## INTRODUCTION.

The Survey of Current Business is designed to present currently each month a picture of the business situation by setting forth the principal facts regarding the various lines of trade and industry. These facts are arranged so as to give comparisons with previous periods; and to facilitate comparisons between the various items, index numbers have been calculated showing the relation of any month to a base period, usually the monthly average for 1913. Index numbers are further explained in the heading of the table "Trend of business movements" on page 19.

Detailed figures for previous months and years are given for each item once every quarter, in the issues appearing in February, May, etc., while in the intervening months the table "Trend of business movements" gives all the current data. In order to make current data available to readers of the Survey of

Current Business at the earliest possible moment, and thus overcome delays in printing, mimeographed sheets are distributed twice a month to those subscribers who request them. One set is issued immediately after the 20th of the month giving data on such items as have been received up to that time, and another set of sheets is mailed at the end of the month giving figures received between the 20th and the end of the month. The information contained on these sheets is also published in "Commerce Reports," issued weekly by the Bureau of Foreign and Domestic Commerce, appearing therein usually the week after the mimeographed sheets are prepared. Requests for the mimeographed sheets, which are mailed free of charge to all subscribers of the Surver who request them, should be addressed to the Bureau of the Census, Department of Commerce, Washington, D. C.

WHOLESALE PRICE COMPARISONS.-MAXIMUM PRICE COMPARED TO PRICE IN RECENT MONTHS.
Note.-Prices to the producer on farm products are from U. S. Department of Agriculture, Bureau of Markets and Crop Estimates. All other prices are from $\boldsymbol{D}$. S. Department of Labor, Bureau of Labor Statistics. As far as possible all quotations represent prices to the producer or at the mill. See diagram on oppoeite page.

## BUSINESS INDICATORS.

The following table gives comparative index numbers for a selected list of important business movements. It is believed that this table will prove useful, because it separates out from the large mass of material a comparatively small number of items which are often regarded as indicative of business in general.

The table has been divided into two parts, the first containing those items for which index numbers can be calculated using 1913 as a base. The second part contains items for which comparable data back to 1913 are not available. This latter group of index numbers is calculated by letting the 1919 monthly average equal 100 . Care should therefore be exercised in comparing the absolute value of the two sets of data. In either group, however, the upward or downward trend of the index numbers, compared to previous months, does reflect the present tendency in each item and will give a basis for business judgment.

[^1]
## SUMMARY FOR FEBRUARY.

Figures on commercial and industrial movements for the month of February show clearly that business conditions are steadily becoming better. This movement is not always even, and progress sometimes seems slow, but when we compare the present output of our basic industries with the corresponding figures four or six months ago a marked improvement is evident.

Although in most lines prices have been relatively stable for the past six months, distributors still remember the disaster caused by overstocked shelves in 1920. Forward orders, therefore, are given sparingly and in reduced volume; however, manufacturers are feeling the effect of repeat orders, and the steadily increasing output of mills and factories shows that fundamentally the country is getting back to normal.

The recent marked increase in the price of farm products has had a favorable effect upon the morale of the agricultural districts; however, not much of this has so far been translated into increased business, because most of last year's crops had left the farmers' hands before the rise came.

## PRODUCTION.

February production in general ran about even with January, with 17 commodities showing increases,

19 decreases, and 4 no change. If the lesser number of working days in the month is considered, an actual increase in productive activity is shown.

Diagram 2.-Course of Production Since 1919.

In the foodstuff group there were two increases in production and two declines; in clothing two declines and one increase; in fuels three advances and three declines; in metals two advances and one decline; in lumber three commodities advanced and three declined; in paper one advance against three declines; in clay and sand products one advance and three declines; in enamel ware two advances; in transportation vehicles two advances and two declines; in tobacco, one advance and two declines.

Compared with 1913, February production showed 11 increases and 11 decreases. Compared with 1919, there were 13 increases and 30 decreases, while from the 1920 average there were 12 increases and 31 decreases. Comparison with 1921 was more favorable, with nearly the same proportional changes as in the 1913 comparison- 24 increases and 19 decreases. As against February, 1921, there were 23 increases and only 17 decreases.

Diagram 3.-('omparison of Present Probleton With Prewar.
(Relative production in $1913=100$.)

movement was responsible for 9 decreases as against only 3 increases-the same as in January-there were 10 increases and 5 decreases, as compared with 8 increases and 8 decreases reported in January. Corn, cement and petroleum stocks all made new high records.

Compared with a year ago, February stocks showed 10 increases and 20 decreases-about the same comparison as was reported for January. In the food group there were 3 increases and 9 decreases, while in the other commodities 7 increases were shown as against 11 decreases.

Leaving out the food commodities, whose seasonal movement throws out the comparison with a yearly average, there were 13 increases over the 1919 average, and 4 decreases, 2 of them in wood pulp. Coffee and tin still remain the only two commodities with smaller stocks than the 1913 average.

[^3]Diagram 4.-Course of Commodity Stocks Since 1919.

## PRICES.

Prices received by farmers for crops and live stock increased still further in February and stood about 10 per cent above the 1913 level. The wholesale price index of the Department of Labor advanced 2 per cent, the first increase since last August. The farm products, foods, and miscellaneous groups were responsible for the advance, especially the former, which finally rose from its long-maintained position as the lowest index number of any group, leaving metals, which declined still further in February, in that position. House furnishing goods also declined slightly. The Federal Reserve Board's regrouping of this index number showed an almost equal rise in agricultural products and farm products-each about 8 per cent, with no change in forest or mineral products. Producers' goods remained unchanged while consumers' goods advanced slightly, but not as much as raw materials. The Federal Reserve Board's index for international price comparisons rose about 3 per cent; imported goods remained unchanged and exported goods increased slightly. Both the Dun and Bradstreet index numbers advanced. The retail price index of food remained unchanged.

Price declines continued in England, France, and Japan, the Canadian wholesale price advanced slightly in a similar trend to United States prices, while the German price increase continued unabated, with an advance of 24 per cent in February.

Taking the individual prices shown in the table and chart on pages 4 and 5, both the market and producers'
prices of farm products rose considerably in Febru-ary-none less than 5 per cent except cotton products, potatoes, and tobacco, the latter remaining unchanged. All food prices rose except carcass beef. Clothing materials showed little change; advances occurred in worsted yarns and sole leather, while declines took place in cotton yarns and print cloths, raw silk and packers' hides. Among the fuels, bituminous coal declined and coke advanced. All metals declined slightly except steel and lead, which remained unchanged. In the building material group the only changes were advances in lumber and in common red brick. Rubber continued to decline.

Most of the increases in farm products and food were over 10 per cent, especially grains and live stock, while outside these groups only coke, lumber and brick made any appreciable advance. The declines were all comparatively slight.

## SALES.

The following table on sales of various commodities has been prepared to give a closer aspect of business needs-actual sales as against production, which may represent orders booked some months before. The sales statistics for commodities also give an indication of future production. The separate commodities covered in this table are few and in most cases relatively unimportant, as the sales can only be reported where trade associations supply the data; but the figures may be found to be of some interest. In addition to the orders of separate commodities booked by manufacturers (included in the first group in the table), the distributive movement of goods as a whole is shown through various channels to the consumer. There has also been shown the actual sales of services, such as transportation, communication, and advertising, in which sale and use run practically together, and also the sale of investment and speculative securities.

February sales increased in four out of eight commodities, one remaining the same-for which sales have been reported, the three declines all being in the enameled-ware industry. Distribution movement showed no change in wholesale orders, a decline in mail-order houses, and an increase in chain-store sales. Among the services reported for February, magazine advertising increased and newspaper advertising and postal receipts declined. Sales of stocks and life insurance increased, but bonds declined.
Comparing the figures with a year ago, taking a January comparison where February is not available, sales of individual commodities increased except printing, this decline being due more to declining prices than decreased activity. Distribution also increased except through mail-order houses. Among the services the only declines were in magazine
advertising, telegraph tolls, and railroad receipts, the latter being partly due to lower rates. Security sales were also higher, except municipal bond issues and postal savings.
In this connection it may be pointed out that some of the items, marked by an asterisk (*), are relatives based on values instead of quantities and are therefore generally dependent on fluctuations in the purchasing power of the dollar, i. e., the level of prices, as well as the fluctuations of sales of physical goods. Therefore, a decline during the past year does not necessarily represent a decline in the physical amount of sales. A rough corrected figure, eliminating the price variation, might be obtained by dividing each item in such series by the wholesale or retail price index number, whichever most nearly corresponds with the class of business done. In a few items expressed in value no correction is necessary for comparison, because there has been little or no change in the price for the goods or services-for instance, postal, telegraph, and telephone receipts. Bond sales on the New York Stock Exchange are really not based on value, because sales of bonds are not reported in their value at the time of sale, but on their par value; therefore, bond sales represent physical quantities: On the other hand, new issues of municipal bonds, unless for refunding purposes, reflect the price level, as the work for which they are issued requires a larger bond issue when prices are high.

Comparison of Sales in Different Lines of Business.

* Items based on value.
i Relative proportion of orders to total transactions.

## TEXTILES.

Receipts of wool at Boston decreased in February as compared with the previous month and were much less than a year ago, due to smaller imports of foreign wool, although domestic receipts were considerably larger. Imports of wool in February continued the sustained increase noted since October. Activity of woolen textile machinery increased, especially woolen. spindles and sets of cards. Consumption of wool increased over January. Considerable advances took place in the prices of raw wool, worsted yarns advanced slightly, but no changes occurred in the prices of dress goods and suitings.

Cotton consumption and machinery activity in textile mills declined 10 per cent in February, but considering that the number of working days declined by approximately the same ratio, the mill activity was about the same as in January. Stocks of cotton continued to be reduced with the adrance of the season. Imports of cotton increased and continued to maintain a large increase over both the previous year and the prewar average. On the other hand, the short crop this season has resulted in further curtailment of exports of raw cotton, but cotton cloth exports increased slightly. Consumption of fabrics by tire manufacturers increased in January. Slight increases occurred in February in the prices of raw cotton but yarns and print cloths declined.

Diagram 5.-Exports and Consumption of Cotion.

Diagram 6.-Total Cotton Ginned from Each Crop, 1913-1921.

Orders for knit goods declined almost half in February, production increased, but shipments and unfilled orders declined. Imports of raw silk declined 24 per cent in February and consumption was 35 per cent less than the large January figures. Stocks declined still further and prices continued to recede. Imports of burlap declined, while a considerable increase was noted in the imports of unmanufactured fibers.

## METALS.

Although recording an actual decline in February, pig-iron production was relatively about 10 per cent greater than in January on account of the difference in the number of working days. Steel-ingot production actually increased over 9 per cent. Exports and imports of steel both declined to about the same level as November and December. Unfilled orders of the United States Steel Corporation declined with the increased rate of production. Prices were reduced on most iron and steel products during the month.

Diagram 7.-Production of Pig Iron and Steel Ingots, and U. S. Steel Corporation's Unfileed Orders.

Meltings of pig iron in Ohio foundries increased 35 per cent in February. Production of sheets increased 33 per cent and stocks declined slightly. Sales of structural steel increased 9 per cent. Shipments of locomotives from factories declined to the smallest total since the Armistice, excepting only last November.

Copper production increased 45 per cent in February, reaching the highest point since April, 1921, but it was still only 37 per cent of the 1913 average. Exports of copper declined very slightly, while the price of electrolytic copper declined.

Production and stocks of zinc declined slightly. Receipts at St. Louis fell off 45 per cent but shipments from St. Louis increased. The price of zinc declined slightly.

Imports and stocks of tin increased and the price was lower. Receipts and shipments of lead at St. Louis declined considerably, but the price remained unchanged.

## FUELS.

Spurred on by the threatened coal strike, production of both anthracite and bituminous coal increased over 8 per cent in February in spite of the smaller number of working days. Stocks of anthracite held by producers declined slightly. Exports of both kinds of coal and also coke showed rather large increases in February.

Diagram 8.-Production of Bituminous Coal.

Diagram 9.-Production of Anthracter Coal.

Petroleum production declined somewhat from the January high record. Consumption and imports both showed a marked falling off, while stocks increased, passing the $200,000,000$ barrel mark and establishing a new record. Total shipments of petroleum from Mexico also declined. Exports of gasoline declined in February; as did consumption and stocks in January. Production in January increased.

Diagram 10.-Production, Consumption, Imports, and Stocks of Petroleum.

PAPER AND PRINTING.
Production and consumption of wood pulp declined in January; stocks increased slightly, and imports showed a heavy falling off. Production and shipments of newsprint paper declined, while for other grades there was a very slight increase. Stocks rose, but exports of all grades of printing paper declined more than half. Prices of paper were slightly reduced.

Printing activity showed a decline in January. Purchases of paper by printers also declined, but sales of printing increased very slightly.

## AUTOMOBILES.

Production of automobiles in February increased markedly over January; both passenger cars and trucks were produced in larger volume than in any month since last October. Shipments of automobiles showed corresponding increases.

## GLASS.

Glass bottle production declined slightly in February, but production and shipments of illuminating glassware increased, although new orders fell off.

## HIDES AND LEATHER.

Imports of hides and skins increased considerably in February, due to the large number of cattle hides imported; the February figure was the largest since last August. Stocks of hides at the end of January showed little change; packer cattle hides increased. The price of packer cattle hides declined but calfskins showed no change in February.
Leather production reports for February showed declines corresponding to the shorter month except for an increase in harness leather. January official figures
showed a decrease in sole and belting leather and an increase in upper leather. Stocks of sole and belting declined although a larger amount was in process; but conditions were exactly reversed as regards upper leather. February exports of both kinds of leather increased. There was a slight advance in hemlock sole while chrome calf remained unchanged.
Diagram 11.-Stocks of Cattle Hides (Packer), and Production and Stocks of Leather (Sole and Belting).

Sales of leather belting increased in January. Production of boots and shoes decreased slightly in February. February exports of boots and shoes increased 21 per cent and prices remained unchanged.

## BUILDING OPERATIONS.

Contracts awarded in the 27 northwestern states totaled $\$ 177,472,000$, compared to $\$ 166,320,000$ in January. Normally, there is a decline in contracts let in February, due to the shorter month. A slight decline was recorded in the total square feet contracted for, the figures for February being $30,061,000$ square feet, compared to $31,261,000$ in January. In February, a year ago, the total square feet amounted to only $16,772,000$, and the total valuation $\$ 100,677,000$.
The feature of the February building statistics was the increase in business buildings. This class of building increased from $4,811,000$ square feet in January, with a valuation of $\$ 23,696,000$, to $6,264,000$ square feet in February, valued at $\$ 39,240,000$. Residential building showed a slight decrease in square feet, compared to January, but the valuation, $\$ 75,728,000$, was practically identical in the two months.

The seasonal character of building operations is shown in the two accompanying diagrams, which give the total square feet of floor space each month since January, 1919, (1) for buildings built with
private capital, and (2) for buildings built largely by public funds, secured either from taxes or by donations. Under private buildings are included business, industrial, and residential construction. Under public and semipublic buildings are includep educational buildings, hospitals and in institutions, public buildings, religious, and memorial buildings, social and recreational buildings, and military and naval buildings.

Diagram 12.-Volume of Butlding Contracts Awarded, by Cuasses.

Diagram 13.-Actual Total and Moving Average of Private Building Construction.

Diagram 14.-Actual Total and Moving Average of Public Building Construction.

The diagrams also show the moving 12 -month average which eliminates all seasonal variation. Each point on the moving average is the average of the 12 months ending with the month plotted. Thus the first point, for December, 1919, represents the monthly average for the calendar year 1919. The next point plotted is for the 12 months beginning February 1, 1919, and ending January 31, 1920. The moving average represents the changes in the annual rate of production.

The two diagrams are drawn to scales which allow .comparisons between the curves. It will be noted that during the prosperity period of 1919 and early 1920, private building expanded very rapidly, but that it fell off sharply with the beginning of the depression period. Public building, however, did not respond to the prosperity stimulus in anything like the same degree, and likewise it showed comparatively little effect from the depression.

As a matter of fact, the period of depression in 1921 appears to have stimulated this class of building. The volume of public building was greater for every month after February, 1921, than for the corresponding month in either of the two preceding years. To a very large extent public building seems to have automatically absorbed part of the slack due to the falling off of private operations.

Both curves are now pointed upwards with every indication that they will go much further in the same direction.

## BULLDING MATERIALS.

Except for declines in Southern pine and Michigan hardwoods, lumber production increased in February. Shipments of all species except Michigan hardwoods increased. Prices of both Southern pine and Douglas fir rose. Stocks of Southern pine increased.

Production of oak flooring declined, but shipments, stocks, and orders increased; unfilled orders were less. Exports of lumber exhibited a decline.
Production of clay fire brick increased in February, but silica and face brick were produced in smaller quantities than in January. Shipments of clay fire and silica brick declined while face brick shipments showed a substantial increase. Stocks declined as regards silica and face brick but increased in the case of clay fire brick. Unfilled orders of both clay fire and face brick showed large increases, the new orders for the former having increased 15 per cent over January. The price of common brick increased 10 per cent in New York, but showed no change in Chicago.
Cement production declined slightly in February, but shipments and stocks increased. There was no change in the price.
Actual shipments of enamel sanitary ware increased in February, except for sinks and miscellaneous ware. Stocks declined except for baths, while receipts of orders declined about 15 per cent in almost all classes in a seasonal movement.
Sales of abrasive paper and cloth, both domestic and foreign, increased in January, and were about the same as in November.

## cereals.

Wheat and flour exports continued to decline in February and the visible supply of wheat was reduced in seasonal proportions, but it is almost twice as large as a year ago. Receipts showed an increase of 30 per cent, rather unusual for February; shipments increased slightly and production of flour increased 5 per cent. Prices of wheat and flour increased from 10 to 15 per cent. Stocks of wheat in country mills and elevators on March 1 amounted to $72,564,000$ bushels, according to the Department of Agriculture, the lowest on record except in 1918, and compared with average stocks of $91,000,000$ bushels on this date.

Corn exports increased in February with a total of $22,254,000$ bushels. This establishes a new record for recent years and was over five times as large as the 1913 monthly average. Receipts, shipments, and visible supply also showed good increases during the month. Prices rose 18 per cent.
Exports of oats declined, but rye and barley exports increased. Prices of all three grains showed marked advances.
The total domestic rail movement of grains, as shown by car loadings, increased $1 \frac{1}{2}$ per cent over January, while total grain exports declined 3 per cent.

## MEATS.

Receipts, total shipments, and slaughter of cattle declined in February, but stocker and feeder shipments increased. Exports increased 36 per cent and
storage holdings were very slightly greater. Production of beef from slaughter showed an increase in January, as did consumption. Prices of cattle and beef cuts increased in February, but carcass beef declined.
Diagram 15.-Beef-Inspected Slaughter, Consumption, and Cold Storage.

Receipts, total shipments, and slaughter of hogs also declined in February, while stocker and feeder shipments more than doubled. Exports and storage holdings of pork products continued to increase. January production of pork from slaughter increased and consumption did also. Prices of hogs showed a sharp increase in February, pork loins increasing only slightly.
Diagram 16.-Pork-Inspected Slaughter, Consumption, Exforts, and Cold Storage Holdings.

Receipts, shipments, and slaughter of sheep declined considerably in February, but storage holdings of lamb increased slightly. Prices of sheep advanced about 16 per cent.

## OTHER FOODSTUFFS.

Exports of condensed milk increased slightly. Receipts of butter declined but cheese and egg receipts were larger than in January. Storage holdings of all dairy products declined in a seasonal movement to a minimum for the season. Butter prices advanced slightly but cheese declined.
Exports of vegetable oils declined and imports again increased in February. Stocks of cotton seed and cottonseed oil and production of cottonseed oil declined seasonally. The price of cottonseed oil rose.
Sugar imports and meltings showed large increases in February and stocks of raw sugar almost doubled. Exports of refined sugar were slightly smaller. Prices rose slightly.

Diagram 17.-Imports, Meltings, and Stocks of Raw Sugar.

Imports of coffee declined in February and stocks, both in the United States and the world as a whole, increased. Receipts in Brazil declined and clearances from Brazil showed a great falling off. Imports of tea continued to decline.

## WATER TRANSPORTATION.

Traffic through the Panama Canal declined in January, but a larger traffic was carried in American vessels. On the other hand, in spite of increases in February in both total entrances and clearances of vessels in foreign trade in United States ports, American ship tonnage in this service continued its steady decline. The tonnage of vessels under construction dwindled still further and the tonnage of vessels completed also decreased.

Diagram 18.-Entrances and Clearances of Vessels in U. S. Foreign Trade, and Ships Under Construction.

RAILROAD TRANSPORTATION.
Marked improvement continued to be made in February in the reduction in surplus cars. Shortages of cars still remain almost infinitesimal. The number of bad order cars again increased slightly and loadings were 5 per cent greater than in the longer month of January.

Operations of the railroads for January showed declines in both freight and passenger revenue, but operating expenses were cut still further. Net operating income, however, was reduced almost half compared with December.

Diagram 19.-Shortíge, Surplus, Bad-order, and Totai, Loadings of Freight Cars.

## LABOR.

A slight increase was noted in employment in February, especially in New York State. Total pay roll increased somewhat less than employment in New York, but much more than employment in Wisconsin. Unemployment in Pennsylvania continued to be reduced.
Immigration declined 22 per cent, continuing its steady fall, and emigration showed a slight decrease. Postal savings increased very slightly after a long succession of declines.

Diagram 20.-Immigration, Emigration, and Immigration Quota.

The following table and chart show the trend of employment in the three principal manufacturing districts of the United States. Separate index numbers have been calculated for each district from the figures reported by the Department of Labor. The Middle Atlantic division shows the greatest depression throughout the period, as compared with January, 1921, while the Central section has had the greatest increase, and New England has shown little change.

Trends in Employment by Districts.

| year and month. | District No. 1, New England. | $\begin{aligned} & \text { District } \\ & \text { No.2, } \\ & \text { Middle } \\ & \text { Atlantic. } \end{aligned}$ | District No. 3, East North Central. | Total in 1,428 United States factories. |

Diagram 21.-Relative Trend of Employment, by Districts. (Employment in January, 1921 = 100.)

Diagram 22.-Map Showing Districts in Employment Chart.

The following table, from reports by the Anthracite Bureau of Information gives an indication of employment in the anthracite coal fields:

Distribution of Employment at Anthracite Mines.

## DISTRIBUTION.

Sales of mail-order houses declined 8 per cent from January, while the compilation of chain-store sales showed an increase of $6 \frac{1}{2}$ per cent. Magazine advertising increased almost 10 per cent, but postal receipts declined slightly.

Diagram 23.-Sales of Mail-Order Houses and Chain Stores, and Postal Receipts.

PUBEIC FINANCE.
There was a slight increase in the total interest-bearing debt of the United States in February in spite of a reduction in Liberty and Victory loans. Customs receipts for February were very large, but total ordinary receipts declined. Ordinary disbursements of the Government also declined markedly, still exceeding the month's receipts, however, by over 10 per cent.

## BANKING AND FINANCE.

Debits to individual accounts and bank clearings showed an almost uniform decrease, both in and outside of New York City, of about 12 per cent, which, reduced to a daily average, would be almost the same as for January. Bills discounted at the Federal Reserve banks declined 17 per cent, and note circulation, total reserves, and deposits all gained slightly. A similar condition prevailed in the member banks of the Federal Reserve System. Call money rose, but time money continued to decline.
The number of business failures started to decline in February, but the actual decrease was small, considering the shorter month. Total defaulted liabilities were almost as large as in January. February dividend and interest payments were slightly larger than a year ago, though January's were slightly less than last year. New capital issues by corporations declined slightly and were almost 50 per cent less than a year ago. New incorporations declined 30 per cent from January. Credit reports showed an increased percentage of orders and declines in indebtedness and payments.

Diagram 24.-Failures and Liabilities, by Months.

Prices of stocks advanced about 4 per cent in February, while the bond index number rose 1 per cent, due to the rise in public utility bonds. The yield on municipal bonds declined very slightly. Sales of stocks increased slightly, but bond sales showed a large decrease, owing to the comparatively small transactions in the United States Government bonds, as the Victory 33 per cents were called during the month for payment in June.

Imports and exports of gold increased in February; both were about one-third less than last year, comparing the first two months of the year. Exports of silver
exceeded imports in February, reversing the conditions prevailing in January. The price of silver declined slightly, the larger decline in London being due to the rise in sterling exchange.

## FOREIGN EXCHANGE.

Exchange rates of the principal foreign countries all rose in February except Japan, which declined, and Germany, which remained the same. The greatest rise took place in Italian exchange, over 11 per cent. The general index number of the Federal Reserve Board declined, however, due to the heavier weighting of the low German exchange in February than in January.

## FOREIGN TRADE.

Imports showed a very slight decline in February, but exports continued to fall off, reaching the lowest point since 1915, with a decrease of over 10 per cent from January. Imports increased from all continents except Asia, whence a decline of 15 per cent occurred, due to a falling off in Japanese trade, while heavy declines in imports from Italy and from Canada contrasted with the general increase from other continents. Exports to Europe and Asia fell off heavily but other continents showed slight increases.

Diagram 25.-Imports and Exports of the United States.

## TREND OF BUSINESS MOVEMENTS.

The following table contains a summary of the monthly figures, designed to show the trend in important industrial and commercial movements. The numerical data for the latest months are given and in addition index numbers for the last four months and for two corresponding months of a year ago. In many lines the figures do not lend themselves readily to statistical uniformity, due to lateness of their publication or publication at other than monthly intervals; therefore the following explanations of the various headings are offered to make clear such distinctions and in general to facilitate the use of the table:

January, 1922.-This column gives the January figures corresponding to those for February shown in the next column-in other words, cover the previous month, and in some cases, where indicated by a foot note, refer to the previous quarter; that is, ending October 1, 1921.
February, 1922.-In this column are given the figures covering the month of February, or, as in the case of stocks, etc., the situation on February 28 or March 1. In a few cases (usually where returns are reported quarterly only) the figures are for the quarter ending December 31 or the condition on that date. Where this column is left blank, no figures for February were available at the time of going to press (April 6).
Corresponding month, January or February, 1921. -The figures in this column present the situation exactly a year previous to those in the "February, 1922," column (that is, generally, February, 1921), but where no figures were available for February, 1922, the January, 1921, figures have been inserted in this column for comparison with the January, 1922, figures. In the case of quarterly figures, this column shows the corresponding quarter of 1920 .
Cumulative total through latest month.-These columns set forth, for those items that can properly be cumulated, the cumulative total for the first two months of the calender years 1921 and 1922, respectively, except where the February, 1922, figures are lacking, in which case these columns are left blank.
Percentage increase $(+$ ) or decrease ( - ) cumulative 1922 from 1921. This columin shows the per cent by which the cumulated total for the first two months of 1922 is greater $(+)$ or less $(-)$ than the total for the corresponding period of 1921.
Base year or period.-For purposes of comparison with a previous more or less normal period, all items, so far as possible, are related to such a period by index numbers. The period taken for each item, called the base, is the monthly average of the year or period stated in this column. Wherever possible, the year 1913 is taken as a base, and if no prewar figures are available, 1919 is usually taken to avoid using a war year as a basis. In some cases it will be noted that figures were not available prior to 1920 or even 1921 , and that sometimes a month, or an average of a few months, has to be used rather than a year's average. Also, for some industries, 1919 would not be a proper base on account of extraordinary conditions in the industry and therefore some more representative year has been chosen.
Index numbers.-In order to visualize the trend of each movement, index or relative numbers are given for the last four months and for two corresponding months of a year ago. These index numbers are computed by allowing the monthly average for the base period, usually 1913 or 1919 , to equal 100 . If the movement for a current month is greater than the base the index number will be greater than 100. If the converse is true the index number will be less than 100 . The difference between 100 and any index number gives at once the per cent increase or decrease compared with the base period. Index numbers may also be used to compute the approximate per cent increase or decrease from one month to the next.
Percentage increase ( + ) or decrease ( - ) February from January. -The last column shows the per cent increase or decrease of the figure for the last month compared with the preceding month.

| Note.-Items marked with an asterisk (*) have not been published previously in the SURVEY or covering back figures for these items will be found at the end of this bulletin. For items marked with a dagger ( $\dagger$ ), detailed tables werepublished in the March Surver (No. 7). For detailed tables covering other items, see the last quarterly issue of the SURVEY (No.6). | NUMERICAL DATA. |  |  |  |  |  | BASEXEAR OR PERIOD | INDEX NฺUMBERS. |  |  |  |  |  | Per-centage in (+) or de crease (-) from Jan. |

TREND OF BUSINESS MOVEMENTS-Continued.

## STOCKS OF COAL.

## (A) INDEX NUMBERS AND (B) NUMERICAL DATA.

Data from Government sources. ${ }^{1}$
[Base year in bold-faced type.]

${ }^{1}$ Reported for first day of each month by identical firms to U. S. Department of Commerce, Bureau of Census, in cooperation with U. S. Geological Survey.
${ }^{2}$ Based on reports from a selected list of 5,000 consumers whose tocks in 1918 bore a known relation to the known total stocks; index numbers are not based on these figures.
${ }^{3}$ No data available; estimate included in total Index number.

FLAXSEED.

${ }^{\text {T }}$ Data on mineral oils from U.S. Department of the Interiot, Bureau of Mines: data on clay fire brick from•The Refractories Manufacturers' Association.
${ }^{2}$ Data revised. Figures for 1921 are from reports of 68 identical muls with a monthly capacity of $78,645,942$ bricks, which is estimated by the Association to represent from 68 to 70 per cent of the total clay fire brick capacity of the United States. Figures for 1919, 1920, and 1922 are computed to this capacity, respectively, from reports from 53,56 , and 60 mills having a monthly capacity for the years in question of $71,572,186,73,526,103$, and $73,307,190$ bricks.
${ }^{8}$ Six months' average, July-December, inclusive.

[^11]
[^0]:    Subscription price of the Survey of Current Business is $\$ 1$ a year; single copies, 10 cents. Foreign subscriptions, $\$ 1.50$; single copies, including postage, 20 cents. Subscription price of Commerce Reports is $\$ 3$ a year; with the Survey, $\$ 4$ a year. Make remittances only to Superintendent of Documents, Washington, D. C., by postal money order, express order, or New York draft. Currency at sender's risk. Postage stamps or foreign money not accepted.

[^1]:    ${ }^{1}$ Monthly prices are for the first of the month following.
    ${ }^{2}$ Based on the total computed production reported by 5 associations. Includes southern pine, Douglas fir, western pine, North Carolina pine, and Michigan hardwoods. The total production of these associations in 1919 was equal to $11,190,000,000$ board feet, compared with a total lumber production for the country of $34,552,000,00 \mathrm{C}$ board feet reported by the census.

[^2]:    ${ }_{2}^{1}$ Since July $1,1921$.
    : As represented by tax-paid withdrawals.

[^3]:    ${ }^{1}$ Relative to stocks at end of 1919 . * Index number less than 1
    95905-22-2

[^4]:    ${ }^{1}$ Twelve months' average, November, 1920, to October, 1920 , inclusive.

[^5]:    - Includes Woolworth, Kresge, McCrory and Kress only.

[^6]:    - Index number not computed.

[^7]:    1 Shipments of wheat, corn, and oats as reported in the Northwestern Miller. Shipments and visible supply of flaxseed as reported in the Oil, Paint, and Drug Reporter. Visible supply of wheat and corn in chief ports reported by Modern Miller.
    : Monthly figures are totals of weekly figures with first and last week of month prorated.
    ${ }^{3}$ At end of week nearest end of the month.

    - Ten-month average.

[^8]:    ${ }^{1}$ Telegraph earnings are combined reports of the Western Union and Postal Telegraph Companies to the Interstate Commerce Commission: Carlot shipments of fruit $a_{\text {nd }}$ vegetables compiled by Department of Agriculture, Bureau of Markets and Crop Estimates. Shipments of linseed oil and oil cake supplied by Minneapolis Chamber of Commerce. Wholesale average monthly prices of coke and sulphuric acid from Department of Labor, Bureau of Labor Statistics.

    2 Orangea, lemons, and grapefruit.
    ${ }^{3}$ Wheat-flour data repeated for correction of annual figures. Data for 1914 to 1916 and 1918 through June, 1920 , from reports of the U.S. Grain Corporation. Since then, from estimates by Russell's Commercial News, based on actual reports. Data for 1917 complied by Northwestern Miller, based partly on data from U. S. Orain Corporation for latter half of the year.

[^9]:    ${ }^{1}$ Data on operations of Canadian employment service prorated from weekly reports of Dominion Department of Lahor, Employment Serrice of Canada; issues of Canadisn bonds compiled by The Financial Post.

    - Placements aro termed casual when employment lasts one week or less.

[^10]:    * Multigraphed or mimeographed sheets.
    * Mhis is nophed or mimeogsaparily the source of the figures published in the "Survey," as many of them are obtained direct from the compilers prior to publication in the respectivo journals. This column and the right-hand column have been added to assist readers in obtaining current statistics between publication dates of the "Survey. ? Beginning Jan. 7, 1922, comhined into new publication called Weather, Crops, ank Markets.
    ${ }^{2}$ Imports and exports of gold and silver in Part II.

[^11]:    * Multigraphed or mimeographed sheets.
