WASHINGTON

VOLUME 16

NUMBER 9

The Bureau of Foreign and Domestic Commerce has completed a series of index numbers on rural sales of general merchandise by regions. These represent an addition to the retail sales data developed by the Bureau in recent years to provide more adequate knowledge of the movement of goods into the hands of consumers. Indexes of variety store sales, rural sales of general merchandise for the country as a whole, and indexes of new passenger car sales have previously been developed and published in the Survey of Current Business. In addition, data are being gathered on retail sales of independent merchants in 15 States—Arkansas, Colorado, Illinois, Indiana, Iowa, Kansas, Massachusetts, Missouri, Nebraska, New Mexico, Ohio, Oklahoma, Texas, Wisconsin, and Wyoming. Summary totals are being issued each month, by types of store, and these will be augmented gradually as the necessary cooperative arrangements are worked out. . . . Monthly reports are also being issued on grocery, drug, and men's wear chain stores, and on sales of a sample group of wholesalers and manufacturers. . . . The new regional indexes of rural general merchandise sales for the period 1929 to date are presented in an article on page 14 by Reba L. Osborne of the Marketing Research Division of the Bureau.

Business Indicators

1923-25=100

Business Situation Summarized

activity in major lines of industry and trade, improved further during July. The adjusted indexes of industrial production, factory employment, freight-car loadings, retail trade, and construction contracts awarded all advanced and, in general, the statistics indicate that a new high level of business activity for the recovery period was reached. Sufficient data are not vet available to determine whether the usual seasonal expansion in industrial production, retail trade, and freight traffic was realized in August.

In the absence of the usual recession in industrial output during July, the Federal Reserve's adjusted index rose 5 points to 108 (1923-25=100), the highest figure reported since the spring of 1930. This further rise is not attributable to an especially favorable situation in a few industries, but rather reflects improvement in a wide range of industries of both the durable and nondurable type. The forward move in the former group of industries, which has been the principal motivating force of the rise this year, has not given evidence of abating; steel mill activity, which is a fairly reliable indicator of the trend in a broad range of such industries, declined less than seasonally in July, and the weekly estimates for August show a somewhat higher level of operations. Automobile production, which held influence on the total volume.

CONOMIC conditions in the United States, as up very well during July, has receded rapidly during. reflected by the seasonally corrected indexes of August as manufacturers gradually curtailed production, or ceased assemblies entirely, in preparation for the change to 1937 models. Textile mill activity expanded in July and the seasonally corrected indexes of production rose sharply. The rise in the index of meat packing was influenced by the movement of livestock to market because of the feed situation.

> Drought conditions over large areas of the country have not been alleviated, and the Department of Agriculture August crop report indicates a distinctly subnormal yield. That Department estimates that cash income from farm marketings will increase less than seasonally this fall, despite the higher level of prices, but that farm income for the final 6 months of the year "will continue to exceed that of the same period of last year."

> The increase in factory employment in July was an exceptional development since a seasonal recession is usual for this period. The number at work last month in both manufacturing and nonmanufacturing industries was substantially in excess of the total a year ago. Aggregate pay rolls were much higher than in July 1935, and this was one of the influences operating to maintain retail trade at a better than seasonal pace. The improvement in sales was evident in both rural and urban areas, the drought apparently having little

Commodity Prices

years of drought. According to Journal of Commerce 79.2 for June and 81.1 for August 15 (1926=100). reports of daily spot prices, wheat rose from \$1 per bushel on June 1 to \$1.27½ July 31 and to \$1.30 August 18; corn from \$0.60\% to \$1.06\% and \$1.17\% on the same dates, respectively; barley from \$0.79% to \$1.02% and \$1.48%, respectively. On August 18, September corn rose to 2 cents above September wheat on the Chicago market and this differential was maintained today (Aug. 19). Spot corn reached the highest price in 16 years and spot wheat the highest since 1929.

10.20 to 12.05 cents per pound; silk from \$1.50 to \$1.83; in prices of butter, cheese, eggs, potatoes, and other and wool from \$0.89 to \$0.90. Scrap steel prices were strong during this period. Building material prices rose during July and textile prices rose moderately through July and the first half of August. Cotton prices advanced from 11.59 cents on June 1 to 13.20 on July 13 and 14, after which they declined to 12.08 past several months, Fairchild's retail price index of on August 18, as crop estimates indicated a somewhat department-store articles increased 0.2 percent to 88.1 larger cotton yield than had been anticipated previously. as of August 1 (January 1931=100). Small declines in prices of hides and leather, and

THOLESALE prices of farm products and foods housefurnishing goods in July were more than offcontinued to rise sharply through July and the set by substantial increases in the first half of August. first half of August. Seldom have prices of grains ad-|The Bureau of Labor Statistics' combined index of 784 vanced so fast and so far in so short a period, even in wholesale price series for July was 80.5 compared with

The index of prices received by farmers in mid-July was 115 percent of the 1909-14 average, compared with 107 the preceding month and 102 in July 1935, according to the Bureau of Agricultural Economics. That Bureau expects the shortage of feed to cause an early marketing of hogs, including an unusual number of brood sows and spring pigs, with a consequent fall decline in hog prices followed by a marked seasonal advance in the late winter and early spring of next From June 1 to August 18, hog prices rose from year. The drought has already caused sharp advances farm products; in fact, the potato crop is so short that prices are expected to be higher than for a decade.

> The National Industrial Conference Board index of the cost of living of wage earners rose only 0.1 percent from June to July. After remaining slightly easier for the

Domestic Trade

CALES data for July confirm early reports that retail the rise indicated by this figure for July was 18 percent trade in that month did not show the customary in comparison with July 1935. seasonal decline. The adjusted index of departmentstore sales advanced 4 points to 91 (1923-25=100), August, reports covering the early part of the month the first time since the summer of 1931 that the index do not indicate that results will be less satisfactory has been above 90. Sales of general merchandise in than in July. Wide gains are generally anticipated small towns and rural areas were maintained at a for the month over the sales for the corresponding better than seasonal rate, the adjusted index rising 2 month of 1935. points to 114.3 (1929-31=100). This was the best sales record since 1929. Chain-store sales reveal a lishments very definitely on the upgrade, merchants similar trend, and automobile concerns enjoyed a good have increased their advertising budgets. Retail volume of business.

The drought apparently has not as yet resulted in an important curtailment of aggregate sales in rural regions, although in the areas most seriously affected it has no doubt had a hampering effect. Rising prices of farm products have tended to sustain farm income for the present, and the prospective shortage of feed supplies has accelerated the movement of livestock to market and hence has served to augment temporarily the flow of income to the farmers. Sales of the two leading mail-order companies (including both mail and store sales) amounted to \$65,270,000 in July, compared with \$49,888,000 in July 1935, a gain of 31 percent, and this high rate of gain was apparently maintained during the first half of August. The Bureau's index of sales of general merchandise in rural areas affords perhaps, a better indication of the increase in farming areas alone; an expanding consumer market.

While actual sales data are not yet available for

With consumer expenditures through retail estabadvertising in newspapers of 52 cities, as compiled by Media Records, Inc., was up 14.4 percent on a linage basis in July over the corresponding month of 1935, compared with a cumulative increase for the first 7 months of the year of 7.2 percent. The relative increase in retail advertising was only slightly larger than the increase for all types of advertising, namely, 12.7 percent. Since the revenue from advertising forms an important part of the income of the newspapers, this increase, which represents a continuation of the expansion of the 2 preceding years, is of considerable importance to the publishers. The figures are of more significance, however, with reference to the general trend of business activity, and as an indication of the manner in which merchants are seeking to profit from

[·] See note on p. 26 of this issue.

Employment

14 percent higher than a year earlier.

Employment usually declines in manufacturing and industries were largely seasonal. many other industries at this period of the year. The recession is usually marked in retail trade, and the July decline in the number at work in such establishments amounted to 90,000. For factory employment, the July gain was an exceptional development, and the seasonally adjusted index rose 1.4 points to 87.7 percent of the 1923-25 average, the highest level reached since August 1930.

larger number of persons at work in the nondurable goods industries, with the durable goods group recording a small decline. In other recent months the gains recorded were the result of the upward trend of employment in the durable goods industries. The small net decline in aggregate employment in the latter showed gains over the month interval. Among the increased about 10 percent during this period.

HE number employed in the industries sur-more important of these June-July increases were: veved regularly by the Bureau of Labor Statistics Furniture, 4.4 percent; blast furnaces, steel works, and was about the same in July as in June, the increase of rolling mills, 3.1 percent; tin cans and other tinware, 62,000 workers in the manufacturing industries being 1.6 percent; and foundry and machine shop products, offset by a decline of 60,000 in the nonmanufacturing 1.4 percent. In the machine tool industry, employindustries. Total pay rolls in all reporting industries ment advanced for the 21st consecutive month. As declined 0.6 percent over the month interval but were in the automobile industry, the recessions in employment reported by certain of the other durable goods

> Among the nondurable goods industries, contraseasonal gains were reported for several of the textile industries-silk and rayon goods, 4.0 percent; cotton goods, 3.0 percent; and woolen and worsted goods, 1.2 percent. With but few exceptions, the declines reported were of less than seasonal proportions.

While employment in nonmanufacturing industries recorded a net decline in July, several important The rise in factory employment was due to the industries in the group reported an increase in the number at work. These included crude petroleum producing, 2.4 percent; electric light and power and manufactured gas, 1.5 percent; telephone and telegraph, 1.4 percent; wholesale trade, 1.0 percent; and building construction, 0.6 percent.

The expansion in employment in manufacturing group of industries in July was attributed largely to establishments during the past year has been accomthe seasonal recession in the automobile industry, panied by a somewhat longer work week so that Of the 46 industries included in this classification, 27 average weekly earnings of factory workers have

6 months' average.

Finance

HE 50-percent increase in reserve requirements is four times the low reached in 1932. The railroad ▲ ordered by the Board of Governors of the Federal Reserve System went into effect on August 15, with a resulting cut in the excess reserves of the member banks to about \$1,800,000,000. The member banks still have a larger volume of excess reserves than at any time prior to the heavy gold imports of the past 2 years.

During the 4 weeks ended August 12, the statement of reporting member banks showed a decrease of \$190,000,000 in total loans and investments. The decline was represented by decreases in (1) loans to brokers and dealers of \$56,000,000; (2) loans on securities to others of \$108,000,000; and (3) investments in Government and other securities of \$130,000,000. Offsetting these decreases were increases in "all other" loans amounting to \$104,000,000, the bulk of which represented an increase in commercial loans. These loans give some evidence of an enlarged demand for business credit in recent months.

Money rates were not affected by the change in reserve requirements. Short-term rates generally remained unchanged, but there was a slight advance in the rate on bankers acceptances.

Aided by generally favorable business and financial news, stock prices reached a peak for the recovery period on August 8, when the Dow-Jones indexes of industrials, rails, and public-utility stocks each established new "highs" somewhat above the levels attained late in July after a steady rise during that month. The public-utility "average" has just about doubled since reaching a depression low in 1935. The industrial "average" has advanced sharply in the past year and

"average" has risen about 100 percent from last year's low, which was a little more than double the 1932 low. Since August 8 prices have moved moderately lower on a less active market.

Sufficient data are now at hand to appraise the extent of recovery in corporation profits during the second quarter. The Standard Statistics preliminary index of the earnings of 161 corporations indicates that profits for the second quarter of the year for this group were about on a par with those of the third quarter of 1930. Thus, the profits of these leading corporations have recovered to within 20 percent of the 1926 average. At the low in 1933, the seasonally corrected index recorded earnings equivalent to only 5 percent of the 1926 average. In the second quarter of 1935 the index was 47, or slightly under half the average for the base period.

The volume of new securities publicly offered declined in July, but the market has been more active during the current month, with an issue of \$100,000,000 debentures being offered above par, with one-half the issue carrying a 3-percent and the balance a 3\fm4-percent coupon, according to the maturity dates. The yields on outstanding bonds have not varied to any considerable degree in recent months, but are lower than a year ago.

The unsettled political situation in Europe has had a depressing effect on the foreign exchanges, and gold shipments from France have been resumed in small volumes.

Note that this column has been changed. See p. 32 for figures excluded.

Foreign Trade

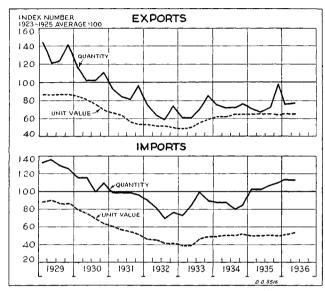

URING the first 7 months of 1936 exports of the preceding year. The increase in the value of crude roughly to the increase in the domestic output of manufactured products. The volume of exports of this class of products was up 16 percent, compared with an increase of 15 percent in the Federal Reserve index of manufacturing production.

A major part of this increase has been in durable manufactured goods, notably in industrial machinery, agricultural machinery and implements, electrical apparatus, iron and steel manufactures, and motor trucks. Significant increases have also occurred in foreign shipments of consumers' goods of the durable type, such as passenger automobiles, electrical refrigerators, and radios. In these respects recovery in foreign trade has paralleled the improvement in domestic sales.

Exports of agricultural products during the 7 months were higher in volume than a year ago when shipments of such commodities were extremely low, but the relative gain was not so pronounced as for finished manufactures. Among the more important commodities contributing to the increase were tobacco, and fruits and vegetables.

Imports of practically all major classes of merchandise have been larger this year than in the first 7 months usually large volume in 1935 because of the drought in value and about 10 percent larger in volume.

finished manufactures were considerably larger material imports of agricultural origin was 40 percent, than in the same month of 1935, the gain corresponding and in tropical and semitropical foodstuffs 9 percent, while competitive agricultural imports as a whole declined 6 percent.

Changes in quantity and unit value (price) of exports and imports, by quarters.

Exports of all products increased 11 percent in value of 1935. Important exceptions to the general trend in the first 7 months of 1936 over the corresponding are found among the agricultural commodities, par-|months of 1935, and the expansion in volume was ticularly those which were purchased abroad in un-|nearly as large. Imports were 16 percent larger in

Real Estate and Construction

ONSTRUCTION contracts awarded have in-|summer. These gains have been made generally from a creased this summer, contrary to the usual seasonal trend, with both publicly financed and privately financed work being placed in increasing volume. Total construction contracts awarded in July in the 37 States covered by the F. W. Dodge Corporation statistical service, amounted to \$295,000,000, the highest total since the middle of 1931. On a seasonally adjusted basis, total contracts were below the level of last winter when public works awards were exceptionally heavy. Privately financed contracts were at the peak for the recovery period in July.

The value of residential construction contracts awarded during July declined only slightly from the June total, whereas there is usually a marked seasonal decline. The seasonally corrected index of residential building has recovered to about two-fifths of the 1923-25 average, while the index of other types of construction has recovered to about 70 percent on the same basis. Both indexes record a very considerable improvement in the past year.

Actual construction operations, judging by the employment statistics, continued to expand in July. A seasonal increase is usual at this period, but the gain last month was exceptionally large. Suppliers of building materials are enjoying the most active and profitable season in several years. The improvement in earnings the features of the corporation reports issued this and only 1 percent reported an oversupply.

relatively low level.

The National Association of Real Estate Boards, in summing up the results of its semiannual survey, reported that prospects for greater activity in the realestate field in the months just ahead "were the most promising in years." The general improvement so far during 1936 has been based mainly on the improved earning power of the existing structures, both residential and commercial. This trend has been accompanied by a favorable market for real-estate securities, with capital actively seeking investment in real property in three-fourths of the 252 communities surveyed.

Increased real-estate activity was found in 92 percent of the cities; property values are higher in 77 percent of the cities; rents are higher for central business property, apartments, and single-family dwellings in a large majority of the cities (more than 90 percent in the case of single-family dwellings). Central office properties show a less favorable situation, although the downward trend in the rentals of such properties has apparently been halted.

Rentals of single-family dwellings are not so low relative to predepression levels as apartment rentals, but this situation has prevailed generally for some years. An undersupply of single-family dwellings was reported of the building-supply manufacturers has been one of in 76 percent of all the cities (66 percent 6 months ago)

Automobiles and Rubber

X/ITH assembly lines of several major automobile 1937 season, which will be formally opened in Novemcompanies inactive and others expected to sus-ber with the New York automobile show. pend operations shortly, the production of 1936 models is gradually drawing to a close. The current model in view of the rapid shifts in schedules, but both year has been a very successful period for the motor companies, not only from the standpoint of the number of cars sold but from that of profits as well. According to a tabulation of Standard Statistics, nine automobile manufacturers reported profits of \$178,302,000 in the first 6 months of the calendar year, which include the most active sales months, compared with \$98,785,000 in the same period of 1935, a gain of 80 percent. While parts and accessory manufacturers did not do so well relatively, 28 companies reported for the 6-month period an increase in profits of 25 percent. These increased earnings have resulted in larger dividend disbursements to stockholders, and there has also been a tendency to return part of the profits to employees either in the form of bonus, or vacations with pay.

With a dozen companies out of production, assemblies in the middle of August were down close to 50,000 units, or about half of the weekly rate which had been maintained in July. As one major company resumed production of 1936 models in the week ended August 22, after a shutdown, there was a temporary recovery in production. However, output is expected to decline through September as plant changes are made and parts are stored in preparation for inaugurating the July consumption on record.

It is difficult to calculate the final output for August Cram's and Ward's estimate that production will exceed last August's United States total of 237,000 units. The two sources differ as to the amount of the increase, the more optimistic placing the probable gain at 20 percent.

July production of cars and trucks in the United States amounted to 441,000 units, the drop from the June total being less than the estimated seasonal change. July sales of cars to consumers were large for this period of the year, and were the best for this month since 1929. The Bureau's seasonally adjusted index of new passenger-car sales, which had advanced from 93 in May to 109 in June, receded to 104 in July. For the 7 months of 1936, the index shows a rise of 24 percent in the dollar volume of new passengerautomobile sales.

With the relatively high level of automobile production and heavy replacement tire sales, the tire manufacturers have enjoyed a good volume of business. Manufacturers' stocks of tires have been cut very materially during recent months. Total consumption of crude rubber during July (two-thirds or more of which is consumed by the tire industry at this period of the year) was under the June total, but was the highest

Federal Reserve Bank of St. Louis

Iron and Steel

RADE sources predicted that no important slackening in steel production would occur this summer, and this is being borne out. July operations were off only about 1 point, from 69.83 to 68.74 percent of capacity, and the weekly estimates of the American Iron and Steel Institute suggest that August is likely to show a modest gain over July. Thus, for 5 consecutive months production has approximated 70 percent of capacity, a level of operations which means profitable operations for the industry generally. During the second quarter, with output averaging 69.94 percent of capacity, 17 steel companies reported profits of \$33,825,000, compared with \$10,398,000 in the second quarter of 1935, and \$11,811,000 in the first quarter of 1936. Those concerns which produced a large proportion of heavy steels made the best comparative gains, since demands for such types have improved markedly this year.

The production of heavy structural shapes in the second quarter this year was at the rate of 44 percent of capacity, against 24 percent in the second quarter of 1935; sheared and universal plates and standard rail production was 36 percent, against 20 percent; for 17 percent.

The lighter products were also produced in larger volume, but the relative increases were generally not so large as those for the "heavy" products. Tin plate was produced at the rate of 88 percent of capacity, compared with 75 percent a year ago; for sheets, the comparative figures were 77 and 63 percent. Thus, the trend in the industry has been toward a better balanced output, but with the heavier products still lagging behind. Of the total finishing capacity, 72 percent was engaged in the second quarter, a somewhat higher percentage than that for ingot production.

While the volume of incoming business slackened during August, according to the trade reviews, demand was reported to be strong and the mills have a large backlog of orders on hand. Scrap prices have been advancing, with the composite price computed by the magazine Steel at \$14.83 in mid-August, or nearly \$3 a ton above the price a year ago. Automobile producers are using less steel at present, but have ordered heavily for the new models. Machinery business is still strong, with the index of machine-tool orders, aided by a rush of foreign business, up to 150 in August (1926 shipments=100), or only 5 points under the bars (including merchant, concrete reinforcing bars, 1929 average. Structural steel demands are increascold finished, alloy, and hoops and baling bands) ing, and the manufacturers of railroad rolling stock will the comparative figures were 49 and 30 percent; for require increasing quantities to fill the orders on their pipe and tubes, 44 and 25 percent; for wheels, 36 and books, which are at the highest level since purchasing by the roads was abruptly halted early in the depression.

Textile Industries

FURTHER expansion in activity in the textile in- than in any month since January. Yarn prices have dustries was reported for July, with the gains in the also indicated wider margins. cotton and rayon industries being particularly noteproduction, composed of basic data for the cotton, wool, and silk industries, advanced to 115 (1923-25= 100), 8 points above that for June and 15 points above the indexes for the 3 months ended with May, in each of which the index stood at 100.

In both the cotton and rayon industries, the increases in production reported in July were contraseasonal, reflecting the strong demand for finished goods. Consumption of cotton was 7 percent larger than in June and was 51 percent above that of July 1935, on a daily average basis. When allowance is made for the usual seasonal variation, July consumption was the largest since 1927, except for a brief period during the summer of 1933.

Recent improvement in sales volumes with prices of cotton goods generally higher than those prevailing earlier in the summer and spring resulted in a widening of manufacturers' margins, despite the rise in raw cotton prices through the first half of July. According to data compiled by the Textile World, manufacturers' margins on carded cotton fabrics were higher in July petitive conditions existing among the textile industries.

Rayon deliveries in July advanced to a new record worthy. This improvement followed a marked in-high. Manufacturers' stocks have continued to dicrease in activity in June from the comparatively minish, with the supply at the end of the month stable level of the March-May period. In July, the amounting to only 0.7 of average monthly shipments Federal Reserve's seasonally adjusted index of textile during the past 12 months. Rayon Organon, which compiles the rayon statistics, points out that stocks of certain popular lines are insufficient to meet current demands. Production of rayon during the first half of 1936 was only 6 percent above that of the corresponding period of 1935, while deliveries recorded a gain of 18 percent.

> Activity in the woolen industry is still considerably under the 1935 average, although some increase in wool consumption and spindle activity was reported in July. Output for the month, on a seasonally corrected basis, was at about the same level as in January, and approximately 20 percent below last August, the peak reached after an advance of exceptional proportions which extended over a period of about a year.

> Although silk deliveries in July were at the highest level of the year, after allowance for seasonal variation, activity in this industry is still relatively low. Sales and consumption of silk goods apparently are still experiencing a long-term decline as a result of com-

Regional Sales of General Merchandise in Small Towns and Rural Areas

By Reba L. Osborne, Market Data Section, Marketing Research Division

AN INDEX of retail sales of general merchandise large a volume of urban trade. J. C. Penney Co. in small towns and rural areas for the country as maintains a number of stores in places exceeding 10,000 a whole, together with a description of the method population; however, sales of these stores were not employed in its construction, was presented in the December 1934 issue of the Survey of Current Busi-NESS. Since the publication of those figures, requisite basic data have been obtained making it possible to construct index figures for four main geographical regions of the country 1—the Middle West, the East, the South, and the Far West.

The regional indexes are constructed from dollarsales figures furnished by the firms which cooperated in supplying the material from which the United States total rural sales index was computed, and the figures presented herewith are entirely comparable in method with that index. The cooperating firms are Chicago Mail Order Co., Montgomery Ward & Co., Sears, Roebuck & Co., and J. C. Penney Co.

It should be noted that while the figures obtained from the four firms furnish a fairly large sample of rural sales of general merchandise, the indexes are not entirely representative since the trend of sales of small independent rural stores differs somewhat from that of the large chain organizations and mail-order companies. Circumstances may require later expansion or modification of the indexes. The data will be supplemented by sales of independent rural stores when an adequate sample of such can be obtained. Also a comparison will be made with figures provided by the Census of Business, 1935, when those figures become available, and should any notable change in the representativeness of the sample be revealed, necessary adjustments will be made.

The J. C. Penney Co. furnished figures comparing sales in each month with sales in the corresponding month of the previous year for an identical group of stores, thus making it possible to eliminate the effect of expansion in the number of stores.2 For the three mail-order firms sales made by mail only were used, the bulk of these sales go to persons in communities of less than 10,000 population. Sales of local stores maintained by two of the mail-order companies were excluded from the index, since they represented too

excluded since a considerable portion of their business comes from the outlying country.

Relative Importance of Sales in Different Regions

The total sales of the four companies as used in the construction of the regional indexes aggregated about \$392,000,000 in 1933 and represent about one-fifth of all general merchandise sales in places of less than 30,000 population, as shown by the 1933 Census of American Business. Of this total, both the East and the South accounted for about \$71,000,000, or 18 percent each; the Middle West \$187,000,000, or nearly 48 percent; and the far West \$63,000,000 or 16 percent. Since no single figure is published by the census which would adequately represent sales in rural regions and small towns, an arbitrary figure was arrived at by combining the census figures representing sales of general merchandise stores in places of less than 30,000 population, catalog sales of all mail-order houses, and sales other than food in all country general stores, it being assumed that approximately one-half of the sales of such stores is food.

Methods of Computing Indexes

The index figures in the group are arithmetic averages of weighted relatives based on average daily sales. After converting the figures to an average daily sales basis, relatives representing sales in the different regions were computed for each firm using the average for the 12 months of 1931 as the base period. These relatives were then multiplied by the respective individual weights for the regions assigned each company. The aggregates thus obtained for the four companies were combined according to regions, and the final indexes computed, using the monthly average for 1929-31 as 100.

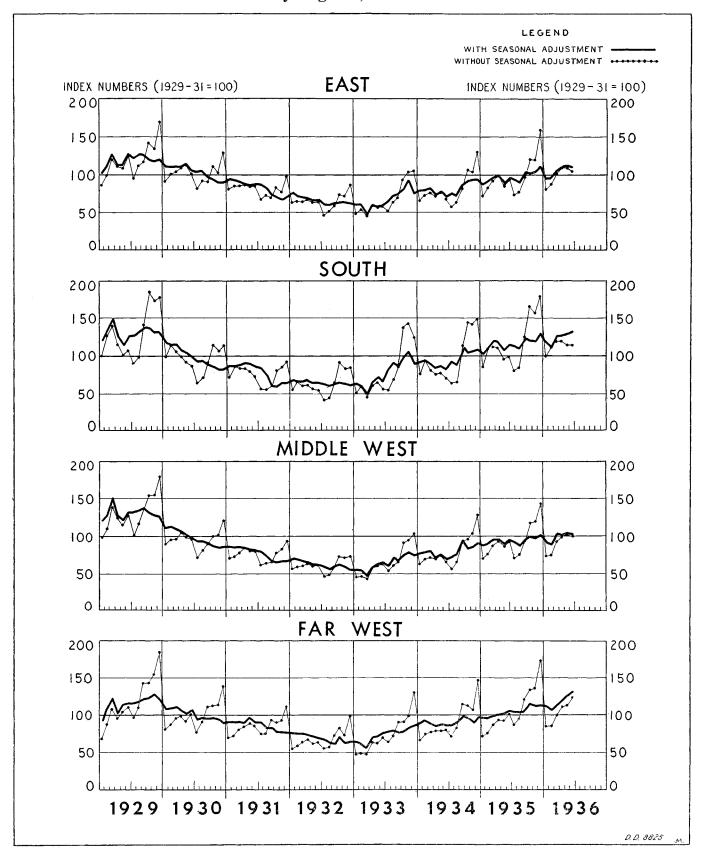

For convenience, the actual computation was made on the basis of a standard length month, equivalent to an average daily sales basis. To convert the monthly sales figures to a standard length month basis the

a series of index numbers, but each having a different base. These link relatives extending over several years were then converted into an index with a common base. In order to do this, the year 1931 was employed and an ordinary index for that year was made by dividing each month's sales by the average for the 12-month period. Each of the index numbers for 1931 was multiplied by the relative for the corresponding month in 1932, to secure an index for each month of 1932, and they were divided by the relatives of 1931 to obtain index numbers for the corresponding months of 1930. The index numbers for 1930 in turn were divided by that year's relatives to extend the index back to 1929 and those for 1932 were multiplied by the relatives for 1933 to project it forward, and so on. The result of this process was an index based

¹ Because of the nature of mail-order distribution, variations from the regional divisions used by the Bureau of the Census were necessary, the States being grouped as follows: Middle West: Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Montana, Wyoming, Colorado, New Mexico. East: Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, West Virginia. South: North Carolina, South Carolina, Georgia, Florida, Kentucky, Tennessee, Alabama, Mississippi, Arkansas, Louisiana, Texas. Far West: Idaho, Arizona, Utah, Nevada, Washington, Oregon, California.

² These figures were converted to an average daily sales basis, from which year link relatives were computed; all of the link relatives thus obtained being in effect on the average months' sales for 1931.

Trend of Sales of General Merchandise in Small Towns and Rural Areas, by Regions, 1929-36

number of working days in each month was calculated in March 1933, with the index for three of the regions back to January 1929; also the number of working days in a standard length month was computed, using a period of 28 years. The sales figures were adjusted to a standard length month basis by multiplying them by the ratio of the number of days in the standard length month to the number of days calculated for the particular month concerned. In calculating the number of working days in a month, allowance was made for the varying sales importance of the different days of the week. The weights assigned the respective days were not the same for all four companies since the proportion of weekly sales made on the different days varied somewhat.

The sales figures were weighted for each company and for each region, the weights varying accordingly. The selection was made with regard, primarily, to the proportion the different company's sales represented of the total sales of each region. Some slight changes were made to take into account for each organization such secondary factors as the general geographical distribution of sales, the proportion of nonrural customers, the variety of merchandise carried, and the relative importance and reliability of sales reported as an indicator of business in rural communities.

An index adjusted for seasonal variations was also computed for each geographical region. A study of the monthly sales figures showed that seasonal influences were not uniform for all regions and, in order to remove satisfactorily the seasonal swings from the index figures, a series of representative correction factors were computed for each region. The "ratio to moving average" method was employed in making the computations with certain further refinements to overcome the lack of data for earlier years. No adjustment was made for the shifting date of Easter; however, should sales figures for subsequent years show any relatively important change in its effect on rural sales, necessary adjustments will be made.

Trend of Sales in Recent Years

From 1929 through 1932 the trend of general merchandise sales in rural areas was steadily downward in all regions. Sales for 1932 were only about one-half as large as the 1929 totals, with decreases ranging from 42 percent in the far West to 52 percent in the Middle West. The largest relative decline for any one year was in 1930, when sales in both the Middle West and in the South fell off 26 percent. The East experienced its greatest decline the following year, and in the far West the largest drop was in 1932.

On a monthly basis, sales were at a peak in March of 1929 in all areas except the far west (after adjustment for seasonal variation). In the latter region, the peak reached in November was 3 percent higher than the top of the spring movement. All of the indexes were lowest universities has enabled this service to expand from the

varying only from 47.1 to 49.2; the index for the far western region was 55.4.

A definite upward swing in sales throughout the country took place during the second quarter of 1933 and has continued up to the present time. Recovery during the first year was decidedly more rapid and more pronounced in the South than in other parts of the country, sales having increased 24 percent from 1932 to 1933 as compared with gains ranging from 4 to 9 percent in the other three regions. A more general gain, however, took place the following year when the dollar volume of sales was about one-fifth greater in each region than for 1933. In 1935, a further gain of about one-fifth was recorded, with the regional increases remarkably uniform for the second consecutive year.

Rural sales continued to record substantial gains during the current year as farm income continued to expand. Total sales for the first half of the year for the country as a whole were about 11 percent in excess of the corresponding period of 1935. The increases, however, varied considerably in the different regions. The greatest relative increase for the 6-month period was recorded in the far West, which showed a gain of 18 percent, and the smallest was in the Middle West where sales increased about 8 percent.

The drought, which has assumed serious proportions this summer, has not as yet been reflected to any important extent in the indexes. The losses experienced may be expected to affect sales in some areas, but the marked rise in prices of the farm products affected will be an offsetting influence for the country as a whole.

A comparison with the 6-month period of 1929 shows that sales in the far West were 7 percent greater for the first half of 1936 than in 1929, the South was only slightly below the 1929 figure for that region, while the East still lacked 9 percent and the Middle West 24 percent of the 1929 6 months' totals.

Indexes Will Be Issued Monthly

The percentage change comparisons of sales by regions which have been shown regularly in monthly statements issued in mimeograph form by the Bureau, will be supplemented by the actual index figures for each region. This group of indexes will also appear with the series for the country as a whole which have been published each month on page 27 of this magazine.

Additional Data on Independent Store Sales

In order to supplement the indexes of the large merchandisers in rural areas, and the other retail sales indexes as well, the Bureau has inaugurated a series of reports of the sales of independent merchants, by States.

The splendid cooperation of retailers, and the collaboration of the bureaus of business research of several 3 States originally covered to some 15 States at the present time.

The figures are released before the end of the month following that to which they relate, and show by lines of trade the changes in sales volumes for the month, as compared with those of the preceding month of the same year and also with sales of the corresponding month of the previous year. The number of firms reporting and the actual dollar figures are also shown; however, the method of presentation insures nondisclosure of reported figures of individual businesses.

Reports are available through the Bureau for the States of Arkansas, Colorado, Illinois, Indiana, Iowa, Kansas, Massachusetts, Missouri, Nebraska, New Mexico, Ohio, Oklahoma, Texas, Wisconsin, Wyoming. It is planned to collect similar information from additional States and eventually to expand the coverage so that it will be national in scope. When data have been collected for a sufficient period, it is hoped that indexes of the sales movement may be constructed and the data presented in a manner which will facilitate ready comparison with other retail sales data.

¹ Computed by Moody's Investors Service and represent the weighted average yields of 200 common stocks, by groups, as of the last day of the month. The weighted average yield consists of the aggregate annual common dividends being paid by the 200 companies as of each given date, divided by the aggregate market valuation of all outstanding common shares of these companies as of the same date. The comparison is for 200 identical companies, regardless of whether a particular con pany is on a dividend-paying basis or not at any given time.

If the current average yields were confined to only those companies among the 200 which are now on a dividend-paying basis, they would average approximately one-half of 1 parcent more than those shown above. But a record of average yields based on only dividend-paying stocks, if including a large number of companies, would have to use a widely varying number of stocks if this record covered the above period. It seems preferable to use an identical group of companies regardless of their dividend status on any particular date.

2 7-month average, June-December, inclusive.

¹ Compiled by the U. S. Department of Agriculture, Bureau of Agricultural Economics. These data represent the production of principal firms operating dry-milk actories in the United States. Included in the series are powdered milk derived from whole milk and skimmed milk; excluded is a small amount of part-skimmed powdered

milk.

2 Yearly totals for 1918 and 1919 do not represent totals of monthly figures for those years. Due to the fact that the monthly figures were made up from incomplete schedules the totals given in the final reports of factory production for those years were used.

¹ Computed by the Board of Governors of the Federal Reserve System and represent a revision of the tabulation that was shown on p. 20 of the June 1935 issue of the Survex and of the monthly data shown in the monthly issues since that date. The revision was necessary in order to make allowance for seasonal shifts which have been in process for a number of years but could not be considered definitely established until recently. For the most part the revisions affect the index only for the period since the beginning of 1931; adjustments for the changing date of Easter, however, have been revised for several earlier years. The principal effects of the current revision for the period from 1931 to date are to lower the adjusted index in March, May, and December and to raise the index in January, February, April, and October. Although the changes were limited to the adjusted index, the unadjusted index is shown in its entirety for the convenience of the users of the Survey. For a description of the method in computing the index see the Federal Reserve Bulletin for April 1928, pp. 236-242, and also the revised statement which the Board of Governors of the Federal Reserve System has available for distribution.

¹ Compiled by Standard Statistics, Inc., and are based on reports of the number of companies indicated above. There is some divergence between the movement of the profits of industrial corporations included in this tabulation and of those included in the tabulation of the New York Federal Reserve Bank which is also carried in the SURVEY, but the differences, where the classifications are comparable, are not great. Such variations may be expected in sample compilations of this type made from different lists of corporations.

Judicates a deficit.

Perliminary.

Monthly Business Statistics

The following summary shows the trend of industrial, commercial, and financial statistics for the past 13 months. Statistics through December 1931 for all series except those marked with an asterisk (*) will be found in the 1932 Annual Supplement to the Survey of Current Business, together with an explanation of the sources and basis of the figures quoted. Series so marked represent additions since the Annual was issued and similar information, if published, will be found in the places noted at the bottom of each page. Note, however, that many revisions have occurred since the last Annual Supplement was published. A special supplement was included in the April 1935 issue, pages 57 to 72, inclusive. This supplement gave the monthly averages of all current series for the years 1932, 1933, and 1934.

The terms "unadjusted" and "adjusted" used to designate index numbers refer to the adjustment for

seasonal variation.

Data subsequent to July will be found in the Weekly Supplement to the Survey.

^{*}Revised.

*New series. See pp. 16-19 of the May 1934 issue, cash income from marketings of agricultural products, p. 19 of the December 1932 issue, Fairchild's price index, and pp. 19 and 20 of the March 1933 issue, quantity marketings.

*Data for August 15, 1936: Total 124, chickens and eggs 112, cotton and cottonseed 103, dairy products 125, fruits 108, grains 129, meat animals 123, truck crops 134, miscellaneous 152

†Index of farm prices has been completely revised. For earlier data see p. 20 of the November 1934 issue. World stocks—revised total, rubber adjusted and sugar adjusted indexes for January 1927-June 1932, appeared on p. 20 of the September 1932 issue. Cash income from marketings of agricultural products revised from January 1933—June 1935. For revisions see p. 19 of the September 1935 issue. World stocks—total revised for period 1920-1935, see p. 20 of the May 1936 issue.

*Monthly retail prices of coal were discontinued with the month of August 1935. Subsequent to that date the price will be shown quarterly.

*This series has been completely revised. Revised indexes for months not shown in the December 1935 issue will appear in subsequent issue. Index computed every 2 weeks; monthly index is figure taken nearest the middle of the month; prior to Aug. 15, 1933, index computed once a montb.

**Section of the March 1934 issue, Pairchild's price index, and pp. 194. Set for period 1920-1935 issue will appear in subsequent issue. Index computed every 2 weeks; monthly index is figure taken nearest the middle of the month; prior to Aug. 15, 1933, index computed once a montb.

Revised.

New series. For earlier data on the following subjects refer to indicated pages of the monthly issues as follows: World prices, p. 20, September 1932; Purchasing Power of the Dollar (except for farm prices), p. 18, August 1933.

Revised series. For revisions of construction contracts awarded on nonresidential buildings for years 1930, 1931, and 1932, refer to p. 20 of the September 1933 issue.

Farm prices (purchasing power) are on p. 20 of the April 1935 issue.

A continuation of the statistics shown on p. 30 and 32, of the 1932 annual supplement, by classes. for the years 1932 and 1933 was published on p. 19 of the August 1934 issue and for 1933 on p. 19 of the October 1935 issue. Series also revised for 1935. See p. 19 of the May 1936 issue.

Indexes are based on 3-month moving average of F. W. Dodge data centered at second month.

See footnote on p. 23 marked """.

Index revised to exclude copper prices, since data on copper stocks have not been available subsequent to October 1931. Both stock and price series now cover 8 Digitized for FRASER

^{*}New series. For earlier data on building costs, American Appraisal Co., refer to p. 20 of the August 1933 issue. N. I. R. A. highway work started in September 1933, see November 1934 issue for beginning of series. For Home Loan Bank loans outstanding for period December 1932-January 1936 see p. 19 of the April 1936 issue. Home Owners' Loan Corporation data from September 1933 to April 1934 will be shown in a subsequent issue. Total loans closed to June 12, 1936, 83,092,870,784. Printers' Ink indexes from January 1922 to May 1934 appear on p. 19 of July 1935 issue. Data prior to May 1934 on "all other" radio and magazine advertising not published. See special note below on foreclosures. Data on H. O. L. C. loans outstanding for period September 1933-January 1936 are shown on p. 19 of the April 1936 issue.

† Revised series. See p. 20 of the October 1933 issue, magazine lineage. For revised data on magazine advertising cost for the years 1933 and 1934, see p. 19 of the February 1936 issue.

§ Index as of August 1, 1936, 208.1.

• Compiled by the Federal Home Loan Bank Board and represent the number of foreclosures on all types of properties in 1,013 identical communities in 48 States; having 53 percent of the population of the United States. Data prior to October 1933 not published. Comparable annual totals for 1926, 65,857; 1932, 210,821; and 1933 209,003. Data were not compiled for other years. Months subsequent to September 1934 were computed by means of a link relative to keep series comparable since the figures for these months are from a slightly different number of communities.

These series represent a break-down of the combined total shown in the Survey previous to September 1933. For earlier data see p. 20 of the September 1933 issue.

§ Index of 1935 revised. See p. 25 of the May 1936 issue.

Beginning January 1934 data includes Home Owners' Loan Corporation improvements.

e Revised.

* New series.

For description of Chain Store Age indexes see p. 19 of the December 1932 issue. Data of H. L. Green Co., Inc., prior to July 1933 will be shown in a subsequent issue.

For earlier data on automobiles see p. 19 of the April 1934 issue and variety-store sales, p. 18 of the March 1934 issue. Data prior to October 1933 on collections not published. Data are currently being received from about 400 stores on open accounts and about 250 on installment accounts. Series on air mail not available prior to May 1934. Series on basis of weight carried was published in the Survey for the period February 1926 to December 1933.

† Revised series. For revisions refer to the indicated pages of the monthly issues as follows: Apparel sales index of Chain Store Age, p. 26, October 1933. Combined index and grocery index of Chain Store Age were revised for period January 1932 through August 1934. See footnote on p. 26 of the Nove Work Ecening Post series on newspaper advertising in 22 cities is available for the period 1916 through January 1934. See the 1932 annual supplement and monthly issues prior to December 1934.

A Data for 1935 revised. See p. 26 of the May 1936 issue.

3 Chain Store Age combined index for the period 1932-35 included 18 companies. Beginning 1936 it was increased to 20 caused by the addition of 1 apparel and 1 shoe company.

Revised.

Revised.

New series. For earlier data on department store sales by Federal Reserve districts, see p. 20 of the February 1935 issue excepting Chicago, for which see note below. Note that the combined index of department-store sales is computed by the Federal Reserve Board and the district indexes are computed by the Federal Reserve Board and the district indexes are computed by the Federal Reserve Board and the district indexes are computed by the Federal Reserve Board and the district indexes are computed by the Federal Reserve Board and the district indexes are computed by the Federal Reserve Board and the district indexes are computed by the Federal Reserve Board indexes for priod January 1923 to October 1934. For earlier data on factory employment unadjusted in detail, see p. 16 of the June 1934 issue. See p. 19 of the July 1934 issue for factory employment unadjusted in detail, see p. 16 of the June 1935 were shown on p. 19 of the August 1935 issue.

† Revisod series. See p. 19 of the April 1935 issue, department-store sales, Chicago.

† This series was shown on p. 20 of the June 1935 issue from 1919 through April 1935. For a subsequent revision see p. 19 of this issue.

† The adjusted index of department-store sales (total value) was revised by the Federal Reserve Board for the years 1929 through 1934. Revised indexes for this period were shown on p. 20 of the June 1935 issue. For a subsequent revision see p. 19 of this issue.

§ Data have been revised for the period January 1933—September 1935. Revisions not shown in the November 1935 issue appeared on p. 16 of the January 1936 issue.

^{*} Revised.

* For earlier data see the following references: For factory employment, adjusted, all series, see pp. 16 to 19 of the July 1934 issue; employment in Baltimore, Milwankee and Massachusetts, p. 18, December 1932; employment in Chicago, p. 20, June 1933; Pittsburgh employment, p. 18, January 1934; Cleveland employment, p. 19, July 1934.

† For revised data refer to the indicated pages as follows: Employment in Delaware and Philadelphia, p. 19, September 1933; for revisions of years 1930-44 for those series and for the city of Pittsburgh, see p. 20 of the March 1935 issue; for Massachusetts, employment for 1931, p. 19, August 1933, and for 1932-34, p. 20, September 1935, revisions for period January 1933-May 1936 not shown above will appear in the 1936 supplement.

§ These data for the period January 1933-September 1935 have been revised; revisions not shown in the December 1935 issue appeared on p. 16 of the January 1936 issue.

Monthly statistics through December, 1931,	1936			1	935					19	36

Revised For earlier data on the following subjects, refer to the indicated pages of the monthly issues as follows: Pay rolls, Baltimore, p. 18, December 1932; pay rolls, Pittsburgh, p. 18, January 1934; pay rolls, Milwaukee, p. 18, December 1932; pay rolls, New York, p. 29, June 1933; pay rolls, Philadelphia, p. 18, December 1932; pay rolls, Pittsburgh, p. 18, January 1934; pay rolls, Maryland and Massachusetts, p. 18, December 1932; pay rolls in dyeing and cleaning establishments and laundries, p. 19, June 1933. Data on pay rolls for nondurable goods industries for the period January 1923-June 1935 are shown on p. 19 of the August 1935 issue.

† Revised series. For revisions on the following subjects, refer to the indicated pages of the monthly issues as follows: Pay rolls, Pennsylvania, Delaware, New Jersey, and Philadelphia, p. 19, September 1933; for revisions of years 1930-34 for these series and for the city of Pittsburgh, see p. 20 of the March 1935 issue; pay rolls, Massachusetts, for 1931, p. 19, August 1933 and 1932-34 p. 20, September 1935, revisions for period January 1933-Mey 1936 not shown above will appear in the 1936 supplement; pay rolls in wholesale and retail trade for 1930-34, inclusive; see p. 20 of September 1935 issue.

A Revised data on Illinois pay rolls from April 1929 to December 1932 will be shown in a subsequent issue.

The revised series on dyeing and cleaning and laundry payrolls shown in the August 1935 issue have been dropped by the Bureau of Labor Statistics and the publication of the original series resumed in the September 1935 issue.

Monthly statistics through December 1931, together with explanatory footnotes and refer-	1936				1935					193	36		
ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	July	July	August	Septem- ber	October	Novem- ber	Decem- ber	January	Febru- ary	March	April	May	June

*New series. For earlier data on the following subjects, refer to the indicated pages of the monthly issues. New series on "Brokers' Loans" for the period January 1929—December 1935 are shown on p. 19 of the March 1936 issue. For new series on bank rates to customers see p. 19 of the March 1936 issue. For new series on bank rates to customers see p. 19 of the March 1936 issue. For new series on interest rates of Federal land banks see p. 20 of the April 1935 issue. Data on excess reserves for the period Sept. 1, 1931—April 1936 are shown on p. 20 of the July 1936 issue. See footnote below on break-down of Investments and total loans. Monthly data previous to October 1933 not available. Data on acceptances and commercial paper, on real estate, to banks and other loans represent a break-down of the "All other" loans total which was published prior to Oct. 1, 1935.

§Figures subsequent to December 1933 represent gold certificates on hand and due from Treasury, plus redemption fund. 1 Method of computing net demand deposits subject to reserve was changed by the "Banking Act of 1935" approved Aug. 23, 1935. Consequently figures since that date are not comparable with those for earlier periods. Data for months August 1934—August 1935 were incorrectly shown in the October 1935 issue.

¶Data on Federal Reserve Reporting Member Banks represent operations in 101 leading cities. These series, according to a statement in the Federal Reserve Bulletin for November 1935, in the main, represent a continuation of the 101 city series published prior to the bank holiday. It is pointed out that although the banking crisis and subsequent developments affected these series considerably, the data reflect the course of banking developments during the disturbed period. Data on 101 cities were last shown in the May 1933 Survey for February 1933. Figures on the new basis not shown above will appear in a subsequent issue.

Classifications have been changed and revised data prepared beginning with January 1934. These data are shown on p. 2

Monthly statistics through December 1931, together with explanatory footnotes and refer-	1936			19	35					198	36

Revised.

See footnote on p. 32 marked "3."

Revised series. For earlier data see pp. 18, 19, and 20 of the July 1933 issue, insurance written and admitted assets: p. 18 of the June 1933 issue, premium collections The nominal official gold value of the Chilean peso was changed from 3 pence gold to 1½ pence gold as of Jan. 2, 1935.

Par values of foreign currencies as given on pp. 86 and 87 of the 1932 annual supplement were changed with the reduction in gold content of the United States dollar.

Quotation based on paper peso since Dec. 10, 1933, instead of gold peso as formerly. Former equivalent to 44 percent of latter. See note on p. 56 of the March 1934 e.

Quotation based of paper pess since Dec. 10, 1933, instead of gold pess as formerly. Former equivalent to 44 percent of latter. See note on p. 36 of the March 1934 issue.

A The figures for "other" bonds and stocks held (book value) for the months of January and February 1934 shown as 611 and 616 million dollars, respectively, in the monthly issues from May 1934 to April 1935 should read 514 for January and 518 for February.

Data slightly revised for the period January 1934-June 1936; revisions not shown above will appear in a subsequent issue.

Data are compiled by the American Bureau of Metal Statistics and represent the estimated world output. The series for the period January 1928-August 1934 presented in the Survey covered the principal producing countries which produced the following percentages of the world total: 1928, 87.9; 1929, 87.1; 1930, 85.5; 1931, 82.0; 1932, 75.5; and 1933, 77.5.

Series revised to include emergency expenditures. Figures as shown in Survey for months prior to May 1932 are comparable with this series. Comparable figures for the period May 1932 to March 1933 are on p. 33 of the June 1934 issue. Later data are shown in monthly issues.

1 For 1934 includes \$2,208, 221, 138 for February, \$2,233,252 for March, \$409,052 for April, \$298,898 for May, \$213,447 for June, \$272,163 for July, \$268,204 for August, \$134,843 for September, \$173,702 for October, \$116,585 for November, \$132,296 for December. For 1935 includes \$1,304,303 for May, \$105,773 for June, \$65,219 for July, \$62,055 for August, \$62,936 for September, \$56,256 for October, \$10,737 for June, \$65,219 for July, \$62,055 for August, \$62,936 for September, \$56,256 for October, \$65,780 for November, and \$70,889 for December. For 1935 includes \$12,007 for July, and \$70,889 for December. For 1935 includes \$12,007 for June, and \$201,071 for July, representing the increment resulting from reduction in weight of the gold dollar.

Por earlier data on net gold imports see p. 20 of the December 1932 issue. For new series for internal revenue tax receipts from admissions to theaters, capital stock transfers, and sales of radios, see p. 20 of the December 1932 issue. For new series for internal revenue tax receipts from admissions to theaters, capital stock transfers, and sales of radios, see p. 20 of the December 1932 issue. For new series for internal revenue tax receipts from admissions to theaters, capital

[†] Revised series. All series of corporation profits revised for period 1928-35. For revised data see p. 15 of the August 1936 issue. The data of the Reconstruction Finance Corporation has been revised to include the statistics of certain loaning agencies of the Corporation not included heretofore and for revisions made in recent audits. Revised data for February 1932-March 1936, inclusive, are shown on p. 20 of this issue. The data have been recently revised again; revisions not shown in the July 1936 issue will appear in the 1936 Supplement.

[•] Revised
• Has included since July 1934 other than farm loan issues for which Treasury has acted as fiscal agent.
• New series. Data on new security registrations fully effective for the period September 1934-December 1935 and volume of trading in futures for the period January 1921-December 1935 are shown on p. 20 of the March 1936 issue. New series on bond sales on all registered exchanges (market and par value) and on the New York Stock Exchange (par value) are shown on p. 20 of the April 1936 issue for the period October 1934-February 1936. Data on new series of prices of domestic bonds (45) and U. S. Government bond prices other than those shown above will appear in a subsequent issue.

‡ The difference in the figures covering bond sales on the New York Stock Exchange (par value) is due to stopped sales being included in the figures of the Securities and Exchange Commission (total) beginning April 1935.

¶ Data for the year 1935 revised by reporting source. See p. 35 of the April 1936 issue.

^{*} New series. For earlier data see p. 20 of the August 1934 issue, yield on United States domestic long-term bonds (all Issues except those due or callable within 8 years) for years 1926-34; for data for years 1919-25 see p. 20 of the November 1935 issue. Series on stock sales on all registered exchanges and on the New York Stock Exchange as compiled by the Securities and Exchange Commission for the period October 1934-February 1936 are shown on p. 20 of the April 1936 issue. For quantity exports adjusted for seasonal variation for the period July 1914-August 1935 see p. 18 of the October 1935 issue.

† For earlier data on yield of domestic and municipal bonds see pp. 19 and 33 of the April 1933 issue. Data covering the Standard Statistics indexes of stock prices have been revised. The revision, however, did not change the indexes materially. Revised data not shown above will appear in the 1936 Supplement.

‡ The difference in the figures covering the volume of stock sales on the New York Stock Exchange since April 1935 is due to stopped and odd lot sales being included in the figures of the Securities and Exchange Commission. These are excluded in the figures reported by the New York Times.

- revised.													

*Revised.

*Beginning with January 1934, import data represent imports for consumption (goods entering consumption channels immediately upon arrival, plus withdrawals for consumption from bonded warehouses) and are not comparable with earlier figures, which consist of general imports (goods entered for storage in bonded warehouses, plus goods entering consumption channels upon arrival in the U. S.).

†Revised series. Data for January 1929-May 1935, inclusive, on electric railway passengers carried and operating revenues for January 1922-April 1935, inclusive, are shown on p. 19 of the August 1935 issue. Data on electric railway passengers carried through December 1935 are based on estimates for 210 companies, and for 1936 on estimates for 214 companies.

*New series. Data prior to April 1933 on value of imports for consumption will be shown in a subsequent issue.

*Digitized #Setures A Equipment of the December 1933 issue. Other revisions for the year 1932 were shown on p. 34 of the April, May, December 1933, and January 1934 Digitized April 1935 issue.

Monthly statistics through December 1931,	1936	1		19	35					19	36		
together with explanatory footnotes and refer- ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey	July	July	August	Septem- ber	October	Novem- ber	Decem- ber	Janu- ary	Febru- ary	March	April	May	June

^{*} Revised. # Includes tonnage in both upper and lower Mississippi River. Revised figures prior to December 1934 will be shown in subsequent issue.

† Revised series. For earlier data see p. 20 of the April 1934 issue for operating revenues, operating expenses, and net railway operating income of class I railways. For revisions of data for clearances of vessels in foreign trade, see p. 36 of the September 1934 issue. For revisions on Panama Canal from August 1914 to June 1935, see p. 19 of the September 1935 issue.

* New series. Data on airplane travel covers scheduled air lines operating in United States. For data on passengers carried for period of 1926 to 1933 and passenger-miles flown from 1930 to 1933, see p. 20 of the February 1934 issue. For data on miles flown and express carried from 1926 through 1933, see p. 19 of the January 1935 issue. New series on telephones as compiled by Federal Communications Commission. Data supersede those published in previous issues of the Survey which covered all carriers having annual operating revenues in excess of \$250,000; present series for 1934 and 1935 are for 57 carriers representing about 95 percent of all carriers according to the 1932 census, based on revenues for all companies. Beginning January 1936, data are for 62 carriers representing about 95 percent. Revised data for 62 companies for 1935 are as fellows: Total operating revenues, January \$1,778,000, February \$78,142,000, March \$31,2,000; message tolls, January \$15,467,000, February \$18,805,000, March \$20,131,000; operating expenses, January \$55,030,000, February \$55,695,000, March \$57,478,000; et operating income January \$15,467,000, February \$14,316,000, March \$15,882,000; stations in service, end of month, January 14,246,000, February 14,285,000, March \$15,882,000; stations in service, end of month, January 14,246,000, February 14,285,000, March \$20,000.

This figure covers room revenue only.

**Data for August, November 1935 and February and May 1936 are for 5 weeks; other months, 4 weeks

^{*} Revised.

* Figures of two industrial alcohol establishments in Puerto Rico are not included in the totals since February 1936. These establishments represented 2 percent of the production of ethyl alchol and 12 percent of the production of denatured alchol in 1935.

* New series. For earlier data see p. 20 of the April 1935 issue (alcohol withdrawn tax paid), p. 20 of the April 1933 issue (production of crude methanol). Latter series for production revised for 1934 and 1935. Revisions not shown above will be published in a subsequent issue.

† Revised series, see p. 36 of the June 1933 issue, for 1932 revisions, exports and imports of fertilizer; for 1933 revisions on exports see p. 29 of the September 1934 issue; for 1934 revisions see p. 19 of the December 1935 issue; for 1934 revisions see p. 36 of the May 1934 issue. Quarterly data on fats and oils for the years 1932 and 1933 were shown on p. 19 of the March 1935 issue; for 1934 on p. 19 of the November 1935 issue. For revised series on explosives for period January 1920-October 1933 see p. 19 of the January 1934 issue.

The refined equivalent of crude production is approximately 82 percent.

Texas only. Louisiana produced 23 percent of the United States production in 1933, 16 percent in 1934, and 23 percent in 1935.

Digitized for FF Figures since January 1922 revised due to dropping of Missouri from Southern States classification. See p. 19 of the January 1934 issue.

Monthly revisions for 1933 are shown on p. 20 of the October 1934 issue; for 1934 revisions see p. 20 of the December 1935 issue.

Federal Reserve Bank of St. Louis

Monthly statistics through December 1931, together with explanatory footnotes and refer-ences to the sources of the data, may be found in the 1932 Annual Supplement to the Survey 1936 January Febru-Decem-Septem October Novem-July July August March | April May June ber ber ary

Digitized for FRASER

^{*}August 1 estimate / December 1 estimate.

*For earlier data on vegetable shortening price, see p. 18 of the January 1934 issue.

*Revised series: Monthly data on cottonseed and cottonseed products for the year ended July 1932 were shown on p. 20 of the February 1933 issue; revisions for each month of 1933 were shown when monthly data for 1934 became available; revisions for year 1934 were shown on p. 38 of the November 1934 issue and for year ended July 1935 on p. 20 of the November 1935 issue. For exports of cottonseed cake and meal for the year 1932, see p. 37 of the June 1933 issue. Data revised for 1933, see p. 19 of the September 1934 issue; for 1934 revisions, see p. 19 of the December 1935 issue. For revised data on imports of vegetable oils for 1932, see p. 17 of the June 1933 issue; for 1933, p. 20, of the October 1934 issue; and for 1934, p. 20, of the December 1935 issue.

Quarterly data on fats and oils for the years 1932 and 1933 were shown on p. 19 of the March 1935 issue; for 1934 on p. 19 of the November 1935 issue. Data revised for 1933; see p. 20 of the October 1934 issue; for 1934 revisions, see p. 20 of the December 1935 issue.

**This series prior to September 1935 was listed as "Lard Compound."

Revised		<u> </u>		·									

[•] Revised.
• New series. For earlier data see p. 19 of the May 1935 issue, manufactured and natural gas. Series on cellulose products prior to January 1933 not available.
¶ Revised series. Data revised beginning with January 1932; see p. 39 of the April 1935 issue. Revisions for period January 1932 to January 1934, inclusive, will be shown in a subsequent issue.
† For revised data for electric-power production for 1932 see pp. 38 and 56 of the May 1933 issue; for 1933 see p. 38 of the May 1934 issue; 1934 and 1935 data also revised. Revisions not shown in the June 1935 issue and in the May 1936 issue will appear in a subsequent number. Manufactured and natural-gas statistics for the years 1929-35 have been revised. Revised data on manufactured gas are shown on p. 20 of the June 1936 issue.
§ For revised data on paint, varnish, and lacquer products for the years on "total" for 1928-35 and "unclassified" for years 1932-35 see p. 20 of the November 1935 issue.

Monthly statistics through December 1931, together with explanatory footnotes and refer-	1936			19	35					193	36

^{*}Revised. Spulk evaporated milk not included since December 1931. *Aug. 1 estimate. *Dec. 1 estimate. *New series. Boverage figures are compiled by the U. S. Treasury, Alcohol Tax Unit. Monthly data on distilled spirits available heginning July 1933 and on fermented malt liquors, April 1933. For earlier data for receipts of milk in Greater New York see p. 20 of the August 1934 issue. See p. 19 of the June 1933 issue for butter consumption. Data on consumption of rectified spirits are as indicated by the sale of stamps. Data prior to April 1933 not published.

**Revised series. For revisions refer to the indicated pages of the monthly issues, as follows: For 1931 on apparent consumption of cheese, production of condensed and evaporated milk, p. 20, January 1933. For earler data on stocks (cold-storage holdings) of total and American whole-milk cheese, p. 19, April 1933. For 1932 revised data on production of factory and American whole-milk cheese, production of ondensed and evaporated milk, p. 39, November 1933. For 1932 and 1933 revisions on production of butter and cheese consumption and 1933 revisions on production of butter, cheese, condensed and evaporated milk, see p. 19 of the March 1935 issue. For final revision for 1933, car-lot shipments of apples, citrus fruits, onions, and postatoes, see p. 20, January 1935 issue, and for 1934 revisions see p. 20 of the March 1935 issue.

**Consumption of distilled spirits (withdrawn tax paid) plus brandy tax paid direct from fruit distillers plus ethyl alcohol withdrawn tax paid (see p. 39) equals Bureau of Internal Revenue total of distilled spirits withdrawn tax paid.

• Revised. • Aug. 1 est	imate.		/ De	c. 1 estim	AtA.		1 No at	otation.		2 Bre	wer's rice	not inclu	ded.

^{4, 950} 4, 068 • Revised.
• Aug. 1 estimate.

• Dec. 1 estimate.

• No quotation.

• No quotation.

• Brewer's rice not included.

• New series. For earlier data, see p. 20 of the November 1932 issue, rye and barley receipts and rye stocks; and p. 20 of the June 1935 issue, wholesale price of wheat, No. 1 Dark Northern Spring, Minneapolis. Since the division of no. 2 barley by the Department of Agriculture into straight and malting grades as of July 1, 1934, prices for each grade have been reported separately.

† Data revised. For revisions of wheat flour, production and consumption (Russell's) from July 1931 to December 1932, see p. 19 of the August 1933 issue. For revised data on exports for 1932 see p. 39 of the June 1933 issue for 1933, p. 20 of the September 1934 issue, and for 1934, p. 19 of the December 1935 issue.

• Represents the visible supply east of the Rocky Mountains as reported by Dun & Bradstreet.

See footnote on p. 37 of this issue. Data for 1933 also revised, see p. 20 of the October 1934 issue, and for 1934, revisions p. 20 of the December 1935 issue.

Monthly statistics through December 1931,	1936	<u>_</u> .		19	935					193	36

†Revised series. For revisions refer to the indicated pages of the monthly issues, as follows: Exports of tobacco for 1932, p. 42, June 1933, data revised for 1933, see p. 20 of the September 1934 issue. For 1934 revisions see p. 19 of the December 1935 issue. 1932 final revision of anthracite production, p. 42, January 1934. Anthracite shipments for 1932, p. 42, December 1933. For revised data for 1932 on sugar meltings and stocks, see p. 41 of the May 1933 issue. For 1932 revisions of sugar imports and exports see p. 41 of the June 1933 issue. For revisions of exports in 1933, see p. 20 of the September 1934 issue. Revised data on shipments and stocks of refined sugar at 2 ports (for period January 1925-April 1935) are shown on p. 18 of the October 1935 issue. The change resulted from a reduction in the number of reporting refineries. #See footnote on p. 37 of this issue. Data revised for 1933, see p. 20 of the October 1934 issue. For 1934 revisions, see p. 20 of the December 1935 issue.

† Price converted to short-ton basis. Data on a short-ton basis, Data on a short-ton basis. Data on a short-ton basis prior to April 1931 were not published. Earlier monthly data were reported on a long-ton basis.

*Note major correction in data on imports of refined sugar from Cuba, June-November 1934, were shown in the February 1935 issue.

*New series. For earlier data, see p. 20 of the August 1934 issue, for receipts of refined sugar from Hawaii and Puerto Rico and imports from Cuba. Data prior to May 1934 on imports of refined sugar from the Philippine Islands are not available.

| Monthly retail price of coal was discontinued with the month of August 1935. Subsequent to that month the price is shown quarterly.

[•] Revised.

• Figures revised to reflect transfers between pipe line and refinery stocks beginning December 1935.

† Revised series. For revisions refer to the indicated pages of the monthly issues, as follows: Consumption of bituminous coal by electric power plants for 1932, p. 42. May 1933; for 1933, p. 42. May 1934. Data also revised for 1934 and 1935. Revisions not shown on p. 43 of the June 1935 issue and p. 46 of the May 1936 issue will appear in a subsequent issue. Bituminous coal production for 1932, p. 42, January 1934. Bituminous coal production revised for 1933 and 1934. Revisions not shown in the May 1935 issue will appear in a subsequent issue. For 1935 issue, and for 1937 previsions see p. 46 of the March 1936 issue. Beehive and byproduct coke for 1932, p. 43 of the Dec. 1933 issue, and for 1933 revisions see p. 48. July 1934. Data for 1934 and 1935 also revised; revisions not shown in the July 1935 and the August 1936 issues will appear in a subsequent issue. Crucke petroleum production, stocks, east of California (total), art refineries and at tank farms and pipe lines, and wells completed, for 1932; see footnote on p. 56, November 1933. Consumption of gas and fuel oils in electric power plants for 1932, p. 43, May 1933; for 1933 revisions, p. 43. May 1934. Data also revised for 1934. Revisions for months not shown for 1934 on p. 44 of the June 1935 issue will appear in a subsequent issue.

Data revised for 1935, see p. 46 of the May 1936 issue. Production of gasoline at refineries for 1932, p. 56, November 1923, retail distribution og gasoline in 41 States for 1935, p. 43, May 1934.

**Bee footnote on p. 37 of this issue. Imports also revised for 1933 issue to 1935 issue.

**Data revised for 1933, see p. 20 of the January 1935 issue. For 1934 see p. 20 of the October 1935 issue.

**Data revised for 1933, see p. 20 of the September 1934 issue for 1935 issue.

a Revised.													

Revised.

Data for 234 manufacturers not available for these months. Figures shown are computed by means of the month-to-month percentage change indicated by the current Census Bureau report for 228 identical concerns.

Raw stocks in all hands as shown above include all hides from Government animals slaughtered under Federal inspection. Hides from cattle allotted to State relief agencies and which were not killed under Federal inspection are not included unless they have already moved into sight. It is obvious, therefore, that a quantity of hides from noninspected slaughter held by State Relief Agencies constitutes an invisible addition to the visible supplies shown above.

Data on production of sheep and lamb and goat and kid leathers from 1927-34 have been revised. For revisions not shown on p. 44 of the April 1935 issue see p. 19 of the June 1935 issue.

Government relief slaughter included for the period June 1934-February 1935. See p. 44 of the June 1935 issue for the figures, excluding relief slaughter. For sheep and lambs, relief slaughter only affected the data for the months of September to December 1934.

Data revised for 1933. See p. 20 of the January 1935 issue. For 1934 see p. 20 of the October 1934 issue, for 1934 revisions see p. 20 of the December 1935 issue.

See footnote on p. 37 of this issue. Imports revised for 1933, see p. 20 of the October 1934 issue, for 1934 revisions see p. 20 of the December 1935 issue.

New series: For earlier data refer to the indicated pages of the monthly issues. Leather production, p. 19, June 1933; leather stocks, p. 19, January 1935. New series on gloves and mittens cover 234 identical manufactures as reported to the U. S. Department of Commerce, Bureau of the Census. Data prior to July 1934 are not available. These data are not comparable with data through January 1934 previously shown. New series on wholesale price of women's shoes began January 1934. Data not shown above will appear in a subsequent issue.

The revised series. For earlier data refer to the in

[•] Revised.

1 Data temporarily discontinued.

• New series. For data on lumber exports for period of January 1919 to September 1932, see p. 20 of the November 1932 issue. See special footnote below on lumber production, shipments, and stocks.

† Data revised for 1932, see p. 44 of the June 1933 issue, exports of Douglas fir lumber and timber. Boot and shoe production for 1934, p. 45, March 1935 issue, for 1935 revision see p. 48 of the March 1936 issue.

• Data revised for 1933. See p. 20 of the September 1934 issue; for 1934 revisions see p. 19 of the December 1935 issue.

• New series on lumber production, shipments, and stocks compiled by National Lumber Manufacturers' Association and represent an estimate of the total lumber cut based on monthly reports received from regional associations covering between 80 and 90 percent of the total cut in 1934 and 70 to 80 percent in 1935. No comparable figures are available prior to January 1934.

¶ Series have been revised for period January 1934-October 1935. These are shown on p. 20 of the February 1936 issue.

‡ Beginning with January 1934 the report includes all known operators; prior to that time approximately 89 percent of the listed capacity,

§ Data revised for 1932. For revisions of exports of Southern pine lumber and timber, see p. 45 of the June 1933 issue. Data revised for 1933, see p. 20 of the September 1934 issue. For 1934 revisions see p. 19 of the December 1935 issue.

§ New series covering these items will be shown in a subsequent issue,

1.70													

Data covering non-vitreous clay, recessed and attachable accessories not included.

Data on convection type radiators, prior to January 1932 not available. For earlier data on wholesale price of plumbing and heating equipment, see p. 20 of the January 1933 issue; for steel castings, p. 20 of the October 1934 issue; and for United States Steel Corporation shipments, see p. 18 of the January 1934 issue.

In equivalent direct radiation.

Revised series. For earlier data on bathroom accessories see p. 20 of the October 1933 issue. Data on vitreous china plumbing fixtures revised beginning January 1938, see p. 47 of the April 1935 issue; revisions for 1933 will be shown in a subsequent issue.

Steel casting series revised January 1935 by the increase of the number of companies from 164 to 180; comparable data not completed for 1934 and earlier years. Figures for 164 companies in January 1935 were new orders, total 31,816, percent of capacity 20.3; new orders, railway specialties, 6,835; production, total 28,519; percent of 1932 revisions see p. 46 of the July 1933 issue; for 1933, p. 47 of the August 1934 issue; for 1934, p. 50 of the August 1935 issue.

Revised figures for the first quarter of 1935 are: January 2,870,000, February 2,774,000, and March 2,865,000 long tons.

Monthly statistics through December 1931, together with explanatory footnotes and refer-	1936			19	35					19	936

Comparable data not available. See the regular monthly report of the Census Bureau for detailed data on this industry.

*Revised.

*New series. For earlier data see p. 20 of the December 1932 issue for tin and terneplate and p. 20 of the July 1934 issue for machine tools (including forging equipment). Current oil-burner series, available only back to January 1933, are based on reports from 160 concerns.

†Revised series. Data on air-conditioning equipment revised starting January 1933; see footnote on p. 48, April 1935. The revisions for 1933 will be shown in a subsequent issue.

‡Oil burners revised for 1934 and 1935, to exclude data erroneously reported. See p. 51 of the April 1936 issue. Data for 1933 and 1934 will be shown in a subsequent issue.

*Revised data on steel furniture shelving for years 1932, 1933, and 1934 will be shown in a subsequent issue.

*Revised series on mechanical stokers, see p. 48 of the April 1935 issue; domestic pumps starting January 1934, see p. 49 of the April 1935 issue.

*Series covering shipments and unfilled orders temporarily discontinued.

^{*}Revised.

*New series: For earlier data, see p. 20 of the December 1932 issue, for tin and terneplate; p. 20 of the July 1935 issue, electric refrigerators; and p. 20 of the August 1934 issue, for hand-type vacuum cleaners.

†Data for Babbitt metal revised for the period January 1932—December 1935; see p. 20 of the July 1936 issue. For 1933 revisions on zinc see p. 49 of the January 1934 issue, for 1934 see p. 49 of the February 1935 issue; for 1935, see p. 52 of the February 1936 issue.

‡Present series on water systems cover 52 companies.

For revisions for 1932, see p. 48 of the June 1933 issue; for 1933, p. 20 of the September 1934 issue; for 1934, p. 19 of the December 1935 issue.

‡Data for 1932 revised; for 1932 revisions, see p. 48 of the June 1933 issue, total imports of copper.

‡See footnote on p. 37 of this issue. Data for 1933 revised; see p. 20 of the October 1934 issue. For 1934 revisions, see p. 20 of the December 1935 issue.

¶Revised series on water systems starting January 1934; see p. 40 of the April 1935 issue; for earlier data on new orders for electrical goods, see p. 19 of the August 1933 issue. New series on water-softening apparatus revised starting January 1933; revisions for 1933 will be shown in a subsequent issue.

[•] Revised.

† Revised series. Data for period January 1933-January 1934, inclusive, on consumption and stocks of waste paper at mills will be shown in a subsequent issue. Sales books, new orders, have been revised beginning January 1935 to include the statistics of 2 members not included heretofore. The data now represent 90 percent of all the sales books sold in the United States. For 1935 revisions see p. 54 of the May 1936 issue. Revised data for 1935 not shown above, January 13,727, February 13,895.

¹ Discontinued by reporting source.

§ The Bureau of the Census has changed the title of the "Boxboard" report to "Paperboard" since data actually cover all board of .0012 of an inch or more in thickness reported by the cooperating manufacturers. Figures given on production and new and unfilled orders are for 94 identical manufacturers; and consumption and stocks of waste paper for 82 manufacturers. Estimated coverage is given in footnote marked § on p. 53.

• New series. New series on paperboard shipping boxes compiled by the National Container Association, Chicago, Ill., from reports from all members of the industry of record beginning in January 1934. The volume of companies not reporting each month is estimated by the association, so as to keep the series comparable. Prior to January 1934 data covering this industry were compiled by the Paper Board Industries Association. See footnote marked "§" on p. 53 of this issue for book, fine, and wrapping paper.

See footnote on p. 37 of this issue; data for 1933 revised; see p. 20 of the October 1934 issue. For 1934 revisions see p. 20 of the December 1935 issue.

¹ Discontinued by reporting source.

† Data for 1934 and for the period January to July 1935 are estimated to represent approximately 97 percent of the industry; for subsequent months the coverage is estimated to be 81 percent. Previously published data are estimated to cover about 80 percent of the industry for 1929-33, inclusive, and 70 to 80 percent prior to 1929.

See footnote on p. 37 of this issue. Data for 1933 revised. See p. 20 of the October 1934 issue. For 1934 revisions see p. 20 of the December 1935 issue.

In October 1933, 4 new companies were included in the report and 1 additional company in January 1934. Since that month, the coverage of the industry is 100 percent. For preceding periods the coverage varied; in 1929 it was 90 percent; in 1931, 80 percent; and in 1933, 95 percent, according to the Census of Manufactures. Overlapping figures are available for October 1933. See the October 1933 issue for October 1933 data for the smaller number of firms.

New series. Earlier data not published on total shipments of rubber heels and rubber soles prior to December 1932.

† Revised series. Data on consumption of rubber for tires and tubes revised for 1932, 1933, and 1934. See p. 51 of the August 1934 issue. Revised data from September 1930-December 1934—rubber world stocks, world affoat, and affoat to the United States appear on p. 20 of the July 1935 issue; for 1932 revisions for United States stocks, see p. 50 of the May 1933 issue. See p. 50 of the June 1933 issue for crude rubber imports.

A Coverages of Rubber Association data has varied considerably over period for which data have been shown in Survey. Coverage was generally higher in 1934 and 1935 than in earlier years.

Monthly statistics through December 1931, together with explanatory footnotes and references to the sources of the data, may be found in the 1932 Annual Supplement to the Survey 1936 1936 Decem-Febru-Septem-ber Novem-ber July July October January March April May June August агу

Revised.

* New series. Earlier data not published on illuminating glassware prior to July 1932 (except production and percent of capacity); for earlier data see p. 20 of the June 1933 issue, face brick, machine production. Series on common and vitrified paving brick and tile beginning January 1934 were shown on p. 20 of the June 1935 issue. For earlier data on gypsum see p. 20 of the January 1933 issue.

‡ Adjusted for degrading and year-end physical inventories

† Data on plate glass represent the total output of the industry. Complete figures for the months of 1932 were shown on p. 52 of the March 1933 issue, and for 1934 revisions p. 55 of the March 1936 issue.

Mouthly series on glass containers for 1934 revisions p. 55 of the March 1936 issue.

Mouthly series on glass containers for 1934 and 1935 are not comparable with those of earlier years due to increase of number of firms reporting to 44. Shipments of the forthey ear of 1933 amounted to 33,048,747, compared with 23,511,963 for the 30 firms reporting for the same year. Comparable statistics on shipments for the companies, now reporting by years, from 1928 to 1933, inclusive, were as follows (in gross): 1923, 31,943,016; 1929, 33,765,896; 1930, 31,905,933; 1931, 31,413,508; 1932, 26,947,949; and 1933, 33,048,747. Data are not available for this period on production and stocks, nor are monthly figures on shipments available. It may be noted from the trend of these data that the monthly figures prior to 1934 had a downward bias. Basis of estimating capacity was changed in computing the new series. Data for 1934 revised; see p. 52 of the May 1935 issue; for 1935 revisions see p. 56 of the June 1936 issue.

Monthly statistics through December 1931, ogether with explanatory footnotes and refer-	1936			19	30				·	193

<sup>Revised.
New series. For earlier data see p. 20 of the February 1934 issue for total shipments, accessories and parts, and registrations of new commercial cars.
Revised series. For earlier data see p. 19 of the August 1933 issue for fire extinguishers and passenger-car registrations; exports of locomotives for 1932; p. 55 of the June 1933 issue for 1934, see p. 20 of the September 1934 issue, and for 1934 p. 19 of this issue. Data on automobile production revised for 1933. See p. 55 of the August 1934 issue. For revised data for 1934 see pp. 55 and 56 of the June 1935 issue. Data for 1935 and 1936 through March revised. See p. 59 of the June 1936 issue.
Taxicabs are included in figures for passenger cars, beginning January 1934 in order to avoid disclosure of individual companies.
United States and Canadian dealers, plus overseas shipment.</sup>

Monthly statistics through December, 1931,	1936			1	1935			1936

Revised.
 Statistics in this section, with few exceptions, are from the Dominion Bureau of Statistics, Ottawa.
 Data for 1934 revised. See p. 56 of the May 1935 issue.
 New series. For earlier data see p. 18 of the February 1933 issue, business indexes, and p. 20 of the October 1933 issue, commercial failures.
 Revised series. See p. 55 of the April 1934 issue, construction and mining, for 1933. Series on common-stock prices revised back to December 1932 as a result of additional stocks being added; for revision see p. 56 of the April 1934 issue. New bond issues revised for the year 1935; see p. 60 of the April 1936 issue.
 Number of commodities changed from 502 to 567 beginning with month of January 1934.
 Data revised January 1932 through July 1933. Revision for 1932 see p. 55 of the November 1933 issue. For final revisions for 1933 see p. 56 of the October 1934 issue.

issue.

A Data for 1935 revised. For revisions see p. 60 of the May 1936 issue.

Data on exports, both index numbers and absolute figures revised beginning April 1933 to include non-monetary gold. Revisions not shown in the July 1936 issue will appear in a subsequent issue.

MINERALS YEARBOOK, 1936

U. S. DEPARTMENT OF THE INTERIOR, BUREAU OF MINES

HIS volume provides in convenient form a comprehensive and accurate record of economic developments and trends in the mining industry of the United States for the information and use of producers and consumers of mineral commodities and of the general public. The factual data regarding the operation of the mineral industry of the United States in 1935 are presented and interpreted in this edition of the Minerals Yearbook."

> JOHN W. FINCH, Director, U. S. Bureau of Mines.

Price \$2 a copy

1089 Pages

69 Chapters

154 Illustrations

CONTENTS

Part I-Survey of the mineral industries

Review of the mineral industry Statistical summary of mineral

production
World production of minerals and
economic aspects of international
mineral policies

Part II—Metals

Gold and silver Copper Lead Zinc

Lead and zinc pigments and zinc

Lead and zinc pigments and zinc salts
Detailed accounts of metal production in Alabama, Alaska, Arizona, Arkausas, California, Colorado, Georgia, Idaho, Illinois, Kansas, Kentucky, Maryland, Michigan, Missouri, Montana, Nevada, New Jersey, New Mexico, New York, North Carolina, Oklahoma, Oregon, Pennsylvania, South Carolina, South Dakota, Tennessee, Texas, Utah, Virginia, Washington, Wisconsin and Wyoming. Secondary metals
Iron ore, pig iron, ferro-alloya, and

Iron ore, pig iron, ferro-alloys, and steel

Bauxite and aluminum

Manganese and manganiferous ores Molybdenum

Tungsten

Chromite Antimony

Attentic Radium, uranium, and vanadium Platinum and allied metals

Minor metals: Beryllium, bismuth, cadmium, cobalt, selenium, tan-talum and columbium, tellurium, titanium, and zirconium

Part III-Nonmetals

Coal Coke and byproducts
Recent developments in coal preparation and utilization

Fuel briquets
Peat
Crude petroleum and petroleum

products
Natural gas
Natural gasoline
Carbon black

Helium Asphalt and related bitumens Cement

Slate Sand and gravel

Gypsum
Lime
Clay
Abrasive materials

Abrasave materials
Sulphur and pyrites
Salt, bromine, calcium chloride
and iodine
Phosphate rock
Fuller's earth
Tale and ground soapstone

Fluorspar and cryolite

Feldspar Asbestos Barite and barium products Potash

Magnesium and its compounds Mica Natural sodium compounds and

boron minerals Cem stones Minor nonmetals: Graphite, green-

sand, kyanite, mineral wool, monazite, strontium minerals, vermiculite and wollastonite

Part IV—Mine Safety

Employment and accidents in the mineral industries

COMPLETE INDEX

The Balance of International Payments of the United States in 1935

Price 10 cents

- The fourteenth annual survey of the United States' international transactions made by the Department of Commerce has just been published. The results are set forth in detail in Trade Information Bulletin No. 833.
- The items examined in this study include not only the so-called "visible" exports and imports but also short-term and long-term capital movements, tourist expenditures, immigrant remittances, interest receipts, etc.
- The data in the present study have an important bearing on the international trade situation, blocked accounts, international security transactions, gold and silver movements, and related problems. It is felt therefore that it is of more than usual significance at this time.

Copies of both publications may be obtained from the Superintendent of Documents, Washington, D. C.

Due to the wide interest in these two publications it is anticipated that the demand for copies will exhaust the initial supply in a short time. In order that delays may be avoided it is suggested that you order your copies today.
