that the overall economic growth rate in the United States moderated to about 3 percent through 1985 and early 1986, and apparently slackened further in the second quarter of this year. Moreover, growth in other major industrialized countries remained slower than in the United States during 1985 and the early part of this year.

Throughout this period, sizable increases in employment have continued in this country; the unemployment rate has remained generally at a little more than 7 percent; and, relative to the size of the working age population, more people are employed than ever before recorded. In Europe, unemployment has also remained relatively steady, but at much higher levels.

After more than three years of economic expansion, the process of disinflation has continued, reinforced for the time being by sharply

lower prices of oil, by far the most important commodity. With industrial prices steady, the average level of wholesale prices has been declining here, and even faster in key countries abroad whose currencies have been sharply appreciating relative to the dollar. Interest rates here and abroad have also declined appreciably, reflecting both the sense of progress against inflation and the fact that growth has been proceeding well within capacity restraints.

The large decline in U.S. interest rates and the sharply higher stock market over the past year suggest that the cost of capital has declined. The fall in oil prices has helped bolster the real income of consumers. Meanwhile, the substantial depreciation of the dollar has placed our industry in a decidedly better competitive position vis-à-vis other industrial countries. As many have suggested, these underlying forces should help sustain an economic expansion that has already lasted longer than most.

But I would be remiss in failing to emphasize much less satisfactory aspects of the U.S. and world economic situation. There can be no evading the fact that some fundamental economic adjustments must be made within our economy in the months and years ahead.

The clear challenge is to find the ways and means to work through those adjustments in a context of sustained growth while also consolidating and retaining the progress toward price stability. The conduct of U.S. monetary policy is obviously relevant to that process. But that single policy instrument cannot itself provide the answer. Complementary approaches in the fiscal, trade, and other policies of this country, and in the approaches of other countries, will be required as well. The hard fact is that, while the need for complementary actions to achieve the necessary adjustments in the United States and world economy seems to be more widely recognized, progress in coordinating action toward those aims has been limited.

DISEQUILIBRIUM IN THE INDUSTRIAL WORLD

Some obvious imbalances have developed in the economies of the industrialized world. That development is evident most of all in the enormous deficit in our external trade and current accounts and in the counterpart surpluses of a few other countries. Unless dealt with effectively and constructively, growing market and political pressures will, sooner or later, inevitably have much more disturbing consequences.

The problem first clearly emerged some time ago. The powerful thrust of the strong U.S. economic expansion in 1983 and 1984 had spilled out abroad in the form of sharply rising imports, aided and abetted by the exceptional strength of the dollar internationally. There were, for a while, benefits on all sides. At a time of slack demand at home, exports to us helped Europe and Japan to restore and maintain their growth. The United States also absorbed a disproportionate share of the necessary external adjustment efforts by the heavily indebted countries of Latin America. Those countries have sharply curtailed their imports since 1982, and they have become more competitive in markets for manufactured goods.

At the same time, the United States began to be the recipient of a growing flow of capital from abroad. That inflow, which pushed the dollar so high in the exchange markets until early 1985, had the practical effect of relieving potential pressures on our internal financial markets even in the face of the massive and growing federal deficit. Consequently, private investment and construction could expand. At the same time, the competitive pressure from imports encouraged strong cost-cutting and productivity efforts in the industrial sector. That has been one powerful factor accounting for the near stability of prices of manufactured goods over the past year or more.

We cannot, however, build a lasting foundation for sustained growth and stability on massive international disequilibrium—huge and rising trade deficits in the United States and counterpart surpluses abroad. Nor can we count on satisfying indefinitely so many of our own needs for capital by drawing so heavily on the

savings generated elsewhere in the world—savings that have been so freely available in part only because internal growth in Europe and Japan has been relatively slow.

Today the imbalances and strains are clearly showing. The forward momentum of our economy has been sustained almost entirely by consumer spending and housing construction, both of which have been accompanied by unsustainably heavy borrowing. Savings meanwhile have remained at a relatively low level, even by past U.S. standards. For more than a year, industrial production in the United States has not grown appreciably, and there has been some decline in 1986. The pace of business investment has slackened.

Some of the relative weakness in industrial output and investment over the past six months can be attributed to temporary factors and to developments peculiar to the United States. For instance, some investment orders were speeded up late last year in anticipation of tax reform, and the debate on the nature of that reform has apparently led to some deferral of ordering this year. The boom in spending for computers has subsided, and commercial construction, in response to large and growing vacancies of office space, is predictably declining. Probably much more important in recent months have been very sharp cutbacks in domestic oil exploration and investment, driving energy-producing states into recessionlike conditions and affecting production of steel and equipment elsewhere as well.

But a large part of the difficulty stems from the continuing imbalances in the world economy. On the average, growth rates in major European economies and Japan were about ³/₄ percent less than the reduced growth path of the United States during 1985 and the first quarter of 1986. However, the more disturbing contrast lies in the source of that growth.

In the United States, the rate of growth in domestic demand, while slowing in the third year of expansion, continued to average about 3¾ percent through that period. Domestic demand growth in the industrialized countries of Europe and Japan was significantly less—about 2½ percent. In the early part of this year, when their exports slackened, those countries did not grow at all.

The plain implication is that our overall GNP growth rate was reduced by continuing deterioration in our trade and current account balances. With our current account deficit reaching a record annual rate of \$135 billion in the first quarter of this year, industrial production and investment were restrained. Meanwhile, foreign surpluses continued to build through much of the period, and as their exports have slowed, internal demand has not yet, in most of those countries, picked up the slack.

Prospects for investment and for manufacturing activity in the United States are heavily dependent on an improved trade outlook. The sharp decline in the dollar since its peak in early 1985 should help set the stage for such an improvement. There is evidence that U.S. producers find themselves in a stronger competitive position. However, the deterioration in actual trade in manufactured goods has slowed little.

The decline in the dollar is both relatively recent and from a very high level so that the absence of a stronger response in trade so far is not entirely surprising. What is of concern is that the domestic markets of our major industrial competitors have remained so sluggish, raising a question as to the buoyancy of the markets for our exports and of their own growth prospects.

You are well aware that the present imbalance among industrial countries is reflected in strong protectionist pressures in the United States. Yet, as the President has so strongly emphasized, to abandon our tradition of relatively open markets would surely be to invite an unravelling of the international trading order. We would then have less trade and more inflation. With that development, prospects for sustained growth both here and abroad would clearly be placed in jeopardy.

I know of the complaints about "unfair" trading practices of other countries. We need to deal with them energetically. But I also know the clear lesson of experience is that a protectionist retreat by the United States, the world's leading economic power, would invite recrimination and escalation. Certainly, the most effective and promising avenue for dealing with the trade complaints on all sides will be in the planned round of multilateral trade negotiations rather than in a tit-for-tat process of mutual retaliation.

Moreover, I believe it is demonstrable that, as

a matter of relative importance, much more fundamental imbalances in the world economy than unfair trading practices are responsible for the present pattern of trade deficits and surpluses. Those underlying imbalances can only be dealt with by complementary economic policies, not by protectionism.

Quite clearly it is in no one's interest—neither the United States nor other countries—that we seek better balance in our external accounts by deliberately restraining further our own growth rate. But it is also true that as things now stand, stronger domestically generated growth in the United States will not reduce the international imbalances. Taken alone, it would aggravate our trade deficit further, posing an even more difficult adjustment problem later.

As I suggested, the recent changes in the exchange rate can help us to escape that dilemma—they should work to improve our trade position and to reduce the surpluses of others. In fact, faced with a combination of appreciating currencies and slower growth in overseas markets, exporters in both Japan and some European countries are experiencing reduced profits and more sluggish orders from abroad. However, in the absence of offsetting internal sources of expansion, those same pressures could dampen their own prospects for growth.

That possibility is one of several reasons why we should not rely on exchange rate changes alone to produce the needed international adjustments in the world economy. Over a number of years, we in the United States will certainly need to shift more of our resources into exports and into recovering domestic markets in which import penetration has been so high. That shift, very broadly, implies relatively more growth in manufacturing; relatively less growth in services, in government spending, or in other sectors; and more savings and less borrowing. For some of the rest of the world, the opposite shift will need to be at work—less reliance on exports and more on domestic sources of growth.

Much still needs to be done to ease the way for those adjustments. For one thing, we in the United States are not prepared for a really large improvement in our trade balance. Our financial markets remain dependent on the large capital inflows from abroad that are a necessary counterpart of our trade and current account deficits. Moreover, taken by itself, depreciation of our currency in an effort to redress the trade deficit poses a risk of renewed inflation.

Only as our huge federal deficit is cut can we comfortably contemplate less borrowing abroad and provide assurance against renewed inflation. Put another way, in a growing economy, reductions in the federal deficit will be necessary to release the real and financial resources necessary to improve our trading position in a way consistent with rising investment.

In a few foreign countries, such as Germany, some signs of stronger internal growth have appeared in recent months. But such signs are far from uniform among key countries abroad, and most projections of their growth for this year have been lowered, not raised, as exports have slowed.

With rising currencies and falling oil prices, some of those countries after years of effort have now successfully achieved virtual stability in consumer prices. Moreover, their wholesale prices have declined sharply and are appreciably lower than they were a year ago.

All of us—and certainly this central banker—can appreciate the importance of maintaining a broad framework of stability and appropriate financial disciplines to sustain that progress. What is at issue for some countries is their ability to achieve and maintain vigorous internal growth at a time of high unemployment and ample resources as external stimulus fades away, as it must if international equilibrium is to be restored. The appreciation of their currencies and the strong deflationary influences of low oil and other commodity prices would appear to offer a prime opportunity for reconciling those goals of domestic growth and stability.

THE INTERNATIONAL DEBT PROBLEM

Four years after the international debt problem broke into our collective consciousness in 1982, when Mexico abruptly lost access to international credit markets, that threat to our mutual prosperity remains. The renewed difficulties of the oil-producing countries today should not, however, obscure the progress that has been

made. Collectively, the heavily indebted countries of Latin America and elsewhere have made an enormous effort to adjust their external accounts; in fact in 1984 and 1985 they were in rough current account balance, in contrast to an aggregate deficit of about \$50 billion in 1982.

To be sure, that effort for a time was accompanied by sharply lower imports, recession, and lower standards of living as these countries brought their spending more in line with their internal resources. But it is also true that many of those countries are again growing, in some cases with vigor, as is the case with the largest single debtor, Brazil. Helped by the reduction in world interest rates, external interest burdens have been reduced appreciably in some countries relative to exports or other measures of capacity to pay. A number of Latin American countries have also made striking progress in dealing with ingrained inflation for the first time in many years, in the process gaining political support. There has been considerable, if uneven, progress toward liberalizing their economic structures in ways that should encourage more growth and productivity over time.

In the midst of this progress, the sharp decline in oil prices over the past six months has had an enormous adverse impact on the oil-exporting heavily indebted countries—Venezuela, Nigeria, Ecuador, and Mexico. At current oil prices, for instance, Mexico would lose about a third of its 1985 exports, perhaps as much as 15 percent of its government revenues, and the equivalent of some 5 percent of its GNP. Inevitably, that situation poses a new and a severe challenge for Mexico—a challenge that will require strong new efforts to make the necessary economic adjustments and to improve the structure of their economy. There is no large cushion of external reserves to buffer the shock. Consequently, a large amount of financial resources will have to be marshalled from abroad to help ease the transition, to maintain continuity in debt service, and to provide a solid base for renewed growth.

That combination of adjustment, structural change, and appropriate financing is, indeed, the essence of the approach announced by the Mexican government earlier this week. In cooperation with the IMF and the World Bank, Mexico is undertaking a wide range of efforts to deal with

both its short- and its longer-range economic problems. To my mind, their efforts, in the midst of crisis to move toward a more open, competitive economy, are particularly encouraging. They have joined the General Agreement on Tariffs and Trade (GATT), import restrictions are being rationalized and liberalized, a good many state-owned enterprises are being made available for sale (or, if too inefficient, shut down), subsidies are being reduced and eliminated, and procedures for approving foreign investment are being eased. If carried through effectively, those measures promise to work toward fundamental improvement in the efficiency, competitiveness, and creditworthiness of the Mexican economy, thereby enhancing prospects for longer-term growth.

Today, that country is in recession. But the program clearly contemplates economic recovery in 1987 and 1988. Certainly, sizable amounts of financing from abroad will be required to support that effort. About half of that financing can be committed by the IMF, the World Bank, and the Inter-American Development Bank. But Mexico is calling upon commercial banks, with so much already at stake, to play a large role as well.

In assessing that situation, I would note that the Mexican exposure of commercial banks appears not to have increased for some 18 months. Indeed, there has been little net new lending to Latin America as a whole over the past year.

Taking the entire period since mid-1982, the exposure of American banks to the heavily indebted countries of Latin America relative to their capital has declined appreciably. That ratio fell from about 120 percent of the capital of lending banks to less than 75 percent at the end of last year, a decline of 38 percent. No doubt, there has been a further reduction by now.

Those exposures, in relative terms, are actually considerably less than they were in 1977, when the data were first collected. For some time, the pace of lending has, in fact, been well below that contemplated by Secretary Baker when he set out a framework for a growth-oriented approach toward the international debt problem at the IMF meetings last autumn.

That initiative—essentially contemplating a combination of strong adjustment efforts and

structural reform by the indebted countries with reasonably assured financing by international institutions and private banks—is now being tested. It is being tested in difficult circumstances not foreseen at the time—the sharp break in oil prices. But the basic community of interests among borrowers and lenders—and the world at large—in a coherent, cooperative approach is as strong as ever.

The debtor countries themselves have an enormous stake in maintaining their creditworthiness and in seeking solutions in the framework of open, competitive markets. We all have a strong interest in international financial order—even more when there are other points of strain in the banking system. And, of course, relationships beyond the purely economic are at stake, for the United States most of all.

The challenge is large, but with cooperation, also manageable. Indeed, the same oil price decline that has undermined the budgetary and trading position of Mexico and other large oil exporters has relieved the pressure on those who are importing oil. Interest rates have declined. A number of borrowing countries will require significantly less, rather than more, financing than the financing that was contemplated a year ago. Given the enormous progress that was made in adjusting external positions, most of the borrowers can look toward more balanced expansion in their imports and exports as they grow—among other things, providing renewed opportunities for American exporters.

But I must also emphasize one essential ingredient for success beyond the capacity of the indebted countries to manage. Only a stable, growing world economy, with markets open to the developing world, can provide an environment that is conducive to economic expansion, more normal interest rates, and orderly debt service by the borrowers. That ingredient is plainly the responsibility of the industrialized world alone. It is one of the reasons why we must collectively deal with the obvious imbalances among us.

MONETARY POLICY IN 1986

These larger issues were the background against which the Federal Reserve has conducted mone-

tary policy in 1986 and reviewed its objectives for growth in money and credit this year and next. The results of the review by the Federal Open Market Committee (FOMC) of target ranges for money and credit for 1986 and tentative ranges for 1987 were discussed in the Humphrey-Hawkins report that was published and sent to the Committee at the end of last week. That report also sets out projections for real activity and prices by FOMC members and Reserve Bank presidents.

As indicated in the report, the posture of monetary policy remained broadly accommodative over the past six months. The discount rate has been reduced in three steps this year 1½ percent, in part responding to and in part facilitating declines in short-term interest rates of similar magnitude. Long-term interest rates also moved lower, extending the sharper drops in the second half of last year. The general structure of interest rates is now as low as at any time since 1977.

The reductions in interest rates in 1985 and 1986 have clearly helped support the more interest-sensitive sectors of the economy, reflected in part in the highest level of housing starts since the late 1970s. The declines have also helped ease the debt servicing costs of businesses, farmers, developing countries, and the U.S. government itself.

On the other side of the ledger, as interest rates have declined, the rate of growth in debt has remained at disturbingly high levels, although there are at least faint signs of a slackening in the rate of debt creation after a burst around the turn of the year. The declines in interest rates also clearly helped induce the general public to increase its holdings of its most liquid assets, including demand deposits and negotiable order of withdrawal (NOW) accounts included in the narrow measure of the money supply, M1. That reaction was undoubtedly amplified by the fact that interest is paid on NOW accounts, which are now the favored form in which transaction balances are held by individuals. With interest rate spreads currently quite narrow between NOW accounts and other liquid assets, those accounts no doubt have served increasingly as a repository for liquid savings as well as for money held for transaction purposes.

Similarly, there are some indications of a greater willingness of businesses to hold demand deposits at a time of lower interest rates, partly because, with interest rates down, a larger balance is necessary to compensate banks for a given amount of services. To some extent, an environment of more stable prices may also be encouraging larger money holdings.

None of that was predictable with any precision, and the rate of growth in M1, which ran at almost 13 percent over the first half of the year, was far above the FOMC's target range. Action to restrain that growth within the target range which would have required reducing the provision of reserves and a significant increase in pressures on bank reserve positions—was not deemed desirable in the light of other important considerations.

One of those considerations was that growth in the broader measures of money—M2 and M3 remained well within their respective target ranges of 6 to 9 percent, ending the second quarter close to their midpoints. That fact and other evidence suggested that much of the growth of M1 reflected a shifting of the composition of liquid assets rather than excessive, and potentially highly inflationary, money creation. That judgment was, of course, reinforced by the moderate rate of growth for the economy over all, the absence of indications of a strong acceleration as the year progressed, evidence of greater stability in prices of manufactured goods, and declining commodity prices.

In looking ahead, the Committee decided to retain the existing ranges of 6 to 9 percent for M2 and M3 this year. The range of 3 to 8 percent that was set for M1 early in the year was not recalibrated because of the uncertainties as to the behavior of that aggregate at present. Certainly the inflationary potential of excessive money growth remains a matter of concern. But in current circumstances, the Committee decided that the significance of changes in M1 could only be judged in the context of movements in the broader aggregates, and against the background of movements in interest rates and the economy generally. Taking account of those factors, growth in excess of the target established at the start of the year will be acceptable.

In circumstances of greater economic, price,

and interest rate stability, more predictable relationships between M1 and the economy may reemerge over time, although the trend of M1 velocity—the ratio between GNP and M1—will likely be different than it was earlier in the postwar period. However, a firm conclusion concerning the nature and stability of future velocity characteristics may take years of experience in the new institutional and economic setting. For the time being, in looking to next year. the Committee set out a highly tentative range of M1 growth of 3 to 8 percent on the assumption that velocity changes will be within the range of most postwar experience. However, that judgment—and indeed the weight to be given any M1 range for 1987—will be carefully reviewed at the start of next year.

The tentative 1987 ranges for M2 and M3 were lowered ½ percentage point to 5½ to 8½ percent. That modest reduction, consistent with the long-term objective of achieving a rate of monetary growth compatible with price stability, is judged to be entirely compatible with a somewhat greater rate of economic growth next year, provided that growth is not accompanied by a marked increase in inflationary pressures.

The actual price statistics for some months have, of course, reflected the precipitous drop in the price of oil, and consumer prices have dropped slightly this year. But equally clearly, the price of oil will not continue falling so fast, and at some point could well rise again. More predictably, the large depreciation of the dollar will bring in its wake an increase in import prices of manufactured goods. That impact has been moderated so far by the narrowing of the earlier wide profit margins of many of those exporting to us and by the availability of imports from developing countries, few of which have had any appreciable appreciation of their currencies visà-vis the dollar.

The rate of increase in costs of housing and of many services, which accounts for a large proportion of the economy, has decelerated little if at all in recent years. With demand strong, measured productivity gains limited, and compensation increases in service occupations continuing to average $4\frac{1}{2}$ percent or more, those areas continue to lend a chronic inflationary bias to the general price level.

Those underlying forces are reflected in the projection of FOMC members and Reserve Bank presidents that the overall inflation rate is likely to be somewhat higher next year. That prospect underscores the need for vigilance in the conduct of monetary policy. We want to assure maintenance of the remarkable progress toward stability as the economy grows more strongly and as a large amount of resources are shifted back to manufacturing industries as our trade balance improves. Without such assurance, there would be no firm basis for expecting the level of interest rates to remain for long at lower levels or to decline further.

In looking toward growth in the range of 3 to 3½ percent next year, considerable emphasis was placed by Committee members on the potential contribution to that growth of a stronger trade balance. As I emphasized earlier, that shift, if it is to take place in the context of sustained and stronger world growth, will require appropriately complementary policies here and abroad. Significant progress toward dealing with our own budget deficit seems to me a key ingredient in that overall policy "mix."

The timing of another important domestic policy instrument—discount rate cuts—has been influenced by international financial and exchange rate considerations. A substantial realignment of the excessively strong dollar exchange rate has been a necessary and constructive part of achieving the necessary adjustment in external trade. But there are clear dangers in placing excessive weight on that approach.

History demonstrates all too clearly that a kind of self-reinforcing cascading depreciation of a nation's currency, undermining confidence and carrying values below equilibrium levels, is not in that nation's interest or that of its trading partners. Among other things, such a movement of the dollar now could transmit strong inflationary pressures to the United States and inhibit the free flow of capital from abroad at reasonable interest rates. Moreover, other countries would find it more difficult to sustain their forward momentum.

In the light of all these considerations, the discount rate reductions in March and April were timed to coincide with similar changes by one or more other key countries, minimizing any impact

on the exchange markets and consistent with the desirability of some reduction in interest rates in the industrialized world generally.

SOME LESSONS OF RECENT EXPERIENCE

Experience over the first half of 1986 underscored the difficulty—I would say the impossibility—of conducting monetary policy in current circumstances according to one or two simple, preset criteria. For instance, the rapid growth of debt and M1 clearly bear watching because of the potential for aggravating the vulnerability of the financial structure to adversity and because of the inflationary potential. However, the weight of the evidence strongly suggests that M1 alone during this period of economic and institutional transition is not today a reliable measure of future price pressures (or indeed a good shortterm "leading indicator" of business activity). The more restrained performance of the broader aggregates, as well as the performance of the economy and prices themselves, point in a different direction.

At the same time pressures on the oil industry, agriculture, and parts of manufacturing and the more general disinflationary process are reflected in strains on some depository institutions. Those strains emphasize the importance of dealing with factors more directly under the control of lenders themselves: excessive leveraging of borrowers and loose credit standards. A broad array of approaches by the supervisory and regulatory authorities has been necessary to deal with the particular points of pressure in a manner consistent with the stability of the entire fabric of financial institutions and markets.

The present situation certainly makes even more pointed the need to provide a stronger sense of legislative direction about the evolution of the financial system over time. There are also urgent specific pieces of legislation before you to permit the Federal Deposit Insurance Corporation and the Federal Reserve to facilitate interstate acquisitions of failed or failing banks and to supplement the resources of the Federal Savings and Loan Insurance Corporation.

The difficulties of some financial institutions are one specific example of economic problems that cannot be effectively dealt with by monetary policy alone. Indeed a strength of monetary policy is that it can respond flexibly to changing circumstances. But it is equally true that a single, broad-brush policy instrument cannot, at one and the same time, be called upon to stimulate the economy, protect the dollar, restrain excessive debt creation, and shift resources away from consumption and back into investment, manufacturing, and exports—as desirable and important as all those goals may be.

Events of recent years have also heavily underscored how cumbersome fiscal policy can be, and the difficulties of achieving political consensus on such matters as tax reform and the appropriate legislative framework for financial institutions. On an international scale, achieving consensus on appropriate action can be still more difficult.

We have nonetheless come a long way toward restoring growth and stability in this decade. But my sense is that all that progress is in growing jeopardy unless we act—we in the United States, we in the industrialized world, and we in the world as a whole—in mutually supportive ways.

The main directions of that effort seem to me clear enough. The Gramm-Rudman-Hollings legislation is an expression of the sense of urgency surrounding our budgetary effort in the United States. The rest of the industrial world needs to achieve and maintain a momentum of "homegrown" expansion. With strong national and international leadership-and with the cooperation of private and public lenders-a constructive resolution of the economic crisis in Mexico can point the way to a wider resolution of the debt problem in a context of growth.

Hard as it may be to carry through on those efforts, that resolution is what needs to be done if the imbalances in the economy are to be effectively addressed. Then we will have a really solid base for sustaining the momentum of growth and the progress toward stability in the years ahead. Certainly, the Federal Reserve will play its part in that effort.

Chairman Volcker presented identical testimony before the House Committee on Banking, Finance and Urban Affairs, July 29, 1986.

Announcements

CHANGE IN THE DISCOUNT RATE

The Federal Reserve Board announced a reduction in the discount rate from 6½ percent to 6 percent, effective on Friday, July 11, 1986.

The action, conforming in part to recent declines in a number of market interest rates, was taken within the framework of the generally accommodative stance of monetary policy that has prevailed for some time.

More specifically, the action appeared appropriate in the context of a pattern of relatively slow growth, comfortably within capacity constraints, in the United States and in the industrialized world generally. That pattern has been accompanied by relatively low prices of a number of important commodities and greater stability in prices of goods generally. Measures of the broader monetary aggregates—M2 and M3—are near the midpoints of the target ranges set at the start of the year.

In making the change, the Board voted on requests submitted by the Boards of Directors of the 12 Federal Reserve Banks. The discount rate is the interest rate that is charged depository institutions when they borrow from their District Federal Reserve Banks.

CHANGE IN REPORTING OF YIELDS ON U.S. TREASURY SECURITIES

The Federal Reserve Board announced that, beginning with the July Federal Reserve Bulletin, it no longer included in its statistical tables the average constant maturity yield on U.S. Treasury notes and bonds with 2½ years remaining to maturity.

This figure is obtained from the Treasury Department. Since there is no marketable Treasury security with an initial maturity of 2½ years, the Treasury has decided to discontinue calculating this yield.

Calculation of the $2\frac{1}{2}$ year constant maturity was initiated at the beginning of 1980 when a new time deposit for small savers was authorized with a maximum yield tied to the $2\frac{1}{2}$ year Treasury yield. All interest rate ceilings on deposits have subsequently been eliminated.

This special announcement was made so that depository institutions with time deposit contracts that rely on this rate and any lenders who offer loans or parties who have existing contracts with variable or adjustable rates tied to this yield could make alternative arrangements.

NEW PUBLICATION

The Federal Reserve Board has announced the publication of a new pamphlet, A Guide to Business Credit and the Equal Credit Opportunity Act.

The pamphlet was written to facilitate and improve access to credit for business owners, particularly first-time borrowers. It describes the credit application process from the lender's perspective and provides guidance on the preparation of effective loan proposals. It also discusses protections provided by the Equal Credit Opportunity Act (which bars discrimination based on sex, race, national origin, marital status, and other factors), including the right of a business applicant to be informed of the lender's reasons for a credit denial.

The pamphlet was prepared in consultation with the following industry groups: the National Association of Bank Women, the American Bankers Association, the Consumer Bankers Association, the Independent Bankers Association of America, the National Bankers Association, and the U.S. Small Business Administration. In addition, the National Association of Women Business Owners brought to this project the viewpoint of business owners as credit applicants.

The pamphlet will be distributed to the smallbusiness community through the Federal Reserve Banks and the groups that joined in its development. Copies are also available on request from Publications Services, Board of Governors of the Federal Reserve System, Washington, D.C. 20551.

DATA FROM CALL REPORTS TO BE AVAILABLE FROM NTIS

Beginning October 1, 1986, the National Technical Information Service (NTIS), an agency of the Department of Commerce, will assume responsibility for public sale and distribution of individual bank printouts of the Reports of Condition and Income. The Board and Federal Reserve Banks will no longer handle such requests. Requests for individual reports received by the Board and Reserve Banks after September 30, 1986, and those for printouts from the June 30, 1986, Call will be returned.

NTIS will be able to produce printouts for all publicly available Call and Income Reports directly from Federal Reserve Board data. Thus, the quality of the data and level of revision will be the same as those currently available from the Federal Reserve System. Requests should be addressed to the following:

Sales Office National Technical Information Service U.S. Department of Commerce 5285 Port Royal Road Springfield, Virginia 22161 (703) 487-4650

REVISED LIST OF OTC STOCKS SUBJECT TO MARGIN REGULATIONS

The Federal Reserve Board has published a revised list of over-the-counter (OTC) stocks that are subject to its margin regulations, effective August 12, 1986.

This List of Marginable OTC Stocks supersedes the revised list that was effective on May 13, 1986. Changes that have been made in the list, which now includes 2,750 OTC stocks, are as follows: 188 stocks have been included for the first time, 160 under national market system (NMS) designation; 45 stocks previously on the list have been removed for substantially failing to meet the requirements for continued listing; and 40 stocks have been removed for reasons such as listing on a national securities exchange or involvement in an acquisition.

The list includes all over-the-counter securities designated by the Board pursuant to its established criteria as well as all securities qualified for trading in the national market system. This list includes all securities qualified for trading in tier 1 of the NMS through August 12 and those in tier 2 through July 15, 1986. Additional OTC securities may be designated as NMS securities in the interim between the Board's quarterly publications and will be immediately marginable. The next publication of the Board's list is scheduled for November 1986.

In addition to NMS-designated securities, the Board will continue to monitor the market activity of other OTC stocks to determine which stocks meet the requirements for inclusion and continued inclusion on the list.

PROPOSED ACTIONS

The Federal Reserve Board has extended the comment period to August 11 on amendments it proposed to Regulation D-Reserve Requirements of Depository Institutions.

The Board also issued for public comment a proposal to allow the head offices of the Federal Reserve Banks of Minneapolis and Kansas City to continue a tiered-pricing structure for check collection services. The proposal also outlines the conditions under which other Reserve Bank offices could establish tiered pricing for check collection services. Comment is requested by September 19.

SYSTEM MEMBERSHIP: ADMISSION OF STATE BANKS

The following banks were admitted to membership in the Federal Reserve System during the period July 1 through July 31, 1986:

Colorado	Kentucky
Castle Rock Castle Rock Industrial Bank	Union Central Trust Company
Florida	North Carolina
Bradenton Bank of Bradenton	Charlotte Barclays Bank
Miami Interstate Bank of Commerce	of North Carolina
	Texas
	Austin Lakeland State Bank

Record of Policy Actions of the Federal Open Market Committee

MEETING HELD ON MAY 20, 1986

1. Domestic Policy Directive

The information reviewed at this meeting indicated a mixed pattern of economic developments. On balance, growth in real GNP, estimated by the Commerce Department to have picked up in the first quarter to an annual rate of 3.7 percent, appeared to be expanding at a relatively modest pace in the current quarter. Thus far in 1986, broad measures of prices, heavily influenced by sharp reductions in petroleum prices, had shown declines in energy and food prices and moderate increases in prices of most other goods and services.

Total nonfarm payroll employment rose 200,000 further in April, after increasing about 3/4 million in the first quarter, but employment trends continued to be unbalanced across industries. Employment in finance and service industries remained strong, and hiring at construction sites picked up substantially after changing little in the first quarter. In manufacturing, however, job losses were recorded for the third consecutive month, and the length of the average factory workweek slipped from the high levels registered at the end of last year. Employment in the oil and gas industry plummeted during the first four months of the year, as firms curtailed drilling activity in response to lower oil prices. The civilian unemployment rate edged down to 7.1 percent in April, close to the level that had prevailed throughout 1985.

The index of industrial production rose an estimated 0.2 percent in April after steep declines in the preceding two months. The increase was attributable mainly to a rebound in motor vehicle assemblies, but there were also some gains in steel output and in production of equipment for business and for defense and space;

these developments offset a further plunge in oil and gas well drilling. The index of capacity utilization for total industry dropped 0.7 percent further in March to 79.3 percent, its lowest level since December 1983, and apparently changed little in April.

Total retail sales rose ½ percent in April, primarily reflecting a substantial increase in spending for automotive products and continued gains in outlays for general merchandise. Sales of domestic automobiles, sparked by a new series of sales and financing incentives, strengthened to an annual rate of 8.0 million units from their sluggish pace of 6.9 million units in March. Sales rose even further in early May to a rate of 8.8 million units.

Total private housing starts increased about 4 percent in April from a relatively high level. During the first four months of 1986, starts averaged nearly 2 million units at an annual rate, well above levels of about 1¾ million units in each of the previous three years. Issuance of residential building permits also rose somewhat in April, with the increase concentrated in the single-family sector. Permits for multifamily structures fell, apparently in response to high rental vacancy rates, particularly in the South, and perhaps to heightened uncertainties about the prospects for changes in tax legislation relating to certain types of real estate investment.

Weakness in the energy sector has contributed to a slowing in business capital spending in recent months. Outlays for nonresidential structures fell sharply as spending on petroleum drilling activity plummeted. Expenditures for capital equipment dropped substantially, about reversing the rise in the previous quarter that was attributed to purchases of equipment in advance of potentially adverse tax law changes. New orders for nondefense capital goods, which had been flat in the fourth quarter, remained lacklus-

ter through March. Recent surveys of capital spending plans point to no more than modest growth in outlays for the year as a whole.

Largely reflecting declines in energy prices, the producer price index fell 0.6 percent in April, its fourth consecutive monthly decline, and over the first four months of the year the index was down about 11 percent at an annual rate. The consumer price index had fallen 0.4 percent in March for the second month in a row, and had declined at an annual rate of about 2 percent over the first three months of the year. Though movements in these indexes were dominated by the sharp drop in prices of petroleum products. declines in food prices at both the producer and consumer levels also helped to hold down inflation in the first quarter. On the other hand, prices of goods other than food and energy items generally have been rising in recent months at about the same pace that prevailed last year, while prices of services have been increasing a little faster than in 1985.

The trade-weighted value of the dollar against major foreign currencies rose somewhat in the week before this meeting but on balance it had declined about 4³/₄ percent further over the period since the Committee's meeting on April 1; the largest decline was against the Japanese yen. There was little net change over the period in the differential between U.S. and a weighted average of foreign interest rates. Throughout the period, but especially around the time of the Tokyo Summit in early May, statements of U.S. and foreign officials appeared to influence trading behavior. The U.S. merchandise trade deficit appeared to have decreased somewhat in the first quarter, as both the volume and average price of oil imports fell and nonagricultural exports picked up.

At its meeting on April 1, 1986, the Committee had adopted a directive that called for maintaining about the existing degree of pressure on reserve positions. The members expected such an approach to policy implementation to be consistent with growth of both M2 and M3 at an annual rate of about 7 percent for the period from March to June. Over the same period, M1 was expected to expand at an annual rate of about 7 to 8 percent, but the members recognized that the behavior of M1 remained subject to unusual

uncertainty. The Committee agreed that somewhat lesser or somewhat greater reserve restraint might be acceptable over the intermeeting period depending on the behavior of the aggregates, the strength of the business expansion, developments in foreign exchange markets, progress against inflation, and conditions in domestic and international credit markets. The intermeeting range for the federal funds rate was retained at 6 to 10 percent.

M1 grew at an annual rate of 14½ percent in April, close to its rapid pace in March, and data available thus far for early May indicated further strong expansion. M1 has expanded more rapidly than the Committee expected at the time of its April 1 meeting, and for the year to date has grown at a rate well above the 8 percent upper limit of the Committee's range for 1986. M2 and M3 expanded in April at annual rates of about 13\(\frac{1}{2}\) percent and 10\(\frac{1}{2}\) percent respectively, also outpacing the growth paths previously expected for the second quarter. However, given its earlier weakness. M2 moved only into the lower part of its long-run range in April, while M3 rose to a level slightly above the midpoint of its range for 1986. Expansion of total domestic nonfinancial debt, which had slowed appreciably over the first quarter, appeared to be continuing at a relatively moderate pace.

Open market operations during the intermeeting period were directed at maintaining about the prevailing degree of pressure on reserve positions. During the three full reserve maintenance periods after the April 1 meeting, seasonal plus adjustment borrowing from the discount window averaged about \$275 million. Borrowing was exceptionally light in the days immediately preceding the announcement on April 18 of a reduction in the discount rate from 7 to 6½ percent, but has averaged a little more than \$300 million since then.

Federal funds generally traded in the 6¾ to 7 percent area over most of the intermeeting period, down about ½ percentage point from the rate prevailing around the time of the previous meeting. Most other short-term rates also declined on balance, though by less than the federal funds and discount rates, while long-term rates moved somewhat higher. After declining early in the intermeeting period, interest rates subsequently

rose against the background of an upturn in oil prices, strong money supply growth, further depreciation of the dollar, and emerging views among market participants that the scope for further easing in monetary policy was reduced.

The staff projections presented at this meeting suggested that expansion in real GNP, though relatively modest in the current quarter, would likely strengthen over the second half of 1986 and would be at a moderate pace in 1987. The rate of unemployment was expected to decline marginally over the projection horizon. The general level of prices, as measured by the GNP implicit deflator, was projected to rise relatively slowly in the near term, but to pick up later as the favorable effects of declining oil prices dissipated and upward pressures on prices from the dollar's depreciation tended to intensify.

In the Committee's discussion of the economic situation and outlook, members commented that stronger economic expansion in line with the staff forecast was a reasonable expectation for the second half of the year, but several members also stressed the risks of a different outcome. It was generally noted that there was no firm evidence to date of a pickup from the currently sluggish rate of expansion in overall economic activity and that weaknesses remained in key sectors of the economy such as energy and agriculture. However, a number of fundamental factors pointed to faster growth later, though there was considerable uncertainty about both the timing and the magnitude of the prospective strengthening. These factors included substantially reduced interest rates, higher prices in equity markets, lower oil prices, and the favorable effects of the dollar's depreciation on the international competitiveness of U.S. products. At the same time, some members observed that inflationary pressures could increase over the next several quarters, particularly if domestic demands for goods and services proved to be quite strong at a time when the lagged price effects of the dollar's depreciation were being felt. It was noted in this connection that progress toward reducing federal budget deficits was urgently needed to improve prospects for balanced economic growth and help protect against renewed inflation.

With regard to specific indications of prospec-

tive strengthening in economic activity, members referred among other developments to the apparent improvement in business confidence in many parts of the country. Housing activity was described as strong in most areas, and some members cited evidence of a pickup in sales of consumer durables related to housing. And although activity in manufacturing industries tended to remain sluggish, the service industries generally were experiencing considerable growth, including notably the financial services and tourism. While the staff forecast had indicated continuing growth of consumer spending and modest expansion in business fixed investment and inventories, one member referred to the possibility that expansion in these key sectors might gather momentum as uncertainties about the actual strength of business were resolved favorably, contributing to a greater acceleration in real economic growth. Another member commented that the buildup of liquidity was seen by many observers as a positive factor for the expansion, especially in the context of what was viewed as an accommodative monetary policy. While broad measures of liquidity had not shown particular strength in recent quarters, holdings of cash balances had been expanding rapidly and were available to support a considerable pickup in spending at some point in the future.

On the other hand, several members indicated that the possibility of the expansion remaining weak could not be ruled out. In this regard, a number of members indicated that they viewed business fixed investment as a major uncertainty in the overall economic outlook, noting that current indicators of future investment remained weak and that there was considerable reluctance to undertake some investment activities pending the passage of tax reform legislation. Moreover, the apparent overbuilding of commercial and other facilities in some parts of the country and weak investment demand in depressed sectors of the economy would tend to inhibit investment spending over the quarters ahead. Members also referred to shortfalls in revenues of state and local governments in depressed areas of the country as a negative factor. Finally, one member referred to the possibility of an inventory correction should the currently positive business mood begin to deteriorate.

A number of members expressed the view that the performance of the economy during the second half of the year would hinge to a considerable extent on foreign developments. Some felt that the main downside risks in the nearer-term business outlook were on the foreign trade side. To an important degree, rising demands for U.S. exports would depend on faster growth in key foreign industrial nations, and it was observed that such growth had been disappointing and a pickup might not occur in the absence of more stimulative economic policies in at least some of those countries. And while a depreciated dollar could be expected to have a favorable impact on U.S. foreign trade over time, that impact might well be delayed and muted in an environment of slow growth abroad and of highly competitive markets for internationally traded goods. Further growth in protectionism in the United States might likewise have a strongly inhibiting effect on U.S. export markets as foreign nations retaliated.

A number of members raised questions about the outlook for inflation. It was pointed out that the recently favorable behavior of overall prices was the result of price declines in the energy and food sectors. Those declines would soon be in the past, and upward pressures on overall prices would reemerge, stimulated in part by the lagged inflationary effects of the dollar's depreciation. Indeed, prices of nonfuel imports were already indicated to have turned up. Even if oil prices were to stabilize near current levels, their favorable impact on overall prices would tend to wane over the quarters ahead, and the possibility of a reversal in oil prices could not be dismissed. Agricultural prices also could not be expected to continue trending downward, and indeed some firming had occurred recently. On the more favorable side, members referred to the intense competition in many markets and to restrained wage settlements in a number of industries. Basic cost pressures appeared to be well contained so far in manufacturing industries although price and wage pressures in the service industries remained disturbing. In one view any intensification of inflationary pressures might well be delayed until well into 1987.

At its meeting in February the Committee had agreed on policy objectives for monetary growth

for the period from the fourth quarter of 1985 to the fourth quarter of 1986 that included ranges of 3 to 8 percent for M1 and 6 to 9 percent for both M2 and M3. The associated range for total domestic nonfinancial debt was set at 8 to 11 percent. In keeping with the Committee's usual procedures under the Humphrey-Hawkins Act, these ranges would be reviewed at the July meeting when provisional ranges would also be established for 1987.

The Committee's policy discussion focused to a considerable extent on the members' evaluation of the recent behavior of the monetary aggregates, particularly M1. With varying degrees of emphasis, members questioned the reliability of M1 developments as a guide for the conduct of monetary policy under prevailing circumstances. It was noted in this connection that the rapid growth in M1 and the associated weakness in its velocity appeared to reflect to a considerable but nonetheless uncertain extent the earlier declines that had occurred in market interest rates in the context of subsiding inflationary expectations and softness in final demands. From this viewpoint, the relatively rapid growth in the demand for money balances needed to be accommodated in order to assure a satisfactory performance of the economy. On the other hand, rapid monetary growth also might imply an excessive buildup in liquidity, with inflationary implications for the future. In that context, several members emphasized the need to gauge the performance of M1 in light of whether behavior of other, broader, monetary aggregates provided confirming evidence of a rapid growth in liquid assets.

Members noted that expansion of the broader aggregates, despite the more rapid growth in recent weeks, was well within the Committee's ranges for 1986, and indeed near the lower end of the range in the case of M2. The more moderate growth of the broader aggregates this year, along with relatively moderate growth of L, an even more encompassing measure of the public's liquid asset holdings, raised questions as to whether the growth of M1 really represented a potentially excessive buildup in liquidity or was more of a shift in the composition of liquid holdings in response to relative movements in interest rates. However, continuing growth in M2 and M3 at the

relatively rapid rates experienced recently could be a matter of increasing concern. One member expressed a somewhat differing assessment of the behavior of the broader aggregates this year in that the contingent liabilities of banks, most of which back instruments that are not included in M2 and M3, also seemed to have grown rapidly. Moreover, growth of M2 and M3 appeared to have been held back by investor portfolio shifts into bonds and equities, including mutual funds, and the unwinding of such shifts could result in faster growth later. In this view, therefore, less comfort could be taken from the relatively restrained growth of the broader aggregates for the year to date.

According to an analysis prepared for this meeting, the maintenance of the current degree of pressure on reserve positions could be expected to be associated with slower monetary growth over the balance of the quarter. Even so, because of the substantial expansion in April and early May, growth for the quarter as a whole would be considerably faster than was expected at the time of the previous meeting, notably in the case of M1. According to this analysis, the unusual surge in demand deposits was likely to subside over the course of coming weeks, while some moderation could also be expected in the growth of NOW accounts as both depositors and depository institutions completed their adjustments to the lower market interest rates that had emerged. Members indicated broad agreement with this analysis, but they questioned the timing and extent of the slower growth. In light of the uncertainties that were involved, some proposed omitting numerical references in the directive to the Committee's expectations for monetary growth in the second quarter. However, despite the greater than usual uncertainties, a majority of the members preferred to retain the customary procedure of specifying numerical growth expectations in the directive.

In the Committee's discussion of policy implementation for the period immediately ahead, most of the members indicated that they were in favor of continuing to direct open market operations at least initially toward maintaining the existing degree of reserve availability. In support of this view, members commented that the rapid growth of the monetary aggregates and the favor-

able conditions for a pickup in business activity had to be weighed against the currently sluggish growth in overall business activity and the consequent uncertainties surrounding the economic outlook. One member felt, however, that the rapid growth in M1 and the potential for increased inflationary pressures later in the year and in 1987 argued for some firming.

With regard to possible adjustments during the intermeeting period, a majority of the members felt that policy implementation should be alert to the potential need for some firming of reserve conditions, especially if business indicators gave a clear signal of a pickup in the rate of economic expansion and monetary growth did not slow in line with expectations. Generally, these members did not want to rule out the possibility of some easing in the weeks immediately ahead, but they foresaw the potential desirability of such a course only in the context of appreciably more sluggish economic performance than was now expected. In this connection, one member emphasized that continuing declines in the velocity of money in combination with a sluggish economic performance might warrant some easing of reserve conditions. Other members believed that there should be no presumptions about the likely direction of any intermeeting adjustments, given the prevailing uncertainties about the performance of the economy, possible developments in domestic and international financial markets, and the behavior of the monetary aggregates. Some members also expressed the view that the Committee should be tolerant of a shortfall of M1 growth below current expectations in light of the rapid expansion of M1 recently and for the year to date. It was noted that account needed to be taken of the behavior of the dollar on foreign exchange markets in any intermeeting adjustments.

At the conclusion of the Committee's discussion, all but one member indicated their acceptance of a directive that called for no change in the existing degree of pressure on reserve positions. The members expected such an action to be associated with a deceleration in monetary growth over the balance of the second quarter. Because such growth had been rapid thus far in the quarter, the members anticipated faster growth of the monetary aggregates, especially

M1, than was expected at the time of the April 1 meeting. The members recognized that the behavior of M1 remained subject to unusual uncertainty, but they agreed that its growth might be in the area of 12 to 14 percent for the period from March to June, assuming some decline over the balance of the quarter. For the same period, M2 and M3 were now expected to expand at annual rates of around 8 to 10 percent. The members agreed that if the anticipated slowing in monetary growth did not occur, somewhat greater reserve pressure would be acceptable in the context of a pickup in the expansion of economic activity, with account being taken of conditions in domestic and international financial markets and the behavior of the dollar on foreign exchange markets. On the other hand, somewhat lesser reserve restraint might be acceptable in the event of pronounced sluggishness in the performance of the economy in association with a marked slowing in monetary growth.

The Committee agreed that the current intermeeting range for the federal funds rate should be reduced by 1 percentage point to 5 to 9 percent. The reduction was intended as a purely technical adjustment in the context of an unchanged degree of reserve availability and its purpose was to provide a more symmetrical range around the lower federal funds rate that had prevailed for some time. The members regard the federal funds range as a mechanism for initiating Committee consultation when its boundaries are persistently exceeded.

At the conclusion of the meeting the following domestic policy directive was issued to the Federal Reserve Bank of New York:

The information reviewed at this meeting indicates a mixed pattern of developments but suggests on balance that economic activity is expanding at a relatively modest pace in the current quarter. Total nonfarm payroll employment increased moderately further in April following a considerable rise in the first quarter. but employment in manufacturing fell for the third consecutive month. The civilian unemployment rate edged down to 7.1 percent. Industrial production and total retail sales turned up in April following earlier declines, while housing starts rose somewhat further from a relatively high level. Weakness in the energy sector has contributed to a slowing of business capital spending. The merchandise trade deficit appears to have decreased somewhat in the first quarter, as the volume and average price of oil imports fell. Largely

reflecting declines in energy prices, consumer prices have declined somewhat since late 1985 and producer prices have fallen substantially.

In April M1 continued to grow at a rapid pace, leaving this aggregate above the upper end of its range for the year. Growth of the broader aggregates, especially of M2, strengthened considerably in April, bringing M2 into the lower part of its long-run range and M3 slightly above the midpoint of its range for 1986. Most short-term interest rates have declined on balance since the April 1 meeting of the Committee, while long-term rates are somewhat higher. On April 18, the Federal Reserve Board approved a reduction in the discount rate from 7 to 6½ percent. The tradeweighted value of the dollar against major foreign currencies has risen somewhat recently but on balance the dollar has declined further since the April meeting, particularly against the Japanese yen.

The Federal Open Market Committee seeks monetary and financial conditions that will foster reasonable price stability over time, promote growth in output on a sustainable basis, and contribute to an improved pattern of international transactions. In furtherance of these objectives the Committee agreed at its February meeting to establish the following ranges for monetary growth, measured from the fourth quarter of 1985 to the fourth quarter of 1986. With respect to M1, the Committee recognized that, based on the experience of recent years, the behavior of that aggregate was subject to substantial uncertainties in relationship to economic activity and prices, depending among other things on its responsiveness to changes in interest rates. It agreed that an appropriate target range under existing circumstances would be 3 to 8 percent, but it intends to evaluate movements in M1 in the light of its consistency with the other monetary aggregates, developments in the economy and financial markets, and potential inflationary pressures. It adopted a range of 6 to 9 percent for M2 and 6 to 9 percent for M3. The associated range for growth in total domestic nonfinancial debt was set at 8 to 11 percent for the year 1986.

In the implementation of policy for the immediate future, the Committee seeks to maintain the existing degree of pressure on reserve positions. This action is expected to be consistent with a deceleration in money growth over the balance of the quarter. However, in view of the rapid money growth thus far in the quarter and the apparent weakness in velocity, the Committee anticipates faster growth for the monetary aggregates, particularly M1, than expected at the last meeting. M2 and M3 are expected to expand over the period from March to June at annual rates of about 8 to 10 percent. While the behavior of M1 continues to be subject to unusual uncertainty, growth at an annual rate of about 12 to 14 percent over the period is now anticipated. If the anticipated slowing in monetary growth does not develop, somewhat greater reserve restraint would be acceptable in the context of a pickup in growth of the economy, taking account of conditions in domestic

and international financial markets and the behavior of the dollar in foreign exchange markets. Somewhat lesser reserve restraint might be acceptable in the context of a marked slowing in money growth and pronounced sluggishness in economic performance. The Chairman may call for Committee consultation if it appears to the Manager for Domestic Operations that reserve conditions during the period before the next meeting are likely to be associated with a federal funds rate persistently outside a range of 5 to 9 percent.

Votes for this action: Messrs. Volcker, Corrigan, Angell, Guffey, Mrs. Horn, Messrs. Johnson, Melzer, Morris, Rice, and Ms. Seger. Vote against this action: Mr. Wallich. Absent and not voting: None.

Mr. Wallich dissented because he preferred to direct open market operations toward somewhat greater restraint. He was concerned about the implications of rapid monetary expansion for inflation and wanted to take action promptly to help assure slower monetary growth.

2. Authorization for Domestic Open Market **Operations**

On June 18, 1986, the Committee approved a temporary increase of \$3 billion, to \$9 billion, in

the limit between Committee meetings on changes in System Account holdings of U.S. government and federal agency securities specified in paragraph 1(a) of the authorization for domestic open market operations. The increase was effective immediately for the intermeeting period ending with the close of business on July 9, 1986.

Votes for this action: Messrs. Volcker, Corrigan, Angell, Guffey, Mrs. Horn, Messrs. Johnson, Morris, Rice, and Boykin. Votes against this action: None. Absent and not voting: Mr. Melzer, Ms. Seger and Mr. Wallich. (Mr. Boykin voted as alternate for Mr. Melzer.)

This action was taken on the recommendation of the Manager for Domestic Operations. The Manager had advised that through June 17, outright purchases of securities thus far in the intermeeting interval had reduced the leeway under the usual \$6 billion limit to about \$21/4 billion. It was anticipated that substantial additional purchases of securities in excess of that leeway would be necessary over the remainder of the intermeeting period. Currency in circulation was expanding rapidly, as expected, while required reserves were growing considerably faster than had been anticipated earlier.

Legal Developments

AMENDMENT TO REGULATION K

The Board of Governors is amending 12 C.F.R. Part 211, its Regulation K, relating to the types of foreign investments that require the specific consent of the Board. Currently an application to the Board is required where the investor banking organization proposes to invest more than 10 percent of its capital and surplus in a foreign organization. The amendment removes this requirement and permits the investor to make the investment after prior notice to the Board 45 days in advance of the date the proposed investment would be made.

Effective July 8, 1986, the Board amends 12 C.F.R. Part 211 as follows:

Part 211—International Banking Operations

1. The authority citation for Part 211 continues to read as follows:

Authority: 12 U.S.C. 211 et seq.; 12 U.S.C. 1841 et seq.; Pub. L. 95–369, 92 Stat. 607, 12 U.S.C. 3101 et seq.; Title II, Pub. L. 97–290, 96 Stat. 1235; Title IX, Pub. L. 98–181, 97 Stat. 1153.

2. Part 211.5(c)(2) is amended by deleting at the end of the first sentence the phrase "if the total amount to be invested does not exceed 10 percent of the investor's capital and surplus."

ORDERS ISSUED UNDER BANK HOLDING COMPANY ACT, BANK MERGER ACT, BANK SERVICE CORPORATION ACT, AND FEDERAL RESERVE ACT

Orders Issued Under Section 3 of the Bank Holding Company Act

Bankers' Bancorp of Illinois Springfield, Illinois

Order Approving Formation of a Bank Holding Company

Bankers' Bancorp of Illinois, Springfield, Illinois, has applied for the Board's approval under section 3(a)(1)

of the Bank Holding Company Act of 1956, as amended ("Act") (12 U.S.C. § 1842(a)(1)), to become a bank holding company by acquiring Independent Bankers' Bank of Illinois, Springfield, Illinois ("Bank"), a de novo bankers' bank.

Notice of the application, affording opportunity for interested persons to submit comments, has been given in accordance with section 3(b) of the Act. The time for filing comments has expired, and the Board has considered the application and all comments received in light of the factors set forth in section 3(c) of the Act (12 U.S.C. § 1842(c)).

Applicant, a nonoperating Illinois corporation, was organized for the purpose of becoming a bank holding company by acquiring Bank, a *de novo* "bankers' bank" chartered under Illinois law, which will perform correspondent services for independent community banks. Bank will only engage in providing banking and banking-related services to other banks.

Section 2 of the Act (12 U.S.C. § 1841(c)), as amended by the Garn-St Germain Depository Institutions Act of 1982, includes bankers' banks in the definition of "bank," enabling these institutions to form holding companies. Bank does not do business with the general public. Instead, Bank intends to provide cash letter remittances and clearings, wire transfers, sales and purchases of federal funds, money market and securities information, sales and purchases of overline commercial and agricultural loans, bank stock loans, and assistance in origination of large complex credits through the use of consultants. Bank will furnish management services which include credit analysis, documentation and controls, collection and workout planning, strategic planning, cross selling and officer call programs, funds availability analysis, data processing analysis, audit procedures and productivity measuring. Bank only competes with other banks that offer correspondent banking services in Illinois. The Board has determined that consummation of this proposal will have no significant effect on competition, either existing or potential, and will not affect the concentration of banking resources in Illinois.

The financial and managerial resources of Applicant and Bank are considered consistent with approval, in

^{1.} Applicant and Bank are owned by 67 community banks, each holding 5 percent or less of Applicant's outstanding shares.

view of the nature of the activities of a bankers' bank, and the prospects of each appear favorable. Factors relating to the convenience and needs of the community to be served also are consistent with approval of this proposal.

Bank also has applied for approval under section 9 of the Federal Reserve Act, 12 U.S.C. § 321 et seq. and section 208.4 of Regulation H, 12 C.F.R. § 208.4, to become a member of the Federal Reserve System. Bank appears to meet all of the criteria for admission to membership, including capital requirements and considerations related to management character and quality. Accordingly, Bank's membership application is approved.

Based on the foregoing and other facts of record, the Board has determined that these applications should be and hereby are approved. This transaction shall not be consummated before the thirtieth calendar day following the effective date of this Order or later than three months after the effective date of this Order, unless such period is extended for good cause by the Board or the Federal Reserve Bank of Chicago, acting pursuant to delegated authority.

By order of the Board of Governors, effective July 21, 1986.

Voting for this action: Chairman Volcker and Governors Wallich, Rice, Seger, Angell and Johnson.

JAMES MCAFEE
Associate Secretary of the Board

First Interstate Corporation Los Angeles, California

[SEAL]

Order Approving Acquisition of a Bank

First Interstate Corporation, Los Angeles, California, a bank holding company within the meaning of the Bank Holding Company Act (the "BHC Act") (12 U.S.C. § 1841 et seq.), has applied for approval under section 3(a)(3) of the BHC Act (12 U.S.C. § 1842(a)(3)) to acquire First Interstate Bank of Oklahoma City, N.A., Oklahoma City, Oklahoma ("Bank"), a newly chartered bank that will purchase certain assets and assume certain liabilities of The First National Bank and Trust Company of Oklahoma City, Oklahoma City, Oklahoma ("FNB").

On July 14, 1986, FNB was declared insolvent and the Federal Deposit Insurance Corporation ("FDIC") was appointed receiver. Pursuant to section 116 of the Garn-St Germain Depository Institutions Act of 1982 (the "Garn-St Germain Act") (12 U.S.C. § 1823(f)), the FDIC determined to arrange for the sale of assets

and the assumption of liabilities of the closed bank and solicited offers for the acquisition of such assets and liabilities from qualified purchasers. After following the applicable procedures set forth in the Garn-St Germain Act, the FDIC on July 14, 1986, accepted Applicant's bid for the assets and liabilities of FNB. On the same day, the FDIC advised that Applicant had been selected as the winning bidder, and recommended immediate action on this application to prevent the liquidation of FNB.

In view of this situation and the need for immediate action to prevent the failure of the institution and to protect the interest of FNB's depositors, it has been determined, pursuant to section 3(b) of the BHC Act (12 U.S.C. § 1842(b)), section 225.14(h) of Regulation Y (12 C.F.R. § 225.14(h)), and section 262.3(l) of the Rules of Procedure of the Board of Governors of the Federal Reserve System (12 C.F.R. § 262.3(l)), to dispense with the notice provisions of the BHC Act.

Under section 3(d) of the BHC Act (12 U.S.C. § 1842(d)), the Douglas Amendment, a bank holding company generally may not be allowed to acquire control of any bank located outside of the holding company's principal state of banking operations. 1 Section 118(c) of the Garn-St Germain Act, however, exempts from this prohibition applications filed as a result of a transaction authorized under section 116 of the Garn-St Germain Act. Section 116 permits the FDIC to authorize the interstate acquisition of a failed bank with assets of \$500 million or more upon compliance with the procedures specified in the statute. FNB had assets of \$1.75 billion as of its most recent report of condition, dated March 31, 1986, and, as noted above, the FDIC has determined to accept Applicant's bid. In view of these and other facts of record, the Secretary concludes that approval of Applicant's proposal to acquire a bank in Oklahoma is not barred by the Douglas Amendment.

FNB operates in the Oklahoma City banking market. Applicant's subsidiary banks do not operate in Oklahoma. Accordingly, consummation of the proposed acquisition would have no effect on competition in any relevant market.

In evaluating this application, the Secretary of the Board has carefully considered the financial and managerial resources of Applicant and the effect on these resources of the proposed acquisition. The Secretary concludes that banking factors are consistent with

^{1.} A bank holding company's principal state of banking operations is that state in which the operations of the bank holding company's banking subsidiaries were principally conducted on July 1, 1966, or the date on which the company became a bank holding company, whichever is later.

approval. Considerations relating to the convenience and needs of the communities to be served are also consistent with approval of the application.

Having considered the record of this application in light of the factors contained in section 3 of the BHC Act, the Secretary has determined that the proposed transaction is in the public interest and that the application should be approved on a basis that would not preclude immediate consummation of the proposed acquisition. On the basis of the above considerations, the application is hereby approved.

The transaction may be consummated immediately but in no event later than three months after the effective date of this Order unless such period is extended for good cause by the Board or by the Federal Reserve Bank of San Francisco acting pursuant to delegated authority.

By order of the Secretary of the Board acting pursuant to delegated authority for the Board of Governors, effective July 14, 1986.

WILLIAM W. WILES Secretary of the Board

Harco Bankshares, Inc. Harlan, Kentucky

Cole Holding Company, Inc. Harlan, Kentucky

Order Approving Formation of Bank Holding Companies

Harco Bankshares, Inc., Harlan, Kentucky ("Harco"), has applied for the Board's approval under section 3(a)(1) of the Bank Holding Company ("Act") (12 U.S.C. § 1842(a)(l)) to become a bank holding company by acquiring all of the voting shares of the successor by merger to The Harlan National Bank, Harlan, Kentucky ("Bank"). By separate applications, Cole Holding Company, Inc., Harlan, Kentucky ("Cole"), has applied for Board approval under section 3(a)(1) of the Act to become a bank holding company by acquiring 35.5 percent of the voting stock of either Harco or Bank.

Notice of the applications, affording an opportunity for interested persons to submit comments and views, has been given in accordance with section 3(b) of the Act. The time for filing comments has expired, and the Board has considered the applications and all comments received in light of the factors set forth in section 3(c) of the Act (12 U.S.C. § 1842(c)).

Harco, a nonoperating corporation with no subsidiaries, was organized for the purpose of becoming a

bank holding company by acquiring Bank, which holds total deposits of \$60 million. Upon acquisition of Bank, Harco would control the 86th largest commercial bank in Kentucky, holding approximately 0.3 percent of the total deposits in commercial banks in the state. Cole is a nonoperating organization formed to hold 35.5 percent of the voting shares of either Harco or Bank. Cole would be a bank holding company, therefore, through its direct or indirect control of Bank.

Bank is the second largest of the three commercial banks located in the Harlan County banking market and controls approximately 39.3 percent of the total deposits in commercial banks in the market.² Principals of Harco, who currently control 71.4 percent of Bank, also control 73.8 percent of Guaranty Deposit Bank, Cumberland, Kentucky ("Guaranty"), which is located approximately 22 miles from Bank and in the Harlan County banking market. Guaranty, with \$28 million in deposits, is the third largest bank in the market and holds 18.9 percent of the market's commercial bank deposits. Principals of Bank have controlled Guaranty since August 1961.

In analyzing the competitive effects of a proposal to form a bank holding company where individuals controlling more than one bank in the relevant banking market seek to transfer control of one of the banks to a bank holding company, the Board considers the competitive effects of the transaction whereby common ownership was established.3 In this case, the Board has considered the competitive effect at the time the principals of Harco first obtained control of Guaranty in August 1961. At that time, the communities of Harlan, which is located in central Harlan County, and Cumberland, which is located in northeast Harlan County, were not considered to be in the same banking market. In 1961, the Harlan County banking market consisted of all of Harlan County except the extreme northern border and the northeastern corner, including Cumberland and two other towns, Benham and Lynch, which were located in a separate Tri-City banking market.

The record indicates that the terrain in Harlan County is mountainous, serving to isolate the Tri-City area from the remainder of the county. In 1961, Harlan and Cumberland each had their own retail, medical

^{1.} All banking data are as of September 30, 1985, unless otherwise noted.

^{2.} The Harlan County banking market is defined as Harlan County, Kentucky.

^{3.} See Mid-Nebraska Bancshares, Inc. v. Board of Governors of the Federal Reserve System, 627 F.2d 266 (D.C. Cir. 1980).

and educational facilities. In addition, the mining industry, which dominated the county's economy, limited the need for commuting between the Tri-City area and the rest of the county by providing their employees with low-cost housing close to mining operations in Benham and Lynch. The average driving time between Harlan and Cumberland in 1961 was substantial, and only after significant highway improvements in the late 1970s did travel between the communities increase. The commuting pattern was further altered by housing changes, including the phase-out of housing provided by coal companies, and by a recent expansion of Harlan's retail facilities. These developments prompted the redefinition of the market in 1985 to place Cumberland and Harlan in the same market. The affiliation of the two banks in 1961 thus had no adverse impact on competition, since Bank and Guaranty operated in separate markets. Accordingly, after consideration of the record, the Board concludes that competitive considerations are consistent with approval of these applications.

The financial and managerial resources of Applicant and Bank are consistent with approval. Considerations of convenience and needs of the community to be served are also consistent with approval.

Based on the foregoing and other facts of record, the Board has determined that consummation of the proposed transactions would be in the public interest and that the applications should be approved. The transactions shall not be consummated before the thirtieth calendar day following the effective date of this Order or later than three months after the effective date of this Order, unless such period is extended for good cause by the Board or by the Federal Reserve Bank of Cleveland acting pursuant to delegated authority.

By order of the Board of Governors, effective July 2, 1986.

Voting for this action: Chairman Volcker and Governors Wallich, Rice, Seger, Angell, and Johnson.

James McAfee

[SEAL]

Associate Secretary of the Board

Hibernia Corporation New Orleans, Louisiana

Order Approving Merger of Bank Holding Companies

Hibernia Corporation, New Orleans, Louisiana, a bank holding company within the meaning of the Bank Holding Company Act of 1956, as amended ("BHC Act") (12 U.S.C. § 1841 et seq.), has applied for the

Board's approval under section 3(a)(5) of the Act (12 U.S.C. § 1842(a)(5)) to merge with Southwest Bancshares, Inc., Lafayette, Louisiana ("Southwest"), and thereby indirectly to acquire Southwest National Bank of Lafayette ("Southwest Bank").

Notice of the applications, affording an opportunity for interested persons to submit comments, has been given in accordance with section 3(b) of the BHC Act. The time for filing comments has expired, and the Board has considered the applications and all comments received in light of the factors set forth in section 3(c) of the BHC Act (12 U.S.C. § 1842(c)).

Applicant is the third largest commercial banking organization in the state, holding deposits of \$2.7 billion, representing 8.9 percent of total deposits in commercial banks in the state. Southwest is the 102nd largest commercial banking organization in Louisiana, controlling one bank subsidiary, holding deposits of \$62.5 million, representing 0.2 percent of total deposits in commercial banks in the state. Upon consummation of this proposal, Applicant would remain the third largest banking organization in Louisiana and would control approximately the same percent of deposits in commercial banks in the state. Consummation of this transaction would not have a significant adverse effect on the concentration of banking resources in the state.

Bank operates in the Lafavette banking market, where it controls 4 percent of total deposits in commercial banks and is the sixth largest of eight banks.3 Applicant's subsidiary banks operate in the New Orleans and Alexandria banking markets.4 Since Applicant's and Southwest's subsidiary banks do not operate in the same markets, consummation of the proposal would not eliminate any existing competition. The Board has also examined the effect of the proposed merger on probable future competition in the relevant markets. On the basis of the number of potential entrants into the relevant markets and the fact that certain of the markets are not highly concentrated, the Board has concluded that consummation of this proposal would not have any significant adverse effects on probable future competition in any relevant market.

^{1.} Applicant has also applied under section 3(a)(3) of the BHC Act to acquire and to exercise options to acquire 25 percent of the shares of Southwest Bank. Applicant states that it would exercise these options only in the event that consummation of the merger transaction appeared unlikely.

^{2.} All banking data are as of June 30, 1985, adjusted to reflect consummation of an acquisition approved by the Board on November 5, 1985.

^{3.} Market data are as of December 30, 1984.

^{4.} The New Orleans banking market consists of the parishes of Orleans, Jefferson, St. Bernard, and St. Tammany; and the Alexandria banking market consists of the parishes of Rapids and Grant. The Lafayette banking market consists of Lafayette Parish.

The financial and managerial resources and future prospects of Applicant, Southwest, and their subsidiary banks are considered satisfactory and consistent with approval.

In considering the convenience and needs of the communities to be served, the Board has also taken into account the records of Applicant's bank subsidiaries under the Community Reinvestment Act ("CRA") (12 U.S.C. § 2901 et seq.), particularly Applicant's lead bank, Hibernia National Bank of New Orleans ("Bank"). The CRA requires the Board to assess the records of those subsidiaries in meeting the credit needs of their entire communities, including low- and moderate-income neighborhoods, consistent with their safe and sound operation, and to take those records into account in its evaluation of bank holding company applications.

With regard to Applicant's CRA record, the Board has considered extensive comments from the Louisiana Association of Community Organizations for Reform Now ("ACORN") and Local 100, Service Employees International Union, AFL-CIO (collectively "Protestants"). Protestants allege that Applicant has failed to assess or meet the needs of low- and moderate-income and minority residents within the New Orleans community served by the Bank. Protestants argue that Applicant and Bank fail to provide a variety of needed services in New Orleans, including mortgage and small business loans (particularly FHA, VA, and SBA guaranteed loans), low-cost, economy checking accounts, and check-cashing services for U.S. government checks. Moreover, Protestants allege Bank has discriminated on the basis of race in extending credit.

In accordance with the Board's practice and procedures for handling protested applications,5 the Board reviewed the CRA record of Applicant, the allegations made by Protestants, and Applicant's response, and it arranged private meetings between Applicant and Protestants, in November 1985 and February 1986, to clarify the issues and provide a forum for the resolution of differences. Applicant took the position that it was already meeting the convenience and needs of the New Orleans community and that there was no need to discuss concerns expressed by Protestants. Applicant rejected the proposals made by Protestants, and offered only to advertise its services in low-income and minority areas and to cash government checks for customers who agreed to deposit one-half the amount of the check for at least a one-day clearing period. Thus, in the absence of any dialog between the Applicant and the Protestants, the private meetings proved fruitless and in order to complete the record on this application, the Board, on April 10, 1986, directed that a public meeting be held.

At the public meeting held in New Orleans on May 3, 1986, both Applicant and Protestants made detailed written submissions and offered testimony. In addition. Applicant advised the Board that it would undertake additional programs and measures in connection with Applicant's service to the convenience and needs of the community, including low- and moderate-income segments. Subsequent to the meeting and in response to concerns expressed at the meeting, Applicant has clarified and expanded the scope of the measures it will undertake to serve the convenience and needs of the community.

Applicant will designate, at the holding company level, a CRA officer with the title of vice president whose responsibility will be to evaluate comments from interested parties and to assure that Applicant meets its CRA obligations. This official will be primarily responsible for assessing the credit needs of the community, including low- and moderate-income residents. As part of this process, the CRA officer will meet with representatives of community groups in New Orleans, including ACORN, as well as any other group that has information helpful to Applicant in assessing the credit needs of the community. Applicant will also instruct its loan officers on a regular basis, in writing, on the policies and practices it develops to meet the needs of low- and moderateincome residents of New Orleans.

Applicant will establish, initially for a two-year period, a mortgage lending program directed primarily at low- and moderate-income residents in New Orleans. During this two-year period, Applicant will make every reasonable effort to make available a minimum of \$2 million of VA and FHA first mortgage loans to low- and moderate-income borrowers. Applicant will assess the program's overall success after two years. At that time, Applicant will decide whether to continue the mortgage lending program, expand it, or discontinue it, based on the success of the program. In addition, Applicant will make SBA loans in New Orleans. Applicant previously provided and will continue to provide non-SBA small business loans in New Orleans. Moreover, Applicant has committed to cash, at no charge, U.S. government checks presented by its customers with valid Louisiana identification. Applicant will revise its CRA statement to reflect accurately the loan programs available to all its customers.

Applicant will advertise on a regular basis all of its relevant loan and deposit programs, including its FHA, VA, and SBA loans and its low-cost economy checking account, in newspapers and other media

^{5.} See 12 C.F.R. § 262.25(c).

designed to reach low- and moderate-income and minority persons.

Applicant also relies strongly on its commitment to a widely dispersed, evenhanded, consumer lending program. Bank has consumer loans outstanding in 147 of the 149 low- and moderate-income census tracts in the city of New Orleans, 6 and Bank approves and declines approximately the same percentage of consumer loan applications in those low- and moderate-income census tracts that have predominately a minority population (minority composition in excess of 80 percent of total population) as in all such low- and moderateincome census tracts. This program is to be continued in the future.

Finally, Applicant will promptly develop a detailed plan to reassess the credit needs of the low- and moderate-income communities in New Orleans through meetings with community groups, including ACORN. Thereafter, Applicant will submit this plan to the Federal Reserve Bank of Atlanta for approval as soon as possible, but in no event later than 90 days following the date of this Order. Applicant will furnish written reports, as required by the Reserve Bank, detailing its progress in implementing its programs to assess and service the convenience and needs of the community.

Despite the commitments now advanced by Applicant, Protestants continue to oppose the applications, in principal part because Protestants believe Applicant's pilot mortgage lending program should include conventional mortgage loans at below market rates with the waiver of a number of requirements, such as the assessment of points and fees. While the Board may in some circumstances give appropriate weight to commitments for future actions to improve service to the community,7 the Board does not believe the CRA or the BHC Act requires the Board to establish the terms and conditions on which lending activities must be conducted to meet community needs. The Board has previously stated that it "finds nothing in the BHC Act that requires or authorizes the Board to dictate a bank's product mix (which credit or deposit services a bank should emphasize) or to dictate what proportion or amount of an institution's funds must, or even should be allocated to any particular credit need, borrower or neighborhood, or on what specific terms credit should be extended." Commerce Bancshares, Inc., 64 Federal Reserve Bulletin 576, 579 (1978).

See also, NBD Bancorp, Inc., 68 FEDERAL RESERVE Bulletin 306, 308 (1982); F&M Bankshares, Inc., 66 FEDERAL RESERVE BULLETIN 508, 509 (1980); and Michigan National Corporation, 66 FEDERAL RE-SERVE BULLETIN 247, 249 (1980).

Finally, Protestants allege that Applicant engages in a pattern or practice of racial discrimination in granting credit in New Orleans. The Board has carefully considered the record on this issue, analyzing the information submitted at the public meeting and relevant loan documentation. Based upon this review, the Board cannot find that individuals were denied credit on the basis of their race or the character of the area where they reside.

Accordingly, based upon all of the evidence, including the programs and measures that Applicant has undertaken to serve the convenience and needs of the community, including low- and moderate-income segments of that community, as well as Bank's record of consumer lending,8 and the additional monitoring of Applicant's programs by the Reserve Bank, the Board concludes that convenience and needs considerations are consistent with approval of these applications.

Based on the foregoing and other facts of record, the Board has determined that the applications should be, and hereby are, approved.9 This transaction shall not be consummated before the thirtieth calendar day following the effective date of this Order, or later than three months after the effective date of this Order, unless such period is extended for good cause by the

^{6.} For purposes of this discussion, a low-income census tract has a median family income of less than 80 percent of the median family income in the metropolitan area and moderate-income census tract has a median family income between 80 percent and 125 percent of the median family income of the metropolitan area.

^{7.} See Board statement of January 3, 1980, Federal Reserve Regulatory Service, § 6-1312.

^{8.} Bank's consumer lending record must be considered in conjunction with its limited mortgage lending record because the Board has found that focusing solely on mortgage lending "does not give a meaningful picture of a bank's overall service to the community.' Marine Midland Banks, Inc., 61 FEDERAL RESERVE BULLETIN 890, 892 (1975). See also American Security & Trust, 62 FEDERAL RESERVE BULLETIN 258 (1976); Manchester Financial Corporation, 63 FEDER-AL RESERVE BULLETIN 849-850 (1977)

^{9.} The Board has also considered the petition of Protestants to consider this matter at an open meeting, or, in the alternative, to maintain a complete transcript of the discussion of this application at the closed meeting and to provide one week's advance notice of the closed meeting. The Government in the Sunshine Act, 5 U.S.C. § 552b, provides specific exemptions from its general requirement of open meetings where, as here, the discussion of a particular item is likely to result in the disclosure to the public of financial institution examination data and ratings or confidential financial information of the applicant. In addition, the Sunshine Act does not require a transcript of any portion of an agency meeting that is closed because discussion of a particular item is likely to involve disclosure of examination data. 12 U.S.C. 552b(f)(1).

Finally, the Sunshine Act provides an exception to the one-week notice requirement of agency meetings in the case of an agency that properly closes a majority of its meetings under the financial institutions examination and certain other exemptions. The Board is such an agency and has adopted a regulation to that effect. Therefore, the Board is required to provide notice of a meeting at the earliest practicable time, a requirement the Board met in this case by actual notice to Protestants two days before the meeting at which this application was considered.

For these reasons, the Board has denied Protestants' petition.

Board or by the Federal Reserve Bank of Atlanta, acting pursuant to delegated authority.

By order of the Board of Governors, effective July 17, 1986.

Voting for this action: Chairman Volcker and Governors Wallich, Rice, Seger, Angell, and Johnson.

[SEAL]

WILLIAM W. WILES Secretary of the Board

InterFirst Corporation Dallas, Texas

Order Approving Acquisition of a Bank

InterFirst Corporation, Dallas, Texas, a bank holding company within the meaning of the Bank Holding Company Act ("Act"), has applied for the Board's approval under section 3(a)(3) of the Act (12 U.S.C. § 1842(a)(3)) to acquire all of the voting shares of InterFirst Bank Delaware, New Castle, Delaware ("Bank"), a proposed new bank chartered under Delaware law that will engage in credit card operations and accept time deposits.

Notice of the application, affording an opportunity for interested persons to submit comments, has been duly published. The time for filing comments has expired, and the Board has considered the application and all comments received in light of the factors set forth in section 3(c) of the Act (12 U.S.C. § 1842(c)).

Applicant is the second largest banking organization in Texas, operating 68 subsidiary banks with total deposits of \$14.2 billion. Bank is a newly chartered state bank that will be located in Delaware. Upon consummation of this proposal, Applicant would transfer the credit card operations of Applicant's lead bank, InterFirst Bank Dallas, to Bank. Because Bank's activities are limited by state law, the proposed transaction would have no significant effect on the concentration of banking resources in Delaware.

Under section 3(d) of the Act, the Douglas Amendment, 12 U.S.C. § 1842(d), the Board is prohibited from approving any application by a bank holding company to acquire any bank located outside the state in which the operations of the bank holding company's banking subsidiaries are principally conducted unless the acquisition is "specifically authorized by the statute laws of the state in which such bank is located, by language to that effect and not merely by implication." On February 19, 1981, and on August 13, 1984, the

State of Delaware amended its banking law to permit an out-of-state bank holding company to acquire not more than two *de novo* banks that will be "operated in a manner and at a location that is not likely to attract customers from the general public in [Delaware] to the substantial detriment of existing banking institutions in this state."²

The proposed acquisition under the Delaware law is subject to approval by the State Bank Commissioner. On January 27, 1986, the State Bank Commissioner of Delaware preliminarily approved Applicant's formation and acquisition of Bank. Based on the foregoing, the Board has determined, as required by section 3(d) of the Act, that the proposed acquisition conforms to Delaware law and is specifically authorized by the statute laws of Delaware.

Although Bank is located in the Wilmington banking market,3 under the limitations imposed by Delaware law on Bank's operations, Bank is not likely to become a significant competitor in that banking market. The Board notes that this proposal represents a reorganization of Applicant's existing credit card operations and that Bank will engage primarily in consumer lending through its credit card operations. Bank will provide consumer credit card services in Texas and Oklahoma and intends in the near future to offer such credit card services in New Mexico, Arizona, Colorado, Kansas, Missouri, Arkansas, and Louisiana. The Board concludes that the proposal will not have adverse effects on competition or the concentration of banking resources in any relevant area, and that the overall competitive effects of the proposal are consistent with approval of the application.

In evaluating this application, the Board has considered the financial and managerial resources and future prospects of Applicant and the effect of this proposal on these resources. In its evaluation of the financial aspects of this proposal, the Board has given particular consideration to the fact that this is an internal reorganization designed to improve operational efficiencies. This proposal is *de minimis* and will not have a material effect on Applicant. Although Bank has no financial or operating history, its financial and managerial resources and future prospects are favorable.

In its evaluation of InterFirst's managerial resources, the Board has considered certain violations by InterFirst's subsidiary banks of the Currency and

^{1.} Banking data are as of December 31, 1985.

^{2.} Del. Code. Ann. tit. 5 § 803 (Supp. 1984). The law provides, however, that each such bank may be operated to attract and retain customers with whom that bank, the out-of-state holding company, or the holding company's banking and nonbanking subsidiaries have or have had business relations.

The Wilmington banking market is approximated by Cecil County in Maryland, Salem County in New Jersey, and New Castle County in Delaware.

Foreign Transactions Reporting Act⁴ ("CFTRA") and the regulations thereunder. The Board notes that InterFirst brought these matters to the attention of the appropriate supervisory authorities after the violations were discovered through an internal audit and has cooperated with law enforcement agencies.

In addition, InterFirst and its subsidiaries have implemented a comprehensive remedial program to correct these violations and to prevent violations from occurring in the future. Applicant has advised the Board that it has filed corrective currency transaction reports; implemented procedures requiring senior officers to monitor compliance with the CFTRA reporting requirements; and established an automated software program at teller windows to help ensure that reportable currency transactions are automatically identified for proper reporting. Applicant also has instituted an intensive internal training program for bank personnel regarding compliance with the CFTRA.

The sufficiency of the compliance procedures adopted to address this matter and the efficacy in correcting the deficiencies have been reviewed by the primary supervisors of the banks involved. The Board also has consulted with appropriate enforcement agencies with respect to this matter, and has considered InterFirst's past record of compliance with the law. For the foregoing reasons, and based upon a review of all of the facts of record, including the nature of this proposal, the Board finds that the financial and managerial resources and future prospects of Applicant are consistent with approval.

Upon consummation of this proposal, Applicant plans to offer Bank's customers new products and services not currently available to them, such as a premium service credit card and credit card registration. The Board concludes that factors relating to the convenience and needs of the community to be served are consistent with approval of the application.

Even though this application is being approved, the Board expresses its concern about the proliferation of statutes of this type which permit the entry of out-of-state bank holding companies in order to shift jobs and revenues from other states, while limiting the in-state activities of out-of-state owned banks so as to avoid competition with in-state banking organizations.⁵ These statutes do not appear to be based on appropriate public policy considerations for assuring a stable and sound banking system locally and nationwide, and the end result of their adoption by other states can only be a serious impairment of banking standards and

no net gains in jobs or revenues because of the proliferation.

Based on the foregoing and other facts of record, the Board has determined that approval of the application would be consistent with the public interest and that the application should be and hereby is approved. The transaction shall not be consummated before the thirtieth calendar day following the effective date of this Order, or later than three months after the effective date of this Order, and Bank shall be opened for business not later than six months after the effective date of this Order. The latter two periods may be extended for good cause by the Board or by the Federal Reserve Bank of Dallas, acting pursuant to delegated authority.

By order of the Board of Governors, effective July 21, 1986.

Voting for this action: Chairman Volcker and Governors Wallich, Rice, Seger, Angell, and Johnson.

JAMES MCAFEE
[SEAL] Associate Secretary of the Board

Orders Issued Under Section 4 of the Bank Holding Company Act

First Bank System, Inc. Minneapolis, Minnesota

Order Approving Application to Engage in the Activity of Making and Servicing Loans

First Bank System, Inc., Minneapolis, Minnesota, a bank holding company within the meaning of the Bank Holding Company Act ("Act") (12 U.S.C. § 1841 et seq.), has applied for the Board's approval under section 4(c)(8) of the Act (12 U.S.C. § 1843(c)(8)) to engage de novo through its subsidiary, FBS Credit Services, Inc. ("Company"), Minneapolis, Minnesota, in acquiring low-quality assets in connection with the sale of some of Applicant's subsidiary banks.

Notice of the application, affording interested persons an opportunity to submit comments, has been duly published (51 Federal Register 17,408 (1986)). The time for filing comments has expired, and the Board has considered the application and all comments received in light of the public interest factors set forth in section 4(c)(8) of the Act.

Applicant, with total consolidated assets of \$25.7 billion, has two lead banks, First National Bank of

^{4. 31} U.S.C. § 5311, et seq.; 31 C.F.R. § 103.

^{5.} See, Citicorp, 71 FEDERAL RESERVE BULLETIN 101 (1985).

^{1.} All banking data are as of December 31, 1985, unless otherwise specified.

Minneapolis ("First Minneapolis"), Minneapolis, Minnesota, and First National Bank of Saint Paul ("First St. Paul"), St. Paul, Minnesota.

Applicant proposes to engage *de novo* in the administration, management, collection, and liquidation of low-quality assets transferred from some of its affiliated banks that it intends to divest. These activities are permissible for bank holding companies under section 225.25(b)(1) of Regulation Y (12 U.S.C. § 1843(b)(3)).²

In every case involving an acquisition by a bank holding company under section 4 of the Act, the Board considers the effect of the acquisition on the financial condition and resources of the applicant. In this connection, the Board has taken into consideration that the subsidiary would be capitalized at a level commensurate with the quality of the specific low-quality assets. Further, the Board also considered that funding would be provided by sophisticated investors and would be on terms which do not expose the subsidiary to liquidity or interest rate risks. After reviewing all the facts of record relating to the overall financial condition of Applicant, the Board has determined that the financial factors relating to this application are consistent with approval, particularly in light of certain commitments made by Applicant in connection with this proposal.

In its evaluation of Applicant's managerial resources, the Board has considered certain violations by Applicant of the Currency and Foreign Transactions Reporting Act ("CFTRA"), and the regulations thereunder.³ The Board notes that Applicant brought the CFTRA matters to the attention of the appropriate supervisory authorities after the violations were discovered through its internal audit and has cooperated with various regulatory agencies.

Applicant has advised the Board that it has taken numerous steps to prevent recurrence of violations of CFTRA, including the following:

- (1) a revision of internal audit procedures to ensure effective auditing for compliance with the CFTRA, including a review of employees' understanding of the regulations through training; testing of samples of transactions to determine if appropriate reports have been made when required; and a review of the exempted customer list;
- (2) a review of all exempt lists and identification of prior transactions which must be reported;

- (3) a review by Applicant's Legal and Compliance Department of current CFTRA Regulations; a revision of procedures to ensure compliance, including reporting, recordkeeping, and retention requirements; and procedural guidelines to assure compliance:
- (4) the development by each bank of specific procedures to ensure compliance with CFTRA in view of Applicant's revised compliance procedures; and
- (5) the designation of a compliance officer at each bank who will be responsible for reviewing the CFTRA requirements with all personnel involved in transactions where violations may occur, and ongoing training of affected personnel in conjunction with periodic reviews of the CFTRA requirements.

The sufficiency of the compliance procedures to address this matter and their efficacy in correcting the deficiencies have been reviewed by Office of the Comptroller of the Currency examiners. The Board has also consulted with appropriate enforcement agencies and has considered Applicant's past record of compliance with the law. For the foregoing reasons and based upon a review of all the facts of record, the Board concludes that the managerial resources of Applicant are consistent with approval.

Before approving an application under section 4 of the Act that the Board has determined is closely related to banking, the Board must consider whether Applicant's performance of the proposed activities "can reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interest, or unsound banking practices." 12 U.S.C. § 1843(c)(8).

Consummation of Applicant's proposal will have no adverse effect on competition, as this proposal is viewed as an internal reorganization. Based upon the facts of record, the Board concludes that performance of the proposed activities by Applicant can reasonably be expected to provide benefits to the public.

Based upon the foregoing and all the facts of record, the Board has determined that the balance of public interest factors it is required to consider under section 4(c)(8) is favorable. Accordingly, the application is hereby approved. This determination is subject to all of the conditions set forth in Regulation Y, including sections 225.4(d) and 225.23(b)(3) (12 C.F.R. §§ 225.4(d) and 225.23(b)(3)), and to the Board's authority to require modification or termination of the activities of the holding company or any of its subsidiaries as the Board finds necessary to assure compliance with the provisions and purposes of the Act and

^{2.} Company also proposes to manage and liquidate certain lowquality assets on behalf of banks retained by Applicant. This activity is permissible without the prior approval of the Board under section 4(c)(1)(C) of the Act and under section 225.22(a) of Regulation Y.

^{3. 31} U.S.C. § 5311 et seq.; 31 C.F.R. § 103.

the Board's regulations and orders issued thereunder, or to prevent evasion thereof.

This transaction shall not be consummated later than three months after the effective date of this Order, unless such period is extended for good cause by the Board, or by the Federal Reserve Bank of Minneapolis, pursuant to delegated authority.

Voting for this action: Chairman Volcker and Governors Wallich, Rice, Seger, Angell, and Johnson.

JAMES MCAFEE
[SEAL] Associate Secretary of the Board

FirstBank Holding Company of Colorado

Lakewood, Colorado

Order Approving the Issuance and Sale of Variably Denominated Payment Instruments

FirstBank Holding Company of Colorado ("Applicant" or "FirstBank"), Lakewood, Colorado, a bank holding company within the meaning of the Bank Holding Company Act ("Act"), has applied for the Board's approval under section 4(c)(8) of the Act (12 U.S.C. § 1843(c)(8)) and section 225.23(a)(3) of the Board's Regulation Y (12 C.F.R. § 225.23(a)(3)), to engage *de novo* in the issuance and sale of payment instruments, as follows: (1) domestic money orders, up to a maximum face value of \$10,000; and (2) official checks, with no limitation on the maximum face amount, but subject to certain conditions. These instruments would be sold throughout Colorado through branches of Applicant's subsidiary banks and one nonbank subsidiary.

Notice of the application, affording interested persons an opportunity to submit comments, has been published (51 Federal Register 15,835 (1986)). The time for filing comments has expired, and the Board has considered the application and all comments received in light of the public interest factors set forth in section 4(c)(8) of the Act.

FirstBank controls total consolidated assets of \$763.9 million¹ and is the seventh largest banking organization in the state. FirstBank controls 26 subsidiary banks, with \$639.4 million in total deposits,²

representing 3 percent of aggregate state deposits. FirstBank also engages in a number of nonbanking activities.

Regulation Y includes on the list of permissible nonbanking activities the issuance and sale of money orders and other similar consumer-type payment instruments with a face value not exceeding \$1,000.3 The Board previously has approved by order applications to engage in the issuance of payment instruments with a maximum face value of \$10,000.4 In its orders, the Board found that an increase in the denomination of such instruments would not affect the fundamental nature of the payment instruments, and the Board concluded that the issuance and sale of the proposed instruments in increased denominations was closely related to banking. In addition, the Board has previously approved by order the direct sale and issuance of official checks with no maximum face value, subject to certain conditions.5

In order to approve this application, the Board must also find that the performance of the proposed activity by FirstBank "can reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices." 12 U.S.C. § 1843(c)(8).

Consumer-type payment instruments, such as traditional money orders, are marketed nationally on the wholesale level by a few large organizations and locally on the retail level by a wide variety of financial and nonfinancial institutions. On the national scale, the market is highly concentrated, being dominated by a few large organizations. Entry into this business on a national or regional scale in a substantial manner involves overcoming significant barriers because a potential entrant must possess the capability for managing the extensive sales and servicing operation necessary for handling a low unit-price, high volume product. Such capabilities frequently are associated with banking organizations with both a moderate size and a significant branch or subsidiary bank system,

^{1.} All banking data are as of March 31, 1986, unless otherwise noted.

^{2.} Deposit data are as of December 31, 1985.

^{3. 12} C.F.R. § 225.25(b)(12).

^{4.} BankAmerica Corporation, 70 Federal Reserve Bulletin 364 (1984); see also The Chase Manhattan Corporation, 71 Federal Reserve Bulletin 905 (1985); and Citicorp, 71 Federal Reserve Bulletin 58 (1985).

^{5.} Wells Fargo & Company, 72 Federal Reserve Bulletin 148 (1986).

^{6.} Money orders are primarily used to transmit money by consumers who do not maintain checking accounts. Traditionally, money orders have a maximum face value printed on the instrument, which is generally at or lower than the limit set by Regulation Y. Official checks can be used as a substitute for a variety of payment instruments, such as cashier's checks, and could be used by businesses as part of their cash management strategy.

such as FirstBank. FirstBank's entry into this market would result in increased competition in an industry that currently is concentrated. Accordingly, the Board views FirstBank's proposal as procompetitive and in the public interest.

Applicant proposes to issue and sell domestic money orders with a maximum face value of \$10,000, and official checks with no limitation on the maximum face amount. In its *BankAmerica* and *Wells Fargo* orders, the Board noted its concern that the issuance of such instruments with a face value over \$1,000 could result in an adverse effect on the reserve base because such instruments are not subject to transaction account reserve requirements. Because reserve requirements serve as an essential tool of monetary policy, the Board has expressed concern that proposals like that of Applicant might result in adverse effects on monetary policy.

In order to assess the effects of such proposals on the reserve base, the Board has determined that it should closely monitor the effects of such proposals on its conduct of monetary policy. To that end, the Board has approved proposals to issue domestic money orders with a face value of up to \$10,000, but also has required the filing with the Board of weekly reports of daily data on this activity. If it appears that the activity causes a significant reduction in the reserve base or other adverse effect on the conduct of monetary policy, the Board has stated that it might impose reserve requirements on such transactions, pursuant to section 19 of the Federal Reserve Act (12 U.S.C. § 461(a)) and the Board's Regulation D (12 C.F.R. Part 204).

To address the monetary policy concerns expressed in the Board's prior orders, FirstBank has committed that it will deposit to a demand deposit account at its subsidiary in Lakewood, FirstBank of Villa Italia, subject to the reserve requirements of that bank, all the proceeds of any official check having a face value in excess of \$10,000. The proceeds of each item will remain in the demand account until the respective payment instrument is paid in full. FirstBank has also committed to submit weekly reports of daily data showing separately the aggregate value of all outstanding instruments (including money orders and official checks) with a face value of up to \$10,000, and the aggregate value of all official checks with a face value exceeding \$10,000.

Applicant contends that implementation of the foregoing commitments and procedures will maintain reserves at the same level as would be the case if the Board were to approve an application to increase the denomination of official checks available for sale by FirstBank from \$1,000 to \$10,000 (as previously approved by order for other bank holding companies), but at the same time will permit FirstBank to increase the efficiency and reduce the overall cost of its payment instrument activities. Having reviewed the proposal, the Board has determined that the commitments and procedures outlined therein sufficiently mitigate the Board's concerns regarding potential adverse effects on the reserve base to allow Applicant to commence the activity as proposed. The Board's approval for Applicant to engage in this activity, of course, is subject to the continued evaluation of its potential adverse effects on monetary policy. If the Board discerns such effects in the future, the Board would require appropriate modification of the activity and/or imposition of additional reserve requirements.

The record shows that the sale of these largedenominated money orders by FirstBank would increase competition in this field and enhance the convenience of purchasers. The Board finds that these instruments, which will be issued by a substantial financial organization and will enjoy ready acceptability, will provide benefits to the public. Moreover, there is no evidence in the record that consummation of this proposal would result in adverse effects, such as unsound banking practices, unfair competition, conflicts of interests, or undue concentration of resources.

Based upon the foregoing and all the facts reflected in the record, the Board has determined that the balance of the public interest factors it is required to consider under section 4(c)(8) is favorable. This determination is subject to all of the conditions set forth in Regulation Y, including sections 225.4(d) and 225.23(b), and to the Board's authority to require such modification or termination of the activities of a holding company or any of its subsidiaries as the Board finds necessary to assure compliance with the provisions and purposes of the Act and the Board's regulations and orders issued thereunder, or to prevent evasion thereof.

The activity shall be commenced no later than three months after the effective date of this Order, unless such period is extended for good cause by the Board or by the Federal Reserve Bank of Kansas City, acting pursuant to delegated authority.

By order of the Board of Governors, effective July 17, 1986.

Voting for this action: Chairman Volcker and Governors Wallich, Rice, Seger, Angell, and Johnson.

7. See notes 4 & 5, supra.

James McAfee

Associate Secretary of the Board

[SEAL]

Independent Bankers Financial Corporation Dallas, Texas

Order Approving Rentention of Interest in Joint Venture with Mills & Allen International PLC

Independent Bankers Financial Corporation, Dallas, Texas, a bank holding company by virtue of its control of Texas Independent Bank, Dallas, Texas, has applied for the Board's approval to retain its interest in GIMB ("Company"), New York, New York, a joint venture partnership with Mills & Allen International PLC, London, England.

The application to retain the joint venture is required under the commitments made by Applicant and Mills & Allen to notify the Board, and apply to retain the joint venture, in the event of changes in the securities activities of Mills & Allen. The Board approved the joint venture on June 26, 1985. Subsequently, Mills & Allen acquired Gintelco, New York, New York, a broker of corporate debt securities that engages to a limited extent in dealing in such securities.

Company engages in the activity of acting as a municipal securities "brokers' broker," as defined by Rule 15c3-1 implementing section 15(c)(3) of the Securities Exchange Act of 1934. Applicant holds a 49 percent interest in Company through its securities brokerage subsidiary, Independent Brokerage of America. The remaining 51 percent interest in Company is held by Mills & Allen through its wholly owned subsidiary GGB Holding, Inc., New York, New York.

Applicant, with total deposits of \$97.4 million,² is a one-bank holding company with a bankers' bank as a subsidiary. The shareholders of Applicant are 360 banks in Texas. Mills & Allen is a publicly held corporation based in the United Kingdom that engages in insurance, advertising and securities activities throughout the world.

In evaluating an application to retain a nonbanking activity, the Board applies the same standards it would apply to an application to commence such activities initially. Section 4(c)(8) of the Bank Holding Company Act ("Act") requires the Board to consider whether Applicant's performance of the proposed activities can "reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices." 12 U.S.C. § 1843(c)(8).

The Board has on previous occasions expressed concerns about joint ventures, particularly those between bank holding companies and securities firms. The Board is concerned that joint ventures not lead to a matrix of relationships between co-venturers that could break down the legally mandated separation of banking and commerce, create the possibility of conflicts of interests and concentration of resources the Act was designed to prevent, or impair or give the appearance of impairing the ability of the banking organization to function effectively as an independent and impartial provider of credit.³ In addition, joint ventures must be carefully analyzed for any possible adverse effects on competition and on the financial condition of the banking organization involved in the proposal. The Board believes that these concerns are exacerbated where, as here, the joint venture involves a relationship between a bank holding company and a securities firm that is more than a passive investor, because such arrangements create the potential for the mingling of permissible and impermissible securities activities.

In its analysis of previous joint ventures, the Board has carefully evaluated the activities of the nonbanking partner in order to assure that an impermissible matrix of relationships with the securities company was unlikely to develop. The Board has also relied on representations and commitments of the companies involved to address possible adverse effects that may arise from the formation of the joint venture.

Company engages exclusively and Mills & Allen engages predominately in brokerage activities that are permissible for a state member bank under section 16 of the Glass-Steagall Act (12 U.S.C. § 24 Seventh).⁴ However, Mills & Allen also engages through Gintelco in a limited amount of dealing in corporate debt issues for its own account.⁵ Were this activity conducted by a member bank or its affiliate, a question would be presented as to whether the activity was consistent with the restrictions in the Glass-Steagall Act on

^{1.} Independent Bankers Financial Corporation, 71 FEDERAL RESERVE BULLETIN 651 (1985).

^{2.} Banking data are as of September 30, 1984.

^{3.} E.g., Independent Bankers Financial Corporation, 71 Federal Reserve Bulletin 651, 653 (1985); Amsterdam-Rotterdam Bank, N.V., 70 Federal Reserve Bulletin 835, 836 (1984); The Maybaco Company and Equitable Bancorporation, 69 Federal Reserve Bulletin 375 (1983); Deutsche Bank AG, 67 Federal Reserve Bulletin 449 (1981).

^{4.} Securities Industry Ass'n v. Board of Governors/Schwab, 468 U.S. ——— (1984).

^{5.} Mills & Allen acquired Gintelco on the day following the Board's approval of the joint venture. The circumstances surrounding the acquisition of Gintelco suggest that Mills & Allen may have misled the Board concerning its plans to expand its securities activities in the United States by failing to disclose information that it had been advised was material to the Board's consideration of the application to form the joint venture.

securities activities of member banks and their affiliates.⁶ Although the Glass-Steagall Act would not prohibit the continuation of the joint venture,⁷ Mills & Allen's expansion of its securities activities presents the possibility of mingling permissible securities activities with securities activities that are impermissible for a member bank under the Glass-Steagall Act.

In the Board's view, the possible adverse effects of Applicant's continued association with Mills & Allen are substantially reduced by certain additional representations provided by the parties in connection with this application to retain Company. Mills & Allen has represented that Gintelco's market-making activity will not exceed existing levels, representing a total of approximately \$3.5 million at any one time or \$250,000 in any one issue.8 This representation limits the dealing activity of Gintelco so that dealing will not be more than a minor and ancillary part of Gintelco's business so long as Mills & Allen retains its interest in the joint venture.

In addition, to avoid the problems which arose from Mills & Allen's acquisition of Gintelco and required this application to retain the joint venture, Applicant and Mills & Allen have represented as follows:

- 1) Mills & Allen does not engage in, nor intend to acquire any other company engaged in, any activity in the United States that would be impermissible for a state member bank under section 16 of the Glass-Steagall Act (12 U.S.C. § 24 Seventh) nor will it engage in, or acquire a company engaged in, any such activity in the United States.
- 2) If at any time Mills & Allen is either unable or unwilling to observe the foregoing representations due to a change in economic or commercial circumstances, or for any other reason, Mills & Allen and Independent Bankers agree that: Mills & Allen will at such time immediately notify the Board; the approval of the Board for Independent Bankers to continue to participate in GIMB with Mills & Allen shall be revoked automatically without any further action by the Board; and Independent Bankers will terminate its business relationship with Mills & Allen with respect to GIMB immediately.

Under these representations, any change in Mills & Allen's securities activities to include any activity that would be impermissible for a state member bank in the United States will result in automatic termination of the joint venture and revocation of the Board's approval for the joint venture, and the Board hereby so conditions its approval of the retention of the joint venture.

In addition, the Board is of the view that potential for commingling the business of Applicant and Company with that of Gintelco is reduced by the commitments previously offered by Mills & Allen and the Applicant concerning separation of offices and personnel, non-referral of customers, the use of the business name GIMB only (on the basis that the name is not readily identifiable with Mills & Allen or any of its subsidiaries), and other commitments. The Board's approval is conditioned upon the joint venturers' adherence to those commitments and the additional representations provided in connection with this application to retain Company.

With respect to the other factors the Board is required to consider, the Board finds no evidence in the record indicating that Applicant's brokerage activities have resulted in, or would result in, any undue concentration of resources, decreased or unfair competition, conflicts of interests, unsound banking practices or other adverse effects.

Based upon the foregoing and all the facts of record, the Board has determined that the balance of public interest factors it is required to consider under section 4(c)(8) is favorable. Accordingly, the application is hereby approved. This determination is subject to the conditions set forth in sections 225.4(d) and 225.23(b)(3) of the Board's Regulation Y, 12 C.F.R. §§ 225.4(d) and 225.23(b)(3). The approval is also subject to the Board's authority to require modification or termination of the activities of the holding company or any of its subsidiaries as the Board finds necessary to assure compliance with the provisions and purposes of the Act and the Board's regulations and orders issued thereunder, or to prevent evasion thereof.

By order of the Board of Governors, effective July 24, 1986.

Voting for this action: Governors Wallich, Rice, Seger, and Johnson. Absent and not voting: Chairman Volcker and Governor Angell.

[SEAL]

JAMES McAfee
Associate Secretary of the Board

^{6. 12} U.S.C. §§ 24 (Seventh), 78, 377 and 378.

^{7.} Mills & Allen and Gintelco are not member banks and do not meet the definition of an "affiliate" of Independent Bankers' member bank subsidiary under section 2(b) of the Glass-Steagall Act. 12 U.S.C. § 221(b).

^{8.} These amounts represent approximately 6 percent of Gintelco's revenues and 3.6 percent of its total assets.

^{9.} See Independent Bankers Financial Corporation, 71 Federal Reserve Bulletin 653-654 (1985).

Order Approving Acquisition of a Federal Savings Bank

Rainier Bancorporation, Seattle, Washington, a bank holding company within the meaning of the Bank Holding Company Act ("BHC Act" or "Act"), has applied under section 4(c)(8) of the BHC Act, 12 U.S.C. § 1843(c)(8), and section 225.23(a)(3) of the Board's Regulation Y, 12 C.F.R. § 225.23(a)(3), to acquire all of the voting shares of Rainier Bank Oregon, a Federal Savings Bank, Portland, Oregon ("Rainier Savings"). Rainier Savings is a newly established federal savings bank formed to assume the liabilities and acquire substantially all of the assets of Lincoln Savings and Loan Association, Portland, Oregon ("Lincoln"), a state savings and loan association, whose deposits are insured by the Federal Savings and Loan Insurance Corporation ("FSLIC").

Rainier Savings would operate as a federal savings bank in Oregon. It would not be a "bank" within the meaning of the BHC Act because its accounts would be insured by the FSLIC. 12 U.S.C. § 1841(c). Although the Board has not added the operation of a federal savings bank to the list of activities generally permissible for bank holding companies, 12 C.F.R. § 225.25(b), the Board has previously determined by order that the operation of a federal savings bank or other thrift institution is closely related to banking.

By acquiring Rainier Savings, Applicant would indirectly acquire Retirement Benefit Services, Inc., Portland, Oregon ("RBS"), a wholly owned subsidiary of Lincoln which provides discount brokerage services and engages in certain other activities. The Board has previously determined discount brokerage to be closely related to banking and permissible for bank holding companies. 12 C.F.R. § 225.25(b)(15).

The Federal Home Loan Bank Board ("Bank Board"), with the concurrence of the Oregon Supervisor of Savings and Loans, has appointed the FSLIC as Lincoln's receiver, effective July 14, pursuant to 12 U.S.C. § 1729(c)(1)(B). The Bank Board has authorized the FSLIC to transfer Lincoln's assets and liabilities to Rainier Savings pursuant to 12 U.S.C. § 1729(a)-(b). In addition, the Bank Board has selected Applicant as the winning bidder for Lincoln under the emergency provisions of section 123 of the Garn-St

Germain Depository Institutions Act of 1982 ("Garn-St Germain Act"), 12 U.S.C. § 1730a(m).

By letter dated July 14, 1986, the Bank Board urged the Board to act on this application immediately in view of Lincoln's weak and deteriorating financial condition and in view of adverse economic conditions in Oregon. The Bank Board found that Lincoln had a negative regulatory net worth of \$16.9 million as of May 31, 1986; has had large and accelerating monthly losses, and a declining deposit base; has had difficulty retaining its staff; and would continue to suffer large losses unless acquired by a stronger institution, such as Rainier. According to the Bank Board, the proposed acquisition would restore public confidence in Lincoln, help to maintain confidence in the savings and loan industry generally, and limit the daily increasing potential cost to the FSLIC.

On July 14, 1986, after considering those and other facts of record, the Board concluded that there is an emergency at Lincoln that requires the Board to act on this application immediately, and the Bank Board concurred in that finding. That same day, acting pursuant to section 118 of the Garn-St Germain Act, the Board accordingly dispensed with the hearing requirement of section 4(c)(8) and shortened to seven days the period for filing comments.2 Notice of the application was promptly published in the Federal Register, 51 Federal Register 25,746 (1986), and in newspapers of general circulation in Portland and Seattle. The time for filing comments has expired, and the Board has considered the application and all comments received in light of the factors set forth in section 4(c)(8).

Section 4(c)(8) of the BHC Act authorizes a bank holding company to engage in nonbanking activities and to acquire shares of a nonbanking company that engages in activities that the Board determines to be "so closely related to banking or managing or controlling banks as to be a proper incident thereto." The Act authorizes the Board to make such determinations by order or by regulation. The Board has previously determined that operating a thrift institution is closely related to banking,³ and it reaffirms that determination in this Order.

With respect to the "proper incident" requirement, section 4(c)(8) requires the Board to consider whether the performance of the activity by an affiliate of a bank holding company "can reasonably be expected to

^{1.} E.g., First Pacific Investments Limited, 72 Federal Reserve Bulletin 342 (1986); F.N.B. Corporation, 71 Federal Reserve Bulletin 340 (1985); Old Stone Corporation, 69 Federal Reserve Bulletin 812 (1983); Citicorp, 68 Federal Reserve Bulletin 656 (1982).

^{2.} The Board has dispensed with the notice and hearing requirements of section 4(c)(8) in similar circumstances. First Pacific Investments Limited, 72 FEDERAL RESERVE BULLETIN 342 (1986); F.N.B. Corporation, 71 FEDERAL RESERVE BULLETIN 340 (1985).

Although section 118 of the Garn-St Germain Act expired on July 15, 1986, the Board's action remains effective.

^{3.} See note 1 supra.

produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices."

In 1977, the Board considered the general question whether savings and loan association ("S&L") activities are a proper incident to banking. The Board concluded that, as a general matter, S&L activities are not a proper incident to banking because the potential adverse effects of generally allowing affiliations of banks and S&Ls were then sufficiently strong to outweigh any public benefits that might result in individual cases. D.H. Baldwin & Co., 63 FEDERAL RESERVE BULLETIN 280 (1977).

Because of the considerations elaborated in *D.H. Baldwin*, the Board has not been willing to permit bank holding companies to acquire thrift institutions on a general basis. The Board has, however, consistently regarded the BHC Act as authorizing the Board to permit such an acquisition, and the Board has approved several such proposals involving failing thrift institutions because any adverse effects of bank/thrift affiliations would be overcome by the public benefits of preserving the failing thrift institutions.⁴

The Board approved acquisitions of failing thrift institutions by bank holding companies both before and after the enactment of the Garn-St Germain Act. That Act recognized the Board's authority under section 4(c)(8) of the BHC Act to approve such acquisitions by authorizing the Board in such cases to dispense with the notice and hearing requirements of section 4(c)(8) under appropriate emergency circumstances. Although the Garn-St Germain Act expired on July 15, 1986, the Board's underlying authority to permit a bank holding company to acquire a failing thrift under the net public benefits test of section 4(c)(8) remains unaffected.

The Board has reexamined, in the context of this application, the general adverse factors cited in the 1977 D.H. Baldwin decision, including regulatory conflicts, erosion of institutional rivalry, and the potential for undermining the prohibitions against interstate banking. The Board has also considered the adverse factors that might be associated with this particular application, including any potential for decreased or unfair competition, undue concentration of resources, conflicts of interests, financial risks, diversion of funds, and participation in impermissible activities.

Based upon its review of the record, the Board has determined that the proposed acquisition would yield substantial and compelling public benefits that would be sufficient to outweigh the generalized adverse effects identified in *D.H. Baldwin*. The acquisition would preserve Lincoln as a competitor, restore public confidence in Lincoln, help to maintain confidence in the savings and loan industry generally, and limit the potential cost to the FSLIC. Applicant would provide Lincoln with significant new capital, sufficient to enable it to achieve a primary capital ratio in compliance with the Board's Capital Adequacy Guidelines.

The record establishes that Applicant has the financial and managerial resources to achieve that result. In evaluating the proposed acquisition, the Board has placed considerable weight on the assistance to be provided by the FSLIC pursuant to its assistance agreement with Applicant, and has relied on Applicant's commitment regarding the capitalization of Rainier Savings.

The proposed acquisition would not substantially lessen in any relevant market or otherwise decrease competition. On the contrary, the acquisition would have a substantial beneficial effect on competition by preserving Lincoln as an effective competitor. Applicant, with deposits of \$4.8 billion, is the second largest banking organization in the State of Washington, with 21.2 percent of all deposits in commercial banks in the state.⁵ Lincoln, with deposits of \$251 million, is the twelfth largest depository institution in Oregon, with 1.2 percent of all deposits in depository institutions in the state.

Applicant and Lincoln compete in the Portland, Oregon, banking market. Applicant is the nineteenth largest of 43 depository institutions in the market, with 0.6 percent of all deposits in depository institutions in the market. Lincoln is the tenth largest depository institution in the market, with 1.2 percent of all deposits in depository institutions in the market. In view of the small market shares involved, the weak condition of Lincoln, and the large number of banks and thrift institutions that would remain in the market, the acquisition would have no substantial adverse effect on existing competition in the market.

As numerous other institutions provide brokerage services, the acquisition would have no substantial

^{4.} See, e.g., F.N.B. Corporation, supra; The Chase Manhattan Corporation, 71 Federal Reserve Bulletin 462 (1985); Interstate Financial Corp 1, 68 Federal Reserve Bulletin 316 (1982).

^{5.} All data are as of June 30, 1985.

^{6.} The Portland, Oregon, banking market is coextensive with the Portland, Oregon, RMA: it includes Longview, Washington, where Applicant has a branch.

Lincoln's only branch outside of the Portland market is in Tillamook, Oregon, which is in the Tillamook County banking market. Applicant does not operate in that market. The Board has determined that the proposed acquisition would have no substantial adverse effect on potential competition in that market.

adverse effect on existing or potential competition in the market for those services.

To guard against possible adverse effects of affiliation between a banking organization and a savings bank, including the potential for unfair competition and diversion of funds, the Board has conditioned its approval as follows:

- 1. Applicant shall operate Rainier Savings as a federal savings bank having as its primary purpose the provision of residential housing credit. Rainier Savings shall limit its activities to those currently permitted to thrift institutions under the Home Owners' Loan Act, but shall not engage in any activity prohibited to bank holding companies and their subsidiaries under section 4(c)(8) of the BHC Act. As discussed below, these limitations shall apply to RBS.
- 2. Rainier Savings shall not establish or operate a remote service unit at any location outside Oregon.
- 3. Rainier Savings shall not establish or operate branches at locations not permissible for national or state banks located in Oregon.
- 4. Rainier Savings shall be operated as a separate, independent, profit-oriented corporate entity and shall not be operated in tandem with any other subsidiary of Applicant. Applicant and Rainier Savings shall limit their operations so as to comply with this condition, and shall observe the following conditions:
 - a. No banking or other subsidiary of Applicant shall link its deposit-taking activities to accounts at Rainier Savings in a sweeping arrangement or similar arrangement.
 - b. Neither Applicant nor any of its subsidiaries shall solicit deposits or loans for Rainier Savings nor shall Rainier Savings solicit deposits or loans for any other subsidiary of Applicant.
- 5. Applicant shall not change the name of Rainier Savings such that the public might be confused about the status of Rainier Savings as a nonbank thrift institution.
- 6. Rainier Savings shall not convert its charter to that of a national or state commercial bank without the Board's prior approval.⁷

7. To the extent necessary to ensure independent operation of Rainier Savings and prevent the improper diversion of funds, there shall be no transactions between Rainier Savings and Applicant or any of its subsidiaries without the prior approval of the Federal Reserve Bank of San Francisco. This limitation encompasses the transfer, purchase, sale, or loan of any assets or liabilities, but does not include infusions of capital from Applicant, the payment of dividends by Rainier Savings to Applicant, or the sale of residential real estate loans from Rainier Savings to any subsidiary of Applicant.

When a bank holding company applies to acquire a nonbanking organization, the nonbanking organization would ordinarily be required to divest any impermissible assets, or to cease to engage in any impermissible activities, before the acquisition is consummated. As this is an emergency acquisition and provides substantial public benefits, the Board has granted Applicant's request for additional time in which to divest nonconforming assets of Lincoln or RBS. Any such assets of Lincoln shall be divested within one year after consummation; any such assets of RBS shall be divested within six months after consummation. The additional time will allow for an orderly divestiture of any such assets. Any activities of Lincoln or RBS that are not permissible for bank holding companies shall cease once the acquisition is consummated.

The Board concludes that, under the conditions set forth above, the proposed acquisition may reasonably be expected not to result in conflicts of interests, unsound banking practices, decreased or unfair competition, undue concentration of resources, or other adverse effects.

Based upon the foregoing and other facts of record, the Board has determined that the proposed acquisition would result in substantial and compelling public benefits that would be sufficient to outweigh any adverse effects that may reasonably be expected to result from this proposal, including any potential adverse effects of the affiliation of a commercial banking organization with a thrift institution. Accordingly, the application is approved subject to the conditions set forth above and in the record.

The Board's decision in this case is subject to the conditions set forth in Regulation Y, including sections 225.4(d) and 225.23(b), 12 C.F.R. §§ 225.25.4(d), 225.23(b), and to the Board's authority to require such modification or termination of the activities of a bank holding company or any of its subsidiaries as the Board finds necessary to assure compliance with, or to prevent evasion of, the provisions and purposes of the Act and the Board's regulations and orders issued thereunder. This transaction shall not be consummat-

^{7.} Applicant has filed an application to acquire a bank in Oregon pursuant to the state's interstate banking statute, which became operative July 1, 1986. Or. Rev. Stat. § 715.065. If that application is approved and the acquisition is consummated, Applicant intends thereafter to merge Rainier Savings with the newly acquired bank. Applicant has requested the Board's approval under condition 6 above for that transaction. Subject to Applicant's obtaining all necessary regulatory approvals for the transaction, the Board hereby grants Applicant the approval required by condition 6, since, upon obtaining those approvals, Applicant would have acquired the bank and be authorized to operate the bank in Oregon under express provisions of Oregon law and consistent with section 3(d) of the BHC Act.

ed later than three months after the effective date of this Order, unless that period is extended for good cause by the Federal Reserve Bank of San Francisco, pursuant to authority hereby delegated, or by the Board.

By order of the Board of Governors, effective July 23, 1986.

Voting for this action: Governors Wallich, Rice, Seger, and Johnson. Absent and not voting: Chairman Volcker and Governor Angell.

JAMES MCAFEE
Associate Secretary of the Board

Reagan Bancshares, Inc. Big Lake, Texas

[SEAL]

Order Approving Acquisition of a Company Engaged in Credit Bureau and Collection Agency Activities

Reagan Bancshares, Inc., Big Lake, Texas, a bank holding company within the meaning of the Bank Holding Company Act, 12 U.S.C. § 1841 et seq. ("Act"), has applied for the Board's approval under section 4(c)(8) of the Act (12 U.S.C. § 1843(c)(8)) and section 225.23(a)(3) of the Board's Regulation Y (12 C.F.R. § 225.23(a)(3)), to acquire Credit Bureau of Big Lake, Inc. ("Company"), Big Lake, Texas, and engage in credit bureau and collection agency activities.

Notice of the application, affording interested persons an opportunity to submit comments, has been duly published, 51 Federal Register 2433 (1986). The time for filing comments has expired, and the Board has considered the application and all comments received in light of the public interest factors set forth in section 4(c)(8) of the Act.

Applicant is one of the smaller commercial banking organizations in the state of Texas, controlling deposits of \$33.2 million, representing less than 0.1 percent of total deposits in commercial banking organizations in the state. Applicant controls one banking subsidiary, Reagan State Bank, Big Lake, Texas ("Bank"). Company is presently owned by principals of Applicant; this proposal is merely a restructuring of ownership. Both Bank and Company operate in the Reagan County banking market, which consists of Reagan County, Texas. Bank is the only banking organization and Company is the only credit bureau or collection agency in the market. Reagan County is sparsely

Credit bureau services to be offered by Applicant include the gathering and reporting of credit information. Company will offer membership to any business that extends credit to customers on a regular basis. For a monthly fee of \$15, members will receive monthly recorded information compiled by Company concerning title, deed, property transfer, security interest and other filings from the Reagan County clerk's office. In addition, Company will perform credit checks on members' customers for a fee which will depend upon the costs to Company in obtaining the credit information. Company will obtain access to nationwide credit information through its membership in one of the five national credit bureau services. Company also will provide information on customers in its area to other credit bureaus and nationwide reporting services for a fee. Collection agency services to be offered include the collection of past due trade accounts and bad checks.

On June 25, 1986, the Board approved adding credit bureau and collection agency activities to the list of permissible nonbanking activities in the Board's Regulation Y.

In order to approve this application under section 4(c)(8) of the Act, the Board must determine that the proposed activities are "so closely related to banking . . . as to be a proper incident thereto. . . ." 12 U.S.C. § 1843(c)(8).

With regard to whether the proposed activities are closely related to banking, the traditional tests for determining whether a nonbanking activity is closely related to banking, and, therefore, permissible for bank holding companies, are set forth in National Courier Association v. Board of Governors of the Federal Reserve System.² The National Courier tests

- (1) Banks generally have in fact provided the proposed services.
- (2) Banks generally provide services that are operationally and functionally so similar to the proposed services as to equip them particularly well to provide the proposed service.
- (3) Banks generally provide services that are so integrally related to the proposed services as to require their provision in a specialized form.

populated; Big Lake, Texas, with a population of 3,500, is the only town in the banking market.

^{1.} Banking data are as of June 30, 1985.

Regarding the operation of a credit bureau, banks frequently report information to credit bureaus and are the source of much of the credit information held by credit bureaus. In addition, banks must, in the normal course of their lending activities, obtain a great deal of credit information about individuals and companies. Banks also use information prepared by such organizations when they receive a loan request from a customer. Finally, the Board notes that the Comptroller of the Currency has issued an interpretive ruling, 12 C.F.R. 5.34 (48 Federal Register 48454 (Oct. 19, 1983)), which specifies that the operation of a credit bureau is a permissible activity for an operating subsidiary of a national bank. Thus, banks either perform the functions of, or in some instances, perform functions which are operationally or functionally similar to the basic elements of a credit bureau.

Concerning the operation of a collection agency, banks, in the normal course of business, engage in debt collection for loans they originate and for loans that they service for others. Banks are regarded as debt collectors under the Fair Debt Collection Practices Act, 15 U.S.C. 1692, when they collect debts from other unrelated entities.

Based upon the above considerations, the Board concludes that Applicant's proposal to engage in credit bureau and debt collection activities is closely related to banking.

Before approving a bank holding company's application to engage in an activity that the Board determines is closely related to banking, the Board also must find that consummation of the proposal can reasonably be expected to produce benefits to the public that outweigh possible adverse effects. 12 U.S.C. § 1843(c)(8). With respect to Applicant's proposal to engage in credit bureau and debt collection activities, it appears that the balance of public benefits considerations is favorable.

Potential conflicts of interests could arise from bank holding company ownership of a credit bureau and collection agency: for instance, in the provision of credit information by Company to financial institutions that compete with Applicant's subsidiary bank(s), or in the use of Company to collect a claim from a debtor who is also indebted to Applicant's subsidiary bank(s), which also seek collection. In order to reduce the likelihood of conflicts of interests, the Board has sought and Applicant has made the following commitments in connection with this application:

(1) Applicant's subsidiary bank(s) will not provide Company with the names of customers of competing collection agencies in instances where the affiliated bank is a depository for a trust account maintained by competing collection agencies; and (2) Company shall not provide preferential treatment to a customer of any affiliated bank.

These commitments closely track the conditions that the Board has determined to impose upon these activities when they are added to the list of permissible activities in Regulation Y.

In addition, there is no evidence in the record, and specifically no comments in opposition to this application, to indicate that Applicant's engaging in the proposed activity would result in undue concentration of resources, decreased or unfair competition, unsound banking practices, or other adverse effects. Applicant has assured the Board that there will be no tving arrangements involving services offered by Company or services offered by Company and Bank. The Board has, by regulation, applied to bank holding companies section 106 of the Act (12 U.S.C. § 1972). which prohibits the tying of services by banks, "in order to provide specific statutory assurance that the use of the economic power of a bank will not lead to a lessening of competition or other unfair practices."3 Section 225.4(d) of the Board's Regulation Y (12 C.F.R. 225.4(d)), specifically prohibits a "bank holding company and any nonbanking subsidiary" from extending credit or providing any service from fixing or varying the consideration for such services "subject to any condition or requirement that, if imposed by a bank, would constitute an unlawful tie-in arrangement under section 106 of the Bank Holding Company Act "

Finally, Applicant has assured the Board that it will conduct Company's collection bureau functions in accordance with the requirements of the Fair Credit Reporting Act, 15 U.S.C. § 1681, which requires that such activities be conducted in a manner which is fair and equitable to the consumer, with regard to the confidentiality, accuracy, relevancy, and proper utilization of credit information. Similarly, Applicant states it will conduct its debt collection activities consistent with the requirements of the Fair Debt Collection Practices Act, 15 U.S.C. § 1692, which seeks to eliminate abusive debt collection practices and promote protection of consumers against debt collection abuses.

Although there are hundreds of local and regional independently operated credit bureaus, the national credit reporting industry consists of only five firms and thus is highly concentrated. While the national market for credit bureau information may be concentrated, this proposal does not involve the acquisition of one of

^{3.} S. Rep. 91-1084, 91st Cong. 2nd Sess. (1970), reprinted in 1970 U.S. Code Cong. & Ad. News 5519, 5535.

the five top-tier credit bureaus. Rather, Company is small and serves a rural, sparsely populated market. Company furnishes information primarily about local residents to local businesses. Company will furnish some information to national credit bureaus or obtain information from national credit bureaus, but anticipates that the overwhelming majority of its credit information requests will be either local in origin or will be credit checks on local residents from outside of the trade area. Based upon these and other facts of record, the Board concludes that the credit bureau and debt collection activities of Company are closely related to banking and the possible adverse effects of this acquisition are outweighed by greater convenience to the public.

With regard to competitive factors, although Bank provides some services similar to those offered by Company, Applicant's proposed acquisition of Company would eliminate little existing competition. Accordingly, the Board finds that competitive factors are consistent with approval.

With regard to financial factors, the Board notes that neither Applicant nor Company will incur any debt in connection with this proposal. The Board concludes that financial and managerial considerations are also consistent with approval of this proposal.

Based upon the foregoing and all the facts of record, the Board has determined that the balance of public interest factors it is required to consider under section 4(c)(8) is favorable. Accordingly, the application is hereby approved.

This determination is also subject to all of the conditions set forth in the Board's Regulation Y, including those in sections 225.4(d) and 225.23(b), and to the Board's authority to require modification or termination of the activities of a bank holding company or any of its subsidiaries as the Board finds necessary to assure compliance with the provisions and purposes of the Act and the Board's regulations and orders issued thereunder, or to prevent evasion thereof.

The transaction shall be made not later than three months after the effective date of this Order, unless such period is extended for good cause by the Board or by the Federal Reserve Bank of Dallas pursuant to delegated authority.

By order of the Board of Governors, effective July 1, 1986.

Voting for this action: Chairman Volcker and Governors Wallich, Seger, Angell, and Johnson. Absent and not voting: Governor Rice.

JAMES McAfee
Associate Secretary of the Board

Security Pacific Corporation Los Angeles, California

Order Approving Application to Engage in Underwriting and Reinsuring Home Mortgage Redemption Insurance

Security Pacific Corporation, Los Angeles, California, a bank holding company within the meaning of the Bank Holding Company Act (12 U.S.C. §§ 1841 et seq.) ("BHC Act" or "Act"), has applied for the Board's approval under section 4(c)(8) of the BHC Act (12 U.S.C. § 1843(c)(8)) to engage indirectly through its wholly owned subsidiaries. Chartered Protective Life Insurance Company, San Diego, California; General Fidelity Life Insurance Company, San Diego, California: and Central Plains Insurance Company. San Diego, California, in the underwriting and reinsuring of home mortgage redemption insurance, that is, insurance that assures repayment of loans secured by first mortgages on residential real estate made by Applicant or its subsidiaries in the event of the death or disability of the mortgagor.

Notice of the application, affording an opportunity for interested persons to submit comments, has been duly published (51 Federal Register 18,379 (1986)). The time for filing comments has expired, and the Board has considered the application and all comments received in light of the public interest factors set forth in section 4(c)(8) of the Act.

Applicant, with total consolidated assets of \$53.5 billion, is the second largest banking organization in California. It presently operates two banking subsidiaries, Security Pacific National Bank, Los Angeles, California, and Security Pacific State Bank, Irvine, California. Applicant also engages, directly and through subsidiaries, in a variety of nonbanking activities. Applicant's three insurance subsidiaries are admitted in 46 states to underwrite credit life insurance. They had a combined total of approximately \$1.6 billion of credit life insurance in force as of December 31, 1985.

Applicant proposes to engage on a nationwide basis in the underwriting and reinsuring of home mortgage redemption insurance in connection with extensions of credit made or purchased by Applicant and its affiliates, where such extensions of credit are secured by first mortgages on residential real estate. The proposed insurance would assure repayment of an outstanding residential mortgage loan in the event of the death or disability of the mortgagor. The face amount of the proposed insurance would never exceed the

[SEAL]

^{1.} Banking data are as of December 31, 1985.

outstanding balance of the mortgage loan and the insurance would terminate upon repayment of the loan. Applicant would underwrite the proposed insurance primarily as group insurance without strict age-based premiums, and would offer the proposed insurance at the time the loan is made.

The Board has recently determined that the activities of underwriting and reinsuring home mortgage redemption insurance are permissible for bank holding companies under the Garn-St Germain Depository Institutions Act of 1982 ("Garn-St Germain Act"), and that such activities are closely related to banking. *Citicorp*, 72 FEDERAL RESERVE BULLETIN 339 (1986). Applicant's proposal to underwrite and reinsure home mortgage redemption insurance is essentially identical to the proposal previously approved by the Board in *Citicorp*. Thus, the Board concludes that Applicant's proposal to engage in the underwriting and reinsurance of home mortgage redemption insurance is permissible under the Garn-St Germain Act and is closely related to banking.

In order to approve this application, the Board is also required to determine that consummation of the proposal can reasonably be expected to produce benefits to the public that outweigh possible adverse effects (12 U.S.C. § 1843(c)(8)). With respect to Applicant's proposal to underwrite home mortgage redemption insurance, it appears that the balance of public benefits considerations is favorable.

Applicant's de novo entry into the underwriting of home mortgage redemption insurance will result in an additional competitor in the home mortgage redemption insurance underwriting market. Applicant's entry into the business is also likely to result in the availability of a greater variety of product features related to home mortgage redemption insurance. For example, Applicant has proposed to offer customers the ability to pay home mortgage redemption insurance premiums as part of customers' periodic mortgage payments.

Applicant proposes to charge rates for home mortgage redemption insurance policies that are generally lower than rates charged by many companies competing in the underwriting of such insurance. Thus, Applicant's proposal is likely to result in some additional rate competition. The availability of these lower rates and the feature described above in home mortgage redemption insurance policies is likely to result in net public benefits.³

There is no evidence in the record to indicate that Applicant's engaging in the proposed activity would result in undue concentration of resources, decreased or unfair competition, unsound banking practices, or other adverse effects. The Board has, by regulation, applied to bank holding companies section 106 of the BHC Act (12 U.S.C. § 1972), which prohibits the tying of services by banks, "in order to provide specific statutory assurance that the use of the economic power of a bank will not lead to a lessening of competition or other unfair competitive practices."4 Section 225.4(d) of the Board's Regulation Y (12 C.F.R. § 225.4(d)) specifically prohibits a "bank holding company and any nonbanking subsidiary" from extending credit or providing any service or from fixing or varying the consideration for such services "subject to any condition or requirement that, if imposed by a bank, would constitute an unlawful tie-in arrangement under section 106 of the Bank Holding Company Act. . . . "

Where insurance, such as home mortgage redemption insurance, is closely related to the lending transaction, it is important that Applicant provide safeguards to prevent the tying of such insurance to an extension of credit or to any other service offered by Applicant or its subsidiaries. In this regard, Applicant has specifically agreed to provide safeguards identical to those approved by the Board in Citicorp, to assure that it would not tie the provision of home mortgage redemption insurance to any other product or service of Applicant. Applicant has agreed to inform borrowers in writing that home mortgage redemption insurance is not required and that, if desired, it may be purchased from other sources.5 Borrowers will also be notified in writing of the right to rescind the insurance contract at any time after the loan commitment is made and prior to closing. In addition, Applicant has proposed to offer an extended rescission feature, under which a customer may rescind, without any obligation to pay a premium, coverage by a home mortgage redemption insurance policy during the first thirty days that the policy is in effect. Finally, premiums that

^{2.} The Board has recently adopted an amendment to its Regulation Y to add the underwriting and reinsurance of home mortgage redemption insurance to the list of permissible nonbanking activities for bank holding companies. The amended regulation will be effective thirty days after publication in the Federal Register.

^{3.} In Citicorp, the Board found that because states had not generally promulgated prima facie ceilings for home mortgage redemption insurance, and since other types of life insurance would serve as substitutes for home mortgage redemption insurance, such insurance did not appear to present the concerns that had prompted the Board to require bank holding companies to offer credit life insurance at rates below the established state ceilings for such insurance (12 C.F.R. 225.25(b)(9) n. 7).

^{4.} S. Rep. 91-1084, 91 Cong. 2nd Sess. (1970), reprinted in 1970 U.S. Code Cong. & Ad. News 5519, 5535.

^{5.} These requirements are contained, in part, in the Board's Regulation Z (12 C.F.R. 226.4(d)).

Applicant charges for home mortgage redemption insurance will be payable on a monthly basis, thus permitting the borrower to rescind the insurance at the end of any month for which a premium has been paid and eliminating premium financing by Applicant as an incentive to sell the insurance. As it did in *Citicorp*, the Board has made these commitments a condition of its approval of this application.

For the reasons set forth in *Citicorp*, the Board finds that the risks presented to bank holding companies from underwriting home mortgage redemption insurance are manageable. In addition, the Board notes that bank holding companies, such as Applicant, have acquired experience through the underwriting of credit life insurance in operating an actuarially sound insurance program.

With respect to managerial resources, the Board has considered certain violations by Applicant of the Currency and Foreign Transactions Reporting Act ("CFTRA") and the regulations thereunder.6 In this regard, the Board notes that Applicant brought these matters to the attention of the appropriate supervisory authorities after the violations were discovered through an internal audit. Applicant has cooperated fully with law enforcement agencies. In addition, Applicant and its subsidiaries have implemented a comprehensive remedial program to correct these violations and to prevent violations from occurring in the future. Applicant has advised the Board that it has established a compliance unit to ensure the central review of transactions considered exempt from reporting under CFTRA; developed a comprehensive audit program to ensure compliance with CFTRA and with internal bank policy and procedures; and filed corrective currency transaction reports. The Board also has consulted with appropriate enforcement agencies with respect to this matter, and has considered Applicant's past record of compliance with the law.

Based upon a consideration of all of the relevant facts, the Board has determined that the balance of the public interest factors that it is required to consider under section 4(c)(8) is favorable. Accordingly, the application is hereby approved.

This determination is also subject to all of the conditions set forth in Regulation Y, including sections 225.4(d) and 225.23(b)(3) (12 C.F.R. §§ 225.4(d) and 225.23(b)(3)), and to the Board's authority to require such modification or termination of the activities of a bank holding company or any of its subsidiaries as the Board finds necessary to assure compliance with the provisions and purposes of the Act and the Board's

regulations and orders issued thereunder, or to prevent evasion thereof.

The transaction shall be made not later than three months after the effective date of this Order, unless such period is extended for good cause by the Board or by the Federal Reserve Bank of San Francisco pursuant to delegated authority.

By order of the Board of Governors, effective July 24, 1986.

Voting for this action: Governors Rice, Seger, and Johnson. Abstaining for this action: Governor Wallich. Absent and not voting: Chairman Volcker and Governor Angell.

[SEAL]

WILLIAM W. WILES Secretary of the Board

Orders Issued Under Sections 3 and 4 of the Bank Holding Company Act

WM Bancorp Cumberland, Maryland

Order Approving Consolidation of Bank Holding Companies and Acquisition of a Company Engaged in Finance and Insurance Activities

WM Bancorp, Cumberland, Maryland, has applied for the Board's approval under section 3(a)(5) of the Bank Holding Company Act (12 U.S.C. § 1842(a)(5)) ("Act") for the consolidation of LTC Bancorp, Cumberland, Maryland ("LTC"), and GNB Bankshares, Inc., Oakland, Maryland ("GNB"), both registered bank holding companies under the Act. Applicant would be the successor corporation and would thereby become a bank holding company.

Applicant has also applied for the Board's approval under section 4(c)(8) of the Act (12 U.S.C. § 1843(c)(8)) to acquire Community Finance, Inc., Cumberland, Maryland ("Community"), an existing subsidiary of LTC, that engages in consumer and commercial finance activities and acts as agent for the sale of life, accident, and health insurance directly related to extensions of credit made by LTC subsidiaries. The Board has determined that these activities are closely related to banking and permissible for bank holding companies (12 C.F.R. §§ 225.25(b)(1) and (8)(i)).

Notice of the applications, affording an opportunity for interested persons to submit comments, has been given in accordance with section 3(b) of the Act (51 Federal Register 20,349 (1986)). The time for filing comments has expired, and the Board has considered the applications and all comments received in light of

^{6. 31} U.S.C. § 311 et seq.; 31 C.F.R. § 103.

the factors set forth in section 3(c) of the Act (12 U.S.C. § 1842(c)) and the considerations specified in section 4(c)(8) of the Act.

LTC, the twenty-second largest commercial banking organization in the state, controls Liberty Bank of Maryland ("Liberty"), with total deposits of \$113.4 million representing 0.5 percent of the total deposits in commercial banks in the state. GNB, the twenty-sixth largest commercial banking organization in Maryland, controls one bank, Garrett National Bank ("Garrett"), with total deposits of \$93.4 million, representing 0.4 percent of the total deposits in commercial banks in the state. Upon consolidation, Applicant would become the fifteenth largest banking organization in the state, with total deposits of \$206.8 million, representing 0.8 percent of total deposits in the state.

Liberty and Garrett compete directly in the Cumberland banking market.² Liberty is the third largest commercial banking organization in the market and controls 15.4 percent of the total deposits in commercial banks in the market.3 Garrett is the fourth largest commercial banking organization in the market and controls 12.5 percent of total deposits in commercial banks in the market. Upon consummation of the proposal, Applicant's share of the deposits in the market would be 27.9 percent. The Cumberland market is considered to be highly concentrated, with the four largest banks controlling 79.1 percent of the deposits in commercial banks in the market. The Herfindahl-Hirschman Index ("HHI") for the market is 1829 and would increase by 384 points to 2213 upon consummation of the proposal.4

Although consummation of the proposal would eliminate some existing competition between Garrett and Liberty in the Cumberland banking market, numerous other commercial banking organizations would remain. In addition, the Board has considered the presence and competition afforded by thrift institutions in

The financial and managerial resources of Applicant, LTC, GNB, and their respective subsidiaries are consistent with approval. Considerations relating to the convenience and needs of the community to be served are also consistent with approval.

Applicant has also applied, pursuant to section 4(c)(8) of the Act, to acquire Community, the nonbanking subsidiary of LTC, and thereby engage in the provision of direct cash consumer loans and sales finance activities and act as an agent for the sale of life, accident, and health insurance directly related to the extension of credit by Applicant. Community was established in 1985 as a subsidiary of LTC, and may be viewed as a de minimis participant in the market for direct cash loans. In addition, because Community only sells insurance related to extensions of credit in connection with its loan activities, consummation of this proposal would not result in the elimination of any competition. Accordingly, Applicant's proposal would not have any significant adverse effect on competition in the Cumberland banking market. Furthermore, there is no evidence in the record to indicate that approval of this proposal would result in undue concentration of resources, decreased or unfair competition, conflicts of interest, unsound banking practices, or other adverse effects on the public interest. Accordingly, the Board has determined that the balance of the public interest factors it must consider under section 4(c)(8) of the Act is consistent with approval of the application.

Based on the foregoing and other facts of record, the Board has determined that the applications under

its analysis of this proposal.5 Two thrift institutions compete with commercial banks in the Cumberland banking market and control approximately 29 percent of the total deposits in the market. These thrift institutions exert a considerable competitive influence in the market as providers of NOW accounts and consumer loans. Based upon the above considerations, the Board concludes that consummation of the proposal is not likely to substantially lessen competition in the Cumberland banking market.6

^{1.} All deposit data are as of December 31, 1985, unless otherwise

^{2.} The Cumberland banking market is approximated by the Cumberland, Maryland Ranally Metropolitan Area ("RMA"); the remainder of Allegany County, Maryland; Garrett County, Maryland; and Mineral County, West Virginia.

^{3.} Market data are as of June 30, 1985.

^{4.} Under the revised Department of Justice Merger Guidelines (49 Federal Register 26,823 (June 29, 1984)), a market in which the postmerger HHI is above 1800 is considered highly concentrated. In such markets, the Department is likely to challenge a merger that increases the HHI by more than 50 points. The Department has informed the Board that a bank merger or acquisition generally will not be challenged (in the absence of other factors indicating anticompetitive effects) unless the post-merger HHI is at least 1800 and the merger increases the HHI by at least 200 points.

^{5.} The Board has previously indicated that thrift institutions have become, or have the potential to become, major competitors of commercial banks. National City Corporation, 70 FEDERAL RESERVE BULLETIN 743 (1984); NCNB Bancorporation, 70 FEDERAL RESERVE BULLETIN 225 (1984); General Bancshares Corporation, 69 FEDERAL RESERVE BULLETIN 802 (1983); First Tennessee National Corporation, 69 Federal Reserve Bulletin 298 (1983).

^{6.} If 50 percent of deposits held by thrift institutions in the Cumberland banking market were included in the calculation of market concentration, the share of total deposits held by the four largest organizations in the market would be 71.2 percent. Liberty would control 12.8 percent of the market's deposits and Garrett would control 10.4 percent of the market's deposits. The HHI would increase by 265 points to 1778.

sections 3 and 4 of the Act should be and hereby are approved. The consolidation shall not be consummated before the thirtieth calendar day following the effective date of this Order, and neither the consolidation nor the acquisition of the nonbanking subsidiary shall be made later than three months after the effective date of this Order, unless such period is extended for good cause by the Board or the Federal Reserve Bank of Richmond, pursuant to delegated authority. The determination as to Applicant's acquisition of the nonbank subsidiary is subject to the conditions set forth in Regulation Y, including sections 225.4(d) and 225.23(b) (12 C.F.R. §§ 225.4(d) and 225.23(b)), and to the Board's authority to require such modification or termination of the activities of a holding company or any of its subsidiaries as the Board finds necessary to assure compliance with the provisions and purposes of the Act and the Board's regulations and orders issued thereunder, or to prevent evasion thereof.

By order of the Board of Governors, effective July 31, 1986.

Voting for this action: Governors Wallich, Rice, Seger, Angell, and Johnson. Absent and not voting: Chairman Volcker. Governor Wallich abstained from the insurance portion of this action.

JAMES MCAFEE [SEAL] Associate Secretary of the Board

1. Unless otherwise noted, rates of change are calculated from average amounts outstanding in preceding month or quarter.

2. Figures incorporate adjustments for discontinuities associated with the implementation of the Monetary Control Act and other regulatory changes to reserve requirements. To adjust for discontinuities due to changes in reserve requirements on reservable nondeposit liabilities, the sum of such required reserves is subtracted from the actual series. Similarly, in adjusting for discontinuities in the monetary base, required clearing balances and adjustments to compensate for float also are subtracted from the actual series.

3. The monetary base not adjusted for discontinuities consists of total reserves plus required clearing balances and adjustments to compensate for float at Federal Reserve Banks plus the currency component of the money stock plus, for institutions that is included in the currency component of the money stock plus, for institutions not having required reserve balances, the excess of current vault cash over the amount applied to satisfy current reserve requirements. After the introduction of contemporaneous reserve requirements (CRR), currency and vault cash figures are measured over the weekly computation period ending Monday.

Before CRR, all components of the monetary base other than excess reserves are added on a not seasonally adjusted basis. After CRR, the seasonally adjusted series consists of seasonally adjusted basis, after CRR, the seasonally adjusted series consists of seasonally adjusted basis, plus the seasonally adjusted excess reserves on a not seasonally adjusted basis, plus the seasonally adjusted currency component of the money stock plus the remaining items seasonally adjusted as a whole.

4. Composition of the money stock measures and debt is as follows:

M1: (1) currency outside the Treasury. Federal Reserve Banks, and the vaults

4. Composition of the money stock measures and debt is as follows:

M1: (1) currency outside the Treasury, Federal Reserve Banks, and the vaults
of commercial banks; (2) travelers checks of nonbank issuers; (3) demand deposits at all commercial banks other than those due to domestic banks, the U.S. government, and foreign banks and official institutions less cash items in the process of collection and Federal Reserve float; and (4) other checkable deposits (OCD) consisting of negotiable order of withdrawal (NOW) and automatic transfer

(OCD) consisting of negotiable order of withdrawal (NOW) and automatic transfer service (ATS) accounts at depository institutions, credit union share draft accounts, and demand deposits at thrift institutions. The currency and demand deposit components exclude the estimated amount of vault cash and demand deposits respectively held by thrift institutions to service their OCD liabilities.

M2: M1 plus overnight (and continuing contract) repurchase agreements (RPs) issued by all commercial banks and overnight Eurodollars issued to U.S. residents by foreign branches of U.S. banks worldwide, Money Market Deposit Accounts (MMDAs), savings and small-denomination time deposits (time deposits—including retail RPs—in amounts of less than \$100,000), and balances in both taxable and tax-exempt general purpose and broker/dealer money market mutual funds. tax-exempt general purpose and broker/dealer money market mutual funds. Excludes individual retirement accounts (IRA) and Keogh balances at depository institutions and money market funds. Also excludes all balances held by U.S.

commercial banks, money market funds (general purpose and broker/dealer), foreign governments and commercial banks, and the U.S. government. Also subtracted is a consolidation adjustment that represents the estimated amount of demand deposits and vault cash held by thrift institutions to service their time and

demand deposits and vault cash held by thrift institutions to service their time and savings deposits.

M3: M2 plus large-denomination time deposits and term RP liabilities (in amounts of \$100,000 or more) issued by commercial banks and thrift institutions, term Eurodollars held by U.S. residents at foreign branches of U.S. banks worldwide and at all banking offices in the United Kingdom and Canada, and balances in both taxable and tax-exempt, institution-only money market mutual funds. Excludes amounts held by depository institutions, the U.S. government, money market funds, and foreign banks and official institutions. Also subtracted is a consolidation adjustment that represents the estimated amount of overnight RPs and Eurodollars held by institution-only money market mutual funds.

L: M3 plus the nonbank public holdings of U.S. savings bonds, short-term Treasury securities, commercial paper and bankers acceptances, net of money market mutual fund holdings of these assets.

Debt: Debt of domestic nonfinancial sectors consists of outstanding credit

market mutual fund holdings of these assets.

Debt: Debt of domestic nonfinancial sectors consists of outstanding credit market debt of the U.S. government, state and local governments, and private nonfinancial sectors. Private debt consists of corporate bonds, mortgages, consumer credit (including bank loans), other bank loans, commercial paper, bankers acceptances, and other debt instruments. The source of data on domestic nonfinancial debt is the Federal Reserve Board's flow of funds accounts. Debt data are based on monthly averages. Growth rates for debt reflect adjustments for discontinuities over time in the levels of debt presented in other tables.

5. Sum of overnight RPs and Eurodollars, money market fund balances (general purpose and broker/dealer), MMDAs, and savings and small time deposits less the estimated amount of demand deposits and vault cash held by thrift institutions to service their time and savings deposit liabilities.

6. Sum of large time deposits, term RPs, and Eurodollars of U.S. residents, money market fund balances (institution-only), less a consolidation adjustment that represents the estimated amount of overnight RPs and Eurodollars held by institution-only money market mutual funds.

institution-only money market mutual funds.
7. Excludes MMDAs.

- 7. Excludes MMDAs.

 8. Small-denomination time deposits—including retail RPs—are those issued in amounts of less than \$100,000. All IRA and Keogh accounts at commercial banks and thrifts are subtracted from small time deposits.

 9. Large-denomination time deposits are those issued in amounts of \$100,000 or more, excluding those booked at international banking facilities.

 10. Large-denomination time deposits at commercial banks less those held by money market mutual funds, depository institutions, and foreign banks and official institutions.

- 11. Changes calculated from figures shown in table 1.23.

float.

2. Dates refer to the maintenance periods in which the vault cash can be used to satisfy reserve requirements. Under contemporaneous reserve requirements, maintenance periods end 30 days after the lagged computation periods in which the balances are held.

3. Equal to all vault cash held during the lagged computation period by institutions having required reserve balances at Federal Reserve Banks plus the amount of vault cash equal to required reserves during the maintenance period at institutions basing no required reserves balances.

amount of vault cash equal to required reserves during the maintenance period at institutions having no required reserve balances.

4. Total vault cash at institutions having no required reserve balances less the amount of vault cash equal to their required reserves during the maintenance period.

5. Total reserves not adjusted for discontinuities consist of reserve balances with Federal Reserve Banks, which exclude required clearing balances and adjustments to compensate for float, plus vault cash used to satisfy reserve requirements. Such vault cash consists of all vault cash held during the lagged

^{6.} Reserve balances with Federal Reserve Banks plus vault cash used to satisfy reserve requirements less required reserves.
7. Extended credit consists of borrowing at the discount window under the terms and conditions established for the extended credit program to help depository institutions deal with sustained liquidity pressures. Because there is not the same need to repay such borrowing promptly as there is with traditional short-term adjustment credit, the money market impact of extended credit is similar to that of nonborrowed reserves.
8. Before February 1984, data are prorated monthly averages of weekly averages; beginning February 1984, data are prorated monthly averages of biweekly averages.
NOTE. These data also appear in the Board's H.3 (502) release. For address, see inside front cover.

^{1.} After May 19, 1986, the highest rate within the structure of discount rates may be charged on adjustment credit loans of unusual size that result from a major

rate under this structure is applied may be shortened. See section 201.3(b)(2) of Regulation A.

3. Rates for short-term adjustment credit. For description and earlier data see the following publications of the Board of Governors: Banking and Monetary Statistics, 1914–1941, and 1941–1970, Annual Statistical Digest, 1970–1979, 1980, 1981, and 1982.

1981, and 1982.

In 1980 and 1981, the Federal Reserve applied a surcharge to short-term adjustment credit borrowings by institutions with deposits of \$500 million or more that had borrowed in successive weeks or in more than 4 weeks in a calendar quarter. A 3 percent surcharge was in effect from Mar. 17, 1980, through May, 1980. There was no surcharge until Nov. 17, 1980, when a 2 percent surcharge was adopted; the surcharge was subsequently raised to 3 percent on Dec. 5, 1980, and to 4 percent on May 5, 1981. The surcharge was reduced to 3 percent effective Sept. 22, 1981, and to 2 percent effective Oct. 12. As of Oct. 1, the formula for applying the surcharge was changed from a calendar quarter to a moving 13-week period. The surcharge was eliminated on Nov. 17, 1981.

may be charged on adjustment credit loans of unusual size that result from a major operating problem at the borrower's facility.

A temporary simplified seasonal program was established on Mar. 8, 1985, and the interest rate was a fixed rate ½ percent above the rate on adjustment credit. The program was re-established on Feb. 18, 1986; the rate may be either the same as that for adjustment credit or a fixed rate ½ percent higher.

2. Applicable to advances when exceptional circumstances or practices involve only a particular depository institution and to advances when an institution is under sustained liquidity pressures. As an alternative for loans outstanding for

only a particular depository institution and to advances when an institution is under sustained liquidity pressures. As an alternative, for loans outstanding for more than 150 days, a Federal Reserve Bank may charge a flexible rate that takes into account rates on market sources of funds, but in no case will the rate charged be less than the basic rate plus one percentage point. Where credit provided to a particular depository institution is anticipated to be outstanding for an unusually prolonged period and in relatively large amounts, the time period in which each

1. For changes in reserve requirements beginning 1963, see Board's Annual Statistical Digest, 1971–1975, and for prior changes, see Board's Annual Report for 1976, table 13. Under provisions of the Monetary Control Act, depository institutions include commercial banks, mutual savings banks, savings and loan associations, credit unions, agencies and branches of foreign banks, and Edge Act corporations.

corporations.

2. Requirement schedules are graduated, and each deposit interval applies to that part of the deposits of each bank. Demand deposits subject to reserve requirements were gross demand deposits minus cash items in process of collection and demand balances due from domestic banks.

The Federal Reserve Act as amended through 1978 specified different ranges of requirements for reserve city banks and for other banks. Reserve cities were designated under a criterion adopted effective Nov. 9, 1972, by which a bank having net demand deposits of more than \$400 million was considered to have the character of business of a reserve city bank. The presence of the head office of such a bank constituted designation of that place as a reserve city. Cities in which there were Federal Reserve Banks or branches were also reserve cities. Any banks having net demand deposits of \$400 million or less were considered to have the character of business of banks outside of reserve cities and were permitted to maintain reserves at ratios set for banks not in reserve cities.

maintain reserves at ratios set for banks not in reserve cities.

Effective Aug. 24, 1978, the Regulation M reserve requirements on net balances due from domestic banks to their foreign branches and on deposits that foreign branches lend to U.S. residents were reduced to zero from 4 percent and 1 percent respectively. The Regulation D reserve requirement of borrowings from unrelated banks abroad was also reduced to zero from 4 percent.

Effective with the reserve computation period beginning Nov. 16, 1978, domestic deposits of Edge corporations were subject to the same reserve requirements as deposits of member banks.

3. Negotiable order of withdrawal (NOW) accounts and time deposits such as

Christmas and vacation club accounts were subject to the same requirements as savings deposits.

The average reserve requirement on savings and other time deposits before implementation of the Monetary Control Act had to be at least 3 percent, the

The average reserve requirement on savings and other time deposits before implementation of the Monetary Control Act had to be at least 3 percent, the minimum specified by law.

4. Effective Nov. 2, 1978, a supplementary reserve requirement of 2 percent was imposed on large time deposits of \$100,000 or more, obligations of affiliates, and incligible acceptances. This supplementary requirement was eliminated with the maintenance period beginning July 24, 1980.

Effective with the reserve maintenance period beginning Oct. 25, 1979, a marginal reserve requirement of 8 percent was added to managed liabilities in excess of a base amount. This marginal requirement was increased to 10 percent beginning Apr. 3, 1980, was decreased to 5 percent beginning June 12, 1980, and was eliminated beginning July 24, 1980. Managed liabilities are defined as large time deposits, Eurodollar borrowings, repurchase agreements against U.S. government and federal agency securities, federal funds borrowings from nonmember institutions, and certain other obligations. In general, the base for the marginal reserve requirement was originally the greater of (a) \$100 million or (b) the average amount of the managed liabilities held by a member bank, Edge corporation, or family of U.S. branches and agencies of a foreign bank for the two reserve computation periods ending Sept. 26, 1979. For the computation period beginning Mar. 20, 1980, the base was lowered by (a) 7 percent or (b) the decrease in an institution's U.S. office gross loans to foreigners and gross balances durom foreign offices of other institutions between the base period (Sept. 13–26, 1979) and the week ending Mar. 12, 1980, whichever was greater. For the computation period beginning May 29, 1980, the base was increased by 7½ percent above the base used to calculate the marginal reserve in the statement week of May 14–21, 1980. In addition, beginning Mar. 19, 1980, the base was reduced to the extent that foreign loans and balances declined.

5. The Garn-St Germain Depository Institutions Act of 1982 (Public Law 97-320) provides that \$2 million of reservable liabilities (transaction accounts, nonpersonal time deposits, and Eurocurrency liabilities) of each depository institution be subject to a zero percent reserve requirement. The Board is to adjust the amount of reservable liabilities subject to this zero percent reserve requirement each year for the next succeeding calendar year by 80 percent of the percentage increase in the total reservable liabilities of all depository institutions, measured on an annual basis as of June 30. No corresponding adjustment is to be made in the event of a decrease. Effective Dec. 9, 1982, the amount of the exemption was established at \$2.1 million. Effective with the reserve maintenance period beginning Jan. 1, 1985, the amount of the exemption is \$2.4 million. Effective with the reserve computation period beginning Dec. 31, 1985, the amount of the exemption is \$2.6 million. In determining the reserve requirements of a depository institution, the exemption shall apply in the following order: (1) nonpersonal money market deposit accounts (MMDAs) authorized under 12 CFR sections); (3) net other transaction accounts; and (4) nonpersonal time deposits or Eurocurrency liabilities starting with those with the highest reserve ratio. With Eurocurrency liabilities starting with those with the highest reserve ratio. With respect to NOW accounts and other transaction accounts, the exemption applies

respect to NÓW accounts and other transaction accounts, the exemption applies only to such accounts that would be subject to a 3 percent reserve requirement.

6. For nonmember banks and thrift institutions that were not members of the Federal Reserve System on or after July 1, 1979, a phase-in period ends Sept. 3, 1987. For banks that were members on or after July 1, 1979, but withdrew on or before Mar. 31, 1980, the phase-in period established by Public Law 97–320 ends on Oct. 24, 1985. For existing member banks the phase-in period of about three years was completed on Feb. 2, 1984. All new institutions will have a two-year phase-in beginning with the date that they open for business, except for those institutions that have total reservable liabilities of \$50 million or more.

7. Transaction accounts include all deposits on which the account holder is permitted to make withdrawals by negotiable or transferable instruments, payment orders of withdrawal, and telephone and preauthorized transfers (in excess of three per month) for the purpose of making payments to third persons or others. However, MMDAs and similar accounts offered by institutions not subject to the rules that permit no more than six preauthorized, automatic, or other transfers per rules that permit no more than six preauthorized, automatic, or other transfers per

However, MMDAs and similar accounts offered by institutions not subject to the rules that permit no more than six preathforized, automatic, or other transfers per month of which no more than three can be checks—are not transaction accounts (such accounts are savings deposits subject to time deposit reserve requirements.)

8. The Monetary Control Act of 1980 requires that the amount of transaction accounts against which the 3 percent reserve requirement applies be modified annually by 80 percent of the percentage increase in transaction accounts held by all depository institutions determined as of June 30 each year. Effective Dec. 31, 191, the amount was increased accordingly from \$25 million to \$26 million; effective Dec. 30, 1982, to \$26.3 million; effective Dec. 31, 1985, to \$29.8 million; effective Dec. 31, 1985, to \$31.7 million.

9. In general, nonpersonal time deposits are time deposits, including savings deposits, that are not transaction accounts and in which a beneficial interest is held by a depositor that is not a natural person. Also included are certain transferable time deposits held by natural persons, and certain obligations issued to depository institution offices located outside the United States. For details, see section 204.2 of Regulation D.

Note. Required reserves must be held in the form of deposits with Federal Reserve Banks or vault cash. Nonmembers may maintain reserve balances with a Federal Reserve Bank indirectly on a pass-through basis with certain approved institutions.

Domestic Financial Statistics ☐ September 1986

1.16 MAXIMUM INTEREST RATES PAYABLE on Time and Savings Deposits at Federally Insured Institutions¹ Percent per annum

	Comm	nercial banks	Savings and loan associations and mutual savings banks (thrift institutions			
Type of deposit	In effect	July 31, 1986	In effect July 31, 1986			
	Percent	Effective date	Percent	Effective date		
Savings Negotiable order of withdrawal accounts Money market deposit account	(2) (3) (4)	4/1/86 1/1/86 12/14/82	(2) (3) (4)	4/1/86 1/1/86 12/14/82		
Time accounts 4 7-31 days	(5)	1/1/86 10/1/83	(5)	9/1/86 10/1/83		

^{1.} Effective Oct. 1, 1983, restrictions on the maximum rates of interest payable by commercial banks and thrift institutions on various categories of deposits were by commercial banks and thrift institutions on various categories of deposits were removed. For information regarding previous interest rate ceilings on all categories of accounts see earlier issues of the Federal Reserve BULLETIN, the Federal Home Loan Bank Board Journal, and the Annual Report of the Federal Deposit Insurance Corporation.

2. Effective Apr. 1, 1986, the interest rate ceiling on savings deposits was removed. Before Apr. 1, 1986, savings deposits were subject to an interest rate ceiling of 5½ percent.

3. Before Jan. 1, 1986, NOW accounts with minimum denomination requirements of less than \$1,000 were subject to an interest rate ceiling of 5½ percent. NOW accounts with minimum required denominations of \$1,000 or more and IRA/Keough (HR10) Plan accounts were not subject to interest rate ceilings. Effective Jan. 1, 1986, the minimum denomination requirement was removed.

4. Effective Dec. 14, 1982, depository institutions are authorized to offer a new account with a required initial balance of \$2,500 and an average maintenance balance of \$2,500 not subject to interest rate restrictions. Effective Jan. 1, 1985, the minimum denomination and average balance maintenance requirements was lowered to \$1,000. Effective Jan. 1, 1986, the minimum denomination and average balance maintenance requirements were removed. No minimum maturity period is required for this account, but depository institutions must reserve the right to require seven days, notice before withdrawals.

5. Before Jan. 1, 1986, deposits of less than \$1,000 were subject to an interest rate ceiling of 5½ percent. Deposits of less than \$1,000 issued to governmental units were subject to an interest rate ceiling of 8 percent. Effective Jan. 1, 1986, the minimum denomination requirement was removed.

^{1.} Figures incorporate adjustments for discontinuities associated with the implementation of the Monetary Control Act and other regulatory changes to reserve requirements. To adjust for discontinuities due to changes in reserve requirements on reservable nondeposit liabilities, the sum of such required reserves is subtracted from the actual series. Similarly, in adjusting for discontinuities in the monetary base, required clearing balances and adjustments to compensate for float also are subtracted from the actual series.

2. Total reserves not adjusted for discontinuities consist of reserve balances with Federal Reserve Banks, which exclude required clearing balances and adjustments to compensate for float, plus vault cash used to satisfy reserve requirements. Such vault cash consists of all vault cash held during the lagged computation period by institutions having required reserve balances at Federal Reserve Banks plus the amount of vault cash equal to required reserves during the maintenance period at institutions having no required reserves during the maintenance period at institutions having no required reserves balances. 1. Figures incorporate adjustments for discontinuities associated with the

Reserve Banks plus the amount of vault cash equal to required reserves during the maintenance period at institutions having no required reserve balances.

3. Extended credit consists of borrowing at the discount window under the terms and conditions established for the extended credit program to help depository institutions deal with sustained liquidity pressures. Because there is not the same need to repay such borrowing promptly as there is with traditional short-term adjustment credit, the money market impact of extended credit is similar to that of nonborrowed reserves.

4. The monetary base not adjusted for discontinuities consists of total reserves plus required clearing balances and adjustments to compensate for float at Federal Reserve Banks and the currency component of the money stock less the amount

of vault cash holdings of thrift institutions that is included in the currency

of vault cash holdings of thrift institutions that is included in the currency component of the money stock plus, for institutions not having required reserve balances, the excess of current vault cash over the amount applied to satisfy current reserve requirements. After the introduction of contemporaneous reserve requirements (CRR), currency and vault cash figures are measured over the weekly computation period ending Monday.

Before CRR, all components of the monetary base other than excess reserves are seasonally adjusted as a whole, rather than by component, and excess reserves are added on a not seasonally adjusted basis. After CRR, the seasonally adjusted series consists of seasonally adjusted total reserves, which include excess reserves on a not seasonally adjusted total reserves, which include excess reserves on a not seasonally adjusted total reserves, which include excess reserves on a not seasonally adjusted total reserves on and the money stock and the remaining items seasonally adjusted as a whole.

5. Reflects actual reserve requirements, including those on nondeposit liabil-

5. Reflects actual reserve requirements, including those on nondeposit liabilities, with no adjustments to eliminate the effects of discontinuities associated with implementation of the Monetary Control Act or other regulatory changes to reserve requirements

reserve requirements.

NOTE. Latest monthly and biweekly figures are available from the Board's H.3(502) statistical release. Historical data and estimates of the impact on required reserves of changes in reserve requirements are available from the Banking Section, Division of Research and Statistics, Board of Governors of the Federal Reserve System, Washington, D.C. 20551.

NOTES TO TABLE 1.21

1. Composition of the money stock measures and debt is as follows: M1: (1) currency outside the Treasury, Federal Reserve Banks, and the vaults of commercial banks; (2) travelers checks of nonbank issuers; (3) demand deposits at all commercial banks other than those due to domestic banks, the U.S. government, and foreign banks and official institutions less cash items in the process of collection and Federal Reserve float; and (4) other checkable deposits (OCD) consisting of negotiable order of withdrawal (NOW) and automatic transfer

(OCD) consisting of negotiable order of withdrawal (NOW) and automatic transfer service (ATS) accounts at depository institutions, credit union share draft accounts, and demand deposits at thrift institutions. The currency and demand deposit components exclude the estimated amount of vault cash and demand deposits respectively held by thrift institutions to service their OCD liabilities. M2: M1 plus overnight (and continuing contract) repurchase agreements (RPs) issued by all commercial banks and overnight Eurodollars issued to U.S. residents by foreign branches of U.S. banks worldwide, MMDAs, savings and small-denomination time deposits (time deposits—including retail RPs—in amounts of less than \$100,000), and balances in both taxable and tax-exempt general purpose and broker/dealer money market mutual funds. Excludes individual retirement accounts (IRA) and Keoph balances at depository institutions and money market

and broker/dealer money market mutual funds. Excludes individual retirement accounts (IRA) and Keogh balances at depository institutions and money market funds. Also excludes all balances held by U.S. commercial banks, money market funds (general purpose and broker/dealer), foreign governments and commercial banks, and the U.S. government. Also subtracted is a consolidation adjustment that represents the estimated amount of demand deposits and vault cash held by thrift institutions to service their time and savings deposits.

M3: M2 plus large-denomination time deposits and term RP liabilities (in amounts of \$100,000 or more) issued by commercial banks and thrift institutions, term Eurodollars held by U.S. residents at foreign branches of U.S. banks worldwide and at all banking offices in the United Kingdom and Canada, and balances in both taxable and tax-exempt, institution-only money market mutual funds. Excludes amounts held by depository institutions, the U.S. government, money market funds, and foreign banks and official institutions. Also subtracted it R5 acconsolidation adjustment that represents the estimated amount of overnight R9

money market funds, and foreign banks and official institutions. Also subtracted is a consolidation adjustment that represents the estimated amount of overnight RPs and Eurodollars held by institution-only money market mutual funds.

L: M3 plus the nonbank public holdings of U.S. savings bonds, short-term Treasury securities, commercial paper and bankers acceptances, net of money market mutual fund holdings of these assets.

Debt: Debt of domestic nonfinancial sectors consists of outstanding credit market debt of the U.S. government, state and local governments, and private nonfinancial sectors. Private debt consists of corporate bonds, mortgages, consumer credit (including bank loans), other bank loans, commercial paper, bankers acceptances, and other debt instruments. The source of data on domestic nonfinancial debt is the Federal Reserve Board's flow of funds accounts. Debt data are based on monthly averages.

- 2. Currency outside the U.S. Treasury, Federal Reserve Banks, and vaults of
- commercial banks. Excludes the estimated amount of vault cash held by thrift institutions to service their OCD liabilities.

 3. Outstanding amount of U.S. dollar-denominated travelers checks of non-bank issuers. Travelers checks issued by depository institutions are included in
- 4. Demand deposits at commercial banks and foreign-related institutions other
- 4. Demand deposits at commercial banks and foreign-related institutions other than those due to domestic banks, the U.S. government, and foreign banks and official institutions less cash items in the process of collection and Federal Reserve float. Excludes the estimated amount of demand deposits held at commercial banks by thrift institutions to service their OCD liabilities.
 5. Consists of NOW and ATS balances at all depository institutions, credit union share draft balances, and demand deposits at thrift institutions. Other checkable deposits seasonally adjusted equals the difference between the seasonally adjusted sum of demand deposits plus OCD and seasonally adjusted demand deposits. Included are all ceiling free "Super NOWs," authorized by the Depository Institutions Deregulation committee to be offered beginning Jan. 5, 1983.
- 6. Sum of overnight RPs and overnight Eurodollars, money market fund balances (general purpose and broker/dealer), MMDAs, and savings and small time deposits, less the consolidation adjustment that represents the estimated amount of demand deposits and vault cash held by thrift institutions to service
- their time and savings deposits liabilities.

 7. Sum of large time deposits, term RPs and term Eurodollars of U.S. residents, money market fund balances (institution-only), less a consolidation adjustment that represents the estimated amount of overnight RPs and Eurodol-
- adjustment that represents the estimated amount of overnight RPs and Eurodollars held by institution-only money market funds.

 8. Savings deposits exclude MMDAs.

 9. Small-denomination time deposits—including retail RPs— are those issued in amounts of less than \$100,000. All individual retirement accounts (IRA) and Keogh accounts at commercial banks and thrifts are subtracted from small time

- Keogh accounts at commercial banks and thrifts are subtracted from small time deposits.

 10. Large-denomination time deposits are those issued in amounts of \$100,000 or more, excluding those booked at international hanking facilities.

 11. Large-denomination time deposits at commercial banks less those held by money market mutual funds, depository institutions, and foreign banks and official institutions.

 Note: Latest monthly and weekly figures are available from the Board's H.6 (508) release. Historical data are available from the Banking Section, Division of Research and Statistics, Board of Governors of the Federal Reserve System, Washington D.C. 2051. Washington, D.C. 20551.

^{1.} Data are prorated averages of Wednesday estimates for domestically chartered insured banks, based on weekly sample reports and quarterly universe reports. For foreign-related institutions, data are averages of month-end estimates based on weekly reports from large U.S. agencies and branches and quarterly reports from all U.S. agencies and branches, New York investment companies majority owned by foreign banks, and Edge Act corporations owned by domestically chartered and foreign banks.

Excludes loans to commercial banks in the United States.
 Includes nonfinancial commercial paper held.
 United States includes the 50 states and the District of Columbia.
 NOTE. These data also appear in the Board's G.7 (407) release. For address, see inside front cover.

MAJOR NONDEPOSIT FUNDS OF COMMERCIAL BANKS

^{1.} Commercial banks are those in the 50 states and the District of Columbia 1. Commercial banks are those in the 30 states and the District of Common with national or state charters plus agencies and branches of foreign banks, New York investment companies majority owned by foreign banks, and Edge Act corporations owned by domestically chartered and foreign banks.

Data for lines 1-4 and 12-17 have been revised in light of benchmarking and revised seasonal adjustment.

2. Includes seasonally adjusted federal funds. RPs, and other borrowings from subbunks and not secondly adjusted net Envedulars. Includes average of

banks, term federal funds, overdrawn due from bank balances, loan RPs, and

banks, term federal funds, overdrawn due from bank balances, loan RPs, and participations in pooled loans.

4. Averages of daily figures for member and nonmember banks.

5. Averages of daily data.

6. Based on daily average data reported by 122 large banks.

7. Includes U.S. Treasury demand deposits and Treasury tax-and-loan notes at commercial banks. Averages of daily data.

8. Averages of Wednesday figures.

Note. The seasonally adjusted series for total nondeposit funds (line 1) and federal funds, RPs, and other borrowings from nonbanks (line 3) have been revised back to November 1980. The revised data are available on request from the Banking Section, Division of Research and Statistics, Board of Governors of the Federal Reserve System, Washington, D.C. 20551.

nonbanks and not seasonally adjusted neet Eurodollars. Includes averages of Wednesday data for domestically chartered banks and averages of current and previous month-end data for foreign-related institutions.

3. Other borrowings are borrowings on any instrument, such as a promissory note or due bill, given for the purpose of borrowing money for the banking business. This includes borrowings from Federal Reserve Banks and from foreign

^{1.} Commercial banking institutions include insured domestically chartered commercial banks, branches and agencies of foreign banks, Edge Act and Agreement corporations, and New York State foreign investment corporations.

2. Insured domestically chartered commercial banks include all member banks and insured nonmember banks.

Note. Figures are partly estimated. They include all bank-premises subsidiaries and other significant majority-owned domestic subsidiaries. Loan and securities data for domestically chartered commercial banks are estimates for the last Wednesday of the month based on a sample of weekly reporting banks and quarter-end condition report data. Data for other banking institutions are estimates made for the last Wednesday of the month based on a weekly reporting sample of foreign-related institutions and quarter-end condition reports.

ALL LARGE WEEKLY REPORTING COMMERCIAL BANKS with Domestic Assets of \$1.4 Billion or More on December 31, 1982, Assets and Liabilities

Includes securities purchased under agreements to resell.
 Levels of major loan items were affected by the Sept. 26, 1984, transaction between Continental Illinois National Bank and the Federal Deposit Insurance Corporation. For details see the H.4.2 statistical release dated Oct. 5, 1984.
 Includes federal funds purchased and securities sold under agreements to repurchase; for information on these liabilities at banks with assets of \$1 billion or more on Dec. 31, 1977, see table 1.13.

^{4.} This is not a measure of equity capital for use in capital adequacy analysis or for other analytic uses.

5. Exclusive of loans and federal funds transactions with domestic commercial banks.

^{6.} Loans sold are those sold outright to a bank's own foreign branches, nonconsolidated nonbank affiliates of the bank, the bank's holding company (if not a bank), and nonconsolidated nonbank subsidiaries of the holding company.

^{1.} Figures include cash items in process of collection. Estimates of gross deposits are based on reports supplied by a sample of commercial banks. Types of depositors in each category are described in the June 1971 BULLETIN, p. 466. Figures may not add to totals because of rounding.

2. Beginning in March 1984, these data reflect a change in the panel of weekly reporting banks, and are not comparable to earlier data. Estimates in billions of dollars for December 1983 based on the new weekly reporting panel are: financial business, 24.4: nonfinancial business, 80.9; consumer, 30.1; foreign, 3.1; other, 9.5.

3. Beginning March 1985, financial business deposits and, by implication, total gross demand deposits have been redefined to exclude demand deposits due to

thrift institutions. Historical data have not been revised. The estimated volume of such deposits for December 1984 is \$5.0 billion at all insured commercial banks and \$3.0 billion at weekly reporting banks.

4. Historical data back to March 1985 have been revised to account for corrections of bank reporting errors. Historical data before March 1985 have not been revised, and may contain reporting errors. Data for all commercial banks for March 1985 were revised as follows (in billions of dollars): all holders, —3; financial business, —8; nonfinancial business, —4; consumer, 9; foreign, 1; other, —1. Data for weekly reporting banks for March 1985 were revised as follows (in billions of dollars): all holders, —1; financial business, —7; nonfinancial business, —5; consumer, 1.1; foreign, .1; other, —2.

^{1.} Effective Dec. 1, 1982, there was a break in the commercial paper series. The Effective Dec. 1, 1982, there was a break in the commercial paper series. The key changes in the content of the data involved additions to the reporting panel, the exclusion of broker or dealer placed borrowings under any master note agreements from the reported data, and the reclassification of a large portion of bank-related paper from dealer-placed to directly placed.
 Correction of a previous misclassification of paper by a reporter has created a break in the series beginning December 1983. The correction adds some paper to nonfinancial and to dealer-placed financial paper.
 Institutions engaged primarily in activities such as, but not limited to, commercial, savings, and mortgage banking; sales, personal, and mortgage financing: factoring, finance leasing, and other business lending; insurance underwriting; and other investment activities.

- Includes all financial company paper sold by dealers in the open market.
 As reported by financial companies that place their paper directly with investors.
- Includes public utilities and firms engaged primarily in such activities as communications, construction, manufacturing, mining, wholesale and retail trade,
- communications, construction, manufacturing, mining, wholesale and retail trade, transportation, and services.

 7. Beginning October 1984, the number of respondents in the bankers acceptance survey were reduced from 340 to 160 institutions—those with \$50 million or more in total acceptances. The new reporting group accounts for over 95 percent of total acceptances activity.

Weekly and monthly figures are averages of all calendar days, where the rate for a weekend or holiday is taken to be the rate prevailing on the preceding business day. The daily rate is the average of the rates on a given day weighted by the volume of transactions at these rates.

places. Thus, average issuing rates in bill auctions will be reported using two 11. Yields are based on closing bid prices quoted by at least five dealers.

12. Yields adjusted to constant maturities by the U.S. Treasury. That is, yields

- are read from a yield curve at fixed maturities. Based on only recently issued, actively traded securities.

- actively traded securities.

 13. Averages (to maturity or call) for all outstanding bonds neither due nor callable in less than 10 years, including one very low yielding "flower" bond.

 14. General obligations based on Thursday figures; Moody's Investors Service.

 15. General obligations only, with 20 years to maturity, issued by 20 state and local governmental units of mixed quality. Based on figures for Thursday.

 16. Daily figures from Moody's Investors Service. Based on yields to maturity on selected long-term bonds.

 17. Compilation of the Federal Reserve. This series is an estimate of the yield on recently-offered, A-rated utility bonds with a 30-year maturity and 5 years of call protection. Weekly data are based on Friday quotations.

 18. Standard and Poor's corporate series. Preferred stock ratio based on a sample of ten issues; four public utilities, four industrials, one financial, and one transportation. Common stock ratios on the 500 stocks in the price index.

 Note. These data also appear in the Board's H.15 (\$19) and G.13 (415) releases. For address, see inside front cover.

For address, see inside front cover.

business day. The daily rate is the average of the rates on a given day weighted by the volume of transactions at these rates.

2. Weekly figures are averages for statement week ending Wednesday.

3. Rate for the Federal Reserve Bank of New York.

4. Unweighted average of offering rates quoted by at least five dealers (in the case of commercial paper), or finance companies (in the case of finance paper). Before November 1979, maturities for data shown are 30-59 days, 90-119 days, and 120-179 days for commercial paper; and 30-59 days, 90-119 days, and 150-179 days for finance paper.

5. Yields are quoted on a bank-discount basis, rather than an investment yield basis (which would give a higher figure).

6. Dealer closing offered rates for top-rated banks. Most representative rate (which may be, but need not be, the average of the rates quoted by the dealers).

7. Unweighted average of offered rates quoted by at least five dealers early in the day.

8. Calendar week average. For indication purposes only.

9. Unweighted average of closing bid rates quoted by at least five dealers.

10. Rates are recorded in the week in which bills are issued. Beginning with the Treasury bill auction held on Apr. 18, 1983, bidders were required to state the percentage yield (on a bank discount basis) that they would accept to two decimal

^{1.} Effective July 1976, includes a new financial group, banks and insurance companies. With this change the index includes 400 industrial stocks (formerly 425), 20 transportation (formerly 15 rail), 40 public utility (formerly 60), and 40

^{423), 20} transportation (formerly 15 rail), 40 public utility (formerly 60), and 40 financial.

2. Beginning July 5, 1983, the American Stock Exchange rebased its index effectively cutting previous readings in half.

3. Beginning July 1983, under the revised Regulation T, margin credit at broker-dealers includes credit extended against stocks, convertible bonds, stocks acquired through exercise of subscription rights, corporate bonds, and government securities. Separate reporting of data for margin stocks, convertible bonds, and subscription issues was discontinued in April 1984, and margin credit at broker-dealers became the total that is distributed by equity class and shown on lines 17-27. lines 17-22.

4. Free credit balances are in accounts with no unfulfilled commitments to the

brokers and are subject to withdrawal by customers on demand

New series beginning June 1984

New series beginning June 1984.
 Each customer's equity in his collateral (market value of collateral less net debit balance) is expressed as a percentage of current collateral values.
 Balances that may be used by customers as the margin deposit required for additional purchases. Balances may arise as transfers based on loan values of other collateral in the customer's margin account or deposits of cash (usually sales proceeds) occur. proceeds) occur.

proceeds) occur.

8. Regulations G, T, and U of the Federal Reserve Board of Governors, prescribed in accordance with the Securities Exchange Act of 1934, limit the amount of credit to purchase and carry margin stocks that may be extended on securities as collateral by prescribing a maximum loan value, which is a specified percentage of the market value of the collateral at the time the credit is extended. Margin requirements are the difference between the market value (100 percent) and the maximum loan value. The term "margin stocks" is defined in the corresponding regulation. corresponding regulation.

1. Holdings of stock of the Federal Home Loan Banks are in "other assets."
2. Includes net undistributed income accrued by most associations.
3. As of July 1985, data include loans in process.
4. Excludes checking, club, and school accounts.
5. Data include all federally insured credit unions, both federal and state chartered, serving natural persons.
6. Direct and guaranteed obligations. Excludes federal agency issues not guaranteed, which are shown in the table under "Business" securities.
7. Issues of foreign governments and their subdivisions and bonds of the International Bank for Reconstruction and Development.
Note. Savings and loan associations: Estimates by the FHLBB for all associations in the United States based on annual benchmarks for non-FSLIC-insured associations.

FSLIC-insured federal savings banks: Estimates by the FHLBB for federal savings banks insured by the FSLIC and based on monthly reports of federally insured institutions

insured institutions.

Savings banks: Estimates by the National Council of Savings Institutions for all savings banks in the United States and for FDIC-insured savings banks that have converted to federal savings banks.

Credit unions: Estimates by the National Credit Union Administration for federally chartered and federally insured state-chartered credit unions serving

federally chartered and federally insured state-chartered credit unions serving natural persons. Life insurance companies: Estimates of the American Council of Life Insurance for all life insurance companies in the United States. Annual figures are annual-statement asset values, with bonds carried on an amortized basis and stocks at year-end market value. Adjustments for interest due and accrued and for differences between market and book values are not made on each item separately but are included, in total, in "other assets."

^{1.} In accordance with the Balanced Budget and Emergency Deficit Control Act of 1985, all former off-budget entries are now presented on-budget. The Federal Financing Bank (FFB) activities are now shown as separate accounts under the agencies that use the FFB to finance their programs. The act has also moved two social security trust funds (Federal old-age survivors insurance and Federal disability insurance trust funds) off-budget.

2. Includes U.S. Treasury operating cash accounts; SDRs; reserve position on the U.S. quota in the IMF; loans to International Monetary Fund; and other cash and monetary assets.

^{3.} Includes accrued interest payable to the public; allocations of special drawing rights; deposit funds; miscellaneous liability (including checks outstanding) and asset accounts; seigniorage; increment on gold; net gain/loss for U.S. currency valuation adjustment; net gain/loss for IMF valuation adjustment; and profit on the sale of gold.

^{1.} Includes (not shown separately): Securities issued to the Rural Electrifica-tion Administration; depository bonds, retirement plan bonds, and individual retirement bonds.

Note. Data from Treasury Bulletin and Daily Treasury Statement (U.S. Treasury Department).

^{2.} Nonmarketable dollar-denominated and foreign currency-denominated series held by foreigners.
3. Held almost entirely by U.S. government agencies and trust funds.
4. Data for Federal Reserve Banks and U.S. government agencies and trust funds are actual holdings; data for other groups are Treasury estimates.

^{5.} Consists of investments of foreign and international accounts. Excludes non-interest-bearing notes issued to the International Monetary Fund.
6. Includes savings and loan associations, nonprofit institutions, credit unions, mutual savings banks, corporate pension trust funds, dealers and brokers, certain U.S. government deposit accounts, and U.S. government-sponsored agencies. Sources. Data by type of security, U.S. Treasury Department, Monthly Statement of the Public Debt of the United States; data by holder. Treasury Bulletin.

^{1.} Transactions are market purchases and sales of securities as reported to the Federal Reserve Bank of New York by the U.S. government securities dealers on its published list of primary dealers.

Averages for transactions are based on the number of trading days in the period. The figures exclude allotments of, and exchanges for, new U.S. government securities, redemptions of called or matured securities, purchases or sales of securities under repurchase agreement, reverse repurchase (resale), or similar contracts. contracts.

2. Data for immediate transactions do not include forward transactions.

3. Includes, among others, all other dealers and brokers in commodities and

securities, nondealer departments of commercial banks, foreign banking agencies, and the Federal Reserve System.

4. Futures contracts are standardized agreements arranged on an organized exchange in which parties commit to purchase or sell securities for delivery at a future date.

5. Forward transactions are agreements arranged in the over-the-counter market in which securities are purchased (sold) for delivery after 5 business days from the date of the transaction for government securities (Treasury bills, notes, and bonds) or after 30 days for mortgage-backed agency issues.

Domestic Financial Statistics ☐ September 1986

ties involved are not available for trading purposes. Immediate positions include reverses to maturity, which are securities that were sold after having been obtained under reverse repurchase agreements that mature on the same day as the securities. Data for immediate positions do not include forward positions.

3. Figures cover financing involving U.S. government and federal agency securities, negotiable CDs, bankers acceptances, and commercial paper.

4. Includes all reverse repurchase agreements, including those that have been arranged to make delivery on short sales and those for which the securities obtained have been used as collateral on borrowings, that is, matched agreements.

5. Includes both repurchase agreements undertaken to finance positions and "matched book" repurchase agreements.

^{1.} Data for dealer positions and sources of financing are obtained from reports submitted to the Federal Reserve Bank of New York by the U.S. government securities dealers on its published list of primary dealers.

Data for positions are averages of daily figures, in terms of par value, based on the number of trading days in the period. Positions are net amounts and are shown on a commitment basis. Data for financing are in terms of actual amounts borrowed or lent and are based on Wednesday figures.

2. Immediate positions are net amounts (in terms of par values) of securities owned by nonbank dealer firms and dealer departments of commercial banks on a commitment, that is, trade-date basis, including any such securities that have been sold under agreements to repurchase (RPs). The maturities of some repurchase agreements are sufficiently long, however, to suggest that the securi-

Consists of mortgages assumed by the Defense Department between 1957 and 1963 under family housing and homeowners assistance programs.
 Includes participation certificates reclassified as debt beginning Oct. 1, 1976.
 Off-budget Aug. 17, 1974, through Sept. 30, 1976; on-budget thereafter.
 Consists of debentures issued in payment of Federal Housing Administration insurance claims. Once issued, these securities may be sold privately on the securities market.
 Certificates of participation issued before fixed 1060 than 1070.

^{5.} Certificates of participation issued before fiscal 1969 by the Government National Mortgage Association acting as trustee for the Farmers Home Administration; Department of Health, Education, and Welfare; Department of Housing and Urban Development: Small Business Administration; and the Veterans Administration. 6. Off-budget.

^{7.} Includes outstanding noncontingent liabilities: Notes, bonds, and deben-

tures. Some data are estimated.

8. Before late 1981, the Association obtained financing through the Federal

Financing Bank.

9. The FFB, which began operations in 1974, is authorized to purchase or sell the state of t

^{9.} The FFB, which began operations in 1974, is authorized to purchase or sell obligations issued, sold, or guaranteed by other federal agencies. Since FFB incurs debt solely for the purpose of lending to other agencies, its debt is not included in the main portion of the table in order to avoid double counting. 10. Includes FFB purchases of agency assets and guaranteed loans; the latter contain loans guaranteed by numerous agencies with the guarantees of any particular agency being generally small. The Farmers Home Administration item consists exclusively of agency assets, while the Rural Electrification Administration entry contains both agency assets and guaranteed loans.

^{1.} Weighted averages based on sample surveys of mortgages originated by major institutional lender groups; compiled by the Federal Home Loan Bank Board in cooperation with the Federal Deposit Insurance Corporation.

2. Includes all fees, commissions, discounts, and "points" paid (by the borrower or the seller) to obtain a loan.

3. Average effective interest rates on loans closed, assuming prepayment at the end of 10 years.

6. Average net yields to investors on Government National Mortgage Association guaranteed, mortgage-backed, fully modified pass-through securities, assuming prepayment in 12 years on pools of 30-year FHAVA mortgages carrying the prevailing ceiling rate. Monthly figures are averages of Friday figures from the Wall Street Journal.

7. Includes some multifamily and nonprofit hospital loan commitments in addition to 1- to 4-family loan commitments accepted in FNMA's free market auction system, and through the FNMA-GNMA tandem plans.

8. Includes participation as well as whole loans.

9. Includes conventional and government-underwritten loans. FHLMC's mortgage commitments and mortgage transactions include activity under mortgage.

end of 10 years.

4. Average contract rates on new commitments for conventional first mortgages; from Department of Housing and Urban Development.

5. Average gross yields on 30-year, minimum-downpayment, Federal Housing
Administration-insured first mortgages for immediate delivery in the private
secondary market. Based on transactions on first day of subsequent month. Large
monthly movements in average yields may reflect market adjustments to changes
in maximum permissable contract rates.

gage commitments and mortgage transactions include activity under mortgage/ securities swap programs, while the corresponding data for FNMA exclude swap

Includes loans held by nondeposit trust companies but not bank trust departments.
 Assumed to be entirely I- to 4-family loans.
 Outstanding principal balances of mortgage pools backing securities insured or guaranteed by the agency indicated.

^{4.} Other holders include mortgage companies, real estate investment trusts, state and local credit agencies, state and local retirement funds, noninsured pension funds, credit unions, and other U.S. agencies.
Note. Based on data from various institutional and governmental sources, with some quarters estimated in part by the Federal Reserve. Multifamily debt refers to loans on structures of five or more units.

Notes by Line number.

1. Line 1 of table 1.57.

2. Sum of lines 3-6 or 7-10.

Sum of lines 3-6 or 7-10.
 Includes farm and commercial mortgages.
 Credit market funds raised by federally sponsored credit agencies, and net issues of federally related mortgage pool securities.
 Line I less line 2 plus line 11 and 12. Also line 20 less line 27 plus line 33. Also sum of lines 28 and 47 less lines 40 and 46.
 Includes farm and commercial mortgages.
 Line 39 less lines 40 and 46.
 Excludes equity issues and investment company shares. Includes line 19.
 Foreign deposits at commercial banks, bank borrowings from foreign branches, and liabilities of foreign hanking agencies to foreign affiliates, less claims on foreign affiliates and deposits by banking in foreign banks.
 Demand deposits and note balances at commercial banks.

- 31. Excludes net investment of these reserves in corporate equities.
 32. Mainly retained earnings and net miscellaneous liabilities.
 33. Line 13 less line 20 plus line 27.
 34–38. Lines 14–18 less amounts acquired by private finance plus amounts borrowed by private finance. Line 38 includes mortgages.
 40. Mainly an offset to line 9.
 47. Lines 33 plus 39, or line 13 less line 28 plus 40 and 46.
 48. Line 2/line 1.
 49. Line 2/line 13.
 50. Sum of lines 10 and 29.

Line 20 ince 13.
 Sum of lines 10 and 29.
 Sa. Includes issues by financial institutions.
 Note. Full statements for sectors and transaction types in flows and in amounts outstanding may be obtained from Flow of Funds Section, Division of Research and Statistics, Board of Governors of the Federal Reserve System, Washington, D.C. 2051.

^{1.} A major revision of the industrial production index and the capacity utilization rates was released in July 1985. See "A Revision of the Index of Industrial Production" and accompanying tables that contain revised indexes (1977=100) through December 1984 in the FEDERAL RESERVE BULLETIN, vol. 71 (July 1985), pp. 487-501. The revised indexes for January through June 1985 were shown in the September BULLETIN.

2. Ratios of indexes of production to indexes of capacity. Based on data from Federal Reserve, McGraw-Hill Economics Department, Department of Commerce, and other sources.

3. Index of dollar value of total construction contracts, including residential, nonresidential and heavy engineering, from McGraw-Hill Information Systems Company, F. W. Dodge Division.

4. Based on data in Employment and Earnings (U.S. Department of Labor).

4. Based on data in *Employment and Earnings* (U.S. Department of Labor). Series covers employees only, excluding personnel in the Armed Forces.

^{5.} Based on data in Survey of Current Business (U.S. Department of Com-

Based on Bureau of Census data published in Survey of Current Business.
 Data without seasonal adjustment, as published in Monthly Labor Review.
 Seasonally adjusted data for changes in the price indexes may be obtained from the Bureau of Labor Statistics, U.S. Department of Labor.

Note. Basic data (not index numbers) for series mentioned in notes 4, 5, and 6, and indexes for series mentioned in notes 3 and 7 may also be found in the Survey of Current Business.

Figures for industrial production for the last two months are preliminary and estimated, respectively.

2.11 LABOR FORCE, EMPLOYMENT, AND UNEMPLOYMENT

Thousands of persons; monthly data are seasonally adjusted. Exceptions noted.

[▲] A major revision of the industrial production index and the capacity utilization rates was released in July 1985. See "A Revision of the Index of Industrial Production" and accompanying tables that contain revised indexes (1977=100) through December 1984 in the FEDERAL RESERVE BULLETIN, vol. 71

⁽July 1985), pp. 487–501. The revised indexes for January through June 1985 were shown in the September BULLETIN.

NOTE. These data also appear in the Board's G.12.3 (414) release. For address, see inside front cover.

2.14 HOUSING AND CONSTRUCTION

Monthly figures are at seasonally adjusted annual rates except as noted.

Note. Census Bureau estimates for all series except (a) mobile homes, which are private, domestic shipments as reported by the Manufactured Housing Institute and seasonally adjusted by the Census Bureau, and (b) sales and prices of existing units, which are published by the National Association of Realtors. All back and current figures are available from originating agency. Permit authorizations are those reported to the Census Bureau from 16,000 jurisdictions beginning with 1978.

Not at annual rates.
 Not seasonally adjusted.
 Value of new construction data in recent periods may not be strictly comparable with data in prior periods because of changes by the Bureau of the Census in its estimating techniques. For a description of these changes see Construction Reports (C-30-76-5), issued by the Bureau in July 1976.

41 Transfers under military grant programs (excluded from lines 4, 6, and 10 above)	194	190	64	10	12	15	28	20

4. Primarily associated with military sales contracts and other transactions arranged with or through foreign official agencies.
 5. Consists of investments in U.S. corporate stocks and in debt securities of private corporations and state and local governments.
 NOTE. Data are from Bureau of Economic Analysis, Survey of Current Business (Department of Commerce).

Scasonal factors are not calculated for lines 6, 10, 12-16, 18-20, 22-34, and 38-41.
 Data are on an international accounts (IA) basis. Differs from the Census basis data, shown in table 3.11, for reasons of coverage and timing; military exports are excluded from merchandise data and are included in line 6.
 Includes reinvested earnings.

International Statistics September 1986

3.11 U.S. FOREIGN TRADE

Millions of dollars; monthly data are not seasonally adjusted.

		1007	1984	1005	198	35			1986		
	Item	1983	1984	1985	Nov.	Dec.	Jan.	Feb.	Mar.	Apr.	May
1	EXPORTS of domestic and foreign merchandise excluding grant-aid shipments	200,486	217,865	213,146	17,721	16,994	17,006	17,735	18,913	17,965	17,431
2	GENERAL IMPORTS including mer- chandise for immediate consump- tion plus entries into bonded warehouses	258,048	325,726	345,276	30,010	30,728	32,005	28,895	31,972	28,762	30,272
3	Trade balance	-57,562	107,861	-132,129	-12,290	-13,734	-14,999	-11,160	-13,059	-10,797	-12,842

Note. The data through 1981 in this table are reported by the Bureau of Census data of a free-alongside-ship (f.a.s.) value basis—that is, value at the port of export. Beginning in 1981, foreign trade of the U.S. Virgin Islands is included in the Census basis trade data; this adjustment has been made for all data shown in the table. Beginning with 1982 data, the value of imports are on a customs valuation basis.

The Census basis data differ from merchandise trade data shown in table 3.10, U.S. International Transactions Summary, for reasons of coverage and timing. On

the export side, the largest adjustments are: (1) the addition of exports to Canada not covered in Census statistics, and (2) the exclusion of military sales (which are combined with other military transactions and reported separately in the "service account" in table 3.10, line 6). On the import side, additions are made for gold, ship purchases, imports of electricity from Canada, and other transactions; military payments are excluded and shown separately as indicated above.

Marketable U.S. Treasury bills, notes, and bonds; and nonmarketable U.S.
 Treasury securities payable in dollars and in foreign currencies.
 Earmarked gold is valued at \$42.22 per fine troy ounce.

Note. Excludes deposits and U.S. Treasury securities held for international and regional organizations. Earmarked gold is gold held for foreign and international accounts and is not included in the gold stock of the United States.

^{1.} Gold held under earmark at Federal Reserve Banks for foreign and international accounts is not included in the gold stock of the United States; see table 3.13. Gold stock is valued at \$42.22 per fine troy ounce.

2. Beginning July 1974, the IMF adopted a technique for valuing the SDR based on a weighted average of exchange rates for the currencies of member countries. From July 1974 through December 1980, 16 currencies were used; from January 1981, 5 currencies have been used. The U.S. SDR holdings and reserve position in the IMF also are valued on this basis beginning July 1974.

^{3.} Includes allocations by the International Monetary Fund of SDRs as follows: \$867 million on Jan. 1, 1970; \$717 million on Jan. 1, 1971; \$710 million on Jan. 1, 1972; \$1,139 million on Jan. 1, 1979; \$1,152 million on Jan. 1, 1980; and \$1,093 million on Jan. 1, 1981; plus transactions in SDRs.

4. Valued at current market exchange rates.

^{1.} Beginning with June 1984 data, reported claims held by foreign branches have been reduced by an increase in the reporting threshold for "shell" branches from \$50 million to \$150 million equivalent in total assets, the threshold now applicable to all reporting branches.

^{2.} Data for assets vis-à-vis other banks in the United States and vis-à-vis nonbanks are combined for dates before June 1984.

13 Мемо: Customer liability on acceptances	38,153	37,715	37,103		28,180	,		28,536				
Dollar deposits in banks abroad, reported by nonbanking business enterprises in the United States ⁴	42,499	46,337	40,714	37,856	37,378	39,465	42,112	41,226	42,891	n.a.		

^{1.} U.S. banks: includes amounts due from own foreign branches and foreign subsidiaries consolidated in "Consolidated Report of Condition" filed with bank regulatory agencies. Agencies, branches, and majority-owned subsidiaries of foreign banks: principally amounts due from head office or parent foreign bank, and foreign branches, agencies, or wholly owned subsidiaries of head office or

parent foreign bank.

2. Assets owned by customers of the reporting bank located in the United States that represent claims on foreigners held by reporting banks for the account of their domestic customers.

^{1.} Remaining time to maturity.

^{3.} Principally negotiable time certificates of deposit and bankers acceptances.
4. Includes demand and time deposits and negotiable and nonnegotiable certificates of deposit denominated in U.S. dollars issued by banks abroad. For description of changes in data reported by nonbanks, see July 1979 BULLETIN,

p. 550.

Note. Beginning April 1978, data for banks' own claims are given on a monthly basis, but the data for claims of banks' own domestic customers are available on a quarterly basis only.

^{2.} Includes nonmonetary international and regional organizations.

^{1.} The banking offices covered by these data are the U.S. offices and foreign branches of U.S.-owned banks and of U.S. subsidiaries of foreign-owned banks. Offices not covered include (1) U.S. agencies and branches of foreign banks, and (2) foreign subsidiaries of U.S. banks. To minimize duplication, the data are adjusted to exclude the claims on foreign branches held by a U.S. office or another foreign branch claims in table 3.14 (the sum of lines 7 through 10) with the claims of U.S. offices in table 3.18 (excluding those held by agencies and branches of foreign banks and those constituting claims on own foreign branches).

Revisions shown in this issue have been made in part to correct some double-counting of claims held by foreign branches located in Puerto Rico, the U.S. Virgin Islands, and Guam.
 Beginning with June 1984 data, reported claims held by foreign branches have been reduced by an increase in the reporting threshold for "shell" branches from \$50 million to \$150 million equivalent in total assets, the threshold now applicable to all reporting branches.

^{1.} For a description of the changes in the International Statistics tables, see July 1979 BULLETIN, p. 550.
2. Comprises Bahrain, Iran, Iraq, Kuwait, Oman, Qatar, Saudi Arabia, and United Arab Emirates (Trucial States).

NOTES TO TABLE 3.21—CONTINUED

Comprises Algeria, Gabon, Libya, and Nigeria.
 Includes nonmonetary international and regional organizations.
 Revisions include a reclassification of transactions, which also affects the totals for Asia and the grand totals.

^{4.} Besides the Organization of Petroleum Exporting Countries shown individually, this group includes other members of OPEC (Algeria, Gabon, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, and United Arab Emirates) as well as Bahrain and Oman (not formally members of OPEC).
5. Excludes Liberia.

^{6.} Includes Canal Zone beginning December 1979.7. Foreign branch claims only.8. Includes New Zealand, Liberia, and international and regional organizations.

International Statistics □ September 1986

^{1.} Estimated official and private transactions in marketable U.S. Treasury securities with an original maturity of more than 1 year. Data are based on monthly transactions reports. Excludes nonmarketable U.S. Treasury bonds and notes held by official institutions of foreign countries.

2. Includes U.S. Treasury notes publicly issued to private foreign residents denominated in foreign currencies.

Comprises Bahrain, Iran, Iraq, Kuwait, Oman, Qatar, Saudi Arabia, and United Arab Emirates (Trucial States).
 Comprises Algeria, Gabon, Libya, and Nigeria.

3.26 DISCOUNT RATES OF FOREIGN CENTRAL BANKS

Percent per annum

	Rate on	June 30, 1986		Rate on	June 30, 1986		Rate on	June 30, 1986
Country	Country Per- Month effective Country		Per- cent	Month effective	Country	Per- cent	Month effective	
Austria Belgium Brazil Canada Denmark		Aug. 1985 May 1986 Mar. 1981 June 1986 Oct. 1983	France ¹ Germany, Fed. Rep. of Italy Japan Netherlands	3.5 12.0 3.5	June 1986 Mar. 1986 May 1986 Apr. 1986 Mar. 1986	Norway Switzerland United Kingdom ² Venezuela	4.0	June 1983 Mar. 1983 Oct. 1985

^{1.} As of the end of February 1981, the rate is that at which the Bank of France discounts Treasury bills for 7 to 10 days.

2. Minimum lending rate suspended as of Aug. 20, 1981.

Note. Rates shown are mainly those at which the central bank either discounts

or makes advances against eligible commercial paper and/or government commercial banks or brokers. For countries with more than one rate applicable to such discounts or advances, the rate shown is the one at which it is understood the central bank transacts the largest proportion of its credit operations.

3.27 FOREIGN SHORT-TERM INTEREST RATES

Percent per annum, averages of daily figures

NOTE. Averages of certified noon buying rates in New York for cable transfers. Data in this table also appear in the Board's G.5 (405) release. For address, see inside front cover.

^{1.} Value in U.S. cents.
2. Index of weighted-average exchange value of U.S. dollar against currencies of other G-10 countries plus Switzerland. March 1973 = 100. Weights are 1972-76 global trade of each of the 10 countries. Series revised as of August 1978. For description and back data, see "Index of the Weighted-Average Exchange Value of the U.S. Dollar: Revision" on p. 700 of the August 1978 Bulletin.

^{3.} Currency reform.

Guide to Tabular Presentation, Statistical Releases, and Special Tables

GUIDE TO TABULAR PRESENTATION

Symbols and Abbreviations

c	Corrected	0	Calculated to be zero
e	Estimated	n.a.	Not available
р	Preliminary	n.e.c.	Not elsewhere classified
r	Revised (Notation appears on column heading when	IPCs	Individuals, partnerships, and corporations
	about half of the figures in that column are changed.)	REITs	Real estate investment trusts
*	Amounts insignificant in terms of the last decimal place	RPs	Repurchase agreements
	shown in the table (for example, less than 500,000	SMSAs	Standard metropolitan statistical areas
	when the smallest unit given is millions)		Cell not applicable

General Information

Minus signs are used to indicate (1) a decrease, (2) a negative figure, or (3) an outflow.

"U.S. government securities" may include guaranteed issues of U.S. government agencies (the flow of funds figures also include not fully guaranteed issues) as well as direct

obligations of the Treasury. "State and local government" also includes municipalities, special districts, and other political subdivisions.

In some of the tables details do not add to totals because of rounding.

150 Number of reports filed ⁶	466		217		117		46	n.a.

^{1.} Data are aggregates of categories reported on the quarterly form FFIEC 002, "Report of Assets and Liabilities of U.S. Branches and Agencies of Foreign Banks." Details may not add to totals because of rounding. This form was first used for reporting data as of June 30, 1980, and was revised as of December 31, 1985. From November 1972 through May 1980, U.S. branches and agencies of foreign banks had filed a monthly FR 886a report. Aggregate data from that report were available through the Federal Reserve statistical release G. 11, last issued on July 10, 1980. Data in this table and in the G.11 tables are not strictly comparable because of differences in reporting panels and in definitions of balance sheet

that no IBF data are reported for that item, either because the item is not an eligible IBF asset or liability or because that level of detail is not reported for IBFs. From December 1981 through September 1985, IBF data were included in all applicable items reported.

4. Total assets and total liabilities include net balances, if any, due from or due to related banking institutions in the United States and in foreign countries (see footnote 5). On the former monthly branch and agency report, available through the G.11 statistical release, gross balances were included in total assets and total liabilities. Therefore, total asset and total liability figures in this table are not comparable to those in the G.11 tables.

5. "Related banking institutions" includes the foreign head office and other U.S. and foreign branches and agencies of the bank, the bank's parent holding company, and majority-owned banking subsidiaries of the bank and of its parent holding company (including subsidiaries owned both directly and indirectly).

6. In some cases two or more offices of a foreign bank within the same metropolitan area file a consolidated report.

items.

2. Includes the District of Columbia.

3. Effective December 1981, the Federal Reserve Board amended Regulations D and Q to permit banking offices located in the United States to operate International Banking Facilities (IBFs). As of December 31, 1985, data for IBFs are reported in a separate column. These data are either included in or excluded from the total columns as indicated in the headings. The notation "n.a." indicates

Federal Reserve Board of Governors
