## SURVEY

## OF

# CURRENT BUSINESS 

# UNITED STATES <br> DEPARTMENT OF COMMERCE bureau of foreign and domestic commerce WASHINGTON 

## Preserve this issue

since, owing to reduced printing funds, there will be no 1933 ANNUAL SUPPLEMENT TO THE SURVEY OF CURRENT BUSINESS.

Every effort has been made to complete the 1932 statistics with this issue, but, in a few instances, December data still are lacking. If you do not keep a complete file of the SURVEY, it is suggested that the missing figures be posted in this copy as soon as they are available. The entire record, excepting the back data which have been published for the new and revised series in the issues since September, 1932, then will be contained in the 1932 ANNUAL SUPPLEMENT and the current March number. For a complete file of the new and revised series presented since the September, 1932, issue, it will be necessary to retain also the special tables.

## Preserve the weekly supplements

 since all of the data in the WEEKLY SUPPLEMENTS are not republished in the monthly numbers-particularly the weekly statistics on page 2 and the graphs on page 1.
## Note the new weekly feature

Beginning February 23 a brief summary of the trend of the weekly statistics is presented each week. This has no counterpart in the monthly issues.

## Business Situation Summarized

BUSINESS during February has been adversely affected by a number of recent developments，out－ standing among which were the banking holidays in Michigan and elsewhere．These not only had adverse local effects，but contributed to the renewed uncer－ tainty in financial markets．Money in circulation has again moved sharply upward to a new high level， accompanied by a renewed outflow of gold and a rather general change in the monetary situation contrasting with the favorable developments in the latter half of 1932．Labor difficulties have also tended to hold back production in the important automotive industry．
Available weekly figures indicate that the usual February rise in business was not realized，a condition similar to that prevailing a year ago．Steel production has advanced to the highest point reached in the fall of 1932，but the upward movement has been character－ ized by irregularity．Automobile production tended downward in February．Construction contracts let during the first half of the month were lower than in January．The textile，clothing，shoe，and food prod－ ucts industries continued to operate at a relatively favorable level．After receding rapidly in the two pre－ ceding months，commodity prices firmed in the middle of February mainly as a result of sharp gains for a few individual commodities．
Increased output was reported for a number of the major manufacturing industries in January，but the
aggregate increase，while marked，fell short of the usual rise．The reduction in mineral production was in excess of the usual seasonal change．After adjustment for seasonal factors，the iron and steel，food products， lumber，tobacco manufactures，zinc，silver and lead indexes were higher than in December．Decreases after adjustment were reported for the textile， automobile，cement，coal，and petroleum industries， although for the first two mentioned，actual output increased．

Both employment and pay rolls declined during the month，with reductions reported for most of the in－ dividual groups．Factory employment usually de－ clines slightly in January，but the adjusted index dropped more than a point．Factory pay rolls con－ tinued to decline．

The decline in retail trade in January，as measured by the department store sales，was more than usually experienced from the December peak．The index dropped to a new low and was 23 per cent below a year ago．Available statistics for the first half of February indicate that this relative decline has continued for that period．

The indexes of exports and imports dropped to the level of last August，the previous low point for ex－ ports．Freight－car loadings in January were lower than in December，both actually and after adjustment for seasonal influences．

## MONTHLY BUSINESS INDEXES

## Comparison of Principal Data, 1929 to 1933

CONSTRUCTION CONTRACTS AWARDED-(BILLIONS OF DOLLARS)

STEEL INGOT PRODUCTION - (MILLIONS OF TONS)

AUTOMOBILE PRODUCTION - (THOUSANDS OF CARS)

FREIGHT CAR LOADINGS - (MILLIONS OF CARS)

## Commodity Prices

COMMODITY prices continued to fall in January， but during the first three weeks of February the index of wholesale prices（the only one available on a weekly basis）indicates that prices have recently stif－ fened．Wholesale prices averaged 2.6 per cent lower in January than in December，food retail prices were 4 per cent lower on January 15 than in mid－December， farm prices were 1.9 per cent lower，and Fairchild＇s retail price index of department store articles was 1 per cent lower on February 1 than on January 3.

The decline in wholesale prices in January was the sharpest since July，1930，the index being 9.4 per cent lower than in January of last year and 37 per cent lower than in July，1929．Of the 784 commodities or price series included in the index， 262 fell from December to January， 84 advanced，and 438 did not change．This compares with 239 declines， 91 advances，and 454 un－ changed quotations from November to December， 1932．Prices of petroleum products were especially weak，dropping 14 per cent，after having already fallen nearly 7 per cent in the preceding month．Butter， cheese，and milk；miscellaneous foods；silk and rayon； and plumbing and heating supplies，alse fell sharply， the losses exceeding 5 per cent．Prices of livestock and poultry，miscellaneous farm products，cereals，leather， knit goods，woolen and worsted goods，nonferrous
metals，brick and tile，lumber，fertilizer materials， furnishings，and pulp and paper decreased 1 to 5 per cent；while 8 other subgroups declined only fractionally． Grains，hides and skins，and cattle feed advanced 3 to 4 per cent．By economic classes，raw materials averaged 3.6 per cent lower in January than in the preceding month，finished products， 2.5 per cent lower，and semifinished manufactures， 1.4 per cent lower．

Food retail prices averaged 4 per cent lower on Janu－ ary 15，than on December 15，the sharpest monthly drop since February，1931．Of the 42 articles of foods on which quotations are regularly received， 25 declined， 6 advanced，and 11 did not change．Food retail prices in mid－January were 5.2 per cent below their 1913 average．

Farm prices were also 1.9 per cent lower on January 15，than on December 15．From mid－December to mid－January prices of grains rose 3 per cent，the first advance since last August and those of cotton and cot－ tonseed increased 4.6 per cent，the first advance since September．After rising sharply from July to Decem－ ber prices of poultry products turned downward in the latter month and on January 15，were one－fifth lower than in the preceding month．Dairy products and meats fell 1.4 per cent and 1.9 per cent，respectively．

## Domestic Trade

RETAIL trade early in January experienced the usual postholiday dullness and was featured by the usual midwinter sales. During the second week there was a moderate recovery which carried through the month but was not of sufficient force to reach the preholiday levels. The inventory and clearance sales which characterized the intensive merchandising for the month brought the volume of goods moved to a point not far below the level of January of last year, but the sales value was off about one-fifth. Colder weather in the first half of February stimulated the movement in certain lines of apparel, but there was no appreciable change in the total volume.
In the wholesale and jobbing fields there was a slight increase in orders during January due to low retail stocks which were diminished by sales activity. The first two weeks in February brought a delayed movement of spring apparel lines, but the late season prevented this from reaching the usual volume.
Department store sales in January had a greater than seasonal decline and the adjusted index fell to a record low. The month's sales were 5 per cent under December and 23 per cent below January of last year. Chain-store sales showed a slight gain after allowance for seasonal factors.
Purchasing in small quantities on a hand-to-mouth basis is reflected in the sustained level of l.c.l. freightcar loadings. Despite the declines in general merchan-
dising levels, except for the usual seasonal movements, the volume of shipments of this character has been practically unchanged since the middle of last summer.
Postal receipts contracted in January from the high Christmas level, in about the same proportion as in January a year ago. Due to higher rates, the present receipts are running only 3 per cent below January of last year and 15 per cent below the same month in 1931.
The rise in commercial insolvencies that usually takes place in January did not occur in as great proportion this year as has been experienced recently. Between December and January the advance amounted to 18 per cent whereas last year it was 25 per cent. The total for the month was also lower than a year ago and below the same month of 1931. Liabilities were considerably below the figure reported for January, 1932, but were larger than the comparatively low totals of the fourth quarter of last year, due to seasonal influences.
Establishment of corporate business organizations took place at an unusually high rate in January. Reports from four key States show a larger number of new corporations than were founded in any month last year, except January. This is the second year that January has brough marked activity in this field, and the totals for the month in this and the preceding year were in excess the January figures of 1930 and 1931.

## DOMESTIC TRADE STATISTICS

## Employment

EMPLOYMENT throughout the United States experienced a decline during the month of January. The United States Bureau of Labor Statistics figures show an aggregate downward movement (based on reports nearest the 15 th of the month) of approximately 4 per cent. In the same period pay rolls contracted by about 5 per cent.

Of the 17 industrial groups reported in the Labor Department's survey, increases in employment were reported in 2. The canning and preserving industry had a gain of 1 per cent due to seasonal activity in the Southern States. The only other gain was a fractional rise in hotel activity caused by conventions and meeting held during the holiday period.

Production of bituminous coal was maintained in the early part of January at approximately the preholiday level. Employment in the industry changed very slightly and pay rolls declined 4.2 per cent. Current employment is 14 per cent below January of last year, while pay rolls show a loss of about one-third. In the anthracite fields a sharp reduction in the number employed was only partially attributable to seasonal changes. Between December and January the employment index fell 16 per cent. At the same time pay rolls moved downward 23 per cent. The present rate of employment in this branch of the industry is 31 per cent below January, 1932.

The Federal Reserve Board's unadjusted factory employment index for January was 2.5 per cent below the December level. Part of this loss was seasonal,
however, and the adjusted index was 2 per cent lower. Factory pay rolls continued to move downward and reached a point below the record low total of last summer. During January there is usually a period of slackening in manufacturing establishments caused by inventory taking and manufacturing readjustment and repairs. This tends to shorten the operating time of the plants involved and while it is not a major factor in altering the number employed, it is usually reflected by the drop in pay-roll totals.

Both the largest decline and the largest gain in manufacturing employment came from highly seasonal industries. The beet-sugar industry reported an employment loss of 43 per cent during the first month of the year. At the same time a rise of 15 per cent was reported for the number engaged in the manufacture of fertilizer.

In the public-utility fields there was an extension in the steady declines in employment registered in the past few months, although in all cases the losses continue fractional. In the power, light, and water industries the aggregate employment decline amounted to 1 per cent while the loss in pay rolls was smaller. Telegraph and telephone employment held at approximately the December level but pay rolls were off 2 per cent.

No change was reported in January in the number of trade-union members employed and the total remained equal to the record low points of December and last July. Currently the number of union workers is running 4 per cent below January of last year.

## Finance

CONDITIONS in the country's financial markets were irregular during January. During the first half of the month security prices made periodic gains but for the month as a whole stock prices showed only a slight net gain and the volume of trading was less than in any opening month of the year since 1922 . Dealings in bonds were also relatively small and prices showed no significant net change for the month.
An element of uncertainty appeared throughout the month in the less-than-seasonal return of currency after the holiday season. After the middle of the month circulation actually increased despite the normal seasonal downward trend. The reported trend reflected banking difficulties in several middle west areas which culminated on February 14, in a statewide banking moratorium in the State of Michigan. The announced bank holiday of eight days was designed to allow time for handling a difficult situation while permitting depositors to draw on their accounts up to 5 per cent of their deposits. The moratorium period was later extended. Further difficulties in Maryland resulted in the declaration of a 3 -day banking holiday in that State on February 24.
Money rates remained during January at the unusually low levels of recent months. This trend continued during the first part of February, but with the movement of funds from financial centers after the announcement of the Michigan bank holiday and the accompanying uncertainty, bill rates stiffened in response to the action of the Federal Reserve Bank of New York in its advance of open-market rates.

The member bank reserve account showed a decline of $\$ 63,000,000$ during January. A statement issued by the Federal Reserve Board on January 5, announced the reserve system's policy of maintaining a substantial volume of excess member bank reserves. This was followed by reserve bank reductions in Government security holdings during January. This movement was reversed during the first part of February as the result of the trend in money in circulation and the disturbances resulting from the unfavorable banking situation in important centers.
The result of the month's gold movements was a substantial gain of over $\$ 100,000,000$, thus continuing the steady net inflow of the metal which set in after the heavy withdrawal of foreign balances in the United States in May and June of 1932. The movement, however, was definitely reversed in February.
The decline in loans and the increase in investments of member banks, continued a trend during the opening month of the year which featured member bank statements during all of 1932. An important part of the investments represents the absorption of United States Treasury issues through which funds are provided for the Reconstruction Finance Corporation. Up to January 31 the Federal Government had advanced through the corporation approximately $\$ 1,789,000,000$ in cash to the various groups of borrowers among which banks received advances of $\$ 894,000,000$, of which approximately $\$ 279,000,000$ has been repaid.

- Large additional amount placed under earmark in London, but not transferred during the month.

## Foreign Trade

UNITED STATES merchandise exports amounted to $\$ 126,000,000$ during January, a decrease of 8 per cent as compared with December, 1932, while imports of $\$ 96,000,000$ were about 1 per cent smaller. Exports exceeded imports to the amount of $\$ 24,600,000$, in comparison with a favorable balance of $\$ 35,000,000$ in December and $\$ 14,500,000$ in January, 1932. Gold imports aggregated $\$ 128,500,000$, an increase of $\$ 28,000,000$ over the metal imports in December.

The decline in the January merchandise exports was due in large part to the normal seasonal reduction in shipments of raw cotton, which were valued at $\$ 29,700,000$, in comparison with $\$ 39,000,000$ in December. Quantity exports of raw cotton totaled $426,000,000$ pounds, as compared with $561,000,000$ pounds in December and $492,000,000$ pounds in the corresponding period of 1932. Exports of rubber manufactures, machinery, manufactures of iron and steel, dried and canned fruit, and leaf tobacco, also showed moderate declines in value. On the other hand, exports of lard, wheat, apples, cotton cloth, refined mineral oils, and automobiles increased, as compared with the shipments in December. Quantity exports of lard, evaporated and dried fruit, leaf tobacco, and cotton cloth were larger in January, 1933, than in the corresponding period of 1932.

Total finished manufactures exports aggregated $\$ 44,300,000$ in January, a decrease of about $\$ 800,000$ as compared with December. The value of foodstuffs, amounting to $\$ 16,200,000$, and semi-manufac-
tures, totaling $\$ 15,800,000$, increased slightly. Finished manufactures were 37 per cent of the total exports, approximately the same proportion as in January, 1932, and in the last half of 1932. Crude materials amounting to 36 per cent, and semi-manufactures, to 13 per cent of the total exports, were also a larger share of the exports than in the corresponding period of 1932, while foodstuff exports dropped to 14 per cent from 16 per cent a year before.

The increase in the favorable merchandise balance in January in comparison with that of the corresponding period of 1932 was due in part to a drop in imports of leading crude materials and foodstuffs. In the early part of 1932 the volume of total imports was maintained at a relatively high level while in January, 1933, quantity imports of leading industrial materials and foodstuffs were considerably lower. Among these were raw silk, crude rubber, unmanufactured wool, hides and skins, copper, burlaps, newsprint, coffee, and cane sugar. Imports of cocoa were 51 per cent larger than in January 1932, and cotton cloth, linen fabrics, unmanufactured tobacco, and crude petroleum showed comparative moderate increases.

The value of finished manufactures imports in January dropped to the lowest level since July, while each of the other classes approximated in value the average in the fourth quarter of 1932. Finished manufactures were 23 per cent of the total imports. Foodstuffs, and crude materials plus semimanufactures, accounted for 32 per cent and 45 per cent of the total imports, respectively.

## Real Estate and Construction

CONSTRUCTION contracts awarded (average daily value) increased 7 per cent from December to January, contrary to the usual December to January change. February activity again reversed the usual January-February rise when the daily average contract value for the first two weeks in February fell 19 per cent below the January level. February contract averages were higher than the previous January daily figures in 1931 and 1932.

The Federal Reserve Board's adjusted index of construction contracts awarded, based on a three months moving average of values and including a prorated estimate for February operations, declined 21 per cent from December. Last year the decline between December and January was 18 per cent.

According to F. W. Dodge Corporation statistics, January, 1933, total contract valuation was but 2 per cent under January, 1932, which in turn was 63 per cent under January, 1931. However, public works and utility contracts accounted for more than half the value of all January contracts. These contracts were but 28 per cent of all contracts in January, 1932. The combined value of contracts in the Middle Atlantic, Pittsburgh, New York City, and New Orleans territories accounted for 60 per cent of the total value of all awards in the 37 States east of the Rocky Mountains. January, 1933, contracts were larger than those of January, 1932, in 5 out of the 13 territories, and New

York City was but 2 per cent under last year. The territories showing increases over a year ago were Texas, New Orleans, Kansas City, St. Louis, and the Central Northwest.

Measurable footage of public works and utilities awards was at the highest level for any January since 1930. However, the large footage for these classes was almost entirely accounted for by contracts for transportation terminals and had no counterpart in the value data on public works and utility contracts. Average daily residential contracts for January and the first two weeks in February showed their regular seasonal movement, January being below December and February above January.

Production, shipments, and new orders of building materials displayed mixed trends. Maple flooring shipments and cement production showed declines of 6 and 30 per cent, respectively, while oak-flooring shipments increased 2 per cent.

The Engineering News-Record index of construction costs declined slightly, but remains above the 1932 average. The indexes of brick and frame house building material prices continued to decline in January and are at their lowest points of the business recession.

Real estate market activity rose 6 per cent in December over the previous month's figure. No longterm real-estate bonds were floated in January.

## Transportation

AMONG the interesting recent developments in the transportation field was the report of the National Transportation Committee, set up by a group of banking, insurance, and educational institutions to study the problems of the railroads and to suggest methods of overcoming some of the present difficulties. Their report was made public on February 15.

Among the recommendations of the committee were included the following: (1) Regional consolidations should be hastened; (2) railroads should be permitted to own and operate competing services, including water lines; (3) inland waterways should bear all costs of amortization, interest, maintenance, and operation and, if they can not compete on this basis, should be abandoned; (4) automotive transportation should be regulated and should bear its fair burden of tax; (5) abandonment of present system of rate making based on fixed valuation; and (6) regulation jurisdiction should be extended to the whole national transportation system.

Freight-car loadings during the first two months of 1933 failed to expand to the customary extent. The weekly figures reveal some irregularity of movement, partly the result of the variation in coal loadings, but for the current year, through the week of February 18, actual loadings were 12 per cent below a year ago. While this is a relatively better comparison than for the year 1932, when the decline amounted to 24 per cent, the downward trend has not yet been
arrested. January loadings on a daily average basis were lower than in December, whereas there is usually a slight rise for the month. As a result the adjusted index declined for the first month since last July.

The drop in coal loadings, from a weekly average ${ }_{\text {of }}$ of 125,000 cars to 107,000 cars, was responsible for the decline in the January total since all other classes were larger when adjusted to a daily average basis. Last year coal loadings were approximately the same in the two months, the drop a year ago being mainly the result of the falling off in l. c. l. merchandise. This year the l. c. l. shipments (on a daily average basis) increased by the usual seasonal amount.

The December operating statistics were better than indicated by the preliminary figures. Gross operating revenues for 1932 of the Class I carriers, representing a total mileage of 242,138 miles, were $\$ 3,162,000,000$, a reduction of one-fourth from the preceding year. Operating expenditures were reduced by a similar percentage, and net railway operating income dropped to $\$ 334,000,000$, equivalent to a return of 1.25 per cent on their property investment and 37 per cent below 1931. December operating statistics were relatively favorable by reason of the continued control of expenditures and the seasonal improvement in passenger traffic. January statistics are not yet available, but usually there is a drop in the operating income in that month. The first individual reports, were relatively favorable.

## RAIL AND WATER TRAFFIC

# Automobile and Rubber 

$A^{\mathrm{T}}$UTOMOBILE production in the early part of January did not experience a prompt postholiday revival. Several producers encountered manufacturing delays that lasted beyond the middle of the month. During the third week total production resumed its upward trend which carried through to the month end. The first week in February another interruption in output was caused by labor difficulties. While the major differences centered around a few plants the effect was sufficient to cause a wide reduction in total units produced. This unsettled condition prevailed throughout the first three weeks of February.

Retail sales of passenger cars in January advanced sharply from the low levels established in the preceding months. Preliminary estimates indicate that the sales total for the month will approximate that of January, 1932. The upward trend continued in a more moderate degree through the first half of February. Dealers stocks continue low with the retail movement of cars well in line with receipts from manufacturers.

Based on returns from 21 States, R. L. Polk \& Co. estimate the January sales of commercial vehicles for the entire country at 12,000 units. Registrations in the reporting states were 19 per cent below January of last year but were 10 per ceat ahead of the December total. Exports of both commercial vehicles and passenger vehicles in January advanced sharply and
were well above the totals of a year ago. The total number of trucks shipped was greater than recorded for any month of last year except March.
A sharp decline during January in employment and pay rolls in the rubber products industries was caused largely by reduced activity in the manufacture of rubber boots and shoes. The employment index of the Bureau of Labor Statistics for the tire industry receded only 1.5 per cent while the boot and shoe figure was off 13 per cent. Pay rolls in January for the entire industry were 10 per cent below the December total. January shipments of crude rubber from British Malaya and Ceylon continued at a high figure but despite this fact and the low consumption rate of the United States there was a lessening in visible stocks of the commodity. The world total on February 1 showed a decline of 1 per cent from the close of the preceding year.
Imports into the United States were kept at a low volume for January, the total being only slightly above the lowest months of last year and under any January receipts for several years.
Preliminary statistics for January show pneumatic tire production as less than the December figure and well under that for any January in recent years. January shipments of casings exceeded production, indicating that manufacturers' inventories registered a decline.

1 Adjusted for seasonal variation.

## Chemical Industries

CHEMICAL industry operations continued at a low ebb in January but started picking up somewhat in the latter part of the month and in early February in anticipation of spring demand. There was little forward buying, most purchases being confined to immediate needs, and stocks in the hands of consumers remained low, so that the usual seasonal increase in demand was expected to be more strongly felt a little later. Unseasonal weather in January reduced consumption of many cold weather products but stimulated sales in medicinal and allied lines. The curtailed rate of operations in the iron and steel industry kept supplies of basic products in the coal-tar group low, and this served to support the general chemical price structure.

Chemical production, as measured by electricity consumption of manufacturing plants, has been holding up better than any other industrial group. Employment in the industry rose more than seasonally in January to the highest level recorded since last June. The increase from the low point reached in August has amounted to approximately 6 per cent, the present level being, however, still about this same proportion below employment at this time a year ago. Pay rolls in the chemical industry increased slightly in January, the volume having changed but slightly since last July.

Ethyl alcohol production dropped severely to a new record low volume in December, 60 per cent less
than was turned out in October, and as much below production in the same month of 1932. The output of both refined and synthetic methanol, however, increased over 20 per cent in December, and was considerably greater than in this period a year ago.

Reflecting the continued low rate of operations in the iron and steel industry, the output of by-product coke in January remained about the same as in December, this being a fifth less than a year ago.

Wood rusin production increased 7 per cent in January after declining in the two preceding months. Operations were a third greater than at the beginning of 1932. Wood turpentine production declined slightly at the first of the year but was also about a third greater than at this time a year ago.

Fertilizer consumption in Southern States started the usual January seasonal rise a little more strongly than last year. The decision to extend further government seed and fertilizer loans, although on a restricted basis, stimulated both production and imports. There were some important developments in the fertilizer materials field in January. Production of potash $_{i}$ from silicate ores, such a feldspar and glauconite, by the Glaeser process developed during the World War is being undertaken in the South, where satisfactory ores exist. Cosach, the Chilean nitrate combine which was thrown into liquidation recently, is now being broken up and the properties divided among the old"individual companies.

## Farm and Food Products

PROCESSING of foodstuffs during January increased 5 per cent over the month of December representing the largest upturn in activity since the month of September, 1932. Employment in the industry, following the general trend at this time of the year, showed a greater than seasonal decline.

Wholesale prices of foodstuffs declined to a new low point. Slight increases in meats, fruits and vegetables were more than offset by marked declines in dairy products. Prices received by farmers also reached a new low on January 15, despite several price advances made within the group since December 15, 1932.

Receipts of wheat at primary markets, dropping to the lowest level since June, showed percentage changes of 8 and 25 per cent, respectively from December and January, last year. Shipments to milling centers, due to unsatisfactory prices, also fell off. Other grains, registered greater demand, receipts of corn and oats being greater than during December. Stocks of grains at the end of January were lower than in December, with the exception of corn in which case an increase occurred, due principally to reduced shipments during the month.

The movement of cattle and calves during January, although larger than in the preceding month, was lower than a year ago. Holdings in storage of beef
and veal products declining 8 per cent from the end of 1932 reached the lowest point for any January on record. The movement of hogs, although seasonally higher than in December, was substantially lower than a year ago. Stocks of fresh and cured pork continued well below a year ago. A similar condition prevailed for the total stocks of meat.

Receipts of butter at the five major markets amounted to $50,828,000$ pounds during January, 4 per cent more than a year ago. Cheese receipts dropped to $10,768,000$ pounds, the smallest amount since April, 1932. Poultry and egg receipts were higher than in January, 1932. Cold storage holdings of butter at the end of January amounted to $17,842,000$ pounds; cheese, $53,419,000$ pounds; poultry, 104,752,000 pounds; case eggs, 76,000 cases; and frozen eggs, $46,413,000$ pounds. The holdings in each instance well lower than last year. Prices of dairy products, both wholesale and farm, underwent further declines. Butter, 92 score, New York, was only slightly above the low point of last June. Cheese prices declined sharply in January reaching the lowest point in nine months. Egg prices were also off from December, being affected by the heavy receipts of fresh supplies. Farm prices of chickens were also lower, which is usual as this time of the year.

FOODSTUFFS STATISTICS

## Forest Products

LUMBER production continued at a low rate in January, about 18 per cent of the estimated normal. There was, however, some increase of more than ordinary seasonal nature as compared with the previous two months. For the industry as a whole, production was equal to the output of January, 1932, according to the Federal Reserve Board's index. The comparative cut has varied widely as between the different types of lumber, however, Southern pine production showing an increase of 6 per cent over this month a year ago, while at the other extreme, Wisconsin hardwoods dropped 71 per cent.

Employment in the industry, as indicated by the seasonally adjusted index, dropped in January to a new low level, a fifth under employment at this time a year ago. Pay rolls continued to decline after the temporary rise in the fall, and a new record low point was reached in January. The drop from the level of a year ago amounted to almost 40 per cent.

Carloadings of forest products picked up somewhat from the record low volume of December, but were, with the December exception, less than in any other month. The January volume was about three-fourths of loadings at this time a year ago.

Further reduction of stocks of lumber on hand was recommended at the end of January, by the survey committee of the Timber Conservation Board. It was
pointed out that although a reduction of $2,500,000,000$ feet had been made in 1932, the net decline since the beginning of 1929 has been but 30 per cent, as compared with a drop in consumption in this period amounting to over 65 per cent. Special note was taken of the coordinating activities in the industry being developed by the American Forest Products Industries, the formation of which was reported last month.

Southern pine production and orders moved strongly upward in January, recovering from the record low levels reached in December. New and unfilled orders were down 10 per cent and 7 per cent, respectively, in comparison with January a year ago. Southern pine stocks on hand on January 31, were a fourth less than at this time a year ago.

Lumber and sawmill products exports dropped off a third in 1932. This was, however, less than the decline in domestic consumption, and the ratio of exports to production increased by about 30 per cent to the largest proportion every recorded. The total volume exported in 1932 was just under one and a third billion board feet. A feature of recent export marketing has been the active demand for Douglas fir ties in China. Imports in 1932, which were down 48 per cent from receipts of the year before, amounted to $380,000,000$ feet.

# Iron and Steel Industry 

DESPITE restraining factors, such as curtailed production in the automobile industry during recent labor difficulties, activity in the iron and steel industry showed a greater than seasonal upturn during January and was stepped up further in the first three weeks of February. Opening the year around 14 per cent of capacity, steel operations had advanced to 18 per cent by the end of the month and to slightly over 20 per cent in the third week of February. The latest weekly operating figure was as high as the peak of the fall rise in 1932. Although not so marked, gains likewise occurred in production of pig iron. While considerable support to iron and steel operations came from the automotive industry, another favorable factor was the moderate increase in orders from miscellaneous sources. Railroad purchases continued negligible.

The Federal Reserve Board's adjusted index of general operations for January showed a gain of 7 per cent over the previous month, but was only 29 per cent of the 1923-1925 average. Current tonnage output of both iron and steel remain well below those reported a year ago. Despite the advance in production, employment and pay rolls declined further last month.

Iron and steel exports increased 5.5 per cent over the showing for December and were 39 per cent above shipments in January last year; imports dropped off to the lowest point reported since last July and were 26 per cent below tonnage a year ago.

The increase in steel operations was the first since last October. Total tonnage was above the monthly average production for the last quarter of 1932 and was 19 per cent higher than the amount produced in December. This advance compared favorably with the increase of 12 per cent between these months a year ago.

In contrast to the slight decline in output of pig iron during last January, this year an increase of more than 4 per cent occurred. The actual tonnage figure, however, was unimpressive. Four more furnaces were added to those in blast during the month, bringing the total up to the number in operation during the early months of last summer.

The decline in unfilled orders on the books of the United States Steel Corporation, as of January 31, placed the backlog tonnage figure at a new low point and indicated that the orders did not keep pace with the increase in operations. In January a year ago the unfilled orders were 39 per cent larger. The tonnage of manganese ore imported during the month was negligible, as in other recent months.
In spite of the uncertain demand and comparatively low rate of operations, prices were only slightly lower. Steel scrap and Bessemer steel billets remained at the levels of the preceding month, while the composite quotations for iron and steel and for finished steel showed slight declines.

1 Adjusted for seasonal variation,

## Textile Industry

ALTHOUGH there were increases in most branches of the textile industry in January，they were generally less than the usual seasonal rise，and the Federal Reserve Board＇s adjusted index of textile pro－ duction in January decreased to 87 per cent of its 1923－1925 average from 91 per cent in December，and 89 per cent in January last year．Employment in January was 2.1 per cent less than in December and pay rolls were 4.7 per cent smaller．Wholesale prices of textiles continued to fall and averaged 2 per cent lower than in December．

Raw cotton consumption per working day averaged 18,500 running bales， 9 per cent more than it was either in January or December，1932．Consumption in the cotton growing States totaled 397，774 running bales in January as compared with 371,079 running bales in December and 358,048 bales in January of last year．New England States consumption totaled 62,066 running bales as compared with 56,540 in the preceding month and 62，993 bales in January， 1932. Activity of cotton spindles，another indicator of cotton textile production，was 9 per cent greater in January than in December，the operation of spindles being at 95.1 per cent of capacity on a single shift basis as compared with 87.2 per cent in the preceding month． Of the $19,101,500$ spinning spindles in place in the cotton－growing States in January，16，846，000 were operated some time during the month，while of New

England＇s 11，105，000 spindles in place， $6,307,000$ were operated．

Wholesale prices of cotton goods decreased for the fourth consecutive month，the January index averaging 3.1 per cent lower than the December index，and 10 per cent lower than the January，1932，index．Com－ pared with 1926，cotton goods prices in January were one－half lower．
January raw wool consumption was 3 per cent less than in the preceding month but 3.7 per cent more than in January a year ago，and 4.9 per cent larger than in January，1931．Woolen spindles，narrow and wide looms，were slightly more active in January than in December，while activity of worsted looms was slightly less active．Compared with a year ago，both spindles and looms were more active．

Wholesale prices of woolen and worsted goods in January fell for the fourth consecutive month and averaged 1.5 per cent lower than in December， 47 per cent below 1926，and 0.6 per cent lower than in 1913.
Raw silk deliveries to Amurican mills increased sharply，totaling 14 per cent more than in December； they were，however， 17 per cent and 21 per cent，re－ spectively，less than in January of 1931 and 1932. Wholesale prices of Japanese raw silk at New York averaged $\$ 1.305$ per pound， 16 per cent lower than in the preceding month， 72 per cent lower than in Janu－ ary，1930，and 53.5 per cent lower than two years ago．

## REVISION OF THE INDEXES OF AGRIGULTURAL MARKETINGS

IN THE accompanying tabulation a revision of the indexes of agricultural marketings previously carried in the Survey of Current Business is presented. In the former computation the index of animal products was not given sufficient weight when combined with the indexes for crops to obtain a general index of agricultural marketings. This inequality has been eliminated.
In the revised indexes the weights have been assigned on the basis of the average annual cash income for the period 1925 to 1929, as reported by the United States Department of Agriculture. Previously the weights assigned were based on the gross farm income for the period 1923-1925 for crops and animal products. The new weights made practically no difference in the movement of the combined index of crop marketings but did result in a rather marked change in the index of animal products, and, of course, in the combined index of agricultural products.
The series used in the construction of these indexes are all taken from the Survey of Current Business, with the exception of those for sweetpotatoes, tomatoes, cabbage, celery, peaches, citrus fruits, grapes, pears, watermelons, cantaloupes, and strawberries. A description of each of the other series will be found in the footnotes given in the 1932 Annual Supplement. The fruit and vegetable series mentioned above are taken from the car-lot shipments as reported by the Department of Agriculture.
In general, the series included are the same as in the original indexes. It will be noted that the miscellaneous group of crops, including hay, tobacco, flaxseed, and cane sugar, which was in the original index, is not shown, but these items were dropped
out some time ago, owing to lack of current data, and the earlier figures adjusted accordingly. In the present revision, fish has been eliminated and cheese added.
The products covered in the index contribute about threefourths of the cash income derived from crops and about fourfifths of the cash income derived from animal products.

On the accompanying chart the movement of the revised indexes from 1920 to 1932 is shown. The combined index shows a marked seasonal variation due to the heavy movement of crops at the harvest period. The curve on animal products indicates the stable character of much marketings

Series Included and Weights Assigned in Revised Index

## Monthly Business Statistics

The following summary shows the trend of industrial, commercial, and financial statistics for the past 13 months. Statistics through December, 1931, for all series except those marked with an asterisk (*) will be found in the 1932 Annual Supplement to the Survey of Current Business, together with an explanation of the sources and basis of the figures quoted. Series so marked represent additions since the Annual was issued and similar information, if published, will be found in the places noted at the bottom of each page. Later data will be found in the Weekly Supplement to the Survey.

| Monthly data, through December, 1931, together with explanatory footnotes, may be found in the 1932 Annual Supplement to the Surdey | 11833 | 1932 |  |  |  |  |  |  |  |  |  |  |  |

## CHANGES IN STATISTIGAL SERIES MADE IN THE DECEMBER, 1932, ISSUE

## DATA ADDED

Fairchild retail price inder
World prices, foodstuffs
Chain-store sales index.
Department-store sales, Philadelphia
, Bhiladol..............
Factory employment, Baltímore, Milwaukee, Maryland, and Massachusetts.
Miscellaneous employment:
Civil service, United State
Trade union members employed, by groups.......................... Factory pay rolls, baltimployed, by groups... Factory pay rolls, Baltimore, Milwaukee, Phila-
delphia, Maryland, and Massachusetts...... tourlo,
Hourly earnings, United States (National Indus
trial Conlerence Board)
Weekly earnings, factory, Massachusetts
Net gold imports, including gold released from
Pyroxylin rods, sheets, and tubes, production, shipments.
Residual fuel oil, production and stocks..........
as oil and distillates, production and stocks...
onvection type radiators, new orders............
Plumbing fixtures, wholesale price.-.
Plumbers' brass, shipments..-
Tin and terne plate, production.
Tin consumption in manufacture of tin and
terne plate.
Mechanical stokers, new orders

DATA ADDED-Continued
Rubber beels and soles, total shipments
Illuminating glassware, new orders, production, shipments, and stocks.................................... Gypsum, imports, production, and shipments. Auto accessories and parts, composite index of shipments.

## DATA DROPPED 1

Industrial production indexes: Copper (mined) Stock indexes, world copper stocks Construction volume (A. G. C.)
.-.........------
miscellaneous group
Aplicants at employment agencies, Western Methano
Methanol, stocks:
At crude plants
At refineries and in transit
Pine-oil stocks.......-................................. Paints, varnish, and lacquer products, unclassiMilk, condensed and eveporated, total exports,
