FEDERAL RESERVE BULLETIN

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM, WASHINGTON, D.C.

PUBLICATIONS COMMITTEE

Joseph R. Coyne, *Chairman* □ S. David Frost □ Griffith L. Garwood □ Donald L. Kohn □ J. Virgil Mattingly, Jr. □ Michael J. Prell □ Richard Spillenkothen □ Edwin M. Truman

The Federal Reserve Bulletin is issued monthly under the direction of the staff publications committee. This committee is responsible for opinions expressed except in official statements and signed articles. It is assisted by the Economic Editing Section headed by S. Ellen Dykes, the Graphics Center under the direction of Peter G. Thomas, and Publications Services supervised by Linda C. Kyles.

Table of Contents

1001 RECENT TRENDS IN THE MUTUAL FUND INDUSTRY

The expanding role of mutual funds has had at least two important implications for the performance and structure of the financial markets. By offering households more diversified investment opportunities and corporations a greater market for their financial instruments, mutual funds have improved the efficiency of financial intermediation by reducing transaction costs. And as intermediaries competing with banks and thrift institutions, mutual funds have contributed to the reduction of the role of these depositories as providers of credit in the intermediation process and consequently have contributed to changes in the relationship between money and economic activity.

1013 INDUSTRIAL PRODUCTION AND CAPACITY UTILIZATION FOR AUGUST 1993

Industrial production, which rose 0.4 percent in July, increased 0.2 percent in August. For a second month, utilization of total industrial capacity remained at 81.8 percent, just above its level in the spring.

1016 STATEMENTS TO THE CONGRESS

John P. LaWare, member, Board of Governors of the Federal Reserve System, discusses the Small Business Loan Securitization and Secondary Market Enhancement Act (S.384), which seeks to increase the availability of credit to small businesses by facilitating the securitization of small business loans and says that the Federal Reserve supports the objectives of S.384 and believes that many of its provisions will prove helpful in encouraging the development, through the securitization process, of a secondary market

- for small business loans, before the Senate Committee on Banking, Housing, and Urban Affairs, September 9, 1993.
- 1020 Lawrence B. Lindsey, member, Board of Governors of the Federal Reserve System, reviews the Community Reinvestment Act and the current efforts of the agencies to strengthen and improve its administration and says that in light of President Clinton's request to the relevant agencies to examine their supervisory approach to this law, the Federal Reserve is working with the other banking and thrift regulatory agencies to comply with the President's request; it is gathering information from the public, including bankers, small business owners, and community groups, and will be in a better position to provide meaningful thoughts on various legislative proposals at a later date, before the Subcommittee on General Oversight, Investigations and the Resolution of Failed Financial Institutions of the House Committee on Banking, Finance and Urban Affairs, September 17, 1993.
- 1026 Governor LaWare discusses the challenges that face banks in meeting the service and credit needs of low-income and minority communities with specific reference to a community in Prince George's County, Maryland, for which the Board developed a profile of current lending activity, and also discusses some of the initiatives being undertaken by the financial institution regulators, and by the Federal Reserve specifically, to address credit availability for underserved areas, before the House Committee on Banking, Finance and Urban Affairs, September 24, 1993.
- 1031 Governor LaWare discusses the implications of the proposed North American Free Trade Agreement (NAFTA) for the financial

services industry and for banking in particular and says that the financial services chapter of the NAFTA incorporates the principles of most-favored-nation and of national treatment that have long been applied in the United States with respect to foreign investment, establishes a government-togovernment system for settling disputes that allows for the participation of persons who are knowledgeable about financial services, contains a strong provision to protect the actions of regulators, and in general would do no harm to the safety and soundness of the U.S. financial system or its institutions, before the House Committee on Banking, Finance and Urban Affairs, September 28, 1993.

1036 ANNOUNCEMENTS

Appointment of the Chairmen and Deputy Chairmen of the boards of directors of the Federal Reserve Banks.

Meeting of the Consumer Advisory Council.

Adoption of an interagency policy statement regarding branch closings by insured depository institutions.

Issuance of a final rule on the filing of criminal referrals.

Release of the quarterly table of adjustment factors for interest income for section 20 companies.

Proposed amendments to Regulation O; proposed revisions to risk-based capital standards to implement section 305 of the Federal Deposit Insurance Corporation Improvement Act.

Change in Board staff.

1039 MINUTES OF THE FEDERAL OPEN MARKET COMMITTEE MEETING

At its meeting on August 17, 1993, the Committee adopted a directive that called for maintaining the existing degree of pressure

on reserve positions. The directive also indicated that, in the context of the Committee's long-run objectives for price stability and sustainable economic growth, and giving careful consideration to economic, financial, and monetary developments, slightly greater or slightly lesser reserve restraint might be acceptable during the intermeeting period. The reserve conditions contemplated at this meeting were expected to be consistent with modest growth in M2 and little net change in M3 over the balance of the third quarter.

1047 LEGAL DEVELOPMENTS

Various bank holding company, bank service corporation, and bank merger orders; and pending cases.

Recent Trends in the Mutual Fund Industry

Phillip R. Mack, of the Division of Research and Statistics, prepared this article. Michael A. Schoenbeck provided research assistance.

Mutual fund assets have grown more than twelvefold from 1980 to mid-1993 and by half in the last two years of that period. Most of this growth has come from net purchases of fund shares by the public, rather than from price appreciation, and it has lately reflected a choice by investors to move funds out of depository institutions. In 1992, the public made net purchases of \$206 billion of mutual fund shares, while making net withdrawals from their deposits at banks and thrift institutions. In turn, mutual funds supplied about one-fourth of funds raised by the domestic nonfinancial sectors of the economy last year, while depository institutions provided only about one-tenth. In short, mutual funds are now a significant competitor of depository institutions for household savings and, with more than \$1.8 trillion in assets, they are a major source of funds in the capital markets.

Several factors underlie the recent surge in mutual funds. One is the drop in rates on deposits-especially short-term deposits-to relatively low levels at a time when rising stock and bond prices have been generating higher returns. As a result, households seeking to maintain satisfactory returns on their savings have been drawn to capital market instruments, especially mutual funds, whose diversification and liquidity offer advantages over direct investments in securities. In addition, the benefits of economies of scale in the mutual fund industry have been shared with investors through a widening array of services provided by fund families. Finally, many funds have eliminated or substantially reduced the sales commissions, or loads, they charge to investors.

Corporations with access to the capital markets, including firms with lower credit ratings, have benefited from the expanded supply of investment dollars represented by the surge in mutual funds. State and local governments also have benefited,

with inflows to tax-exempt mutual funds running at a record pace since the end of 1992. Moreover, in recent years, smaller corporations raising equity through initial public offerings, as well as established firms, have seen mutual funds purchase a significant portion of the new equity they have sold.

In response to the growth of the funds industry, banks have increased their participation in the provision of mutual fund services. For example, many banks sell mutual fund shares to their retail customers and, in some cases, act as an investment adviser to mutual funds and provide other related services. The increased involvement of banks has brought attention to their role in the sale of mutual fund shares, including their responsibility for ensuring that customers are made aware of the differences between mutual fund shares and insured deposits.

The expanding role of mutual funds has had at least two important implications for the performance and structure of the financial markets. By offering households more diversified investment opportunities and corporations a greater market for their financial instruments, mutual funds have improved the efficiency of financial intermediation by reducing transaction costs. And as intermediaries competing with banks and thrift institutions, mutual funds have contributed to the reduction of the role of these depositories as providers of credit in the intermediation process and consequently have affected the relationship between money and economic activity.

TYPES OF MUTUAL FUNDS

A mutual fund is a type of investment company. An investment company sells shares or certificates that represent an interest in a pool of financial assets; a mutual fund (technically an open-end company) is an investment company that continuously issues and redeems its shares. The price of such shares, apart from any brokerage commissions, equals the

net asset value of the fund, determined by dividing the market value of the fund's assets, less any liabilities, by the number of outstanding shares. The net asset value is calculated daily as of the close of U.S. securities markets. Open-end funds must redeem their shares on demand at a value equaling the next calculated net asset value and mail proceeds within seven days.

Another type of investment company, the closedend fund, does not redeem its shares but typically offers a fixed number of nonredeemable shares that are bought and sold on a stock exchange. A third type of investment company is the unit investment trust. Unlike other funds, unit investment trusts hold a relatively fixed portfolio of securities that is not actively managed.

The greater liquidity of open-end funds has helped make them by far the most popular form of investment company. By mid-1993, open-end funds—the focus of this article—held assets of about \$1.8 trillion (table 1), as compared with only \$90 billion of assets in closed-end funds.

For the most part, the portfolio of a mutual fund consists of marketable securities, both domestic and foreign, such as corporate stocks and bonds, government bonds, municipal bonds, and money market instruments. An individual mutual fund,

however, invests in a specific subset of securities defined by its stated investment objective. For example, a money market mutual fund invests in a diversified pool of short-term money market instruments, such as commercial paper, certificates of deposit, and U.S. Treasury bills. Long-term mutual funds are those that invest primarily in stock and bond securities. Because they use certain share valuation techniques based upon historical costs, money funds are allowed to report a constant \$1 share value.² Stock and bond mutual funds, on the other hand, must report their share values at market prices; hence, investor accounts in these funds may show a gain or a loss on any given day, apart from any distributions.

THE STRUCTURE AND REGULATION OF MUTUAL FUNDS

A mutual fund typically is organized as a business trust or corporation. The board of directors, elected by the shareholders of the fund, is responsible for overseeing the fund's operations. Among the board's duties is the selection, subject to shareholder approval, of an investment adviser to oversee the day-to-day management of the fund.³

Responsibilities of the investment adviser include making appropriate investments in line with the fund's investment policies and objectives and conducting economic and financial research. For these services, the adviser receives a fee based on a percentage of the fund's assets. Within certain limits, the adviser's fee income increases with the

Closed-end funds are well-suited for investment in less liquid securities, which may not be appropriate for the requirements of open-end mutual funds. In recent years, closed-end funds have been important purchasers of foreign stocks and bonds and of municipal bonds.

^{2.} The Securities and Exchange Commission has given money funds the authority to use either of two accounting techniques of share valuation: amortized cost and penny rounding methods. Under the amortized cost method, a money fund values its securities at historical cost, with any interest earned accrued daily over the life of the assets. By declaring these accruals as a daily dividend to its shareholders, the money fund is able to maintain a \$1 price per share. Under the penny rounding method, a money fund rounds its net asset value per share to the nearest one cent to compute the current price of its shares. Most money funds use the amortized cost method of share valuation.

^{3.} Under the Investment Company Act of 1940, which establishes the legal and regulatory framework for the mutual funds industry, at least 40 percent of a fund's directors must be unaffiliated with the investment adviser, with any registered broker-dealer, or with any other interested person.

amount of assets under management, an arrangement that gives the adviser an incentive to perform well and to attract new investors. In some cases, the adviser's compensation also varies with the fund's performance relative to some specified benchmark.

The board also retains an independent custodian to hold the fund's assets in trust (except occasionally in the case of a bank-advised fund) and selects a transfer agent to maintain shareholder ownership records and to process orders for sales and redemptions. Governed by the Investment Company Act of 1940, the custodial arrangement is designed to prevent misuse of the fund's assets by the investment adviser. The services provided by the custodian include settling securities transactions, receiving dividends and interest, and making payments for the fund's expenses. Typically, the custodian's compensation varies with the volume of assets under management.

The board also hires an underwriter to sell fund shares either directly to investors or indirectly through brokers.⁴ Depository institutions may also sell shares to their customers. Shares in some funds are sold at a premium over the net asset value. This premium, or "front-end load," covers, where applicable, the underwriter's cost, the broker's commission, and other sales and promotional expenses incurred by the fund.⁵

In direct sales or marketing, the underwriter offers shares to investors through the mail, by telephone, or at fund offices. Direct marketers usually do not charge a load; some no-load and low-load funds, however, use annual fees to finance the distribution of their shares to the public.

The Investment Company Act of 1940 is one of several federal statutes governing mutual funds. One of the primary objectives of the act is the protection of investors against abuses, and it contains specific requirements that the mutual fund be operated in the best interests of the fund's share-

Other aspects of mutual fund operations are governed by three other federal statutes: (1) Pursuant to the Securities Act of 1933, mutual funds must provide investors with accurate information about its investment objective, yield, and operating procedures through a prospectus. (2) The Securities Exchange Act of 1934 requires the registration of brokers and dealers with the Securities and Exchange Commission (SEC) and sets certain requirements for the solicitation of shareholder votes and proxies in connection with shareholder meetings. (3) The Investment Advisers Act of 1940 requires the registration of all mutual fund advisers (other than banks or bank holding companies), prohibits fraudulent practices, and gives the SEC enforcement powers.

To determine if the regulatory requirements are met, the SEC reviews disclosure statements and conducts on-site examinations. The SEC reviews fund disclosures about operating plans, management structure, and financial condition. On-site examinations typically probe the funds' valuation techniques, investment activities, management functions, and sales and liquidations of shares.

THE ROLE OF MUTUAL FUNDS IN THE FINANCIAL SYSTEM

Like other financial intermediaries, mutual funds channel savings to different forms of investments. To the saver, mutual funds offer several advantages over the closest, nonintermediary alternative—the direct purchase of stocks and bonds. First, by pooling the savings of many investors, mutual funds can afford to employ professional asset managers and analysts with investment expertise exceeding that of the typical small investor. Second, mutual funds allow small savers to invest in a diversified

holders. For example, the statute places restrictions on changing a mutual fund's investment policies without shareholder approval, provides that the adviser's compensation be approved by shareholders and annually approved by the board of directors, prohibits conflict-of-interest transactions between the fund and its affiliates, limits the mutual fund's use of financial leverage, and requires mutual funds to pay redemption proceeds within seven days except under extraordinary circumstances.

About 59 percent of all sales of stock and bond fund shares in 1992 were brokered.

^{5.} Back-end loads, in contrast, are charges paid by investors only on redemptions that occur within a specified period after purchase, expressed typically as a percentage of redemption proceeds. Such loads, which usually decline over time, are used to recoup advances to brokers and to discourage trading by investors.

portfolio, thus reducing their exposure to certain types of risk. Typically, the higher transactions costs and minimum purchase sizes encountered in direct investment make diversification difficult for the small investor. Finally, mutual funds offer investors a greater degree of liquidity than would be available through direct investments in the capital markets. For example, mutual funds offer a variety of convenient means for purchasing and redeeming shares, such as making fund investments and portfolio adjustments over the phone and (for money market funds and some bond funds) making redemptions by writing checks.

Mutual funds are distinct from other intermediaries, especially depository institutions, in the way they channel savings. In raising funds, mutual funds issue shares that represent an ownership interest. Shareowners assume all the market risk and credit risk of the fund's assets and share proportionally in all the gains and losses of the fund. Consequently, the return on the shareholder's investment fluctuates with general market conditions and the investment performance of the fund. Banks and thrift institutions, in contrast, primarily issue deposit liabilities with a fixed rate of interest. Most depositors are fully protected by deposit insurance and are not subject to any credit risk.

In supplying funds, mutual funds primarily specialize in marketable securities of firms that have access to the capital markets. Funds must confine their investments to marketable securities in order to meet investor redemptions in a timely manner.⁶ Although depository institutions purchase marketable securities, their special role is in providing funds to borrowers who, because of their small size or the complexity or monitoring requirements of the debt contract, may lack access to the public securities markets.

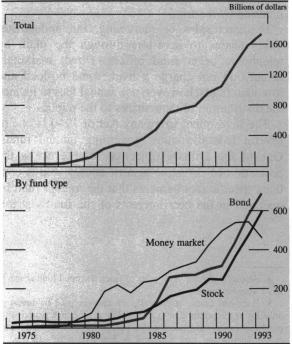

Mutual funds actively compete with banks and thrift institutions for the balances of households and in supplying funds to borrowers. Such competition is limited, however, to those households that are willing to take on additional risk for higher expected returns and to those borrowers capable of financing their needs directly through the securities markets.

THE DEVELOPMENT OF MUTUAL FUNDS

Offered in the mid-1920s, closed-end funds gained acceptance ahead of open-end mutual funds; in 1929 they accounted for 95 percent of industry assets. Open-end mutual funds, however, soon overshadowed them, and between 1940 and 1970 their assets grew more than a hundredfold, to about \$48 billion. Throughout this period, they almost exclusively invested in equity, although bond funds also emerged and grew.

In the early 1970s, when volatile stock market conditions along with persistent inflation reduced the attractiveness of bond and equity funds, the industry created money market mutual funds. These funds met the desire of investors to benefit from money market rates, which were then above the level that federal regulation allowed depository institutions to offer on retail accounts, and the success of these funds spurred the development of other funds investing in fixed-income securities: Municipal bond funds were introduced in the mid-1970s, and mortgage-backed and government bond funds were started in the mid-1980s.

1. Net assets of the mutual fund industry, 1974-93

Source. Investment Company Institute.

SEC guidelines permit a mutual fund to hold up to 15 percent of its net assets in illiquid securities.

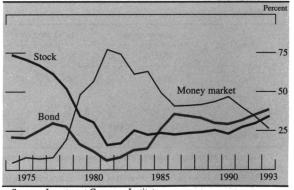

Mutual funds have continued to play an active role in equity markets, with holdings of equity funds growing from about \$40 billion in 1970 to about \$580 billion in the first half of 1993. Bond and money funds grew faster over this period, however (chart 1). As a result, the assets of stock funds declined from about 80 percent of industry assets to 34 percent between year-end 1970 and mid-1993, by which time bond funds accounted for about 40 percent of industry assets and money funds about 26 percent (chart 2).

Money Market Mutual Funds

Money market mutual funds grew rapidly in the late 1970s and early 1980s, when interest rates on money market instruments exceeded regulatory ceilings that applied to depository institutions.⁷ Flows from depositories to money funds supported expansion of the commercial paper market, an important alternative to bank loans for businesses. The growth of money funds was interrupted temporarily in 1982, when banks and thrift institutions were permitted to offer money market deposit accounts, which were not subject to interest rate ceilings. Money funds resumed their growth in

^{7.} For a detailed history, see Timothy Q. Cook and J. G. Duffield, "Money Market Mutual Funds and Other Short-Term Investment Pools," in Timothy Q. Cook and R. K. LaRoche, eds., *Instruments of the Money Market*, 7th ed. (Federal Reserve Bank of Richmond, 1993), pp. 156–72.

Source. Investment Company Institute.

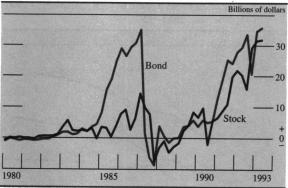

1983, partly because they remained important to investors in their broader investment strategies. For example, brokerage houses include them as part of cash management accounts. In addition, mutual fund families offer money funds along with stock and bond funds as part of a menu of products that allows investors to switch between short- and long-term funds.

Stock and Bond Funds

In the 1980s, the growth of assets in stock and bond funds was driven by heavy purchases of fund shares, rising stock prices, and lower interest rates (rising bond prices). During this period, investment companies expanded the number and variety of long-term funds they offered. The development of new financial instruments, such as securities backed by mortgages or other assets, and the increased ease of investing overseas spurred the diversification of fund types. Funds investing in specific industries also became popular. The number of long-term funds increased from about 450 at the end of 1979 to about 3,300 by mid-1993.

Inflows to bond funds surged dramatically during the 1985–86 period (chart 3), with the majority of new money going to municipal, mortgage-backed, and government bond funds. Investors withdrew from bond funds in early 1987, when bond prices fell because of an upward move in

Net sales are gross sales including reinvested dividends minus gross redemptions.

Source. Investment Company Institute.

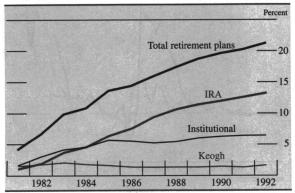

interest rates; as deposit rates fell in relation to bond yields in late 1990, investors began moving aggressively into bond funds again. Stock mutual funds grew during the bull market of the mid-1980s and then shrank in the aftermath of the stock market crash in October 1987. In 1989, with stock funds posting strong investment results, inflows resumed.

Retirement Assets

Some of the growth of mutual funds in the 1980s is attributable to their use as investment vehicles for retirement assets (chart 4). In 1982, U.S. tax laws created incentives for investors to open individual retirement accounts (IRAs) and Keogh accounts, which boosted investments in instruments, including mutual funds, that could be structured in the form of such accounts. The upward trend in the asset size of these retirement-oriented mutual fund accounts was interrupted in 1986, after the Congress enacted the Tax Reform Act of 1986, which reduced the number of households eligible to use IRA and Keogh accounts to defer taxes on current income.

In recent years, the share of mutual fund assets held by institutional retirement plans has increased. In addition, investments in IRA and Keogh mutual fund accounts have once again picked up with their use for lump sum distributions and rollovers from employee pension accounts that are liquidated because of a job change or plan termination.

4. Retirement assets as a share of total mutual fund assets, by type of plan, 1981–92

Source. Investment Company Institute.

Sales Loads and Fees

The growth and development of the industry has been associated with a decline in sales loads.⁸ Among the mutual funds charging a front-end load, the average load fell from 8.5 percent in 1970 to about 4.5 percent in 1992.⁹ Over the same period, the market share of no-load funds increased from 6 percent to about 31 percent of industry assets.

As sales loads have declined, expenses charged to shareholders, as a proportion of assets (the expense ratio), has increased substantially, except in the case of tax-exempt bond funds (table 2). The rise in expense ratios has occurred, however, at the same time that industry assets have been increasing, and insofar as many fund expenses are fixed costs, the growth in industry assets would reduce these ratios. Moreover, mutual funds operate in a

 Ratio of mutual fund expenses to fund assets, and 12b-1 component, by selected fund types, 1982 and 1992

Percent

Bund town	Expens	e ratio 1	12b-1 fee ratio ²		
Fund type	1982	1992	1982	1992	
Equity	1.08	1.49	.08	.42	
global	1.29	1.83	.06	.41	
Bond	.89	.90	.20	.36	
Taxable	.94 .81	1.03	.26	.39	

The sum of all expenses and fees, excluding loads (sales commissions), divided by industry assets.

^{8.} In the 1970 amendments to the Investment Company Act of 1940, the Congress authorized the National Association of Securities Dealers (NASD) to prescribe sales loads, subject to SEC oversight, and in 1975 the NASD adopted an 8.5 percent maximum on front-end sales loads.

^{9.} Back-end loads or contingent deferred sales loads (CDSL) are sometimes used in junction with 12b-1 fees as an alternative to front-end sales loads (12b-1 fees are those that can be assessed against fund assets to recover distribution expenses of the fund). For example, instead of charging a 6 percent front-end load, a mutual fund could recoup the same amount through a combination of an annual 1 percent 12b-1 fee and a CDSL of 6 percent that declines 1 percentage point per year until reaching zero after the sixth year.

^{2.} For funds imposing such fees, the ratio of 12b-1 fees to assets. See text for definition of 12b-1 fees.

Source. Lipper Analytical Services.

competitive market, which impedes them from charging fees that exceed competitive levels.¹⁰

Three factors may have contributed to the rise in the industry expense ratio. Before 1980, a mutual fund's investment adviser and underwriter typically incurred the costs of distributing the fund's shares. In 1980, the SEC adopted rule 12b-1, allowing mutual funds to use their assets to pay for sales commissions, sales literature, advertising, and other distribution expenses. Most no-load and low-load funds have adopted 12b-1 fees to finance their distribution expenses, and the fees have grown as a proportion of assets for funds imposing such fees (table 2).11 Second, the number of small and international funds, which are more costly to operate, has grown. Third, mutual funds have expanded shareholder services that require costly computer, telephone, and shareholder accounting systems. These expenditures may have offset some of the gains achieved with economies of scale resulting from an increase in industry assets.

RECENT GROWTH OF THE INDUSTRY

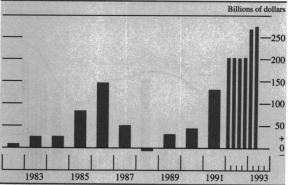

Net sales of long-term mutual funds were a record \$202 billion in 1992, up from \$130 billion in 1991 and easily outpacing the previous record of \$144 billion set in 1986 (chart 5). 12 During the first half of 1993, net sales amounted to \$135 billion and at that rate will set another record.

One reason for the surge in net sales has been the drop in deposit rates to low levels by historical standards and the accompanying steepening of the yield curve. Although both short-term and longterm rates have fallen since 1989, the decline in short-term rates has been more pronounced. The rate on the six-month Treasury bill fell from 8.8 percent in the spring of 1989 to 3.2 percent in the summer of 1993, and the yield on the thirtyyear Treasury bond fell from 8.7 percent to 6.3 percent over the same period. Thus, the returns on long-term assets, such as stock and bond funds, became increasingly attractive relative to rates on deposits at banks and thrift institutions, which follow short-term market rates. In addition, the heavy inflows in recent years may have been aided by the reduced need of depositories to compete aggressively for funds. For example, weak loan demand may have reduced the need of banks to offer competitive rates on deposits. Moreover, competition for funds may have been further reduced by the resolution of failed thrifts, which typically had paid a premium to attract funds.¹³ As a result, deposit rates may have been lower than the given decline in market interest rates would have otherwise produced.

The strong net sales of mutual funds may also reflect the high yields that some mutual funds have

^{13.} As the Resolution Trust Corporation closed failed thrifts, it typically paid depositors directly and closed their accounts or sold the deposits to thrift institutions or banks that reset their rates, which in effect pushed average deposit rates down.

Long-term funds exclude money market funds. Sales reported for 1992-93 are quarterly at an annual rate.
 Source. Investment Company Institute.

^{10.} According to the antitrust criteria of the Department of Justice, an industry with a Herfindahl index of less than 1,000 is considered unconcentrated. For the mutual fund industry as a whole, the Herfindahl index ranged from 500 in 1984 to 380 in 1992.

The Herfindahl index is calculated as the sum of the squares of market shares of all fund complexes in the market. The larger the index, which can range from zero to 10,000, the more concentrated the market.

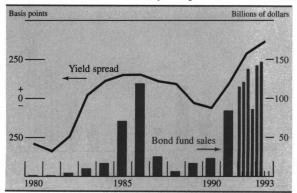

^{11.} In a rule that became effective in July 1993, the NASD limits the amount of 12b-1 fees that may be charged. The intent of the rule is to ensure that investors will not pay more than 7.25 percent of the purchase price of a mutual fund share when 12b-1 fees, front-end loads, and back-end loads are combined. Also, under the new rule, no fund that charges 12b-1 fees in excess of 0.25 percent can describe itself as a no-load fund.

^{12.} Net sales are gross sales plus reinvested dividends minus gross redemptions. Net sales of bond funds in 1992 were \$115 billion, just under the record of \$119 billion set in 1986. Net sales of stock funds were \$87 billion in 1992, breaking the previous record of \$46 billion set in 1991.

been able to advertise. One way that a mutual fund differentiates itself and attempts to attract potential investors is to publicize its superior investing skills based upon past performance.14 Advertisements will often highlight holding-period returns, calculated according to SEC guidelines, relative to some benchmark, such as returns on the issues in the S&P 500 index of stock prices or against other funds with similar investment objectives. Although such advertisements include disclaimers that past performance is no guide to future performance, they may still be effective in convincing investors that the fund has superior investment skills and is likely to enjoy superior future returns. Funds that have strong recent performance tend to have strong inflows, even though most research has failed to show that money managers can persistently produce superior returns.¹⁵ Thus, some of the inflows to mutual funds may reflect the actions of investors who base their expectations of a fund's future returns on the fund's past performance.

14. See Erik R. Sirri and Peter Tufano, "Buying and Selling Mutual Funds: Flows, Performance, Fees, and Services," Harvard Business School Working Paper 93–017 (1992). They show that the demand for mutual funds is weakly related to fees charged and strongly related to services provided and past performance.

6. Net sales of bond funds and yield spread, 1980–93¹

Yield spread is rate on thirty-yearTreasury bond less six-month certificate
of deposit. Fund sales reported for 1992–93 are quarterly at an annual rate.
Source. Investment Company Institute.

The surge in purchases of shares in long-term funds is not unprecedented. In 1985 and 1986, investors shifted into bond funds when interest rates fell and the yield curve steepened. In fact, bond funds posted record net sales of \$119 billion in 1986, slightly above the \$115 billion of net sales in 1992 (chart 6). Inflows came to a halt in April 1987, when interest rates backed up sharply. Also during this period, the demand for bond funds for retirement purposes may have fallen when the Congress placed eligibility limitations on IRA contributions.

HOUSEHOLD OWNERSHIP OF MUTUAL FUNDS

The strong inflows to mutual funds reflect their popularity among households. According to preliminary data from the Federal Reserve Board's Survey of Consumer Finances, households shifted assets from deposits to mutual funds in the 1989–92 period; they held about 13 percent of their financial assets in long-term mutual funds at the end of 1992, up from about 10 percent in 1989, while their holdings of deposits and money funds fell from about 37 percent to 31 percent (table 3). Direct holdings of stocks, bonds, and "other" financial assets (not shown) also slightly increased during this period.¹⁶

The dispersal of ownership of long-term mutual funds also increased, from about 12 percent of households in 1989 to 15½ percent in 1992. The increase in new ownership was most heavily concentrated among households in which the head was between 55 and 64 years of age. These households apparently shifted assets away from bank deposits and money funds into long-term mutual funds. Their holdings of bank deposits and money fund shares fell from about 40 percent of their financial assets in 1989 to about 22 percent in 1992, while the share of long-term mutual funds in their portfolios rose from about 11 percent to 17 percent over the same period. Somewhat in contrast, the households in the 35-44 age group maintained the share of their financial assets in bank deposits and

Titman, "Mutual Fund Performance: An Analysis of Quarterly Portfolio Holdings," Journal of Business, vol. 62 (July 1989), pp. 393–416.

^{16. &}quot;Other" financial assets include trusts, annuities, managed investment accounts, call accounts, deposits at uninsured institutions, and the cash value of life insurance.

money fund shares, at about 33 percent, over the 1989–92 period; the share of long-term funds in their portfolios did grow, however, from about 9½ percent to about 12½ percent, while the share of other financial assets declined.

MUTUAL FUNDS AS FINANCIAL INTERMEDIARIES

With their rapid growth, mutual funds have become increasingly important suppliers of debt and equity funds. Indeed, corporations with access to the reduced interest rates and elevated share prices of the capital markets have benefited from the surge in mutual fund assets: In recent years, mutual funds as a group have been the largest net purchaser of equities and a major purchaser of corporate bonds (table 4). Companies have repaid shorter-term debt—especially bank loans—and lowered the costs of long-term debt, while reducing overall balance sheet leverage. Such financial restructuring has been a particularly urgent priority for many of the firms that issued high-yield ("junk") bonds in the 1980s.

Mutual funds have been one of the major suppliers of credit in the high-yield bond market, as certain other institutional investors have pulled back from riskier investments. Recent legislation inhibits thrift institutions from investing in belowinvestment-grade corporate debt. And the public's concern about the financial health of life insurance companies has led most insurers to curtail their purchases of high-yield bonds and concentrate in high-grade securities. Consequently, flows to high-yield bond funds have played a more important role in the high-yield market than in the past, tending to boost bond prices (narrow yield spreads). Industry sources estimate that mutual funds, which purchased roughly 75 percent of new issuance of high-yield bonds in 1992, now hold about one-half of the stock of such bonds, up from about one-third in the 1980s.

Mutual funds also have increased their presence in the market for tax-exempt securities; they are now the largest net purchaser in that market (table 4) and are offsetting the reduced net purchases by households and the runoff at commercial banks. Banks have been net sellers of tax-exempt securities since passage of the Tax Reform Act of 1986, which significantly reduced the tax advantages for banks owning them. Households in the past several years have relied more heavily on mutual funds for their investments in municipal securities.

BANK-RELATED MUTUAL FUNDS

In response to the outflow of deposits, banks are increasingly participating in the mutual fund busi-

^{17.} Investment Company Institute et al. v. Camp, Comptroller of the Currency, et al., 401 U.S. 617 (1971).

Nevertheless, several rule changes have made it possible for banks to increase their participation in the industry.¹⁸ In 1972, the Federal Reserve Board authorized bank holding companies to act as mutual fund investment advisers, transfer agents, and custodians.19 In an accompanying interpretation, the Board placed several restrictions on the activities of bank holding companies that advise mutual funds. For example, neither a bank holding company nor its bank or nonbank affiliates could promote any mutual fund, or provide investment advice to any customer investing in any mutual fund, for which it acted as an investment adviser. In addition, the Board cautioned bank holding companies from advising a mutual fund, unless the fund was located off the bank's premises. In 1992, the Board relaxed some of these restrictions. Provided that a number of disclosures are made to customers regarding the bank holding company's relationship to the mutual fund and the status of mutual funds as an uninsured investment product, the Board allowed a bank holding company or its subsidiary to provide investment advice and other brokerage services to customers investing in any bank-advised fund. In addition, the Board eliminated the location restriction.

A banking organization can participate in the mutual funds industry in several ways. One is through a proprietary mutual fund (a fund advised by the bank), with the shares brokered by the bank primarily to its customers. An unaffiliated third

party, however, organizes the fund and an unaffiliated distributor underwrites the shares. In addition, a bank can sell shares of nonproprietary funds, for which it acts only as broker. Involvement in the brokerage of these funds can range from renting lobby space to an unaffiliated broker to selling fund shares through a brokerage firm affiliated with the bank. Although the bank is providing only brokerage services, it does earn fee income from sales commissions and enters the retail mutual funds market at a low initial expense.

Net assets of bank proprietary mutual funds, including both long-term and money market funds, are estimated to have increased from \$31 billion at the end of 1987 to \$162 billion at the end of the first quarter of 1993 (table 5). Money market funds account for the majority of bank-related mutual fund assets, but bank-related long-term funds have grown rapidly in the past several years and are about evenly split between stock and bond funds. Between 1987 and early 1993, banks increased their market share of total industry assets from 4 percent to nearly 10 percent (table 5). However, they have had much greater penetration in the money fund sector than in the stock and bond sectors. At the end of the first quarter of 1993, bank money funds accounted for about 20 percent of total money fund assets, whereas bank long-term mutual funds were only about 4 percent of total stock and bond fund assets.

18. See Melanie L. Fein, Securities Activities of Banks (Prentice-Hall, 1992), for a detailed account of the regulatory changes.

IMPLICATIONS FOR THE INTERMEDIATION PROCESS

By providing savers with investment options and by participating in the market for securities, mutual funds compete with other financial intermediaries. Although some intermediaries may have been

adversely affected by the rise of such competition, mutual funds have tended to make the financial system more efficient by reducing the transactions costs to households seeking saving alternatives and to borrowers issuing securities.

Clearly, the growth of the mutual funds industry has challenged the traditional role of banks. Mutual funds pose a competitive threat by offering saving instruments that have become more attractive alternative to bank deposits, given their liquidity and other characteristics. Recent experience also suggests that households are quite sensitive to changes in returns on bank deposits relative to those on mutual fund shares. Mutual funds are aggressively attempting to exploit the greater household awareness by offering new types of funds, additional shareholder services, and retirement products.

Mutual funds also challenge banks to the extent that bank borrowers can directly tap the capital markets. As mutual funds grow, they make securities markets accessible to many borrowers that were previously confined to bank loans—mediumsized businesses and individuals, who gain indirect access to the public market through asset securitization.

As investors, mutual funds have played an important role in the development of markets for securitized financial assets. Securitization began with mortgages in the 1970s and has since spread to other types of financial assets, such as automobile loans and credit card receivables.²⁰ Banks and other nonbank institutions have increasingly securitized such assets and sold them to various investors, including mutual funds. Securitization allows banks and thrift institutions to continue to originate loans by having mutual funds and other investors

fund such loans.²¹ This form of intermediation thus complements lending by depository institutions but also produces greater competition in the provision of financial services.

Asset quality problems, higher regulatory capital requirements, and cautious lending also have added to the downward trend in the amount of intermediation through banks in recent years. Accompanying this diminished role for depository institutions in the credit markets has been the slow growth in broad measures of the money supply. Such slowness is reflected in the velocity of M2, which is the ratio of gross domestic product to M2. In the past, decreases in short-term interest rates have lowered the opportunity cost of holding deposits, as deposit rates typically lagged the decline in market yields, thus causing the level of M2 to rise relative to output and its velocity to fall. In the past three years, however, the velocity of M2 has risen in the face of the general decline in market interest rates.22

OUTLOOK

The mutual fund industry will remain an important investment option for household savings and an important funding source for corporations and state and local governments that can directly tap the capital markets. Growth of the industry may subside as the yield curve flattens and inflows into long-term stock and bond funds slows. However, the introduction of new types of funds and services, the potential for the growth of funds marketed through banks, and the demographic forces that favor retirement products will tend to support industry growth.

^{20.} The securitization of loans to small and less creditworthy firms has been rather limited. Thus, banks cannot easily originate and sell such loans into the secondary markets and have accordingly retained the business of these borrowers, who typically cannot directly tap the capital markets to obtain financing. Recent regulatory changes have made it easier for banks and other financial intermediaries to issue securities backed by small business loans in the public markets, but banks still need to evaluate and monitor the creditworthiness of such borrowers

^{21.} By securitizing, banks and thrift institutions save on capital costs, earn fee income from servicing the loans, and earn interest income from the spread between the borrowers' rate and the rate paid to the investors.

Industrial Production and Capacity Utilization for August 1993

Released for publication September 16

Industrial production, which rose 0.4 percent in July, increased 0.2 percent in August. The production of business equipment and durable goods materials rose sharply. However, the production of

defense and space equipment and of durable consumer goods declined further, and the output of energy materials decreased because of the continuing strike in the coal industry. At 111.1 percent of its 1987 annual average, total industrial production was 0.7 percentage point above its level in the

^{1.} Data seasonally adjusted or calculated from seasonally adjusted monthly data.
2. Change from preceding month

second quarter and 4.2 percent above its yearearlier level. For a second month, utilization of total industrial capacity remained at 81.8 percent, just above its level in the spring.

When analyzed by market group, the data show that the output of consumer goods decreased 0.2 percent, reversing the gain in July. Among consumer durable goods, the output of automotive products declined about 1/2 percent and was 8½ percent below its April level; the output of other durable consumer goods fell 1 percent as the production of appliances lost much of its July rise. The output of consumer nondurables was unchanged and has been flat, on balance, since late last year; the production of electricity for residential use, which surged in July, was little changed in August because of the continued above-normal demand for air conditioning.

The production of equipment rose more than ½ percent despite a further decline in output of defense and space equipment. Oil and gas well drilling, which has picked up recently, rose more than 8 percent. The output of business equipment advanced 0.7 percent, primarily because of the sustained uptrend in the production of informationprocessing equipment; the output of business equipment excluding computers rose only 0.1 percent in August and was 2³/₄ percent above the level of a year ago.

The output of construction supplies, which grew sharply in July, increased 0.2 percent. Over the past year, the production of construction supplies has risen about 4 percent, but it has changed little, on balance, since February. The output of industrial materials, which had been held back since May by strikes in mining, rose 0.2 percent in August.

^{3.} Contains components in addition to those shown.

r Revised.

p Preliminary.

Among the major components, the overall production of durable goods materials, which had been sluggish during the late spring and earlier summer months, rose 0.7 percent. The output of parts for equipment increased further, and the production of parts for consumer durables picked up. Also, the output of basic metals rose despite a strike in iron ore mining and a cutback in aluminum production. The production of nondurable materials, such as chemicals and paper, has changed little recently. The output of energy materials, which had been boosted in July by a spurt in electricity generation, fell back because of the further strike-related curtailments in coal mining.

When analyzed by industry group, the data show that within manufacturing, output increased 0.3 percent in August. Among durable manufacturing industries, the most notable increases occurred in machinery and steel. The gain in the output in nondurable manufacturing reflected mainly an

increase in food. The utilization of manufacturing capacity, which was 80.8 percent in August, has inched up since June to a level near the upper end of the range that has prevailed for most of this year. The operating rate for advanced-processing industries edged up to 79.2 percent in August but was still 1.5 percentage points below its longer-run average; industries that remain at relatively low operating rates include transportation equipment and instruments. The rate for primary-processing industries, at 84.7 percent, also was only a bit above its July level but 2.5 percentage points above its long-term average, with most major industries operating at above average rates.

The output at mines fell 1.0 percent because of strikes in the coal and iron ore industries. The output at utilities, which had posted gains averaging nearly 3 percent in June and July, was unchanged.

Statements to the Congress

Statement by John P. LaWare, Member, Board of Governors of the Federal Reserve System, before the Committee on Banking, Housing, and Urban Affairs, U.S. Senate, September 9, 1993

I am here today to discuss the Small Business Loan Securitization and Secondary Market Enhancement Act (S.384), which seeks to increase the availability of credit to small businesses by facilitating the securitization of small business loans. The objective of this bill is extremely important, particularly given the problems that small businesses have had in obtaining adequate credit accommodation. Moreover, experience in other sectors of the credit markets in which securitization has taken place suggests that securitization of small business loans could yield similar benefits to banks and other financial institutions that originate and securitize these loans.

Accordingly, the Federal Reserve supports the objectives of S.384. Although we have not seen a final version of the bill, we believe, based on discussions with staff members of this committee, that many of its provisions will prove helpful in encouraging the development, through the securitization process, of a secondary market for small business loans. We also support the bill's approach of promoting this development by relying on the private sector rather than involving the government through yet another guarantee program.

Successful small businesses are vital to the well-being of the U.S. economy. Indeed, the use of the word "small" to describe this sector of the business community is, in a sense, misleading. In the aggregate, the volume of business activity generated by small and medium-sized firms accounts for approximately one-half of the employment and receipts in the nonfinancial, nonfarm business sector.

Small and medium-sized businesses have become increasingly important to the U.S. economy over the past two decades. Recent gains in employment have occurred largely in those industries that are dominated by such businesses, specifically retail trade and services. Given this experience, we believe that the prospect for future growth and prosperity depends importantly upon the vitality and performance of small and medium-sized businesses.

A key element in the success of smaller firms is their ability to obtain adequate credit accommodation. Traditionally, the commercial banking system has been the principal source of credit to smaller businesses, and the small business segment has contributed importantly to the earnings of banks.

Unfortunately, in recent years, many banks have had to deal with substantial loan-quality problems and have experienced significant losses. Consequently, after nearly a decade of aggressive lending—often on terms much more liberal than warranted by the credit standing of their borrowers—banks have been working to improve their balance sheets and many have tightened their lending standards. Although this development is clearly necessary, one adverse effect is that the ready availability of credit to small businesses may have declined.

In the past two years, banks have experienced improved asset quality and record profits. As a result, the banking system is in a position to increase lending activity. Banks are better able to play their traditional role in the financing of the economy, a development that should prove beneficial to the small business sector. Our surveys, in fact, have indicated that many banks have eased their loan standards somewhat in recent months, especially for smaller business borrowers. I should point out as well that our surveys also indicate that demand for credit remains slack.

Nonetheless, various reports suggest that some smaller businesses are having difficulty obtaining credit, especially in areas experiencing economic difficulty. Their problems may be, in part, caused by regulatory practices or perceptions of regulatory policies. Accordingly, the Federal Reserve and the other bank supervisory agencies have recently implemented several initiatives designed to facilitate the availability of credit to creditworthy borrowers. These initiatives are intended to result in increased credit availability to all borrowers. Some of these initiatives were particularly designed to benefit smaller business borrowers.

Specifically, in March, the federal supervisory agencies initiated a program to allow banks to establish a "basket" of loans that will be judged on the basis of performance and not be criticized on the basis of documentation deficiencies. The Federal Reserve believes that some small business loans that may not have been made because of a fear of regulatory criticism may now be extended in a manner consistent with safe and sound banking and with banks' traditional underwriting practices. Although not enough time has passed to permit a large number of these loans to be made, we understand that several banks currently have this opportunity under consideration. After the banking agencies have gained experience with the program, we will review whether sound, well-managed banks can be given even greater latitude to utilize the "basket."

Another important initiative is the agencies' proposal to increase from \$100,000 to \$250,000 the threshold amount below which real estate-related loans do not require appraisals under title XI of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989. Raising the threshold should reduce the documentation burden and expense associated with loans to small businesses that are collateralized wholly or in part by property.

A possible avenue to increase credit availability to the small business sector (and the focus of Senate bill S.384) could be the expansion of opportunities to securitize small business loans. Although this approach is no panacea, it has been given increased consideration in recent years.

In a securitization, loans are placed in a pool and securities are issued that entitle the holders to the proceeds of the principal and interest payments flowing from the underlying loans. Originators of loans that are used in asset-backed securities could benefit from improved liquidity,

enhanced fee income, and—to the extent that a true sale has occurred and the assets are removed from their balance sheets—less need for capital. Investors, on the other hand, acquire securities that require no management of the underlying loans on their part and yet provide an attractive return for instruments that pose, depending upon the nature of the credit enhancement, little or no credit risk.

Both sales and purchases of securitized pools, then, offer improved diversification and a greater selection of risk and return alternatives. Purchases of securities backed by loans may be particularly valuable to smaller banks that do not have the capability of geographically diversifying their lending or diversifying according to industrial sector.

Given the potential benefits to be gained from the securitization of small business loans and business loans generally, the Federal Reserve believes that it is important to give careful consideration to all proposals designed to promote and encourage the securitization of such loans. These potential benefits have been dramatically demonstrated by the impressive growth in the residential mortgage-backed securities market and the markets for securities based on auto loans and other consumer loans. It thus seems reasonable that small business lending could also benefit from securitization.

The nature of small business loans, however, differs substantially from the types of loanssuch as residential mortgages, auto loans, and credit card receivables-that are currently securitized. These types of loans are relatively homogeneous, whereas small business loans tend to be quite heterogeneous in nature, in part, because of the natural diversity of small business enterprises and individually negotiated loan terms designed to suit the unique credit needs of each borrower. This diversity manifests itself in loans with widely different maturities and repayment terms, different degrees of documentation, and different amounts of information regarding the underlying financial positions of the obligors. This heterogeneity greatly complicates the process of predicting the future cash flows produced even by pools of the highest credit quality.

Also, small business loan pools may exhibit a diversity in credit quality, which, coupled with a

diversity in documentation standards, greatly complicates the task of performing due diligence and reaching a judgment as to the overall quality of the pool. Finally, the lack of sufficiently broad and deep historical data on the performance of small business loans makes actuarial methods of estimating loan losses extremely difficult.

These difficulties, which in and of themselves represent barriers to successful widespread securitization of small business loans, tend to cause securities markets to require substantial credit enhancements on small business loan pools. At the same time, the special nature of small business loans makes it relatively difficult for banks to accurately assess the riskiness of issuing such credit enhancements. Thus, it is especially important to assure that banks maintain capital at a level commensurate with their risk exposure both to loans they have sold into pools and to the pools they have acquired. Capital should be held where risk exposure exists, and banks selling assets with substantial first-loss recourse continue to be exposed to risks related to the assets. Under such first-loss arrangements, a bank selling assets with recourse commits to cover any initial losses on loans that may occur up to a contractually agreed upon amount. This results in the selling bank being exposed to a possibly significant proportion of the potential losses on the transferred loans.

Another point that needs to be made regarding the securitization process is that banks are likely to select loans of higher quality for sale into loan pools and to retain loans of lower quality in their portfolios. Accordingly, if this process is repeated over time, it can lead to a significant decline in the credit quality of loans held on the balance sheet. If such deterioration does occur, the portfolios would be subject to greater supervisory scrutiny, and the capital held against these loans would have to be bolstered.

Under generally accepted accounting principles (GAAP)—or, more specifically, financial accounting standard (FAS) 77—which the bill as introduced proposed to utilize, a bank may remove from its balance sheet an asset sold with recourse even if it has retained the risk of ownership. This accounting standard treats the transfer of assets with recourse as a sale if the seller relinquishes the benefits of owning the asset, is

reasonably able to estimate the expected losses to which it is still exposed under the recourse provision, and establishes a specific liability reserve equal to the amount of these expected losses. This treatment generates a strong incentive for banks to underestimate losses, and this weakness has caused some accounting professionals to criticize FAS 77. However, even if accurate loss estimates were used, this approach would still be of concern from a supervisory perspective because it does not take into account the possibility that actual losses may turn out to be substantially greater than expected losses. The role of capital is to serve as a buffer against such developments, and GAAP is silent on this aspect of risk exposure.

The banking agencies' rules attempt to establish policies to ensure that government-insured depository institutions will hold capital commensurate with their risk exposure in any transactions—including securitized transactions—that they engage in. Thus, unlike GAAP, the regulatory treatment of asset sales focuses on the retention of risk rather than the relinquishing of the benefits of ownership. Under this treatment, when a loan is transferred with recourse, the agencies have generally treated the transaction as a borrowing and required the transferor to maintain capital against the entire amount of the assets transferred.

In recent years, however, it has come to be recognized that this conservative approach does not fully take into account contractual limitations on the selling bank's recourse obligation and may not accurately reflect expectations or practices of the marketplace. Accordingly, the agencies, under the auspices of the Federal Financial Institutions Examination Council, have been reviewing existing recourse rules. They have concluded that these rules should be modified to reduce the capital charges for certain asset sales with limited recourse to make those charges more commensurate with the contractual credit risk to which the selling organization is exposed. We plan to issue a detailed proposal for public comment in the near future. Although the specifics of the new recourse rules are not yet concrete, the new guidelines that the Federal Reserve ultimately administers will be consistent with the basic supervisory principle that the capital held against transactions should be commensurate with their risk. I would note that although the existing regulatory guidance needs revision, its limitations have not precluded the development of substantial securitization markets for other types of loans.

As I said earlier, we support the overall objectives of S.384. The bill places a reliance on the private sector to develop the secondary market for small business loans, and we find that aspect of the bill attractive. It is imperative that we avoid adding to the already enormous volume of government liabilities by creating an additional government agency, or increasing the involvement of existing government agencies, in the securitization of small business loans.

One of the most important safety and soundness considerations is the amount of capital that is maintained to protect banking organizations from any risks associated with loan securitization. The bill as introduced contained capital provisions that in our view would not provide adequate protection to banks involved in securitization. Although we have not seen a final version of this bill, discussions between the staff members of this committee and the banking agencies have identified alternative approaches that represent some relaxation of current standards. These approaches could be acceptable so long as they are properly structured and accompanied by appropriate prudential and safety and soundness limitations. For example, we understand that, to encourage the securitization of small business loans, current drafts of the bill would give designated institutions permission to maintain capital against risk exposure arising from the sale of small business loans with firstloss recourse in an amount that is less than is required under the banking agencies' existing capital standards.

We also understand that important limitations that help mitigate safety and soundness concerns are incorporated in current drafts of the bill. First, the preferential treatment would be restricted to those institutions that, under current capital standards, are either well capitalized or

are adequately capitalized and have the approval of their primary regulator. Second, there is a major limitation placed on the aggregate amount of retained recourse that is eligible for the preferential treatment. So long as these limitations are appropriately specified, we do not believe that the approach in the bill, as we understand it, would threaten safety and soundness conditions, although it may encourage securitization and the availability of credit to small business firms. Obviously, we would want to reserve final judgment on these safeguards and other provisions of the bill until we have had an opportunity to review the actual language of the bill and its consistency with the fundamental prudential principles underlying U.S. and international capital standards.

As I mentioned earlier, the banking agencies have under way a broad-based review of our capital standards for securitization and other recourse arrangements. We believe that rather than specifying detailed capital requirements for a select group of assets by statute, it would be preferable for the Congress to fashion legislation directing the agencies to develop appropriate capital standards for securitizing small business loans. This would enable the agencies to address small business loan securitization in a manner that would be consistent with the prudential framework for securitization more generally. Such an approach is preferable for economic efficiency and bank safety and soundness. It would also avoid the rigidities that result when technical and complex regulatory requirements are written into law. The agencies need flexibility to be able to adjust the rules to later experience in the market.

In view of the importance of credit availability to small and medium-sized businesses, we are committed to continuing to work with this committee, the other banking agencies, and the Administration in developing an approach that will remove any unnecessary impediments to securitization, while at the same time protecting the safety and soundness of the banking system.

Statement by Lawrence B. Lindsey, Member, Board of Governors of the Federal Reserve System, before the Subcommittee on General Oversight, Investigations and the Resolution of Failed Financial Institutions of the Committee on Banking, Finance and Urban Affairs, U.S. House of Representatives, September 17, 1993

I appreciate the opportunity to appear before this subcommittee to discuss the Community Reinvestment Act (CRA) and the current efforts of the agencies to strengthen and improve its administration. This statute has become an extremely important part of the landscape of financial institution supervision in recent years. Across our nation it has affected the relationship of thousands of banks and thrift institutions with their communities—particularly low- and moderate-income neighborhoods. Both large and small institutions have struggled with the law's demands. Local groups have aggressively used the law—particularly in the applications process—to prompt commitments for increased lending to those who may have been overlooked before. The regulators have sought to enforce the law fairly and fully in the face of the enormous diversity that exists among America's communities and its financial institutions.

Our CRA efforts have seldom been made to the satisfaction of either the covered institutions or community groups, and the President has directed that the agencies conduct a thorough reexamination of our supervisory approach. This is a zero-based review that will take into account the views of all affected parties. In doing so, it is important to start from a common understanding of where we have come since the statute was enacted in 1977.

Although the total impact of the CRA is very hard to measure, I believe a fair assessment would have to conclude that it has generally made depository institutions more responsive to the needs of their communities. Of course, the level of effort has varied widely among institutions. Certainly it has not totally cured the ills and decline that plague many of our cities. That would be an unrealistic expectation. But the CRA has, in my view, been instrumental in opening channels of communication between banks and thrift institutions and previously un-

derserved segments of their communities. New relationships have been established with community groups and individuals, new products have been designed and marketed, and many thousands of credit applications have been taken from those who previously had no banking relationship. Most important, I am convinced that thousands of loans have been made throughout the United States that would not have been made but for the CRA. I have personally traveled to many communities and toured numerous projects that are now helping to stabilize and revitalize communities as a result of the CRA. In addition, numerous witnesses from consumer and community organizations at recently held hearings have testified to the valuable contributions the CRA has made.

But exactly what is the overall level of that lending? I do not know, and I suspect that no one does. The community groups who track lending agreements with institutions point to more than \$30 billion in commitments for new credit. Many of these commitments cover several years and therefore extend into the future. Moreover, I know of no overall assessment of the extent to which the commitments have been realized. Although formal commitments to community groups get considerable media attention, I suspect that most CRA-related activity goes on outside the high profile negotiated agreements that receive so much attention. My own belief is that the true impact of the CRA has far exceeded any number derived strictly from the formal commitments. If the figure is, for example, double the committed amount, it is a formidable amount indeed, and this fact should not be overlooked as we evaluate the CRA's effectiveness.

Whatever the degree of new lending attributable to the CRA, it has not been accomplished without numerous problems, which I will refer to later. But before doing that, an important point about the CRA is often lost in the debate about its flaws. If this federal statute has, in fact, had the considerable impact I have described, it is important to note that this has been accomplished without a huge appropriation of government dollars and without thousands of bureaucrats to administer the program. These matters, of course, are very significant and topical—as current as last week's announcement of a major

campaign to "reinvent" government in ways that emphasize these very characteristics.

The CRA established a national goal and put considerable power in both supervisory agencies and the public to enforce it but left the details of how this goal would be accomplished to local communities and the depository institutions in them. The CRA counted on the unique economic needs, and the give and take in the local social and political scene, to define the specifics of the CRA program for each community. No one in Washington has yet been employed to decide how much or what type of CRA lending should be made in the individual communities you represent. To my way of thinking, that has been a considerable strength of the law. In any review of the CRA I believe we must acknowledge the value of this approach at the same time that we search for improvements.

But all is not perfect as you well know. The flexibility that I have referred to has come with a price. Bankers and many community groups alike complain that the standards are too vague. Our own examiners would be more comfortable as they go about their very difficult job of assessing compliance if the rules of the game were more precise. Despite the ever-increasing efforts of the agencies over the years to define more specifically the various levels of performance used in our rating system, we are constantly faced with questions about "how much is enough," what loans get the CRA credit, and exactly what "weight" different categories of loans will receive. Living with the current uncertainty makes bankers nervous, community groups dissatisfied with their ability to hold institutions accountable, and everyone concerned about assuring fair and consistent evaluations by the agencies. And believe me, no one would be happier than those in my agency who are charged with the day-to-day enforcement of the law if we were "going by the book."

Common agreement also appears that too much emphasis has been placed on paperwork and process as opposed to performance. There is undoubtedly some truth to this despite the agencies' efforts to ensure otherwise. But, it is important to keep in mind that, in some sense, the focus on process is a natural outgrowth of leaving the definition of an appropriate level of perfor-

mance up to the needs of the community and the capacity of its institutions. Nevertheless, the concern about focusing on paperwork rather than results is widespread enough to require careful evaluation.

And, of course, there are other criticisms as well—that the CRA is "too much stick and too little carrot" and that we must search for more incentives to encourage good performance, that too many institutions receive satisfactory or better ratings, and that either too much or too little emphasis is given to the CRA in the context of application processing. Suffice it to say that there are numerous areas of controversy in which improvements may be desirable.

Thus, we have what to me is a rather confusing scene. On the one hand, we have an important national program that appears to have stimulated considerable lending and revitalization in low-income and minority communities. And it has done so in a period of great shortage of federal dollars and without the rules and red tape that bedevil so many government efforts. On the other hand, I do not know of any regulatory area in which there is such common agreement that all is not right and that some "reform" is necessary. My overall sense, however, is that in focusing so much on the imperfections of the CRA, we may have lost sight of its considerable benefits.

But surely we can do better. And, it was in response to widespread concern that the CRA can be improved that the President issued his charge to the agencies to rethink their administration of this law. In the President's CRA reform request, he asked the agencies to address several specific areas. These include the following:

- Developing new regulations and procedures that replace paperwork and uncertainty with greater performance, clarity, and objectivity
- Developing a core of well-trained CRA examiners
- Working together to promote consistency, and even-handedness, to improve public CRA performance evaluations, to institute more effective sanctions against financial institutions with consistently poor performance, and to develop more objective, performance-based CRA assessment standards that minimize the compliance burden on financial institutions, while stimulating CRA performance.

As you are aware, we are presently working with the other agencies to carry out the President's initiative. Working together, however, is nothing new to us in this area. To promote uniformity in the approach to the CRA, the Board, along with the other banking and thrift regulatory agencies, has worked through the Federal Financial Institutions Examination Council (FFIEC) for some time. For example, through the FFIEC the agencies developed a common approach to the regulation, interagency CRA examination procedures, a uniform format for CRA public disclosures, and other regulatory material. We have a common commitment to cooperation and uniformity, and I am confident that together we can meet the President's goals.

Initially, our focus is on ensuring wide public input. The Federal Reserve System, along with the Federal Deposit Insurance Corporation, the Office of the Controller of the Currency, and the Office of Thrift Supervision, is presently holding public CRA meetings across the United States to solicit comments on how to improve the CRA process. To date, we have heard the views of several hundred bankers, community groups, small business owners, as well as members of the general public. From these meetings, we have been told what is working with the CRA, what is not working, and what we need to consider to "fix" it. I can tell you that many of the stories I have heard—from bankers, small business owners, and community groups—have been compelling. The stories, however, point up as many differences in perspective between the various groups as they do common concerns.

For example, although many may agree that it is important to find new incentives to encourage better CRA performance, there is great disagreement about what they might be. Very understandably, banks that have sought and achieved an "outstanding" rating would like to see this rewarded with a "safe harbor" from protests. Community groups, to put it mildly, do not favor the idea. Although there is common concern about paperwork, there is a growing recognition that any movement toward more quantifiable standards may require more, not less, data, and this is not a happy thought for many. Likewise, concern about the disproportionate burden on

small institutions has caused some to suggest a small institution exemption. Others find this untenable. The idea of more precision in the requirements has widespread support, but there are difficult and controversial issues when it comes to what the specific numbers might be or even the process by which they might be set. Moreover, there is widespread concern that in attempting to be precise we may fall into the credit allocation trap. In short, although there may be widespread agreement that the CRA requires some major repairs, there is very little agreement about the appropriate fix.

At this point, we are still gathering information, and it would be premature for us to offer any proposals. The Board, along with the other agencies, will continue this process of assessing the various arguments and concerns in an important public meeting in Chicago next week. Many of the issues that will be under consideration are dealt with in the several bills that you asked us to review in preparation for this testimony. Thus, I am not now in a very good position to express any views on the details of these legislative proposals.

Given the fact that the agency review of the CRA is so comprehensive and is only in midstream, I would counsel against proceeding with legislation until the results of the agency review can be evaluated. There may or may not be a constructive role for legislation at some point, but it seems premature to make that judgment now. It is also clear that some of the proposals for change in the bills are already within the authority of the agencies. Some provisions that do not affect the CRA directly, for example, dealing with the Bank Enterprise concept, may nevertheless be affected by how the agencies ultimately decide to recast the CRA. Thus, we will be in a much better position to provide meaningful thoughts on the various legislative proposals at a later date.

Finally, you have asked for information on the present status of the Federal Reserve System's CRA examination and enforcement. In general, the Board's involvement in the CRA encompasses consumer compliance examinations, community affairs efforts, and consideration of applications for bank expansion. I would like to tell you a little about these areas.

COMPLIANCE EXAMINATIONS

The Board supervises approximately 1,000 state member banks for compliance with the CRA. The Board first established a specialized consumer compliance examination program in 1977. Through this program, the twelve Reserve Banks conduct on-site examinations of state member banks to determine compliance with consumer protection legislation, including the CRA, by using a cadre of specially trained examiners, as the President has suggested.

Examiners review twelve CRA assessment factors during the CRA examination. A bank's compliance with these factors, which are grouped into five rating categories, form the basis of the CRA rating assigned. Some of these factors require an evaluation of the bank's lending and investment within its community. Others require an evaluation of how the bank has decided to meet its community's credit needs—its CRA program. In addition, examiners weigh the bank's fair lending efforts and its capacity to help meet community credit needs.

EXAMINATION IMPROVEMENTS

Our consumer compliance schools for examiners devote considerable time to the CRA and related regulations, such as those covering fair lending and home mortgage disclosure. System compliance examiners currently receive CRA training from three separate schools. One of these, a more advanced compliance school, includes segments on community development lending. Another school, called "CRA Advanced Examination Techniques," provides examiners with a weeklong intensive course in the CRA. Over the past three years, virtually all of our consumer compliance examiners have completed this course. We are also taking steps to help our safety and soundness examiners understand the essentials of the community development market so that they can fairly assess the quality of a bank's reinvestment loans.

Besides these schools, we have been concerned about providing examiners with better tools to help them get the job done. To this end, on behalf of the FFIEC, the Federal Reserve has developed

a computerized system for analyzing the expanded data collected under the Home Mortgage Disclosure Act (HMDA). The system is extremely versatile and allows the data to be segmented by demographic characteristics such as race, gender, and income levels, or geographic boundaries. Examiners can now sort through vast quantities of data to focus attention on specific lending markets and draw comparisons between an individual HMDA reporter's performance and all lenders in the area. With these capabilities, examiners can more readily determine whether a bank is effectively serving all segments of its market, including low- and moderate-income and minority neighborhoods. We have been holding HMDA training sessions on how to use this system throughout the United States for our examiners, as well as those from other agencies.

System examiners also use HMDA data on a more "micro" level, as well. Recently, the Federal Reserve System developed a computerized model for using HMDA data in connection with the fair lending portion of the examination. This model allows examiners to match minority and nonminority pairs of applicants with similar credit characteristics, but different loan outcomes, for a more extensive fair lending review. Once the pairs are selected, examiners pull the credit files for the applicants to determine if discrimination played a part in the credit granting process. Although a comparison of minority and majority applicants has always been a part of the Federal Reserve's fair lending examination, we believe that this computerized selection process will enable examiners to focus their efforts and spend more time on the actual fair lending review of loan files.

The Federal Reserve has also developed the capability to map by computer the geographic location of a bank's lending products, including mortgage loans. This mapping includes demographic information for the bank's local community. We believe that this type of analysis and presentation will enhance our ability to assess a bank's CRA performance in meeting the credit needs of its local community, including minority areas. It should also be helpful in evaluating a bank's geographic delineation of its local CRA service area to ensure that it does not exclude low- and moderate-income neighborhoods.

Finally, I believe it is important to note that, in response to community concerns heard about the CRA and its enforcement, the agencies through the FFIEC have taken steps to try to improve the CRA over the past several years. For example, in June 1992, the FFIEC issued revised, uniform CRA examination procedures that clarify CRA examination policies. For example, they emphasize the importance of using numerical data in the public CRA evaluation to the extent that they are used in the assessment process to support the conclusions reached. When they are available, our examiners now routinely factor into their CRA assessments "hard data" derived from HMDA tables, the supervisory Call Reports, bank lending records, and other sources.

We have been mindful of the widely shared perception, often vocalized by bankers, that the CRA entails an undue amount of paperwork. In developing the new examination procedures in 1992, we endeavored to help reduce the amount of paperwork and documentation by emphasizing that institutions should retain for examiners' review only information that leaves an audit trail for CRA activities and related lending and that is useful to the institution's own management needs. We have emphasized to our examiners that CRA documentation will generally be less formal and less extensive in small and rural banks than it is in larger, urban banks. We want to reduce as much as possible the paperwork burden on bankers so that they can focus on the lending side.

Personnel resources allocated to CRA examination have increased significantly since 1989. Besides conducting examinations, our examiners and Reserve Bank staff members spend considerable time in follow-up to the examinations through correspondence, advisory visits, and educational activities directed to the industry as a whole. The frequency of CRA examinations by the Federal Reserve System has been maintained, despite the fact that CRA examinations have become a more demanding and time-consuming job for examiners.

For more than a decade, we have examined state member banks with a satisfactory or better record of past CRA performance every eighteen to twenty-four months. "Problem banks," or those with demonstrated weaknesses, are exam-

ined every six to twelve months. Since the public disclosure provisions became effective in 1991, the Federal Reserve has examined every bank it supervises at least once for CRA purposes, and many twice, and has presented its findings to the public. We believe that this process has proceeded relatively smoothly and has had a positive impact on financial institutions and their responses to their CRA obligations.

The Board has authorized its Division of Consumer and Community Affairs to hire an individual whose primary job responsibility will be to work in the area of fair lending enforcement. This person will help coordinate our efforts in this area and assist our examiners in analyzing the complex issues associated with detection of credit discrimination. We hope to have this person on board shortly.

FAIR LENDING INITIATIVES

In May of this year, the agencies sent a letter to the chief executive officer of each federally regulated bank and thrift institution in the United States. In this letter, the heads of the four agencies said that they expect all financial institutions to do their part to design programs to ensure access to credit on a nondiscriminatory basis. The letter urged special attention to eleven specific fair lending activities, including enhanced employee training, internal second review programs for loan applications that might otherwise be denied, participation in multilender mortgage review boards, and affirmative marketing and call programs.

Then, in June, the agencies undertook several fair lending initiatives to enhance our ability to detect lending discrimination at each of our institutions. In particular, these efforts include the following:

- Providing additional fair lending training to examiners
- Developing a fair lending seminar for industry executives
- Developing alternative discrimination detection methods
- Implementing referral procedures to the Department of Justice for violations of the Equal Credit Opportunity Act

• Improving the agencies' consumer complaint programs.

COMMUNITY AFFAIRS PROGRAM

The Board believes that ensuring fair access to credit can also be advanced by focusing on positive actions that a lender may take to address such concerns. Consequently, through its Community Affairs program, the Federal Reserve conducts outreach, education, and technical assistance activities to help financial institutions and the public understand and address community development and reinvestment issues. During 1992, resources devoted to Community Affairs activities at the Reserve Banks were increased to enable the Federal Reserve System to respond to the growing number of requests for information and assistance from banks and others on the Community Reinvestment Act, fair lending, and community development topics. Efforts were expanded to work with financial institutions, banking associations, governmental entities, businesses, and community groups to develop community lending programs that help finance affordable housing, small and minority business, and other revitalization projects. For example, the Federal Reserve Bank of Kansas City sponsored a conference for bankers on "Credit and the Economically Disadvantaged," focusing on barriers faced by minority borrowers and steps that banks can institute to ensure that credit is offered on an equitable basis. The Boston and the New York Reserve Banks cosponsored a conference on credit issues affecting economic development programs for Native Americans, especially those living on reservations. And, here at the Board, we recently held a meeting for Washington-area bankers that focused on successful programs in other parts of the United States. In this meeting, which was

cosponsored by the Federal Reserve Bank of Richmond, bankers discussed the Delaware Valley Mortgage Plan and other successful models for multibank efforts to combat mortgage lending disparities in low-income and minority areas. These are but an example of a comprehensive community affairs program at work throughout the Federal Reserve System.

APPLICATIONS PROCESS

Applications for bank expansion that present CRA issues, such as those affected by poor CRA ratings or CRA protests, have grown more numerous in recent years. Since 1989, the Board has denied five applications in whole or in part based on CRA concerns. Although the Federal Reserve Board has denied few applications on CRA grounds, it should be kept in mind that it denies relatively few applications generally. In 1992, only six applications were turned down, one of them because of CRA deficiencies. This record does not, however, fully reflect the influence that the CRA has had. Institutions with poor CRA records often do not file an application with their supervisory agency. Others take concrete steps to address weaknesses in their CRA performance before filing an application. Still other applications are withdrawn if applicants anticipate an adverse finding after the agency's preliminary review. Through the applications process, just as through our examinations and community affairs program, we have sought to maintain a strong approach to CRA enforcement.

In conclusion, I appreciate the opportunity to appear before you today to testify on the important and complex issues regarding the Community Reinvestment Act. The Board shares your concerns about these issues and looks forward to working with the Congress and others to address this important topic.

Statement by John P. LaWare, Member, Board of Governors of the Federal Reserve System, before the Committee on Banking, Finance and Urban Affairs, U.S. House of Representatives, September 24, 1993

I appreciate the opportunity to speak to you today about the challenges that face banks in meeting the service and credit needs of low-income and minority communities. I commend the committee for holding this hearing in a local community in Prince George's County where questions pertaining to these factors have been raised.

It is our understanding that the committee is interested in developing a profile of current lending activity in a specific neighborhood in Prince George's County and then periodically reviewing the record for changes in bank credit and service delivery. As a starting point for analysis, we were furnished a list of thirty-nine census tracts and a list of banks and thrift institutions that were identified by the committee as having a branch or office located in these specific census tracts, or, as I will refer to it in the testimony, the "target area."

I toured the target area with the Director of Housing and Community Development for Prince George's County. During that visit we discussed demographics, housing, and other conditions in the county as a whole, and in the target area specifically. I saw many encouraging developments in some areas—and opportunities in others—which I will address later in this statement.

First, I would like to comment on some of the specific characteristics of the neighborhood. I will make some general observations about the overall Home Mortgage Disclosure Act (HMDA) data for the area. Then I will briefly discuss the banks for which the Federal Reserve is the primary regulator and that are located in the target area. Finally, I would like to acquaint the committee with some of the initiatives being undertaken by the financial institution regulators, and by the Federal Reserve specifically, to address credit availability for underserved areas.

CHARACTERISTICS OF PRINCE GEORGE'S COUNTY

Prince George's County is an interesting area for this type of study because it has undergone some massive changes in population and demographics during the past ten years. The county estimates the 1992 population at roughly 750,000 people. This is an increase of 20,000 people just since the 1990 census and an increase of 85,000 in population since the 1980 census.

The county's population is 58 percent minority, including 50 percent black and 8 percent Hispanic, Asian, and other minorities. This represents a shift since 1980, when the majority of the county's population was white. The shift is a result of the out-migration of whites coupled with the in-migration of blacks, many of whom came from Washington, D.C., in search of better housing values and public school systems. Many of the blacks who have moved into the county represent middle- and upper-income families. Prince George's County has both the highest median income for a black population and the largest number of black-owned businesses of any county in the United States.

The thirty-nine census tracts that make up the target area of interest to the committee differ from the county over all in some demographic characteristics. The population of the target area is 159,000 and consists of 82 percent blacks and 3 percent Hispanic, Asian, and other minorities. Even though this area has a greater percentage black population than the county as a whole, the median income for the target area of \$46,476 is very close to the county median of \$49,031. However, the median home value for the target area of \$111,779 is lower than the county median of \$123,995. The percentage of owner-occupied units in the thirty-nine tracts (56.9 percent) is roughly equivalent to that in the county as a whole (56.2 percent).

During my tour of the target area, I observed that, as was expected, most of the older, lower-income housing is closest to the District line. Some of the residences in these areas are currently undergoing rehabilitation, and some of those rehabs are being financed by the county government. Others are being financed privately. Many other homes in the general area apparently

could benefit from repair or improvement. The commercial areas in those neighborhoods are small retail strips. We did see several bank branches in certain commercial areas near the District line; however, there were also quite a few check-cashing operations and liquor stores that also frequently cash checks.

As you travel farther out Central Avenue toward Enterprise Road, there is a lot of new housing and commercial development. The housing stock reflects an upward shift in income, with recently built larger, more expensive homes. I was struck by the apparent diversity of income within the relatively small area of the thirty-nine targeted census tracts.

As indicated by the attached maps, we have plotted the locations of all the depository institutions with offices in the target area. Six of these institutions have branches or offices along the narrow Central Avenue corridor. The largest number of branches (twelve) are clustered in the southwest area of the designated community. That southwest corner of the target area includes census tracts with a population that is 60 percent to 80 percent minority, and with median family incomes that fall in the range of 80 percent to 120 percent of the Metropolitan Statistical Area (MSA) median income (\$54,173 in 1990). The remainder of the branches are scattered throughout the neighborhoods. The areas with the lowest income do not have many branches of banks or savings and loans.

HOME MORTGAGE LENDING

The best information available about the types and volume of credit extended in the neighborhoods that are the focus of these hearings is for residential lending. As a product of the data collected under the authority of the Home Mortgage Disclosure Act, we know both the types and volume of home loans applied for and granted in selected census tracts. We also know the race and income of the applicants and borrowers.

For this hearing, on behalf of all the agencies here today, we examined the 1992 HMDA data, which are still being processed by the Federal Reserve Board. The HMDA reports are quite revealing, although I must caution that revisions to the data are still possible because we are just completing the final editing of the 1992 data. We will be happy to provide the committee with revised information if corrections are made.

The Federal Reserve used the preliminary 1992 HMDA data to prepare special reports showing the home lending activity of the depository institutions that have branches in the target neighborhoods besides a report showing the lending activity of all lenders covered by HMDA for these neighborhoods, including lenders, such as mortgage companies, that have no deposit-taking function.

The 1992 HMDA data show that the depository institutions with branches in the target neighborhoods received relatively few applications for credit to purchase or improve homes or refinance existing mortgages in these neighborhoods. When comparing the HMDA data and the maps showing the location of institution branches, it is somewhat surprising that, at least in the target area, branch location seems to have no relation to the number of housing-related loan applications.

According to the 1992 HMDA data, the depository institutions that have branches in the target area received fifteen applications for home purchase loans, nine of which were approved; ninety-eight applications for refinancing, fifty-six of which were approved; and 150 applications for home improvement loans, fifty-nine of which were approved. However, the HMDA data also reveal that approximately 190 lenders covered by HMDA with locations outside the target area both depositories and mortgage companies—received loan applications pertaining to properties in the target area. These lenders with office locations outside the target area include eighty banks and thrift institutions, sixty-three mortgage company subsidiaries of banks and thrift institutions, and fifty independent mortgage companies. I should note that the HMDA data probably understate the total number of residential lenders active in these areas because some of the lenders extending credit in these neighborhoods

^{1.} The attachments to this statement are available from Publications Services, Board of Governors of the Federal Reserve System, Washington, DC 20551.

either are exempt from HMDA because of the institution's size (less than \$10 million in assets) or location (not in an MSA), or, because of a low volume of loans, are not required to report their lending in the Washington MSA by census tract.

In 1992, the roughly 190 other lenders active in the target neighborhoods received approximately 2,900 applications for home purchase loans, 1,900 of which were approved; 2,850 applications for refinancing, approximately 2,150 of which were approved; and roughly 700 applications for home improvement loans, 400 of which were approved.

One thing that is shown by the HMDA data is the disposition of housing-related applications. On a national basis, the denial rate for black applicants for conventional home purchase loans is about twice the rate for white applicants. However, in the target area, the black denial rate of 18.8 percent is actually lower than the white denial rate of 20.8 percent.

We also looked at the denial rates for other types of housing products extended by all lenders in the target area. Historically, the denial rates nationally for FHA and VA home purchase loans have been 26.4 percent for black and 16.3 percent for white applicants. In the target area, for 1992, these rates also reflect roughly an 8 percentage point difference and are 18.3 percent for black and 10.2 percent for white applicants. Refinancing and home improvement applications in the target area show denial rates very different from the national norms. Mortgage refinancing applications nationally have resulted in denial rates of 29.5 percent for black and 13.7 percent for white applicants. The target area, in 1992, experienced a 12.2 percent denial rate for black applicants and a 10.5 percent denial rate for white applicants, a significantly lower disparity than the national figures. Home improvement applications demonstrated a similar pattern. Whereas nationally the denial rates were 44.2 percent for black applicants and 21.1 percent for white applicants, in the target area the denial rates were 39.5 percent for black applicants and 38.7 percent for white applicants.

It is worth noting that although the local depository institutions accounted for a very small proportion of all the home purchase and home refinancing applications in the target neighborhoods, they were major players in home improvement loans, accounting for about 20 percent of total applications.

By examining the 1992 HMDA data we can learn something about the types of loans used by homebuyers in the targeted area for this review. In 1992, of the roughly 2,900 applications for home purchase loans, 61 percent were either for FHA-insured or VA-guaranteed loans; the remainder were for conventional loans. Among low- and moderate-income black applicants for home purchase loans, 75 percent applied for government-backed loans, while only 49 percent of white applicants with similar incomes sought government-backed credit. The reasons for these differences are not known.

STATE MEMBER BANKS IN THE TARGET AREA

The Federal Reserve has primary regulatory responsibility for only two of the banks that appeared on the list supplied by the committee. These two banks together have a total of four branches or offices in the designated area. One of the banks became a member of the Federal Reserve just within the past year. That bank was last examined, for compliance with the Community Reinvestment Act (CRA), by its previous regulator, in 1989, before public disclosure of CRA ratings. Consequently, we do not have a public rating at this time. That bank is scheduled for a compliance examination, which will include a review of performance under the Community Reinvestment Act, by the Federal Reserve Bank of Richmond in November. Upon completion of that examination, we will be glad to send the committee a copy of the publicly disclosed CRA Evaluation Report.

The other state-member institution in the neighborhood was rated "satisfactory" in April 1993. The committee has already been sent a copy of that report. It is important to keep in mind that the evaluation of that bank is based on its entire delineated community, which encompasses a large area including, but not limited to, parts of Prince George's County.

Both state member banks offer a broad range of credit services, including loans for home improvement, refinancing, and purchase (including FHA and VA loans); loans for residential and commercial construction; loans for small business start-up, expansion, and operation; and general consumer loans.

One of the state member banks will cash government checks for noncustomers with proper identification. The other bank provides that service for customers only. Both banks have low-cost basic checking accounts with no minimum balance, one at a monthly cost of \$3.00 and the other with a \$4.00 monthly fee. These fees include six checks per month, with a \$0.50 per check fee for any checks beyond the six.

The two state member banks located in the neighborhoods had no mortgage loan purchase applications, four applications for refinancing, of which one was approved and three denied, and twenty-five home improvement loan applications (nine approved, fourteen denied, and two withdrawn). However, these statistics do not tell the entire lending story for these institutions.

Both state member banks have mortgage company subsidiaries. In examining the HMDA data, we also looked at the target area lending activity by these subsidiaries. The mortgage company subsidiaries received a total of forty-five mortgage home purchase loan applications, of which forty were approved, three were denied, and two were withdrawn. There were ninety-nine applications for mortgage loan refinancing in the target area, of which seventy-three were approved, eight were denied, and eighteen were withdrawn.

FEDERAL RESERVE INITIATIVES

I would now like to discuss some of the initiatives in which the Federal Reserve Board is participating or initiating to increase credit availability in low-income and minority neighborhoods.

In response to concerns in the banking industry and among potential borrowers, in March the federal banking agencies issued a joint statement on credit availability that created a special category for small and medium-sized business and farm loans that could be made with less documentation than is normally required. The amount of such loans may not exceed 20 percent of a

bank's capital. It was our hope at the time that banks would take advantage of this opportunity to increase the number of small business loans in communities such as the target area. However, it seems that only a few institutions are utilizing this basket, possibly because of slack demand.

On June 10, the agencies announced additional credit availability initiatives that included lessening paperwork and regulatory burdens for financial institutions to encourage them to make additional credit available. These initiatives included revised valuations of collateral, better coordination of bank examinations among the agencies, and guidance on use of classification categories in commercial examinations.

These initiatives also included guidance on fair lending and referred to an interagency letter issued in May. This interagency letter on lending discrimination was signed by the principals of all the federal banking regulatory agencies and was sent to the chief executive officers of all banks. savings and loan associations, and bank holding companies in the United States. It stressed the serious nature of violations of antidiscrimination laws and the importance of these issues to the regulatory agencies. The letter also included guidance to the financial institutions on steps that can be taken to ensure that they are complying with the relevant fair lending statutes and regulations. The recommendations included the use of second reviews for denied applications, mortgage review boards, and compensation programs in financial institutions that provide incentives to loan officers for loans made to low- and moderate-income minority applicants.

Further guidance to banks on discrimination issues is included in the Federal Reserve Bank of Boston's brochure "Closing the Gap." This creative pamphlet discusses discrimination and provides advice to banks on ways to have an effective program that serves the minority communities in a bank's delineated area. "Closing the Gap" is now in its third printing, and thousands of copies have been distributed to financial institutions and others throughout the United States.

The Federal Reserve is also emphasizing compliance with fair lending statutes by improving examiner training and examination techniques for these requirements. We have developed a special "HMDA data analysis system," which allows computer analysis of the raw information to facilitate a better understanding of the HMDA data. This enables our examiners to go beyond the normal HMDA tasks as they review lending activity in cases where the analysis indicates a possible problem. Although the data alone cannot provide evidence of discrimination, they may indicate areas that need further explanation or investigation by the examiners.

The HMDA data are also being used in a recently developed computer model that allows examiners to match minority and nonminority applicants with similar credit characteristics but different loan outcomes. Once the pairs are selected, the examiners will pull the identified files and determine the factors used in the credit process. This model is still being tested in several Reserve Bank Districts, but initial feedback shows great promise for use in fair lending examinations.

Besides the HMDA data, we now have a mapping program that allows us to analyze several variables and present them in an easy-to-read display. Some of the capabilities of this system are evident in the maps I have submitted that show the race, income, and housing loans in the target area.

Another major initiative currently being undertaken by the agencies is the Community Reinvestment Act reform project. The administration has requested that the regulatory agencies review CRA and revise it to base it less on process and paperwork and more on actual credit extended or performance. The agencies are working together on this project and are currently engaged in gathering wide public input from bankers and community groups. Two meetings have been held, one with industry trade associations and one with representatives of national community advocacy organizations. Additionally, principals of the agencies have held seven public hearings on CRA in locations throughout the country and gathered testimony from a wide variety of large and small banks and thrift institutions, community and other grass-roots organizations, and public officials.

In response to the recent series of articles on lending and banking services in the *Washington Post*, the Federal Reserve Board and the Federal

Reserve Bank of Richmond invited the chief executives of the major financial institutions in the Washington metropolitan area to an information session at the Board. More than sixty local bankers attended this program.

The session featured a presentation on the Delaware Valley Mortgage Plan, an innovative bank consortium in Philadelphia that offers single-family housing loans to low- and moderate-income individuals and families. The plan has eleven bank and thrift participants that have committed to offer creative mortgage products to lower-income persons. They also commit to not reject applications until after a credit committee for the plan has an opportunity to explore other methods of approving the loan. The plan has made more than \$270 million in mortgages to roughly 16,500 families since 1975. The President of the Federal Reserve Bank of Richmond has confirmed the support of Reserve Bank and Board staff for similar initiatives the local lenders may wish to pursue.

Among the goals established for the Community Affairs program at the Federal Reserve Bank of Richmond is the preparation of community profiles of all the metropolitan and major rural areas in the District. The first profile, currently being prepared, is for all of Prince George's County, including the target area that is the focus of these hearings. The profiles will describe the general credit needs of each area, with specific focus on low- and moderate-income neighborhoods and small businesses. The profiles will also identify various opportunities for financial institution investment. By providing demographic analysis and information on groups active in community development, the profiles should help financial institutions respond positively to community reinvestment challenges.

After completion of the Prince George's County profile, the Community Affairs office will sponsor a training seminar in community development finance for financial institutions, community groups, and public officials in the area. This seminar will promote public and private initiatives and opportunities in the county and be a prototype for action as additional profiles are completed.

In conclusion, I thank you for the opportunity to testify today on this particular neighborhood

in Prince George's County as well as methods for addressing credit availability issues in other neighborhoods that include minority residents and small businesses. We recognize the importance of these issues and look forward to working with you to address them.

Statement by John P. LaWare, Member, Board of Governors of the Federal Reserve System, before the Committee on Banking, Finance and Urban Affairs, U.S. House of Representatives, September 28, 1993

I am pleased to appear before the committee this morning to discuss the implications of the proposed North American Free Trade Agreement (NAFTA) for the financial services industry and banking in particular.

Before I begin, let me state that the Federal Reserve supports the NAFTA without qualification. Its implementation will provide overall benefits to the people and the economy of the United States that will grow over time. The agreement will promote the economic and financial integration of the North American continent, a process already in progress. The NAFTA will solidify U.S. access to Canadian markets and provide significantly improved access for many U.S. firms to the substantial Mexican markets that will expand rapidly as the Mexican economy capitalizes on reforms instituted over the past decade. Moreover, the long-term beneficial effects for the United States of a stable, growing economy on our southern border are hard to overstate and may be more meaningful than any of the specific provisions in the agreement.

At this point, I will summarize briefly the provisions of the agreement as they relate to banking and other financial services. I will then turn to the other issues raised in your letter of invitation.

The financial services chapter establishes the rules governing treatment by each NAFTA country of the other countries' financial firms, investments in the financial sector, and cross-border service providers. The obligations set out in the financial services chapter, however, do not require any change in U.S. law or regulatory practice because the United States already follows its basic principles: market access, national

treatment, and the right to nondiscriminatory or "most-favored-nation" (MFN) treatment.

With respect to market access, each country agrees to allow financial institutions of the other countries to establish and operate in its market through subsidiaries. In doing so, each country must grant to the financial firms of the other countries treatment that is no less favorable than what is granted to comparable domestic financial institutions. Thus, a Mexican or Canadian bank in the United States would be treated as a U.S. banking organization, and any nonbanking activities of affiliates of the banks will continue to be subject to the provisions of the Bank Holding Company Act. Treatment is considered no less favorable if it grants to the foreign firm equal competitive opportunities; that is, it does not disadvantage the foreign firm in its ability to provide financial services as compared with the ability of similar firms to provide the services. The financial services chapter also requires each country to provide MFN treatment for the firms of the other NAFTA countries, assuring that no NAFTA country may grant better treatment to firms from countries outside the NAFTA. U.S. banks and bank holding companies already operate subsidiary banks in Canada under these general principles. The main benefit to U.S. banks will be in their ability to establish subsidiaries in Mexico, a market essentially closed to all but one U.S. institution. Although Mexico will open its banking market only gradually, keeping market share limits at least until the year 2000, the NAFTA will allow several U.S. banks to form subsidiary banks and other financial firms and compete on a national treatment basis with banks and financial groups in Mexico.

The agreement will also allow each country to grandfather, or in the language of trade agreements "to reserve," certain provisions of existing law that do not conform to national treatment or MFN principles. Under this provision, the United States has reserved several provisions of federal law that limit the national treatment avail-

able to foreign banks or individuals. However, the degree of discrimination in these laws cannot be increased, and any future measures must conform to the national treatment and MFN principles.

Besides these basic requirements, the financial services chapter also requires each country to abide by the principle of "transparency" in its regulation of financial services. This requires that each country allow an opportunity for public comment on proposed measures in the financial services area and make available all requirements necessary for engaging in financial services activities in the country. The chapter also contemplates that any country may request consultations with another, including consultations with regulators, on any matter affected by the financial services chapter. In the Federal Reserve's view, this simply codifies existing practice.

From a supervisory standpoint, an essential feature of the NAFTA is that it provides a substantial "prudential carveout," that is, nothing in the services provisions of the NAFTA shall be construed to prevent a country from adopting or maintaining reasonable measures for prudential reasons. The chapter gives a nonexhaustive list of areas for prudential regulation, including the protection of consumers of financial services; the maintenance of the safety, soundness, integrity, or financial responsibility of financial market participants; and ensuring the integrity and stability of the financial system. We believe that prudential regulation as implemented in the United States is reasonable and could withstand scrutiny under this provision. In addition, the NAFTA provisions on services do not apply to a country's monetary and related credit policies or to exchange rate policies.

Under the NAFTA, a country would have the right to a hearing on whether another country is abiding by its obligations under the agreement. This so-called dispute settlement mechanism provides that panels, with participants usually drawn from standing rosters, would hear the dispute and render a final opinion on whether the measure at issue conforms to the NAFTA. If the panel finds that a country's law or regulation violates the NAFTA, the country may change the offending measure. If it does not, the com-

plaining country has the right to suspend benefits to firms of the offending country that are commensurate with the harm suffered by the firms of the complaining country.

The financial services chapter contemplates that experts in financial services will be included on the roster of persons who hear disputes in the financial services area. Moreover, the financial services chapter also contemplates establishment of a Financial Services Committee to supervise the implementation of the NAFTA, to consider issues on financial services that are referred to it by another NAFTA country, and to participate in disputes in the investment area where a country claims the prudential or monetary policy carveout as a defense to the action at issue. In these cases, the decision of the Financial Services Committee will be final. Unlike other chapters of the NAFTA that allow a private party, such as an individual person or firm, to bring a dispute against another country, a dispute in financial services may only be brought by a government of a country.

In summary, the financial services chapter of the NAFTA incorporates the principles of MFN and national treatment that have long been applied in the United States with respect to foreign investment. The chapter establishes a government-to-government dispute settlement system that allows for the participation of persons knowledgeable about financial services. Significantly, the financial services chapter recognizes the importance of supervision and regulation of financial services and provides protections for prudential actions of regulators.

Let me now turn to the specific questions raised in your letter of invitation. The principles of national treatment and better access to all markets for all firms have long been supported by the Federal Reserve. When multilateral trade agreements began to be negotiated in the 1980s that would, for the first time, establish these principles as enforceable obligations to govern the provision of banking and other financial services, the Federal Reserve sought to assure that these negotiated obligations did not interfere with the legitimate objectives of prudential supervision and regulation. These views were shared with the Treasury Department as the U.S. negotiator for banking and securities services in

the NAFTA process. At the Treasury's invitation, the Federal Reserve and other regulators provided technical assistance during the course of the negotiations on how proposed provisions of the NAFTA would affect U.S. banking and other laws. There was ongoing informal contact between Treasury and Federal Reserve officials about supervisory issues over the course of the NAFTA negotiations, and a member of the Board's staff attended many of the negotiating sessions.

The Federal Reserve's principal objective has been to assure that any agreement that might be negotiated contain a strong protection for the prudential actions of regulators, with respect to both individual institutions and the stability of the financial system itself. In addition, the Board believed that it was important that any system set up to review disputes in financial services should include the active participation of financial experts. The presence of financial experts in the dispute resolution process assures that persons with an understanding of the basis of the regulation of financial services will generally decide issues involving regulated financial entities. Finally, the Board believes that it is important that the financial services sector be protected from retaliatory measures resulting from disputes in other sectors. Because of the potential spillover effect into other areas, financial services, and the banking system in particular, should not be disrupted by potentially ill-considered actions resulting from disputes in other sectors.

The NAFTA contains provisions that satisfy the concerns of the Federal Reserve. A strong provision protects the actions of regulators. Financial experts will generally participate in settling disputes in financial services and must be included when prudential or monetary policy reasons are cited as the basis for the dispute. A Financial Services Committee will assist in implementation of the financial services chapter and retaliation across sectoral lines is limited. In sum, the NAFTA appears to protect the interests of prudential supervision in the U.S. market and of financial institutions while creating opportunities for U.S. banks and other financial firms in the Mexican market.

U.S. banks and bank holding companies have a long history of following their U.S. customers

to foreign markets. When U.S. businesses began their substantial foreign expansion in the 1950s and 1960s, U.S. banks increased their foreign presence to continue to provide banking services to American commerce. As the Mexican economy opens under the NAFTA, there will be an increased demand for U.S. goods. American banks and securities companies will have opportunities to provide sophisticated financial services to U.S. companies, as well as to the Mexican firms that will increasingly need the types of innovative services at which U.S. financial services companies excel.

Of course, U.S. banks and bank holding companies will be subject to the same regulation of their Mexican operations by the Federal Reserve as currently apply to all of their other foreign operations, as well as the same supervision of their foreign operations through the regular reporting and examination process.

The NAFTA does not change in any way either the manner in which U.S. banks may make investments in foreign companies or the way that banks are regulated with respect to their activities outside the United States. As you know, the Board's Regulation K governs the international operations of member banks, bank holding companies, and Edge Act corporations. Permissible activities of foreign subsidiaries of these investors are listed in Regulation K and include banking, leasing, fiduciary activities, and securities and insurance activities within certain limits. Regulation K also requires that a U.S. bank or holding company provide forty-five days' prior notice to the Board before investing in any foreign company in an amount that exceeds the lesser of \$25 million or 5 percent of its capital. The Board analyzes such proposals in light of the financial condition of the bank or holding company and for compliance with U.S. law. In this regard, the investing U.S. banking organization must provide relevant documentation on the investment. If issues are raised by the proposal, the Board may suspend the prior notice or deny the investment. All of these measures will be in effect with respect to investments in banks and other companies in Mexico.

After an investment has been made, the U.S. bank or bank holding company must provide detailed financial reports to the Federal Reserve

for analysis to determine the condition of the foreign entity. This analysis is included in the ongoing performance monitoring of the bank or bank holding company. In addition, the Federal Reserve often conducts on-site examination of foreign subsidiaries of U.S. banks and bank holding companies. Of course, neither the NAFTA nor the Mexican and U.S. legislation to implement it have been passed. Nevertheless, the Federal Reserve has held discussions with regulators in Mexico concerning sharing of information, including possible on-site examinations of subsidiaries of U.S. banks. In this regard, I note that the Mexican authorities conduct on-site examinations of Mexican banks on a regular basis. In most of the large Mexican banks, the National Banking Commission has established and staffed permanent on-site examination offices for constant surveillance. We believe that we will be able to work cooperatively with the Mexican regulators to obtain necessary information on Mexican subsidiaries of U.S. banks, through examinations or other mechanisms, to assure that these investments would not pose any undue risk to the safety and soundness of the U.S. banks.

The subsidiaries in Mexico will be subject to the same restrictions that are currently in place with respect to any foreign subsidiary under Regulation K. Foreign companies owned by U.S. banks and bank holding companies are generally prohibited from engaging in any activities in the United States. Foreign subsidiaries of U.S. banks are not permitted to underwrite or deal in securities in the United States. Similarly, foreign subsidiaries are prohibited from underwriting insurance in the United States. Consequently, foreign affiliates of U.S. banks cannot be used to evade the nonbanking restrictions of U.S. law. These restrictions are monitored in the ongoing review of each banking organization. If a banking organization were to ignore such restrictions and conduct impermissible activities in the United States through a foreign company, the Board has enforcement authority to deal with such violations.

The NAFTA provision regarding cross-border services provides that no new restrictions shall be placed on cross-border activities that are permitted on the date the NAFTA enters into force. With respect to banking in the United States, this provision relates primarily to crossborder lending and deposit-taking. Currently, there are no restrictions in federal law preventing a foreign bank from advertising in the United States the services that the bank offers outside the United States. U.S. residents may place deposits with the foreign offices of foreign banks and also may, and do, borrow from the non-U.S. offices of foreign banks and other firms. Similarly, U.S. banks could lend cross-border to Mexican or Canadian residents or accept deposits from such residents. Of course, this provision is also subject to the prudential carveout, which allows reasonable measures to be taken to protect depositors or other users of financial services, even with respect to cross-border services.

The provision does not require that the crossborder service providers of the other countries be allowed to "do business" or "solicit" business, such as by advertising or setting up an office, in the country. Each country retains the right to define what is meant by "doing business" or "soliciting" under this provision. The cross-border provision also explicitly recognizes, without prejudicing any other type of prudential regulation, that registration requirements for instruments sold cross-border and for the crossborder providers themselves are reasonable prudential measures. Finally, the NAFTA countries have agreed that further consultations should be held no later than January 1, 2000, on further liberalizations in the cross-border area.

With respect to the Foreign Bank Supervision Enhancement Act of 1991, under which a foreign bank may not establish a branch, agency, or commercial lending company unless the Board finds that the foreign bank is subject to comprehensive supervision or regulation by home country authorities on a consolidated basis, you have asked whether Mexican banks are subject to comprehensive supervision and on what basis the Board made such determination. Several applications by Mexican banks are pending at the Board, and it would not be appropriate to comment on specifics before the applications have been presented for Board action. I can say that there have been very useful and informative discussions with the supervisory authorities in Mexico on the programs that have been put in place in Mexico since the banks were reprivatized starting in 1991 and that these discussions are continuing to allow us to complete the record on the applications.

Let me also say that, as a general matter in determining whether a particular foreign bank is subject to consolidated supervision, the Board considers a broad range of information. We study the structure of the supervisory system; how it applies to the particular bank applicant; the extent of the information on the operations of the bank and its dealings with affiliates that are available to the supervisors, including the nature and frequency of reporting by the bank to its supervisors; whether there are audits required of or commissioned by the bank; the nature and scope of any examinations or inspections by the supervisors; the supervisory practices of the authorities with respect to the bank's operations; and any enforcement authority the supervisor may have. This type of information is under review in connection with the applications by Mexican banks. These standards would not be changed if the NAFTA were to be adopted.

As can be seen from this brief review, the NAFTA would not in any way diminish the ability of the United States to apply sound prudential standards to financial institutions from Mexico or Canada operating in the United States. Nor would it in any way affect the requirements imposed on U.S. banks in their operations outside the United States. The NAFTA provides no additional scope for a U.S. bank to underwrite securities or insurance in the United States; it cannot be used as a back door to engage in impermissible activities in the United States.

In sum, the NAFTA would provide substantial benefits to U.S. banks and other financial firms that are currently precluded from operating in Mexico. It could also stabilize and strengthen the Mexican economy while allowing the United States and U.S. firms to participate in the benefits to be reaped from such progress. Finally, because the entire regulatory scheme applicable to all foreign subsidiaries of U.S. banking organizations will also apply to any Mexican subsidiaries, we believe the NAFTA will do no harm to the safety and soundness of the U.S. financial system or its institutions.

Announcements

APPOINTMENT OF CHAIRMEN AND DEPUTY CHAIRMEN OF THE BOARDS OF DIRECTORS OF THE FEDERAL RESERVE BANKS

The Federal Reserve Board announced on September 29, 1993, the appointment of Chairmen and Deputy Chairmen of the twelve Federal Reserve Banks for 1994.

Each Reserve Bank has a board of directors of nine members. The Board of Governors in Washington appoints three of these directors and designates one of its appointees as Chairman and a second as Deputy Chairman.

The Chairmen and Deputy Chairmen appointed by the Board for 1994 are the following:

Boston

Jerome H. Grossman, Chairman of the Board and Chief Executive Officer, New England Medical Center, Inc., Boston, renamed Chairman

Warren B. Rudman, Esq., Sheehan, Phinney, Bass, and Green, Manchester, N.H., renamed Deputy Chairman.

New York

Maurice R. Greenberg, Chairman and Chief Executive Officer, American International Group, Inc., New York City, Chairman

A Deputy Chairman will be selected later.

Philadelphia

James M. Mead, President, Capital Blue Cross, Harrisburg, Pa., Chairman

Donald J. Kennedy, Business Manager, International Brotherhood of Electrical Workers, Local Union No. 269, Trenton, N.J., Deputy Chairman.

Cleveland

A. William Reynolds, Chairman and Chief Executive Officer, Fairlawn, Ohio, renamed Chairman

G. Watts Humphrey, Jr., President, GWH Holdings, Inc., Pittsburgh, Pa., renamed Deputy Chairman.

Richmond

Henry J. Faison, President, Faison Associates, Charlotte, N.C., Chairman

Claudine B. Malone, President, Financial and Management Consulting, McLean, Va., Deputy Chairman.

Atlanta

Leo Benatar, Chairman of the Board and President, Engraph, Inc., Atlanta, Ga., Chairman

Hugh M. Brown, President and Chief Executive Officer, BAMSI, Inc., Titusville, Fla., Deputy Chairman.

Chicago

Richard G. Cline, Chairman, President, and Chief Executive Officer, NICOR, Inc., Naperville, Ill., renamed Chairman

Robert M. Healey, President, Chicago Federation of Labor and Industrial Union Council, AFL-CIO, Chicago, Ill., renamed Deputy Chairman.

St. Louis

Robert H. Quenon, Mining Consultant, St. Louis, Mo., renamed Chairman

John F. McDonnell, Chairman and Chief Executive Officer, McDonnell Douglas Corp., St. Louis, Mo., Deputy Chairman.

Minneapolis

Gerald A. Rauenhorst, Chairman of the Board and Chief Executive Officer, Opus Corp., Minneapolis, Minn., Chairman

Jean D. Kinsey, Professor, Consumption and Consumer Economics, Department of Agricultural and Applied Economics, University of Minnesota, St. Paul, Minn., Deputy Chairman.

Kansas City

Burton A. Dole, Jr., Chairman of the Board and President, Puritan-Bennett Corp., Overland Park, Kan., renamed Chairman

Herman Cain, President and Chief Executive Officer, Godfather's Pizza, Inc., Omaha, Neb., renamed Deputy Chairman.

Dallas

Cece Smith, General Partner, Phillips-Smith Specialty Retail Group, Dallas, Tex., Chairman

Roger R. Hemminghaus, Chairman, President, and Chief Executive Officer, Diamond Shamrock, Inc., San Antonio, Tex., Deputy Chairman.

San Francisco

James A. Vohs, Chairman and Chief Executive Officer (Retired), Kaiser Foundation Health Plan, Inc., and Kaiser Foundation Hospitals, Oakland, Calif., renamed Chairman Judith M. Runstad, Co. Managing Partner, Foster Pepper and Shefelman, Seattle, Wash., renamed Deputy Chairman.

MEETING OF THE CONSUMER ADVISORY COUNCIL

The Federal Reserve Board announced that the Consumer Advisory Council held a meeting on Thursday, October 28. The Council's function is to advise the Board on the exercise of the Board's responsibilities under the Consumer Credit Protection Act and on other matters on which the Board seeks its advice.

ADOPTION OF AN INTERAGENCY POLICY STATEMENT REGARDING BRANCH CLOSINGS

The Federal Reserve Board announced on September 21, 1993, adoption of a joint interagency policy statement regarding branch closings by insured depository institutions.

The policy statement, which was effective September 21, 1993, provides guidance concerning the branch closing provisions of section 42 of the Federal Deposit Insurance Act, specifically the requirements that insured depository institutions adopt policies for branch closings and provide notices before closing any branch.

The statement contains the following guidelines:

- It defines a "branch" for purposes of section 42 as a traditional brick-and-mortar branch at which deposits are received, checks are paid, or money is lent, thereby excluding the closing of automatic teller machines (ATMs) and temporary branches from notice requirements of section 42.
- It provides that the relocation or consolidation of a branch is not a closing.
- It provides that a temporary interruption of service is not a closing.
- It makes clear that as long as a branch continues to meet the definition of "branch" under section 42, a downgrading of the services is not a closing.
- It allows each insured depository institution to devise a means of allocating customers among branches and provides guidance on how this can be

done, instead of defining who is a customer of a branch and who must be notified of a proposed closing.

- It identifies the information to be included in the notice to customers and in the notice posting at the branch.
- It provides that no branch closing has occurred when an acquiring institution operates a branch temporarily under an option agreement with the Federal Deposit Insurance Corporation (FDIC) or Resolution Trust Corporation (RTC) if the acquiring institution decides not to exercise the option and refers the branch to the FDIC or RTC.

The policy statement was developed in consultation with the Office of the Comptroller of the Currency, the FDIC, and the Office of Thrift Supervision.

ISSUANCE OF A FINAL RULE ON FILING CRIMINAL REFERRALS

The Federal Reserve Board issued on September 3, 1993, a final rule amending its Regulations H (Membership of State Banking Institutions in the Federal Reserve System), K (International Banking Operations), and Y (Bank Holding Companies and Change in Bank Control), to require all domestic and foreign banking organizations supervised by the Board, including state member banks, bank holding companies, Edge corporations, and certain U.S. branches and agencies of foreign banks, to file criminal referrals on a broad range of suspected criminal activities. The final rule was effective October 8, 1993.

The rule was issued by the Board to enhance law enforcement agencies' ability to investigate and prosecute the matters reported in criminal referrals and to facilitate the implementation of a new interagency criminal referral database.

The final rule codifies existing Board criminal referral reporting guidelines, which have been in place since 1985, and requires that criminal referrals be made on a new standardized criminal referral form.

The form was developed by the bank regulatory agencies in cooperation with federal law enforcement agencies, including the Department of Justice, the Federal Bureau of Investigation, and the

U.S. Secret Service. It will be used by all federal financial institutions supervisory agencies and the institutions they regulate.

The new form will replace the various current referral forms used by the banking agencies and will be distributed to financial institutions in the United States, along with a computer software package enabling the preparation of the form on a personal computer.

RELEASE OF QUARTERLY TABLE OF ADJUSTMENT FACTORS FOR INTEREST INCOME FOR SECTION 20 COMPANIES

The Federal Reserve Board released on September 30, 1993, its quarterly table of factors to adjust interest income. These factors are to be used by section 20 companies that adopt the Board's alternative index revenue test to measure compliance with the 10 percent limit on bank-ineligible securities activities. The table of factors is available from Publications Services, Board of Governors of the Federal Reserve System, Washington, DC 20551.

PROPOSED ACTIONS

The Federal Reserve Board requested on September 3, 1993, public comment on proposed amendments to Regulation O (Loans to Executive Officers, Directors, and Principal Shareholders of Member Banks). Comments were requested by October 12, 1993.

The Federal Reserve Board on September 14, 1993, requested public comment on an interagency notice revising risk-based capital standards to implement section 305 of the Federal Deposit Insurance Corporation Improvement Act (FDICIA) regarding interest rate risk. Comments were requested by October 29, 1993.

CHANGE IN BOARD STAFF

The Board announced that Deborah Danker, Assistant Director in the Division of Monetary Affairs, resigned, effective October 15, 1993.

Minutes of the Federal Open Market Committee Meeting of August 17, 1993

A meeting of the Federal Open Market Committee was held in the offices of the Board of Governors of the Federal Reserve System in Washington, D.C., on Tuesday, August 17, 1993, at 9:00 a.m.

Present:

Mr. Greenspan, Chairman

Mr. McDonough, Vice Chairman

Mr. Angell

Mr. Boehne

Mr. Keehn

Mr. Kelley

Mr. LaWare

Mr. Lindsey

Mr. McTeer

Mr. Mullins

Ms. Phillips

Mr. Stern

Messrs. Broaddus, Jordan, Forrestal, and Parry, Alternate Members of the Federal Open Market Committee

Messrs. Hoenig, Melzer, and Syron, Presidents of the Federal Reserve Banks of Kansas City, St. Louis, and Boston respectively

Mr. Kohn, Secretary and Economist

Mr. Bernard, Deputy Secretary

Mr. Coyne, Assistant Secretary

Mr. Gillum, Assistant Secretary

Mr. Mattingly, General Counsel

Mr. Patrikis, Deputy General Counsel

Mr. Prell, Economist

Messrs. R. Davis, Promisel, Rosenblum, Scheld, Siegman, Simpson, and Slifman, Associate Economists

Ms. Greene, Deputy Manager for Foreign Operations

Ms. Lovett, Deputy Manager for Domestic Operations

Mr. Ettin, Deputy Director, Division of Research and Statistics, Board of Governors

Mr. Madigan, Associate Director, Division of Monetary Affairs, Board of Governors

Mr. Stockton, Associate Director, Division of Research and Statistics, Board of Governors

Ms. Johnson, Assistant Director, Division of International Finance, Board of Governors

Ms. Low, Open Market Secretariat Assistant, Division of Monetary Affairs, Board of Governors

Messrs. Beebe, J. Davis, T. Davis, Dewald, Goodfriend, and Ms. Tschinkel, Senior Vice Presidents, Federal Reserve Banks of San Francisco, Cleveland, Kansas City, St. Louis, Richmond, and Atlanta respectively

Messrs. McNees, Meyer, and Miller, Vice Presidents, Federal Reserve Banks of Boston, Philadelphia, and Minneapolis respectively

Ms. Meulendyke, Manager, Open Market Operations, Federal Reserve Bank of New York

By unanimous vote, the minutes for the meeting of the Federal Open Market Committee held on July 6-7, 1993, were approved.

Secretary's Note: Advice had been received of the election of William J. McDonough by the Board of Directors of the Federal Reserve Bank of New York as a member of the Federal Open Market Committee for the period commencing July 19, 1993, and ending December 31, 1993, and that he had executed his oath of office.

By unanimous vote, the Committee elected William J. McDonough as Vice Chairman of the Committee to serve until the first meeting of the Committee after December 31, 1993.

The Deputy Manager for Foreign Operations reported on developments in foreign exchange markets during the period since the July meeting. There were no System open market transactions in

foreign currencies during this period, and thus no vote was required of the Committee.

The Deputy Manager for Domestic Operations reported on developments in domestic financial markets and on System open market transactions in government securities and federal agency obligations during the period July 7, 1993, through August 16, 1993. By unanimous vote, the Committee ratified these transactions.

The Committee then turned to a discussion of the economic and financial outlook and the implementation of monetary policy over the intermeeting period ahead. A summary of the economic and financial information available at the time of the meeting and of the Committee's discussion is provided below, followed by the domestic policy directive that was approved by the Committee and issued to the Federal Reserve Bank of New York.

The information reviewed at this meeting suggested that economic activity was expanding at a moderate pace. The limited data available on spending in the third quarter presented a mixed picture but on balance pointed to continued expansion in consumption, business fixed investment, and homebuilding. Employment remained on an uptrend, and industrial production recently had firmed somewhat. After rising at a faster rate in the early part of the year, consumer prices had changed little and producer prices had fallen in recent months.

Total nonfarm payroll employment, after a small gain in June, expanded in July at a rate close to its average advance in earlier months of the year. The services industries, led by business services, provided half of the July increase. Elsewhere, considerable hiring was evident in wholesale and retail trade, and construction employment moved up after a small decline in June. In manufacturing, more jobs were lost, although at a slower rate than earlier in the year. The civilian unemployment rate dropped to 6.8 percent in July.

Industrial production recovered in July from small declines in May and June. Manufacturing output rose in spite of a sizable cutback in motor vehicle assemblies; utility production registered a strong weather-related gain; and mining output declined further. Within manufacturing, the production of consumer durable goods other than automobiles and trucks rebounded in July, and the output of business equipment advanced further.

Total utilization of industrial capacity edged higher in July, reflecting a substantial gain at electric utilities; utilization of manufacturing capacity was unchanged.

Retail sales increased slightly further in July after a sizable rise in the second quarter. Spending on automobiles was down in July for a second straight month, but sales were strong at apparel, furniture and appliance, and general merchandise stores. Total housing starts, depressed by wet weather and floods in some areas of the country, were down somewhat in July; however, permit issuance moved up, suggesting that homebuilding activity remained in a mild uptrend. In addition, consumer surveys indicated that attitudes toward homebuying continued to be strongly positive during July, and builders' assessments of home sales improved substantially.

Business fixed investment increased in the second quarter at about the rapid pace of the first quarter. Spending for equipment remained strong, with solid increases in purchases of motor vehicles, computers, and a wide range of machinery and equipment. However, outlays for aircraft declined in the second quarter, retracing some of the substantial first-quarter rise. The limited information available for the third quarter pointed to some slowing of the growth of spending for equipment. In the second quarter, nonresidential building activity posted its largest advance in three years. Expenditures were up across a broad array of categories, with investment in institutional and public utilities structures being particularly strong.

Business inventories expanded moderately during the second quarter, and inventory accumulation was broadly in line with sales over the first half of the year. In manufacturing, stocks edged lower in June, reflecting a further decline in inventories held by aircraft producers. Outside of the aircraft industry, inventory changes were mixed. For manufacturing as a whole, the ratio of inventories to shipments fell in June to one of the lowest levels in recent years. In the wholesale trade sector, inventories expanded modestly in June, and with sales lower, the inventory-to-sales ratio for the sector increased slightly. Retail inventories, after changing little in May, rose slightly more than sales in June, and the stocks-to-sales ratio for the retail sector remained near the high end of its range for the past several years.

The nominal U.S. merchandise trade deficit was considerably smaller in May than the deficits recorded in March and April; however, the deficit for April and May combined was larger than the average rate for the first quarter. The value of exports rose slightly in May; increases in sales abroad of industrial supplies, machinery, and consumer goods offset declines in agricultural products, civilian aircraft, and motor vehicles and parts. A drop in the value of imports was spread across a wide range of products, particularly automotive products, consumer goods, and oil. The economic performance of the major foreign industrial countries was mixed in the second quarter. Output continued to decline in western Germany, and economic activity in Japan appeared to have stalled after modest growth in the first quarter. In contrast, economic recovery continued in Canada and the United Kingdom.

Producer prices of finished goods declined in July for a second consecutive month. Prices of finished foods edged lower, and prices of finished energy goods, particularly gasoline and fuel oil, fell significantly; excluding the food and energy components, producer prices edged up in July and to that point in the year had risen at a slightly lower rate than was recorded in 1992. At the consumer level, prices for nonfood, non-energy items were up slightly in both June and July and for the year to date had increased a little more slowly than last year. Hourly compensation for private industry workers rose in the second quarter at about the rate seen last year. Average hourly earnings of production or nonsupervisory workers were unchanged on balance over June and July, but for the year through July these earnings had increased at the same pace as in 1992.

At its meeting on July 6–7, 1993, the Committee adopted a directive that called for maintaining the existing degree of pressure on reserve positions and that retained a tilt toward possible firming of reserve conditions during the intermeeting period. Accordingly, the directive indicated that in the context of the Committee's long-run objectives for price stability and sustainable economic growth, and giving careful consideration to economic, financial, and monetary developments, slightly greater reserve restraint would be acceptable or slightly lesser reserve restraint might be acceptable during the intermeeting period. The reserve condi-

tions associated with this directive were expected to be consistent with modest growth of the broader monetary aggregates over the third quarter.

Throughout the intermeeting period, open market operations were directed toward maintaining the existing degree of pressure on reserve positions. Two upward adjustments were made to expected levels of adjustment plus seasonal borrowing in anticipation of further increases in demand for seasonal credit. Borrowing averaged close to expected levels over most of the intermeeting interval, and the federal funds rate remained near 3 percent.

Money market interest rates were little changed on balance over the intermeeting period, while rates on intermediate-term U.S. Treasury obligations and on fixed-rate mortgages dropped slightly. Yields on long-term Treasury and corporate bonds were down by more, with the rate on the thirty-year Treasury bond falling below 6½ percent. Many market interest rates moved higher after Chairman Greenspan's congressional testimony on July 20, which was perceived by market participants as suggesting a greater likelihood of some tightening of monetary policy in the future. Subsequently, interest rates generally retreated in reaction to incoming economic data indicating subdued inflation pressures and to the passage of the deficitreduction legislation. Major indexes of stock prices increased somewhat over the intermeeting period.

In foreign exchange markets, the trade-weighted value of the dollar in terms of the other G-10 currencies was about unchanged on balance over the intermeeting period. The dollar strengthened slightly against the German mark, but it rose by significantly more against most other European currencies in the Exchange Rate Mechanism in the aftermath of a widening of the margins within which participating currencies are allowed to fluctuate relative to each other. The widening, which was in response to massive selling pressures on the French franc and several other currencies, followed sharp increases in short-term interest rates in the affected countries. With exchange market participants continuing to focus on Japan's trade surplus, the dollar fell substantially against the yen.

M2 expanded only slightly in July after growing appreciably over the second quarter. The continued strength of inflows to bond and stock mutual funds suggested that households were still realigning their

portfolios toward assets outside the monetary aggregates. Through July, M2 was estimated to have grown at a rate close to the lower end of the Committee's range for the year. M3 contracted slightly in June and July, owing in part to a substantial drop in institution-only money market mutual funds, whose returns had not kept pace with the increase in money market rates in late spring. In addition, depository institutions placed greater reliance on various nondeposit sources of funds, including the issuance of equity and subordinated debt. Through July, M3 had declined a little and was slightly below its annual range. Total domestic nonfinancial debt had expanded at a moderate rate in recent months, and for the year through June was estimated to have increased at a rate in the lower half of the Committee's monitoring range.

The staff projection prepared for this meeting suggested moderate growth in economic activity and modest reductions in margins of unemployed labor and capital through next year. The fiscal restraint stemming from the recent legislation and uncertainty about other government policies would act as a drag on the economy. On the other hand, lower interest rates were expected to contribute to further gains in spending on consumer durables, housing, and business fixed investment. Continued expansion also would be supported by further improvements in the availability of credit, a small boost to production over the next several quarters associated with rebuilding activity in areas of the Midwest affected by the recent floods, and a pickup in foreign demand resulting from some strengthening in economic activity abroad. The projected slack in labor and product markets, coupled with some tempering of inflation expectations, was expected to foster modest further reductions in wage and price inflation.

In the Committee's discussion of prospective economic conditions, members commented that recent developments had not materially altered the outlook for moderate and sustained growth in economic activity. Despite widespread indications of pessimistic consumer and business attitudes, overall consumer spending and business investment appeared to be reasonably well maintained. Likewise, the outlook for increased fiscal restraint associated with the recently enacted deficit-reduction legislation needed to be weighed against the favorable effects on spending of reduced interest rates

in intermediate- and long-term debt markets, the improved balance sheets of consumers and businesses, and the indications of a somewhat better availability of loans from financial intermediaries. In an environment of moderate economic growth, the fundamentals bearing on the outlook for inflation were consistent with further disinflation, and the members drew some encouragement from consumer and producer price developments in recent months. Several cautioned, however, that recent price measures probably overstated the reduction in inflation, just as the surge in prices earlier in the year seemed to have overstated the underlying inflation trend. Members also referred to the persistence of inflationary expectations among business executives and consumers. Thus, while the rise in inflation appeared to have been arrested, any further progress toward price stability was likely to be limited over the quarters ahead.

Business contacts and other sources of information suggested little change since the July meeting in the pace or composition of economic activity in different parts of the country. Descriptions of economic performance varied from slow to moderate growth in most regions, though business activity probably continued to weaken in some major areas such as California. Despite sustained, if not ebullient, growth in sales to consumers and the relative strength in business investment spending in the first half of this year, business sentiment was widely described as cautious or negative even in some regions whose economies were outperforming the nation as a whole. According to business contacts, the recent enactment of deficit-reduction legislation had tended to mitigate concerns about the size of future federal deficits, but business executives were now focusing on the implications of higher taxes and many were expressing apprehension about further though still unannounced tax increases that might be associated with health care reform. Business sentiment and sales also were being affected adversely in many areas by cutbacks in defense contracts and closings of military installations and by the weakness in foreign demand for some products.

With regard to developments and prospects in key sectors of the economy, members noted that despite further survey indications of eroding consumer confidence, consumer expenditures had strengthened in recent months after a pause earlier in the year. The pickup had featured rising sales of motor vehicles, and while the latter had slipped recently, a number of special factors such as shortages of popular models at the end of the model year and the effects of flooding in some parts of the Midwest suggested the need to withhold judgment on any downward shift in the underlying demand for motor vehicles. Tourism was reported to have strengthened considerably in many areas this summer, though there were major exceptions. As had been true for an extended period, consumer attitudes continued to be inhibited by concerns about employment opportunities, especially given further reductions in defense spending, the ongoing restructuring and related downsizing of many business operations, and the continuing efforts by business firms to limit the number of their permanent employees in order to hold down the rising costs of health care and other nonwage worker benefits. Members noted, however, that the growth in employment thus far this year, while tending to involve many low-paying jobs, had greatly exceeded the rate of expansion in 1992. In the view of at least some members, appreciable further growth was likely as business firms found it increasingly difficult in an expanding economy to meet growing demands through outsourcing, temporary workers, and overtime work. Some members also noted that the newly legislated taxes on higher incomes would tend to curtail some consumer spending. The timing of that effect was uncertain; tax liabilities had already risen, but some payments on the added tax liabilities were not due until April of 1994 and 1995.

Members anticipated that building activity, notably housing construction, would provide some stimulus to the expansion. Although indicators of housing activity were somewhat mixed for the nation as a whole, sales of new and existing homes were brisk in many regions and even sales of second homes were reported to be improving in some areas. Prospective homebuyers continued to exercise considerable caution, but reductions in mortgage rates and generally improved affordability pointed to rising housing sales and construction over the quarters ahead. In the nonresidential sector, there was growing evidence of some strengthening in the construction of commercial and institutional structures, but overcapacity was likely to depress the construction of new office

buildings for an extended period in most parts of the country. In some areas, infrastructure and other rebuilding associated with the recent floods was likely to stimulate some construction activity later this year.

With regard to the external sector of the economy, the members again noted a somewhat mixed picture. Exporters from some parts of the country continued to report relatively brisk sales abroad, but many domestic producers were expressing concerns about weak markets in key foreign nations. Against the background of more stimulative economic policies in a number of those countries, some overall strengthening in the major foreign economies was viewed as a reasonable expectation, but the overall growth in exports was likely to lag the anticipated expansion in imports over the projection horizon. The North American Free Trade Agreement now under consideration in the Congress was a topic of active discussion among business contacts, and the uncertain outcome of that treaty was a matter of concern in several parts of the country.

Members observed that the more favorable performance of key measures of prices in recent months had tended to relieve earlier concerns about a possible worsening in inflation. However, because the recent price indexes probably overstated the improvement in the trend rate of inflation, it was too early to determine whether they pointed to renewed disinflation. In any event, a number of fundamental factors appeared to have favorable implications for the inflation outlook, notably the prospect that some slack in labor and capital resources would persist in the context of projections that pointed to a relatively moderate rate of economic expansion. Members continued to cite reports from numerous business firms regarding their inability to raise prices because of the highly competitive markets in which those firms had to operate. Many business contacts also referred to the absence of significant increases-and indeed to occasional decreases-in the costs of their outside purchases. Oil price developments in world markets and the ongoing competition from foreign producers also were cited as favorable elements in the outlook for inflation. On the negative side, adverse weather conditions in recent months including severe floods in the Midwest appeared to have fostered some upward pressure on food prices,

and higher taxes would raise gasoline prices in the fourth quarter. Perhaps of greater significance, business contacts and surveys of households indicated persisting expectations that inflation would rise at some point. In this connection, however, passage of the federal deficit-reduction legislation and the Committee's reaffirmation in its directive and in congressional testimony of its commitment to price stability seemed to have had a constructive effect on attitudes in financial markets and on long-term interest rates, and these developments could prove to be harbingers of more favorable inflation attitudes more generally.

In the Committee's discussion of policy for the intermeeting period ahead, the members agreed that recent developments pointed to the desirability of a steady policy course. While economic growth did not seem particularly robust, neither was it clear that a disinflationary trend had been reestablished. Many members observed that real shortterm interest rates were at very low levels, indeed slightly negative by some calculations, and while real intermediate- and long-term interest rates were higher, it was apparent that monetary policy was in an accommodative posture. This conclusion was seen as reinforcing the view that monetary policy probably would have to move in the direction of restraint at some point to resist any incipient tendency for inflationary pressures to intensify. For now, the relatively slow economic expansion in the first half of the year, the fiscal restraint associated with the deficit-reduction legislation, other obstacles to economic growth, and the encouraging inflation statistics for recent months argued against any near-term policy adjustment.

Moreover, there was no compelling evidence that current monetary policy was fostering credit flows usually associated with speculative excesses or impending increases in price pressures. Growth in the broad measures of money and in the debt of nonfinancial sectors remained fairly damped despite indications of greater willingness to supply credit by banks, other financial intermediaries, and investors in securities markets. With regard to the monetary aggregates, low short-term interest rates undoubtedly were contributing to large shifts of funds from depository institutions, notably from components of M2 and M3 to stock and bond mutual funds and to other financial instruments, and thus to the sluggish behavior of the broad

measures of money. In this connection, a staff analysis pointed to continuing slow growth in M2 over the near term and, on the assumption of little or no change in the degree of pressure on reserve positions, to growth for the year at a rate around the lower end of the Committee's range. Growth in M3 was likely to fall marginally below the Committee's range for the year. On the other hand, growth in M1 and various reserve measures was expected to remain relatively robust.

Turning to possible adjustments to policy during the intermeeting period ahead, the members endorsed a proposal to return to an unbiased intermeeting instruction that did not incorporate any presumption with regard to the direction of possible intermeeting policy changes. The members agreed that the probability of an intermeeting policy adjustment was relatively remote. Incoming data on economic activity and prices had reduced concerns that inflation and inflationary expectations might be worsening. The Committee retained its fundamental objectives of fostering economic expansion at a sustainable pace that was consistent with further progress over time toward stable prices. However, it now appeared less likely than at the time of the May and July meetings that the Committee needed to bias its consideration of responses to incoming information in the intermeeting period toward possible tightening in order to achieve those objectives. One member, while agreeing that a tightening move would not be appropriate under current circumstances, nonetheless believed that monetary policy had been overly stimulative for some time and that the Committee should move toward restraint at the first favorable opportunity.

At the conclusion of the Committee's discussion, all the members expressed a preference for a directive that called for maintaining the existing degree of pressure on reserve positions. They also indicated their support of a directive that did not include a presumption about the likely direction of any adjustment to policy during the intermeeting period. Accordingly, in the context of the Committee's long-run objectives for price stability and sustainable economic growth, and giving careful consideration to economic, financial, and monetary developments, the Committee decided that slightly greater or slightly lesser reserve restraint might be acceptable during the intermeeting period. The

reserve conditions contemplated at this meeting were expected to be consistent with modest growth in M2 and little net change in M3 over the balance of the third quarter.

At the conclusion of the meeting, the Federal Reserve Bank of New York was authorized and directed, until instructed otherwise by the Committee, to execute transactions in the System account in accordance with the following domestic policy directive:

The information reviewed at this meeting suggests that economic activity is expanding at a moderate pace. Total nonfarm payroll employment increased in July at a rate close to its average advance in earlier months of the year, and the civilian unemployment rate declined to 6.8 percent. Industrial production turned up in July after posting small declines in May and June. Retail sales edged higher in July following a sizable rise in the second quarter. Housing starts were down somewhat in July, but permits moved up. Available indicators point to continued expansion in business capital spending. The nominal U.S. merchandise trade deficit declined in May, but for April and May combined it was larger than its average rate in the first quarter. After rising at a faster rate in the early part of the year, consumer prices have changed little and producer prices have fallen in recent

Short- and intermediate-term interest rates have changed little since the Committee meeting on July 6–7, while yields on long-term Treasury and corporate bonds have declined somewhat. In foreign exchange markets, the trade-weighted value of the dollar in terms of the other G-10 currencies was about unchanged on balance over the intermeeting period.

After expanding appreciably over the second quarter, M2 increased slightly further in July and M3 declined. For the year through July, M2 is estimated to have grown at a rate close to the lower end of the Committee's range for the year, and M3 at a rate slightly below its range. Total domestic nonfinancial debt has expanded at a moderate rate in recent months, and for the year

through June it is estimated to have increased at a rate in the lower half of the Committee's monitoring range.

The Federal Open Market Committee seeks monetary and financial conditions that will foster price stability and promote sustainable growth in output. In furtherance of these objectives, the Committee at its meeting in July lowered the ranges it had established in February for growth of M2 and M3 to ranges of 1 to 5 percent and 0 to 4 percent respectively, measured from the fourth quarter of 1992 to the fourth quarter of 1993. The Committee anticipated that developments contributing to unusual velocity increases would persist over the balance of the year and that money growth within these lower ranges would be consistent with its broad policy objectives. The monitoring range for growth of total domestic nonfinancial debt also was lowered to 4 to 8 percent for the year. For 1994, the Committee agreed on tentative ranges for monetary growth, measured from the fourth quarter of 1993 to the fourth quarter of 1994, of 1 to 5 percent for M2 and 0 to 4 percent for M3. The Committee provisionally set the monitoring range for growth of total domestic nonfinancial debt at 4 to 8 percent for 1994. The behavior of the monetary aggregates will continue to be evaluated in the light of progress toward price level stability, movements in their velocities, and developments in the economy and financial markets.

In the implementation of policy for the immediate future, the Committee seeks to maintain the existing degree of pressure on reserve positions. In the context of the Committee's long-run objectives for price stability and sustainable economic growth, and giving careful consideration to economic, financial, and monetary developments, slightly greater reserve restraint or slightly lesser reserve restraint might be acceptable in the intermeeting period. The contemplated reserve conditions are expected to be consistent with modest growth in M2 and little net change in M3 over the balance of the third quarter.

Votes for this action: Messrs. Greenspan, McDonough, Angell, Boehne, Keehn, Kelley, LaWare, Lindsey, McTeer, Mullins, Ms. Phillips, and Mr. Stern. Votes against this action: None.

Legal Developments

FINAL RULE—AMENDMENT TO RULES OF PROCEDURE

The Board of Governors is amending 12 C.F.R. Part 262, its Rules of Procedure. This regulation changes the publication requirements for notice of applications under the Federal Deposit Insurance Act for the merger, consolidation, or acquisition of assets or the assumption of liabilities, if the acquiring, assuming, or resulting bank will be a state member bank. In addition, the Board is making technical changes to the regulation.

Effective September 27, 1993, 12 C.F.R. Part 262 is amended as follows:

Part 262-Rules of Procedure

1. The authority citation for 12 C.F.R. Part 262 is revised to read as follows:

Authority: 5 U.S.C. 552, 12 U.S.C. 321, 1828(c), and 1842.

2. In section 262.3, paragraph (b)(1)(i)(D) is removed, and paragraphs (b)(1)(i)(E) and (F) are redesignated as paragraphs (b)(1)(i)(D) and (E), respectively, in paragraph (b)(2) the first sentence, the word "application" is corrected to read "application", a new paragraph (b)(3) is added, and paragraph (j), introductory text, is revised to read as follows:

Section 262.3—Applications.

* * * * *

(b) * * *

(3) In the case of an application for a merger, consolidation, or acquisition of assets or assumption of liabilities, if the acquiring, assuming, or resulting bank is to be a State member bank, the applicant shall cause to be published notice in the form prescribed by the Board. The notice shall be published in a newspaper of general circulation in the community or communities in which the head office of each of the banks to be a party to the merger, consolidation, or acquisition of assets or assumption of liabilities is located. The notice shall be published on at least three occasions at appropriate intervals.

The last publication of the notice shall appear at least thirty days after the first publication. The notice must provide an opportunity for the public to give written comment on the application to the appropriate Federal Reserve Bank for at least thirty days after the date of the first publication of the notice. Within seven days of publication of notice for the first time, the applicant shall submit its application to the appropriate Reserve Bank for acceptance, along with a copy of the notice. If the Reserve Bank has not accepted the application as complete within ninety days of the date of the first publication of the notice, the applicant may be required to republish notice of the application.

(j) * * * The following types of applications require procedures exclusive of, or in addition to, those described in paragraphs (i)(1) through (5) of this section.

ORDERS ISSUED UNDER BANK HOLDING COMPANY ACT

Orders Issued Under Section 3 of the Bank Holding Company Act

Norwest Corporation Minneapolis, Minnesota

Order Approving the Acquisition of a Bank

Norwest Corporation, Minneapolis, Minnesota ("Norwest"), a bank holding company within the meaning of the Bank Holding Company Act ("BHC Act"), has applied under section 3 of the BHC Act (12 U.S.C. § 1842) to acquire Ralston Bancshares, Inc., Omaha, Nebraska ("Ralston"), and thereby indirectly acquire Ralston Bank, Ralston, Nebraska ("Bank").

^{1.} Norwest proposes to merge Ralston into Norwest and to merge Bank into Norwest Bank Nebraska, N.A., Omaha, Nebraska ("Norwest Nebraska"), a wholly owned subsidiary of Norwest. Norwest has separately applied to and received approval from the Office of the Comptroller of the Currency ("OCC") for the proposed merger under the Bank Merger Act (12 U.S.C. § 1828(c)).

Notice of the application, affording interested persons an opportunity to submit comments, has been published (58 Federal Register 33,444 (1993)). The time for filing comments has expired, and the Board has considered the application and all comments received in light of the factors set forth in section 3(c) of the BHC Act.

Norwest, with total consolidated assets \$47.8 billion, operates 86 banking subsidiaries located in 13 states.² Norwest is the third largest commercial banking organization in Nebraska, controlling deposits of approximately \$1.8 billion, representing 9.3 percent of the deposits in commercial banks in the state.3 Ralston is the 35th largest commercial banking organization in Nebraska, controlling \$82.8 million in deposits, representing less than 1 percent of the deposits in commercial banks in the state. Upon consummation of the proposal, Norwest would remain the third largest commercial banking organization in Nebraska, controlling deposits of \$1.9 billion, representing 9.7 percent of the total deposits in commercial banks in the state.4

Competitive Considerations

Norwest and Ralston compete directly in the Omaha-Council Bluffs banking market.⁵ Norwest is the second largest commercial bank or thrift institution ("depository institution") in the market, controlling deposits of \$1.07 billion, representing 17 percent of total deposits in depository institutions in the market ("market deposits").⁶ Ralston is the 11th largest depository institution in the market, controlling \$85 million in deposits, representing 1.4 percent of market deposits. Upon consummation of this proposal, Norwest would remain the second largest depository institution in the

market, controlling deposits of approximately \$1.16 billion, representing 18.4 percent of market deposits. The Herfindahl-Hirschman Index ("HHI") would increase by 46 points to 1282.7 Market concentration as measured by the HHI would increase slightly, and the market would remain moderately concentrated. In addition, 43 depository institutions would continue to compete in this market. Based on these and other facts of record in this case, the Board concludes that consummation of this proposal would not have a significantly adverse effect on competition and the concentration of banking resources in the Omaha-Council Bluffs banking market or any other relevant banking market.8

Other Considerations

The Board concludes that the financial and managerial resources and future prospects of Norwest, its subsidiaries, and Ralston are consistent with approval. The Board also concludes that considerations relating to the convenience and needs of the communities to be served and the other supervisory factors that the

^{2.} Asset data are as of June 30, 1993.

^{3.} State and market share data are as of June 30, 1992.

^{4.} The Board previously has determined that the interstate banking statutes of Nebraska specifically authorize Norwest to acquire additional banking organizations in the state, subject to certain restrictions based on the volume of deposits and the number of banks it controls in the state. See Norwest Corporation, 70 Federal Reserve Bulletin 470 (1984). The Nebraska Director of Banking and Finance has informally advised the Board that this proposal satisfies these restrictions, as subsequently amended. See Neb. Rev. Stat. § 8-904 (1990).

^{5.} The Omaha-Council Bluffs banking market is comprised of the Omaha-Council Bluffs RMA, Douglas County, Nebraska, less the portion west of the Elkhorn River, and Pottawatamie County, Iowa, less its two eastern tiers of townships.

^{6.} Market share data are based on calculations in which the deposits of thrift institutions are included at 50 percent. The Board previously has indicated that thrift institutions have become, or have the potential to become, significant competitors of commercial banks. See Midwest Financial Group, 75 Federal Reserve Bulletin 386 (1989); National City Corporation, 70 Federal Reserve Bulletin 743 (1984). Thus, the Board has regularly included thrift deposits in the calculation of market share on a 50 percent weighted basis. See, e.g., First Hawaiian, Inc., 77 Federal Reserve Bulletin 52 (1991).

^{7.} Under the revised Department of Justice Merger Guidelines, 49 Federal Register 26,823 (June 29, 1984), a market in which the post-merger HHI is between 1200 and 1800 is considered moderately concentrated and above 1800 is considered highly concentrated. In highly concentrated markets, the Justice Department is likely to challenge a merger that increases the HHI by more than 50 points. The Justice Department has informed the Board that a bank merger or acquisition generally will not be challenged (in the absence of other factors indicating anti-competitive effects) unless the post-merger HHI is at least 1800 and the merger increases the HHI by 200 points. The Justice Department has stated that the higher than normal HHI thresholds for screening bank mergers for anti-competitive effects implicitly recognize the competitive effects of limited-purpose lenders and other non-depository financial entities.

^{8.} The Board has carefully considered a comment from an individual ("Commenter") alleging that this proposal would have substantially anti-competitive effects by reducing the availability of credit and other financial products and services in the Omaha-Council Bluffs banking market and throughout Nebraska. The Board continues to believe that the appropriate geographic market for reviewing the competitive effects of a bank acquisition proposal is local in nature and, in this case, the relevant banking market is the Omaha-Council Bluffs banking market. See, e.g., SouthTrust Corporation, 78 Federal Reserve Bulletin 710 (1992); First Hawaiian, Inc., supra; United States v. Philadelphia National Bank, 374 U.S. 321 (1963). Based on all the facts of record, and for the reasons discussed above, the Board concludes that this proposal would not substantially lessen competition for banking services, or result in an undue concentration of resources, in this or any other relevant banking market.

^{9.} Commenter has expressed concern about the potential loss to the Federal Deposit Insurance Corporation and disruption to commerce in numerous markets that could result in the event of the failure or financial difficulty of Norwest. The Board has carefully considered this comment, and, based on all the facts of record, including review of relevant examination reports, and for the reasons discussed in this Order, concludes that these objections do not warrant denial of this application.

Board must consider under section 3 of the BHC Act are consistent with approval of this proposal. 10

Based on all the facts of record, including the commitments made by Norwest in connection with this application, the Board has determined that the application should be, and hereby is, approved. The Board's approval of this proposal is expressly conditioned on compliance with the commitments made in connection with this application. The commitments and conditions relied on by the Board in reaching its decision are both deemed to be conditions imposed in writing by the Board in connection with its findings and decision, and, as such, may be enforced in proceedings under applicable law.

This transaction shall not be consummated before the thirtieth calendar day following the effective date of this Order, or later than three months after the effective date of this Order, unless such period is extended for good cause by the Board or by the Federal Reserve Bank of Minneapolis, acting pursuant to delegated authority.

By order of the Board of Governors, effective September 7, 1993.

Voting for this action: Chairman Greenspan and Governors Mullins, Kelley, LaWare, Lindsey, and Phillips. Absent and not voting: Governor Angell.

WILLIAM W. WILES Secretary of the Board

Orders Issued Under Section 4 of the Bank Holding Company Act

Bank of Montreal Montreal, Quebec, Canada

Bankmont Financial Corp. New York, New York

Order Approving an Application to Engage in Futures Commission Merchant Activities

Bank of Montreal, Montreal, Quebec, Canada ("Applicant"), a bank holding company within the meaning of the Bank Holding Company Act ("BHC Act"), has applied under section 4(c)(8) of the BHC Act (12 U.S.C. § 1843(c)(8)), and section 225.23 of the Board's Regulation Y (12 C.F.R. 225.23), to act, through a wholly owned subsidiary, Harris Futures Corporation, Chicago, Illinois ("Company"),1 as a futures commission merchant ("FCM") for unaffiliated customers in executing and clearing, and clearing without executing, futures and options on futures on non-financial commodities.2 Company proposes to engage in these activities on the Chicago Board of Trade ("CBOT"), the Chicago Mercantile Exchange ("CME"), and the New York Mercantile Exchange ("NYMEX").3

Company does not propose to trade in the proposed derivative instruments for its own account for any purpose;⁴ nor does Company propose to trade in the

^{10.} Commenter also has alleged that the branches of Norwest Nebraska generally fail to meet the credit needs of their service communities under the Community Reinvestment Act (12 U.S.C. § 2901 et seq.) ("CRA") and, in particular, that the Hastings, Nebraska, branch fails to meet the credit needs of small businesses and manufacturers in that banking market. The Board notes that Norwest Nebraska received an "outstanding" rating from its primary federal regulator, the OCC, at its most recent examination for CRA performance as of April 30, 1992. In this regard, the OCC also has approved Norwest Nebraska's application to merge with Bank under the statutory factors in the Bank Merger Act, which require consideration of Norwest Nebraska's CRA performance.

The Board has reviewed the steps taken by Norwest Nebraska to ascertain local small business and manufacturing credit needs, the bank's outreach efforts, and the small business and agricultural lending activities of the bank in the Hastings community. In light of all the facts of record, including relevant examination reports, the Board does not believe that these comments warrant denial of this application.

^{11.} Commenter has requested that the Board visit the communities served by Norwest Nebraska in order to assess directly the bank's CRA performance. Based on all the facts of record, including Commenter's submissions and relevant reports of examination, the Board does not believe that a visitation is necessary to clarify the factual record or otherwise warranted in this case, and, accordingly, denies this request.

^{1.} Applicant controls Company through an intermediate subsidiary, Bankmont Financial Corp., New York, New York, that also is an applicant in this case.

^{2.} Initially, Applicant proposes to conduct these FCM activities in futures and options on futures on heating oil, crude oil, corn, wheat, soybeans, cattle, and hogs. A complete list of the proposed contracts is set forth in the Appendix. Applicant must provide at least 20 days prior written notice to the Federal Reserve System before engaging in FCM activities with respect to additional contracts linked to physical commodities (unless the Board has approved the contracts for any other bank holding company under the BHC Act) to assure that such contracts are comparable to previously approved contracts.

^{3.} Company is a clearing member of the CME and the CBOT, and will operate on the NYMEX through the use of omnibus trading accounts with non-affiliated FCMs that are clearing members of the NYMEX. Company is not currently a clearing member of the NYMEX, and must obtain the Board's approval before becoming a clearing member of NYMEX or any other commodities exchange. An omnibus account is an arrangement between a member clearing firm of an exchange and a nonmember firm that seeks to conduct business on that exchange, whereby the clearing firm executes and clears transactions for the nonmember firm and its customers. The omnibus account reflects all positions of the nonmember firm's customers, but is divided into separate segments for purposes of calculating margin requirements, reporting current holdings, and other matters. See Northern Trust Corporation, 79 Federal Reserve Bulletin 723, 724 n.4 (1993).

^{4.} In those circumstances where a customer defaults on a contract after the termination of futures trading and Company is required to make or take delivery of the underlying commodity, or where Com-

physical commodities themselves. In addition, Company does not propose to, and will not, act as a commodities trading advisor,⁵ or otherwise provide investment advice with regard to the proposed instruments. Company will provide the proposed FCM services only to institutional customers,⁶ and will not provide such services to retail brokerage customers, locals, or market makers.⁷

Notice of the application, affording interested persons an opportunity to submit comments on the proposal, has been published (58 Federal Register 3950 (1993)). The time for filing comments has expired, and the Board has considered the application and all comments received in light of the public interest factors set forth in section 4(c)(8) of the BHC Act.

Applicant, with total consolidated assets equivalent to approximately \$84.8 billion, is the 61st largest bank in the world, and the third largest bank in Canada.8 In the United States, Applicant controls fifteen banks in Illinois, Arizona, and California,9 operates three non-

pany exercises its rights to liquidate a customer's account, Company is permitted to take those actions necessary to mitigate its damages, including acting for its own account in retendering or redelivering the commodity, entering into an exchange-for-physical transaction, or entering into an offsetting transaction in the cash market, provided these or other appropriate actions are taken as soon as practicable.

5. Under the Commodity Exchange Act, a commodity trading advisor includes, with certain exceptions, "any person who, for compensation or profit, engages in the business of advising others, either directly or through publications or writings, as to the value of commodities or as to the advisability of trading in any commodity for future delivery on or subject to the rules of any contract market, or who for compensation or profit, and as part of a regular business, issues or promulgates analyses or reports concerning commodities." 7 U.S.C. § 2.

6. See 12 C.F.R. 225.2(g).

7. Applicant anticipates that, following consummation of the proposal, approximately 10 percent of Company's business would be conducted on behalf of managed commodity funds (or commodity pools), which engage in speculative trading rather than trading for hedging purposes. Most of Company's customers engage predominantly in non-speculative trading. Managed commodity funds are regulated and supervised by the Commodity Futures Trading Commission ("CFTC") and the National Futures Association. None of the managed commodity funds would be owned, sponsored, or advised by, or otherwise affiliated with, Applicant. Company would trade on behalf of managed commodity funds only if those funds have acceptable draw down provisions. When a fund declines in value to a specific level of the initial value of the fund, the fund must cease its trading operations, pay its liabilities, and distribute its remaining assets to investors. For most funds, the draw down level is set at 30 to 70 percent of the initial fund value. All new customers will be subject to Company's existing credit analysis and criteria. With respect to managed commodity fund customers, Company will apply its current credit approval procedures to both the funds and their managers. Applicant has committed to provide the Federal Reserve System with prior notice of any significant change in Company's customer base.

8. Data are as of July 31, 1993.

9. The banks controlled by Applicant are: Harris Trust and Savings Bank, Chicago, Illinois; Harris Bank Argo, Summit, Illinois; Harris Bank Roselle, Roselle, Illinois; Harris Bank Hinsdale, N.A., Hinsdale, Illinois; Harris Bank Winnetka, N.A., Winnetka, Illinois; Harris Bank Naperville, Naperville, Illinois; Harris Bank Glencoe-Northbrook, N.A., Glencoe, Illinois; Harris Bank Wilmette, N.A., Wilmette, Illinois; Harris Bank Barrington, N.A., Barrington, Illinois;

deposit trust companies in New York and Florida, ¹⁰ and owns a corporation organized pursuant to section 25(a) of the Federal Reserve Act (12 U.S.C. § 611 et seq.) ("Edge Act"). ¹¹ Applicant also maintains branches in Chicago, Illinois, and New York, New York, an agency in Houston, Texas, and a representative office in Los Angeles, California. Applicant has received prior Federal Reserve approval to engage directly and through subsidiaries in a broad range of nonbanking activities.

Company is an FCM registered with the CFTC, and is, therefore, subject to the record-keeping, reporting, fiduciary standards, and other requirements of the Commodity Exchange Act (7 U.S.C. § 1 et seq.) and the CFTC. Company, with a main office in Chicago, Illinois, and a branch office in London, England, is currently engaged in executing and clearing on major commodities exchanges futures and options on futures on financial commodities and certain broad-based and widely traded stock and bond indices. ¹² Company does not trade for its own account, provide investment advisory services to its customers, or manage discretionary trading accounts.

The Board has not previously approved the execution and clearance by bank holding companies of futures and options on futures on non-financial commodities. To date, the Board has limited its approval to acting as an FCM in the execution and clearance on major commodities exchanges of futures and options on futures on a variety of financial commodities, such as gold and silver bullion and coins, foreign exchange, government securities, certificates of deposit and money market instruments that banks may buy and sell for their own accounts, and stock and bond indices.¹³

Harris Bank Libertyville, Libertyville, Illinois; Harris Bank St. Charles, St. Charles, Illinois; Harris Bank Batavia, N.A., Batavia, Illinois; Harris Bank Frankfort, Frankfort, Illinois; Harris Trust Bank of Arizona, Scottsdale, Arizona; and Harris Trust Company of California, Los Angeles, California.

10. The non-deposit trust companies operated by Applicant are: Bank of Montreal Trust Company, New York, New York; Harris Trust Company of New York, New York, New York; and Harris Trust Company of Florida, West Palm Beach, Florida. These non-deposit trust companies are operated pursuant to section 225.25(b)(3) of the Board's Regulation Y (12 C.F.R. 225.25(b)(3)).

11. The Edge Act corporation owned by Applicant is Harris Bank International Corporation, New York, New York.

12. See Bank of Montreal, 71 Federal Reserve Bulletin 970 (1985). Company currently engages in FCM activities on the CME, the CBOT, the Commodity Exchange, the London International Financial Futures and Options Exchange, the Marche a Terme International de France, and the Singapore International Monetary Exchange.

13. See 12 C.F.R. 225.25(b)(18); J.P. Morgan & Co. Incorporated, 71 Federal Reserve Bulletin 251 (1985); Bankers Trust New York Corporation, 71 Federal Reserve Bulletin 111 (1985); Republic New York Corporation, 63 Federal Reserve Bulletin 951 (1977); Standard and Chartered Banking Group Ltd., 38 Federal Register 27,552 (1973). The proposed clearing without executing activities were recently approved by the Board in Northern Trust Corporation, 79

Section 4(c)(8) of the BHC Act provides that a bank holding company may, with Board approval, engage in any activity that the Board determines to be "closely related to banking or managing or controlling banks." The Board also must determine that the activity is a proper incident to banking. In judging whether the performance of an activity meets the proper incident to banking test, the Board must determine whether the proposed activity may be reasonably expected to produce public benefits that outweigh any possible adverse effects.

A particular activity may be deemed closely related to banking if it is demonstrated that:

- (1) Banks generally provide the proposed services; or
- (2) Banks generally provide services that are operationally or functionally similar to the proposed services so as to equip them particularly well to provide the proposed services; or
- (3) Banks generally provide services that are so integrally related to the proposed services as to require their provision in a specialized form. See National Courier Ass'n v. Board of Governors, 516 F.2d 1229, 1237 (D.C. Cir. 1975).¹⁴

The Office of the Comptroller of the Currency ("OCC") has determined that national banks may engage in a broad range of FCM activities in all types of exchange-traded futures and options contracts, on both financial and non-financial commodities, for the accounts of customers, and for their own accounts for hedging purposes.¹⁵ In making this determination, the OCC concluded that standardized futures and options on futures traded on commodities exchanges are financial instruments, regardless of the underlying commodity upon which a future or option is based. The OCC reasoned that the clearing process for any futures contract or option on a futures contract involves essentially an extension of credit because, upon the receipt of an executed order from a customer, the clearing broker supplies its own credit to an order on behalf of the customer, and transmits the order to the

Federal Reserve Bulletin 723 (1993), and The Sakura Bank, Limited, 79 Federal Reserve Bulletin 728 (1993). Company proposes to conduct its clearing only activities subject to the same conditions and limitations set forth in these orders, including the use of "give-up agreements" by and among Company, Company's customers, and the nonaffiliated executing FCM, that would allow Company to refuse to clear trades that exceed specified risk parameters.

exchange clearing organization for settlement. The OCC also concluded that the execution, clearance, and advisory services provided by an FCM to its customers are essentially the same irrespective of whether the underlying commodities are financial or non-financial in nature.

On the basis of this authority, a number of national banks act as an FCM in the execution and clearance of futures and options on futures on a broad array of financial and non-financial commodities. The State of New York Banking Department also has permitted several New York-chartered banks to engage, to a limited extent, in FCM activities involving derivative instruments on non-financial commodities.

The Board previously has authorized bank holding companies to conduct FCM activities with respect to numerous instruments based on financial commodities. In most respects, acting as an FCM in connection with contracts involving non-financial commodities is operationally and functionally similar to conducting FCM activities with respect to derivative contracts involving financial commodities. In both cases, an FCM monitors customer credit risk and trading exposure; assesses and collects initial and maintenance margins from customers; and brokers, executes, and clears trades.

Moreover, acting as an FCM for derivative instruments involving non-financial commodities involves functions, skills, risk, and expertise that are substantially similar to those associated with the execution and clearance of financial futures and options contracts that previously have been approved by the Board. In this regard, the mechanics of executing and clearing trades (evaluating customer credit risk, receiving and recording orders, monitoring customer trading positions, transmitting orders to the appropriate exchange trading pits for execution, securing counterparties for the trades, completing trade execution slips, confirming and settling trades, and reconciling trading sheets) are operationally the same whether the commodity underlying the exchange-traded derivative instrument is financial or non-financial. The rules and regulations of the CFTC, as well as the rules, procedures, practices, capital requirements, and safeguards of the various commodities exchanges, govern both the execution and clearance of non-financial futures and options and the execution and clearance of financial futures and options.16

^{14.} In addition, the Board may consider any other basis that may demonstrate that the proposed activity has a reasonable or close connection or relationship to banking or managing or controlling banks. See Board Statement Regarding Regulation Y, 49 Federal Register 806 (1984); Securities Industry Association v. Board of Governors, 468 U.S. 207, 210-11 n.5 (1984).

^{15.} OCC Interpretive Letter No. 507 (May 5, 1990), and OCC Interpretive Letter No. 494 (Dec. 20, 1989).

^{16.} In 1991, the Board permitted bank holding companies to provide investment advice with respect to trading futures contracts and options on futures contracts in non-financial commodities, such as agricultural and energy commodities. See Swiss Bank Corporation, 77 Federal Reserve Bulletin 126 (1991). In approving this activity, the Board found that the provision of investment advice with respect to investing in futures and options on futures on non-financial commod-

In 1981, the Board denied a proposal under another provision of the BHC Act and the Federal Reserve Act by a corporation organized pursuant to section 25(a) of the Federal Reserve Act to engage through a foreign FCM subsidiary in trading certain non-financial commodities futures on a foreign futures exchange. 17 In that case, the Board determined that there was an insufficient nexus between the proposed activity and other banking or financial activities of that time. 18 Since the Board's decision in that case, the OCC has permitted national banks to act as an FCM for derivatives on all types of non-financial commodities in the futures and options markets. The State of New York has granted similar approval to a small number of state-chartered banks.

Further, the Board has significantly expanded the FCM activities that are permissible for bank holding company subsidiaries, and has determined that providing investment advice to sophisticated institutional customers on futures and options on futures on nonfinancial commodities is an activity closely related to banking. Thus, the nexus between the proposed activity and the banking and financial activities currently provided by banks, bank holding companies, and their subsidiaries is more substantial than existed in 1981.

For these reasons, and based on all the facts of record, the Board believes that the proposed activity of acting as an FCM in the execution and clearance of futures and options on futures on non-financial commodities, as proposed by Applicant, is an activity that is closely related to banking for purposes of the BHC Act. 19 In order to approve this application, the Board also must determine that the performance of the proposed activities by Applicant can reasonably be expected to produce public benefits that would outweigh possible adverse effects under the proper incident to banking standard of section 4(c)(8) of the BHC Act.

The Board notes that both Company and the commodities exchanges on which the proposed FCM activities would be conducted are subject to regulatory oversight by the CFTC. Company's trading and clearing activities also would be subject to regulation and review by the CFTC and the commodities exchanges.

Applicant has committed to conduct the proposed activities subject to the same rules and procedures imposed by the Board on FCM activities in derivatives of financial commodities, including prohibitions on extending credit to customers for the purpose of meeting margin requirements, and on trading for the account of the bank holding company or any affiliate for purposes other than hedging.²⁰ In addition, in order to minimize risks associated with the delivery of non-financial commodities, Applicant has committed to take a number of steps in the event one of Company's customers has an open position in a contract after the termination of futures trading, and the customer is unable or unwilling to make or take delivery.21

Applicant currently provides banking and other financial services to producers, processors, and users of the agricultural and energy products underlying the proposed futures and options contracts, and Applicant has developed considerable experience in the markets for those commodities. In addition, Applicant has, for many years, provided a full range of credit, cash management, investment management, foreign exchange, and hedging products and services to businesses within the natural resources and agricultural industries. The proposed FCM services are intended to complement and expand these existing services. The Board expects that the de novo entry of Applicant into the market for the proposed services in the United States would provide added convenience to Applicant's customers, and would increase the level of competition among existing providers of these services.

In every case involving a nonbanking acquisition under section 4 of the BHC Act, the Board must also consider the financial condition and resources of the

ities appeared to be the functional equivalent of providing advice with respect to futures and options on futures on financial commodities, and that exchange-traded futures and options on futures involving non-financial commodities were essentially financial instruments.

^{17.} Bankers International Corporation, 67 Federal Reserve Bulletin 364 (1981).

^{18.} The Board also concluded that neither the FCM nor the foreign exchange was subject to governmental oversight.

^{19.} The Board has determined to seek public comment on a proposal to amend its Regulation Y to add this activity to its regulatory list of permissible nonbanking activities. In the interim, the Board has delegated authority to the Reserve Banks to act on applications to conduct these activities within the parameters set forth in this order.

^{20.} See 12 C.F.R. 225.25(b)(18). Applicant also has committed that Company will not enter into any tying arrangements with any lending affiliates.

^{21.} Among the steps Applicant will take are:

⁽¹⁾ Retendering the commodity (which involves placing the commodity up for delivery at the exchange involved without taking delivery of the commodity);

⁽²⁾ Redelivering the commodity (which involves placing the commodity up for delivery at the exchange involved after taking delivery of the commodity);

⁽³⁾ Offsetting the customer's open position through an exchangefor-physical transaction (which involves exchanging a cash position for a futures position) using the same procedures applicable to exchange-traded futures transactions (there is an established and relatively liquid market for exchange-for-physical transactions in most commodities);

⁽⁴⁾ Offsetting the commodity in the cash market (which involves either selling the delivered commodity for cash, or purchasing the commodity to facilitate a delivery); and

⁽⁵⁾ Seeking to avoid delivery through some other mechanism, such as the NYMEX's pre-matching system (which combines a notification system, the matching of counterparties, negotiation assistance, and cash-settlement procedures).

applicant and its subsidiaries and the effect of the proposal on these resources.²² In this case, the Board notes that Applicant meets the relevant risk-based capital standards consistent with the Basle Accord, and has capital equivalent to that which would be required of a U.S. banking organization. Company reports capital in excess of the regulatory minima. In view of these and other facts of record, the Board has determined that the financial factors are consistent with approval of this application. The managerial resources of Applicant and its subsidiaries also are consistent with approval.

Based on the commitments made by Applicant regarding its conduct of the proposed activities, the limitations on the activities noted in this Order, and all the facts of record, the Board has determined that the performance of the proposed activities by Applicant could reasonably be expected to produce public benefits that would outweigh the possible adverse effects under the proper incident to banking standard of section 4(c)(8) of the BHC Act.

Based on the foregoing and all the facts of record, the Board has determined to, and hereby does, approve the application subject to all the terms and conditions set forth in this Order, and in the abovenoted Board regulations and orders that relate to these activities. The Board's determination is also subject to all of the terms and conditions set forth in the Board's Regulation Y, including those in sections 225.4(d) and 225.23(b), and to the Board's authority to require modification or termination of the activities of a bank holding company or any of its subsidiaries as the Board finds necessary to assure compliance with, and to prevent evasion of, the provisions of the BHC Act, and the Board's regulations and orders issued thereunder. The Board's decision is specifically conditioned on compliance with all of the commitments made in this application, including the commitments discussed in this order and the conditions set forth in this Order and in the above-noted Board regulations and orders. These commitments and conditions shall be deemed to be conditions imposed in writing by the Board in connection with its findings and decisions, and may be enforced in proceedings under applicable law.

This transaction shall not be consummated later than three months after the effective date of this Order, unless such period is extended for good cause by the Board or by the Federal Reserve Bank of Chicago, pursuant to delegated authority.

By order of the Board of Governors, effective September 28, 1993.

Voting for this action: Chairman Greenspan and Governors Mullins, Angell, LaWare, and Phillips. Absent and not voting: Governors Kelley and Lindsey.

NationsBank Corporation Charlotte, North Carolina

Order Approving Application to Engage De Novo in Inventory Collateral Inspection Services

NationsBank Corporation, Charlotte, North Carolina ("Applicant"), a bank holding company within the meaning of the Bank Holding Company Act ("BHC Act"), has applied, pursuant to section 4(c)(8) of the BHC Act (12 U.S.C. § 1843(c)(8)) and section 225.23(a)(3) of the Board's Regulation Y (12 C.F.R. 225.23(a)(3)), to engage *de novo*, through its wholly owned subsidiary, NationsCredit Commercial Corporation, Allentown, Pennsylvania ("Company"), in providing the following services to customers who make loans secured by inventory:

(1) Identifying inventory and determining its general condition, level of protection, and amount of use, as appropriate;

^{22. 12} C.F.R. 225.24; The Fuji Bank, Limited, 75 Federal Reserve Bulletin 94 (1989); Bayerische Vereinsbank AG, 73 Federal Reserve Bulletin 155 (1987).

- (2) Identifying inventory subject to a purchase money security interest under the Uniform Commercial Code;
- (3) Identifying missing inventory and potential credit exposure as a result thereof; and
- (4) Supporting the proper allocation of loan payments that are related to the aging or sale of inventory.

Company would provide inspection services only with respect to inventory that is pledged as collateral for a loan. Applicant anticipates that its customers would include manufacturers or multi-state distributors of goods that provide the financing for the purchase of the goods; finance companies that provide purchase money inventory financing on a multi-state basis; and large regional banks that provide purchase money inventory financing to retailers on a multi-state basis. Applicant would provide these services throughout the United States.

Notice of this application, affording interested persons an opportunity to submit comments, has been published (58 Federal Register 41,092 (1993)). The time for filing comments has expired, and the Board has considered this application and all comments received in light of the factors set forth in section 4(c)(8) of the BHC Act.

Applicant, with total consolidated assets of \$122.9 billion, is the fourth largest banking organization in the United States.² Applicant operates subsidiary banks in eleven states and engages directly and through subsidiaries in a variety of permissible nonbanking activities.

In this case, Applicant proposes to provide collateral inspection services to third party lenders, but not in connection with loans made or serviced by Applicant. Applicant argues that this activity is identical to the collateral inspection services it performs for its own extensions of credit.

The Board has, by regulation, authorized bank holding companies to make, acquire, and service loans for the company's own account or for the account of others.³ Banks inspect collateral for loans originated as part of their direct lending activities,⁴ and bank holding companies currently inspect and survey collateral in connection with loans made or serviced by

The Board also is required to determine whether the performance of the proposed activity by Applicant is a proper incident to banking—that is, whether the proposed activity "can reasonably be expected to produce benefits, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interest, or unsound banking practices." 12 U.S.C. § 1843(c)(8).

Consummation of this proposal can reasonably be expected to result in public benefits by providing added convenience to Applicant's customers. In addition, this proposal can reasonably be expected to facilitate the entry of additional competitors into the inventory financing market, in particular smaller financial institutions and manufacturers that are unable or unwilling to perform for themselves the collateral inspections required to monitor these loans. This proposal therefore may increase the availability of inventory financing. There is also no evidence in the record to indicate that consummation of this proposal is likely to result in any significantly adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices that are not outweighed by the public benefits in this case.

The financial and managerial resources of Applicant and Company also are consistent with approval. Accordingly, on the basis of all the facts of record and commitments made by Applicant, the Board concludes that the public benefits that would result from approval of this application outweigh the potential adverse effects, and that the public interest factors it must consider under section 4(c)(8) of the BHC Act are consistent with approval.

Based on the foregoing and all the other facts of record, the Board has determined to, and hereby

the bank holding company.⁵ Bank holding companies have the necessary expertise to identify and survey loan collateral, and could apply this expertise to inspection services for other lenders on a stand-alone basis. Applicant would provide these services only in connection with an extension of credit either by Applicant or by a third party. The Board believes that collateral inspection services as proposed by Applicant are included within the activities authorized by section 225.25(b)(1) of the Board's Regulation Y.

^{1.} Company does not propose at this time to appraise, repossess, or resell the collateral. These activities may be engaged in by a bank holding company. See 12 C.F.R. 225.25(b)(13) and (23).

^{2.} Data are as of June 30, 1993.

^{3.} Section 225.25(b)(1) of the Board's Regulation Y (12 C.F.R 225.25(b)(1)).

^{4.} See, e.g., Office of the Comptroller of the Currency Interpretative Letter No. 185 (March 11, 1981) (national bank required to maintain collateral inspection reports on file to support exception from single borrower lending limits under the National Bank Act (12 U.S.C. § 84)).

^{5.} Section 225.25(b)(1) of the Board's Regulation Y authorizes the servicing of loans of the type made by commercial finance and factoring companies, which companies routinely perform collateral inspection services. See also The Fort Worth National Corporation, 60 Federal Reserve Bulletin 382, 383 (1974) (approving the supervision and inspection of collateral pledged in connection with the origination and servicing of agricultural loans).

does, approve this application. This approval is specifically conditioned on compliance by Applicant with all the commitments and conditions made in connection with this application. The Board's determination also is subject to all of the conditions contained in the Board's Regulation Y, including those in sections 225.4(d) and 225.23(b) (12 C.F.R. 225.4(d) and 225.23(b)(3)), and to the Board's authority to require such modification or termination of the activities of a bank holding company or any of its subsidiaries, as it finds necessary to assure compliance with, or prevent evasion of, the provisions and purposes of the BHC Act and the Board's regulations and orders issued thereunder. All the commitments and conditions relied on in reaching this decision in this case are deemed to be conditions imposed in writing by the Board, and as such may be enforced in proceedings under applicable law.

This transaction shall not be consummated later than three months after the effective date of this Order, unless such period is extended for good cause by the Board or by the Federal Reserve Bank of Richmond, acting pursuant to delegated authority.

By order of the Board of Governors, effective September 13, 1993.

Voting for this action: Vice Chairman Mullins and Governors Kelley, LaWare, Lindsey, and Phillips. Absent and not voting: Chairman Greenspan and Governor Angell.

JENNIFER J. JOHNSON Associate Secretary of the Board

Orders Issued Under Sections 3 and 4 of the Bank Holding Company Act

Banc One Corporation Columbus, Ohio

Order Approving Acquisition of a Bank Holding Company

Banc One Corporation, Columbus, Ohio ("Banc One"), a bank holding company within the meaning of the Bank Holding Company Act ("BHC Act"), has applied under sections 3 and 4 of the BHC Act to acquire Central Banking Group, Inc., Oklahoma City, Oklahoma ("CBG"), and thereby acquire indirectly Central Bank of Oklahoma City and Friendly Bank of Oklahoma City, both of Oklahoma City, Oklahoma.

Banc One also has applied under section 4(c)(8) of the BHC Act (12 U.S.C. § 1843(c)(8)) to acquire Central Financial Life Insurance Company, Inc., an Arizona reinsurance company ("Central Life"), and thereby engage in underwriting credit life, accident, and health insurance sold in connection with extensions of credit by CBG's subsidiary banks pursuant to section 225.25(b)(8) of the Board's Regulation Y (12 C.F.R. 225.25(b)(8)).

Notice of the applications, affording interested persons an opportunity to submit comments, has been published (58 Federal Register 39,026 (1993)). The time for filing comments has expired, and the Board has considered all comments received in light of the factors set forth in sections 3(c) and 4(c)(8) of the BHC Act.

Banc One, with total deposits of approximately \$59.4 billion, controls banking subsidiaries in Ohio, Indiana, Michigan, Wisconsin, Illinois, Texas, Colorado, Kentucky, and West Virginia.² Banc One does not currently control any banks in Oklahoma. CBG is the fifth largest commercial banking organization in Oklahoma, controlling deposits of \$484.9 million, representing 1.9 percent of the total deposits in commercial banking organizations in the state. Upon consummation of this proposal, Banc One would become the fifth largest commercial banking organization in Oklahoma, controlling 1.9 percent of the total deposits in commercial banks in the state.

Banc One and CBG do not compete directly in any relevant banking markets. Based on all the facts of record, the Board concludes that the acquisition of CBG and its subsidiary banks by Banc One would not result in any significantly adverse effects on competition in any relevant banking market.

Douglas Amendment Analysis

Section 3(d) of the BHC Act, the Douglas Amendment, prohibits the Board from approving an application by a bank holding company to acquire control of any bank located outside of the bank holding company's home state, unless such acquisition is "specifically authorized by the statute laws of the State in which such bank is located, by language to that effect and not merely by implication." For purposes of the Douglas Amendment, the home state of Banc One is Ohio.4

^{1.} Banc One proposes to acquire CBG and its subsidiaries indirectly through its wholly owned subsidiary, Banc One Oklahoma Corporation, Oklahoma City, Oklahoma ("Banc One Oklahoma"). In this regard, Banc One Oklahoma also has applied pursuant to section 3 of the BHC Act to acquire CBG and thereby become a bank holding

company, and to acquire CBG's nonbank subsidiary pursuant to section 4 of the BHC Act.

^{2.} State deposit data are as of March 31, 1993, and include acquisitions approved by the Board as of that date.

^{3. 12} U.S.C. § 1842(d).

^{4.} A bank holding company's home state is that state in which the operations of the bank holding company's banking subsidiaries were principally conducted on July 1, 1966, or the date on which the company became a bank holding company, whichever is later.

This proposal would represent the initial entry of an Ohio bank holding company into Oklahoma. In considering this proposal, the Board has analyzed the interstate banking statutes of Ohio and Oklahoma, and has concluded that Banc One is authorized under the laws of Oklahoma to acquire the subsidiary banks of CBG in Oklahoma.⁵ Accordingly, the Board's approval of this proposal is not prohibited by the Douglas Amendment. Approval of the proposed transaction is conditioned, however, upon Banc One's satisfying the requirements of Oklahoma's interstate banking statute pertaining to shareholder approval and other requirements of the statute.⁶

Convenience and Needs Considerations

In acting upon an application to acquire a depository institution under the BHC Act, the Board must consider the convenience and needs of the communities to be served, and take into account the records of the relevant depository institutions under the Community Reinvestment Act (12 U.S.C. § 2901 et seq.) ("CRA"). The CRA requires the federal financial supervisory agencies to encourage financial institutions to help meet the credit needs of the local communities in which they operate, consistent with the safe and sound operation of such institutions. To accomplish this end, the CRA requires the appropriate federal supervisory authority to "assess the institution's record of meeting the credit needs of its entire community, including low- and moderate-income neighborhoods, consistent with the safe and sound operation of such institution," and to take that record into account in its evaluation of bank holding company applications.7

In this regard, the Board has received comments from the Coalition of Neighborhoods ("Coalition") alleging that Banc One and its subsidiary bank, Banc One Cincinnati, N.A., Cincinnati, Ohio ("Bank One Cincinnati"), have generally not met the credit needs of minorities, women and low- and moderate-income individuals in the Cincinnati area.⁸ In particular, the

Coalition maintains that the bank's record of performance under the CRA is deficient when measured under a number of the assessment factors used by federal regulators to evaluate CRA performance in their examinations. The Board also has received comments from the Main Street Business Association ("MSBA"), alleging that Banc One's subsidiary, Banc One Community Development Corporation, Columbus, Ohio ("Banc One CDC"), a community development corporation ("CDC"), has failed to invest in the Main Street commercial district and I-670 corridor section of Columbus, Ohio, which were identified as targeted investment areas in Banc One's application to form the CDC.

In its consideration of the convenience and needs factor, the Board has carefully reviewed the entire record of CRA performance of Banc One and CBG and their subsidiary banks, as well as all comments received regarding these applications, including Banc One's response to those comments, and all of the other relevant facts of record in light of the CRA, the Board's regulations, and the Statement of the Federal Financial Supervisory Agencies Regarding the Community Reinvestment Act ("Agency CRA Statement"), 10

A. CRA Performance Examinations

The Agency CRA Statement provides that a CRA examination is an important and often controlling factor in the consideration of an institution's CRA record, and that these reports will be given great weight in the applications process. The Board notes that Bank One Cincinnati received a "satisfactory" rating from the Office of the Comptroller of the Currency ("OCC"), at its most recent examination for CRA performance as of July 20, 1993 (the "1993 OCC Examination"), and that Banc One's lead subsidiary bank in Ohio, Bank One, Columbus, N.A., Columbus, Ohio ("Banc One Columbus"), received an "outstanding" rating in April 1993 from the OCC. In addition,

^{5.} See 6 Okla. Stat. Ann. § 506 (1989); Ohio Rev. Code Ann. § 1101.05. Oklahoma's interstate banking statute permits an out-of-state bank holding company to acquire a bank in Oklahoma provided that the home state of the applicant permits Oklahoma-based bank holding companies to acquire banks in that state on a reciprocal basis, and certain other requirements, including shareholder notice and approval, are met.

^{6.} The Oklahoma Bank Commissioner has indicated that the proposed acquisition would, assuming the various procedural and other statutory requirements are fulfilled, be permissible under the Oklahoma interstate banking statute.

^{7. 12} U.S.C. § 2903.

^{8.} The Coalition believes that Banc One should not be permitted to expand its banking operations into states other than Ohio until Banc One has established with communities in Cincinnati a set of measur-

able guidelines for meeting this area's credit needs, and a process for monitoring Banc One's progress in abiding by these guidelines. In this regard, the Coalition has requested the Board to endorse written agreements with community groups, and require Banc One to make specific dollar commitments to community groups such as the Coalition.

The Coalition's comments provide specific suggestions on methods that examiners can use to improve their analysis of a bank's performance under these factors.

^{10. 54} Federal Register 13,742 (1989).

^{11. 54} Federal Register 13,742 (1989). The Board recently considered the record of performance of Banc One under the CRA. See Banc One Corporation, 79 Federal Reserve Bulletin 872 (1993).

^{12.} In CRA examinations completed by the Federal Reserve Bank of Kansas City on May 3, 1993, Friendly Bank of Oklahoma City

all but two of Banc One's 78 subsidiary banks have received either "outstanding" or "satisfactory" ratings from their primary regulators in their most recent examinations of their CRA performance. 13

B. CRA Record of Performance of Bank One Cincinnati

As noted above, one commenter alleges that Bank One Cincinnati has not taken sufficient steps to help meet the credit needs of all neighborhoods in its delineated community in the Cincinnati area. The Board has reviewed the CRA record of performance of Bank One Cincinnati in light of these comments.

Lending and Community Development Activities. Bank One Cincinnati offers a variety of conventional loan products that the OCC concluded in its 1993 examination were suited to the ascertained credit needs of the bank's community. In addition, the bank participates government-insured and sponsored programs, including Federal Housing Administration mortgage loans, Farmer's Home Administration loans in rural areas, Ohio Housing Finance Agency loans for first time home buyers and Small Business Administration loans for small businesses.

The bank has also taken certain measures to increase the availability of mortgage financing for low- and moderate-income individuals, including hiring an officer specializing in affordable housing lending and developing the "Welcome Home" loan program. This program is designed to facilitate home ownership for low- and moderate-income individuals by reducing down payment requirements and closing costs, eliminating mortgage guaranty insurance, and employing flexible under-

received an "outstanding" rating and Central Bank of Oklahoma City

writing guidelines. As of June 30, 1993, 131 applications had been approved from low- and moderate-income borrowers, including 22 applications from African-American borrowers, for a total of approximately \$7.8 million in housing loans.

In addition, Bank One Cincinnati formed a Small Business Banking Division in 1992 to promote lending to area firms with annual sales of less than \$2 million. During the first half of 1993, Bank generated 71 applications from low- and moderate-income neighborhoods, and has made 30 of these loans. The bank has also introduced a revolving line of credit designed to meet the needs of small business borrowers.

Investments in local community development and redevelopment programs also constitute part of the bank's CRA performance record. Bank One Cincinnati personnel monitor community development and redevelopment programs through membership in organizations such as the Neighborhood Development Corporation Association of Cincinnati, the Brown/Clermont County Housing Coalition, and the Ohio Community Development Corporation Association. The bank has committed funds to the Cincinnati Equity Fund, a local consortium of corporations and financial institutions formed for the purpose of purchasing and rehabilitating housing units for low- and moderate-income individuals, and financing for redevelopment in the Roselawn neighborhood targeted for redevelopment by the City of Cincinnati.

Geographic Distribution of Loans/Branch Offices. The 1993 OCC Examination concluded that the geographic distribution of Bank One Cincinnati's credit extensions, applications, and denials reflected a reasonable penetration in all segments of the delineated community, including low- and moderate-income areas. In this regard, examiners found the areas with the highest market shares were the areas that Bank One Cincinnati had served the longest. Examiners found in the 1993 OCC Examination that Bank One Cincinnati's offices were reasonably accessible to all segments of its service community. In this regard, six of its thirty-eight full service branches are located in low- and moderateincome neighborhoods, and a majority of these branches offer Saturday hours. The 1993 OCC Examination concluded that the bank's record of opening, acquiring and closing banking locations has not adversely affected the level of services in low- and moderate-income areas.14

Other Aspects of CRA Performance. Bank One Cincinnati ascertains credit needs in many ways, in-

received a "satisfactory" rating.

13. The OCC has assigned a " 'needs to improve" rating to Bank One, Cleveland, N.A., Cleveland, Ohio ("Bank One Cleveland"). As required by the Board's Order in Banc One's acquisition of Valley National Corporation, Phoenix, Arizona, Banc One has submitted to the Board a copy of its plan to address weaknesses in Bank One Cleveland's CRA performance and its first quarterly progress reports with respect to this improvement plan. See Banc One Corporation, 79 Federal Reserve Bulletin 524 (1993). Several new loan products designed to assist in meeting the credit needs of low- and moderateincome borrowers, and new programs for analyzing the geographic distribution of the bank's loans were recently reviewed by the Board in connection with Banc One's acquisition of Colorado Western Bancorp, Inc., Montrose, Colorado. See Banc One Corporation, 79 Federal Reserve Bulletin 872 (1993).

Nicholas County Bank, Summersville, West Virginia received a "needs to improve" rating from the FDIC in December, 1991, prior to its acquisition by Banc One. See Banc One Corporation, 79 Federal Reserve Bulletin 872 n.13 (1993). The FDIC has indicated to the Board that it recently conducted a limited review of this bank's CRA program and procedures, and believes that this bank has strengthened its CRA program and addressed concerns raised by examiners at the 1991 examination.

The Board has considered information collected in the course of certain ongoing examinations of subsidiary banks of Banc One.

^{14.} The Coalition alleges that Bank One Cincinnati has failed to establish branches in low- and moderate-income areas in Cincinnati while establishing branches in predominantly white middle- and upper-income neighborhoods in the city.

cluding calling programs, meetings with civic and community groups, and an annual review of demographic data in relation to its lending activities. The bank also receives input on credit needs and public initiatives from Community Advisory Committees made up of representatives from businesses, community groups and governmental agencies that meet on a quarterly basis. The 1993 OCC Examination noted that these ascertainment efforts have resulted in the development of new products to meet specialized needs in the delineated community. For example, Bank One Cincinnati has created an Alternative Loan List of government assistance programs to assist women- and minority-owned businesses and participates in the Ohio MiniLoan programs.

Several aspects of Bank One Cincinnati's marketing programs are designed to ensure that all segments of the community, including low- and moderate-income areas, are informed of its products and services. In particular, the bank uses door hangers, bus bench ads, billboards, and advertising in publications and radio stations with large low- and moderate-income and minority audiences. 16 Bank One Cincinnati also has targeted its marketing efforts to better inform the community of the availability of its special affordable mortgage programs by participating in home ownership fairs and seminars and contacting realtors who serve low- and moderate-income areas.

C. HMDA Data

The Coalition alleges that data that Bank One Cincinnati is required to file under the Home Mortgage Disclosure Act (12 U.S.C. § 2801 et seq.) ("HMDA") show that Bank One Cincinnati has not met the credit needs of its delineated service area, especially the needs of African-Americans in the sections of Hamilton County represented by the Coalition. These data indicate some disparities in approvals and denials of loan applications according to racial and ethnic group and income status in the areas served by Bank One Cincinnati. Because all banks are obligated to adopt and implement lending practices that ensure not only

safe and sound lending, but also equal access to credit by creditworthy applicants regardless of race, the Board is concerned when the record of an institution indicates disparities in lending to minority credit applicants. The Board recognizes, however, that HMDA data alone provide only a limited measure of any given institution's lending in its community. The Board also recognizes that HMDA data have limitations that make the data an inadequate basis, absent other information, for conclusively determining whether an institution has engaged in illegal discrimination on the basis of race or ethnicity in making lending decisions.

In examining Bank One Cincinnati, the OCC considered the bank's record of meeting community credit needs in light of the HMDA data filed by the bank for the years 1991 and 1992. The 1993 OCC Examination concluded that Bank One Cincinnati had not engaged in any illegal discriminatory credit practices. In this regard, Bank One Cincinnati's compliance officer reviews files of approved and denied consumer loan applications on a continuing basis as part of the bank's compliance program. The bank has established written policies, procedures and training that address illegal credit practices. The 1993 OCC Examination stated that equivalent levels of assistance were given to all applicants and underwriting standards were uniformly applied.

The OCC reviewed Bank One Cincinnati's record of lending in specific portions of the Cincinnati area, including Hamilton County, in light of claims by community advocates that the bank is not meeting the mortgage credit needs of low- and moderate-income individuals in these areas. In this regard, the 1993 OCC Examination states that Bank One Cincinnati should have been more aggressive in attempting to meet these credit needs when the bank entered Hamilton County in mid-1991. The 1993 OCC Examination concluded, however, that the geographic distribution of Bank One Cincinnati's credit extensions, applications, and denials reflected a reasonable penetration in all segments of the delineated community, including low- and moderate-income areas. The 1993 OCC Examination also indicated that certain factors may account for this weakness in Bank One Cincinnati's lending in this area. For example, the OCC noted that Bank One Cincinnati was aggressive in including low- and moderate-income areas within its delineated service area. Moreover, the OCC noted that management of Bank One Cincinnati has acknowledged the need to actively attempt to meet the credit needs of this area, and the bank has modified its marketing strategy to attract more mortgage applicants from these neighborhoods and has introduced the "Welcome Home" affordable housing product. As a result of these efforts, Bank One Cincinnati is receiving mortgage ap-

^{15.} The Coalition disputes the value of these advisory committees and other policy development and implementation efforts by Bank One Cincinnati because no women or minorities serve on the bank's board of directors. The 1993 OCC Examination found that the bank's board was satisfactorily involved in monitoring and improving CRA performance, and in particular, both the bank's board and senior management focused on the bank's penetration in low- and moderate-income and minority areas within the delineated community.

^{16.} The Coalition alleges that these efforts are insufficient because the bank does not use a sufficient number of black models and black-owned advertising agencies. The 1993 OCC Examination concluded that bank's marketing programs satisfactorily informed all segments of the delineated community about its products and services.

plications from more low- and moderate-income areas in Hamilton County. 17

D. Banc One CDC

MSBA alleges that when Banc One sought approval to establish its CDC in 1987, Banc One represented that it would invest in public housing and economic revitalization projects in neighborhoods targeted by the City of Columbus ("Columbus") for rehabilitation, including the Main Street commercial district and the I-670 corridor. The MSBA alleges that Banc One CDC has failed to invest in these neighborhoods, and that Banc One CDC has sought to maximize its return on investment in publicly-subsidized housing developments instead of investing in economic development projects.¹⁸

The record indicates that the Banc One CDC supports the community development initiatives of all Banc One subsidiary banks, not just Banc One's activities in Columbus. ¹⁹ In some instances it serves as a catalyst for lending by Banc One subsidiary banks and in other cases, it provides technical support to subsidiary banks. Banc One CDC has made approximately \$1.6 million of investments in projects involving Banc One Columbus, and Banc One CDC has worked closely with Bank One Columbus to identify viable projects for development. The record in this case also indicates that Bank One Columbus has made various investments in the Main Street area and I-670 corridor, and has established credit relationships with minority-owned businesses in these areas. ²⁰

Conclusion Regarding Convenience and Needs Factors

On the basis of all the facts of record, including the comments provided by the Coalition and MSBA, Banc One's response to these comments, and relevant reports of examination, the Board concludes that convenience and needs considerations, including the CRA performance records of Banc One, CBG and their subsidiary banks, are consistent with approval of these applications.²¹ The Board will continue to monitor implementation of steps developed by Banc One and Bank One Cincinnati to improve this bank's CRA program, and take this review into account in future applications to establish a depository facility.

Other Considerations

The financial and managerial resources and future prospects of Banc One, Banc One Oklahoma, CBG, and their respective subsidiaries, and other supervisory factors the Board must consider under section 3 of the BHC Act, also are consistent with approval of this proposal.

Banc One also has applied, pursuant to section 4 of the BHC Act, to engage in underwriting credit life, accident and health insurance sold in connection with extensions of credit by CBG banks. As noted above, the Board has previously determined that these activities are permissible for bank holding companies under section 4(c)(8) of the BHC Act and the Board's Regulation Y,²² and Banc One proposes to conduct these activities in accordance with the Board's regulations.

^{17.} The 1993 OCC Examination indicated that in 1991, the bank received no mortgage applications from 23 low- and moderate-income census tracts in Hamilton County, but that in 1992 the bank received mortgage applications from all but 10 of these census tracts.

^{18.} The MSBA maintains that this failure constitutes a misrepresentation of the purpose for the subsidiary when it was approved to engage in community development activities under section 225.25(b)(6) of the Board's Regulation Y, and has requested a public evaluation of its activities. In this regard, the 1987 application cited the Main Street commercial district and the I-670 corridors in Columbus as examples of targeted neighborhoods, but did not limit the CDC's activities to those areas. The System's approval of this application did not require Banc One CDC to invest in any specific project. Banc One CDC is subject to regular examination by the Federal Reserve Bank of Cleveland, and its activities were found to be in compliance with the Board's regulations in its most recent examination as of year-end 1992. In light of all facts of record, the Board does not believe Banc One CDC's purpose was misrepresented in the application.

^{19.} The Banc One CDC serves a twelve-state area, and as of September, 1993, this CDC has funded 45 projects in five states.

^{20.} For example, Bank One Columbus has:

⁽¹⁾ Extended credit to seven organizations in the Main Street area in the last three years;

⁽²⁾ Financed the acquisition and rehabilitation of a multi-family property under development by a Main Street community organization:

⁽³⁾ Extended credit, in conjunction with Banc One Mortgage Corporation, to a limited partnership in connection with the acquisition and redevelopment of a warehouse on Main Street;

⁽⁴⁾ Extended credit to several minority-owned businesses in the I-670 corridor; and

⁽⁵⁾ Established a credit relationship with the I-670 Community Development Corporation to facilitate land acquisition and development by this organization.

^{21.} The Coalition has requested a public hearing or meeting to collect information on whether Banc One Cincinnati engages in prohibited, discriminatory or other illegal credit practices. Section 3(b) of the BHC Act does not require the Board to hold a public hearing or meeting on an application unless the appropriate supervisory authority for the bank to be acquired makes a timely written recommendation of denial of the application. In this case, the Oklahoma Bank Commissioner has not recommended denial of the proposal.

Generally, under the Board's rules, the Board may, in its discretion, hold a public hearing or meeting on an application to clarify factual issues related to the application and to provide an opportunity for testimony, if appropriate. 12 C.F.R. 262.3(e) and 262.25(d). The Board has carefully considered this request. In the Board's view, the Coalition has had ample opportunity to present written submissions, and the Coalition has submitted written comments that have not identified material facts that are in dispute. Therefore, the Board has determined that a public meeting or hearing is not necessary to clarify the factual record in this application, or otherwise warranted in this case, and the request for a public hearing or meeting on this application is denied.

^{22.} See 12 C.F.R. 225.25(b)(8).

The record in this case indicates that there are numerous providers of these nonbanking services, and there is no evidence in the record to indicate that consummation of this proposal is likely to result in any significantly adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices that would outweigh the public benefits of this proposal. Accordingly, the Board has determined that the balance of public interest factors it must consider under section 4(c)(8) of the BHC Act is favorable and consistent with approval of Banc One's application to acquire Central Life.

Conclusion

Based on the foregoing and other facts of record, the Board has determined that the applications should be, and hereby are, approved. The Board's approval is specifically conditioned upon compliance with all of the commitments made by Banc One in connection with these applications and with the conditions referred to in this Order. For purposes of this action, the commitments and conditions relied on in reaching this decision shall be deemed to be conditions imposed in writing by the Board and, as such, may be enforced in proceedings under applicable law.

The determinations as to the nonbanking activities are subject to all of the conditions in the Board's Regulation Y, including those in sections 225.4(d) and 225.23(b)(3) (12 C.F.R. 225.4(d) and 225.23(b)(3)), and to the Board's authority to require such modification or termination of the activities of a holding company or any of its subsidiaries as the Board finds necessary to assure compliance with, or to prevent evasions of, the provisions and purposes of the BHC Act and the Board's regulations and orders issued thereunder.

The acquisition of CBG's subsidiary banks shall not be consummated before the thirtieth calendar day following the effective date of this Order, and the acquisition of CBG's subsidiary banks and nonbanking subsidiaries shall not be consummated later than three months after the effective date of this Order, unless such period is extended for good cause by the Federal Reserve Bank of Cleveland, acting pursuant to delegated authority.

By order of the Board of Governors, effective September 23, 1993.

> JENNIFER J. JOHNSON Associate Secretary of the Board

The Royal Bank of Scotland Group plc Edinburgh, Scotland

The Royal Bank of Scotland plc Edinburgh, Scotland

Citizens (U.K.) Limited Edinburgh, Scotland

Citizens Financial Group, Inc. Providence, Rhode Island

Order Approving Applications to Acquire and Retain a Federal Savings Association

The Royal Bank of Scotland Group plc, Edinburgh, Scotland ("Applicant"), a bank holding company within the meaning of the Bank Holding Company Act ("BHC Act"), has applied under section 4(c)(8) of the BHC Act (12 U.S.C. § 1843(c)(8)), and section 225.23 of the Board's Regulation Y (12 C.F.R. 225.23), to acquire all the voting shares of The Boston Five Bancorp, Inc., Boston, Massachusetts ("Boston Five Bancorp''), and thereby indirectly acquire The Boston Five Cents Savings Bank, F.S.B., Boston, Massachusetts ("Boston Five"), a federal savings association.1 As soon as practicable after the acquisition of Boston Five Bancorp, Applicant intends to convert Boston Five to a Massachusetts savings bank, which is a "bank" for purposes of the BHC Act. Accordingly, Applicant also has applied under section 3(a)(3) of the BHC Act (12 U.S.C. § 1342(a)(3)) to retain control of Boston Five following the proposed conversion.²

Notice of the applications, affording interested persons an opportunity to submit comments, has been published (58 Federal Register 32,358, 35,004 (1993)). The time for filing comments has expired, and the Board has considered the applications and all comments received in light of the factors set forth in sections 3(c) and 4(c)(8) of the BHC Act.

^{1.} Applicant's wholly owned subsidiaries, The Royal Bank of Scotland plc, Edinburgh, Scotland ("Royal Bank"), Citizens (U.K.) Limited, Edinburgh, Scotland, and Citizens Financial Group, Inc., Providence, Rhode Island ("CFG"), are also applicants to this proposal.

^{2.} Applicant proposes to merge a newly formed acquisition subsidiary of CFG with and into Boston Five Bancorp, with Boston Five Bancorp surviving the merger. Boston Five Bancorp then would merge with and into CFG, with CFG surviving the merger. Following the conversion of Boston Five to a Massachusetts savings bank, Applicant would merge its existing Massachusetts savings bank subsidiary, Citizens Bank of Massachusetts, Plymouth, Massachusetts ("Citizens Bank"), with and into Boston Five, with Boston Five surviving the merger. Applicant also has applied under section 4(c)(8) of the BHC Act to acquire up to 15 percent of the shares of Boston Five Bancorp pursuant to a stock option agreement, which option would terminate upon consummation of this proposal.

Applicant, with total consolidated assets equivalent to approximately \$56.1 billion, is the sixth largest banking organization in the United Kingdom.3 In the United States, Applicant indirectly controls banks in Rhode Island, Connecticut, and Massachusetts. Applicant is the 36th largest banking organization in Massachusetts, controlling deposits of \$416.9 million, representing less than one percent of all deposits in depository institutions in the state.4 Through Boston Five, Boston Five Bancorp controls deposits of \$1.6 billion in Massachusetts. 5 Upon consummation of the proposal. Applicant would become the seventh largest banking organization in Massachusetts, controlling deposits of \$2.0 billion, representing approximately 2 percent of all deposits in depository institutions in the state.

Considerations Under Section 4 of the BHC Act

The Board has previously determined by regulation that owning, controlling, and operating a savings association are activities closely related to banking and permissible for bank holding companies under section 4(c)(8) of the BHC Act, provided that any savings association acquired by a bank holding company must conform its direct and indirect activities to those permissible for bank holding companies.⁶ Applicant has committed that it will not, as a result of this transaction, engage in any activities not permitted for bank holding companies under section 4(c)(8) of the BHC Act.⁷

Consummation of the proposal would bring new capital and financial strength to Boston Five, enable Boston Five to offer a broader array of banking services and products, increase competition in the markets currently served by Boston Five, and provide greater convenience to customers of both Applicant and Boston Five. The record indicates that Applicant's acquisition of Boston Five would not result in any significantly adverse effects, such as undue con-

centration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices, that would outweigh the public benefits of this acquisition. Accordingly, and based on all the facts of record, the Board has determined that the balance of public interest factors that the Board must consider under section 4(c)(8) of the BHC Act is favorable and consistent with approval of Applicant's acquisition of Boston Five.

Considerations Under Section 3 of the BHC Act

As noted above, upon consummation of the proposal, Applicant plans to convert Boston Five from a federal savings association to a state savings bank, which is a "bank" for purposes of the BHC Act. Consequently, the Board must review the proposed transaction under section 3 of the BHC Act.

Citizens Bank and Boston Five compete directly in the Boston banking market. Upon consummation of this proposal, the Boston banking market would remain unconcentrated. The Board has carefully considered the competition offered by other depository institutions in this market and the number of competitors remaining in this market! as well as the level of

^{3.} Asset and ranking data for Applicant are as of March 31, 1993.

^{4.} State deposit and ranking data are as of December 31, 1992.

^{5.} When Boston Five converted from a non-federally insured state-chartered savings bank to a federal savings association in 1983, the Federal Savings and Loan Insurance Corporation was no longer accepting new members, and the Savings Association Insurance Fund of the FDIC had not yet been established. Accordingly, since Boston Five converted to a federal thrift, its deposits have been insured by the Bank Insurance Fund of the FDIC pursuant to section 112 of the Garn-St. Germain Depository Institutions Act of 1982 (12 U.S.C. § 1464(0)(2)(A)).

^{6.} See 12 C.F.R. 225.25(b)(9).

^{7.} In this regard, Applicant has committed that it will divest all impermissible real estate investments currently held by Boston Five within two years of consummation of the proposal, and will not undertake any new impermissible projects or investments during this period.

^{8.} See 12 U.S.C. § 1841(c)(1). The Board notes that Boston Five currently acts as agent in the sale of savings bank life insurance in Massachusetts, and, as a necessary predicate thereto, holds less than 5 percent of the voting stock in the Savings Bank Life Insurance Company of Massachusetts, a domestic stock life insurance company established by the Commonwealth of Massachusetts (collectively, "SBLI activities"). See Mass. Gen. Laws Ann. ch. 178A, §§ 2 and 4 (West Supp. 1993). Upon conversion of Boston Five to a state savings bank, Applicant would continue to engage through Boston Five in SBLI activities in accordance with Massachusetts law and section 24(c) of the Federal Deposit Insurance Act (12 U.S.C. § 1831a(e)). See Merchants National Corporation, 75 Federal Reserve Bulletin 388 (1989).

^{9.} The Boston banking market is approximated by the Boston Ranally Metropolitan Area ("Boston RMA") minus the New Hampshire towns of Brentwood, Chester and Derry, plus the Massachusetts towns of Ayer, Berlin, Groton, Harvard, Pepperell and Shirley, and those portions of Bellingham, Carver, Lakeville, Middleboro and Plymouth not already included in the Boston RMA.

^{10.} Under the revised Department of Justice Merger Guidelines (49 Federal Register 26,823 (1984)), a market in which the post-merger Herfindahl-Hirschman Index ("HHI") is less than 1000 is considered unconcentrated. The Justice Department has informed the Board that a bank merger or acquisition generally will not be challenged (in the absence of other factors indicating anti-competitive effects) unless the post-merger HHI is at least 1800 and the merger increases the HHI by 200 points. The Justice Department has stated that the higher than normal HHI thresholds for screening bank mergers for anti-competitive effects implicitly recognize the competitive effect of limited-purpose lenders and other non-depository financial entities.

^{11.} In this regard, depository institutions include commercial banks, savings banks, and savings associations, and market share data are based on calculations in which the deposits of thrift institutions are included at 50 percent. The Board previously has indicated that thrift institutions have become, or have the potential to become, significant competitors of commercial banks. First Union Corporation, 76 Federal Reserve Bulletin 83 (1990); Midwest Financial Group, 75 Federal Reserve Bulletin 386 (1989). Upon consummation of this proposal,

and change in market concentration¹² following consummation of this proposal. Neither the Office of Thrift Supervision nor the Federal Deposit Insurance Corporation has provided any objection to consummation of this proposal or indicated that the proposal would have any significantly adverse competitive effects. On the basis of these and other facts of record, the Board concludes that consummation of this proposal would not have a significantly adverse effect on competition in the Boston banking market, or any other relevant banking market.

Under section 3 of the BHC Act, as amended by the Foreign Bank Supervision Enhancement Act of 1991,13 the Board may not approve an application involving a foreign bank unless the bank is "subject to comprehensive supervision or regulation on a consolidated basis by the appropriate authorities in the bank's home country." As provided in Regulation Y, the Board determines whether a foreign bank is subject to consolidated home country supervision under the standards set forth in Regulation K.15 The Board's Regulation K provides that a foreign bank may be considered subject to consolidated supervision if the Board determines that the bank is supervised or regulated in such a manner that its home country supervisor receives sufficient information on the worldwide operations of the foreign bank, including the relationship of the bank to its affiliates, to assess the foreign bank's overall financial condition and compliance with law and regulation.16

Royal Bank is subject to supervision and regulation by the Bank of England. The Board has previously determined, in orders approving applications under the International Banking Act (12 U.S.C. § 3101 et seq.) ("IBA"), that two other banks chartered in the United Kingdom are each subject to comprehensive supervision on a consolidated basis. ¹⁷ In this case, the Board has determined that Royal Bank is supervised in its banking operations by the Bank of England on the same terms and conditions as set forth in those prior orders.

The investment and insurance activities of Royal Bank and certain of Royal Bank's subsidiaries are also subject to supervision by self-regulatory organizations

Applicant would become the seventh largest of 216 depository institutions in the Boston banking market, controlling approximately 2.8 percent of total deposits in depository institutions in the market.

("SROs") that act under authority delegated by the Department of Trade and Industry to the Securities and Investment Board ("SIB"). The SIB establishes general principles that the SROs apply to firms engaged in particular types of investment and insurance activities. These principles ensure that Royal Bank or the relevant subsidiary is fit and proper to perform the investment or insurance activities and conforms to certain prudential standards, such as minimum capital requirements. Based on all the facts of record, the Board has determined that Royal Bank is subject to comprehensive supervision or regulation by its home country supervisors on a consolidated basis.

Section 3 of the BHC Act also requires the Board to disapprove any application involving any company that fails to provide the Board with adequate assurances that the company will make available to the Board such information on the operations or activities of the company and its affiliates that the Board determines to be appropriate to determine and enforce compliance with the BHC Act. 19 Applicant and Royal Bank have each committed that, to the extent permitted by law, each entity will make available to the Board such information on the operations of Applicant and any of its affiliates that the Board deems necessary to determine and enforce compliance with the BHC Act, the IBA, and other applicable federal law. If the disclosure of such information is prohibited by law or otherwise, Applicant and Royal Bank have each committed to cooperate with the Board to obtain any approvals or consents that may be needed to gain access to information requested by the Board.

The Board has reviewed the restrictions on disclosure of information in relevant jurisdictions in which Applicant and Royal Bank operate, and has communicated with certain government authorities concerning access to information. In light of the commitments provided by Applicant and Royal Bank and other facts of record, and subject to the conditions of this order, the Board has concluded that Applicant has provided

^{12.} The HHI in the Boston banking market would decrease 15 points from 830 to 815 upon consummation of this proposal.

^{13.} Pub. L. No. 102-242, § 201 et seq., 105 Stat. 2286 (1991).

^{14. 12} U.S.C. § 1842(c)(3)(B).

^{15.} See 12 C.F.R. 225.13(b)(5).

^{16.} See 12 C.F.R. 211.24(c)(1)(ii).

^{17.} See Coutts & Co., AG, 79 Federal Reserve Bulletin 636 (1993) (with respect to National Westminster Bank, plc); Singer & Friedlander, Ltd., 79 Federal Reserve Bulletin 809 (1993) ("Singer").

^{18.} The SROs which supervise these investment and insurance activities are the Securities and Futures Authority ("SFA"), the Investment Management Regulatory Organization ("IMRO"), the Assurance and Unit Trust Regulatory Organization ("LAUTRO"), and the Financial Intermediaries, Managers and Brokers Regulatory Association ("FIMBRA"). The Board considered the supervision by SFA and IMRO of the securities and investment activities of another U.K. bank in Singer, and has determined that these SROs supervise the relevant activities of Royal Bank and its subsidiaries on the same terms and conditions as set forth in Singer. LAUTRO and FIMBRA supervise the marketing of life insurance and related products by Royal Bank and its subsidiaries. This supervision requires compliance with rules that govern conflicts of interest, marketing, advertising, customer dealings, market operation, and resources. LAUTRO and FIMBRA ensure compliance with these rules by Royal Bank and its subsidiaries through reporting requirements, periodic inspections, and enforcement actions.

^{19.} See 12 U.S.C. § 1843(c)(3); 12 C.F.R. 225.13(b)(4).

adequate assurances of access to any necessary information the Board may request.

The Board also considers the financial condition of a foreign bank involved in a section 3 application.²⁰ Royal Bank must comply with capital standards that conform to the Basle Accord, as implemented by the United Kingdom. Royal Bank's capital exceeds these minimum standards, and is equivalent to capital that would be required of a U.S. banking organization.

Based on the foregoing and all the facts of record, the Board has determined that the financial and managerial resources and future prospects of Applicant, Applicant's subsidiaries, and Boston Five, and the other supervisory factors the Board must consider under section 3 of the BHC Act, are consistent with approval of the proposal. In addition, the convenience and needs of the communities to be served, the supervision of Royal Bank, and the Board's access to information, are all consistent with approval of Applicant's proposal.

Accordingly, the Board has determined that the applications should be, and hereby are, approved. The Board's determination is subject to all the terms and conditions set forth in this order and in Regulation Y, including those in sections 225.4(d) and 225.23(b) of Regulation Y, and to the Board's authority to require modification or termination of the activities of a bank holding company or any of its subsidiaries as the Board finds necessary to assure compliance with, and to prevent evasion of, the provisions of the BHC Act and the Board's regulations and orders issued thereunder. The Board's decision is specifically conditioned on compliance with all the commitments made in connection with this application, including the commitments discussed in this Order, and the conditions set forth in this Order and in the above-noted Board regulations and orders. These commitments and conditions shall be deemed to be conditions imposed in writing by the Board in connection with its findings and decisions, and, as such, may be enforced in proceedings under applicable law.

The acquisition of Boston Five Bancorp and the pre-conversion transactions that are the subject of Applicant's section 4 application shall not be consummated later than three months after the effective date of this order unless such period is extended for good cause by the Board or by the Federal Reserve Bank of Boston acting pursuant to delegated authority. The conversion and post-conversion transactions that are the subject of Applicant's section 3 application shall not be consummated before the thirtieth calendar day following the effective date of this Order or later than three months after the effective date of this Order,

unless such period is extended for good cause by the Board or by the Federal Reserve Bank of Boston acting pursuant to delegated authority.

By order of the Board of Governors, effective September 13, 1993.

Voting for this action: Vice Chairman Mullins and Governors Kelley, LaWare, Lindsey, and Phillips. Absent and not voting: Chairman Greenspan and Governor Angell.

JENNIFER J. JOHNSON Associate Secretary of the Board

Orders Issued Under Federal Reserve Act

Barnett Bank of Naples Naples, Florida

Order Approving the Establishment of a Branch

Barnett Bank of Naples, Naples, Florida ("Barnett Bank"), a state member bank, has applied, pursuant to section 9 of the Federal Reserve Act (12 U.S.C. § 321 et seq.), to establish a full-service branch office at 50 Bald Eagle Drive, Marco Island, Florida.

Notice of the application, affording interested persons an opportunity to submit comments, has been published. The time for filing comments has expired, and the Board has considered the application and all comments received in light of the factors set forth in section 9 of the Federal Reserve Act.

Barnett Bank is a subsidiary of Barnett Banks, Inc., Jacksonville, Florida ("Barnett"), the largest banking organization in Florida. Barnett Bank has its main office in Naples, Florida, and operates branches in Naples and on Marco Island. The proposed branch will be located at the location of a former branch of First Florida, N.A., Tampa, Florida ("First Florida Bank"), acquired by Barnett as part of its acquisition of First Florida Banks, Inc., Tampa, Florida, in December 1992. Barnett Bank closed two branches of First Florida Bank on Marco Island in March 1993, and currently serves its Marco Island customers from a single Barnett Bank branch opened before the First Florida acquisition. Based on its actual experience in the Marco

^{20.} See 12 C.F.R. 225.13(b)(1).

^{1.} See Barnett Banks, Inc., 79 Federal Reserve Bulletin 44 (1993).
2. The Board has carefully considered comments filed by individuals ("Protestants") objecting to this proposal because, in their view, the closure of the Marco Island offices of First Florida Bank was designed to eliminate senior First Florida Bank employees. In response to these comments, Barnett Bank contends that the decision to close these offices was reached after considering the results of numerous studies and surveys that indicated that the community's banking needs could be effectively served by a single branch, and that the closure was in accordance with branch closing notice requirements.

Island banking market since the First Florida acquisition, Barnett Bank has determined that the demand for banking services is greater than previously anticipated and that establishment of this new office will permit Barnett Bank to better serve the current deposit and credit needs of customers on Marco Island.³

The Board has reviewed the factors it is required to consider in applications for the establishment and operation of branches under the Federal Reserve Act. Based on all the facts of record, the Board believes that these factors, including the financial condition of Barnett Bank, the general character of its management, and the proposed exercise of corporate powers, are consistent with approval and the purposes of section 9 of the Federal Reserve Act. The Board also believes that Barnett Bank's efforts to meet the credit needs of its entire community, including low- and moderate-income neighborhoods, are consistent with approval. 5

Based on the foregoing, the Board has determined that the application should be, and hereby is, approved. The Board's approval is specifically conditioned upon compliance by Barnett Bank with all the commitments made in connection with the application. For purposes of this action, these commitments and conditions are considered conditions imposed in writing by the Board in connection with its findings and decisions, and, as such, may be enforced in proceedings under applicable law.

This branch shall be in operation no later than one year after the effective date of this Order, unless such period is extended for good cause by the Board or by the Federal Reserve Bank of Atlanta, acting pursuant to delegated authority.

By order of the Board of Governors, effective September 7, 1993.

Voting for this action: Chairman Greenspan and Governors Mullins, Kelley, LaWare, Lindsey, and Phillips. Absent and not voting: Governor Angell.

WILLIAM W. WILES Secretary of the Board

Orders Issued Under International Banking Act

Korea First Bank Seoul, Korea

Order Approving Establishment of Representative Office

Korea First Bank, Seoul, Korea ("Bank"), a foreign bank within the meaning of the International Banking Act ("IBA"), has applied under section 10(a) of the IBA (12 U.S.C. § 3107(a)) to establish a representative office in Seattle, Washington. A foreign bank must obtain the approval of the Board to establish a branch, agency, commercial lending company, or representative office in the United States under the Foreign Bank Supervision Enhancement Act of 1991 ("FBSEA"), which amended the IBA.

Notice of the application, affording interested persons an opportunity to submit comments, has been published in a newspaper of general circulation in Seattle, Washington (*The Seattle Times*, August 27, 1992). The time for filing comments has expired and the Board has considered the application and all comments received.

Bank, with \$35.1 billion in consolidated assets, is the fourth largest bank in Korea. Bank operates 298 branch offices in Korea and controls six domestic subsidiaries engaged in leasing, investment consulting, software development, merchant banking, venture capital, and commodity futures activities. Bank also operates branches in Osaka, Tokyo, London, and Singapore, and representative offices in Hong Kong, Frankfurt and Sydney, and owns subsidiaries in Vietnam, Germany, Hong Kong and London.

In the United States, Bank operates a wholly owned subsidiary bank, Korea First Bank of New York, New York, New York; three agencies located in New York, Los Angeles, and Orange County, California; and an insured branch in Chicago.

The activities of the proposed representative office would be limited to representational and administrative functions, such as soliciting new business or acting as liaison between Bank's head office and customers in the State of Washington, providing information regarding services offered by Bank to potential customers, and gathering and providing business and economic information. The proposed representative office would not accept any deposits or make any loans, make any business decision for the account of Bank, including contracting for any deposit or deposit-

^{3.} Protestants believe that, as a condition for reopening the new office, Barnett Bank should be required to offer all former First Florida Bank employees their previous positions and to restore all lost wages and benefits. Barnett Bank has indicated that some former First Florida Bank employees affected by the branch closings were offered full-time employment with Barnett Bank, and that its policy is to consider all First Florida Bank employees displaced by these branch closures for vacant positions within Barnett, including positions at the new branch location. Based on all the facts of record, the Board does not believe that Protestants' comments warrant denial under the factors the Board must consider in applications involving the establishment of a branch.

^{4.} See 12 U.S.C. § 322.

^{5.} See 12 U.S.C. § 2901 et seq.

^{1.} Data are as of December 31, 1992, unless otherwise noted.

like liability on behalf of Bank, or otherwise transact any banking business.

In acting on an application to establish a representative office, the IBA and Regulation K provide that the Board shall take into account whether the foreign bank engages directly in the business of banking outside of the United States, has furnished the Board with the information it needs to assess adequately the application, and is subject to comprehensive supervision or regulation on a consolidated basis by its home country supervisor (12 U.S.C. § 3105(d)(2); 12 C.F.R. 211.24). The Board may also take into account additional standards as set forth in the IBA (12 U.S.C. § 3105(d)(3)-(4)) and Regulation K (12 C.F.R. 211.24(c)).

The Board has previously stated that the standards that apply to the establishment of a branch or agency need not in every case apply to the establishment of a representative office because representative offices do not engage in a banking business and cannot take deposits or make loans.2 In evaluating an application to establish a representative office under the IBA and Regulation K, the Board will take into account the standards that apply to establishment of branches and agencies, subject to the following considerations. With respect to supervision by home country authorities, a foreign bank that proposes to establish a representative office must be subject to a significant degree of supervision by its home country supervisor. Among the factors the Board may consider are the extent to which there is regular review of a substantial portion of the bank's operations by the home country supervisor through examination, review of external audits, or a comparable method, submission of periodic reports relating to financial performance, and assurance that the bank itself has a system of internal monitoring and control that enables bank management to administer properly the bank's operations. The home country supervisor must also have indicated that it does not object to the establishment of the representative office in the United States.

A foreign bank's financial and managerial resources will be reviewed to determine whether its financial condition and performance demonstrate that it is capable of complying with applicable laws and has an operating record that would be consistent with the establishment of a representative office in the United States. If the financial condition of the foreign bank significantly differs from international norms, the foreign bank would be evaluated to determine whether such difference can be justified in

the context of the operations of the applicant and the proposed representative office. All foreign banks, whether operating through branches, agencies or representative offices, will be required to provide adequate assurances of access to information on the operations of bank and its affiliates necessary to determine compliance with U.S. laws.

In this case, with respect to the issue of supervision by home country authorities, the Board has considered the following information. The Bank of Korea has primary authority over the supervision of commercial banks, including Bank, and certain special-purpose banks. The Superintendent of the Office of Bank Supervision and Examination (the "OBSE") within the Bank of Korea is the principal supervisory authority for Bank. The Ministry of Finance ("Ministry") has primary authority over the supervision of non-bank financial institutions and the international operations of all banking institutions. The Ministry has approved the establishment of the proposed representative office by Bank.

The OBSE performs annual, on-site examinations of Bank. An annual examination includes a review of Bank's compliance with Korean banking laws, regulations, and orders issued by the Monetary Board, adequacy of the internal control system, accounting procedures, asset quality, capital adequacy, risk exposure, and liquidity. Special examinations dealing with specific matters and/or specific branch offices, including foreign offices, are carried out when the OBSE determines that they are necessary, usually every two years. Bank is also required to file periodic financial reports with the OBSE. Based on all the facts of record, which include the information described above, the Board concludes that factors relating to the supervision of Bank by its home country supervisors are consistent with approval of the proposed representative office.

The Board has also found that Bank engages directly in the business of banking outside of the United States through its commercial banking operations in Korea. Bank also has provided the Board with the information necessary to assess the application through submissions that address relevant issues.

The Board has also taken into account the additional standards set forth in section 7 of the IBA and Regulation K. (See 12 U.S.C. § 3105(d)(3)-(4); 12 C.F.R. 211.24(c)(2)). As noted above, Bank has received the consent of the Ministry to establish the proposed representative office. In addition, the Ministry and OBSE may share information on Bank's operations with other supervisors, including the Board.

Given Bank's record of performance, its overall financial resources and compliance with Korean capi-

^{2.} See 58 Federal Register 6348, 6351 (1993); Citizens National Bank, 79 Federal Reserve Bulletin 805 (1993).

tal requirements,³ and its standing with its home country supervisors, the Board has determined that financial and managerial factors are consistent with approval of the proposed representative office. Bank appears to have the experience and capacity to operate the proposed representative office, and has established controls and procedures for the proposed representative office to ensure compliance with U.S. law.

Bank has committed that it will make available to the Board such information on the operations of Bank and any affiliate of Bank that the Board deems necessary to determine and enforce compliance with the IBA, the Bank Holding Company Act of 1956, as amended, and other applicable Federal law, to the extent permitted by law. The Board has reviewed the restriction on disclosure of information in Korea, and has communicated with certain government authorities regarding access to information. In addition, Bank has committed to cooperate with the Board to obtain approvals or consents that may be required for the Board to gain access to information that it may request. In light of these commitments and other facts of record, and subject to the condition described below, the Board concludes that Bank has provided adequate assurances of access to any necessary information the Board may request.

On the basis of all the facts of record, and subject to the commitments made by Bank, as well as the terms

and conditions set forth in this Order, the Board has determined that the Bank's application to establish a representative office should be, and hereby is, approved. If any restrictions on access to information on the operations or activities of Bank and any of its affiliates subsequently interfere with the Board's ability to determine the compliance by Bank or its affiliates with applicable federal statutes, the Board may require termination of any of the Bank's direct or indirect activities in the United States. Approval of this application is specifically conditioned on compliance by Bank with the commitments made in connection with this application, and with the conditions contained in this Order.4 The commitments and conditions referred to above are conditions imposed in writing by the Board in connection with its decision, and may be enforced in proceedings under 12 U.S.C. § 1818 or 12 U.S.C. § 1847 against Bank and its affil-

By order of the Board of Governors, effective September 24, 1993.

JENNIFER J. JOHNSON Associate Secretary of the Board

^{3.} The Bank of Korea has required Korean banks to meet transitional risk-based capital standards until January 1, 1996, when Korean banks must be in conformance with the Basle minimum standards. For the period of January 1, 1994 to December 31, 1995, Korean banks must maintain a total risk-based capital ratio of at least 7.25 percent.

^{4.} The Board's authority to approve the establishment of the proposed representative office parallels the continuing authority of the State of Washington to license offices of a foreign bank. The Board's approval of this application does not supplant the authority of the State of Washington and its agent, the Washington Department of General Administration, Division of Banking, to license the proposed representative office of Bank in accordance with any terms or conditions that the State of Washington may impose.

PENDING CASES INVOLVING THE BOARD OF GOVERNORS

This list of pending cases does not include suits against the Federal Reserve Banks in which the Board of Governors is not named a party.

Richardson v. Board of Governors, et al., No. 93-C 836A (D. Utah, filed August 30, 1993). Action against Board and others for damages and injunctive relief for alleged constitutional and statutory violations caused by issuance of Federal Reserve notes. On September 20, 1993, the Board filed a motion to dismiss.

Kubany v. Board of Governors, et al., No. 93-1428 (D.
 D.C., filed July 9, 1993). Action challenging Board determination under the Freedom of Information Act.

Bennett v. Greenspan, No. 93-1813 (D. D.C., filed April 20, 1993). Employment discrimination action.

Ezell v. Federal Reserve Board, No. 93-0361 (D. D.C., filed February 19, 1993). Action seeking damages for personal injuries arising from motor vehicle collision. The case was dismissed by the court on July 30, 1993.

Amann v. Prudential Home Mortgage Co., et al., No. 93-10320 WD (D. Massachusetts, filed February 12, 1993). Action for fraud and breach of contract arising out of a home mortgage. On April 17, 1993, the Board filed a motion to dismiss.

Adams v. Greenspan, No. 93-0167 (D. D.C., filed January 27, 1993). Action by former employee under the Civil Rights Act of 1964 and the Rehabilitation Act of 1973 concerning termination of employment.

Sisti v. Board of Governors, No. 93-0033 (D. D.C., filed January 6, 1993). Challenge to Board staff interpretation with respect to margin accounts. The Board's motion to dismiss was granted on May 13, 1993. On June 3, 1993, the petitioner filed a notice of appeal. Cross-motions for summary disposition were filed on August 13, 1993.

U.S. Check v. Board of Governors, No. 92-2892 (D. D.C., filed December 30, 1992). Challenge to partial denial of request for information under the Freedom of Information Act.

CBC, Inc. v. Board of Governors, No. 92–9572 (10th Cir., filed December 2, 1992). Petition for review of civil money penalty assessment against a bank holding company and three of its officers and directors for failure to comply with reporting requirements. Oral argument is scheduled for November 8, 1993.

DLG Financial Corporation v. Board of Governors, No. 392 Civ. 2086-G (N.D. Texas, filed October 9, 1992). Action to enjoin the Board and the Federal Reserve Bank of Dallas from taking certain enforcement actions, and seeking money damages on a variety of tort and contract theories. On October 9, 1992, the court denied plaintiffs' motion for a temporary restraining order. On March 30, 1993, the court granted the Board's motion to dismiss as to it, and also dismissed certain claims against the Reserve Bank. On April 29, the plaintiffs filed an amended complaint. The Board's motion to dismiss the amended complaint was filed on May 17.

Zemel v. Board of Governors, No. 92-1056 (D. D.C., filed May 4, 1992). Age Discrimination in Employment Act case. The parties' cross-motions for summary judgment are pending.

State of Idaho, Department of Finance v. Board of Governors, No. 92-70107 (9th Cir., filed February 24, 1992). Petition for review of Board order returning without action a bank holding company application to relocate its subsidiary bank from Washington to Idaho. On June 4, 1993, the Court of Appeals denied the petition for review.

Board of Governors v. Ghaith R. Pharaon, No. 91-CIV-6250 (S.D. New York, filed September 17, 1991). Action to freeze assets of individual pending administrative adjudication of civil money penalty assessment by the Board. On September 17, 1991, the court issued an order temporarily restraining the transfer or disposition of the individual's assets.

FINAL ENFORCEMENT ORDERS ISSUED BY THE BOARD OF GOVERNORS

Bosshard Banco, Ltd. Bangor, Wisconsin

The Federal Reserve Board announced on September 29, 1993, the issuance of an Order of Assessment of a Civil Money Penalty against Bosshard Banco, Ltd., Bangor, Wisconsin, and Jeff Gray, an institution-affiliated party of Bosshard Banco, Ltd.

GENERAL INFORMATION

In many of the tables, components do not sum to totals because of rounding.

Minus signs are used to indicate (1) a decrease, (2) a negative figure, or (3) an outflow.

"U.S. government securities" may include guaranteed issues of U.S. government agencies (the flow of funds figures also

include not fully guaranteed issues) as well as direct obligations of the Treasury. "State and local government" also includes municipalities, special districts, and other political subdivisions.

1. Unless otherwise noted, rates of change are calculated from average amounts outstanding during preceding month or quarter.

2. Figures incorporate adjustments for discontinuities, or "breaks," associated with regulatory changes in reserve requirements. (See also table 1.20.)

3. The seasonally adjusted, break-adjusted monetary base consists of (1) seasonally adjusted break-adjusted total reserves (line 1), plus (2) the seasonally adjusted currency component of the money stock, plus (3) (for all quarterly reporters on the "Report of Transaction Accounts, Other Deposits, and Vault Cash" and for all weekly reporters whose vault cash exceeds their required reserves) the seasonally adjusted, break-adjusted difference between current vault cash and the amount applied to satisfy current reserve requirements.

4. Composition of the money stock measures and debt is as follows:

M1: (1) currency outside the U.S. Treasury, Federal Reserve Banks, and the vaults of depository institutions, (2) travelers checks of nonbank issuers, (3) demand deposits at all commercial banks other than those owed to deposity institutions, the U.S. government, and foreign banks and official institutions, less cash items in the process of collection and Federal Reserve float, and (4) other checkable deposits (OCDs), consisting of negotiable order of withdrawal (NOW) and automatic transfer service (ATS) accounts at depository institutions, credit union share draft accounts, and demand deposits at thrift institutions. Seasonally adjusted M1 is computed by summing currency, travelers checks, demand deposits and OCDs, each seasonally adjusted separately.

M2: M1 plus (1) overnight (and continuing-contract) repurchase agreements (RPs) issued by all depository institutions and overnight Eurodollars issued to U.S. residents by foreign branches of U.S. banks worldwide, (2) savings (including MMDAs) and small time deposits (time deposite—including retail RPs—in amounts of less than \$100,000, and (3) balances in both taxable and tax-exempt general-pur

tax-exempt, institution-only money market funds. Excludes amounts held by depository institutions, the U.S. government, money market funds, and foreign banks and official institutions. Also excluded is the estimated amount of overnight RPs and Eurodollars held by institution-only money market funds. Seasonally adjusted M3 is computed by adjusting its non-M2 component as a whole and then adding this result to seasonally adjusted M2.

L: M3 plus the nonbank public holdings of U.S. savings bonds, short-term Treasury securities, commercial paper, and bankers acceptances, net of money market fund holdings of these assets. Seasonally adjusted L is computed by summing U.S. savings bonds, short-term Treasury securities, commercial paper, and bankers acceptances, each seasonally adjusted separately, and then adding this result to M3.

Debt: Debt of domestic nonfinancial sectors consists of outstanding credit market debt of the U.S. government, state and local governments, and private nonfinancial sectors. Private debt consists of corporate bonds, mortgages, consumer credit (including bank loans), other bank loans, commercial paper, bankers acceptances, and other debt instruments. Data are derived from the Federal Reserve Board's flow of funds accounts. Data are derived from the Federal Reserve Board's flow of funds accounts. Data are derived from the Federal Reserve Board's flow of funds accounts. Data on debt of domestic nonfinancial sectors are monthly averages, derived by averaging adjacent month-end levels. Growth rates for debt reflect adjustments for discontinuities over time in the levels of debt presented in other tables. of debt presented in other tables.

5. Sum of (1) overnight RPs and Eurodollars, (2) money market fund balances

5. Sum of (1) overnight RPs and Eurodollars, (2) money market fund balances (general purpose and broker-dealer), (3) savings deposits (including MMDAs), and (4) small time deposits.
6. Sum of (1) large time deposits, (2) term RPs, (3) term Eurodollars of U.S. residents, and (4) money market fund balances (institution-only), less (5) a consolidation adjustment that represents the estimated amount of overnight RPs and Eurodollars held by institution-only money market funds. This sum is seasonally adjusted as a whole.
7. Small time deposits—including retail RPs—are those issued in amounts of less than \$100,000. All IRA and Keogh account balances at commercial banks and thrift institutions are subtracted from small time deposits.
8. Large time deposits are those issued in amounts of \$100,000 or more.

8. Large time deposits are those issued in amounts of \$100,000 or more, excluding those booked at international banking facilities.

9. Large time deposits at commercial banking leadilities.

9. Large time deposits at commercial banks less those held by money market funds, depository institutions, U.S. government and foreign banks and official

institutions

institutions (that is, those whose vault cash exceeds their required reserves) to

^{1.} Data in this table also appear in the Board's H.3 (502) weekly statistical release. For ordering address, see inside front cover.

2. Excludes required clearing balances and adjustments to compensate for float and includes other off-balance-sheet "as-off" adjustments.

3. Total "lagged" vault cash held by depository institutions subject to reserve requirements. Dates refer to the maintenance periods during which the vault cash can be used to satisfy reserve requirements. The maintenance period during which the vault cash is held. Before Nov. 25, 1992, the maintenance period during which the vault cash is held. Before Nov. 25, 1992, the maintenance period ded thirty days after the lagged computation period by "bound" institutions (that is, those whose required reserves exceed their vault cash) plus the amount of vault cash applied during the maintenance period by "nonbound"

institutions (that is, those whose vault cash exceeds their required reserves) to satisfy current reserve requirements.

5. Total vault cash (line 2) less applied vault cash (line 3).

6. Reserve balances with Federal Reserve Banks (line 1) plus applied vault cash (line 3).

7. Total reserves (line 5) less required reserves (line 6).

8. Also includes adjustment credit.

9. Consists of borrowing at the discount window under the terms and conditions established for the extended credit program to help depository institutions deal with sustained liquidity pressures. Because there is not the same need to repay such borrowing promptly as with traditional short-term adjustment credit, the money market impact of extended credit is similar to that of nonborrowed reserves. reserves.

Available on a short-term basis to help depository institutions meet temporary needs for funds that cannot be met through reasonable alternative sources.
The highest rate established for loans to depository institutions may be charged on adjustment-credit loans of unusual size that result from a major operating problem

ordinarily is charged on extended-credit loans outstanding less than thirty days; however, at the discretion of the Federal Reserve Bank, this time period may be shortened. Beyond this initial period, a flexible rate somewhat above rates on market sources of funds is charged. The rate ordinarily is reestablished on the first business day of each two-week reserve maintenance period, but it is never less than the discount rate applicable to adjustment credit plus 50 basis points.

4. For earlier data, see the following publications of the Board of Governors: Banking and Monetary Statistics, 1914–1941, and 1941–1970; and the Annual Statistical Digest, 1970–1979.

In 1980 and 1981, the Federal Reserve applied a surcharge to short-term adjustment-credit borrowings by institutions with deposits of \$500 million or more that had borrowed in successive weeks or in more than four weeks in a calendar quarter. A 3 percent surcharge was in effect from Mar. 17, 1980, through May 7, 1980. A surcharge of 2 percent was reimposed on Nov. 17, 1980; the surcharge was subsequently raised to 3 percent on Dec. 5, 1980, and to 4 percent on May 5, 1981. The surcharge was changed from a calendar quarter to a moving thirteen-week period. The surcharge was climinated on Nov. 17, 1981, the formula for applying the surcharge was eliminated on Nov. 17, 1981.

adjustment-cream nains of unusual size that result from a major operating problem at the borrower's facility.

2. Available to help relatively small depository institutions meet regular seasonal needs for funds that arise from a clear pattern of intrayearly movements in their deposits and loans and that cannot be met through special industry lenders. The discount rate on seasonal credit takes into account rates on market sources of funds and ordinarily is reestablished on the first business day of each

sources of funds and ordinarily is reestablished on the first business day of each two-week reserve maintenance period; however, it is never less than the discount rate applicable to adjustment credit.

3. May be made available to depository institutions when similar assistance is not reasonably available from other sources, including special industry lenders. Such credit may be provided when exceptional circumstances (including sustained deposit drains, impaired access to money market funds, or sudden deterioration in loan repayment performance) or practices involve only a particular institution, or to meet the needs of institutions experiencing difficulties adjusting to changing market conditions over a longer period (particularly at times of deposit disintermediation). The discount rate applicable to adjustment credit

1.15 RESERVE REQUIREMENTS OF DEPOSITORY INSTITUTIONS¹

_		Requirement				
	Type of deposit ²	Percentage of deposits	Effective date			
1 2	Net transaction accounts ³ \$0 million-\$46.8 million More than \$46.8 million ⁴	3 10	12/15/92 12/15/92			
3	Nonpersonal time deposits ⁵ .	0	12/27/90			
4	Eurocurrency liabilities ⁶ .	0	12/27/90			

1. Required reserves must be held in the form of deposits with Federal Reserve Banks or vault cash. Nonmember institutions may maintain reserve balances with a Federal Reserve Bank indirectly on a pass-through basis with certain approved institutions. For previous reserve requirements, see earlier editions of the Annual Report or the Federal Reserve Bulletin. Under provisions of the Monetary Control Act, depository institutions include commercial banks, mutual savings banks, savings and loan associations, credit unions, agencies and branches of foreign banks, and Edge Act corporations.

2. The Garn-St Germain Depository Institutions Act of 1982 (Public Law 97-320) requires that \$2 million of reservable liabilities of each depository institution be subject to a zero percent reserve requirement. The Board is to adjust the amount of reservable liabilities subject to this zero percent reserve requirement each year for the succeeding calendar year by 80 percent of the percentage increase in the total reservable liabilities of all depository institutions, measured on an annual basis as of June 30. No corresponding adjustment is to be made in the event of a decrease. On Dec. 15. 1992, the exemption was raised from \$3.6 million to \$3.8 million. The exemption applies in the following order: (1) net negotiable order of withdrawal (NOW) accounts (NOW accounts less allowable deductions); and (2) net other transaction accounts. The exemption applies only to accounts that would be subject to a 3 percent reserve requirement.

3. Include all deposits against which the account holder is permitted to make withdrawals by negotiable or transferable instruments, payment orders of withdrawal, and telephone and preauthorized transfers in excess of three per month for the purpose of making payments to third persons or others. However, money market deposit accounts (MAOAs) and similar accounts subject to the rules the

for the purpose of making payments to third persons or others. However, money market deposit accounts (MMDAs) and similar accounts subject to the rules that

permit no more than six preauthorized, automatic, or other transfers per month, of which no more than three may be checks, are not transaction accounts (such accounts are savings deposits).

The Monetary Control Act of 1980 requires that the amount of transaction accounts against which the 3 percent reserve requirement applies be modified annually by 80 percent of the percentage change in transaction accounts held by all depository institutions, determined as of June 30 each year. Effective Dec. 15, 1992, for institutions reporting quarterly, and Dec. 24, 1992, for institutions reporting weekly, the amount was increased from \$42.2 million to \$46.8 million.

4. The reserve requirement was reduced from 12 percent to 10 percent on Apr. 2, 1992, for institutions that report weekly, and on Apr. 16, 1992, for institutions that report quarterly.

2, 1992, for institutions that report weekly, and on Apr. 16, 1992, for institutions that report quarterly.

5. For institutions that report weekly, the reserve requirement on nonpersonal time deposits with an original maturity of less than 1½ years was reduced from 3 percent to 1½ percent for the maintenance period that began Dec. 13, 1990, and to zero for the maintenance period that began Dec. 27, 1990. The reserve requirement on nonpersonal time deposits with an original maturity of 1½ years or more has been zero since Oct. 6, 1983.

For institutions that report quarterly, the reserve requirement on nonpersonal time deposits with an original maturity of less than 1½ years was reduced from 3 percent to zero on Jan. 17, 1991.

6. The reserve requirement on Eurocurrency liabilities was reduced from 3 percent to zero in the same manner and on the same dates as was the reserve requirement on nonpersonal time deposits with an original maturity of less than 1½ years (see note 4).

1. Latest monthly and biweekly figures are available from the Board's H. 3 (502) weekly statistical release. Historical data and estimates of the impact on required reserves of changes in reserve requirements are available from the Monetary and Reserves Projections Section, Division of Monetary Affairs, Board of Governors of the Federal Reserve System, Washington, DC 20551.

2. Figures reflect adjustments for discontinuities, or "breaks," associated with regulatory changes in reserve requirements. (See also table 1.10)

3. Seasonally adjusted, break-adjusted total reserves equal seasonally adjusted, break-adjusted total reserves equal seasonally adjusted, break-adjusted required reserves (line 4) plus excess reserves (line 16).

4. Seasonally adjusted total reserves (line 1) less total borrowings of depository institutions from the Federal Reserve (line 17).

5. Extended credit consists of borrowing at the discount window under the terms and conditions established for the extended credit program to help depository institutions deal with sustained liquidity pressures. Because there is not the same need to repay such borrowing promptly as with traditional shorterm adjustment credit, the money market impact of extended credit is similar to that of nonborrowed reserves.

6. The seasonally adjusted, break-adjusted monetary base consists of (1) seasonally adjusted, break-adjusted total reserves (line 1), plus (2) the seasonally adjusted, break-adjusted monetary base consists of (1) seasonally adjusted, break-adjusted total reserves (line 1), plus (2) the seasonally adjusted, break-adjusted difference between current vault cash and the amount applied to satisfy current reserve requirements.

7. Break-adjusted total reserves equal break-adjusted required reserves (line 9) plus excess reserves (line 16).

8. To adjust required reserves for discontinuities that are due to regulatory

plus excess reserves (line 16).

8. To adjust required reserves for discontinuities that are due to regulatory changes in reserve requirements, a multiplicative procedure is used to estimate

what required reserves would have been in past periods had current reserve requirements been in effect. Break-adjusted required reserves include required reserves against transactions deposits and nonpersonal time and savings deposits (but not reservable nondeposit liabilities).

9. The break-adjusted monetary base equals (1) break-adjusted total reserves (line 6), plus (2) the (unadjusted) currency component of the money stock, plus (3) (for all quarterly reporters on the "Report of Transaction Accounts, Other Deposits and Vault (cash)" and for all those weekly reporters whose vault cash exceeds their required reserves) the break-adjusted difference between current vault cash and the amount applied to satisfy current reserve requirements.

exceeds their required reserves) the break-adjusted difference between current vault cash and the amount applied to satisfy current reserve requirements.

10. Reflects actual reserve requirements, including those on nondeposit liabilities, with no adjustments to eliminate the effects of discontinuities associated with changes in reserve requirements.

11. Reserve balances with Federal Reserve Banks plus vault cash used to satisfy reserve requirements.

12. The monetary base, not break-adjusted and not seasonally adjusted, consists of (1) total reserves (line 11), plus (2) required clearing balances and adjustments to compensate for float at Federal Reserve Banks, plus (3) the currency component of the money stock, plus (4) (for all quarterly reporters on the "Report of Transaction Accounts, Other Deposits and Vault Cash" and for all those weekly reporters whose vault cash exceeds their required reserves) the difference between current vault cash and the amount applied to satisfy current reserve requirements. Since the introduction of changes in reserve requirements (CRR), currency and vault cash figures have been measured over the computation periods ending on Mondays.

13. Unadjusted total reserves (line 11) less unadjusted required reserves (line 14).

Footnotes appear on following page.

market fund holdings of these assets. Seasonally adjusted L is computed by summing U.S. savings bonds, short-term Treasury securities, commercial paper, and bankers acceptances, each seasonally adjusted separately, and then adding this result is 182 this result to M3.

Debt: Debt of domestic nonfinancial sectors consists of outstanding credit

Debt: Debt of domestic nonfinancial sectors consists of outstanding credit market debt of the U.S. government, state and local governments, and private nonfinancial sectors. Private debt consists of corporate bonds, mortgages, consumer credit (including bank loans), other bank loans, commercial paper, bankers acceptances, and other debt instruments. Data are derived from the Federal Reserve Board's flow of funds accounts. Debt data are based on monthly averages. This sum is seasonally adjusted as a whole.

3. Currency outside the U.S. Treasury, Federal Reserve Banks, and vaults of depository institutions.

4. Outstanding amount of U.S. dollar-denominated travelers checks of non-bank issuers. Travelers checks issued by depository institutions are included in demand deposit

- 5. Demand deposits at commercial banks and foreign-related institutions other than those owed to depository institutions, the U.S. government, and foreign banks and official institutions, less cash items in the process of collection and
- Federal Reserve float.

 6. Consists of NOW and ATS account balances at all depository institutions, credit union share draft account balances, and demand deposits at thrift institu-
- credit union share draft account balances, and demand deposits at unit made tions.

 7. Sum of (1) overnight RPs and overnight Eurodollars, (2) money market fund balances (general purpose and broker-dealer), (3) savings deposits (including MMDAs), and (4) small time deposits.

 8. Sum of (1) large time deposits, (2) term RPs, (3) term Eurodollars of U.S. residents, and (4) money market fund balances (institution-only), less (5) a consolidation adjustment that represents the estimated amount of overnight RPs and Eurodollars held by institution-only money market funds.

 9. Small time deposits—including retail RPs—are those issued in amounts of less than \$100,000. All IRAs and Keogh accounts at commercial banks and thrift institutions are subtracted from small time deposits.

 10. Large time deposits are those issued in amounts of \$100,000 or more, excluding those booked at international banking facilities.

 11. Large time deposits are commercial banks less those held by money market funds, depository institutions, U.S. government, and foreign banks and official institutions.

^{1.} BIF, Bank Insurance Fund. Data in this table also appear in the Board's H.6 (508) Special Supplementary Table monthly statistical release. For ordering address, see inside front cover. Estimates are based on data collected by the Federal Reserve System from a stratified random sample of about 460 commercial banks and 80 savings banks on the last Wednesday of each period. Data are not

seasonally adjusted and include IRA/Keogh deposits and foriegn currency denominated deposits. Data exclude retail repurchase agreements and deposits held in U.S. branches and agencies of foreign banks.

2. Includes personal and nonpersonal money market deposits.

3. BIF-insured savings banks include both mutual and federal savings banks.

1.23 BANK DEBITS AND DEPOSIT TURNOVER¹

^{1.} Commercial banks are nationally and state-chartered banks in the fifty states and the District of Columbia, agencies and branches of foreign banks, New York State investment companies majority owned by foreign banks, and Edge Act and agreement corporations owned by domestically chartered and foreign banks.

Data in this table also appear in the Board's G.10 (411) monthly statistical release. For ordering address, see inside front cover.

2. Includes federal funds, repurchase agreements (RPs), and other borrowing from nonbanks and net balances due to related foreign offices.

3. Reflects net positions of U.S. chartered banks, Edge Act corporations, and U.S. branches and agencies of foreign banks with related foreign offices plus net positions with own international banking facilities (IBFs).

4. Borrowings through any instrument, such as a promissory note or due bill, given for the purpose of borrowing money for the banking business. This includes

borrowings from Federal Reserve Banks and from foreign banks, term federal funds, loan RPs, and sales of participations in pooled loans.

5. Figures are based on averages of daily data reported weekly by approximately 120 large banks and on quarterly or annual data reported by other banks.

6. Figures are partly averages of daily data and partly averages of Wednesday data.

o. Figures are partly averages of data.

7. Time deposits in denominations of \$100,000 or more. Estimated averages of daily data.

8. U.S. Treasury demand deposits and Treasury tax and loan notes at commercial banks. Averages of daily data.

^{1.} Excludes assets and liabilities of international banking facilities.
2. Includes insured domestically chartered commercial banks, agencies and branches of foreign banks, Edge Act and agreement corporations, and New York State investment corporations majority owned by foreign banks. Data are estimates for the last Wednesday of the month based on a sample of weekly reporting foreign-related and domestic institutions and quarter-end condition reports.

^{3.} This balancing item is not intended as a measure of equity capital for use in

capital-adequacy analysis.

4. Includes all member banks and insured nonmember banks. Loans and securities data are estimates for the last Wednesday of the month based on a sample of weekly reporting banks and quarter-end condition reports.

the United States.

9. Affiliates include a bank's own foreign branches, nonconsolidated nonbank affiliates of the bank, the bank's holding company (if not a bank), and nonconsolidated nonbank subsidiaries of the holding company.
10. Credit extended by foreign branches of domestically chartered weekly reporting banks to nonbank U.S. residents. Consists mainly of commercial and industrial loans, but includes an unknown amount of credit extended to other than nonfinancial businesses.

NOTE. Data that formerly appeared in table 1.28, Assets and Liabilities of Large Weekly Reporting Commercial Banks in New York City, can be obtained from the Board's H.4.2 (504) weekly statistical release. For ordering address, see inside front cover.

Includes certificates of participation, issued or guaranteed by agencies of the U.S. government, in pools of residential mortgages.
 Includes securities purchased under agreements to resell.
 Includes allocated transfer risk reserve.
 Includes negotiable order of withdrawal accounts (NOWs), automatic transfer service (ATS), and telephone and preauthorized transfers of savings deposits.
 Includes borrowings only from other than directly related institutions.
 Includes federal funds purchased and securities sold under agreements to repurchase.

b. includes redefar times prichased and securines soft under agreements to repurchase.
 7. This balancing item is not intended as a measure of equity capital for use in capital-adequacy analysis.
 8. Excludes loans to and federal funds transactions with commercial banks in

Institutions engaged primarily in commercial, savings, and mortgage banking; sales, personal, and mortgage financing; factoring, finance leasing, and other business lending; insurance underwriting; and other investment activities.
 Includes all financial-company paper sold by dealers in the open market.
 Series were discontinued in January 1989.
 As reported by financial companies that place their paper directly with investors.

1.33 PRIME RATE CHARGED BY BANKS Short-Term Business Loans¹

Percent per year

Date of change	Rate	Period	Average rate	Period	Average rate	Period	Average rate
1990— Jan. 1	10.50 10.00 9.50 9.00 8.50 8.00 7.50 6.50	1990	10.01 8.46 6.25 10.11 10.00 10.00 10.00 10.00 10.00 10.00 10.00 10.00 10.00 10.00	1991— Jan. Feb. Mar. Apr. May June July Aug. Sept. Oct. Nov. Dec. 1992— Jan. Feb. Mar. Apr.	9.52 9.05 9.00 8.50 8.50 8.50 8.50 8.20 8.20 6.50 6.50 6.50	1992— May	6.50 6.50 6.00 6.00 6.00 6.00 6.00 6.00

^{1.} The prime rate is one of several base rates that banks use to price short-term business loans. The table shows the date on which a new rate came to be the predominant one quoted by a majority of twenty-nine large banks, rather than the

date on which the first bank made a change in the rate. Data in this table also appear in the Board's H.15 (519) weekly and G.13 (415) monthly statistical releases. For ordering address, see inside front cover.

^{5.} Includes public utilities and firms engaged primarily in such activities as communications, construction, manufacturing, mining, wholesale and retail trade,

transportation, and services.

6. Data on bankers dollar acceptances are gathered from approximately 100 institutions. The reporting group is revised every January.

7. In 1977 the Federal Reserve discontinued operations in bankers dollar acceptances for its own account.

^{1.} The daily effective federal funds rate is a weighted average of rates on trades through New York brokers.
2. Weekly figures are averages of seven calendar days ending on Wednesday of the current week; monthly figures include each calendar day in the month.
3. Annualized using a 360-day year or bank interest.
4. Rate for the Federal Reserve Bank of New York.
5. Quoted on a discount basis.
6. An average of officing rates on commercial paper placed by several leading.

An average of offering rates on commercial paper placed by several leading dealers for firms whose bond rating is AA or the equivalent.
 An average of offering rates on paper directly placed by finance companies.
 Representative closing yields for acceptances of the highest-rated money

center banks.

9. An average of dealer offering rates on nationally traded certificates of deposit.
10. Bid rates for Eurodollar deposits at 11 a.m. London time. Data are for

indication purposes only.

11. Auction date for daily data; weekly and monthly averages computed on an

issue-date basis.

^{12.} Yields on actively traded issues adjusted to constant maturities. Source: U.S. Treasury.

13. General obligations based on Thursday figures; Moody's Investors Service.

14. General obligations only, with twenty years to maturity, issued by twenty state and local governmental units of mixed quality. Based on figures for Thursday. Thursday

^{15.} Daily figures from Moody's Investors Service. Based on yields to maturity on selected long-term bonds.

16. Compilation of the Federal Reserve. This series is an estimate of the yield

^{16.} Compulation of the Federal Reserve. This series is an estimate of the yield on recently offered, A-rated utility bonds with a thirty-year maturity and five years of call protection. Weekly data are based on Friday quotations.
17. Standard & Poor's corporate series. Preferred stock ratio is based on a sample of ten issues: four public utilities, four industrials, one financial, and one transportation. Common stock ratio is based on the 500 stocks in the price index. Nott. Data in this table also appear in the Board's H.15 (519) weekly and G.13 (415) monthly statistical releases. For ordering address, see inside front cover.

on securities other than options are the difference between the market value (100 percent) and the maximum loan value of collateral as prescribed by the Board. Regulation T was adopted effective Oct. 15, 1934; Regulation U, effective May 1, 1936; Regulation G, effective Mar. 11, 1968; and Regulation X, effective Nov. 1, 1971.

On Jan. 1, 1977, the Board of Governors for the first time established in Regulation T the initial margin required for writing options on securities, setting it at 30 percent of the current market value of the stock underlying the option. On Sept. 30, 1985, the Board changed the required initial margin, allowing it to be the same as the option maintenance margin required by the appropriate exchange or self-regulatory organization; such maintenance margin rules must be approved by the Securities and Exchange Commission. Effective Jan. 31, 1986, the SEC approved new maintenance margin rules, permitting margins to be the price of the option plus 15 percent of the market value of the stock underlying the option. Effective June 8, 1988, margins were set to be the price of the option plus 20 percent of the market value of the stock underlying the option (or 15 percent in the case of stock-index options).

^{1.} Effective July 1976, includes a new financial group, banks and insurance companies. With this change the index includes 400 industrial stocks (formerly 425), 20 transportation (formerly 15 rail), 40 public utility (formerly 60), and 40 financial.

2. On July 5, 1983, the American Stock Exchange rebased its index, effectively cutting previous readings in half.

3. Since July 1983, under the revised Regulation T, margin credit at broker-dealers has included credit extended against stocks, convertible bonds, stocks acquired through the exercise of subscription rights, corporate bonds, and government securities. Separate reporting of data for margin stocks, convertible bonds, and subscription issues was discontinued in April 1984.

4. Free credit balances are amounts in accounts with no unfulfilled commitments to brokers and are subject to withdrawal by customers on demand.

5. New series since June 1984.

6. These requirements, stated in regulations adopted by the Board of Governors pursuant to the Securities Exchange Act of 1934, limit the amount of credit that can be used to purchase and carry "margin securities" (as defined in the regulations) when such credit is collateralized by securities. Margin requirements

^{1.} In accordance with the Balanced Budget and Emergency Deficit Control Act of 1985, all former off-budget entries are now presented on-budget. Federal Financing Bank (FFB) activities are now shown as separate accounts under the agencies that use the FFB to finance their programs. The act has also moved two social security trust funds, (federal old-age survivors insurance and federal disability insurance) off-budget. The Postal Service is included as an off-budget item in the Monthly Treasury Statement beginning in 1990.

2. Includes special drawing rights (SDRs); reserve position on the U.S. quota in the International Monetary Fund (IMF); loans to the IMF; other cash and

monetary assets; accrued interest payable to the public; allocations of SDRs; deposit funds; miscellaneous liability (including checks outstanding) and asset accounts; seigniorage; increment on gold; net gain or loss for U.S. currency valuation adjustment; net gain or loss for IMF loan-valuation adjustment; and profit on sale of gold.

^{1.} Functional details do not sum to total outlays for calendar year data because revisions to monthly totals have not been distributed among functions. Fiscal year total for outlays does not correspond to calendar year data because revisions from the Budget have not been fully distributed across months.
2. Old-age, disability, and hospital insurance, and railroad retirement accounts.
3. Old-age, disability, and hospital insurance.
4. Federal employee retirement contributions and civil service retirement and disability fund.

disability fund.

^{5.} Deposits of earnings by Federal Reserve Banks and other miscellaneous receipts.
6. Includes interest received by trust funds.
7. Consists of rents and royalties for the outer continental shelf and U.S. government contributions for employee retirement.

^{1.} Transactions are market purchases and sales of securities as reported to the Federal Reserve Bank of New York by the U.S. government securities dealers on its published list of primary dealers. Averages are based on the number of trading days in the period. Immediate, forward, and futures transactions are reported at a principal value, which does not include accrued interest; options transactions are reported at the face value of the underlying securities.

Dealers report cumulative transactions for each week ending Wednesday.

2. Transactions for immediate delivery include purchases or sales of securities (other than mortgage-backed agency securities) for which delivery is scheduled in five business days or less and "when-issued" securities that settle on the issue date of offering. Transactions for immediate delivery of mortgage-backed agency securities include purchases and sales for which delivery is scheduled in thirty business days or less. Stripped securities are reported at market value by maturity of coupon or corpus.

corpus.

3. Includes such securities as collateralized mortgage obligations (CMOs), real estate mortgage investment conduits (REMICs), interest-only securities (IOs), and principal-only securities (POs).

^{4.} Futures transactions are standardized agreements arranged on an exchange. Forward transactions are agreements made in the over-the-counter market that specify delayed delivery. All futures transactions are included regardless of time to delivery. Forward contracts for U.S. Treasury securities and federal agency debt securities are included when the time to delivery is more than five business days. Forward contracts for mortgage-backed agency securities are included when the time to delivery is more than thirty business days.

5. Options transactions are purchases or sales of put-and-call options, whether arranged on an organized exchange or in the over-the-counter market, and include options on futures contracts on U.S. Treasury and federal agency securities.

NOTE. In tables 1.42 and 1.43, "n.a." indicates that data are not published because of insufficient activity.

because of insufficient activity.

Data for several types of options transactions—U.S. Treasury securities, bills; Federal agency securities, debt; and federal agency securities, mortgage-backed, other than pass-throughs—are no longer available because activity is insufficient.

^{1.} Data for positions and financing are obtained from reports submitted to the Federal Reserve Bank of New York by the U.S. government securities dealers on its published list of primary dealers. Weekly figures are close-of-business Wednesday data; monthly figures are averages of weekly data.
2. Securities positions are reported at market value.
3. Net immediate positions include securities purchased or sold (other than mortgage-backed agency securities) that have been delivered or are scheduled to be delivered in five business days or less and "when-issued" securities that settle on the issue date of offering. Net immediate positions of mortgage-backed agency securities include securities purchased or sold that have been delivered or are scheduled to be delivered in thirty business days or less.
4. Includes such securities as collateralized mortgage obligations (CMOs), real estate mortgage increase investment conduits (REMICS), interest-only securities (IOS).

^{4.} Includes such securities as collateralized mortgage obligations (CMOs), real estate mortgage investment conduits (REMICs), interest-only securities (IOs), and principal-only securities (POs).

5. Futures positions reflect standardized agreements arranged on an exchange. Forward positions reflect agreements made in the over-the-counter market that specify delayed delivery. All futures positions are included regardless of time to Digitized for FRASER

delivery. Forward contracts for U.S. Treasury securities and federal agency debt securities are included when the time to delivery is more than five business days.

securities are included when the time to delivery is more than investibilities days. Forward contracts for mortgage-backed agency securities are included when the time to delivery is more than thirty business days.

6. Overnight financing refers to agreements made on one business day that mature on the next business day; continuing contracts are agreements that remain in effect for more than one business day but have no specific maturity and can be terminated without advance notice by either party; term agreements have a fixed maturity of more than one business day.

terminated without advance notice by either party; term agreements have a fixed maturity of more than one business day.

7. Matched-book data reflect financial intermediation activity in which the borrowing and lending transactions are matched. Matched-book data are included in the financing breakdowns given above. The reverse repurchase and repurchase numbers are not always equal because of the "matching" of securities of different values or different types of collateralization.

NOTE. Data for futures and forward commercial paper and bankers acceptances and for term financing of collateralized loans are no longer available because of insufficient activity.

Consists of mortgages assumed by the Defense Department between 1957 and 1963 under family housing and homeowners assistance programs.
 Includes participation certificates reclassified as debt beginning Oct. 1, 1976.
 On-budget since Sept. 30, 1976.
 Consists of debentures issued in payment of Federal Housing Administration insurance claims. Once issued, these securities may be sold privately on the

insurance caims. Once issued, these securities may be soid privately on the securities market.

5. Certificates of participation issued before fiscal year 1969 by the Government National Mortgage Association acting as trustee for the Farmers Home Administration, the Department of Health, Education, and Welfare, the Department of Housing and Urban Development, the Small Business Administration, and the Veterans' Administration.

eterans Administration.

6. Off-budget.

7. Includes outstanding noncontingent liabilities: notes, bonds, and debenires. Some data are estimated.

8. Excludes borrowing by the Farm Credit Financial Assistance Corporation,

shown on line 17.

9. Before late 1982, the Association obtained financing through the Federal Financing Bank (FFB). Borrowing excludes that obtained from the FFB, which is shown on line 22.

^{10.} The Financing Corporation, established in August 1987 to recapitalize the Federal Savings and Loan Insurance Corporation, undertook its first borrowing in October 1987.

October 1987.

11. The Farm Credit Financial Assistance Corporation, established in January 1988 to provide assistance to the Farm Credit System, undertook its first borrowing in July 1988.

12. The Resolution Funding Corporation, established by the Financial Institutions Reform, Recovery and Enforcement Act of 1989, undertook its first borrowing in October 1989.

13. The FFB, which began operations in 1974, is authorized to purchase or sell obligations issued, sold, or guaranteed by other federal agencies. Because FFB incurs debt solely for the purpose of lending to other agencies, its debt is not included in the main portion of the table in order to avoid double counting.

14. Includes FFB purchases of agency assets and guaranteed loans; the latter are loans guaranteed by numerous agencies, with the amounts guaranteed by any one agency generally being small. The Farmers Home Administration entry consists exclusively of agency assets, whereas the Rural Electrification Administration entry consists of both agency assets and guaranteed loans.

^{1.} Includes finance company subsidiaries of bank holding companies but not of retailers and banks. Data are before deductions for unearned income and losses. Data in this table also appear in the Board's G.20 (422) monthly statistical release. For ordering address, see inside front cover.

2. Includes all loans secured by liens on any type of real estate, for example, first and junior morgages and home equity loans.

3. Includes personal cash loans, mobile home loans, and loans to purchase other types of consumer goods such as appliances, apparel, general merchandise, and recreation vehicles.

4. Outstanding balances of pools upon which securities have been issued; these balances are no longer carried on the balance sheets of the loan originator.

^{2.} Before deduction for unearned income and losses.

recreation vehicles

S. Passenger car fleets and commercial land vehicles for which licenses are required.
 Credit arising from transactions between manufacturers and dealers, that is, floor plan financing.
 Includes loans on commercial accounts receivable, factored commercial accounts, and receivable dealer capital; small loans used primarily for business or farm purposes; and wholesale and lease paper for mobile homes, campers, and travel trailers.

1. Weighted averages based on sample surveys of mortgages originated by major institutional lender groups for purchase of newly built homes; compiled by the Federal Housing Finance Board in cooperation with the Federal Deposit Insurance Corporation.

2. Includes all fees, commissions, discounts, and "points" paid (by the borrower or the seller) to obtain a loan.

3. Average effective interest rate on loans closed for purchase of newly built homes, assuming prepayment at the end of ten years.

4. Average contract rate on new commitments for conventional first mortgages; from U.S. Department of Housing and Urban Development (HUD). Based on transactions on the first day of the subsequent month.

5. Average gross yield on thirty-year, minimum-downpayment first mortgages insured by the Federal Housing Administration (FHA) for immediate delivery in the private secondary market. Based on transactions on first day of subsequent month.

6. Average net yields to investors on fully modified pass-through securities backed by mortgages and guaranteed by the Government National Mortgage Association (GNMA), assuming prepayment in twelve years on pools of thirty-year mortgages insured by the Federal Housing Administration or guaranteed by the Department of Veterans Affairs.
7. Does not include standby commitments issued, but includes standby commitments converted.

7. Does not include standay commitments issued, our includes standay commitments converted.

8. Includes participation loans as well as whole loans.

9. Includes conventional and government-underwritten loans. The Federal Home Loan Mortgage Corporation's mortgage commitments and mortgage transactions include activity under mortgage securities swap programs, whereas the corresponding data for FNMA exclude swap activity.

Based on data from various institutional and governmental sources; figures for some quarters estimated in part by the Federal Reserve. Multifamily debt refers to loans on structures of five or more units.
 Includes loans held by nondeposit trust companies but not loans held by bank trust departments.
 Includes savings banks and savings and loan associations.
 FmHA-guaranteed securities sold to the Federal Financing Bank were reallocated from FmHA mortgage pools to FmHA mortgage holdings in 1986:Q4 because of accounting changes by the Farmers Home Administration.

^{5.} Outstanding principal balances of mortgage-backed securities insured or guaranteed by the agency indicated.
6. Other holders include mortgage companies, real estate investment trusts, state and local credit agencies, state and local retirement funds, noninsured pension funds, credit unions, and finance companies.
SOURCES. Based on data from various institutional and government sources. Separation of nonfarm mortgage debt by type of property, if not reported directly, and interpolations and extrapolations, when required, are estimated mainly by the Federal Reserve. Line 64, from Inside Mortgage Securities.

^{1.} A major revision of the industrial production index and the capacity utilization rates was released in April 1990. See "Industrial Production: 1989 Developments and Historical Revision," Federal Reserve Bulletin, vol. 76 (April 1990), pp. 187-204.

2. Ratio of index of production to index of capacity. Based on data from the Federal Reserve, DRI McGraw-Hill, U.S. Department of Commerce, and other

6. Based on data from U.S. Department of Commerce, Survey of Current

6. Based on data from U.S. Department of Commerce, survey of Carren Business.
7. Based on data not seasonally adjusted. Seasonally adjusted data for changes in the price indexes can be obtained from the U.S. Department of Labor, Bureau of Labor Statistics, Monthly Labor Review.
Note. Basic data (not indexes) for series mentioned in notes 4, 5, and 6, and indexes for series mentioned in notes 3 and 7 can also be found in the Survey of

Current Business.

Figures for industrial production for the latest month are preliminary, and many figures for the three months preceding the latest month have been revised. See "Recent Developments in Industrial Capacity and Utilization," Federal Reserve Bulletin, vol. 76 (June 1990), pp. 411-35. See also "Industrial Production Capacity and Capacity Utilization since 1987," Federal Reserve Bulletin, vol. 79, (June 1993), pp. 590-605.

Persons sixteen years of age and older, including Resident Armed Forces. Monthly figures are based on sample data collected during the calendar week that contains the twelfth day; annual data are averages of monthly figures. By definition, seasonality does not exist in population figures.
 Includes self-employed, unpaid family, and domestic service workers.
 Includes all full- and part-time employees who worked during, or received.

Earnings.

Sources.

3. Index of dollar value of total construction contracts, including residential, nonresidential, and heavy engineering, from McGraw-Hill Information Systems Company, F.W. Dodge Division.

4. Based on data from U.S. Department of Labor, Employment and Earnings.

Series covers employees only, excluding personnel in the armed forces.

5. Based on data from U.S. Department of Commerce, Survey of Current

pay for, the pay period that includes the twelfth day of the month; excludes proprietors, self-employed persons, household and unpaid family workers, and members of the armed forces. Data are adjusted to the March 1984 benchmark, and only seasonally adjusted data are available at this time.

^{1.} Data in this table also appear in the Board's G.17 (419) monthly statistical release. For ordering address, see inside front cover. For a detailed description of the series, see "Recent Developments in Industrial Capacity and Utilization," Federal Reserve Bulletin, vol. 76 (June 1990), pp. 411–35. See also "Industrial Production Capacity and Capacity Utilization Since 1987," Federal Reserve Bulletin, vol. 79, (June 1993), pp. 590–605.

2. Capacity utilization is calculated as the ratio of the Federal Reserve's seasonally adjusted index of industrial production to the corresponding index of capacity.

capacity.

^{3.} Primary processing includes textiles; lumber; paper; industrial chemicals; petroleum refining; rubber and plastics; stone, clay, and glass; and primary and fabricated metals.

^{4.} Advanced processing includes food, tobacco, apparel, furniture, printing, chemical products such as drugs and toiletries, leather and products, machinery, transportation equipment, instruments, miscellaneous manufacturing, and ord-

^{5.} Monthly highs, 1978 through 1980; monthly lows, 1982.6. Monthly highs, 1988–89; monthly lows, 1990–91.

^{1.} Data in this table also appear in the Board's G.17 (419) monthly statistical release. For ordering address, see inside front cover.

A revision of the industrial production index and the capacity utilization rates

was released in May 1993. See "Industrial Production, Capacity, and Capacity Utilization since 1987," Federal Reserve Bulletin, vol. 79 (June 1993), pp. 590-605.

2. Standard industrial classification.

Institute and seasonally adjusted by the Census Bureau, and (2) sales and prices of existing units, which are published by the National Association of Realtors. All back and current figures are available from the originating agency. Permit authorizations are those reported to the Census Bureau from 17,000 jurisdictions beginning in 1984.

^{1.} Not at annual rates.
2. Not seasonally adjusted.
3. Recent data on value of new construction may not be strictly comparable with data for previous periods because of changes by the Bureau of the Census in its estimating techniques. For a description of these changes, see Construction Reports (C-30-76-5), issued by the Census Bureau in July 1976.
SOURCE. Bureau of the Census estimates for all series except (1) mobile homes, which are private, domestic shipments as reported by the Manufactured Housing

^{1.} Seasonal factors are not calculated for lines 12-16, 18-20, 22-34, and 38-40.
2. Data are on an international accounts basis. The data differ from the Census basis data, shown in table 3.11, for reasons of coverage and timing. Military exports are excluded from merchandise trade data and are included in line 5.
3. Reporting banks include all types of depository institution as well as some brokers and dealers.

Associated primarily with military sales contracts and other transactions arranged with or through foreign official agencies.
 Consists of investments in U.S. corporate stocks and in debt securities of private corporations and state and local governments.

A54 International Statistics □ November 1993

3.11 U.S. FOREIGN TRADE¹

Millions of dollars; monthly data seasonally adjusted

Item	1990	1991	1992	1993								
ren	1990	1991	1992	Jan.	Feb.	Mar.	Арг.	May	June ^r	July ^p		
Exports of domestic and foreign merchandise, excluding grant-aid shipments	393,592	421,730	448,164	37,505	36,928	38,895	38,479	38,930	37,639	37,083		
warehouses	495,311	488,453	532,665	45,176	44,832	49,347	48,660	47,306	49,698	47,424		
3 Trade balance	-101,718	-66,723	-84,501	-7,672	-7,904	-10,453	-10,182	-8,376	-12,058	-10,340		

^{1.} Government and nongovernment shipments of merchandise between foreign countries and the fifty states, including the District of Columbia, Puerto Rico, the U.S. Virgin Islands, and U.S. Foreign Trade Zones. Data exclude (1) shipments among the United States, Puerto Rico, the U.S. Virgin Islands, and other U.S. affiliated insular areas. (2) shipments to U.S. Armed Forces and diplomatic missions abroad for their own use, (3) U.S. goods returned to the United States by its Armed Forces, (4) personal and household effects of travelers, and (5) in-transit shipments. Data reflect the total arrival of merchandise from foreign countries that immediately entered consumption channels, warehouses, or U.S. Foreign Trade Zones (general imports). Import data are Customs value; export data are F.A.S. value. Since 1990, data for U.S. exports to Canada have been derived from import data compiled by Canada; similarly, in Canadian statistics, Canadian exports to the United States are derived from import data compiled by

the United States. Since Jan. 1, 1987, merchandise trade data have been released forty-five days after the end of the month; the previous month is revised to reflect late documents.

late documents.

Data in this table differ from figures for merchandise trade shown in the U.S. balance of payments accounts (table 3.10, lines 2 through 4) primarily for reasons of coverage. For both exports and imports, a large part of the difference is the treatment of military sales and purchases. The military sales to foreigners (exports) and purchases from foreigners (imports) that are included in this table as merchandise trade are shifted, in the balance of payments accounts, from "merchandise trade" into the broader category "military transactions."

^{1.} Reporting banks include all types of depository institution, as well as some

10. Excludes central banks, which are included in "Official institutions."

Reporting banks include all types of depository institution, as well as some brokers and dealers.
 Excludes negotiable time certificates of deposit, which are included in "Other negotiable and readily transferable instruments."
 Includes borrowing under repurchase agreements.
 For U.S. banks, includes amounts owed to own foreign branches and foreign subsidiaries consolidated in Consolidated Report of Condition filed with bank regulatory agencies. For agencies, branches, and majority-owned subsidiaries of foreign banks, consists principally of amounts owed to head office or parent foreign bank, and foreign branches, agencies, or wholly owned subsidiaries of head office or parent foreign bank.
 Financial claims on residents of the United States, other than long-term securities, held by or through reporting banks.

^{6.} Includes nonmarketable certificates of indebtedness and Treasury bills issued to official institutions of foreign countries.

7. Principally bankers acceptances, commercial paper, and negotiable time certificates of deposit.

8. Principally the International Bank for Reconstruction and Development, the Inter-American Development Bank, and the Asian Development Bank. Excludes "holdings of dollars" of the International Monetary Fund.

9. Foreign central banks, foreign central governments, and the Bank for International Settlements.

10. Eveludes central banks, which are included in "Official institutions."

^{1.} The banking offices covered by these data are the U.S. offices and foreign branches of U.S.-owned banks and of U.S. subsidiaries of foreign-owned banks. Offices not covered include (1) U.S. agencies and branches of foreign banks, and (2) foreign subsidiaries of U.S. banks. To minimize duplication, the data are adjusted to exclude the claims on foreign branches held by a U.S. office or another foreign branch claims in table 3.14 (the sum of lines 7 through 10) with the claims of U.S. offices in table 3.18 (excluding those held by agencies and branches of foreign banks and those constituting claims on own foreign branches).

Since June 1984, reported claims held by foreign branches have been reduced by an increase in the reporting threshold for "shell" branches from \$50 million to

^{\$150} million equivalent in total assets, the threshold now applicable to all

^{\$150} million equivalent in total assets, the threshold now applicable to all reporting branches.

2. Organization of Petroleum Exporting Countries, shown individually; other members of OPEC (Algeria, Gabon, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, and United Arab Emirates); and Bahrain and Oman (not formally members of OPEC).

3. Excludes Liberia.

4. Includes Canal Zone.

5. Foreign branch claims only.

6. Includes New Zealand, Liberia, and international and regional organizations.

^{1.} For a description of the changes in the international statistics tables, see Federal Reserve Bulletin, vol. 65, (July 1979), p. 550.
2. Comprises Bahrain, Iran, Iraq, Kuwait, Oman, Qatar, Saudi Arabia, and United Arab Emirates (Trucial States).

Comprises Algeria, Gabon, Libya, and Nigeria.
 Includes nonmonetary international and regional organizations.
 Revisions include a reclassification of transactions, which also affects the totals for Asia and the grand totals.

Official and private transactions in marketable U.S. Treasury securities having an original maturity of more than one year. Data are based on monthly transactions reports. Excludes nonmarketable U.S. Treasury bonds and notes held by official institutions of foreign countries.

Comprises Bahrain, Iran, Iraq, Kuwait, Oman, Qatar, Saudi Arabia, and United Arab Emirates (Trucial States).
 Comprises Algeria, Gabon, Libya, and Nigeria.

3.26 DISCOUNT RATES OF FOREIGN CENTRAL BANKS¹

Percent per year

	Rate on Sept. 30, 1993			Rate on S	Sept. 30, 1993		Rate on	Sept. 30, 1993	
Country	Percent	Month effective	Country	Percent	Month effective	Country	Percent	Month effective	
Austria	6,25 6,5 4,90 8,25 6,75	July 1993 Sept. 1993 Sept. 1993 Sept. 1993 July 1993	Germany	6.25 8.5 1.5 5.5	Sept. 1993 Sept. 1993 Sept. 1993 Sept. 1993	Norway Switzerland United Kingdom	7.5 4.5 12.0	July 1993 July 1993 Sept. 1992	

^{1.} Rates shown are mainly those at which the central bank either discounts or makes advances against eligible commercial paper or government securities for commercial banks or brokers. For countries with more than one rate applicable to such discounts or advances, the rate shown is the one at which it is understood that the central bank transacts the largest proportion of its credit operations.

3.27 FOREIGN SHORT-TERM INTEREST RATES¹

Percent per year, averages of daily figures

Averages of certified noon buying rates in New York for cable transfers. Data in this table also appear in the Board's G.5 (405) monthly statistical release. For ordering address, see inside front cover.
 Value in U.S. cents.
 Index of weighted-average exchange value of U.S. dollar against the currencies of ten industrial countries. The weight for each of the ten countries is

the 1972-76 average world trade of that country divided by the average world trade of all ten countries combined. Series revised as of August 1978 (see Federal Reserve Bulletin, vol. 64 (August 1978), p. 700).

1. Effective March 31, 1984, the report of condition for commercial banks was 1. Effective March 31, 1984, the report of condition for commercial banks was substantially revised. Some of the changes are as follows: (1) Previously, banks with international banking facilities (IBFs) that had no other foreign offices were considered domestic reporters. Beginning with the March 31, 1984, Call Report these banks are considered foreign and domestic reporters and must file the foreign and domestic report of condition. (2) Banks with assets of more than \$1 billion report additional items. (3) The domestic offices of banks with foreign offices report far less detail. (4) Banks with assets of less than \$25 million are excused from reporting certain detail items.

The notation "n.a." indicates the lesser detail available from banks that don't have foreign offices, the inapplicability of certain items to banks that have only domestic offices or the absence of detail on a fully consolidated basis for banks that have foreign offices.

that have foreign offices.

that have foreign offices.

All transactions between domestic and foreign offices of a bank are reported in "net due from" and "net due to" lines. All other lines represent transactions with parties other than the domestic and foreign offices of each bank. Because these intraoffice transactions are nullified by consolidation, total assets and total liabilities for the entire bank may not equal the sum of assets and liabilities respectively of the domestic and foreign offices.

2. Foreign offices include branches in foreign countries, Puerto Rico, and U.S. territories and possessions; subsidiaries in foreign countries; all offices of Edge Act and agreement corporations wherever located; and IBFs.

3. "Over 100" refers to banks whose assets, on June 30 of the preceding calendar year, were \$100 million or more. (These banks file the FFIEC 032 or

- FFIEC 033 Call Report.) "Under 100" refers to banks whose assets, on June 30 of the preceding calendar year, were less than \$100 million. (These banks file the FFIEC 034 Call Report.)

 4. Because the domestic portion of allowances for loan and lease losses and allocated transfer risk reserves are not reported for banks with foreign offices, the components of total assets (domestic) do not sum to the actual total (domestic).

 5. Because the foreign portion of demand notes issued to the U.S. Treasury is not reported for banks with foreign offices, the components of total liabilities (foreign) do not sum to the actual total (foreign).

 6. The definition of "all other" varies by report form and therefore by column in this table.

- The definition of "all other" varies by report form and therefore by column in this table.
 Equity capital is not allocated between the domestic and foreign offices of banks with foreign offices.
 Only the domestic portion of federal funds sold and securities purchased under agreements to resell are reported here; therefore, the components do not sum to totals.
- Acceptances of other banks is not reported by domestic banks having less than \$300 million in total assets; therefore the components do not sum to totals.
 Only the domestic portion of federal funds purchased and securities sold under agreements to repurchase are reported here; therefore the components do
- not sum to totals.

 11. Components are reported only for banks with total assets of \$1 billion or more; therefore, components do not sum to totals.

4.23 TERMS OF LENDING AT COMMERCIAL BANKS Survey of Loans Made, August 2-6, 1993—Continued

NOTES

- 1. The survey of terms of bank lending to business collects data on gross loan extensions made during the first full business week in the mid-month of each quarter by a sample of 340 commercial banks of all sizes. A sample of 250 banks reports loans to farmers. The sample data are blown up to estimate the lending terms at all insured commercial banks during that week. The estimated terms of bank lending are not intended for use in collecting the terms of loans extended over the entire quarter or residing in the portfolios of those banks. Construction and land development loans include both unsecure loans and loans secured by real estate. Thus, some of the construction and land development loans would be reported on the statement of condition as real estate loans and the remainder as business loans. Mortgage loans, purchased loans, foreign loans, and loans of less that \$1,000 are excluded from the survey. As of September 30, assets of most of the large banks were at least \$7.0 billion. For all insured banks, total assets averaged \$275 million.

 2. Average maturities are weighted by loan size; excludes demand loans.

 3. Effective (compounded) annual interest rate calculated from the stated rate and other terms of the loans and weighted by loan size.

- The chances are about two out of three that the average rate shown would differ by less than the amount of the standard error from the average rate that would be found by a complete survey of lending at all banks.
 The rate used to price the largest dollar volume of loans. Base pricing rates include the prime rate (sometimes referred to as a bank's 'basic' or 'reference' rate); the federal funds rate; domestic money market rates other than the federal funds rate; foreign money market rates; and other base rates not included in the foregoing classifications.
 Overnight loans mature on the following business day.
 Demand loans have no stated date of maturity.
 Nominal (not compounded) annual interest rate calculated from the stated rate and other terms of the loans and weighted by loan size.
 Calculated by weighting the prime rate reported by each bank by the volume of loans reported by that bank, summing the results, and then averaging over all reporting banks.
 The proportion of loans made at rates below the prime may vary substantially from the proportion of such loans outstanding in banks' portfolios.

^{1.} Data are aggregates of categories reported on the quarterly form FFIEC 002, "Report of Assets and Liabilities of U.S. Branches and Agencies of Foreign Banks." The form was first used for reporting data as of June 30, 1980, and was revised as of December 31, 1985. From November 1972 through May 1980, U.S. branches and agencies of foreign banks had filed a monthly FR 886a report. Aggregate data from that report were available through the Federal Reserve statistical release G. I.I. last issued on July 10, 1980. Data in this table and in the G.11 tables are not strictly comparable because of differences in reporting panels and in definitions of balance sheet items. IBF, international banking facility.

2. Includes the District of Columbia.

3. Effective December 1981, the Federal Reserve Board amended Regulations D and Q to permit banking offices located in the United States to operate international banking facilities (IBFs). Since December 31, 1985, data for IBFs have been reported in a separate column. These data are either included in or excluded from the total columns as indicated in the headings. The notation "n.a." indicates that no IBF data have been reported for that item, either because the

item is not an eligible IBF asset or liability or because that level of detail is not reported for IBFs. From December 1981 through September 1985, IBF data were included in all applicable items reported.

4. Total assets and total liabilities include net balances, if any, due from or owed to related banking institutions in the United States and in foreign countries (see note 5). On the former monthly branch and agency report, available through the G.11 statistical release, gross balances were included in total assets and total liabilities. Therefore, total asset and total liability figures in this table are not comparable to those in the G.11 tables.

5. Related depository institutions includes the foreign head office and other

5. Related depository institutions includes the foreign head office and other U.S. and foreign branches and agencies of a bank, a bank's parent holding company, and majority-owned banking subsidiaries of the bank and of its parent holding company (including subsidiaries owned both directly) and indirectly).

In some cases two or more offices of a foreign bank within the same metropolitan area file a consolidated report.

LEGEND

Both pages

- Federal Reserve Bank city
- Board of Governors of the Federal Reserve System, Washington, D.C.

NOTE

The Federal Reserve officially identifies Districts by number and Reserve Bank city (shown on both pages) and by letter (shown on the facing page).

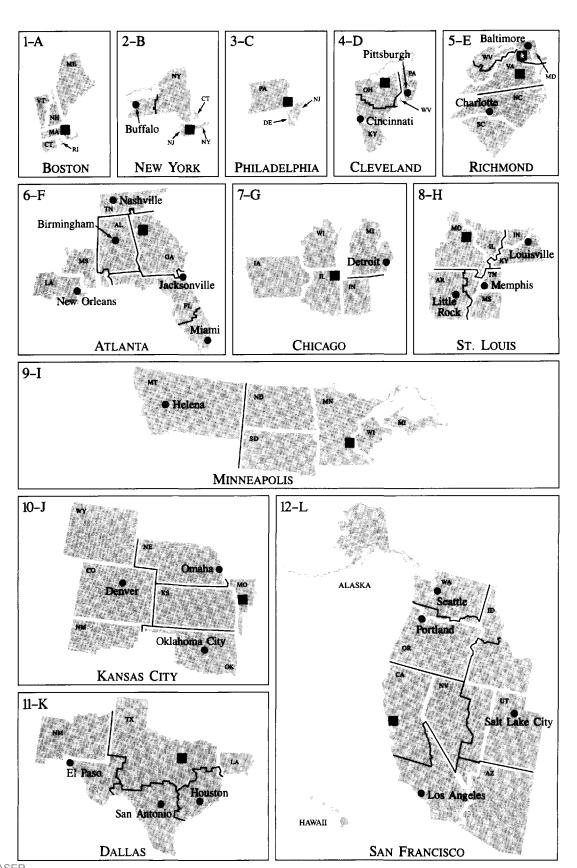

In the 12th District, the Seattle Branch serves Alaska, and the San Francisco Bank serves Hawaii.

The System serves commonwealths and territories as follows: the New York Bank serves the

Facing page

- Federal Reserve Branch city
- Branch boundary

Commonwealth of Puerto Rico and the U.S. Virgin Islands; the San Francisco Bank serves American Samoa, Guam, and the Commonwealth of the Northern Mariana Islands. The Board of Governors revised the branch boundaries of the System most recently in December 1991.

Federal Reserve Statistical Releases Available on the Commerce Department's Economic Bulletin Board

The Board of Governors of the Federal Reserve System makes some of its statistical releases available to the public through the U.S. Department of Commerce's economic bulletin board. Computer access to the releases can be obtained by subscription. For further information regarding a subscription to the economic bulletin board, please call (202) 482-1986. The releases transmitted to the economic bulletin board, on a regular basis, are the following:

Reference Number	Statistical release	Frequency of release
Н.3	Aggregate Reserves	Weekly/Thursday
H.4.1	Factors Affecting Reserve Balances	Weekly/Thursday
Н.6	Money Stock	Weekly/Thursday
H.8	Assets and Liabilities of Insured Domestically Chartered and Foreign Related Banking Institutions	Weekly/Monday
H.10	Foreign Exchange Rates	Weekly/Monday
H.15	Selected Interest Rates	Weekly/Monday
G.5	Foreign Exchange Rates	Monthly/end of month
G.17	Industrial Production and Capacity Utilization	Monthly/midmonth
G.19	Consumer Installment Credit	Monthly/fifth business day
Z.7	Flow of Funds	Quarterly

Publications of Interest

FEDERAL RESERVE REGULATORY SERVICE

To promote public understanding of its regulatory functions, the Board publishes the Federal Reserve Regulatory Service, a three-volume looseleaf service containing all Board regulations as well as related statutes, interpretations, policy statements, rulings, and staff opinions. For those with a more specialized interest in the Board's regulations, parts of this service are published separately as handbooks pertaining to monetary policy, securities credit, consumer affairs, and the payment system.

These publications are designed to help those who must frequently refer to the Board's regulatory materials. They are updated monthly, and each contains citation indexes and a subject index.

The Monetary Policy and Reserve Requirements Handbook contains Regulations A, D, and Q, plus related materials.

The Securities Credit Transactions Handbook contains Regulations G, T, U, and X, dealing with extensions of credit for the purchase of securities, together with related statutes, Board interpretations, rulings, and staff opinions. Also included are the Board's list

of marginable OTC stocks and its list of foreign margin stocks.

The Consumer and Community Affairs Handbook contains Regulations B, C, E, M, Z, AA, and BB, and associated materials.

The Payment System Handbook deals with expedited funds availability, check collection, wire transfers, and risk-reduction policy. It includes Regulation CC, Regulation J, the Expedited Funds Availability Act and related statutes, the official Board commentary on Regulation CC, and policy statements on risk reduction in the payment system.

For domestic subscribers, the annual rate is \$200 for the Federal Reserve Regulatory Service and \$75 for each Handbook. For subscribers outside the United States, the price including additional air mail costs is \$250 for the Service and \$90 for each Handbook. All subscription requests must be accompanied by a check or money order payable to the Board of Governors of the Federal Reserve System. Orders should be addressed to Publications Services, mail stop 138, Board of Governors of the Federal Reserve System, Washington, DC 20551.

U.S. MONETARY POLICY AND FINANCIAL MARKETS

U.S. Monetary Policy and Financial Markets by Ann-Marie Meulendyke offers an in-depth description of the way monetary policy is developed by the Federal Open Market Committee and the techniques employed to implement policy at the Open Market Trading Desk. Written from her perspective as a senior economist in the Open Market Function at the Federal Reserve Bank of New York, Ann-Marie Meulendyke describes the tools and the setting of policy, including many of the complexities that differentiate the process from simpler textbook models. Included is an account of a day at the Trading Desk, from morning information-gathering through daily decisionmaking and the execution of an open market operation.

The book also places monetary policy in a broader

context, examining first the evolution of Federal Reserve monetary policy procedures from their beginnings in 1914 to the end of the 1980s. It indicates how policy operates most directly through the banking system and the financial markets and describes key features of both. Finally, the book turns its attention to the transmittal of monetary policy actions to the U.S. economy and throughout the world.

The book is \$5.00 a copy for U.S. purchasers and \$10.00 for purchasers outside the United States. Copies are available from the Public Information Department, Federal Reserve Bank of New York, 33 Liberty Street, New York, NY 10045. Checks must accompany orders and should be payable to the Federal Reserve Bank of New York in U.S. dollars.

Publications of Interest

FEDERAL RESERVE CONSUMER CREDIT PUBLICATIONS

The Federal Reserve Board publishes a series of pamphlets covering individual credit laws and topics, as pictured below. The series includes such subjects as how the Equal Credit Opportunity Act protects women against discrimination in their credit dealings, how to use a credit card, and how to resolve a billing error.

The Board also publishes the *Consumer Handbook* to *Credit Protection Laws*, a complete guide to consumer credit protections. This forty-four-page booklet explains how to shop and obtain credit, how to maintain a good credit rating, and how to dispute unfair credit transactions.

Three booklets on the mortgage process are also available: A Consumer's Guide to Mortgage Lock-Ins, A Consumer's Guide to Mortgage Refinancings, and A Consumer's Guide to Mortgage Settlement Costs. These booklets were prepared in conjunction with the Federal Home Loan Bank Board and in consultation with other federal agencies and trade and consumer groups.

Copies of consumer publications are available free of charge from Publications Services, mail stop 138, Board of Governors of the Federal Reserve System, Washington, DC 20551. Multiple copies for classroom use are also available free of charge.
