

MONTHLY SUPPLEMENT TO COMMERCE REPORTS

UNITED STATES
DEPARTMENT OF COMMERCE
WASHINGTON

SURVEY OF
CURRENT BUSINESS

AS OF
DECEMBER 1, 1921

No. 5

COMPILED BY
BUREAU OF THE CENSUS
BUREAU OF FOREIGN AND DOMESTIC COMMERCE
BUREAU OF STANDARDS

Subscription price of the SURVEY OF CURRENT BUSINESS is \$1 a year; single copies, 10 cents. Foreign subscriptions, \$1.50; single copies, including postage, 20 cents. Subscription price of COMMERCE REPORTS is \$3 a year; with the Survey, \$4 a year. Make remittances only to Superintendent of Documents, Washington, D. C., by postal money order, express order, or New York draft. Currency at sender's risk. Postage stamps or foreign money not accepted.

WASHINGTON : GOVERNMENT PRINTING OFFICE : 1922

INTRODUCTION.

The present number of the "Survey" contains (1) a summary text pointing out the principal changes during the month; (2) a table, entitled TREND OF BUSINESS MOVEMENTS, giving the principal data, together with numerical and percentage comparisons; (3) detailed tables containing new data not shown in preceding issues; and (4) a list of the organizations from which the statistics are taken.

A few suggestions have been received to the effect that the period covered by the "Survey" should be the month immediately preceding the date of issue. In answer to this, it must be remembered that the "Survey of Current Business" is first of all a statistical record of current business movements. To receive reports and tabulate them requires time even under the best of conditions. Very few figures are available before the 20th of the next month. Copy for the "Survey" goes to the printer about the 25th of the month. This gives an opportunity to enter in the proof figures which are received up to the last days of the month. Thus the figures received up to the end of December are those covering the month of November. This is as close to the time of publication as it is possible to secure actual data for the majority of items.

In the main the text has been confined to a statement of certain facts brought out by the actual data. In certain industries the trends during December have been touched upon, based upon telegraphic reports to the Department of Commerce, although it is impossible to give actual figures in support of such comments.

It should also be pointed out again that in receiving and publishing figures from trade associations and technical journals the Department of Commerce assumes no responsibility for their correctness. The figures are furnished to us by the associations in good faith, and we believe they are representative of the industry to the extent indicated. The Department does not attempt to check the correctness of such data.

The detailed figures for earlier years and for the months of 1920 and 1921 will be found in the two preceding numbers (numbers 3 and 4). The issue following the present one will be a complete quarterly number, giving detailed tables for all items.

SUMMARY OF THE MONTH'S DEVELOPMENTS.

General slowing down of industry after the spurt in October was the outstanding characteristic of the November business figures. This is partially accounted for as a seasonal reaction in many lines, such as textiles and automobiles, and in some lines, such as coal and transportation, by the overstimulation of October business in the face of the threatened railroad strike.

The general result of November conditions appeared to be stabilization. This tendency was felt especially in textiles, metals, building construction and its related industries, and retail sales. It was also manifested in price movements, employment conditions, and in railroad transportation.

PRODUCTION.

Figures on November production thus far received indicate greater activity than in October in metals, clothing, and glass. On the other hand, production for November slackened among the foodstuffs and tobacco, while an irregular condition existed in the construction industries, fuels, and paper. The chief relative changes in November were decreases in wheat flour, bituminous coal, and cement, and increases in zinc, California redwood, and glass bottles.

COMPARISON OF PRESENT PRODUCTION WITH PREWAR.

	RELATIVE PRODUCTION (1913=100).				
	Maximum in 1920.	Minimum in 1921.	Nov., 1920.	Oct., 1921.	Nov., 1921.

Cigarettes.....	349	293	272	377	326
Manufactured tobacco.....	114	73	54	101	83

¹ As represented by tax-paid withdrawals. ² 1920 monthly average.

Out of 20 commodities whose production can be compared with the prewar average, the latest figures show that the tobacco, building materials, clothing, and foodstuffs groups were all producing more than the 1913 average, except in a few cases, which are only slightly below. The metals were all considerably below the prewar basis in spite of good increases during November, while the fuels are divided, with petro-

leum and by-product coke far above the prewar average, the coals slightly below and beehive coke far below. Production of cigarettes and oak flooring was more than twice the prewar average, while oleomargarine, wool, by-product coke, and petroleum showed gains of over 50 per cent above the 1913 level. Copper and beehive coke were produced at less than half their prewar rate; in fact, at less than 20 per cent.

Calculating the index numbers on a new basis, relative to 1919, the November figures show that 14 commodities out of 34 were above the 1919 production.

¹ The 1913 relatives have here been calculated on a 1919 base, as many more commodities can be compared on this basis.

² As represented by tax-paid withdrawals.

³ Latest month available, June.

DIAGRAM 2.—COURSE OF PRODUCTION SINCE 1199.

(Relative production of 1919=100.)

STOCKS.

Stocks of commodities at the end of November were, in general, slightly larger than in 1919. The largest relative stocks were those of corn and coal, both above five times as large, due somewhat to seasonal variation. Increases of from 50 to 100 per cent occurred in wheat and cottonseed oil, both largely seasonal increases, and in zinc, cement, face brick, and petroleum. Outside of the seasonal decrease in meats, all the declines from 1919 were very small.

During November seasonal declines took place in the cold-storage commodities, except meats, and in corn, but other food stocks rose. Other commodities moved irregularly. Compared with November, 1920, the stocks of 12 commodities (beef, mutton, wheat, corn, eggs, coffee, cotton, petroleum, zinc, silica brick, face brick, and paper) were higher, while declines occurred in 9 commodities (pork, sugar, cottonseed oil, butter, cheese, apples, tin, yellow pine, and oak flooring).

Large variations occur in the few comparisons which can be made with the 1913 average. Wheat, corn, cotton, and oak flooring stocks were more than double the prewar average; zinc and petroleum stocks were 65 and 82 per cent above, respectively; and declines of 20 to 30 per cent occurred in coffee, tin, and cement.

PRICES.

The retail price of food declined slightly in November and was 52 per cent above the 1913 average. The National Industrial Conference Board's compilation of the cost of living showed no change in November, a decline in clothing marking the only difference in any group. Farm prices of live stock declined over 6 per cent in November. The official index numbers of wholesale prices each declined 1 point, while Dun's index number rose 1 point and Bradstreet's remained the same. Except for the continued rise in Germany, European prices manifested little change during the month.

In the list of individual wholesale prices, as shown by the table and diagram on pages 8 and 9, prices of farm products to the producer declined in November in 5 cases, while 3 remained unchanged, and lambs increased. Out of the 13 farm products, the market price of 4 (wool, corn, oats, and sheep) increased, 2 remained unchanged, and 7 declined. Food prices again declined. Of 12 items of clothing, 3 (cotton sheeting, raw silk, and packers' hides) increased, 4 remained unchanged, and 5 declined. In the fuels group, petroleum again made a tremendous advance, with the November price double the September average, while coke declined and the coals remained the same. Little change occurred in iron, steel, and lead,

with foundry iron slightly lower, but other metals continued to advance in price. Among the building materials, a considerable increase occurred in lumber, a decline in steel beams, and little change in brick and cement. Rubber continued its advance. The main changes during November from the October relation to the 1913 average were the increase of the producers'

price of lamb to the 1913 average, the market price of wool to above that average, while the prices of silk and petroleum rose to about double the 1913 average. Of the 57 prices listed, 14 are below the 1913 average, 3 of which are metals, and the others, except rubber and hides, are farm products. Anthracite coal is still at the maximum price.

DIAGRAM 4.—COMPARISON OF WHOLESALE PRICES AT PRESENT WITH 1920 AND PREWAR.

(Relative prices of 1913=100.)

WHOLESALE PRICE COMPARISONS.

MAXIMUM PRICE COMPARED TO PRICE IN RECENT MONTHS.

NOTE.—Prices to the producer on farm products are from U. S. Department of Agriculture, Bureau of Markets and Crop Estimates. All other prices are from U. S. Department of Labor, Bureau of Labor Statistics. As far as possible all quotations represent prices to the producer or at the mill. See diagram on opposite page.

COMMODITIES.	Date and maximum relative price.		Sep-tember, 1921, relative price.	Octo-ber, 1921, relative price.	Novem-ber, 1921, relative price.	Per cent in-crease (+) or de-crease (—) in Novem-ber over October.

Rubber, Para island, fine (New York).....	Jan., 1913	124	22	26	27	+ 3.8

TEXTILES.

The cotton crop turned out to be considerably larger than earlier estimates, but 36 per cent less than the prewar average. Recent ginning reports indicate that a very small proportion of the crop still remains to be ginned, as is graphically shown in the accompanying diagram. The world visible supply of cotton at the end of November was almost the same as a month previous, but stocks at American mills and warehouses continued to increase and were considerably larger, especially at the mills, than a year ago. Imports of raw cotton during November were the heaviest since March, 1920, but exports slumped over 25 per cent from the high mark made in October.

Increased activity in cotton textiles during November was indicated by a slight increase in the number of active spindles and by an increase of about 6 per cent in the consumption of cotton, to the highest monthly figure since June, 1920. On the other hand, exports of cotton cloth declined somewhat and less business was noted in November in finishing plants. Price declines of 5 to 9 per cent occurred during November in raw cotton and its products, except in sheetings, where a slight increase was shown.

DIAGRAM 5.—EXPORTS AND CONSUMPTION OF COTTON.

Woolen mills were generally less active in November than in October, this decline in most cases amounting to about 5 per cent. Carpet and rug and narrow looms were more active than in October. Imports of wool increased slightly, but were less than in November, 1920. A considerable increase occurred during November in the market price of wool, though the producer received slightly less for his wool on December 1 than a month before. Dress goods declined somewhat in price, but worsted yarns and men's suitings remained the same.

DIAGRAM 6.—COTTON GINNED TO SPECIFIED DATES.

Imports of raw silk increased slightly during November and consumption declined, while stocks were larger. The price of silk showed an increase of over 18 per cent during the month.

Late reports received by the Department of Commerce indicate that the textile business during December has slackened since November. This is only partly due to "between season" dullness. General world economic conditions and the lack of purchasing power among the farmers of the Middle West are stated to be the chief causes. The tone of the textile markets has been more depressed.

METALS.

Iron ore movement by water from Lake Superior was very small during November, due to the approaching close of navigation. The production of pig iron and of steel ingots continued to advance during November, though at a diminished rate. Unfilled orders of the United States Steel Corporation again decreased slightly. Imports and exports of iron and steel showed little change. A few slight declines occurred in iron and steel prices, such as foundry iron and steel beams.

Shipments of bar iron increased somewhat in November, and sales of structural steel were slightly better than in October and twice as large as a year ago, again making a record for the past 18 months. New orders for bolts, nuts, and rivets declined sharply in November, but unfilled orders showed little change. Shipments of bolts declined, but nuts and rivets showed slightly larger shipments.

Production of copper remained at a low point, but exports for November showed a good increase and attained the highest mark since May, 1920. The price of copper increased slightly.

Zinc production took a considerable leap in November, increasing 45 per cent and showing the largest production since the beginning of the year. Stocks were reduced slightly and the movement at St. Louis was somewhat larger than in October. A fractional price increase was noted in November.

Imports of tin increased in November to the largest figure noted this year, but are still considerably below November, 1920. On the other hand, stocks were reduced 35 per cent during the month and were the smallest recorded in two years. These conditions affected the price of tin, which advanced almost 5 per cent during the month.

The movement of lead at St. Louis declined considerably during November. Prices remained unchanged.

Late reports received by the Department of Commerce indicate a slight slowing down in iron and steel production in December, with steel production at about 45 per cent of capacity and blast-furnace operations in the Pittsburgh district at about 50 per cent. Business has been active in rails, pipe, tin plate, and fabricated steel, with wire dull and operations in the wire mills at about 50 per cent of capacity. Iron and steel prices are holding steady except for a reduction in steel pipe.

DIAGRAM 7.—PRODUCTION OF PIG IRON AND STEEL INGOTS AND U. S. STEEL CORPORATION'S UNFILLED ORDERS.

FUELS.

Declines occurred in the production of both bituminous and anthracite coal in November, largely a reaction from the October threat of a railroad tie-up. Small increases occurred in the production of coke in November, but this industry still operated on a greatly reduced scale. Shipments of anthracite declined. Exports of anthracite and coke increased

slightly, but bituminous exports declined to less than a third of the previous November exports. Stocks of anthracite and bituminous reported on November 1, were quite large. Electric power production continued to increase in November.

DIAGRAM 8.—PRODUCTION OF BITUMINOUS AND ANTHRACITE COAL.

Slight increases occurred in November in the production, stocks, consumption, and imports of petroleum, with imports showing the greatest relative increase. Shipments from Mexico declined. The price of crude petroleum again made a phenomenal advance of 37 per cent during the month. Exports of gasoline declined somewhat. October production and consumption of gasoline increased, while stocks declined.

DIAGRAM 9.—PRODUCTION, CONSUMPTION, IMPORTS, AND STOCKS OF PETROLEUM.

PAPER.

A slight increase occurred in the production of news-print paper in November, but the total of other classes declined and stocks increased slightly. Exports of both classes increased materially after two months of heavy declines. Imports and production of wood pulp increased, while stocks remained stationary. The price of domestic paper advanced, especially the spot price, but the Canadian price was lowered. Printing activity increased 5 per cent in October.

AUTOMOBILES.

The production of both passenger cars and trucks slumped over 21 per cent in November, both being at the low mark recorded since these statistics began to be collected in July. Revised figures have now become available for past months, which are given in the following table:

MONTH.	PRODUCTION OF—	
	Passenger cars.	Trucks.
July, 1921.....	165,575	10,761
August, 1921.....	167,705	13,076
September, 1921.....	144,669	13,645
October, 1921.....	134,734	12,810
November, 1921.....	106,042	10,009

Shipments of automobiles also declined in about the same ratio. During the last four months shipments have manifested a steady tendency to decline, partly due to seasonal causes. Reports of motor accessory dealers indicated a decline of almost 5 per cent in purchases and of about 6 per cent in outstanding notes in October, while accounts past due increased $3\frac{1}{2}$ per cent.

Latest reports to the Department of Commerce manifest a seasonal slackening in the automobile trade awaiting the January automobile shows, but a better tone than a year ago. Sales of parts to jobbers have increased.

GLASS.

The production of glass bottles again increased in November, but, in spite of large increases during October and November, was less than the 1919 average by 14 per cent and also considerably smaller than a year ago. Orders, production, and shipments of illuminating glassware showed a further good increase in November and were 37, 62, and 59 per cent higher, respectively, than six months before.

BUILDING AND CONSTRUCTION.

Index numbers of building costs showed little change in November and are still over 50 per cent greater than the prewar level. Total volume of building contracts awarded in November declined about 7 per cent, due largely to the decline in business buildings. Industrial and residential building contracts continued to increase, but the groups of public and

semipublic buildings, except educational, continued the marked decline noted in October. Compared with November, 1920, the total building contracts were twice as large, with increases in every group except industrial buildings, while in the residential and educational groups, the contracts awarded were more than three times as great. The November increase brought the cumulative total for 11 months to within 9 per cent of the 1920 total.

DIAGRAM 10.—VOLUME OF BUILDING CONTRACTS AWARDED, BY CLASSES.

DIAGRAM 11.—RELATIVE PRODUCTION OF CEMENT AND LUMBER AND SALES OF STRUCTURAL STEEL. (Relative to 1919=100.)

Lumber production varied considerably during November. Southern pine, California redwood, and oak flooring showed increased production, while for Douglas fir and western pine declines were noted. Shipments and orders followed the trend of production in each class, except for oak flooring, where both declined in the face of slightly greater production. Exports of lumber in November were slightly less than in October, while prices were about 10 per cent higher.

Production of fire-clay brick showed a slight improvement, but silica and face brick production receded during November. Shipments of silica brick increased and stocks declined, but the other classes showed decreased shipments and larger stocks. Prices maintained approximately the same level.

Cement production and shipments came down from the high October records, in a seasonal movement. Stocks increased and prices remained stationary.

HIDES AND LEATHER.

Imports of hides declined slightly in November, but exceeded those in November, 1920, though the cumulative was still far below 1920. Stocks of hides were in general larger than a year ago. The price of packers' green salted hides increased, but calfskins declined.

November production of leather thus far reported shows slight increases. October census reports showed increased leather production, and slightly increased stocks. November exports of leather showed a good increase, but the cumulative total remained far behind 1920. A slight weakening occurred in leather prices.

Exports of boots and shoes declined still further, but no price changes occurred.

BOOT AND SHOE PRODUCTION.

The Bureau of the Census, United States Department of Commerce, has undertaken to compile monthly figures on the production of boots and shoes in the United States. The first month covered is November, 1921. Reports were received from 1,022 establishments, of which 81 were not in operation during this month.

BOOT AND SHOE PRODUCTION.

Month of November, 1921.

KIND.	Number of pairs.
Men's (high and low cut).....	6,780,253
Boys' and youths' (high and low cut).....	1,869,934
Women's (high and low cut).....	6,875,146
Misses' and children's (high and low cut).....	3,150,263
Infants' (high and low cut).....	1,761,281
Athletic and sporting (leather).....	607,181
All canvas and other textile fabrics.....	210,001
All other kinds ¹	2,338,551
Grand total.....	23,592,610

¹ Includes slippers for house and evening wear at home, barefoot sandals and play shoes, moccasins and all others not specified.

The total production of all kinds of boots and shoes for November, 1921, as shown in the table above,

was 23,592,610 pairs. Some idea of the completeness of this figure may be obtained by comparison with the Census of Manufactures for 1919. In that year 1,450 establishments reported a total annual production of 274,236,800 pairs, equivalent to an average monthly production of 22,853,067 pairs. The November figure exceeds the average monthly production in 1919 by more than 700,000 pairs.

CHEMICALS.

A considerable increase in exports of fertilizer featured the November foreign trade in chemicals. Imports and exports of all classes of chemicals, however, for the 11 months of the year were considerably less than in 1920. Prices of crude drugs advanced slightly, but essential oils and drugs and pharmaceuticals declined.

CEREALS.

Wheat receipts, shipments, and exports declined in November in response to a seasonal movement and the production of wheat flour also declined. The visible supply continued to increase and was almost 50 per cent larger than a year ago. Declines occurred in the prices of wheat and flour.

Corn movement in the terminal markets also declined during November and the visible supply started to decline from the peak reached at the end of October. The whole corn movement, however, was considerably larger than in November, 1920. Prices increased slightly during November.

Exports of oats and rye showed drops of about 60 per cent each in November, but barley exports increased. Prices of oats and barley increased slightly and a considerable decline occurred in the price of rye.

Car loadings of all grains declined 25 per cent in November and total exports of grains were over 30 per cent less than in October.

CROP PRODUCTION.

The Crop Reporting Board of the Bureau of Markets and Crop Estimates, U. S. Department of Agriculture, made public its final revised estimates of acreage, production, and value of important farm crops on December 28, 1921. The figures for the three years 1919, 1920, and 1921 underwent important revisions as a result of the Census reports for the year 1919. The Crop Reporting Board bases its estimate each year on reports of percentage changes received from its correspondents and agents. The numerical basis for the acreage and production figures are those obtained from the decennial census reports. The board applies the percentage changes as reported from each district and State, and under ordinary conditions reaches an excellent approximation to the true values. After each decennial census it is necessary to make certain revision and to establish a base for the succeeding ten years.

The revised figures on the production for certain important crops for the past three years are shown in the accompanying table.

CROP PRODUCTION.
Revised December 28, 1921.

CROP.	Unit.	1921	1920	1919

Total value, all crops.....	Thous. of dolls..	5,675,877	9,075,388	13,689,597

On December 29 the Department of Agriculture estimated the area sown to winter wheat in the fall of 1921 as 44,293,000 acres, a decline of 1.2 per cent as compared with the revised estimate of 44,847,000 acres sown a year ago. The condition of the crop on December 1 was placed at 76 as against 87.9 a year ago and a ten-year average of 89. The rye area was placed at 5,184,000 acres, an increase of 22.6 per cent over the 4,228,000 acres sown a year ago, while the condition of the rye crop on December 1 was placed at 92.2 as against 90.5 a year ago and a ten-year average of 90.9.

MEATS AND LIVE STOCK.

Receipts, shipments, and slaughter of cattle declined perceptibly from both October, 1921, and November, 1920. The 1921 totals were below the previous year in every case. Exports of beef products followed the same trend. Inspected slaughter production and consumption of beef for October were but slightly less than a year ago. Cold-storage holdings continued their seasonal increase, but were 20 per cent below November, 1920. Cattle prices declined.

Hog movement and slaughter generally increased in November, but were below the level of November, 1920, and the total movement for 11 months was also slightly less than in 1920. Exports of pork products declined slightly. Inspected slaughter production and consumption for October exceeded October, 1920, and the cumulative total also exceeded last year's. Cold-storage holdings increased slightly and were almost 50 per cent greater than in 1920. Prices of hogs declined 14 per cent from October.

DIAGRAM 12.—INSPECTED SLAUGHTER, CONSUMPTION, AND COLD-STORAGE HOLDINGS OF BEEF PRODUCTS.

DIAGRAM 13.—INSPECTED SLAUGHTER, CONSUMPTION, EXPORTS, AND COLD-STORAGE HOLDINGS OF PORK PRODUCTS.

Sheep receipts, shipments, and slaughter declined from both October, 1921, and November, 1920, and, though storage holdings increased, they were much less than the huge stocks held a year ago. Prices were irregular, ewes declining and lambs advancing.

The figures just published by the Bureau of the Census regarding the total slaughter in the United States in 1919 are interesting as affording the first comparison since 1909 of the proportion which Federally inspected slaughter bears to the total in the country. The appended table shows an enormous increase in the proportion of cattle and calves slaughtered under Federal inspection, and good-sized increases in hogs and sheep.

**TOTAL ANIMALS SLAUGHTERED IN THE UNITED STATES, 1909
AND 1919.**

	CATTLE AND CALVES.		HOGS.		SHEEP.	
	1919	1909	1919	1909	1919	1909

Under Federal inspection.....	14,059	9,903	41,812	31,395	12,691	11,350
Per cent inspected.....	82.1	49.2	68.2	59.0	90.9	77.8

OTHER FOODSTUFFS.

Exports of condensed milk underwent a marked decline in November, but were larger than in November, 1920. Receipts and storage holdings of butter, cheese, and eggs all declined and, except in the case of eggs, were also lower than in November, 1920. The price of butter advanced, but cheese declined.

There was little change in exports of vegetable oils in November, but imports almost doubled. November consumption of oleomargarine was about half as large as a year ago. Stocks of cottonseed and cottonseed oil increased, but production and prices of oil declined slightly.

DIAGRAM 14.—IMPORTS, MELTINGS, AND STOCKS OF RAW SUGAR.

In spite of greatly increased imports of raw sugar, meltings in November underwent a slight decline. Stocks increased and almost equalled those held a year ago. Prices declined very slightly.

A good increase in coffee imports brought the total for 11 months almost up to the 1920 cumulative. Stocks in the United States and in the world increased, but our own stocks remained less than in November, 1920. Receipts of coffee in Brazil declined slightly, but clearances increased. Imports of tea into the United States remained constant.

TOBACCO.

Production of all classes of tobacco products decreased in November. Exports declined about one-third in November, but remained above last year's. No change occurred in prices.

DIAGRAM 15.—RELATIVE PRODUCTION OF CIGARS, CIGARETTES, AND MANUFACTURED TOBACCO.

(Relative production 1913=100.) •

WATER TRANSPORTATION.

Panama Canal traffic in October was considerably larger than in September, but American vessels did not participate in the increase. Traffic through the Sault Ste. Marie Canal in November was only half of the October traffic on account of the approaching close of navigation.

Entries into American ports in November were slightly less than in October, and a considerable decline took place in clearances. In both cases foreign ships were responsible for the decline, as American tonnage increased in each case. Although fewer vessels were under construction in November, a greater number were completed than in October.

DIAGRAM 16.—ENTRANCES AND CLEARANCES OF VESSELS IN U. S. FOREIGN TRADE, AND SHIPS UNDER CONSTRUCTION.

RAIL TRANSPORTATION.

Statistics for November show that the comparatively small surplus and large shortage of freight cars in October was due largely to the threatened railroad strike, for the November surplus rose to the highest point since July and the shortage almost disappeared. Car loadings declined considerably from the large October movement, but good progress was made in the reduction of bad-order cars.

October railroad operating revenue showed a good increase in spite of a decline in passenger revenue. Expenses also increased, but net operating income was the largest since the railroads were turned back to their owners. Early November statements indicate that November operation was not so favorable, however.

LABOR.

A very slight increase was reported in November in the number of men employed in industry throughout the United States, continuing the succession of increases noted since August. Small decreases occurred in both number employed and total pay roll in New York and Wisconsin. A decline was also reported from Wisconsin in the average weekly earnings for November and postal savings continued to recede. Immigration and emigration were considerably curtailed in October, and both were less than half of the 1913 average.

A survey of unemployment conditions in New York City by the Committee on Unemployment Statistics shows a reduction in the number unemployed in the city from 343,000 on October 15 to 331,000 on December 15. The greatest gain in employment was in the retail trade, largely on account of seasonal conditions.

DIAGRAM 17.—SHORTAGE, SURPLUS, BAD-ORDER, AND TOTAL LOADINGS OF FREIGHT CARS.

DIAGRAM 18.—IMMIGRATION, EMIGRATION, AND IMMIGRATION QUOTA.

DISTRIBUTION MOVEMENT.

Slight declines took place in the sales of mail-order houses and chain stores in November, and also in magazine advertising. Newspaper advertising, on the other hand, increased substantially and postal receipts were slightly greater than in October. Compared with a year ago, slight increases occurred in postal receipts and chain-store sales, but substantial declines took place in the sales of mail-order houses and both magazine and newspaper advertising.

DIAGRAM 19.—SALES OF MAIL-ORDER HOUSES AND CHAIN STORES, AND POSTAL RECEIPTS.

PUBLIC FINANCE.

In spite of a further reduction of outstanding Liberty loan issues, the total interest-bearing debt of the United States increased in November. Receipts of the Government declined, customs receipts fell off, and disbursements increased. The money in circulation continued to decline.

BANKING AND FINANCE.

Bank clearings and debits to individual accounts showed little change in November for New York City, but declined perceptibly in the rest of the country. Federal Reserve note circulation and discounts continued to decline, and reserves and deposits again increased. A slight increase occurred in total loans, rediscounts, and investments of Federal Reserve member banks, but demand deposits increased further. Interest rates on call loans and commercial paper continued their drop, both classes approaching close to a 5 per cent rate.

Business failures in November again increased by 16 per cent over the previous month, and were the largest in any month for several years, but the total liabilities were about the same as in October. Dividend and interest payments were almost 30 per cent greater than a year ago. New security issues by both corporations and municipalities were very much greater

than in November, 1920. New incorporations again declined, reaching the lowest mark in two years, except for last July.

Prices of stocks and bonds advanced from 2 to 4 points in November, and the yield on municipal bonds fell from 5 to 4½ per cent. Sales of both stocks and bonds also increased perceptibly, chiefly the corporation and foreign Government bonds.

Imports of gold increased and exports declined to the lowest point in two years, except for April, 1921, making a net import balance of over \$50,000,000 for the month. Gold production in the United States in 1921, reported by the Treasury Department, was 2,375,479 ounces, valued at \$49,105,500, a decrease of \$2,081,400 from 1920, and less than half of the 1915 record. Imports of silver declined, but still exceeded exports by about \$1,000,000. The price of silver declined 4 per cent during the month. The 1921 production of silver was 50,364,389 ounces, a decline of 4,997,184 ounces from 1920 and of about one-third from the 1915 record.

FOREIGN EXCHANGE.

The general movement of foreign exchange rates in November was upward, led by British and Swiss exchange. At the end of November Swiss francs were only 3 per cent below par and in December this exchange reached par. German marks continued their steady decline.

FOREIGN TRADE.

A decided decline in exports and an increase in imports brought the net export balance for November to almost the lowest mark of the year. Imports increased from all continents, the largest gain being from South America. Exports to Asia and Africa increased, but declined to the other continents. All the principal European countries took less from us in November than in October.

DIAGRAM 20.—IMPORTS AND EXPORTS OF THE UNITED STATES.

TRADE AND INDUSTRY OF FOREIGN COUNTRIES.

Export trade of the United Kingdom manifested a very slight increase in November, while imports advanced over 5 per cent. The increase in imports was wholly due to the large gain in raw material imports, while exports showed little change in any one group. Slight increases in quantities exported occurred in cotton goods, coal, and iron and steel, while woolens declined slightly. Production of both pig iron and steel ingots in Great Britain increased considerably in November, but was far behind November, 1920.

Total production for the 11 months was only about one-third of the 1920 production for this period in both cases, this being principally due to the great miners' strike last spring.

French trade for October showed no change in imports and an increase of 1 per cent in exports. An increase in imports of foodstuffs was balanced by decreases in raw materials and manufactures. The export increases occurred in foodstuffs and raw materials, while manufactured exports declined.

TREND OF BUSINESS MOVEMENTS.

The following table contains the complete monthly figures designed to show the trend in important industrial and commercial movements. The numerical data for the latest months are given to connect with the detailed tables in the October (or in some cases November) issue of the SURVEY. In many lines the figures do not lend themselves readily to statistical uniformity, due to lateness of their publication or publication at other than monthly intervals; therefore the following explanations of the various headings are offered to make clear such distinctions and in general to facilitate the use of the table:

November, 1921.—In this column are given the figures covering the month of November, or, as in the case of stocks, etc., the situation on November 30, or December 1. In a few cases (usually where results are reported quarterly only) the figures are for the quarter ending November 1 or the condition on that date. Where this column is left blank, no figures for November were available at the time of going to press (December 31).

October, 1921.—This column gives the October figures corresponding to those for November shown in the "November, 1921" column—in other words, cover the previous month, and in some cases, where indicated by a footnote, refer to the previous quarter; that is, ending July 1, 1921.

Corresponding month 1920, October or November.—The figures in this column present the situation exactly a year previous to those in the "November, 1921" column (that is, generally, November, 1920), but where no figures were available for November 1921, the October, 1920, figures have been inserted in this column for comparison with the October, 1921, figures. In the case of quarterly figures, this column shows the corresponding quarter of 1920.

Cumulative total through latest month.—These columns set forth, for those items that can properly be cumulated, the cumulative total for the first 11 months of the years 1921 and 1920, respectively, except where November, 1921, figures are lacking. Then these columns contain the cumulative figures for 10 months only.

Base year or period.—For purposes of comparison with a previous normal period, all items, where possible, are related to such a period by percentage comparisons. The period taken for each item, called the base, is the monthly average of the year or period stated in this column. Wherever possible the year 1913 is taken as a base, and if no prewar figures are available, 1919 is usually taken to avoid using a war year as a basis. In some cases it will be noted that figures were not available prior to 1920 or even 1921, and that sometimes a month, or an average of a few months, has to be used rather than a year's average.

Latest month from base.—Percentage changes in this column show the relation between the November, 1921, figures or the quarter ended then (or, if that column is blank, by the October, 1921, figures) and the base year or period. By adding 100 per cent to the figures in this column, the index number for the latest month, carrying on the series of index numbers given in the October number of the SURVEY, can be obtained. For example, for wool consumption, the index number for November is $100 + 63 = 163$, while for November wool imports the index number is $100 - 13 = 87$.

Latest month from corresponding month, 1920.—This shows the percentage increase or decrease of November, 1921, over November, 1920, or (if no figures are given in the November, 1921, column) of October, 1921, over October, 1920. In the case of quarterly items, these figures show the increase or decrease of the latest (usually the third) quarter of 1921 over the corresponding quarter of 1920. In short, it is the comparison between the second and third columns of the table.

Cumulative 1921 from same period 1920.—This column shows the percentage change of the cumulative 1921 figures from the cumulative 1920 figures—cumulated through November where the numerical cumulative data (in the fourth and fifth columns of this table) run through November, otherwise through October.

August from July, etc.—The four last columns of this table show the percentage change of each month from the previous month, except where the figures are quarterly. Then the figures in the column "November over October" represent the change of the third quarter from the second quarter of the year, and in the column "August from July" is the change of the second quarter from the first quarter. The columns "September from August" and "October from September" are left blank in such cases.

Items marked with an asterisk (*) are those for which detailed figures of preceding months and years will be found in detail in the tables at the end of this issue. For those marked with a dagger (†) the detailed figures will be found in the November number (No. 4). All other items are shown in detail in the October number.

	NUMERICAL DATA.					PERCENTAGE INCREASE (+) OR DECREASE (-).

¹ Except price of petroleum from U. S. Department of Labor, Bureau of Labor Statistics. The sources of other data are: Receipts and shipments of lead and zinc, Merchants' Exchange of St. Louis; Silica brick, Refractories Manufacturers Association; California white pine from California White and Sugar Pine Association; Michigan hardwood lumber from Michigan Hardwood Manufacturing Association; Ohio foundry iron from Ohio Foundrymen's Association; Chemical price index numbers from Oil, Paint and Drug Reporter.

² Converted from data in pigs of 50 pounds each.

³ Converted from data in slabs of 80 pounds each.

⁴ Figures for 1921 are from reports of 15 identical mills with a monthly capacity of 27,305,500 bricks, which is estimated by the association to represent from 78 to 80 per cent of the total silica brick producing capacity of the United States. Figures for earlier years are computed to this capacity from reports of 12 identical mills with a monthly capacity of 25,448,833 bricks.

⁵ Actual figures reported by about 20 mills each month; the number varies from 13 to 26.

⁶ Actual figures reported by about 40 mills each month; the number varies from 36 to 58, but 48 is the highest number reporting in any month since the beginning of 1919.

⁷ Represents percentage of actual to normal melt of grey iron foundries in Ohio. Prior to September, reports represent the month beginning with the 15th day of the calendar month. September figures are for the period Sept. 15 to 30 only. Subsequent figures are for calendar months.

⁸ Average price of the month.

⁹ Compiled from weekly wholesale quotations of 35 drugs and pharmaceutical chemicals.

¹⁰ Compiled from weekly wholesale quotations of 20 essential oils.

¹¹ Compiled from weekly wholesale quotations of 40 crude botanical drugs.

¹ Based on figures compiled by the U. S. Department of Commerce, Bureau of the Census. The data embrace returns from packers, tanners, dealers, importers, and manufacturers. As given in the monthly reports by the Bureau of the Census, the returns are expressed in numbers of hides and skins. For the above summary these have been reduced to pounds on the basis of the average weights of each class.

² Includes skins with and without wool, but does not include weight of wool.

¹ Newspaper advertising, from statistical department of the *New York Evening Post*; Municipal bond yields from *The Bond Buyer*; Printing activity from *United Typothetae of America*; Imports and exports of paper and silver from *U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce*; Telephone and telegraph operations from reports by companies to *Interstate Commerce Commission*; Government receipts and disbursements from daily statement of the *U. S. Treasury*; Glass bottle production from *National Bottle Manufacturers Association*.

² Compiled from 22 identical cities: New York, Chicago, Philadelphia, Detroit, Cleveland, St. Louis, Boston, Baltimore, Los Angeles, Buffalo, San Francisco, Milwaukee, Washington, Cincinnati, New Orleans, Minneapolis, Indianapolis, Columbus, Louisville, St. Paul, Birmingham, and Houston. For the year 1916 to 1918, no reports were available for Boston, Louisville, Houston, and Columbus. The totals for those years were computed from the actual reports of the 18 other cities, allowing 13.85 per cent of the total to the four missing cities, the average ratio of those cities to the total in the subsequent years.

³ Glass bottle production index based on reports of identical firms representing approximately 90 per cent of the capacity of the industry.

⁴ Combined reports of 10 largest telephone companies.

⁵ Based on market yield of bonds of 20 large cities at the first of each month.

⁶ Printing activity based on productive hours reported by plants in 52 cities in 30 states, each department being weighted for the combined index number.
