# FEDERAL RESERVE BULLETIN

Board of Governors of the Federal Reserve System Washington, D.C.

### Publications Committee

Joseph R. Coyne, *Chairman* □ Stephen H. Axilrod □ Michael Bradfield Janet O. Hart □ James L. Kichline □ Tony J. Salvaggio □ Edwin M. Truman

Naomi P. Salus, Coordinator

The FEDERAL RESERVE BULLETIN is issued monthly under the direction of the staff publications committee. This committee is responsible for opinions expressed except in official statements and signed articles. The artwork is provided by the Graphic Communications Section under the direction of Peter G. Thomas. Editorial support is furnished by the Economic Editing Unit headed by Mendelle T. Berenson.

## Table of Contents

### 813 COMMUNITY REINVESTMENT ACT: A SECOND PROGRESS REPORT

The Federal Reserve reviews System actions in bank and banking organization applications in which a CRA protest was lodged or a less-than-satisfactory CRA performance was revealed in the examination process.

### 824 INDUSTRIAL PRODUCTION

Output declined about 1.5 percent in October.

### 826 STATEMENTS TO CONGRESS

Nancy H. Teeters, Member, Board of Governors, offers the Board's views on two bills: one to authorize loans at interest rates in excess of certain state usury ceilings and the other to allow any type of lender to originate loans at a rate up to 1 percentage point above the Federal Reserve discount rate, before the Subcommittee on Consumer Affairs and Coinage of the House Committee on Banking, Finance and Urban Affairs, October 21, 1981.

- 828 Theodore E. Allison, the Board's Staff Director for Federal Reserve Bank Activities, discusses the provision of payments mechanism services, particularly electronic fund transfer services, before the Subcommittee on Government Information and Individual Rights of the House Committee on Government Operations, October 22, 1981.
- 832 Lyle E. Gramley, Member, Board of Governors, discusses certain issues related to the impact of federal deficits on the supply, distribution, and price of credit; on inflation; and on the conduct of monetary policy, before the Subcommittee on Domestic Monetary Policy of the House Committee

- on Banking, Finance and Urban Affairs, October 27, 1981.
- 835 Paul A. Volcker, Chairman, Board of Governors, comments on some of the implications of S. 1720, including title I, which incorporates the provisions of the so-called Regulators' Bill passed by the House; the bills embodied in S. 1720 raise questions about the appropriateness of geographic restrictions on the operation of depository institutions, the relationship between commerce and banking, and the validity of the remaining legal compartmentalization in the provision of financial services, before the Senate Committee on Banking, Housing, and Urban Affairs, October 29, 1981.
- 845 Governor Teeters expresses the Board's support for H.R. 2372, the bill to establish procedures for budgetary control of federal credit programs, and also recommends a continuing evaluation of the effective use of direct spending, direct loans, loan guarantees, and beneficial tax treatment, before the Task Force on Enforcement, Credit, and Multi-Year Budgeting of the House Committee on the Budget, October 29, 1981.
- 850 Henry C. Wallich, Member, Board of Governors, reviews recent developments in trade and current accounts and examines factors that affect the outlook for trade, before the Subcommittee on Trade of the House Ways and Means Committee, November 3, 1981.

### 854 ANNOUNCEMENTS

Change in discount rate surcharge.

Change in discount rate.

Adoption of fee schedules for transportation in supplying currency and coin to the nation's banks and thrift institutions. Adoption of policy statement on enforcement by state member banks of the Equal Credit Opportunity and Fair Housing Acts.

Amendment to Board's rules to delegate to the Reserve Banks authority to make certain determinations for nonbanking activities of bank holding companies.

Deferral of reserve and reporting requirements for nonmember depository institutions with less than \$2 million in total deposits.

Proposed change in the way depository institutions maintain reserves; proposed amendment to Regulation K to permit Edge corporations to engage in certain investment advisory and management services in the United States; proposal to amend the definition in Regulation Z of the "arranger" of credit; proposed amendment to Regulation Y expanding the activities permissible for bank holding companies; proposed amendment to Regulation T about collateral when brokers and dealers borrow or lend securities.

Admission of six state banks to membership in the Federal Reserve System.

### 859 LEGAL DEVELOPMENTS

Amendments to Regulations A and T; various rules and bank holding company and bank merger orders; and pending cases.

# The Community Reinvestment Act: A Second Progress Report

This article was prepared by Glenn Canner, Division of Research and Statistics. It is the second in a series of reports on Federal Reserve System activities pursuant to the Community Reinvestment Act of 1977. The first article appeared in the Federal Reserve Bulletin, volume 66, February 1980.

The Community Reinvestment Act of 1977 is intended to encourage federally insured commercial banks, mutual savings banks, and savings and loan associations to help meet the credit needs of the communities in which they are chartered. The CRA directs the four federal supervisory agencies—the Board of Governors of the Federal Reserve System, the Comptroller of the Currency, the Federal Deposit Insurance Corporation, and the Federal Home Loan Bank Board—to consider the CRA record of an institution in evaluating any application for a charter, deposit insurance, branch or other deposit facility, office relocation, merger, or acquisition. The act also requires that, in connection with the examination of a financial institution, the appropriate supervisory agency shall "assess the institution's record and encourage it to meet the credit needs of its entire community, including low- and moderate-income neighborhoods, consistent with safe and sound operation of such institution."

During the nearly three years that the regulations implementing the CRA have been in force, the consumer compliance examiners of the Federal Reserve System have had an opportunity to review the CRA performance of all state member banks. By and large these reviews revealed that the banks have complied with the act. In addition, the Board of Governors has acted on numerous banking organization applications in which CRA issues have been raised in protests lodged by competing banks or community

groups. While the Board has attempted to handle these protested applications expeditiously, in many cases it has met with only limited success. To facilitate the processing of CRA cases, as well as applications protested on other grounds, the Board has adopted new protest procedures. In addition, the Reserve Banks have appointed Community Affairs Officers whose responsibilities include advising community groups and banks on the procedures to follow in CRA disputes.

A review of the CRA cases decided by the Federal Reserve System indicates the importance that the Board has given to affirmative action by applicants to communicate with members of their community, particularly those residing in low- and moderate-income neighborhoods. In both its CRA information statement and its decisions in CRA cases, the Board has noted repeatedly that it does not believe the CRA was intended to require lending institutions to allocate credit (see "Information Statement Re Community Reinvestment Act," FEDERAL RE-SERVE BULLETIN, volume 66, January 1980, page 30). Moreover, the Board has stated that it will not attempt to dictate the product mix that a lending institution should offer. At the same time, the Board has emphasized that it expects banks to offer the types of credit they list on their CRA statements in an evenhanded and nondiscriminatory fashion.

This article discusses the Board's recently revised protest procedures and the general concerns that led to their adoption. It also reviews decisions by the Federal Reserve System on bank and bank holding company applications that have raised CRA issues: some involve applications protested on CRA grounds, and others involve unsatisfactory ratings on CRA examinations but no formal protest from the public. Finally, this article considers the role of the Community Affairs Officer at each Federal Re-

serve District Bank and briefly reviews revised Regulaton C implementing the Home Mortgage Disclosure Act of 1980.

### REVISED PROTEST PROCEDURES

Early in December 1980, in response to its experience during the first two years of administering the Community Reinvestment Act, the Federal Reserve Board adopted new procedures for handling protested applications. (See Federal Reserve press release, December 4, 1980.) The new procedures had three goals: to provide better notice to the public of applications submitted to the Board by banking organizations; to clarify the schedule for submission of comments on applications by the public; and to set up an experiment with public meetings on some protested applications, particularly those involving an applicant's CRA record.

Underlying the revisions were several considerations. The foremost was the desire to facilitate the timely development of a complete record for each application. Virtually all the early decisions on applications subject to CRA protests have involved long periods, from three to fourteen months, to develop a record on which the Board could act. These periods have often been the result of extensive written exchanges between the System and the parties to the protest. In Board experience, it takes about six and a half months, on average, from the receipt of an application for the System to act on CRA cases. However, in the five cases in which CRA protests were withdrawn after negotiated settlements between the parties, a System decision typically was reached in less than four months. These periods do not compare favorably with the System's normal case experience. Between January and August 1981, the average application submitted to the System and approved under delegated authority took only 1.7 months to decide. During the same period, those cases that raised substantial legal or policy questions outside the CRA area and that were considered by the Board took 3.7 months on average to decide, although the decision time varied widely. Largely as a reaction to the delays in CRA and other protested cases, the Board issued the new protest procedures.

Under the revised protest procedures, public meetings will generally be scheduled shortly after the end of the period for public comment. The conclusion of the meeting will normally mark the close of the public portion of the record on the application, except for written comments that respond to new material accepted at the meeting. Public meetings should substantially shorten the Board's decision time and put it in a better position to evaluate the substance of the protest. The primary purpose of the public meetings is to elicit information and clarify factual issues related to the application. Beyond that, public meetings will offer a forum for protestants to air their grievances against applicants, while applicants have an opportunity to expound on both the public benefits of the proposed transaction and the positive aspects of their record. The decision to hold a meeting will not reflect adversely on the applicant's record.

The new policy on public meetings is not intended to preclude private meetings between the parties to resolve differences. As a matter of course, the Federal Reserve System will attempt to arrange a private meeting and associated negotiations between the parties before deciding to hold a public meeting. Such private meetings have proven useful in "clearing the air," and they usually result in agreement on at least some of the issues involved in the protest.

The revised procedures also specify a standard form of public notice to be used by applicants, which includes the date on which the comment period ends. The procedures also direct each of the Federal Reserve Banks to publish a weekly list of (1) applications it has accepted and (2) applications for which newspaper notices have been published and submitted for acceptance. These weekly lists, available on request, are prepared as a courtesy by the Banks and do not replace the formal notices required by statute or regulation. The belief is that the standard form for public notices and the weekly lists of applications will substantially increase the public's awareness of bank applications that may influence the well-being of their communities. Currently, the Banks send out approximately 400 weekly lists, about 29 percent of which go to community groups. The other principal recipients are law firms, banking organizations, accounting firms, and the press.

### CRA PROTESTS TO DATE

Since 1977 when the CRA was enacted, twentyone applications from banking organizations to the Federal Reserve System have been protested on CRA grounds. The appendix to this article presents the significant characteristics of each of these cases.

Of the twenty-one CRA protests received to date, seventeen have come from community organizations and four from financial institutions that are competitors of the applicant. Although each case is unique, case 5 (see appendix) embodies the elements that many CRA protests have shared. The object of the protest, by the Michigan Committee on Law and Housing, was a large urban-based midwestern banking organization, the Michigan National Corporation. (This protest is typical in that all but one of the other community group protests involved a large urban-based midwestern or eastern banking establishment.) The allegations were of long-standing technical violations of the Community Reinvestment Act and the Home Mortgage Disclosure Act; failure to communicate available credit services to the community; an inadequate volume of residential loans in low- and moderateincome neighborhoods, and racial discrimination in lending for home purchases. In approving the application, the Board obtained commitments that are typical in cases of deficient CRA records: expanded advertising of credit services, intensified training of bank personnel in consumer compliance, and regular meetings with members of the community. In its required quarterly reports to the Federal Reserve Bank of Chicago-one method by which the System monitors compliance-Michigan National detailed the steps it had taken to strengthen its CRA performance. These steps included the initiation of an affirmative marketing program, including a mobile loan office; slide presentations for community groups on available credit services and loan standards; and a credit-oriented advertising campaign.

As the appendix describes, nineteen of the twenty-one applications protested on CRA grounds have been approved by the Federal Reserve System; two are still pending. Commitments or conditions have played an important role in seven decisions, and privately negotiated agreements between the parties have been a factor in the resolution of six others.

Acting on applications protested on CRA grounds, the Board has had an opportunity to clarify its position on the banking system's responsibilities under the regulations. In particular, the Board has used its orders to address the issue of credit allocation. A number of community-organization protestants have demanded that applicants allocate predetermined amounts of credit, often at below-market rates, for residential lending in specific areas or to low- and moderate-income groups. The Board has stated repeatedly that it does not believe that the CRA requires banking organizations to allocate credit in such a manner (see cases 1 and 5). But, it has also stated that each banking organization is responsible for providing the types of credit listed in its CRA statement to its community in a fair and nondiscriminatory manner (case 9). Moreover, as its decisions clearly indicate, the Board expects banking organizations to act affirmatively to ensure that all members of the community are aware of their credit services (cases 1 and 2).

Board orders in several CRA cases have addressed the applicability of the CRA to certain types of proposed transactions. In particular, the Board has held that the CRA is not applicable to bank holding company applications for nonbanking activities (cases 2 and 4). In addition, the Board has held that the CRA is not relevant to an application by a foreign-owned banking organization if it does not have an existing banking presence in the United States (case 19).

### APPLICANTS WITH LOW CRA RATINGS

While applications for approval of acquisitions or for expansions of activities give the Board a special opportunity to review the CRA performance of banking organizations, its concern with that performance is not confined to those occasions. Together with the other regulators of the nation's depository institutions, the Federal Reserve System monitors lenders' compliance with the CRA on an ongoing basis through the examination process.

On March 5, 1981, the Federal Financial Institution Examination Council (FFIEC) adopted a uniform numerical rating system for CRA examinations. The new system provides consumer compliance examiners with comprehensive and uniform guidelines for evaluating the performance of federally regulated financial institutions under the various assessment factors of the CRA and its implementing regulations. Under the Uniform Interagency CRA Assessment Rating System, ratings range from 1 (strong record) to 5 (substantially inadequate); 3 signifies a less than satisfactory performance. Before the adoption of the uniform rating system each agency applied its own scheme. For example, under the Federal Reserve's old system, a CRA rating of 3 was considered satisfactory and did not require more than normal supervisory action.

In the 894 CRA compliance examinations of state member banks that the Federal Reserve System conducted during 1980, the average rating was 2.6. Only 28 institutions, or 3 percent, of the banks examined were found to have a CRA performance that was less than satisfactory (see table). The other enforcement agencies have had similar experiences.

CRA examination ratings of member banks, Federal Reserve System, 1980

Rating	Number of banks	Percentage of banks	
1	31	3.5	
2	328	36.7	
3	507	56.7	
4	26	2.9	
5	2	.2	
Total	894	100.0	

1. Under the CRA rating scheme in effect during 1980, a rating of 1 = outstanding; 2 = good; 3 = satisfactory; 4 = needs improvement; and 5 = unsatisfactory.

Nine of ten applications that have been received by the Federal Reserve System during the past two years have been acted on by the Federal Reserve Banks under delegated authority. The Federal Reserve Board itself considers applications that raise significant legal or undecided policy issues, including CRA concerns. If an applicant or any of its banking affiliates has received a CRA examination rating of 5, the application is removed from delegation to be reviewed by the Board. This action occurs whether or not a protest or comment has been received from the public. On the other hand, if an organization with a CRA rating of 4 (needs improvement) can demonstrate that the problems that led to the low rating have been substantially corrected, its application may remain under delegated authority.

In practice, CRA examinations of a given bank occur roughly every 12 to 18 months. Therefore, institutions that receive a low rating have an opportunity to take measures to improve their CRA performance between examinations. Nevertheless, the Federal Reserve System frequently must act on an application from a banking organization in the interim. Under these circumstances an applying institution with a CRA rating of 4 must submit evidence of corrective action to assure the Board that it has taken steps to improve its CRA performance. In addition, the Board may in some circumstances give weight to commitments for action by applicants with low CRA ratings as part of its consideration of convenience-and-need factors in the application. "Such commitments are not viewed as part of the CRA record but may be weighed with it, and they are considered an important aspect of the Board's role in encouraging improved performance" (FEDERAL RESERVE BULLETIN, volume 66, January 1980, page 32).

Board encouragement of improved CRA performance is particularly evident when institutions have received low CRA ratings, but have not been subject to comments or protests pertinent to the CRA. From December 1979 through August 1981, the Federal Reserve System reviewed twenty-six applications in which the applicant, one of its affiliates, or the bank to be acquired had received a less than satisfactory CRA rating. None involved CRA protests. This development is understandable because twentytwo of the banks were located in rural markets in which organized community groups are less active. Of these twenty-six applications, twentyfive were ultimately approved under delegated authority; the other was approved directly by the Board. Commitments to the Board for action by applicants were an important consideration in nine of these cases. In the rest, the applicants had either already taken steps to correct technical violations or made substantive changes to improve their CRA performance. The commitments were similar to those made in protested applications (cases 1 and 3). Overall, the Federal Reserve System has been able to use the application process to encourage improved CRA performance on the part of low-rated banks and has been able to act on these applications within the normal time frame.

### COMMUNITY AFFAIRS OFFICER

Public awareness of the functions of the Federal Reserve System has grown considerably in light of its responsibilities for establishing monetary policy and its functions as a bank regulatory agency. In recent years the System has increasingly dealt directly with both banking organizations and the general public in its role as a bank regulator—especially in connection with CRA enforcement. For example, examination procedures now require bank examiners to make "outside contacts"—contacts with public officials and other representatives of the community-in the course of the regular CRA compliance review.

Implementation of the CRA has raised questions among bankers and community groups. Some bankers have been confused about their responsibilities under the CRA regulations; and community groups have incorrectly interpreted the CRA to require depository institutions or the Federal Reserve System to allocate credit. Moreover, both groups have been unclear about the Board's policies with respect to protested applications. To provide assistance to the public, each of the Federal Reserve Banks has a Community Affairs Officer who serves as the principal contact at the Reserve Bank for questions about CRA and civil rights enforcement. In this context the CAOs provide banks and neighborhood organizations with information about the Board's procedures on applications and handling of protests. They also serve an education function and as conduits for information regarding various community development programs that are available through both the public and the private sectors.

The Board believes that the CAOs can contribute both to the communities in their Districts and to the System. As information disseminators, advisers, and catalysts, the CAOs can help communities overcome problems that can be addressed best by public and private participants acting together. Ultimately, the Board believes that an effective CAO can help to minimize the causes of CRA protests and facilitate the processing of applications and thus reduce costs of the application process to all parties.

### HOME MORTGAGE DISCLOSURE ACT **DEVELOPMENTS**

Virtually all objections by community groups to bank and bank holding company applications on CRA grounds have been based on an analysis of local residential lending activity by depository institutions. Community groups normally obtain this home loan information from statements banks make under the requirements of the Home Mortgage Disclosure Act. HMDA requires depository institutions located in standard metropolitan statistical areas (SMSAs) to disclose publicly the location of their residential loans. Institutions with less than \$10 million in assets are exempt from these requirements. HMDA was originally enacted in December 1975 and was extended with amendments and a five-year sunset provision in October 1980. In July 1981 the Federal Reserve Board issued a revised and simplified version of Regulation C, which implements the provisions of the act (see FEDERAL RESERVE BULLETIN, volume 67, September 1981, pages 720-24).

The revised regulation liberalizes the disclosure requirements. Regulation C continues to require identification by census tract of loans extended on property located in SMSA counties whose population exceeds 30,000; but covered depository institutions may now identify their home purchase and home improvement loans by county rather than by census tract or zip code if the property is located in a smaller SMSA county. In addition, the disclosure statement itself has been streamlined by the deletion of the column that summed the lender's conventional and government-backed home purchase lending activity. Elimination of this column will reduce required computation and paperwork costs associated with preparing the disclosure statements. These revisions, together with other, less significant changes, should lower compliance costs without any real reduction in benefits.

Despite several cost-saving changes, HMDA continues to be an expensive regulation. A 1979 study of HMDA by the Federal Home Loan Bank Board and the Federal Deposit Insurance Corporation estimated that compliance with the act cost the 8,200 covered institutions about \$5.8 million in 1977. Moreover, the costs of compliance fell disproportionately on those lenders marginally involved in the residential loan market, typically small commercial banks. According to the study, lenders extending fewer than 200 residential loans in a given year incur an average disclosure cost per loan that is nearly three times that incurred by institutions reporting more than 1,000 loans a year. Overall, the reporting institutions incurred an average cost of \$713 to compile and disclose their HMDA data in 1977.

A 1980 amendment to the original act directs the FFIEC to compile annually for each SMSA aggregate data by census tract for depository institutions that are required to disclose data under the act. In addition, the FFIEC is directed to produce tables for each SMSA that aggregate the lending patterns of covered institutions for various categories of census tracts grouped according to location, age of housing stock, income

level, and racial characteristics. Tables generated from the aggregation process are to be made available to the public by December 31 of the year after the calendar year on which the data are based. Aggregation of HMDA data will cost the FFIEC member agencies about \$300,000 a year, although the reporting institutions will not incur any significant increase in costs because of aggregation. The depository institutions are responsible for sending two copies of their annual HMDA statement to the appropriate supervisory agency. The various banking agencies then edit the statements and forward them to the Federal Reserve as the agency with primary responsibility for preparation of the annual aggregate reports.

The revised regulation imposes the new requirement that covered institutions display a notice in their lobbies of the availability of the HMDA data; the original regulation left the method of notification to the discretion of the management of the institution. In considering this provision, the Board felt that the old regulation was ineffective and that lobby notices would afford wider dissemination of information regarding the availability of the HMDA data. To reduce the burden of this requirement, the Board decided to bear the costs of producing a lobby notice and to make it available to lenders on request.

### APPENDIX: Community Reinvestment Act Protests Lodged through September 1, 1981

Case 1		Principal reasons for protest	Allegation that applicant failed to serve the credit needs of New York City residents

Allegation that applicant failed to comply with procedural requirements of CRA, failed to delineate properly the CRA community, failed to meet the housing-related credit needs of low- and moderate-income neighborhoods, engaged in racial discrimination in residential lending, and failed to communicate effectively with members of the community

Disposition

protest

Approval with commitments (to improve CRA training of bank personnel, participate in special lending programs, designate CRA officers, and investigate allegation of racial discrimination)

Significant policy positions

"Protestant has suggested that Applicant should make a commitment to achieve specified levels of housing-related lending. The Board does not regard the imposition of such requirements as appropriate, and does not believe that CRA requires this type of commitment." (FEDERAL RESERVE BULLETIN, volume 66, March 1980, page 249, note 10)

Case 6

Applicant Ameritrust Corporation, Cleveland, Ohio

Protestant Buckeye-Woodland Community Congress,

Cleveland, Ohio

Date Application—May 15, 1979; Federal Reserve System decision—February 21, 1980

Principal reasons for protest

Allegation that applicant failed to extend a sufficient amount of residential and small business loans, prescreened residential loan applicants, failed to assess credit needs, used ineffective and discriminatory advertising, and failed to comply with procedural requirements of CRA

Public meeting

Held on December 12, 1979

Disposition

Conditional approval with commitments: Condition that applicant maintain a register of all inquiries and applications for mortgage and home improvement loans made by persons at offices of applicant in Cuyahoga County. Commitments to: (1) improve its training programs for lending personnel to prevent future violations, (2) offer credit counseling to applicants or refer them to independent credit counselling organizations, (3) make public its real estate appraisal standards, (4) study the feasibility of making public its lending policies, and (5) make the public aware of commitments 2, 3, and 4

Significant policy

"The CRA requires the Board to assess each institution's record of meeting the credit needs of its community and then to 'take such record into account in its evaluation of an application for a deposit facility by such institution.' 12 U.S.C. 2902(2).

The Board believes that the CRA commits to the Board's discretion the evaluation of an institution's CRA record and the weight that record is given in the context of other statutory considerations. Accordingly, the Board may consider, among other things, the convenience to the communities served afforded by the expansion of well managed financial institutions, the efficiencies inherent in permitting an institution's management to determine its most appropriate corporate structure, and the procompetitive effects of de novo expansion in determining whether an institution's CRA record is consistent with approval in the context of particular proposals." (FEDERAL RESERVE BULLE-TIN, volume 66, March 1980, page 241, note 6)

Case 7

Applicant Landmark Bancshares Corporation, Clay-

ton, Missouri

Protestant Wellston Community Organization, St.

Louis, Missouri

Date Application—August 8, 1979; Federal Re-

serve System decision-November 30,

1979

Principal reasons for

protest

Allegation that applicant was going to attempt to drain funds from Wellston community through proposed new suburban branch location, had an inadequate residential loan record, and failed to ascertain

credit needs

Disposition Approval; protest withdrawn following ne-

gotiated settlement of CRA issues

Significant policy positions

Private agreement establishes residential lending goals for designated areas at below-market rates. The Federal Reserve Bank of St. Louis noted that, "since the Board of Governors has stated that neither the Bank Holding Company Act nor the Community Reinvestment Act, 12 U.S.C. 2901, et. seq., authorizes the Board to impose conditions to allocate credit, the Reserve Bank does not endorse any term of the agreement between applicant and protestant which may have such a result." (Federal Reserve Bank of St. Louis, news release, November 30, 1979, page 3)

Case 8

Date

Applicant Mid-Continent Bancshares, Inc., Belle-

ville, Illinois

Protestant East St. Louis Neighborhood Development Corporation, East St. Louis, Illinois

and the state of t

Application—August 15, 1979; Federal Reserve System decision—November 9,

1979

Principal reasons for protest	Allegation of inadequate residential lend- ing in low- and moderate-income neighbor- hoods and failure to communicate ade- quately with East St. Louis neighborhood residents	Significant policy positions	"Applicant is a major wholesale commer- cial bank involved in commercial lending and finance throughout the United States and the world, and the Board does not regard Applicant's efforts in these lines as
Disposition	Approval; protest withdrawn following negotiated settlement of CRA issues		being inconsistent with helping to meet the credit needs of its local community. Just as the CRA was not intended to establish
Case 9			fixed ratios between deposits and loans in particular neighborhoods, it also cannot be
Applicant	First National Boston Corporation, Boston, Massachusetts		read to require fixed proportions of retail or commercial deposits to retail or com- mercial lending." (FEDERAL RESERVE BULLETIN, volume 66, July 1980, page

# **Industrial Production**

### Released for publication November 13

Industrial production fell an estimated 1.5 percent in October, after a revised drop of 1.2 percent in September and of 0.2 percent in August. Again in October, most of the overall reduction occurred in durable materials, construction supplies, and autos; declines also occurred in production of most other materials and products. At 149.5 percent of the 1967 average, the October index was 2.9 percent below the recent peak of total industrial production in July.

In market groupings, output of consumer goods declined 0.9 percent in October, after similar decreases in the two preceding months. Auto assemblies were reduced about 11 percent to an annual rate of 5.5 million units. Production of home goods, such as appliances and furniture, was cut 1.1 percent further last month. Consumer nondurable goods declined 0.4 percent, due mainly to decreases in the output of food and fuel. Business equipment, reflecting large declines in manufacturing, power, and farm equipment, was reduced 0.5 percent, about half of the sizable drop that occurred in September. This was the third monthly decline in output of business equipment. Production of defense and space equipment edged up 0.2 percent in October, after average monthly increases of 0.5 percent in the preceding six months. Output of construction supplies was reduced an estimated 3.8 percent further, after a sizable decline last month, and was 10 percent below its recent peak last March.

Output of materials decreased 2.3 percent in October, reflecting a sharp decline in durable

Federal Reserve indexes, seasonally adjusted. Latest figures: October. Auto sales and stocks include imports.

materials—particularly metals and parts for consumer durable goods and for equipment. Nondurable materials declined 1.6 percent, as production of textiles, paper, and chemicals was curtailed sharply. Output of energy materials also was reduced considerably for the third consecutive month.

In industry groupings, manufacturing output was curtailed sharply in October, by 1.7 percent, after a sizable decline in September. Production of durable manufactures was reduced 1.9 percent, and nondurable manufactures 1.3 percent. Output of mining was unchanged from the previous month and utilities edged down.

# Statements to Congress

Statement by Nancy H. Teeters, Member, Board of Governors of the Federal Reserve System, before the Subcommittee on Consumer Affairs and Coinage of the Committee on Banking, Finance, and Urban Affairs, U.S. House of Representatives, October 21, 1981.

I am pleased to appear before this subcommittee to present the Federal Reserve Board's views on two bills—H.R. 3172, a bill to authorize loans at interest rates in excess of certain state usury ceilings, and H.R. 2501, the Credit Deregulation and Availability Act of 1981. H.R. 3172 would temporarily allow any type of lender to originate loans at a rate up to 1 percentage point above the Federal Reserve discount rate. H.R. 2501 would permanently remove all state limits on interest rates on business, agricultural, and consumer credit, and also would preempt state restrictions on transaction and access fees on consumer credit and payment services. Both bills, however, would permit any state to reestablish its own ceilings by enacting overriding legislation.

These two bills would thus broaden the preemptive provisions of the Depository Institutions Deregulation and Monetary Control Act of 1980. In addition to providing for the phasing out of interest rate ceilings on deposit accounts, that act permanently preempted state usury laws affecting most first-mortgage home loans and temporarily preempted state usury laws governing most business and agricultural loans by permitting lenders to charge a rate up to 5 percentage points above the discount rate. The act also extended to certain financial institutions the authority, previously granted only to national banks, to set rates on all types of loans up to 1 percentage point above the discount rate. States could override this provision, however.

The Federal Reserve Board for some time has been concerned about the adverse impact that usury ceilings can have on the availability of funds in local markets and has encouraged the states to remove these barriers to the flow of credit. As costs of funds have risen sharply in recent years, the supply of credit in areas with restrictive rate ceilings has been curtailed, especially to higher-risk borrowers, and loanable funds have been channeled to other investments or to geographic areas permitting a more competitive return. These developments have underscored the importance of allowing financial markets to function without hindrance from artificial constraints on loan rates, particularly in light of the prospect that eventually all controls will be removed on the rates that banks and thrift institutions can pay for deposits.

The Board's long-held view has been that interest rates for consumer loans and other types of credit are best determined in markets unconstrained by rate ceilings of any kind. If some ceiling is to be established, nonetheless, the Board remains vigorously opposed to using the discount rate as an index to which the ceiling would be pegged, as stipulated in H.R. 3172. We feel that to tie a usury ceiling to a tool of monetary policy would be inappropriate.

The Federal Reserve discount rate, as you know, is the rate of interest charged by Federal Reserve Banks on credit they extend to depository institutions. These institutions are subject to significant restrictions on the amount and the frequency of their discount window borrowing. Ordinarily, large institutions with access to national money markets are expected to repay these loans the following business day; smaller institutions that lack such broad market access may require accommodation for somewhat longer periods of time. In any case, the maturity of this special type of borrowing—largely to meet temporary requirements for funds—is ordinarily much shorter than is typical for business, agricultural, or consumer credit. The discount rate is thus a decidedly imperfect indicator of the course of interest rates on longer-maturity credits. Moreover, as an administered rate that reflects general policy considerations that are often complex, the discount rate often deviates from other market interest rates, even those of comparable maturity.

Both as an administered rate and a short-term rate, therefore, the discount rate may deviate significantly from market-determined interest rates in maturity categories more relevant to consumer, business, and farm loans. Tying the usury limit to the Federal Reserve discount rate would thus increase the likelihood that a statutory ceiling might at times be well below market interest rates, providing little incentive toward the desired increase in the availability of credit. That is especially the case in consumer lending, in which the going rates at any one time typically range widely depending on loan size, collateral (if any), and other determinants of the costs of administration and of credit risk. In light of these considerations, the Board much prefers the approach of H.R. 2501, which would remove ceilings entirely, over the discount rate formulation of H.R. 3172.

Notwithstanding its clear preference for the principle of outright suspension of rate ceilings, the Board continues to have reservations about whether the federal government should become involved at all in preemption of state law governing interest rates on consumer loans. Federal preemption is not necessarily or frequently an appropriate solution to localized problems, and seems to run counter to the expressed desires of the Congress and the administration to reduce the level of federal regulation in matters that can be dealt with by state or community governments. The Board would prefer that the counterproductive effects of usury ceilings be addressed by corrective steps at the state level, and we would note that a large number of states have acted on their own during the past two years to modify or remove rate ceiling statutes. If the Congress nevertheless chooses to take preemptive action, we endorse the inclusion of provisions that would allow individual states to override the federal legislation. Both bills under consideration, as noted earlier, contain such provisions.

It is also of concern to the Board that title II of H.R. 2501 would authorize and direct the Federal Reserve to publish official interpretations

about the scope and the application of the consumer credit preemption provisions of the act. The Board recognizes that these rulings could help resolve uncertainties about the relationship of the federal law to state usury laws. For example, uncertainties are raised about the scope of the preemption of state laws that restrict penalty charges or that govern which charges creditors may retain and how interest rebates must be computed in the event that customers prepay their obligations. Even so, it is unclear whether the benefits accruing to the public from these interpretive rulings would outweigh the costs of the regulatory burdens that would be imposed. More fundamentally, the Board is extremely reluctant to assume the role of interpreting these legal relationships and of resolving possible statutory conflicts. These clearly are functions primarily of a judicial character that, in the Board's opinion, should remain within the purview of the courts whenever possible. They are far removed from the Board's primary responsibility, which is the formulation of monetary policy.

Another special feature of H.R. 2501 is the removal of state controls on periodic fees associated with credit card or debit card accounts as well as transaction charges for credit cards or payment mechanism services. As in the case of interest rate ceilings, the Board favors the determination of such fees and charges by market forces. The prohibition in some states of account or transaction fees on credit card accounts has allowed customers who pay in full by the end of the billing cycle to use credit services without paying for them. Permitting transaction and access fees in such instances makes economic sense because these charges enable creditors to allocate costs in accordance with the use of specific services. However, as in the case of interest rates, the Board believes that corrective action at the state level would be the most desirable way to address the counterproductive effects of limitations on these fees and charges.

To summarize, the Board supports attempts to remove ceilings that can constrain the price of business, agricultural, and consumer credit. It also supports efforts to eliminate controls on fees that may be charged in connection with consumer credit accounts and payment services. The

Board continues to feel that linking ceilings to the discount rate is inappropriate and that state action rather than federal law would be preferable in governing pricing policies when no clear, compelling national interest is in question, as would seem to be the case with consumer loans.

Statement by Theodore E. Allison, Staff Director for Federal Reserve Bank Activities, Board of Governors of the Federal Reserve System, before the Subcommittee on Government Information and Individual Rights of the Committee on Government Operations, U.S. House of Representatives, October 22, 1981.

I am pleased to be able to discuss with your subcommittee the role of the Federal Reserve in the provision of payments mechanism services, particularly those that are often referred to as electronic fund transfer services.

In addition, I will explain why the Federal Reserve's operation of a highly secure and flexible network is needed to carry out the System's monetary policy and payments mechanism responsibilities and why technological obsolescence has made it necessary to replace the current network. This replacement project, incidentally, isn't at all remarkable—the System has upgraded its communications facilities every 10 to 20 years since 1915.

The Federal Reserve, as the nation's central bank, has a number of diverse, but highly interrelated, responsibilities—for monetary policy, bank supervision and regulation, and payments system operations. Our basic responsibility for the efficiency and integrity of the nation's payments mechanism dates from the Federal Reserve Act of 1913 and was confirmed by the Congress only last year with the passage of the Monetary Control Act of 1980. This legislation makes it clear that the Federal Reserve should participate in the payments mechanism in ways that will promote competition, contribute toward greater efficiency, and ensure an adequate level of payments services nationwide. These objectives will be accomplished by requiring the System to make available its payment services to all depository institutions and over the long run to charge for such services at their full cost. These are major developments in the evolution of the payments mechanism, and I will discuss the

implications later on in my statement. First, however, a brief history of the Federal Reserve's role in the payments mechanism may be helpful.

### THE U.S. PAYMENTS MECHANISM

Before 1800, exchange of currency (and gold) was the primary method for transferring funds. Paper checks became widely used in the mid-1800s, and they have played a dominant role in the U.S. payments mechanism ever since. With more than 30 billion checks per year moving through the economy and the cost of labor and transportation increasing, electronic payment systems are being developed to supplement the check system. Electronic fund transfers, which are only in their infancy, have the potential to improve greatly the security, efficiency, and reliability of the money transfer system.

Before the creation of the Federal Reserve, checks were cleared and funds were transferred through a network of interbank correspondent balances. In order for one bank's check to be cleared when deposited at another bank, the check moved through one or more correspondent banks. The number of correspondent banks involved in clearing a check depended on many factors including the distance between the two banks. This process led to pyramiding of correspondent balances and a slow collection system.

The establishment of the Federal Reserve in 1913 altered the U.S. payments system in at least two important respects. First, it reduced the need for banks to maintain a complex network of correspondent balances to clear checks and other payments: Federal Reserve member banks could use a single reserve-account balance to transfer funds by wire. Indeed, the Federal Reserve Act directed that reserve accounts be used to clear payments transactions among depository institutions. Today, correspondent balances are still used to clear payments, primarily of smaller depository institutions. Book-entry accounting

using reserve accounts, however, has all but eliminated the need to ship currency between banks to settle payments flows between geographic regions of the United States.

The second change in the payments system was the establishment of a national wire transfer network to provide access to these centralized reserve accounts. In 1915 the wire network was a telegraphic communication system. It has evolved into a high-speed, computerized network. Besides its role in the payments mechanism, the wire network is a vital element in the conduct of monetary policy and the operation of the government securities market.

Despite the changes in the mechanism used to carry out these responsibilities, however, the basic central banking role performed by the Federal Reserve has not changed since 1913.

# FEDERAL RESERVE WIRE TRANSFER AND SETTLEMENT OPERATIONS

The 12 Federal Reserve District Banks and their 25 branches maintain reserve accounts and clear directly and indirectly with all depository institutions in the nation. A depository institution that wishes to transfer funds from its reserve balance to another depository institution uses the Federal Reserve's wire transfer system. Reserve balances are transferred by depository institutions to purchase or sell federal funds (that is, to make interbank loans), to move correspondent bank balances from one institution to another, and to send funds to another bank on behalf of its customers. The Treasury Department and other federal agencies maintain accounts at Federal Reserve offices, and they use these accounts and the wire transfer system extensively to disburse and collect monies. In 1980, 43 million transfers of reserve balances took place, involving an aggregate of \$78 trillion.

The settlement of funds transfers and reserveaccount maintenance functions of the wire transfer system contribute to an efficient payments mechanism. Settlement through the Federal Reserve, with the full force and power of a central bank behind it, substantially reduces the risk of settlement failure, which could result in serious disruptions in financial markets.

# THE WIRE TRANSFER NETWORK AND MONETARY POLICY

Depository institutions must have access to their reserve accounts to adjust them in response to fluctuations in their reservable liabilities. One way this access is provided is by the wire transfer system. This system is also used by the Federal Reserve, the Treasury, and depository institutions to transfer U.S. government and agency securities. It is also through this network that Federal Reserve open market operations are facilitated. Open market operations are the primary method used to expand or contract the money supply. The wire transfer system improves the efficiency of open market operations by promoting a large, secure, and liquid market for government securities. This arrangement not only facilitates the marketing of government debt but also results in lower cost to the Treasury.

# OTHER USES OF THE FEDERAL RESERVE'S COMMUNICATION SYSTEM

The Federal Reserve's communication network is also used for two other purposes. First, it transmits timely bank deposit data to the Federal Reserve Board for day-to-day monetary policy purposes. These data include daily deposit information on 14,000 depository institutions. Second, it transfers recurring payments of small dollar value such as direct deposit of payroll and bill payments among automated clearinghouses (ACHs). The ACH was established jointly by the banking industry and the Federal Reserve as a vehicle to clear and settle certain types of electronic payments. In 1980 about 60 million commercial and 160 million Treasury payments were processed through the ACH. Incidentally, more than 30 percent of the social security recipients in the United States have elected to have their benefits sent through the ACH mechanism.

The ACH, we believe, has the potential to offer significant benefits to the public in terms of decreased cost, increased convenience, and greater security for certain types of payments. This judgment is shared by the financial industry, by the federal government—which is the largest user of the ACH, and by the National Commis-

sion on Electronic Fund Transfers. The National Commission on Electronic Fund Transfers further concluded that Federal Reserve involvement in the operation of ACHs was necessary because the private sector was not yet able to operate ACH facilities economically without this assistance.

### THE FEDERAL RESERVE'S COMMUNICATION NETWORK

The Federal Reserve uses data processing and communications to receive, process, and deliver payments. The computers are general data processing machines of the type used by most large, multipurpose organizations, both public and private. Our need to transmit data among the Federal Reserve offices, the Board, and the Treasury is accomplished through three communications networks-the interdistrict Fed Wire, the interdistrict bulk data network, and the local District networks.

On the Fed Wire more than 175,000 messages containing wire transfers of funds and securities, along with administrative information, are being communicated each day among the Federal Reserve Banks through a central store-and-forward message switch in Culpeper, Virginia. This network, including its extensions from head offices to branches and offices, was installed between 1969 and 1974; it replaced an antiquated semiautomated network that was installed in 1953.

A bulk data network, which uses high-speed switched circuits to connect the 12 Federal Reserve Banks and the Board of Governors, was implemented in 1976. This network is used to transmit bank deposit data and ACH payments.

Each Federal Reserve Bank has also implemented its own local network between the head office and its branches. These facilities are used to move accounting data and other local traffic within the District.

### THE NEW FEDERAL RESERVE COMMUNICATIONS SYSTEM

As it has done on the average of every 10 to 20 years, the Federal Reserve System is now replacing its communications network. The current upgrading is needed because the present system and its technology are 10 years old, and more cost-effective and reliable technologies are available. Moreover, the present system relies in large part on an American Telephone and Telegraph Company service that will terminate in 1983, and its central switch is maintained by a vendor that will cease its maintenance responsibilities in 1985. Within the Federal Reserve, the replacement project is known by the acronym FRCS-80 (Federal Reserve Communications System for the Eighties). Conceptual planning for FRCS-80 began in late 1975 on the assumption that a more efficient communications technology would be available in the 1980s and that the Federal Reserve System would be making its payment services available to all depository institutions. These assumptions have proved correct with the development of packet switching technologies and the passage of the Monetary Control Act of 1980.

The new system will be a general-purpose data communications network that will satisfy the Federal Reserve's internal communications requirement of providing services to the financial community, the Treasury, and other government agencies. FRCS-80 will be used for the transmission of the same data that is sent over the current network.

The functions of the existing separate communications networks will be consolidated into a single network providing better service at less cost. Historically, as the need for new data communications applications emerged, the most frequent solution was the implementation of independent data communications systems tailored to a single application. With FRCS-80, new communications requirements can be met without additional networks or major design changes.

FRCS-80 will do the following:

- Improve the reliability and efficiency of the Federal Reserve's communications operations.
- Reduce the total cost of System communications through a more efficient use of circuits.
- Increase security of data moving within the Federal Reserve System.

The conceptual design of FRCS-80 is that of a distributed "packet-switched" network. No single central switching site, such as the current switch in Culpeper, Virginia, will be required to coordinate the operation of the network. Rather than revolve around a computerized hub, as does the current Fed Wire, the computer power of FRCS-80 will be distributed among the Federal Reserve offices.

As part of the process of selecting a new communications network, the Federal Reserve compared two network approaches—a public access network and a private network. The private network approach was chosen because of security risks involved in using a public network and the lack of control over the flexibility of the public network. Flexibility is critical because the Federal Reserve must respond rapidly to changes in legislation or monetary policy.

After evaluating proposals from several vendors, the Federal Reserve awarded a \$10 million contract to Northern Telecommunications, Inc., to provide hardware and software and to install the network on a turnkey basis. Recently a factory acceptance test was completed, and equipment is now being installed in the Federal Reserve offices. The network is expected to be fully operational in early 1983.

### PRICING OF FEDERAL RESERVE SERVICES

The Monetary Control Act of 1980 required the pricing of certain Federal Reserve services. These services include all payments mechanism services, such as check processing, wire and securities transfers, settlement, and ACH transactions. We are now charging for all financial services except cash transportation. Charges for cash transportation are scheduled to commence in early 1982. Over the long run, the revenues derived from the sale of financial services will cover all Federal Reserve costs in providing them, including an amount to reflect privatesector costs not incurred by the Federal Reserve, such as taxes and financing costs. As a result, services will be offered competitively, allowing the private sector adequate opportunity to enter or expand its share of the market for payments mechanism services.

Even before pricing began, significant competition already existed in check processing. Large money center correspondent banks and private

service bureaus clear a substantial proportion of total checks written. Bankwire, CHIPS, and SWIFT are private-sector competitors for domestic and international transfers of large-dollar funds.1

The pricing of ACH operations, because of economies of scale and potential for improving the efficiency of certain types of funds transfers, is based temporarily on long-run costs to encourage the development of such operations. In the near future, the price of ACH services will be based on actual costs, and as ACH volume grows, we expect competitors to enter this market.

### THE ROLE OF THE FEDERAL RESERVE IN POINT OF SALE

We understand that certain parties are concerned that FRCS-80 is being designed to accommodate point-of-sale switching capabilities. The National Commission on Electronic Fund Transfers in 1977 reported to the Congress on the role of the federal government in electronic funds transfer. The commission recommended "that the federal government not be involved operationally, at present or in the foreseeable future, in point-ofsale switching and clearing facilities except for the provision of net settlement among depository institutions." The design of FRCS-80 does not contemplate any point-of-sale switching activities, and the Federal Reserve has no intention of getting involved in such activities.

### **PRIVACY CONSIDERATIONS**

Before I conclude my remarks, I would like to explain briefly the Federal Reserve policy on

<sup>1.</sup> The Clearing House Interbank Payments System (CHIPS) is a nongovernmental facility that clears international transactions for its 100 members. It is operated by the New York Clearing House Association, which has as its controlling members the 12 largest New York City commercial hanks

The Society for Worldwide Interbank Financial Transactions (SWIFT) is a cooperative company located in Belgium that operates a communications network to exchange payment instructions among its more than 800 members.

retention and disclosure of electronic payment records containing data on individuals. I will focus on our ACH policy because data identifying an individual is rarely part of a wire transfer.

While the ACHs do not process enough information to serve as a threat to privacy, the Federal Reserve has taken affirmative steps to insure the privacy of data in our possession. Various ACH records contain individual and business names, bank account numbers, and social security and other individual identification numbers. Such transaction data are retained by Federal Reserve Banks only for the limited time needed to fulfill operational requirements. Records maintained on computer media are retained no longer than 30 business days following settlement of the transaction. Microfiche historical records containing individual transaction data are retained for 60 business days following settlement. Microfiche historical records that do not contain individual transaction data are retained for one year. At the end of their respective retention periods, all records are destroyed.

The Federal Reserve data-disclosure policy pertains to all payments services, including the ACH. The Federal Reserve Banks will not disclose individual transaction data except to parties that are part of the transfer, such as the originating and receiving financial institutions, or when a grand jury subpoena or an order of a court with proven jurisdiction is presented.

### **CONCLUSION**

The subcommittee's invitation for the Board to testify at this hearing requested the Federal Reserve to comment on what it believed to be its appropriate role in the provision of telecommunications services. As I have explained, the Federal Reserve offers payments services to the banking industry and uses telecommunications for its internal operations. The Federal Reserve clears, delivers, and settles interbank payments. In doing so, we use computer and telecommunications equipment and facilities, and we appreciate the subcommittee's concern that the provision of these facilities occurs in a competitive environment. 

Statement by Lyle E. Gramley, Member, Board of Governors of the Federal Reserve System, before the Subcommittee on Domestic Monetary Policy of the Committee on Banking, Finance and Urban Affairs, U.S. House of Representatives, October 27, 1981.

I am pleased to appear before you today, on behalf of the Board of Governors of the Federal Reserve System, to discuss the important questions that you have raised regarding the impact of federal deficits on the supply, distribution, and price of credit, on inflation, and on the conduct of monetary policy.

I would like to begin with the question of the relationship of budget deficits to monetary policy. A common and serious misconception exists that federal deficits must be financed by creating money. In fact, in the large and sophisticated capital markets of the United States today, sizable federal deficits can be financed without intervention or assistance by the Federal Reserve. The Treasury sells securities in the open market at the interest rate necessary to attract a sufficient volume of bids. Whether the Federal Reserve System absorbs into its portfolio any of the resultant increase in Treasury debt depends entirely on the amount of reserves that is needed to support the growth rates of money that the Federal Reserve has targeted.

Monetary policy has not always been so independent from debt management policy. In the period of large deficits during World War II, the Federal Reserve bought the amount of Treasury securities necessary to peg interest rates at low levels. The result was a lack of control over growth of money and credit, and an excessive buildup of liquidity that contributed to the inflation of the immediate postwar years. In 1951, the "Accord" between the Treasury and the Federal Reserve freed the System to conduct an independent monetary policy. For a while thereafter, the Federal Reserve did avoid actions that might substantially alter market conditions in the midst of a Treasury financing operation—the policy known as "even keeling." But even this practice was ended some years ago when the Treasury adopted the more flexible technique of selling securities by auction. Thus, there is no necessary or mechanical link between federal deficits and the conduct of monetary policy.

This certainly does not mean, however, that sizable federal deficits do not affect financial markets or that they are insignificant in the struggle to reduce inflation. On the contrary, when the Federal Reserve is restraining the growth of money and credit to slow inflation, as we are now doing, the credit demands of the federal government have enormous significance for interest rates and the ability of private borrowers to obtain funds. The federal government, in effect, takes its place at the head of the credit line, and since aggregate credit supplies are being constrained, private borrowers are squeezed out.

Whether private credit use is cut back by rising interest rates or by nonprice rationing of credit depends on the institutional environment. In the past, financial markets were characterized by a good many barriers to flows of funds, the most important of which were low ceilings on rates payable on time and savings deposits and legal barriers on the interest rates that lenders could charge or that borrowers could pay. In those circumstances, a rise in market interest rates led to disintermediation at depository institutions and a decline in the availability of credit to potential homebuyers, farmers, small businesses, and others. Usury ceilings also served to reduce mortgage credit availability, and laws and constitutions of many states periodically prohibited states and their political subdivisions from paying going rates of interest in the money and capital markets.

Today, with most of those barriers gone, the nonprice rationing mechanism has been largely dismantled. Borrowers generally are able to obtain credit if they are able and willing to pay the going rate. This means, however, that interest rates must rise to higher levels than they used to in order to reconcile overall credit demands with available credit supplies.

Those interest levels will be very high if inflationary pressures are strong and expectations are widespread that inflation will continue. Lenders will then demand an inflation premium, and borrowers will be more willing to pay it. In view of the rapid rates of inflation that we have experienced in the recent past, the inflation premium in interest rates is large. A lasting reduction in interest rates will only occur as we bring inflation down. That is why monetary policy must remain steadfastly on an anti-inflationary course.

The burden of high interest rates is very uneven on the various sectors of our economy. The housing industry has been devastated; many auto dealers have closed their doors because of declining sales and extremely high costs of financing inventories; small firms in other lines are also going out of business. The thrift industry is experiencing a severe squeeze on earnings; high interest rates will also impede the rise in business capital formation that we need for improvement in productivity performance, thus offsetting some of the beneficial effects of the business tax cuts included in the Economic Recovery Act of 1981. Meanwhile, some industries—such as defense, energy production, and high technology appear to be thriving despite extraordinarily high interest rates.

Heavy federal demands in credit markets, to be sure, do not always imply high interest rates or appreciable crowding out of private borrowers. For example, if the deficit to be financed were solely the consequence of a decline in revenues that occurred because of a recession, the weakening of private credit demands would more than offset the rise of federal borrowing. The important problem we face today, however, is a persistent long-run growth in the proportion of funds raised in the money and capital markets by the federal sector.

The table shows that the federal share of overall borrowing has been on an uptrend over the past 25 years. The first column shows the sharp rise in the proportion of total credit flows that is preempted by direct Treasury borrowing. A pause in the upward trend occurred in the latter part of the 1960s when the economy experienced a prolonged cyclical expansion. The strength of incomes and the belated Vietnam tax surcharge elevated tax receipts and reduced the federal deficit. Subsequently, however, the share rose again, and in the latter half of the 1970s was running at close to 20 percent.

If borrowing by government-sponsored agen-

cies—such as the Federal Home Loan Banks and the Federal National Mortgage Association—is included in the totals, the share of total credit flows absorbed by the federal sector is somewhat higher. The precise significance of this calculation, however, is hard to judge. Some of the borrowing of sponsored agencies merely makes available to borrowers credit that they would have obtained through private channels anyway; in those cases, the total demands on credit markets are not increased.

Another important aspect of federal intervention in credit markets is private borrowing under federal loan guarantees. In the 1940s and 1950s, federal loan guarantees were significant in the mortgage market as a result of the strong demand for housing and the high risks that lenders attached to nonguaranteed mortgages following the disastrous experience of the Great Depression. As these factors became less important, federal mortgage guarantee activities shrank relative to the size of the mortgage and total credit markets, but by the 1970s new types of guarantee programs began to swell the total once again.

The significance of federal loan guarantees for assessing the strains on credit markets emanating from the federal sector is also unclear. All we can say with certainty is that the amount of direct Treasury borrowing understates to an unknown degree the total demands of the federal sector on credit markets. We also know that a sizable proportion of total credit flows are being influenced one way or another by the activities of federal credit programs. Indeed, by the latter half of the 1970s, fully a quarter of the funds raised by the financial and nonfinancial sectors of the economy represented either direct Treasury borrowing or federal intervention and redirection of credit flows through the activities of sponsored agencies and guarantee programs. In fiscal 1981, the figure was well above 30 percent.

It is essential that federal deficits be controlled if strains in financial markets are to be reduced and if the private sectors of the economy are to increase their share of real resources without the often inefficient intervention of special federal credit assistance. What are the prospects for the federal deficit? Estimates for the deficit in fiscal year 1982 vary widely, but it really is the outlook for subsequent years that is most troubling. For example, the estimates of the Congressional Budget Office suggest that, even if all of the spending reductions anticipated by the First Concurrent Budget Resolution were implemented, the federal deficit would be \$50 billion or larger in each of the years through 1984. This projection, moreover, assumes \$50 billion in additional spending reductions by fiscal 1984, which have not yet been enacted, and a fairly optimistic outcome for real economic growth. In the absence of the additional \$50 billion in expenditure reductions assumed, the deficit in fiscal 1984 could be \$100 billion or even larger.

Continuation of deficits of this magnitude would imply persistent pressures on interest rates. Uncertainties regarding the ability of the administration and the Congress to take the actions necessary to change these prospects are evident in the bond markets, in which long-term interest rates have remained near peak levels even while short-term rates have receded markedly over the past couple of months.

In this setting the alternatives are clear. One is to move ahead with further reductions in federal spending. To achieve a balanced budget by 1984, we will probably need reductions in outlays in fiscal 1984 of somewhere around \$100 billion. If cuts of that magnitude are not feasible or are deemed by the Congress to be unwise, the only alternative is to restore some of the cuts in revenues contained in the Economic Recovery Act of 1981.

Let me conclude my remarks by noting that we are seeing signs of progress in the fight against inflation. Both consumer and producer prices have risen less rapidly this year than last; indeed, we have seen more progress in reducing inflation in 1981 than almost anyone had expected. The first signs of progress are also beginning to appear on the wage front as well. Contract reopenings and wage concessions have occurred in a number of industries and the environment for the new round of union contract negotiations that will begin next year should favor fewer inflationary settlements than have characterized the recent past. Significant progress in conservation of energy has narrowed the latitude of the Organization of Petroleum Exporting Countries to impose major increases in oil prices. And, in 1982, the upward pressure on wages and costs from increases in the minimum wage and social security taxes will be less than in the current year.

We have reached a critical stage in our fight against inflation. We can consolidate our gains and move forward to price stability. If we do not, we will almost surely see a return to double-digit inflation.

The Federal Reserve is determined to stay with a course of monetary policy that will reduce inflation. Eventually, the course of monetary policy on which we are embarked will, in fact, reduce inflation and bring down interest rates in the process. Our country will achieve the goals of reasonably stable prices, lower interest rates, and a more vigorous and prosperous economy much sooner, however, if the Congress and the administration work together to eliminate the prospects for very large federal deficits in the years ahead.

Statement by Paul A. Volcker, Chairman, Board of Governors of the Federal Reserve System, before the Committee on Banking, Housing, and Urban Affairs, U.S. Senate, October 29, 1981.

I am happy to appear before the banking committee this morning to discuss the legislation now before you. As you well know, the proposed legislation ranges over a wide field. While some of its provisions are technical, taken as a whole the proposals could have profound implications for our financial system.

The discussion engendered by the bill is timely, for we are obviously in the midst of a period of enormous financial change. Those changes are forced by developments in the marketplace, and change will take place whatever the Congress decides with respect to this legislation or whatever the approach of the regulatory agencies. What is at issue—and what we can influence—is the speed and direction of that change; the legislative proposals before you challenge all of us to consider more explicitly the kind of a financial structure we would like to see in the years ahead.

In providing a focus for that consideration—not just in concept or theory, but in terms of concrete legislation—you have provided a signal public service, and we welcome the opportunity to participate in these hearings.

In their specifics, the bills before you are, of course, both complex and controversial. Moreover, broad as they are, some of their provisions inevitably raise further pressing questions, including the appropriateness of geographic restrictions on the operation of depository institutions, the relationship between commerce and banking, and the validity of the remaining legal "compartmentalization" in the provision of financial services. My understanding is that you intend to consider some or all of those issues next year; except to note their relationship to some of the provisions of the legislation, I will not attempt to deal with them this morning.

I would like to preface the more particular comments of the Federal Reserve Board with some comments on the forces at work in the marketplace bearing on our financial structure and then to suggest the general framework within which we have approached the specific issues. The statement will then summarize our position on the specific provisions of the bills.

The efforts of individuals, businesses, financial institutions, and markets to adapt to inflation and to the extraordinarily high current level of interest rates that has accompanied inflation are among the most potent factors pushing toward change in financial structures and behavior. The stresses on thrift institutions, the competitive inroads made by money market mutual funds, and the controversy over the phasing out of interest rate ceilings at depository institutions are only some of the most obvious examples of the forces at work tending to alter—and even undermine—the established institutional structure. Regulators and the Congress alike have the responsibility for responding to these pressures in a constructive way. We can and should ease those strains that arise from elements in the legal or regulatory system that are truly outmoded. When appropriate, we can provide transitional financial assistance. We can also accelerate consideration of more fundamental reforms to minimize current-and potentially recurrent-problems.

At the same time, let us also recognize that no legislative or regulatory changes can assure a sound and efficient financial system in the face of accelerating inflation, and that we need not and should not plan on inflation as a way of life. As we succeed in bringing inflation under control, some of the forces and pressures for change so evident today in our financial system will subside. In appraising particular proposals for structural change—changes likely to be with us for many years—we need to look beyond the present transitional and market problems to a vision of what is appropriate for the longer run.

There can be little doubt that structural change is inevitable and desirable, whether the current exceptional stresses quickly abate or not, whether interest rates are high or low or fluctuate widely in between, or whether "transitional" or "emergency" measures are adopted to ease current strains. Irreversible technological change is fundamentally altering the financial environment; modern data processing capabilities, instantaneous and cheap communications, and relatively inexpensive and fast travel are all breaking down the traditional geographic or insti-

tutional barriers to competition and contributing to the rapid growth of new institutions able to exploit new technology. Old concepts of what is banking and what is not are blurred. Even national borders are losing their significance. We have an array of financial institutions and instruments that simply were unknown a decade or two ago. The typical customer—business or individual—no longer feels so dependent on his local bank or savings and loan for financial services. Even the distinction between commerce and finance—embodied in law and tradition—has been eroded.

In the circumstances, many institutions are understandably concerned not only about the strains arising from current market conditions but about the prospects for their industries over the years ahead and whether they, as individual institutions, will have the ability to compete fairly and effectively in the future. To be sure, some of those concerns may be exaggerated or inconsistent; banks, thrift institutions, and investment houses have long perceived strong competitive thrusts from each other, yet all have survived and roughly maintained or even enhanced their share in the provision of credit as more of the total market for credit has become institutionalized. But the pervasive air of uncertainty about the future role of financial institutions itself calls for reexamination of the legal framework and for building a new consensus about the desired institutional structure.

Given the national responsibilities for monetary policy and for maintaining the safety and efficiency of our financial system, we—and you—must be sensitive to unreasonable or unnecessary regulatory structures and to threats to the stability and growth of depository institutions that have long been the backbone of our credit markets and are the transmission channel for monetary policy. We should also consider whether or not, in instances when regulation of depository institutions remains essential, it may be necessary to bring newer institutions within the regulatory framework for reasons of equity, safety, or monetary policy.

The bills before you address some of these long-term issues, as well as the more pressing immediate needs. The testimony you have already heard reflects the fact that proposals affecting the competitive position of particular

industries are bound to be contentious and difficult to resolve. Nevertheless, they must be dealt with, recognizing that the intramural disputes of regulated institutions need to be placed in the broader context of aggressive competition from newer institutions and from the open market.

Against that background we have assessed the implications of the specific changes proposed in S. 1720 for our financial structure and its evolution in the years ahead. At the same time, we would strongly urge that the debate on longerterm structural issues not deter your immediate attention from the provisions of the bill needed to help deal with the current situation in the distressed thrift industry-specifically those provisions common to the so-called Regulators' Bill adopted yesterday in the House.

### A FRAME OF REFERENCE

The objective of reform of banking and financial regulation is, in essence, simple enough. We, as a nation, want to preserve and nurture the strong competitive forces that assure that our financial system remains the most efficient and innovative in the world. We also want to maintain the discipline necessary for the strength and solidity of our depository institutions—institutions that are the essential nucleus of a stable financial system. And we must also preserve our ability to conduct an effective monetary policy.

The difficulties and complexities arise in effectively blending the objectives, all of which are important, but which in application may conflict. The existing legal and regulatory structure is rife with such conflicts, and the temptation is strong to dismantle it wholesale and to start afresh. Certainly, a structure put in place in quite different circumstances in the early 1930s is outdated in important respects by technology and by the growth of competitive nonbanking institutions. But in approaching change, our conviction in the Federal Reserve is that some basic building blocks of the present system should be preserved, and the presumption is that needed change can be fit into that framework.

Specifically, the laws and traditions of this country embodying a separation of banking and commerce still seem valid to us. That tradition rests on concepts that concentration of economic power can be dangerous, that the potential for conflicts of interest in a service so vital as the extension of capital and credit should be minimized, and that there is a special public interest in the safety and soundness of our depository institutions—an interest that does not, and should not, extend in the same way to other businesses. In some respects, our concerns about preserving a broad dividing line between banking and commerce are reinforced by technological change. For example, advances in communications and data analysis could potentially enhance the capacity and reach of financialcommercial conglomerates, raising the risk of dangerous concentration of power and conflicts of interest.

The case for separation is less clear with respect to banking and investment banking, and in practice, the line between banking and other financial services has become increasingly blurred. Banks, investment banks, and business firms have all long been involved in extending credit to both consumers and businesses, and some substantial overlapping in the provision of services by different types of institutions—bank and nonbank—is both inevitable and useful in enhancing competition without damage to other essential functions. However, at the margin, we believe distinctions can and should be made. For instance, the risks and uncertainties, as well as the greater potential for conflict of interest, in handling equity financing suggests that that function should remain outside commercial banking (or depository institutions). Underwriting and marketing of corporate securities to the general public by banks raise questions of risk, selfdealing, and conflict of interest. Conversely, to lodge transactions balances and responsibility for the payments system within the regulated (and insured) "banking" sector has strong advantages.

A large variety of services often thought of as financial fall between these extremes. S. 1720 touches on insurance, some securities activities, and mutual funds. Some services related to finance—including management consulting, travel services, and data processing and transmission, in particular—deserve consideration as well as possible areas in which banking might reasonably overlap commerce with benefits for competition and convenience.

In considering these and existing areas of overlap, a second element in our framework is relevant: to the extent regulation is necessary at all, institutions providing the same services should be subject to substantially the same regulation in providing these services, regardless of their form of organization. A number of the distortions and inequities in financial markets today result from failure to adhere to this principle. An obvious case in point is the absence of reserve requirements on money market mutual funds even when those funds have the essential attributes of transactions balances in depository institutions.

Obviously, consistency in regulatory treatment should be achieved by removing unnecessary regulatory constraints as well as by closing loopholes in the application of those regulations deemed essential. For example, one of the most powerful arguments for eliminating ceilings on interest rates paid by depository institutions is the competition from nonregulated institutions and from the open market itself.

The third element in our thinking has implications for assessing several provisions of S. 1720: our regulatory system should encourage a degree of diversity among institutions, large and small, specialized and generalized, "retail" or "wholesale" oriented. Traditionally in the United States, this concern has provided much of the rationale for geographic limits on banking, and for a separate legal and regulatory structure for banking and thrift institutions. Both technology and market incentives are breaking down geographic and functional distinctions. Like it or not, in the marketplace we obviously have interstate banking and active competition between banks and thrifts in large measure. Moreover, depository institutions are competing every day with other, nonbank providers of similar financial services. The only realistic question can be how the strong forces for further overlap and "homogenization" can be channeled most constructively. In some cases, time is needed for adaptation. Some elements of diversity in the provision of financial services that have served us well can reasonably be preserved. Regulatory policies can be more sensitive to the particular problems and particular needs of the smallest institutions.

The fourth and last general point I would like to make is that public policy must attach particular importance to maintaining the safety and soundness of depository institutions. Depository institutions handle the bulk of the payments of services and transaction settlements in our economy-and indeed much of the enormous volume of dollar transactions abroad. They are the principal repository of the financial assets of most households and businesses. In recognition of the importance of maintaining confidence in the system and assuring its stability, banking and thrift institutions have been provided with deposit insurance. At the same time, those institutions are subjected to substantial supervision and regulation with respect to capital, to lending policies, and to other operations significant for their safety and soundness. As a result, they have certain competitive advantages and constraints; in those respects, depository institutions are, and should remain, different from other financial enterprises. In other words, there are limits on the degree to which competition of depository institutions with other institutions can be unfettered.

In commenting on the specific provisions of S. 1720, reference, when appropriate, will be made to this general framework. As will be apparent in our comments, we consider a few provisions of the bill of urgent importance. Other positions may be relatively noncontroversial. Those sections dealing with "Glass-Steagall" issues and the powers of thrift institutions—because of their important implications for the evolution of the system—in our judgment deserve particularly close scrutiny but have fewer implications for the immediate problems facing depository institutions.

# IMMEDIATE NEEDS— "THE REGULATORS' BILL"

S. 1720 incorporates in title I the main provisions of the so-called Regulators' Bill adopted by the House. We would strongly urge that, whatever action is taken with respect to the remainder of the bill, and without prejudice to the remaining provisions, these sections be enacted immediately.

These provisions are in no sense a fundamental solution to the problems of the thrift industry or a substitute for structural reform. They may, however, be of critical importance in providing the regulatory agencies with the flexibility and authority needed to deal with transitional problems posed for the thrift industry by the extraordinarily high level of market rates.

Title I has two main elements. The first recognizes that, in circumstances like the present. otherwise viable thrift institutions may face depletion of existing capital as they work toward restoring their earnings position. The Federal Deposit Insurance Corporation (FDIC) and the Federal Savings and Loan Insurance Corporation (FSLIC) would be provided clear authority to supply capital temporarily to such institutions—capital that should be repaid from future earnings—so that their operating capability can be maintained during a transitional period, and at the same time reducing the potential loss to the insurance funds from an avoidable failure. Under present law, the powers of the FDIC, in particular, are so closely circumscribed as to make it difficult or impossible to exercise such an option except in the case of "assisted" mergers, thus unnecessarily raising questions about the ability of some well-managed, basically sound institutions to remain viable as independent entities.

The second element in the bill would facilitate orderly mergers of failing thrift institutions with healthy out-of-state thrift institutions or, as a last resort, bank holding companies in instances when such mergers are not practicable with thrift institutions within a state. Authority for acquisition in-state or out-of-state of thrifts by bank holding companies already exists in other statutes. As a matter of policy, that authority has not been exercised. The purpose of the new authority would be to provide clear and specific guidance by the Congress as to the circumstances in which such acquisitions might be permitted and to cut across obstacles in the law of some states to the conversion of mutual institutions into stock form, a necessary prerequisite to acquisitions by bank holding companies.

As I have indicated to the committee before, without this legislation the Federal Reserve, faced with an emergency situation, may well find it necessary to act under existing authority to

allow a bank holding company to acquire a thrift institution. Should that authority be used, it is not clear that such acquisitions would subsequently be confined to emergency situations. Moreover, state law in some instances could frustrate the objective. In these circumstances, action within the framework of the new limited and defined authority would appear preferable at this time.

# OTHER PROVISIONS READY FOR PROMPT ACTION

While they are not of the same degree of urgency as title I, S. 1720 contains a number of more technical provisions that the Board considers both a distinct improvement in regulatory practice and relatively noncontroversial.

Section 210 of the bill would amend section 23A of the Federal Reserve Act, governing bank relationships with its affiliates, to simplify the administration of this section while improving its effectiveness. Sections 221–33 would amend the Financial Institutions Regulatory and Interest Rate Control Act of 1978 (FIRA) to reduce burdensome operating requirements and remove some restrictions necessary to its purpose. Indeed, we believe further steps could be taken to that end, and we would be glad to work with the committee.

The Federal Reserve also supports section 702, which would exempt deposits at international banking facilities from federal deposit insurance assessments, placing such deposits on a parity with deposits at overseas branches of U.S. banks. We believe such parity is important to the effective operation of the international banking facilities authorized by the Board, which are to begin operation in December. Should the Congress not wish to foreclose the possibility of the FDIC assessing deposits of both international banking facilities (IBF) and foreign branches at some future time, the basic purpose of parity in treatment could be achieved by requiring that IBF deposits be treated in the same manner as foreign branch deposits rather than by permanent exemption. While we strongly doubt that assessments on such deposits are appropriate now, the alternative approach would permit the

FDIC to reconsider that question in the future if it so desired.

PREEMPTION OF STATE LAWS: USURY CEILINGS, "DUE-ON-SALE CLAUSES," AND TRUTH IN LENDING

Several provisions of S. 1720 provide for federal preemption of state law, in each case permitting states to override the preemption by new legislation within three years after the effective date of the provision.

In approaching questions of this kind, the Board is reluctant to support preemption of state law, but that may be necessary when a clear national interest is at stake. In earlier testimony, we have recognized the adverse impact that usury laws can have on the availability of credit in local markets and have urged the removal of such ceilings. But we have also suggested that further action in that respect might reasonably be left to individual states. That preference was expressed in the knowledge that action by the Congress last year already preempted state usury ceilings for the bulk of bank lending: remaining state usury laws that are binding affect mainly local consumer lending, for which the national interest is less clear.

Should the Congress wish to act in this area, the Board would strongly endorse the provision in sections 401–04 that would permit states, by new action, to reestablish usury ceilings, and we would also urge that any new ceilings adopted in federal or state legislation not be tied to the Federal Reserve discount rate. That rate is an instrument of monetary policy and not appropriately a benchmark for usury rates in the market.

Section 141 would permit depository institutions, state law notwithstanding, to enforce dueon-sale clauses in mortgage instruments. For the majority of Board members, the reluctance to preempt state law is in this instance more than offset by a sense of urgency growing out of the strongly adverse effects on the soundness of thrift institutions of failure to enforce due-on-sale clauses. Inability to enforce contractual due-onsale provisions, agreed to by the borrower in undertaking the mortgage commitment, has slowed the turnover of low-yielding mortgages in institutional portfolios precisely at the time when earnings pressures are so strong as to threaten the viability of many thrift institutions. Indeed, the net result of failure to enforce due-on-sale clauses may be to restrain the provision of new, fixed-rate mortgages more than would otherwise be the case in today's markets.

As the legislation is presently drafted, existing state law prohibitions on due-on-sale clauses would be preempted. However, in the 20 states where either state legislatures or the courts have taken recent action to prohibit due-on-sale provisions, borrowers could reasonably have interpreted that, whatever the contractual terms, due-on-sale clauses could not be enforced. We believe that as a matter of equity the bill should be amended so that it does not permit enforcement of due-on-sale provisions with respect to sales occurring in the period between the time state legislatures or the courts have acted and the passage of preemption legislation.

Section 704 of the bill would preempt "any state law that is similar in purpose, scope, requirement or content" to the national Truth in Lending laws. The broadened test for preemption—current law preempts only "inconsistent" state laws—is clearly aimed at the important objective of simplifying compliance by lenders, without loss of the basic consumer protection provided by federal law.

The Board agrees with that objective, but has substantial doubts about the administrative feasibility of applying so vague a test as "similarity" to the multiplicity of specific state provisions. Moreover, we note that the possibility of states overriding the federal preemption would, as drafted, appear to extend to the possibility of repeal of any Truth in Lending protection—state or federal—within a state. Alternatively, a state might adopt a different system of disclosure, adding to burdens and confusion on the part of creditors. We question whether such results are intended. In light of these complications, I would hope that our staff might work further with yours toward the desired objective.

Apart from the preemption issue, S. 1720 would attempt to provide further simplification of the administration of the Truth in Lending law and to reduce litigation by limiting creditor liability to "substantial noncompliance" and exempting "arrangers" from disclosures. The approach

proposed to limit litigation appears to have substantial legal and technical ambiguities.

Exemption of "arrangers" does offer substantial simplification, but at the expense of exempting a large category of mortgage financing in today's market—so-called creative financing provided by the seller or by other nonprofessional lenders with the assistance or guidance of a realtor. The appropriate balance between simplification and potential loss of consumer protection is difficult to draw, and the Board welcomes efforts of the Congress to provide guidance.

In accordance with present law, which contemplates coverage of those regularly "arranging" mortgage finance, we have recently invited public comment on certain proposals. We would be glad to make those comments available to you as they are received.

The Board would have no objection to delaying the effective date of new Truth in Lending requirements scheduled under existing law to become effective April 1, 1982.

### BANKING AND OTHER FINANCIAL SERVICES

Several provisions of S. 1720 deal with the question of what other kinds of financial services banks or other depository institutions might properly provide. In practice, a substantial and growing overlap already exists between commercial and investment banking, and the bill would extend that direct competition into the area of municipal revenue bonds and the sponsorship of investment companies (that is, mutual funds) and the sale of their shares.

In evaluating proposals of this kind, the Board believes a number of concerns cited in the past by the Congress and the courts should be taken into account. One of those concerns is the possibility of conflicts of interest arising between management of the bank's loan and security portfolio and its nonbanking investment activities. The potential riskiness of the nonbanking activity is also relevant, given the inevitable linking of a bank's reputation to that of its affiliates; our own experience in supervising bank holding companies suggests the extreme difficulty, at best, of insulating banks from the fortunes of other holding company affiliates. In

the case of the largest institutions, safeguards against the undue concentration of economic power may be appropriate.

Concerns of this kind can be and have been addressed in supervisory and regulatory policies; the mere possibility of conflicts or abuse or risks cannot justify sweeping prohibitions on particular types of activity, particularly in areas in which competition and public convenience would be appreciably improved by bank entry. In the end, it is a matter of balancing potential dangers against advantages in particular instances. Indeed, a step-by-step evolutionary approach toward expanded powers for banks and bank holding companies has much to commend it, permitting all of us to observe experience as it develops. While we do not support at this time all of the proposals contained in S. 1720, we would note that other service areas—such as travel services, data processing, and the sale of commercial paper (which is presently in dispute in the courts)—might well be considered for inclusion in the legislation. In that connection, the Board considers undesirable the additional restrictions on the already limited provision of credit-related insurance services by bank holding companies, as proposed in section 601 of the bill. Those services seem to us helpful in promoting competition and public convenience without substantial risk or conflict of interest with banking.

The Board has long supported extension of the ability of commercial banks to underwrite municipal revenue bonds, as well as general obligations, as would be provided by section 301. Revenue bonds have become a much more prominent feature of municipal finance in recent years, and authority for commercial banks to participate in this area of municipal finance appears a logical extension of power that they have exercised for many years. The provisions of the bill designed to protect against conflicts of interest and unsound banking practices are desirable and should reasonably be extended to the existing authority to deal in general obligations.

A more cautious approach toward depository institution sponsorship of investment companies and the sale of shares in mutual funds seems appropriate. In particular, participation in money market mutual funds could aggravate current pressures on thrift institutions and other market distortions.

The intent of some depository institutions in sponsoring such funds is related to their inability to compete without interest rate restrictions in the deposit market. The process of deregulation of deposit instruments has, as you know, been highly controversial because competing considerations cannot be fully reconciled. A rapid lifting of deposit rate ceilings would have the advantage of enabling depository institutions to compete on a more equal footing with users of short-term funds, would offer benefits to the consumer, and would help maintain a flow of credit to local communities served by depository institutions.

At the same time, however, the higher interest costs resulting from the more rapid liberalization of deposit ceilings would bring still heavier pressure on the earnings of both thrift institutions and many banks locked into longer-term, loweryielding assets. Providing authority to banks to sell their own money market mutual funds may, on the surface, appear an attractive means of cutting through the dilemma—on the one hand, permitting the banks to compete more fully, while on the other, retaining deposit rate ceilings. But the dilemma cannot be escaped so easily. The result inevitably would be to attract more funds from traditional deposits, potentially adding liquidity pressures to the current earnings problems of thrifts. Without amending the present provisions of the Investment Company Act enforcing diversification of fund assets and restricting transactions among affiliated institutions, the funds attracted into the bank-sponsored money market funds could not be employed in lending by the sponsoring institution. Indeed, the nature of lending and investing by depository institutions could imply major shifts in the availability of credit to particular regions of the country and to some categories of borrowers. However, should present law be changed so that the funds could be funneled back into the sponsoring bank, potential conflict of interest becomes of more concern.

Further inducements to the growth of money market funds, particularly if sponsored by banks and operated alongside regular transactions accounts, would also raise serious questions for the conduct of monetary policy. Money market fund shares carry no reserve requirement. Such shares can be withdrawn by check and on demand, and arrangements can be developed for automatic transfer to and from deposit accounts (including "zero balance" accounts); in other words, they can be the functional equivalent of interest-bearing demand deposits. The implication is that both the meaning of money supply statistics and our ability to control the money stock could be gravely impaired by major shifts from deposit transaction accounts to money market funds.

For these reasons, the Board feels strongly that authority to permit banks to sponsor and sell money market mutual funds should not be provided at this time, and that such authority would in fact weaken both our institutional structure and monetary control. Instead, we would urge that the very real problems of equity and competition be approached in other ways.

The process of deregulation of deposit instruments should proceed as rapidly as circumstances permit. At the same time, we would suggest that money market funds, to the extent they in fact provide transaction-balance services. be brought within the framework of reserve requirements and that those funds that do not wish to provide such transactions services be required to insist on a short—say, seven-day notice before withdrawal. The net effect would be to move toward competitive equality and to improve the arrangements for monetary control. With these changes in place and interest rate ceilings phased out, the question of providing depository institutions with authority for money market fund powers could be reexamined.

Depository institution participation in more traditional stock, bond, or diversified mutual funds would not have the same adverse consequences either for the safety and soundness of depository institutions or for monetary policy. Some potential does exist for conflicts of interest, for confusion on the part of the public about the bank's responsibility for the value of the shares, and for adversely reflecting on the reputation of the bank itself. While different in legal basis and in asset composition, the difficulties arising some years ago when banks became active in sponsoring real estate investment trusts may be suggestive of possible problems.

The potential for abuse and misunderstanding is certainly limited by existing banking and investment company law and regulation. Moreover, few problems have arisen in the trust and agency activities of banks, which resemble the proposed mutual fund powers. Based on this record, the Board believes banks should have broader powers for providing investment management services, but with certain added safeguards.

As a first step in that direction, we would suggest banks now be permitted to operate, as part of their trust departments, commingled investment accounts on an agency basis. The effect would be to encourage joint management of individual accounts too small to be profitably serviced individually-essentially the same service as provided by mutual funds. We would also suggest that regulatory guidelines be established to restrict advertising to the general public, to minimize the possibility of confusion with liabilities of the bank itself, and to protect against conflicts of interest.

Should the Congress wish to go further than our proposal and permit banks at this time to sponsor investment companies—that is, to enter the mutual fund business directly—we believe the activity should be segregated into a separate holding company subsidiary, that use of the bank's name be prohibited, that sales commissions not be charged (that is, only "no-load" funds be permitted), and that further guidelines be developed by the regulatory agencies to avoid conflicts of interest and self-dealing.

### **BROADENED THRIFT POWERS**

The most sweeping changes in the present institutional structure are implied by the provision of S. 1720 that greatly expands the lending and deposit powers of thrift institutions. As we read the proposed legislation, thrifts would be provided with virtually the full range of commercial banking asset and liability powers, at least so far as domestic banking is concerned, and in some cases without limitations (such as single borrower limits) long applicable to commercial banks. In addition, new or expanded powers for real estate development—including sizable equity positions through subsidiaries—would be provided.

I believe the generally accepted view that the new powers are of little relevance in relieving the existing earnings pressure on thrift institutions—

indeed, incautiously used by institutions without present experience and expertise in commercial lending, the new powers could precipitate greater difficulties. Rather, the apparent purpose would be to enhance the competitive position of the thrift institutions over time and to provide greater flexibility to cope with swings in interest rates or other market conditions in the future. Those are understandable and worthy objectives. Yet, in evaluating the provisions as a whole, insistent questions arise.

We would be left with a seemingly anomalous situation of two sets of institutions—commercial banks and thrifts-with comparable asset and liability powers, yet with different regulatory structures, branching powers, access to government-sponsored credit, and (for a transitional period) interest rate ceiling differentials. For one set—the thrift institutions—the separation of commerce from banking and the prohibition on interstate banking could, in some circumstances, be breeched; for the other—commercial banks the present restrictions could remain in full force. To put the point another way, if thrift powers are to be broadened to the extent envisaged, the logic would point to the need for substantial further changes in law very promptly. Decisions will need to be made, for instance, about whether commercial bank or thrift branching powers should be the norm, whether we find it acceptable that industrial or commercial firms should operate subsidiaries with full banking powers, and whether banks, too, should be able to become real estate developers. Decisions on such issues could affect the safety, soundness, and efficiency of our financial institutions. Moreover, the point is not just theoretical; for many banks, S. 1720 would seem to provide a strong inducement to convert to thrift charters to take advantage of the broader branching powers, greater flexibility in real estate activity and nonbanking activities, and incidentally the remaining interest rate ceiling differentials and the ability to borrow from the Home Loan Bank System.

Those anomalies could be rectified, now or later. But looked at from another vantage point, the proposals raise the further, and more basic, question of whether our vision of the future financial system is evolving toward fully "homogenized," multipurpose institutions. I recognize traditions in the thrift industry have been

strongly oriented toward the housing industry and the individual, and some provisions in the tax law would, at least for the present, continue to provide incentives for that specialization. However, we would anticipate that competitive forces would strongly dilute the separate institutional traditions under the framework proposed by S. 1720.

A related question is whether the full range of commercial banking powers is really necessary to assure the competitive strength of thrift institutions. Historically, the answer has been no, as reflected in the relative earnings and growth performance of the industry. But today, with the competitive advantage of interest rate differentials being phased out, with differences in tax treatment less significant, and with markets more volatile, the historical record may not provide a full answer.

Of course, concern on this score has motivated the legislative proposals. At the same time, we should recognize that thrift institutions have already been provided substantial added flexibility in the Monetary Control Act last year and by regulatory action. Given the limited time available and the current pressures on the industry, few institutions have yet geared up to full use of this new authority.

Clearly, there are a number of possibilities for providing still more flexible authority to the thrift institutions. We would urge, however, that any further steps at this point be taken within the broad framework of a concept of community, family-oriented institutions. Such an approach, for instance, would be compatible with full consumer credit and individual deposit-taking powers. Limited commercial loan powers-viewed as meeting the needs of local, smaller businesses—would help fill a niche in the credit market, and would be consistent with a community orientation. Thrift institutions and their affiliates could logically provide insurance and trust services for individuals and could deal with real estate and construction—the existing areas of expertise—within this concept.

That evolutionary approach seems to us more fully in the traditions of our financial system—a system that has served us well and can continue to do so. We do not perceive an absence of competition, or large new competitive opportunities, in the national, regional, or foreign markets

for commercial lending; indeed, there could be danger in looking toward those markets as a "quick fix" for depressed earnings. Those thrift institutions that, in fact, wish to operate as full commercial banks should be able to convert to commercial bank charters—and impediments to such conversions could be removed. Questions of appropriate branching and other powers for banks and thrifts would, of course, remain. However, we believe those issues could and should be dealt with on their merits, rather than as a byproduct of fully yielding the lending and deposit powers of banks and thrifts.

### MISCELLANEOUS PROVISIONS

S. 1720 also includes a number of miscellaneous provisions that I have some concern about and would like to touch on very briefly.

Limits on national bank loans to one entity. Under existing law, national banks are constrained in the amount of lending to any one entity to 10 percent of their capital and surplus. The Federal Reserve strongly opposes the provision of S. 1720 that would raise the limit to 25 percent. Risk diversification has long been a key element of sound financial practice, and in my view, one that may be even more important than ever in light of the longer-term decline in the capital ratios of most of our largest banks. Accordingly, the Board opposes any general increase in the current limits on lending to any one entity.

The Board does understand that current law may hinder small banks in their attempts to serve the needs of their larger customers. At the same time, small banks tend to have relatively strong capital positions. The Congress may thus want to consider an alternative approach, such as raising the lending limit to 15 percent of capital and surplus for banks with a relatively high capital ratio of, say, more than 7 or 8 percent.

Limits on loans of certain types and in real estate lending. The Federal Reserve supports the provision of the bill removing statutory limitations on certain types of loans as a share of a bank's assets. The Board also is not opposed to providing banks with greater flexibility in real

estate lending. The Board believes potential problems in this area can be dealt with best by regulation and through the bank examination process.

Exemptions from reserve requirements. S. 1720 and the accompanying S. 1686 would exempt depository institutions below a certain size, as well as the deposits of state and local governments, from reserve requirements. The Federal Reserve strongly opposes the provision of S. 1686 exempting state and local deposits from reserve requirements. Those deposits, from the standpoint of monetary control, have the characteristics of transaction balances and should be treated in the same manner as other components of the money supply. But the Board has no objection to the provision of S. 1686 that would extend the eligibility of state and local governments to have negotiable order of withdrawal accounts.

S. 1720 would exempt from reserve requirements depository institutions with total deposits of less than \$5 million. The Federal Reserve is in favor of efforts to relieve burdens on smaller institutions if such efforts can be accomplished without significantly affecting our ability to conduct monetary policy, or without damage to other objectives. Consequently, the Board would support exempting institutions below \$5 million. We would point out, however, that that approach raises certain technical problems as well as questions of equity that may merit further consideration. As an alternative, the Congress may want to consider exempting the first \$2 million in reservable deposits for all institutions. The effect on small institutions would be virtually the same, and some of the potential problems would be alleviated, although the cost to the Treasury would be somewhat higher.

Increased deposit insurance on individual retirement and Keogh accounts. While we are mindful of the desirability of secure retirement funds, the Federal Reserve is concerned by the trend toward higher insurance limits on all types of accounts. This trend increases the risk to the insurance funds and diminishes the sense of discipline implicit in the need for larger depositors to consider the soundness of their depository institutions.

Consolidation of insurance funds. The last issue I would like to touch on is the potential consolidation of the deposit insurance funds of the Federal Deposit Insurance Corporation, Federal Savings and Loan Insurance Corporation, and National Credit Union Association, to be accomplished by expanding the FDIC's authority. The Board has serious reservations about such a consolidation at this time. A consolidation raises a number of important regulatory questions that have not been adequately addressed. The Board recommends that the Congress postpone consideration of this issue pending fuller assessment of the financial and regulatory implications.

Statement by Nancy H. Teeters, Member, Board of Governors of the Federal Reserve System, before the Task Force on Enforcement, Credit and Multi-Year Budgeting of the Committee on the Budget, U.S. House of Representatives, October 29, 1981.

Mr. Chairman, it is a pleasure to be here today to present the views of the Federal Reserve Board on the budgeting and control of federally assisted credit. In particular, it is a pleasure to have the opportunity to express our support for H.R. 2372, the bill introduced by Mr. Mineta and Mr. Bethune to establish procedures for budgetary control of federal credit programs. This is a

particularly appropriate time to consider such steps. Given the serious inflation problem currently plaguing our nation, it is imperative that growth in money and credit be held to a moderate pace. Within this context, every effort should be made to insure that federal credit activities as well as federal spending are carefully evaluated in order to avoid creating serious distortions in financial markets.

Indeed, for off-budget federal loan programs and loan guarantees to provide a less conspicuous substitute for direct, on-budget federal spending would be most inappropriate at a time when strenuous efforts are being made to bring the growth of spending under control. Although

the economic and credit market consequences of federal loans and loan guarantees are not in all cases the same as those of deficit-financed federal spending, enough similarities exist to warrant parallel procedures for budgetary review and control. I shall argue therefore that formal procedures for budgetary control of federal credit activities are highly desirable. Furthermore, I shall renew my earlier recommendations for establishment of a new budget commission to analyze the appropriate accounting for federal credit programs and for continuing analysis and evaluation of the appropriate tools—direct spending, loans, loan guarantees, or tax expenditures—for achieving alternative program objectives.

## GROWTH OF FEDERAL CREDIT PROGRAMS

As you know, federal credit programs have expanded enormously, both in amount and in scope, in recent years. The total volume of outstanding direct loans and loan guarantees, for example, has been projected to total more than \$540 billion by the end of the fiscal year, which ended last month. This amount is nearly triple the level of \$190 billion reached just 10 years ago. In addition, the volume of loans held by government-sponsored agencies was projected to total about \$170 billion at the end of fiscal year 1981, up \$20 billion from last year and more than four times the level of 10 years earlier. In fact, the growth of such loans has been much larger than anticipated, principally due to increased demands on the Federal Home Loan Banks.

Federal credit activities, moreover, are likely to continue to grow rapidly in the years ahead unless deliberate efforts are made to constrain them. The January budget projected that net credit advanced under federal auspices—direct, guaranteed, and sponsored—would total more than \$100 billion during fiscal year 1982. The Mid-Session Review of the fiscal year 1982 budget called for a significant reduction in loan obligations and guarantee commitments, and further reductions are soon to be announced. Even so, if total credit flows in the coming years were roughly to match those of the past year, funds raised under federal credit auspices will account for well over one-quarter of the total net funds

raised by nonfinancial and financial borrowers in domestic credit markets.

The widening range of economic activities assisted by federal programs is also noteworthy. In the late 1950s, the home mortgage guarantee programs of the Federal Housing Administration (FHA) and the Veterans Administration (VA) accounted for 90 percent of the total volume of guaranteed and insured loans outstanding. This proportion has since trended down and was expected to have been about 73 percent at the end of the last fiscal year, mainly because of an expansion of loan guarantees into new areas—such as military sales and student loans.

The provision of federal credit assistance through direct loans and loan guarantees to achieve particular social and economic objectives has been widely recognized as a legitimate and valuable activity. Many credit programs originally were established to correct imperfections in capital markets that denied credit to some groups or made the cost of credit prohibitive. For example, the FHA-insured loan programs were devised during the Great Depression to reduce the risks perceived by lenders. By pooling risks across a large number of loans issued in a standardized fashion, the government program encouraged private lenders to advance credit at a lower cost to borrowers and on less restrictive terms than would otherwise have been possible. Over time, these more liberal terms gained general acceptance among all types of private lenders.

Many other federal credit assistance programs have been introduced over subsequent years to foster social objectives. Increasingly, these programs have involved substantial interest subsidies. According to estimates by the Office of Management and Budget, the present value of the interest subsidy on new direct loan obligations and commitments to guarantee loans in the fiscal year just ended amounted to almost \$27 billion. In contrast to the home mortgage area, moreover, the default rate in some of these programs-such as student loans and assistance for low-income housing—has been comparatively high. Thus, the government has had to absorb sizable, and in some cases unanticipated, default losses in addition to the measured interest rate subsidies to borrowers. In the past few years, the

federal government has also guaranteed to single borrowers sizable loans that carry a large potential for default.

## IMPACTS OF FEDERAL CREDIT PROGRAMS

Because the general purpose of federal credit programs, obviously, is to enable individual borrowers or groups of borrowers to obtain credit that would otherwise be unavailable to them or available only at a higher cost, it follows that these programs will generally tend to increase use of credit by program beneficiaries. Whether this increase will, in turn, result in greater use of credit in the aggregate and whether such an increase is desirable depends on the characteristics of the particular programs and on the state of the economy at large.

Let me give some examples to demonstrate the differences in the economic effects of federal credit assistance programs. In some cases, programs may serve as close substitutes for deficitfinanced federal spending. Consider, for example, a situation in which the Congress was contemplating expanding the program in which the federal government guarantees debt issued by state and local authorities who then use the proceeds to provide low-cost housing to the poor. Many of the end results of such an expansion could be quite similar to those that would be observed if the federal government were, alternatively, to increase its direct spending to undertake the construction of the rental units and were then to rent space on a subsidized basis. Note that under either approach construction funds would be provided by private investors either through the acquisition of federally guaranteed securities or by acquiring more Treasury securities than otherwise; the same essential type and volume of productive resources would be used to construct the rental units; and low-income families would be provided with better housing than they are otherwise able to obtain.

While stressing basic similarities, however, I should also note some important differences. The most important is that loans must be paid back. Thus, if such a program were to grow to a plateau and then remain constant in size, the volume of loan repayments would equal new loans being

guaranteed and the net economic effect would be small. Growth in the net volume of guaranteed loans outstanding, however, could have an effect similar to that of deficit spending. In addition, interest paid on the debt instruments issued by states and localities under the program is not subject to federal tax, as it would be on a direct debt issue of the federal government, so net tax revenues would also be reduced by an expansion of the program.

Of course, other credit programs have much less similarity to noncredit federal spending. For example, homebuyers who take out mortgages under federal guarantees could, in most instances, obtain private credit without the guarantee, albeit at a slightly higher rate. Providing roughly equivalent assistance through direct federal spending in this case would require the federal government to give homebuyers only a modest interest subsidy. The small size of this subsidy suggests that net demands on real resources and credit markets are affected relatively little by the guarantee program. Many cases obviously fall somewhere between these two extremes. Compare the effects of direct federal loans and outright grants-in-aid. In both cases, beneficiaries gain immediate command over goods and services. The major difference between the two approaches—in the case of the loan the government obtains a claim on the beneficiary while it does not with the grant—is an important distinction. This distinction is, however, a distinction without substance in those cases in which the borrower defaults.

In general, the closeness of the analogy between assistance provided by federal credit programs and deficit-financed direct federal spending appears to depend less on whether the aid in question is provided through direct loans or loan guarantees than on such things as creditworthiness of beneficiaries, the size and riskiness of the undertaking, and the relative ability of beneficiaries to tap private credit sources on their own.

As in the case of deficit-financed federal spending, federal credit activities may reduce the availability of credit to others who are not program beneficiaries. The extent to which such "crowding out" takes place, however, depends importantly on the state of conditions in the economy and financial markets. During reces-

sionary periods when credit supplies are readily available, credit assistance may work mainly to enable borrowers to obtain additional funds, which can be used to increase demands for goods or services. Thus, in these periods the net result of credit assistance programs may be, to a great extent, to promote a more intense use of resources and an expansion of economic activity rather than a transfer of credit (and resulting effective demand) from one borrower to another.

In times when less slack exists in resource utilization and credit market conditions are relatively tight, however, there is a much greater tendency for credit extended under federal auspices to channel loanable funds, and hence command over real resources, toward assisted borrowers and away from others. In other words, just as private borrowers can, at times, be crowded out of credit markets when federal outlays are financed through the issuance of Treasury debt, so some private borrowers can face higher credit costs when other selected borrowers obtain loans with the assistance of the federal government. Nothing need be inherently wrong with the resulting allocation of credit if the federal intervention in credit markets reflects a careful assessment of the market imperfections that the government is trying to overcome and a careful weighing of costs and benefits. Continuous scrutiny of priorities under a credit budget process is important, however, if such balancing of costs and benefits is to be achieved. And such scrutiny is essential in current circumstances when the growth of credit is necessarily limited by anti-inflation policies.

## BUDGETARY CONTROL OF FEDERAL CREDIT ACTIVITIES

As you know, congressional review and control of federal credit activities have been evolving over time. The utilization of the "unified budget" concept, beginning with the 1969 budget, is one notable watershed. At that time, the government adopted for *control* purposes a budget framework that was, in most respects, a cash accounting system. In making this choice, it was decided (after considerable debate) to include the net outlays of all direct lending programs on

budget. This new approach, however, was uncomfortably silent on how federal loan guarantees were to be treated. In the early 1970s, moreover, some backsliding from the comprehensive coverage of the unified budget occurred, as a number of agencies were removed from the budget and newly established agencies were accorded off-budget status.

Furthermore, the advantages for orderly marketing of federal debt gained through creation of the Federal Financing Bank (FFB) in 1974 had an unfortunate side effect. Since the FFB's activities have been off-budget from the outset, its acquisition of loans is not reflected in the budget. Accordingly, the budgetary scrutiny intended to apply to direct loan programs as a result of the comprehensive coverage of the unified budget tended to be eroded. And agencies that made direct, on-budget loans to the public were able to sell these loans to the FFB, thereby enabling these agencies to extend new loans without constraint.

In recent years, this erosion process has begun to be turned around. A number of important steps have been taken to make coverage of the unified budget more comprehensive and to improve controls of credit programs. In addition to incremental improvements in budget coverage, major strides have been taken in the development of a separate credit-budget process. In the past two years, totals have been calculated and presented in the budget for gross new direct loan obligations and new loan guarantee commitments. Components of the credit-budget total have been shown in respective budget functions and have been subdivided by agency and program in the special analysis accompanying the budget and in the budget appendix. Also, the outlays of the FFB (direct loans and loan-asset purchases) are now attributed to the originating agency, which in my view eliminates the tendency for the operation of the FFB to obscure the nature of credit programs. A final important step taken by the Congress last year was to have the budget resolutions include target ceilings for total new loan obligations and total new guarantee commitments and to distribute these totals by budget function.

Both the past and the current administrations have also proposed that a substantial proportion

of the credit-budget totals be made subject to annual appropriations limitations. The January budget proposed that 63.8 percent of the credit budget for fiscal year 1982 be so limited. Those programs exempted are limited to unambiguous entitlements that cannot be effectively limited by appropriations; programs that provide for unforeseeable contingencies, such as deposit insurance; guarantees of certificates of beneficial ownership that are sold by the Farmers Home Administration and the Rural Electrification Administration; and a catchall of programs, such as export promotion loans by the Commodity Credit Corporation, that the last administration believed appropriate not to curtail due to economic circumstances. That final area of exemption, in particular, deserves careful evaluation by the Congress.

Broadening the coverage of the unified budget and the formulation of a separate but parallel credit budget set the stage for a number of further steps in implementing an effective process to bring credit programs under systematic review and control. H.R. 2372 would formalize the credit-budget process implemented on an experimental basis last year. This bill would amend the Budget Act to apply to the credit budget the same enforcement procedures and legislative timetables that apply to the rest of the budget. The Federal Reserve Board, in general, enthusiastically endorses the establishment of these formal procedures as, logically, the next step in budgetary control of credit programs.

The Board's view, however, is that the section of this bill pertaining to appropriations limitations should be modified. Limitations are, of course, central to the budgetary control process proposed by the previous administration and endorsed by the present administration. However, exemption of at least some emergency assistance and entitlement programs appears warranted. The Board, therefore, suggests that all such programs continue to be exempted from appropriations limitations at least until more experience is gained with the new budget process and a case-by-case review of these programs can determine the possible difficulties or advantages of applying appropriations limitations to them. The exemption of entitlement and emergency assistance programs from appropriations limitations

need not imply changing the current procedures whereby legislation creating or expanding entitlements is referred to the Appropriations Committee for review. The Board's recommendation that entitlements and emergency assistance programs be exempted from binding appropriations ceilings is intended only to promote the effective operations of those programs thought by the Congress to be worthwhile, even in the event of unanticipated demands on them resulting from natural disasters or unforeseen economic developments.

Although enactment of H.R. 2372 would go far to bring order into the federal credit program scene, I would like to recommend some other steps. One is a systematic review of the treatment of federal credit programs in the unified budget. The current haphazard situation, in which some loan programs are included in the unified budget and others are not, should be ended. A careful analysis should be undertaken of the question of whether or not the principal amount (net) of all direct loans should be included in the unified budget and whether, if the principal amount of direct loans is excluded as I am inclined to prefer, the amount of the implicit or explicit interest subsidy should be placed on budget. Similarly, a comprehensive review of guarantee programs would be desirable in order to determine whether the potential subsidy or future outlay for defaults is taken appropriately into account. I have previously called for the establishment of a new budget commission, which would be charged with analyzing and resolving these questions. In my view, the passage of time has not reduced the advisability of establishing such a commission.

Finally, I recommend to this committee a continuing evaluation of the extent to which direct spending, direct loans, loan guarantees, or beneficial tax treatment can be used most effectively to achieve particular program objectives and the extent to which, in particular budget functions, there may be duplicative and excessive use of these various approaches. The budget process has come a long way in providing the accounting framework and legislative process needed to address such questions. I look forward to further progress, and I believe that enactment of H.R. 2372 would contribute to it.

Statement by Henry C. Wallich, Member, Board of Governors of the Federal Reserve System, before the Subcommittee on Trade of the Ways and Means Committee, U.S. House of Representatives, November 3, 1981.

I am pleased to be here today, on behalf of the Federal Reserve Board, to discuss U.S. trade policy.

In my remarks I should like first to review recent developments in our trade and current accounts and then to examine briefly prospects for the future and the more important factors affecting that outlook. Among these factors are general macroeconomic policies here and abroad as well as policies that are specifically directed toward trade in both goods and services. I shall also discuss the relationship between both types of policies and our international trade performance.

In looking at our past trade performance, it is important to realize that, although particular sectors face problems that are sometimes severe, the United States has in general remained quite competitive in the world economy. This is manifested most dramatically in the recent expansion of our exports: between 1978 and 1980 total U.S. exports increased nearly 60 percent in value and more than 20 percent in volume. While agricultural exports continued to grow strongly over this period, the major source of strength was the nonagricultural component. This strength was broadly based in consumer goods, capital goods, and industrial supplies. With U.S. exports increasing more rapidly than those of our main competitors, the U.S. share of world exports of manufactures rose from 17 percent in 1978 to slightly more than 20 percent in the first quarter of this year.

Furthermore, this strong expansion of our exports was not matched by a comparable increase in imports. In value terms, total U.S. merchandise imports rose somewhat more than 40 percent between 1978 and 1980, whereas the total volume declined slightly, mainly as a result of a drop of nearly 20 percent in the quantity of oil imports. The decline in import volume occurred at the same time that U.S. real gross national product was rising.

The strength in U.S. exports and the relative weakness in imports resulted in a reduction in the deficit in the U.S. trade balance from \$34 billion in 1978 to \$25 billion last year. The reduction in the trade deficit occurred in the face of a rise in the price of petroleum imports of more than 200 percent, increasing our bill for imported oil to almost \$80 billion in 1980. A major factor explaining these trade developments was the depreciation of the dollar between mid-1977 and late 1978. The drop of 17 percent in the international value of the dollar over this period provided incentives for U.S. firms to sell more of their products in export markets and to compete more effectively with imports. Also, in 1978 and 1979 the economies of most of our major trading partners were expanding quite vigorously.

The fact that U.S. firms responded to these incentives, with a consequent improvement in our trade position, demonstrates that U.S. producers can compete effectively in world markets. This ability to compete does not deny the importance of continuing efforts both here and abroad to reduce and eliminate impediments to our exports. What our recent trade performance does indicate is that we can maintain a strong U.S. trading position without resorting to protectionist policies.

Before turning to the outlook for the U.S. trade and current accounts, it is important to note that, although the U.S. merchandise trade balance has been in deficit for several years, this deficit has been partially offset, and in recent years more than fully offset, by a surplus on nontrade items. More generally, a remarkable feature of U.S. international transactions is that service account items constitute a large fraction of total current account receipts and payments. Service account receipts were 35 percent of total receipts (that is, merchandise exports plus earnings from service exports) in 1980, the same as in 1977. On the payments side, the proportion is somewhat lower: in 1977, service account payments were 22 percent of total payments, and this fraction rose to 25 percent in 1980.

The largest positive component of the service account has been net investment income, which increased from about \$18 billion in 1977 to nearly \$33 billion last year. This substantial rise in our net earnings on foreign investment reflects both the fact that U.S. residents have been investing more abroad than foreigners have been investing in this country and the fact that foreign earnings of U.S. oil companies have grown in recent years.

As the surplus on services has grown and the trade deficit has declined, the U.S. current account (which includes merchandise trade, services, and transfers) has shifted from a deficit of \$14 billion in 1977 and 1978 to a surplus of nearly \$4 billion in 1980. In the first half of this year, the current account surplus was at an annual rate of \$8 billion. The surplus current account position of the United States over the past two and one-half years contrasts with that of many industrial countries—for example, continental European countries and Japan—which have had current account deficits, some of which are continuing.

Recognition of the underlying strength of the U.S. external position, as evidenced by our current account surplus relative to the deficits in several major foreign countries, has contributed, along with other developments, to the substantial appreciation of the dollar in foreign exchange markets this year.

In providing this background I wish to emphasize two points. First, it is important for the United States to continue to have a strong export sector that includes a broad range of domestic industries and firms. Expanding exports as a consequence of improved domestic productivity contributes to the strength of the U.S. economy and of the dollar, which in turn helps to moderate domestic inflation. Second, although particular industries certainly face strong competition from abroad, we are not faced with a crisis in our trade position or an overall deterioration in our basic international competitiveness. Our present position, which is fundamentally a healthy one, allows us to address issues of trade policy from the perspective of long-term policy goals rather than as a hasty response to a deteriorating trade and payments situation.

Turning now to the outlook for the trade and current accounts, a number of factors must be taken into consideration. First, real growth in the economies of our major industrial trading partners next year is likely to be somewhat better than this year, which will tend to have a positive impact on our trading position. A positive impact is also likely to arise as the U.S. inflation rate continues to decline, especially if it declines relative to the average inflation rate in our main

trading partners. Imports of the Organization of Petroleum Exporting Countries (OPEC) will probably continue to grow at a rapid rate next year, and this growth will provide a source of strong demand for U.S. exports, enabling them to continue to expand. Recently, U.S. exports to OPEC have been expanding at year-over-year rates of more than 25 percent. At the same time, moderation in increases in oil prices, which seems likely, and continued reduction in import demand should hold down our oil import bill.

On the negative side, the appreciation of the dollar from the level of 1980—to the extent that it is not offset by a better inflation performance here compared with abroad—will make it more difficult for U.S. exporters to sell abroad and will provide encouragement for imports. Indeed, this impact of the appreciation appears to have started in the third quarter of this year. Another negative factor is likely to be attempts by non-oil developing countries to restrain their import demands and to reduce their large current account deficits to more manageable levels.

The net effect of the interaction of these factors is likely to be a shift from a current account surplus this year to a deficit in 1982. But I would emphasize that a surplus or deficit in our current transactions is the difference between two large numbers—each on the order of \$350 billion to \$400 billion—and point estimates are therefore very uncertain. Moreover, a shift to a current account deficit should not necessarily be cause for concern. First, it need not reflect a deterioration in the domestic determinants of U.S. competitiveness, but rather the recent strength of the dollar. Second, a U.S. deficit would match in part the OPEC surplus. While the OPEC current account surplus is expected to decline in 1982, it will nevertheless be of sizable magnitude. This current account surplus must be matched by corresponding deficits on the part of other countries. The developing countries will continue to run current account deficits next year, but it would be healthy if some of them were reduced. Consequently, some industrial countries may also have deficits (as was the case for both Germany and Japan in 1980) as counterparts to the OPEC surplus. Therefore, it is not necessarily undesirable for the United States to have a moderate current account deficit at the same time a large OPEC surplus exists. On the contrary, if all industrial countries attempted to achieve current account surpluses in this situation, a self-defeating decline would occur in the volume of trade. As expenditures of OPEC countries grow to match their earnings, their surpluses, as well as other countries' deficits, will decline.

Focusing now on economic policy and international trade, I would like first of all to underscore the importance of achieving a noninflationary but expanding domestic economy as the basic underpinning of a strong and expanding U.S. foreign trade sector. We have already made some progress in reducing the rate of inflation, but we still have a long way to go before inflation is brought down and stays down. In working toward this important national objective, the Federal Reserve has a special responsibility to restrain the expansion of money and credit. In the short run, one effect of monetary restraint, in an economy in which considerable momentum to inflation still exists, is to contribute to the strength of the dollar. As I mentioned earlier, the appreciation of the dollar above the level in 1980 will tend to dampen the expansion of exports and make imports more competitive with domestic substitutes.

Exports and imports of goods and services have become increasingly important in the U.S. economy, each rising from 7 percent of GNP in 1970 to 13 percent in 1980. Consequently, in making forecasts of the economy and in analyzing the effects of economic policies, it has now become essential to take account of how changes in foreign economic conditions and exchange rate developments affect our exports, imports, and other indicators of our economic well-being.

In an economy increasingly open to international influences, it is of course necessary to recognize that export- and import-competing sectors of the economy will be particularly affected by monetary policy through the impact that policy has on exchange rates. However, these sectors will benefit in the longer run from the improved price performance that is the objective of monetary policy. Recent progress in reducing inflation, part of which has come about as a result of the strong dollar, would be jeopardized by any relaxation in current policy intended to aid a particular sector. Any benefit to that

segment of the economy would undoubtedly be transitory and would be outweighed by the damage to our fight against inflation. We will not gain as world traders in the long run if we have a high inflation rate accompanied by a depreciating dollar.

Our international trade has of course benefited considerably from the financial services provided by American banks. They not only have provided the direct financing needed for the healthy expansion of U.S. exports but also have fostered the growth of U.S. and world trade through their international lending activities.

I would note that the Federal Reserve has recently acted to enable U.S. financial institutions to provide additional international banking services and thereby provide more facilities for the financing of foreign trade. In response to the congressional mandate in the International Banking Act, the Federal Reserve modified the rules for Edge corporations to permit them to finance companies that are engaged in exporting and to establish domestic branches that can provide international banking services in new areas. The concrete benefits of these actions in expanding international banking services, and in particular in facilitating the financing of U.S. exports, will of course be observed only gradually.

It is important that other government policies contribute to improving the productivity of the U.S. economy. We need to continue our efforts to create an environment favorable to the growth of productivity and thereby both directly and indirectly to maintain a strong trading position. Reduction in the burden of government regulation would be helpful in this regard. More specifically, a number of government policies exist that probably could be amended in ways that would contribute materially to the exploitation of export opportunities by the private sector. Among the impediments that have been mentioned are the absence of clear guidelines under the Foreign Corrupt Practices Act, the reporting burden of the antiboycott provisions of the Export Administration Act, and requirements that certain U.S. exports be shipped in American vessels.

Deregulation and other measures that improve the efficiency of the economy are the appropriate means for enhancing our competitive position in world markets. Competitiveness must be fostered not only in industries that export, but also throughout our economy and especially in sectors in domestic markets that may face competition from the exports of other countries. What often happens is that industries protected from the winds of foreign competition do not feel it necessary to implement the innovations or undertake the investment required to stay competitive. In certain cases—the steel industry is often cited—costs are allowed to rise far out of line with costs in the rest of the economy, and then protection is granted from lower-cost foreign imports.

When domestic industries maintain higher prices as a result of tariffs, quotas, or less formal export restraints abroad, the American consumer is not the only one who suffers. The American exporter is hurt as well. Since part of the exporter's inputs are imported or consist of domestically produced goods that compete with imports,

the exporter's costs of production rise when protection is granted to those sectors of the economy that compete with imports. We need to recognize that measures designed to improve one part of the balance of trade by reducing imports may well have the counterproductive effect of making our exports less competitive in world markets.

In summary, U.S. trade policy must be viewed in the context of the broad U.S. economic objectives of maintaining a sustainable rate of economic growth and reducing our rate of inflation. Policies that increase the efficiency and productivity of our economy and encourage the movement of resources into those sectors that are expanding will help attain these objectives. Through such policies, U.S. industries will be on a strong footing to compete in world markets and will thereby make a contribution to maintaining the strength of the dollar.

# Announcements

## CHANGE IN DISCOUNT RATE SURCHARGE

The Federal Reserve Board has approved a 1 percentage point reduction—from 3 percent to 2 percent—in the discount rate surcharge that applies to large, frequent borrowers at the discount window. (The reduction was effective on October 12 for the Federal Reserve Banks of Philadelphia, Richmond, Atlanta, Chicago, Dallas, and San Francisco and on October 13 for the Reserve Banks of Boston, New York, Cleveland, St. Louis, Minneapolis, and Kansas City.) No change was made in the basic discount rate of 14 percent.

The adjustment is a further technical response to the decline over recent weeks in short-term money market rates. The Board emphasized the action was taken within the context of the continuing policy to restrain growth in money and credit.

In announcing the change, the Board acted on requests from the directors of the 12 Federal Reserve Banks. The discount rate is the interest rate that is charged for borrowings from the District Federal Reserve Banks.

## CHANGE IN DISCOUNT RATE

The Federal Reserve Board approved a reduction in the basic discount rate from 14 percent to 13 percent, effective November 2, 1981. No change was made in the 2 percent surcharge that currently applies to large, frequent borrowers at the discount window.

This action was taken against the background of recent declines in short-term interest rates and the reduced level of adjustment borrowing at the discount window. It is consistent with a pattern of continued restraint on growth of money and credit.

In announcing the change, the Board acted on requests from the directors of the Federal Reserve Banks of Boston, New York, Philadelphia, Cleveland, Richmond, Chicago, St. Louis, Minneapolis, and San Francisco. (Similar action was taken by the directors of the Federal Reserve Banks of Atlanta and Kansas City, effective November 3, and of Dallas, effective November 6.) The discount rate is the interest rate that applies to borrowings from the District Federal Reserve Banks.

## ADOPTION OF FEE SCHEDULES

The Federal Reserve Board has adopted fee schedules for its transportation services in supplying currency and coin to the nation's banks and thrift institutions, effective January 28, 1982. The Board also adopted a policy for access to cash processing services.

The Board acted under the Monetary Control Act of 1980, which requires pricing of Federal Reserve services, and after consideration of comment received on a proposal published in August 1980.

The fee schedules apply a mark-up of 16 percent, as a private sector adjustment factor (PSAF), to the System's administrative costs in providing coin and currency transportation services.

Transportation services. The revised fee schedule for armored car carrier service consists of a volume charge (a fee per delivery or deposit of a bag of currency or coin) and a charge per stop. The per-stop charges appear in the fee schedule by zone.

The Board established a \$75 ceiling on the perstop charge for 1982 and plans to review during the latter part of 1982 the need to continue the ceiling in 1983. It is intended that Reserve Banks, together with depository institutions they serve, strive to reduce costs of services to remote points. Federal Reserve Banks will supply information on what delivery points are included in a zone.

Registered mail service. Fees for shipment of currency and coin by mail include the cost of postage, registered mail, and full insurance. There is no volume charge since fees reflect actual mail service. The Board adopted a ceiling of \$37.50 for one-way mail service for 1982. The use of registered mail is intended to be limited to those end points where armored carrier service is unavailable. Reserve Banks will make determinations whether to use registered mail on a case-by-case basis.

Access policy. The Board regards currency and coin processing (paying, receiving, and verifying coin and currency, and issuing, sorting, canceling, and destroying currency) as governmental activities, and processing is, therefore, not priced. As for access to these processing services, the Board has adopted a policy providing that by the end of 1983 all Federal Reserve offices will offer, at a minimum, access to all depository institutions seeking direct processing services on the following basis: (1) one office per institution, or (2) one office of a depository institution per municipality (subject to adjustment for special circumstances).

## ADOPTION OF POLICY STATEMENT

The Federal Reserve Board announced on October 13, 1981, its adoption of a policy statement on enforcement by state member banks of the Equal Credit Opportunity and Fair Housing Acts.

The policy statement, which was recommended to the Board and to the other federal financial institutions' regulators by the Federal Financial Institutions Examination Council, follows.

## Policy Statement

This document sets forth the general policies that the Board of Governors of the Federal Reserve System will apply in enforcing the Equal Credit Opportunity Act and the Fair Housing Act.

The Board believes it appropriate to remind state member banks of their responsibilities under these laws and that the Board will vigorously enforce them. State member banks will be required to institute procedures to assure that all violations of the acts, including those not cited in this policy statement, will not recur. In addition, failure to comply with certain specific provisions of the acts has been judged by the Board to be particularly serious and usually to warrant retrospective action to correct the conditions resulting from the violations.

Enforcement policy statement authority. This enforcement policy statement is issued pursuant to the Board's authority under the Equal Credit Opportunity Act (ECOA) (15 U.S.C. 1691, et seq.), the Fair Housing Act (42 U.S.C. 3601, et seq.), and 8(b) of the Federal Deposit Insurance Act (12 U.S.C. 1818(b)).

Enforcement policy statement. The objective of this enforcement policy statement is to ensure that the rights of credit applicants are protected by requiring state member banks to take corrective action for certain, more serious past violations of the Equal Credit Opportunity and Fair Housing Acts, as well as to be in compliance in the future. In an effort to achieve that objective, the Board will encourage voluntary correction and compliance with the acts. Whenever violations addressed by this policy statement are discovered, the state member bank will be required to take action to ensure such violations will not recur and to correct the effects of violations discovered.

The Board generally will require the state member bank to take action to correct conditions resulting from violations occurring within 24 months before the discovery of violations by the Board, except for violations concerning adverse action notices for which corrective action will be required for violations occurring within six months before discovery.

Violations in the following areas are considered serious by the Board and will usually be subject to retrospective corrective action:

- 1. Discouraging applicants on a prohibited basis in violation of the Fair Housing Act or sections 202.4 or 202.5(a) of Regulation B.
- 2. Using credit criteria in a discriminatory manner in evaluating applications in violation of the Fair Housing Act or sections 202.4 through 202.7 of Regulation B.
- 3. Imposing different terms on a prohibited basis in violation of the Fair Housing Act or sections 202.4 or 202.6(b) of Regulation B.
- 4. Requiring cosigners, guarantors, or the like on a prohibited basis in violation of section 202.7(d) of Regulation B.
- 5. Failing to furnish separate credit histories as required by section 202.10 of Regulation B.
- 6. Failing to provide an adequate notice of adverse action under section 202.9 of Regulation B.

This policy statement will neither preclude the use of any administrative authority that the Board possesses to enforce these laws, nor limit the Board's discretion to take other action to correct conditions resulting from violations of these laws, nor preclude referral of cases to the Attorney General. Additionally, this policy statement does not foreclose a credit applicant's right to bring civil action under the Equal

Credit Opportunity or Fair Housing Acts or to file a complaint with the Department of Justice or the Department of Housing and Urban Development for violations of housing laws. Further this policy statement does not supersede or substitute for any regulations or enforcement policies issued by the Board or the Department of Housing and Urban Development under the Fair Housing Act.

## AMENDMENT TO BOARD RULES

The Federal Reserve Board on October 20, 1981. issued an amendment to its rules regarding delegation of authority that delegates to the Reserve Banks authority to make certain determinations regarding "grandfather" privileges for nonbanking activities of bank holding companies.

The amendment provides that Reserve Banks may make determinations permitting such activities to continue when all of the following conditions have been met:

- 1. The bank holding company is a "company covered in 1970" under section 4(a)(2) of the Bank Holding Company Act.
- 2. The nonbanking activities raise no significant unresolved policy issues.
- 3. The bank holding company has been lawfully and continuously engaged in such activities since June 30, 1968.

## DEFERRAL OF RESERVE REQUIREMENTS

The Federal Reserve Board has extended for six months the deferral of reserve and reporting requirements for nonmember depository institutions with less than \$2 million in total deposits.

The Monetary Control Act of 1980 made certain deposits of nonmember as well as member depository institutions subject to federal reserve requirements. To lessen the burden for very small institutions and in view of operational considerations, the Board had previously deferred until November 1981 reserve requirements for institutions with less than \$2 million in total deposits as of December 31, 1979. This deferral will now extend through April 1982. The Board extended the deferral period since legislation under consideration in the Congress would provide a permanent exemption from reserve requirements for smaller depository institutions.

The deferral affects nearly 18,000 depository institutions, including about 17,000 credit unions. These institutions are estimated to hold ½ of 1 percent of all deposits. Those offering transaction accounts or nonpersonal time deposits are subject to reserve requirements.

## PROPOSED ACTIONS

1. The Federal Reserve Board has requested public comment on a staff proposal to change the way depository institutions maintain reserves. Comment should be received by January 15, 1982.

The proposed change, if adopted by the Board, would introduce essentially contemporaneous reserve requirements on transaction accounts for medium-sized and larger depository institutions instead of the lagged reserve system now in effect. Transaction accounts include checking, negotiable order of withdrawal, and automatic transfer accounts.

Specific comment was requested by the Board on the implications of the proposed change for the functioning of the money markets and the operations of depository institutions, including the probable impact on reserve management and deposit monitoring systems. When possible, the Board would like specific estimates of the costs involved, both start-up and continuing.

The Board emphasized that its decision to seek public comment on the proposal in no way commits it to approve a final rule at some time in the future.

Under the present lagged reserve system, depository institutions must post their required reserves in any given week, based on their deposit levels two weeks earlier.

Contemporaneous reserve requirements (CRR) have some potential for improving the implementation of monetary policy by strengthening the linkage between the reserves held by depository institutions and the money supply. There is some question, however, whether such potential gains would increase short-run volatility in the money market. The Board noted that any potential gains in monetary control should not be exaggerated, in view of the sizable remaining slippages between reserves and money and in view of the inherent volatility of short-run money flows.

Depository institutions also have added costs in shifting to CRR—the cost of altering deposit information systems and the complications that might result in reserve management. Consequently, the design and desirability of a CRR system must balance gains in monetary control against potential costs.

Comments are requested on the following proposal:

- —CRR would apply only to institutions that report their deposit levels weekly to the Federal Reserve. Certain institutions with \$15 million or less in total deposits may report quarterly, while certain others with deposits under \$2 million do not report.
- -Reserves would be maintained over twoweek periods. These periods would continue to end on Wednesday, and all institutions would settle their reserve accounts at the same time.
- -Required reserves would be computed on the basis of average deposit levels over a twoweek period ending on Monday. Reserves required against transaction deposits would be maintained in the two-week maintenance period ending on the Wednesday two days after the end of the computation period. This two-day interval is provided to facilitate the computation of required reserves by affected institutions.
- -Required reserves for other reservable liabilities would also be computed for two-week periods ending on Monday, but the actual reserves would be posted in the two-week maintenance period beginning 17 days later, on a Thurs-
- -Vault cash eligible to be counted as a reserve in a maintenance period would continue to be lagged and would be equal to vault cash holdings during the computation period ending 17 days before the beginning of that maintenance period.
- -No change would be made in the current limit of plus or minus 2 percent of daily average required reserves that applies to the carry-over of reserve surpluses or deficiencies into the next

reserve period. However, lengthening the reserve period from one week to two weeks provides the same additional flexibility for managing reserve positions as would a doubling of the carry-over limit with a one-week period.

The Board also desires comment on variations of the proposal such as staggering reserve periods for different sets of institutions with half settling every other week, lengthening reserve computation and maintenance periods to three or four weeks, and increasing the percentage of allowable carry-over.

- 2. The Federal Reserve Board has requested comment on a proposed amendment to Regulation K (International Banking Operations) to permit Edge corporations to engage in certain investment advisory and management services in the United States. The Board requested comment by December 18, 1981.
- 3. The Board has requested comment by December 7, 1981, on a proposal to amend the definition in Regulation Z (Truth in Lending) of "arranger" of credit.
- 4. The Board has asked for public comment on a proposal to amend Regulation Y (Bank Holding Companies and Change in Bank Control) to add the provision of management consulting advice to unaffiliated nonbank depository institutions to the activities permissible for bank holding companies. The Board requested comment by December 30, 1981.
- 5. The Board has proposed for public comment an amendment to its Regulation T (Credit by Brokers and Dealers) that would permit brokers or dealers to make use of U.S. government securities or irrevocable letters of credit as collateral when they borrow or lend securities. The regulation now requires a deposit of cash as collateral in such circumstances. The Board requested comment by January 5, 1982.

## SYSTEM MEMBERSHIP: ADMISSION OF STATE BANKS

The following banks were admitted to membership in the Federal Reserve System during the period September 11 through November 10, 1981:

Alabama		Illinois	
Boaz	First Bank of Boaz	Dixon	City Bank and Trust Company
Arizona		Texas	
Phoenix Camel	Bank, Incorporated	Manvel	Citizens Bank and Trust
Colorado		Wisconsin	
Bailey	Park County Bank	Madison	. Wisconsin Independent Bank

# Legal Developments

#### AMENDMENT TO REGULATION A

The Board of Governors of the Federal Reserve System has amended its Regulation A, "Extensions of Credit by Federal Reserve Banks," (12.CFR Part 201) for the purpose of reducing the discount rate surcharge that applies to large, frequent borrowers at the discount window.

Effective September 22, 1981, section 201.51 is amended as set forth below:

Section 201.51—Short Term Adjustment Credit for Depository Institutions

Section 201.51 is amended in the last sentence by removing "4 per cent" and inserting in lieu thereof "3 per cent".

## AMENDMENT TO REGULATION T

The Board of Governors of the Federal Reserve System is amending Regulation T (12 CFR Part 220) to provide a separate margin requirement for options on debt securities issued or guaranteed by government entities (exempted debt securities). The Board's existing margin rule for options was adopted to apply to options written on corporate equity securities.

Effective October 26, 1981, the Board adopts the following amendments to sections 220.4(i) and 220.8(b) and (j):

1. Section 220.4(i) is revised to read as follows:

## Section 220.4—Special Accounts

- (i) Special bond account.
  - (1) In a special bond account a creditor may extend and maintain credit on any exempted security, registered non-equity security, or OTC margin bond. The maximum loan value of securities held in this account shall be as prescribed from time to time in § 220.8 of this part (the supplement to Regulation T).
  - (2) Put and call options on exempted securities may be issued, endorsed or guaranteed in this account if

either a security position in lieu of margin (cover) is held in the account or the amount of margin prescribed by the Board from time to time in § 220.8 of this part (the supplement to Regulation T) is included in the adjusted debit balance.

- (3) A security position held in the account may serve in lieu of the margin required for writing a call or a put, if the following conditions are met:
  - (i) For writing a call, the covering long security position shall be valued at no more than the exercise price of the call or
  - (ii) For writing a put, the amount of margin required for a covering short security position shall be based on a value not less than the exercise price of the put.
- (4) Any security position held in the account which serves in lieu of the margin required for a put or a call shall be unavailable to support any other option transaction in the account.
- (5) The customer may either designate at the time the option order is entered which security position held in the account is to serve in lieu of the margin required or have a standing agreement with the creditor as to the method to be used for making the determination on any given day.
- 2. Section 220.8 (b) and (j) are revised to read as follows:

## Section 220.8—Supplement

(b) Maximum loan value for a special bond account. The maximum loan value of an exempted security, an OTC margin bond, or a registered nonequity security which is not a put, call or combination thereof shall be as determined by the creditor in good faith. No put, call or combination thereof shall have any loan value.

- (j) Margin required for the writing of options.
  - (1) The amount to be included in the adjusted debit balance of a general account, special bond account, or special convertible debt security account pursuant to paragraphs (d)(5) and (i) of § 220.3 of this part, as the margin required for the issuance, endorsement, or guarantee of any put or call on an equity

security shall be 30 per cent of the current market value of the underlying security with an adjustment for any applicable increase or reduction.

(2) The amount to be included in the adjusted debit balance of an account pursuant to § 220.4(i) of this part as the margin required for the issuance, endorsement, or guarantee of a put or call on an exempted debt security or the security position to be held in lieu of margin shall be equivalent to (i) The amount specified by the rules of the national securities exchange on which the option is traded provided that all such rules have been approved or amended by the Securities and Exchange Commission pursuant to sections 19(b) or 19(c) of the Securities Exchange Act of 1934, or (ii) in the case of an option on an exempted debt security which is not traded on an exchange an amount or security position which the creditor in good faith deems to be equivalent to the margin or the cover on comparable exchangetraded options.

# AMENDMENT TO RULES REGARDING DELEGATION OF AUTHORITY

The Board of Governors of the Federal Reserve System has amended its Rules Regarding Delegation of Authority (12 CFR Part 265) to delegate to the Reserve Banks authority to make determinations regarding indefinite "grandfather privileges" for certain non-banking activities of eligible bank holding companies under section 4(a)(2) of the Bank Holding Company Act.

Effective October 20, 1981, section 265.2(f) of the Board's Rules Regarding Delegation of Authority is amended by adding paragraph (54) as follows:

Section 265.2—Specific Functions Delegated to Board Employees and Federal Reserve Banks

(f) \* \* \*

- (54) Under the provisions of section 4(a)(2) of the Bank Holding Company Act relating to grandfather privileges for certain nonbanking activities of bank holding companies, to determine that termination of grandfathered activities of a particular bank holding company is not warranted: *Provided*, The Reserve Bank is satisfied all of the following conditions are met:
  - (i) The company or its successor is "a company covered in 1970;"
  - (ii) The nonbanking activities for which indefinite grandfather privileges are being sought do not

present any significant unsettled policy issues; and

(iii) The bank holding company was lawfully engaged in such activities as of June 30, 1968 and has been engaged in such activities continuously thereafter.

## BANK HOLDING COMPANY AND BANK MERGER ORDERS ISSUED BY THE BOARD OF GOVERNORS

Orders Under Section 3 of Bank Holding Company Act

Jefferson County Bancorp., Inc., Hillsboro, Missouri

Order Approving Acquisition of a Bank Holding Company

Jefferson County Bancorp., Inc., Hillsboro, Missouri, has applied for the Board's approval under section 3(a)(5) of the Bank Holding Company Act (12 U.S.C. § 1842(a)(5)) to acquire at least 50.63 percent of the voting shares of Century Bancshares Corporation, St. Louis, Missouri ("Century"), and thereby indirectly to acquire North St. Louis Trust Company, St. Louis, Missouri ("Bank").

Notice of the application, affording opportunity for interested persons to submit comments and views, has been given in accordance with section 3(b) of the act. The time for filing comments and views has expired, and the Board has considered the application and all comments received, including those of minority shareholders of Century, in light of the factors set forth in section 3(c) of the act (12 U.S.C. § 1842(c)).

Applicant, through its ownership of Jefferson County Bank and Trust Company, Hillsboro, Missouri, is the 454th largest banking organization in Missouri, with deposits of \$8.8 million. Century, through its ownership of Bank, is the 398th largest banking organization in the state with deposits of \$19.0 million. Upon consummation of the proposal, Applicant would rank as the 234th largest banking organization in Missouri with .11 percent of total commercial bank deposits in the state.

Applicant's subsidiary bank is the 78th largest of 82 banking organizations in the St. Louis banking market<sup>2</sup> with .08 percent of deposits in commercial banks

<sup>1.</sup> Banking data regarding state market shares are as of December 31, 1980.

<sup>2.</sup> The St. Louis banking market is defined as the St. Louis Ranally Metro area and includes all of the City of St. Louis and St. Louis County, portions of Franklin, Jefferson, Lincoln, and St. Charles Counties in Missouri, and portions of Jersey, Macoupin, Madison, Monroe, and St. Clair Counties in Illinois.

there.<sup>3</sup> Bank is the 66th largest banking organization in the St. Louis market, with .18 percent of market deposits. Thus, consummation of the proposal would result in the elimination of some existing competition. Although the Board normally considers the elimination of existing competition as an adverse factor, the Board regards the effects on competition in this case to be insignificant.

The financial and managerial resources of Applicant and its subsidiary bank are generally satisfactory. Future prospects of Century and its subsidiary bank are considered to be generally satisfactory, particularly in light of the improvements that Applicant expects to make. Although Applicant will incur some debt in connection with this proposal, Applicant appears to have sufficient flexibility to service the debt without adversely affecting the financial condition of its existing banking subsidiary or Bank. Accordingly, considerations relating to banking factors are consistent with approval of the application. Applicant intends to expand the services offered by Bank to include full service banking on Saturdays and to offer maximum interest rates on savings accounts. Thus, considerations relating to the convenience and needs of the community to be served are consistent with approval.

Based upon the foregoing and other considerations reflected in the record of this application,<sup>4</sup> it is the Board's judgment that consummation of the proposal to acquire Bank would be consistent with the public interest and that the application should be approved. On the basis of the record, the application is approved for the reasons summarized above. The transaction shall not be made before the thirtieth calendar day following the effective date of this Order, or later than three months after the effective date of this Order, unless such period is extended for good cause by the Board, or by the Federal Reserve Bank of St. Louis, pursuant to delegated authority.

By order of the Board of Governors, effective October 21, 1981.

Voting for this action: Chairman Volcker and Governors Schultz, Wallich, Partee, Teeters, Rice, and Gramley.

(Signed) WILLIAM W. WILES, [SEAL] Secretary of the Board.

United Bank Corporation of New York, Albany, New York

Order Approving Acquisition of Bank

United Bank Corporation of New York ("UBNY"), Albany, New York, a bank holding company within the meaning of the Bank Holding Company Act, has applied for the Board's approval under section 3(a)(3) of the Bank Holding Company Act (12 U.S.C. § 1842(a)(3)) to acquire 100 percent of the successor by merger to The Rondout National Bank ("Bank"), Kingston, New York.

Notice of the application, affording opportunity for interested persons to submit comments, has been given in accordance with section 3(b) of the act. The time for filing comments has expired, and the Board has considered the application and all comments received in light of the factors set forth in section 3(c) of the act.

UBNY, with deposits of \$1.8 billion, is the 15th largest commercial banking organization in New York, holding 1.1 percent of total deposits in commercial banks in the state through its six subsidiary banks. Acquisition of Bank, which holds deposits of \$46.8 million, and ranks 65th among commercial banks in New York, would increase UBNY's share of statewide commercial bank deposits by only .03 percent. Accordingly, consummation of this proposal would not significantly increase the concentration of commercial banking resources in the state.

UBNY is the second largest of 21 banking organizations competing in the Mid-Hudson banking market<sup>2</sup> and holds 11.8 percent (\$143 million) of total deposits in commercial banks in that market through 11 banking offices. Bank is the ninth largest banking organization in the market and holds 3.8 percent of market deposits through its seven offices. Upon consummation of the proposal, UBNY would rank as the largest banking organization in the market with 15.6 percent of market deposits.

<sup>3.</sup> Banking data for the St. Louis market are as of June 30, 1980.

<sup>4.</sup> The Board has considered the comments of minority shareholders of Century ("Protestants"), who have alleged that Applicant, through its principal shareholders, has already acquired more than 5 percent of the shares of Century without the Board's prior approval, in violation of section 3(a)(3) of the act. Protestants base their contention on the previous acquisition by Applicant and Applicant's three shareholders of 4,555 shares each, representing approximately 3.8 percent, or 15.2 percent in the aggregate, of Century's 120,000 outstanding voting shares. The Board has determined that Protestants' claim is nonmeritorious. There is no evidence in the record to indicate that Applicant's principals purchased shares of Century on behalf of Applicant. Indeed, Applicant appears to be subject to the individual control of the three principals who together own 100 percent of Applicant. Moreover, the record includes a statement by Applicant's principals that they intend to carry their investments in Century as personal investments if this application is denied and that there are no agreements or understandings to indemnify the principals against loss if the application is denied. Accordingly, the Board is satisfied that the acquisition of shares of Century by Applicant's principals was made in their individual capacities and thus was not subject to the Board's prior approval under the act.

<sup>1.</sup> All banking data are as of December 31, 1980.

<sup>2.</sup> The Mid-Hudson market includes Dutchess and Ulster Counties and the Newburgh (or northeastern) area of Orange County.

Although such a combination of size and market shares might normally raise some concern about the elimination of significant existing competition, the Board notes that several facts in the record in this case indicate that these factors alone do not accurately reflect the effects of this application on existing competition. Following consummation of the proposal, the Mid-Hudson banking market would continue to be one of the least concentrated banking markets in New York State. The effects of the proposal on competition are further mitigated by the toehold presence in the market of three of the nation's 15 largest banking organizations. As the Board has noted on previous occasions, the competitive influence of these large firms cannot always be measured by their market shares alone, especially with respect to their ability to serve commercial customers.3

The Board also has considered the presence of savings and loan associations and mutual savings banks in the market. Although the Board continues to view commercial banking as the relevant line of commerce in determining the competitive effects of a proposal, the Board has stated that it may be appropriate in particular cases to take into consideration direct competition from thrifts in specific areas when evaluating various competitive influences.4 In view of the absolute size and significant deposit-taking role of thrifts in the Mid-Hudson market, as well as their expanded powers, the Board believes that the influence of thrift institutions further diminishes the adverse competitive effects of the proposal. Accordingly, on the basis of the above and other facts of record, the Board does not regard the effect of the proposal on competition in the Mid-Hudson market to be so substantially adverse as to warrant denial of the application.

The financial and managerial resources and future prospects of Applicant, its subsidiaries, and Bank are considered satisfactory, particularly in view of the fact that consummation of the proposal would result in the injection of new capital into Bank. Bank's access to Applicant's managerial and financial resources will increase Bank's lending capabilities and broaden the range and quality of its services. Considerations relating to the convenience and needs of the community to be served thus are regarded as being sufficient to outweigh any adverse competitive effects resulting from the proposal. Based on the foregoing and other facts of record, the Board has determined that consummation of the transaction would be consistent with

On the basis of the record, the application is approved for the reasons summarized above. The transaction shall not be consummated before the thirtieth calendar day following the effective date of this Order, or later than three months after the effective date of this Order, unless such period is extended for good cause by the Board or by the Federal Reserve Bank of New York, pursuant to delegated authority.

By order of the Board of Governors, effective October 5, 1981.

Voting for this action: Chairman Volcker and Governors Schultz, Wallich, Partee, Rice, and Gramley. Voting against this action: Governor Teeters.

(Signed) JAMES MCAFEE, Assistant Secretary of the Board.

Orders Under Sections 3 and 4 of Bank Holding Company Act

State Street Boston Corporation, Boston, Massachusetts

Worcester Bancorp, Inc., Worcester, Massachusetts

SEAL

Order Approving Acquisition of Shares of a Bank Holding Company

State Street Boston Corporation ("Applicant"), Boston, Massachusetts, a bank holding company within the meaning of the Bank Holding Company Act, has applied for the Board's approval under sections 3 and 4 of the Bank Holding Company Act (12 U.S.C. §§ 1842 and 1843) to acquire 16.6 percent of the voting shares of Worcester Bancorp, Inc. ("Worcester") Worcester, Massachusetts, an unaffiliated bank holding company. As a result of consummation of this transaction, Applicant would indirectly acquire an interest in Worcester's banking subsidiaries. Also, Applicant would indirectly acquire an interest in Worcester's nonbanking subsidiaries, Wornat Development Corporation and Wornat Insurance Agency, Inc., both of Worcester, Massachusetts. These corporations engage, respectively, in the business of mort-

the public interest and that the application should be approved.

<sup>3.</sup> The Bank of New York (Empire National Bank), 66 FEDERAL RESERVE BULLETIN 807 (1980).

<sup>4.</sup> Id.; Fidelity Union Bancorporation, 66 FEDERAL RESERVE BUL-LETIN 576 (1980); United Bank Corporation of New York (Schenectady Trust Company), 66 FEDERAL RESERVE BULLETIN 61, 63 (1979).

<sup>1.</sup> Worcester's five banking subsidiaries are First National Bank of Amherst, Amherst; Worcester County National Bank, Worcester; The Peoples National Bank of Marlborough, Marlborough; Franklin County Trust Company, Greenfield; and First National Bank of Cape Cod, Orleans; all in Massachusetts.

gage banking activities for the purpose of conducting an orderly liquidation of assets, and selling creditrelated insurance. Such activities have been determined by the Board to be closely related to banking. 12 C.F.R. §§ 225.4(a)(1) and (9).

Notice of these applications, affording opportunity for persons to submit comments and views, has been given in accordance with sections 3 and 4 of the Bank Holding Company Act. The time for filing comments and views has expired, and the Board has considered the applications and all comments received in light of the factors set forth in section 3(c) of the Bank Holding Company Act (12 U.S.C. § 1842(c)) and the considerations specified in section 4(c)(8) of the Bank Holding Company Act.

An acquisition of less than a controlling interest in a bank is not a normal acquisition for a bank holding company. Although the Bank Holding Company Act contemplates investments between 5 and 25 percent of a bank's voting shares, the Board believes such proposals must be carefully analyzed in light of all of the factors enumerated in the Bank Holding Company Act. More particularly, section 3 of the Bank Holding Company Act requires that in every case involving the acquisition of more than 5 percent of the stock of a bank or bank holding company, the Board must analyze the competitive, financial, managerial, future prospects, and convenience and needs considerations; section 4 of the Bank Holding Company Act similarly requires that in every case involving the acquisition of more than 5 percent of the shares of a nonbank company, the Board must analyze all of the aspects of the applications in order to determine whether the acquisition can reasonably be expected to produce benefits to the public that outweigh possible adverse effects. The Board has considered all such factors with regard to the applications, even though Applicant's proposal involves a minority interest in Worcester's voting shares and those shares will be placed in trust.

Applicant, the fourth largest commercial banking organization in Massachusetts, controls three subsidiary banks with 36 offices having aggregate deposits of \$1.8 billion, representing 9.4 percent of the total deposits of commercial banks in Massachusetts.<sup>2</sup> Worcester, the seventh largest commercial banking organization in Massachusetts, controls five subsidiary banks with 52 offices having aggregate deposits of \$710 million, representing 3.5 percent of the total deposits of commercial banks in Massachusetts. Applicant and Worcester, if considered as a combined banking organization, would rank as the third largest in the state with aggregate deposits of \$2.6 billion,

representing 12.9 percent of the total deposits of commercial banks in Massachusetts, and the subject combination would increase the concentration of banking resources of the top five commercial banking organizations in Massachusetts.

Applicant's and Worcester's subsidiary banks are direct competitors in three Massachusetts banking markets. Applicant's three subsidiary banks operate in the Boston, Cape Cod, and Fitchburg-Leominster banking markets, while Worcester's five subsidiary banks operate in the Boston, Cape Cod, Fitchburg-Leominster, Worcester, Athol, Greenfield, and Amherst-Northampton banking markets. Thus, Applicant and Worcester are direct competitors in the Boston, Cape Cod, and Fitchburg-Leominster banking markets. In the Boston banking market, Applicant ranks as the fourth largest of 72 commercial banking organizations in the market, with \$1.6 billion in market deposits, representing 10.9 percent of total commercial bank deposits. Worcester ranks 43rd in the Boston banking market with total market deposits of \$24.0 million, and a 0.2 percent market share. In the Fitchburg-Leominster market, Applicant ranks as the smallest of five commercial banking organizations in the market, with deposits of \$3.9 million and 3.1 percent market share; Worcester ranks second with deposits of \$37.1 million and a 29.1 percent market share. In the Cape Cod banking market, Applicant ranks sixth of eight commercial banking organizations in the market, with deposits of \$29.6 million and a 8.1 percent market share; Worcester ranks fourth with deposits of \$45.4 million and a 12.4 percent market share. Thus, a combination of Applicant and Worcester would, on its face, appear to eliminate some existing competition in these three banking markets.

Based upon the above and other relevant information of record, the Board believes that if Applicant and Worcester were considered as a combined organization, statewide concentration of banking resources would be increased, and the combination of Applicant and Worcester would apparently eliminate some existing competition in three relevant banking markets. There are, however, several unique factors associated with this proposal that mitigate any competitive consequences. Such factors include: a plan requiring the immediate transfer of the shares of Worcester acquired by Applicant to a trust administered by an independent corporate trustee; a trust designed to ensure that Applicant does not exercise a controlling influence over Worcester; the fact that Applicant's option to purchase the subject 16.6 percent interest in Worcester was obtained in an effort to acquire control of Worcester, such effort being terminated at this time in light of Worcester's decision to accept the bid of another large Massachusetts bank holding company

<sup>2.</sup> All banking data are as of June 30, 1981.

(Shawmut Corporation ("Shawmut"), Boston, Massachusetts); and the fact that this application involves an acquisition of shares to be held in a trust for a limited time certain. The Board finds that because of these unique facts and circumstances, the competitive impact of the acquisition is minimized, and therefore the anticompetitive effects would not be so serious as to warrant denial of the subject application. Moreover, the Board recognizes that this factual pattern is unlikely to occur in the future and, therefore, this decision is not intended to reflect a Board predisposition to favor the structuring of proposals along these lines in the future.<sup>3</sup>

With respect to potential competition, the four banking markets of Worcester where Applicant does not operate, (i.e., Worcester, Athol, Greenfield, and Amherst-Northampton), do not appear attractive for de novo entry and, moreover, Applicant's banks are restricted by law from branching into such areas. Applicant's proposal does raise some concerns regarding the elimination of probable future competition in the Worcester banking market because Worcester is the largest banking organization in that market, and because Applicant is a sizeable organization in the state. The effects of this acquisition are mitigated by the fact that this investment represents less than a controlling interest in Worcester, Applicant's ownership will be of limited duration, and there are a substantial number of thrift institutions competing to some extent with commercial banks in the market. Thus, consummation of the transaction would not result in any adverse effects upon probable future competition in any relevant market.

The financial and managerial resources and future prospects of Applicant, Worcester, and their subsidiaries are considered generally satisfactory and consistent with approval in the context of the particular facts pertaining to this application. In addition, the Board concludes that considerations relating to the convenience and needs of the communities to be served are consistent with approval in the subject case. Based upon the foregoing and other considerations reflected in the record, the Board's judgment is that under the standards set forth in section 3 of the Bank Holding Company Act, the proposed acquisition, considered in the context of all the unique facts and circumstances

associated therewith, is in the public interest and that the application should be approved.

Applicant's proposal is also subject to the requirements of section 4(c)(8) of the Bank Holding Company Act (12 U.S.C. § 1843(c)(8)) and section 225.4 of the Board's Regulation Y (12 C.F.R. § 225.4) because Applicant would, upon consummation of the subject proposal, acquire an indirect interest in Worcester's nonbank subsidiaries. The activities of these nonbank companies were determined to be permissible for bank holding companies at the time Worcester received Board approval for their acquisition and they have not changed their activities since that time. Furthermore, there is no evidence in the record indicating that consummation of this proposal, under the unique set of circumstances associated therewith, would result in any undue concentration of resources, unfair competition, conflicts of interests, unsound banking practices or other adverse effects on the public interest. Based upon the foregoing and other considerations reflected in the record, the Board has determined that the balance of the public interest factors that must be considered under section 4(c)(8) supports approval of Applicant's proposal, and the application to indirectly acquire an interest in Worcester's nonbank subsidiaries in this particular situation should be approved.

In approving these applications the Board finds, in the context of the unique facts and circumstances associated therewith, and under the standards set forth in both sections 3 and 4 of the Bank Holding Company Act, that the proposal is unlikely to have an adverse effect on the public interest at the present time and that the application should be approved. However, Applicant's banking and nonbanking activities remain subject to Board review, and the Board retains the authority to require Applicant to modify or terminate any such activities or holdings if the Board at any time determines that its activities or continued holding of shares is likely to result in adverse effects on the public interest.

On the basis of the record, the applications are approved for the reasons summarized above. The transaction shall not be consummated before thirty days after the effective date of this Order, or later than three months after the effective date of this Order, unless such period is extended for good cause by the Board, or by the Federal Reserve Bank of Boston acting pursuant to delegated authority.

The determination as to Worcester's nonbanking subsidiaries is subject to the conditions set forth in § 225.4(c) of Regulation Y, and to the Board's authority to require such modification or termination of the activities of a holding company or any of its subsidiaries as the Board finds necessary to assure compliance with the provisions and purposes of the Bank Holding

<sup>3.</sup> In the event that circumstances change so Applicant would acquire control of Worcester, Applicant would be required to submit an application for such acquisition, and the Board would reexamine the competitive considerations as well as all other relevant factors in view of the new set of facts and circumstances, absent the mitigating factors enumerated above.

<sup>4.</sup> In fact, consummation of this particular proposal may result in financial benefits as Applicant stands to gain a significant profit from the sale of its Worcester shares, and has committed to use all such profits to increase the equity capital of its subsidiary banks.

Company Act and the Board's regulations and orders issued thereunder or to prevent evasion thereof.

Orders Under Section 4 of Bank Holding Company Act

Educators Investment Company of Kansas, Emporia, Kansas

J.R. Montgomery Bancorporation, Lawton, Oklahoma

James B. Chambers Memorial, Wheeling, West Virginia

Investment Corporation of America, Inc., River Forest, Illinois

Bostates Investment Co., Tulsa, Oklahoma

Charter Bancorporation, Inc., Northfield, Illinois

Commerce Group Kearney, Inc., Lincoln, Nebraska

Fremont Bancshares, Inc., Fremont First National Co., Lincoln, Nebraska

Merchants Corporation, Bangor, Maine

Determination Regarding "Grandfather Privileges" of Certain Bank Holding Companies

Section 4 of the Bank Holding Company Act (12 U.S.C. § 1843) provides certain privileges ("grandfather privileges") with respect to nonbanking activities of a company that, by virtue of the 1970 amendments to the act, became subject to the act. Pursuant to section 4(a)(2) of the act, a "company covered in

1970" may continue to engage, either directly or through a subsidiary, in nonbanking activities that such a company was lawfully engaged in on June 30, 1968 (or on a date subsequent to June 30, 1968, in the case of activities carried on as a result of the acquisition by such company or subsidiary, pursuant to a binding written contract entered into on or before June 30, 1968, of another company engaged in such activities at the time of the acquisition), and has been continuously engaged in since June 30, 1968 (or such subsequent date).

Section 4(a)(2) of the act provides, inter alia, that the Board may terminate such grandfather privileges if, having due regard to the purposes of the act, the Board determines that such action is necessary to prevent an undue concentration of resources, decreased or unfair competition, conflicts of interest, or unsound banking practices. With respect to a company that controls a bank with assets in excess of \$60 million on or after December 31, 1970, the Board is required to make such a determination within two years.

On the evidence before it, the Board makes the following findings: Each of the companies named below became a bank holding company as a result of the 1970 amendments to the act by virtue of its ownership of its subsidiary bank, and is regarded as "a company covered in 1970" as that term is defined in section 2(b) of the act. From the record, it has been determined that each of the companies has been engaged continuously in the nonbanking activities indicated since prior to June 30, 1968, and that each of these activities appears to be eligible for indefinite grandfather privileges.

Company	Subsidiary Bank and Total Banking Assets	Grandfathered Activities
Educators Invest- ment Company of Kansas, Inc. Emporia, Kan- sas	Citizens National Bank and Trust Company, Emporia, Kansas— \$73 million as of Sep- tember 30, 1979	Development of oil gas interests held on June 30, 1968
J. R. Montgomery Bancorporation, Lawton, Oklaho- ma	City National Bank & Trust Co., Lawton, Oklahoma—\$48.1 million as of Septem- ber 30, 1980	Operating and managing motion picture theatres held on June 30, 1968 and sub- lease of property to affiliated bank
James B. Cham- bers Memorial, Wheeling, West Virginia	The First National Bank & Trust Com- pany of Wheeling, Wheeling, West Vir- ginia—\$82 million as of December 31, 1979	Acting as charita- ble trust and making loans to corporations and individuals
Investment Corporation of America, Inc., River Forest, Illinois	River Forest State Bank and Trust Company, River Forest, Illinois— \$128.1 as of Decem- ber 31, 1980.	Commercial finance

Company	Subsidiary Bank and Total Banking Assets	Grandfathered Activities
Bostates Invest- ment Co., Tulsa, Oklahoma	Boulder Bank and Trust Co., Tulsa, Oklahoma—\$74.2 million as of Septem- ber 30, 1980	None <sup>1</sup>
Charter Bancor- poration, Inc., Northfield, Illi- nois	Bank of Wheaton, Wheaton, Illinois— \$90 million as of Sep- tember 30, 1980	None
Commerce Group Kearney, Inc., Lincoln, Nebras- ka	First National Bank & Trust Co. of Kear- ney, Kearney, Ne- braska—\$79.5 mil- lion as of September 30, 1980	None
Fremont Banc- shares, Inc. Fremont First Na- tional Co., Lin- coln, Nebraska	First National Bank & Trust Co. of Fre- mont, Fremont, Ne- braska—\$85.1 mil- lion as of September 30, 1980	None <sup>1</sup>
Merchants Corporation, Bangor, Maine	Merchants National Bank of Bangor, Bangor, Maine— \$63.2 as of Septem- ber 30, 1980	None <sup>1</sup>

On the basis of the foregoing and all the facts before the Board, it appears that the volume, scope and nature of the activities of the above-mentioned bank holding companies described herein do not demonstrate an undue concentration of resources, decreased or unfair competition, conflicts of interest, or unsound banking practices. Thus, there appears to be no reason to require these bank holding companies to terminate their grandfathered activities. The Board's judgment is that, at this time, termination of the grandfather privileges of the above-mentioned companies is not necessary in order to prevent an undue concentration of resources, decreased or unfair competition, conflicts of interest, or unsound banking practices. This determination does not authorize the entry into any new activity or product extension that was not engaged in on June 30, 1968, and continuously thereafter, or any activity that is not subject to this determination. Moreover, companies may not acquire new investments not held on June 30, 1968, except where such new investments would be necessary to preserve the value of the companies' grandfathered interest.2

A significant alteration in the nature or extent of the activities engaged in by any of these companies, or a change in location thereof, will be cause for a reevaluation by the Board of the activities of that bank holding company under the provisions of section 4(a)(2) of the act; that is, whenever the alteration or change is such that the Board finds that a termination of the grandfather privileges is necessary to prevent an undue concentration of resources or any other adverse consequences at which the act is directed. No merger, consolidation, acquisition of assets other than in the ordinary course of business, or acquisition of any interest in a going concern, to which these bank holding companies or any of their nonbank subsidiaries is a party, may be consummated without prior approval of the Board. Further, the provision of any credit, property, or service by any of these bank holding companies or subsidiary thereof shall not be subject to any condition which, if imposed by a bank, would constitute an unlawful tie-in arrangement under section 106 of the Bank Holding Company Act Amendments of 1970.

This determination herein does not preclude a later review by the Board of the nonbank activities of these bank holding companies and a future determination by the Board in favor of termination of grandfather benefits of these companies. This determination is subject to the Board's authority to require modification or termination of the activities of these bank holding companies or any of their nonbanking subsidiaries as the Board finds necessary to assure compliance with the provisions and purposes of the act, and the Board's regulations and orders issued thereunder, or to prevent evasion thereof.

Voting for this action: Chairman Volcker and Governors Wallich, Partee, Teeters, Rice, and Gramley. Absent and not voting: Governor Schultz.

(Signed) JAMES McAFEE, [SEAL] Assistant Secretary of the Board.

Orders Under Bank Merger Act

Isabella Bank and Trust, Mount Pleasant, Michigan

Order Approving Merger of Banks

Isabella Bank and Trust, Mount Pleasant, Michigan ("Applicant"), has applied to the Board pursuant to the Bank Merger Act (12 U.S.C. § 1828(c)), for approval to merge with The Blanchard State Bank, Blanchard, Michigan ("Bank"), under the charter and title of Applicant. As an incident to the proposed

<sup>1.</sup> Was not engaged in any nonbanking activities pursuant to section 4(a)(2) of the act as of June 30, 1968.

<sup>2.</sup> The Republic National Bank of Dallas, 59 FEDERAL RESERVE BULLETIN 768 (1973).

merger, the existing offices of Bank would become branch offices of the resulting bank.

As required by the Bank Merger Act, notice of the proposed transaction has been published and reports on competitive factors have been requested from the Attorney General, the Comptroller of the Currency, and the Federal Deposit Insurance Corporation. The time for filing comments has expired, and the Board has considered the application and all comments received in light of the factors set forth in the act.

Applicant is the 102nd largest banking organization in Michigan with \$69.7 million in deposits, representing 0.17 percent of total deposits held by commercial banks in the state. Bank is the 328th largest bank in the state, with deposits of \$12.3 million, representing 0.03 percent of total deposits held by commercial banks in the state. Consummation of the proposed merger would not significantly increase Applicant's share of deposits in Michigan, and accordingly, would not have an appreciable effect on the concentration of banking resources in the state.

Applicant is the largest bank in the Isabella-Clare banking market,<sup>2</sup> with 27.0 percent of commercial bank deposits in the market. Bank's main office is the seventh largest banking organization in the Isabella-Clare banking market and holds \$6.1 million in deposits, representing 2.6 percent of commercial bank deposits in the market. Bank's other office, located in Six Lakes, Michigan, is the eighth largest banking organization in the Montcalm County banking market<sup>3</sup> and holds approximately \$5.2 million in deposits, representing 2.9 percent of the commercial bank deposits in that market. Upon consummation of the proposed merger, Applicant would hold approximately 29.6 percent of commercial bank deposits in the Isabella-Clare banking market.

While the combined market shares of Applicant and Bank might normally raise some concern about the elimination of existing competition, the Board notes that several facts in the record in this case indicate that market shares alone do not accurately reflect the effects of this application on existing competition. The Board notes that Applicant's share of market deposits has declined over the past several years and Bank's market share in the Isabella-Clare banking market has declined even more substantially over the same period. Moreover, the aggregate share of deposits held by the four and seven largest banking organizations in the

Bank's office in Six Lakes, Michigan competes in the Montcalm County banking market, which is adjacent to the Isabella-Clare banking market. Applicant currently maintains no offices in the Montcalm County banking market, and the Board concludes that consummation would not result in the loss of any significant amount of existing or potential competition in that market. In this regard, the Board notes that Bank is not a dominant organization within the Montcalm County banking market; of the market's eight banking organizations it ranks last, with less than three percent of the commercial bank deposits in the market.

The financial and managerial resources and future prospects of Applicant and Bank are considered satisfactory. In connection with the proposed transaction, Applicant intends to provide Bank with assistance in trust services, data processing, foreign currency transactions, and solicitation of credit card customers. Considerations relating to the convenience and needs of the communities to be served thus are regarded sufficient to outweigh any slightly adverse competitive effects resulting from the proposal. Based on the foregoing and other facts of record, the Board has determined that consummation of the transaction would be consistent with the public interest and that the application should be approved.

On the basis of the record, the application is approved for the reasons summarized above. The transaction shall not be consummated before the thirtieth calendar day following the effective date of this Order, or later than three months after the effective date of this Order, unless such period is extended for good cause by the Board or by the Federal Reserve Bank of Chicago, pursuant to delegated authority.

By order of the Board of Governors, effective October 7, 1981.

Voting for this action: Chairman Volcker and Governors Schultz, Wallich, Partee, Rice, and Gramley. Voting against this action: Governor Teeters.

(Signed) WILLIAM W. WILES, Secretary of the Board.

Isabella-Clare banking market has also declined significantly. While the Board continues to view commercial banking as the relevant line of commerce in determining the competitive effects of a proposal, the Board notes that numerous savings and loan associations and credit unions operate in the Isabella-Clare banking market and that the activities of these institutions further diminish the competitive effects of this proposal. Accordingly, the Board finds that consummation of the proposal will have only slightly adverse effects on existing competition in the Isabella-Clare banking market.

<sup>1.</sup> All banking data cited in this paragraph are as of December 31, 1980. All other banking data are as of June 30, 1980.

<sup>2.</sup> The Isabella-Clare banking market is approximated by Clare and Isabella Counties, Michigan.

<sup>3.</sup> The Montcalm County banking market is approximated by Montcalm County, Michigan plus Spencer and Oakfield townships in Kent County, Michigan.

## ORDERS APPROVING APPLICATIONS UNDER THE BANK HOLDING COMPANY ACT AND BANK MERGER ACT

## By the Board of Governors

During October 1981, the Board of Governors approved the applications listed below. Copies are available upon request to Publications Services, Division of Support Services, Board of Governors of the Federal Reserve System, Washington, D.C. 20551.

- David Merrill, et al. v. Federal Open Market Committee, filed May 1975, U.S.D.C. for the District of Columbia.

# Financial and Business Statistics

#### **CONTENTS**

## Domestic Financial Statistics

- A3 Monetary aggregates and interest rates
- A4 Reserves of depository institutions, reserve, bank credit
- A5 Reserves and borrowings of depository institutions
- A6 Federal funds and repurchase agreements of large member banks

## **POLICY INSTRUMENTS**

- A7 Federal Reserve Bank interest rates
- A8 Depository institutions reserve requirements
- A9 Maximum interest rates payable on time and savings deposits at federally insured institutions
- A10 Federal Reserve open market transactions

## FEDERAL RESERVE BANKS

- All Condition and Federal Reserve note statements
- A12 Maturity distribution of loan and security holdings

## MONETARY AND CREDIT AGGREGATES

- A12 Bank debits and deposit turnover
- A13 Money stock measures and components
- A14 Aggregate reserves of depository institutions and member bank deposits
- A15 Loans and securities of all commercial banks

## COMMERCIAL BANKS

- A16 Major nondeposit funds
- A17 Assets and liabilities, last Wednesday-of-month series

## WEEKLY REPORTING COMMERCIAL BANKS

#### Assets and liabilities

- A18 All reporting banks
- A19 Banks with assets of \$1 billion or more
- A20 Banks in New York City
- A21 Balance sheet memoranda
- A22 Branches and agencies of foreign banks
- A23 Commercial and industrial loans
- A24 Gross demand deposits of individuals, partnerships, and corporations

## FINANCIAL MARKETS

- A25 Commercial paper and bankers dollar acceptances outstanding
- A26 Prime rate charged by banks on short-term business loans
- A26 Terms of lending at commercial banks
- A27 Interest rates in money and capital markets
- A28 Stock market—Selected statistics
- A29 Savings institutions—Selected assets and liabilities

## FEDERAL FINANCE

- A30 Federal fiscal and financing operations
- A31 U.S. budget receipts and outlay
- A32 Federal debt subject to statutory limitation
- A32 Gross public debt of U.S. Treasury—Types and ownership
- A33 U.S. government marketable securities— Ownership, by maturity
- A34 U.S. government securities dealers— Transactions, positions, and financing
- A35 Federal and federally sponsored credit agencies—Debt outstanding

# SECURITIES MARKETS AND CORPORATE FINANCE

- A36 New security issues—State and local governments and corporations
- A37 Open-end investment companies—Net sales and asset position
- A37 Corporate profits and their distribution
- A38 Nonfinancial corporations—Assets and liabilities
- A38 Total nonfarm business expenditures on new plant and equipment
- A39 Domestic finance companies—Assets and liabilities; business credit

#### REAL ESTATE

- A40 Mortgage markets
- A41 Mortgage debt outstanding

#### CONSUMER INSTALLMENT CREDIT

- A42 Total outstanding and net change
- A43 Extension and liquidations

## FLOW OF FUNDS

- A44 Funds raised in U.S. credit markets
- A45 Direct and indirect sources of funds to credit markets

## Domestic Nonfinancial Statistics

- A46 Nonfinancial business activity—Selected measures
- A46 Output, capacity, and capacity utilization
- A47 Labor force, employment, and unemployment
- A48 Industrial production-Indexes and gross value
- A50 Housing and construction
- A51 Consumer and producer prices
- A52 Gross national product and income
- A53 Personal income and saving

## International Statistics

- A54 U.S. international transactions—Summary
- A55 U.S. foreign trade
- A55 U.S. reserve assets
- A56 Foreign branches of U.S. banks—Balance sheet data
- A58 Selected U.S. liabilities to foreign official institutions

### REPORTED BY BANKS IN THE UNITED STATES

- A58 Liabilities to and claims on foreigners
- A59 Liabilities to foreigners
- A61 Banks' own claims on foreigners
- A62 Banks' own and domestic customers' claims on foreigners
- A62 Banks' own claims on unaffiliated foreigners
- A63 Claims on foreign countries—Combined domestic offices and foreign branches

## SECURITIES HOLDINGS AND TRANSACTIONS

- A64 Marketable U.S. Treasury bonds and notes— Foreign holdings and transactions
- A64 Foreign official assets held at Federal Reserve Banks
- A65 Foreign transactions in securities

## REPORTED BY NONBANKING BUSINESS ENTERPRISES IN THE UNITED STATES

A66 Liabilities to unaffiliated foreigners A67 Claims on unaffiliated foreigners

#### INTEREST AND EXCHANGE RATES

- A68 Discount rates of foreign central banks
- A68 Foreign short-term interest rates
- A68 Foreign exchange rates
- A69 Guide to Tabular Presentation, Statistical Releases, and Special Tables

1. Unless otherwise noted, rates of change are calculated from average amounts outstanding in preceding month or quarter. Growth rates are adjusted for discontinuities in series that result from changes in Regulation D.

2. Includes reserve balances at Federal Reserve Banks in the current week plus vault cash held two weeks earlier used to satisfy reserve requirements at all depository institutions plus currency outside the U.S. Treasury, Federal Reserve Banks, the vaults of depository institutions, and surplus vault cash at depository institutions.

the vaults of depository institutions, and surplus vault cash at depository institutions.

3. M1-A: Averages of daily figures for (1) demand deposits at all commercial banks other than those due to domestic banks, the U.S. government, and foreign banks and official institutions less cash items in the process of collection and Federal Reserve float; (2) currency outside the Treasury, Federal Reserve Banks, and the vaults of commercial banks; and (3) traveler's checks of nonbank issuers.

M1-B: M1-A plus negotiable order of withdrawal and automated transfer service accounts at banks and thrift institutions, credit union share draft accounts, and demand deposits at mutual savings banks.

M2: M1-B plus savings and small-denomination time deposits at all depository institutions, overnight repurchase agreements at commercial banks, overnight Eurodollars held by U.S. residents other than banks at Caribbean branches of member banks, and money market mutual fund shares.

M3: M2 plus large-denomination time deposits at all depository institutions and term RPs at commercial banks and savings and loan associations.

L: M3 plus other liquid assets such as term Eurodollars held by U.S. residents other than banks, bankers acceptances, commercial paper, Treasury bills and other liquid Treasury securities, and U.S. savings bonds.

- 4. Savings deposits exclude negotiable order of withdrawal (NOW) and automatic transfer service (ATS) accounts at commercial banks.

  5. Small-denomination time deposits are those issued in amounts of less than \$100,000.

  6. Large-denomination time deposits are those issued in amounts of \$100,000 or more.

- 6. Large-denomination time deposits are those issued in amounts of \$100,000 or more.
  7. Savings and loan associations, mutual savings banks, and credit unions.
  8. Changes calculated from figures shown in table 1.23.
  9. Averages of daily effective rates (average of the rates on a given date weighted by the volume of transactions at those rates).
  10. Rate for the Federal Reserve Bank of New York.
  11. Quoted on a bank-discount basis.
  12. Unweighted average of offering rates quoted by at least five dealers.
  13. Market yields adjusted to a 20-year maturity by the U.S. Treasury.
  14. Bond Buyer series for 20 issues of mixed quality.
  15. Weighted averages of new publicly offered bonds rated Aaa, Aa, and A by Moody's Investors Service and adjusted to an Aaa basis. Federal Reserve compilations.
- 16. Average rates on new commitments for conventional first mortgages on new homes in primary markets, unweighted and rounded to nearest 5 basis points, from Dept. of Housing and Urban Development.
  Note: Reserve series have been revised to adjust for discontinuties associated.
- with the transitional phase-in of reserve requirements under the Monetary Control
- M3 has been revised to incorporate additional data for term repurchase agreements

<sup>1.</sup> As of Aug. 13, 1981 excludes required clearing balances of all depository institutions.

institutions.

2. Prior to Nov. 13, 1980, the figures shown reflect only the vault cash held by member banks.

3. Total vault cash at institutions without required reserve balances less vault cash equal to their required reserves.

4. Adjusted to include waivers of penalties for reserve deficiencies in accordance with Board policy, effective Nov. 19, 1975, of permitting transitional relief on a graduated basis over a 24-month period when a nonmember bank merged into an

existing member bank, or when a nonmember bank joins the Federal Reserve System. For weeks for which figures are preliminary, figures by class of bank do not add to total because adjusted data by class are not available.

5. Reserve balances with Federal Reserve Banks which exclude required clearing balances plus vault cash at institutions with required reserve balances plus vault cash equal to required reserves at other institutions.

6. Reserve balances with Federal Reserve Banks which exclude required clearing balances plus vault cash used to satisfy reserve requirements less required reserves. (This measure of excess reserves is comparable to the old excess reserve concept published historically.)

113MJ 1011111111111111111111111111111111111	3 374					In effect Oct. 31, 1981	14	14

<sup>1.</sup> Effective Oct. 12, 1981, a 2 percent surcharge was applied to short-term adjustment credit borrowings by institutions with deposits of \$500 million or more who borrowed in successive weeks or in more than 4 weeks in a moving 13-week period which includes the current week and the 12 preceding weeks. The rate for seasonal credit is unaffected by the surcharge.

2. Applicable to advances when exceptional circumstances or practices involve only a particular depository institution and to advances when an institution is under sustained liquidity pressures. See section 201.3(b)(2) of Regulation A.

3. Rates for short-term adjustment credit. For description and earlier data see the following publications of the Board of Governors: Banking and Monetary Statistics, 1914–1941 and 1941–1970; Annual Statistical Digest, 1971–1975, 1972–1976, 1973–1977, and 1974–1978.

In 1980 and 1981, the Federal Reserve applied a surcharge to short-term adjustment credit borrowings by institutions with deposits of \$500 million or more that had borrowed in successive weeks or in more than 4 weeks in a calendar quarter. A 3 percent surcharge was in effect from Mar. 17, 1980, through May 7, 1980. On Nov. 17, 1980, a 2 percent surcharge was adopted; the surcharge was subsequently raised to 3 percent on Dec. 5, 1980 and to 4 percent on May 5, 1981. The surcharge was reduced to 3 percent effective Sept. 22, 1981 and to 2 percent effective Oct. 12. As of Oct. 1, the formula for applying the surcharge was changed from a calendar quarter to a moving 13-week period.

1. For changes in reserve requirements beginning 1963, see Board's Annual Statistical Digest, 1971–1975 and for prior changes, see Board's Annual Report for 1976, table 13. Under provisions of the Monetary Control Act, depository institutions include commercial banks, mutual savings banks, savings and loan associations, credit unions, agencies and branches of foreign banks, and Edge Act comparations.

ciations, credit unions, agencies and branches of foreign banks, and Edge Act corporations.

2. (a) Requirement schedules are graduated, and each deposit interval applies to that part of the deposits of each bank. Demand deposits subject to reserve requirements were gross demand deposits minus cash items in process of collection and demand balances due from domestic banks.

(b) The Federal Reserve Act as amended through 1978 specified different ranges of requirements for reserve city banks and for other banks. Reserve cities were designated under a criterion adopted effective Nov. 9, 1972, by which a bank having net demand deposits of more than \$400 million was considered to have the character of business of a reserve city bank. The presence of the head office of such a bank constituted designation of that place as a reserve city. Cities in which there were Federal Reserve Banks or branches were also reserve cities. Any banks having net demand deposits of \$400 million or less were considered to have the character of business of banks outside of reserve cities and were permitted to maintain reserves at ratios set for banks not in reserve cities.

business of banks outside of reserve cities and were permitted to maintain reserves at ratios set for banks not in reserve cities.

(c) Effective Aug. 24, 1978, the Regulation M reserve requirements on net balances due from domestic banks to their foreign branches and on deposits that foreign branches lend to U.S. residents were reduced to zero from 4 percent and 1 percent respectively. The Regulation D reserve requirement on borrowings from unrelated banks abroad was also reduced to zero from 4 percent.

(d) Effective with the reserve computation period beginning Nov. 16, 1978, domestic deposits of Edge corporations were subject to the same reserve requirements as deposits of member banks.

3. (a) Negotiable order of withdrawal (NOW) accounts and time deposits such as Christmas and vacation club accounts were subject to the same requirements as savings deposits.

as Christmas and vacation club accounts were subject to the same requirements as savings deposits.

(b) The average reserve requirement on savings and other time deposits before implementation of the Monetary Control Act had to be at least 3 percent, the minimum specified by law.

4. (a) Effective Nov. 2, 1978, a supplementary reserve requirement of 2 percent was imposed on large time deposits of \$100,000 or more, obligations of affiliates, and ineligible acceptances. This supplementary requirement was eliminated with the maintenance period beginning July 24, 1980.

(b) Effective with the reserve maintenance period beginning Oct. 25, 1979, a marginal reserve requirement of 8 percent was added to managed liabilities in excess of a base amount. This marginal requirement was increased to 10 percent beginning Apr. 3, 1980, was decreased to 5 percent beginning June 12, 1980, and was reduced to zero beginning July 24, 1980. Managed liabilities are defined as large time deposits, Eurodollar borrowings, repurchase agreements against U.S. government and federal agency securities, federal funds borrowings from non-member institutions, and certain other obligations. In general, the base for the marginal reserve requirement was originally the greater of (a) \$100 million or (b) the average amount of the managed liabilities held by a member bank. Edge corporation, or family of U.S. branches and agencies of a foreign bank for the two statement weeks ending Sept. 26, 1979. For the computation period beginning Mar. 20, 1980, the base was fowered by (a) 7 percent or (b) the decrease in an institutions U.S. office gross loans to foreigners and gross balances due from foreign offices of other institutions between the base period (Sept. 13–26, 1979) and the week ending Mar. 12, 1980, whichever was greater. For the computation period beginning May 29, 1980, the base was increased by 7½ percent above the base used to calculate the marginal reserve in the statement week of May 14–21, 1980. In addition, beginning Mar. 19, 1980, the base was reduced to the extent that foreign loans and balances declined.

5. For existing nonmember banks and thrift institutions at the time of implementation of the Monetary Control Act, the phase-in period ends Sept. 3, 1987. For existing member banks the phase-in period is about three years, depending on whether their new reserve requirements are greater or less than the old requirements. For existing agencies and branches of foreign banks, the phase-in ends Aug. 12, 1982. All new institutions will have a two-year phase-in beginning with the date they come for business.

12. 1982. All new institutions will have a two-year phase-in beginning with the date that they open for business.

6. Transaction accounts include all deposits on which the account holder is permitted to make withdrawals by negotiable or transferable instruments, payment orders of withdrawal, and telephone and preauthorized transfers (in excess of three per month) for the purpose of making payments to third persons or others.

7. In general, nonpersonal time deposits are time deposits, including savings deposits, that are not transaction accounts and in which the beneficial interest is held by a depositor that is not a natural person. Also included are certain transferable time deposits held by natural persons, and certain obligations issued to depository institution offices located outside the United States. For details, see section 204.2 of Regulation D.

Note. Required reserves must be held in the form of deposits with Federal Reserve Banks or vault cash. After implementation of the Monetary Control Act, nonmembers may maintain reserves on a pass-through basis with certain approved

1. July 1, 1973, for mutual savings banks; July 6, 1973, for savings and loan

associations.

2. For authorized states only, federally insured commercial banks, savings and loan associations, cooperative banks, and mutual savings banks in Massachusetts and New Hampshire were first permitted to offer negotiable order of withdrawal (NOW) accounts on Jan. 1, 1974. Authorization to issue NOW accounts was extended to similar institutions throughout New England on Feb. 27, 1976, and in New York State on Nov. 10, 1978, and in New Jersey on Dec. 28, 1979. Authorization to issue NOW accounts was extended to similar institutions nationwide effective Dec. 31, 1980.

3. For exceptions with respect to certain foreign time deposits see the FEDERAL RESERVE BULLETIN for October 1962 (p. 1279), August 1965 (p. 1084), and Feb-

reserve Bulletin for October 1902 (p. 1279), August 1965 (p. 1084), and recruary 1968 (p. 167).

4. Effective Nov. 10, 1980, the minimum notice period for public unit accounts at savings and loan associations was decreased to 14 days and the minimum maturity period for time deposits at savings and loan associations in excess of \$100,000 was decreased to 14 days. Effective Oct. 30, 1980, the minimum maturity or notice period for time deposits was decreased from 30 days to 14 days for mutual savings banks.

period for time deposits was decreased from 30 days to 14 days for mutual savings banks.

5. Effective Oct. 30, 1980, the minimum maturity or notice period for time deposits was decreased from 30 days to 14 days for commercial banks.

6. No separate account category.

7. No minimum denomination. Until July 1, 1979, a minimum of \$1,000 was required for savings and loan associations, except in areas where mutual savings banks permitted lower minimum denominations. This restriction was removed for deposits maturing in less than 1 year, effective Nov. 1, 1973.

8. No minimum denomination. Until July 1, 1979, minimum denomination was \$1,000 except for deposits representing funds contributed to an Individual Retirement Account (IRA) or a Keogh (H.R. 10) plan established pursuant to the Internal Revenue Code. The \$1,000 minimum requirement was removed for such accounts in December 1975 and November 1976 respectively.

9. Between July 1, 1973, and Oct. 31, 1973, there was no ceiling for certificates maturing in 4 years or more with minimum denominations of \$1,000; however, the amount of such certificates that an institution could issue was limited to 5 percent of its total time and savings deposits. Sales in excess of that amount, as well as certificates of less than \$1,000, were limited to the 6½ percent ceiling on time deposits maturing in 2½ years or more.

Effective Nov. 1, 1973, ceilings were reimposed on certificates maturing in 4 years or more with minimum denomination of \$1,000. There is no limitation on the amount of these certificates that banks can issue.

10. Accounts subject to fixed-rate ceilings. See foothode 8 for minimum denomination requirements.

ination requirements.

11. Effective January 1, 1980, commercial banks are permitted to pay the same rate as thrifts on IRA and Keogh accounts and accounts of governmental units when such deposits are placed in the new 2½-year or more variable-ceiling certificates or in 26-week money market certificates regardless of the level of the Treasury

icates or in 26-week money market certificates regardless of the level of the 1 reasury bill rate.

12. Must have a maturity of exactly 26 weeks and a minimum denomination of \$10,000, and must be nonnegotiable.

13. Commercial banks, savings and loan associations, and mutual savings banks were authorized to offer money market time deposits effective June 1. 1978. The ceiling rate for commercial banks on money market time deposits entered into before June 5. 1980, is the discount rate (auction average) on most recently issued six-month U.S. Treasury bills. Until Mar. 15, 1979, the ceiling rate for savings and loan associations and mutual savings banks was ½ percentage point higher than the rate for commercial banks. Beginning Mar. 15, 1979, the ½-percentage-point interest differential is removed when the six-month bill rate is 9 percent or more. The full differential is in effect when the six-month bill rate is 8½ percent or less. Thrift institutions may pay a maximum 9 percent when the six-month bill rate is between 8¾ and 9 percent. Also effective March 15, 1979, interest compounding was prohibited on six-month money market time deposits at all offering institutions. The maximum allowable rates in October for commercial banks and

thrift institutions were as follows: Oct. 6, 14.468; Oct. 10, 13.750; Oct. 20, 14.045; Oct. 27, 13.869. Effective for all six-month money market certificates issued beginning June 5, 1980, the interest rate ceilings will be determined by the discount rate (auction average) of most recently issued six-month U.S. Treasury bills as

Bill rate	Commercial bank ceiling	Thrift ceiling
8.75 and above	bill rate + 1/4 percent	bill rate + 1/4 percent
8.50 to 8.75	bill rate + 1/4 percent	9.00
7.50 to 8.50	bill rate + 1/4 percent	bill rate + ½ percent
7.25 to 7.50	7.75	bill rate + ½ percent
Below 7.25	7.75	7.75

7.25 to 7.50 to 8.50 bill rate + ½ percent
7.25 to 7.50 To 7.50 Solil rate + ½ percent
8.25 to 7.55 The prohibition against compounding interest in these certificates continues.
14. Effective Oct. 1, 1981, depository institutions are authorized to issue all savers certificates (ASCs) with a 1-year maturity and an annual investment yield goal to 70 percent of the average investment yield for 52-weck U.S. Treasury bills as determined by the auction of 52-week U.S. Treasury bills held immediately before the calendar week in which the certificate is issued. A maximum lifetime exclusion of \$1,000 (\$2,000 on a joint return) from gross income is generally authorized for interest income from ASCs. The annual investment yields for ASCs issued in October (in percent) were as follows: Oct. 1, 12.61, Oct. 4, 12.14.
15. Effective Aug. 1, 1981, commercial banks may pay interest on any variable ceiling nonnegotiable time deposit with an original maturity of 2½ years to less than 4 years at a rate not to exceed ¼ of 1 percent below the average 2½-year yield for U.S. Treasury securities as determined and announced by the U.S. Treasury Department immediately before the date of deposit. Mutual savings banks and savings and loan associations may pay interest on these certificates at a rate not to exceed the averate 2½-year yield for U.S. Treasury securities as determined and announced average 2½-year yield for U.S. Treasury securities is less than 9.50 percent, commercial banks may pay 9.25 percent and mutual savings banks and savings and loan associations, 9.30 percent for these deposits. These deposits have no required minimum denomination, and interest may be compounded on them. The ceiling rates of interest at which they may be offered vary biweekly. The maximum allowable rates in October (in percent) for commercial banks were as follows: Oct. 10, 15.40; Oct. 27, 15.30; and for thrift institutions: Oct. 10, 15.65; Oct. 27, 15.55.

16. Between Jan. 1, 1980, and Aug. 1, 1981, commercial banks, mutual savings banks, and savings a

Note. Before Mar. 31, 1980, the maximum rates that could be paid by federally insured commercial banks, mutual savings banks, and savings and loan associations were established by the Board of Governors of the Federal Reserve System, the Board of Directors of the Federal Deposit Insurance Corporation, and the Federal Home Loan Bank Board under the provisions of 12 CFR 217, 329, and \$26 respectively. Title II of the Depository Institutions Deregulation and Monetary Control Act of 1980 (P.L. 96-221) transferred the authority of the agencies to establish maximum rates of interest payable on deposits to the Depository Institutions Deregulation Committee. The maximum rates on time deposits in denominations of \$100,000 or more with maturities of 30-89 days were suspended in June 1970; such deposits maturing in 90 days or more were suspended in May 1973. For information regarding previous interest rate ceilings on all types of accounts, see earlier issues of the Federal Reserve Bulletin, the Federal Home Loan Bank Board Journal, and the Annual Report of the Federal Deposit Insurance Corporation.

<sup>1.</sup> Includes securities loaned—fully guaranteed by U.S. government securities pledged with Federal Reserve Banks—and excludes (if any) securities sold and scheduled to be bought back under matched sale-purchase transactions.

2. Includes U.S. government securities held under repurchase agreement against receipt of foreign currencies and foreign currencies warehoused for the U.S. Treasury. Assets shown in this line are revalued monthly at market exchange rates.

Includes special investment account at Chicago of Treasury bills maturing within 90 days.
 Includes exchange-translation account reflecting the monthly revaluation at market exchange rates of foreign-exchange commitments.
 Beginning September 1980, Federal Reserve notes held by the Reserve Bank are exempt from the collateral requirement.

<sup>1.</sup> Represents accounts of individuals, partnerships, and corporations, and of

Note. Historical data for the period 1970 through June 1977 have been estimated; these estimates are based in part on the debits series for 233 SMSAs, which were available through June 1977. Back data are available from Publications Services, Division of Administrative Services, Board of Governors of the Federal Reserve System, Washington, D.C. 20551. Debits and turnover data for savings deposits are not available before July 1977.

Represents accounts of individuals, partnerships, and corporations, and ot states and political subdivisions.
 Excludes special club accounts, such as Christmas and vacation clubs.
 Accounts authorized for negotiable orders of withdrawal (NOW) and accounts authorized for automatic transfer to demand deposits (ATS). ATS data availability starts with December 1978.

4. Represents corporations and other profit-seeking organizations (excluding commercial banks but including savings and loan associations, mutual savings banks, credit unions, the Export-Import Bank, and federally sponsored lending agencies).
 Savings accounts other than NOW; business; and, from December 1978, ATS.

1. Composition of the money stock measures is as follows:
M1-A: Averages of daily figures for (1) demand deposits at all commercial banks other than those due to domestic banks, the U.S. government, and foreign banks and official institutions less cash items in the process of collection and Federal Reserve float; (2) currency outside the Treasury, Federal Reserve Banks, and Heavaults of commercial banks; and (3) travelers checks of nonbank issuers.
M1-B: M1-A plus negotiable order of withdrawal (NOW) and automatic transfer service (ATS) accounts at banks and thrift institutions, credit union share draft accounts, and demand deposits at mutual savings banks.
M2: M1-B plus savings and small-denomination time deposits at all depository institutions, overnight repurchase agreements at commercial banks, overnight Eurodollars held by U.S. residents other than banks at Caribbean branches of member banks, and money market mutual fund shares.
M3: M2 plus large-denomination time deposits at all depository institutions and term RPs at commercial banks and savings and loan associations.
2. L: M3 plus other liquid assets such as term Eurodollars held by U.S. residents other than banks, bankers acceptances, commercial paper, Treasury bills and other liquid Treasury securities, and U.S. savings bonds.
3. Outstanding amount of U.S. dollar-denominated travelers checks of nonbank issuers.

issuers.

4. Small-denomination time deposits are those issued in amounts of less than \$100,000.

5. Large-denomination time deposits are those issued in amounts of \$100,000 or more and are net of the holdings of domestic banks, thrift institutions, the U.S. government, money market mutual funds, and foreign banks and official institu-

1008.
6. Includes ATS and NOW balances at all institutions, credit union share draft balances, and demand deposits at mutual savings banks.
7. Overnight (and continuing contract) RPs are those issued by commercial banks to the nonbank public, and overnight Eurodollars are those issued by Caribbean branches of member banks to U.S. nonbank customers.

NOTE. Latest monthly and weekly figures are available from the Board's H.6(508) release. Back data are available from the Banking Section, Division of Research and Statistics.

<sup>1.</sup> Reserves of depository institutions series reflect actual reserve requirement percentages with no adjustment to eliminate the effect of changes in Regulations D and M. Before Nov. 13, 1980, the date of implementation of the Monetary Control Act, only the reserves of commercial banks that were members of the Federal Reserve System were included in the series. Since that date the series include the reserves of all depository institutions. In conjunction with the implementation of the act, required reserves of member banks were reduced about \$4.3 billion and required reserves of other depository institutions were increased about \$1.4 billion. Effective Oct. 11, 1979, an 8 percentage point marginal reserve requirement was imposed on "Managed Liabilities." This action raised required reserves about \$320 million. Effective Mar. 12, 1980, the 8 percentage point marginal reserve requirement was raised to 10 percentage points. In addition the base upon which the marginal reserve requirement was calculated was reduced. This action increased required reserves about \$1.7 million in the week ending Apr. 2. 1980. Effective May 29, 1980, the marginal reserve requirement was reduced from 10 to 5 percentage points and the base upon which the marginal reserve requirement was calculated was raised. This action reduced required reserves about \$980 million in the week ending June 18, 1980. Effective July 24, 1980, the 5 percent marginal reserve requirement on managed liabilities and the 2 percent supplementary reserve

requirement against large time deposits were removed. These actions reduced required reserves about \$3.2 billion.

2. Reserve balances with Federal Reserve Banks plus vault cash at institutions

Reserve balances with Federal Reserve Banks plus vault cash at institutions with required reserve balances plus vault cash equal to required reserves at other institutions.

3. Includes reserve balances at Federal Reserve Banks in the current week plus vault cash held two weeks earlier used to satisfy reserve requirements at all depository institutions plus currency outside the U.S. Treasury, Federal Reserve Banks, the vaults of depository institutions, and surplus vault cash at depository institutions.

4. Includes total time and savings deposits and net demand deposits as defined by Regulation D. Private demand deposits include all demand deposits except those due to the U.S. government, less cash items in process of collection and demand balances due from domestic commercial banks.

NOTE. Latest monthly and weekly figures are available from the Board's H.3(502) statistical release. Back data and estimates of the impact on required reserves and changes in reserve requirements are available from the Banking Section, Division of Research and Statistics.

8. As of Dec. 1, 1978, nonbank financial loans were reduced \$0.1 billion as the

8. As of Dec. 1, 1976, nonoana marical rolls were reduced \$0.1 official an energy free leads of the bank, and nonconsolidated nonbank affiliates of the bank, the bank's holding company (if not a bank), and nonconsolidated nonbank subsidiaries of the holding company.

10. As of Dec. 1, 1979, loans sold to affiliates were reduced \$800 million and commercial and industrial loans sold were reduced \$700 million due to corrections of the bank in Naw York City.

of two banks in New York City.

11. As of Dec. 31, 1978, commercial and industrial loans sold outright were increased \$0.7 billion as the result of reclassifications, but \$0.1 billion of this amount was offset by a balance sheet reduction of \$0.1 billion as noted above.

12. United States includes the 50 states and the District of Columbia.

Note. Data are prorated averages of Wednesday estimates for domestically chartered banks, based on weekly reports of a sample of domestically chartered banks and quarterly reports of all domestically chartered banks. For foreign-related institutions, data are averages of month-end estimates based on weekly reports from large agencies and branches and quarterly reports from all agencies, branches, investment companies, and Edge Act corporations engaged in banking.

<sup>1.</sup> Includes domestically chartered banks; U.S. branches and agencies of foreign banks. New York investment companies majority owned by foreign banks, and Edge Act corporations owned by domestically chartered and foreign banks.

2. Excludes loans to commercial banks in the United States.

3. As of Dec. 31, 1978, total loans and securities were reduced by \$0.1 billion. "Other securities" were increased by \$1.5 billion and total loans were reduced by \$1.6 billion largely as the result of reclassifications of certain tax-exempt obligations. Most of the loan reduction was in "all other loans."

4. As of Jan. 3, 1979, as the result of reclassifications, total loans and securities and total loans were increased by \$0.6 billion. Business loans were increased by \$0.4 billion and real estate loans by \$0.5 billion. Nonbank financial loans were reduced by \$0.3 billion.

5. Absorption of a nonbank affiliate by a large commercial bank added the

reduced by \$0.3 billion.

5. Absorption of a nonbank affiliate by a large commercial bank added the following to February figures: total loans and securities, \$1.0 billion; total loans and leases, \$1.0 billion; commercial and industrial loans, \$.5 billion; real estate loans, \$1.0 billion; nonbank financial, \$1.0 billion.

6. As of Dec. 31, 1978, commercial and industrial loans were reduced \$0.1 billion as a result of reclassifications.

7. An accounting procedure change by one bank reduced commercial and industrial loans by \$0.1 billion as of Apr. 1, 1981.

5. As of Dec. 1, 1979, loans sold to affiliates were reduced \$800 million due to corrections of two New York City banks.

6. Averages of daily figures for member and nonmember banks. Before October 1980 nonmember banks were interpolated from quarterly call report data.

7. Includes averages of current and previous month-end data until August 1979; beginning September 1979 averages of daily data.

8. Based on daily average data reported by 122 large banks beginning February 1980 and 46 banks before February 1980.

9. Includes U.S. Treasury demand deposits and Treasury tax-and-loan notes at commercial banks. Averages of daily data.

10. Averages of Wednesday figures.

Note. Movement of federal funds, RPs, and other borrowings from nonbanks (lines 3 and 4) is based on fluctuations in security RP borrowings (lines 13 and 14) and borrowings from unaffiliated foreign sources (not shown) after October 1980.

<sup>1.</sup> Commercial banks are those in the 50 states and the District of Columbia with national or state charters plus agencies and branches of foreign banks. New York investment companies majority owned by foreign banks, and Edge Act corporations owned by domestically chartered and foreign banks.

2. Includes seasonally adjusted federal funds, RPs, and other borrowings from nonbanks and not seasonally adjusted net Eurodollars and loans to affiliates. Includes averages of Wednesday data for domestically chartered banks and averages of current and previous month-end data for foreign-related institutions.

3. Other borrowings are borrowings on any instrument, such as a promissory note or due bill, given for the purpose of borrowing money for the banking business. This includes borrowings from Federal Reserve Banks and from foreign banks, term federal funds, overdrawn due from bank balances, loan RPs, and participations in pooled loans. Includes averages of daily figures for member banks and averages of current and previous month-end data for foreign-related institutions.

4. Loans initially booked by the bank and later sold to affiliates that are still held by affiliates. Averages of Wednesday data.

Note. Figures are partly estimated. They include all bank-premises subsidiaries and other significant majority-owned domestic subsidiaries. Data for domestically chartered commercial banks are for the last Wednesday of the month; data for other banking institutions are for the last day of the quarter.

Domestically chartered commercial banks include all commercial banks in the United States except branches of foreign banks; included are member and nonmember banks, stock savings banks, and nondeposit trust companies.
 Other assets include loans to U.S. commercial banks.
 Commercial banking institutions include domestically chartered commercial banks, branches and agencies of foreign banks, Edge Act and Agreement corporations, and New York State foreign investment corporations.

Exclusive of loans and federal funds transactions with domestic commercial banks.
 All demand deposits except U.S. government and domestic banks less cash items in process of collection.

Loans sold are those sold outright to a bank's own foreign branches, non-consolidated nonbank affiliates of the bank, the bank's holding company (if not a bank), and nonconsolidated nonbank subsidiaries of the holding company.
 Excludes trading account securities.

<sup>1.</sup> Adjustment bank amounts represent accumulated adjustments originally made to offset the cumulative effects of mergers. These adjustment amounts should be added to outstanding data for any date in the year to establish comparability with any date in the subsequent year. Changes shown have been adjusted for these amounts.

NOTE. New series. The 134 large weekly reporting commercial banks with domestic assets of \$1 billion or more as of Dec. 31, 1977, are included in this series. The revised series is on a last-Wednesday-of-the-month basis. Partly estimated historical data are available from the Banking Section, Division of Research and Statistics, Board of Governors of the Federal Reserve System, Washington, D.C. 20551.

<sup>2.</sup> Includes commercial and industrial loans at a few banks with assets of \$1 billion or more that do not classify their loans.

<sup>1.</sup> Figures include cash items in process of collection. Estimates of gross deposits are based on reports supplied by a sample of commercial banks. Types of depositors in each category are described in the June 1971 BULLETIN, p. 466.

2. Beginning with the March 1979 survey, the demand deposit ownership survey sample was reduced to 232 banks from 349 banks, and the estimation procedure was modified slightly. To aid in comparing estimates based on the old and new reporting sample, the following estimates in billions of dollars for December 1978 have been constructed using the new smaller sample; financial business, 27.0: nonfinancial business, 146.9: consumer, 98.3: foreign, 2.8: and other, 15.1.

3. Demand deposit ownership data for March 1981 are subject to greater than normal errors reflecting unusual reporting difficulties associated with funds shifted to NOW accounts authorized at year-end 1980. For the household category, the \$15.7 billion decline in demand deposits at all commercial banks between December 1980 and March 1981 has an estimated standard error of \$4.8 billion.

<sup>4.</sup> After the end of 1978 the large weekly reporting bank panel was changed to 170 large commercial banks, each of which had total assets in domestic offices exceeding \$750 million as of Dec. 31, 1977. See "Announcements," p. 408 in the May 1978 BULLETIN. Beginning in March 1979, demand deposit ownership estimates for these large banks are constructed quarterly on the basis of 97 sample banks and are not comparable with earlier data. The following estimates in billions of dollars for December 1978 have been constructed for the new large-bank panel; financial business. 18.2; nonfinancial business, 67.2; consumer. 32.8; foreign. 2.5; other, 6.8.

1. Weekly and monthly figures are averages of all calendar days, where the rate for a weekend or holiday is taken to be the rate prevailing on the preceding business day. The daily rate is the average of the rates on a given day weighted by the volume of transactions at these rates.

2. Weekly figures are statement week averages—that is, averages for the week ending Wednesday.

3. Unweighted average of offering rates quoted by at least five dealers (in the case of commercial paper), or finance companies (in the case of finance paper). Before November 1979, maturities for data shown are 30-59 days, 90-119 days, and 120-179 days for commercial paper; and 30-59 days, 90-119 days, and 150-179 days for finance paper.

179 days for finance paper.

4. Yields are quoted on a bank-discount basis, rather than an investment yield basis (which would give a higher figure).

5. Dealer closing offered rates for top-rated banks. Most representative rate (which may be, but need not be, the average of the rates quoted by the dealers).

6. Unweighted average of offered rates quoted by at least five dealers early in the day.

Unweighted average of oldered rates quoted by at least five dealers early in the day.
 Unweighted average of closing bid rates quoted by at least five dealers.
 Rates are recorded in the week in which bills are issued.
 Yields are based on closing bid prices quoted by at least five dealers.
 Yields adjusted to constant maturities by the U.S. Treasury. That is, yields are read from a yield curve at fixed maturities. Based on only recently issued, actively traded securities.

11. Each weekly figure is calculated on a biweekly basis and is the average of five business days ending on the Monday following the calendar week. The biweekly rate is used to determine the maximum interest rate payable in the following two-week period on small saver certificates. (See table 1.16.)

12. Unweighted averages of yields (to maturity or call) for all outstanding notes and bonds neither due nor callable in less than 10 years, including several very low yielding "flower" bonds.

13. General obligations only, based on figures for Thursday, from Moody's Investors Service.

Investors Service.

14. General obligations only, with 20 years to maturity, issued by 20 state and local governmental units of mixed quality. Based on figures for Thursday.

15. Daily figures from Moody's Investors Service. Based on yields to maturity on selected long-term bonds.

16. Compilation of the Federal Reserve. Issues included are long-term (20 years or more). New-issue yields are based on quotations on date of offering; those on recently offered issues (included only for first 4 weeks after termination of underwriter price restrictions), on Friday close-of-business quotations.

17. Standard and Poor's corporate series. Preferred stock ratio based on a sample of ten issues: four public utilities, four industrials, one financial, and one transportation. Common stock ratios on the 500 stocks in the price index.

<sup>1.</sup> Effective July 1976, includes a new financial group, banks and insurance companies. With this change the index includes 400 industrial stocks (formerly 425), 20 transportation (formerly 15 rail), 40 public utility (formerly 60), and 40 financial.

5. Each customer's equity in his collateral (market value of collateral less net debit balance) is expressed as a percentage of current collateral values.

6. Balances that may be used by customers as the margin deposit required for additional purchases. Balances may arise as transfers based on loan values of other collateral in the customer's margin account or deposits of cash (usually sales proceed) occur.

collateral in the customer's margin account or deposits of cash (usually sales proceeds) occur.

7. Regulations G, T, and U of the Federal Reserve Board of Governors, prescribed in accordance with the Securities Exchange Act of 1934, limit the amount of credit to purchase and carry margin stocks that may be extended on securities as collateral by prescribing a maximum loan value, which is a specified percentage of the market value of the collateral at the time the credit is extended. Margin requirements are the difference between the market value (100 percent) and the maximum loan value. The term "margin stocks" is defined in the corresponding regulation.

financial.

2. Margin credit includes all credit extended to purchase or carry stocks or related equity instruments and secured at least in part by stock. Credit extended is endof-month data for member firms of the New York Stock Exchange.

In addition to assigning a current loan value to margin stock generally, Regulations T and U permit special loan values for convertible bonds and stock acquired 
through exercise of subscription rights.

3. A distribution of this total by equity class is shown on lines 17–22.

4. Free credit balances are in accounts with no unfulfilled commitments to the

brokers and are subject to withdrawal by customers on demand.

Effective June 1978, earned income credit payments in excess of an indi-vidual's tax liability, formerly treated as income tax refunds, are classified as outlays

6. Includes accrued interest payable to the public; allocations of special drawing rights; deposit funds; miscellaneous liability (including checks outstanding) and asset accounts; seignorage; increment on gold; net gain/loss for U.S. currency valuation adjustment; net gain/loss for IMF valuation adjustment; and profit on the sale of gold.

SOURCE. "Monthly Treasury Statement of Receipts and Outlays of the U.S. Government," Treasury Bulletin, and the Budget of the United States Government, Fiscal Year 1982.

#### NOTES TO TABLE 1.37

- 1. Holdings of stock of the Federal Home Loan Banks are included in "other
- 2. Includes net undistributed income, which is accrued by most, but not all, associations.
- associations.

  3. Excludes figures for loans in process, which are shown as a liability.

  4. The NAMSB reports that, effective April 1979, balance sheet data are not strictly comparable with previous months. Beginning April 1979, data are reported on a net-of-valuation-reserves basis. Prior to that date, data were reported on a gross-of-valuation-reserves basis.

  5. Beginning April 1979, includes obligations of U.S. government agencies. Before that date, this item was included in "Corporate and other."

  6. Includes securities of foreign governments and international organizations and, prior to April 1979, nonguaranteed issues of U.S. government agencies.

  7. Excludes checking, club, and school accounts.

  8. Commitments outstanding (including loans in process) of banks in New York State as reported to the Savings Banks Association of the state of New York.

  9. Direct and guaranteed obligations. Excludes federal agency issues not guaranteed, which are shown in the table under "Business" securities.

- 10. Issues of foreign governments and their subdivisions and bonds of the International Bank for Reconstruction and Development.
- Note. Savings and loan associations: Estimates by the FHLBB for all associations in the United States. Data are based on monthly reports of federally insured associations and annual reports of other associations. Even when revised, data for
- associations and annual reports of other associations. Even when revised, data for current and preceding year are subject to further revision.

  Mutual savings banks: Estimates of National Association of Mutual Savings Banks for all savings banks in the United States.

  Life insurance companies: Estimates of the American Council of Life Insurance for all life insurance companies in the United States. Annual figures are annual-statement asset values, with bonds carried on an amortized basis and stocks at year-end market value. Adjustments for interest due and accrued and for differences between market and book values are not made on each item separately but are included, in total, in "other assets."

  Credit unions: Estimates by the National Credit Union Administration for a group of federal and state-chartered credit unions that account for about 30 percent.
- group of federal and state-chartered credit unions that account for about 30 percent of credit union assets. Figures are preliminary and revised annually to incorporate recent benchmark data.

retroactive to January 1976.

2. Effective Oct. 1, 1980, the Pension Benefit Guaranty Corporation was re-classified from an off-budget agency to an on-budget agency in the Department of

Labor.

3. Half-year figures are calculated as a residual (total surplus/deficit less trust fund surplus/deficit).

4. Includes Postal Service Fund; Rural Electrification and Telephone Revolving Fund; and Rural Telephone Bank.

5. Includes U.S. Treasury operating cash accounts; special drawing rights; gold tranche drawing rights; loans to International Monetary Fund; and other cash and monetary accepts monetary assets

date of the transaction for government securities (Treasury bills, notes, and bonds) or after 30 days for mortgage-backed agency issues.

NOTES. Averages for transactions are based on number of trading days in the period.

period.

Transactions are market purchases and sales of U.S. government securities dealers reporting to the Federal Reserve Bank of New York. The figures exclude allotments of, and exchanges for, new U.S. government securities, redemptions of called or matured securities, purchases or sales of securities under repurchase agreement, reverse repurchase (resale), or similar contracts.

1. In September 1977 the Farm Credit Banks issued their first consolidated bonds, and in January 1979 they began issuing these bonds on a regular basis to replace the financing activities of the Federal Land Banks, the Federal Intermediate Credit Banks, and the Banks for Cooperatives. Line 17 represents those consolidated bonds outstanding, as well as any discount notes that have been issued. Lines 1 and 10 reflect the addition of this item.

and to reflect the addition of this item.

2. Consists of mortgages assumed by the Defense Department between 1957 and 1963 under family housing and homeowners assistance programs.

3. Includes participation certificates reclassified as debt beginning Oct. 1, 1976.

4. Off-budget Aug. 17, 1974, through Sept. 30, 1976; on-budget thereafter.

5. Consists of debentures issued in payment of Federal Housing Administration insurance claims. Once issued, these securities may be sold privately on the securities market.

6. Certificates of participation issued prior to fiscal 1969 by the Government National Mortgage Association acting as trustee for the Farmers Home Administration; Department of Health, Education, and Welfare; Department

of Housing and Urban Development; Small Business Administration; and the Veterans Administration.

7. Off-budget.

8. Unlike other federally sponsored agencies, the Student Loan Marketing Association may borrow from the Federal Financing Bank (FFB) since its obligations are guaranteed by the Department of Health, Education, and Welfare.

9. The FFB, which began operations in 1974, is authorized to purchase or sell obligations issued, sold, or guaranteed by other federal agencies. Since FFB incurs debt solely for the purpose of lending to other agencies, its debt is not included in the main portion of the table in order to avoid double counting.

10. Includes FFB purchases of agency assets and guaranteed loans; the latter contain loans guaranteed by numerous agencies with the guarantees of any particular agency being generally small. The Farmers Home Administration item consists exclusively of agency assets, while the Rural Electrification Administration entry contains both agency assets and guaranteed loans.

NOTES TO TABLE 1.44

1. Immediate positions are net amounts (in terms of par values) of securities owned by nonbank dealer firms and dealer departments of commercial banks on a commitment, that is, trade-date basis, including any such securities that have been sold under agreements to repurchase (RPs). The maturities of some repurchase agreements are sufficiently long, however, to suggest that the securities involved are not available for trading purposes. Securities owned, and hence dealer positions, do not include securities to resell (reverse RPs). Before 1981, data for immediate positions include forward positions.

2. Figures cover financing involving U.S. government and federal agency securities, negotiable CDs, bankers acceptances, and commercial paper.

- 3. Includes all reverse repurchase agreements, including those that have been arranged to make delivery on short sales and those for which the securities obtained have been used as collateral on borrowings, i.e., matched agreements.

  4. Includes both repurchase agreements undertaken to finance positions and "matched book" repurchase agreements.

Note. Data for positions are averages of daily figures, in terms of par value, based on the number of trading days in the period. Positions are shown net and are on a commitment basis. Data for financing are based on Wednesday figures, in terms of actual money borrowed or lent.

	1,410	797	447	699	678	322	1,018	824	1,028	982		

Weighted averages based on sample surveys of mortgages originated by major institutional lender groups. Compiled by the Federal Home Loan Bank Board in cooperation with the Federal Deposit Insurance Corporation.
 Includes all fees, commissions, discounts, and "points" paid (by the borrower or the seller) in order to obtain a loan.

<sup>3.</sup> Average effective interest rates on loans closed, assuming prepayment at the end of 10 years.

4. Average contract rates on new commitments for conventional first mortgages, rounded to the nearest 5 basis points; from Department of Housing and Urban

Average gross yields on 30-year, minimum-downpayment, Federal Housing Administration-insured first mortgages for immediate delivery in the private secondary market. Any gaps in data are due to periods of adjustment to changes in maximum permissible contract rates.
 Average net yields to investors on Government National Mortgage Association guaranteed, mortgage-backed, fully modified pass-through securities.

assuming prepayment in 12 years on pools of 30-year FHA/VA mortgages carrying the prevailing ceiling rate. Monthly figures are unweighted averages of Monday quotations for the month.

7. Average gross yields (before deduction of 38 basis points for mortgage servicing) on accepted bids in Federal National Mortgage Association's auctions of 4-month commitments to purchase home mortgages, assuming prepayment in 12 years for 30-year mortgages. No adjustments are made for FNMA commitment fees or stock related requirements. Monthly figures are unweighted averages for auctions conducted within the month.

8. Includes some multifamily and nonprofit hospital loan commitments in ad-

auctions conducted within the month.

8. Includes some multifamily and nonprofit hospital loan commitments in addition to 1- to 4-family loan commitments accepted in FNMA's free market auction system, and through the FNMA-GNMA tandem plans.

9. Includes participation as well as whole loans.

10. Includes conventional and government-underwritten loan.

<sup>1.</sup> Includes loans held by nondeposit trust companies but not bank trust de-

Note. Based on data from various institutional and governmental sources, with some quarters estimated in part by the Federal Reserve in conjunction with the Federal Home Loan Bank Board and the Department of Commerce. Separation of nonfarm mortgage debt by type of property, if not reported directly, and interpolations and extrapolations when required, are estimated mainly by the Federal Reserve. Multifamily debt refers to loans on structures of five or more units.

I. Includes loans held by nondeposit trust companies but not bank trust departments.
 C. Outstanding principal balances of mortgages backing securities insured or guaranteed by the agency indicated.
 3. Other holders include mortgage companies, real estate investment trusts, state and local credit agencies, state and local retirement funds, noninsured pension funds, credit unions, and U.S. agencies for which amounts are small or separate data are not readily available.

<sup>1.</sup> The Board's series cover most short- and intermediate-term credit extended to individuals through regular business channels, usually to finance the purchase of consumer goods and services or to refinance debts incurred for such purposes and scheduled to be repaid (or with the option of repayment) in two or more installments.

2. Includes auto dealers and excludes 30-day charge credit held by travel and entertainment companies.

 $<sup>3.\</sup> Net\ change\ equals\ extensions\ minus\ liquidations\ (repayments,\ charge-offs\ and\ other\ credit);\ figures\ for\ all\ months\ are\ seasonally\ adjusted.$ 

<sup>▲</sup>Total consumer noninstallment credit outstanding—credit scheduled to be repaid in a lump sum, including single-payment loans, charge accounts, and service credit—amounted to \$64.3 billion at the end of 1978, \$71.3 billion at the end of 1979, and \$72.2 billion at the end of 1980.

# 1.57 CONSUMER INSTALLMENT CREDIT Extensions and Liquidations Millions of dollars; monthly data are seasonally adjusted.

NOTES BY LINE NUMBER.

- NOTES BY LINE NUMBER.

  1. Line 2 of table 1.58.
  2. Sum of lines 3-6 or 7-10.
  6. Includes farm and commercial mortgages.
  11. Credit market funds raised by federally sponsored credit agencies, and net issues of federally related mortgage pool securities.
  12. Line 1 less line 2 plus line 11. Also line 19 less line 26 plus line 32. Also sum of lines 27, 32, and 38 less lines 40 and 46.
  17. Includes farm and commercial mortgages.
  25. Line 38 less lines 40 and 46.
  26. Excludes equity issues and investment company shares. Includes line 18.
  28. Foreign deposits at commercial banks, bank borrowings from foreign branches, and liabilities of foreign banking agencies to foreign affiliates.
  29. Demand deposits at commercial banks.

30. Excludes net investment of these reserves in corporate equities.
31. Mainly retained earnings and net miscellaneous liabilities.
32. Line 12 less line 19 plus line 26.
33-37. Lines 13-17 less amounts acquired by private finance. Line 37 includes mortgages.
39. Mainly an offset to line 9.
46. Lines 32 plus 38, or line 12 less line 27 plus 39 and 45.
47. Line 2/line 1.
48. Line 19/line 12.
49. Sum of lines 10 and 28.
50. 52. Includes issues by financial institutions.
Note. Full statements for sectors and transaction types quarterly, and annually for flows and for amounts outstanding, may be obtained from Flow of Funds Section. Division of Research and Statistics, Board of Governors of the Federal Reserve System. Washington, D.C. 20551.

<sup>1.</sup> The industrial production and capacity utilization series have been revised back to January 1979.

2. Ratios of indexes of production to indexes of capacity. Based on data from Federal Reserve, McGraw-Hill Economics Department, and Department of Com-

Federal Reserve, mcGraw-Fini Decisions 2-1.

3. Index of dollar value of total construction contracts, including residential, nonresidential, and heavy engineering, from McGraw-Hill Information Systems Company, F. W. Dodge Division.

4. Based on data in Employment and Earnings (U.S. Department of Labor). Series covers employees only, excluding personnel in the Armed Forces.

5. Based on data in Survey of Current Business (U.S. Department of Commerce).

Based on Bureau of Census data published in Survey of Current Business.
 Data without seasonal adjustment, as published in Monthly Labor Review.
 Seasonally adjusted data for changes in the price indexes may be obtained from the Bureau of Labor Statistics. U.S. Department of Labor.

Note. Basic data (not index numbers) for series mentioned in notes 4, 5, and 6, and indexes for series mentioned in notes 3 and 7 may also be found in the Survey of Current Business. Figures for industrial production for the last two months are preliminary and estimated, respectively.

Persons 16 years of age and over. Monthly figures, which are based on sample data, relate to the calendar week that contains the 12th day; annual data are averages of monthly figures. By definition, seasonality does not exist in population figures. Based on data from Employment and Earnings (U.S. Department of Labor).

2. Includes self-employed, unpaid family, and domestic service workers.

Monthly high 1973; monthly low 1975.
 Preliminary; monthly highs December 1978 through January 1980; monthly lows July 1980 through October 1980.

<sup>3.</sup> Data include all full- and part-time employees who worked during, or received pay for, the pay period that includes the 12th day of the month, and exclude proprietors, self-employed persons, domestic servants, unpaid family workers, and members of the Armed Forces. Data are adjusted to the March 1979 benchmark and only seasonally adjusted data are available at this time. Based on data from Employment and Earnings (U.S. Department of Labor).

### A48 Domestic Nonfinancial Statistics November 1981

### 2.13 INDUSTRIAL PRODUCTION Indexes and Gross Value

Monthly data are seasonally adjusted.

Note. Census Bureau estimates for all series except (a) mobile homes, which are private, domestic shipments as reported by the Manufactured Housing Institute and seasonally adjusted by the Census Bureau, and (b) sales and prices of existing units, which are published by the National Association of Realtors. All back and current figures are available from originating agency. Permit authorizations are those reported to the Census Bureau from 16,000 jurisdictions beginning with 1978.

Not at annual rates.
 Not seasonally adjusted.
 Value of new construction data in recent periods may not be strictly comparable with data in prior periods due to changes by the Bureau of the Census in its estimating techniques. For a description of these changes see Construction Reports (C-30-76-5), issued by the Bureau in July 1976.

Seasonal factors are no longer calculated for lines 12 through 41.
 Data are on an international accounts (IA) basis. Differs from the Census basis data, shown in table 3.11, for reasons of coverage and timing; military exports are excluded from merchandise data and are included in line 6.
 Includes reinvested earnings of incorporated affiliates.

4. Primarily associated with military sales contracts and other transactions arranged with or through foreign official agencies.
5. Consists of investments in U.S. corporate stocks and in debt securities of private corporations and state and local governments.

Note. Data are from Bureau of Economic Analysis, Survey of Current Business (U.S. Department of Commerce).

#### 3.11 U.S. FOREIGN TRADE

Millions of dollars; monthly data are seasonally adjusted.

_	Team	1070	1978 1979					1981

Note. The data in this table are reported by the Bureau of Census data on a free-alongside-ship (f.a.s.) value basis—that is, value at the port of export. Beginning in 1981, foreign trade of the U.S. Virgin Islands is included in the Census basis trade data; this adjustment has been made for all data shown in the table. The Census basis data differ from merchandise trade data shown in table 3.10, U.S. International Transactions Summary, for reasons of coverage and timing. On the export side, the largest adjustments are: (a) the addition of exports to Canada not covered in Census statistics, and (b) the exclusion of military sales (which are combined with other military tracestions and exported separately in the "service". combined with other military transactions and reported separately in the "service

account" in table 3.10, line 6). On the *import side*, additions are made for gold, ship purchases, imports of electricity from Canada and other transactions; military payments are excluded and shown separately as indicated above.

SOURCE, FT900 "Summary of U.S. Export and Import Merchandise Trade" (U.S. Department of Commerce, Bureau of the Census).

<sup>1.</sup> Gold held under earmark at Federal Reserve Banks for foreign and international accounts is not included in the gold stock of the United States; see table 3.22.

2. Beginning July 1974, the IMF adopted a technique for valuing the SDR based on a weighted average of exchange rates for the currencies of member countries. From July 1974 through Docember 1980, 16 currencies were used; from January 1981. 5 currencies have been used. The U.S. SDR holdings and reserve position in the IMF also are valued on this basis beginning July 1974.

<sup>3.</sup> Includes allocations by the International Monetary Fund of SDRs as follows: \$867 million on Jan. 1, 1970; \$717 million on Jan. 1, 1971; \$710 million on Jan. 1, 1972; \$1,139 million on Jan. 1, 1979; \$1,152 million on Jan. 1, 1980; and \$1,093 million on Jan. 1, 1981; plus net transactions in SDRs.
4. Beginning November 1978, valued at current market exchange rates.
5. Includes U.S. government securities held under repurchase agreement against receipt of foreign currencies, if any.

In May 1978 the exemption level for branches required to report was increased, which reduced the number of reporting branches.
 In May 1978 a broader category of claims on foreign public borrowers, in-

cluding corporations that are majority owned by forcing governments, replaced the previous, more narrowly defined claims on foreign official institutions.

<sup>1.</sup> Excludes negotiable time certificates of deposit, which are included in "Other negotiable and readily transferable instruments." Data for time deposits before April 1978 represent short-term only.

2. Includes borrowing under repurchase agreements.

3. U.S. banks: includes amounts due to own foreign branches and foreign subsidiaries consolidated in "Consolidated Report of Condition" filed with bank regulatory agencies. Agencies, branches, and majority-owned subsidiaries of foreign banks: principally amounts due to head office or parent foreign bank, and foreign branches, agencies or wholly owned subsidiaries of head office or parent foreign bank.

bank.

4. Financial claims on residents of the United States, other than long-term securities, held by or through reporting banks.

<sup>5.</sup> Includes nonmarketable certificates of indebtedness and Treasury bills issued to official institutions of foreign countries.

6. Principally bankers acceptances, commercial paper, and negotiable time certificates of deposit.

7. Principally the International Bank for Reconstruction and Development, and the Inter-American and Asian Development Banks.

8. Foreign central banks and foreign central governments and the Bank for International Settlements.

9. Excludes central banks, which are included in "Official institutions."

<sup>1.</sup> Includes the Bank for International Settlements. Beginning April 1978, also includes Eastern European countries not listed in line 23.

2. Beginning April 1978 comprises Bulgaria, Czechoslovakia, the German Democratic Republic, Hungary, Poland, and Romania.

3. Included in "Other Latin America and Caribbean" through March 1978.

4. Comprises Bahrain, Iran, Iraq, Kuwait, Oman, Qatar, Saudi Arabia, and United Arab Emirates (Trucial States).

Comprises Algeria, Gabon, Libya, and Nigeria.
 Excludes the Bank for International Settlements, which is included in "Other Western Europe."
 NOTE. Data for period prior to April 1978 include claims of banks' domestic customers on foreigners.

<sup>2.</sup> Assets owned by customers of the reporting bank located in the United States that represent claims on foreigners held by reporting banks for the account of their domestic customers.
3. Principally negotiable time certificates of deposit and bankers acceptances.

<sup>4.</sup> Data for March 1978 and for period before that are outstanding collections

only.

5. Includes demand and time deposits and negotiable and nonnegotiable certificates of deposit denominated in U.S. dollars issued by banks abroad. For description of changes in data reported by nonbanks, see July 1979 BULLETIN, p. 550.

Remaining time to maturity.
 Includes nonmonetary international and regional organizations.

<sup>▲</sup> Data in the two columns for this month differ because of changes in reporting coverage. Figures in the first column are comparable in coverage with those for the preceding quarter; figures in the second column are comparable with those for the following quarter.

<sup>1.</sup> The banking offices covered by these data are the U.S. offices and foreign branches of U.S.-owned banks and of U.S. subsidiaries of foreign-owned banks. Offices not covered include (1) U.S. agencies and branches of foreign banks. and (2) foreign subsidiaries of U.S. banks. To minimize duplication, the data are adjusted to exclude the claims on foreign branches held by a U.S. office or another foreign branch of the same banking institution. The data in this table combine foreign branch claims in table 3.13 (the sum of lines 7 through 10) with the claims of U.S. offices in table 3.17 (excluding those held by agencies and branches of foreign banks and those constituting claims on own foreign branches). However, see also footnote 2.

2. Beginning with data for June 1978, the claims of the U.S. offices in this table include only banks' own claims payable in dollars. For earlier dates

the claims of the U.S. offices also include customer claims and foreign currency claims (amounting in June 1978 to \$10 billion).

3. In addition to the Organization of Petroleum Exporting Countries shown individually, this group includes other members of OPEC (Algeria, Gabon, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, and United Arab Emirates) as well as Bahrain and Oman (not formally members of OPEC).

4. Foreign branch claims only through December 1976.

5. Excludes Liberia.

6. Includes Canal Zone beginning December 1979.

7. Foreign branch claims only.

8. Includes New Zealand, Liberia, and international and regional organizations.

<sup>1.</sup> Estimated official and private holdings of marketable U.S. Treasury securities with an original maturity of more than 1 year. Data are based on a benchmark survey of holdings as of Jan. 31, 1971, and monthly transactions reports. Excludes nomarketable U.S. Treasury bonds and notes held by official institutions of foreign countries.

#### 3.22 FOREIGN OFFICIAL ASSETS HELD AT FEDERAL RESERVE BANKS

Millions of dollars, end of period

Assets	1978	1979	1980	1981							
Assets	1976	1979	1980	Apr.	May	June	July	Aug.	Sept.	Oct. p	
1 Deposits	367	429	411	475	346	338	285	255	419	547	
Assets held in custody 2 U.S. Treasury securities <sup>1</sup> . 3 Earmarked gold <sup>2</sup> .	117,126 15,463	95,075 15,169	102,417 14,965	113,746 14,886	109,742 14,875	107,884 14,871	105,064 14,854	102,197 14,833	101,068 14,813	101,068 14,811	

<sup>1.</sup> Marketable U.S. Treasury bills, notes, and bonds; and nonmarketable U.S. Treasury securities payable in dollars and in foreign currencies.

2. The value of earmarked gold increased because of the changes in par value of the U.S. dollar in May 1972 and in October 1973.

Note. Excludes deposits and U.S. Treasury securities held for international and regional organizations. Earmarked gold is gold held for foreign and international accounts and is not included in the gold stock of the United States.

Beginning December 1978, includes U.S. Treasury notes publicly issued to private foreign residents denominated in foreign currencies.
 Comprises Bahrain, Iran, Iraq, Kuwait, Oman, Qatar, Saudi Arabia, and United Arab Emirates (Trucial States).
 Comprises Algeria, Gabon, Libya, and Nigeria.

2. Prior to December 1978, foreign currency data include only liabilities denominated in foreign currencies with an original maturity of less than one year.

Comprises Bahrain, Iran, Iraq, Kuwait, Oman, Qatar, Saudi Arabia, and United Arab Emirates (Trucial States).
 Comprises Algeria, Gabon, Libya, and Nigeria.
 Includes nonmonetary international and regional organizations.

#### 3.26 DISCOUNT RATES OF FOREIGN CENTRAL BANKS

Percent per annum

Country	Rate on Sept. 30, 1981			Rate on	Sept. 30, 1981		Rate on Sept. 30, 1981		
	Per- cent	Month effective	Country	Per- cent	Month effective	Country	Per- cent	Month effective	
Argentina	181.54 6.75 13.0 49.0 18.21 11.00	Sept. 1981 Mar. 1980 May 1981 Mar. 1981 Oct. 1981 Oct. 1980	France Germany, Fed. Rep. of Italy Japan Netherlands Norway	17.5 7.5 19.0 6.25 9.0 9.0	Oct. 1981 May 1980 Mar. 1981 Mar. 1981 Mar. 1981 Nov. 1979	Sweden Switzerland United Kingdom <sup>2</sup> Venezuela.	11.0 6.0 11.0	Oct. 1981 Sept. 1981 Nov. 1980	

As from February 1981, the rate at which the Bank of France discounts Treasury bills for 7 to 10 days.
 Minimum lending rate suspended as of August 20, 1981.

NOTE. Rates shown are mainly those at which the central bank either

discounts or makes advances against eligible commercial paper and/or government commercial banks or brokers. For countries with more than one rate applicable to such discounts or advances, the rate shown is the one at which it is understood the central bank transacts the largest proportion of its credit operations.

#### General Information

Minus signs are used to indicate (1) a decrease, (2) a negative figure, or (3) an outflow.

"U.S. government securities" may include guaranteed issues of U.S. government agencies (the flow of funds figures also include not fully guaranteed issues) as well as direct

obligations of the Treasury. "State and local government" also includes municipalities, special districts, and other political subdivisions.

In some of the tables details do not add to totals because of rounding.
