VOLUME 13

NUMBER 7

EXPLANATORY

The Survey of Current Business is designed to present each month the available statistical measurements of economic activity, together with the necessary analytical comment, which will enable readers to obtain a comprehensive picture of the business situation. Certain of the more important series are presented in graphic form so that the trend of the major indicators can be readily determined. In order to get the monthly statistics to subscribers more quickly, and to bring the material up to date with current weekly statistics, a 4-page supplement is furnished each week as part of the threefold service of the Survey. Libraries should note that all of the statistics presented in the weekly supplement are not republished in the monthly numbers. It is important, therefore, that these supplements be preserved and bound with the monthly issues if the entire record is to be complete.

organizations, are presented regularly each month. Most of the statistics are not compiled by the Survey, but represent a careful selection of material available from all sources. The chief function of this publication is to bring together in usable form the statistics which, if published at all, are scattered in hundreds of different publications and reports, and to aid in the proper analysis and interpretation of the figures. The Survey of Current Business compiles the indexes of domestic and world stocks, new and unfilled orders, agricultural, livestock, and forest-products marketings, foreign trade, 5- and 10-cent store sales, and department store sales by districts.

SOURCES OF DATA

The sources and inclusiveness of the data in the table "Monthly Business Statistics" will be found either in the explanatory footnotes covering each series in the 1932 Annual Supplement to the Survey, or on the indicated pages of the monthly issues. These latter refer to new material added since the 1932 Annual Supplement was published. The data given in these footnotes should always be kept in mind when utilizing the statistics carried in each monthly number. Sources of the weekly statistics are given on page 20 of the July, 1932, issue of the Survey, and in somewhat more detail on page 4 of the August 4, 1932, issue of the Weekly Supplement to the Survey.

HISTORICAL DATA

In the 1932 Annual Supplement to the Survey of Current Business, the statistical series presented currently are carried back on a monthly basis to 1923, and on a yearly basis to 1913, where available. The statistics therein have been carefully reviewed and revised and supersede those carried in the 1931 Annual Supplement as well as those in the semiannual numbers issued prior to 1931. The December issue contained the first major revision of material since the 1932 supplement was issued. A list of the series dropped, as well as of the

new data added, may be found on page 56 of this issue. Earlier data for the new series, if published, may be found on the indicated pages of the monthly numbers.

Since the reduction in printing funds makes it impossible to publish the 1933 Annual Supplement, subscribers may find it convenient to keep the March 1933 issue posted up to date with the latest revisions and to fill in any 1932 data which were missing at the time of publication. They will thus have a complete 1932 record in this one issue.

Monthly data prior to 1923 will be found in the early issues of the Survey and, in the Record Book of Business Statistics, data on textiles, metals and machinery, fuels, automobiles, and rubber are carried back to 1909 on a monthly basis, where available. These record books should not be used for data later than 1922, and the monthly data should be checked against the annual averages given in the 1932 Annual Supplement to assure the continuity of the series and to obtain any necessary corrections. The three parts of the Record Book may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D.C., for 10 cents each, or 30 cents for the set.

INDEX NUMBERS

To facilitate comparisons of the movement of important series over a period of time, index numbers have been used in numerous instances throughout the Survey. In brief, these index numbers simply express the current movement with relation to a fixed base—usually the monthly average of the years 1923–25. The construction of these index numbers is described in brief in the annual supplement.

SEASONAL ADJUSTMENT OF INDEXES

Seasonal variations are found in most economic series for which monthly statistics are obtainable. Consumption and production of commodities, foreign trade, retail trade, employment, construction, railroad freight traffic, and many other types of data are marked by seasonal swings repeated with minor variations year after year. These are definitely periodic in character within a 12-month period. In cases where an adjustment is noted for a series carried in the Survey, the index has been corrected for the number of working or business days in the various months, and then adjusted for seasonal variation. The index figures thereby become comparable throughout the series.

METHODS OF USE

Methods of using and interpreting current business statistics have been collected by the Department of Commerce from many business concerns and are described in a booklet entitled "How to Use Current Business Statistics," together with methods of collecting statistics. This booklet may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D.C., for 15 cents per copy.

Business Situation Summarized

B USINESS activity continued to expand during June, and the adverse seasonal influences usually manifest at this time have so far failed to halt the upward movement. Production was considerably higher in May and June than in the corresponding months of 1932, and in the latter period reached the highest level since the middle of 1931. Steel ingot production has increased to 50 percent of capacity. Automobile schedules have currently been revised upward, and June output is expected to exceed the May total which was the largest since July 1931. Electric power production continues to indicate extensive gains in manufacturing activity; lumber production has improved steadily; and the industries producing the major lines of consumers' goods have maintained their high May schedules. Output of a number of important industries was higher in the first 5 months of 1933 than in the corresponding period of 1932.

Employment and pay-roll gains have lagged considerably behind the increases in production. While factory employment and pay rolls both increased last month, and the upward trend continued in June, the indexes in May were below the low level of a year ago. Average hourly factory earnings during the month also were at a new low point. The American Federation of Labor estimates the number of unemployed in June at over eleven and a half million.

Available indexes of consumer purchasing indicate for the most part that goods are not moving into consumption as fast as they are being produced. The rise in such industries as textiles and tobacco manufacturing is much too large to be accounted for by any increase that may have occurred in consumer purchasing to date. However, stocks of finished goods in the hands of distributors have been low for a considerable period and a more active demand would require some upbuilding of such stocks.

Department store sales in May were slightly less than in the preceding month, and the adjusted index remained unchanged. Freight-car loadings in June increased to the highest point of the year, and the spread in comparison with last year has widened so that in the latest week reported, loadings were 13 percent higher than in the same week of 1932.

Construction contracts awarded during the first half of June were higher than for the same period of May, although the total remained very low.

Wholesale prices moved higher in June for the fourth consecutive month. Stock prices have been irregular, but the large gains of the preceding 2 months have been held. Bond prices have been steady, following the sharp improvement in May. Money rates for short term commitments continue extremely low.

Foreign trade improved in May, contrary to the usual seasonal trend. The increase in exports was due mainly to heavy shipments of cotton at higher prices, but for imports the increase was the result of gains in a wide range of commodities.

² Adjusted for seasonal variation.

Comparison of Principal Data, 1929 to 1933

Commodity Prices

THE upward movement of commodity prices was accelerated during May and the first half of June. The rise has derived some of its momentum from the continued contraseasonal gains in business activity, but the inflation program of the Government and its anticipated effects have been an important influence. While certain raw materials and foodstuffs have appreciated to a greater extent than the decline in the foreign exchange value of the dollar, the general level of wholesale prices has risen much less. Measured by the principal European gold currencies, the dollar has been quoted at a discount of from 15 to 20 percent, while the Bureau of Labor Statistics index of wholesale prices, based on 784 commodities or price series, has increased 8.2 percent since the low point touched in early March. The cost of living in May rose slightly less than 1 percent from the April low point.

Wholesale prices which averaged 3.8 percent higher in May than in April, the largest monthly increase since April 1920, advanced 1.1 percent further from June 3 to 17, and on the latter date reached a level 0.9 percent higher than the June 1932 average. Of the 784 commodities or price series included in the Bureau of Labor Statistics index, 364 advanced from April to May, 371 showed no change, and only 49 declined. Nine of the ten groups advanced as did 35 of the 44 subgroups. Nineteen of the subgroups crossed or

equaled the levels of May 1932. Prices of farm products at wholesale markets averaged 13 percent higher than in April; foods, 5.9 percent; hides and leather products, 10.8 percent; textiles, 7.9 percent; chemicals and drugs, 2.5 percent; and metals and metal products, building materials, and miscellaneous articles, 1 to 2 percent.

Food retail prices rose 3.7 percent from April 15 to May 15, the first increase since the fractional rise of last October and the greatest monthly advance since August 1921. Of the 42 articles of foods on which quotations are regularly received, prices of 30 increased from April to May, 5 decreased, and 7 showed no change. This compares with 12 increases, 17 decreases, and 13 unchanged quotations from March to April.

After having risen 27 percent during the preceding 3 months, the general level of farm prices was fairly steady from mid-May to mid-June according to reports reaching the Department of Agriculture. From April 15 to May 15 grain and cotton and cottonseed prices rose nearly one third, meat animals 14 percent, chickens and eggs 11 percent, dairy products 7 percent, and fruits and vegetables 3 percent. As farm marketings of grains and cotton are relatively small at this time of the year, farm cash income from a price advance in these products so far has not been greatly increased.

Domestic Trade

DISTRIBUTION indexes have not kept pace with the rise in productive activity, but there has been a narrowing of the decline in comparison with a year ago and during June, sales gave evidence of holding up well despite adverse seasonal influences. Sales in certain lines, notably automobiles, have improved considerably. Retail sales through the department, chain store, and mail-order houses, however, have expanded only moderately since April. A year ago retail trade was declining and, after allowing for the drop in prices in the year's interval, retail sales in May were in excess of a year ago in volume.

The unadjusted index of department storesales in May was slightly lower than in April, while the adjusted index remained unchanged at 68 percent of the 1923–25 average. In comparison with the early months of the year, the spread has narrowed considerably, the May adjusted index being 7 percent below last year in comparison with an average drop for the 5 months of 17 percent. A number of the Federal Reserve districts, including Atlanta, Dallas, Minneapolis, and San Francisco, reported higher sales than in May 1932. In the Kansas City district they were equal to last year. The indexes by districts do not take into account the extra trading day in May.

Sales of the leading mail order companies, including catalog and store sales, increased in May contrary to the usual trend for the month. The value was 7 percent larger than in April and was only 2 percent below a year ago. The leading chain store organizations

reported sales close to and, in some instances, higher than a year ago.

Merchandise l.c.l. loadings show a continued tendency to lag, and this is the only freight classification still running behind last year. May shipments increased to the highest point since November, although the adjusted index advanced only to the February figure. The spread with relation to last year has narrowed, the latest week's figure being 4 percent below the same week of 1932, compared with a decline for the year to date of 13 percent.

Commercial failures in May and June have continued to reflect considerable improvement over the 3 preceding years. May failures were the fewest for the month of any year since 1929, and the liabilities involved were also the smallest for the month since that year. For the first 5 months commercial failures were one fourth less than in the corresponding period of 1932, and the liabilities involved dropped 37 percent.

Newspaper advertising linage increased in May, and the reduction from last year's figure narrowed. The total for 22 cities was 11 percent less than in May 1932, compared with an average reduction for the 5 months of 22 percent. Radio advertising expenditures were reduced further in May and there was also a drop in the payments for magazine advertising.

Postal receipts in May were higher than in the same month of 1932, the first time since November 1932 that collections have shown an increase over the year previous.

Employment

WIDESPREAD increases in both employment and pay rolls were reported for May, and the upward trend has continued in June. On a percentage basis some of the gains recorded have been large, although in general they have not matched the production increases, and the current indexes remain at a very low level.

While the upward trend in manufacturing activities has been uneven, nearly all the reporting industries shared in the movement. Of the 89 manufacturing industries reporting to the Bureau of Labor Statistics, 72 showed higher employment and 81 larger pay rolls in May than in April. After adjustment for seasonal factors, the index of factory employment increased 5 percent during May, the largest relative increase for 1 month as far back as the index is available (1919). Despite the recent betterment the adjusted index of factory employment advanced in May only to the level of last December and was 2.4 percent below a year ago. The pay-roll index advanced 9 percent to the highest point since last October, and was 9.1 percent below the May 1932 figure.

Employment in all of the major groups, with the exception of chemicals and allied products, was higher than in the preceding month. The increase in employment in the other groups were fairly uniform. The individual industries reporting the largest gains included the beverage, cotton, silk, rayon, and woolen goods, plumbers' supplies, radio and phonographs, aircraft, glass, leather, rubber tires and tubes, and tobacco manufactures.

The improvement in employment and pay rolls was shared by the nonmanufacturing industries. Of the 16 groups in this class, 9 reported larger employment, and in several of those where the number on the pay roll was reduced, the decline was smaller than usual for the month. Aside from the quarrying and nonmetallic mining and building construction groups, which showed increases of 11 percent and 8.9 percent, respectively, the gains were slight.

Larger pay rolls were reported in all but four of the nonmanufacturing groups, the exceptions being the anthracite, retail trade, canning and preserving and dyeing and cleaning groups. The industries reporting larger pay rolls with reduced employment were bituminous coal, telephone and telegraph, electric-railroad and motor-bus operation and maintenance, and hotels.

One of the major objects of the recently enacted industrial recovery act is the providing of additional work opportunities and the raising of the wage scale. While wage increases have been announced recently by a number of leading organizations, the trend of average hourly rates was still downward in May. In that month, average weekly factory earnings increased to \$16.71 compared with \$15.39 in April and \$17.17 in May 1932. Average hourly earnings, which in April were unchanged at the March figure of 46 cents, dropped to 45.3 cents, compared with the average hourly rate of 51 cents in May 1932.

Employment among trade-union members was slightly improved during May, increases being reported for the building and metal trades groups.

Finance

THE passage by Congress of a resolution repealing the gold clause in public and private contracts and the enactment of the Glass-Steagall banking bill were among the important pieces of legislation enacted during May and the first half of June. The former declared (1) that the clauses in public and private obligations payable in gold are contrary to public policy, and (2) that obligations may be discharged in legal tender. The latter contained provisions for (1) the insurance of bank deposits within certain limits. (2) the extension of branch banking by national banks in States which permit State institutions to have branches, (3) the divorcing of security affiliates from commercial banks within a year, (4) the severance of deposit banking from investment banking, (5) the prohibition of interest payments on demand deposits, and other provisions of importance.

Another important legislative act was the Securities Act of 1933, approved May 27, 1933, which is designed "to provide full and fair disclosure of the character of securities sold in interstate and foreign commerce" and to prevent frauds in the sale and distribution of securities.

Member bank credit outstanding, as estimated on the basis of reports by banks in 90 cities, showed a slight increase during May and the first half of June. Deposits during the last 2 months have tended to increase more rapidly than loans and investments, owing to the return flow of currency to the banks after the bank holiday and the use of these funds by the member banks to reduce their outstanding credit at the Federal Reserve banks.

During the period under review total Federal Reserve credit outstanding has declined, largely as a result of a drop in total bills discounted and in bills purchased in the open market. As the first step in the credit expansion provided for by recent legislation the Federal Reserve banks purchased approximately \$25,000,000 of Government securities during the week beginning May 17 and holdings have steadily increased since that time.

Although, owing to the embargo, gold movements during May were virtually limited to releases from earmark, the gold reserves of the Federal Reserve banks increased by more than \$100,000,000 as a result of the continued flow of gold coin and certificates to the banks.

Stock prices have moved steadily upward in sympathy with a decline in the foreign exchange value of the dollar and in reflection of the increase in business activity. During the closing days of May trading rose to record levels. Bond prices moved upward with more consistency although lower grade issues tended to keep in sympathy with the more irregular movement of stocks.

The increased activity in the security markets led to a marked increase in broker's loans. At the same time call-loan rates declined until they reached their former low level of 1 percent. Rates on commercial paper and on acceptances also tended downward.

Foreign Trade

NOREIGN trade during May showed a relatively Plarge increase as compared with the preceding month, contrary to the usual seasonal trend. The adjusted index for exports advanced from 29 to 32 percent of the 1923-25 average, while that for imports increased from 25 to 32, the highest figure since last The value of exports was \$114,200,000, 8.6 percent higher than in April. Imports reached \$106,900,000 an increase of 21 percent for the month. Compared with May 1932, exports were 13 percent and imports 5 percent smaller. As a result of the greater advance in imports, the favorable merchandise balance was reduced to \$7,300,000. For the elapsed 5 months of this year, exports have exceeded imports by \$79,300,000 whereas in the corresponding period of 1932 the excess was \$89,400,000.

The outstanding change in exports during May occurred in shipments of unmanufactured cotton. These increased from 240,300,000 pounds in April to 326,500,000 pounds in May, while the increase in value of cotton—\$9,100,000—was slightly greater than the increase for all exports. Among other leading commodities, exports of lard, canned fruit, oranges, lumber, coal, iron and steel products, electrical appliances, and various classes of machinery increased during May while leaf tobacco and mineral oil exports were considerably smaller.

The increase in imports during May was due to larger shipments of a wide range of commodities. These were reflected in the totals for each economic

class. Increases in value ranged from 35 percent for semimanufactures to 13 percent for finished manufactures. Principal articles showing increases were leather, lumber, paper base stocks, and tin among the semimanufactures; cotton manufactures and newsprint among the finished manufactures; hides and skins, oilseeds, and raw silk among the crude materials; and coffee, sugar, and fruits among the foodstuffs.

Tin imports increased in April and again in May to a total of 12,824,000 pounds which represented a larger quantity than for any month since April 1930. Imports of hides and skins and leather were the largest for any month since the latter part of 1931. Raw silk, coffee, and wood pulp imports were larger in quantity than in the preceding month or in May 1932, although for the 5 months ended May 1933 they were smaller than in the corresponding period of 1932. Imports of lumber and newsprint were considerably smaller than in May 1932. An increase in the proportion of Philippine sugar imported in May accounted for the increase of \$2,200,000 in the value of total sugar imports. In quantity, imports of sugar were slightly smaller than in April.

Unit values of a large number of leading export and import commodities showed increases during May and a few were higher than a year ago. The increase in the unit price of unmanufactured cotton from 7.05 cents per pound in April to 7.98 cents per pound in May accounted for nearly one third of the increase in the value of cotton exports.

Adjusted for seasonal variation.

² Monthly average.

Real Estate and Construction

CONSTRUCTION contracts awarded in the first half of June reached a total of about \$60,000,000 which, on a daily average basis, represented the highest activity level since last fall. The increases occurred in all three of the major groups, but the most pronounced gain was in nonresidential construction.

The program of public works provided for in recent legislation, which contemplated expenditures totaling \$3,300,000,000, is looked to for a needed stimulus to this basic industry. The extremely low level to which activity has been reduced is indicated by the Federal Reserve Board's index, which has averaged 17 percent of the 1923–25 average in the first 5 months of the year. Plans are being pushed to get public expenditures under this program started.

May contract awards were larger than in the previous month, the increase amounting to 35 percent. The total, however, was less than the value of awards in January and but 53 percent of the amount reported last May. Measurable footage of contracts was approximately the same as a year ago. For the first 5 months of the year, the average value of undertakings was not much more than half that in the similar period of 1932. Two years ago contracts awarded were four times as large.

A steady increase in residential building activity from the low point reached in February brought the total value of that class of undertakings during May to the highest level in over a year. Last May a decrease from the previous month occurred in these contracts. In May 1931, the value of residential construction was almost three and a half times as great.

The value of public works and utility contracts in May increased 40 percent over the low record of the previous month; for the year so far the amount was 43 percent less than the corresponding valuation of last year.

As is expected at this season, building material shipments advanced over the levels of the previous month. The increase in cement shipments amounted to 36 percent. Oak flooring shipments, which increased 53 percent, as compared to an advance of 3 percent at this time last year, were at the highest level since October 1931. They were only slightly more than half the amount reported in May 1931.

Building material prices for brick houses showed no change from the low level of the previous month, and the slight increase which occurred in frame-house materials was insufficient to bring prices above the monthly average level for the first 5 months of the year. An advance of 2.6 percent in the index of the Engineering News-Record which includes prices of structural steel shapes, cement, lumber, and the rates paid common labor, indicated construction costs were near the level prevailing at the end of 1931. The real estate market continued stagnant. The only long-term real estate bonds floated so far this year was a relatively small amount during February.

Transportation

EXPANDING productive activity has been reflected in a steady advance in carloadings which, for each of the 6 weeks ended June 17, exceeded the loadings in the corresponding period of 1932. This is the first time since 1929 that improvement has been shown over the preceding year's record. Average weekly loadings for the 2 weeks ended June 17, were 576,238 cars, compared with an average of 492,000 cars in the full month of June 1932. The May rise was in excess of the seasonal gain for the month and the adjusted index advanced to 56 percent of the 1923–25 average compared with 53 in April and 54 in May 1932.

The rise in loadings in May extended to all classes with the major part of the increase concentrated in the miscellaneous group. All classes, with the exception of livestock and l.c.l. merchandise, were larger in May than a year ago. The weekly l.c.l. loadings have not yet crossed last year's figures and for the latest week reported were 4 percent lower. The adjusted index for May increased 5 percent above April, but was no higher than in February and was 7 percent below a year ago. The relative increase in total loadings since March has been much less than the increase in production, the adjusted carloadings index advancing 12 percent and the production index 27 percent.

The first operating reports for May reveal a decided improvement in net operating income for the month. These early returns indicate that the May total was much more than double the figure of a year ago. In April, the net operating income was only 8 percent below last year and as there was a sharp drop in May 1932 and an increase this year, the comparison for last month should be decidedly favorable. Nevertheless, much further improvement is needed to restore the impaired earning capacity of the roads. In the first 4 months of 1933 the net operating income of the class I carriers amounted to \$52,761,317, compared with \$85,647,469 in 1932.

The railroads gave notice on June 15 of their intention to seek an additional 12½ percent reduction in the basic pay scale which would increase the cut now in effect to 22½ percent. Through the mediation of the Federal coordinator, appointed under the recent legislative enactment, an agreement was reached on June 21 whereby the railroads agreed to defer action in this regard until June 30, 1934.

The Railroad Credit Corporation announced that at the termination of the lending period on May 31, substantially all of the emergency revenues which accrued to the carriers up to and including March had been received and allocated. Loans actually made totaled \$73,691,368.

Prospects of the equipment branch have brightened somewhat with the better traffic returns, although the improvement in May was slight and was confined to the repair industry. Employment in this group was up 3 percent and pay rolls 7 percent. In the manufacturing branch, conditions were unchanged.

Automobiles and Rubber

WHILE June usually brings a recession in automobile production, during the current month there has been a contraseasonal rise, according to the weekly estimates of output. The June figures are expected to show a considerable increase over the May total which was the largest since July 1931.

Expansion in automotive schedules during May increased total output approximately 35,000 units over production in the preceding month and a year ago. According to the Federal Reserve Board's index, adjusted for seasonal factors, the gain over April amounted to 16 percent. Combined output in the first 5 months of the year was 9.4 percent higher than in the same period of 1932. Production of Canadian plants during May was the largest in 2 years.

Passenger car output in May was 46 percent above the monthly average output for the year. The number of trucks produced so far this year was slightly less than in the corresponding months of 1932, although the trend has been steadily upward since February. Output of taxicabs fell off, but for the year to date more than four times as many have been produced as in the corresponding period of 1932.

Estimates of R. L. Polk & Co. place retail sales of new passenger cars in the United States during May between 150,000 and 155,000 units, as compared with about 120,000 in April and 131,000 in May 1932. Truck sales were estimated around 23,000 units, as against 17,500 in the preceding month and 18,500 last

May. The trend in retail sales has continued upward in the first 3 weeks of June.

Although exports of passenger cars and trucks during May declined slightly from shipments in the preceding month, in each instance shipments for the first 5 months of the year were considerably above the corresponding totals for this period last year. Shipments of both classes of motor vehicles, however, totaled less than 60 percent of exports in these months of 1931.

Preliminary estimates place production of pneumatic tires for May 65 percent over the April showing and 35 percent above May 1932. These increases are slightly less than the relative gains which occurred in total crude rubber consumption on the same basis of comparison. Reports indicate that shipments of casings were well maintained during the month, while manufacturers' inventories declined slightly at the end of May and were about 25 percent below stocks on May 31, 1932.

A sharp increase in domestic consumption of crude rubber during May raised the total 70 percent above the April figure, whereas last year the increase between these months was only 12 percent. For the first 5 months of the year, however, crude rubber consumption remained 11 percent below that in the similar period of last year. Imports increased 6,000 tons, compared to a decrease of 4,000 tons in May 1932. World stocks at the end of the month were the lowest for the year and were also below a year ago.

Chemical Industries

MPROVED general business activity in May and early June served to modify the seasonal recession in the chemical and allied industries usually experienced at this time of year. The heavy chemical branch has shared in the general rise in manufacturing activity. Prices in all sections turned definitely upward. Employment declined by less than the normal seasonal amount, while pay rolls increased to the highest volume recorded since June a year ago. Several sections of the chemical industry have perfected trade association organizations to function under the Industrial Recovery Act.

May employment declined less than usual at this time of year, and when allowance is made for the normal seasonal movement, the volume surpassed that of any of the months since January 1932. The greatest gains in employment occurred in the heavy chemicals, paint and varnish, soap, and rayon and allied products sections of the industry, while the losses were recorded in the fertilizer, drug, and cottonseed oil, cake, and meal divisions.

Pay rolls increased in May for the second consecutive month to reach the highest volume recorded during the past 10 months. The most important rise took place in the heavy and general chemicals branch.

Stocks of chemical raw materials on hand declined about the normal seasonal amount in May to approximately the same level reached at this time in the past 2 years. Manufactured stocks, however, were drawn upon to more than the usual seasonal extent and declined to the lowest volume recorded during the past 3 years. Stocks of finished products on hand in May were 16 percent less than at this time a year ago.

Reflecting increased activity in the iron and steel industry, the production of byproduct coke rose 16 percent in May to the highest monthly volume recorded during the past year.

Production of wood rosin and turpentine rose sharply in May from the low level reached in April, the output of the former increasing by a fourth to exceed the level reached in this month a year ago. Receipts of gum rosin and turpentine at three ports mounted rapidly and more than seasonally in May, the increases over the previous month amounting to approximately 75 percent in each case. Prices of gum rosin and turpentine increased in May by 25 and 9 percent, respectively. Stocks of the gum products on hand at the end of the month showed the usual seasonal increase for this time of year while stocks of the wood products declined.

Fertilizer consumption in Southern States usually falls off abruptly in May, but this year an increase was registered over the exceedingly low April absorption. The volume about doubled between these months, the current consumption being greater than the normally low levels reached in May of the past 2 years. Imports of fertilizers were approximately the same in May as in the month previous, although there is usually a sharp decline in this period.

Farm and Food Products

PERATIONS in the foodstuffs industry improved during May, and pay rolls in all the group classifications of the industry were higher than in April with the exception of the flour milling branch. The Federal Reserve Board's production index (which is computed from the livestock slaughtered, flour milled, and sugar melted) dropped from the exceptionally high point touched in April.

Wholesale prices of foods again increased during May, making the third successive monthly advance. The gain over April amounted to 5.9 percent. Farm prices have also increased substantially.

Receipts of bread grains at primary markets registered a greater than seasonal gain during May. Stocks of corn increased more than 5,000,000 bushels over April to the highest point since March 1928; holdings of oats were also higher, but wheat stocks declined 7,388,000 bushels. The crop forecast of winter wheat as of June 1 showed no change in the outlook for this harvest which will be the smallest in nearly 30 years. Movement of livestock to markets revealed a greater than seasonal movement during May, substantial gains being noted in the receipts of cattle, calves, hogs, and sheep.

Plans have been drawn up to place into effect the provisions of the Agricultural Adjustment Act as it relates to wheat and cotton. For wheat the plan

provides for a decrease in the acreage planted of one fifth, but its operations have been held in abeyance pending a discussion of a general reduction on the part of other large wheat-growing countries. A fluctuating tax on the milling of wheat will be imposed to make up the difference between the parity price and the price at the farm market. The effective date of the tax has not been set but it is expected to be put in force within a short time after the beginning of the crop year.

A plan has also been drawn provided for a reduction in the 1933 acreage of cotton of approximately 25 percent. Adjustment for holding 10,000,000 acres out of cultivation will be compensated for by funds obtained from a processing tax. This tax, to be levied against spinners will begin, according to present plans, on August 1, and will amount to the difference in the average farm price for cotton at the time it becomes effective and the pre-war price of 12.4 cents per pound. The growers withdrawing acreage will be compensated by either of the following: (1) a rental varying from 6 to 12 dollars per acre according to yield, plus the privilege of taking an option on Government-owned cotton at 6 cents a pound in amounts equaling their crop reduction or (2) a higher rental varying from 7 to 20 dollars per acre without the privilege of taking the cotton option.

Forest Products

MAY and early June developments favorable to general business were reflected in the improved position of the lumber industry. Activity increased in all branches, with the most pronounced improvement in orders, and a slightly slower pick-up in shipments and production.

The outstanding feature of the situation in May and early June was the increase of 36 percent in new orders received in the last week of the period over orders in the first week. This was accompanied by rising prices. Shipments increased less than new orders during this time, resulting in a 60 percent rise in unfilled orders. At the same time production was less than shipments, and existing stocks on hand were further curtailed.

The lumber industry was among the first to organize its various units so as to prepare to function under the Industrial Recovery Act. Other Government programs, such as those relating to home loans and the stimulation of construction, are being closely followed due to their direct effect on the demand for lumber.

Production of lumber rose sharply during May and early June in response to increased orders. The May volume of output was the largest recorded during the past year and a half, and represented an increase of 23 percent from the previous month's production. Current output is 60 percent above that of last February, when a definite turn in the previously downward trend took place.

Employment in the lumber and allied products industries as a group increased 7 percent in May as compared with April. Normally, there is no appreciable change in this period. Pay rolls rose 15 percent, reflecting an increase in the time worked by those already employed as well as the augmentation of the number of employees working. Employment is currently 9 percent below May a year ago, while pay rolls have fallen off 19 percent in this period.

Carloadings of forest products have continued to increase, the rise amounting to about a fifth in each of the months April and May. Current loadings are the highest reached during the past year and a half and are 11 percent greater than in May 1932.

Naval stores marketings were up more than seasonally in May, the normally sharp increase at this time being greatly surpassed. Marketings in this month were a fifth above a year ago, and were about 10 percent less than in May 1931.

Southern pine new orders were up 59 percent in May after remaining stationary from March to April. The current volume surpasses that of any month since January 1931 and is 75 percent greater than in this month a year ago. Production rose about a third in May whereas there is usually a slight seasonal decline at this time. Shipments failed to keep pace with the rise in orders, and unfilled orders on hand increased over a third.

Iron and Steel Industry

CONTINUED contraseasonal expansion in demand for steel brought the rate of operations by the latter part of June to 50 percent of capacity, the highest activity reported in over 2 years. A year ago the operating rate was around 16 percent of capacity and the trend was downward. Support in the industry continued primarily from the automotive industry and from miscellaneous sources. Railway, construction, and oil industry requirements showed little improvement.

General operations for the month of May advanced 40 percent over the April showing, according to the Federal Reserve Board's adjusted index. Although 5 percent additional wage earners were employed, the number was still under the total reported last December and 7 percent below May a year ago. The relatively wider increase occurring in pay rolls placed wages 19 percent above the average amount received by mill labor during the first 5 months of the year.

Iron and steel exports in May, amounting to 123,000 tons, exceeded those of any month since October 1930. Japan continued the largest market, taking 76,000 tons, substantially all of which was scrap. Total exports in the first 5 months of 1933 reached 425,000 tons, 155,000 more than in the same period of 1932. Imports during these months amounted to 118,000 tons, a decrease of more than 30 percent as compared to the corresponding months of 1932.

The gain in steel ingot production during May was the second consecutive increase. Output was nearly 80 percent larger than the tonnage produced in May last year; 22 percent below production in May 1931; and approximately half the output reported in May 1930. Operations averaged 34 percent of capacity, which was more than double the March rate.

Pig iron output, at 887,000 tons, was the largest total reported since March 1932. Average monthly production through May, however, was 30 percent below the tonnage produced in this period last year and only one third the output for the corresponding months of 1931. Fifteen additional stacks were placed in operation during the month, bringing the total above the average number in blast during the first 5 months of both this and last year.

Reversing the usual trend in May, an increase in unfilled orders on the books of the United States Steel Corporation placed the tonnage at the highest level since December. The total, however, fell short of the backlog a year ago and was only slightly more than half the figure reported for May 1931.

Outstanding among price advances during May was that in scrap, which was quoted 41 percent higher in the Chicago district. Finished steel prices increased slightly and the composite price of iron and steel rose to \$28.75 in early June. No change has occurred in quotations of steel billets since the decline reported last June.

Textile Industry

TEXTILE production in May increased sharply for the second successive month and the Federal Reserve Board's seasonally adjusted index averaged 106 percent of its 1923–25 average, an increase of 25 percent over April and the highest figure since November 1929. Recent reports indicate that the improvement continued in June. Employment in May increased 5.5 percent over the preceding month and pay rolls were 8 percent larger according to the indexes of the Bureau of Labor Statistics.

Wholesale prices of textiles averaged 8 percent higher in May than in April and rose a further 5 percent from June 3 to 17.

Raw cotton consumption per working day averaged 23.281 running bales in May compared with 19.018 bales in April and only 13,034 bales in May of last year. It was the largest monthly consumption since October 1929. May activity of spinning machinery, at 112.3 percent of capacity on a single shift basis, was 17 percent more than in April and 77 percent larger than in the corresponding month of 1932. In the cotton growing States 90 percent of the spindles in place were operated at sometime during the month, and in the New England States 62 percent, as compared with 88 percent and 56 percent, respectively, in April. Production of cotton printed cloths in May increased 28 percent over the April output but was slightly smaller than in March. Shipments of these goods were smaller than production causing stocks at the end of May to rise 1.2 percent above the total at the end of April.

Wholesale prices of cotton goods rose 14 percent, the second successive advance to reach the September 1932 level. The May index was 9.5 percent higher than in May of last year. Compared with 1929, cotton goods prices in May were 41 percent lower, and also 7.7 percent lower than the May combined index of all commodities.

Following the slow revival of activity in April, wool consumption increased 63 percent in May and was nearly three times the consumption of May 1932. It was also 4.3 percent more than the consumption in May 1931. There was a considerable increase in the operating time of woolen and worsted spindles and of looms. Activity of woolen spindles increased from 53 percent of capacity on a single shift basis in April to 77 percent in May; worsted spindles from 35 to 72 percent; narrow looms from 29 to 46 percent; and wide looms from 42 to 66 percent. Wholesale prices of woolen and worsted goods rose 15 percent from April to May.

Deliveries of raw silk to American mills in May were 13 percent greater than in the preceding month, and were the largest since last October. They were 43 percent larger than in May 1932 and 4.6 percent more than in the same month of 1931.

Prices of 13-15 Japanese raw silk in New York averaged \$1.586 per pound in May compared with \$1.324 in April and an average of \$4.933 in 1929.

¹ Compiled by the Association of Life Insurance Presidents, and represents a revision of the data previously shown, which covered 44 companies. These series are based on reports of 39 companies holding approximately 82 percent of the admitted assets of all United States legal reserve companies. The data are given as of the end of each month and are designed to show the fluctuations in the character of investments of life-insurance companies. Admitted assets embrace all assets permitted by statute to be included for testing the solvency of the companies. In addition to the items separately listed, the total also includes real estate, collateral loans, bills receivable, interest due and accrued, deferred and unpaid premiums, etc. Of the bonds and stocks, approximately 98½ percent are bonds and 1½ percent are stocks. For 1933 data see page 31 of this issue.

¹ Compiled by the Association of Life Insurance Presidents, and represents a revision of the figures previously shown due to the elimination of one company. The data on insurance written represent only new business that has been paid for, and is exclusive of revivals, increases, and dividend additions. The 43 companies whose figures are included in these tables had in force 81 percent of the total life insurance in force in all United States legal reserve companies at the close of 1931. These tables supersede data previously shown in the Survey of Current Business on this subject. See p. 31 of this issue for 1933 figures. Revised data on premium collections appeared on p. 18 of the June 1933 issue.

[§] Statistics cover 90 cities. Comparable figures not available prior to 1932 but adjustment has been made in indexes above.

[†] Weekly average, 1928-30=100. X Average same week, 1930-32=100. § 1933 indexes are based on reports from 90 cities; earlier data cover 101 cities.

Monthly Business Statistics

The following summary shows the trend of industrial, commercial, and financial statistics for the past 13 months. Statistics through December 1931 for all series except those marked with an asterisk (*) will be found in the 1932 Annual Supplement to the Survey of Current Business, together with an explanation of the sources and basis of the figures quoted. Series so marked represent additions since the Annual was issued and similar information, if published, will be found in the places noted at the bottom of each page. Later data will be found in the Weekly Supplement to the Survey.

[•] Revised. # Or exports (—).
• New series superseding old series which covered the physical movement only. For earlier data see p. 20 of December 1932 issue.
• Allowance has been made for gold earmarked at Bank of England for the account of the Federal Reserve Bank of New York.
• Differs from Federal Reserve Board figure, since \$8,900,000 declared for export on Feb. 28 was not actually taken from Federal Reserve Bank of New York until Mar. 1.

Monthly statistics through December 1931, to- gether with explanatory footnotes and refer-	1933				19	932					19	33

a Revised.

[•] New series. Earlier data not published on rubber heels and soles. For machine production of brick see p. 20 of the June 1933 issue. ‡ Adjusted for degrading and year-end physical inventories. # Census Bureau has comparative summaries for 2 months only on structural clay products. Series not comparable over 13-month period.
