313 *PROPOSED REVISION TO THE FEDERAL RESERVE'S DISCOUNT WINDOW LENDING PROGRAMS*

The Board of Governors' Regulation A currently authorizes the Federal Reserve Banks to operate three main discount window programs: adjustment credit, extended credit, and seasonal credit. On May 17, 2002, the Board published for public comment a proposed amendment to Regulation A that would establish two new discount window programs called primary credit and secondary credit as replacements for adjustment and extended credit. Primary credit would be available for very short terms, ordinarily overnight, to depository institutions that are in generally sound financial condition. Secondary credit would be available, subject to Reserve Bank approval and monitoring, for depository institutions that did not qualify for primary credit.

The interest rate on primary credit would usually be above short-term market interest rates, including the federal funds rate, as opposed to the current situation in which the discount rate (the interest rate for adjustment credit) is typically below money market interest rates. Because of the above-market rate, the restrictions currently employed to limit access to adjustment credit will be unnecessary for primary credit. The primary credit program would be broadly similar to mechanisms adopted by many other major central banks to provide credit at the margin at an above-market rate.

Proposed Revision to the Federal Reserve's Discount Window Lending Programs

Brian F. Madigan and William R. Nelson, of the Board's Division of Monetary Affairs, prepared this article. The proposal discussed here incorporates contributions from many other Board and Reserve Bank staff members.

The Board of Governors' Regulation A currently authorizes the Federal Reserve Banks to operate three main discount window programs: adjustment credit, extended credit, and seasonal credit. On May 17, 2002, the Board published for public comment a proposed amendment to Regulation A that would establish two new discount window programs called primary credit and secondary credit as replacements for adjustment and extended credit.¹ The proposed amendment is intended to improve the functioning of the discount window and the money market more generally. The Board also requested comment on the continued need for the seasonal program but did not propose any substantive changes to the program.

According to the proposal, primary credit would be available for very short terms, ordinarily overnight, to depository institutions that are in generally sound financial condition. The interest rate on primary credit would usually be above short-term market interest rates, including the federal funds rate, as opposed to the current situation in which the discount rate (the interest rate for adjustment credit) is typically below money market interest rates.

Eliminating the existing incentive for depository institutions to borrow from the window to exploit the typically positive spread should substantially reduce the administration necessary for each discount window loan. In particular, borrowers of short-term primary credit would no longer be required to have exhausted other sources of funds before turning to the window nor be prohibited from borrowing to fund sales of federal funds. The reduction in administrative burden should help encourage depository institutions to turn to the discount window when money markets tighten significantly and should thereby

improve the ability of the window to serve as a marginal source of reserves for the overall banking system and a backup source of liquidity for individual depository institutions. Secondary credit would be available, subject to Reserve Bank approval and monitoring, for depository institutions that did not qualify for primary credit. As required by law, all types of discount window loans would have to be backed by adequate collateral.

The primary credit program would be broadly similar to mechanisms adopted by many other major central banks to provide credit at the margin at an above-market interest rate. Adoption of the proposal would *not* entail a change in the stance of monetary policy. It would not require a change in the Federal Open Market Committee's (FOMC) target for the federal funds rate and would not affect the level of market interest rates more generally.

BACKGROUND

Functions of the Discount Window

In implementing monetary policy, the Federal Reserve employs open market operations as the principal source of reserves to the banking system and currency to the public and as the principal means of effecting short-run adjustments in reserves. In this context, discount window credit has two main roles. First, it acts as a short-run safety valve for the overall banking system by making additional reserves available when the aggregate supply of reserves provided through open market operations falls short of demand, thereby preventing an excessive tightening of money market conditions. Second, it enables depository institutions that are financially sound but have experienced an unexpected shortage of reserves or funding to make payments while avoiding overdrafts on their accounts at Federal Reserve Banks or shortfalls in meeting their reserve requirements.

These discount window functions have been performed primarily by the adjustment credit program. Adjustment credit is extended at the basic discount

1. The proposed amendment to Regulation A and request for comment can be found at www.federalreserve.gov/boarddocs/press/bcreg/2002/20020517/default.htm. The *Federal Register* notice, 67 Fed. Reg. 36,544, was published on May 24, 2002.

Effective federal funds rate and discount rate, 1955–2002

NOTE. The data are monthly and extend through May 2002.

rate, which over the past decade has typically been 25 to 50 basis points below the usual level of overnight market interest rates, as indexed by the federal funds rate (chart).² Despite the below-market discount rate, the volume of adjustment credit has usually been relatively small, in part because the Federal Reserve has sought to prevent an uncontrolled expansion of the supply of reserves and a misallocation of credit by requiring that depository institutions borrow only to meet short-term needs and first exhaust other reasonably available sources of funds.

Under the proposed revision, the functions currently performed by adjustment credit would be performed largely by primary credit. Primary credit would be the principal backup source of reserves for the system and of liquidity for individual depository institutions that are in generally sound financial condition. Under the proposed arrangements, depository institutions would have the incentive to seek out lower-priced alternatives on their own initiative before requesting higher-priced primary credit. Because the interest rate on primary credit would be above the target federal funds rate and because the funds rate usually is close to its target, the aggregate volume of primary credit would be expected to be low.³ But the volume would be low because of a

pricing differential not because administration by Federal Reserve Banks would limit the amount of borrowing.

Besides serving as a marginal source of aggregate reserves to the market and a backup source of liquidity to sound depository institutions, the discount window can also, at times, serve as a useful tool for promoting financial stability by providing temporary funding to depository institutions that are experiencing significant financial difficulties. The provision of central bank credit can help guard against the sudden collapse of depository institutions by addressing liquidity strains while an institution is making a transition to sounder footing. Discount window credit can also be used to facilitate an orderly closure of a failing institution when consistent with least-cost resolution of the failure. An institution obtaining credit in such situations must be monitored appropriately to ensure that it does not take excessive risks in an attempt to return to profitability or use central bank credit in a way that would increase costs to the deposit insurance fund of resolving the institution if a resolution ultimately became necessary.⁴ Historically, the need for such loans to troubled banks has been met by extended credit; under the proposed revision, it would be met by secondary credit.

2. Over the Federal Reserve's first fifty years, the discount rate was generally equal to or higher than short-term market interest rates. The relationship changed in the mid-1960s, and the pattern established at that time has continued over most of the nearly four decades since then. The historical record indicates that the reversal at that time reflected macroeconomic policy considerations rather than a judgment that such a rate alignment was most suitable for operation of the discount window.

3. The proposal for a primary credit program is unrelated to the Federal Reserve System's consideration of alternative assets as substi-

tutes for Treasury securities in its portfolio that was discussed in the FOMC minutes of January 30–31, 2001. The minutes of the meeting are available at www.federalreserve.gov/fomc/minutes/20010131.htm. Because the volume of primary credit outstanding ordinarily would be small, primary credit could not be a substitute for Treasuries as a major asset in the System portfolio.

4. Lending under such circumstances may be subject to the guidelines on lending to troubled institutions imposed by the Federal Deposit Insurance Corporation Improvement Act (FDICIA) of 1991.

Shortcomings of Current Lending Programs Addressed by Proposal

The below-market interest rate on adjustment credit causes several significant problems. The incentive for depository institutions to exploit the below-market rate means that borrowing requests are subject to considerable administration. Such administration may involve a review of every prospective borrower's funding situation to establish at least a presumption that other reasonably available sources of funds have been exhausted, that the purpose of the borrowing is appropriate, and that the credit will not be used for

arbitrage. Because such evaluations necessarily are subjective, achieving consistency in credit administration across the System's twelve Reserve Banks is difficult. Also, the process of obtaining information on depository institutions' funding situations can be somewhat burdensome to the institutions, likely making them reluctant to turn to the window. In addition, the rules for the use of discount window credit necessitated by the below-market rate have proved difficult to formulate and explain, and depository institutions have often cited uncertainty about their borrowing privileges as a reason for their reluctance to borrow. Depository institutions have been required first to

Primary Credit: An Improved Safety Valve for Releasing Significant Market Pressures

A key function of adjustment credit is to serve as a safety valve for the bank reserves market. On any given day, the aggregate volume of reserves provided through open market operations can fall short of the amount demanded as a result of fluctuations in various factors that affect the supply of or demand for reserves. Borrowing from the discount window creates additional reserves, so the willingness of depository institutions to turn to the discount window when such shortfalls occur governs the extent of the effects of the shortfalls on money market interest rates. If depository institutions are very reluctant to use the window, they bid vigorously for funds in the market, pushing money market rates, especially the overnight federal funds rate, up sharply. But if depository institutions are quite willing to use the window, the increase in the funds rate may be much more modest.

The willingness of institutions to use the window and the associated effects of a shortfall in reserves on money market interest rates have varied considerably over time. One gauge of this willingness is the average level of adjustment credit extended to large banks on days when the funds rate tightens moderately, exceeding the FOMC's target by 25 to 200 basis points at the close (chart).

During the early 1990s, that average was quite low. At its low point, reached in 1993, adjustment borrowing on moderately tight days averaged just \$45 million. In those years, a number of banking institutions experienced significant financial difficulties. As a result, many banks, even healthy institutions, were concerned that their borrowing would be viewed by other market participants as a sign of financial weakness. Such perceptions could result in serious difficulties for the institution (or exacerbate existing problems). Even though the Federal Reserve holds information about borrowing by individual banks in the strictest confidence, market participants have at times tried to infer which banks might be borrowing through knowledge of which banks were bidding for funds in the market late in the day and from aggregate data published by the Federal Reserve.

In recent years, institutions have become somewhat more willing to use the window, with adjustment borrowing on moderately tight days exceeding \$200 million on average in 2000 and 2001. The increased willingness has undoubtedly been largely due to the improved condition of the industry. Still, institutions have on occasion been willing to pay quite high rates in the market rather than turn to the discount window, suggesting that some institutions remain reluctant to borrow. Even if the proposed change in discount window structure does not completely eliminate that reluctance, it should still help damp late-day spikes in the federal funds rate. With no restrictions on the re-lending of funds obtained through the program, institutions that are willing to borrow at the window should have an incentive to borrow primary credit and lend in the funds market to other institutions that might have some residual reluctance to turn to the discount window.

Average borrowing on days on which the federal funds rate was high, 1989–2001

NOTE. Average adjustment credit borrowing by large banks on days on which the federal funds rate was 25 to 200 basis points above the targeted federal funds rate at the close. The data are annual.

seek funds in the market before seeking discount window credit. This requirement may make them reluctant to borrow because turning to the window after signaling their need for funds to the market could be seen as a sign of weakness, particularly during episodes of financial stress. The reluctance to use discount window credit stemming from these factors has limited the effectiveness of the discount window in buffering shocks to money markets. (See box "Primary Credit: an Improved Safety Valve for Releasing Significant Market Pressures.")

The establishment of a lending program with an above-market rate would sharply reduce the need for the administration of the window. Reduced administration would encourage greater uniformity in the administration of the discount window across Federal Reserve Districts. It should also mitigate institutions' reluctance to borrow when money markets tighten sharply by minimizing Reserve Bank questioning, by significantly increasing the comprehensibility of the rules regarding credit extension, and by eliminating the requirement that institutions first attempt to secure funds elsewhere. Furthermore, the proposed changes should appreciably reduce depository institutions' concern that borrowing will be perceived as a sign of weakness, as only financially sound institutions will have access to primary credit.

The proposal to adopt a primary credit program is also related to the Federal Reserve's ongoing planning for contingencies. Having a means of preventing an undue tightening of money markets during a financial market crisis, such as that following the terrorist attacks on September 11, 2001, would be useful in the event that depository institutions' demands for excess reserves rise sharply; disruptions inhibit the flow of funds through the banking system, particularly late in the day; or the Federal Reserve's ability to carry out open market operations is impaired. If, as is intended, the primary credit facility significantly reduces the reluctance of depository institutions to use the discount window, the Federal Reserve should be able to cap the federal funds rate near its target during a crisis by reducing the primary discount rate to a level close to the target.

SPECIFICATIONS OF THE PROPOSED NEW TYPES OF CREDIT

Primary Credit

As the replacement for adjustment credit, primary credit would be available only to generally sound depository institutions, ordinarily with little or no

administrative burden on the borrower. It would typically be extended for very short terms (usually overnight) but could be extended for up to a few weeks if the lending Reserve Bank determines that the institution is in generally sound condition and cannot obtain such credit in the market on reasonable terms (those qualifying for longer-term loans would in most cases be relatively small institutions that lack access to national money markets).

Interest Rate

Under the proposal, the primary discount rate would be changed through the same discretionary procedure currently followed for setting the basic discount rate: The boards of directors of the Federal Reserve Banks would establish a primary discount rate, as well as other discount rates, every two weeks subject to review and determination by the Board of Governors, as required by the Federal Reserve Act. The primary discount rate would not be set according to a formula but would presumably move broadly in line with the target federal funds rate, much as the basic discount rate does currently.

The proposal suggests that when the program begins, the boards of directors of the Federal Reserve Banks would initially establish, subject to the statutorily required review and determination by the Board of Governors, the primary discount rate at a level 100 basis points above the FOMC's then-prevailing target for the federal funds rate. That level would likely place the primary discount rate somewhat above the cost of alternative short-term funds for eligible depository institutions, except in circumstances of unusually tight money markets or funding needs arising very late in the day. (Such a spread would also be similar to the spreads employed by other central banks. See box "Experience of Other Central Banks.")

A substantial spread would encourage depository institutions to borrow only to meet short-term, unforeseen needs. Too wide a spread, however, would mean that the federal funds rate could, at times, rise to undesirably high levels above the FOMC's target. Notably, if the primary discount rate were to fall close to or below the target federal funds rate, the Reserve Banks would again need to restrict the use of discount window credit, eliminating the advantages of primary credit relative to adjustment credit. Although the proposal tentatively recommends an initial spread of 100 basis points, public comment will help inform both the Federal Reserve's choice of that initial spread and the subsequent establishment of primary discount rates. An aspect of the proposal

is that the primary discount rate could be lowered in an emergency, thereby helping to ensure that the federal funds rate is capped at a level that would facilitate the continued functioning of financial markets during crises.

Eligibility

Only depository institutions judged by the lending Reserve Bank to be generally sound would be eligible for primary credit. At the inception of the new

Experience of Other Central Banks

The central banks of nearly all industrialized countries have standing lending facilities that make collateralized loans at an above-market rate.¹ Such facilities are sometimes called "Lombard" facilities after *Lombardkredit*, the German term for a collateralized loan and for the loans made at an above-market rate by the Swiss National Bank and, before the formation of the European Central Bank (ECB), by the Bundesbank (the central bank of Germany).² In 1999, the ECB was opened with a Lombard facility; in 1996, the Bank of Canada restructured its facilities to include an overdraft facility that acts as a Lombard facility; and in 2001, the Bank of Japan adopted

a Lombard facility. Other central banks that have employed Lombard facilities include those in Austria, Belgium, France, Italy, and Sweden. These facilities typically have extended short-term credit with few restrictions on the borrowing institution's funding situation or use of the proceeds. Lombard rates have varied from 25 to 200 basis points above the central bank's target policy rate or related money market rates. The ECB has generally set the marginal lending rate (the rate on its Lombard facility) 100 basis points above the refinancing rate (its target policy rate) (chart).

Discussions with staff members of these central banks indicate that Lombard facilities that are a part of monetary policy operations similar to those of the Federal Reserve have been very effective in setting an upper limit on market rates. For example, after the Bundesbank removed certain limits on Lombard loans and began to actively target the overnight interest rate, overnight market rates never rose above the ceiling. Similarly, since the inception of the ECB in 1999, the daily average interbank rate in the euro area has not risen above the ECB's marginal lending rate, while intraday data indicate that within-the-day highs of euro-area interbank rates have only rarely exceeded the marginal lending rate and by very little. The recent experience of the Bank of Canada indicates that its lending arrangement has also been an effective ceiling for rates. It is too soon to determine whether the Bank of Japan's Lombard facility will effectively cap overnight money market rates.

1. The major exceptions are the Federal Reserve and the Bank of England. If liquidity is needed, the Bank of England instead conducts a late-afternoon overnight repurchase agreement (repo) operation normally at 100 basis points above the prevailing official repo rate. It also has the option of opening a late lending facility for the clearing banks after the markets have closed. The applicable repo rate for the late lending facility ranges between the official repo rate and 150 basis points above the repo rate, depending on market conditions.

2. The Lombardy region of Northern Italy was an important center of finance in the Middle Ages. The word "Lombard" came to mean banker or moneylender (also pawnbroker)—hence such terms as *Lombardkredit*, Lombard facility, and Lombard Street, the London address that in the nineteenth century was the center of English banking. In his 1873 book, *Lombard Street: A Description of the English Money Market* (New York: E.P. Dutton, 1910), Walter Bagehot famously recommends that in response to a financial panic, the central bank lend freely at a penalty rate (chap. 7, p. 198 ff.). The application of the term "Lombard facility" to that practice has to do, however, with the medieval origins of "Lombard" rather than, as is sometimes thought, with the name of Bagehot's book or Lombard Street itself.

European Central Bank benchmark interest rates, 1999–2002

NOTE. The data are daily and extend through June 14, 2002.

1. Euro overnight index average.

program, the Reserve Banks would classify each depository institution with a borrowing agreement already on file as either eligible or ineligible for primary credit and would notify the institution of its status. New applicants for Federal Reserve credit would be notified of their eligibility once they filed borrowing documents. Institutions would also be notified promptly of any change in their eligibility. The Federal Reserve would treat institutions' eligibility or ineligibility as confidential.

The Reserve Banks would adopt uniform guidelines for judging institutions' degree of financial soundness and thus their eligibility for primary credit. A general principle to be reflected in the guidelines would be that primary credit should be viewed as an attractive source of funds mainly when money markets tighten significantly, pushing overnight market interest rates at least to the level of the primary discount rate. That is, all eligible institutions should usually face a cost of overnight funds in the marketplace somewhat below the primary discount rate. Because only generally sound depository institutions would be eligible to obtain primary credit, the establishment of eligibility guidelines could also help reduce the concerns of depository institutions that borrowing at the discount window would be viewed as a sign of weakness; as noted previously, such concerns have at times severely limited the willingness of depository institutions to borrow, even when money markets were extremely tight.

The guidelines for determining eligibility would be based primarily on supervisory ratings, though supplementary information, including ratings issued by major rating agencies, market spreads on subordinated debt, information from supervisory exams in progress, and other news since the last exam, would also be considered. The Reserve Banks would initially adopt guidelines along the following lines: Domestically chartered depository institutions with CAMELS ratings of 1 or 2 and branches and agencies of foreign banking organizations with Strength of Support Assessment (SOSA) of 1 would be eligible for primary credit unless supplementary information suggested that the institution's financial condition had deteriorated since its last examination.⁵ Institutions rated CAMELS 3 or SOSA 2 would be eligible for primary credit if supplementary information suggested that they were generally sound, but the funding situation of such institutions seeking credit would

be reviewed and monitored. Institutions rated CAMELS 4 or SOSA 3 would not be eligible for primary credit except in rare circumstances, such as when an ongoing examination indicated a substantial improvement in condition. Credit extensions to ineligible CAMELS 4 and SOSA 3 institutions as well as to CAMELS 5 institutions would be made under the proposed secondary credit program, described later. Based on the proposed guidelines and the current distribution of supervisory ratings, most depository institutions would be judged eligible for the primary credit program.

These criteria are consistent with the intent of the guidelines for discount window lending contained in the Federal Deposit Insurance Corporation Improvement Act in that lending to troubled institutions would be closely monitored. The criteria are also consistent with the guidelines used by Federal Reserve Banks to determine institutions' access to daylight credit as set forth in the Federal Reserve's Payments System Risk Policy. In general, depository institutions that qualify for access to daylight credit would be eligible for primary credit, and those that do not would be restricted to secondary credit.

No Requirement Regarding Exhaustion of Funds

The requirement in Regulation A that depository institutions exhaust reasonably available alternative sources of funds before obtaining adjustment credit would be dropped. The removal of this requirement is consistent with the overall reduction in discount window administration that the Federal Reserve would be seeking under this program. As an important consequence, depository institutions would be free to sell federal funds to others while obtaining primary credit as long as those activities were consistent with safe and sound banking practices. In addition, allowing depository institutions to resell the proceeds of primary credit loans would enhance the ability of the primary credit rate to serve as a cap on the federal funds rate when money markets tighten. For that reason, the Federal Reserve would welcome financially sound institutions' engagement in such transactions if the institutions judge that the transactions would be in their financial interest.

Collateral

Under the proposal, collateral policies would be unchanged. As required by the Federal Reserve Act, all borrowing would be collateralized to the satisfaction of the lending Reserve Bank. Federal Reserve

5. CAMELS (Capital, Assets, Management, Earnings, Liquidity, and Sensitivity to market risk) ratings are set on a scale of 1 through 5, with 5 representing the highest degree of supervisory concern. SOSA rankings are set on a scale of 1 through 3, with 3 representing the highest degree of supervisory concern.

Banks would continue to accept a broad range of financial assets as collateral for discount window loans.

Reserve Bank Discretion to Lend or Not Lend

The main purpose of the proposed primary credit program is to make short-term credit available as a backup source of liquidity to generally sound institutions. Reserve Banks would retain the discretion not to lend in circumstances that they apprise are inconsistent with that purpose.

Secondary Credit

Secondary credit, the proposed replacement for extended credit, would be designed for depository institutions that do not qualify for primary credit. Because some institutions currently eligible for adjustment credit would not qualify for primary credit, secondary credit would potentially be used more often than extended credit has been, particularly in recent years, and the program would be designed to recognize the somewhat broader class of borrowing situations that would be covered under it. Specifically, secondary credit might be extended to meet temporary funding needs of an institution if, in the judgment of the Reserve Bank, such a credit extension would be consistent with the institution's timely return to reliance on private funding sources. Also, a Reserve Bank may extend secondary credit if, in cooperation with the Federal Deposit Insurance Corporation and consistent with a least-cost resolution, the Reserve Bank determines that such credit would facilitate the orderly resolution of serious financial difficulties of the borrowing institution. The change in the name of the program is intended in part to eliminate the focus on longer-term credit extensions implied by the term "extended credit."

The interest rate on secondary credit would be set by formula at 50 basis points above the primary discount rate. The setting of the interest rate at a level above the rate on primary credit—and therefore even further above the target federal funds rate—reflects the less-sound condition of borrowers of secondary credit.

Seasonal Credit

The proposal recommends no substantive change to the seasonal credit program. Seasonal credit would remain available to small and medium-sized institutions that experience significant seasonal swings in their loans and deposits. The rate on seasonal credit would continue to be the average of the effective federal funds rate and the secondary market interest rate on large ninety-day certificates of deposit for the previous reserve maintenance period. Because such a rate would almost always be less than the primary discount rate, it would be necessary to remove from Regulation A the stipulation that the seasonal credit rate be at least as high as the basic discount rate.

The seasonal credit program was originally designed to address the difficulties that relatively small banks experiencing substantial intra-yearly swings in funding needs faced because of a lack of access to the national money markets. However, funding opportunities for smaller depository institutions have expanded considerably over the past few decades as a result of deposit deregulation and the general development of financial markets. These changes call into question the continued need for the seasonal program. The proposal seeks specific public comment on whether small depository institutions still lack reasonable access to funding markets, on the continued need for the seasonal lending program, and on the appropriate setting of the seasonal credit discount rate, particularly in view of the proposed establishment of a primary credit program with an above-market interest rate.

NEXT STEPS

The Board is seeking public comments on all aspects of the proposal. The comment period, extending for ninety days from date of publication, ends August 22, 2002. Following an analysis of the comments, the staff will present a revised proposal to the Board. If the Board votes to revise the Federal Reserve's lending programs, the changes will take place once internal procedures are modified, a process that could take several months, and depository institutions are made familiar with the new procedures. □

Announcements

FEDERAL OPEN MARKET COMMITTEE DIRECTIVE

The Federal Open Market Committee decided on May 7, 2002, to keep its target for the federal funds rate unchanged at $1\frac{3}{4}$ percent.

The information that has become available since the last meeting of the Committee confirms that economic activity has been receiving considerable upward impetus from a marked swing in inventory investment. Nonetheless, the degree of the strengthening in final demand over coming quarters, an essential element in sustained economic expansion, is still uncertain.

In these circumstances, although the stance of monetary policy is currently accommodative, the Committee believes that, for the foreseeable future, against the background of its long run goals of price stability and sustainable economic growth and of the information currently available, the risks are balanced with respect to the prospects for both goals.

Voting for the FOMC monetary policy action were Alan Greenspan, Chairman; William J. McDonough, Vice Chairman; Susan S. Bies; Roger W. Ferguson, Jr.; Edward M. Gramlich; Jerry L. Jordan; Robert D. McTeer, Jr.; Mark W. Olson; Anthony M. Santomero; and Gary H. Stern. Voting against the action: none.

LETTER FROM CHAIRMAN GREENSPAN ON FEDERAL TRADE COMMISSION ACT AND UNFAIR BANKING PRACTICES

The Federal Reserve Board released on May 30, 2002, a letter from Chairman Alan Greenspan to Representative John J. LaFalce confirming the application to banks of the prohibition contained in section 5 of the Federal Trade Commission Act against unfair or deceptive acts or practices.

The letter also confirms that the federal banking agencies are legally authorized to use enforcement powers under section 8 of the Federal Deposit Insurance Act against violations of this prohibition.

PROPOSAL TO REVISE DISCOUNT WINDOW PROGRAM

The Board of Governors requested on May 17, 2002, public comment on a proposal to revise the Federal Reserve's discount window programs, which provide credit to help depository institutions meet temporary liquidity needs.

Adoption of the proposal would not entail a change in the stance of monetary policy. The Federal Open Market Committee's target for the federal funds rate would not change as a result of this proposal, and the level of market rates more generally would be unaffected.

The Board is proposing the establishment of a new type of discount window credit, to be called primary credit. It would replace adjustment credit, which currently is extended at a below-market rate.

Primary credit would be available for very short terms as a backup source of liquidity to depository institutions that are in generally sound financial condition. It would be extended at a rate that would be above the usual level of short-term market interest rates, including the federal funds rate.

The primary credit program would be broadly similar to mechanisms used by many other major central banks.

The interest rate for primary credit would be set through a procedure identical to that currently used for the basic discount rate. Under the proposal, the interest rate on primary credit would initially be set at 100 basis points above the target federal funds rate. Thereafter, Reserve Banks would set the rate, subject to review and determination by the Board of Governors.

By restricting eligibility to generally sound institutions and by eliminating the incentive for institutions to borrow to exploit the positive spread of money market rates over the discount rate, the primary credit program should considerably reduce the need for the Federal Reserve to review the funding situations of borrowers.

The Federal Reserve expects that, as a result of this reduced administration, institutions' willingness to use the window when money markets tighten should

increase, limiting potential volatility in the federal funds rate.

Another element of the proposal is the establishment of a secondary credit program to replace the existing extended credit program. Secondary credit would be available in appropriate circumstances to depository institutions that do not qualify for primary credit. Secondary credit would be extended at an interest rate 50 basis points above the primary discount rate.

The proposal also contains certain minor technical changes to the Board's Regulation A that are independent of the primary and secondary credit proposals.

Comments are due ninety days after publication in the *Federal Register*.

ADVISORY ON FRAUD SCHEMES INVOLVING FINANCIAL INSTRUMENTS

The Federal Reserve Board on May 20, 2002, alerted financial institutions and the public to the continued proliferation of fraudulent schemes involving financial instruments.

In 1993 and again in 1996, the Federal Reserve issued advisories concerning illegal activities claiming to involve a financial instrument issued by a "prime bank." These questionable transactions promise extremely high rates of return with little or no risk and often insinuate the involvement of a well-known government agency, such as the Federal Reserve, the World Bank, or the International Monetary Fund.

The Federal Reserve knows of no legitimate use of "prime bank" financial instruments and does not license anyone to trade any type of financial instruments or to act as the Federal Reserve's agent to sell or redeem them.

In an advisory letter to supervisory authorities at the twelve regional Federal Reserve Banks and to banking organizations supervised by the Federal Reserve, the Board again stressed the dangers associated with investing or participating in these illicit transactions and listed several hallmarks or "red flags" that have been associated with many fraudulent scams.

The Federal Reserve also noted that, since the issuance of the Board's 1993 and 1996 alerts concerning "prime bank" financial instruments, many wrongdoers have stopped referring to "prime bank" instruments and begun to use the names of legitimate financial instruments in their scams, such as "medium term notes" (often referred to as "MTNs").

Federal and state law enforcement agencies, as well as the Securities and Exchange Commission (SEC), have investigated and prosecuted numerous individuals associated with "prime bank" or other investment schemes involving financial instruments.

Individuals, banking organizations, and other entities that have been invited to participate in transactions with the characteristics described in the new alert are encouraged to contact the local offices of federal law enforcement authorities as well as the SEC.

WHITE PAPER ON SETTLEMENT OF GOVERNMENT SECURITIES

The Federal Reserve Board and Securities and Exchange Commission announced on May 9, 2002, the release of a "white paper" discussing possible structural changes in the settlement of government securities and requested public comment on the document.

The paper, published May 13 in the *Federal Register*, was developed with a goal of identifying issues and questions that need to be further explored. In releasing the paper, the staffs of the agencies emphasized they have not concluded that any of the approaches discussed represent an improvement over current arrangements or that structural change is necessary.

Following the September 11, 2001, terrorist attacks, the agencies held discussions with market participants concerning vulnerabilities in the settlement of government securities. Market participants were interested in exploring structural changes in the provision of settlement services for government securities, including the concept of establishing a utility to conduct settlement. The paper identifies possible approaches for creating a utility and possible assessment criteria for evaluating the various approaches.

MINUTES OF BOARD DISCOUNT RATE MEETINGS

The Federal Reserve Board released on May 20, 2002, the minutes of its discount rate meetings from February 4, 2002, to March 18, 2002.

ANTHRAX TESTS AT THE BOARD

On May 9, 2002, mail processed in a secure facility outside the Federal Reserve Board buildings tested positive for traces of anthrax DNA.

Routine preliminary tests, administered late Tuesday and Wednesday by Board and contract employees wearing protective environmental suits, detected anthrax spores in small batches of mail totaling about twenty pieces. The affected mail was routine commercial and business mail and did not have any of the characteristics identified by the FBI as suspicious.

The swabs that produced the positive readings will be sent to a laboratory for additional testing.

The source of the possible contamination is not known. Subsequent tests of mailroom surfaces and mail-distribution points within the Board's buildings have all been negative.

Board officials have notified, and are working with, the FBI and with U.S. Postal Service inspectors.

An anthrax trace found at the Board last December is believed to have been the result of cross-contamination. Extensive follow-up testing after that incident yielded no further positive results.

PUBLICATION OF THE MAY 2002 UPDATE TO THE *COMMERCIAL BANK EXAMINATION MANUAL*

The May 2002 update to the *Commercial Bank Examination Manual*, Supplement No. 16, has been published and is now available. The *Manual* comprises the Federal Reserve System's regulatory, supervisory, and examination guidance for state member banks. The new supplement includes the following:

1. *Board's October 16, 2001, Approval of a Revision to Regulation K.* The Board authorized, effective November 26, 2001, limited portfolio investments in foreign companies without prior Board notice (sections 211.8 and 211.9) and limited investments in Edge and agreement corporations (section 211.5) that may be permissible for state member banks and other foreign banking or other bank-related organizations. (See Supervision and Regulation [SR] Letter 02-3.)

2. *Revisions to the Capital Adequacy Standard (Risk-Based Measure).*

a. The November 8, 2001, Regulation H change (effective January 1, 2002) addressed the treatment of recourse obligations, residual interests, and direct-credit substitutes that expose banking organizations primarily to credit risk. New standards are added for the treatment of residual interests, including a concentration limit for credit-enhancing interest-only strips. Credit ratings from rating agencies and certain limited alternative credit-rating approaches can be used by banks to match the risk-based capital requirement more closely to their relative risk of loss for certain positions in asset securitizations. (See SR Letters 02-16, 02-15, 02-14, and 02-12.)

b. The January 8, 2002, Regulation H change (effective April 1, 2002) established special minimum capital

requirements for equity investments in nonfinancial companies. The new capital requirements apply symmetrically to equity investments. The requirements impose a series of marginal capital charges on such authorized covered equity investments that increase with the level of a bank's overall exposure to equity investments relative to its tier 1 capital. (See SR Letter 02-4.)

c. The risk-based capital treatment for forward equity transactions also is discussed. The Federal Reserve has determined that any common stock that is covered by forward equity transactions entered into after the issuance of SR Letter 01-27 (November 9, 2001) will be excluded from a state member bank's tier 1 capital, other than those transactions specified for deferred compensation or other employee benefit plans.

3. *Management of Insurable Risks.* Certain types of insurance that are available to the banking industry are discussed. Bank management responsibilities for managing insurable risks are also discussed, including coordinating the management of the bank's various types of risk exposures in conjunction with an insurance program or making a decision to selectively self-insure (alternative risk transfer) when permissible and appropriate. The examiners' responsibilities for reviewing a bank's risk management and management of its insurance program are also discussed. The examination objectives, examination procedures, and internal control questionnaire are updated.

4. *Payment Systems Risk and Electronic Funds Transfer.* The update discusses the Board's December 11, 2001, revision of the policy statement on payments system risk (PSR policy). The PSR policy was revised to modify the net debit cap calculation for U.S. branches and agencies of foreign banks, as well as the time that electronic check presentments are posted to depository institutions' Federal Reserve accounts for purposes of measuring daylight overdrafts. The PSR policy incorporates, with minor modifications, the Board's interim policy that allows certain depository institutions to pledge collateral to the Federal Reserve to access additional daylight-overdraft capacity above their net debit caps. The examiners' responsibilities are discussed with regard to payment system risk and electronic funds transfer. The examination objectives, examination procedures, and internal control questionnaire also have been updated.

5. *Examiners' Review of Regulatory Reports.* Changes in Federal Reserve reporting requirements are discussed for reports that are filed by banks and other banking organizations. The changes include the new FR Y-10 report, the revised FR Y-6 report, and the internal record-keeping requirements for FR 2064. (See SR Letter 02-2 and its discussion of examiners' responsibilities in this regard.)

6. *Various Other Regulation H Revisions.*

a. The sections on the overall conclusions regarding the condition of the bank and on other types of examinations have been revised to include the Federal Reserve's notification requirements, whereby a state member bank is to notify the Federal Reserve System regarding changes in the general character of a bank's business or the scope of its corporate powers. (See sections 208.3(d)(1) and (2) and

SR Letter 02-9). Included is a discussion on individual or multiple-branch applications, expedited processing criteria, and a bank's investment in premises for branches. Branch closing requirements are discussed in relationship to section 42 of the Federal Deposit Insurance Act, section 208.6 of Regulation H, and the June 29, 1999, joint policy statement regarding branch closings. Customers and the Federal Reserve must be notified of branch closings.

b. The bank premises and equipment section has been revised to reflect previous changes to section 24 of the Federal Reserve Act and section 208.21(a) of Regulation H. For example, a state member bank that is well rated and well capitalized may invest in bank premises in an amount of 150 percent or less of its perpetual preferred stock and related surplus plus common stock plus surplus, if the bank gives at least a fifteen-day prior notice to the Reserve Bank.

c. The definition of "capital stock and surplus" is discussed as it pertains to the Board's authority to approve a state member bank's limited investment of up to 10 percent of its capital and surplus in a community development corporation. (See Regulation H, section 208.2(d).) The investment limitations also are discussed for section 9 of the Federal Reserve Act for public welfare or other such investments.

A more detailed summary of changes is included with the update package. The *Manual* and updates, including pricing information, are available from Publications Services, Mail Stop 127, Board of Governors of the Federal Reserve System, Washington, DC 20551 (or charge by facsimile: 202-728-5886). The *Manual* is also available on the Board's public web site: www.federalreserve.gov/boarddocs/supmanual/.

ENFORCEMENT ACTIONS

The Federal Reserve Board announced on May 16, 2002, the issuance of an order of prohibition against

Edward DeRosa, a former employee and institution-affiliated party of Rabobank Nederland, New York, New York.

Mr. DeRosa, without admitting to any allegations, consented to the issuance of the order based on his violations of law, unsafe and unsound practices, and breaches of his fiduciary duty to Rabobank and its customers in connection with his embezzlement of approximately \$170,000 for his personal use.

The Federal Reserve Board, the Maryland Commissioner of Financial Regulation, and the Central Bank of Ireland jointly announced on May 16, 2002, the execution of a written agreement by and among Allied Irish Banks, p.l.c., Dublin, Ireland, Allfirst Financial Inc., Baltimore, Maryland, and Allfirst Bank, Baltimore, Maryland.

The Federal Reserve Board announced on May 10, 2002, the issuance of a cease and desist order against Pedro Cabrera, a former employee of Banco Mercantil, C.A., S.A.C.A., New York Agency, New York, New York.

The Federal Reserve Board announced on May 10, 2002, the issuance of a cease and desist order against the Bank of the Orient, San Francisco, California.

BOARD STAFF CHANGE

The Federal Reserve Board announced on June 4, 2002, that Richard (Dick) Stevens, Director of the Division of Information Technology, will retire on June 28 after more than twenty-nine years at the Board. □

Legal Developments

ORDERS ISSUED UNDER FEDERAL RESERVE ACT

JPMorgan Chase Bank
New York, New York

Order Approving Establishment of a Branch

J.P. Morgan Chase Bank, New York, New York ("Bank"), a state member bank, has given notice under section 9 of the Federal Reserve Act ("Act") (12 U.S.C. § 321 *et seq.*) of its intention to establish a branch at the Newport Center, 575 Washington Boulevard, Jersey City, New Jersey.

Notice of the proposal, affording interested persons an opportunity to submit comments, has been published in accordance with the Board's Rules of Procedure (12 C.F.R. 262.3(b)). The time for filing comments has expired, and the Board has considered the notice and all comments received in light of the factors specified in the Act.

Bank is the 13th largest banking organization in New Jersey, controlling deposits of approximately \$2.6 billion, representing approximately 1.5 percent of commercial banking deposits in the state.¹ Bank is a wholly owned subsidiary of J.P. Morgan Chase & Co., New York, New York.

Considerations Under the Federal Reserve Act

Section 9(4) of the Act (12 U.S.C. § 322) requires that when acting on a branch application, the Board consider the financial condition of the applying bank, the general character of its management, and whether its corporate powers are consistent with the purposes of Act.

The Board has carefully reviewed the factors it is required to consider for the establishment of a branch under section 9 of the Act in light of all facts of record. As part of its consideration, the Board has reviewed reports of examination and other supervisory information. Based on all the facts of record, the Board has concluded that these statutory factors are consistent with approval of the notice.

Community Reinvestment Act Considerations

In acting on an application to establish a branch, the Board is required to take into account a bank's record under the Community Reinvestment Act ("CRA").² The CRA requires the federal financial supervisory agencies to encourage financial institutions to help meet the credit needs

of the local communities in which they operate, consistent with their safe and sound operation, and requires the appropriate federal supervisory authority to assess the institution's record of meeting the credit needs of its entire community, including low- and moderate-income ("LMI") neighborhoods, in evaluating branch applications.

A. CRA Performance Examination

As provided in the CRA, the Board evaluates the performance of an institution in light of examinations by the appropriate federal supervisors of the CRA performance record of the institution. An institution's most recent CRA performance evaluation is a particularly important consideration in the applications process because it represents a detailed, on-site evaluation of the institution's overall record of performance under the CRA by its appropriate federal supervisor.³ Bank received an overall "outstanding" rating at its most recent CRA examination by the Federal Reserve Bank of New York, as of July 9, 2001.

B. CRA Performance Record

According to its most recent CRA examination, Bank's lending activity in the New York Metropolitan Area⁴ showed excellent responsiveness to retail credit needs.⁵ During the examination period, Bank and its affiliates were the leading lender in the New York Metropolitan Area in originated and purchased home purchase, refinance, and small business loans. According to examiners, the overall geographic distribution of Bank's retail loans reflected excellent loan penetration in LMI areas.

3. See *Interagency Questions and Answers Regarding Community Reinvestment*, 66 *Federal Register* 36,620 and 36,639 (2001).

4. Examiners noted that performance in the New York Metropolitan Area had the greatest weight on Bank's overall CRA rating because of the high concentration of deposits, lending, and population in that assessment area. The New York Metropolitan Area includes southern New York, western Connecticut, and northeastern New Jersey. Jersey City is part of the New York Metropolitan Area.

5. One commenter, a Jersey City community group, inquired about Bank's past and future involvement in the Jersey City community and the extent of Bank's involvement in addressing local credit needs. Bank responded that even before its current decision to establish a branch, it had provided support to organizations committed to increasing the quality of life in Jersey City, primarily in the areas of affordable housing, economic development, and the provision of social services. Since 1996, Bank has provided grants totaling more than \$500,000 to Jersey City organizations engaged in community development activities. Bank stated that it intends to continue to support community development activities in Jersey City in the future.

1. Deposit and state ranking data are as of June 30, 2001.

2. 12 U.S.C. § 2901 *et seq.*

Bank's record of lending to businesses in the New York Metropolitan Area was excellent. Approximately 93 percent of small loans to businesses originated in the assessment area during the examination period were for amounts of \$100,000 or less. The average size of such loans was \$33,000, an amount that examiners concluded would meet the credit needs of smaller businesses. Examiners also rated Bank's community development lending performance in the New York Metropolitan Area as excellent.⁶

Bank received an "outstanding" rating on the investment portion of its CRA examination in the New York Metropolitan Area. Examiners characterized Bank's level of qualified community development investments and grants as exhibiting strong responsiveness to credit and community development needs through organizations involved in affordable housing, economic development, community services, and revitalization and stabilization activities.⁷

Examiners rated Bank's performance in the New York Metropolitan Area under the service test as outstanding. Examiners based this rating on what they characterized as excellent delivery of retail services and Bank's leadership role in providing community development services. Overall, examiners indicated that delivery systems were readily accessible to all portions of Bank's assessment area, taking into consideration the percentage of the population residing in LMI areas. Examiners also characterized Bank as a leader in providing community development services.

C. Conclusion on CRA Performance

The Board has considered carefully the entire record of Bank's CRA performance, including Bank's most recent CRA performance examination. Based on all the facts of record, the Board concludes that CRA considerations are consistent with approval of the proposal.

Conclusion

Based on the foregoing and all the facts of record, the Board has determined that this notice should be, and hereby is, approved. The Board's approval is specifically conditioned on Bank's compliance with all commitments made in connection with the proposal. The commitments and conditions relied on by the Board are deemed to be conditions imposed in writing in connection with its findings and decision and, as such, may be enforced in proceedings under applicable law.

Approval of this notice is subject to the establishment of the proposed branch within one year of the date of this order, unless such period is extended by the Board or the Federal Reserve Bank of New York, acting pursuant to

delegated authority, and to approval of the proposal by the appropriate state authorities.

By order of the Board of Governors, effective May 30, 2002.

Voting for this action: Chairman Greenspan, Vice Chairman Ferguson, and Governors Bies and Olson. Absent and not voting: Governor Gramlich.

ROBERT DEV. FRIERSON
Deputy Secretary of the Board

ORDERS ISSUED UNDER INTERNATIONAL BANKING ACT

*Banca Comerciala Romana S.A.
Bucharest, Romania*

Order Approving Establishment of a Representative Office

Banca Comerciala Romana S.A. ("Bank"), Bucharest, Romania, a foreign bank within the meaning of the International Banking Act ("IBA"), has applied under section 10(a) of the IBA (12 U.S.C. § 3107(a)) to establish a representative office in New York, New York. The Foreign Bank Supervision Enhancement Act of 1991, which amended the IBA, provides that a foreign bank must obtain the approval of the Board to establish a representative office in the United States.

Notice of the application, affording interested persons an opportunity to submit comments, has been published in a newspaper of general circulation in New York (*The New York Post*, August 1, 2001). The time for filing comments has expired, and all comments have been considered.

Bank, with total consolidated assets of \$3.6 billion,¹ is the largest commercial bank in Romania. Seventy percent of Bank's shares are owned by the Authority for Privatization and State Ownership Administration, a public legal entity subordinated to the Romanian government that carries out the government's privatization strategy. The remaining 30 percent of Bank's shares are owned by five private, widely held, regionally based ownership funds established under Romania's 1991 privatization law. Bank provides wholesale and retail banking services to corporate, individual, and government customers. Bank has branches throughout Romania, as well as in Cyprus and Moldova. Bank has subsidiary banks in Germany, France, and the United Kingdom.

The proposed representative office would enable Bank to provide assistance to existing and potential customers in identifying and facilitating business and trade opportunities between Romania and the United States. Bank intends to engage in general marketing and promotional activities, development and enhancement of correspondent relation-

6. During the examination period, community development loan commitments benefiting this assessment area totaled \$693 million.

7. Bank's level of community development investment in the assessment area totaled \$750 million, with \$433 million of additional unfunded investment commitments.

1. Data are as of December 31, 2001.

ships, research and consulting services, and certain loan solicitation activities.

In acting on an application to establish a representative office, the IBA and Regulation K provide that the Board shall take into account whether the foreign bank engages directly in the business of banking outside the United States and has furnished to the Board the information it needs to assess the application adequately. The Board also shall take into account whether the foreign bank and any foreign bank parent is subject to comprehensive supervision or regulation on a consolidated basis by its home country supervisor.² With respect to establishment of representative offices, the Board will consider that the standard regarding supervision has been met where it determines that the applicant bank is subject to a supervisory framework that is consistent with the activities of the proposed representative office, taking into account the nature of such activities and the operating record of the applicant.³ The Board may take into account additional standards set forth in the IBA and Regulation K.⁴

In connection with this application, Bank has provided certain commitments that limit the activities of the representative office. It has committed that the representative office would engage only in certain specified activities and would not make credit decisions on behalf of Bank, solicit deposits on behalf of Bank, or engage in activities related to securities trading, foreign exchange, or money transmission.

As noted above, Bank engages directly in the business of banking outside the United States through its banking operations in Romania. Bank also has provided the Board with the information necessary to assess the application through submissions that address the relevant issues. With respect to supervision by home country authorities, the National Bank of Romania ("NBR") is the principal supervisory authority of Bank. The NBR is the sole licensing,

regulatory, and supervisory authority for all banking organizations in Romania. The Board has previously approved the establishment of a limited representative office in the United States by a Romanian bank.⁵ Bank is supervised by the NBR on substantially the same terms and conditions as that bank.

Although Romania is not a member of the Financial Action Task Force ("FATF"), Romania has enacted laws based on the general recommendations of the FATF. Anti-money laundering standards have been established and programs to deter money laundering are being implemented. Under Romanian law, money laundering is a criminal offense and financial institutions are required to establish internal policies, procedures, and systems for the detection and prevention of money laundering throughout their worldwide operations. Romania has also established the National Office for Money Laundering Prevention and Fighting ("National Office"). Bank forwards suspicious transaction reports to the National Office for further investigation. Bank has established specific policies and procedures designed to prevent, detect, and report any money laundering activities. These policies include a "know your customer" policy, parameters to identify suspicious transactions, reporting and record retention for all suspicious transactions, and employee training.

Based on all the facts of record, including commitments provided by Bank limiting the activities of the proposed representative office, it has been determined that factors relating to the supervision of Bank by its home country supervisor are consistent with approval of the proposed representative office.

The Board has taken into account the additional standards set forth in the IBA and in Regulation K.⁶ The NBR has no objection to the establishment of the proposed office. With respect to the financial and managerial resources of Bank, taking into consideration Bank's record of operations in its home country, its overall financial resources, and its standing with its home country supervisor, the Board has determined that financial and managerial considerations are consistent with approval. In addition, Bank appears to have the experience and capacity to support the proposed office and has established controls and procedures for the proposed office to ensure compliance with applicable U.S. law, as well as controls and procedures for its worldwide operations generally.

With respect to access to information, the Board has reviewed the restrictions on disclosure in relevant jurisdictions in which Bank operates and has communicated with relevant government authorities about access to information. Bank has committed to make available to the Board such information on the operations of Bank and any affiliate of Bank that the Board deems necessary to determine and enforce compliance with the IBA, the Bank Holding Company Act, and other applicable federal law. To the

2. See 12 U.S.C. § 3107(a)(2); 12 C.F.R. 211.24(d)(2). In assessing this standard, the Board considers, among other factors, the extent to which the home country supervisors:

- (i) Ensure that the bank has adequate procedures for monitoring and controlling its activities worldwide;
- (ii) Obtain information on the condition of the bank and its subsidiaries and offices through regular examination reports, audit reports, or otherwise;
- (iii) Obtain information on the dealings with and relationship between the bank and its affiliates, both foreign and domestic;
- (iv) Receive from the bank financial reports that are consolidated on a worldwide basis, or comparable information that permits analysis of the bank's financial condition on a worldwide consolidated basis;
- (v) Evaluate prudential standards, such as capital adequacy and risk asset exposure, on a worldwide basis.

These are indicia of comprehensive, consolidated supervision. No single factor is essential and other elements may inform the Board's determination.

3. See, e.g., *RHEINHYP Rheinische Hypothekenbank AG*, 87 *Federal Reserve Bulletin* 558 (2001); see also *Promstroybank of Russia*, 82 *Federal Reserve Bulletin* 599 (1996); *Komercni Banka, a.s.*, 82 *Federal Reserve Bulletin* 597 (1996); *Commercial Bank "Ion Tiriac"*, S.A., 82 *Federal Reserve Bulletin* 592 (1996).

4. See 12 U.S.C. § 3105(d)(3) and (4); 12 C.F.R. 211.24(c)(2).

5. *Commercial Bank "Ion Tiriac"*, S.A., 82 *Federal Reserve Bulletin* 592 (1996).

6. See 12 U.S.C. § 3105(d)(3) and (4); 12 C.F.R. 211.24(c)(2).

extent that the provision of such information may be prohibited or impeded by law or otherwise, Bank has committed to cooperate with the Board to obtain any necessary consents or waivers that might be required from third parties in connection with disclosure of certain information. In addition, subject to certain conditions, the NBR may share information on Bank's operations with other supervisors, including the Board. In light of these commitments and other facts of record, and subject to the condition described below, the Board has concluded that Bank has provided adequate assurances of access to any necessary information the Board may request.

On the basis of all the facts of record, and subject to the commitments made by Bank, as well as the terms and conditions set forth in this order, Bank's application to establish a representative office in New York is hereby approved.⁷ If any restrictions on access to information on the operations or activities of Bank or any of its affiliates subsequently interfere with the Board's ability to deter-

mine and enforce compliance by Bank or its affiliates with applicable federal statutes, the Board may require or recommend termination of any of Bank's direct or indirect activities in the United States. Approval of this application also is specifically conditioned on compliance by Bank with the commitments made in connection with this application and with the conditions in this order.⁸ The commitments and conditions referred to above are conditions imposed in writing by the Board in connection with its decision and may be enforced in proceedings against Bank, its offices, and its affiliates under applicable law.

By order, approved pursuant to authority delegated by the Board, effective May 21, 2002.

ROBERT DEV. FRIERSON
Deputy Secretary of the Board

7. Approved by the Director of the Division of Banking Supervision and Regulation, with the concurrence of the General Counsel, pursuant to authority delegated by the Board.

8. The Board's authority to approve the establishment of the proposed office parallels the continuing authority of the State of New York to license offices of a foreign bank. The Board's approval of this application does not supplant the authority of the State of New York or its agent, the New York State Banking Department ("Department"), to license the proposed office of Bank in accordance with any terms or conditions that the Department may impose.

PENDING CASES INVOLVING THE BOARD OF GOVERNORS

This list of pending cases does not include suits against the Federal Reserve Banks in which the Board of Governors is not named a party.

Caesar v. United States, No. 02-0612 (EGS) (D.D.C.), removed on April 1, 2002 from No. 02-1502 (D.C. Superior Court, originally filed March 1, 2002). Action seeking damages for personal injury.

Community Bank & Trust v. United States, No. 01-571C (Ct. Fed. Cl., filed October 3, 2001). Action challenging on constitutional grounds the failure to pay interest on reserve accounts held at Federal Reserve Banks.

Laredo National Bancshares, Inc. v. Whalen v. Board of Governors, No. 01-CV-134 (S.D. Tex.), removed on September 5, 2001, from No. 99CVQ00940-D3 (District Court, 341st Judicial District, Webb County, Texas, originally filed July 26, 2001). Third-party petition seeking indemnification or contribution from the Board in connection with a claim asserted against defendant Whalen alleging tortious interference with a contract.

Radfar v. United States, No. 1:01CV1292 (PLF) (D.D.C., complaint filed June 11, 2001). Action under the Federal Tort Claims Act for injury on Board premises.

Artis v. Greenspan, No. 01-CV-0400(ESG) (D.D.C., complaint filed February 22, 2001). Employment discrimination action.

On August 15, 2001, the district court consolidated the action with *Artis v. Greenspan*, No. 99-CV-2073 (EGS) (D.D.C., filed August 3, 1999), also an employment discrimination action.

Howe v. Bank for International Settlements, No. 00CV12485 RCL (D. Mass., filed December 7, 2000). Action seeking damages in connection with gold market activities and the repurchase by the Bank for International Settlements of its privately-owned shares. On March 26, 2002, the district court dismissed the action against all defendants.

Trans Union LLC v. Federal Trade Commission, et al., No. 01-5202 (D.C. Cir., filed June 4, 2001). Appeal of district court order entered April 30, 2001, upholding challenged provisions of an interagency rule regarding Privacy of Consumer Finance Information

Albrecht v. Board of Governors, No. 00-CV-317 (CKK) (D.D.C., filed February 18, 2000). Action challenging the method of funding of the retirement plan for certain Board employees. On March 30, 2001, the district court granted in part and denied in part the Board's motion to dismiss.

Fraternal Order of Police v. Board of Governors, No. 1:98CV03116 (WBB)(D.D.C., filed December 22, 1998). Declaratory judgment action challenging Board labor practices. On February 26, 1999, the Board filed a motion to dismiss the action.

*A57 GUIDE TO SPECIAL TABLES AND STATISTICAL RELEASES**A58 INDEX TO STATISTICAL TABLES***Discontinuation of Certain Statistical Tables in the *Federal Reserve Bulletin***

The following ten tables have been discontinued in the Financial and Business Statistics section of the *Federal Reserve Bulletin*. Information on the sources of data in these tables appears in the Announcements section of the June 2002 issue of the *Bulletin*, page 290.

Discontinued tables:

1.38	1.39	1.48	2.10	2.11
2.14	2.15	2.16	2.17	3.11

Page numbers of the tables in the Financial and Business Statistics section have been revised.

Guide to Tables

SYMBOLS AND ABBREVIATIONS

c	Corrected	G-10	Group of Ten
e	Estimated	GDP	Gross domestic product
n.a.	Not available	GNMA	Government National Mortgage Association
n.e.c.	Not elsewhere classified	GSE	Government-sponsored enterprise
p	Preliminary	HUD	Department of Housing and Urban Development
r	Revised (Notation appears in column heading when about half the figures in the column have been revised from the most recently published table.)	IMF	International Monetary Fund
*	Amount insignificant in terms of the last decimal place shown in the table (for example, less than 500,000 when the smallest unit given is in millions)	IOs	Interest only, stripped, mortgage-backed securities
0	Calculated to be zero	IPCs	Individuals, partnerships, and corporations
...	Cell not applicable	IRA	Individual retirement account
ABS	Asset-backed security	MMDA	Money market deposit account
ATS	Automatic transfer service	MSA	Metropolitan statistical area
BIF	Bank insurance fund	NAICS	North American Industry Classification System
CD	Certificate of deposit	NOW	Negotiable order of withdrawal
CMO	Collateralized mortgage obligation	OCDs	Other checkable deposits
CRA	Community Reinvestment Act of 1977	OPEC	Organization of Petroleum Exporting Countries
FAMC	Federal Agriculture Mortgage Corporation	OTS	Office of Thrift Supervision
FFB	Federal Financing Bank	PMI	Private mortgage insurance
FHA	Federal Housing Administration	POs	Principal only, stripped, mortgage-backed securities
FHLBB	Federal Home Loan Bank Board	REIT	Real estate investment trust
FHLMC	Federal Home Loan Mortgage Corporation	REMICs	Real estate mortgage investment conduits
FmHA	Farmers Home Administration	RHS	Rural Housing Service
FNMA	Federal National Mortgage Association	RP	Repurchase agreement
FSA	Farm Service Agency	RTC	Resolution Trust Corporation
FSLIC	Federal Savings and Loan Insurance Corporation	SCO	Securitized credit obligation
G-7	Group of Seven	SDR	Special drawing right
		SIC	Standard Industrial Classification
		TIIS	Treasury inflation-indexed securities
		VA	Department of Veterans Affairs

GENERAL INFORMATION

In many of the tables, components do not sum to totals because of rounding.

Minus signs are used to indicate (1) a decrease, (2) a negative figure, or (3) an outflow.

"U.S. government securities" may include guaranteed issues of U.S. government agencies (the flow of funds figures also

include not fully guaranteed issues) as well as direct obligations of the U.S. Treasury.

"State and local government" also includes municipalities, special districts, and other political subdivisions.

19 Eurodollars ¹⁰	7.0	-3.9	-3.6	6.1	-15.7	-6.3	35.5	10.0	-2.8

1. Unless otherwise noted, rates of change are calculated from average amounts outstanding during preceding month or quarter.

2. Figures incorporate adjustments for discontinuities, or "breaks," associated with regulatory changes in reserve requirements (See also table 1.20.)

3. The seasonally adjusted, break-adjusted monetary base consists of (1) seasonally adjusted, break-adjusted total reserves (line 1), plus (2) the seasonally adjusted currency component of the money stock, plus (3) (for all quarterly reporters on the "Report of Transaction Accounts, Other Deposits and Vault Cash" and for all weekly reporters whose vault cash exceeds their required reserves) the seasonally adjusted, break-adjusted difference between current vault cash and the amount applied to satisfy current reserve requirements.

4. Composition of the money stock measures is as follows:

M1: (1) currency outside the U.S. Treasury, Federal Reserve Banks, and the vaults of depository institutions, (2) travelers checks of nonbank issuers, (3) demand deposits at all commercial banks other than those owed to depository institutions, the U.S. government, and foreign banks and official institutions, less cash items in the process of collection and Federal Reserve float, and (4) other checkable deposits (OCDs), consisting of negotiable order of withdrawal (NOW) and automatic transfer service (ATS) accounts at depository institutions, credit union share draft accounts, and demand deposits at thrift institutions. Seasonally adjusted M1 is computed by summing currency, travelers checks, demand deposits, and OCDs, each seasonally adjusted separately.

M2: M1 plus (1) savings (including MMDAs), (2) small-denomination time deposits (time deposits—including retail RPs—in amounts of less than \$100,000), and (3) balances in retail money market mutual funds. Excludes individual retirement accounts (IRAs) and Keogh balances at depository institutions and money market funds.

Seasonally adjusted M2 is calculated by summing savings deposits, small-denomination

time deposits, and retail money fund balances, each seasonally adjusted separately, and adding this result to seasonally adjusted M1.

M3: M2 plus (1) large-denomination time deposits (in amounts of \$100,000 or more), (2) balances in institutional money funds, (3) RP liabilities (overnight and term) issued by all depository institutions, and (4) eurodollars (overnight and term) held by U.S. residents at foreign branches of U.S. banks worldwide and at all banking offices in the United Kingdom and Canada. Excludes amounts held by depository institutions, the U.S. government, money market funds, and foreign banks and official institutions. Seasonally adjusted M3 is calculated by summing large time deposits, institutional money fund balances, RP liabilities, and eurodollars, each seasonally adjusted separately, and adding this result to seasonally adjusted M2.

5. Sum of (1) savings deposits (including MMDAs), (2) small time deposits, and (3) retail money fund balances, each seasonally adjusted separately.

6. Sum of (1) large time deposits, (2) institutional money fund balances, (3) RP liabilities (overnight and term) issued by depository institutions, and (4) eurodollars (overnight and term) of U.S. addressees, each seasonally adjusted separately.

7. Small time deposits—including retail RPs—are those issued in amounts of less than \$100,000. All IRA and Keogh account balances at commercial banks and thrift institutions are subtracted from small time deposits.

8. Large time deposits are those issued in amounts of \$100,000 or more, excluding those booked at international banking facilities.

9. Large time deposits at commercial banks less those held by money market funds, depository institutions, the U.S. government, and foreign banks and official institutions.

10. Includes both overnight and term.

1. Amounts of cash held as reserves are shown in table 1.12, line 2.

2. Includes securities loaned—fully guaranteed by U.S. government securities pledged with Federal Reserve Banks—and excludes securities sold and scheduled to be bought back under matched sale-purchase transactions.

3. Includes compensation that adjusts for the effects of inflation on the principal of inflation-indexed securities.

4. Cash value of agreements arranged through third-party custodial banks. These agreements are collateralized by U.S. government and federal agency securities.

5. Excludes required clearing balances and adjustments to compensate for float.

1. Data in this table also appear in the Board's H.3 (502) weekly statistical release. For ordering address, see inside front cover. Data are not break-adjusted or seasonally adjusted.

2. Excludes required clearing balances and adjustments to compensate for float and includes other off-balance-sheet "as-of" adjustments.

3. Vault cash eligible to satisfy reserve requirements. It includes only vault cash held by those banks and thrift institutions that are not exempt from reserve requirements. Dates refer to the maintenance periods in which the vault cash can be used to satisfy reserve requirements.

4. All vault cash held during the lagged computation period by "bound" institutions (that is, those whose required reserves exceed their vault cash) plus the amount of vault cash applied during the maintenance period by "nonbound" institutions (that is, those whose vault cash exceeds their required reserves) to satisfy current reserve requirements.

5. Total vault cash (line 2) less applied vault cash (line 3).

6. Reserve balances with Federal Reserve Banks (line 1) plus applied vault cash (line 3).

7. Total reserves (line 5) less required reserves (line 6).

8. Borrowing at the discount window under the terms and conditions established for the Century Date Change Special Liquidity Facility in effect from October 1, 1999, through April 7, 2000.

9. Consists of borrowing at the discount window under the terms and conditions established for the extended credit program to help depository institutions deal with sustained liquidity pressures. Because there is not the same need to repay such borrowing promptly as with traditional short-term adjustment credit, the money market effect of extended credit is similar to that of nonborrowed reserves.

1. Available on a short-term basis to help depository institutions meet temporary needs for funds that cannot be met through reasonable alternative sources. The highest rate established for loans to depository institutions may be charged on adjustment credit loans of unusual size that result from a major operating problem at the borrower's facility.

2. Available to help relatively small depository institutions meet regular seasonal needs for funds that arise from a clear pattern of intrayear movements in their deposits and loans and that cannot be met through special industry lenders. The discount rate on seasonal credit takes into account rates charged by market sources of funds and ordinarily is reestablished on the first business day of each two-week reserve maintenance period; however, it is never less than the discount rate applicable to adjustment credit.

3. May be made available to depository institutions when similar assistance is not reasonably available from other sources, including special industry lenders. Such credit may be provided when exceptional circumstances (including sustained deposit drains, impaired access to money market funds, or sudden deterioration in loan repayment performance) or

practices involve only a particular institution, or to meet the needs of institutions experiencing difficulties adjusting to changing market conditions over a longer period (particularly at times of deposit disintermediation). The discount rate applicable to adjustment credit ordinarily is charged on extended-credit loans outstanding less than thirty days; however, at the discretion of the Federal Reserve Bank, this time period may be shortened. Beyond this initial period, a flexible rate somewhat above rates charged on market sources of funds is charged. The rate ordinarily is reestablished on the first business day of each two-week reserve maintenance period, but it is never less than the discount rate applicable to adjustment credit plus 50 basis points.

4. For earlier data, see the following publications of the Board of Governors: *Banking and Monetary Statistics, 1914-1941*, and *1941-1970*; and the *Annual Statistical Digest, 1970-1979*, and *1980-1989*, and *Statistical Digest, 1996-2000*. See also the Board's Statistics: Releases and Historical Data web pages (<http://www.federalreserve.gov/releases/H15/data.htm>).

1.15 RESERVE REQUIREMENTS OF DEPOSITORY INSTITUTIONS¹

Type of deposit	Requirement	
	Percentage of deposits	Effective date
<i>Net transaction accounts</i> ²		
1 \$0 million–\$41.3 million ³	3	12/27/01
2 More than \$41.3 million ⁴	10	12/27/01
3 Nonpersonal time deposits ⁵	0	12/27/90
4 Eurocurrency liabilities ⁶	0	12/27/90

1. Required reserves must be held in the form of deposits with Federal Reserve Banks or vault cash. Nonmember institutions may maintain reserve balances with a Federal Reserve Bank indirectly, on a pass-through basis, with certain approved institutions. For previous reserve requirements, see earlier editions of the *Annual Report* or the *Federal Reserve Bulletin*. Under the Monetary Control Act of 1980, depository institutions include commercial banks, savings banks, savings and loan associations, credit unions, agencies and branches of foreign banks, and Edge Act corporations.

2. Transaction accounts include all deposits against which the account holder is permitted to make withdrawals by negotiable or transferable instruments, payment orders of withdrawal, or telephone or preauthorized transfers for the purpose of making payments to third persons or others. However, accounts subject to the rules that permit no more than six preauthorized, automatic, or other transfers per month (of which no more than three may be by check, draft, debit card, or similar order payable directly to third parties) are savings deposits, not transaction accounts.

3. The Monetary Control Act of 1980 requires that the amount of transaction accounts against which the 3 percent reserve requirement applies be modified annually by 80 percent of the percentage change in transaction accounts held by all depository institutions, determined as of June 30 of each year. Effective with the reserve maintenance period beginning December 27, 2001, for depository institutions that report weekly, and with the period beginning January 17, 2002, for institutions that report quarterly, the amount was decreased from \$42.8 million to \$41.3 million.

Under the Garn–St Germain Depository Institutions Act of 1982, the Board adjusts the amount of reservable liabilities subject to a zero percent reserve requirement each year for the

succeeding calendar year by 80 percent of the percentage increase in the total reservable liabilities of all depository institutions, measured on an annual basis as of June 30. No corresponding adjustment is made in the event of a decrease. The exemption applies only to accounts that would be subject to a 3 percent reserve requirement. Effective with the reserve maintenance period beginning December 27, 2001, for depository institutions that report weekly, and with the period beginning January 17, 2002, for institutions that report quarterly, the exemption was raised from \$5.5 million to \$5.7 million.

4. The reserve requirement was reduced from 12 percent to 10 percent on April 2, 1992, for institutions that report weekly, and on April 16, 1992, for institutions that report quarterly.

5. For institutions that report weekly, the reserve requirement on nonpersonal time deposits with an original maturity of less than 1.5 years was reduced from 3 percent to 1.5 percent for the maintenance period that began December 13, 1990, and to zero for the maintenance period that began December 27, 1990. For institutions that report quarterly, the reserve requirement on nonpersonal time deposits with an original maturity of less than 1.5 years was reduced from 3 percent to zero on January 17, 1991.

The reserve requirement on nonpersonal time deposits with an original maturity of 1.5 years or more has been zero since October 6, 1983.

6. The reserve requirement on eurocurrency liabilities was reduced from 3 percent to zero in the same manner and on the same dates as the reserve requirement on nonpersonal time deposits with an original maturity of less than 1.5 years (see note 5).

1. Some of the data in this table also appear in the Board's H.4.1 (503) weekly statistical release. For ordering address, see inside front cover.

2. Cash value of agreements arranged through third-party custodial banks.

3. Face value of the securities.

4. Includes securities loaned—fully guaranteed by U.S. Treasury securities pledged with Federal Reserve Banks—and includes compensation that adjusts for the effects of inflation on the principal of inflation-indexed securities. Excludes securities sold and scheduled to be bought back under matched sale-purchase transactions.

5. Valued monthly at market exchange rates.

6. Includes special investment account at the Federal Reserve Bank of Chicago in Treasury bills maturing within ninety days.

7. Includes exchange-translation account reflecting the monthly revaluation at market exchange rates of foreign exchange commitments.

17 Borrowings from the Federal Reserve	.12	.32	.21	.07	3.39	.13	.08	.07	.05	.03	.08	.07	

1. Latest monthly and biweekly figures are available from the Board's H.3 (502) weekly statistical release. Historical data starting in 1959 and estimates of the effect on required reserves of changes in reserve requirements are available from the Money and Reserves Projections Section, Division of Monetary Affairs, Board of Governors of the Federal Reserve System, Washington, DC 20551.

2. Figures reflect adjustments for discontinuities, or "breaks," associated with regulatory changes in reserve requirements. (See also table 1.10.)

3. Seasonally adjusted, break-adjusted total reserves equal seasonally adjusted, break-adjusted required reserves (line 4) plus excess reserves (line 16).

4. Seasonally adjusted, break-adjusted nonborrowed reserves equal seasonally adjusted, break-adjusted total reserves (line 1) less total borrowings of depository institutions from the Federal Reserve (line 17).

5. Extended credit consists of borrowing at the discount window under the terms and conditions established for the extended credit program to help depository institutions deal with sustained liquidity pressures. Because there is not the same need to repay such borrowing promptly as with traditional short-term adjustment credit, the money market effect of extended credit is similar to that of nonborrowed reserves.

6. The seasonally adjusted, break-adjusted monetary base consists of (1) seasonally adjusted, break-adjusted total reserves (line 1), plus (2) the seasonally adjusted currency component of the money stock, plus (3) (for all quarterly reporters on the "Report of Transaction Accounts, Other Deposits and Vault Cash" and for all those weekly reporters whose vault cash exceeds their required reserves) the seasonally adjusted, break-adjusted difference between current vault cash and the amount applied to satisfy current reserve requirements.

7. Break-adjusted total reserves equal break-adjusted required reserves (line 9) plus excess reserves (line 16).

8. To adjust required reserves for discontinuities that are due to regulatory changes in reserve requirements, a multiplicative procedure is used to estimate what required reserves would have been in past periods had current reserve requirements been in effect. Break-adjusted required reserves include required reserves against transactions deposits and nonpersonal time and savings deposits (but not reservable nondeposit liabilities).

9. The break-adjusted monetary base equals (1) break-adjusted total reserves (line 6), plus (2) the (unadjusted) currency component of the money stock, plus (3) (for all quarterly reporters on the "Report of Transaction Accounts, Other Deposits and Vault Cash" and for all those weekly reporters whose vault cash exceeds their required reserves) the break-adjusted difference between current vault cash and the amount applied to satisfy current reserve requirements.

10. Reflects actual reserve requirements, including those on nondeposit liabilities, with no adjustments to eliminate the effects of discontinuities associated with regulatory changes in reserve requirements.

11. Reserve balances with Federal Reserve Banks plus vault cash used to satisfy reserve requirements.

12. The monetary base, not break-adjusted and not seasonally adjusted, consists of (1) total reserves (line 11), plus (2) required clearing balances and adjustments to compensate for float at Federal Reserve Banks, plus (3) the currency component of the money stock, plus (4) (for all quarterly reporters on the "Report of Transaction Accounts, Other Deposits and Vault Cash" and for all those weekly reporters whose vault cash exceeds their required reserves) the difference between current vault cash and the amount applied to satisfy current reserve requirements. Since February 1984, currency and vault cash figures have been measured over the computation periods ending on Mondays.

13. Unadjusted total reserves (line 11) less unadjusted required reserves (line 14).

NOTES TO TABLE 1.21

1. Latest monthly and weekly figures are available from the Board's H.6 (508) weekly statistical release. Historical data starting in 1959 are available from the Money and Reserves Projections Section, Division of Monetary Affairs, Board of Governors of the Federal Reserve System, Washington, DC 20551.

2. Composition of the money stock measures is as follows:

M1: (1) currency outside the U.S. Treasury, Federal Reserve Banks, and the vaults of depository institutions, (2) travelers checks of nonbank issuers, (3) demand deposits at all commercial banks other than those owed to depository institutions, the U.S. government, and foreign banks and official institutions, less cash items in the process of collection and Federal Reserve float, and (4) other checkable deposits (OCDs), consisting of negotiable order of withdrawal (NOW) and automatic transfer service (ATS) accounts at depository institutions, credit union share draft accounts, and demand deposits at thrift institutions. Seasonally adjusted M1 is computed by summing currency, travelers checks, demand deposits, and OCDs, each seasonally adjusted separately.

M2: M1 plus (1) savings deposits (including MMDAs), (2) small-denomination time deposits (time deposits—including retail RPs—in amounts of less than \$100,000), and (3) balances in retail money market mutual funds. Excludes individual retirement accounts (IRAs) and Keogh balances at depository institutions and money market funds. Seasonally adjusted M2 is calculated by summing savings deposits, small-denomination time deposits, and retail money fund balances, each seasonally adjusted separately, and adding this result to seasonally adjusted M1.

M3: M2 plus (1) large-denomination time deposits (in amounts of \$100,000 or more) issued by all depository institutions, (2) balances in institutional money funds, (3) RP liabilities (overnight and term) issued by all depository institutions, and (4) eurodollars (overnight and term) held by U.S. residents at foreign branches of U.S. banks worldwide and at all banking offices in the United Kingdom and Canada. Excludes amounts held by deposit-

ory institutions, the U.S. government, money market funds, and foreign banks and official institutions. Seasonally adjusted M3 is calculated by summing large time deposits, institutional money fund balances, RP liabilities, and eurodollars, each seasonally adjusted separately, and adding this result to seasonally adjusted M2.

3. Currency outside the U.S. Treasury, Federal Reserve Banks, and vaults of depository institutions.

4. Outstanding amount of U.S. dollar-denominated travelers checks of nonbank issuers. Travelers checks issued by depository institutions are included in demand deposits.

5. Demand deposits at commercial banks and foreign-related institutions other than those owed to depository institutions, the U.S. government, and foreign banks and official institutions, less cash items in the process of collection and Federal Reserve float.

6. Consists of NOW and ATS account balances at all depository institutions, credit union share draft account balances, and demand deposits at thrift institutions.

7. Sum of (1) savings deposits (including MMDAs), (2) small time deposits, and (3) retail money fund balances.

8. Sum of (1) large time deposits, (2) institutional money fund balances, (3) RP liabilities (overnight and term) issued by depository institutions, and (4) eurodollars (overnight and term) of U.S. addressees.

9. Small time deposits—including retail RPs—are those issued in amounts of less than \$100,000. All IRAs and Keogh accounts at commercial banks and thrift institutions are subtracted from small time deposits.

10. Large time deposits are those issued in amounts of \$100,000 or more, excluding those booked at international banking facilities.

11. Large time deposits at commercial banks less those held by money market funds, depository institutions, the U.S. government, and foreign banks and official institutions.

12. Includes both overnight and term.

NOTE: Tables 1.26, 1.27, and 1.28 have been revised to reflect changes in the Board's H.8 statistical release, "Assets and Liabilities of Commercial Banks in the United States." Table 1.27, "Assets and Liabilities of Large Weekly Reporting Commercial Banks," and table 1.28, "Large Weekly Reporting U.S. Branches and Agencies of Foreign Banks," are no longer being published in the *Bulletin*. Instead, abbreviated balance sheets for both large and small domestically chartered banks have been included in table 1.26, parts C and D. Data are both merger-adjusted and break-adjusted. In addition, data from large weekly reporting U.S. branches and agencies of foreign banks have been replaced by balance sheet estimates of all foreign-related institutions and are included in table 1.26, part E. These data are break-adjusted.

The not-seasonally-adjusted data for all tables now contain additional balance sheet items, which were available as of October 2, 1996.

1. Covers the following types of institutions in the fifty states and the District of Columbia: domestically chartered commercial banks that submit a weekly report of condition (large domestic); other domestically chartered commercial banks (small domestic); branches and agencies of foreign banks, and Edge Act and agreement corporations (foreign-related institutions). Excludes International Banking Facilities. Data are Wednesday values or pro rata averages of Wednesday values. Large domestic banks constitute a universe; data for small domestic banks and foreign-related institutions are estimates based on weekly samples and on quarter-end condition reports. Data are adjusted for breaks caused by reclassifications of assets and liabilities.

The data for large and small domestic banks presented on pp. A17–19 are adjusted to remove the estimated effects of mergers between these two groups. The adjustment for mergers changes past levels to make them comparable with current levels. Estimated quantities of balance sheet items acquired in mergers are removed from past data for the bank group that contained the acquired bank and put into past data for the group containing the

acquiring bank. Balance sheet data for acquired banks are obtained from Call Reports, and a ratio procedure is used to adjust past levels.

2. Excludes federal funds sold to, reverse RPs with, and loans made to commercial banks in the United States, all of which are included in "Interbank loans."

3. Consists of reverse RPs with brokers and dealers and loans to purchase and carry securities.

4. Includes vault cash, cash items in process of collection, balances due from depository institutions, and balances due from Federal Reserve Banks.

5. Excludes the due-from position with related foreign offices, which is included in "Net due to related foreign offices."

6. Excludes unearned income, reserves for losses on loans and leases, and reserves for transfer risk. Loans are reported gross of these items.

7. This balancing item is not intended as a measure of equity capital for use in capital adequacy analysis. On a seasonally adjusted basis, this item reflects any differences in the seasonal patterns estimated for total assets and total liabilities.

8. Fair value of derivative contracts (interest rate, foreign exchange rate, other commodity and equity contracts) in a gain/loss position, as determined under FASB Interpretation No. 39.

9. Includes mortgage-backed securities issued by U.S. government agencies, U.S. government-sponsored enterprises, and private entities.

10. Difference between fair value and historical cost for securities classified as available-for-sale under FASB Statement No. 115. Data are reported net of tax effects. Data shown are restated to include an estimate of these tax effects.

11. Mainly commercial and industrial loans but also includes an unknown amount of credit extended to other than nonfinancial businesses.

12. Total amount outstanding.

1. The prime rate is one of several base rates that banks use to price short-term business loans. The table shows the date on which a new rate came to be the predominant one quoted by a majority of the twenty-five largest banks by asset size, based on the most recent Call

Report. Data in this table also appear in the Board's H.15 (519) weekly and G.13 (415) monthly statistical releases. For ordering address, see inside front cover.

NOTE: Some of the data in this table also appear in the Board's H.15 (519) weekly statistical release. For ordering address, see inside front cover.

1. The daily effective federal funds rate is a weighted average of rates on trades through New York brokers.

2. Weekly figures are averages of seven calendar days, ending on Wednesday of the current week; monthly figures include each calendar day in the month.

3. Annualized using a 360-day year or bank interest.

4. Rate for the Federal Reserve Bank of New York.

5. Quoted on a discount basis.

6. Interest rates interpolated from data on certain commercial paper trades settled by the Depository Trust Company. The trades represent sales of commercial paper by dealers or direct issuers to investors (that is, the offer side). See the Board's Commercial Paper web pages (<http://www.federalreserve.gov/releases/cp>) for more information.

7. An average of dealer offering rates on nationally traded certificates of deposit.

8. Bid rates for eurodollar deposits collected around 9:30 a.m. Eastern time. Data are for indication purposes only.

9. Yields on actively traded issues adjusted to constant maturities.

SOURCE: U.S. Department of the Treasury.

10. Based on the unweighted average of the bid yields for all Treasury fixed-coupon securities with remaining terms to maturity of 25 years and over.

11. A factor for adjusting the daily long-term average in order to estimate a 30-year rate can be found at <http://www.treas.gov/offices/domestic-finance/debt-management/interest-rate/ltrcompositindex.html>.

12. General obligation bonds based on Thursday figures; Moody's Investors Service.

13. State and local government general obligation bonds maturing in twenty years are used in compiling this index. The twenty-bond index has a rating roughly equivalent to Moody's A1 rating. Based on Thursday figures.

14. Daily figures are averages of Aaa, Aa, A, and Baa yields from Moody's Investors Service. Based on yields to maturity on selected long-term bonds.

15. Effective December 7, 2001, the Moody's Aaa yield includes yields only for industrial firms. Prior to December 7, 2001, the Aaa yield represented both utilities and industrial.

16. Standard & Poor's corporate series. Common stock ratio is based on the 500 stocks in the price index.

1. In July 1976 a financial group, composed of banks and insurance companies, was added to the group of stocks on which the index is based. The index is now based on 400 industrial stocks (formerly 425), 20 transportation (formerly 15 rail), 40 public utility (formerly 60), and 40 financial.

2. On July 5, 1983, the American Stock Exchange rebased its index, effectively cutting previous readings in half.

3. Since July 1983, under the revised Regulation T, margin credit at broker-dealers has included credit extended against stocks, convertible bonds, stocks acquired through the exercise of subscription rights, corporate bonds, and government securities. Separate reporting of data for margin stocks, convertible bonds, and subscription issues was discontinued in April 1984.

4. Free credit balances are amounts in accounts with no unfulfilled commitments to brokers and are subject to withdrawal by customers on demand.

5. Series initiated in June 1984.

6. Margin requirements, stated in regulations adopted by the Board of Governors pursuant to the Securities Exchange Act of 1934, limit the amount of credit that can be used to purchase and carry "margin securities" (as defined in the regulations) when such credit is collateralized by securities. Margin requirements on securities are the difference between the market value (100 percent) and the maximum loan value of collateral as prescribed by the Board. Regulation T was adopted effective Oct. 15, 1934; Regulation U, effective May 1, 1936; Regulation G, effective Mar. 11, 1968; and Regulation X, effective Nov. 1, 1971.

On Jan. 1, 1977, the Board of Governors for the first time established in Regulation T the initial margin required for writing options on securities, setting it at 30 percent of the current market value of the stock underlying the option. On Sept. 30, 1985, the Board changed the required initial margin, allowing it to be the same as the option maintenance margin required by the appropriate exchange or self-regulatory organization; such maintenance margin rules must be approved by the Securities and Exchange Commission.

1. The U.S. Treasury first issued inflation-indexed securities during the first quarter of 1997.

2. Includes (not shown separately) securities issued to the Rural Electrification Administration, depository bonds, retirement plan bonds, and individual retirement bonds.

3. Nonmarketable series denominated in dollars, and series denominated in foreign currency held by foreigners.

4. Held almost entirely by U.S. Treasury and other federal agencies and trust funds.

5. Data for Federal Reserve Banks and U.S. government agencies and trust funds are actual holdings; data for other groups are Treasury estimates.

6. U.S. Treasury securities bought outright by Federal Reserve Banks, see *Bulletin* table 1.18.

7. In March 1996, in a redefinition of series, fully defeased debt backed by nonmarketable federal securities was removed from "Other miscellaneous investors" and added to "State and local treasuries." The data shown here have been revised accordingly.

8. Includes nonmarketable foreign series Treasury securities and Treasury deposit funds. Excludes Treasury securities held under repurchase agreements in custody accounts at the Federal Reserve Bank of New York.

9. Includes individuals, government-sponsored enterprises, brokers and dealers, bank personal trusts and estates, corporate and noncorporate businesses, and other investors.

1. The figures represent purchases and sales in the market by the primary U.S. government securities dealers reporting to the Federal Reserve Bank of New York. Outright transactions include all U.S. government, federal agency, government-sponsored enterprise, mortgage-backed, and corporate securities scheduled for immediate and forward delivery, as well as all U.S. government securities traded on a when-issued basis between the announcement and issue date. Data do not include transactions under repurchase and reverse repurchase (resale) agreements. Averages are based on the number of trading days in the week.

2. Outright Treasury inflation-indexed securities (TIPS) transactions are reported at principal value, excluding accrued interest, where principal value reflects the original issuance par amount (unadjusted for inflation) times the price times the index ratio.

NOTE: Major changes in the report form filed by primary dealers induced a break in the dealer data series as of the week ending July 4, 2001. Current weekly data may be found at the Federal Reserve Bank of New York web site (<http://www.newyorkfed.org/pihome/statistics>) under the Primary Dealer heading.

1. Data for positions and financing are obtained from reports submitted to the Federal Reserve Bank of New York by the U.S. government securities dealers on its published list of primary dealers. Weekly figures are close-of-business Wednesday data. Positions for calendar days of the report week are assumed to be constant. Monthly averages are based on the number of calendar days in the month.

2. Net outright positions include all U.S. government, federal agency, government-sponsored enterprise, mortgage-backed, and corporate securities scheduled for immediate and forward delivery, as well as U.S. government securities traded on a when-issued basis between the announcement and issue date.

3. Figures cover financing U.S. government, federal agency, government-sponsored enterprise, mortgage-backed, and corporate securities. Financing transactions for Treasury inflation-indexed securities (TIIS) are reported in actual funds paid or received, except for pledged securities. TIIS that are issued as pledged securities are reported at par value, which is the value of the security at original issuance (unadjusted for inflation).

NOTE: Major changes in the report form filed by primary dealers included a break in many series as of the week ending July 4, 2001. Current weekly data may be found at the Federal Reserve Bank of New York web site (<http://www.newyorkfed.org/pihome/statistics>) under the Primary Dealer heading.

1. Consists of mortgages assumed by the Defense Department between 1957 and 1963 under family housing and homeowners assistance programs.

2. Includes participation certificates reclassified as debt beginning Oct. 1, 1976.

3. On-budget since Sept. 30, 1976.

4. Consists of debentures issued in payment of Federal Housing Administration insurance claims. Once issued, these securities may be sold privately on the securities market.

5. Certificates of participation issued before fiscal year 1969 by the Government National Mortgage Association acting as trustee for the Farmers Home Administration; the Department of Health, Education, and Welfare; the Department of Housing and Urban Development; the Small Business Administration; and the Veterans Administration.

6. Off-budget.

7. Includes outstanding noncontingent liabilities: notes, bonds, and debentures. Includes Federal Agriculture Mortgage Corporation; therefore, details do not sum to total. Some data are estimated.

8. Excludes borrowing by the Farm Credit Financial Assistance Corporation, which is shown on line 17.

9. Before late 1982, the association obtained financing through the Federal Financing Bank (FFB). Borrowing excludes that obtained from the FFB, which is shown on line 22.

10. The Financing Corporation, established in August 1987 to recapitalize the Federal Savings and Loan Insurance Corporation, undertook its first borrowing in October 1987.

11. The Farm Credit Financial Assistance Corporation, established in January 1988 to provide assistance to the Farm Credit System, undertook its first borrowing in July 1988.

12. The Resolution Funding Corporation, established by the Financial Institutions Reform, Recovery, and Enforcement Act of 1989, undertook its first borrowing in October 1989.

13. The FFB, which began operations in 1974, is authorized to purchase or sell obligations issued, sold, or guaranteed by other federal agencies. Because FFB incurs debt solely for the purpose of lending to other agencies, its debt is not included in the main portion of the table to avoid double counting.

14. Includes FFB purchases of agency assets and guaranteed loans; the latter are loans guaranteed by numerous agencies, with the amounts guaranteed by any one agency generally being small. The Farmers Home Administration entry consists exclusively of agency assets, whereas the Rural Electrification Administration entry consists of both agency assets and guaranteed loans.

NOTE: This table has been revised to incorporate several changes resulting from the benchmarking of finance company receivables to the June 1996 Survey of Finance Companies. In that benchmark survey, and in the monthly surveys that have followed, more detailed breakdowns have been obtained for some components. In addition, previously unavailable data on securitized real estate loans are now included in this table. The new information has resulted in some reclassification of receivables among the three major categories (consumer, real estate, and business) and in discontinuities in some component series between May and June 1996.

Includes finance company subsidiaries of bank holding companies but not of retailers and banks. Data in this table also appear in the Board's G.20 (422) monthly statistical release. For ordering address, see inside front cover.

1. Owned receivables are those carried on the balance sheet of the institution. Managed receivables are outstanding balances of pools upon which securities have been issued; these balances are no longer carried on the balance sheets of the loan originator. Data are shown

before deductions for unearned income and losses. Components may not sum to totals because of rounding.

2. Excludes revolving credit reported as held by depository institutions that are subsidiaries of finance companies.

3. Includes personal cash loans, mobile home loans, and loans to purchase other types of consumer goods, such as appliances, apparel, boats, and recreation vehicles.

4. Outstanding balances of pools upon which securities have been issued; these balances are no longer carried on the balance sheets of the loan originator.

5. Credit arising from transactions between manufacturers and dealers, that is, floor plan financing.

6. Includes loans on commercial accounts receivable, factored commercial accounts, and receivable dealer capital; small loans used primarily for business or farm purposes; and wholesale and lease paper for mobile homes, campers, and travel trailers.

1. Weighted averages based on sample surveys of mortgages originated by major institutional lender groups for purchase of newly built homes; compiled by the Federal Housing Finance Board in cooperation with the Federal Deposit Insurance Corporation.

2. Includes all fees, commissions, discounts, and "points" paid (by the borrower or the seller) to obtain a loan.

3. Average effective interest rate on loans closed for purchase of newly built homes, assuming prepayment at the end of ten years.

4. Average contract rate on new commitments for conventional first mortgages; from U.S. Department of Housing and Urban Development (HUD). Based on transactions on the first day of the subsequent month.

5. Average gross yield on thirty-year, minimum-downpayment first mortgages insured by the Federal Housing Administration (FHA) for immediate delivery in the private secondary market. Based on transactions on first day of subsequent month.

6. Average net yields to investors on fully modified pass-through securities backed by mortgages and guaranteed by the Government National Mortgage Association (GNMA), assuming prepayment in twelve years on pools of thirty-year mortgages insured by the Federal Housing Administration or guaranteed by the Department of Veterans Affairs.

7. Does not include standby commitments issued, but includes standby commitments converted.

8. Includes participation loans as well as whole loans.

9. Includes conventional and government-underwritten loans. The Federal Home Loan Mortgage Corporation's mortgage commitments and mortgage transactions include activity under mortgage securities swap programs, whereas the corresponding data for the Federal National Mortgage Association exclude swap activity.

1. Multifamily debt refers to loans on structures of five or more units.

2. Includes loans held by nondeposit trust companies but not loans held by bank trust departments.

3. Includes savings banks and savings and loan associations.

4. FmHA-guaranteed securities sold to the Federal Financing Bank were reallocated from FmHA mortgage pools to FmHA mortgage holdings in 1986:Q4 because of accounting changes by the Farmers Home Administration.

5. Outstanding principal balances of mortgage-backed securities insured or guaranteed by the agency indicated.

6. Includes securitized home equity loans.

7. Other holders include mortgage companies, real estate investment trusts, state and local credit agencies, state and local retirement funds, noninsured pension funds, credit unions, and finance companies.

SOURCE: Based on data from various institutional and government sources. Separation of nonfarm mortgage debt by type of property, if not reported directly, and interpolations and extrapolations, when required for some quarters, are estimated in part by the Federal Reserve. Line 69 from Inside Mortgage Securities and other sources.

1. The Board's series on amounts of credit covers most short- and intermediate-term credit extended to individuals, excluding loans secured by real estate. Data in this table also appear in the Board's G.19 (421) monthly statistical release. For ordering address, see inside front cover.

2. Comprises motor vehicle loans, mobile home loans, and all other loans that are not included in revolving credit, such as loans for education, boats, trailers, or vacations. These loans may be secured or unsecured.

3. Outstanding balances of pools upon which securities have been issued; these balances are no longer carried on the balance sheets of the loan originator.

4. Totals include estimates for certain holders for which only consumer credit totals are available.

1. Data in this table also appear in the Board's G.17 (419) monthly statistical release. The data are also available on the Board's web site, <http://www.federalreserve.gov/releases/g17>. The latest historical revision of the industrial production index and the capacity utilization rates was released in November 2001. The recent annual revision is described in the March 2002 issue of the *Bulletin*. For a description of the methods of estimating industrial production and capacity utilization, see "Industrial Production and Capacity Utilization: Historical Revision and Recent Developments," *Federal Reserve Bulletin*, vol. 83 (February 1997), pp. 67-92, and the references cited therein. For details about the construction of individual industrial production series, see "Industrial Production: 1989 Developments and Historical Revision," *Federal Reserve Bulletin*, vol. 76 (April 1990), pp. 187-204.

2. Capacity utilization is calculated as the ratio of the Federal Reserve's seasonally adjusted index of industrial production to the corresponding index of capacity.

3. Primary processing includes textiles; lumber; paper; industrial chemicals; synthetic materials; fertilizer materials; petroleum products; rubber and plastics; stone, clay, and glass; primary metals; fabricated metals; semiconductors and related electronic components; and motor vehicle parts.

4. Advanced processing includes foods, tobacco, apparel, furniture and fixtures, printing and publishing, chemical products such as drugs and toiletries, agricultural chemicals, leather and products, machinery except semiconductors and related electronic components, transportation equipment except motor vehicle parts, instruments, and miscellaneous manufacturing.

5. Monthly highs, 1978-80; monthly lows, 1982.

6. Monthly highs, 1988-89; monthly lows, 1990-91.

1. Data in this table appear in the Board's G.17 (419) monthly statistical release. The data are also available on the Board's web site, <http://www.federalreserve.gov/releases/g17>. The latest historical revision of the industrial production index and the capacity utilization rates was released in November 2001. The recent annual revision is described in the March 2002 issue of the *Bulletin*. For a description of the methods of estimating industrial production and capacity utilization, see "Industrial Production and Capacity Utilization: Historical

Revision and Recent Developments," *Federal Reserve Bulletin*, vol. 83 (February 1997), pp. 67-92, and the references cited therein. For details about the construction of individual industrial production series, see "Industrial Production: 1989 Developments and Historical Revision," *Federal Reserve Bulletin*, vol. 76 (April 1990), pp. 187-204.

2. Standard Industrial Classification.

1. Seasonal factors are not calculated for lines 11-16, 18-20, 22-35, and 38-41.

2. Associated primarily with military sales contracts and other transactions arranged with or through foreign official agencies.

3. Consists of investments in U.S. corporate stocks and in debt securities of private corporations and state and local governments.

4. Reporting banks included all types of depository institutions as well as some brokers and dealers.

5. Consists of capital transfers (such as those of accompanying migrants entering or leaving the country and debt forgiveness) and the acquisition and disposal of nonproduced nonfinancial assets.

1. Gold held "under earmark" at Federal Reserve Banks for foreign and international accounts is not included in the gold stock of the United States; see table 3.13, line 3. Gold stock is valued at \$42.22 per fine troy ounce.

2. Special drawing rights (SDRs) are valued according to a technique adopted by the International Monetary Fund (IMF) in July 1974. Values are based on a weighted average of exchange rates for the currencies of member countries. From July 1974 through December 1980, sixteen currencies were used; since January 1981, five currencies have been used. U.S.

SDR holdings and reserve positions in the IMF also have been valued on this basis since July 1974.

3. Includes allocations of SDRs by the International Monetary Fund on Jan. 1 of the year indicated, as follows: 1970—\$867 million; 1971—\$717 million; 1972—\$710 million; 1979—\$1,139 million; 1980—\$1,152 million; 1981—\$1,093 million; plus net transactions in SDRs.

4. Valued at current market exchange rates.

3.13 FOREIGN OFFICIAL ASSETS HELD AT FEDERAL RESERVE BANKS¹

Millions of dollars, end of period

Asset	1998	1999	2000	2001			2002				
				Oct.	Nov.	Dec.	Jan.	Feb.	Mar.	Apr.	May ^p

12 Other countries	4,266	5,795	3,950	6,126	7,185	4,922	5,657	5,349	6,903

1. Includes the Bank for International Settlements.

2. Principally demand deposits, time deposits, bankers acceptances, commercial paper, negotiable time certificates of deposit, and borrowings under repurchase agreements.

3. Includes nonmarketable certificates of indebtedness and Treasury bills issued to official institutions of foreign countries.

4. Excludes notes issued to foreign official nonreserve agencies. Includes current value of zero-coupon Treasury bond issues to foreign governments as follows: Mexico, beginning March 1990, 30-year maturity issue; Venezuela, beginning December 1990, 30-year maturity issue; Argentina, beginning April 1993, 30-year maturity issue.

5. Debt securities of U.S. government corporations and federally sponsored agencies, and U.S. corporate stocks and bonds.

SOURCE: Based on U.S. Department of the Treasury data and on data reported to the department by banks (including Federal Reserve Banks) and securities dealers in the United States, and on the 1994 benchmark survey of foreign portfolio investment in the United States.

3.16 LIABILITIES TO, AND CLAIMS ON, FOREIGNERS Reported by Banks in the United States¹

Payable in Foreign Currencies

Millions of dollars, end of period

Item	1998	1999	2000	2001

1. Reporting banks include all types of depository institutions as well as some brokers and dealers. Excludes bonds and notes of maturities longer than one year.

2. Excludes negotiable time certificates deposit, which are included in "Other negotiable and readily transferable instruments."

3. Includes borrowing under repurchase agreements.

4. For U.S. banks, includes amounts owed to own foreign branches and foreign subsidiaries consolidated in quarterly Consolidated Reports of Condition filed with bank regulatory agencies. For agencies, branches, and majority-owned subsidiaries of foreign banks, consists principally of amounts owed to the head office or parent foreign bank, and to foreign branches, agencies, or wholly owned subsidiaries of the head office or parent foreign bank.

5. Financial claims on residents of the United States, other than long-term securities, held by or through reporting banks for foreign customers.

6. Includes nonmarketable certificates of indebtedness and Treasury bills issued to official institutions of foreign countries.

7. Data available beginning January 2001.

8. Principally bankers acceptances, commercial paper, and negotiable time certificates of deposit.

9. Principally the International Bank for Reconstruction and Development, the Inter-American Development Bank, and the Asian Development Bank. Excludes "holdings of dollars" of the International Monetary Fund.

10. Foreign central banks, foreign central governments, and the Bank for International Settlements.

11. Excludes central banks, which are included in "Official institutions."

1. Reporting banks include all types of depository institutions as well as some brokers and dealers.

2. Before January 2001, combined data reported for Belgium-Luxembourg.

3. Before January 2001, data included in United Kingdom.

4. Since December 1992, has excluded Bosnia, Croatia, and Slovenia.

5. Includes the Bank for International Settlements and European Central Bank. Since December 1992, has included all parts of the former U.S.S.R. (except Russia) and Bosnia, Croatia, and Slovenia.

6. Before January 2001, "Other Latin America" and "Other Caribbean" were reported as combined "Other Latin America and Caribbean."

7. Beginning 2001, Cayman Islands replaced British West Indies in the data series.

8. Comprises Bahrain, Iran, Iraq, Kuwait, Oman, Qatar, Saudi Arabia, and United Arab Emirates (Trucial States).

9. Comprises Algeria, Gabon, Libya, and Nigeria.

10. Before January 2001, included in "All other."

11. Excludes the Bank for International Settlements, which is included in "Other Europe."

1. For banks' claims, data are monthly; for claims of banks' domestic customers, data are for quarter ending with month indicated.

Reporting banks include all types of depository institution as well as some brokers and dealers.

2. For U.S. banks, includes amounts due from own foreign branches and foreign subsidiaries consolidated in quarterly Consolidated Reports of Condition filed with bank regulatory agencies. For agencies, branches, and majority-owned subsidiaries of foreign banks, consists

principally of amounts due from the head office or parent foreign bank, and from foreign branches, agencies, or wholly owned subsidiaries of the head office or parent foreign bank.

3. Assets held by reporting banks in the accounts of their domestic customers.

4. Principally negotiable time certificates of deposit and bankers acceptances, and commercial paper.

5. Data available beginning January 2001.

6. Includes demand and time deposits and negotiable and nonnegotiable certificates of deposit denominated in U.S. dollars issued by banks abroad.

1. The banking offices covered by these data include U.S. offices and foreign branches of U.S. banks, including U.S. banks that are subsidiaries of foreign banks. Offices not covered include U.S. agencies and branches of foreign banks. Beginning March 1994, the data include large foreign subsidiaries of U.S. banks. The data also include other types of U.S. depository institutions as well as some types of brokers and dealers. To eliminate duplication, the data are adjusted to exclude the claims on foreign branches held by a U.S. office or another foreign branch of the same banking institution.

These data are on a gross claims basis and do not necessarily reflect the ultimate country risk or exposure of U.S. banks. More complete data on the country risk exposure of U.S. banks are available in the quarterly Country Exposure Lending Survey published by the Federal Financial Institutions Examination Council.

2. Organization of Petroleum Exporting Countries, shown individually; other members of OPEC (Algeria, Gabon, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, and United Arab Emirates), and Bahrain and Oman (not formally members of OPEC).

3. Excludes Liberia. Beginning March 1994 includes Namibia.

4. As of December 1992, excludes other republics of the former Soviet Union.

5. Includes Canal Zone.

6. Foreign branch claims only.

7. Includes New Zealand, Liberia, and international and regional organizations.

1. Averages of certified noon buying rates in New York for cable transfers. Data in this table also appear in the Board's G.5 (405) monthly statistical release. For ordering address, see inside front cover.

2. U.S. cents per currency unit.

3. The euro is reported in place of the individual euro area currencies. By convention, the rate is reported in U.S. dollars per euro. The bilateral currency rates can be derived from the euro rate by using the fixed conversion rates (in currencies per euro) as shown below:

Euro equals

13.7603	Austrian schillings	1,936.27	Italian lire
40.3399	Belgian francs	40.3399	Luxembourg francs
5.94573	Finnish markkas	2.20371	Netherlands guilders
6.55957	French francs	200.482	Portuguese escudos
1.95583	German marks	166.386	Spanish pesetas
.787564	Irish pounds	340.750	Greek drachmas

4. Starting with the February 2002 *Bulletin*, revised index values resulting from the periodic revision of data that underlie the calculated trade weights are reported. For more information on the indexes of the foreign exchange value of the dollar, see *Federal Reserve Bulletin*, vol. 84 (October 1998), pp. 811-818.

5. Weighted average of the foreign exchange value of the U.S. dollar against the currencies of a broad group of U.S. trading partners. The weight for each currency is computed as an average of U.S. bilateral import shares from and export shares to the issuing country and of a measure of the importance to U.S. exporters of that country's trade in third country markets.

6. Weighted average of the foreign exchange value of the U.S. dollar against a subset of broad index currencies that circulate widely outside the country of issue. The weight for each currency is its broad index weight scaled so that the weights of the subset of currencies in the index sum to one.

7. Weighted average of the foreign exchange value of the U.S. dollar against a subset of broad index currencies that do not circulate widely outside the country of issue. The weight for each currency is its broad index weight scaled so that the weights of the subset of currencies in the index sum to one.

Maps of the Federal Reserve System

LEGEND

Both pages

- Federal Reserve Bank city
- ★ Board of Governors of the Federal Reserve System, Washington, D.C.

NOTE

The Federal Reserve officially identifies Districts by number and Reserve Bank city (shown on both pages) and by letter (shown on the facing page).

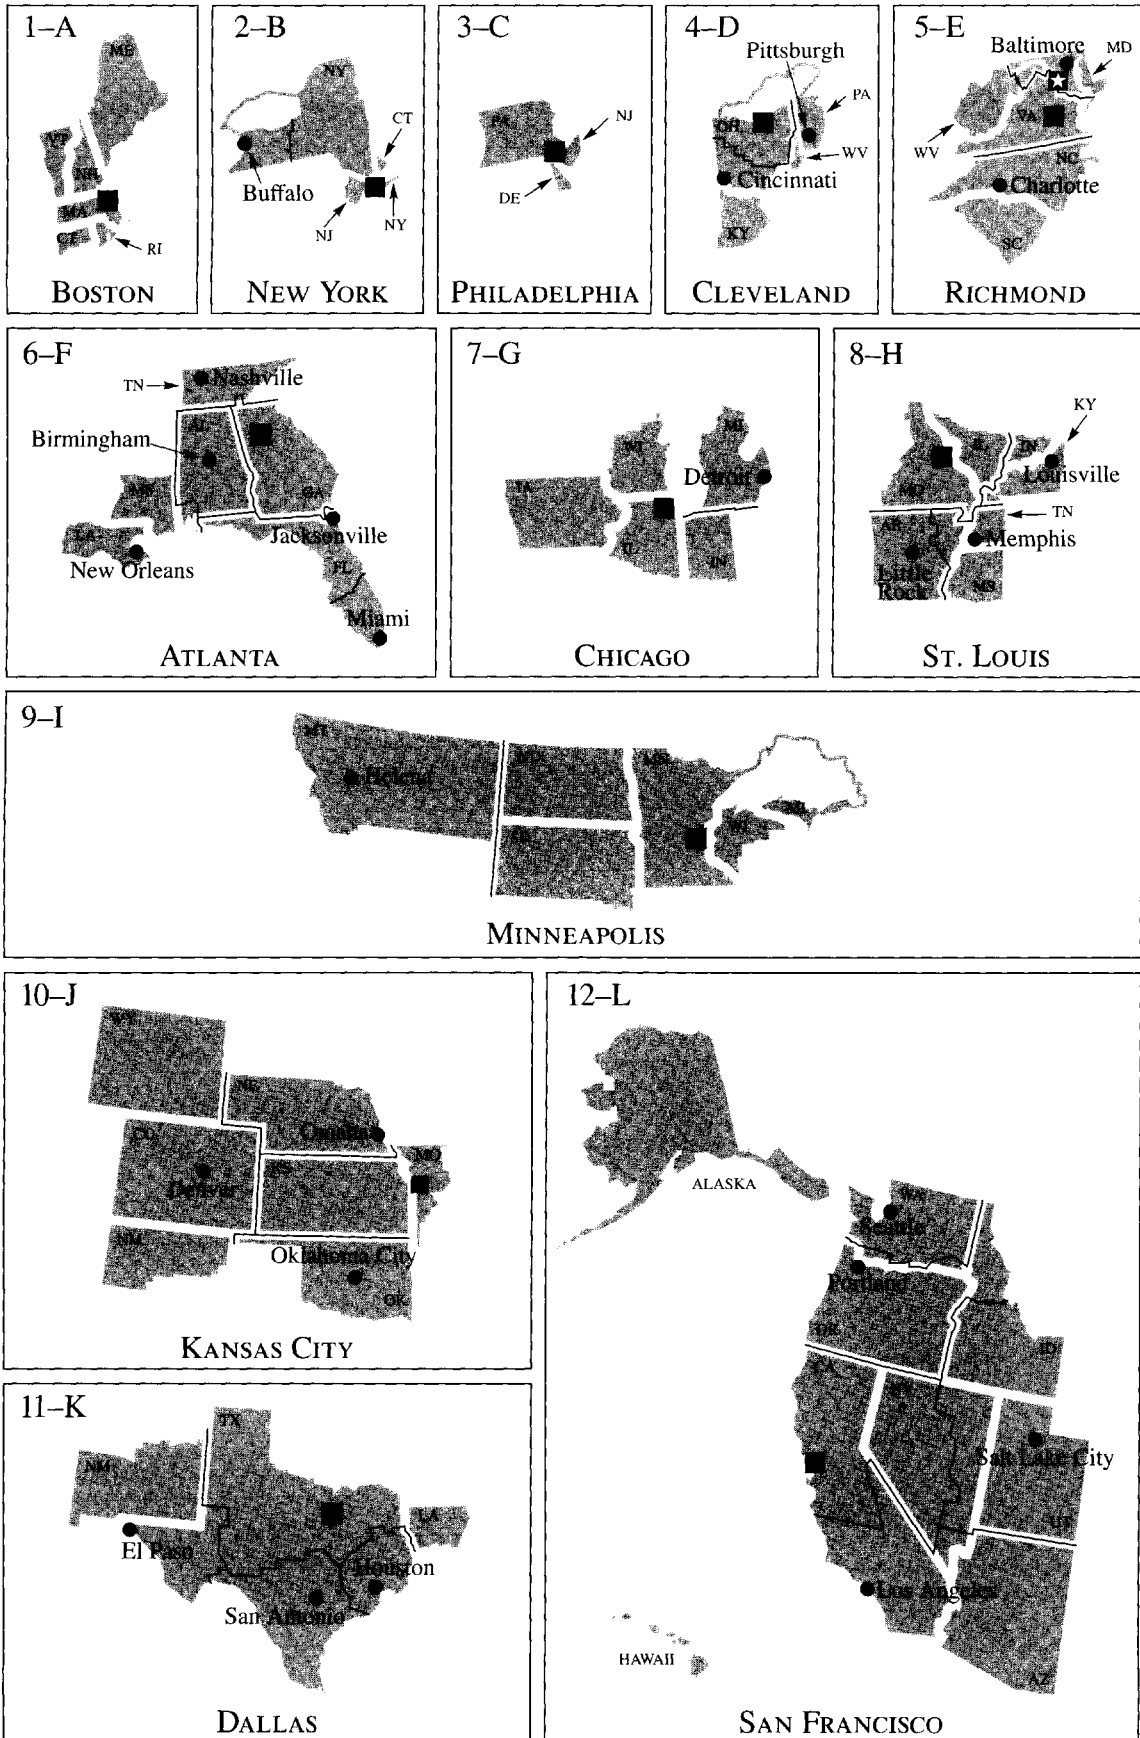

In the 12th District, the Seattle Branch serves Alaska, and the San Francisco Bank serves Hawaii.

The System serves commonwealths and territories as follows: the New York Bank serves the Commonwealth

Facing page

- Federal Reserve Branch city
- Branch boundary

of Puerto Rico and the U.S. Virgin Islands; the San Francisco Bank serves American Samoa, Guam, and the Commonwealth of the Northern Mariana Islands. The Board of Governors revised the branch boundaries of the System most recently in February 1996.

2. Executive Vice President

Publications of Interest

FEDERAL RESERVE REGULATORY SERVICE

To promote public understanding of its regulatory functions, the Board publishes the *Federal Reserve Regulatory Service*, a four-volume loose-leaf service containing all Board regulations as well as related statutes, interpretations, policy statements, rulings, and staff opinions. For those with a more specialized interest in the Board's regulations, parts of this service are published separately as handbooks pertaining to monetary policy, securities credit, consumer affairs, and the payment system.

These publications are designed to help those who must frequently refer to the Board's regulatory materials. They are updated monthly, and each contains citation indexes and a subject index.

The Monetary Policy and Reserve Requirements Handbook contains Regulations A, D, and Q, plus related materials.

The Securities Credit Transactions Handbook contains Regulations T, U, and X, dealing with extensions of credit for the purchase of securities, together with related statutes, Board interpretations, rulings, and staff opinions. Also included is the Board's list of foreign margin stocks.

The Consumer and Community Affairs Handbook contains Regulations B, C, E, G, M, P, Z, AA, BB, and DD, and associated materials.

The Payment System Handbook deals with expedited funds availability, check collection, wire transfers, and risk-reduction policy. It includes Regulations CC, J, and EE, related statutes and commentaries, and policy statements on risk reduction in the payment system.

For domestic subscribers, the annual rate is \$200 for the *Federal Reserve Regulatory Service* and \$75 for each handbook. For subscribers outside the United States, the price including additional air mail costs is \$250 for the service and \$90 for each handbook.

The *Federal Reserve Regulatory Service* is also available on CD-ROM for use on personal computers. For a standalone PC, the annual subscription fee is \$300. For network subscriptions, the annual fee is \$300 for 1 concurrent user, \$750 for a maximum of 10 concurrent users, \$2,000 for a maximum of 50 concurrent users, and \$3,000 for a maximum of 100 concurrent users. Subscribers outside the United States should add \$50 to cover additional airmail costs. For further information, call (202) 452-3244.

All subscription requests must be accompanied by a check or money order payable to the Board of Governors of the Federal Reserve System. Orders should be addressed to Publications Services, mail stop 127, Board of Governors of the Federal Reserve System, Washington, DC 20551.

GUIDE TO THE FLOW OF FUNDS ACCOUNTS

A new edition of *Guide to the Flow of Funds Accounts* is now available from the Board of Governors. The new edition incorporates changes to the accounts since the initial edition was published in 1993. Like the earlier publication, it explains the principles underlying the flow of funds accounts and describes how the accounts are constructed. It lists each flow series in the Board's flow of funds publication, "Flow of Funds Accounts of the United States" (the Z.1 quarterly statistical release),

and describes how the series is derived from source data. The *Guide* also explains the relationship between the flow of funds accounts and the national income and product accounts and discusses the analytical uses of flow of funds data. The publication can be purchased, for \$20.00, from Publications Services, Mail Stop 127, Board of Governors of the Federal Reserve System, Washington, DC 20551.

Federal Reserve Statistical Releases Available on the Commerce Department's Economic Bulletin Board

The Board of Governors of the Federal Reserve System makes some of its statistical releases available to the public through the U.S. Department of Commerce's economic bulletin board. Computer access to the releases can be obtained by subscription.

For further information regarding a subscription to the economic bulletin board, please call (202) 482-1986. The releases transmitted to the economic bulletin board, on a regular basis, are the following:

<i>Reference Number</i>	<i>Statistical release</i>	<i>Frequency of release</i>
H.3	Aggregate Reserves	Weekly/Thursday
H.4.1	Factors Affecting Reserve Balances	Weekly/Thursday
H.6	Money Stock	Weekly/Thursday
H.8	Assets and Liabilities of Insured Domestically Chartered and Foreign Related Banking Institutions	Weekly/Monday
H.10	Foreign Exchange Rates	Weekly/Monday
H.15	Selected Interest Rates	Weekly/Monday
G.5	Foreign Exchange Rates	Monthly/end of month
G.17	Industrial Production and Capacity Utilization	Monthly/midmonth
G.19	Consumer Installment Credit	Monthly/fifth business day
Z.1	Flow of Funds	Quarterly
