# Business Indicators

1923-25 = 100

# Business Situation Summarized

**B**USINESS activity has expanded at an accelerated pace during December and January. Sharp gains have been evident in industrial production and employment. The adjusted index of industrial production for December, at 86 percent of the 1923-25 average, was 12 points higher than in November and was the same as the 1934 high. Weekly data for January indicate a further advance in the index for the current month.

While the rapid expansion in output in the automobile and steel industries has been outstanding, increased production and sales have been reported over a wide range of industries. Automobile production has recently been at a rate not witnessed for this period of the year since 1929, while steel ingot production has increased from 32 percent of capacity in the first week of December to 53 percent in the latter part of January. Expansion, after due allowance for seasonal trends, has also occurred in the leather and shoe, lumber, rubber manufacturing, tobacco manufacturing, machine tool, textile, newsprint, and plate-glass industries. Cement production declined by more than the usual seasonal amount in December, while production in those food processing industries represented in the production index showed the usual seasonal drop.

The expansion in production in December was reflected in a contraseasonal increase in the number

of factory workers. The seasonally adjusted index of factory employment rose 3 percent, while the payroll increase was 6.2 percent.

Distribution of goods by the railroads did not decline to the usual extent during December, the adjusted index rising sharply. Loadings were the same as a year earlier, but during the first 3 weeks of January loadings were slightly below the comparable total in 1934. While retail sales for December did not measure up to some advance estimates, the volume was substantially above 1933. The expansion in sales of department stores and of general merchandise sales in rural areas from November to December exceeded the usual seasonal rise.

The amount of new construction work undertaken during December declined following a seasonal trend, but daily average contract awards increased in the first half of January. Private construction activity continues on a low level.

Wholesale prices have advanced since the middle of December due to further increases in prices of farm products and foods. Security prices have moved irregularly during January, with no particular change in the general level of quotations between December and the end of January. The unsettlement in foreign exchange markets during the month resulted in substantial gold exports from Europe to the United States.

# Comparison of Principal Data, 1930-34

## BANK DEBITS OUTSIDE NEW YORK CITY - (BILLIONS OF DOLLARS)

## CONSTRUCTION CONTRACTS AWARDED - (BILLIONS OF DOLLARS)

## STEEL INGOT PRODUCTION - (MILLIONS OF TONS)

## AUTOMOBILE PRODUCTION - (THOUSANDS OF CARS)

## FREIGHT CAR LOADINGS - (MILLIONS OF CARS)

# Commodity Prices

WHOLESALE commodity prices rose during the 4 weeks ended January 19 to 78.5 percent of the 1926 base, from the level of 76.7 maintained during each of the 3 weeks ended December 8, 15, and 22. The index has risen to a high for the price recovery period, and is currently about 9 percent above the level of a year ago.

The recent gains in the index as well as the gains during the past year, are wholly attributable to the increases in the prices of farm products and foods. The prices of farm products rose 5.6 points during the 4 weeks ended January 19 and food prices rose 4.6 points. The weekly index of farm products in the week ended January 12 and that of foods in the week ended January 19 marked new highs for these groups, 77.2 and 79.8, respectively, and indicate substantial increases above the average for each group in December.

The price changes from December 1933 to December 1934 in the other 8 groups into which the products other than farm products and foods are segregated, were slight, with the exception of the declines in hides and leather and textile products and the gains in the chemical and drug and miscellaneous groups.

Moody's index of the spot prices of 15 sensitive commodities reached a new high January 9 at 160, or 60 percent above the prices of these commodities on December 31, 1931. This represented a 10-point rise from the comparable date in December. Since January 9 the index has receded to 155.1 on January 23. The December 1934 average of this index was 151.5, which was 22 percent above the average for December 1933.

Retail prices of department-store articles, as measured by the Fairchild index, continued during December the slight downward movement which has been under way since March. The index for January 2, at 87.2 percent of the January 1, 1931, prices was 2.4 points below the high for the year 1934.

Retail prices of foods advanced 1.5 percent during the 2 weeks ended January 2, increases being noted in each of the 6 groups of foods. This is the first increase in the index of food prices since the 2 weeks ended September 11, which marked the high since the beginning of the recovery period. The current index is slightly below that for the September 11 period. Since January 2, 1934, the index has advanced 10.9 percent.

# Domestic Trade

**C**URRENT data on retail trade indicate a relatively favorable trend of consumer purchases. December sales rose sharply in accordance with the usual trend and, for department store and rural general merchandise sales, the increases were in excess of the normal seasonal gains. The increase in variety store sales did not measure up to seasonal expectations. Sales reports on January retail store trade are not as favorable as the December returns, although the dollar volume of sales continues to show substantial increases over a year ago. Sales of new passenger automobiles, which declined in December, are expected to record a much greater-than-seasonal increase in January.

Statistics for the year 1934 reveal the first yearly increase in the dollar volume of retail sales since 1929. The 4-year decline following 1929 had reduced the value of retail trade by approximately one-half to \$25,000,-000,000. The available indexes of retail trade for the past year indicate a gain in total dollar sales of at least 10 percent, and possibly as much as 15 percent, in comparison with 1933.

Sales through department stores during December were up about 4 percent after adjustment for seasonal variation. This was the first increase in the adjusted index since August. December sales were 11 percent higher than in 1933, or the same relative increase as in November.

The improvement in purchasing power of the farm population was a notable feature of the year 1934. December sales of general merchandise in rural areas, after allowance for the usual seasonal rise, were 5 percent higher than in November. The increase over the same month of 1933 was 22 percent, or about the same relative gain for the year as a whole.

One of the interesting aspects of the sales of chain grocery stores is the apparent decline in the volume of food sold through these outlets during the year 1934. The gain of 4 percent in the year's sales as compared with 1933 was considerably less than the rise in food prices for the year. Similarly, December sales were 1.5 percent higher than a year earlier whereas the rise in the retail food price index was about 9.6 percent between these 2 periods.

In line with the trend of retail sales, newspaper and magazine linage expanded during 1934 for the first time since 1929. The increase in newspaper linage was about 10 percent, and for magazine linage, 30 percent. After adjustment for seasonal variation, magazine advertising reached a peak in the summer of 1934, at which time it was 50 percent above the depression low reached in the first quarter of 1933. In the latter half of the year, and particularly in December, the trend of magazine advertising was downward, after due allowance for seasonal factors.

# Employment

**F**ACTORY employment increased in December contrary to the usual seasonal movement, the seasonally adjusted index advancing 3 percent. The increase in pay rolls was larger, amounting to 6.2 percent. While employment increases occurred in a large number of industries, the principal causes of the rise were the unusually rapid increase in the production of automobiles and the less-than-seasonal decline in many of the industries in the nondurable goods group.

The increase in employment in the manufacturing industries in the durable goods classification amounted to 3.4 percent. The increase in the transportation equipment group alone was estimated at 92,000, most of these being taken on by automobile factories. The increase for the durable goods industries combined was estimated at 90,000, so that the statistics indicate some decrease in the "heavy" goods industries, when the transportation equipment group is excepted. However, 25 of the 46 industries in the durable goods classification showed increases.

Of the 44 industries placed in the nondurable classification, 17 showed increases in December while 27 reported decreases. Among these decreases, which were mainly seasonal in character, were: The beet sugar industry (40 percent), canning and preserving (22 percent), shirts and collars (11 percent), men's furnishings (7 percent), women's clothing (3.4 percent), and millinery (5.7 percent).

Among nonmanufacturing industries, the largest gain was the seasonal increase in the retail trade group. For department stores, variety stores, general merchandise, and mail-order establishments, the increase amounted to 27 percent. Employment in the building and construction industry experienced a seasonal decline of 12 percent.

Relief demands upon the Federal Government continued extremely heavy during the month. There was little change in the number of persons supplied with work by Government programs in December as compared with November. The Public Works Administration employed 87,000 fewer workers in December, the work of building and maintaining State roads required 50,000 fewer men, and the end of an enlistment period accounted for a decline of 37,000 in the Civilian Conservation Corps enrollment. Offsetting these declines was the increase of 200,000 in workers employed by the emergency works program.

It is estimated that over 19,000,000 persons, or about 15 percent of the total population of the country, were receiving relief under the general relief and numerous special programs of the Federal Emergency Relief Administration in December. This is the largest total for any period since the present program has been in effect. These figures reflect the continuing large volume of unemployment and the exhaustion of private resources.

# Finance

**OUTSTANDING** developments in the field of finance during January were the Budget message of the President to Congress, the flurry in the security and foreign-exchange markets induced by the hearing of the gold cases by the Supreme Court, and the heavy movement of gold from Europe to the United States.

According to the Budget message, the estimated Federal deficit for the fiscal year ending June 30, 1935, is \$4,869,000,000, including \$573,000,000 for statutory debt retirements. For the fiscal year to end June 30, 1936, the estimated expenditures of \$8,520,000,000, including \$636,000,000 for debt retirement, are expected to exceed receipts by \$4,528,000,000. These deficits are the result of continued heavy expenditures for recovery and relief since regular expenditures (exclusive of debt retirements) are below anticipated receipts.

Speculative activity arising from the general discussion of the gold cases caused a brief reaction in both stock and bond prices in mid-January. This was accompanied by a recession in some speculative commodity prices and a sharp break in foreign-exchange rates. Changes in both the stock and bond price "averages", as a result of the month's trading, were not important.

The break in the foreign-exchange rates of gold-standard countries made profitable the import of gold, and arrangements were made to transfer a considerable quantity to this country. Net gold imports during December amounted to \$92,000,000, while in the 2 weeks ended January 18 imports were \$18,000,000. These have tended to increase the already high monetary gold stocks.

The condition of extreme ease prevailing in the short-term money market in recent months was unaffected by the year-end demands. Since the first of the year, seven of the Federal Reserve banks have reduced their rediscount rates. Four of the banks now have a rate of 2½ percent, seven a rate of 2 percent, while the New York bank has a rate of 1½ percent.

No marked change has occurred in the volume of new funds derived from long-term capital issues. The amount of such issues in both December and January remained extremely small. The Securities and Exchange Commission issued new regulations during the month concerning the registration of new issues which were designed to facilitate new financing.

Member bank credit outstanding was approximately the same in mid-January as a month earlier. Investments in Government obligations increased during this period, while there was a further moderate decline in loans. Government deposits were reduced as the large balance accumulated in December was gradually utilized for the settlement of current bills. These Government operations continue to be reflected in a marked growth in demand deposits, since a considerable portion of the Government funds after disbursement find their way into private accounts. This relationship is evident in the changes in the member bank statement during the past year. In this period, net demand deposits have increased by approximately 2¼ billion dollars, while the banks' holdings of Government obligations and Government guaranteed obligations have increased by about 2½ billion dollars.

<sup>1</sup> 91 cities.<sup>2</sup> Net exports indicated by (-).<sup>3</sup> Gold coin reported in circulation prior to Jan. 31, 1934, was eliminated from the total as of that date.

# Foreign Trade

**F**OREIGN trade fell off in December by more than the usual seasonal reduction. The value of both exports and imports dropped 12 percent as compared with November. Curtailment of exports in December occurred chiefly in leaf tobacco, raw cotton, coal, crude petroleum, and meat products. Among the imports, the heaviest declines were in coffee, crude rubber, raw silk, and tin, although imports of many other commodities also declined.

Complete statistics for the year indicate that the physical volume of exports increased 18 percent in 1934 as compared with 1933, primarily as a result of the expansion in foreign sales of semimanufactures and finished articles. The quantity of crude material exports was about 8 percent larger in the first quarter of 1934 than in the same quarter of 1933, but exports of this class of commodities (particularly raw cotton) during the remainder of the year fell considerably under the shipments in the corresponding period of 1933. In the last quarter of 1934, the quantity of crude material exports was 28 percent less than in the final quarter of 1933.

Aside from the expansion in exports of manufactured articles, the higher level of commodity prices accounted chiefly for the increases of 27 percent and 14 percent, respectively, in the value of exports and imports during 1934.

The unit value (price) index of exports of United States merchandise increased approximately 18 percent as compared with 1933, while the price index of imports advanced by 16 percent. Crude materials showed relatively marked advances in prices; the unit value of that class of exports increased 32 percent, while the increase for crude material imports was 22 percent. Finished manufactured articles increased only moderately in price—9 percent in export trade and about 6 percent in import trade.

Automobiles, machinery and apparatus, metal manufactures, wood and paper, and petroleum products were among the leading groups of export commodities chiefly responsible for the expansion in the quantity of total exports. The value of machinery and vehicle exports aggregated \$435,000,000 in 1934 in comparison with \$236,700,000 in 1933, an increase of 84 percent, while the value of the other groups showed increases ranging from 77 to 14 percent.

Exports of cotton cloth declined 25 percent in quantity during 1934 but, because of the advance in price, the value was slightly larger than in 1933. The quantity of unmanufactured cotton exports decreased 30 percent and the value dropped 6 percent. This decline in cotton exports was responsible for a drop of more than one-fifth in the quantity of all agricultural products exported.

# Real Estate and Construction

**T**HE major development of the month, affecting the construction industry, was the announcement of the Government's plans to handle the relief problem during the next fiscal year by an enlarged program of public-works construction, for which an appropriation of \$4,000,000,000 was asked of Congress.

During the year 1934, publicly financed construction contracts in the areas covered by the F. W. Dodge Corporation statistics, constituted over 60 percent of the total. Government work was on a considerably larger scale than in 1933, and accounted for all of the increase in the value of contracts placed in 1934. Privately financed contracts declined by about \$5,000,000 below the 1933 total, to \$568,000,000.

The decline in the volume of contracts let during December and January has been less than usually experienced during these months, according to the Federal Reserve Board's index. For the year 1934 the Board's index was below one-third of the 1923-25 average in all but the first two months of the year, the average for the year being 32 percent. This represents an increase over both 1933 and 1932, due entirely to Government initiative.

Each of the 10 general classes of construction, excepting factories and residential buildings, reflected gains in contract totals for the year. The decline in factory contracts was about 10 percent, while the loss in residential construction was nominal.

Statistics on building permits for December show a decline in the volume of work represented by additions, alterations, and repairs, the type of activity which is not fully reflected in the contract totals. The value of work covered by permits for this class of work in 764 cities was 26 percent lower in December than in November, and 2.4 percent less than in December 1933.

The statistics of the American Federation of Labor reveal that 43 percent of its members in the building trades were employed in December, compared with 44 percent in November. About half of the number working were on a full-time basis.

The Federal Housing Administration has actively pushed its drive for the modernization and repair of existing structures. About 85,000 loans were reported to have been made by banks and other lending organizations with an aggregate value of \$36,000,000. The estimated amount of work undertaken, both on a credit and cash basis, is several times this total.

While the Home Owners' Loan Corporation has not been accepting applications for loans since the middle of November, advances are being made on approved loans applied for before that date. Up to January 17, the Corporation had made loans to 760,102 home owners, disbursing \$2,301,000,000 for this purpose. While applications had dropped considerably below the peak reached in March 1934, the number received in October was 35,675.

<sup>1</sup> Based on 3-month moving average and adjusted for seasonal variations.

<sup>2</sup> Index is as of first of month, Jan. 1, 1935, 198.7.

# Transportation

**F**REIGHT-CAR loadings in December declined less than is usual during that month and the adjusted index of the Federal Reserve Board rose from 59 percent of the 1923-25 average in November to 64 in December. Improvement was noted in all but one of the 8 classes of freight, livestock shipments alone showing a decline as compared with the usual seasonal movement. The adjusted index of miscellaneous freight, which represents more than one-third of the total shipments, increased more than 10 percent to 71 percent of the average shipments in 1923-25. L. c. l. merchandise shipments increased but slightly on this basis.

During the first 3 weeks of January loadings showed about the usual seasonal movement. For the week ended January 19 loadings were 69.5 percent of the 15-year average for that week, which is the highest point reached on this base since the first of July, except for 2 weeks in December.

Net railway operating income of class I railroads during November declined 16 percent below that for November 1933, or slightly more than the October 1934 decline, as compared with October 1933. Similar comparisons for the earlier months of the year were far more favorable, as net railway operating income declined only 3 percent for the first 11 months as compared with the same period of 1933. The decrease

in net railway operating income for the 11-month period is attributable to the 8.9 percent increase in operating expenses, since total operating revenues increased 5.7 percent and taxes decreased 4.9 percent. Car-loading reports indicate that net railway operating income will be less in December than in December a year ago.

Railway employment continued in December, the decline which has been noted each month since July, but after adjustment for the usual seasonal variation the index of employment increased slightly in December to 55 percent of the 1923-25 average.

The Association of American Railroads has reported that class I railroads installed 24,103 new freight cars in 1934. In 1933 and 1932 the corresponding figures were 1,879 and 2,968, respectively. Fifty-nine new steam locomotives and 31 electric locomotives were placed in service in 1934. In 1933 one new steam locomotive was installed and in 1932, 37. Purchases on the 1934 scale were made possible by the extension of loans from P. W. A. funds.

The major electrification project of the Pennsylvania Railroad between New York and Washington, which was financed partly by Government aid, was completed to a point which permitted the operation of the first through train in January.

# Automobiles and Rubber

**P**RODUCTION of automobiles for the 1935 market has proceeded at a pace not witnessed since 1929. In the absence of major alterations such as were responsible for the delays experienced a year ago, production schedules are generally about a month ahead of the 1934 records. Production of 183,000 cars by United States factories during December was the largest for this month since 1928 and, judging by the schedules for the current month, January output should equal and possibly exceed the January 1930 figure.

The attendance at the automobile shows and other evidences that an expanding market exists for cars this year have caused dealers to place large orders with the manufacturers. The uncertainties arising from the expiration of the automobile code early in February and the possibility of labor difficulties may also have influenced the production schedules set by the manufacturers. But whatever the reason for the rapidity with which the industry has swung into production this year, demands of automobile manufacturers since early December have put increasing pressure on the industries supplying the basic materials, parts, and accessories, and have brought about a sharp rise in activity in these related lines.

With production of automobiles in the final month of 1934 the highest since August, the year's total of 2,778,739 passenger cars and trucks was the largest since 1930, while the production of trucks alone was the largest since 1929.

The effect of this rising tide of production on employment and pay rolls is evident from the statistics for Detroit. The number employed in Detroit factories in mid-January was more than double the total for the end of October and was exceeded in only three months—March, April, and May—during 1934.

Since new passenger sales in December were largely confined to the clearance of 1934 models, the decline in the seasonally adjusted index of sales for that month was without significance. Relatively few of the new models were delivered before January 1, but the trend of production and sales during the current month assures a substantial rise in the January index.

Activity in the rubber manufacturing industry has recently been at a high rate for this time of the year. Moving contrary to the usual trend, the consumption of crude rubber in December increased by about 5 percent, on a daily average basis, as compared with November. Consumption for the month was the largest December total on record. Production of pneumatic casings was sharply higher in December than in November, although domestic shipments were slightly lower. A substantial increase in domestic shipments is anticipated during January.

With exports from producing countries restricted to 70,000 tons a month for the first quarter of 1935 and both domestic and foreign consumption rising, some reduction of the large world stocks of crude rubber may be in prospect.

## Forest Products

**D**URING the past month there has been a substantial gain in the volume of new orders and shipments of lumber. In the 4 weeks ended January 19, weekly orders were in excess of the cut by 93, 72, 54, and 40 percent, respectively. Shipments were also considerably in excess of production during this period, the latter being held at approximately the same level as in the corresponding period a year earlier.

The marked rise in the volume of incoming business has been due in part to commitments made following the suspension of the minimum price provisions of the lumber code during December. A year earlier when the minimum price provisions of the code were placed in effect, the opposite effect was evident for a time. Wholesale prices of lumber for the month of December averaged the same as in the preceding month, 81.2 percent of the 1926 average, but since the middle of that month, lumber prices have declined.

Lumber finishing operations were at a higher level in December than in the preceding month, while operations in the furniture manufacturing industry also expanded.

Activity in the naval-stores industry has remained quiet during recent weeks with much hesitancy evident in forward buying. Receipts of rosin at the three

principal southern ports during December were the largest since July 1933 and tended to increase the abnormally high stocks held at the end of November. Turpentine receipts during the month declined slightly. Stocks, however, increased to the highest level since December 1931.

Production of paper and paper products declined during December, partly due to seasonal influences. There was a marked decline in the output of paper boxes and also of paper and pulp. The newsprint industry was an exception to the general trend in the United States, while Canadian production of newsprint held close to the high November rate.

The demand for newsprint was influenced by the desire of publishers to increase their stocks in anticipation of the increase in price to \$42.50 a ton, effective on January 1, 1935. Many individual mills were reported to be working at capacity in December in order to make deliveries prior to the first of the year.

Shipments of newsprint from Canadian mills declined slightly in December below the November total, but shipments from United States mills increased. In both instances, shipments were in excess of production with the result that there was a large reduction in mill stocks. This movement, however, reflected the transfer of stocks from producers to the consuming industry.

# Iron and Steel

**O**PERATIONS in the iron and steel industry expanded rapidly during December and January in response to the heavy demands for finished steel from a number of major consumer industries. By the week ended January 26, the rate of steel ingot production had advanced to 50 percent of capacity, a rate generally regarded as providing a profitable basis of operation for the industry as a whole.

The automobile industry has released the largest tonnages since early 1930, and many sheet and strip mills are reported to have a substantial volume of orders on hand and to be pushed to meet current demands. Agricultural implement makers, sanitary ware manufacturers, and miscellaneous outlets were among other large purchasers. Two important customers, the railroads and the construction industry, have placed relatively few orders.

Steel-ingot production in December, at 35 percent of capacity, was up more than a fifth as compared with the preceding month. December shipments of finished steel by the leading producer were 14 percent above the November total and a much larger increase is anticipated for January. The number of pig-iron furnaces in blast had increased to 69 by the end of the year and more were lighted during January.

Machinery manufacturers are among those requisitioning increased quantities of steel. The improvement in machinery lines is evident from the sharp rise

in orders for machine tools during December. This demand was extensive and well distributed. Domestic business reached the highest volume of any month since 1930, while there was substantial gain in foreign business also. The volume of machine-tool orders for the year 1934 was equal to about 61 percent of the average for the preceding 15 years.

Figures on finished steel consumption for the year 1934 reveal some shifts in the relative position of major consumers, although the automobile industry with one-fifth of the total continued as the leading outlet. The railroads and building industry contend for second place with consumption estimated at from 11 to 13 percent of the total, while metal containers are in fourth place after placing second in 1933. Exports accounted for approximately 5 percent of the reported consumption. Purchasers of steel rails, spurred by substantial Government loans to the railroads, more than doubled as compared with 1933. Awards for structural shapes and reinforcing steel improved only slightly over 1933.

During the past year there was no expansion of any importance in the ingot capacity of the industry, but a marked increase in finishing mill capacity occurred. Sheet and strip mills, with an annual capacity of nearly 1,000,000 tons, were completed, according to trade sources, and an additional 2,000,000 tons is reported to be under construction.

# Textile Industries

**M**IXED trends were evident in textile manufacturing during December, but operations for the industry as a whole were at a higher level than in November. The sharp rise in the seasonally adjusted index of production was influenced by the trend of silk consumption and the increase in activity in the woolen industry. Nevertheless, the pay-roll data indicate rather wide-spread gains for the month in the fabric industries. Pay rolls in the wearing-apparel industries declined in reflection of the seasonal reaction in production.

Sales of cloth improved in December, resulting in some increase in accumulated orders at the year end. Cotton gray goods sales were substantially higher than production, and unfilled orders increased to the highest level since last March. Silk piece-goods business also improved and, with production varying only slightly from the November rate, there was some reduction in stocks. Sales in the woolen industry indicated a continuation of the recent improved trend of demand for such fabrics.

Increases in machine activity in the woolen industry were particularly sharp during December. Woolen and worsted spindles were operated at a higher rate than in any previous month of 1934, and also at a higher rate than in the same month of other recent

years, not excepting December 1929. Weaving activity also expanded to a marked degree, although there was very little change in operations of narrow looms.

Viewing the year in retrospect, activity in each of the major lines declined from the 1933 levels with the exception of the rayon industry. The cotton industry, however, operated at a much higher rate than did either the wool or the silk industries. A strong upturn appeared in the wool industry in October.

Consumption of raw cotton in 1934 while 13 percent below that for 1933, was slightly above the average for the 1930-32 period. Similar data for the wool and silk industries indicate a close approach to the 1932 depression low for wool consumption and a new low since 1924 for silk deliveries to mills.

In contrast to the declines in the cotton, silk, and wool industries during 1934, the production of rayon established another yearly record. Output was estimated at 210,331,000 pounds, an increase of 73 percent as compared with 1929. Mill consumption of rayon was estimated to be about 4 percent less than in 1933, the difference of about 11,000,000 pounds (less 2,500,000 pounds exported) representing an addition to stocks. This increase, however, resulted in a better balance of stocks than existed at the end of 1933.

## TEXTILE STATISTICS

# Wholesale Commodity Prices 1929-34

By H. Gordon Hayes, Chief, Division of Economic Research

**P**RICES tie together—or keep apart—the multitudinous elements in our complex economic life, if one includes in the category of prices not only the prices of commodities but also security prices, wage and interest rates, rents, royalties, commissions, and other similar payments. Within the complex relationships of our economic society, certain forces tend to produce price relationships that will promote or maintain prosperity while others tend to induce or prolong depressions. Which of these groups is in the ascendency at any particular period of time depends on the peculiar circumstances that prevail, and the ensuing results are of grave importance in terms of economic welfare.

The price relationships that prevailed in the latter part of the decade of the 1920's were such that prosperity could not continue and various aspects of "bad" business became increasingly apparent in the latter part of 1929. Instead of the imbalance that prevailed being corrected, maladjustments became more and more pronounced during the following 3 years. These maladjustments prevailed throughout the entire price structure and a full description and analysis thereof would be very timely. Limitations of space, however, confine this article to a summary statement of the price movements of commodities at wholesale as reported each month by the Bureau of Labor Statistics of the United States Department of Labor. These

series of 784 items are combined into an index and, also, are classified, or grouped, into various divisions for which indexes are computed.

These indexes are subject to the limitations that are necessarily involved in making a selection of items to be included, and of the weights to be assigned to each one. Further, the price data may not in some cases be strictly accurate because of discounts allowed on reported prices, and changes in the quality of the articles included. The data may, however, be accepted as indicating the trends of wholesale prices. These indexes are computed on the basis of the corresponding prices in 1926 being equal to 100, but since the present purpose is to review price movements during the 5 years, 1930-34, the indexes have been shifted to a 1929 base.

## The Decline from 1929 to the Spring of 1933

The outstanding fact in the price history of the 3½ years following the summer of 1929 is the almost unbroken decline month after month. There were only 5 months in the 44-month period, July 1929 to February 1933, inclusive, in which the composite wholesale price index did not decline, and only 3 of these, July-September 1932, were consecutive months. The index at the close of this period was 38 percent below its position at the beginning. Certain commodity prices, however, and many noncommodity

Chart 1

prices, fell but little and in some cases actually advanced, which undoubtedly contributed to the general decline by intensifying the degree of imbalance in the price structure.

Chart 1 gives a graphic presentation of the movement of the index of the 784 price series and of the 3 indexes of farm products, foods, and other commodities. The declines of these 3 group indexes were approximately 60 percent, 46 percent, and 28 percent, respectively, from the 1929 average to February 1933. These same data combined into 3 classes, raw materials, semimanufactures, and finished products, chart 2, show declines for the period under review of approximately, 50 percent, 40 percent, and 30 percent, respectively.

Another classification of the Bureau of Labor Statistics series is given in chart 3, showing the 10 commodity groups arranged according to the degree of decline in the different groups. As shown therein, the prices of three groups, metals and metal products, house furnishings, and chemicals and drugs, declined slightly less than 25 percent from 1929 to the lows which were reached in the early part of 1933, and the prices of building materials only a little more than 25 percent, while the prices of farm products as already noted fell about 60 percent, and food prices more than 45 percent. This chart also indicates that while the depression low was reached in February by the combined commodities and by 5 of the groups, the low for the other 5 groups was reached somewhat later.

The disparities that have been noted in the classes and groups of commodities were also pronounced within the groups as is shown in the accompanying

table, which was compiled by the Bureau of Labor Statistics. The prices of 27 of the 784 items increased during the period indicated, 42 were unchanged (were the same at the close as at the beginning of the period), and 48 were down less than 10 percent, while 78 items were from 60 to 90 percent below their June 1929 levels in February 1933.

The distribution by groups of the 42 items with no change in price over this period shows 14 to be in the chemicals and drugs group, 13 in the metals and metal products group, 7 in the building materials group, and 4 in the house-furnishings group. Among these 42 items whose prices were the same at the close as at the beginning of this period, several were unchanged in price during every one of the 44 months included, while for some items, prices had not changed since 1921. This was true of augers and of bone black. Other items in the group with unvarying prices during the time of the general decline are chisels, carvers, bar iron, corn pickers, wrapping paper, plaster board, snuff, carbon dioxide, calcium carbide, and corn flakes.

Thirteen of the 27 items whose prices advanced from June 1929 to February 1933 were in the chemical group and 4 were in the metals and metal products group. Two farm products were in this class, hops and New York white potatoes, and one food item, bread, in San Francisco.

The behavior of the chemical prices is especially noteworthy. Of the 89 items included in the index of chemical and drug products, the prices of 27, or almost one-third of the total, either advanced or remained unchanged, and the prices of 21 fell only from 10 to 20 percent during this period. Prices of metals and

Chart 2

metal products were also relatively rigid during the general price decline. Thirteen of the 130 items were unchanged in price, 4 advanced, and 59 declined less than 20 percent.

<sup>1</sup> Bureau of Labor Statistics, Report No. 132.

Combining the items that increased in price during this period with those whose prices were unchanged, it is found that of the 69 items in this category 27 were chemicals or drugs, 17 metals or metal products, and 9 building materials. The items in these 3 groups thus represent almost 80 percent of the items whose price behavior was in sharp contrast with the general trend during the 44-month period under review.

#### The Volume of Production

A fundamental reason for the relatively greater decline in agricultural prices than in the prices of finished goods is that the volume of production in the one field was curtailed but little, while it was greatly reduced in the other. The Bureau of Agricultural Economics estimates that the physical quantity of agricultural output of the country in 1929 was 9 percent above the average output for the years 1919-27, 12 percent above that average in 1931, and 4 percent above that level in 1932. In sharp contrast to this trend of agricultural production, the physical volume of manufacturing output, according to the Federal Reserve Board's index, fell from 119 percent of the 1923-25 average in 1929 to 63 percent of that average in 1932.

Whereas, in agriculture the physical output in 1932 was approximately the same as in 1929, in manufacturing the physical output in 1932 was only a little

more than half of the output 3 years earlier. If attention is directed to certain lines of manufacture the contrast with agriculture becomes far more pronounced. The output of automobiles, iron and steel, cement, and lumber in 1932 was 74 percent, 76 percent, 55 percent, and 73 percent, respectively, below that in 1929. The self-employed farmer and his family maintained the agricultural output of the country near the peak levels during the 3 years, 1930-32, while the manufacturer dismissed large numbers of his employees and greatly reduced his output.

#### The Price Recovery

The rise which began in the general list of prices in March 1933 has been almost continuous during the 22 months ended December 1934, there having been only 4 months in which the combined index did not advance. The gain during this time represented a rise of 29 percent from the February 1933 low. During the first 8 months of this period the rise was especially pronounced, the index advancing approximately 20 percent, or two-thirds of the gain for the entire period.

Prices of farm products rose more sharply than did the prices of other products, the increase amounting to 76 percent. The prices of foods rose 40 percent during the period under review and the prices of commodities other than farm products and foods 20 percent. The prices of metals and metal products and of chemicals and drugs, 2 of the 3 groups that showed the least decline, rose about 10 percent. The three economic classes, raw materials, semimanufactures, and finished goods registered price gains of approximately 50 percent, 25 percent, and 20 percent, respectively, during these 22 months.

An interesting situation is observed if the recovery in prices is measured in terms of the percentage of the decline that had been regained by December 1934, as is indicated on chart 3. Commodities, other than farm products and foods, and the two groups, farm products and textile products, had recovered approximately 50 percent of their price declines by that month. This was also true of the two classes, raw materials and finished products. Building materials and the fuel and lighting group were at the bottom of the list in this classification, having recovered only about 40 percent of their decline and chemicals and drug prices were at the top of the list having recovered 70 percent of the decline which they experienced from 1929 to the depression low.

The price movement in the three classes, raw materials, semimanufactures, and finished goods, during the recovery period shows an interesting divergence as respects semimanufactures, as is indicated in chart 2. The percentage increases of raw material and semimanufactures were practically identical from the February 1933 low to September 1933. Since then the prices of semimanufactures have declined almost

continuously while the other two series in this classification have advanced. The 1934 rise in prices of raw materials is largely attributable to the increase in the prices of farm products.

#### Factors Influencing the Price Rise

In analyzing the factors that contributed to the price rise from February 1933 through December 1934 attention should be called to the two periods, March to October 1933, and the subsequent 14 months. During the earlier of these two periods, the price advance was not limited to any of the groups, but during the later period combined index for commodities of other than farm products and foods remained practically unchanged.

The sharp and general rise in the 8 months, March-October 1933 is one aspect of, and may be partly attributed to, the marked improvement in business which took place during that period and the accompanying and resulting purchase of goods. The unadjusted index of industrial production, as compiled by the Federal Reserve Board, rose from 60 in March to 78 in October, a gain of 30 percent, having reached 95 in July, and pay-roll disbursements in factories, without adjustment for the usual seasonal variations, as reported by the Bureau of Labor Statistics, increased during this period from 37.1 to 59.4 of the 1923-25 average, a rise of 60 percent. The National Industrial Recovery Administration influenced the business improvement during this period, and especially encouraged the sharp rise which culminated in July, as business men speeded up production in anticipation of an increase in wages. Many of the codes also contributed to price increases or, at least, to the maintenance of established prices.

The emphasis of the administration on an increase in prices and the ensuing belief that monetary inflation would be undertaken stimulated speculative buying and hastened the price rise. The suspension of gold payments in March 1933 and the decline in the foreign exchange value of the dollar in April and the following months contributed directly to a rise in the prices of imports and of raw material exports and may be expected to have had some effect on the prices of closely related products. The policy of Government expenditure for relief and recovery, and the resulting increase in buying power, tended further to augment the price increase.

The rise in the general index since October 1933, which is accounted for by the rise in the prices of farm products and foods, if all the other groups are combined, is largely attributable to the policy of crop curtailment, including the imposition of processing taxes and marketing agreements and to the severe drought of the summer of 1934. Another factor has been the liberal crop-lending policy of the Government. The relief policy and expenditure for public

works has also been a factor in raising these prices and in sustaining the prices in the combined groups of other than farm products and foods.

#### Present Price Disparities

It is apparent, from a glance at the charts, that the marked disparities in the price structure in the early part of 1933 have been substantially lessened. Considerable disparities still exist, however. As compared with 1929, building material prices were in December only approximately 10 percent below the 1929 levels, while farm products prices were more than 30 percent below that level. As related to the 1926 base, as shown on page 5 of this issue of the SURVEY, the prices of these groups were much more uniform in December 1934 than if compared with the 1929 prices. On that base, the prices of farm products were above the prices of textiles and miscellaneous products and were only slightly below the prices of fuel and lighting items. The group

Chart 3

with the highest prices as compared with 1926 was metals and metal products at 85.9 percent of that base and textile prices were the lowest at 70 percent.

The price relationships as they prevailed in 1926, 1929, or at any other date, are not necessarily the relationships that should be restored. This is especially apparent in respect to the 1929 prices, since price relationships at that time, using the term broadly, were such that prosperity could not be maintained, and since then changes in technique have undoubtedly been so altered that price relationships which would have permitted full utilization of our economic resources at that date would not now secure that result. The desirable balance within the price structure can be determined only by trial and error. It seems apparent, however, that the prices of certain of the commodity groups are still such as to prevent the degree of coordination that is so essential among the various elements in the economic society.

<sup>1</sup> Data computed by the Federal Reserve banks located in the districts listed above. In the Minneapolis district, the index covers the sales of reporting stores in the cities of St. Paul, Minneapolis, and Duluth-Superior only. The unadjusted indexes with the exception of the Minneapolis district are based on daily average sales, while the adjusted indexes have been corrected for seasonal variation. These indexes displace the data shown for these same districts in previous issues of the Survey. The indexes formerly carried were computed from percentage changes in sales as reported by the Federal Reserve Board for the period since December 1930 when the F. R. B. discontinued the computation of indexes by districts. These indexes, based on percentage changes, are being continued for the Boston, Richmond, St. Louis, and Kansas City reserve districts, since the banks in these areas have not computed data similar to the above indexes.

<sup>2</sup> Annual figures are averages of monthly figures.

# Monthly Business Statistics

The following summary shows the trend of industrial, commercial, and financial statistics for the past 13 months. Statistics through December 1931 for all series **except those marked with an asterisk (\*)** will be found in the 1932 Annual Supplement to the Survey of Current Business, together with an explanation of the sources and basis of the figures quoted. Series so marked represent additions since the Annual was issued and similar information, if published, will be found in the places noted at the bottom of each page. Later data will be found in the Weekly Supplement to the Survey.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1934	1933	1934

\* Revised.

† New series. See pp. 16-19 of the May 1934 issue, cash income for marketings of agricultural products and p. 19 of the December 1932 issue, Fairchild price index.

‡ Preliminary.

§ Data for Jan. 15, 1935: Total 107, chickens and eggs 114, cotton and cottonseed 108, dairy products 112, fruits 87, grains 115, meat animals 96, truck crops 117, miscellaneous 112.

† Index of farm prices has been completely revised. For earlier data see p. 20 of the November 1934 issue. Revised total, rubber adjusted and sugar adjusted indexes for January 1927-June 1932, appeared on p. 20 of the September 1932 issue. Cash income for marketings of agricultural products revised from July 1933-June 1934. See p. 23 of the September 1934 issue.

‡ The data on retail prices of food until Aug. 15, 1933, were reported as of the 15th of each month. From then on the prices have been reported every 2 weeks. The monthly figures for months subsequent to August 1933 represent the figure nearest to the 15th of the month.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1934	1933	1934

\* New series. For earlier data on building costs, American Appraisal Co., refer to p. 20 of the August 1933 issue. N.I.R.A. highway work started in September 1933; see November 1934 issue for beginning of series. First Home Loan Bank loan data were issued for December 1932. See special note below on foreclosures.

† Revised series. See p. 20 of the October 1933 issue.

§ Index as of Jan. 1, 1935, 198.1

• Compiled by the Federal Home Loan Bank Board and represent the number of foreclosures on all types of properties in 1,013 identical communities in 48 States having 83 percent of the population of the United States. Data prior to October 1933 not published. Comparable annual totals for 1926, 65,857; 1932, 210,821; and 1933, 209,003. Data were not compiled for other years. Months subsequent to September 1934 were computed by means of a link relative to keep series comparable since the figures for these months are from a slightly different number of communities.

• Revised.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1934	1933	1934

\* Revised.

\* New series. For description of Chain Store Age indexes see p. 19 of the December 1932 issue. Comparable data of H. L. Green Co., Inc., sales prior to July 1933 not available. For earlier data on automobiles see p. 19 of the April 1934 issue and variety store sales p. 18 of the March 1934 issue. Data prior to October 1933 on collections not published. Data are currently being received from about 400 stores on open accounts and about 250 on installment accounts. New series on air mail not available prior to May 1934. Series on basis of weight carried was published in the Survey for the period February 1926 to December 1933. For earlier data on department store sales by Federal Reserve districts, see p. 20 of this issue. Note that the combined index of department store sales is computed by the Federal Reserve Board and the district indexes are computed by the Federal Reserve banks. For districts not marked by an asterisk the series are as previously published.

† Revised series. For revisions refer to the indicated pages of the monthly issues as follows: Apparel sales index of Chain Store Age, p. 26, October 1933. Combined index and grocery index of Chain Store Age have been revised for period January 1932 through August 1934. See footnote on p. 26 of the November 1934 issue.

\* New York Evening Post series on newspaper advertising in 22 cities is available for the period 1916 through January 1933. See the 1932 annual supplement and monthly issues prior to December 1934.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1934	1933	1934

<sup>a</sup> Revised.

<sup>3</sup> Not available.

\* For earlier data see the following references: Employment in Baltimore, Milwaukee, Maryland, and Massachusetts, and Federal civilian employment, total United States, pp. 18 and 19, December 1932; employment in banks and brokerage houses, etc., Federal and State highway employment, dyeing and cleaning establishments, and laundries and employment in Chicago, pp. 19 and 20, June 1933; Pittsburgh employment, p. 18, January 1934; Cleveland employment, p. 19, July 1934; trades-union members employed, p. 18, of the December 1932 issue.

† For revised data refer to the indicated pages as follows: Employment in Delaware, New Jersey, Pennsylvania, and Philadelphia, p. 19, September 1933; and for Massachusetts, employment for 1931, 1932, and 1933, p. 19, August 1933. Employment in banks, brokerage houses, etc., for 1932, p. 28, January 1934. Employment in laundries and dyeing and cleaning establishments, p. 20, August 1934. Data prior to that given above on retail and wholesale trade employment not published, excepting for the few additional months given on pp. 6 and 7.

\* Figures represent the condition as of the end of the month shown. They have been pushed back from the data published as of the first of the following month by the Department of Agriculture. This method was followed since September 1932. Figures shown previous to that date in the Survey are as of the first of the month.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1934	1933	1934

▲ Less than one million. Data shown in thousands appeared in the Oct. 1934 issue. Joint-stock land banks in liquidation. These figures will no longer be reported.

\* Not available.

† New series. For earlier data on the following subjects refer to the indicated pages of the monthly issues, as follows: Pay rolls, banks, brokerage houses, etc., p. 19, June 1933; pay rolls in dyeing and cleaning establishments and laundries, p. 19, June 1933; factory weekly earnings, p. 20, October 1932; factory hourly earnings, p. 18, December 1932; weekly earnings, Massachusetts, p. 18, December 1932; construction wage rates, p. 19, September 1933. Earlier data on additional series of agricultural loans outstanding will be shown in a subsequent issue.

‡ Revised series. For revisions on the following subjects refer to the indicated pages of the monthly issues, as follows: Pay rolls of banks, brokerage houses, etc., for 1932, p. 29, January 1934; Massachusetts weekly earnings for 1931, 1932, and 1933, p. 19, August 1933 issue; pay rolls in laundries and dyeing and cleaning establishments, p. 20, August 1934; factory weekly and hourly earnings revised for 1933. See p. 20 of the July 1934 issue. Certain classes of loans included in figures shown through May 1934 have been reclassified by FCA and removed from the agricultural loan category. Data prior to that given on retail and wholesale trade pay roll not published, excepting for the few additional months given on pp. 6 and 7.

§ Beginning with March 1932 method of computing rates was changed.

▲ Increase in wage rates during March 1934 was due to provisions of title I, sec. 204, par. 2, item C of the National Recovery Act, which required State highway department to fix minimum wage scales.

▲ Construction wage rates as of Jan. 1, 1935, common labor, \$0.538; skilled labor, \$1.11.

▲ Breakdown of figure shown in issues up to November 1934.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1934	1933	1934

\* Revised. \* Rate changed Oct. 20, 1933, and Feb. 2, 1934.

\* New series. Earlier data for Federal Reserve member banks shown on p. 18 of the January 1934 issue except as noted below. These data cover 90 cities and supersede the previous data for 101 cities. They are available only from January 1932 to date. One additional city has been added in 1934 to offset the dropping of 1 bank which discontinued reporting. New series on brokers' loans not available for periods not shown. For brokers' loans by reporting New York City member banks see November 1934 and previous issues. See special notes below on Federal Reserve member bank loans and investments.

† Figures subsequent to December 1933 represent gold certificates on hand and due from U. S. Treasury, plus redemption fund—Federal Reserve notes, \$35,138,000 on Feb. 28, \$32,748,000 on Mar. 31, \$31,400,000 on Apr. 30, \$30,000,000 on May 31, \$25,724,000 on June 30, \$24,056,000 on July 31, \$24,000,000 on Aug. 31, \$21,798,000 on Sept. 29, \$22,032,000 on Oct. 31, \$20,137,000 on Nov. 30, and \$19,060,000 on Dec. 31, 1934.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1934	1933	1934

Telephones (net op. income).....mills. of dol.	47.2													

▲ Or exports (—).

▲ Deficit.

▲ Preliminary.

\* Quotation based on paper peso instead of gold peso as formerly. Former equivalent to 44 percent of latter. See note on p. 56 of the March 1934 issue.

\* New series superseding old series which covered the physical movement only. For earlier data see p. 20 of December 1932 issue, net gold imports.

† Revised series. For earlier data see pp. 18 and 20 of the July 1933 issue, insurance written and admitted assets; p. 18 of the June 1933 issue, premium collections, and p. 19 of the July 1934 issue, corporation profits.

• Data are compiled by the American Bureau of Metal Statistics and represent the estimated world output. The series previously presented in the SURVEY covered the principal producing countries which produced the following percentages of the world total: 1928, 87.9; 1929, 87.1; 1930, 85.5; 1931, 82.0; 1932, 75.5; and 1933, 77.5.

\* For values of foreign currencies as given on pp. 86 and 87 of 1932 annual supplement were changed with the reduction in gold content of the United States dollar.

• Decision of Treasury and Federal Reserve to omit gold coin from circulation figures as of Jan. 31, at which time it was carried as \$287,000,000, is not reflected in the January total, which is the daily average figure for the month. Large increase in February resulted from revaluation of the dollar to 59.06 percent of former gold content.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1934	1933	1934

\* New series. For earlier data see p. 20 of the August 1934 issue, yield on United States domestic long term bonds (all issues except those due or callable within 8 years.)  
See special note below on yield on U. S. Treasury bills.

† Revised series. For earlier data see pp. 19 and 33, of the April 1933 issue, yield on domestic and municipal bonds.

‡ Data revised for 1932. See p. 34 of the March 1933 issue. Other revisions for the year 1932 were shown on p. 34 of the April, May, December, 1933, and January 1934 issues.

• Monthly data on yields from 91-day bills for period December 1929 to May 1934 are shown on p. 20 of January 1935 issue. Data on yields from 182-day bills not available prior to February 1934.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1934	1933

\* Revised.

\* New series. Data on airplane travel covers scheduled airlines operating in United States. For data on passengers carried for period of 1926 to 1933 and passenger-miles flown from 1930 to 1933 see p. 20 of the February 1934 issue. For data on miles flown and express carried from 1926 through 1933, see p. 19 of the January 1935 issue.

† Revised series. For earlier data see p. 20 of the April 1934 issue for operating revenues, operating expenses, and net railway operating income of class I railways. For revisions of data for clearances of vessels in foreign trade, see p. 36 of the September 1934 issue.

# Preparation of report turned over to Federal Communications Commission which has not yet compiled its initial report.

\* Preliminary.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1934	1933	1934

\* Revised.

† New series. For earlier data see p. 20 of the April 1933 issue (crude methanol) and p. 19 of January 1934 issue (explosives).

‡ Figures revised due to dropping of Missouri from Southern States classification. See p. 19 of the January 1934 issue for earlier data.

§ See footnote on p. 35 of this issue. Monthly revisions for 1933 are shown on p. 20 of the October 1934 issue.

† Revised series, see p. 36 of the June 1933 issue, for 1932 revisions, exports and imports of fertilizer and imports of vegetable oils; for 1933 revisions on exports see p. 20 of the September 1934 issue; for revised data for crude methanol production for 1933, see p. 36 of the May 1934 issue; quarterly data for the year 1932 and the quarterly periods ended March, June, and September, 1933, also revised. These will be shown in a subsequent issue.

\* Texas only. Louisiana produced 23 percent of United States production in 1933.

† The refined equivalent of crude production is approximately 82 percent.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1934	1933	1934

\* Revised. † Preliminary.

\* New series. For earlier data see p. 19 of the May 1933 issue, manufactured and natural gas, and p. 19 of the June 1933 issue, butter consumption. Beverage figures are from the U. S. Bureau of Internal Revenue monthly data on distilled spirits available beginning July 1933 and on fermented malt liquors, April 1933.

† For revised data for electric-power production for 1932, see pp. 38 and 56 of the May 1933 issue; for 1933 see p. 38 of the May 1934 issue; for manufactured gas for 1932 and 1933 and natural gas for 1931, 1932, and 1933, see p. 20 of the May 1934 issue; for butter production for 1931 see p. 20 of the January 1933 issue.

\* Certain figures for nonreporting breweries estimated for October 1934.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1934	1933	1934

\* Revised.

\* Dec. 1 estimate.

† Final estimate.

‡ Prices not available.

\* New series. For earlier data see p. 20 of the November 1932 issue, barley, receipts of milk in Greater New York, p. 20 of the August 1934 issue. Since the division of no. 2 barley by the Department of Agriculture into straight and malting grades as of July 1, 1934, prices for each grade have been reported separately.

† Revised series. For revisions refer to the indicated pages of the monthly issues, as follows: For 1931 on apparent consumption of cheese, production of total and American whole-milk cheese, and production of condensed and evaporated milk, p. 20, January 1933. For earlier data on stocks (cold-storage holdings) of total and American whole-milk cheese, p. 19, April 1933. For 1932 revised data on production of factory and American whole-milk cheese, production of condensed and evaporated milk, p. 39, September 1933. For subsequent revisions for 1932 on production of evaporated milk, p. 39, November 1933. For final revision for 1933, car-lot shipments of apples, citrus fruits, onions, and potatoes, see p. 20, January 1935 issue. For 1932 exports of rice, p. 39, June 1933. For revised figures on 1933 exports of grains (total, barley, corn, and rice) by months, see p. 20 of September 1934 issue.

# See footnote on p. 35 of this issue. Data for 1933 also revised, see p. 20 of the October 1934 issue.

• Bulk evaporated milk not included since December 1931.

• Represents the visible supply east of the Rocky Mountains as reported by Dun & Bradstreet.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey			1934	1933	1934

\* Revised. Note major correction in data on imports of sugar from Cuba June-November 1934.

† New series. For earlier data, see p. 20 of the August 1934 issue, for receipts of refined sugar from Hawaii and Puerto Rico and imports from Cuba. Data prior to May 1934 not available on imports of refined sugar from the Philippine Islands.

‡ For revised data for 1932 on sugar meltings and stocks, see p. 41 of the May 1933 issue. For 1932 revisions of sugar imports and exports, see p. 41 of the June 1933 issue.

§ See footnote on p. 35 of this issue. Data revised for 1933. See p. 20 of the October 1934 issue.

¶ Data not available.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1934	1933	1934

\* Revised.

† Revised series. For revisions refer to the indicated pages of the monthly issues, as follows: Exports of tobacco for 1932, p. 42, June 1933—data revised for 1933. See p. 20 of the September 1934 issue; 1932 final revision of anthracite and bituminous coal production, p. 42, January 1934; anthracite shipments for 1932, p. 42, December 1933; consumption of bituminous coal by electric power plants, p. 42, May 1933; beehive and byproduct coke for 1932, p. 43 of December 1933 issue and for 1933 revisions see p. 43, July 1934. Crude petroleum production, stocks, east of California (total), at refineries and at tank farms and pipe lines, and wells completed, for 1932. See footnote on p. 56, November 1933.

# See footnote on p. 35 of this issue. Data revised for 1933. See p. 20 of the October 1934 issue.

† Price converted to short-ton basis. Data prior to November 1931 not published.

\* Dec. 1 estimate.

/ Final estimate.

\$ Data revised for 1933. See p. 20 of the January 1935 issue.

‡ Preliminary.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1934	1933				1934							
	Decem- ber	Decem- ber	January	February	March	April	May	June	July	August	Septem- ber	October	Novem- ber

\* Revised.

\* New series. For data on lumber exports for period of January 1919 to September 1932, see p. 20 of the November 1932 issue. For earlier data on leather stocks, see p. 19 of the January 1935 issue. New series on leather gloves and mittens cover 234 identical manufactures as reported to the U. S. Department of Commerce, Bureau of the Census. Data prior to July 1933 are not available. These data are not comparable with figures through January 1934 previously shown in the Survey.

† Data revised for 1932, see p. 44 of the June 1933 issue, exports of Douglas fir lumber and timber.

‡ Data for March, June, August, and November 1934, are for 5 weeks; other months, 4 weeks.

\* Preliminary.

† Data revised for 1933. See p. 20 of the September 1934 issue.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1934	1933	1934

\* Temporarily discontinued.

\* New series. Earlier data on furniture activity, all districts, prior to April 1933 not published. For imports of iron and steel, see p. 20 of the November 1932 issue; for castings, p. 20 of the April 1933 issue. New series on iron and steel composite price are shown on p. 19 of the January 1935 issue.

† Data revised for 1932. For revisions, see p. 45, exports of southern pine lumber and timber, and p. 45, iron and steel, of the June 1933 issue. Data revised for 1933; see p. 20 of the September 1934 issue.

‡ Revised. Data prior to April 1933 not published.

§ Beginning with January 1934 the report includes all known operators. Prior to this time approximately 89 percent of the listed capacity was included.

¶ Imports from Cuba not included.

# See footnote on p. 35 of this issue. Data revised for 1933; see p. 20 of the October 1934 issue.

\* Data for March, June, August, and November 1934 are for 5 weeks; other months, 4 weeks.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1934	1933	1934

\* Revised.

\* New series. For earlier data see p. 18 of the January 1934 issue, United States Steel Corporation shipments, p. 20 of the December 1932 issue, tin and terneplate, p. 19 of the January 1933 issue, stokers. Current oil-burner series available only back to January 1933 are based on reports from 149 concerns; see p. 45 of the May 1934 issue for 1933 data.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1934	1933	1934

\* Revised.

† New series; for earlier data, see p. 20 of the December 1932 issue for tin and terne plate; p. 20 of the July 1934 issue for machine tools (including forging equipment.)

‡ Revised series; for earlier data on new orders for electrical goods see p. 19 of the August 1933 issue.

§ Present series on water systems now cover 49 companies. Data revised beginning January 1933. See p. 49 of the December 1934 issue. Note the complete revision for 1934, zinc.

¶ Data on exports revised for 1933; see p. 20 of the September 1934 issue.

# Series covering shipments and unfilled orders temporarily discontinued.

\* Data for 1932, revised; for revisions see p. 48 of the June 1933 issue, exports of refined and total imports of copper for 1933 revisions on zinc, see p. 49 of the January

1934 issue. See footnote on p. 35 of this issue. Data for 1933 revised; see p. 20 of the October 1934 issue.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1934	1933	1934

\* Revised.

† New series. For earlier data on hand-type vacuum cleaners see p. 20 of the August 1934 issue. Data prior to October 1931 not published on brass plumbing fixtures.

‡ Revised series. For earlier data see pp. 18, 19, and 20 of the November 1933 issue for chemical, mechanical wood pulp, and total paper; p. 49 of the June 1933 issue for 1932 for chemical wood pulp imports; and p. 19 of the December 1933 issue for book paper.

# See footnote on p. 35 of this issue. Data for 1933 revised. See p. 20 of the October 1934 issue.

\* Beginning with January 1934 figures have been compiled by the Code Authority of the Ingot Brass and Bronze Industry. The figures are more complete than those on deliveries previously shown. Shipments of the concerns formerly reporting contribute about 80-85 percent of the total for the present series.

The Code Authority for the Paper Industry is expected to shortly resume publication of some of these paper figures.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1934	1933	1934

\* Revised. † Preliminary.

† Revised series. For earlier data see pp. 19 and 20 of the December 1933 issue for writing, wrapping, and other grades of paper; for 1932 revisions, p. 50 of the June 1933 issue for crude rubber imports; and for 1932 revisions, p. 50 of the May 1933 issue for world and United States stocks. Data on consumption of rubber for tires revised for 1932, 1933, and 1934. For revisions see p. 51 of the August 1934 issue.

§ The Bureau of the Census has changed the title of the "Boxboard" report to "Paper board" since data actually cover all board of .012 of an inch or more in thickness reported by the cooperating manufacturers. The totals for paper-board production and shipments, as given above, computed from the American Paper and Pulp Association figures through December 1933, represent the total for all paper board. Figures given on production, operations and new and unfilled orders are for 94 identical manufacturers; shipments and finished stocks are for 78 manufacturers and consumption and stocks of waste paper for 82 manufacturers. Revised figures given are not comparable with data shown for months prior to October 1933.

† Data for 1934 are estimated to represent approximately 97 percent of the industry; data are estimated to cover 79 percent of the industry for 1929-33, inclusive, and 75 to 80 percent prior to 1929.

\* See footnote on p. 35 of this issue. Data for 1933 revised. See p. 20 of the October 1934 issue.

† New series. See p. 19 of the December 1933 issue for the complete paper-board series. New series compiled by the Container Code Authority, Chicago, Ill., from reports from all members of the industry of record beginning in January 1934. The volume of companies not reporting each month is estimated by the Code Authority, so as to keep the series comparable. The solid fiber figures are complete as reported. Prior to January 1934 data covering this industry were compiled by the Paper Board Industries Association.

Monthly statistics through December 1931, together with explanatory footnotes and references to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1934	1933	1934

\* Revised.

† New series. Earlier data not published on rubber heels and soles prior to December 1932, and on illuminating glassware prior to July 1932 (except production and percent of capacity); for earlier data see p. 20 of the June 1933 issue, face brick, machine production.

§ Census Bureau has comparative summaries for 2 months only on structural clay products. Series not comparable over 13-month period.

† Adjusted for degrading and year-end physical inventories.

‡ Revised data for 1933 represent total production for the United States.

# Series on glass containers are not comparable for 1934 and earlier years due to increase of number of firms reporting to 44. Shipments of the 44 firms for the year of 1933 amounted to 33,056,706 compared with 23,511,963 for the 30 firms reporting a year ago. Comparable statistics on shipments for the companies, now reporting by years, from 1928 to date were as follows (in gross): 1928, 31,943,016; 1929, 33,765,896; 1930, 31,905,933; 1931, 31,413,508; 1932, 26,947,949; and 1933, 33,048,747. Data are not available for this period on production and stocks, nor are monthly figures on shipments available. It may be noted from the trend of these data that the monthly figures prior to 1934 had a downward bias. Basis of estimating capacity was changed in computing the new series.

• In October 1933 4 new companies were included in the report and 1 additional company in January 1934. Since that month, the coverage of the industry is 100 percent. For preceding periods the coverage varied but was about 80 percent. Overlapping figures are available for October 1933. See the October 1934 issue for October 1933 data for the smaller number of firms.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1934	1933	1934

• Revised. / Final estimate.

\* New series. For earlier data on gypsum, see p. 20 of the January 1933 issue; the new series on hosiery compiled by the Hosiery Code Authority and are estimated to represent 95 percent of the industry. The revised data on hosiery presented in the October 1934 issue are based on a check of the data previously reported, made by the Code Authority. Data on cotton cloth finishing are from the National Association of Finishers of Textile Fabrics and cover practically all the industry; comparable figures are not available prior to December 1933; the production statistics are prorated from data for 4-week periods; stocks are as reported at end of each 4-week period.

† For revisions for crop years 1931-32, 1932-33, and 1933-34, see p. 52 of the October 1933 issue, p. 52 of the September 1933 issue, and p. 53 of the October 1934 issue, respectively.

† For revisions of cotton consumption domestic stocks and spindle activity for the year ended July 1932, see p. 20 of the February 1933 issue, and for cotton consumption domestic stocks and spindle activity for the year ended July 1933, see pp. 52 and 53 of the November 1933 issue. For revision of cotton stocks and spindle activity for year ended July 1934 see p. 52 of the October 1934 issue.

‡ Data revised for 1932; for revisions, see p. 53 of the June 1933 issue. Data revised for 1933; see p. 20 of the September 1934 issue.

§ See footnote on p. 35 of this issue. Data revised for 1933; see p. 20 of the October 1934 issue.

• Stocks at end of 4-week periods through June 16. July figures are averages for July 14 and Aug. 11. August figure as of Sept. 8. Subsequent data for succeeding 4-week periods.

† No quotation.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of data, may be found in the 1932 Annual Supplement to the Survey	1934	1933	1934

<sup>a</sup> Revised.

<sup>b</sup> Since July 1934 report has been on a weekly basis. July figure here is for 4 weeks; August, 4 weeks; September, 5 weeks; October, 4 weeks; November, 4 weeks, and December, 5 weeks. Figures for July and succeeding months are computed from Census Bureau figures so as to represent 100 percent of the wool industry.

<sup>c</sup> Data revised for 1932. For revisions see pp. 63 and 54 of the June 1933 issue. Data also revised for 1933; see p. 20 of the October 1934 issue.

<sup>d</sup> See footnote on p. 35 of this issue.

<sup>e</sup> Compiled by the Silk Code Authority (The National Federation of Textiles, Inc.) and represent the percentage of operations based on an 80-hour week (2 shifts of 40 hours each). Data are not comparable with the series previously shown in the Survey which were based on a smaller sample and which were computed on the basis of a 48-hour week. The code authority expects to adjust the old series to a comparable basis, when opportunity affords.

<sup>f</sup> New series. Silk spindle activity, compiled by Silk Throwing Code Authority; not comparable with spinning data previously shown. For earlier data on silk piece goods (stock-carrying mills only) see p. 20 of August 1934 issue.

<sup>g</sup> Beginning with the July 1934 report the statistics are reported on the basis of 4 and 5 weeks, the weekly distribution being determined by the Saturdays. The statistics presented herewith are still based on the pre-code computed norm (currently based on the single-shift performance over the 5-year period 1928-32). The current data represent practically complete coverage of the industry.

<sup>h</sup> Foreign receipts for year 1934 are compiled by U. S. Department of Agriculture and are not comparable with data carried through December 1933. This results in a total figure which also is not comparable with earlier data.

<sup>i</sup> Compiled by Bureau of the Census and represent stocks of raw wool held by all dealers, topmakers and manufacturers who usually hold significant stocks of wool. Census report gives additional details on raw wool, as well as stocks of tops, nolls, and carpet wool which are not included in the totals here given. Figures by types and origin are different break-downs of same total.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1934	1933	1934

\* Revised. \* Preliminary.

\* New series. For earlier data see p. 20 of the February 1934 issue for total shipments, accessories and parts, and registrations of new commercial cars.

† Revised series. For earlier data see p. 19 of the August 1933 issue for fire extinguishers and passenger-car registrations; and p. 55 of the June 1933 issue for 1932 exports locomotives. Data on automobiles revised for 1933. See p. 55 of the August 1934 issue.

‡ Index of sales of new passenger cars is shown on p. 26 of this issue.

§ Data revised for 1932. See p. 54 of the June 1933 issue. Data revised for 1933. See p. 20 of the September 1934 issue.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1934	1933	1934
