NUMBER 3

The usual Semiannual Revision

of material has been made in this issue. A list of the new data added and the series dropped is given below. The pages indicated for the new series refer to this issue, while the pages given for the discontinued series refer to the February 1936 issue.

DATA ADDED		DATA DROPPED	
	Page		Page
Home Owners' Loan Corporation, loans outstanding.....	25	Interest rates on long-term real estate bonds.....	32
United States Employment Service, applications and placements.....	29	Yields on United States Treasury bills *..	35
Interest rates charged customers by banks in principal cities.....	32	Yields on common stocks *.....	36
Internal revenue collections from specified sources (sales of radios, trading on produce exchanges (future trading), admissions to theaters, and capital stock transfers).....	34	Wholesale price, women's shoes (colored, calf, Goodyear welt, oxford) *.....	47
Volume of trading in wheat and corn futures..	35	Hardwoods: Total, gum and oak, production, shipments, stocks, and new and unfilled orders *.....	48
Value of bond sales (market and par) on all registered exchanges and the New York Stock Exchange (Securities and Exchange Commission).....	35	Wholesale price, Douglas fir flooring (1 x 4, "B" and better) *.....	48
Estimated gross proceeds of new securities registered with the Securities and Exchange Commission.....	35	Furniture, southeastern district, orders and shipments *.....	49
Stock sales (volume and value) on all registered exchanges and on the New York Stock Exchange (Securities and Exchange Commission).....	36	Nonmetallic conduits, shipments.....	53
Agricultural exports (total, and total excluding cotton) adjusted for seasonal variations.....	36	Men's and boys' garments cut (overcoats, separate trousers, and suits) *.....	57
Wholesale price, women's shoes (colored blucher, St. Louis).....	47	Silk machine activity, spinning spindles (all types), and broad and narrow loom activity *.....	58
Wholesale price, Douglas fir flooring (1 x 4, "B" and better v. g.).....	48	Silk piece goods (commission and stock-carrying mills) production, shipments, and stocks, etc.*.....	58
		Elastic webbing, shipments *.....	58
		Taxicabs, production *.....	59

* Discontinued by reporting source.

It is important that the tables printed monthly in the SURVEY, presenting back data for the new and revised series, be retained for reference purposes.

Business Indicators

1923-25=100

Business Situation Summarized

BUSINESS activity has declined moderately below the December peak, but the major indexes for both January and February were higher than for the corresponding months of 1935. This recession follows a period of substantial expansion in the latter half of 1935, and has been influenced by special and temporary conditions, such as the changes in the seasonal trend of automobile production and sales, and the severe winter experienced throughout the country.

The increase in the volume of industrial production in January was less than seasonal, and the Federal Reserve's adjusted index dropped from 104 in December to 99. A further recession in the seasonally adjusted index is anticipated for February, but the indicated change is not large. The principal influences in the January movement of the index were the declines in pig iron, steel ingot, and automobile production, and the less-than-seasonal increase in some of the consumers' goods industries, particularly textile and leather manufactures. Coal production increased by about the usual seasonal amount and lumber production was up both actually and after seasonal adjustment. During February the output of automobiles declined sharply, while steel ingot production again turned upward.

The heavy movement of coal was responsible for the gain in freight traffic in recent weeks in comparison with a year ago since the combined volume of other

loadings has been about the same as in 1935 subsequent to the week ended February 1. The seasonally adjusted index of loadings for January was slightly lower than the December index which was the highest reported since August 1931. The February index was the same as that for January.

Employment in both the manufacturing and non-manufacturing industries declined in January, partly by reason of seasonal influences. Significant features of the data are the substantial increases in both employment and pay rolls in the durable goods industries in comparison with a year ago.

Retail sales in January dropped by more than the usual seasonal amount after the marked rise toward the close of 1935, and trade has continued relatively slow during February. For the first 2 months of the year, however, retail sales have been above those of a year ago in both urban and rural areas. The gain in purchasing power in farm regions is indicated by the increase of 26 percent in the index of cash income from the marketings of farm products in January over those of a year ago. The added income from benefit payments by the A. A. A. ceased early in January.

Construction activity has been hampered by existing weather conditions, and contracts awarded have declined. The outlook for the spring building season, nevertheless, remains favorable.

Graphic Comparison of Principal Data

Commodity Prices

THE Bureau of Labor Statistics' index of wholesale prices has shown a tendency to flatten out if not to turn slightly downward during the past 3 months. In fact, the 5.2 percent rise in this index from December 1934 to December 1935 was due mostly to the advances of three component groups, namely, foods, farm products, hides and leather, and the textile products. Hides and leather continued to advance in January of this year but the foods group—particularly cereal products and meats—declined substantially and the index of farm prices receded slightly, notwithstanding some improvement in grain prices. However, both foods and farm products indexes advances during the first half of February. The unusually severe winter occasioned some price advances in the fuel and light group in January and February but this advance was largely offset by declines in textile prices, which reflected lower cotton prices and the removal of processing taxes.

The index of the raw material components of the Bureau of Labor Statistics' combined index was about 0.5 percent higher for January than for December and about 1 percent higher still by February 15. On the other hand, the January index for finished products was about 0.8 percent and that for semimanufactures

about 0.5 percent lower than the December index. By mid-February prices of finished products had recovered slightly but those of semimanufactures had declined about 0.4 percent more.

The horizontal movement of the Bureau of Labor Statistics' 784 commodity weekly index from the middle of December to the middle of February (Dec. 14, 80.8; Jan. 18, 80.2; Feb. 15, 80.6—1926 average equals 100), may be compared with the 4 percent advance of Moody's daily index of 15 "sensitive" commodity prices.

The Department of Agriculture, after noting little change between January 15 and February 15 in the general level of prices received by farmers, stated that it anticipated a downward trend of farm prices until midyear.

January was the first month since July 1935 in which the National Industrial Conference Board's cost of living index failed to advance. Increases in indexes of rents and coal were offset by declines in food, clothing, and gas and electricity. Fairchild's composite index of prices of department-store articles was only 0.1 percent higher February 1 than January 2, and only 1.7 percent higher than February 1, 1935. Changes in most components of this index were nominal.

Domestic Trade

RETAIL business so far during 1936 has reflected the adverse influence of prolonged cold weather, although this has not been the only factor contributing to the more-than-seasonal drop in sales since December. These recent changes, however, represent temporary readjustments and do not indicate a reversal of the upward trend of sales which has been in progress since 1933. Consumer purchasing power is at a higher level than a year ago and this improvement is reflected in the sales increases reported over the opening months of 1935.

The drop in the index of general merchandise sales in rural areas since December has been more pronounced than the recession in the department store sales index, but the former is a more sensitive index, and hence is naturally subject to wider swings. It is possible that the Supreme Court decision declaring the Agricultural Adjustment Act unconstitutional may have influenced spending in rural areas, but there is at present no statistical evidence to support this view and it is doubtful that any such effects would be felt so promptly as to influence markedly the January figure. It should be noted, moreover, that January sales of general merchandise in rural areas were the highest for the month since 1930 and were 10 percent in excess of those of the opening month of 1935.

The drop in the seasonally adjusted index of passenger automobile sales reflects not only the hampering effects of a severe winter but also the unusually large volume of sales in the final quarter of 1935, when

deliveries of new models increased rapidly. Sales of cars during February also have been slow.

Final estimates by the Department of the value of retailers' sales in 1935 reveal a gain of 14 percent in comparison with those of 1934. The relative increase was the same as the estimated gain in 1933.

Total sales by retailers were estimated at \$32,606,000,000 for 1935, compared with the estimate of \$28,649,000,000 for 1934 and the figure of \$25,037,000,000 reported in the Census of American Business for 1933. The 1935 figure was two-thirds as large as that reported in 1929.

Since readers of the SURVEY are acquainted with the changes in those lines of business covered by the regular monthly data, chief interest attaches to the estimates for other lines. It should first be noted, however, that sales for all major groups were higher than in 1934, the increase ranging from 2 percent for variety stores to 26 percent for catalog sales of the mail order companies.

Sales of the building supply and hardware and furniture and household equipment groups, were up about one-fifth for each; restaurant and eating place sales advanced 18 percent; jewelry sales, 15 percent; farmers' supply county general store sales, 12 percent; and sales of apparel and drugs, 8 percent each.

Copies of the release showing the trend of sales, by kinds of business, from 1929 to 1935 may be secured from the Marketing Research and Service Division, Bureau of Foreign and Domestic Commerce, Washington, D. C.

Employment

EMPLOYMENT and pay rolls in the industries surveyed monthly by the Bureau of Labor Statistics declined in January, coincident with the seasonal reduction of operations in many lines of production, and the reduced volume of retail trade following the Christmas buying season. Severe weather conditions were also effective in reducing the number of workers employed, particularly in the building construction and quarrying industries.

After advancing steadily for 6 months, the seasonally adjusted index of factory employment in January fell 0.6 of a point to 85 percent of the 1923-25 average, while pay rolls, without seasonal adjustment, were 5.7 percent lower than in December. A year ago, factory employment increased in January but more than half of the gain resulted from the usual seasonal increase in employment in the automobile factories. This year, with the new model cars introduced 2 months earlier than usual, employment in the automobile assembly plants remained unchanged between December and January.

The extent of the recent improvement in the durable goods industries and the trend toward a better balanced production is exemplified by the gains in factory employment and pay rolls in January over the same month in 1935. Employment and pay rolls in the durable goods industries were up 13 percent and 23 percent, respectively, over this period, while in the nondurable goods industries, employment was 0.3 percent lower, and pay rolls only 3.8 percent higher. It should not be

overlooked, however, that employment in the former group of industries is still relatively lower than in the latter group. For the durable goods industries, 719 workers were employed in January for every 1,000 employed in 1929, while in the nondurable goods industries this ratio in January was 870 to 1,000.

Of the 90 manufacturing industries surveyed, 28 reported gains in the number of workers employed in January as compared with December, while 15 reported larger pay rolls. The millinery industry, with a gain of 15 percent, was the only one reporting an increase well in excess of the usual seasonal expansion.

With few exceptions, declines in employment in January did not exceed the usual seasonal recession by a wide margin. Industries reporting declines in employment of considerably more than the usual seasonal proportions included cement, 16 percent; shirts and collars, 11 percent; canning and preserving, 7.9 percent; silk and rayon goods, 5 percent; woolen and worsted goods, 4.5 percent; and leather, 2.7 percent.

Practically all of the sharp recession in employment in nonmanufacturing industries in January was accounted for by the seasonal recessions in retail and wholesale trade, and in building construction. Gains were reported for anthracite and bituminous coal mining as production was stimulated by the prevailing low temperatures. Metalliferous mining reported a gain which lifted the employment index for that industry to the highest level since September 1931. Gains were reported also for year-round hotels and brokerage houses.

Finance

THE available figures on bank credit outstanding indicate a slightly mixed trend from late January to the middle of February. Generally speaking, however, the figures of the reporting member banks reflected little change. Excess reserves of the member banks have remained in excess of \$3,000,000,000, the weekly changes during February being of little significance. The March Treasury financing will undoubtedly cause some reduction.

The immediate effect of the announcement by the Board of Governors of the Federal Reserve System of the lowering of the maximum loan value of registered securities from 55 percent to 45 percent on January 24, effective February 1, was to decrease the volume of loans to brokers and dealers as reported by the New York City reporting member banks. By February 19, however, the volume of the loans had risen to the same point as they were on January 22.

In commenting on the action with reference to margin requirements, the Board of Governors of the Federal Reserve System estimated that at the end of 1935 margins required on active issues averaged about 40 percent of current market prices, as compared with about 30 percent at the time the Board's regulation was put into effect in October 1934. It was further estimated by the Board that stocks in the so-called antipyridding zone (i. e., on which profits cannot be pyramided) will, under the new regulation, include those with a volume of trading amounting to about one-third of the total dollar volume of trading in the stocks on the New York Stock Exchange. Stocks in

which nearly two-thirds of the trading is done will be subject to the maximum margin requirement of 55 percent. In this group of stocks, pyramiding of profits will still be possible, since for each dollar of price advance 45 cents will become available to margin additional borrowing.

The upward movement of stock prices continued during February. Following the Supreme Court's decision in the Tennessee Valley Authority case relative to the sale of power from the Wilson Dam, a short-lived decline was led by the public utility shares. Again in the final week of the month prices fell rather abruptly. The steady improvement in bond prices proceeded with only minor interruption.

New capital issues fell sharply during January, and the figures for early February did not indicate any important change. Nevertheless, there is a large volume of new issues (including several important railroad offerings) being prepared for the market. A condition of general ease still prevails in the money markets.

During the early part of February the President announced that an immediate survey of all Federal credit agencies would be conducted with a view to canceling at least \$1,000,000,000 in unused lending authorizations voted by Congress during his administration. At the same time the Treasury Department announced an excess of expenditures over receipts during the first 7 months of the fiscal year of \$2,124,419,000. In the corresponding portion of the fiscal year 1934-35 the deficit was \$1,965,674,000.

² Net exports indicated by (-).

Foreign Trade

EXPORTS and imports were each about 12 percent greater in value in January than in the opening month of 1935. The increase in exports was about the same as the relative gain recorded in the latter half of 1935 in comparison with the same period of the preceding year, but the percentage increase for imports was considerably less.

The increase in exports in January over a year ago was mainly the result of the expansion in sales of finished manufactures, although the value of exports of agricultural products was also somewhat larger. The value of machinery and vehicle exports was 50 million dollars in January 1936, compared with 38 million dollars in January 1935. The increase in exports of various classes of machinery ranged from 69 percent for industrial machinery to 10 percent for electrical apparatus. The value of exports of automobiles, including parts and accessories, increased 28 percent, while exports of petroleum and products increased 14 percent.

The more important increases in imports in January, in comparison with the corresponding month of 1935, were in crude materials and certain foodstuffs. Hides and skins, inedible vegetable oils, unmanufactured tobacco, textile fibers, fur skins, metals, and paper base stocks showed increases in value ranging from 17 to 129 percent. Imports of such leading food commodities as fish, meats, and cocoa increased in both quantity and value as compared with January 1935. Imports of whisky more than doubled as a result of

the reduction in duty on January 1, 1936, the effective date of the Canadian trade agreement. Imports of cane sugar were barely half as large in quantity in January 1936 as in January 1935. Although coffee imports were 18 percent larger in quantity than in January 1935, the value declined 7 percent. Imports of certain grains and animal feeds were considerably smaller in quantity than in January 1935; the need for such imports has gradually diminished as domestic supplies have become more normal.

The new reciprocal trade agreement with Brazil, which also became effective on January 1, raises to six the number of countries with which agreements are now in effect. Other than Brazil and Canada, these include Cuba, Belgium, Haiti, and Sweden. In addition, agreements have been signed with the Netherlands, Switzerland (effective Feb. 1 and 15, respectively), and Honduras (effective Mar. 2). The agreement with Colombia has been concluded, but the effective date has not yet been set. Negotiations are in progress with seven other nations.

In the year 1935, exports to the 10 countries with which agreements have been concluded represented 28 percent of our total exports, while imports from those countries accounted for 37 percent of all imports. Exports to the seven countries with which agreements are being negotiated were approximately 8 percent of our total exports in 1935, while imports from those countries were 6 percent of our imports.

Real Estate and Construction

ACTIVITY in the construction industry has been curtailed as a result of the hampering effects of low temperatures and heavy snows. Contracts for new work in many instances have been held up until such time as it is possible to start actual construction operations. The value of new construction work placed under contract during February was considerably less than in January, although it was higher than that reported in February 1935.

The marked decline in the value of contracts awarded, as reported by the F. W. Dodge Corporation for January, was the result of the drop in the amount of publicly financed work placed under contract from \$196,000,000 in December to \$139,000,000 in January. The recession in privately financed work was only from \$68,000,000 to \$65,000,000. On the basis of the January figures, and the outlook for spring building the Dodge Corporation has estimated a contract total for the first quarter of the year of \$450,000,000, or about 50 percent in excess of the total reported in the initial quarter of 1935.

Improvement in the construction industry has extended to all major geographic areas, with the large metropolitan centers such as New York and Chicago reporting relatively large increases in January in comparison with the opening month of 1935.

The outstanding increase by classes of construction, in January over the opening month of 1935 was in the nonresidential group and this in turn was the

result of the placement of an unusually large volume of contracts for educational buildings.

While publicly financed contracts made up 55 percent of the total in 1935 and 68 percent in January 1936, these contract totals do not measure the full extent of the construction work undertaken by the Government. Aside from the geographic limitations of the Dodge data and the fact that contracts under a certain minimum figure are excluded, much of the Government work is of the force account type.

General improvement in the real-estate market was reported in the semiannual report of the National Association of Real Estate Boards issued in February, based on a survey of conditions in 275 cities. The high lights of the report may be summarized as follows: (1) An increase in real-estate prices in comparison with a year ago was reported in 60 percent of the cities; (2) the rate of turn-over of properties has improved in 85 percent of all cities; (3) a rising tendency in rents was reported for more than three-fourths of the cities; (4) a shortage of single-family rental dwellings was noted in two out of every three cities surveyed; (5) an increase in leasing rentals for commercial buildings was reported for the first time in 10 years; and (6) a general decline in mortgage rates and an increase in the availability of loanable funds was noted. In summation, the report is the most optimistic review issued by the association since the advent of the depression, and notes some of the basic influences behind the current improvement in the construction industry.

Transportation

RAIL traffic continued to increase during the first 3 weeks of February on a daily average basis, but the expansion in loadings since December has been slightly less than seasonal. The severe winter and the consequent heavy movement of coal have been the most important factors in the gains recorded in recent weeks. During the first 7 weeks of 1936, the increase in coal traffic over the corresponding period of 1935 accounted for about half of the 7.3 percent increase in loadings of all classes of freight. Loadings of l. c. l. and miscellaneous freight, which consist largely of manufactured goods, and which together account for almost 60 percent of all loadings, were 2.3 percent larger than in 1935.

With the exception of livestock, loadings of the remaining 5 classes of freight were higher in this 7-week period than in the corresponding period of 1935. It may be noted however that total loadings, less coal, actually dropped below a year ago during the first 3 weeks in February.

The expansion in freight traffic in January was reflected in the improved financial reports of the carriers. According to the available data, gross revenues were the highest for that month since 1931, and were 13 percent above the January 1935 total of \$264,197,000. Net railway operating income showed a larger relative gain, the increase in operating expenses being smaller than the gain in gross operating revenues. January

net was \$35,875,000, a gain of 64 percent over a year ago and the highest for that month since 1930.

Statistics just made available by the Interstate Commerce Commission show that the class I railroads operated at only a very slight loss (\$288,000) in 1935, as a result of the improvement in traffic during the last 5 months of the year and the modest expansion in passenger traffic. Last year was the first since 1931 that the carriers did not report a substantial deficit.

On the strength of the improvement in their financial position in 1935, and the prospects of some further improvement in 1936, the railroads have placed a considerable volume of orders for equipment. According to the Railway Age, orders for 171,000 tons of rails were placed in January, as compared with 67,000 a year ago, and 61,000 tons in January 1934. While railroad purchases are still relatively low, the promptness with which orders have followed the improvement in operating results indicates that the railroads will be important purchasers of durable goods if the present upward trend of traffic continues.

In line with the efforts of the roads to improve their volume of l.c.l. freight, it is planned to extend the pick-up-and-delivery service. The western railroads extended their service in January, the southern roads inaugurated this service in February, while the eastern roads have announced they will extend the service in April.

Automobiles and Rubber

PRESENT estimates indicate that the production of automobiles for the first 2 months of 1936 will be approximately equal to the output in the corresponding months of 1935. Thus, the decline of assemblies in recent weeks below the level of a year ago has canceled the increase reported in January, and March production will have to equal the 1935 figure of 430,000 units if output in the first quarter is to match the 1,058,000 cars and trucks turned out in the initial quarter of 1935. This would mean an increase of more than 60 percent in March over the estimated production of 265,000 units in February.

While the large volume of passenger-car sales in the final quarter of 1935 was a factor influencing sales during the current quarter, the weather conditions throughout most of the country have hampered sales efforts and materially cut the number of prospective new-car owners who are ready to accept immediate delivery of cars. Some production and marketing difficulties experienced by the manufacturers have also been cited as influencing the production totals, but these appear to be merely incidental since the large stocks of new cars accumulated by dealer organizations and the current volume of retail sales are undoubtedly the controlling influences. The used car problem also is still acute.

The seasonally adjusted index of automobile production declined in January to 111 from 126 in December (1923-25=100) and will drop further in February.

With output down to 63,000 units in the week ended February 22, according to Cram's estimate, it is the consensus of opinion in the trade that assemblies will soon commence to expand as the spring selling season opens a market now largely dormant. The test of the market for new cars will thus come very shortly and the results will give some indication of the probable trend for the year as a whole.

With the decline in production, the business of parts and equipment suppliers has receded. The drop in requisitions for original equipment tires has been a major influence in the downward trend of activity in the rubber tire and tube industry during February, and some curtailment of working forces was made the occasion of labor difficulties in Akron, employees of a leading manufacturer engaging in a "sit-down" strike (refusing to work after individuals had reported for duty). Production of this company ceased pending the adjustment of differences.

The automobile tire production figures for the final quarter of 1935 reveal a very even output in that period, a trend which was indicated by the crude rubber consumption data which are available some time in advance of the tire report. It may be expected, therefore, that the January figures on tire production, will show a substantial increase in line with the sharp rise in the consumption of crude rubber. As indicated above, however, this advance has not been maintained during February.

Forest Products

PRODUCTION of lumber has not kept pace with shipments since the middle of January, hence manufacturers' stocks, which increased during the last half of 1935, are now declining. New orders received have been about 15 percent in excess of production in recent weeks. Part of this recent improvement in the statistical position of the industry is due to the reduction in logging operations caused by the severe winter, but the increase in orders received in comparison with those of 1935 indicates improvement of a more fundamental nature.

Taking into consideration this further gain in orders and the promising outlook for major consuming industries, the Lumber Survey Committee in its report to the Department of Commerce has estimated the probable consumption of lumber during the first quarter of 1936 at 4,873 million board feet. This is at an annual rate of 20 billion feet, or about 8 percent more than the estimated consumption in 1935. If this figure is realized, lumber consumption will be the largest since 1930 when the total was 26.5 billion feet.

Major increases in lumber consumption are anticipated by the committee in the residential construction, railroad, and furniture industries. Gradual improvement in economic conditions is expected to stimulate the demand for lumber from the container and farm-equipment industries.

Despite the increase in stocks during the latter half of 1935, the committee did not recommend a general reduction in manufacturers' stocks at the

present time. This decision was based on the stock reduction prior to last summer and upon the future outlook, but it was pointed out that the balance which has been achieved should be maintained at least until a further increase in consumption has taken place.

The committee reported that "the proportion of slow-moving mill stocks of lumber is still substantial, although it is declining as general building activity increases. The present-day hand-to-mouth buying policy of retailers and industrial consumers is imposing upon the sawmills the necessity of carrying a larger proportion of the national lumber supply than formerly. On account of these factors the committee is of the opinion that a reasonable ratio of stocks on hand to current consumption is not generally more than 35 percent greater than the ratio in the year before the depression. This percentage varies substantially between regions and species. Due regard therefore should be given to the unbalanced conditions of stocks in some regions. These conditions may warrant moderate accumulations of surplus items necessary to provide for scarce items. Exchanges of scarce items between mills continue to be preferable to additional manufacture which has the effect of adding to existing unwieldy surpluses in other items."

Activity at paper mills has increased since December, with the rate of operations in the middle of February about 10 percent above that for December. Production during the first half of the current month was slightly lower than in February 1935.

Iron and Steel

ONE of the interesting features of the current industrial situation is the definite improvement in the rate of steel operations during February, despite the slackening of the demands of automobile manufacturers who collectively provided a market for one-quarter of the finished steel produced in 1935.

Mounting railroad purchases and increased demands for structural steel are the sources to which the trade journals ascribe the present improvement, but it appears that many other industries also are in the market for increasing quantities of steel with the current rate of ingot production about 10 percent above the 1935 yearly average. It may be noted also that shipments of finished steel by the largest corporation increased in January, contrary to the movement of ingot output which dropped from 56 percent of capacity in December to 51 percent in January. January shipments by the United States Steel Corporation were the largest since May 1931, with the exception of the months of May and June 1934, when shipments were abnormally high for a brief period by reason of anticipatory buying before a price rise became effective. February deliveries also will be high in view of the progress made in filling the enlarged volume of orders for the railroad industry. Both production and shipments during the first quarter of 1936 are expected to be higher than in the first quarter of 1935, although ingot production will probably average below rather than above the output for the final quarter of 1935.

The extent of the slackening in orders from the automobile industry during the current quarter is indicated by the sales of steel sheets reported by independent sheet manufacturers. In January such sales amounted to 175,000 short tons, the smallest figure reported since June of last year and a drop of 40 percent from the November peak. Production and shipments were considerably higher than new orders, but the volume of unfilled orders on the books of manufacturers is relatively high and sufficient to maintain production for sometime around the level of the past few months unless the rapid decline in orders should continue.

Prices of finished steel have weakened during the past month, according to the *Iron Age*, but the change in the composite price has been relatively slight—the drop in the month ended February 18 being from 2.13 cents a pound to 2.109 cents. A year ago the price was 2.124 cents. Scrap prices have been strong, with the *Iron Age* composite advancing to the best level since April 1930. The scrap buying movement, however, is apparently influenced by the weather and transportation situation and buying by dealers. This explains the apparently contradictory movements of the prices of scrap and finished steel.

Reports for the leading steel manufacturing companies covering the year 1935, assembled by Standard Statistics, Inc., reveal that the industry operated at a profit for the first year since 1930. Nine major companies reported a combined net income of \$33,669,000, as compared with a loss of \$17,718,000 in 1934.

Textile Industries

JANUARY statistics on cotton-mill activity indicate that the Supreme Court's decision invalidating the Agricultural Adjustment Act has as yet had little effect on output. The confusion existing in the markets for a time was eliminated to at least a partial degree, as buyers and sellers gradually came to an understanding with regard to prices and the protection of mutual interest with reference to possible future legislation and past taxes held in escrow. Nevertheless the relatively small volume of forward buying indicates that the uncertainty over the future has not been entirely removed.

Prices of finished cotton goods have gradually worked lower in recent weeks, as mill owners passed on the benefits of reduced costs resulting from the elimination of the processing taxes and the decline in raw-cotton prices.

Cotton consumption increased 11 percent from December to January, on a daily average basis, or slightly less than the usual seasonal amount. However, January consumption was the highest for any month since July 1933 and was 9 percent above that of January 1935.

As a result of the slightly less-than-seasonal gain in cotton consumption and the contraseasonal recessions in wool consumption and silk deliveries, the Federal Reserve's seasonally adjusted index of textile production declined 5 points from December to January, that is, to 106 percent of the 1923-25 average. Neverthe-

less, the index reveals that activity in the three branches of the textile industry for which data are included is still at a relatively high rate; except for the last 4 months of 1935, the index has not been above its present level since the summer of 1933. It is actually higher than for any January since 1929.

The wool component continues as the most important single factor in the present high position of the index, notwithstanding the gradual slackening in operations in woolen mills since the record pace of last October. In January the seasonally adjusted group index for the wool industry, which is constructed from data on wool consumption and wool machinery activity, was 6 percent lower than in December and 15 percent lower than in October 1935. Despite the sharp decline after October, operations in January were the highest for that month since 1923.

Following the rapid advance during the last quarter of 1935, the seasonally adjusted index of nonacetate-rayon deliveries declined 13 percent in January. Deliveries were also below those of January 1935 but were above the average for last year. In 1935, rayon accounted for 7.2 percent of the total consumption of all textile fibers, according to data compiled by the Textile Economics Bureau, Inc. The rayon percentage of the total has increased steadily since the commercial development of the industry began; in 1920, rayon-fiber consumption amounted to only 0.3 percent of total volume of all fiber consumed.

Progress of the Aeronautics Industry

By M. Joseph Meehan, Editor, Survey of Current Business

DESPITE the many vicissitudes experienced by some of its branches, the aeronautics industry has a depression record of substantial progress in many directions. The impact of the declining phase of the business cycle caught this young and vigorously grow-

of airline safety devices; the growth of protected airlines; and the gradual reduction in travel costs. By 1935 the number of passengers carried on scheduled air-transport lines had increased to 860,761 and the number of passenger miles to 360,569,000. These figures include passengers carried on both domestic lines and foreign lines operating from the United States.

Aircraft Manufacturing Expanded Rapidly.

While the first successful flight of a heavier-than-air craft took place in the early years of the century, it remained for the war to give a real impetus to the development of the aircraft industry. The conflict ended with the United States Government in possession of a large surplus of planes and engines which were not used for military purposes but which were subsequently diverted to commercial use. As a result, production declined for a short period after the termination of hostilities but, as indicated on chart 1, there was a sharp upward trend in the manufacture of aircraft, engines, and parts from 1921 to 1929. In the latter year the value of production was about 10 times that of 1921, if allowance is made for the incompleteness of the data given on the chart for the earlier year. By 1932, the value of production dropped to nearly one-third of the 1929 total, and 1933 brought only a very slight change.

Chart 1.—Value of Production of Aircraft, Parts, and Equipment.

ing industry at the peak of a wave of rapid expansion and necessitated rather extensive readjustments to conform to a period of more normal growth. Certain major commercial activities—notably the miscellaneous services, such as sightseeing, charter flying, student instruction, photography, and aerial surveying—underwent a marked shrinkage after 1930 and, even with the improvement experienced in the past 2 years, such operations are far below the peak levels reached 5 years ago. The manufacture of planes and equipment also suffered a sharp curtailment subsequent to 1929, but in 1934 this industry joined the general upward movement and improvement is progressing with increasing momentum. The organized transport industry has, on the other hand, a notable record of progress which was uninterrupted even in the worst years of the depression.

The tremendous growth of the transport industry, which will be discussed in some detail later, is a development of the past decade. As late as 1926, only 5,782 passengers were carried on scheduled airlines.¹ In that year active promotional steps of the Federal Government started the transport industry on a period of rapid expansion. Widespread public acceptance of this new mode of transportation has been based on the emergence from the research laboratories of larger, safer, faster, and more comfortable planes; the development

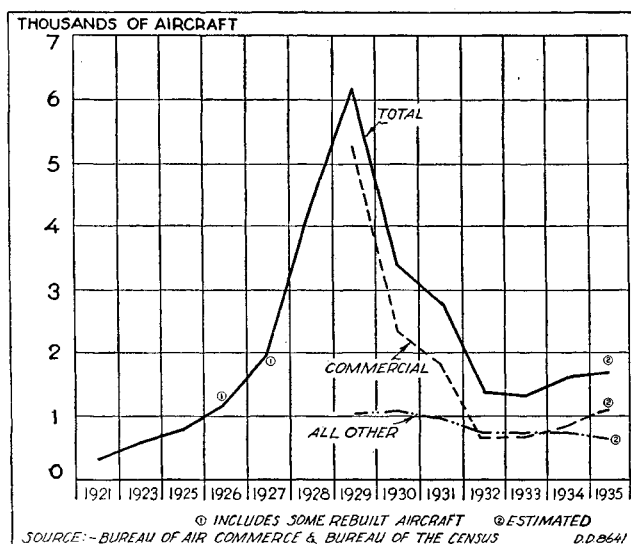

Chart 2.—Production of Aircraft.

In the past 2 years the value of aeronautical products manufactured has increased substantially.

The figures shown on chart 1 for the years subsequent to 1926 include the value of engines and parts produced by companies not classed by the Bureau of the Census in the aircraft industry. Hence, the data here given for the biennial census years are larger than the aircraft industry totals reported by the census.

¹ This figure and most others used in the article and in the charts are from the records of the Bureau of Air Commerce, U. S. Department of Commerce.

Out of the above-mentioned total value of products in 1929, \$69,400,000 (or 73 percent) was reported by the Bureau of the Census as produced by the aircraft industry.

Military Orders Main Support of Industry During Depression.

During the period of severe curtailment in manufacturing activity, military orders were the major source of support for aircraft and engine manufacturers. The problem of readjustment to a more restricted market was accentuated by the excess production of 1929, which necessitated a period of inventory liquidation. For some companies it was necessary also to curtail extensive subsidiary operations, such as flying fields and training services. These readjustments by the major companies were largely accomplished by 1932.

The industry was slow to respond to the recovery influences set in motion in 1933, since the Government economy program initiated early in that year resulted in a curtailment of the funds available for military expenditures. The influence of the economy program was also felt to some extent in 1934. However, in that year the volume of commercial business expanded considerably and for the first time since 1929 exceeded in value the military business. In 1935, an extensive program of development of the air defense forces was laid out which will mean a very substantial increase in the volume of production for military use.

Commercial planes delivered during the past 3 years have averaged much higher in price than in the period 1925 to 1932 because of the relatively large number of heavy transport planes produced in the later period. This type made up three-fourths of the nonmilitary business in 1934 and a similar high percentage in 1935. Such planes have been increasing in size and carrying capacity and have required more powerful and hence higher priced engines. The trend in the size and motive power of military planes produced has also been in the same direction.

Revival of the demand for the smaller commercial and pleasure craft will naturally tend to lower the average unit price of planes produced, notwithstanding the probable utilization of larger and more powerful ships for transport and military use.

Export Sales.

The export market has accounted for a larger proportion of the business of domestic producers of aeronautical products during the depression than in the earlier years of development. Exports of such products were relatively small until 1929, when shipments increased to \$9,126,000, a gain of 149 percent over the preceding year. In 1930 and 1931, exports dropped rapidly, but the expansion in the 3 years 1932, 1933, and 1934 carried the total to a peak of \$17,548,000 in the latter year. In 1935, the value fell to \$14,331,000, mainly by reason of the drop in exports to China,

Russia, and Germany. Shipments to these countries were unusually large in 1934.

Though aeronautical products were shipped to 73 different countries in 1935, about 60 percent of the total went to the 7 countries taking products with a value of more than half a million dollars each. These countries, in the order of size of shipments, were as follows: China, Netherlands, Russia, Japan, Brazil, Italy, and Mexico. The shipments, by countries, vary considerably from year to year. Three countries—Peru, Colombia, and Germany—each purchased more than a million dollars' worth of equipment in 1934, but in 1935 their combined purchases were valued at less than a million dollars.

Progress of the Transport Industry.

The record volume of passenger, mail, and express business in 1935 was just another milestone in the upward trend of transport activity established with the inception of the air-transport industry 10 years ago. In 1926, under the provisions of the Kelly law, the carrying of the air mail was transferred from the Post Office Department to private carriers through the awarding of mail contracts. This gave the initial impetus to the establishment and extension of private mail and passenger lines, and the carrying of mail has been the main source of revenue in every year since 1926.

In the same year that private contractors took over the carrying of the air mail, the Aeronautics Branch of the Department of Commerce (now the Bureau of Air Commerce) was created to undertake the establishment and maintenance of the airways of the Nation. Starting with a nucleus of 2,041 miles of lighted airways (that portion of the transcontinental route from New York to Salt Lake City), the Department has built up a system of lighted and radio-equipped airways approximately 22,000 miles in length.

Air-mail revenues cut since 1933.

The income from the mail business increased from \$765,549 in 1926 to \$26,884,000 in 1931. During this period the amount of mail handled rose from 377,206 to 9,643,211 pounds. In recent years the income from this source has been drastically curtailed, first, by the drop in the average volume of mail carried in the 3 years 1932, 1933, and 1934, and, second, by the change in the rate of payments by the Government under the new mail contracts awarded in 1934.

Existing domestic air-mail contracts were annulled by the Post Office Department in February 1934 and for a short time the mail was carried in Army planes. In the following May new contracts were let. For the entire year the payments for domestic mail service were cut approximately in half, from \$16,467,000 in 1933 to \$8,804,000 in 1934, the latter figure including

payments of \$2,249,000 to the War Department for mail service from February 20 to March 16, 1934. Notwithstanding these developments, the poundage of air mail in 1934 was slightly larger than in 1933. During 1935, the volume of air mail carried under the new rates nearly doubled and thus established a new record, exceeding by more than 40 percent the previous high mark set in 1931. The revenues derived from carrying mail in 1935, however, were not as large as those collected in 1931, 1932, and 1933.

Coincident with the decline in mail revenues, the receipts from passenger business gradually assumed more importance. Passenger traffic has increased in every year since 1926, although there was a drop in the number of passengers carried in one year, namely 1934, when commercial services were adversely influenced for a few months while air-mail contracts were being adjusted. Even in that year, however, the passenger-miles flown increased.

Aside from the factors of increased safety, speed, comfort, and convenience of schedules, the main impetus to travel by air has been given by the downward trend of fares. As passenger business increased, because of numbers carried and greater lengths of individual trips, the rates of fare have been reduced with a resultant improvement in the competitive status of the industry. The average fare fluctuated between 10.6 and 12 cents a mile from 1926 to 1929, but since the latter year the fare has gradually been reduced to less than 6 cents a mile. This trend has been accompanied by increased efficiency of operations on the part of the companies, particularly through the increased utilization of the available passenger space. In 1935, the percentage of all seats used on planes flying on domestic lines was 54.83 percent, compared with 51.82 percent in 1934 and 42.34 in 1932.

Notwithstanding the general acceptance by the traveling public of this newest mode of travel, the passenger traffic on the air lines is still but a small fraction of the rail traffic. In 1935, the passenger-miles flown on domestic airlines (313,905,508) was equivalent to less than 2 percent of the railroad passenger-miles, although the percentage of traffic carried between some of the principal cities is much higher than this average.

The third principal source of revenue of the air-transport companies is the express business. Receipts from this source are still considerably less than those derived from either the mail or the passenger business. The express business has developed more slowly, but during the past 5 years, as the transport planes increased in size, the volume of domestic express business increased tenfold. In 1935, the volume of express carried on domestic lines was 80 percent larger than in 1934.

While the growth of the express business may be noted from chart 3, the significance of the present volume of such traffic may perhaps be realized more readily when it is stated that in 1935 the express

poundage was 46 percent as large as the mail poundage. In 1930, the ratio of express to mail carried was about 1 to 20.

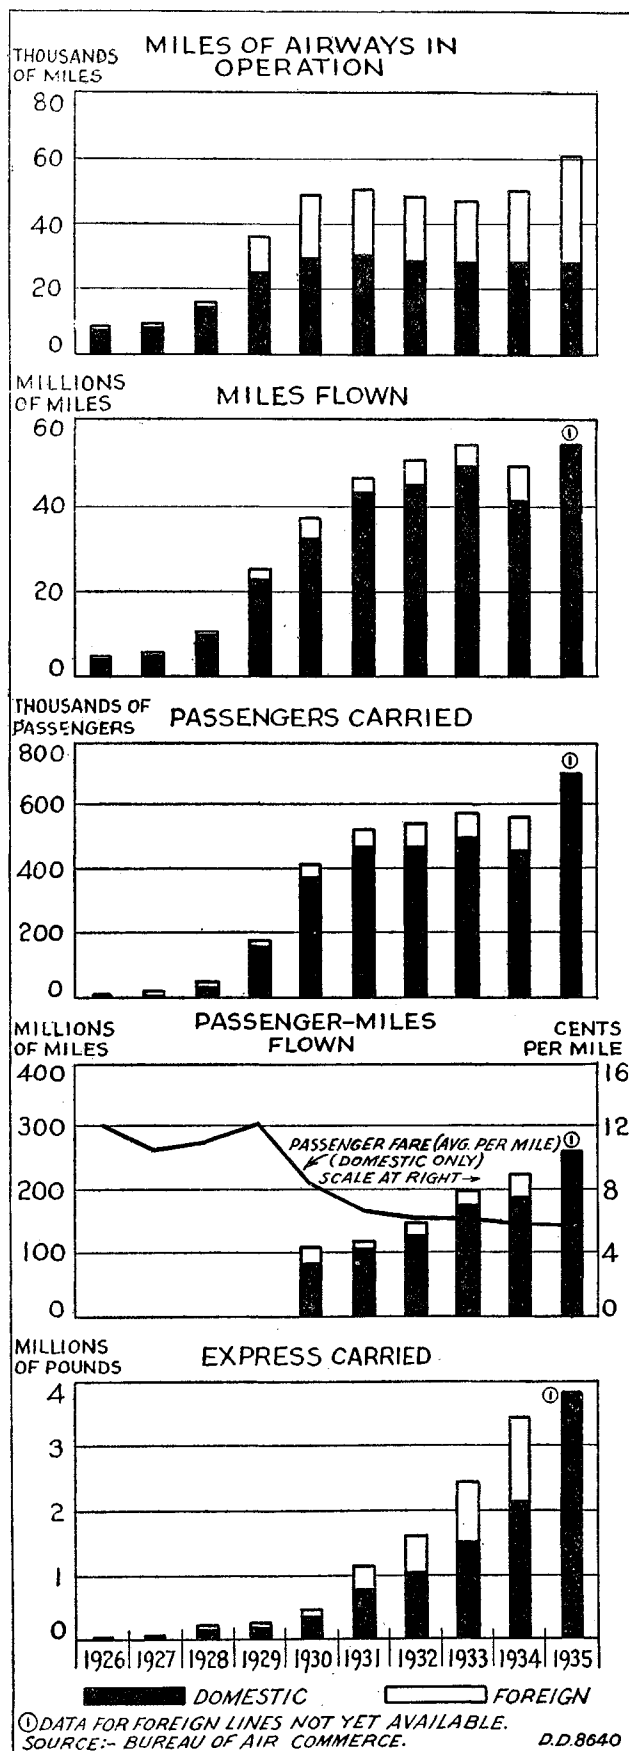

Chart 3. Growth of Scheduled Air Transport Operations, 1926-1935.

¹ Computed by the Board of Governors of the Federal Reserve System, and represent rates charged by reporting banks to their own customers as distinguished from open market rates. All averages are based on rates reported for 3 types of customer loans—commercial loans, and demand and time loans on securities. The method of computing the averages takes into account (a) the relative importance of each of these 3 types of loans and (b) the relative importance of each reporting bank, as measured by total loans. In the 2 group averages the average rate for each city included is weighted according to the importance of that city in the group, as measured by the loans of all banks.

¹ Compiled by the Board of Governors of the Federal Reserve System and represent a revision of the data on this subject shown in previous years in the Survey of Current Business. These data were published in weekly form beginning Feb. 6, 1929, on p. 825, of the December 1934 and p. 726 of the November 1935 issues of the Federal Reserve Bulletin. The figures as now shown differ from the previous data in that they do not include loans to brokers and dealers for account of nonreporting banks, and for account of others. Figures for such loans will be published monthly in the Federal Reserve Bulletin.

² 11-month average.

¹ Compiled by the U. S. Department of Agriculture, Grain Futures Administration, from reports furnished since July 10, 1923, by the clearing members and clearing associations of the exchanges. For wheat futures, reports are received from the Chicago Board of Trade, Chicago Open Board, and the Minneapolis, Kansas City, Duluth, St. Louis, Milwaukee, New York, Seattle, and Portland exchanges. For corn futures reports are received from the Chicago Board of Trade, the Chicago Open Board, and the Minneapolis, Kansas City, St. Louis, and Milwaukee exchanges. For the period January 3, 1921, to April 30, 1923, internal-revenue reports were virtually the only source of information on the volume of trading in corn and wheat futures on the Chicago Board of Trade. Between May 1, 1923, and July 9, 1923, these reports were utilized in conjunction with reports made to the Grain Futures Administration.

¹ Compiled by the Securities and Exchange Commission and represents the volume of new securities covered by registration statements that have become fully effective, i. e., approved by the Commission. The figures include those registrations which have been made effective under notice of deficiencies and effective under notice of hearings. They do not include data on registration statements filed and not yet effective whether because of stop or refusal orders, withdrawals, or because examination had not yet been completed.

The data are based solely on the registration statements as filed by the registrants with the Securities and Exchange Commission. All data refer to registrants' intentions as of the date of filing or of later amendments. Thus, they represent statistics of intentions to sell securities rather than the actual sales of securities. The filing of the registration certificates was made mandatory under the provisions of the Securities Act of 1933.

Monthly data are available only from September 1934 to date. Prior to Sept. 1, 1934, the Securities Act of 1933 was administered by the Federal Trade Commission. Up to that date the Federal Trade Commission had permitted 794 statements, representing a total of \$1,164,135,600 in securities of various kinds, to become effective.

Additional details are given in the monthly reports of the Securities and Exchange Commission, including a break-down by industries and the indicated rise of the proceeds.

² Average of months shown.

Monthly Business Statistics

The following summary shows the trend of industrial, commercial, and financial statistics for the past 13 months. Statistics through December 1931 for all series **except those marked with an asterisk (*)** will be found in the 1932 Annual Supplement to the Survey of Current Business, together with an explanation of the sources and basis of the figures quoted. Series so marked represent additions since the Annual was issued and similar information, if published, will be found in the places noted at the bottom of each page. Note, however, that many revisions have occurred since the last Annual Supplement was published. **A special supplement was included in the April 1935 issue, pages 57 to 72, inclusive. This supplement gave the monthly averages of all current series for the years 1932, 1933, and 1934.**

The terms unadjusted and adjusted used to designate index numbers refer to the adjustment for seasonal variation.

Data subsequent to January will be found in the Weekly Supplement to the Survey.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1936	1935

* Revised.

† Preliminary.

* New Series. See pp. 16-19 of the May 1934 issue, cash income for marketings of agricultural products, p. 19 of the December 1932 issue, Fairchild price index, and pp. 19 and 20 of the March 1933 issue, quantity marketings.

† Data for Feb. 15, 1936: Total 109, chickens and eggs 121, cotton and cottonseed 94, dairy products 123, fruits 92, grains 92, meat animals 125, truck crops 117, miscellaneous 94.

† Index of farm prices has been completely revised. For earlier data see p. 20 of the November 1934 issue. World stocks—revised total, rubber adjusted and sugar adjusted indexes for January 1927-June 1932, appeared on p. 20 of the September 1932 issue. Cash income for marketings of agricultural products revised from January 1933-June 1935. For revisions see p. 19 of the September 1935 issue.

• Monthly retail prices of coal was discontinued with the month of August 1935. Subsequent to that date the price will be shown quarterly.

† This series has been completely revised. Revised indexes for months not shown in the December 1935 issue have not yet been completed by the Department of Labor. They will be published as soon as available. Index computed every 2 weeks; monthly index is figure taken as nearest the month, prior to Aug. 15, 1933, index computed once a month.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1936	1935

* Revised.

* New series. For earlier data on building costs, American Appraisal Co., refer to p. 20 of the August 1933 issue. N. I. R. A. highway work started in September 1933, see November 1934 issue for beginning of series. First Home Loan Bank loan data were issued for December 1932. Home Owners' Loan Corporation data from September 1933 to April 1934 will be shown in a subsequent issue. Total loans closed to Jan. 31, 1936, \$2,981,913,430. Printer's Ink indexes from January 1922 to May 1934 appear on p. 19 of July 1935 issue. Data prior to May 1934 on "all other" radio and magazine advertising not published. See special note below on foreclosures. Data on H. O. L. C. loans outstanding for period September 1933–December 1934 will be shown in a subsequent issue.

* Revised series. See p. 20 of the October 1933 issue, magazine lineage. For revised data on magazine advertising cost for the years 1933 and 1934, see p. 19 of the February 1936 issue.

† Index as of Feb. 1, 1936, 201.2.

* Compiled by the Federal Home Loan Bank Board and represent the number of foreclosures on all types of properties in 1,013 identical communities in 48 States; having 53 percent of the population of the United States. Data prior to October 1933 not published. Comparable annual totals for 1926, 65,857; 1932, 210,821; and 1933, 209,003. Data were not compiled for other years. Months subsequent to September 1934 were computed by means of a link relative to keep series comparable since the figures for these months are from a slightly different number of communities.

* These series represent a break-down of the combined total shown in the Survey previous to September 1933. For earlier data see p. 20 of the September 1933 issue. † Months of January, May, August, and October 1935 and January 1936 include 5 weeks; other months include 4 weeks.

* For the period October 1933–February 1935, inter-bank loans that were formerly included have been removed.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1936	1935

* Revised.

* New series. For description of Chain Store Age indexes see p. 19 of the December 1932 issue. Comparable data of H. L. Green Co., Inc., sales prior to July 1933 not available. For earlier data on automobiles see p. 19 of the April 1934 issue and variety-store sales, p. 18 of the March 1934 issue. Data prior to October 1933 on collections not published. Data are currently being received from about 400 stores on open accounts and about 250 on installment accounts. Series on air mail not available prior to May 1934. Series on basis of weight carried was published in the Survey for the period February 1926 to December 1933.

† Revised series. For revisions refer to the indicated pages of the monthly issues as follows: Apparel sales index of Chain Store Age, p. 28, October 1933. Combined index and grocery index of Chain Store Age were revised for period January 1932 through August 1934. See footnote on p. 26 of the November 1934 issue.

‡ Monthly data from January 1932 through June 1935 are on page 20 of the July 1935 issue.

• The New York Evening Post series on newspaper advertising in 22 cities is available for the period 1916 through January 1934. See the 1932 annual supplement and monthly issues prior to December 1934.

Monthly statistics through December 1931, together with explanatory footnotes and references to the sources of the data, may be found in the 1932 Annual Supplement to the Survey

* Revised.

• New series. For earlier data on department store sales by Federal Reserve districts, see p. 20 of the February 1935 issue excepting Chicago, for which see note below. Note that the combined index of department store sales is computed by the Federal Reserve Board and the district indexes are computed by the Federal Reserve banks. For districts not marked with an asterisk the series are as published in the 1932 Annual Supplement and subsequent issues. See p. 20 of the December 1934 issue for rural sales for period January 1929 to October 1934. For earlier data on factory employment unadjusted in detail, see p. 16 of the June 1934 issue. See p. 19 of the July 1934 issue for factory employment unadjusted total. Data on employment in the durable and nondurable goods groups for the period January 1923-June 1935 are shown on p. 19 of the August 1935 issue.

† Revised series. See p. 19 of the April 1935 issue, department store sales, Chicago.

▲ This series was shown on p. 20 of the June 1935 issue from 1919 through April 1935.

● The adjusted index of department store sales (total value) was revised by the Federal Reserve Board for the years 1929 through 1934. Revised indexes for this period were shown on p. 20 of the June 1935 issue.

§ Data have been revised for the period January 1933-September 1935. Revisions not shown in the November 1935 issue appear on p. 16 of the January 1936 issue.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1936	1935

* Revised.

† Preliminary.

‡ Temporarily discontinued by the reporting source.

* For earlier data see the following references: Employment in Maryland, and Federal civilian employment, total, United States, p. 18, December 1932; Federal and State highway employment, dyeing and cleaning establishments, and laundries, p. 19, June 1933; trades-union members employed, p. 18, December 1932, and hours of work, p. 20, October 1932. Pay rolls in the durable group for the period January 1923-June 1935 are shown on p. 19 of the August 1935 issue. Data for factory pay rolls by classes are shown on p. 18 of the June 1934 issue. See also p. 19, July 1934 issue. Data on the U. S. Employment Service for the period July 1933-June 1935 were shown on p. 19 of the September 1935 issue.

† For revised data refer to the indicated pages as follows: Employment in New Jersey and Pennsylvania, p. 19, September 1933; employment in laundries, and dyeing and cleaning establishments, p. 20, August 1934; hotels revised for the period January 1929-July 1935, inclusive, see p. 20 of the September 1935 issue. For revised data on employment in wholesale and retail trade for 1930-34, see p. 20 of the March 1935 issue. Hours of work per week in factories revised for 1933. See p. 20 of the July 1934 issue. For labor turn-over see p. 20 of the April 1935 issue.

* Figures represent the condition as of the end of the month shown. This method has been followed since September 1932. Figures shown previous to that date in the Survey are as of the first of the month. They were published as of the first of the following month by the Department of Agriculture.

† Data revised for 1934. See pp. 29 and 56 of the May 1935 issue.

‡ Data have been revised for the period January 1933-September 1935. Revisions not shown in the November 1935 issue appear on p. 16 of the January 1936 issue.

§ The revised series on dyeing and cleaning and laundry employment shown in the August 1935 issue have been dropped by the B. L. S. and the publication of the original series resumed.

Monthly statistics through December, 1931, together with explanatory footnotes and references to the sources of the data, may be found in the 1932 Annual Supplement to the Survey

* Revised.

† For earlier data on the following subjects, refer to the indicated pages of the monthly issues as follows: Pay rolls, Baltimore, p. 18, December 1932; pay rolls, Chicago, p. 20, June 1933; pay rolls, Milwaukee, p. 18, December 1932; pay rolls, New York, p. 20, June 1933; pay rolls, Philadelphia, p. 18, December 1932; pay rolls, Pittsburgh, p. 18, January 1934; pay rolls, Maryland and Massachusetts, p. 18, December 1932; pay rolls in dyeing and cleaning establishments and laundries, p. 19, June 1933. Data on pay rolls for nondurable goods industries for the period January 1923-June 1935 are shown on p. 19 of the August 1935 issue.

† Revised series. For revisions on the following subjects, refer to the indicated pages of the monthly issues as follows: Pay rolls, Pennsylvania, Delaware, New Jersey, and Philadelphia, p. 19, September 1933; for revisions of years 1930-34 for these series and for the city of Pittsburgh, see p. 20 of the March 1935 issue; pay rolls, Massachusetts, for 1931, p. 19, August 1933 and 1932-34 p. 20, September 1935; pay rolls in wholesale and retail trade for 1930-34, inclusive, p. 20, March 1935; pay rolls in dyeing and cleaning establishments and laundries, p. 20, August 1934; hotels revised for the period January 1929-July 1935, inclusive; see p. 20 of September 1935 issue.

▲ Revised data on Illinois pay rolls from April 1929 to December 1932 will be shown in a subsequent issue.

• The revised series on dyeing and cleaning and laundry payrolls shown in the August 1935 issue have been dropped by the Bureau of Labor Statistics and the publication of the original series resumed.

§ Data have been revised for the period January 1933-September 1935. Revisions not shown in the November 1935 issue, appear on p. 16 of the January 1936 issue.

Monthly statistics through December 1931, together with explanatory footnotes and references to the sources of the data, may be found in the 1932 Annual Supplement to the Survey

*Revised.

†Revised series. For revisions on the following subjects, refer to the indicated pages of the monthly issues. Massachusetts weekly earnings for 1931, p. 19, August 1933; and for 1932-34, p. 20, September 1935; factory weekly and hourly earnings for 1933, p. 20, July 1934. Certain classes of loans included in the figures shown through May 1934 have been reclassified and removed from the agricultural category.

‡Data for 1934 revised. See pp. 30 and 56 of the May 1935 issue.

§Construction wage rates as of Feb. 1, 1936—common labor, \$0.547; skilled labor, \$1.12.

▲Beginning with March 1932 data are based on Federal-aid and State projects; before that time the data are based on Federal-aid projects.

†Joint-stock land banks in liquidation.

*New series. For earlier data on the following subjects, refer to the indicated pages of the monthly issues as follows: Factory weekly earnings for period of January 1927 through August 1932, p. 20, October 1932; factory hourly earnings for January 1926-December 1931, p. 18, December 1932; weekly earnings Massachusetts for January 1926-December 1931, p. 18, December 1932; construction wage rates for January 1922-July 1933, p. 19, September 1933. Additional series on agricultural loans were first included in the June 1934 issue for land-bank commissioner for period July 1933-April 1934. Additional series were also included in this issue for banks for cooperatives including central bank and production credit associations for the period October 1923-April 1934, and emergency crop loans and regional agricultural credit corporations for April 1933-April 1934. Data for emergency crop loans for fiscal years from June 1922-June 1931 and monthly periods January 1932-March 1933 and regional credit corporations for October 1932-March 1933 will be shown in a subsequent issue.

▲Break-down of figures shown in issues up to November 1934.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey.	1936	1935

* Revised.

*New series. For earlier data on the following subjects, refer to the indicated pages of the monthly issues. New series on "Brokers' Loans" for the period January 1929-December 1935 are shown on p. 19 of this issue. For new series on bank rates to customers see p. 19 of this issue. For new series on interest rates of Federal land banks see p. 20 of the April 1935 issue. Data on excess reserves prior to September 1934 will be shown in a subsequent issue. See footnote below on break-down of "Investments" and total loans. These 3 series represent a break-down of the investment total. Monthly data previous to October 1934 not available. Data on acceptances and commercial paper, on real estate, to banks and other loans represent a break-down of the "All other" loans total which was published prior to Oct. 1, 1935.

†Figures subsequent to December 1933 represent gold certificates on hand and due from Treasury, plus redemption fund.

‡Method of computing net demand deposits subject to reserve was changed by the "Banking Act of 1935" approved Aug. 23, 1935. Consequently figures since that date are not comparable with those for earlier periods. Data for months August 1934-August 1935 were incorrectly shown in the October 1935 issue.

§Data on Federal Reserve Reporting Member Banks represent operations in 101 leading cities. These series, according to a statement in the Federal Reserve Bulletin for November 1935, in the main, represent a continuation of the 101 city series published prior to the bank holiday. It is pointed out that although the banking crisis and subsequent developments affected these series considerably, the data reflect the course of banking developments during the disturbed period. Data on 101 cities were last shown in the May 1933 Survey for February 1933. Figures on the new basis not shown above will appear in a subsequent issue. Data on brokers' loans by reporting member banks also represent a continuation of the series covering 101 cities last shown in the May 1933 Survey.

¶Effective January 1936, classifications have been changed to exclude certain financial failures and thus to limit the data more strictly to commercial failures. Change affects only the agents and brokers totals, and the grand total. Figures for these two groups for January 1935, comparable with January 1936 are as follows: Agents and brokers, number 51; liabilities, \$1,155,000. Grand total, number, 1,146; liabilities, \$14,603,000.

Monthly statistics through December 1931, together with explanatory footnotes and references to the sources of the data, may be found in the 1932 Annual Supplement to the Survey

† See footnote on p. 32 marked "g" * Revised.

† Revised series. For earlier data see pp. 18, 19, and 20 of the July 1933 issue, insurance written and admitted assets: p. 18 of the June 1933 issue, premium collections.

‡ The nominal official gold value of the Chilean peso was changed from 3 pence gold to 1½ pence gold as of Jan. 2, 1935.

§ Par values of foreign currencies as given on pp. 86 and 87 of 1932 annual supplement were changed with the reduction in gold content of the United States dollar.

• Quotation based on paper peso since Dec. 10, 1933, instead of gold peso as formerly. Former equivalent to 44 percent of latter. See note on p. 56 of the March 1934 issue.

▲ The figures for "other" bonds and stocks held (book value) for the months of January and February 1934 shown as 611 and 616 million dollars, respectively, in the monthly issues from May 1934 to April 1935 should read 514 for January and 518 for February.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1936	1935

▲ Or exports (-).

• Revised.

§ Preliminary.

⁴ Deficit.

• Data are compiled by the American Bureau of Metal Statistics and represent the estimated world output. The series for the period January 1928-August 1934 presented in the SURVEY covered the principal producing countries which produced the following percentages of the world total: 1928, 87.9; 1929, 87.1; 1930, 85.5; 1931, 82.0; 1932, 75.5; and 1933, 77.5.

§ Series revised to include emergency expenditures. Figures as shown in SURVEY for months prior to May 1932 are comparable with this series. Comparable figures for the period May 1932 to March 1933 are on p. 33 of the June 1934 issue. Later data are shown in monthly issues.

• The item of \$333,245,378 carried by the Treasury as a credit under the trust funds for May represents a transfer of that amount from the general fund to the trust funds. Amount represents deposits of governmental agencies for which Treasury has been acting as fiscal agent. The amount therefore has not been included in the May total of receipts and expenditures.

† For 1934 includes \$2,808,221,138 for February, \$2,233,252 for March, \$409,052 for April, \$298,868 for May, \$213,447 for June, \$272,163 for July, \$268,204 for August, \$134,843 for September, \$173,702 for October, \$116,585 for November, \$132,296 for December. For 1935 includes \$123,639 for January, \$68,241 for February, \$157,326 for March, \$89,144 for April, \$96,103 for May, \$105,773 for June, \$65,219 for July, \$62,055 for August, \$62,936 for September, \$56,256 for October, \$65,780 for November, \$70,889 for December, and \$60,222 for January 1936, representing the increment resulting from reduction in weight of gold dollar.

* For earlier data on net gold imports see p. 20 of the December 1932 issue. For new series for internal revenue tax receipts from admissions to theaters, capital stock transfers, sales of produce (future delivery), and sales of radios, see p. 20 of the Feb. 1936 issue.

§ This excludes relief grants to States by the R. F. C. under the Emergency Relief Act of 1933 upon certification of grants by the Federal Emergency Relief Administrator. During 1934 these amounted to \$499,650,000 on Jan. 31, Feb. 28, Mar. 31, and Apr. 30, \$500,000,000 disbursed for relief purposes under Emergency Appropriation Act of 1935, and \$10,000,000 purchase of stock in R. F. C. Mortgage Co. and \$12,500,000 for preferred stock subscription in export-import banks.

† Revised series. See p. 19 of the July 1934 issue, corporation profits total for period 1928-35 and p. 20 of the October 1935 issue for public utilities, 1928-35. The data of the Reconstruction Finance Corporation has been revised to include the statistics of certain loaning agencies of the Corporation not included heretofore and for revisions made in recent audits. Revised data for February 1932-June 1935, inclusive, are shown on p. 20, of August 1935 issue.

Monthly statistics through December 1931, together with explanatory footnotes and references to the sources of the data, may be found in the 1932 Annual Supplement to the Survey

* Revised.

† Has included since July 1934 other than farm loan issues for which Treasury has acted as fiscal agent.

‡ Revised series on domestic bond prices for July 1931-February 1933 appeared on pp. 19 and 33 of the April 1933 issue.

§ New series. Data on new security registrations fully effective for the period Sept. 1934-Dec. 1935 and volume of trading in futures for the period Jan. 1919-Dec. 1935 are shown on p. 20 of this issue. For new series on U. S. Government bond prices see p. 20 of the June 1933 issue. New series on bond sales on all registered exchanges began in Oct. 1934. Figures not shown appear in the annual report of the Securities and Exchange Commission dated June 30, 1935.

¶ The difference in the figures covering bond sales on the New York Stock Exchange (par value) is due to stopped sales being included in the figures of the Securities and Exchange Commission (total) beginning April 1935.

‡ Revised series on domestic bond prices for July 1931-Feb. 1933 appeared on pp. 19 and 33 of the April 1933 issue.

Monthly statistics through December, 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1936	1935

* Revised.

* New series. For earlier data see p. 20 of the August 1934 issue, yield on United States domestic long-term bonds (all issues except those due or callable within 8 years) for years 1926-1934; for data for years 1919-25 see p. 20 of the November 1935 issue. Series on stock sales on all registered exchange began in October 1934. Data for months not shown above appear in the annual report of the Securities and Exchange Commission dated June 30, 1935. For quantity exports adjusted for seasonal variation for the period July 1914-August 1935 see p. 18 of the October 1935 issue.

† For earlier data on yield of domestic and municipal bonds see pp. 19 and 33 of the April 1933 issue.

‡ The difference in the figures covering the volume of stock sales on the New York Stock Exchange since April 1935 is due to stopped and odd lot sales being included in the figures of the Security and Exchange Commission. These are excluded in the figures reported by the New York Stock Exchange.

Monthly statistics through December 1931, together with explanatory footnotes and references to the sources of the data, may be found in the 1932 Annual Supplement to the Survey.

* Revised.

§ Data revised for 1933. See p. 20 of the October 1934 issue; for 1934 revisions, see p. 20 of the December 1935 issue.

Beginning with January 1934, import data represent imports for consumption and are not comparable with earlier figures, which consist of general imports. See explanation on p. 9 of the March 1934 issue.

† Revised series. Data for January 1929–May 1935, inclusive, on electric railway passengers carried and operating revenues for January 1932–April 1935, inclusive, are shown on p. 19 of the August 1935 issue.

Monthly statistics through December 1931, together with explanatory footnotes and references to the sources of the data, may be found in the 1932 Annual Supplement to the Survey

Operating income.....thous. of dol.		557	454	952	1,195	1,450	1,156	894	1,219	1,306	1,452	1,002	

* Revised. † Includes tonnage in both upper and lower Mississippi River. Revised figures prior to December 1934 will be shown in subsequent issue.

† Revised series. For earlier data see p. 20 of the April 1934 issue for operating revenues, operating expenses, and net railway operating income of class I railways. For revisions of data for clearances of vessels in foreign trade, see p. 36 of the September 1934 issue. For revisions on Panama Canal from August 1914 to June 1935, see p. 19 of the September 1935 issue.

* New series. Data on airplane travel covers scheduled airlines operating in United States. For data on passengers carried for period of 1926 to 1933 and passenger-miles flown from 1930 to 1933, see p. 20 of the February 1934 issue. For data on miles flown and express carried from 1926 through 1933, see p. 19 of the January 1935 issue. New series on telephones as compiled by Federal Communications Commission. Data supersede those published in previous issues of the Survey which covered all carriers having annual operating revenues in excess of \$250,000; present series covers only those companies with operating revenues in excess of \$250,000 which have interstate lines. In December 1933 operating revenues of these companies were 97.7 percent of the total of the companies previously reporting.

• This figure covers room revenue only.

† Data for March, June, August, and November 1935 are for 5 weeks; other months, 4 weeks.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1936	1935

* Revised.

† New series. For earlier data see p. 20 of the April 1935 issue (alcohol withdrawn tax paid), p. 20 of the April 1933 issue (crude methanol) and p. 10 of January 1934 issue (explosives).

* Revised series, see p. 36 of the June 1933 issue, for 1932 revisions, exports and imports of fertilizer; for 1933 revisions on exports see p. 29 of the September 1934 issue; for 1934 revisions see p. 19 of the December 1935 issue; for revised data for crude methanol production for 1933, see p. 36 of the May 1934 issue. Quarterly data on fats and oils for the years 1932 and 1933 were shown on p. 19 of the March 1935 issue; for 1934 on p. 19 of the November 1935 issue.

▲ The refined equivalent of crude production is approximately 82 percent.

♦ Texas only. Louisiana produced 23 percent of the United States production in 1933 and 16 percent in 1934.

† Figures since January 1922 revised due to dropping of Missouri from Southern States classification. See p. 19 of the January 1934 issue.

* See footnote on p. 37 of this issue. Monthly revisions for 1933 are shown on p. 20 of the October 1934 issue; for 1934 revisions see p. 20 of the December 1935 issue

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1936		1935

• Revised.

† December 1 estimate.

• For earlier data on vegetable shortening price, see p. 18 of the January 1934 issue.

† Revised series: Monthly data on cottonseed and cottonseed products for the year ended July 1932 were shown on p. 20 of the February 1933 issue; revisions for each month of 1933 were shown when monthly data for 1934 became available; revisions for year 1934 were shown on p. 38 of the November 1934 issue and for year ended July 1935 on p. 20 of the November 1935 issue. For exports of cottonseed cake and meal for the year 1932 see p. 37 of the June 1933 issue. Data revised for 1933 see p. 19 of the September 1934 issue; for 1934 revisions see p. 19 of the December 1935 issue. For revised data on imports of vegetable oils for 1932 see p. 17 of the June 1933 issue; for 1933, p. 20 of the October 1934 issue; and for 1934, p. 20 of the December 1935 issue. Quarterly data on fats and oils for the years 1932 and 1933 were shown on p. 19 of the March 1935 issue; for 1934 on p. 19 of the November 1935 issue.

• See footnote on p. 37 of the October 1934 issue. Data revised for 1933; see p. 20 of the October 1934 issue; for 1934 revisions see p. 20 of the December 1935 issue.

• This series prior to September 1935 was listed as "Lard Compound."

Monthly statistics through December 1931, together with explanatory footnotes and references to the sources of the data, may be found in the 1932 Annual Supplement to the Survey

* Revised.

† New series. For earlier data see p. 19 of the May 1935 issue, manufactured and natural gas. Series on cellulose products prior to January 1933 not available.

‡ Revised series. Data revised beginning with January 1932. See p. 39 of the April 1935 issue. Revisions for period January 1932 to January 1934, inclusive, will be shown in a subsequent issue.

§ For revised data for electric-power production for 1932 see pp. 38 and 56 of the May 1933 issue; for 1933 see p. 38 of the May 1934 issue; 1934 data also revised. Revisions not shown in the June 1935 issue will appear in a subsequent issue. Manufactured and natural-gas revisions for years 1929-34, inclusive, were shown on pp. 19 and 20 of the May 1935 issue.

¶ For revised data on paint, varnish, and lacquer products for the years on "total" for 1928-35 and "unclassified" for years 1932-35 see p. 20 of the November 1935 issue.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1936	1935

* Revised.

§ Bulk evaporated milk not included since December 1931.

/ Dec. 1 estimate.

* New series. Beverage figures are from the U. S. Treasury, Alcohol Tax Unit. Monthly data on distilled spirits available beginning July 1933 and on fermented malt liquors, April 1933. For earlier data on receipts of milk in Greater New York see p. 20 of the August 1934 issue. See p. 19 of the June 1933 issue for butter consumption. Data on consumption of rectified spirits are as indicated by the sale of stamps. Data prior to April 1933 not published.

† See footnote on p. 37 of this issue. Data for 1933 also revised, see p. 20 of the October 1934 issue. For 1934 revisions see p. 20 of the December 1935 issue.

§ Revised series. For revisions refer to the indicated pages of the monthly issues, as follows: For 1931 on apparent consumption of cheese, production of total and American whole-milk cheese, and production of condensed and evaporated milk, p. 20, January 1933. For earlier data on stocks (cold-storage holdings) of total and American whole-milk cheese, p. 19, April 1933. For 1932 revised data on production of factory and American whole-milk cheese, production of condensed and evaporated milk, p. 39, September 1933. For subsequent revisions for 1932 on production of factory and American whole-milk cheese, production of condensed and evaporated milk, p. 39, September 1933. For 1932 and 1933 revisions on butter and cheese consumption, and 1933 revisions on production of butter, cheese, condensed and evaporated milk, see p. 19 of the March 1935 issue. For 1934 revisions on production of butter, cheese, condensed and evaporated milk, and apparent consumption of butter and cheese see p. 19 of the November 1935 issue. For final revision for 1933, car-lot shipments of apples, citrus fruits, onions, and potatoes, see p. 20, January 1935 issue, and for 1934 revisions see p. 20 of the November 1935 issue. Data on consumption of distilled spirits revised to include brandy tax paid direct from fruit distilleries. For revisions see p. 39 of the March 1935 issue.

* Consumption of distilled spirits (withdrawn tax paid) plus brandy tax paid direct from fruit distilleries plus ethyl alcohol withdrawn tax paid (see p. 39) equals Bureau of Internal Revenue total of distilled spirits withdrawn tax paid.

Monthly statistics through December, 1931, together with explanatory footnotes and references to the sources of the data, may be found in the 1932 Annual Supplement to the Survey

* Revised.

† Brewer's rice not included.

f Dec. 1 estimate

1 No quotation.

* New series. For earlier data, see p. 20 of the November 1932 issue, rye and barley receipts and rye stocks; and p. 20 of the June 1935 issue, wholesale price of wheat, No. 1 Dark Northern Spring, Minneapolis. Since the division of no. 2 barley by the Department of Agriculture into straight and malting grades as of July 1, 1934, prices for each grade have been reported separately.

† Data revised. For revisions of wheat flour, production and consumption (Russell's) from July 1931 to December 1932, see p. 19 of the August 1933 issue. For revised data on exports for 1932 see p. 39 of the June 1933 issue for 1933, p. 20 of the September 1934 issue, and for 1934, p. 19 of the December 1935 issue.

* Represent the visible supply east of the Rocky Mountains as reported by Dun & Bradstreet.

† See footnote on p. 37 of this issue. Data for 1933 also revised, see p. 20 of the October 1934 issue, and for 1934, revisions p. 20 of the December 1935 issue.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1936	1935

† Data not available.

* Revised.

† Dec. 1 estimate.

† Revised series. For revisions refer to the indicated pages of the monthly issues, as follows: Exports of tobacco for 1932, p. 42, June 1933, data revised for 1933, see p. 20 of the September 1934 issue. For 1934 revisions see p. 19 of the December 1935 issue. 1932 final revision of anthracite production, p. 42, January 1934. Anthracite shipments for 1932, p. 42, December 1933. For revised data for 1932 on sugar meltings and stocks, see p. 41 of the May 1933 issue. For 1932 revisions of sugar imports and exports see p. 41 of the June 1933 issue. For revisions of exports in 1933, see p. 20 of the September 1934 issue. Revised data on shipments and stocks of refined sugar at 2 ports (for period January 1925–April 1935) are shown on p. 18 of the October 1935 issue. The change resulted from a reduction in the number of reporting refineries.

† See footnote on p. 37 of this issue. Data revised for 1933, see p. 20 of the October 1934 issue. For 1934 revisions, see p. 20 of the December 1935 issue.

† Price converted to short-ton basis. Data on a short-ton basis prior to April 1931 were not published. Earlier monthly data were reported on a long-ton basis.

† Note major correction in data on imports of refined sugar from Cuba June–November 1934 were shown in the February 1935 issue.

† New series. For earlier data, see p. 20 of the August 1934 issue, for receipts of refined sugar from Hawaii and Puerto Rico and imports from Cuba. Data prior to May 1934 on imports of refined sugar from the Philippine Islands are not available.

† Monthly retail price of coal was discontinued with the month of August 1935. Subsequent to that month the price will be shown quarterly.

Monthly statistics through December, 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1936	1935

* Revised.

† Figures revised to reflect transfers between pipe line and refinery stocks beginning December 1935.

Revised series. For revisions refer to the indicated pages of the monthly issues, as follows: Consumption of bituminous coal by electric power plants for 1932, p. 42, May 1933; for 1933, p. 42, May 1934. Data also revised for 1934. Revisions not shown on p. 43 of the June 1935 issue will appear in a subsequent issue. Bituminous coal production, for 1932, p. 42, January 1934. Bituminous coal production revised for 1933 and 1934. Revisions not shown in the May 1935 issue will appear in a subsequent issue. Beehive and byproducts coke for 1932, p. 43 of December 1933 issue, and for 1933 revisions see p. 43, July 1934. Data for 1934 also revised; revisions not shown in the July 1935 issue will appear in a subsequent issue. Crude petroleum production, stocks, east of California (total), at refineries and at tank farms and pipe lines, and wells completed, for 1932. See footnote on p. 56, November 1933. Consumption of gas and fuel oils in electric power plants for 1932, p. 43, May 1933; for 1933 revisions, p. 43, May 1934. Data also revised for 1934. Revisions for months not shown for 1934 on p. 44 of the June 1935 issue will appear in a subsequent issue. Production of residual fuel oils and gas oil and distillate fuels, stocks of residual fuel oil east of California, consumption of gasoline, production of gasoline at natural gas plants and refineries, stocks of gasoline at refineries, for 1932, p. 56, November 1933; retail distribution of gasoline in 41 States for 1932, p. 43, May 1933, for 1933, p. 43, May 1934.

See footnote on p. 37 of this issue. Imports also revised for 1933, see p. 20 of the October 1934 issue; for 1934 revisions see p. 20 of the December 1935 issue.

† Data revised for 1933. See p. 20 of the January 1935 issue. For 1934 see p. 20 of the October 1935 issue.

* Data revised for 1933, see p. 20 of the September 1934 issue; for 1934 revisions see p. 19 of the December 1935 issue.

* New series. For earlier data see p. 20 of the February 1933 issue, production and stocks of residual fuel oil and gas oil and distillate fuels.

† Monthly retail price of coal was discontinued with the month of August 1935. Subsequent to that month the price will be shown quarterly.

▲ Beginning with August 1934 certain anthracite stocks were included which had not been covered in previous reports.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1936	1935

* Revised.

† Raw stocks in all hands as shown above include all hides from Government animals slaughtered under Federal inspection. Hides from cattle allotted to State relief agencies and which were not killed under Federal inspection are not included unless they have already moved into sight. It is obvious, therefore, that a quantity of hides from noninspected slaughter held by State Relief Agencies constitutes an invisible addition to the visible supplies shown above.

‡ Data on production of sheep and lamb and goat and kid leathers from 1927-34 have been revised. For revisions not shown on p. 44 of the April 1935 issue see p. 19 of the June 1935 issue.

▲ Government relief slaughter included for the period June 1934-February 1935. See p. 44 of the June 1935 issue for the figures, excluding relief slaughter. For sheep and lambs, relief slaughter only affected the data for the months of September to December 1934.

• Data revised for 1933. See p. 20 of the January 1935 issue. For 1934 see p. 20 of the October 1935 issue.

¶ See footnote on p. 37 of this issue. Imports revised for 1933, see p. 20 of the October 1934 issue, for 1934 revisions see p. 20 of the December 1935 issue.

* New series: For earlier data refer to the indicated pages of the monthly issues. Leather production, p. 19, June 1933; leather stocks, p. 19, January 1935. New series on gloves and mittens cover 234 identical manufactures as reported to the U. S. Department of Commerce, Bureau of the Census. Data prior to July 1934 are not available. These data are not comparable with data through January 1934 previously shown. New series on wholesale price of women's shoes began January 1934. Data not shown above will appear in a subsequent issue.

† Revised series. For earlier data refer to the indicated pages of the monthly issues. Production of cattle, sheep, and lamb leather, p. 44, April 1934; imports of total hides and skins for 1932, exports of upper leather for 1932, p. 43, June 1933. Production of asphalt for 1932 and consumption of kerosene and lubricating oil, for 1932, see p. 56 of the November 1933 issue.

• Data revised for 1933. See p. 20 of the September 1934 issue; for 1934 revisions see p. 19 of the December 1935 issue.

Monthly statistics through December 1931, together with explanatory footnotes and references to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1936	1935

* Revised.

† Data temporarily discontinued.

• New series. For data on lumber exports for period of January 1919 to September 1932, see p. 20 of the November 1932 issue. See special footnote below on lumber production, shipments, and stocks.

† Data revised for 1932, see p. 44 of the June 1933 issue, exports of Douglas fir lumber and timber. Boot and shoe production for 1934, p. 45, March 1935 issue.

• Data revised for 1933. See p. 20 of the September 1934 issue; for 1934 revisions see p. 19 of the December 1935 issue.

▲ New series on lumber production, shipments, and stocks compiled by National Lumber Manufacturers' Association and represent an estimate of the total lumber cut based on monthly reports received from regional associations covering between 80 and 90 percent of the total cut in 1934 and 70 to 80 percent in 1935. No comparable figures are available prior to January 1934.

† Series have been revised for period January 1934–October 1935. These are shown on p. 20 of the February 1936 issue.

‡ Beginning with January 1934 the report includes all known operators; prior to that time approximately 89 percent of the listed capacity.

§ Data revised for 1932. For revisions of exports of Southern Pine lumber and timber, see p. 45 of the June 1933 issue. Data revised for 1933, see p. 20 of the September 1934 issue. For 1934 revisions see p. 19 of the December 1935 issue.

• New series covering these items will be shown in a subsequent issue.

Monthly statistics through December 1931, together with explanatory footnotes and references to the sources of the data, may be found in the 1932 Annual Supplement to the Survey

* Revised.

* New series. Data on furniture activity, all districts, prior to April 1933 not published. For imports of iron and steel, see p. 20 of the November 1932 issue; for malleable castings, p. 20 of the April 1933 issue. New series on iron and steel composite price was shown on p. 19 of the January 1935 issue.

† For 1932, 1933, and 1934 revisions, see p. 45 of the June 1933 issue, p. 20 of the September 1934 issue, and p. 19 of the December 1935 issue, respectively.

‡ Revised. Data prior to April 1933 not published on plant operations. For range boilers, see p. 20 of the July 1934 issue.

• Imports from Cuba not included.

See footnote on p. 37 of this issue. For 1933 and 1934 revisions, see p. 20 of the October 1934 issue and p. 20 of the December 1935 issue, respectively.

¶ Distribution of unfilled orders of deliveries of 30 days or less and deliveries of more than 30 days have been discontinued by the reporting source.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1936	1935

* Revised.

* Data on convection type radiators, prior to January 1932 not available. For earlier data on wholesale price of plumbing and heating equipment, see p. 20 of the January 1933 issue; for steel castings, p. 20 of the October 1934 issue; and for United States Steel Corporation shipments, see p. 18 of the January 1934 issue.

† In equivalent direct radiation.

† Revised series. For earlier data on bathroom accessories see p. 20 of the October 1933 issue. Data on vitreous china plumbing fixtures revised beginning January 1933, see p. 47 of the April 1935 issue; revisions for 1933 will be shown in a subsequent issue.

▲ Steel casting series revised January 1935 by the increase of the number of companies from 164 to 180; comparable data not completed for 1934 and earlier years. Figures for 164 companies in January 1935 were new orders, total 31,816, percent of capacity 20.3; new orders, railway specialties, 6,835; production, total 28,519; percent of capacity 18.2; production, railway specialties 6,052.

§ For 1932 revisions see p. 46 of the July 1933 issue; for 1933, p. 47 of the August 1934 issue; for 1934, p. 50 of the August 1935 issue.

Monthly statistics through December 1931, together with explanatory footnotes and references to the sources of the data, may be found in the 1932 Annual Supplement to the Survey

* Revised.

• New series. For earlier data see p. 20 of the December 1932 issue for tin and terneplate and p. 20 of the July 1934 issue for machine tools (including forging equipment.) Current oil-burner series, available only back to January 1933, are based on reports from 160 concerns.

† Revised series. Data on air-conditioning equipment and oil burners revised starting January 1933; see footnote on p. 48, April 1935. The revisions for 1933 will be shown in a subsequent issue.

▲ Revised data on steel furniture shelving for years 1932, 1933, and 1934 will be shown in a subsequent issue.

‡ Revised series on mechanical stokers, see p. 48 of the April 1935 issue; domestic pumps starting January 1934, see p. 49 of the April 1935 issue.

• Series covering shipments and unfilled orders temporarily discontinued.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1935

* Revised.

† New series: For earlier data, see p. 20 of the December 1932 issue, for tin andterneplate; p. 20 of the July 1935 issue, electric refrigerators; and p. 20 of the August 1934 issue, for hand-type vacuum cleaners.

† Data for Babbitt metal revised. Revisions not shown above will appear in a subsequent issue. For 1933 revisions on zinc see p. 49 of the January 1934 issue; for 1934 see p. 49 of the February 1935 issue; for 1935, see p. 52 of the February 1936 issue.

† Present series on water systems cover 52 companies.

• For revisions for 1932, see p. 48 of the June 1933 issue; for 1933, p. 20 of the September 1934 issue; for 1934, p. 19 of the December 1935 issue.

† Data for 1932 revised; for 1932 revisions, see p. 48 of the June 1933 issue, total imports of copper.

† See footnote on p. 37 of this issue. Data for 1933 revised; see p. 20 of the October 1934 issue. For 1934 revisions, see p. 20 of the December 1935 issue.

† Revised series on water softening apparatus revised starting January 1933; revisions for 1933 will be shown in a subsequent issue.

Monthly statistics through December 1931, together with explanatory footnotes and references to the sources of the data, may be found in the 1932 Annual Supplement to the Survey

● Revised.

● Since January 1934 the figures are more complete than those on deliveries previously shown. Shipments of the concerns formerly reporting contribute about 80-85 percent of the total for the present series.

▲ These series have covered a varying number of companies for period covered in survey; percentage of industry coverage not known. Reports have been from 12 companies since January 1934.

† In September 1935 3 firms discontinued reporting; data of 3 firms of equal size were added, thereby maintaining the comparability of the series.

† Revised series. See p. 49 of the June 1933 issue for 1932 chemical wood pulp imports. Data on total paper for 1934 revised. Revisions for months not shown in the August 1935 issue will appear in a subsequent issue.

* New series. Data prior to October 1931 not published on plumbing brass.

† See footnote on p. 37, of this issue. Date for 1933 revised; see p. 20 of the October 1934 issue. For 1934 revisions see p. 20 of the December 1935 issue.

§ The figures on paper (including total, fine, and wrapping) are as reported by the American Paper and Pulp Association, except book paper, the data on which are reported by the Book Paper Division of the Paper and Pulp Industry; they are not comparable with the data carried in the Survey from the American Paper and Pulp Association through December 1933. The present classification of the association differs from that previously used by them, as well as from the Bureau of the Census classification. In addition to the classes shown, the association also reports on printing paper (including uncoated book), boards, paperboard, and newsprint. The first two of these classifications are not used in the Survey, while the Bureau of the Census report is used for paperboard and the Newsprint Service Bureau's report for newsprint (the latter series is identical with that reported by the association). The ratio of the production reported by the association, the Newsprint Service Bureau, and the Bureau of the Census (monthly report on paperboard) to the annual figures reported by the Bureau of the Census for 1934 follow: Total paper, 87.4 percent; fine paper, 76.1 percent; wrapping, 109.7 percent (present classification of association is much broader than is Census or earlier association classification); paperboard, 68 percent of all paper board, but 81 percent of the more comparable classifications of container board and boxboard; book paper, uncoated, 95 percent and coated 100 percent (book paper estimates are by association since the data cannot be checked with Census data); and newsprint, 97 percent. Figures for the first 5 months of 1934 on book paper are not available. Data are available for the other series for the months of January to April 1934. These figures will be shown in a subsequent issue.

† See footnote marked "▲" on p. 60 of this issue.

Monthly statistics through December 1931, together with explanatory footnotes and references to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1936	1935

* Revised.

† Revised series. Data for period January 1933-January 1934, inclusive, on consumption and stocks of waste paper at mills will be shown in a subsequent issue.

‡ The Bureau of the Census has changed the title of the "Boxboard" report to "Paperboard" since data actually cover all board of .0012 of an inch or more in thickness reported by the cooperating manufacturers. Figures given on production and new and unfilled orders are for 94 identical manufacturers; and consumption and stocks of waste paper for 82 manufacturers. Estimated coverage is given in footnote marked § on p. 53.

§ New series. New series on paperboard shipping boxes compiled by the National Container Association, Chicago, Ill., from reports from all members of the industry of record beginning in January 1934. The volume of companies not reporting each month is estimated by the association, so as to keep the series comparable. Prior to January 1934 data covering this industry were compiled by the Paper Board Industries Association. See footnote marked "§" on p. 53 of this issue for book, fine, and wrapping paper.

See footnote on p. 37 of this issue; data for 1933 revised; see p. 20 of the October 1934 issue; for 1934 revisions see p. 20 of the December 1935 issue.

Monthly statistics through December 1931, together with explanatory footnotes and references to the sources of the data, may be found in the 1932 Annual Supplement to the Survey

* Revised.

b See footnote marked "†"

† Data for 1934 and for the period January to July 1935 are estimated to represent approximately 97 percent of the industry; for August, September, October, November, and December 1935 the coverage is estimated to be 81 percent. Previously published data are estimated to cover about 80 percent of the industry for 1929-33, inclusive, and 70 to 80 percent prior to 1929.

See footnote on p. 37 of this issue. Data for 1933 revised. See p. 20 of the October 1934 issue. For 1934 revisions see p. 20 of the December 1935 issue.

• In October 1933, 4 new companies were included in the report and 1 additional company in January 1934. Since that month, the coverage of the industry is 100 percent. For preceding periods the coverage varied; in 1929 it was 90 percent; in 1931, 80 percent; and in 1933, 95 percent, according to the Census of Manufactures. Overlapping figures are available for October 1933. See the October 1934 issue for October 1933 data for the smaller number of firms.

* New series. Earlier data not published on total shipments of rubber heels and rubber soles prior to December 1932.

† Revised series. Data on consumption of rubber for tires revised for 1932, 1933, and 1934. See p. 51 of the August 1934 issue. Revised data from September 1930-December 1934—rubber world stocks, world afloat, and afloat to the United States appear on p. 20 of the July 1935 issue; for 1932 revisions for United States stocks, see p. 50 of the May 1933 issue. See p. 50 of the June 1933 issue for crude rubber imports.

▲ Coverages of Rubber Association data has varied considerably over period for which data have been shown in SURVEY. Coverage was generally higher in 1934 and 1935 than in earlier years.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1936	1935

* Revised.

* New series. Earlier data not published on illuminating glassware prior to July 1932 (except production and percent of capacity); for earlier data see p. 20 of the June 1933 issue, face brick, machine production. Series on common and vitrified paving brick and tile beginning January 1934 were shown on p. 20 of the June 1935 issue. For earlier data on gypsum see p. 20 of the January 1933 issue.

† Adjusted for degrading and year-end physical inventories.

Data on plate glass represent the total output of the industry. Complete figures for the months of 1932 were shown on p. 52 of the March 1933 issue, and for 1933 on p. 52 of the March 1934 issue, 1934 also revised. Revisions for the year: January, 7,607; February, 7,441; March, 10,125; April, 8,873; May, 8,050; June 6,813; July, 7,539; August, 7,743; September, 6,985; October, 7,820; November, 6,867; and December, 8,704.

Series on glass containers are not comparable for 1934, 1935, and earlier years due to increase of number of firms reporting to 44. Shipments of the 44 firms for the year of 1933 amounted to 33,056,706, compared with 23,511,963 for the 30 firms reporting for the same year. Comparable statistics on shipments for the companies, now reporting by years, from 1928 to 1933, inclusive, were as follows (in gross): 1928, 31,943,016; 1929, 33,765,896; 1930, 31,905,933; 1931, 31,413,508; 1932, 26,947,949; and 1933, 33,048,747. Data are not available for this period on production and stocks, nor are monthly figures on shipments available. It may be noted from the trend of these data that the monthly figures prior to 1934 had a downward bias. Basis of estimating capacity was changed in computing the new series. Data for 1934 revised, see p. 52 of the May 1935 issue.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1936	1935

f As of Dec. 1.

* New series. Hosiery compiled by the *National Association of Hosiery Manufacturers* and estimated to represent 95 percent of the industry. For complete series see p. 19 of the September 1935 issue. Data on cotton cloth finishing are from the *National Association of Finishers of Textile Fabrics* and cover practically all the industry; comparable figures are not available prior to December 1933; the production statistics are prorated from data for 4-week periods; stocks are reported at end of each 4-week period. Data on cotton yarn, southern spinning from January 1933-April 1934 will be shown in a subsequent issue. Rayon deliveries from January 1923-April 1935 were shown on p. 19 of the June 1935 issue.

† For revisions for crop years 1931-32, 1932-33, 1933-34, and 1934-35, see p. 52 of the October 1933 issue, p. 52 of the September 1933 issue, p. 53 of the October 1934 issue, and p. 57 of the October 1935 issue, respectively.

‡ For revisions of cotton consumption, domestic stocks, and spindle activity for crop years 1931-32, 1932-33, 1933-34, and 1934-35, see p. 20 of the February 1933 issue, pp. 52 and 53 of the November 1933 issue, p. 53 of the October 1934 issue, and p. 57 of the October 1935 issue, respectively.

§ For 1932 revisions see p. 53 of the June 1933 issue; for 1933 revisions see p. 20 of the September 1934 issue; 1934 revisions are shown on p. 19 of the December 1935 issue. See footnote on p. 37 of this issue. Data revised for 1933; see p. 20 of the October 1934 issue; data also revised for 1934, see p. 20 of the December 1935 issue.

• Stocks at end of 4-week periods through June 16. July figures are averages for July 14 and Aug. 11. August figure as of Sept. 8. Subsequent data at the end of succeeding 4-week periods.

† For 1932 revisions see p. 53 of the June 1933 issue, for 1933 revisions see p. 20 of the October 1934 issue, and for 1934 revision see p. 20 of the December 1935 issue.

Monthly statistics through December 1931, together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	1936	1935

• Revised.

• Preliminary.

• See footnote on p. 37 of this issue.

§ Since July 1934 report has been on a weekly basis. Data for September and December 1934 and March, June, September, and December 1935, and January 1936 are for 5 weeks; other months, 4 weeks. Figures for July and succeeding months are computed from Census Bureau figures so as to represent 100 percent of the wool industry; earlier figures incomplete.

* New series. Wool stock series began in June 1934. See p. 20 of the July 1935 issue for earlier data and explanation of new wool consumption series.

• Beginning with the July 1934 report the statistics are reported on the basis of 4 and 5 weeks, the weekly distribution being determined by the Saturdays. The statistics presented herewith are still based on the pre-code computed normal (currently based on the single-shift performance over the 5-year period 1928-32). The current data represent practically complete coverage of the industry. Since December 1934 no allowance has been made for holidays.

▲ Foreign receipts beginning January 1934 are compiled by U. S. Department of Agriculture and are not comparable with data carried through December 1933. This results in a total figure which also is not comparable with earlier data.

† Compiled by the Bureau of the Census and represent stocks of raw wool held by all dealers, topmakers, and manufacturers who usually hold significant stocks of wool. The figures for the 3 quarters of 1934 have been revised to include the "grade not stated."

‡ Grease equivalent of shorn wool, plus actual weight of pulled wool. Conversions are based on totals; scoured wool is multiplied by 2 and pulled wool by 1½. Includes clothing and carpet wools. See note on apparel class wool on p. 20 of the July 1935 issue. As this grease series will probably be dropped in favor of the more accurate scoured series, it is suggested that those who wish to keep series going have their names placed on Bureau of the Census mailing list for the monthly wool consumption report, from which can be computed the present data, using formula given.

§ For 1932 revisions see p. 53 of the June 1933 issue, for 1933 revisions see p. 20 of the October 1934 issue, and for 1934 see p. 20 of the December 1935 issue.

• Data revised for 1932, see p. 54 of the June 1933 issue. Data revised for 1933, see p. 20 of the September 1934 issue; and for 1934, p. 19 of the December 1935 issue.

|| Index of sales of new passenger cars is shown on p. 26 of this issue.

Monthly statistics through December 1931, together with explanatory footnotes and references to the sources of the data, may be found in the 1932 Annual Supplement to the Survey

* Revised.

* New series. For earlier data see p. 20 of the February 1934 issue for total shipments, accessories and parts, and registrations of new commercial cars.

† Revised series. For earlier data see p. 19 of the August 1933 issue for fire extinguishers and passenger-car registrations; exports of locomotives for 1932; p. 55 of the June 1933 issue for 1933, see p. 20 of the September 1934 issue, and for 1934 p. 19 of this issue. Data on automobile production revised for 1933. See p. 55 of the August 1934 issue. For revised data for 1934 see pp. 55 and 56 of the June 1935 issue.

† Taxicabs are included in figures for passenger cars, beginning January 1934 in order to avoid disclosure of individual companies.

• United States and Canadian dealers, plus overseas shipment.

Monthly statistics through December, 1931, together with explanatory footnotes and references to the sources of the data, may be found in the 1932 Annual Supplement to the Survey

● Statistics in this section, with few exceptions, are from the Dominion Bureau of Statistics, Ottawa.

* Revised. † Deficit.

‡ Data for 1934 revised. See p. 56 of the May 1935 issue.

§ New series. For earlier data see p. 18 of the February 1933 issue, business indexes, and p. 20 of the October 1933 issue, commercial failures.

† Revised series. See p. 55 of the April 1934 issue, construction and mining, for 1933. Series on common-stock prices revised back to December 1932 as a result of additional stocks being added; for revision see p. 56 of the April 1934 issue.

Number of commodities changed from 502 to 567 beginning with month of January 1934.

§ Data revised January 1932 through July 1933. Revision for 1932 see p. 55 of the November 1933 issue. For final revisions for 1933 see p. 56 October 1934 issue.

▲ Wood pulp figures shown on p. 53, with the exception of the soda pulp figures, are compiled by the United States Pulp Producer's Association (formerly reported to the Pulp Executive Code Authority). Starting in January 1936, the data are based on reports received from 162 mills instead of the 172 mills covered in 1935. Two large mills reported for the first time in January 1936, and their output was about the same as that for the 12 mills that ceased reporting. Thus, the coverage of the industry remained unchanged at 94 percent; (incorrectly reported in the Survey of July 1935–February 1936 as 91 percent). However, in individual lines, the coverage has changed: With 162 mills reporting the coverages are, bleached sulphate, 93 percent; unbleached sulphate, 98 percent. (These 2 items are shown in combination in the Survey). Bleached sulphate, 95 percent; unbleached sulphate, 94 percent; groundwood, 92 percent. With 172 mills reporting, these percentages were respectively, 100 percent, 94 percent, 100 percent, and 98 percent, groundwood was unchanged. The figures are available starting with January 1934, and are not comparable with earlier data shown in the Survey. See footnote on p. 56 of the April 1935 issue.
