## Economic Condîhions

during the first 6 months of 1938 were less favorable than in 1937. The unfavorable trend was reflected in a continued recession in the national income, but the rate of decline showed definite signs of slackening after January of this year. The decline in primary business activity since December has been relatively moderate, in contrast to the abrupt curtailment in the final months of 1937. A review of business developments in the first half of 1938 is presented on page 3.

Toward the end of the second quarter some of the more sensitive business indicators turned upward. Stock prices rallied sharply and sensitive commodity prices were bid up. Government expenditures, which are expected to have a stimulating effect on numerous lines, were being pushed toward the end of the period under review. The resumption of the forward movement in construction activity was one of the brighter spots in the general business picture.

## New Subscription Rate

The Superintendent of Documents announced that the annual subscription rates to the Survey of Current Business, including the monthly and weekly issues, have been advanced. Rates now in effect are as follows:
Domestic ..... $\$ 2.00$
Foreign ..... $\$ 3.50$

## Business Indicators

# Review of Business Conditions in the First Half of 1938 

By Walter F. Crowder, Division of Economic Research

FURTHER deterioration in general economic conditions occurred in the first half of 1938, deepening and broadening the recession movement in progress since the late summer of 1937 . The unfavorable trend was reflected in a continued recession in the national income, but the rate of decline showed definite signs of slackening after January of this year. The decline in primary business activity since December has been relatively moderate, in contrast to the abrupt curtailment in the final months of 1937. The contraction, however, has gradually extended to lines that usually show a lag during periods of recession. Consumer purchases, which declined only moderately during the final quarter of 1937, were substantially reduced in the January-June period. Industrial production, employment, and railroad freight traffic, on the other hand, declined only moderately, following the precipitous drop in the late months of 1937. Unemployment, which had been steadily reduced up to the fall of 1937, increased materially during the past 9 months. Construction contracts underwent a sharp curtailment between June 1937 and February 1938, but more recently the gain in both public and private operations has lifted building activity to approximately the average level prevailing in 1936 and 1937.

The trend of commodity prices was toward moderately lower levels during the first 6 months of the year. The downward movement, however, was apparently checked in the final weeks of June. Stock prices moved irregularly lower throughout most of the period, and bond prices, especially second-grade issues and railroads, evidenced further marked weakness. Stock prices moved upward at a rather rapid rate toward the end of the second quarter.

## National Income Lower.

Monthly income payments have declined uninterruptedly so far during 1938, extending the downward movement which began late last summer. The seasonally adjusted index of total income payments in May was off 11 percent from the recovery peak of 88.6 $(1929=100)$ in August 1937, according to the monthly index of income payments compiled by the Bureau of Foreign and Domestic Commerce. Total income payments for the first 5 months of 1938 were $\$ 25,389,000,-$ 000 , approximately 7 percent less than the $\$ 27,279,-$ 000,000 estimate for the corresponding period of 1937. The margin of decline has widened as the year has progressed; income payments in May were 10 percent lower than those in May 1937, while the first quarter
of this year they averaged 5.4 percent less than a year earlier.

Labor income during the first 5 months of 1938 was 8.4 percent lower than in the comparable months of 1937. The decline from a year ago has been pronounced in the commodity-producing industries-manufacturing, mining, and construction-in which wages and salaries were down about one-fifth. Payments in the transportation and public-utility group dropped 7 percent, reflecting primarily the reduction in railroad pay rolls. Labor income in the trade and finance and in the government and service groups was only slightly lower than in the January-May period last year.

Income paid to property holders in the form of dividends and interest during the first 5 months of 1938 was about 6 percent below that in the comparable period of 1937. This reduction is in marked contrast to the experience in the early months of 1930 when dividend and interest payments were 9 percent higher than in the January-May period of 1929. Interest payments were well maintained, but dividends have declined sharply since the first of the year.

Entrepreneurial withdrawals were 2 percent below the levels of a year ago. The relatively well-sustained volume of net rents and royalties has been an important steadying influence upon this type of income payment, rental rates laving shown only slight declines since last October. The contraction in farm prices and farm cash income has been the principal depressing influence upon total entrepreneurial income in recent months.

## Income from Agriculture.

Income from farm marketings in the first 5 months of 1938 totaled $\$ 2,568,000,000$, a drop of 11 percent from receipts of $\$ 2,895,000,000$ in the corresponding period of 1937, according to estimates of the Bureau of Agricultural Economics. Government payments so far this year have totaled $\$ 212,000,000$, as compared with $\$ 302,000,000$ in the January-May period last year. Total cash income (including Government payments) was 13 percent lower than in the first 5 months of 1937. Receipts from crops in this period were 20 percent below those in the corresponding months of 1937, while receipts from livestock and livestock products were only 6 percent lower than last year. Increased sales of dairy products partially offset smaller receipts from meat animals, poultry, and poultry products.

It is expected that the total income from farm marketings for the first half of 1938 will approximate $\$ 3,050,000,000$, as compared with $\$ 3,503,000,000$ in the
first 6 months of 1937. On the basis of the assumption that commodity prices remain at or near the present low levels, the Department of Agriculture estimates that farm income for the last 6 months of 1938 could not be expected to exceed $\$ 4,500,000,000$, making a total of $\$ 7,550,000,000$ for this year as compared with $\$ 8,521,-$ 000,000 last year. The crop outlook for the summer and fall harvest, however, is very good. According to the June 1 crop report, growing conditions at that time were better than on the same date of any year since 1929 .

## Industrial Production Down.

The total volume of industrial production declined moderately during the first half of 1938, following the severe drop in the last 4 months of 1937. By reference to the chart on page 2, it will be seen that industrial output dropped from $117(1923-25=100)$ in August to 80 in January and has moved slowly lower since then to 76 in May, according to the seasonally adjusted index compiled by the Board of Governors of the Federal Reserve System. Preliminary estimates for June indicate no change in the adjusted index.

The decline in the output of manufactured products, which was quite general and severe in 1937, persisted in 1938. The course of the production of durable and nondurable manufactures, and the principal components of each group, over the past $31 / 2$ years is indicated in the accompanying chart.

Output of nondurable goods, which declined by somewhat more than one-fifth from the spring of last year to January 1938, has continued at that restricted level. Operations in this group of industries during the first 6 months of 1938 averaged about one-fifth lower than in the corresponding period of 1937, and were only 5 and 3 percent, respectively, above the output in these lines during the first half of 1932 and 1933. The severe curtailment in cotton consumption, woolen-mill activity, and boot and shoe production during the final months of 1937 indicated a rate of operations in finishing lines below the more steady rate of consumer purchases of the products of these industries.
Silk and rayon deliveries to mills (not shown on the chart) dropped sharply from midsummer to the end of 1937, then recovered about one-third of this decline in the first quarter of 1938, a recovery which was not fully sustained. Activity at meat-packing establishments has proceeded at a relatively even pace at about the average level of the preceding 2 years. Production of petroleum products has shown an extension of the downward trend which began last fall. Output of tobacco products, contrary to the general movement in the nondurable-goods industries, has moved irregularly upward.

Output of durable manufactures, although turning downward later in 1937 than the nondurable-goods industries, fell more rapidly during the final 4 months of the year. The usual seasonal rise was not fully experiDigitized for FRASented in these lines during the first half of 1938, resulting http://fraser.stlouisfed.org/
cent in June. Automobile assemblies in the United States during the first 5 months just topped 1 million units as compared with over $21 / 4$ million in the same months last year. Lumber production has shown a smaller relative decline from the comparable months last year. Output in this industry at the high point last year, however, was low when compared with the predepression years, as the construction industry, especially residential building, experienced less of a rise in the recovery period than other lines.

## Employment and Pay Rolls Lower.

Total nonagricultural employment recorded a contraseasonal decline in May, after having failed to record the usual rise during the first 4 months of the year. After allowance for seasonal changes, employment has receded steadily since early last fall and is currently at

Figure 2.-Total Nonagricultural Employment in the United States, 1929-38 (U. S. Department of Labor).
'Includes trade, finance, service, and miscellaneous industries, and Government,
education, and professional services.

the lowest point since February 1936. These data, which cover all persons engaged in gainful work outside of agriculture (excluding employment on W. P. A. and other emergency projects), indicate that the drop in employment since September 1937 has amounted to about $3,300,000$ workers.

The decline in factory employment continued throughout the first 5 months of 1938 . On a seasonally adjusted basis, employment dropped 18 percent during the last 6 months of 1937 , and 8 percent further during the first 5 months of 1938 . Pay rolls have shown a more abrupt decline since the fall of 1937.

Following the production trends, the number at work in durable-goods manufacturing industries recorded a sharper drop than employment in nondurable-goods
industries. Since the peak last July, employment in factories producing durable goods dropped 33 percent, while employment in nondurable-goods lines declined 17 percent, on the basis of the seasonally adjusted indexes. Among the durable-goods classifications, the sharpest decline was recorded in railroad car-building shops ( 58 percent); in nondurable-goods lines, the greatest decline was in rubber tires and tubes ( 32 percent). The best showing has been made for stone, clay, and glass products in the first group of industries, and tobacco manufactures in the second group, where the declines since last summer have amounted to 22 percent and 1 percent, respectively.
Employment in the various trade lines has experienced a relatively small decline as compared with that in manufacturing industries. In wholesale trade, the number at work in the middle of May was about 4 percent below May 1937, and in retail trade the decline amounted to 7 percent. The general-merchandising

Figure 3.-Indexes of Average Hourly and Weekly Earnings and Hours Worked per Week in 25 Manufacturing Industries, 1929-38.
Note.-Computed from the original data of the National Industrial Conference Board, using 1929 as a base.
classification of retail trade experienced the sharpest decline ( 10 percent).

A verage hourly earnings (wage rates) in manufacturing industries have shown little change since last summer and are currently at near record highs, as is indicated in figure 3. Average hours worked per week have shown little change so far this year, following a decline of more than one-fifth since early 1937. Under the influence of these forces weekly earnings have also moved narrowly this year.

## Prices Decline.

Wholesale prices, as measured by the index of the Bureau of Labor Statistics, moved downward rather sharply in the first 4 months of 1938 but leveled off in May and advanced slightly in the late weeks of June, although the average for the month was unchanged. The general index stood at 78.2 percent of the 1926 aver-

age in the week ended June 25, as compared with 77.7 in the week ended June 4, 81 the week ended January 1, and 87.5 the week ended September 25, 1937. This index in early June was the lowest since the final week of December 1934. (The data used in figure 4 are on a monthly basis. The latest statistics available are for May.)

Prices of agricultural products have shown an irregular but persistent downward movement for more than a year, during which time the farm-products index dropped 30 percent. The index in June was the lowest reported since the summer of 1934 . Prices of commodities, other than farm products and foods, did not de-
cline on the average until October, and since that time these prices have fallen only about 6 percent. Lower prices for textile products, hide and leather products, building materials, and chemicals and drugs have been largely responsible for the drop that did occur. The prices of housefurnishings declined only slightly, while the index of prices of metals and metal products has increased fractionally. Although there is considerable individual variation in timing and extent of the movements, the magnitude of the drop in the prices of some selected items from the highs of 1937 is shown in the accompanying table.

Figure 4.-Indexes of Wholesale Prices of Farm Products, Foods, and other Commodities, 1926-38 (U. S. Department of Labor).

## Construction Activity

The total dollar volume of construction contracts awarded continued to decline through the first 2 months of 1938 , extending the downward trend of awards which began last July, according to reports by the F. W. Dodge Corporation for 37 Eastern States. Sharp advances in contracts awarded during March, April, and May, however, lifted total awards to approximately the level of 1936 and 1937. For the first 5 months of 1938 the dollar volume of awards averaged 11 percent below that in the comparable months of 1937 and was 58 percent below the value in the same months of 1929. Residential building in the January-May period was down 26 percent from 1937 and 66 percent from 1929.

Building, both private and public, contributed to this advance in March, April, and May. Although both residential and nonresidential building advanced substantially, the gain was considerably larger in the latter classification. Some of the spring rise may have resulted, however, from the release of construction that had been deferred pending the inauguration of the new Federal aid program. High costs of labor and materials still constitute a deterrent to a large-scale revival of building. The construction industry generally has failed to share in the technological developments which have made high wages and low production costs possible in the manufacturing field, though it is forced into price competition with other lines of activity for the labor and materials which are used.

## Railroads.

Freight loadings declined steadily through April of this year in continuation of the tendency which first became evident last summer, and reached a point only slightly above the lows of 1933. In May and June a small upturn in traffic that was slightly larger than usual occurred. The effects of the decline in traffic since inidsummer of last year on the profits of the railroads have been particularly serious, as they did not experience so full a recovery from the depression lows as other major industries.

Loadings in the first 5 months of 1938 were down 25 percent from the corresponding period of last year. At this level, car loadings were slightly below those in the January-May period of 1932 and were only 9 percent above those in 1933.

Miscellaneous loadings, which are comprised in large part of shipments of manufactured products, were nearly 30 percent lower in the first 5 months of 1938 than in the corresponding period last year. Loadings of forest products for the same comparative period recorded a drop of 28 percent, but the marked rise in construction contract awards during the past several months presages some increase in lumber slipments during the early summer. Reflecting the current low rate of activity in the steel industry, loadings of ore in
in May were only about one-fifth those of a year ago, and for the first 5 months were less than one-third the movement in the same months in 1937.

Gross revenues of Class I railroads have remained well above those of 1933, but higher operating costs, despite the price declines of recent months, have resulted in month-to-month deficits which are slightly larger than those recorded in the worst depression year (see figure 5). The deficit, after all charges, amounted to $\$ 140,000,000$ in the first 4 months of 1938, the largest loss recorded by the carriers for any comparable period since these data first became available in 1931. In the corresponding months of 1933 , the loss was $\$ 120,000,000$. In April, the carriers were granted an increase in freight rates, which on the basis of traffic volume in 1936, was estimated to yield additional annual revenue of approximately $\$ 175,000,000$. In the first 6 months of the year, however, freight traffic was about 16 percent below that of the same months in 1936.

Figure 5.-Financial Operations of Class I Railways, Excluding Switching and Terminal Companies, 1927-38 (Interstate Commerce Commission).
${ }^{1}$ Monthly data are not available prior to 1931.
Equipment buying by the railroads was in relatively small volume during the first half of the year. Orders for locomotives in the first 5 months of the year, as reported in the Railway Age, totaled only 44 as compared with 206 in the corresponding period of 1937. Freight-car orders for these same comparative periods were 6,933 and 44,562 , respectively. The equipment manufacturers and railroad car shops have worked off their backlogs and have geared operations to the present small volume of incoming orders.

## Foreign Trade.

The relatively high volume of export trade during the first 5 months of this year has been a significant factor in cushioning the business recession that began last fall. The shifts in the indexes of quantity, price, and value of exports and imports, as compiled by the Bureau of Foreign and Domestic Commerce, are shown in the accompanying chart. In the decline in economic activity after 1929, the leading industrial nations
were also severely hit, and this was reflected in the rapid drop in foreign trade. Although there has been some contraction in business activity in leading foreign countries during the past few months, the current domestic recession has not had a counterpart in other nations, and the sustained foreign demand has thus acted as a support to export trade. The continued high level of exports and the downward trend of imports during the first 5 months of this year have resulted in building up an excess of exports over imports of more than $\$ 544,000,000$, the largest export balance for this period since 1921.

Exports in the January-May period this year were 7 percent above those in the corresponding period last year. Agricultural exports, reflecting the good harvest

Figure 6.-Changes in Quantity, Unit Value (Prices), and Total Value of Exports and Imports, by Quarters, 1929-38 (U. S. Department of Commerce).
in 1937 and the drought shortage in 1936, were up 29 percent. Nonagricultural exports advanced 1 percent, largely because heavy shipments of machinery (up 16 percent) and petroleum and products (up 18 percent) offset declines in other lines.

In the first 5 months of 1938, 52 percent of the orders for machine tools was from foreign sources as compared with 21 percent of a much larger total volume last year; 14 percent of the total automobile production was exported as compared with 7 percent last year; and 11 percent of total steel products (data for first quarter only) was exported as compared with 4 percent last year. Advances in the relative importance of export trade in these lines were due to the curtailment in domestic demand as compared with a relatively steady volume of shipments to foreign buyers.

Imports of merchandise, seasonally adjusted, have declined almost without interruption since the spring of 1937. The drop from June 1937 through May 1938 in
the adjusted index exceeded 50 percent. Imports in the first 5 months of 1938 were 42 percent below those in the corresponding months of 1937, when imports of crude materials and foodstuffs were at high levels under the stimuli of rising prices, the high rate of industrial activity, and the drought-shortened supplies of domestic foodstuffs. The lowered volume of import trade this year resulted largely from a reverse situation-prices were lower, industrial demand was slack, and ample supplies of agricultural products were available. Imports of agricultural products in the January-May period this year were down 46 percent from the same months last year; nonagricultural imports were down 33 percent.

## Retail Trade.

The effect of the business recession was not felt to a significant degree in retail trade until late in 1937; then became pronounced in the first half of 1938 . Although consumer purchasing was somewhat retarded during the third quarter of 1937, not until November did the dollar volume of sales fall below that in the comparative month of the previous year.

The deepening business recession was reflected in the monthly series of decreases in retail sales through May of 1938 (the latest period for which data are complete), with the relative decline in comparison with a year ago increasing as the period advanced. Sales in May were down 20 percent from May 1937, whereas trade in January of this year was 12 percent below that in the same month last year. Statistics for June are not yet complete, but available data indicate some improvement in trade activity.

Preliminary estimates for the first 6 months of 1938 indicate a decline in the total dollar volume of retail sales of about 18 percent from the same period of 1937. Sales of durable goods experienced the greatest relative decline. The decrease was especially marked in new passenger automobile sales, the dollar volume of which dropped 45 percent during the first 5 months of the year as compared with the similar period of 1937; lumber and building materials, hardware, and furniture and household appliances also recorded substantial declines, General merchandise sales decreased about 12 percent, while grocery store sales, which move narrowly, were down about 6 percent. The decrease in dollar volume of general merchandise sold can be accounted for in part by lowered prices.

Although retail activity was generally depressed during the first 5 months of the year and consumer income averaged about 7 percent below the estimated amount for the first half of 1937, the recession pattern was not uniform throughout the Nation. The margin of change varied greatly in the different regions and among the different States; the largest declines occurred in those States where purchasing power was more closely tied in with industrial activity. Sales in the Central Western and Southern States were less de-
pressed than in other regions, while the East North Central States showed the largest relative declines. Wholesale Trade.

The margin by which wholesalers' sales this year have fallen below sales last year, when activity was relatively steady, has continued to widen as the year has progressed. Beginning last October, sales fell below those of the corresponding month a year earlier. In January they were down 12 percent from January 1937 and in May 16 percent from May 1937. Preliminary estimates indicate that wholesale sales during the first 5 months of 1938 averaged about 15 percent below those in the comparable period last year.

Among the various lines of wholesaling activity, the largest declines during the first 5 months from the same months in 1937 were recorded by firms selling electrical goods, hardware, furniture, and jewelry, while the least severe contractions were shown by those selling drugs, tobacco, petroleum products, and meats. Wholesalers' inventories in May were down 14 percent from May 1937, when stocks were generally high, while sales were off 16 percent from May last year.

## Banking and Credit. ${ }^{1}$

Major financial developments during the first half of 1938 included the shifts in the gold and credit policies of the Federal monetary authorities, and the change in the fiscal program of the Government. During more than a year, as a means of preventing increases in monetary gold stock from further expanding bank reserves, gold purchases by the Treasury had been made out of the proceeds of the sale of additional public-debt obligations; and, in pursuance of this policy, gold acquisitions had been placed in an inactive account in the Treasury. On February 14 it was announced that, retroactive to January 1, 1938, gold acquisitions would be placed in the inactive account only to the extent that they exceeded $\$ 100,000,000$ in any quarter.

[^1]Since gold imports and other gold purchases were running currently below this level, the effect of the new policy was to permit acquisitions after the beginning of the year to increase bank reserves.

This action by the Treasury was followed on April 14 by the desterilization of approximately $\$ 1,400,000,000$ of inactive gold, representing the net accumulation since the beginning of sterilization on December 21, 1936. Desterilization was accomplished through the deposit of gold certificates with the Federal Reserve Banks, and the desired effect upon bank reserves was

Figure 7.-Total Member-Bank Reserve Balances at Federal Reserve Banks, with Estimates of Acguired and Excess Reserves, 1934-38 (Board of Governors of the Federal Reserve System).
produced by drawing down the resulting Treasury deposits through the retirement of Treasury bills with cash at the rate of $\$ 50,000,000$ weekly.

The change in the gold policy of the Treasury was supplemented by a reduction of approximately $131 / 4$ percent in the reserve requirements on all classes of deposits for all member banks announced by the Board of Governors of the Federal Reserve System on April 15. This action followed the doubling of requirements during 1936 and 1937. The effect of the order was to raise the excess reserves of member banks by about $\$ 750,000,000$ to $\$ 2,492,000,000$ on April 20. Largely as a result of the disbursement by the Treasury of the

Figure 8.-Bank Credit of Reporting Member Banks in 101 Cities, 1935-38. Wednesday Figures (Board of Governors of the Federal Reserve System).
proceeds of gold desterilization, the total reserves of the banks rose to $\$ 7,922,000,000$ on June 22, as compared with $\$ 6,983,000,000$ at the end of 1937 . Excess reserves were estimated at $\$ 2,780,000,000$ on June 22 almost four times the amount in early August 1937 and considerably more than twice the amount at the beginning of the year.

On June 21 a bill providing for the expenditure of $\$ 3,753,000,000$ for relief and public works was signed by the President. The extension of Government efforts to stimulate business was signalized earlier by the reopening and enlargement of the credit facilities of the Reconstruction Finance Corporation for the benefit of both large and small business enterprises by amendments which became effective on April 13.

Developments during the first 6 months of 1938 in the sphere of commercial banking reflected principally the depressed condition of business. Commercial, industrial, and agricultural loans of the weekly reporting member banks fell from $\$ 4,601,000,000$ at the end of 1937 to $\$ 3,916,000,000$ on June 22, a decrease of $\$ 685$,000,000 . Other loans declined by $\$ 423,000,000$, chiefly as a result of the reduction in loans to brokers and dealers in securities. The investments of reporting member banks increased during the same period by $\$ 278,000,000$ as the banks increased their holdings of Government and Government-guaranteed obligations by approximately $\$ 130,000,000$ and their holdings of other securities, on balance, by $\$ 148,000,000$. Demand deposits in these banks were increased during the period by $\$ 505,000,000$. The decline in loans tended, of course, to reduce deposits, but other factors, especially the purchase by banks of securities from nonbank holders, had the greater effect of increasing them.

## Security Markets and Money Markets.

The trend in stock prices was irregularly downward during the half-year ended in June. The Standard Statistics index of 420 stocks fell to 73.9 for May, as compared with 82.2 in December 1937 and with 120.5 at the beginning of the downturn in prices in the preceding August. The decline, as measured by representative averages, was most pronounced in the case of railroad shares, which lost well over half of their quoted value between August 1937 and May 1938. When it became apparent, in June, that no railroad legislation would be forthcoming at the closing session of Congress, railroad obligations showed further weakness. Publicutility stocks dropped from 78.8 at the year-end to 69.5 in May. Industrials, which fell from 95.2 in December to 87.4 in May, showed the smallest proportionate decline among the major classifications but were more than a third below the level of August 1937. A moderate advance in stock prices during the first 3 weeks of June was followed by a brisk rally in the final week of the month which carried combined averages close to the year's high. The volume of trading, which had been exceptionally light during the early months
of the year, recovered sharply with the upturn in prices after June 20. Bond prices drifted lower during the first 6 months of 1938 and were carried to the lowest levels in recent years in mid-June as a result largely of the further decline in quotations for railroad obligations. In the last 2 weeks of June bond prices experienced some

Figure 9.-Movement of Stock Prices by Major Groups, 1926-38 (Standard Statistics Co., Inc.).
recovery. The variations in yields on three grades of corporation bonds are shown in figure 10.

The dullness in the capital market was unrelieved during the first half of 1938. Flotations by domestic corporations for new capital in the 5 -month period from January to May totaled approximately $\$ 655,000,000$, a

Figure 10.-Yield of 120 Corporate Bonds by Ratings, 1928-38 (Moody's Investors Service).

Note.-In the rating classification followed by Moody's Investors Service, Aaa indicates bonds which are and may be expected to remain the most conservative type of investment. Such bonds will tend to fluctuate in price with fluctuations of the prevailing long-term interest rates. Bonds rated A have distinct investment qualities, but do not have the elements of strength which would necessarily prevent their intrinsic worth from being affected by some special development; while those rated Baa have definitely less of an investment and more of a speculative character.
decrease of 30 percent from the aggregate for the corresponding period of 1937. Dividend declarations by 600 companies fell steadily during the same period and stood at $\$ 1.43$ per share in May, as compared with $\$ 2.18$ in December 1937 and with $\$ 2.09$ in May 1937,
according to a compilation by Moody's Investors Service. Treasury quarterly financing in March was confined to the refunding of maturing notes, and in June to the exchange of bonds and notes for obligations maturing on June 15 and on September 15. Interest rates on the securities offered in the recent exchange, $23 / 4$ percent on 25 -year bonds and $1 \frac{1}{8}$ percent on 5 -year notes, were the lowest which have been quoted for Government obligations of similar maturities. The extreme ease in the money market was indicated also by the fall in the Treasury bill rate to 0.016 for the offering of June 20.

## Foreign Exchange Markets and Gold Movements.

As in other recent years, the foreign exchanges were strongly affected during the first half of 1938 by the repercussions of political developments at home and abroad. During January and February, the dollar showed weakness in terms of the principal European currencies, with the usual exception of the French franc; and the liquidation of dollar balances in February growing out of the fear of dollar devaluation carried the pound sterling, the guilder, and the Swiss franc to the highest levels since the Tripartite Declaration of September 1936. In March, at the time of the union of Austria with Germany, the European currencies were under severe pressure, although fluctuations in rates were kept within fairly narrow limits by virtue of official supporting operations. Gold engagements at that time in London and in Brussels for American account were the first reported acquisitions in Europe since September 1937. Both the strength of the dollar and the movement of gold signified at least a brief resumption of the flow of capital funds from European centers to the United States.

The continued weakness of the French franc, arising from the prolongation of domestic financial difficulties and accentuated by the strained international situation, culminated in a further depreciation of the franc in early May. Renewed pressure upon the European currencies was evident until the reappearance in June of rumors of a reduction in the gold buying price of the United States Treasury. Under the influence of these rumors the dollar was generally weak on the foreign exchanges, and another of the spasmodic flights to gold was indicated by a strong demand in the London market for gold for hoarding purposes. Following the "complete and formal" denial by the Secretary of the Treasury on June 20 that further devaluation of the dollar was contemplated and his reminder that the matter rested between the President and himself, both of whom
had issued frequent denials, the exchanges moved again in favor of the dollar.

## Gold Movement at Lower Rate.

Gold imports into the United States in the period from January to the middle of June, which amounted to $\$ 234,000,000$, were much reduced in comparison with the extremely heavy inflow during the same period of 1937, which aggregated $\$ 948,000,000$. The persistence of the inward movement was attributable to the large excess of merchandise exports from this country, which was accumulating at the rate of more than $\$ 100,000,000$ per month, while the reduction in the size of the reported inflow reflected the reversal in the movement of capital funds which appeared in the last quarter of 1937 and continued into the early months of 1938. Gold acquisitions in the London market, which were $\$ 658,000,000$ in the period from January to mid-June in 1937, fell to only $\$ 90,000,000$ in the corresponding period of 1938, and substantial engagements for American account were confined to the period of marked weakness in the principal European currencies in March, April, and late May. In June, the movement of gold from London to New York ceased with the liquidation of foreign dollar balances and with the simultaneous appearance of a heavy demand for gold growing out of fears of a further devaluation of the dollar.
Gold imports from Belgium during January-June represented a part of the gold lost by the National Bank of Belgium in the defense of the belga, which was under severe pressure in March and again in May. Those from Sweden, which began in May, were reported to be for safekeeping. Arrivals from producing countries were much smaller than in 1937, especially in the case of Canada and British India. Receipts from Japan totaled $\$ 55,500,000$ up to June 17, as compared with $\$ 43,000,000$ in the same period of 1937 and with $\$ 246,000,000$ during the whole of the preceding year.
Capital Movements During First Quarter.
The statistics of capital movements between the United States and foreign countries during the first quarter of 1938, issued by the Treasury Department on June 30, showed a continuation of the outward movement of short-term banking funds which featured the final quarter of 1937. This outflow, consisting almost entirely of a reduction in foreign dollar balances, was placed at $\$ 233,000,000$ during January-March, as compared with $\$ 644,000,000$ during the preceding period. The outward movement, which became progressively heavier on a monthly basis, was unbroken
except for 2 isolated weeks in January and in March. The net outflow of capital during the quarter amounted to only $\$ 203,000,000$ as a result of an inward movement of brokerage balances amounting to approxinutely $\$ 6,000,000$ and a net inflow of funds in security trans-
actions amounting to $\$ 24,000,000$. The latter movement was entirely the result of net purchases of foreign securities in this market by foreigners since domestic securities were sold, on balance, to the extent of $\$ 12,000,000$.

## Summary of Business Trends in June

INDUSTRIAL production during June was main－ tained at approximately the May level after allow－ ance for the usual seasonal decline．Steel ingot production averaged about 10 percent lower than in May，a change of about seasonal proportions．Output，however，tended upward during the month，being scheduled at 29 percent of capacity in the final week of the month as compared with 26 percent in the first week．The prices of finished and semifinished steel products，which had resisted the general price decline，experienced moderate reductions after some weeks of uncertainty over the price structure．

Automobile assemblies for June，according to weekly estimates，declined more than seasonally from May． Further curtailment of greater－than－seasonal propor－ tions is indicated for automobile production in the sum－ mer months，if amounced plans are not altered．

Bituminous coal output in June showed the usual small expansion，and electric power production made a slight contraseasonal gain．Freight－car loadings during the first 3 weeks of June showed a gain from May of slightly more－than－seasonal proportions，as a result of a sharp increase in the movement of ore and a small gain in the shipments of manufactured goods included in the miscellaneous group．No marked changes occurred in the other major industrial series for which June data
are available，but a brisk improvement in sales of tex－ tiles was reported in the latter part of the month and commitments in other commodities increased．

A definite strengthening in primary commodity prices was noted after the first week of June when many quotations had reached levels not touched since 1934. In the final weeks of the month a broad price advance embraced most important raw materials．Security markets experienced a sharp advance in the latter part of the month，with representative stock＂averages＂re－ cording substantial gains．Bond financing during June was the largest for any month since July a year ago． Several large corporate issues were successfully floated．

Department store sales during the first 3 weeks in June showed a progressive narrowing of the margin by which sales this year were below those in the corre－ sponding weeks last year．

Construction contracts awarded in the first half of June made a less favorable showing than in May when awards on a seasonally adjusted basis were the highest since last August．Total awards declined 15 percent from the daily average in May，the change resulting in large measure from the reduction in public works projects，which were placed in large volume during May．Residential awards were relatively favorable．

# Commodity Prices 

COMMODITY prices moved upward after the first week of June when many sensitive commodity quotations and the general index of wholesale prices were the lowest since late 1934．Moody＇s index of spot prices of 15 raw commodities increased from 130 （De－ cember $31,1931=100$ ）on June 1 ，to 141 in the fourth week of the noonth，recovering all of the loss since the latter part of April．Advances were recorded in prices of lead，zinc，tin，rubber，silk，and farm products．Steel scrap quotations advanced nearly $\$ 2$ per ton after de－ clining almost uninterruptedly since last summer．Do－ mestic copper，lead，and zinc mines have been shut down in recent weeks and international control groups have reduced production and export quotas of tin， rubber，and copper．

Steel prices were reduced late in June after holding practically constant at the levels established in March of last year．Steel ingot quotations were reduced $\$ 3$ to $\$ 34$ per ton at Pittsburgh．Between the summer of 1936 and March 1937，steel ingot prices had been ad－ vanced from $\$ 29$ to $\$ 37$ per ton．Proportionate de－ creases were made in quotations of a variety of finished steel products．

Prices of farm products firmed after the first week in June，the wholesale price index compiled by the Bureau of Labor Statistics advancing from 67.2 （1926＝ 100），the lowest since August 1934，to 68.8 for the week ended June 25．Wheat prices recovered from the lows early in June as prospects for a record crop were fol－ lowed by reports of rust damage．Spot cotton quo－ tations in 10 Southern markets increased during the month from less than 8 cents per pound to $83 / 4$ cents． The average price for beef steers at Chicago was $\$ 9.51$ per 100 pounds for the week ended June 25，a gain of $\$ 1.02$ since the first week of May．Over the same period the average price paid by packers for hogs increased $\$ 0.74$ to $\$ 8.43$ ．

Living costs of wage earners have held steady since January，following a drop of over 2 percent from the recovery peak last October．Retail food prices were fractionally lower at mid－May than a month earlier， but remained above the February－March level．The Fairchild index for retail prices of department store articles continued to decline during May，and on June 1 was 89.5 （January $1,1931=100$ ），as compared with the recovery high of 96.6 on September 1， 1937.

## Domestic Trade

DEPARTMENT store sales during the first 4 weeks in June showed some improvement, narrowing the percentage declines from a year ago from 19 percent in the last week in May to 10 percent in the week ended June 25. Consumer purchasing during May fell below that of the comparative period of the previous year for the seventh consecutive month, the relative decline in the dollar volume of sales being larger than for any of the preceding months. Sales of heavy consumer goods showed considerably wider declines than were recorded for general merchandise and food.

Rural general merchandise sales in May were down 13 percent from May 1937, while sales of variety and grocery chain stores decreased 9 percent and 3 percent, respectively. Department store sales in May declined 4 points to $79(1923-25=100)$, according to the seasonally adjusted index of the Board of Governors of the Federal Reserve System, and were 15 percent below sales in May 1937. The margin by which sales this year fell below those of last year varied widely among the Federal Reserve districts, ranging from 5 percent for the Dallas district to 27 percent for the Philadelphia area.

May sales of more than 16,000 independent retail firms in 25 States reporting sales data to the Bureau, and representing all regions excepting New England and the Middle Atlantic States, were about one-fifth less than in May 1937. This compares with an average decrease in March and April of 16 percent from the
average for these 2 months last year. May sales were $4 \frac{1}{2}$ percent below those in April 1938, with 10 of the 25 States reporting increases; 1 , no change; and 14 , decreases.

Wholesale sales in May, as reported to the Bureau of Foreign and Domestic Commerce by a sample group of more than 1,900 firms, were 16 percent below those in May 1937, and were down 1.4 percent from April 1938. As compared with trade in May last year, sales by wholesalers of jewelry were down 33 percent, sales of electrical goods were down 30 percent, and furniture, lumber, and hardware sales were down approximately 27 percent. Drug, grocery, petroleum, and tobacco wholesalers reported only minor declines from a year ago. An analysis of the inventories of wholesalers indicates that stock liquidation has been proceeding steadily, if slowly, with the major part of the decline occurring since the beginning of February.

Manufacturers' sales in May 1938 were more than onefourth below those of May last year, according to reports from almost 1,100 manufacturers cooperating with the Bureau--April sales were down by approximately the same relative amount from April last year. Every major industry group for which sales data are shown recorded sales lower than those of May 1937. The smallest contraction was in the printing, publishing, and allied industries group where the decline was about 10 percent. Sales of the iron and steel products group were less than half as large as a year ago.

# Employment 

CONTRASEASONAL declines in employment in May, revealed by the Bureau of Labor Statistics, were due largely to curtailment of forces in factories, mines, and railroads, and in retail and wholesale trade. During the first 4 months of the year employment did not record the usual seasonal increase, and, with the May decline, the number at work dropped to the lowest point since early in 1936. These data, which cover all persons engaged in gainful work outside of agriculture (excluding employment on W. P. A. and other emergency projects), indicate that since September 1937 the drop in employment has amounted to about $3,300,000$ workers.
In factories, the May decline in employment exceeded that usually experienced, the seasonally adjusted index receding 1.6 points to $77.6(1923-25=100)$. Factory pay rolls also were lower in May, but the relative decrease was less than that recorded for employment. Since last fall, however, the drop in weekly wage payments has amounted to 31 percent, as compared with a decline of 23 percent in employment. The decline in the number of workers and in pay rolls has been much more severe in the durable than in the nondurable goods industries.
In May, 11 of the 14 major groups into which manufacturing industries are classified reported declines in employment; for pay rolls, there were 7 declines in the major groups and a similar number of increases. The most pronounced declines, those which occurred in
textiles, particularly wearing apparel, and in leather and its products, were in part seasonal; in wearing apparel establishments, however, the decline was about twice that usually experienced, so that the adjusted employment index dropped more than 5 points to the lowest level since 1932. Machinery industries and transportation equipment plants also reported marked reductions in employment. The agricultural-implement industry continued to make a relatively favorable showing and although the number at work in these plants has recorded a decline of about 17 percent since last fall, employment is at a much higher level than in most other industries, when comparison is made with the 1923-25 base. Increases in employment in May were largely of a seasonal nature and for the most part were restricted to manufacturers of stone, clay, and glass products, and food and kindred items.

Among the 16 nonmanufacturing industries reporting employment data to the Bureau of Labor Statistics, the only increases of more than 1 percent in May were seasonal gains reported for quarrying and nonmetallic mining, and building construction. Wholesale and retail trade both showed seasonal declines, the recession in retail general merchandising establishments being somewhat sharper than usual. The mining industries, except quarrying, all recorded declines, with anthracite producers reporting the sharpest drop in the number of workers.

## Finance

THE decline in stock prices was arrested in June by a moderate advance during the first 3 weeks, followed by a sharp rally during the final week of the month. The volume of trading was exceptionally small until the upturn in prices after June 20. In the week ended June 25, industrials advanced 17 percent, railroads 29 percent, and utilities 11 percent.
In the capital market the feature of the month was the offering of $\$ 100,000,000$ of 10 -year debentures by a leading industrial corporation. The June 15 financing of the Treasury was limited to an exchange of new bonds and notes for maturing obligations. The extreme ease in the money market was indicated by the fall in the Treasury bill rate to 0.016 percent for the offering of June 20.

An expected development during June in the banking sphere was the further increase in the total and excess reserves of member banks as a result of the continued disbursement by the Treasury of the proceeds of gold desterilization. Total reserves increased $\$ 300,000,000$ to $\$ 7,922,000,000$ between May 18 and June 22. Excess reserves rose during this period by $\$ 227,000,000$ to $\$ 2,782,000,000$. At the same time Treasury deposits with Federal Reserve Banks were drawn down $\$ 354$,000,000 to $\$ 929,000,000$; and the total credit base was expanded by $\$ 80,000,000$ chiefly because of the increase of $\$ 65,000,000$ in monetary gold stock. Other factors (increases in Treasury cash, and in nonmember bank deposits), involving the utilization of $\$ 134,000,000$, accounted for the difference between the rise in total reserves and the combined change in Treasury deposits and in the credit base.
The failure of excess reserves to rise to the extent of the increase in total reserves was the result of an in-
crease in required reserves--the consequence, in turn, of the addition of almost $\$ 370,000,000$ to the demand liabilities of weekly reporting member banks during the 5 -week period ended June 22. During this same period, the total loans and investments of reporting member banks decreased by $\$ 107,000,000$. Holdings of Government and Government-guaranteed obligations declined by $\$ 80,000,000$, and holdings of other securities rose by $\$ 102,000,000$. Loans to commerce, industry, and agriculture continued to decline, while loans to brokers and dealers in securities increased.
The foreign-exchange markets reacted during June in the usual manner to renewed rumors of a reduction in the gold buying price of the United States Treasury and to repeated official denials that a reduction was contemplated. During the period from late May to mid-June, under the influence of these rumors, the principal European currencies showed generally firm tendencies in terms of dollars. At the same time a strong hoarding demand for gold appeared in the London market. This demand was reflected in a rise in the sterling price of gold on June 17 to a new high for the year and, together with the high quotation for sterling, in a rise in the dollar price of gold in London above the parity price of $\$ 35$ an ounce. Following the "formal and complete" denial by the Secretary of the Treasury on June 20 that further devaluation of the dollar was contemplated, the exchanges moved in favor of the dollar.
Imports of gold into the United States during recent weeks included, besides the regular arrivals from goldproducing countries, additional receipts from Japan and substantial receipts from the United Kingdom and from Sweden.

## Foreign Trade

THE slowing up in the foreign demand for United States merchandise which has been in evidence for several months was reflected in the foreign trade figures for May. Exports, which had held up remarkably well during the present set-back in business, declined 6 percent in value from April and for the first time in a year and a half were smaller in value than in the corresponding month of the previous year. General imports, which laave tended downward since early in 1937, were 7 percent smaller in May than in April and only about one-half as great as in May 1937.

As a consequence of the sharp reduction in the value of imports as compared with a year ago, the value of merchandise exports exceeded the value of imports by over $\$ 100,000,000$ in May as in other recent months. Theamount by which the value of merchandise exportshas exceeded the value of merchandise imports was increased to a total of $\$ 544,226,000$ for the first 5 months of 1938.

The increased agricultural production in the United States during 1937 as compared with 1936, when the drought cut output, is responsible in large part for the marked change in the composition of foreign trade in May 1938. The value of exports of agricultural products was 33 percent larger in May 1938 than in May 1937, whereas the value of agricultural imports showed a reduction of 55 percent. Agricultural products accounted for 25 percent of the total value of exports in May as against 17 percent in May 1937.

Exports in May of the other three classes of commodities, crude materials, semimanufactures, and finished manufactures, were lower in value than in May a year ago. Exports of finished manufactures, however, which showed a much less marked decline than the crude materials and semimanufactures, contributed slightly more than 50 percent of total exports, approximately the same proportion as in May 1937. Exports of some finished manufactures, cotton cloth, motor fuel, metalworking machinery, and aircraft, increased. However, shipments of a number of leading manufactures, anong them motor trucks, passenger automobiles, electric refrigerators, radio apparatus, and steel manufactures, dropped much lower in May than a year ago.

The depressed state of domestic business, as well as the recovery of agriculture from the drought condition of 1936, contributed to the reduction in imports during May. Unmanufactured wool imports were only 4,029,000 pounds as compared with almost $30,000,000$ pounds in May 1937, and rubber imports were $62,963,000$ pounds as compared with $109,531,000$ pounds in May 1937. Imports of grains and preparations in May were only $\$ 600,000$, as compared with $\$ 11,200,000$ in the corresponding month last year. Imports of finished manufactures, particularly newsprint and burlaps, were maintained at fairly high levels in May 1938, and the decline in total imports of finished manufactures, although substantial, was less marked than for total imports.

## Construction and Real Estate

THE dollar value of total construction contracts awarded in the first half of June was 18 percent lower than daily average awards in May, largely as a result of a reduction in public works and utilities projects which were placed in large volume in May. Contracts let in the first half of June were 19 percent below those in the comparable period last year. Awards for the first 6 months of 1938 will fall approximately 12 percent below total awards during the first half of 1937.
There was a substantial increase in construction contracts awarded in May, following a slight decline in April, and awards for the month were 16 percent above the total for May 1937. Contracts let in the 37 States covered by the Dodge statistics totaled $\$ 283,156,000$, the largest dollar volume recorded in any month since July of last year. The increase in May was primarily in the heavy engineering classification, which was augmented by a project of $\$ 22,000,000$ for a water-supply tunnel. Private construction awards were 8 percent below the dollar volume for May of last year, while publicly financed work was 55 percent above last year.

The dollar volume of residential contracts awarded in May, on a daily average basis, increased 16 percent over April, and was only 1 percent below May 1937.

For the first 5 months of this year residential contracts were 26 percent below the corresponding months of last year. The contract statistics for this year do not include any of the low-rent housing projects approved by the United States Housing Authority. Although the Housing Authority has approved local projects estimated to cost more than $\$ 100,000,000$, the work on these projects has not yet reached the contract-award stage. It is expected that these projects will swell the residential total in the late summer and fall months.
A survey by the United States Public Health Service, dealing with living conditions in 83 cities during the 1935-36 period, revealed the need for new residential accommodations, particularly for families in the lower income classes. Based on this survey, involving an analysis of 703,489 urban households, the Public Health Service estimated that $3,000,000$ urban families in the United States have fewer rooms in their homes than there are persons; $1,000,000$ live in dwellings with more than one and a half times as many persons as there are rooms; 700,000 live in dwellings with at least twice as many persons as there are rooms. Overcrowding was prevalent in every section of the country and in cities of every size.

CONSTRUCTION, BUILDING MATERIALS, AND REAL ESTATE

${ }_{2}^{1}$ Based on 3-month moring average of values and adjusted for seasonal variations.
${ }^{3}$ Index is as of 1st of month; index for June 1, 1938, is 236.9.
${ }^{2}$ See note marked " $t$ " on p. 24 .
${ }^{4}$ See foutnute tarked "*" on p. 25 .

## Transportation

FREIGHT traffic recorded a slight upturn during May and the first 3 weeks of June. Although the gain was small, it was the first since last July, after adjustment for working days and for seasonal variations. In May, the adjusted index presented in the table below advanced 1 point to $58(1923-25=100)$, with two of the major classifications-coal and miscellaneous load-ings-showing nore than seasonal gains. During the extended period of decline which began in May 1937, the combined index dropped nearly one-third, and by May of this year several of the commodity classifications were at or near the low points of 1932-33. During April and May daily average loadings of miscellaneous freight, which is comprised largely of manufactured products, were more than one-third below those of the early spring of 1937. Loadings of forest products in the same months were about 40 percent under last summer's volume, the recent improvement in construction activity not yet being reflected in these statistics to any important degree. Merchandise l. c. l. freight in April and May was only 60 percent of the 1923-25 average, the lowest figure ever recorded for railroad movement of this type of freight.
Total loadings have remained above those of 1933, but higher operating costs, despite recent declines in prices of materials purchased by the railroads, have resulted in month-to-month deficits that are slightly larger than those of the worst depression year. In the first 4 months of 1938 the loss, after all charges, totaled nearly $\$ 140,000,000$, as compared with a loss of $\$ 120,-$

000,000 in the corresponding period of 1933. In May gross revenues, tabulated from the returns of a representative group of roads, were 22 percent below those of the corresponding month last year. This indicates a slight improvement in the year-to-year comparison, since total revenues in March and April were, respectively, 25 percent and 24 percent below those of a year ago.

Railway employment (excluding executives, officials, and staff assistants) in May was reduced to a level only slightly above that of early 1933, according to Interstate Conmmerce Commission statistics. On an index basis, and after allowance for seasonal variations, the May figure of $50.1(1923-25=100)$ was the lowest reported since the figures first became available in 1920. Since June 1937, the index has dropped 22 percent, and is about 46 percent below the 1929 average. The sharpest decline since June a year ago has been in maintenance of equipment and stores ( 31 percent) and maintenance of way and structures ( 32 percent). Train and engine service employment was reduced about 18 percent over this interval.

Railway hourly wage rates are currently near the record high of February 1938. In April an average hourly wage of 72.9 cents was paid to employees of Class I roads, as compared with 66.2 cents in June 1937. This increase has only in part been due to higher wage rates, an additional important factor being the relatively sharper decline in employment in the lowpay than in the high-pay brackets, as is indicated in the preceding paragraph.

## Monthly Business Statistics

The following table represents a continuation of the statistical series published in the 1936 Supplement to the Survey of Current Business. That volume contains monthly data for the years 1932 to 1935, inclusive, and monthly averages for earlier years back to 1913 insofar as available; it also provides a description of each series, and references to sources of monthly figures prior to 1932. The 1936 supplement may be secured from the Superintendent of Documents, Government Printing Office, Washington, D. C., for 35 cents per copy.

A few series have been added or revised since the 1936 Supplement went to press. These are indicated by an asterisk ( ${ }^{*}$ ) for the added series and by a dagger ( $\dagger$ ) for the revised series. A brief footnote accompanying each of these series provides a reference to the source where the descriptive note may be found.

The terms "unadjusted" and "adjusted" used to designate index numbers refer to the adjustment for seasonal variation. Data subsequent to May will be found in the Weekly Supplement to the Survey.

${ }^{P}$ Preliminary. ${ }^{\text {P Revised. }}$
*New series. For data on slaughtering and meat packing for period 1919-37, see table 42, p. 20, of the October 1937 issue. Data on income payments for period 1929-36 and a description of the series appeared on pp. $7-13$ of the February 1938 Survey; revised figures for the full year 1937 appeared on p. 22 of the March 1938 issue. Latest available data on income payments appear in the Weekly Supplement to the Survey for the fourth Thursday in each month.

| Monthly statistics through December 1935, together with explanatory notes and references to the sources of the data may be found in the 1036 Supplement to the Survey. | 1938 | 1937 |  |  |  |  |  |  |  | 1938 |  |  |  |

$r$ Revised.
$\dagger$ Revised series. Data for passengers carried are for 206 companies accounting for 93 percent of the passengers carried by all transit companies. Data adjusted to a comparable basis prior to that shown on p. 37 of tho April 1938 Survey will appear in a subsequent issue. For average cash fares, data beginning 1917 will appear in the 1938

| Monthly statistics through December 1935, together with explanatory notes and references to the sources of the data may be found in the 1038 Supplement to the Survey. | $\begin{gathered} \hline 1938 \\ \hline \text { May } \end{gathered}$ | 1937 |  |  |  |  |  |  |  | 1938 |  |  |  |

${ }^{-}$Revised.

- New series. For data on prices of Douglas fir lumber, see table 7, p. 19 of the February 1937 issue.
$\dagger$ Revised series. Data on total lumber production and shipments revised beginning January 1836: data not shown on p. 87 of the March 1938 Survey will be piven in a subsequent issue. For 1935 revisions in total lumber. and $1935-36$ revisions in Southern pine and Western pine lumber see tables 16 and 17, , 20 . 20 of the April 1937 issue. Later revisions in Southern pine lumber for period $1934-36$ not shown on $p .47$ of the October 1937 Survey will be published in a subsequent issue. For California redwood,
revisions not shown on 4 . 47 of the May 1938 Survey together with a new series on redwood stocks will appear in a subsequent issue. Revisions in Southern pine timber exports Digitized beginning Japuary 1928 will be shown in a subsequent issue.

| Monthly statistics through December 1935, together with explanatory notes and references to the sources of the data may be found in the 1936 Sapplement to the Survey. | 1938 | 1937 |  |  |  |  |  |  |  | 1938 |  |  |  |

${ }^{1}$ Discontinued.
Beginning January 1937, the American Itun and Steel Institute computes the percent of capacity on a weekly average basls, with no allowance for Sundays or holidays the figures shown here have been carried forward oo the old basis (which relates daily average output to daily average eaparity with allowance for Sundays, July 4 , and Cbristmas) in order to keep the series comparable

- As reported by 21 manufacturers; beginning Jan. 1937 data are available from the reports of the Bureau of the Census for 34 additional establishments

| Monthly statistics through December 1935, together with explanatory notes and references to the sources of the data may be found in the 1996 Supplement to the Survey | 1938 | 1937 |  |  |  |  |  |  |  | 1938 |  |  |  |

- Revised.
- Less than $\$ 500$.
sClassifications changed starting in January 1937, but for all practical purposes the series shown are comparable with earlier data. Classes 4 and 5 are practically equivalent to former class 4; changes made in classes 1, 2, and 3 do not affeet the total for the 3 elasses as shown here.
$\dagger$ Revised series. Measuring and dispensing pumps, "oil, grease, and other," revised beginning January 1936 ; figures not shown on p. 49 of the October 1937 Survey will appear iu a subsequent issue. Steam, power, centrifugal, and rotary pumps for the period 1931-37; revisions not shown on p. 49 of the May 1988 Survey will be given in a subsequent issue. Data on steel shelving revised beginning January 1936; data not shown on p. 89 of the March 1938 Survey will appear in a subsequent issue. The in.

*New serie sbown on p. 123 of the 1936 Supplement, for which monthly data for 1935 and 1036 were given in table 27 , D. 20 of the July 1937 issue
$\dagger$ Revised series. Data on industrial electric furnaces revised by the Industrial Furnace Manufacturers' Association, Inc.; data formerly collected by the National Electrical Manufacturers' Association. The present series (available beginning January 1936) is based on the reports of 12 manufacturers which represent 85 to 95 percent of total sales of electric furnaces for industrial purposes. Data not shown on p. 50 of the November 1937 Survey, will appear in the 1938 Supplement to the Survey.
a For 2 additional companies which started reporting in March 1938, sales for the first 3 months of 1938 and included in the March figure.

PAPER AND PRINTING

ISee note marked " 1 " on next page. 1 Discontinued by reporting source
$\dagger$ Revised series. Data on production of wood pulp have been revised heginning 1932, and consumption and shipments and stocks, beginning 1934 . Production data not shown on p. 51 of the April 1938 issue, and shipments and consumption, and stocks, prior to March 1937 not shown on p. 51 of the May 1038 Survey, will appear in a subbequent issue. In the above presentation the data are all raised to estimated industry totals on the basis of an identical sample of 152 mills; heretofore, only the data on production and consumption and shipments have been raised. For production, the estimated industry totals have been supplied by the compilers, and for consumption and shipments, and stocks, the sample data have been adjusted to the raised production figures by the Survey of Current Business. Consumption and shipments, and stocks, as shown here supersede the data shown in the April 1938 Survey. This revision was occasioned by the use of an improved method of adjustment. Data are restricted to the items specified, with no attempt made to estimate semichemical pulp or screenings. Data on chemical and ground-wood imports have been revised beginning January Digitized fi935; Rexsieps not shown on p. 51 of the December 1937 Survey will appear in a subsequent issue. Data on total paper, total paper excluding newsprint and paperboard. http://fraser. stoouk paper have been revised beginning 1934. Rerisions not shown on p. 51 of the May 1938 Survey will appear in a subsequent issue.

| Monthly statistics through December 103b, together with explanatory notes and references to the sources of the data may be found in the 1936 Supplement to the Survey | 1938 | 1937 |  |  |  |  |  |  |  | 1938 |  |  |  |

RUBBER AND RUBBER PRODUCTS

${ }^{1}$ Data are no longer available.
Revised
FFor data ratsed to industry totals, see the 1938 Supplement. Figures shown here are as reported; these were qulso given in the 1936 Supplement
and 1936. Revisions not shown on p 52 cor consumption, world and United states stocks of ruhber, consumption, production and stocks of reclaimed rubber revised for 1935 and 1936. Revisions not shown on p. 22 of the May 1937 Survey will appear in a subsequent issue. Newsprint stocks at publishers and in transit to publishers revised begin-
to adjust for errors in computations; revisions not shown on p. 52 of the November 1937 issue will appear in a subsequent Survey. Shipments of paperboard shipping boxes
to adjust for errors in computations; revisions not shown on p. 52 of the november 1937 issue will
revised for year 1937 . Revisions not shown above will appear in a subsequent issue.

# American Direct Investments in Foreign Countries:1936 

Economic Series No. 1 . . . . 10 cents a copy
Direct investments of American corporations and businessmen in foreign enterprises and properties at the end of 1936 totaled $\$ 6,691,000,000$ as compared with $\$ 7,528,000,000$ at the end of 1929, a net decline of approximately 10 percent.

This report, the third of a series recently inaugurated by the Finance Division of the Bureau of Foreign and Domestic Commerce, is based on an exhaustive survey by the Division. In view of the intimate bearing which the study has on the international commercial and financial position of the United States it should be both of timely interest and permanent value.

The original study in this series was "Insurance Transactions in the Balance of International Payments of the United States, 1919-35" (Trade Information Bulletin No. 834: Price 5 cents). The second report was "Foreign Investments in the United States." (Price 15 cents.)

## Market Research Sources

$$
\text { Domestic Commerce Series No. } 55 \text { (1938 Edition) . . } 30 \text { cents a copy }
$$

This edition of Market Research Sources brings up to date the record of marketing research in the United States. Because of the growing appreciation of the importance of accurate knowledge in the evaluation of markets, great progress has been made by the organizations and individuals engaged in such research during the 2 -year interval since the publication of the 1936 Edition. This handbook serves the dual purpose of a source book for those interested in marketing research and a check upon work which has been done or is being currently conducted, thus obviating duplication of effort.

[^6]
[^0]:    Subscription price of the monthly and weekly issues of the Survey ${ }^{-}$of Current Business is $\$ 2$ a year. Sing!e-copy price: Monthly, 15 cent-; weekly, 5 cents. Foreign subscriptions, $\$ 3.50$. Price of the 1936 Supplement is 35 cents. Make remittances only to Superintendent of Documents, Washiagton, D. C.

[^1]:    : This review of financial developments during the first half of 1538 was prepared by Dr. August Maffry of the Finance Division of the Burean of Foreign and Demestic Commerce.

[^2]:    ${ }^{1}$ Middle of month．

[^3]:    1 This item was first reported by the Federal Reserve in May 1937; see footnote marked " $\theta$ " on p. 32 of this issue.

[^4]:    §Index as of June 1, 1038, is 236.9 .
    -Revised.
    *New series. Data on number of grade crossing projects represent a breakdown of the total proiects shown in the 1936 Supplement. For foreclosures indexes for metropolitan communities for 1932-36, see table 18, p. 20 of the April 1937 issue. The same reference also gives data on nonfarm real estate foreclosures for $1934-36$; these figures, how ever, were shifted to $1926=100$ beginning with the June 1938 issue. The Fome Owners' Loan Corporation data are for loans closed through June 12 , 1936 , when lending operations ceased, and for loans outstanding thercaiter. For loans outstanding, data beginning 10.5 .
    Survey. Data on highway and yrade crossing projects administered by the Bureauof Public Roads revised to inelude certain funds which heretofore have beoar in a subsequent Survey. Data on high way and grade crossing projects administered by the Bureau of Public Roads revised to inelude certain funds which heretofore have been excluded. Earlier
    data not shown on p. 25 of the June 1938 Survey will appear in the 1938 Supplement.

[^5]:    Revised. ${ }^{D}$ Preliminary. ${ }^{1}$ Data no longer available.
    tRevised series. Data on finished cotton cloth beginning 1934, see table 31, p. 19 of the August 1937 issue. Due to ehange in the number of firms reporting, data beginning January 1938 are projected on the basis of identical mill reports. The identical mill report is available for production only, hence the stock figures cannot be carried forward. For rayon deliveries, 1923-37, and stocks, 1930-37, see table 43, p. 20 of the October 1937 issue. For total visible supply of silk for period July 1930-December 1936, see table 11, p. 20, of the February 1937 issue. Data on fur sales revised beginning January 1936; revisions not shown on p. 94 of the March 1938 Survey will appear in a.
    

[^6]:    Copies of the above publications may be obtained, at the prices stated, from the Superintendent of Documents, Government Printing Office, Washington, D. C., or from any District Office of the Bureau of Foreign and Domestic Commerce. Remittance should be by check or money order, payable to the Superintendent of Documents.
