BUREAU OF FOREIGN AND DOMESTIC COMMERCE
WASHINGTON

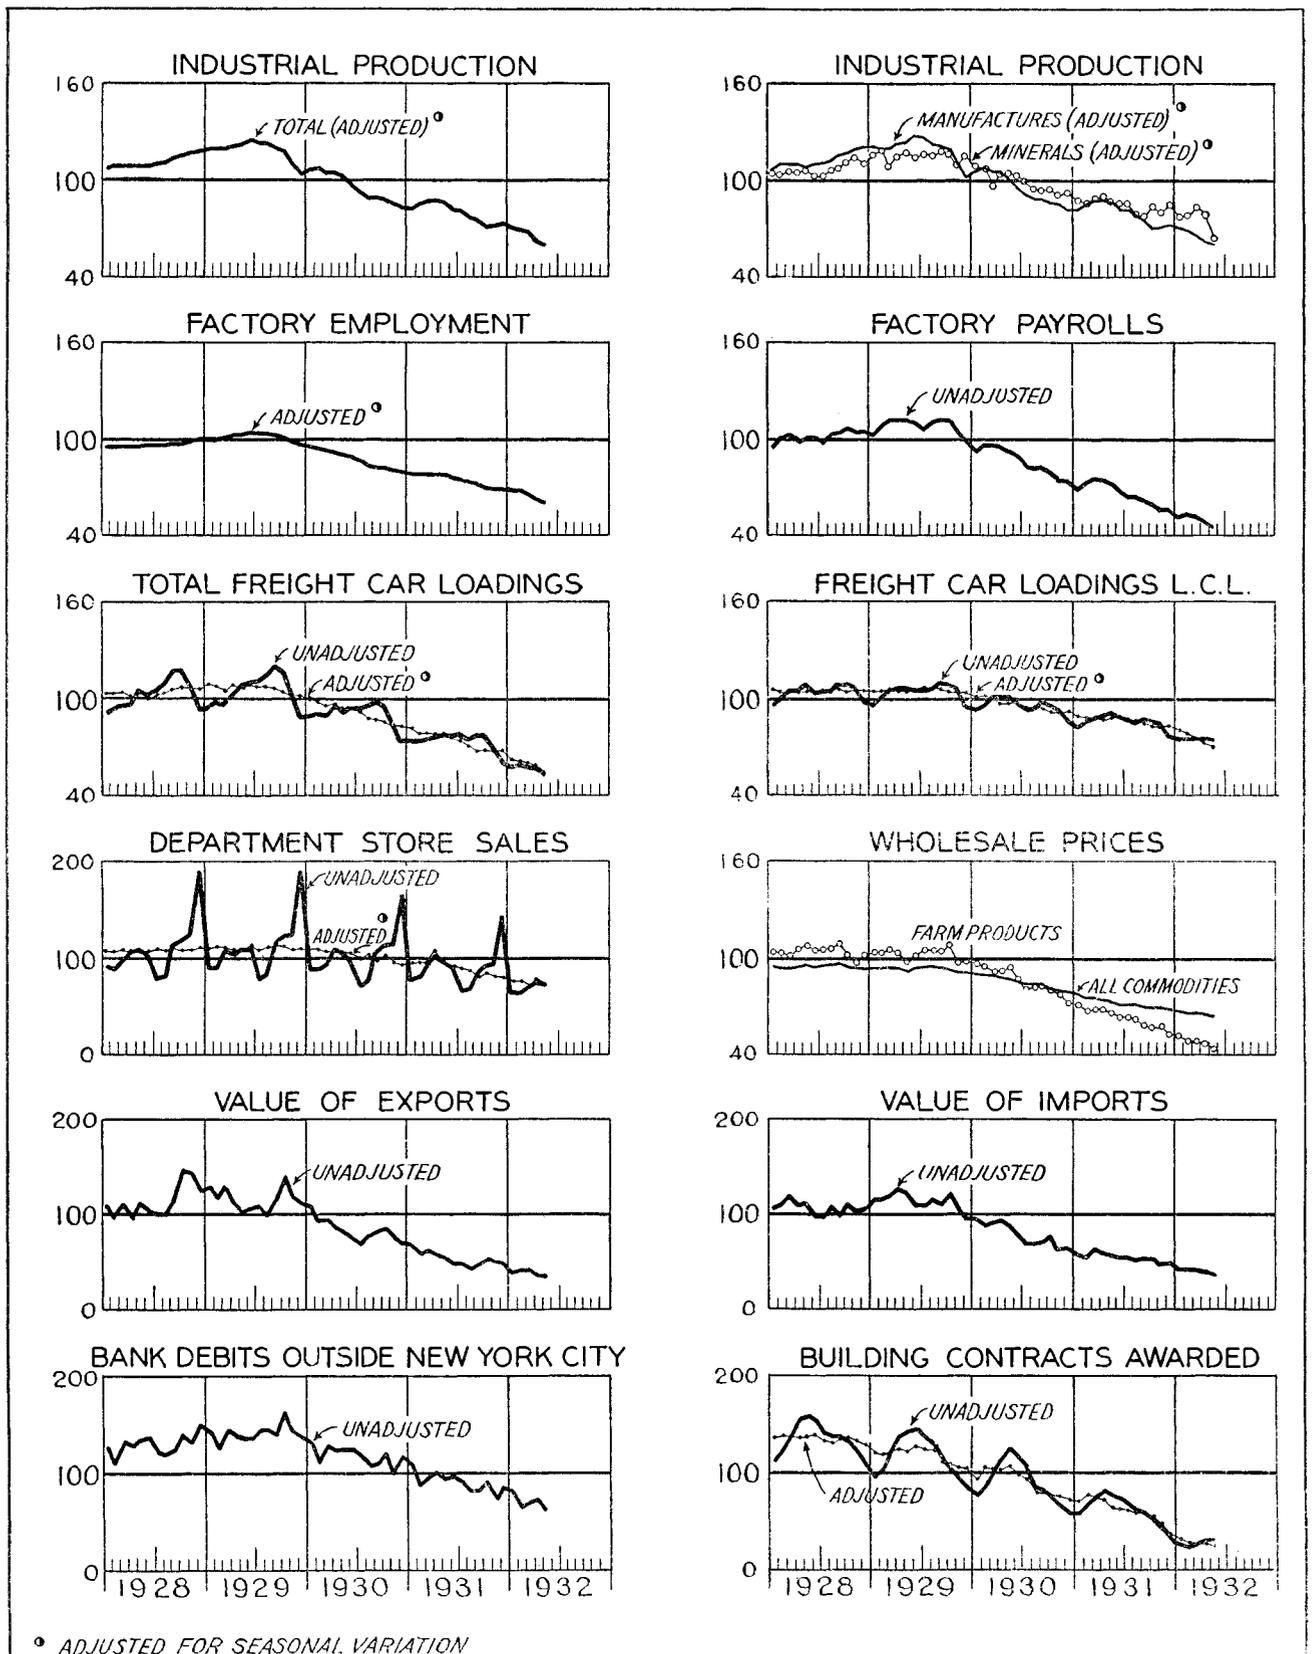

CLEARING HOUSE OF BUSINESS STATISTICS

Major facts gathered from many sources and presented regularly in the Survey of Current Business afford a complete digest of business movements, an essential background for evaluating current trends and formulating business policies. Over 200 organizations contribute the basic statistics presented regularly in this publication.

Business Indicators

1923-1925 = 100

Business Situation Summarized

MANUFACTURING activity again receded in May, but at a less rapid rate than in the two preceding months, and increases occurred in the output of automobiles, cement, food products, lumber, and tobacco manufactures. Total industrial production, without allowance for seasonal influences, declined 3.2 per cent, as a result of a drop of 14 per cent in mineral output and of 1.6 per cent in manufacturing production. The decline in the output of coal was the major factor in the fall of the minerals index, although losses also occurred in the output of petroleum, zinc, and silver. Industrial production normally increases slightly from April to May, so that the drop in the adjusted production index was somewhat greater than the loss in actual output. During the first three weeks of June no improvement has occurred, and there has been some further recession in several important industries. Automobile production has continued upward during the current month.

Distribution indexes also show some further shrinkage in consumer purchasing in May and the first half of June. The rail movement of merchandise has undergone a further reduction, and loadings of less-than-car-lot merchandise declined after holding steady for the first four months of the year. Retail sales declined during May, with department store sales following the trend, whereas in the preceding month they made a relatively better showing. Returns for May afford no indication of a change in the trend of our

foreign trade. Exports dropped by more than the usual seasonal amount, while imports were sharply lower.

Continued recession in business activity is reflected in a further loss in employment and pay rolls during May. After allowing for seasonal influences, factory employment dropped 3 per cent, and the unadjusted index of pay rolls was off 5 per cent. The trend in nonmanufacturing industries was also downward, although earnings in the quarrying and nonmetallic mining, cleaning and dyeing, crude petroleum, power, light and water, and wholesale trade groups increased.

Construction activity expanded in May and the daily average volume of contracts awarded was 24 per cent above the preceding month. The increase was the result of a gain in public works and utility construction, as the daily average of residential contracts declined to a new low level at a rate of only about \$1,000,000. Daily average contracts awarded during the first three weeks of the current month dropped considerably below the May level.

Security prices receded further in May, but during the current month the decline has slackened and the turnover in recent sessions has been very light. The gold outflow, which was extremely rapid during May, slowed appreciably in June, and during the third week of the month we had a net gain of gold on balance. Reserve banks have made continued heavy purchases of Government securities, but this action has not yet been reflected in an expansion of member bank loans.

Comparison of Principal Data, 1928 to 1932

Commodity Prices

NEW low levels of commodity prices were reached in May and declines in farm prices and retail prices of foods were general. About one-half of the commodities included in the wholesale price index showed a firm undertone, and 10 per cent showed moderate advances, but losses for the remaining 40 per cent caused the combined index to fall to the lowest level reached in 20 years. Some further declines have occurred during the current month.

Wholesale commodity prices declined 1.7 per cent in May, the sharpest monthly drop since January, and reached a lower level than at any time since July, 1911. Weakness in livestock prices, the index of which fell 10 per cent, and declines of 3 to 4 per cent in grains and other agricultural commodities, caused prices of farm products to average 5.3 per cent lower in May than in April. Prices of foods declined 2.8 per cent as a result of a 5.6 per cent fall in meat prices and 3.3 per cent in prices of butter, cheese, and milk. A further drop of 13 per cent in hides and skins, which have fallen nearly two-thirds since 1926, and a 10 per cent decline in prices of leather more than offset steady prices of boots and shoes, and caused the hides and leather products group to decline 3.4 per cent. Prices of silk and rayon fell 7 per cent and those of cotton goods 4 per cent. Other price drops ranging from 1 to

3 per cent include knit goods, woolen and worsted goods, coke, nonferrous metals, brick and tile, paint and paint materials, and mixed fertilizers. Although rubber and petroleum prices are still extremely low, in May they advanced 1.5 per cent and 3.7 per cent, respectively.

Retail prices of foods continued to decline and on May 15, 1932, averaged 2.9 per cent lower than on the corresponding date in April. Of the 42 articles on which quotations are regularly received, prices of 31 were lower on May 15 than on April 15, 4 were higher, and 7 were unchanged. The greatest drop occurred in prices of onions, 35 per cent, while the sharpest rise was in the price of potatoes, 6 per cent. Prices of sugar bacon, canned salmon, plate beef, lard, butter, pork and beans, and pork chops declined 4 to 7 per cent.

Farm prices fell 5 per cent in May, and on the 15th of the month reached the lowest level on record. As a result of seasonal rises, prices of fruits and vegetables advanced 2.5 per cent. Prices of meat animals and cotton and cottonseed fell the most, 11 per cent, and 9 per cent, respectively. Dairy products prices declined 6 per cent. The quarterly index of prices paid by farmers for the commodities they buy declined 4 per cent from December, 1931, to March, 1932; the index is, however, still 14 per cent higher than the 1910-1914 average.

Domestic Trade

DISTRIBUTION of merchandise at wholesale and retail has continued on a restricted scale, although June sales have felt some stimulus from the demand for seasonal merchandise, and individual lines have profited from the temporary stimulus afforded by the incidence of new fiscal levies on June 21. Buying generally continues for immediate needs, with stocks being held at a minimum.

Available statistics on retail trade in May reveal a further contraction in consumer purchasing. Department-store sales, which moved upward during March and April, decreased in May, whereas there is usually a seasonal increase during the month. Sales for the month were 24 per cent below a year ago and for the first five months the decline from the 1931 level was 22 per cent. The dollar figures indicate that during the first half of the current year there has been a shrinkage in the volume of sales through these outlets. In 1931 the decline in department-store sales of 11 per cent could be attributed largely to price recessions. So far during the current year the Fairchild retail price index of department-store items has dropped only 18 per cent in comparison with a decline of 22 per cent in dollar sales. By Federal reserve districts, the greatest declines were in Dallas, Chicago, and Cleveland, with losses ranging from 25 to 28 per cent. The eastern districts, New York, Philadelphia, and Richmond, showed the smallest relative declines, the lowest being the Richmond district with 18 per cent.

Sales through other leading retail outlets for which statistics are available also declined during May. The dollar volume of sales through 36 chain-store companies was 11.8 per cent below a year ago, and for the five months were 11.3 per cent less than in the same months of 1931. The two leading mail-order houses reported May sales 3 per cent below April and 23 per cent below a year ago. Five-and-ten chain sales were only slightly less than in April, but a seasonal expansion is usual for this period and the adjusted index declined for the third successive month.

Merchandise l. c. l. shipments, an important trade barometer, declined in May after holding steady for the first four months of the year. However, during this period the adjusted index has dropped 12 per cent, reflecting the absence of the usual spring expansion of trade. During the first two weeks of July merchandise l. c. l. loadings underwent a further contraction.

Magazine and newspaper advertising held up well in May as a result of the intensification of sales efforts. Magazine lineage was about the same as in May, while newspaper advertising dropped off about 3 per cent. Expenditures on radio advertising were lower in May.

Commercial failures remain high, but the total for May was below the level of April and March and in the first three weeks of June a further reduction has occurred. The liabilities involved in May insolvencies were the lowest since last December.

Employment

REFLECTING the continued drifting of industry and trade to lower levels, employment in most lines of activity again declined in May. The drop was general, extending to all of the major classifications of factories with the exception of those processing food products, and to the mining industries and public utilities as well as retail trade. Pay rolls likewise were smaller and relatively the decline for all reporting industries was greater than the decline in employment.

Factory employment, according to the Federal Reserve Boards unadjusted index, declined 4.1 per cent to approximately 61 per cent of the 1923-1925 level, while their index of pay rolls declined 5.1 per cent to an amount 54 per cent below the average during 1923-1925. Employment in manufacturing establishments usually shows a seasonal decline from April to May, but the decline this year was greater than the normal movement and the adjusted index registered a decline of 3.3 per cent.

Of the 89 separate manufacturing industries from which the Bureau of Labor Statistics collects employment and pay-roll data, 13 showed increased employment and 20 increased earnings. The beet-sugar and ice cream industries, which are seasonally active, showed the largest relative gains in employment. Manufacturers of automobiles reported an increase of 1.4 per cent in employment and 14 per cent in pay rolls.

The greatest decreases in employment were reported by the fertilizer, agricultural implement, millinery, cottonseed oil, steam fittings, silk goods, and machine tool industries.

Nonmanufacturing industries reduced employment and pay rolls further in May. The most pronounced curtailment of employment took place in building construction, metalliferous mining, and canning and preserving industries. Employment in the anthracite mining industry declined 4.6, while pay rolls fell off 19 per cent. Increases in both employment and wage payments were recorded in the cleaning and dyeing, the nonmetallic mining, and the quarrying groups of industries. Wages paid common labor in road building declined slightly during May.

The actual hours per week averaged by factory wage earners, which have been declining almost steadily for many months, reached a new low in May. In that month workers averaged 33.9 hours per week, 21 per cent less than a year earlier. Although the percentage of trade-union members reported as employed in May remained unchanged, there was a slight decline in the proportion employed on full time. In May only 47 per cent of the total membership were reported as having full-time employment. Latest data indicate that the number of labor disputes and the number of workers involved continue to be relatively small.

Finance—Credit and Banking

THE general banking and credit situation during May and the first half of June was featured by a steady decline in bank loans and by a continuation of open-market purchases of Government securities by the Federal reserve banks.

The liquidation of member bank credit has been gradual and applied equally to commercial loans and security loans. In order to keep excess funds employed, which accumulated as a result of the reserve banks, open-market operations, the member banks turned more and more to investments, with the result that this part of their portfolio in May showed the largest monthly increase for the year. However, the member banks have confined their purchases largely to Government securities. Such holdings increased by \$454,000,000 from the end of April to the middle of June, while the portfolio of other securities dropped \$33,000,000. The purchases of Government securities by the reserve banks were almost as large as those of April, when total holdings for the first time exceeded \$1,000,000,000. During the first half of June reserve bank purchases of Government securities continued at the rate of approximately \$60,000,000 a week.

Bankers' acceptances outstanding dropped approximately \$92,000,000 during May. Federal reserve holdings steadily declined throughout the month, but showed an upward tendency after the first week of June. During the period from the beginning of May to the middle of June, bankers' acceptances held by the reserve banks

for the account of foreign correspondents fell from approximately \$300,000,000 to about \$200,000,000.

Gold exports assumed large proportions during May, but the rate of outflow showed a reverse tendency by the middle of June, with the result that during the week ended June 22 there was a net gain of \$6,000,000 in the country's monetary gold stocks, the first weekly gain since early in April. Apparently a large part of the outflow represented a transfer abroad of central bank funds which had been employed in the New York market. The greater part of the recent outflow of the metal was destined to France, Netherlands, Switzerland, and Belgium, the same group of countries which received the major portion of this country's exports during the period immediately following England's suspension of gold payments in September of last year. The effect of the recent movement has been to increase the volume of loanable funds abroad and to ease money-market conditions generally. With the cessation of foreign withdrawals the Federal Reserve Bank of New York reduced its rediscount rate on June 23 from 3 per cent to 2½ per cent, the former rate having been in effect since February 26.

Money in circulation showed very slight changes during May as well as during the early weeks of June. An increase in postal savings deposits carried the total 100 per cent above that of June, 1931. Bank debits outside of New York were irregular with the general trend downward.

Finance—Security and Money Markets

SECURITY prices continued downward during May, but during June the market has displayed greater resistance, on a reduced turnover. At various intervals the market has shown a marked sensitiveness to such factors as (1) the action of the Interstate Commerce Commission in the case of the St. Louis-San Francisco Railroad's loan application, (2) passage by the House of Representatives of the Goldsborough bill, (3) announcement of the Senate plan for relief loans to States, and (4) announcements of numerous dividend reductions and omissions. Except for occasional rallies, both stock and bond prices tended downward during May. Government bonds showed only periodic strength as a result of open-market purchases by the Federal reserve banks. The leading European security markets showed a more or less irregular trend during the entire period, although on the whole the tone was cheerful, after the unfavorable influences early in May.

Money rates continued low throughout May and the first half of June. Call rates remained uniformly about 2½ per cent, while rates on commercial paper were reduced before the end of May by one-half of 1 per cent. On May 11 the offering rate on 90-day bankers' acceptances declined from 1½ per cent to the previously prevailing low rate of seven-eighths of 1 per cent. The dominating influence during the entire period under review was the open-market policy of the Federal reserve banks, featured by heavy purchases of Govern-

ment securities, which caused a pronounced accumulation of bank funds in the financial centers. A large supply of funds seeking employment in high-grade paper was constantly available and the yields on short-term Government obligations fell to exceptionally low levels.

Brokers' loans continued to decline throughout May and during June to the last date for which figures are available. This class of loans made by the reporting member banks of New York was at the end of May not much more than one-fourth of the total a year ago. The even more marked decline in the total reported by the members of the New York Stock Exchange indicates the extent to which "outside" funds have been withdrawn from speculative markets. The same trend is indicated in the classified figures of the stock and bond collateral loans made to brokers and dealers by the member banks reporting to the New York Federal Reserve Bank. These show that loans made by them for the account of nonbanking customers stood at the negligible figure of \$7,000,000 by the middle of June.

New capital issues were somewhat higher in May than in April, but are still on a very low level. For the second time this year no new long-term real estate bonds appeared on the market. Interest payments were about the same as a year ago, but average dividends per share paid fell to a new low monthly level.

² End of month.

Foreign Trade

SHIPMENTS of raw cotton and wheat to foreign countries continue in excess of the movement in the corresponding period of other recent years, although the normal seasonal decrease during May in raw-cotton shipments accounted for the greater part of the decline in the value of total exports. Exports, amounting to \$132,000,000, declined 2 per cent from April and imports, totaling \$112,000,000, dropped 11 per cent, while the favorable balance of merchandise trade was \$20,000,000 as compared with \$9,000,000 in April. The outflow of gold to foreign countries, which again assumed large proportions in May and the early part of June, has once more subsided. Total gold exports for the month of May amounted to \$212,000,000. For the eleven months ended May 1932, the excess of gold exports over gold imports has amounted to more than a half billion dollars.

The most notable change in export trade during May was an increase of \$3,400,000 in exports of petroleum and petroleum products over April, the value of these products totaling \$23,200,000. Exports of gasoline, amounting to 4,400,000 barrels, increased 850,000 barrels, and were the largest shipments for any month since May, 1931. The value of exports of industrial machinery, automobiles, copper, meats and fats, oranges, and canned and dried fruits increased slightly, while that of electrical machinery and appli-

ances, office equipment, tobacco, and wheat flour were somewhat lower.

The decline in imports during May was larger than the normal shrinkage at this season of the year. With the exception of coffee, copper, tin, and newsprint, the quantity of all leading commodity imports was smaller than in April and with few exceptions was less than in the corresponding period of 1931. Imports of petroleum products showed a marked drop as compared with April, but were greater than in May, 1931. During the past three months total imports have shown a reduction in volume, whereas in the opening months of the year they were practically as large as in the corresponding period of the year before. For the 5-month period, ended May, quantity imports of cocoa, sugar, meats, fish, oilseeds, cotton cloth, petroleum products, linen fabrics, and copper were larger than in the corresponding period of 1931, while those of rubber, raw silk, coffee, newsprint, hides and skins, wool, burlaps, and tin were lower.

Outstanding factors in the shrinkage in value of exports so far this year, as compared with the corresponding period of 1931, have been the lower level of prices and a reduction in shipments of automobiles, machinery, iron and steel products, copper, and tobacco. Quantity exports of cotton, cotton cloth, wheat, and apples have been larger than a year ago.

¹ Reexports of foreign merchandise during May, 1932, were \$3,346,000.

Real Estate and Construction

INCREASED activity in the building industry continued throughout May, when, contrary to the usual downward tendency for that month, the value of all contract awards aggregated more than the corresponding total for any month since last November. On a daily average basis, the gain over April, in both value and measurable footage, amounted to approximately 24 per cent. As compared with May, 1931, respective decreases of 52 per cent and 58 per cent in total value and square footage occurred. Contracts let in the Middle Atlantic States, New York City, and the Pittsburgh territory accounted for a little more than half the total value of awards for the month. The adjusted index of construction contracts let, based on a 3-month moving average of values centered on May, decreased slightly from the revised figure for April. In the first half of June the daily average value of contracts declined 24 per cent from that of the previous month, thus offsetting the increase of the same proportion which had occurred from April to May.

Value of public works and utility projects in May made the best showing in six months and again took the lead in all construction undertakings. Although the total was 43 per cent below the value of similar contracts let during May last year, it showed the substantial advance of 30 per cent over the April figure.

Residential building remained comparatively inactive, with average value of awards for the first five months of this year less than one-third the corresponding figure for the same period of 1931. Measurable footage of these undertakings was unchanged from April, and, while the total was only one-third the footage reported in May, 1931, the average so far this year was maintained.

A sharp gain marked the monthly record of new structural steel orders. Increasing 40 per cent over bookings in April, the May total reached the same tonnage level reported for last November and was 38 per cent above the monthly average so far this year. Volume of orders in May a year ago, however, were 67 per cent greater. Shipments of maple flooring advanced 5.7 per cent over those in April and cement production during May reached the highest total in six months.

Further recession in the Engineering News-Record's index of construction costs, while slight, placed that figure at a new low point for the depression. Building material prices for frame and brick houses declined from April, 1.9 per cent and 2.5 per cent, respectively. No long-term real estate bond flotations were reported for the month.

BUILDING MATERIALS, CONSTRUCTION, AND REAL ESTATE

Transportation

THE trend of railroad freight traffic has continued downward through the first half of June. Loadings of revenue freight in May delined 5.9 per cent, and the seasonally adjusted index of loadings dropped 8.5 per cent, the latter having declined each month during the current year. For the first 23 weeks of 1932 freight car loadings dropped 25 per cent, as compared with a reduction of 18 per cent for the year 1931 in comparison with 1930.

Decreased loadings were reported for all classes of traffic during May, but the drop in coal loadings was responsible for the major part of the decline. Loadings of miscellaneous freight were lower, but remained above the average shipments for the first three months of the year. Merchandise l. c. l. loadings dropped to a new low for the depression.

After declining during February and March, surplus freight cars have increased in each of the past two months. Equipment buying by the roads has been held to a minimum owing to the state of current revenues. Orders for only 26 freight cars were placed during May, and no orders were entered for locomotives or passenger cars.

No improvement has occurred in the rate of earnings of the railroads on their property investment, current returns continuing around 1¼ per cent. Operating revenues are off over 40 per cent from a year

ago, despite the rate increases and drastic economies, and gross operating revenues are off 24 per cent. Dividend disbursements by the carriers continued to fall, with the May total about one-third below a year ago.

Canal traffic expanded seasonally in May, although the movement on all major channels was well below a year ago. The movement through the "Soo" Canal was less than 40 per cent of the total of a year ago and the Welland movement declined 18 per cent. St. Lawrence traffic was off 24 per cent, while the New York State Canal and the Cape Cod Canal showed smaller declines. River traffic decreased during April with the exception of the movement on Government-owned barges on the Mississippi. The latter increase was the result of a general gain in up-river traffic.

Available travel data show a seasonal upturn, but the movement is well below a year ago. Hotel room occupancy in May was the same as in April but was 13 per cent below a year ago, and there was a further reduction in rates. Foreign travel remains well under a year ago. Passports issued during the first five months were 9.2 per cent below last year. Pullman passengers carried showed a drop of 29 per cent from a year ago, according to statistics covering the first four months. Visitors at national parks increased seasonally in May, but during the first five months of 1932, such travel was 14 per cent lower than a year ago.

Automobiles and Rubber

EXPANSION in automobile production schedules has extended into June, with the low-price producers contributing the major part of the output. The spring peak in automotive production usually is reached in April and May and only a slight variation is normally witnessed between these two periods. May production this year increased 36,823 units, or one-fourth over April and the first three weeks of June has brought a further increase. Production during the first five months of 1932 was 48 per cent below last year, but the June comparison with a year ago is the most favorable for any month so far this year.

Increased production in May was confined to passenger vehicles, as the output of trucks was the same as in April. Canadian production increased following the curtailment of the preceding month. Employment and pay rolls in the industry increased during May, the former by 1.4 per cent and the latter by 14 per cent. The index of Detroit factory employment showed a further increase in the middle of June.

Retail sales of automobiles continued upward in May. Preliminary statistics on passenger-car registrations indicate a gain of from 10 to 15 per cent for the month as against a normal seasonal increase of about 1 per cent. Sales of commercial vehicles were also larger than in April, following the decline from the March level. Exports of automobiles continue re-

stricted, and foreign shipments of both passenger cars and trucks were lower in May than in April.

Employment in the rubber-products industry was further reduced during May but pay rolls were larger. The latter increase followed declines in the two preceding months. Both production and shipments of pneumatic casings increased in May, accompanied by a reduction in inventories. Buying in May and June was stimulated by the possibilities of increased prices resulting from the taxes levied in the new revenue bill.

Domestic consumption of crude rubber increased 13 per cent during May, but for the year to date has averaged well below a year ago. Despite the fact that more producing estates are closing down constantly, and others are tapping only the best-yielding areas, crude rubber output continues in excess of the demand with the consequent increase of world stocks and price declines. Crude rubber dropped to 2.50 cents a pound, and is currently selling only slightly above that level. Foreign takings of rubber have been at a record high figure thus far in 1932, restricted imports of fabricated goods furnishing a stimulus to the domestic manufacture, in foreign countries, of finished products.

During April, the United Kingdom took the lead in tire exports, the first time that this country has led in 12 years. Available statistics for May indicate that this position was retained during that month.

Chemical Industries

CHEMICAL sales have been steadily declining since the first of the year, and this tendency continued throughout the month of May. As a whole, however, the industry has been affected less by prevailing economic conditions than most other industries because of its wide diversity of products, the basic nature, and the variety of uses for which each product is adapted, and the unitized production organization.

This situation is reflected in employment in the industry, which declined in May somewhat less than is usual at this time of year. The adjusted index for May was 80 as compared with the combined factory employment index of 62. Present employment is, however, at a record low level for the industry and is approximately 15 per cent less than a year ago. Pay rolls also reached a new low point in May, about a fourth under the amount of a year ago.

The stocks of chemical manufactured goods on hand continued in May the decline noted in the two previous months. Present stocks on hand are slightly greater than at this time last year and 4 per cent less than in this month in 1930.

Ethyl alcohol production picked up slightly in April after declining steadily since last October. The level of output was 9 per cent under that of April, 1931. Refined methanol production also increased in April, while that of the synthetic product declined in that

month, but increased in May. Output of the refined product is off 46 per cent as compared with a year ago, while synthetic shows a decline of 36 per cent in the same period.

A further decline in the production of by-product coke took place in May and a new low level was reached. As compared with a year ago output has declined 44 per cent and, in comparison with two years ago there has been a drop of almost 60 per cent.

A substantial increase in the production of wood rosin occurred in May, while the receipts of gum rosin at three ports experienced the usual sharp seasonal increase for this time of year. Stocks of gum rosin at the ports and wood rosin at plants increased from the low point reached in April. Wood turpentine production continued the increase of the past two months, with present output 14 per cent less than in May a year ago. Turpentine stocks at plants have been declining steadily since January. Pine-oil production increased more than seasonally in May.

Fertilizer consumption contracted sharply but seasonally in May. Total imports of fertilizer increased, although there is usually a seasonal decline at this time. Imports of nitrate of soda were again insignificant, the domestic air-reduction industry now producing practically all of the United States requirements.

¹ Southern States.

Farm and Food Products

SOME deterioration in grain crops occurred during May, according to the Department of Agriculture's June 1 crop report. Winter wheat production was estimated at 410,669,000 bushels, a decline from the May 1 forecast of 30,112,000 bushels and 377,000,000 bushels below the output of a year ago. The forecast of the rye crop as of June 1 was 38,734,000 bushels, or 730,000 bushels less than the May estimate. Last year's crop amounted to 32,746,000 bushels. Prices received by farmers for their produce showed but slight change from the level of the previous month, the only increase being in the fruit and vegetable group, which showed a gain of 3 per cent.

Livestock movements at primary markets showed a slight upturn during May. Receipts of all classes of livestock were the largest since March and of cattle and calves the largest since December. Shipments of all types of animals fell off from the preceding month and were well below May of last year. Slaughter of animals under Federal inspection during May recorded declines from April, in the case of cattle and calves, and sheep and lambs. As compared with May, 1931, the slaughter of cattle and calves showed declines, while the slaughter of sheep and lambs remained unchanged. Hog slaughter, on the other hand, reflected increases over the previous month and the corresponding period a year ago.

Cold-storage holdings of meats and meat products at the end of May, 1932, were approximately unchanged from the preceding month. In contrast with the same period in 1931, such holdings were 5 per cent lower. Stocks of lard at the end of May were the highest since June, 1929. Holdings of butter, cheese, eggs, and poultry reflecting greater production at this time of the year, increased in May, but remained below a year ago, poultry excepted.

Processing of foods registered a slight decline from a month ago, according to the adjusted index of the Federal Reserve Board, but continues relatively high. Employment and pay rolls in the industry showed only fractional changes from the previous month. Wholesale prices of foods declined 3 per cent from the previous month and 20 per cent from a year ago.

Meltings of raw sugar at eight ports during May amounted to 306,072 long tons, compared with 298,362 long tons in April and 332,556 long tons in May, 1931. Stocks of raw sugar at these ports declined 6 per cent during the month. Shipments and stocks of refined sugar at Savannah and New Orleans registered increases of 22 and 24 per cent, respectively, over the previous month. Prices of sugar, both wholesale and retail, at New York fell off slightly when compared with the prices that ruled in April, but future prices have improved during June.

Forest Products

LUMBER production increased slightly more than seasonally in May, continuing a gradual rise since the record low point reached last February. However, total production this year, through the week ending June 11, has been only about half of output in the corresponding period a year ago and at the low rate of 22 per cent of normal. Shipments of lumber this year up to June 11 have exceeded production by 29 per cent, and excess stocks on hand have been materially reduced.

Employment in the industry reached a new low level in May, the adjusted index having declined 30 per cent from that of May, 1931, and 47 per cent from this month two years ago. Pay rolls also declined to a new low record in May, there having been a steady decline during the past year which has altogether amounted to a drop of over 50 per cent.

Car loadings of forest products, which usually show a distinct seasonal rise in May, continued the decline that was noted in the previous month and reached a new low record for this time of year. Weekly average loadings were 43 per cent less than in May a year ago and two-thirds off as compared with this month two years ago.

Production of southern hardwoods up to June 11 was 57 per cent of output in this period a year ago. Shipments, which were two-thirds of the volume of a

year ago, were, however, greater than production by 36 per cent in the first 23 weeks of the year, and a material reduction in existing stocks was accomplished in this period.

The production of Douglas fir in the first 23 weeks of the year was 24 per cent of normal and only slightly more than half of the output in this period last year. Shipments thus far this year have exceeded production by 15 per cent, and stocks have been further reduced to a point 21 per cent less than a year ago. Shipments have exceeded production consistently in the last three months. New orders thus far during the current year have exceeded shipments by 8 per cent and have amounted to 57 per cent of new orders in this period last year.

Southern pine output declined seasonally in May to a level one-third under production in this month a year ago and 61 per cent less than two years ago. Production thus far this year has been 32 per cent of normal, while in this period shipments have been 16 per cent in excess of production, and stocks on hand had been cut to a volume 22 per cent less than a year ago. New orders fell off seasonally in May but the curtailment of production at the same time caused unfiled orders to remain constant.

Iron and Steel Industry

IRON and steel operations during May were adversely influenced by hand-to-mouth buying and the failure of automotive and railway requirements to bolster the rate of output. According to the American Iron and Steel Institute's monthly report, covering 95 per cent of the industry, operations were placed at 20 per cent of capacity, as against 23 per cent in April. Including the near capacity operations of remaining plants supplying automotive requirements, operations during the month were at a somewhat higher rate. In the first three weeks of June, in line with the usual seasonal trend, further recessions in output have taken place.

Fabricated structural steel provided a relatively bright spot in the industry for May. In contra-seasonal trend, new orders increased 40 per cent over April bookings, which were the largest for the year. However, the total tonnage booked was only 60 per cent of the volume reported for May a year ago. Shipments advanced 5.8 per cent above the April level, but remained 50 per cent under those in the same month of 1931.

The Federal Reserve Board's adjusted index of general operations for May continued a decline which has characterized the monthly figures since January. The adjusted index of employment de-

creased 4.3 per cent from April, while the unadjusted pay-roll index showed a drop of 5.3 per cent.

Further decline in output of pig iron, accompanied by a loss of seven operating blast furnaces, placed production at a new record low for many years. For the first five months of the year, total tonnage was slightly more than half that produced in the corresponding period of 1931. The decline from April in output of steel ingots was 10.8 per cent, only slightly more than the 8 per cent decrease in production which occurred in May last year. Although it is customary for the volume of unfilled orders to decrease during May, total tonnage of bookings reported by the United States Steel Corporation touched a new all time low, marking the fourteenth consecutive monthly decline.

Notwithstanding continued efforts to strengthen prices, little support was given by tonnage volume. The iron and steel composite price slipped to a slightly lower level, while steel scrap, in marked absence of demand, declined 8.6 per cent from the April figure.

Iron and steel exports in May were the largest since July, increasing 38 per cent over April. Approximately 44 per cent consisted of shipments of scrap. Imports for the month increased 14 per cent.

Textile Industry

FURTHER slackening in demand and lower prices for their products caused textile mills to again curtail output during May so as to keep production more in line with new orders. The Federal Reserve Board's seasonally adjusted index of textile production in May averaged only 60 per cent of its 1923-1925 monthly average, as compared with 65 per cent in the preceding month. Employment in the textile industry decreased 6.5 per cent after adjustment and pay-roll totals fell 16 per cent.

Consumption of raw cotton per working day averaged 13,037 bales in May, 9 per cent less than in April, and aggregated only 332,439 bales for the entire month. New England mill consumption totaled 36,106 bales, 61 per cent less than in the same month of last year, while consumption in cotton-growing States, 287,655 bales, was 21 per cent less. Spindle activity decreased from 70.7 per cent of capacity on a single-shift basis in April to 63.3 per cent in May. Cotton-cloth production in the latter month, as reflected by the output of 300 classes of cotton goods, averaged 45,929,000 yards per week, 11 per cent less than in April and 19 per cent less than in May a year ago. As a result of fewer new orders and an increase of 5 per cent in ship-

ments, unfilled orders on manufacturers' books at the end of May were 11 per cent smaller than at the end of April. Sales in May were 18,000,000 yards in excess of cancellations, a much more favorable showing than in the preceding month. Weakness in prices of several constructions caused the index of cotton-goods prices to fall 4 per cent.

A further slowing down in most branches of the woolen industry occurred in May. Consumption of wool decreased from 19,954,000 pounds in April to 16,519,000 pounds in May, a reduction of 17 per cent; activity of worsted spindles decreased from 29 per cent of capacity in April to 25 per cent in May, and looms from 21 to 18 per cent of capacity. Operation of woolen spindles increased 15 per cent and that of wide looms did not change. The decline in wholesale prices of woolen and worsted goods, 2 per cent, was smaller than in the preceding month.

Raw-silk deliveries to American mills decreased 8 per cent from April to May, reflecting a smaller consumption, and were the smallest since June, 1930. A further drop of 7 per cent was shown in prices of silk and rayon, and in May prices of these goods averaged 71 per cent lower than in 1926.

TEXTILE STATISTICS

Miscellaneous Industries

MACHINERY

EMPLOYMENT and pay rolls in the machinery industry again declined during May, a continuation of the trend of the past two years. New orders for foundry equipment showed an upturn during the month, the first since February. Shipments of equipment, in keeping with the expanded new orders, were also higher. New orders for machine tools at 25 per cent of the 1922-24 average showed a slight loss from the previous month while shipments dropped to a new low. New orders for woodworking machinery increased 10 per cent over April, although shipments were markedly lower.

FUELS

Production of both anthracite and bituminous coal recorded declines from April, an important factor in the decline of total industrial output. Crude petroleum output declined, but the demand for refined products increased in recent weeks with a consequent lowering of stocks.

PAPER AND PRINTING

Employment and pay rolls in the paper and printing industry during May declined. As compared with

April, 1931, employment fell 11 per cent and pay rolls 23 per cent. Newsprint paper output during May amounted to 88,087 tons in the United States and 175,887 in Canada. These figures represent slight losses from the production of a month ago. In contrast with May, 1931, the declines were more marked. For the year to date American production amounted to 460,760 tons, which was 33,464 tons lower than the corresponding period in 1931.

CEMENT, CLAY, AND GLASS PRODUCTS

The adjusted index of employment in the industry for May at 45.8 per cent of the 1923-1925 average showed a loss of 5 per cent from the preceding month, and pay rolls were also reduced. Increases during May occurred over the previous month in the production and shipments of Portland cement, but the increase was of a seasonal character. The output of illuminating glassware and polished plate glass recorded declines from the month of April, while the output of glass containers equaled the production of the previous month. Although no change occurred over the production of the previous month, increases were evident at the end of May in net new orders and stocks.

Monthly Business Statistics

The following summary, showing the trend of industrial and commercial movements, represents a continuation of the data in the 1932 Annual Supplement of the Survey of Current Business which contains figures for earlier years and explanations of the sources and basis of the figures quoted. Later data will be found in the Weekly Supplements of the Survey. **The arrangement of months was changed with the June, 1932, issue.**

Earlier data, together with explanatory footnotes, may be found in the 1932 Annual Supplement to the Survey	1932		1931							1932

Explosives	36	Notes in circulation	30		

S-P-E-C-I-F-I-C-A-T-I-O-N-S

To determine whether an applicable specification exists for any commodity—consult—

National Directory of Commodity Specifications, 1932

which gives the standards and specifications of trade associations, technical societies, and other organizations nationally representative of some branch of American industry, as well as those of governmental agencies that represent the Federal Government.

Uses the decimal system. Cross-references related specifications. Defines uses of commodities, if known, when not self-evident from the title. Contains comprehensive index.

The direct purpose of any wise cooperative effort in the adoption of specifications is to secure constructive application of scientific knowledge to service requirements; to coordinate similar demands and eliminate unessential differences; to balance increases in cost against probable service improvements, taking full advantage of existing commercial varieties; and to formulate adequate test or inspection methods—all this resulting in the development of greatly improved products, vital support to the national movement toward simplification of lines, processes, and business practices, and marked lowering of costs and prices.—*Herbert Hoover.*
