

MONTHLY SUPPLEMENT TO COMMERCE REPORTS

UNITED STATES
DEPARTMENT OF COMMERCE
WASHINGTON

SURVEY OF
CURRENT BUSINESS

No. 1
AUGUST 1, 1921

COMPILED BY
BUREAU OF THE CENSUS
BUREAU OF FOREIGN AND DOMESTIC COMMERCE
BUREAU OF STANDARDS

For sale by the SUPERINTENDENT OF DOCUMENTS, Washington, D. C., at \$1.00 a year; single copies, 10 cents
Foreign subscriptions, \$1.50; single copies, including postage, 20 cents. Remittances should be made only to the
Superintendent of Documents, Washington, D. C., by postal money order, express order, or New York draft. Cur-
rency may be sent at sender's risk. Postage stamps or foreign money will not be accepted

INTRODUCTION.

This summary of statistical information as to the trend of business and industry was placed in type, and for the month of July 1,500 copies were printed.

It was distributed to trade and commercial journals, to important business houses, trade associations, public bodies, and economists, requesting opinion as to the usefulness of the data, and asking for constructive criticism. An extraordinary number of replies have been received, insistent upon the importance of the preparation and distribution of the information and offering many useful suggestions. Many changes have been made in accordance with these suggestions in this issue; but the publication is still in experimental form, and the Department is anxious to receive still further criticism with a view to rendering the publication fully serviceable to the commercial public.

It will be noted that the order of the figures here presented has been entirely altered, that a brief summary of the index numbers has been introduced, that graphs have been prepared, and further statistical information is given as tends to indicate the current trend of business.

In order that the publication shall impose no cost upon the taxpayers, it is proposed that a charge of \$1 per annum shall be made for the Survey. After September 1 it will also be included with the reorganized "Commerce Reports" at a total subscription price for the two services of \$4 per annum.

The Introduction given last month is repeated for the information of those who receive the publication for the first time.

INTRODUCTION TO JULY NUMBER.

To visualize the current trends of business and industry monthly, the Department of Commerce has found it necessary to condense and compile a large volume of information. These facts have been of service to the Department in its attempt to grasp the changing business conditions. It is believed they may be useful to the business public and that the figures, in some measure, will assist in the enlargement of business judgment.

To concentrate such a mass of information in convenient form and to make it useful for study and comparison, the data have been coded into relative figures, or index numbers, where necessary. These index numbers enable the reader to see at a glance the general upward or downward tendency of a movement, which can not so easily be grasped from actual figures.

STATISTICS COMPILED FROM VARIOUS SOURCES.

The basic figures used in the accompanying tables are largely those already in existence and are collected from Government departments, trade associations, etc. In cases where the basic data have been collected by outside agencies the Department of Commerce assumes no responsibility for their accuracy or completeness. The figures used, however, are in some cases those generally accepted in business circles as sufficiently complete to represent the current trend of the given industrial movement, and in other instances are vouched for by the trade association.

To be of the greatest value such information must be widely diffused and digested by the business men of the country. It is not enough that the banks and the big business concerns should understand the trends in business; the small manufacturer and the small dealer must have some understanding, too, so that there may be some semblance of unity in action. The Department hopes to reach this audience by offering to them these data.

In preparing these figures every effort is made to secure accuracy and completeness. On the other hand, it is realized that timeliness is often of more value than extreme accuracy. In certain cases it is necessary to

use preliminary figures or advance estimates in order to avoid too great delay in publication after the end of each month.

HOW RELATIVE FIGURES ARE COMPUTED.

In computing the relative figures, the attempt has been made to use the average of the last prewar year, 1913, as a base equal to 100. In many instances the basic statistics do not go back to the prewar years and, in such cases, averages for the year 1919 have been taken as a base. In a few cases still other base years have been used for special reasons. These facts, together with the source of the basic data, are indicated in the several tables. Certain commodity movements, such as the production of cottonseed oil, cold-storage holdings, etc., are very seasonal in character. In calculating the index numbers no allowance has been made for this, since it was thought better to let this fact show in the relative figures themselves.

For those unfamiliar with the use of such relative figures a word of explanation is necessary. Take the figures in the first column of Tables 38 and 78 which deal with the bank clearings in New York City as reported monthly by Bradstreet. In 1913 the average monthly clearing amounted to \$7,886,000,000. This number is allowed to equal 100 on our relative scale. In January, 1920, the total bank clearings were \$23,210,000,000, or equivalent to a relative number of 294, when the 1913 average is taken as 100. In June, 1921, bank clearings in New York City were only \$16,849,000,000, or on the relative basis only 214. The difference between 100 and any relative number gives at once the per cent increase or decrease above or below the base year. Thus bank clearings in January, 1920, were 194 per cent above the 1913 average, and in June, 1921, they were 114 per cent above the same base. In the number of business failures, as reported in column 3 of Table 38, the relative number for January, 1920, is 43, indicating a decrease for that month of 57 per cent below the 1913 monthly average.

SUMMARY.

The following summary compares the index number for the last month available, usually July, 1921, with the number for the preceding month and that for the corresponding month a year ago. Unless otherwise stated the months compared are July, 1921, with June 1921, and July, 1920. When other months are used, the fact is indicated by the following footnotes:

(¹) The figures given compare August, 1921, with July, 1921, and August, 1920.

(²) Comparison is for June, 1921, with the preceding month and the corresponding period last year.

(³) The latest data available are for May, 1921. The comparison is between this month, April, 1921, and May, 1920.

(⁴) Data collected quarterly the figures compare the June, 1921, quarter with March, 1921, and June, 1920.

(⁵) Figures represent percentage of active to total machines reported for August, 1921, July, 1921, and August, 1920. The figures in the last two columns show increase or decrease in these percentages.

(⁶) Data on knit goods represent percentage of normal production for June, 1921, May, 1921, and July, 1920, respectively. The last two columns show increase or decrease in these percentages.

¹ The data on leather products, given in Tables 7, 8, 45, and 46, are based on the monthly census of hides, skins and leather, as compiled by the Bureau of the Census. The figures embrace returns from between 4,500 and 5,000 establishments, including packers, tanners, dealers, importers, and manufacturers of shoes, gloves, and other leather goods. As given in the census reports, the returns on leather are shown in numbers of skins, sides, backs, butts, pounds, etc. For the present summary, these figures have been converted either to pounds or square feet on the basis of average weights and sizes.

¹ Except data on cement reported by the Geological Survey which is placed here for convenience.² Since the number of mills reporting each month varies rather widely, the average per mill is used as the only information immediately available. It is expected that next month figures more representative of the trend of the industry will be used.³ Association states that these figures represent reports from 25 mills during the period stated and constitute about 90 per cent of the total oak flooring industry.⁴ Figures prior to 1921 are taken from the yearly reports of the Geological Survey. The compilation of monthly reports begin with January of this year.⁵ Allowance made for seasonal variation as determined from the monthly averages for the years 1913 to 1920, inclusive.

* See diagram and footnote on opposite page.

¹ The Geological Survey resumed in June, 1921, the publication of monthly production data on by-product coke which was discontinued at the close of the war. The index figures given do not adequately represent the depression in this industry because a much larger proportion of coke is now being made in by-product ovens than formerly. It is estimated that the present maximum capacity of the by-products ovens is about 3,510,000 tons per month. On the basis of 100 equal to this maximum the July output was only 37, or 63 per cent below capacity. Assuming that 85 to 90 per cent of maximum capacity represents normal production the present rate is about 57 per cent of normal.

² Figures for earlier years adjusted to represent approximate net stocks to conform with data for current months.

³ Yearly figures for "Stocks at end of month" are averages of monthly figures.

* Figures prior to July, 1920, compiled by U. S. Grain Corporation; recent months from Russel's Commercial News. Data from 1914 to 1916 are averages for calendar years; remaining averages are for crop years ending June 30 of the year indicated.

¹ Aggregate stocks in United States and Canada east of the Rocky Mountains.

² Receipts and shipments at principal primary markets.

³ These figures represent world visible supply of American cotton. Cotton production figures on page 22, and exports and imports of unmanufactured cotton on page 7.

⁴ Figures include reports from seven ports; Boston, New York, Philadelphia, Savannah, New Orleans, Galveston, and San Francisco. Meltings are calculated from weekly reports, the odd days being prorated. Stocks represent the amount of raw sugar in the hands of refiners on the dates nearest the end of the month as reported for each port.

¹ Cold-storage holdings are distinctly seasonal. No allowance for this has been made in calculating these index numbers.² Includes bacon, ham, shoulders, lard, neutral lard, and canned, fresh, and pickled pork.⁴ Includes butter, cheese, and condensed and evaporated milk.³ Includes fresh, canned, pickled, and cured beef, and oleo oil and tallow.⁵ Includes cottonseed, corn, and linseed oils.⁶ The following oils are included: Chinese nut, cocoa butter, coconut, cottonseed, olive (inedible), olive (edible), palm, palm kernel, peanut, rapeseed, soya bean. Where certain of these were reported in gallons, they have been converted into pounds, allowing 7½ pounds per gallon.⁷ These figures are for fiscal years.

¹ The figures given in tables 21, 23, 59, and 60 represent the movement of certain more important vegetable and animal fats and oils, as reported quarterly by the Bureau of the Census. The data cover factory production, factory consumption, and factory and warehouse stocks. The stock figures refer to the amount on hand at the end of each period.

¹ Reported quarterly. Yearly figures are quarterly averages.² Represents the total of plug, twist, fine-cut, smoking tobacco, and snuff.³ The internal revenue report the number of large cigars, i. e., those weighing over 3 pounds per thousand and the number of small cigars weighing less than the above amount. Likewise they report the number of large and small cigarettes, the former weighing more than 3 pounds per thousand. Large cigars and small cigarettes represent more than 90 per cent of the total number manufactured in each case and are the only ones given in this table.

¹ These figures on earnings were obtained by dividing the total pay roll by the total number of employees as reported by the bureau. Inasmuch as the firms reporting in successive months were not always identical, some irregularities are introduced.

² Data not available prior to Jan., 1921; this month used as base for index numbers.

³ Includes total admitted, both immigrants and nonimmigrants.

⁴ Includes total departed, both emigrants and nonemigrants.

¹ These index numbers were prepared for purposes of international price comparison.² The Federal Reserve Board has not calculated the index numbers for the years 1914 to 1918.³ Farm prices of crops represent the relative average prices to farmers of the 10 leading crops as of the first of each month. The live-stock farm price index is computed as of the 15th of the month.

¹ Silk stocks and consumption shown on pp. 8 and 46.² Includes duck and other cloth, bleached, unbleached, and colored.³ Running bales; linters are included.⁴ 500-pound bales.⁵ Cotton production figures shown on p. 59, and world visible supply figures on p. 61.⁶ Figures listed for years 1913 through 1920 represent monthly averages of cotton consumed and on hand during crop years (beginning Aug. 1 of the preceding year and ending July 31 of the year to which the figure is credited). Figures are in running bales.⁷ Figures for 1918, 1919, 1920, and 1921 compiled from monthly reports on consumption by mills; preceding years compiled from production and net imports.⁸ These figures are for fiscal years; those following are for calendar years.

¹ Imports of raw silk shown on pages 7 and 45. Consumption figures represent withdrawals from warehouses.² The preliminary report from the Bureau of the Census shows that, in 1919, the total production of knit underwear in the United States amounted to 26,517,000 dozens, compared with 28,032,000 dozens in 1914. In terms of monthly averages, the 1919 output was at the rate of 2,209,000 which, by comparison, indicates that the normal production of the mills reporting above comprises about 40 per cent of the industry.

¹ The "total" number of looms and spindles reported in the earlier years does not represent the totals for the country but only such as furnished reports. Assuming that these were a fair sample of all machines, they furnish a basis to calculate the proportion of active machinery each year. The 1913 figures were collected by the National Association of Wool Manufacturers.

² These figures are for cotton crop years (beginning Aug. 1 and ending July 31). Figures opposite any one year represent months' average of active cotton spindles for the period beginning Aug. 1 of preceding year.

AUTOMOBILE SHIPMENTS.

In future issues of the "Survey" it is expected that current statistics on the automobile industry will be presented. The following tabulation from the National Automobile Chamber of Commerce gives some idea of the trend of this industry:

MONTH.	CARLOADS.		DRIVEAWAYS.		BOAT SHIPMENTS.	
	1920	1921	1920	1921	1920	1921
January.....	25,057	6,485	29,283	3,185	93
February.....	25,505	9,986	43,719	7,507	99
March.....	29,326	16,287	57,273	9,939	75
April.....	17,147	20,187	64,634	14,197	1,619
May.....	21,977	18,608	74,286	15,193	2,381
June.....	22,516	20,269	60,746	18,834	8,350	3,947
July.....	23,082	19,470	52,342	15,320	8,702	3,725

July shipments, averaging driveaways and boat shipments into carload equivalents, are given as 61 per cent of July, 1920, and 7 per cent less than June, 1921; last year the shipments in July were 4 per cent less than in June.

¹ The data on leather products, given in Tables 7, 8, 45, and 46, are based on the monthly census of hides, skins and leather, as compiled by the Bureau of the Census. The figures embrace returns from between 4,500 and 5,000 establishments, including packers, tanners, dealers, importers, and manufacturers of shoes, gloves, and other leather goods. As given in the census reports, the returns on leather are shown in numbers of skins, sides, backs, butts, pounds, etc. For the present summary, these figures have been converted either to pounds or square feet on the basis of average weights and sizes.

¹ Except data on cement reported by the Geological Survey which is placed here for convenience.² Since the number of mills reporting each month varies rather widely the average per mill is used by the association to express the trend in the industry.³ Association states that these figures represent reports from 25 mills during the period stated and constitute about 90 per cent of the total oak-flooring industry.⁴ Figures prior to 1921 are taken from the yearly reports of the Geological Survey. The compilation of monthly reports begin with January of this year.

1920 LUMBER PRODUCTION.

The United States Forest Service reports that 927 large mills, representing about one-half of the annual lumber production of the United States, cut 16,709,115,000 board feet in 1920, compared to 16,254,812,000 board feet in 1919. This is an increase of 3.4 per cent. The total cut by all mills in 1919, as reported by the Bureau of the Census, was 34,550,000,000 board feet. The Forest Service concludes that the 1920 cut was approximately the same as in 1919.

¹ Based on pig iron and rolled products, as used by the Iron Trade Review.

ZINC IN THE FIRST HALF OF 1921.

The Geological Survey reports that the smelter production of zinc from foreign and domestic ores for the first six months of 1921 totaled 102,525 tons, as compared with 258,108 tons in the same months of 1920 and 205,269 tons in the last half of 1920. The stock of zinc held at smelters and in warehouses June 30, 1921, was 94,747 tons, compared with 71,037 tons at the end of 1920 and 29,892 tons one year ago.

The apparent domestic consumption of zinc, taking into account imports and exports, amounted to 83,965 tons in the first half of 1921, compared with 175,268 tons in the same months of 1920 and 147,783 tons in the last half of that year.

The number of retorts in operation on June 30, 1921, was 36,000, compared with 56,000 at the end of 1920 and 75,000 on June 30, 1920.

¹ Yearly figures represent the monthly averages of total production of all companies as compiled annually by the American Iron and Steel Institute. The institute reports monthly production figures for 30 companies which, in 1920, produced 84.2 per cent of the total output of the country. In order to make the monthly figures comparable, they have been calculated to a 100 per cent production on the basis of the above percentage.

² The 14 products included in this table are: Pig iron, billets, slabs, sheet bars, wire rods, steel bars, plates, structural shapes, black galvanized and blue annealed sheets, tin plate, wire nails, and black pipe.

¹ Figures for earlier years adjusted to represent approximate net stocks to conform with data for current months.² Yearly figures for "stocks at end of month" are averages of monthly figures.

CONSUMPTION OF COAL IN THE MANUFACTURE OF COKE.

The Geological Survey, Department of the Interior, estimates the monthly consumption of coal for the manufacture of coke as shown in the opposite statement.

The Geological Survey says: "The depression in the coke industry throws a flood of light on the absence of demand for coal. The coke industry, which normally takes 15 per cent of the coal supply of the country, is now consuming coal at the rate of less than one-third of its requirements during the periods of greatest business activity. In 1918, for example, the industry was consuming every month 5,000,000 tons of raw coal more than at present."

YEAR AND MONTH.	CONSUMED IN BY-PRODUCT OVENS.	CONSUMED IN BEEHIVE OVENS.	TOTAL COAL CONSUMED.

* Figures prior to July, 1920, compiled by U. S. Grain Corporation; recent months from Russel's Commercial News. Data from 1914 to 1916 are averages for calendar years; remaining averages are for crop years ending June 30 of the year indicated.

¹ Aggregate stocks in United States and Canada east of the Rocky Mountains.

² Receipts and shipments at principal primary markets.

³ These figures represent world visible supply of American cotton. Cotton production figures on page 59, and exports and imports of manufactured cotton on page 45.

⁴ Figures include reports from seven ports: Boston, New York, Philadelphia, Savannah, New Orleans, Galveston, and San Francisco. Meltings are calculated from weekly reports, the odd days being prorated. Stocks represent the amount of raw sugar in the hands of refiners on the dates nearest the end of the month as reported for each port.

¹ The figures given in tables 21, 23, 59, and 60 represent the movement of certain more important vegetable and animal fats and oils, as reported quarterly by the Bureau of the Census, Department of Commerce. The data cover factory production, factory consumption, and factory and warehouse stocks. The stock figures refer to the amount on hand at the end of each period.

¹ Reported quarterly. Yearly figures are quarterly averages.² Represents the total of plug, twist, fine-cut, smoking tobacco, and snuff.³ The Internal Revenue reports the number of large cigars, i. e., those weighing over three pounds per thousand, and the number of small cigars weighing less than the above amount. Likewise they report the number of large and small cigarettes, the former weighing more than three pounds per thousand. Large cigars and small cigarettes represent more than 90 per cent of the total number manufactured in each case and are the only ones given in this table.

¹ At end of month, exclusive of Canadian roads. The American Railway Association reports the number of freight cars which are idle (surplus) and also the number of requests for cars which can not be filled (shortage). The difference between these two figures represents the net freight car situation for the country as a whole. The car shortages can not ordinarily be filled from the idle cars because of the uneven geographical distribution of the latter.

² Includes other classes than group listed.

³ Total includes coke shipments in addition to commodity groups listed.

RAILWAY REVENUES AND EXPENSES.¹

¹ These figures on earnings were obtained by dividing the total pay roll by the total number of employees as reported by the bureau. Inasmuch as the firms reporting in successive months were not always identical, some irregularities are introduced.² Data not available prior to Jan., 1921; this month used as base for index numbers.³ Includes total admitted, both immigrants and nonimmigrants.⁴ Includes total departed, both emigrants and nonemigrants.
