TRENDS

Your records may not show them. Research does.

TRENDS are not determined merely by studying your plant or your customers. Research traces the direction your industry is taking, not only in your own selling community but over the whole Continent, even the world; and indicates whether your organization can follow wherever the arrow points to *greater sales, increased profits.*

THE SURVEY of CURRENT BUSINESS

starts you at the first tee in your trail of trends with a summary of the current business situation and of developments in your field. It then follows through with specific data related to your own activities—prices, production, stocks, new orders, unfilled orders, exports, retail sales, employment, wages, and other basic figures.

TRENDS

thus trailed by facts lead to seasonal or permanent adjustments in your business; explorations into new territories; perhaps, new undertakings.

Your records will show the results of this research—a larger net on your income statement, a greater surplus on your balance sheet.

Business Situation Summarized

BUSINESS continues extremely dull, and the seasonal increase which usually occurs at this time of the year has been slow in developing. Industrial production in August receded slightly from the July level, and the adjusted index fell below that of last December. Declines of about equal proportions in manufacturing and mineral production caused the general index to drop 3.6 per cent below July and 12 per cent below August, 1930. Recession during the month was pronounced in the iron and steel, automobile, cement, and petroleum industries. Activity in major lines of consumers' goods continued on a relatively favorable plane, resulting in pay-roll gains in the textile, food products, and leather industries. Silk and cotton consumption in August were substantially in excess of a year ago, and the output of boots and shoes was the largest since October, 1929. The adjusted employment index was slightly below July, while the unadjusted index of pay rolls was unchanged.

Distribution indexes have also failed to expand. Freight-car loadings again declined, the adjusted index receding about 5 per cent below July. Department store sales were larger, but the increase was less than seasonal. Bank debits outside New York were about 10 per cent lower than in July, and have not increased so far in September.

Probably the most encouraging feature of the month was the continued stability of wholesale prices, the index of which has remained substantially unchanged since June. The severe decline in construction awards in early August was canceled in a measure by the subsequent increase, although the total for the month was off more than seasonally.

Reserve bank credit outstanding increased sharply during August, primarily as a result of continued currency withdrawals and the transfer of an additional volume of foreign bank funds from the money markets to deposits in the reserve banks. Changes in money rates were negligible, and the market was characterized by continued ease. Stock prices in August fluctuated within a narrow range, but in September acute weakness carried the market below the June lows. Bond prices have also been reactionary. Gold holdings advanced in August, but more recently important amounts have been placed under earmark for foreign account as a result of the unsettlement abroad. New capital issues were relatively small. Commercial failures in August decreased, both in number and liabilities involved, but bank suspensions were more numerous and the deposits affected were the largest since last December.

¹ Adjusted for seasonal variation.

² Adjusted for number of working days.

Finance—Credit and Banking

CREDIT and banking statistics during August were indicative of the continued low level of business activity. Bank debits in New York City, which reflect to a fair degree conditions in the security markets, fell during August approximately 16 per cent below those of the previous month. Debits outside of New York City, which reflect the general tendencies in business turnover, showed a decline of about 10 per cent. To some extent seasonal influences accounted for these trends, but the failure of general business activity to hold to seasonal levels caused the drop to be somewhat marked.

Liquidation of commercial bank portfolios is reflected in the general downward trend of both loans and investments. The decline in "all other" loans fails to show the full degree to which commercial loans have receded, owing to the inclusion of certain bank holdings of acceptances which do not represent new commercial transactions. The August decline in loans on securities is in line with a trend evident throughout the year and influenced in part by the low prices of stocks. The month's change in bank investments is somewhat contrary to the general trend since the end of 1929 and is indicative of the tendency on the part of banks to protect their reserve position in time of stress. During the first half of September there was no change in these general trends.

The condition of the Federal reserve banks at the

end of August reflected several recent and significant developments. The marked increases in Federal reserve notes in circulation during a month of receding business activity is apparently influenced in part by the tendency of individuals and institutions to maintain a somewhat more liquid position than usual. A factor which reflects a condition of international interest is the month's sharp increase in bills bought in the open market. This sharp reversal was apparently the result of England's action in drawing on her American credits in an effort to stem the flow of gold from London, a development which culminated during the third week of September in the suspension of sterling payments in gold. In consequence of these domestic and foreign developments total reserve bank credit exceeded the billion dollar mark for the first time this year.

Despite a net import of gold during August, the reserve ratio showed the sharpest drop for any month this year. The decline was due to a sharp increase in reserve-bank liabilities, especially in the note circulation. The month's drop in total bankers' acceptances outstanding was approximately equal to the decline of the preceding month. These two reductions for single months were influenced to a large degree by sharp contractions of credits based on goods stored in or shipped between foreign countries and by the maturity of credits which were not renewed.

Finance—Security and Money Markets

STEADY declines in the general level of bond prices, halted temporarily in the final week, featured security markets during August. All stocks listed on the New York Stock Exchange as of September 1 showed a slight appreciation as compared with a month previous. In the first half of September both stock and bond prices dropped rapidly and liquidation assumed increasing proportions.

Activity during the greater part of August was accompanied by a relatively low rate of turnover. During the first three weeks of September, however, sales assumed greater volume largely as a result of heavy liquidation early in the month and heavy alternate selling and buying immediately preceding and following the suspension of gold payments by England.

Reported stock sales during August were on an exceptionally low level. The turnover showed a marked increase during the first three weeks of September owing to occasional periods of heavy liquidation. In a fair degree security market activity, as reflected in both turnover and price, moved sympathetically with developments in the international money markets and with the security price trend in leading European markets. The far-reaching nature of these influences caused bond prices to move in general with stock prices.

After sharp declines during the first week of August various bond groups, especially certain European and South American issues, showed renewed strength but by the middle of the month weakness again definitely set in and prices moved steadily downward throughout August and the first half of September.

Continued weakness in the general banking situation, as well as in the security markets, continues to be reflected in the unusually low level of new capital issues. August issues were considerably below those of February, the record low month of the first half of the year. Issues of long-term real-estate bonds, though still on a low monthly level, showed a marked increase during August over those of the preceding month. Total dividend and interest payments fell below those of any preceding month of 1931 but were only 3 per cent less than in August, 1929.

Average money rates showed no change during August. Loans to members of the New York Stock Exchange from all sources increased slightly, whereas loans to brokers by reporting banks in New York City showed further reduction. This contrast in trend suggests increased lending from by private and non-banking sources.

1931 in Comparison

FIRST 8 MONTHS REMAINDER OF YEAR

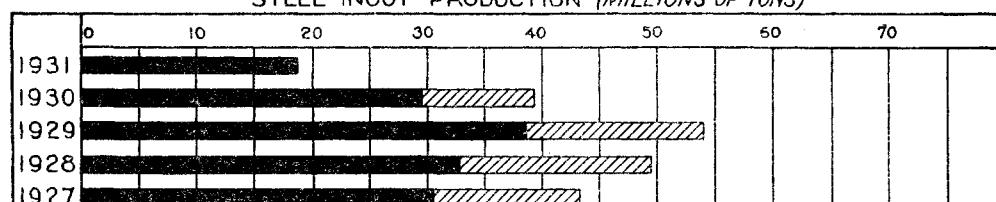

BANK DEBITS OUTSIDE NEW YORK CITY — (BILLIONS OF DOLLARS)

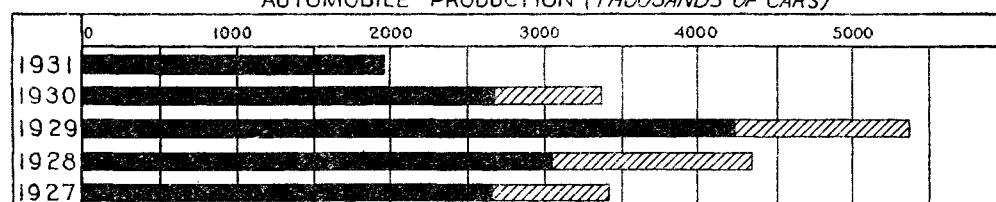

CONSTRUCTION CONTRACTS AWARDED (BILLIONS OF DOLLARS)

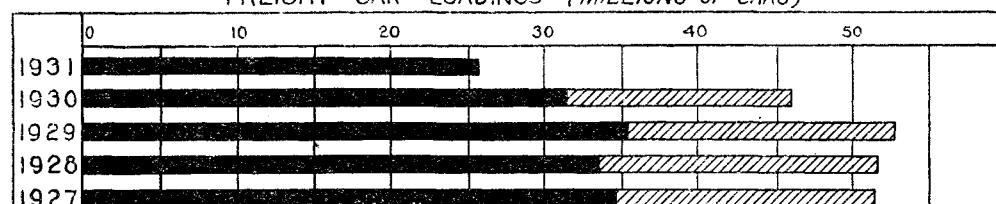

STEEL INGOT PRODUCTION (MILLIONS OF TONS)

AUTOMOBILE PRODUCTION (THOUSANDS OF CARS)

FREIGHT CAR LOADINGS (MILLIONS OF CARS)

Commodity Prices

IN August, for the second successive month, prices of commodities in wholesale and retail markets, held the level of the month preceding. Farm prices averaged slightly lower.

In wholesale markets advances of 7 per cent in prices of fuel and lighting materials and slightly higher prices of foods were reflected in the combined index which registered an advance of 0.2 per cent, the first rise since September, 1930. About one-half of the commodities included in the combined index of wholesale prices did not change in price from July to August, 1931. The most conspicuous changes in prices from July to August, 1931, occurred in petroleum products and rubber, the former advancing 23.8 per cent and the latter dropping 15.2 per cent. Livestock and poultry advanced 6.3 per cent in price, prices of meat and dairy products rose 3.5 per cent and 2 per cent, respectively, and prices of anthracite coal advanced 1.5 per cent. Nonferrous metals, chemicals, and miscellaneous textiles declined in price from 2 to 3 per cent. A decline from 3 to 4 per cent occurred in prices of cotton goods, structural steel, and paint materials, and drops ranging

from 5 to 10 per cent occurred in prices of farm products other than livestock and poultry, in hides and skins, in fertilizer materials and in cattle feed.

Prices of foods at retail advanced slightly in August, 1931, as compared with the preceding month, and on August 15 prices of pork chops, cabbage, butter, and eggs were from 5 to 12 per cent higher than on July 15, 1931. Eight others of the forty-two articles of foods on which quotations are regularly received advanced (in most instances in excess of 1 per cent), 21 articles declined, and 9 remained unchanged from July to August, 1931. Nineteen of the twenty-one articles of foods declining in price exceeded 1 per cent.

Due to a drop of 25.4 per cent in prices of cotton and cottonseed and further drops in prices of grains, the combined index of farm prices fell 5.1 per cent from July to August 15, 1931, to a level of 25 per cent lower than before the war and about one-third lower than a year ago. Of 22 important farm products 17 were lower on August 15, 1931, than the 5-year pre-war average, and of these prices of cotton and grains were nearly halved.

Employment

FACTORY employment increased slightly during August, but the increase was less than is usual at this season of the year. Employment in factories was on a level about 12 per cent below August 1930 and about 30 per cent below August 1929. The volume of wage payments to factory workers declined slightly from July to August, whereas an increase of 3.3 per cent usually occurs. Employment in the mining industry, after seasonal adjustments are made, increased in some branches and decreased in others.

Factory employment during the first eight months of the year averaged almost 16 per cent under the same period in 1930 and 25 per cent under 1929. The volume of pay rolls during the first eight months of the year averaged 24 per cent under 1930 and 36 per cent under 1929.

Increases in the seasonally adjusted employment indexes were recorded during August by the textiles industry only, while the iron and steel, machinery, lumber, automobiles, leather, nonferrous metals, chemicals, rubber, tobacco, cement, clay, and glass groups recorded declines of more than seasonal proportions. Employment increased normally in the food industry and decreased normally in the paper and printing industry.

An increase during August in the actual number of employees was reported by 24 of the 54 manufacturing industries on which the Bureau of Labor receives reports. The most pronounced gain in employment in these separate industries were largely seasonal and

were shown in the following industries: Pianos, 18.5 per cent; millinery, 14.1 per cent; stoves, 9.6 per cent women's clothing, 8.1 per cent; fertilizers, 7.1 per cent; and confectionery, 7 per cent.

The West, North, Central, and the South Atlantic geographic divisions reported small increases in employment in August, and the New England division reported increased earnings. The remaining divisions reported both decreased employment and earnings, the greatest decreases in both items being shown in the West South Central States.

Per capita earnings in manufacturing industries in August were 0.4 per cent lower than in July and 9.6 per cent lower than August, 1930.

Both employment and pay rolls of bituminous coal mines increased from July, and the same items for anthracite mining also recorded increases. Employment and pay rolls in retail trade during August, as compared with July, held up better than during the same period last year, although on a lower level than at this time last year. Employment and pay rolls of the public utility groups showed slight decreases from July to August.

The trade unions reported 26 per cent of their members unemployed in August, the same proportion as reported for July. This compares with a 22 per cent unemployment in August, 1930, and 9 per cent in August, 1929. Wages of common labor in road building during August were the same as reported for the month of July.

Domestic Trade

DEPARTMENT store sales increased slightly less than the usual seasonal amount during August, according to the seasonally adjusted index of the Federal Reserve Board. Sales during August were 12 per cent less than in the same month last year, measured in dollar volume, and the cumulative total for the first eight months of the year was 9 per cent less than in corresponding period in 1930. The value of stocks of goods in department stores, as indicated by the seasonally adjusted index of the Federal Reserve Board, showed little change during August, but was 13 per cent smaller than a year ago.

Carloadings of merchandise freight in less than car-load lots were slightly smaller in August than in the preceding month, while the adjusted index was 9.5 per cent less than in the corresponding month last year.

The seasonally adjusted index of 5-and-10-cent store sales recorded more than the usual seasonal increase during August, and the value of sales was only 2.5 per cent smaller than a year ago.

Mail-order sales, based on the reports of two outlets, failed to show the usual seasonal increase during August and were 15 per cent less than in the corresponding period in 1930. Postal receipts in 50 selected cities showed a decline from July to August and were 10 per cent less than in the corresponding month last year.

Commercial failures during August decreased from the preceding month, but the number was somewhat higher than in the same month last year. August, with 1,944 failures, was the third consecutive month in which the number was below the 2,000 mark. The number of failures among manufacturers was less than in the corresponding month of last year, but there were increases for trading establishments and for agents and brokers. Total liabilities of all failures during August were 13 per cent less than in the preceding month but 10 per cent larger than in the same month last year; liabilities for August failures were larger in 1928 and 1924. The increase in liabilities over August of last year was accounted for by an increase of 45 per cent for the trading group and 18 per cent for agents and brokers. Manufacturers' liabilities in August showed a decrease of 30 per cent from the corresponding period in 1930.

Magazine advertising registered a seasonal decline in lineage during August and was 22 per cent less than in the same month last year. Newspaper advertising was unchanged from July to August, and was only 4.3 less than in August, 1930. Volume of radio advertising, represented by cost of use of facilities, declined in August and was less than in the corresponding month last year.

² Adjusted for seasonal variation.

* End of month figures.

Foreign Trade

UNITED STATES foreign trade during August fell off considerably, whereas the usual trend at this season of the year is slightly upward. Merchandise exports showed a drop of 9 per cent in value as against a normal seasonal increase of 4 per cent, while imports declined 5 per cent. Average daily exports and imports amounted to \$5,320,000 and \$5,360,000, respectively.

The balance of trade during August was "unfavorable" to the amount of about \$2,000,000,000. Exports of agricultural products tend downward during the summer months, and although our exports during August of recent years have exceeded imports, the "favorable" balance, in general, has been comparatively small. In August of 1929 the excess of exports over imports amounted to only \$11,000,000. Since 1921 the value of merchandise imports has exceeded that of exports in the following months: June, 1922; March, April, May, and June, 1923; July, 1924; June, 1925; January, February, March, and April, 1926; and May, 1929. Net imports of gold during August, 1931, totaled \$57,500,000.

By comparison with the corresponding period of 1930, the 45 per cent reduction in the value of exports during August was larger than any decrease recorded during the preceding months of the year, while the recession of 24 per cent in the value of imports, al-

though greater than in July, was less than the average reduction for the period January through June. Smaller shipments of wheat and flour, raw cotton, iron and steel, copper, numerous classes of machinery, and automobiles, together with the sharp reduction in unit values (average prices) of practically all commodities, accounted primarily for the decline in exports. Our quantity shipments of oil cake and meal, fruits, canned salmon, vegetable oils, cotton-mill waste, power-driven metal-working machinery, sodium compounds and carbon black were larger than in August, 1930. As compared with July, 1931, exports of wheat and flour, raw cotton, and machinery decreased considerably in value, while barley, apples, canned and evaporated fruit, coal and coke, and petroleum products showed increases.

In import trade the low level of prices was the primary factor in the drop in value as compared with the corresponding period of 1930. Our quantity purchases of crude rubber, coffee, sugar, cotton cloth, burlaps, hides and skins, and meats were larger, and decreases shown for a number of commodities were comparatively moderate.

For the period January through August, 1931, the respective declines in exports and imports on a volume basis as compared with the corresponding period of 1930 amounted to approximately 23 per cent and 13 per cent.

¹ Reexports of foreign merchandise during August, 1931, were \$3,315,000.

Transportation

MOVEMENT of freight during August, as reflected by the number of freight-car loadings, declined slightly more than the usual seasonal amount and the adjusted index of the Federal Reserve Board was 5.3 per cent lower than in July. Average daily loadings during August were 21 per cent under August, 1930, and 34 per cent under August, 1929. During the first eight months of the year the average monthly loadings were 18 per cent under the same period in 1930 and 28 per cent under 1929.

Average weekly merchandise loadings in less than carload lots during August decreased slightly, whereas, a slight increase is normal for this period. These loadings were almost 10 per cent under August, 1930, and almost 19 per cent under August, 1929. The average monthly loadings of merchandise for the first eight months of the current year were 10 per cent under the same period in 1930 and 15 per cent under 1929. The livestock, coal and coke, forest products, and ore commodity groups recorded slight increases in average weekly loadings as compared with July loadings.

A decrease in the movement of freight has naturally been reflected in an increased number of idle freight cars. The daily average number of surplus cars for

the last eight days of August was 33 per cent greater than reported for the same period in August last year and 262 per cent over 1929. The peak in the number of surplus freight cars in the present depression was recorded in December, 1930.

Dividend payments of railroads during August totaled \$33,500,000, compared with \$37,700,000 in August, 1930, and \$37,600,000 in August, 1929. Payments of dividends by railroads during the first eight months of the year averaged \$40,700,000 compared with \$44,500,000 during the same period in 1930, and \$39,150,000 in 1929.

The seasonal increase in inland waterway traffic which has been under way since the opening of spring was extended through August, but the August tonnage passing through the Sault Ste. Marie Canal was only 75 per cent of that reported for August last year and only 60 per cent of the 1929 tonnage. During the first eight months of the current year the average monthly tonnage passing through this canal was 42 per cent under the same period last year and 54 per cent under 1929. Traffic through the Panama Canal increased during August with respect to July but was materially under August, 1930, and August, 1929.

² Data for January, May, August, and November are for 5 weeks; other months, 4 weeks.

Construction

THE total volume of contracts awarded continued to decline in August, although building construction in several sections of the country registered a slight increase. Both residential building and that of public works and utilities followed the downward trend. The seasonal slackening in demand for building materials was reflected in the smaller shipments of maple flooring and common brick and the decline in the production of cement. Although construction costs as a whole declined from July, building-material prices of frame-house construction showed a slight upturn.

The number of square feet of all types of building contracts awarded was 9.5 per cent less than in July, while the value fell off 18.5 per cent. As compared with August, 1930, the declines were 23 and 33 per cent, respectively. Over the 8-month period of 1931 the floor space and value were 27 and 31 per cent less than in the corresponding period of 1930.

The value of residential contracts awarded declined 5.8 per cent, the smallest drop in four consecutive months and the volume was 11 per cent less than in July. As compared with August, 1930, the decline in volume and value was 16 and 27 per cent, respectively.

For the first eight months of 1931, the number of square feet of residential contracts awarded was 7.8 per cent less than in the same period of 1930. The contracts awarded for public works and utilities, which fluctuate widely, showed drops of 40 per cent in volume and 37 per cent in value as compared with July.

Shipments of maple flooring declined only 1.5 per cent from July, but fell 23 per cent below August, 1930. Portland cement production was only 2.5 per cent less than in July, but during the first eight months of this year there has been a decline of 21 per cent as compared with the same period of both 1930 and 1929.

The index of construction costs (composed of the prices of structural steel shapes, cement, lumber, and the rates paid common labor) remained fairly steady until the spring of 1931 but has declined rather sharply since then; there was a decline of 6.9 per cent from June to July and only 1.7 per cent from July to August. Building-material prices for frame houses showed a slight advance over July, while those of brick houses declined slightly.

Agriculture

ANIMAL products marketed during August, as indicated by the combined index of physical volume shown in the table, declined seasonally from the preceding month; the total was slightly above that of a year ago, but somewhat below the five-year average.

Seasonal declines were registered for receipts of wool, poultry and eggs, and dairy products. Livestock marketings increased from July to August, which was the same tendency exhibited in most of the recent years. Fresh fish landed, in three New England markets and one Pacific coast market, have shown declines in August during the past two years, while the volume during the month was only about three-fourths as large as a year ago.

Crop marketings declined during August, according to the combined index, instead of showing the usual seasonal increase; grains declined nearly 17 per cent from the preceding month and were 52 per cent less than in August, 1930. Cotton receipts increased by less than the usual seasonal amount and were 62 per cent less than a year ago. Vegetable marketings declined seasonally during August and were 22 per cent less than in the corresponding month last year. Receipts of fruits showed a seasonal increase over the preceding month and were larger than a year ago.

Wheat production in the United States, estimated

by the Department of Agriculture, as of September 1, indicated a total of 886,000,000 bushels compared with 863,000,000 bushels in 1930. Winter wheat alone accounted for the increase over last year, as the indicated total yields of durum and other spring wheat were less than half as large as last year. Reports from 34 wheat countries indicate a decrease of 123,000,000 bushels below the world's production last year. Corn production forecast as of September 1 indicated a total nearly 30 per cent greater than the short crop of 1930 and only slightly less than the average of the five years 1925-1929. The cotton crop report as of September 1 indicated a total yield of 15,685,000 bales, or 1,341,000 bales more than in 1930, and an increase of 101,000 bales compared with the August 1 estimate. The combined production of the principal food crops is expected to be somewhat above the average, while crops raised for feed are a little below average. Hay and feed crops are rather plentiful in the East and South, although there is a shortage in hay, oats, and barley from Michigan and Kansas west. Flaxseed is expected to be the smallest crop since 1922.

Visible stocks of wheat and of cotton on hand at the end of August were larger than for the same period of either of the two preceding years.

Iron and Steel Industry

FURTHER recession in activity in the iron and steel industry in August extended the current decline from the peak of the spring rise over the fifth month. Measured by the Federal Reserve Board's index, operations declined 14 per cent from July to the lowest level since December, 1921. For the first eight months of the current year, the index averaged 37 per cent below the same period last year, while the August index was 45 per cent below August, 1930.

Employment and pay rolls in the industry underwent some additional contraction in August. The employment index was 2.5 per cent below July and 16 per cent below August, 1930, while the drops in pay rolls were 3.4 per cent and 35 per cent, respectively.

August pig-iron production was 12 per cent below July, and the average daily output was the lowest since October, 1921. Production was only about half as great as in August, 1930, and for the first eight months of the year has averaged 41 per cent less than in the corresponding months of 1930.

Steel ingot production in August was 8.9 per cent below July, and while the decline was not as severe as in the two months immediately preceding, it was contrary to the trend in every year since 1922. For

the first eight months of the year, steel production was 36 per cent below the preceding year and was only half of the average of the last five years. Operations were at the rate of 31 per cent of capacity in August, compared with 34 in July and 59 a year ago. September output in recent years has usually been below August and, with operations in the first three weeks averaging slightly below last month, it appears unlikely that the month's production will exceed that of August. Unfilled orders of the United States Steel Corporation declined 235,359 tons from the July total, and were the smallest for any month since September, 1927. The decrease was less than in the same month of either 1929 or 1930, but prior to 1929 changes in the unfilled tonnage in August were small and irregular. As the corporation operated at only 34 per cent of capacity during the month and ran its backlog off 7 per cent, it is evident that buying continued at a very low level.

Price changes were minor in August and early September, with the composite iron and steel price holding the slight gain of July. Prices of structural steel beams eased off, and the finished steel price lost the small gain of the preceding month.

Chemical Industries

DURING August the Federal Reserve Board's adjusted index of employment in the chemical industries recorded a continuation of the decline of June and July. This was accompanied by a corresponding decrease in pay rolls. In both instances the reduction amounted to about 3 per cent. For the first eight months of the current year the average monthly employment was 14.5 per cent below the same period of 1930 and pay rolls decreased 18 per cent. In August employment and pay rolls were both 17 per cent below the same month of 1930.

Further curtailment in production was shown by the available figures for August. The production of naval stores, which had held steady for more than a year experienced a sharper decline than during July. Turpentine production was 40 per cent below the previous month and 57 per cent below August of last year. Rosin output for August also declined 40 per cent from the July level and was 54 per cent under the same month a year ago. The average monthly production for the first eight months of 1931 showed a reduction of 27 per cent for rosin and 29 per cent in the case of turpentine as compared with 1930. Continuing the decline of the last four months, production of by-product coke was 5 per cent less than in July and 32 per cent less than in the same month a year

ago. Average monthly production for the first eight months was 28 per cent lower than in 1930.

Stocks of manufactured chemicals showed a further slight decline to a point close to the August, 1930, figure, which is the lowest point reached in several years. Stocks of raw materials moved up 1.5 per cent, the first increase since October, 1930. The average monthly stock of manufactured chemicals for the first eight months of 1931 was less than for a similar period in 1930 and 1929 by 8 per cent and 9 per cent, respectively.

Fertilizer consumption showed an increase over July, after a continued decline for the last four months, but fell slightly under August a year ago. Seasonal increases in the importation of fertilizers and fertilizer materials took place in August. The advance over July amounted to 31 per cent, but the total for August was 20 per cent below the same month a year ago. The volume of imports of nitrate of soda was approximately double that of the preceding month and nearly four times as great as in August, 1930. This is the first increase in five months and is in contrast to the decided decrease in August of last year. During the first eight months imports of nitrate of soda have been only about 7 per cent less than in the same period of 1930.

Automobiles and Rubber

PRODUCTION in the automotive industry continued to decline by more than seasonal proportions during August, due entirely to a reduction of 15 per cent in passenger-car output. Truck production was practically unchanged. Units produced in the United States reached a total of 189,000, representing a reduction of 13 per cent from July and of 16 per cent from August, 1930. For the first eight months of the current year the average monthly output was 26 per cent under the same period in 1930.

Employment in the industry underwent a further slight reduction for the month of August and was accompanied by a proportionate decline in pay rolls. While these figures do not represent a large monthly decrease, they are 14 per cent and 13 per cent, respectively, under the same month in 1930.

August exports of passenger cars failed to retain the gain recorded for July and fell slightly under the June figure. Truck exports continued to decline and reached a low point for the year. The monthly average of total exports for the first eight months was about half that of a like period in 1930 and one-fourth the figure attained in 1929.

Pneumatic-tire output in July was 13 per cent under

that of the preceding month, but was 23 per cent greater than in July, 1930. With the exception of June, domestic shipments were larger than for any month of the current year. Complete data for August are not yet available, but production receded from the July level. Shipments also declined, but were larger than the output. For the first seven months of the year the average monthly production declined 2.5 per cent with shipments receding 4 per cent compared with a like period in 1930.

Employment in the rubber industry declined for the second consecutive month. The August adjusted index was 70.5, compared with 73.8 in July and 80.0 in August, 1930. Pay rolls were reduced approximately 3 per cent, bringing the index to 20 per cent below August of last year.

World stocks of crude rubber in August showed a further increase over the record levels of July and were 29 per cent greater than in the corresponding month of 1930. August imports of crude rubber declined 11.5 per cent as compared with July, but exceeded August, 1930, by 6.5 percent. The average monthly import for the first eight months of the present year is 5 per cent less than for the same period in 1930.

Textile Industry

TEXTILE production showed less than the usual seasonal increase during August, as indicated by the adjusted index of the Federal Reserve Board, but the increase over the corresponding month last year amounted to 23 per cent.

Raw cotton consumption during August was less than in the preceding month, but 21 per cent greater than in the corresponding month last year. Stocks on hand in mills and in warehouses at the end of August were slightly less than in the preceding month, while the total was 18 per cent larger than a year ago.

Production of cotton textiles increased from July to August, but the total was slightly less than in August, 1930. The average weekly production of cotton piece goods, accounting for about half of total cloth output, was 52,000,000 yards in August, compared with 48,000,000 yards in the preceding month; the sales of these goods were about 20 per cent under current production during August against 18 per cent in July. Shipments of cotton textiles during August were above the volume for the preceding month but somewhat less than in the same month last year; stocks on hand at the end of the month were somewhat less than for July, and

were about 43 per cent less than a year ago. Unfilled orders declined 22 per cent during August and reached a point which was slightly less than a year previous.

Wool receipts at Boston declined seasonally during August and the total was 29 per cent less than in the corresponding month last year. The price at Boston of the territory type of fine, staple, scoured wool has shown little change during the four months ending in August but the average for the month was 17 per cent less than a year ago.

Spinning of woolen and worsted goods in August continued the upward trend, which had been in evidence during recent months; the rate of activity for woolens during August was 38 per cent above that of the same month last year, while the ratio of active spindle hours in worsteds was 42 per cent greater. The indexes of employment and pay rolls in woolens and worsteds combined, during August, showed that it was one of the few manufacturing industries operating more actively than a year ago.

Raw silk deliveries increased seasonally and were 11 per cent larger than a year ago.

¹ Months do not contain same number of weeks.

Food Industries

FOOD products processed during August were in about the same volume as during the preceding month, according to the seasonally adjusted index of the Federal Reserve Board, while the rate of production was 5 per cent less than in the same month last year and 12 per cent less than the monthly average of 1923-1925, which is taken as the base of the index, or 100. The seasonally adjusted index of employment showed no change during August, and was below the level of a year ago.

Wholesale prices of food products recorded the second consecutive monthly increase during August but the index was still about 15 per cent less than a year ago.

Wheat receipts in the principal markets during August were about 37 per cent less than in the preceding month, which was the largest decrease between these two months in any recent year. August has shown increased receipts over July in some years, amounting to as much as 39 per cent in 1927. The volume in August of this year was 21 per cent less than in the same month a year ago. Visible supplies of wheat in the United States increased seasonally and the total was about 22 per cent larger than at

the end of the same month last year. Exports of wheat, including flour, declined during August instead of registering the usual seasonal increase, and the volume was only half as great as in the same month in 1930.

Corn receipts in the principal markets declined during August and the volume for the month was only 60 per cent as large as in the corresponding month last year. The visible supply decreased from July to August, but the total was 60 per cent larger than a year ago.

Cattle receipts which increased seasonally were somewhat larger than in the same month of either of the two preceding years. The Department of Agriculture reports that more unfinished cattle, but fewer grain-fed cattle are coming to market than during the latter months of 1930. The estimated number of cattle on feed in the Corn Belt on August 1 was 13 per cent smaller than a year ago. Hog receipts recorded a seasonal decrease from July to August, while the volume was about 6 per cent smaller than in the corresponding month last year. Meats in cold storage have declined seasonally since the spring months; the total on hand at the end of August was 22 per cent less than in August, 1929.

Forest Products

LUMBER production as measured by estimated timber cut reached a new low level in August, the Federal Reserve index standing at 40 per cent of the 1923-1925 average. This represents a decline of 10 per cent from the month previous and 34 per cent from the level of a year ago, and reflects the efforts of the industry to bring production more nearly into line with present demand.

Employment in the forest products industry declined slightly to a point one-fifth below a year ago and about half of the 1923-1925 average. Pay rolls also declined more than seasonally to a point just over 40 per cent of the 1923-1925 average.

Marketings of forest products in August were maintained at about the level of a year ago, with a very slight increase over the revised estimate for July. Present marketings are about two-thirds of the 1923-1925 average. Carloadings increased sharply but seasonally.

Marketings of naval stores declined somewhat more than seasonally in August to a point 17 per cent below August a year ago and 4 per cent below the average for this month in the years 1923-1925.

Production of southern pine, Douglas fir, and hardwoods this year have averaged less than new orders,

whereas last year up to this time production was exceeding the receipt of new orders. This reflects a better technical position of the industry although operations are at a low level.

Southern pine production declined while new and unfilled orders increased. Production during the first eight months of this year was about 40 per cent below the same period last year, being this year 10 per cent below new orders, whereas last year up to this time production was 9 per cent in excess of new orders.

Douglas fir production increased seasonally in August to a level 17 per cent below this month last year; new orders also increased and unfilled orders declined seasonally. Production for the first eight months of 1931 was at a rate about 8 per cent below that of placing of new orders, whereas in the same period last year production exceeded new orders by 2 per cent. Hardwoods production declined about 8 per cent in August while new orders dropped 6 per cent and unfilled orders fell off 7 per cent. Unfilled orders are now about three and a half times the monthly production.

Unfilled furniture orders in the Southeastern district in August were approximately the same as in July, the average amount for the first eight months of the year being 7 per cent below the same period last year.

Miscellaneous Industries

LEATHER

Although there was an increase of about 2.5 per cent in the actual number of employees in the leather and leather products industry during August, this increase was less than the usual seasonal increase and the adjusted index of employment in the industry dropped 0.6 per cent. The Federal Reserve Board's adjusted index on production of leather and shoes increased by one point, however, and was 7.4 per cent over August last year. Production of shoes was almost 18 per cent greater than in July and was 18 per cent above August 1930.

PAPER AND PRINTING

A normal seasonal drop of 0.3 per cent in employment was recorded by the paper and printing industry during August. Pay rolls declined 0.5 per cent, and were almost 13 per cent under August, 1930. Production of newsprint paper, which is normally about the same in July and August, decreased by 12 per cent to the lowest level of the year and to a point 14 per cent under August last year.

NONFERROUS METALS

Production in the nonferrous metals group as indicated by the Federal Reserve Board's adjusted index dropped during August, reaching the lowest point so far this year. Employment and pay rolls also declined during the month and were materially under August, 1930.

Silver production increased more than normally, while lead production decreased after seasonal adjustments are made. Copper and zinc production increased by normal amounts for this season of the year but production of both metals was materially under August last year.

FUELS

The increase in the production of bituminous coal during August was less than normal so that the adjusted index of production decreased by 5.4 per cent from the July figure. August production was 14 per cent under August last year. Anthracite production increased by 7 per cent.

¹ Compiled by the Association of Life Insurance Presidents from reports of 44 companies. Prior to May, 1927, 45 companies were represented, but due to a merger of 2 companies this number was reduced to 44. This merger did not affect the comparability of the series in any way, as both companies contributed their data toward the aggregate compilation. Annuities were first segregated in January, 1930. This table revises any data previously shown in the Survey of Current Business on this subject.

WEEKLY BUSINESS INDICATORS

[Weekly average, 1923-1925 = 100]

* Relative to a computed normal taken as 100.

† Relative to weekly average 1928-1930 for week shown.

Monthly Business Statistics

The following table contains a summary of the monthly figures designed to show the trend in important industrial and commercial movements. These data represent continuations of the figures presented in the 1931 Annual Supplement to the Survey of Current Business, in which monthly figures for the past seven years may be found, together with explanations as to the sources and basis for the figures quoted. The figures given below should always be read in connection with these explanations. For later data, which have become available since these data were compiled, see recent Weekly Supplements to the Survey.

EXPLANATORY

The Survey of Current Business is designed to present each month a picture of the business situation by setting forth the principal facts regarding the various lines of trade and industry. The figures are very largely those already in existence. The chief function of the Survey is to bring together those data which, if available at all, are scattered in hundreds of different publications. A portion of these data are collected by Government departments, other figures are compiled by technical journals, and still others are reported by trade associations. The Survey of Current Business computes the indexes on total stocks, new orders, agricultural marketings, crop marketings, and unfilled orders based on available data.

SOURCES OF DATA

The sources and inclusiveness of the data appearing in the table "Monthly Business Statistics" will be found noted in the 1931 Annual Supplement to the Survey of Current Business, and the sources of the weekly data are given on page 4 of the February 5, 1931, issue of the Weekly Supplement to the Survey of Current Business.

HISTORICAL DATA

Monthly data on all the various series carried in the Monthly Survey will be found in the 1931 Annual Supplement to the Survey, running back seven years and in some cases eight years. Data previous to that included in the 1931 Annual Supplement will be found in the monthly Surveys prior to 1924.

RELATIVE AND INDEX NUMBERS

To facilitate comparison between different important items and to chart series expressed in different units, relative numbers (often called "index numbers," a term referring more particularly to a special kind of numbers described below) have been calculated. The monthly average for 1923-1925 has usually been used as a base equal to 100.

The relative numbers are computed by allowing the monthly average for the base year to equal 100. If the movement for the current month is greater than the base, the relative number will be greater than 100, and vice versa. The difference between 100 and the relative number will give at once the per cent increase

or decrease compared with the base period. Thus, a relative number of 115 means an increase of 15 per cent over the base period, while a relative number of 80 means a decrease of 20 per cent from the base.

Relative numbers may also be used to calculate the approximate percentage increase or decrease in a movement from one period to the next. Thus, if a relative number at one month is 120 and for a later month is 144, there has been an increase of 20 per cent.

When two or more series of relative numbers are combined by a system of weightings, the resulting series is denominated an index number. The index number, by combining many relative numbers, is designed to show the trend of an entire group of industries, or for the country as a whole, instead of for the single commodity or industry which the relative number covers. Comparisons with the base year or with other periods are made in the same manner as in the case of relative numbers.

SEASONAL ADJUSTMENTS TO INDEXES

Seasonal variations are found in most series of economic statistics for which monthly values are obtainable. Consumption and production of commodities, interest rates, bank clearings, railroad freight traffic, and many other types of data are marked by seasonal swings repeated with minor variations year after year. These, in so far as they exist at all, are definitely periodic in character, with a constant 12-month period. In cases where an adjustment is noted for a series carried in the Survey, the index has been corrected for number of working or business days in the various months and then adjusted for seasonal variation. The index figures thereby become comparable throughout the series.

METHODS OF USE

Methods of using and interpreting current business statistics have been collected by the Department of Commerce from many business concerns and are described in a booklet entitled "How to Use Current Business Statistics," together with methods of collecting statistics. This booklet may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C., at 15 cents per copy.

Every American business barometer

**analyzed
and summarized
in this 716-page
volume**

All the pertinent details of production, employment, prices, foreign and domestic trade, construction, fuel and power, transportation and communication, banking and finance, and other phases of the economic life of the United States and industrial and trade conditions in Alaska, Hawaii, the Philippine Islands, and Porto Rico

COMMERCE YEARBOOK 1931 - - - Volume I - - - UNITED STATES

In charts, text, and tables it records developments during 1930 in practically every branch of American commercial activity—not only exhaustive data obtained by the Bureaus and Divisions of the Department of Commerce but also statistics from many other governmental as well as private sources
