## SURVEY

## OF

# CURRENT BUSINESS 

# UNITED STATES DEPARTMENT OF COMMERCE bureau of foreign and domestic commerce WASHINGTON 

A
MONG the durable goods industries that have made rapid strides toward recovery is included the farm equipment manufacturing industry. Business in 1935 was the best since 1930, although it fell considerably short of the results of the earlier year. Production amounted to $\$ 331,998,066$ in 1935 , or almost three times the value of the 1932 production. The total was, however, only 55 percent of the 1929 figure. . . . Business, both domestic and foreign, so far during 1936 has shown further substantial gains. . . . The review on page 16 by E. V. Needham, the Bureau's agricultural implements specialist, gives a summary of recent as well as of historical trends.

## Business Situation Summarized

INDUSTRIAL activity has tended to level off in about the same as in March; the indexes of food procMay after the unusually rapid rise in April when the essing and shoe production fell off less than the seasonally adjusted index of manufacturing advanced usual seasonal amount; and the contraseasonal gain to 99 from 93 in March, and the index of mineral out- in tobacco manufacturing established a record for the put rose to 104 from 95 . While the March-April month in this industry.
change was influenced by the effects of the floods which The expansion in manufacturing in April was accomaccompanied the spring thaw in the East, the forward panied by an increase in the seasonally adjusted index movement this spring continues to lave as a basis the of factory employment; there was a large gain also in sales expansion in many industries.

The demand for finished steel has held the ingot industries surveyed regularly by the Bureau of Labor rate during May close to 69 percent of capacity, the Statistics. During the past year of increased producApril figure, which represented the highest rate of tion and national income, the estimated gain in emproduction in 6 years. Sales of automobiles have been ployment in all industries and occupations has been maintained in May at a rate which promises little in excess of $1,500,000$.
change in production from the April total; in that Retail sales reports for April reveal mixed trends month production exceeded half a million units for the in comparison with the March results, but the value of first time since 1929. This high rate of automobile all retail sales was greater than in April 1935, and a production was the major factor in the record output substantial year-to-year gain for the May comparison of plate glass in April, although the expansion in build- is indicated by current reports.
ing operations has also caused an increasing demand The May crop report revealed a deterioration due to for this product as well as for lumber, cement, and the uneven distribution of rainfall and extreme temother building materials. Notwithstanding the further peratures. In the first half of May, however, there improvement in construction, the relatively low level was a marked improvement in conditions. Prices of of building remains a major deterrent to reemployment, farm products and foods have continued to decline as not only in this industry but in others as well. adjustments are gradually made to a more normal
In the nondurable goods industries the changes in demand-supply situation. Prices of industrial comApril were not so marked. Production of textiles was modites also have eased.

## MONTHLY BUSINESS INDEXES

## Graphic Comparison of Principal Data

## Commodity Prices

TTHE Bureau of Labor Statistics monthly combined July 30, 1935. By May 20 this index had reacted to index of 784 wholesale commodity price series 165.4, but subsequently receded to 163.3. recovered one-tenth of a point in April to 79.7 (1926 =

Farm prices, after having experienced a 1-point rise 100) after having experienced a fall of 1 point in March, in April, appear to have resumed the downward trend the largest decline for a year and a half. Among the which began in January. Cotton prices have declined important group and subgroup constituents of the com- somewhat since the advances of March and April, but bined index, meats advanced most in April; next in world consumption is at a record high level and prosorder came farm products and building materials. pects are for a reduction in the world carry-over of Substantial declines were exhibited, however, by American cotton. Wool prices declined sharply in grains, chemicals and drugs, and textiles.
The same Bureau's weekly index of all wholesale commodity prices dropped to 78.1 for the week ended May 16, the largest declines during the first half of May being shown by foods (especially meats), farm products (especially grains), chemicals and drugs, metals and metal products, and textiles. The only significant advance was in the index of miscellaneous products.

Following a 3-month period of very narrow fluc ations around 170 (Dec. 31, $1931=100$ ), Moody's and changes in most groups were slight. Fur prices daily index of 15 "sensitive" commodities advanced continued the uninterrupted gain which began in to 172.1 on April 18 and again on April 23-the highest October 1935 and average about 10 percent higher point in 6 months. It then began a sharp decline now than a year ago, whereas the composite index and on May 12 reached 162.7, the lowest figure since is only 2 percent higher.

## Finance

AFTER the sharp decline in prices in April, the stock in the final quarter of 1935 when earnings recorded a market movement was irregular during the first strong contraseasonal increase. For the second quar3 weeks in May, with a slight upward tendency. The ter of the year, an increase in profits will undoubtedly volume of shares traded dropped sharply.
The figures of non-Federal capital financing in April indicate that over a billion dollars of securities were offered to the public in that month. While this total was the largest in 6 years and about two-thirds of the all-tine record established in September 1929, there is a marked difference in the types and purposes of the present financing and that of 1929 . In the earlier year the predominant form of financing was stocks rather than bonds; in 1935 and in the first part of 1936 the reverse was true with relatively little stock financing. In 1929 nearly 90 percent of the issues represented new capital and only 10 percent represented refinancing, although it should be noted that credit loans had been reduced from 6 to 4 percent. The about one-fifth of the capital raised in 1929 was for one-quarter of 1 percent increases in call and time rates investment trusts. In 1935, 70 percent represented on the New York Stock Exchange reflect the increased refunding issues, while in the first 4 months of 1936 about 80 percent was for refunding.

An important factor in these refunding operations has been the ability of corporations, by reason of improved earnings, to take advantage of the prevailing low interest rates. Many have been able to convert their outstanding obligations bearing high interest rates into securities carrying a much lower rate. The recent announcement of an offering of $\$ 85,000,000$ of 3 -percent debenture bonds by a large petroleum corporation set a new record for low-cost, industrial financing.
lections in the first 10 months of the present fiscal year
Corporation profits during the first quarter of the were 7 percent above the collections for the similar year were smaller, on a seasonally corrected basis, than period in the 1935 fiscal year.

On a have been those reported for southern Michigan (Deseasonally adjusted basis, residential awards were the troit particularly), Texas, and upstate New York.

## BUILDING MATERIALS, CONSTRUCTION, AND REAL ESTATE

1 Based on 3-month moving average and adjusted for seasonal variations.
${ }^{2}$ Index is as of lst of month, May 1, 1936, 203.4.

## Transportation

DURING the first 5 months of 1936 there has been 1931 , but they were 15 percent less than in the same noteworthy improvement in the volume of railroad period of that year. The gain over 1935 amounted to equipment purchases. Through May 21, 19,240 freight 8 percent, with all classifications showing increases, cars and 88 locomotives were ordered, according to the except livestock and l. c. l. loadings. For the lasttabulations of the Railway Age. These totals exceeded mentioned group, the total was not only below that of those for the full year of 1935 , during which 18,6991935 but was also lower than in any similar period since freight cars and 83 locomotives were ordered. Rail 1920. Miscellaneous loadings, which are composed buying also has expanded sharply, with orders for the largely of manufactured products, were 11 percent first 4 months of the year totaling 445,000 tons, more ligher than in 1935.
than twice the amount in the corresponding period in 1935, according to the same source. Purchases of all types of equipment are still relatively small, however, in comparison with those of predepression years. Nevertheless, they have played a significant part in the rise in manufacturing activity this spring.

Weekly freight-car loadings have advanced steadily since March, with the exception of the small recession in the week ended May 9 , but on a seasonally adjusted basis, loadings are still below the December figure. During the first half of May only one class of traffic, ore, showed a marked expansion and this increase was approximately of seasonal proportions. Loadings usually record the sharpest expansion of the year between April and May, but the increase is generally concentrated in the latter half of the month.

For the first 20 week of the year totat exceeded those in comparable periods of all years since ably better than those for March.

## Automobiles and Rubber

WHILE the 1936 peak of automobile production of cars announced an increase from 22 to 24 percent in has apparently been passed the rate of assemblies the discount allowance to dealers. This was designed has fallen off very gradually. Current estimates place to strengthen the position of the dealers in a field the probable May production at a figure close to that where competition is extremely keen.
for ${ }^{*}$ April, when United States factory sales amounted Profits of automobile manufacturers have increased to 502,775 cars and trucks, of which 469,545 were for considerably this year, but the parts and accessory the domestic market. To find a larger total, it is companies have not done so well. The two leading necessary to go back to June 1929, and in only 5 months manufacturers of cars that issue quarterly statements, in the history of the industry have assemblies topped the reported profits for the initial period of 1936 well in half-million mark. All of these months were in 1929. excess of the totals for that period last year. The
'Indicated production for the first 2 months of the comparison is influenced, however, by the slow start of second quarter is thus approximately $1,000,000$ vehicles, one company on the 1935 models. Twenty-seren compared with 814,000 in the same months of 1935 . manufacturers of parts and accessories reported a Production of cars dropped sharply in May a year ago, combined net profit 8 percent less than the total for partly by reason of labor difficulties which for a time the initial quarter of 1935.
curtailed the operations of one of the leading pro- In the rubber-manufacturing industry, production ducers of low-priced cars.

The current high rate of output has been based on reaching the record figure of 46,707 long tons. This the favorable trend of retail sales of cars. General brings the total consumption for the 4 months slightly Motors' sales to consumers in the United States, above the figure for the same period of 1935 . Tire amounting to 200,117 vehicles, were the the highest in business inereased in April, with the larger demand the history of the corporation, and they exceeded sales for original equipment tires supplemented by the to dealers by more than 5,000 cars. Sales of all makes seasonal trend in renewal tire sales. The latter probwere up considerably in April, although the seasonally ably have been stimulated to some extent also by the adjusted index continues to move erratically. Reports general increase in retail tire quotations announced by for the first half of May indicate that sales during this the major companies. At the same time the price period have been maintained on about a par with those increase was made, two of the leading tire producers of the first half of April. In May one leading producer announced general wage increases.

## Forest Products

LUMBER consumption, including exports, for the were about one-fifth larger than the comparable total first half of the current year is estimated by the a year ago and were also about 8 percent in excess of Special Lumber Survey Committee in a report to the production. Shipments exceeded production by a Department of Commerce at $10,650,000,000$ board substantial margin during this period, with a resulting feet. This represents the largest consumption for the decline (partly seasonal) in producers' stocks. The period since 1930, but is only about 3 percent in excess ratio of unfilled orders to stocks for the four important of the comparable 1931 total and is 43 percent less than softwood regions is now the most favorable for the past the estimated consumption in the first 6 months of 6 years, the entire period for which data are available.
1929. In the first 6 months of 1935 the consumption amounted to $8,615,000,000$ feet and in 1932, the low year of the depression, it was $6,780,000,000$ feet.
The Committee found that the major sources of increased business this year were the construction industry, which is by far the most important consumer of lumber, and the agricultural implement industry in which production has shown a substantial increase. The Committee reported that the increased use of lumber in the furniture industry was not so marked as anticipated, and that the increase in the container industry, in comparison with the early months of 1935, was only 2 percent. More automobiles have been produced this year than last, but the increased use of steel in the current models has curtailed the market for lumber to some extent. Exports of lumber this year have been less than in 1935.
Increased consumption has been reflected in orders received by the mills this spring, although there was little change in the volume from March to April. Total orders for lumber for the first 4 months of 1936

The production statistics reported weekly for identical mills reveal a rising tendency through the first half of May.

Production in the furniture industry in April was at a slightly lower rate than in March, if the employment and pay-roll data may be accepted as a correct guide. Reports concerning manufacturers' sales in April and early May indicate some slackening in the volume of purchases by retailers following the sharp spurt in March. The volume of retail sales, according to reports received by the Department, is substantially ahead of a year ago. Reporting furniture stores in three principal mid-Western States, for example, show dollar sales in April to have been more than one-fourth above the April 1935 total.
The increase in paper production in April was unusually large, the rate of operation moving up to 82 percent of capacity from 76 percent in April. The increase in the production of board mills was less pronounced.

FOREST PRODUCTS STATISTICS

## Iron and Steel

DEMAND for finished steel products has sustained the rate of ingot production near the peak reached in April. After rising above 70 percent of capacity in the latter part of that month, operations have subsided only slightly in succeeding weeks. It is estimated that output for May will be about the same as in April, when production averaged 69 percent of capacity. On a daily average basis, output in April was the largest since May 1930 and was nearly 50 percent in excess of the total for April 1935.

Automobile purchases have been an important influence in the maintenance of a relatively high rate of steel production through May. While other sources of business have required increasing tonnages this spring, it may be noted that the output of automobiles in April reached 503,000 units against 421,000 in March. Present estimates place the probable May requirements close to the April figure. Railroad, structural steel, and machinery business has also tended to bolster the rate of operations. Orders for freight cars, steel rails, track work, and structural steel in April were each larger than in March. Continued improvement in machinery business is evidenced by a further gain in new orders for machine tools; domestic business for this industry in April was the best so far experienced in the recovery period. Orders for steel sheets were sharply lower than in March, although shipments were about one-fifth larger.

Statistics on the volume of finished products made for sale in the first quarter are now available, and provide detailed information concerning the sources of increased business this year. Generally, the largest percentage increases have been in the heavy lines, but the output of this type of products is still relatively low. Production of heavy structural shapes in the first quarter was at the rate of 32 percent of capacity against 19 percent a year ago; standard rails 26 percent against 13 ; splice bars and tie plates 22 percent against 14; and bars 37 percent against 32 . Production of pipes and tubes also showed a substantial increase. For lighter products the gains generally were smaller; thus, the capacity engaged for sheets dropped from 74 to 72 percent. The amount of both black plate and tin plate produced for sale was considerably in excess of the total for the first quarter of 1935.

Production of all products utilized about 55 percent of total finishing capacity, compared with 45 percent in the opening quarter of 1935. Roughly the same proportion of finished capacity as of ingot capacity was engaged this year. In 1935 ingot production was at a rate some 5 points higher than the rate of finishing.

The trade press has featured reports of prospective price increases for third-quarter delivery, and some price increases were announced in the latter part of May. Scrap prices have been declining, after rising steadily throughout the first quarter.

# Farm Equipment Business Recovers Rapidly 

By E. V. Needham, Agricultural Implements Specialist, Bureau of Foreign and Domestic Commerce

SALES and production of farm equipment manu- year. For the low year, 1932, the value of production factures have recovered rapidly in the past 3 years after dropping to an extremely low level in 1932. In that year, the estimated value of production was less than one-fifth of the 1929 figure. The improvement has resulted mainly from the rise in the income of thie farm population, and particularly in that portion of the farm income which is available after meeting current expenses of production.

Figure 1.-Distribution of Gross Income From Farm Production, 1924-35 (United States Department of Agricultare.

Figure 1 shows the trend of gross income from farm production during the past 12 years, and the proportion of the total required for production expenses, as well as that portion representing the value of products retained for consumption on the farms. It will be noted that the amount available after meeting production expenses, and exclusive of the consumption requirements on the farms, dropped sharply after 1929 to reach a relatively small total in 1932. This decline was accompanied by a rapid drop in the sales of farm equipment. With the recovery in farm prices and farm income, and the added rental and benefit payments by the A. A. A., sales in the past 2 years have undergone a marked revival.

Farm equipment business in 1935 was the best since 1930, although it fell considerably short of the results of the earlier year. Production amounted to $\$ 331$,998,066 , and sales in the United States were valued at $\$ 300,268,076$, according to preliminary official statistics of the United States Bureau of the Census. Production during 1935, however, was only 65 percent of the 1930 figure of $\$ 507,002,259$, and only 55 perent of the 1929 figure of $\$ 606,621,812$. Official statistics for 1931 show production of $\$ 214,390,792$, while estimates for the intervening years, 1932 to 1934, inclusive, Digitized for FRASER place production below the $\$ 200,000,000$ mark in each
adverse influences tending to restrict sales and the drop in production. According to the census of 1930, the number of tractors on farms was 920,021 , and by July 1935 the number had increased to $1,174,889$. At present the number is in excess of $1,200,000 .{ }^{1}$

Figure 2.-Value of Production of Farm Equipment and Related Products (Bureau of the Census, U. S. Department of Commerce).
Note.-The census of production of farm equipment and related products was not taken for the years 1932 to 1934 inclusive. The totals for these years are unofficial estimates.

## Development of "All-Purpose Tractor."

The original tractor, which came into fairly general use during and immediately following the war, was somewhat limited in its application to agriculture. It was ideally suited to plowing, harvesting, and tasks requiring belt power, but it could not be used to cultivate row crops such as corn, cotton, and similar products.

About 1925, the "all-purpose tractor" of lower horsepower was developed. This type overcame many of the objections to its predecessors and it has constituted a very large proportion of the total produced in recent years. In 1931, 61,940 wheeled tractors were produced of which 25,831 , or 41.7 percent, were of the "all-purpose" type. In 1935, 138,084 wheel tractors were manufactured of which 106,343 , or 77 percent, were of this type. Part of the gain made in 1935 was due to the development of the so-called "baby all-purpose tractor", a machine of small horsepower for use on small holdings.

The track-laying tractor has also made important strides during the past few years, and has made a marked contribution to the industry's recovery. This particular machine has certain limitations for farm use, being employed mainly on extensive holdings, but it is a most practical machine for many industrial uses such as logging, road building, grading, and other tasks in the construction industry.

An important development in the track-laying tractor industry in recent years was the utilization of the Diesel engine for power purposes. The first Diesel-powered tractor was produced in 1931 and subsequently the Diesel type has grown in popularity due to its low operating costs. It is now being marketed by all track-laying tractor producers.

## Improvement in Other Types of Equipment.

Coincident with the development of the tractor and its widespread application to farming tasks has been the improvement and refinements in many other types of equipment. The "baby combine", for example, has recently been developed for the small farm with diversified crops. Heretofore the combine was suitable only for use on large farms and was beyond the reach of the small diversified farm except on a cooperative basis. Many other developments have been of interest, but lack of space prevents a more extensive treatment here.

## Comparative Production and Sales Data.

The accompanying table gives comparative figures on production and sales of the principal classes of farm equipment and related products for the years 1930, 1931, and 1935. It should be noted that the 1935 figures are preliminary and subject to correction, but it is not believed that the final figures will alter materially the data as here presented.

## Table 1.-Value of Farm Equipment and Related Products Manufactured

 and Sold, by Classes: 1935, 1931, and 1930[The sales statistics refer only to sales by manufacturers and do not cover sales by dealers to consumers. The principal difference between the export sales as reported by manufacturers and the value of exports as reported by the Bureau of Foreign and Domestic Commerce is the fact that many manufacturers report to the Bureau of the Census on a fiscal-year basis, whereas the reports of the Bureau of Foreign and Domestic Commerce are compiled on a calendar-year basis. The figures for export sales understate somewhat and those for domestic sales correspondingly overstate the amounts of the actual sales, because of the fact that some manufacturers sell to middlemen who export a part but not all of the commodities they purchase, so that manufacturers do not in all cases know whether their products are destined for export. The value figures include values of attachments and parts.]

Planting, seeding, and fertilizing machinery.

Plows and listers...

Harrows, rollers, pulver izers, and stalk cutters.

Cultivators and weeders.

Harvesting machinery.-

Ha

Machines for preparing crops for market or use

Tractors.

Engines ${ }^{2}$

Farm wagons and trucks.

Miscellaneous farm machines and equipment

I Not called for separately on schedule.
2 Statistics for 1935 include data for engines up to 100 horsepower, whereas those for 1931 and 1930 include data only for engines up to 20 horsepower.
Source: Bureau of the Census, U. S. Department of Commerce.

[^1]Aside from the marked increase in the value of tractor production, the largest relative increases from 1931 to 1935 were in haying machinery, plows and listers, and farm wagons and trucks. The increase in harvesting machinery, between the two periods, was relatively smaller than that for other major types of equipment.

## Improvement in Export Trade Lagging.

Exports of farm equipment and related products fell precipitously from 1929 to 1932 and, while there has been some recovery during the past 3 years, it has

Figure 3.-Exports of Farms Equipment and Related Products and the Percentage of the Production of these Products Exported (Bureau of Foreign and Domestic Commerce, U. S. Department of Commerce)
Note.-A census of production of farm equipment and related products was not taken for the years 1932 to 1934; the totals used for computing the percentage of the products exported for these years are unofficial estimates. See figure 2 for production data.
not been so marked as the gains in domestic sales. During the period 1924 to 1931, inclusive, the proportion of the total domestic production exported exceeded 20 percent. In 1931, when the ratio was highest, the percentage was 27 . Although official production figures are not available for 1932, 1933, and 1934, only about 10 percent of the estimated production was exported, or approximately the same as the figure revealed by the official data for 1935. Figure 3 shows the value of exports for the period 1919 to 1935, inclusive, together with the ratio of exports to production for all these years, except 1919.

The rapidly expanding trade during the 1920 's was largely the result of the demand in certain foreign countries for power-farming equipment. In Canada, Argentina, South Africa, and Australia, a large market for tractors, combines, and other power-farming implements was developed. An additional factor in this expanding trade was the inability of certain major farm equipment producing countries to compete on favorable terms with United States manufacturers in agricultural areas while the domestic manufacturing industries in these countries were being rehabilitated. During recent years of more restricted markets, manufacturers in these countries have offered more aggressive competition to American sales organizations. Furthermore, sales were restricted by the many foreign trade barriers, such as high tariffs, exchange controls, import restrictions, and other artificial impediments to the flow of trade.
Were it not for unusually large purchases by the Union of Soviet Socialist Republics in 1930 and 1931, the foreign trade statistics would make a much less favorable showing during the early years of the depression. In these 2 years, exports to the Union of Soviet Socialist Republics amounted to $\$ 79,790,000$, or 46 percent of the total exports. Sales to this area have been reduced to relatively small proportions since 1931, owing to the rapid development of the Soviet farm equipment manufacturing industry.
The reciprocal trade agreement program may alleviate some of the adverse influences operating to restrict trade. The agreement with Canada, effective January 1, 1936, removed all tariff duties on tractors and lowered the duty on other farm machinery. This market has always been the leading foreign purchaser of American farm equipment. The agricultural situation and general business outlook in Australia and South Africa have improved during the past year with a resultant gain in exports to those countries. Better agricultural conditions in Argentina have stimulated sales to some extent in that major market.

Exports for the first quarter of 1936 were valued at $\$ 8,913,374$, an increase of 36 percent over those of the corresponding quarter of 1935. While the largest total for this period since 1931, it was much smaller than in the earlier period.

## Monthly Business Statistics

The following summary shows the trend of industrial, commercial, and financial statistics for the past 13 months. Statistics through December 1931 for all series except those marked with an asterisk ( ${ }^{*}$ ) will be found in the 1932 Annual Supplement to the Survey of Current Business, together with an explanation of the sources and basis of the figures quoted. Series so marked represent additions since the Annual was issued and similar information, if published, will be found in the places noted at the bottom of each page. Note, however, that many revisions have occurred since the last Annual Supplement was published. A special supplement was included in the April 1935 issue, pages 57 to 72 , inclusive. This supplement gave the monthly averages of all current series for the years 1932, 1933, and 1934.

The terms "unadjusted" and "adjusted" used to designate index numbers 'refer to the adjustment for seasonal variation.

Data subsequent to April will be found in the Weekly Supplement to the Survey.

* New Series. See pp. 16-19 of the May 1934 issue, cash income for marketings of agricultural products, p. 19 of the December 1932 issue, Fairchild's price index, and pp. 19 and 20 of the March 1933 issue, quantity marketings. 101 , cotton and cottonseed 96 , dairy products 106 , fruits 103 , grains 88 , meat animals 118 , truck crops 105 , miscellaneous 97
$\dagger$ Index of farm prices has been completely revised. For earlier data see p. 20 of the November 1934 issue. World stocks-revised total, rubber adjusted and sugar adjusted indexes for January 1927-June 1932, appeared on p. 20 of the September 1932 issue. Cash income for marketings of agricultural products revised from January 1933 June 1935. For revisions see p. 19 of the September 1935 issue. World stocks-total revised for period $1920-1935$, see p. 20 of the May 1936 issue.
- Monthly retail prices of coal were discontinued with the month of August 1935 . Subsequent to that date the price will be shown quarterly.

I This series bas been completely revised. Revised indexes for months not shown in the December 1935 issue will appear in a subsequent issue. Index computed every 2 weeks; monthly index is figure taken nearest the middle of the month; prlor to Aug. 15, 1933 , inder computed once a month.
$\Delta$ See foot noote on p. 24 marked, " $\delta$ ".

- Revised.

20, New series. For earlier data on building costs, American Appraisal Co., refer to p. 20 of the August 1933 issue. N. I. R. A. highway work started in September 1933, see November 1934 issue for beginning of series. For Home Loan Bank loans outstanding for period December 1932-January 1936 see p. 19 of the April 1936 issue, Home Owners' Loan Corporation data from September 1933 to April 1934 will be shown in a subsequent issue. Total loans closed to Apr. 30, 1936, $\$ 3,060,028,685$. Printers' Ink indexes from January 1922 to May 1934 appear on p. 19 of July 1935 issue. Data prior to May 1934 on "all other" radio and magazine advertising not published. See special note below on foreclosures. Data on H. O. L. C. Ioans outstanding for period September 1933-January 1936 are shown on p. 19 of the April 1936 issue.

+ Revised series. See p. 20 of the October 1933 issue, magazine lineage. For revised data on magazine advertising cost for the years 1933 and 1934 , see p. 18 of the February 1936 issue.
\& Index as of May 1, 1936, 203.4. Compiled by the Federal Home Loan Bank Board and represent the number of foreclosures on all types of properties in 1,013 identical communities in 48 States: having 53 percent of the population of the United States. Data prior to October 1933 not published. Comparable annual totals for 1926, 65,857; 1932, 210,821; and 1933 having 53 percent of the population of the United States. Data prior to October 1933 not published. Comparable annual totals for 1926, 85,857; 1932, 210,821; and 1933
209,003 . Data were not compiled for other years. Months subsequent to September 1934 were computed by means of a link relative to keep series comparable since the figures for these months are from a slightly different number of communities.
figures
$\#$ These series represent a break-down of the combined total shown in the Survey previous to September 1933. For earlier data see p. 20 of the September 1933 issue. T Months of May, August, and October 1935; January and April 1936 include 5 weeks; other months include 4 weeks.
I Months of May, Alugust, and October 1935; January and April 1936 include 5 weeks; other months include 4 w

a Revised.

* Now series. For earlier data on department store sales by Federal Reserve districts, see p. 20 of the February 1935 issue excepting Chicago, for which see note below. Note ihat the combined index of departnent-store sales is computed by the Federal Reserve board and the distrjct indexes are computed by the Federal Reserve banks. sales for period January 1929 to October 1934. For earlier data on factory employment unadjusted in detail, see p. 16 of the June 1934 issue. See p. 19 of the July 1934 issue for factory employment unadjusted total. Data on employment in the durable and nondurable goods groups for the period January $1923-J u n e 1935$ were shown on p. 19 of the August 1935 issue.
$\dagger$ Revised series. See p. 19 of the April 1935 issue, department-store sales, Chicago.
A This series was shown on p, 20 of the June 1935 issue from 1919 through A pril 1935.
- The adjusted index of department-store sales (total value) was revised by the Federal Reserve Board for the years 1929 through 1934 . Revised indexes for this period were shown on p. 20 of the June 1935 issue.
§Data have been revised for the period January 1933-September 1935. Revisions not stown in the November 1935 issue appeared on p. 18 of the Janaary 1936 issue.

| Monthly statistics through December 1931, together with explanatory footnotes and references to the sources of the data, may be found in the 1932 Annual Supplement to the Survey | 1936 | 1935 |  |  |  |  |  |  |  |  | 1936 |  |  |

a Revised.
*New series. For earlier data on the following sublects, refer to the indicated pages of the monthly issues. New series on "Brokers' Loans" for the period January 1929-December 1935 are shown on p. 19 of the March 1936 issue. For new series on bank rates to customers see p. 18 of the March 1936 issue, For new series on interest rates of Federal land banks see p. 20 of the April 1935 issue. Data on excess reserves prior to September 1934 will bo shown in a subsequent issue. See footnote below a break-down of Investments and total loans. These 3 series represent a break-down of the investment total. Monthly data previous to October 1934 not available. Data on acceptances and commercial paper, on real estate, to banks and other loans represent a break-down of the "All other" loans total which was published prior to Oct. 1, 1935.

Figures subsequent to December 1933 represent gold certificates on hand and due from Treasury, plus redemption fund.
ather date are not comparable with those for earlier periods. Data for months August 1934-August 1935 were incorrectly shown in the October 1935 issue.
for November 1935, in the main, represent a continuation of the 101 city series published prior to the bank holiday. It is pointed out that although the banking crisis and suhsequent developments affected these series considerably, the data reflect the course of banking developments during the disturbed period. Data on 101 cities were last shown in the May 1933 Survey for February 1933. Figures on the new basis not shown above will appear in a subsequent issue. Data on brokers' loans by reporting member banks also represent a continuation of the series covering 101 cities last shown in the May 1033 Survey.
$\sigma^{2}$ Classifications have been changed and revised data prepared beginning with January 1034 . These data are shown on p. 20 of the May 1936 issue.

| Monthly statistics through December 1931, together with explanatory footnotes and references to the sources of the data, may be found in the 1832 Annual Supplement to the Survey | 1936 | 1935 |  |  |  |  |  |  |  |  | 1936 |  |  |

$\dagger$ Revised series. For earlier data see pp. 18,19 , and 20 of the July 1933 issue, insurance written and admitted assets; p . 18 of the June 1933 issue, premium collections. The nominal offial gold value of the Chilean peso was changed rom 3 pence gold to $1 / 2$ pence gold as of Jan. 2, 1935.
Par values of foreign currencies as given on pp. 86 and 87 of the 1932 annual supplement were changed with the reduction in gold content of the United States dollar. Quotation based on paper peso since Dec. 10, 1933, instead of gold peso as formerly. Former equivalent to 44 percent of latter. See note on p. 56 of the March 1934
iThe figures for "other" bonds and stocks held (book value) for the months of January and February 1934 shown as 611 and 616 million dollars, respectively, in the thly issues from May 1934 to April 1935 should read 514 for January and 518 for February.

Preliminary

Data are compiled by the American Bureau of Metal Statistics and represent the estimated world output．The series for the period January 1928 －August 1934 presented in the SURvex covered the principal producing countries which produced the following percentages of the world total： $1923,87.9 ; 1929,87.1 ; 1930,85.5 ; 1931,82.0 ; 1932,75.5 ;$ and $1933,77.5$ ．${ }^{\prime}$ Series revised to include emergency expenditures．Figures as shown in Survey for months prior to May 1932 are comparable with this series．Comparable figures for the period May 1932 to Mareh 1933 are on p． 33 of the June 1934 issue．Later data are shovy in monthly issues．
o The item of $\$ 333,245,378$ carried by the Treasury as a credit under the trust funds for May 1935 represents a transfer of that amount from the gencral fund to the trust funds．Amount represents deposits of governmental agencies for which Treasury has been acting as fiseal agent．The amount therefore has not been included in the May 1935 total of receipts and expenditures．

IFor 1934 includes $\$ 2,808,221,138$ for February，$\$ 2,233,252$ for March，$\$ 409,052$ for April，$\$ 298,868$ for May，$\$ 213,447$ for June，$\$ 272,163$ for July，$\$ 268,204$ for August，$\$ 134,843$ for April，$\$ 96,103$ for May，$\$ 105,773$ for June，$\$ 65,219$ for July，$\$ 62,295$ for August，$\$ 62,936$ for September，$\$ 23,256$ for October，$\$ 65,780$ for February，$\$ 157,326$ for March，$\$ 89,144$ For 1936 include $\$ 60,222$ for January，$\$ 43,460$ for February，$\$ 58,427$ for Narch，aud $\$ 105,254$ ior A pril，representing the increment resulting from reduction in weight of the gold dollar．
＊For earlier data on net gold imports see p． 20 of th 6 December 1932 issue．For new scries for internal revenue tax receipts from admissions to theaters，capital stock transfers，and sales of radios，see p． 20 of the Feb． 1936 issue．For new series on sales of produce（future delivery），see p． 19 of the April 1036 issue．
§This excludes reliel grants to States by the R．F．C．under the Emergency Relief Aet of 1933 upon certification of grants by the Federal Emergency Relief Adminis－

[^4]\#Beginning with January 1934, import data represent imports for consumption (goods entering consumption channels immediately upon arrival, plus withdrawals for consumption from bonded warehouses) and are not comparable with earlier figures, which consist of general imports (goods entered for storage in bonded warebouses, plus goods entering consumption channels upon arrival in the U. S.).
f Revised series. Data for January 1929-May 1935, inclusive, on electric railway passengers carried and operating revenues for January 1932-A pril 1935, inclusive, are
shown on p. 19 of the August 1935 issue. Data on electric railway passengers carried through December 1935 are based on estimates for 210 companies, and for 1936 on shown on p. 19 of the Augus
estimates for 214 companies.

- New series. Data prior to April 1933 on value of imports for consumption will be shown in a subsequent issue
§Data revised for 1932. See p. 34 of the March 1933 issue. Other revisions for the year 1932 were shown on p. 34 of the April, May, December 1933, and January 1934 suesS FFer revised data for months of 1933, see p. 20 of the September 1934 issue, and for 1934 , revisions, see p. 19 of the December 1935 issue.

| Monthly statistics through December 1931, together with expla natory footnotes and references to the sources of the data, may be found in the 1932 Annual Supplement to the Survey | 1936 | 1935 |  |  |  |  |  |  |  |  | 1936 |  |  |

${ }^{a}$ Reviser.

* New series. For earlier data see p. 20 of the April 1935 issue (alcobol withdrawn tax paid), p. 20 of the April 1933 issue (crude methanol). This series for production revised for 1934 and 1935. Revisions not shown above will be published in a subsequent issue.
$\dagger$ Revised series, see p. 36 of the June 1933 issue, for 1932 revisions, exports and imports of fertilizer; for 1933 revisions on exports see p. 29 of the September 1934 issue; for 1934 revisions see p. 19 of the December 1935 issue; for revised data for crude methanol production for 1933 , see p. 36 of the May 1934 issue. Quarterly data on (ats and oils for the years 1932 and 1933 were shown on p. 19 of the March 1935 issue; for 1934 on p. 19 of the November 1935 issue. For revised series on explosives for period January 920-October 1933 see p. 19 of the January 1934 issue.
- The refined equiralent of crude production is approximately 82 percent.

Texas only. Louisiana produced 23 percent of the United States production in 1933 and 16 percent in 1934.

## - Revised.

- New series. For earlier data see p. 19 of the May 1935 issue, manufactured and natural gas. Series on cellulose products prior to January 1933 not available.

T Revised series. Data revised beginning with January 1932; see p. 39 of the April 1935 issue. Revisions for period January 1932 to January 1934 , inclusive, wial be shown in a subsequent issue.
$\dagger$ For revised data for electric-power production for 1932 see pp. 38 and 56 of the May 1933 issue; for 1933 see p. 38 of the May 1934 issue; 1934 and 1935 data also revised Revisions not shown in the June 1935 issue and in the May 1936 issue will appear in a subsequent number. Manufactured and natural-gas statistics for the years $1924-35$ have been revised. Revised data on manufactured gas areshown ou $p$. 20 of this issue. Data for the natural gas series superseded by current statistics appeared on $p$. 23 of the May 1935 issue and in the monthly numbers through May 1936. Revisions for entire period will appear in a subsequent issue.

| Monthly statistics through December 1981, together with explanatory footnotes and references to the sources of the data, may be found in the 1992 Annual Supplement to the Survey | 1936 | 1935 |  |  |  |  |  |  |  |  | 1936 |  |  |

* New series. Beverage figures are compiledby the U. S. Treasury, Alcohol Tax Unit. Monthy data on distilied spirits available beginning July 1933 and on fermented malt liquors, April 1933. For earlier data for receipts of milk in Greater New York see p. 20 of the August 1934 issue. See p. 19 of the June 1933 issue for butter consumption Data on consumption of rectified spirits are as indicated by the sale of stamps. Data prior to April 1933 not published.
\#See footnote on p. 37 of this issue. Data for 1933 also revised, see p. 20 of the October 1934 issue. For 1934 revisions see p. 20 of the December 1935 issue.
$\dagger$ Revised series. For revisions refer to the indicated pages of the monthly issues, as follows: For 1931 on apparent consumption of cheese, production of total and A merican whole-milk cheese, and production of condensed and evaporated milk, p. 20, January 1933. For earler data on stocks (cold-storage holdings) of total and American whole-milk cheese, p. 19, Aprill 1933. For 1932 revised data on production of factory and A merican whole-milk cheese, production of condensed and eraporated milk, p. 30 , September 1933. For subsequent revisions for 1932 on production of evaporated milk, p. 39, November 1933. For 1932 and 1933 revisions on butter and cheese consumption and 1933 revisions on production of butter, cheese, condensed and evaporated milk, see p .19 of the March 1935 issue. For 1934 revisions on production of butter, cheese, condensed and evaporated milk, and apparent consumption of butter and cheese see p. 19 of the November 1935 issue. For final revision for 1933 , car-lot shipments of apples, citrus fruits, onions, and potatoes, see p. 20 , January 1935 issue, and for 1934 revisions see p. 20 of the Novem
revised to include brandy tax paid direct from fruit distilleries. For revisions see p. 39 of the March 1935 issue.
Burean onsumption of distilled spirits (withdrawn tax paid) plus brandy tax paid direct from fruit distillers plus ethyl alcohol withdrawn tax paid (see p. 39) equals Bureau of Internal Revenue total of distilled spirits withdrawn tax paid.

 p. 20 of the September 1934 issue. For 1934 revisions see P . 19 of the December 1935 issue. 1932. final revision of anthracite production, p . 42 , , january 1934 . Anthracite exports see p. 41 of the June 1933 issue. For revisions of exports in 1933 , see p .20 of the september 1934 issus. Revised data on shipments and stocks of refined sugar at 2 ports (for period January 1925-A pril 1935) are shown on p .18 of the October 1930 issue. The change resulted from a reduction in the number of reporting refineries.
\#See footnote on p. 37 of this issue. Data revised for 1933 , see p. 20 of the October 1934 issue. For 1934 revisious, see p. 20 of the December 1935 issue.
$\dagger$ Price converted to short-ton basis. Data on a short-ton basis prior to A pril 1931 were not published. Earlier monthly data were reported on a long-ton basis.

- Note major correction in data on imports of refined sugar rom Cuba, June-November 1934, were shown in the February 1935 issue.
- New series. For earlier data, see p. 20 of the August 1934 issue, for receipts of refined sugar from Hawaii and Puerto Rico and imports from Cuba. Data prior to May 1934 on imports of refined sugar from the Philippine Islands are not available.
©Monthly retail price of coal was discontinued with the month of August 1935. Subseguent to that month the price is shown quarterly

- Revised. ${ }_{b}$ Figures revised to refect transfers between pipe line and refinery stocks beginning December 1935.
b Figures revised to reflect transfers between pipe line and refinery stocks beginaing December 1935.
May 1933; for 1933, p. 42, May 1934. Data also revised for 1934 and 1935. Revisions not shown on p. 43 of the of bituminous coal by electric power plants for 1932, p. 42 in a subsequent issue. Bituminous coal production for 1932, p. 42, January 1934. Bituminous coal production revised for 1933 and 1934 . Revisions not shown in the in a subsequent issue. Bituminous coal prosuction or 1935 revisions see p. 46 of the March 1936 issue. Beehive and byproducts coke for 1932 , p. 43 of December 1933 issue, May 1935 issue will appear in a subsequent issue. For 1935 revisions see $p .46$ of the March 1936 issue. Beehive and byproducts coke for 1932 , p . 43 of December 1933 issue, and for 1933 revisions see p. 43 , July 1934. Data for 1934 also revised; revisions not shown in the July y 1935 issue will appear in a subsequent issue. Cerude petroleum proof gas and fuel oils in electric power plants for 1932, p. 43, May 1933; for 1933 revisions, p. 43, May 1934. Data also revised for 1934 . Revisions for months not shown for 1934 on p. 44 of the June 1935 issue will appear in a subsequent issue. Data revised for 1935 ; see p .40 of the May 1936 issue. Production of residual fuel oils and gas oil and distillate fuels, stocks of residual fuel oil east of California, consumption of gasoline, production of gasoline at natural-gas plants and refineries, stocks of gasoline at refineries for 1932, p. 56, November 1933; retail distribution of gasoline in 41 States for 1932, p. 43, May 1933; for 1933, p. 43, May 1934.
\# See footnote on p. 37 of this issue. Imports also revised for 1933, see p. 20 of the October 1934 issue; for 1934 revisions see $p$. 20 of the December 1935 lssue.
Data revised for 1933. See p. 20 of the January 1935 issue. For 1934 see p. 20 of the October 1935 issue.
Data revised for 1933 , see p. 20 of the September 1934 issue: for 1934 revisions see p. 19 of the December 1935 issue.
Now series. For earlier data see p. 20 of the February 1933 issue, production and stocks of residual fuel oil and gas oil and distillate fuels.
A Beginning with August 1934 certain anthracite stocks were included which had not been covered in previous reports.

I Data for 234 manufacturers not available for these months. Figures shown are computed by means of the month-to-month percentage change indicated by the current
Census Bureau report for 228 identical concerns.
I Raw stocks in all hands as shown above include all hides from Government animals slaughtered under Federal inspection. Hides from cattle allotted to State relief agencies and which were not killed under Federal inspection are not included unless they have already moved into sight. It is obvious, therefore, that a quantity of hides from noninspected slaughter beld by State Relief Apencies constitutes an invisible addition to the visible supplies shown above.
$\ddagger \ddagger$ Data on production of sheep and lamb and goat and kid leathers from $1927-34$ have been revised. For revisions not shown on p. 44 of the April 1935 issue see $p .19$ the June 1935 issue
4 Government relief slaughter included for the period June 1934-February 1935. See p. 44 of the June 1935 issue for the figures, excluding relief slaughter. For sneep
\& Data revised for 1933 . See p. 20 of the January 1935 issue. For 1934 see p. 20 of the October 1935 issue.
\# Data revised for 1933. See p. 20 of the January 1935 issue. For 1934 see p. 20 of the october 1935 issue.

* New series: For earlier data refer to the indicated pages of tbe monthly issues. Leather production, p. 19, June 1933; leather stocks, p. 19, January 1935 . New series on gloves and mittens cover 234 identical manufactures as reported to the U. S. Department of Commerce, Bureau of the Census. Data prior to July 1934 are not available. These data are not comparable with data through January 1934 previously shown. New series on wholesale price of women's shoes began January 1934. Data not hown above will appear in a subsequent issue.
$t$ Revised series. For earlier data refer to the indicated pages of the monthly issues. Production of cattle, sheep, and lamb leather for 1932 and $1933, \mathrm{p} .44$, A pril 1934. Production of cattle hides revised for 1935, p. 47 of the A pril 1936 issue. Imports of total hides and skins for 1932, exports of upper leather for 1932, p. 43, June 1933. Prouction of asphalt for 1932 and consumption of Eerosene and lubricating oil, for 1932, see p. 56 of the November 1933 issue.

${ }^{a}$ Revised.
1 Data temporarily discontinued.
production, ship. For data on lumber exports for period of Janusry 1919 to September 1932, see p. 20 of the November 1932 issue. See special footnote below on lumber production, shipments, and stoces.

- Data revised for 1933 . See p. 20 of the September 1034 issue; for 1934 revisions see p. 19 of the December 1935 issue.
$\triangle$ New series on lumber production, shipments, and stocks compiled by National Lumber Manufacturers' Association and represent an estimate of the total lumber cut based on monthly reports received from regional associations covering between 80 and 90 percent of the total cut in 1934 and 70 to 80 percent in 1935 . No comparable figures are availabie prior to January 1934.
ISeries have been revised for period January 1934-October 1935. These are shown on p. 20 of the February 1936 issue.
$\ddagger$ Beginniag with January 1934 the report includes all known operators; prior to that time approximately 89 percent of the listed capacity.
\$. Data revised for 1932 . For revisions of exports of Southern pine lumber and timber, see p. 45 of the June 1933 issue. Data revised for 1933 , see $p .20$ of the September 1934 issue For 1934 revisions see p. 19 of the December 1935 issue.
$\sigma$ New series covering these items will be shown in a subsequent issue.

a Revised.
ercent of the total for the present series. mpanjes since January 1934.
$\ddagger$ In September 19353 firins discontinued reporting; data of 3 firms of equal size were added, thereby maintaining the comparability of the series.
T Revised series. See p. 49 of the June 1933 issue for 1932 chemical wood pulp imports. Data on total paper for 1934 revised. Revisions for months not shown In the august 1935 issue will appear in a subsequent issue.
\# See footnote on p. 37, of this issue. Date for 1933 revised; see p. 20 of the October 1934 issue. For 1934 revisions see p. 20 of the December 1935 issue.
§ The figures on paper (including tota), fine, and wrapping) are as reported by the American Paper and Pulp Association, except book paper, the data on which?are reported by the Book Paper Dirision of the Paper and Pulp Industry; they are not comparable with the data carried in the Survey from the American Paper and Pulp Association through December 1933. The present classification of the association differs from that previously used by them, as well as from the Bureau of the Census classification. In addition to the classes shown, the association also reports on printing paper (including uncoated book), boards, paperboard, and newsprint. The first two of these classifications are not used in the SuRvex, while the Bureau of the Census report is used for paperboard and the Nowsirint Service Bureau's report for newsprint (the latter series is identical With that reported by the association). The ratio of the production reported by the association, the Newsprint Service Bureau, and the Bureau or census (mon thly report on paperboard) to the annual figures reported by the Bureau of the Census for 1934 follow: Total paper, 87.4 percent; fine paper, 76.1 perboard, but 81 percent of the more comparable classifications of container board arid boxboard book paper uncoated 95 percent and coated 100 percent (book anper mates are by association since the data cannot be checked with Census data) ; and newsprint, 97 percent. Figures for the first 5 months of 1934 on book paper are not available. Data are avallable for the other series for the months of January to April 1934. These figures will be shown in a subsequent issue.

I Bee footnote markod " $A$ " on p. 60 of the March 1936 issue.

a Revised.
$\dagger$ Revised series. Dats for period January 1933-January 1934, inclusive, on consumption and stocks of waste paper at mills will be shown in a subsequent issue. Sales books, new orders, have been revised beginning January 1935 to include the statistics of 2 nembers not included heretofore. The data now represent 90 percent of all the sales books sold in the United States. For 1935 revisions see p. 54 ot the May 1936 issue. Revised data for 1935 not shown above, January 13,727 , February 3,895.

1 Shipment figures are no longer reported by the Specialty Accounting Supply Manufacturer's Association
§ The Bureau of the Census has changed the title of the "lBoxboard" report to "Paperboard" since data actnally cover all board of . 0012 of an inch or more in thickness reported by the cooperating manufacturers. Figures given on production and new and unflled orders are for 94 identical manufacturers; and consumption and stoeks of waste paper for 82 manufacturers. Estimated coverage is giren in foot note marked $\$$ on p. 53

- New series. New series on paperbond shipping boxes compiled by the National Container Association, Chicago, Ill., from reports from all members of the industry of uary 1934 data covering this industry were compiled by the Paper Board Industries Association. See footnote iuarked "s" on p. 53 of this issue for book, fine, and wrapping paper.
$\#$ See footnote on p. 37 of this issue; data for 1933 revised; see p. 20 of the October 1934 issue. For 1934 revisions see p. 20 of the December 1935 issue.

${ }^{1}$ Discontinued by reporting source.

* New series. Earlier data not published on total shipments of rubber heels and rubber soles prior to December 1932
$\dagger$ Revised series. Data on consumption of rubber for tires and tubes revised for 1932, 1933, and 1934. See p. 51 of the August 1934 issue. Revised data from September 1930-December 1934-rubber world stocks, world afloat, and afloat to the United States appear on p. 20 of the July 1935 issue; lor 1932 revisions for United States stocks, see p. 50 of the May 1933 issue. See p. 50 of the June 1933 issue for crude rubber imports.

1935 than in earlier years. Association data has raried considerably over period for which data have been shown in Survey. Coverage was generally higher in 1934 and 1935 than in earlier years.

| Monthly statistics through December 1931, together with explanatory footnotes and references to the sources of the data, may be found in the 1932 Annual Supplement to the Survey | 1936 | 1935 |  |  |  |  |  |  |  |  | 1936 |  |  |

${ }^{a}$ Revised.

* New series. Earlier datanot published on illuminating glassware prior to July 1932 (except production and percent of capacity); for earlier data see p. 20 of the June 1933 issue, lace brick, machine production. Series on common and ritrified paving brick and tile beginning January 1934 were shown on p. 20 of the June 1935 issue. For earlier data on gypsum see p. 20 of the January 1933 issue.

A Adusted lor degrading and year end physical inventories.
T Data on plate glass represent the total output of the industry. Complete figures for the months of 1932 were shown on p. 52 of the March 1933 issue, fot 1933 on p. 52 of the March 1934 issue, and for 1934 revisions $p 56$ of the March 1936 issue.
\# Monthly series on glass containers for 1934 and 1935 are not comparable with those of earlier years due to increase of number of firms reporting to 44 . Shipments of the 44 firms for the year of 1933 omounted to $33,048,747$, compared with $23,511,963$ for the 30 firms reporting for the same year. Comparable statistics on shipments for the companies, now reporting by Fears, from 1928 to 1933 , inclusive, were as follows (in gross): 1928, 31,943,016; 1929, 33,765,896; 1930, 31,905,933; 1931, 31,413,508; 1932, 26,947,949; and $1933,33,048,747$. Data are not available for this period on production and stocks, nor are monthly figures on shipments available. It may be noted from the trend of these data that the monthly figures prior to 1934 had a downward bias. Basis of estimating capacity was changed in computing the new series. Data for 1934 revised,
see 1985 issue.

 April 1936 are for 5 weeks; other months, 4 weeks. Figures for July and succeeding months are computed from Census Bureau figures so as to represent 100 percent of the wool industry; earlier figures incomplete.

* New series. Wool stock series began in June 1934. See p. 20 of the July 1935 issue for earlier data and explanation of new wool consumption series.
- Beginning with the July 1934 report the statistics are reported on the basis of 4 and 5 weeks, the weekly distribution being determined by the Saturdays. The statistics presented herewith are still based on the pre-code conputed normal (currently based on the single-shift performance over the 5 -year period 1928-32). The current data represent practically complete coverage of the industry, Since December 1934 no allowance has been made for holidays.

Foreign recelpts beginning Janlary 1934 are compiled by Ci. S. Department of Agriculture and are not comparable with data carried through December 1933. This results in a total figure which also is not comparable with earlier data.

I Compiled by the Bureau of the Census and represent stocks of raw wool held by all dealers, topmakers, and manufacturers who usually hold significant stocks of wool. The figures for the 3 quarters of 1934 have been revised to include the "grade not stated."
Includes alothr and carpet wools. See note on apparel class pool on 20 of the Juls 1935 issu based on totals; scoured wool is multiphed by and pulled wool by $1 / 3$. Includes clothing and carpet wools. See note on apparel class wool on p. 20 of the july 1935 issue. As this grease series will probably be dropped in favor of the more accurate scoured series, it is suggested that those who wish to keep series going bave their names placed on Bureau of the Census mailing list for the monthly wool consumption report, from which can be computod the present data, using formula given.
${ }^{2}$ Data revised for 1932 , see p. 54 of the June 1933 issue. Data revised for 1933 , see p. 20 of the September 1934 issue; and for 1934 , p. 19 of the December 1235 issue.
Index of sales of new passenger cars is shown on p. 26 of this issue.
$\dagger$ Data for 1935 revised. For revisions see p. 53 of the April 1936 issue.
QOf the 282 identical organizations reporting originally 8 discontinued financing in January, 2 in February, 2 in March, 5 in June, 1 in July, 2 in August, 1 in September 1 in October, and 2 in Decenber, 1934.

[^0]:    Subscription price of the Survey of Current Business is $\$ 1.50$ a year. Single-copy price: Monthly, $\mathbf{1 0}$ cents; weekiy, 5 cents.
    Foreign subscriptions, $\$ 3$, including weekly supplements. Make remittances only to Superintendent of Documents, Washington, D. C.

[^1]:    ${ }^{1}$ Estimates for years subsequent to the census are from the Research Department,

[^2]:    1 Compiled by the U. S. Department of Agriculture, Bureau of Agricultural Economics. The series shown above, with the exception of Canadian wheat in Canada, includes domestic grain in storage in public and private elevators in 41 markets and grain afloat in vessels or barges in harbors of lake or seaboard ports. They do not include grain in transit either by train or water, stocks in mills or mill elevators attached to mills, or private stocks of grain intended for local use. Stocks of Canadian "Wheat in Canada includes practically all Canadian wheat held within Canadian borders exclusive of farm avd certain mill stoeks. These figures differ from those entitled "Visible supply" as shown on p. 43 of this issue in that the series shown above cover stocks of grain in most of the recognized grain centers in the United States and ex-
    clude private stocks while the data shown on p. 43 cover stocks of grain, east of the Rocky Mountains only, and include private stocks to some extent. It is the intention to show the above data only to represent stocks of grain, in the 1936 Supplement to the Survey of Current Business.

[^3]:    1 Compiled by the American Gas Association and represent a revision of the data that appeared in original form on p. 144 of the 1932 annual supplement and in revised form on p. 19 of the May 1933 , p. 20 of May 1934, and p. 19 of the May 1935 issues, as well as data shown in subsequent monthly issues until April 1936 , wherein statistics for cone monthe of panies according to the kind of gas they wero distributing in i934. For exsmple, former distributors of manufactured gas who changed to the distribution of natural gas in 1934 and 1935 , the figures will be again revised according to the 1935 classification. Data for 1935 cover only companies distributing manufactured gas; howerer, the figures as here shown include some revisions which were not available when they were originally published in previous monthly issues of the Sunver. The natural-gas series in revised form for the period 1929-35 will appear in the July 1936 Surver. For 1936 monthly data refer to $p .41$ of this issue.

[^4]:    ${ }^{*}$ Data revised for 1933. See p. 20 of the October 1934 issue; for 1934 revisions, see p. 20 of the December 1935 issue.

[^5]:    a Revised. \#Includes tonnage in both upper and lower Mississippi River. Revised figures prior to December 1934 will be shown in subsequent issue. $\dagger$ Revised series. For earlier data see p, 20 of the April 1934 issue for operating revenues, operating expenses, and net railway operating income of class I railways. For revisions of data for clearances of vessels in foreign trade, see p. 36 of the September 1934 issue. For revisions on Panama Canal from August 1914 to June 1935 , see p. 19 of the September 1935 issue.
    flown from 1930 to 1933 and 1933 and passenger-miles fown from 1930 to 1933 , see p. 20 of the February 1934 issue. For data on miles flown and express carried from 1926 through 1933 , see p. 19 of the January 1935 issue. New series on telephones as compiled by Federal Communications Commission. Data supersede those published in previous issues of the Survey which covered all carriers having annual operating revenues in excess of $\$ 250,000$; present series for 1934 and 1935 are for 57 carriers representing about 95 percent of ant carriers according tor the 1935 are as follows: Total operating revenues, January $\$ 81,778,000$, February $\$ 78,142,000$, March $\$ 81,514,000$; station revenues, January $\$ 54,859,000$, February $\$ 53,021,000$, March $\$ 5$, $\$ 5,312,000$; message tolls, January $\$ 19,862,000$, February $\$ 18,005,000$, Mrarch $\$ 20,131,000 ;$ operating expenses, January $\$ 58,003,000$, February $\$ 55,595,000$, March $\$ 57,478,000$, net operating income, January $\$ 15,467,000$, February $\$ 14,316,000$, March $\$ 15,882,000$; stations in service, end of month, January $14,246,000$, February $14,285,000$, March $14,334,000$,

    - This figure covers room revenue only.

    I Data for March, June, August, November 1935 and February 1936 are for 5 weeks; other months, 4 weeks.

[^6]:    ssue, for hand-type vacuum cleaners.
