## Further aids in distribution

In the recent survey of wholesale and retail distribution of hardware and related lines in the Gulf Southwest, by the Bureau of Foreign and Domestic Commerce, three methods of determining what products to carry were found in vogue: General or local market analysis, systematic study of retail dealer requirements, and "want lists."

The report of this survey, prepared in the domestic regional division, follows reports of previous studies of the distribution of dry goods, cotton production and distribution, and the petroleum industry of the Gulf Southwest. It illustrates the Bureau's services, not only in furnishing basic data for investigations (in the SURVEY OF CURRENT BUSINESS) but also the findings of detailed marketing research and personal conferences.

You already are familiar with the scope of the foundation material found in the SURVEY. An announcement of the published results of the investigation of hardware distribution in the Gulf Southwest appears on the last cover of this issue.

# Business Situation Summarized

ALTHOUGH the volume of production and distribution showed further shrinkage in February and early March after allowing for seasonal variation, there has been a noticeable revival of confidence following upon evidence that recent financial measures have been effective in causing a sharp reduction in the number of banking failures and a return of hoarded currency to the banks. In addition to these effects, financial relief has been evidenced in greater stability of wholesale prices during the past few weeks, and easing of money rates, although liquidation of banking assets has continued.

Productive activity was somewhat higher in February, but the increase fell short of the usual seasonal gain for the month. The adjusted index of factory production declined more than 1 per cent and was 19 per cent below the level of a year earlier, but mineral production, after allowance for normal seasonal change, was at the same level as in January.

Production of textiles, apparel, shoes, and other consumption goods was relatively well maintained in February as in other recent months, while industries producing industrial materials and equipment continued sharply curtailed. Building operations continued at low ebb, with the adjusted index of contract awards declining by more than 10 per cent from January to February.

Employment in manufacturing industries increased in February by less than the normal seasonal amount, while the index of factory pay rolls, for the first time in nearly a year, showed a distinct gain. Nearly half of the 89 manufacturing industries from which reports are received reported increased employment, conspicuous gains being recorded in textiles, apparel, shoes, automobiles, agricultural equipment, railroad cars, pottery, glass, furniture, and fertilizers. Nearly all of the nonmanufacturing industries reported small decreases in employment, accompanied in most instances by similar declines in pay rolls.

Movement of freight by rail was slightly larger in February than in January, although by less than the usual seasonal amount, so that the adjusted index of freight car loadings declined 5 per cent. Rail shipments of merchandise in less-than-carload lots were virtually unchanged in volume, whereas they usually increase about 4 per cent at this season. The dollar volume of department store sales increased seasonally in February, but remained at a level about 14 per cent below that of the same period in 1931, a decline which is partially attributable to substantial price reductions during the past year. Merchandise exports increased nearly 3 per cent above the January total, although they usually decline in February, while imports showed about the normal seasonal decrease.

# Finance—Credit and Banking

**B**ANKING conditions have undergone distinct improvement during the past month as a result of remedial legislation designed to halt the rapid deflation of bank credit, and arrest hoarding and bank failures. Since the enactment of the Glass-Steagall bill, bank failures have been reduced to an average weekly number of 12, compared with the monthly total of 342 in January and 115 for the full month of February. Concurrently, there has been a reversal in the trend of money in circulation with a decline in the weekly circulation figures for the past six weeks. The important influence of bank failures on the curve of money in circulation has been amply demonstrated over the past year and a half and the reduction in the circulating media reflects this decline in suspensions, as well as the organized efforts to arrest hoarding.

Liquidation of bank credit has not yet been halted, despite the various aids extended to the banks. Loans on securities of reporting member banks declined throughout February and the first three weeks of March, and the total of such accommodations is currently about 28 per cent below a year ago. Similarly, the commercial loans, as represented by the "all other" category, have continued to experience a weekly recession of important proportions. Both of these movements have been accompanied in recent months by a continued shrinkage in the investment portfolios of the member banks, although an increase in mid-March was reported as a result of the treasury financing. The gold movement from this country,

which again assumed large proportions in January and February, has more recently shown a tendency to subside and under the provisions of the recently enacted legislation the free gold stocks have been augmented in order to meet any further demands from foreign sources.

Federal reserve credit outstanding underwent further reduction during February and the first three weeks of March. The decline has resulted from the reduction in bill holdings of the member banks which has been partially offset by increased holdings of government securities. Government securities held are currently \$208,000,000 above a year ago. Total reserve credit outstanding for the week ended March 19, was \$222,000,000 under the total at the end of January, but \$718,000,000 in excess of a year ago.

Bank debits tended downward in February, and, while the weekly figures for March have moved erratically, they continue around the February level. February debits outside New York were 25 per cent below the same month of last year, or slightly less than the percentage decline in January. While part of the fall has resulted from the lowering of prices, the figures reflect a continued shrinkage in the volume of transactions.

The upward trend of postal savings, which has been particularly rapid in recent months, resulted in a February total 134 per cent above a year ago. The actual gain for the month was smaller than for the two months immediately preceding.

# Finance—Security and Money Markets

SECURITY markets have been unable to maintain the upward swing initiated in February as a result of the adoption of important financial legislation. The response of the bond market to these constructive moves was pronounced, and prices moved upward without interruption until the early part of March. Practically all sections of the list participated in the general strength, with United States Government bonds rising to new highs for the year. The steps taken by the Reconstruction Finance Corporation to aid railroad credit were an important contributing factor not only to the strength in the rail list, but to the general market as well. All bonds listed on the New York Stock Exchange showed an appreciation as of March 1, in comparison with the month previous, of approximately \$975,000,000, with both foreign and domestic issues recording substantial gains.

Stock prices moved irregularly upward during the final three week of February, although the average of the weekly prices for the month was below January. In the early part of March the market showed a disposition to break through the upper level of the trading range under the impetus of constructive developments in the British financial situation. This movement was halted by renewed unsettling developments here and abroad, coupled with the absence of indications of improved earnings. Trading on the stock exchange was the lightest since last August.

Brokers' loans have expanded slightly during March, but the extremely small size of the outstanding total is indicated by the ratio of loans to the market value of all listed shares of 1.90 per cent as of March 1. This compares with a ratio of close to 10 per cent at the peak of the 1929 market.

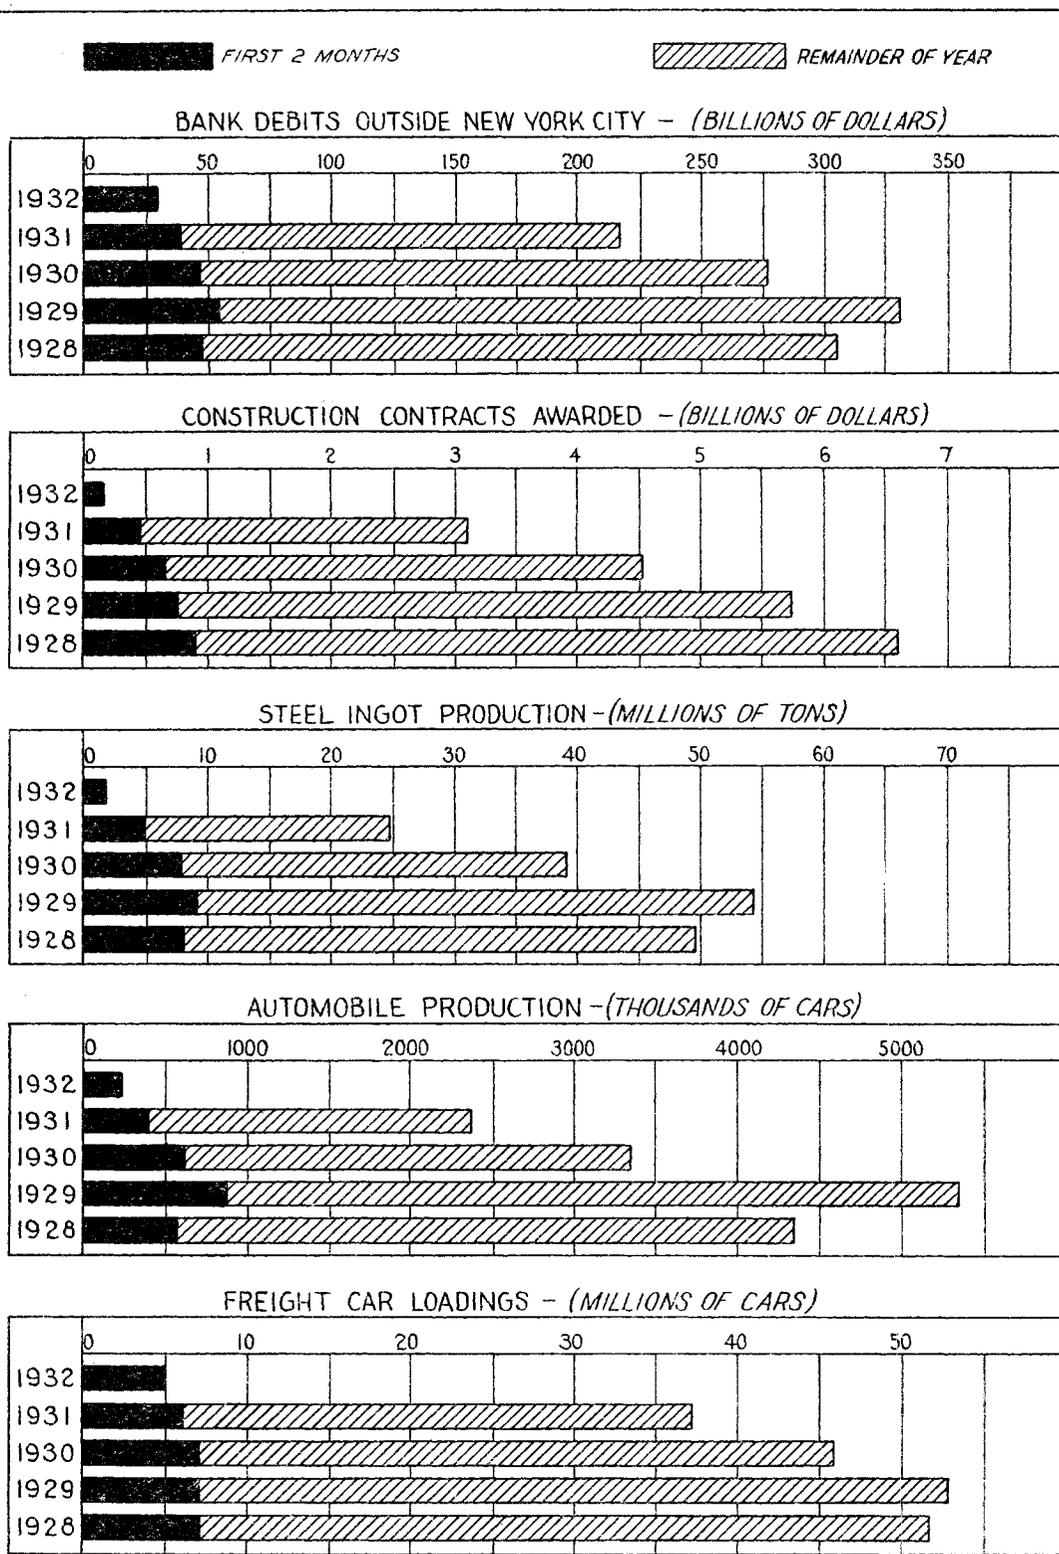

Open market money rates averaged somewhat lower in February, with the exception of the commercial paper rate which was unchanged but which has tended to ease off since the end of February. Following the reduction of the rediscount rate of the New York Federal Reserve Bank and the reduction of the official buying rate for bankers' acceptances, the open-market quotations dropped with leading acceptance dealers marking the rates down on three successive occasions during March.

The market for long-term security issues remains inactive. New capital issues during February were smaller than in January, and the increase in March has been slight with offerings still confined to the best grade issues. The cumulative effects of lowered and omitted dividends is reflected in the reduction of 16 per cent in the total of dividend and interest payments for the month as compared with a year ago. The decline was due entirely to a reduction of 32 per cent in dividend payments since the total of interest payments for the month was 3.4 per cent in excess of a year ago.

# 1932 in Comparison

# Commodity Prices

COMMODITY prices reached lower levels in February, a continuation of the renewed weakness which developed in December. Declines in retail food prices and in the general level of wholesale prices were not quite as severe as in the preceding month, and during the first three weeks of the current month wholesale prices have advanced slightly from the low point reached at the end of February.

Wholesale commodity prices averaged 1.5 per cent lower in February than in the preceding month, and 14 per cent lower than in February, 1931. The sharpest fall occurred in prices of farm products and foods. Prices of hides and leather products, metals and metal products, and building materials declined from 1 to 2 per cent, while those of textile products, chemicals and drugs, and house-furnishing goods declined only fractionally. Prices of fuel and lighting materials advanced 0.6 per cent.

Among the subgroups of commodities the sharpest declines were in the prices of plumbing and heating equipment, 11 per cent; cattle feed, 9 per cent; and crude rubber, 7.5 per cent. Price declines in other subgroups in excess of 3 per cent include: Livestock and poultry, and hides and skins, about 6 per cent; butter, cheese, and milk, 5.5 per cent; lumber, 4.1 per cent; nonferrous metals, 4.9 per cent; farm products, other than grains and livestock, 3.8 per cent; meats, 3.9 per

cent; silk and rayon, 3.2 per cent; and mixed fertilizers, 3.4 per cent. Only fractional declines occurred in prices of 13 of the 46 subgroups.

Retail prices of foods declined 3.7 per cent from January 15 to the middle of February, as compared with a 4.4 per cent decline from December 15 to the corresponding date in January. During the past year prices of these products have dropped 17 per cent. Of the 42 articles of foods on which quotations are received each month, prices of 30 were lower on February 15 than in the preceding month, while 4 were higher and 8 were unchanged. Prices of fresh eggs again fell sharply, 19 per cent, and quotations for pork chops, butter, and lard were from 7 to 9 per cent lower. The articles showing advances in price constitute a very small part of the diet.

The decline of farm prices from mid-January to February 15, as measured by the index of the Department of Agriculture, amounted to 4.8 per cent, bringing the index to the lowest level reached since its compilation was begun in 1909. Farm prices are now 40 per cent lower than the 5-year pre-war average. From January to February, 1932, farm prices of dairy and poultry products fell 9.4 per cent, meat animals dropped 4.4 per cent, and fruits and vegetables, and grains declined 3 per cent and 2 per cent, respectively. Prices of cotton and cottonseed advanced 4.4 per cent.

# Employment

**E**MPLOYMENT conditions in February were only slightly changed, with a drop of 0.3 per cent below January reported for the 16 groups covered by the Bureau of Labor Statistics data. Pay rolls were approximately the same as in February. Statistics on factory employment reveal some expansion, the first gain since last September; however, the February increase was less than the usual seasonal movement, and the adjusted index declined. Increased factory employment was reported for the iron and steel, machinery, textiles, transportation equipment, leather, nonferrous metals, and tobacco industries. The gains exceeded the usual seasonal increase in the case of textiles and leather products, reflecting the more active demand for clothing and footwear. Compared with a year ago, the industries producing consumers' goods continue to make the most favorable records. Employment in the leather industry in February was about the same as a year ago, while employment in the rubber products industry was off only 4.7 per cent, and in the textile industry 6.3 per cent.

The chart on page 2 of this issue illustrates that the decline in factory employment and pay rolls has followed almost a straight line trend since the peak reached in the latter half of 1929. In February the employment index was at a point one-third below the 1929 peak. The drop in pay rolls has been sharper owing to the prevalence of part-time employment and wage reductions, but the trend has been almost uniformly downward, interrupted by the temporary improvement

in the spring of 1930 and 1931, which has not been duplicated so far this year.

Among the nonmanufacturing industries, the number employed was further reduced during February and the decline was general in all groups, with the exception of the hotels and canning and preserving industries. In these two latter industries, employment totals increased 1.3 and 5.9 per cent, respectively. The most severe declines were in the mining industry and in the retail trade group. In addition to the hotel and canning industries, where increased employment was reflected in larger pay-roll totals, increased pay rolls were reported for the crude petroleum and telephone and telegraph groups, while the total for the bituminous coal industry was unchanged. Declines in both employment and pay rolls were reported for the anthracite, power, light and water, electric railway, and the wholesale and retail trade groups.

Employment among trade union members was the same in February as in the preceding month, but continues well below a year ago according to the American Federation of Labor. In addition to the 31 per cent reported unemployed during February, there was a further 20 per cent working only part time. Unemployment was most prevalent in the building trades, a reflection of the low level of activity in the construction industry. The printing trades reported the lowest percentage of unemployed, but the greatest amount of part-time employment.

† Adjusted for seasonal variation.

# Domestic Trade

**R**etail and wholesale trade has shown little improvement except in such seasonal lines as clothing, and buying has continued restricted and for immediate requirements. The early date of Easter has stimulated sales of certain merchandise, but the increased volume from this source is of a seasonal nature. Department-store sales, measured in dollar volume, increased by approximately the usual seasonal amount in February. Sales were 10 per cent below the same month a year ago, but as this year had one more trading day the decline on a daily-average basis was 14 per cent. The volume of February sales was also below a year ago. The St. Louis and Richmond districts continued the relatively favorable showing of the preceding month, but the decline in New York was of average proportions. The greatest declines were in the South, in the Atlanta and Dallas districts, but the drop in Chicago was also above the average. Sales through the two leading mail-order houses increased during February whereas a small decrease is usual for the month. However, for the first two months of 1932 the dollar volume of mail order sales was 20 per cent below a year ago. Sales through the leading 5-and-10 chains increased in February by slightly more than the usual seasonal amount.

Distribution of merchandise by the railroads was only slightly higher than in January, and in the first half of March car loadings were approximately the same as in the corresponding period of February. Merchandise l.c.l. loadings continued close to the

January level, but as there is usually a seasonal gain during the month the adjusted index moved downward. Loadings of this class of merchandise were off 14 per cent in comparison with a year ago, while in the immediately preceding months the spread had been 10 per cent.

Commercial failures were fewer in February, but the drop was seasonal and the total was in excess of a year ago. Liabilities involved remained exceptionally high. During the first three weeks of March, failures have averaged approximately the same as in February. For the elapsed two months of the current year total failures increased 5.3 per cent and the liabilities involved increased 18 per cent as compared with a year ago.

Magazine advertising increased in February but was well below a year ago. For the first two months of the year magazine lineage was 26 per cent below the same period of 1931. Expenditures on national magazine advertising showed the usual seasonal uptrend during the first three months of the year, but first-quarter expenditures were 26 per cent below a year ago. Expenditures on radio advertising were slightly less than in January, but continued to run about half again as large as a year ago.

Postal receipts during February recorded the usual decline for the month, and were 9 per cent below the same month of 1931. For the first two months of the year postal receipts averaged 11 per cent less than in the same period a year ago.

# Foreign Trade

**EXPORTS** from the United States during February increased \$5,000,000 over the January total, in contrast with the usual seasonal decline. This improvement together with the drop in imports resulted in a gain in the favorable balance of merchandise trade from \$14,400,000 in January to approximately \$24,000,000. February exports and imports were valued at \$155,000,000 and \$131,000,000, respectively.

The heavy outflow of gold, which began during January, has passed its peak, with total exports of \$128,000,000 in February, and \$236,000,000 in the elapsed two months of the current year. During the first weeks of March, the gold outflow has been considerably smaller. Gold imports in February, largely from Japan and Canada, amounted to \$37,600,000, as contrasted with \$32,900,000 in January and \$16,200,000 in the corresponding month of 1931.

Major factors in the increase in exports during February were the continuous heavy flow of raw cotton to the Far East; the comparatively large shipments of wheat, not only to South America and China, but also to Europe; a considerable increase in leaf-tobacco exports to the United Kingdom; and a moderate increase in exports of machinery and appliances, and automobiles. While gasoline exports failed to maintain the gain of the preceding month, February shipments were higher than in December.

Unit values (average prices) of leading export and import commodities during February showed no significant change. Although prices of tobacco and gasoline exports averaged slightly higher, the unit values of other leading exports were either about the same or somewhat lower. In import trade, the unit value of coffee, tin, and unmanufactured wool increased; while prices of a majority of the other leading commodities moved downward.

Our export trade so far this year has included smaller quantities of machinery, automobiles, refined mineral oils, cotton manufactures, copper, tobacco, and meat products than last year; while exports of cotton, wheat, and apples have been considerably larger. The extent of these changes is reflected in the proportion which the several economic classes form of the total. For the 2-month period ended February, 1932, crude materials constituted 34 per cent of our total exports; crude foods, 6 per cent; and finished manufactures, 38 per cent. The distribution in the corresponding period of 1931 was 23, 3, and 50 per cent, respectively.

Except for cocoa and cane sugar, imports of leading commodities were smaller in quantity than in January, while as compared with February, 1931, cocoa, sugar, hides and skins, cotton cloth, and copper were higher; and crude rubber, raw silk, newsprint, tin, and burlaps were lower.

<sup>1</sup> Reexports of foreign merchandise during February, 1932, were \$2,927,000.

# Transportation

THE railway transportation situation has been strengthened by developments since the first of the year. Early in January rates were revised under I. C. C. authorization and on February 1, the agreement for a temporary 1-year wage readjustment became effective. The assistance afforded by the Reconstruction Finance Corporation has added another strengthening element to the situation.

Commodity distribution, as measured by freight-car loadings, increased less than usual in February and the adjusted index of the Federal Reserve Board declined 5 per cent below the preceding month. Average daily loadings in February were one-fifth less than a year ago and one-third less than two years ago.

Total cars loaded during the month amounted to two and a quarter million as compared with three and a half million in February two years ago. Loadings of merchandise in less-than-carload lots failed to record the seasonal rise usual at this time. Current loadings are 14 per cent less than a year ago and 23 per cent less than two years ago.

Loadings of three classes of products, grain, coal and coke, and forest products, were higher in February than in January. Shipments of grain and grain products increased 10 per cent in this period, but were 17 per cent less than a year ago and 22 per cent less than two years ago. Coal and coke loadings, which

usually decline seasonally in the first two months of the year, increased slightly, but were still almost one-fifth and one-third less than the respective totals for the two preceding years. The rise in loadings of forest products was of a seasonal nature.

Declines in carloadings were registered by the livestock, ore, and miscellaneous groups. Seasonal influences accounted for the drop in livestock loadings, but movement of ore and miscellaneous freight reached a new record low.

The freight-car surplus decreased in February for the second consecutive month, although the excess continues large. Dividend payments by steam railways in February reflect the widespread cuts and omissions necessitated by the cumulative effects of the decline in traffic. February disbursements were 33 per cent below the same month of 1931 and 38 per cent below the total for February, 1930.

Traffic through the Cape Cod Canal declined seasonally in February, but was in greater volume than during the same month of the past two years. Mississippi River barge traffic also declined seasonally but was well above a year ago. Clearances of American vessels in foreign trade declined slightly, but seasonally in February. However, the tonnage increased about 5 per cent as compared with clearances in the same month of 1931.

## RAIL AND WATER TRAFFIC

<sup>1</sup> Daily average basis.

<sup>2</sup> Data for May, August, and October are for 5 weeks; other months, 4 weeks.

# Construction

CONSTRUCTION contracts awarded during February increased in value over those reported for January, but the measurable footage again declined. The Federal Reserve Board's unadjusted index, which is based on a 3-month moving average, dropped 8 per cent below January, marking the tenth consecutive monthly decline. According to the F. W. Dodge Corporation's statistics covering 37 States, the Chicago territory showed the greatest activity, with awards valued at over \$17,000,000. Public utilities contracts were responsible for more than two-thirds of this amount. Awards in New York City and vicinity aggregated above \$11,000,000, and those of the Middle Atlantic States, excluding New York, reached more than \$12,500,000. On a daily average basis, the value of contracts awarded during February was 14 per cent higher than in January, mainly the result of an increase in the first two weeks of the month. During the first half of March the average daily value of awards gained 2.9 per cent over that of February. This increase, as well as the one for February, was considerably below the usual seasonal expansion.

Despite a decline of 41 per cent in the measurable footage of public works and utility contracts in comparison with January, the value of these contracts was 17 per cent above the amount reported in that

month. Compared to the figures for February, 1931, declines of 24 per cent in square footage and 64 per cent in value occurred. Decreases from the corresponding period in 1930 were 90 per cent and 71 per cent, respectively. Residential building contracts declined for the fourth consecutive month. In value, they were 11 per cent under January and less than one-third the amount reported in the same period last year as well as the year before.

Shipments of maple flooring, which had declined steadily since last June, increased 17 per cent in February, but remained 23 per cent below February a year ago. Oak flooring shipments decreased slightly from January, a continuation of the previous downward trend. Cement production was the lowest in years, falling to 67 per cent of the output during the same month of 1931 and to less than half of the total for February, 1930. An increase of 29 per cent occurred in the volume of new orders for structural steel, but in February a year ago they were two and one-half times as large and in the same month of 1930, more than four times as great.

The Engineering News-Record reported that construction costs, as measured by prices of structural steel shapes, cement, lumber, and the rates paid common labor, declined further during February.

# Agriculture

**C**OTTON exports for the current season, from August 1, 1931, through February of this year, aggregated 3,925,000 bales. This was a gain of 1,013,000 bales, or 26 per cent, over the export total for the same period a year ago. A major portion of the increase was caused by larger shipments to the Far East. Italy also took a larger amount while shipments to France and Germany registered a sharp decline. The movement of American cotton into the United Kingdom remained approximately unchanged.

Wool production in the United States in 1931 exceeded the 1930 output by 21,994,000 pounds. The total 1931 product of 435,415,000 pounds was composed of 369,315,000 pounds of shorn wool and 66,100,000 pounds of the pulled variety.

Tobacco products continue in demand at approximately the level of recent months. The decreasing value of total sales has been due not only to price reductions and smaller consumption, but to a decided trend toward lower priced products.

Wheat stocks held on farms in the United States on March 1, 1932, were estimated at 207,323,000 bushels. This is 45,881,000 bushels more than the estimated holdings of a year ago and is substantially above the 1925-1929 average of 124,997,000 bushels. These estimates include wheat held for all purposes including the seeding of spring wheat for which purpose from 23,000,000 to 27,000,000 bushels have been used annually in recent years. The proportion of last year's crop remaining on the farms on March 1 amounts

to 23 per cent and represents the largest proportion for any year since 1921. The 10-year average from 1920 to 1929, inclusive, was 17 per cent.

On March 9, the Federal Farm Board announced that it had authorized the Grain Stabilization Board to make available 40,000,000 bushels of wheat to the American Red Cross, or other organizations it might designate, for food and feed relief. The first call was for 5,000,000 bushels and was made immediately.

Stocks of corn have been increased by the comparatively mild weather in most of the major producing States, combined with a low level of prices. On March 1 estimated farm stocks were placed at 1,103,691,000 bushels compared with 703,529,000 bushels held on the same date a year ago. However, last year's stocks were abnormally low due to a small crop in 1930. The 5-year average, 1925-1929, for March 1, was 1,051,029,000 bushels. The portion of last year's crop held on March 1 amounted to 43 per cent compared with 34 per cent held a year ago and a 5-year average of 39 per cent.

Farm holdings of the 1931 potato crop amounted to 112,000,000 bushels on March 1. This represents about one-third of the entire crop but all of this remainder is not available for sale since this includes seed for the current year and a quantity to be consumed as food by families on farms. It is, however, substantially above the holdings of March 1, 1931, when a total of 82,000,000 bushels, or 27 per cent of the 1930 crop, was still on the farms.

## INDEXES OF AGRICULTURAL MARKETING AND STOCKS

# Iron and Steel Industry

ALTHOUGH iron and steel production decreased for the short month of February and continued below seasonal expectations, average daily output was greater than that of the previous month. The Federal Reserve Board's adjusted index of general operations decreased 4.7 per cent, whereas in 1931 a gain of 14 per cent was reported for the period. The unadjusted index of pay rolls showed an increase of 2.5 per cent over the January figure; the adjusted index of employment, however, declined to the lowest point reported for the depression.

Steel operations increased from 27 to 28 per cent of capacity, as against 49 per cent a year ago and 84 per cent in the similar period of 1930. Figures for the first three weeks in March indicate no improvement over the month of February. The sluggish tone in the industry is attributed in part to delays in steel purchases on the part of one of the leading producers in the low-priced automotive field which have served to slow up orders of other automobile manufacturers as well. Unfilled orders on the books of the United States Steel Corporation at the end of February showed a loss for the eleventh consecutive month, dropping 3.9 per cent from the January record to the lowest point in the history of the corporation.

Pig-iron production approached that reported for January. Total output, however, was little more

than half the amount produced in February last year, and one-third the production in the same month of 1930.

Production of steel ingots almost equaled the January level, but was only 58 per cent of the total for February a year ago. Imports of manganese ore fell off sharply to approximately one-sixth the amount imported during January. Little change was reported for the month in iron and steel exports, which continued exceedingly low, having declined 56 per cent from shipments a year ago and 80 per cent from those in the same period of 1930.

New orders and shipments of fabricated structural steel showed increases of 29 per cent and 19 per cent, respectively, as compared to the previous month. They remained well under the volume reported for any month of 1931, however, with new orders 23 per cent, and shipments 28 per cent, of the amounts recorded in February, 1930.

The trend in prices continued downward during the month. Structural steel beams alone made a slight advance of 1.3 per cent; composite finished steel was firm; while the iron and steel composite, as well as the price for Bessemer steel billets, made further declines to new lows. Quotations on March 1 for heavy melting steel scrap fell off to \$8.25 per ton.

## IRON AND STEEL STATISTICS

<sup>1</sup> Adjusted for seasonal variation.

# Chemical Industries

**M**ANUFACTURING operations in the chemical industry in February, as measured by electrical energy consumption, increased slightly, but less than usual at this season. The present rate of energy consumption is 6 per cent less than in February a year ago but only 2 per cent less than two years ago.

Employment in the chemical industry declined to a new low point in February, while pay rolls recovered slightly after the severe decline registered in January. The current rate of employment represents a decline of 15 per cent from this time a year ago and 26 per cent from February, 1930. Pay rolls have declined to a greater extent as part-time employment has spread and some wage readjustments have taken place. Pay rolls in the first two months of this year have been about one-fourth less than in this period a year ago.

Stocks of manufactured chemicals and oils increased slightly, but seasonally, in February over the revised estimate for January, and reached a record high point. This was 15 per cent higher than in the same month last year, but only 8 per cent greater than in February, 1930. Stocks of raw materials, unlike those of the manufactured products, declined by considerably more than the usual seasonal amount in February. Raw material stocks in the first two months of this year have averaged only 5 per cent above stocks in this period last year.

Ethyl alcohol production declined somewhat less than seasonally in January. Output in this month was 11 per cent greater than in January, 1931, and 21 per cent larger than in the same month two years ago. Crude methanol production increased 11 per cent in February as compared with January, although there is usually a slight seasonal decline at this time. Production of synthetic methanol, however, declined seasonally in this period. The present rate of production of the crude product is only half of the rate of output a year ago, while the output of synthetic methanol is 18 per cent less than in February of last year.

Consumption of fertilizer showed a seasonal rise in February, but remained at a rather low level. There has been a decline in consumption of 40 per cent from February a year ago and a drop of 64 per cent from the same month in 1930. Imports of potash salts increased exceptionally in February due almost entirely to the receipt of large shipments of manure salts. Receipts were slightly greater than in February, 1931, but only about a third of imports in the same month two years ago. Imports of nitrate of soda declined sharply to a record low point in February. Domestic production of atmospheric nitrogen and synthetic nitrate of soda have increased to such a point that some quantities of the latter product are now being exported.

# Automobiles and Rubber

**A**UTOMOBILE production declined throughout February except for a slight gain experienced during the second week. Although the actual total of units produced showed only a small loss, the seasonally adjusted production index of the Federal Reserve Board declined 25 per cent. The reduction in output was confined entirely to passenger vehicles, with truck production advancing 13 per cent. Exports ran contrary to production trends with foreign passenger-car shipments gaining 10 per cent and trucks declining 16 per cent.

The Federal Reserve Board index of employment in the automobile industry during February stood at 64.7 per cent of the 1923 to 1925 average when adjusted for seasonal factors. This compares with 67.1 for January and 68.8 for February, 1931. The unadjusted pay-roll index for February indicated a gain in actual wages paid of 9 per cent.

Crude rubber imports into the United States during February continued the decline of the preceding month and the total tonnage was less than the receipts for any month in 1931. February domestic consumption of crude rubber was moderately higher than the amount consumed in February of last year and marked the first monthly gain over the same month of the previous year since last July. Reclaimed consump-

tion, however, showed a greater decrease than the increase in crude consumption. The use of reclaimed rubber is steadily declining, whereas, usually at this period of the year it is at its peak. Continued high production of crude rubber has forced the price to successive new low levels, permitting the replacement of reclaimed by crude where earlier this move would not have been practical.

Since last November rubber growers and the governments most interested in crude rubber production have been endeavoring to formulate a plan for crop curtailment and restriction. On March 19 the British and Dutch Governments announced that the participants had found it impossible to devise an acceptable plan and that the conferences were ended.

Employment in the tire industry experienced a small gain for February, continuing the series of fractional advances registered since last November. The employment index of the Department of Labor has moved steadily upward but the entire gain from November to February amounted to only 2 per cent. Pay rolls have made a better showing with the index advancing in the same period from 43.5 to 51.4. Employment in the rubber boot and shoe industry declined 5.5 per cent in February while pay rolls showed a contraction of 8 per cent.

# Textile Industry

**F**URTHER general improvement was shown in many branches of the textile industry in February, although the seasonally adjusted production index declined. Stocks of goods were reduced, prices were generally steadier or slightly higher, pay-roll disbursements were larger, and employment increased 4 per cent.

Consumption of raw cotton averaged 18,200 running bales per working day in February, 6 per cent more than in January, compared with a usual seasonal increase of about 4 per cent. Output of 300 classifications or constructions of carded cotton cloths again increased sharply, and in February totaled 61,086,000 yards per week, 5 per cent more than the weekly output of the preceding month. While sales of these cloths were about one-fourth less than in January, they were slightly in excess of the large February production. Stocks of carded cotton cloths were smaller at the end of February than at any time for which comparable data are available by reason of the fact that shipments have continued to exceed production. Unfilled orders at the end of February were equivalent to slightly more than six weeks' output at the February rate of production. A sharp increase was shown in spindle activity from January to February, 5.7 per cent, and in the latter month operations were at 93 per cent of capacity on a single-shift basis. Wholesale

prices of cotton goods were steady and averaged 1 per cent higher than in January, the first advance of any sort since November, 1930, and the largest monthly rise in nearly three years.

Boston wool receipts were 28 per cent smaller in February than in January and about one-third smaller than in the same month a year ago. Activity of woolen spindles was 11 per cent higher than in January, but worsted spindle activity was 4 per cent smaller. As compared with a year ago activity in February was 12 per cent and 6 per cent lower, respectively. From January to February there was a slight decline in prices of territory fine staple wool at Boston, the first change in several months. Wholesale prices of woolen and worsted goods declined less than from December to January, however. As compared with the same month a year ago, wholesale prices of woolen and worsted goods in February, 1932, were 14 per cent lower.

Deliveries of raw silk to American mills were 22 per cent smaller in February than in the preceding month, and 15 per cent less than in February, 1931. Wholesale prices of silk and rayon again fell 3 per cent in February as compared with the preceding month, and reached a level 63 per cent lower than the average for 1926.

# Food Industries

**C**ANNED vegetable consumption has been maintained at a fairly constant level throughout the winter, despite increasing competition from fresh products. Abnormally mild weather has permitted heavy shipments of fresh vegetables to continue through the usually restricted periods. February shipments of canned goods gained substantially over January and an even further increase took place in early March.

Citrus fruit crops were not as large this season as a year ago, but the consumer demand was good and forwardings have been comparatively heavy. This movement is not accurately reflected in rail-traffic statistics, since there has been a decided increase in motor-truck shipments from Florida and Texas.

Extremely cold weather in early March brought injury to many prematurely advanced food crops, particularly in the Southern States. Hardy truck crops were not affected to the same degree as the fruit and tender truck crops and received a compensating advancement in the extreme South by good rainfall.

Supplies of lower grade steers at Chicago during February reached an unusually high level. This was partially offset by the small number of cows and

heifers available, but the aggregate supplies were 10 per cent greater than during February of last year. There was a curtailed demand for stockers and feeders throughout January and February. Shipments of cattle for feeding and grazing purposes from 12 markets into the Corn Belt States were also in a small volume. The total for the first two months of the year was approximately 50 per cent below a year ago and was the smallest movement for these months experienced in the past 12 years.

Butter in cold storage in the United States on March 1 totaled 15,100,000 pounds, which is slightly less than half the total holdings of a year ago. The amount held on this date for the past five years has averaged 22,300,000 pounds. Dressed poultry receipts at four major markets for the month of February amounted to 19,600,000 pounds compared with 24,700,000 pounds received during the same month last year and a 5-year average of 24,700,000 pounds.

Salable chicks hatched during January showed a moderate increase over last year despite a slight decrease in orders for later delivery. Case eggs held in cold storage on March 1 amounted to 265,000 cases compared with 408,000 held a year ago.

# Forest Products

**P**ROGRESS has been made recently by the lumber industry in meeting the adverse conditions brought about by reduced consumption. Production has been brought more into balance with orders and the increase in stocks checked. Reports from 600 large mills indicate that production in the first 10 weeks of this year was only 20 per cent of capacity, but in this period orders have exceeded production by 46 per cent, while sawmill stocks had been reduced by March 12 to a point 17 per cent below a year ago.

Production of softwoods in the first 10 weeks of the year was off 47 per cent as compared with a year ago, while hardwood production declined 49 per cent in the same period. Softwood shipments declined 65 per cent and hardwood 75 per cent as compared with a year ago.

Lumber imports in January were 37 per cent less in value than a year ago, while exports in this month were only 20 per cent less. The decline in exports has been chiefly in southern pine, and to a lesser extent in hardwoods. Foreign shipments of Douglas fir increased 17 per cent as compared with January last year.

Lumber production in February, as indicated by the adjusted index of the Federal Reserve Board,

reached a new low point, having declined 15 per cent from the previous month. The present rate of production is only a little over half of the rate prevailing a year ago and one-third of the rate in February, 1930.

Employment declined slightly in February as compared with the previous month and reached a new low point. The present situation represents a decline of 23 per cent and 44 per cent, respectively, as compared with employment in February one and two years ago.

Pay rolls in the lumber and lumber products industry also declined to a new low level in February, the usual seasonal increase having failed to appear. Pay rolls in the first two months of the year were 41 per cent less than last year, and were only about one-quarter of the 1923-1925 average.

The southern pine industry has shown some increase in activity since the low point reached in December. New and unfilled orders have been increasing, while production has increased, but at a much slower rate. However, operations in February were still at a low level as compared with previous years, production being 42 per cent less than a year ago and 64 per cent less than two years ago, with new orders off 30 and 52 per cent, respectively, from the same periods.

<sup>1</sup> Compiled by the *New York Stock Exchange* to show price movements of all securities on the exchange and the growth in the securities listed. The figures have been compiled on a monthly basis as far back as Jan. 1, 1925. As issued, the statistics represent the condition as of the first day of the month. However, to facilitate the use of the statistics with relation to the other series carried in the *Survey of Current Business*, the figures have been moved back one month and are considered here as reflecting the condition as of the end of the preceding month. The increase in the bond figures in April, 1923, was due to the inclusion in the total of \$12,000,000,000 of British Government bonds.

# Monthly Business Statistics

The following table contains a summary of the monthly figures designed to show the trend in important industrial and commercial movements. These data represent continuations of the figures presented in the 1931 Annual Supplement to the Survey of Current Business, in which monthly figures for the past seven years may be found, together with explanations as to the sources and bases for the figures quoted. The figures given below should always be read in connection with these explanations. For later data, which have become available since these data were compiled, see recent Weekly Supplements to the Survey.

# EXPLANATORY

---

The Survey of Current Business is designed to present each month a picture of the business situation by setting forth the principal facts regarding the various lines of trade and industry. The figures are very largely those already in existence. The chief function of the Survey is to bring together those data which, if available at all, are scattered in hundreds of different publications. A portion of these data are collected by Government departments, other figures are compiled by technical journals, and still others are reported by trade associations. The Survey of Current Business computes the indexes on total stocks, new orders, agricultural marketings, crop marketings, and unfilled orders based on available data.

## SOURCES OF DATA

The sources and inclusiveness of the data appearing in the table "Monthly Business Statistics" will be found noted in the 1931 Annual Supplement to the Survey of Current Business, and the sources of the weekly data are given on page 4 of the February 5, 1931, issue of the Weekly Supplement to the Survey of Current Business.

## HISTORICAL DATA

Monthly data on all the various series carried in the Monthly Survey will be found in the 1931 Annual Supplement to the Survey, running back seven years and in some cases eight years. Data previous to that included in the 1931 Annual Supplement will be found in the monthly Surveys prior to 1924.

## RELATIVE AND INDEX NUMBERS

To facilitate comparison between different important items and to chart series expressed in different units, relative numbers (often called "index numbers," a term referring more particularly to a special kind of numbers described below) have been calculated. The monthly average for 1923-1925 has usually been used as a base equal to 100.

The relative numbers are computed by allowing the monthly average for the base year to equal 100. If the movement for the current month is greater than the base, the relative number will be greater than 100, and vice versa. The difference between 100 and the relative number will give at once the per cent increase

or decrease compared with the base period. Thus, a relative number of 115 means an increase of 15 per cent over the base period, while a relative number of 80 means a decrease of 20 per cent from the base.

Relative numbers may also be used to calculate the approximate percentage increase or decrease in a movement from one period to the next. Thus, if a relative number for one month is 120 and for a later month is 144, there has been an increase of 20 per cent.

When two or more series of relative numbers are combined by a system of weightings, the resulting series is denominated an index number. The index number, by combining many relative numbers, is designed to show the trend of an entire group of industries, or for the country as a whole, instead of for the single commodity or industry which the relative number covers. Comparisons with the base year or with other periods are made in the same manner as in the case of relative numbers.

## SEASONAL ADJUSTMENTS TO INDEXES

Seasonal variations are found in most series of economic statistics for which monthly values are obtainable. Consumption and production of commodities, interest rates, bank clearings, railroad freight traffic, and many other types of data are marked by seasonal swings repeated with minor variations year after year. These, in so far as they exist at all, are definitely periodic in character, with a constant 12-month period. In cases where an adjustment is noted for a series carried in the Survey, the index has been corrected for number of working or business days in the various months and then adjusted for seasonal variation. The index figures thereby become comparable throughout the series.

## METHODS OF USE

Methods of using and interpreting current business statistics have been collected by the Department of Commerce from many business concerns and are described in a booklet entitled "How to Use Current Business Statistics," together with methods of collecting statistics. This booklet may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C., at 15 cents per copy.

# Distribution in

## the GULF SOUTHWEST

An analysis of trading areas, store location, finances, operating expenses, turnover, collections, personnel, lines handled, buying and selling practices, deliveries, returned goods, advertising, competition, and other factors in wholesale and retail distribution of hardware and related products in the Gulf Southwest.

**100 wholesalers, 477 retailers, 8 managers of chain stores** supplied operating statements and balance sheets and discussed their business policies with field agents of the Bureau of Foreign and Domestic Commerce, in order that this investigation might be of the greatest value to wholesalers, retailers, manufacturers, and others interested in distribution in this area.

**Domestic Commerce**  
**Series No. 52**

**Price 70 Cents**
