### **Business Situation Summarized**

Business activity during October shows a continuation of the improved trend of recent months. Expansion in industrial output has been accompanied by a rising volume of freight traffic which has resulted from the acceleration in the distribution of manufactured products and industrial raw materials as well as from the seasonal movement of agricultural products and the heavier movement of coal. Retail sales reports indicate a somewhat more spotty situation than in September when the returns generally made a favorable showing; the September gains were influenced by the expansion in employment and pay rolls, as well as by the higher income of the agricultural population. Activity in the construction industry is improving slowly; the current volume of both actual and projected construction work is still low.

The increase in industrial production in September exceeded the usual seasonal gain; weekly data available for October indicate a further advance for the current month. Automobile production has expanded steadily after reaching a low for the year at the end of September with the change over to new models. Steel production in October has been at a slightly higher rate than in September, the third successive monthly increase. Cotton and silk textile production has increased, while the rayon and woolen industries have continued to operate at high levels. Lumber production has increased; the output of nonferrous metals is also higher. Weekly electric power output estab-

lished a new high in October; bituminous coal production, which showed a less-than-seasonal rise in September as a result of the strike, has increased more than usual in October. Industrial output is currently close to 90 percent of the 1923-25 average, which is the highest level of operations for the fall period since 1930; a year ago the index stood at 74.

Retail store sales in September expanded by more than the usual seasonal amount, with the widest gains in rural areas. The index of rural sales of general merchandise in September was the highest for this month since 1929. The substantial increase in dollar sales over a year ago indicates an increased physical volume of sales since retail prices (aside from foods) are little changed from the level of a year ago.

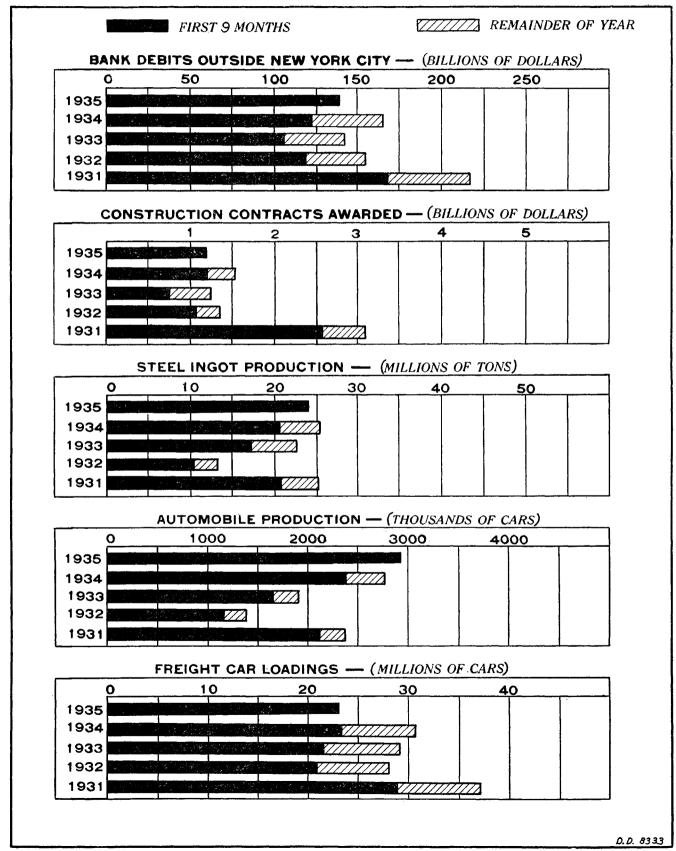

Commodity prices have changed very slightly on the average during October. Prices of speculative commodities have moved irregularly, but have tended lower since establishing a high for the year in the first week of October.

Stock prices have advanced to a 1935 high during October. Bond prices have been generally firm. Conditions continue favorable to refunding operations and corporations are taking advantage of the situation to reduce interest charges. Short-term interest rates have remained at nominal levels; excess member bank reserves have reached another high, this time in excess of \$3,000-000,000. The fall expansion in bankloans has been small.

### Comparison of Principal Data, 1931-35

Digitized for FRASER http://fraser.stlouisfed.org/ Federal Reserve Bank of St. Louis

### Commodity Prices

WHOLESALE prices of the more-sensitive commodities have fluctuated rather violently since the latter part of September. Moody's index of 15 commodities, which reached a high for the year at 173.3 on September 24, dropped to 170.9 by the end of the month. It again turned upward in early October to establish a new peak at 175.3 and has since tended downward. These movements were influenced mainly by developments in the European political situation.

The Bureau of Labor Statistics' monthly index of wholesale prices, based on 784 commodity price series, advanced from 80.5 in August to 80.7 in September—a new high for the year and the highest average for any month since November 1930. The weekly index has varied little from the middle of August to the third week of October. There was a very small decline for September in the monthly index of nonfarm and food products, a substantial decline in fuel and lighting, but marked increases in chemicals, hides, and leather.

Retail prices of department-store articles rose 1 percent from September 1 to October 1, the largest monthly gain since November 1933, according to Fair-child's index. The greatest increases were in home

furnishings and women's apparel, though the advance was shared by all groups except infant's wear. Retail food prices were higher in early October than in August, according to the Bureau of Labor Statistics' index. At 124 percent of the 1913 average, the index was 6.6 percent higher than for the corresponding date of last year. Higher prices of meats, lard, butter, and eggs accounted for a large part of this change.

The cost of living of wage earners rose from 83.0 to 83.5 from August to September, according to the National Industrial Conference Board's index. Items other than foods contributing to the September rise in the cost of living were rents, which were up 0.8 percent, and coal, 1.2 percent. Clothing prices also rose for the first time in a year, but the increase was only 0.1 percent.

Average farm prices at mid-September were 107 percent of the prewar average as compared with 106 percent a month earlier, and they were somewhat higher in mid-October, according to the Bureau of Agricultural Economics. Average prices received by farmers have risen and those paid by farmers have fallen in recent months, so that prices received, relative to those paid, are now the highest in over 5 years.

Index is for 1st of following month.

### Domestic Trade

RETAIL sales data for September reveal a more than seasonal expansion as compared with August. All of the available monthly indexes, with the exception of that for new passenger automobile sales, were higher, and the sharp drop in automobile sales is a reflection of the new model changes rather than an indication of a reversal of the favorable trend of sales. September retail sales were substantially above those for the corresponding month of 1934 on a dollar basis. These dollar sales gains are generally indicative of a rise in volume, since retail prices, with the major exception of food prices, have not changed to any appreciable extent during the year.

Preliminary sales reports for October indicate a somewhat more spotty situation than existed in the preceding month. Fall sales promotions, however, have met with considerable success, and the month's sales are expected to record a substantial gain over October 1934. Passenger automobile sales will probably touch a low for the year this month, but the final 2 months of the year may be expected to bring another upturn in automobile sales as new models become available for delivery.

With the marketing of crops, retail trade in rural areas has shown a decided upward movement. The seasonally adjusted index of such sales moved up from 93 in August to 105 in September, the highest figure reported since May 1930. September sales were the highest for this month since 1929.

The increase in general merchandise sales in urban areas, as reflected by the department-store sales index, was less pronounced; nevertheless, the seasonally adjusted index rose 3 points to 82 percent of the 1923–25 average, equaling the previous high of the year reached last March. Sales of 18 principal chain-store companies were about 5 percent higher than a year ago, but there was considerable disparity between the results in individual lines.

Recent increases in retail sales have been widely distributed geographically. Chain-store data record increases in all areas compared with a year ago, and September department-store sales were higher in all areas except Kansas City and St. Louis. The best showing in department-store trade last month was made in the eastern districts, which, for the year to date, show a less-than-average increase.

The statistics of commercial failures continue to reflect the improved financial position of business concerns. Such fluctuations as have occurred in the index of insolvencies during the past 2 years have been relatively minor.

After adjustment for seasonal variation, the index of advertising has fluctuated within the range of three points since last spring—or between 76.3 and 79.3. During September the expansion in newspaper advertising linage was smaller than the normal seasonal increase, but the index of farm-paper advertising was at the highest level reached since the summer of 1931.

1 Corrected to daily average basis.

2 Adjusted for seasonal variation.

8 End of month,

4 See note on p. 26 of the Nov. 1934 issue.

### **Employment**

A SUBSTANTIAL increase in employment was revealed by the Bureau of Labor Statistics indexes for September. It is estimated by the Bureau that approximately 335,000 workers were reemployed in the industries surveyed monthly. These industries employ more than half of the gainful workers. The September increase in employment was mainly seasonal in character; the gain in manufacturing industries was about equal to the usual seasonal rise and these industries plus retail trade in which the gain also was seasonal, accounted for six-sevenths of the total increase for all reporting industries.

Gains in employment in 71 of the 90 manufacturing industries lifted the unadjusted index for September 2.2 percent to 83.5 percent of the 1923–25 average, the highest level recorded since November 1930. The seasonally adjusted index was up 0.2 of a point to 81.9. Pay rolls were up 3.6 percent over this period with only 18 of the 90 industries reporting declines.

Nondurable goods industries showed a greater increase in employment in September than did the durable goods industries, the gains being 2.9 percent and 1.0 percent, respectively. Of the 46 durable goods industries 38 showed gains, while in the 44 nondurable goods industries, increases were recorded for 33.

Among the more important industries, more-thanseasonal gains in September were reported for foundry and machine shop products, furniture, knit goods, silk and rayon goods, and men's clothing. Increased activity in the construction industry was responsible for the higher level of employment in the steam and hot water heating, millwork, sawmill, and plumbers' supplies industries. The machine tool industry reported a further gain in employment in September, with the number of workers the highest reported since December 1930.

Declines, as well as gains, in employment in September were mostly of a seasonal nature. The 12 percent drop in the automobile industry was occasioned by preparations for the production of 1936 models.

Of the 17 nonmanufacturing industries surveyed, 10 showed gains in employment from August to September, while 13 had larger pay rolls. The largest relative increase in employment was that reported for the anthracite mining industry, which recovered most of the loss reported in the preceding month. Employment in wholesale and retail trade establishments increased in September, as operators prepared for the usual fall upturn in business. Other important nonmanufacturing industries reporting gains were metalliferous mining and building construction.

October statistics on the number of trade union members employed show no change in comparison with September; there was, however, a slight increase in the number working full time. In October, 80 percent of the membership was employed part-time or full-time, compared with 76 percent in August and 76 percent a year ago. Employment among trade union members is currently at the highest level since the middle of 1930.

### Finance

CONDITIONS in financial markets have undergone very little change during October. Despite rather sharp setbacks induced largely by developments in the international situation, stock price averages have advanced to a new high for the year.

The favorable nature of the reports issued on profits for the third quarter has contributed to the strength in industrial shares. Profits of 120 industrial corporations, as indicated by the preliminary index of Standard Statistics, for the third quarter were considerably higher than in 1934 and possibly exceeded those realized in the third quarter of 1933 which benefited from the pre-N. R. A. "boom" and the sharp rise in prices which was not accompanied at that time by a corresponding increase in costs. Earnings of 15 public-utility corporations were slightly higher in the third quarter than in 1934 but otherwise were the lowest reported for the quarter since 1925.

Bond prices have been firm after some slight weakness in early October. While prices and yields have not altered to any extent in recent months, current yields on representative bonds are below those of a year ago and are also considerably less than in 1929. The yield on 60 representative corporate bonds, as computed by Standard Statistics, was, on October 9, 4.30 percent, compared with 4.57 a year ago and 4.70, the 1929 average. The yield on the 15 municipal bonds included in this compilation was down to 3.18, a drop of about 0.64 of a point in a year. These bonds were priced to yield 5.27 percent subsequent to the financial panic of 1933.

191 cities.

A continuing feature of the banking situation has been the heavy inflow of gold. Imports in the week ended October 18 amounted to \$123,000,000, and the total flow to this country since early September has been several times this figure. Although the bulk of the gold came from Europe, the gold reserves of the European central banks, with two exceptions, have not shown a corresponding decrease.

Bank deposits have continued to expand, but the turnover of deposits has remained low. The net demand deposit figures, subsequent to the report for August 23, have included Government deposits subject to reserve. These deposits were not included in the figures of demand deposits previously, inasmuch as they were not subject to reserve requirements.

Issuance of new securities has continued in considerable volume, the proceeds being used mainly for refunding purposes. A substantial amount of corporate cash has been employed in these refunding operations since many of the new issues raised a smaller total than was required to retire the old issues, including premiums and financing charges.

In late September the Treasury announced that it would redeem \$8,424,000,000 of its outstanding gold-clause bonds and notes at par and accrued interest at any time up to January 1, 1936. During October, the Treasury announced that the final conversion of the outstanding Liberty Loan bonds had been completed. Subsequent to 1927, when for the first time a Liberty bond became subject to call, about \$13,400,000,000,000 of these bonds were redeemed.

<sup>3</sup> Net exports indicated by (-).

### Foreign Trade

EXPORTS increased in September by 15 percent, or about the usual seasonal amount. Imports declined 4 percent as compared with the usual decrease of 1 percent. Exports exceeded imports in value by \$36,536,000, compared with an export excess of \$59,655,000 in September 1934 and \$13,476,000 in September 1933.

Agricultural products exported increased from \$42,723,000 in August to \$76,423,000 in September, and accounted for most of the increase in the total. This upward movement was of a seasonal character, with large increases reported for cotton, fruits and nuts, and unmanufactured tobacco. There was some improvement in the exports of grains and grain preparations, particularly barley, and also in feeds and in canned vegetables.

The September exports of unmanufactured cotton, apples, and canned fruit were larger in quantity than in the corresponding month of 1934. Tobacco exports were greater in value, but in quantity they were 1 percent less than in September 1934.

Nonagricultural exports were valued at \$119,114,000 in September, a drop of \$8,000,000 from the preceding month. Exports of machinery and vehicles declined about 6 million dollars—from \$41,790,000 to \$35,915,-000—the drop in value of automobile exports accounting for about 2½ million dollars of the decline. value of automobiles, including parts and accessories, totaled \$13,322,000 in September 1935 and was \$673,000 lower than in September 1934. The early shift to the new models affected foreign shipments as well as the domestic business.

The September import decline was almost entirely due to a decrease in imports of Cuban sugar. Practically the entire 1935 quota of Cuban sugar was imported during the first 8 months of this year, and, as a consequence, imports of Cuban sugar in September dropped nearly \$20,000,000. There was also some recession in imports of grains and crude rubber during September. Total agricultural imports declined from \$103,418,000 in August to \$84,506,000 in September. Competitive agricultural imports, which include meats, butter, fats, vegetable oils, oilseeds, grain and feeds, totaled approximately \$18,000,000 in September, a decline of \$5,000,000 from the high level of last May.

Among the agricultural products, nursery-stock imports showed the usual marked seasonal increase during September and raw-silk imports increased considerably in quantity and value. The price of raw-silk imports averaged \$1.44 per pound in September compared with \$1.35 in August 1935 and \$1.13 in September 1934. The latter figure represented practically the lowest price reached by silk during recent years.

Nonagricultural imports increased from \$77,026,000 in August to \$84,183,000 in September. Imports of metals and manufactures, including copper, tin, platinum, nickel, iron ore and steel manufactures, increased about \$5,000,000 compared with August; the value of \$18,141,000 was the highest value reached in any month since October 1930.

<sup>3</sup> Monthly average of unadjusted indexes.

### Real Estate and Construction

THE expansion in the daily average volume of construction contracts awarded during September was accompanied by an increase in actual building operations. Total construction contracts awarded for the month were slightly lower than in August, but when allowance is made for the fewer number of working days in September there was an increase of 12 percent, a gain which was contrary to the usual seasonal movement at this period.

While publicly financed work was an important factor in the showing of contracts awarded in September, the most significant feature of the figures was the continued gain in privately financed residential building. The dollar volume of residential contracts in September was 3 percent higher than in August, and, on a daily average basis, the increase was considerably larger. There is usually very little change in residential construction placed under contract at this period. September residential contracts were more than twice as large as in September 1934.

Total awards for all classes of construction for the 9 months were slightly lower than for the corresponding period of 1934, owing to the decline in contracts awarded for large engineering works financed by public funds. In view of the large gain in October over the corresponding period a year ago, the total for the 10 months will be larger than in 1934.

The major gains in residential construction during the current year have been in the erection of 1- and 2family dwellings. The increase in the construction of apartments and hotels has been very small, and the actual volume of such construction for the first 3 quarters of the year amounted to only about \$66,000. 000. Contracts for single dwellings to be occupied by owners amounted to \$148,000,000, as compared with \$181,000,000 a year ago. Single-family dwellings for sale or rent increased from 25 million in 1934 to 50 million dollars this year. Total residential contracts were valued at 339 million dollars against 188 million in the first 3 quarters of 1934.

The volume of additions, alterations, and repairs undertaken during September was less than in August, according to the Bureau of Labor Statistics' permit statistics from 770 cities. In comparison with a year ago, however, there was an increase of 18 percent in the number of permits issued and of 39 percent in the estimated cost of such work.

Conditions in the real-estate field continue to show gradual improvement, with vacancies decreasing, rents increasing, and market activity tending upward. The H. O. L. C. is gradually acting upon the loan requests filed last summer, when applications were received for allocation of the additional funds secured by the corporation. According to present estimates, the last of the 185,000 applications now awaiting action will be disposed of early next year. It is expected that when loan operations cease, the loans of the corporation will have reached a total of 3 billion dollars.

Digitized for FRASER http://fraser.stlouisfed.org/

1 Based on 3-month moving average and adjusted for seasonal variations. Federal Reserve Bank of St. Louis

<sup>2</sup> Index is as of 1st of month, October 1, 1935, 195.1.

#8-month average.

### Transportation

URING the 4 weeks of October, daily average freight-car loadings were about 5 percent above the September level. As the seasonal variation in the freight movement for this period is small, a rise of several points in the seasonally adjusted index of loadings is anticipated for October, following the rise of 2 points in September to 62 percent of the 1923-25 average.

Loadings of miscellaneous freight have recorded a gain of about 7 percent during October on a daily average basis. The movement of this class of traffic is of particular significance, since it includes the car-lot movement of the products of industry as distinguished from farm products and heavy raw materials such as coal and ore. Coal loadings have increased by more than the usual seasonal amount, although the comparison is affected by the curtailment of production and shipments during the strike which occurred in the latter part of September.

Freight-car loadings for the first 43 weeks of the year were one-half of 1 percent higher than in 1934. A better showing is anticipated for the full year, since fourth-quarter traffic is expected to be substantially higher than a year ago.

The improvement in traffic volume resulted in a sharp gain in net railway operating income in September. Reports so far available suggest that the carriers operated at a profit, after taxes and charges, for the first time this year. In August the loss aggregated about 2½ million dollars, and in September 1934 the loss was just over 2 million dollars. October results are expected to record further improvement in the financial operating statement.

During the past month, the Interstate Commerce Commission announced the organization of the New Bureau of Motor Carriers to carry out the duties recently imposed on the Commission by Congress. This Bureau will undertake to regulate the activities of motor carriers engaged in interstate commerce. The task confronting the new Bureau is a formidable one. according to Commissioner Eastman, who points out that, although the total number of such carriers is not known, there may be as many as 250,000. The task of regulation may possibly be gaged in terms of number rather than in tonnage carried.

The upturn in traffic volume resulted in an increase in the number of employees in the transportation division during September. According to data compiled by the Interstate Commerce Commission, the transportation group employed 2.3 percent more workers, but there was a decline of 3.5 percent in the number employed in the maintenance of ways and structures. The composite index of employment composed of these 2 groups of workers and 5 others advanced 0,2 of a point to 55.4 percent of the 1923-25 average, on a seasonally adjusted basis. A year ago, the index stood at 56.2.

### Automobiles and Rubber

AFTER reaching a low for the year in September, automobile production has again turned upward during October with the inauguration of assemblies on 1936 models. United States production during September approximated 90,000 units, of which 33,000 were commercial cars. With all major producers again in production, output in October is expected to exceed 200,000, compared with 132,000 vehicles in October 1934.

Since the seasonal movement of passenger-car production has been radically altered this year by the early introduction of new models, an erratic movement of the adjusted index of production has been produced, although some allowance was made for this factor in the September index.

Most of the changes revealed in the new models have been minor in character so that it is not anticipated that a repetition of the delays experienced in reaching volume production by some of the leading manufacturers in the past 2 years will recur this year. Trade estimates forecast the assembly of approximately three-quarters of a million units in the final quarter of 1935, which is approximately double the output in the corresponding period of 1934. The acceleration of activity in the automobile industry is expected to furnish additional impetus to the industries supplying parts and materials, and it is expected to exercise a favorable influence also on the combined industrial output during the final quarter.

If the above-mentioned estimate of the production in the final quarter is realized, it will mean a total United States production for the year of approximately 3,700,000 cars and trucks, the highest total produced since 1929.

Tentative production and sales budgets for the next year have been placed above the 1934 level, but such estimates are subject to frequent reappraisals as the season develops. Sales during September and October have followed a downward tendency as stocks of old models have been cleared and preparations made for introducing the 1936 lines. Very few of these new models have been placed in the hands of buyers as yet, since most companies have not adequately stocked their dealer organizations.

Dollar sales during the coming year apparently will not be influenced by price changes since prices of the 1936 models which have been announced to date show very little variation in comparison with those for 1935.

Activity in the rubber industry as indicated by the consumption of crude and the employment and payroll data, was somewhat higher in September than in August or September a year ago. Unsettlement in the retail tire price structure has continued during recent weeks. Tire sales, however, have improved, with the result that stocks of manufacturers have been reduced. Beginning with August, the percentage of the industry reporting tire production monthly was reduced. See page 55 for the estimated coverage.

8 months' average.

### Forest Products

THE upward trend of lumber production has continued during October. New orders and shipments were somewhat lower than in September, and were also below production. The resulting increase in stocks has not been large. Production of lumber during the first 6 months of the year was considerably below market requirements, but in the third quarter output increased about in proportion to the gain in consumption. The continued upward trend in residential building, and to a lesser extent the gain in consumption by the furniture and other consuming industries, has contributed to the improving outlook for this industry.

Lumber production so far this year has been higher than in 1934. Since 1932, when lumber production dropped to about one-fourth of the 1929 rate, output has approximately doubled. This relative increase has been greater than that for industrial activity as a whole, a condition which is true of the durable-goods industries generally since the output of such materials is subject to wide changes during business cycles.

Accompanying the rise in sawmill activity this year has been the improvement in millwork output. Production of finished lumber products was higher in September than in August and was considerably in excess of a year ago. The increase in the output of maple and oak flooring, for example, amounted to 23 and 127 percent, respectively, in comparison with September 1934. Activity in furniture factories was higher in

September than in the preceding month and also considerably higher than a year ago. Pay-roll disbursements for a representative group of furniture factories in September was 35 percent above the amount reported last year.

Of particular importance to the southern lumber industry was the approval by railway executives of freight-rate reductions ranging from 1 to 12 cents per hundred pounds on southern pine and other species of lumber shipped from producing points in the South and Southwest. The tariffs containing these reductions have been submitted to the Interstate Commerce Commission for approval.

Activity in the paper-manufacturing industry, which improved during September, has continued at the higher level in October. Production in September was about one-fourth above September 1934, with current operations at approximately 75 percent of capacity. Board mills are operating at the same ratio to capacity as the paper mills, but this rate is somewhat higher than in September.

New business in both coarse- and fine-grade paper has improved during recent weeks, with prices firm. The newsprint market has not been active. Contracts for next year's requirements have been held up in anticipation of higher prices. Recent developments, however, indicate that this situation is clearing with some companies posting a price \$1 a ton above the 1935 figure.

### Iron and Steel

PRODUCTION of steel ingots during October has been at a higher level than in September. Fluctuations in the weekly rate of output have been small, with the indicated rate of output for the month approximately 53 percent of capacity, compared with 51.13 percent in September. Daily average production is expected to exceed slightly the previous high of the year which was reached last February. By mid-October the cumulative total production of ingots exceeded the output for the entire year 1934. Compared with the same period of 1934, output for the the 10 months is estimated to be 23 percent higher.

Releases from the automobile industry have increased as the assembly of new models has progressed. Consumption by manufacturers of farm implements and industrial machinery has been well sustained, and other so-called "miscellaneous" purchasers of steel have contributed a substantial volume of tonnage in the aggregate. The construction industry has required increased quantities of reinforcing bars, but the volume of fabricated structural steel shipments is less than a year ago. A very small tonnage is being taken by the railroads.

Shipments of finished steel products have followed the upward trend of ingot production. September daily average deliveries of the leading steel corporation amounted to 24,597 tons, a figure which was exceeded during 1935 only by the March total of 25,292 tons. In August, shipments averaged 23,130 tons daily. Since the beginning of the current month, evidences

point to little change in the average daily rate of shipments, as customers are taking deliveries and also placing orders at a steady pace.

Production of pig iron has followed the trend of ingot production, with daily average output in September 4 percent higher than in August. This represented the highest level of production since June 1934. Some further improvement is indicated in October by the sustained demand for pig as well as the increased number of furnaces in blast. As of October 1, 104 furnaces were producing at the rate of 59,250 tons per day against 99 furnaces on September 1 which were making iron at the rate of 56,815 tons a day. Total output of pig iron during the first three quarters of 1935 was 14 percent above the output in the corresponding period of 1934.

New orders, shipments, and production of steel sheets by independent manufacturers declined moderately in September, but each of these series showed substantial gains over corresponding periods of other recent years. Shipments for the month were close to the total for September 1930. The index of machine tool orders for September dropped to 80 from 126 in August, but shipments did not show a corresponding decrease.

Prices of finished steel products have changed very slightly during the current year. Scrap prices, which moved upward until the end of September, have since reacted moderately. Pig iron was advanced \$1 a ton in the latter part of October.

### Textile Industries

CONDITIONS in the textile industries during September and the first half of October have been relatively favorable, with operations in the woolen and rayon industries continuing at a high rate, and activity at cotton and silk mills expanding considerably. Prices of most fabrics and fibers have advanced, with a particularly wide gain in the price of raw silk. Sales of finished goods have improved.

Advancing 2 points to 106 percent of the 1923–25 average, the Federal Reserve Board's seasonally adjusted index of textile production in September was at the highest level since the summer of 1933 when operations were temporarily accelerated in the precode rush of activity. Excepting that period, textile industries as a whole are operating at the highest level since late in 1929, according to this index. The index does not include data on the rayon industry and, if proper consideration is given to the rapid strides made by this industry in recent years, it is probable that the relative position of the textile industries as a group is even more favorable than is indicated by the index as it now stands.

As has been true for several years, activity in the cotton industry continues at a lower level relative to the 1923-25 average than in any of the other three major branches of the industry. There was, however, a sharp increase in cotton-mill activity in September

which lifted the seasonally adjusted index of cotton consumption 10 points to 95 percent of the 1923–25 average. This was within 3 points of the high for the year recorded in January. Weekly estimates indicate that October consumption will show a gain over September of about the usual seasonal amount.

The manufacture of woolen goods in September was at a lower rate than in August. Daily average consumption of wool declined about 10 percent from August to September, but remained above any like month since the figures first became available in 1921. Machinery activity was also lower in September. All classifications showed declines from the high August level, the largest being the 9-percent decrease for wide looms and the smallest a 3-percent decline for worsted spinning spindles.

The principal feature in the silk industry continues to be the almost uninterrupted rise in raw silk prices to the highest point reached since the short-lived boom of mid-1933. Silk deliveries to American mills during August and September increased considerably, although this situation is apparent only after the abnormal movement to Canadian mills during July and August is eliminated from the totals. After this adjustment, deliveries from July to August and from August to September increased 12 and 24 percent, respectively, on a daily average basis.

### The National Income Produced, 1929-34

By Robert R. Nathan, Chief, Income Section, Division of Economic Research

ESTIMATES of the national income paid out for the years 1929 to 1934, inclusive, were presented in the August 1935 issue of the Survey of Current Business. Since the publication of these estimates on income paid out, requisite basic data have become available making possible the completion of estimates

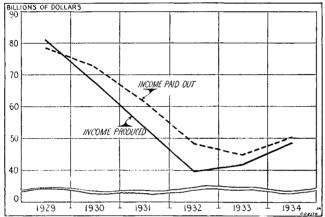

Chart I.-Trend of national income paid out and produced

of the national income produced as well as permitting necessary revisions in the income paid out figures. In analyzing changes in the nature and extent of economic activities through the medium of the national income estimates, it is important to give consideration to income produced as well as to income paid out and also to the residual item of business savings and losses.

#### **Definition of Terms**

The national income produced represents the aggregate value of all commodities produced and services rendered, less the value of raw materials depleted and capital equipment worn out in the processes of production. More briefly it may be defined as the net product of the national economy. Income paid out may be defined as the compensation paid to or received by individuals for their productive services, whether labor, management, or the furnishing of capital. If payments by all business enterprises to all individuals for their services (national income paid out) are less than the aggregate net product of the nation (national income produced), then the business enterprises of the country have retained a portion of the net product. This portion is termed business savings. If, however, the national income produced is less than the national income paid out, then the business enterprises of the nation have maintained the income payments by

drafts upon business resources. These drafts are termed business losses. Income paid out and business savings or losses are estimated directly, whereas income produced is arrived at by adding business savings to or deducting business losses from income paid out.<sup>2</sup>

As defined in this study, business savings or business losses represent the difference between the total national income produced and the total national income paid out and should not be confused with the ordinary conception of business profits or deficits, with changes in the surplus accounts of business establishments, nor with variations in the national wealth. profits are usually considered as the amount available for dividends and entrepreneurial withdrawals whereas business savings or losses are herein regarded as the residual after the payment of dividends and the withdrawals of entrepreneurs. Insofar as surplus is concerned, there are many factors other than the volume of business savings or losses which effect changes in the surplus accounts of business enterprises. The revaluation of capital assets, profits from the sale of capital assets, corporate reorganizations, and the capitalization of surplus are some of the more important ways in which changes in surplus can be brought about other than by the transfer of business savings or losses to surplus. Statistics of business savings and losses shed but little light upon changes in the wealth of the nation. Fluctuations in the general price level and in the volume of savings of individuals are perhaps two of the most important factors causing changes in the dollar volume of the national wealth. Business savings or losses are significant, however, in reflecting the extent to which business enterprises retain a portion of the net product during periods of prosperity and also the extent to which they maintain payments during periods of depressions by drawing upon existing resources.

#### Income Produced Up 23 Percent from 1932 to 1934

From the depression low in 1932, national income produced increased 9 billion dollars, or 23 percent, to a total of 48.6 billion dollars in 1934. From 1933 to 1934, the increase in income produced was 6.7 billion dollars, or 16 percent, as compared with a gain of 5.2 billion dollars, or 12 percent, in the national income paid out. As a result of the larger gain in income produced relative to income paid out, business losses declined by nearly 50 percent from 1933 to 1934. The draft upon business resources necessary to maintain income payments in the form of wages, salaries,

<sup>1</sup> The figures presented in this article represent the latest estimates of the Department of Commerce and are those which will be presented in the complete volume on national income to be published in the near future. The revisions in the estimates of income paid out made since preliminary data were published in the August issue, were due to the receipt of data on all corporate operations in 1933 and new data received on rental income and on the motor-trucking industry. In compiling the estimates in the August issue, it was necessary to use sample corporate data for Digitized for FRASER both 1933 and 1934; current estimates use sample data only for 1934.

<sup>&</sup>lt;sup>2</sup> For a more comprehensive discussion of these concepts and of the scope and limitations of the estimates, the reader should refer to "National Income, 1929-32", Senate Document No. 124, 73d Cong., 2d sess., and to the forthcoming publication on this subject by the Department of Commerce.

dividends, interest, entrepreneurial withdrawals, and rents had reached the huge total of 8.8 billion dollars in 1932. By 1934 these business losses were reduced to 1.6 billion dollars.

Table 1 shows the latest Department of Commerce estimates for each of these items for the years 1929 to 1934, inclusive. In 1929, the first year covered by the estimates, income produced totaled 81 billion dollars and exceeded the income paid out aggregate by 2.4 billion dollars. In 1930, the 13.1 billion dollar decline in the national income produced was more than twice as large as the drop of 5.7 billion dollars in income paid out and as a result business enterprises sustained estimated net losses of 5 billion dollars in that year. The decline in income produced in 1931 was 3.1 billion dollars larger than the decline in income paid out and business losses rose to 8.1 billion dollars. In 1932, the drop in the total income produced was slightly in excess of the decrease in the total income paid out and estimated business losses reached the peak of 8.8 billion dollars. The increase in income produced in 1933, while income paid out was continuing to decline, led to a 5.8 billion dollar decrease in business losses in that year.

#### Substantial Fluctuations in Real Income Produced

While these estimates of the national income present striking evidence of the impact of the depression upon our economic structure, it must be recognized that the national income is measured in terms of dollars, and the price level is an important influence in determining the movement of the estimates. While income produced was declining 51 percent from 1929 to 1932, the Bureau of Labor Statistics index of wholesale prices fell 32 percent. During the next 2 years income produced rose 23 percent while the wholesale price index increased 16 percent. Since income produced represents the net value of services rendered as well as commodities produced and since the wholesale price index represents only commodities, it cannot be used to deflate the income estimates. It is apparent, however, that the fluctuations in the national income were more than mere price phenomena and that there was a substantial reduction from 1929 to 1932 and an Digitized functions from 1932 to 1934 in the volume of goods

produced and services rendered in the United States. The marked decline and subsequent rise in the total number of persons employed and commodities produced during this period tend to substantiate this conclusion.

#### Largest Relative Improvement in Agriculture

As shown in table 2, the effect of the depression upon the various industries of the country was by no means uniform. The declines in income produced in private industries from 1929 to the low for the depression varied from 30 percent in the electric light and power and manufactured gas industry to 82 percent in the construction industry. The gains from the depression lows to 1934 were also highly variable. From 1932 to 1934 agriculture showed a gain in income produced of 91 percent, mining registered an increase of 78 percent, and manufacturing showed a rise of 74 percent. Income produced in the agricultural industry increased from 33 percent of the 1929 level in 1932 to 62 percent in 1934. The construction industry was the major exception to the tendency for those industries which had shown the largest declines to record the largest subsequent gains. Income produced in the construction industry in 1934, although higher than in 1933, was less than one-fourth as large as in 1929. For all governmental agencies, including those providing work relief, the level of income payments to individuals increased in each year subsequent to 1929. From 1929 to 1934 the gain was 23 percent with work-relief programs included, and 3 percent when they are excluded.

Relative Importance of Each Industry Varies Considerably

As a result of the variations in the trends for the different industries, the proportion of the national income produced in each industrial division fluctuated widely from year to year. (See table 3 and chart II.) As a result of the marked gains in 1933 and 1934, agriculture's relative share in the national total was

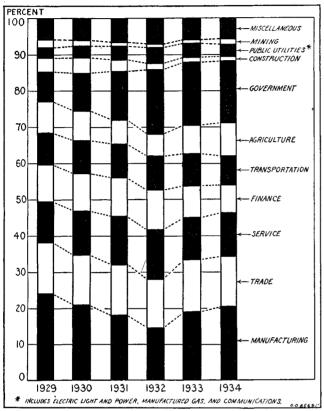

Chart II .- Distribution of income produced by industrial divisions

higher in 1934 than in any of the other years covered. The relative shares of the mining and manufacturing industries fell off considerably from 1929 to 1932 and recovered substantially in the following 2 years. Manufacturing accounted for almost one-fourth of the total in 1929, less than one-seventh in 1932, and approximately one-fifth in 1934. The construction industry contributed 4 percent of the national income

produced in 1929 and only 1.4 percent in 1933 and 1.5 percent in 1934. The proportion accounted for by all governmental agencies in the country rose from 8 percent in 1929 to 18 percent in 1932, in which year it was larger than that of any other industry. Government's proportion declined in 1933 and 1934, even with the inclusion of the various work-relief programs. Excluding the work-relief programs, the relative importance of Government dropped from 18 percent in 1932 to 14 percent in 1934. It is apparent from chart II that the changes from 1932 to 1934 generally tended to bring the industries closer to the relative status of the predepression period.

Table 3.-Percent of Income Produced by Industrial Divisions

The Department of Commerce will publish in the near future a volume presenting the national-income estimates for the 6 years, 1929 to 1934, inclusive, in detail, showing the classifications of income produced and income paid out by industrial divisions and types of payments as well as estimates of the number of persons engaged and the per capita incomes. report will also point out the limitations of the data. The classifications will be comparable to those developed in "National Income, 1929-32", Senate Document No. 124, Seventy-third Congress, second session, which was prepared by the Department of Commerce with the cooperation of the National Bureau of Economic Research. The forthcoming volume will include a discussion of the concepts and scope of the income estimates and detailed descriptions of the sources of data and of the methods of making the estimates.

<sup>&</sup>lt;sup>1</sup> Compiled by the U. S. Department of Agriculture, Bureau of Agricultural Economics, and represents the usual annual revision of data previously shown in the Surrey of Current Business. In addition to the series given above, monthly figures are available from the Department of Agriculture on unsweetened condensed milk until December 1934. Data on this product were included in the 1932 Annual Supplement under the title "Evaporated Milk (unsweetened) bulk goods." These figures are published once, each year, by months, in the annual report of the U. S. Department of Agriculture, entitled "Manufactured Dairy Products."

¹ Compiled by the U.S. Department of Commerce, Bureau of the Census, and represent a revision of the statistics shown previously in the Surrey of Current Business for total and unclassified sales of paints, varnishes, and lacquer products. The reason for the revision was the elimination of data of 7 establishments engaged exclusively in the manufacture of pigments, the sale of which were previously included in the "unclassified" group. The inclusion of this item represented duplication, since the pigments were used later in the manufacture of paint and reported as such. The number of establishments included in the report has been reduced from 586 to 579 for the "total" and from 242 to 235 for the "unclassified." No revisions have been made in the "classified" group.

### Monthly Business Statistics

The following summary shows the trend of industrial, commercial, and financial statistics for the past 13 months. Statistics through December 1931 for all series except those marked with an asterisk (\*) will be found in the 1932 Annual Supplement to the Survey of Current Business, together with an explanation of the sources and basis of the figures quoted. Series so marked represent additions since the Annual was issued and similar information, if published, will be found in the places noted at the bottom of each page. Note, however, that many revisions have occurred since the last Annual Supplement was published. A special supplement was included in the April 1935 issue, pages 57 to 72, inclusive. This supplement gave the monthly averages of all current series for the years 1932, 1933, and 1934.

Data subsequent to September will be found in the Weekly Supplement to the Survey.

http://fraser.stlouisfed.org/ Federal Reserve Bank of St. Louis

<sup>\*</sup>Revised. \*Prelimlnary.

\*New Series. See pp. 16-19 of the May 1934 issue, cash income for marketings of agricultural products, p. 19 of the December 1932 issue, Fairchfld price index and pp. 19 and 20 of the March 1933 issue, marketings.

\*Data for October 15, 1935: Total 109, chickens and eggs 132, cotton and cottonseed 94, dairy products 104, fruits 82, grains 101, meat animals 125, truck crops 120, miscellaneous 103.

†Index of farm prices has been completely revised. For earlier data see p. 20 of the November 1934 issue. World stocks—revised total, rubber adjusted and sugar adjusted indexes for January 1927-June 1932, appeared on p. 20 of the September 1932 issue. Cash income for marketings of agricultural products revised from January 1933-June 1935. For revisions see p. 19 of the Sept. 1935 issue.

#The data on retail prices of food until Aug. 15, 1933, were reported as of the 15th of each month. From then on the prices have been reported every 2 weeks. The monthly figures for months subsequent to August 1933 represent the figure nearest to the 15th of the month.

Digitized for FRASER.

Revised.
 New series. For earlier data on the following subjects refer to indicated pages of the monthly issues as follows: World prices, p. 20, September 1932; Purchasing Power of the Dollar (except for farm prices), p. 18, August 1933.
 † Revised series. For revisions of construction contracts awarded on nonresidential buildings for years 1930, 1931, and 1932, refer to p. 20 of the September 1933 issue.
 Farm prices (purchasing power) are on p. 20 of the April 1935 issue.
 A continuation of the statistics shown on pp. 30 and 32, of the 1932 annual supplement, by classes, for the years 1932 and 1933 was published on p. 19 of the August 1934 issue and for 1934 on p. 19 of the Oct. 1935 issue.
 ‡ Indexes are based on 3-month moving average of F. W. Dodge data centered at second month.

<sup>\*</sup>Revised.

\*New series. For earlier data on building costs, American Appraisal Co., refer to p. 20 of the August 1933 issue. N. I. R. A. highway work started in September 1933, see November 1934 issue for beginning of series. First Home Loan Bank loan data were issued for December 1932. Home Owner's Loan Corporation data from September 1933 to April 1934 will be shown in a subsequent issue. Total loans closed to September 31, 1935, \$2,794,140,477. Printer's Ink indexes from January 1922 to May 1934 appear on p. 19 of July 1935 issue. Data prior to May 1934 on "all other" radio and magazine advertising not published. See special note below on foreclosures.

† Revised series. See p. 20 of the October 1933 issue, magazine lineage.

§ Index as of October 1, 1935, 195.1.

Ocmpiled by the Federal Home Loan Bank Board and represent the number of foreclosures on all types of properties in 1,013 identical communities in 48 States; having 53 percent of the population of the United States. Data prior to October 1933 not published. Comparable annual totals for 1926, 65,857; 1932, 210,821; and 1933, 209,003. Data were not compiled for other years. Months subsequent to September 1934 were computed by means of a link relative to keep series comparable since the figures for these months are from a slightly different number of communities.

† Recelpt of applications stopped on Nov. 13, 1934, and was not resumed until May 28, 1935.

† These series represent a break-down of the combined total shown in the Survey previous to September 1933. For earlier data see p. 20 of the September 1933 issue.

These series represent a break-down of the combined total shown in the Survey previous to September 1933. For earlier data see p. 20 of the September 1933 issue.

Revised.

New series. For description of Chain Store Age indexes see p. 19 of the December 1932 issue. Comparable data of H. L. Green Co., Inc., sales prior to July 1933 not available. For earlier data on automobiles see p. 19 of the April 1934 issue and variety-store sales, p. 18 of the March 1934 issue. Data prior to October 1933 on collections to published. Data are currently being received from about 400 stores on open accounts and about 250 on installment accounts. New series on air mail not available prior to May 1934. Series on basis of weight carried was published in the Survey for the period February 1926 to December 1933.

Revised series. For revisions refer to the indicated pages of the monthly issues as follows: Apparel sales index of Chain Store Age, p. 26, October 1933. Combined index and grocery index of Chain Store Age were revised for period January 1932 through August 1934. See footnote on p. 26 of the November 1934 issue.

Monthly data from January 1932 through June 1935 are on page 20 of the July 1935 issue.

The New York Evening Post series on newspaper advertising in 22 cities is available for the period 1916 through January 1933. See the 1932 annual supplement and monthly issues prior to December 1934.

Revised.

<sup>•</sup> Revised.
• New series. For earlier data on department store sales by Federal Reserve districts, see p. 20 of the February 1935 issue excepting Chicago, for which see note below. Note that the combined index of department store sales is computed by the Federal Reserve Board and the district indexes are computed by the Federal Reserve banks. For districts not marked with an asterisk the series are as published in the 1932 Annual Supplement and subsequent issues. See p. 20 of the December 1934 issue for period January 1929 to October 1934. For earlier data on factory employment unadjusted in detail, see p. 18 of the June 1934 issue. See p. 19 of the July 1933 issue for factory employment unadjusted total. Data on employment in the durable and nondurable goods groups for the period January 1923-June 1935 are shown on p. 19 of the August 1935 issue.

† Revised series. See p. 19 of the April 1935 issue department store sales Chicago.

† This series was shown on p. 20 of the June 1935 issue from 1919 through April 1935.

The adjusted index of department store sales (total value) was revised by the Federal Reserve Board for the years 1929 through 1934. Revised indexes for this period were shown on p. 20 of the June 1935 issue.

Path a divised index of the period January 1933-August 1935. Revisions not shown above will appear in a subsequent issue.

<sup>•</sup> Revised.
• For earlier data see the following references: For factory employment, adjusted, all series, see pp. 16 to 19 of the July 1934 issue; employment in Baltimore, Milwaukee, and Massachusetts, p. 18, December 1932; and employment in Chicago, p. 20, June 1933; Pittsburgh employment, p. 18, January 1934; Cleveland employment, p. 19, July 1934

† For revised data refer to the indicated pages as follows: Employment in Delaware and Philadelphia, p. 19, September 1933; for revisions of years 1930-34 for those series and for the city of Pittsburgh, see p. 20 of the March 1935 issue; for Massachusetts, employment for 1931, p. 19, August 1933, and for 1932-1934 p. 20, September 1935.
§ Data have been revised for the period January 1933-August 1935. Revisions not shown above will appear in a subsequent issue.
¶ These data for the period January 1933-August 1935 are undergoing revision and will be shown in a subsequent issue.

<sup>\*</sup>Revised

\*Revised

\*Revised

\*For earlier data on the following subjects, refer to the indicated pages of the monthly issues as follows: Pay rolis, Baltimore, p. 18, December 1932; pay rolls, Chicago, p. 20, June 1933; pay rolls, Milwaukee, p. 18, December 1932; pay rolls, New York, p. 20, June 1933; pay rolls, Philadelphia, p. 18, December 1932; pay rolls, Pittsburgh, p. 18, January 1934; pay rolls, Maryland and Massachusetts, p. 18, December 1932; pay rolls in dyeing and cleaning establishments and laundries, p. 19, June 1935; factory weekly earnings for period of Jan. 1927 through Aug. 1932, p. 20, October 1932. Data on pay rolls for nondurable goods industries for the period January 1923—June 1935; factory shown on p. 19 of the August 1935 issue.

† Revised series. For revisions on the following subjects, refer to the indicated pages of the monthly issues as follows: Pay rolls, Penusylvania, Delaware, New Jersey, and Philadelphia, p. 19, September 1932; for revisions of years 1930—34 for these series and for the city of Pittsburgh, see p. 20 of the March 1935 issue; pay rolls, Massachusetts, for 1931, p. 19, August 1933 and 1932—34 p. 20, September 1935; pay rolls in wholesale and retail trade for 1930—34, inclusive, p. 20, March 1935; pay rolls in dyeing and cleaning sfor 1933, p. 20, July 1934.

\*\*A Revised data on Illinois pay rolls from April 1929 to December 1932 will be shown in a subsequent issue.

Digitized for FRASER

\*\*The revised series on dyeing and cleaning and laundry employment shown in the August 1935 issue have been dropped by the B. L. S. and the publication of the http://fraser.stlouisfeotiging) series resumed.

\*\*Federal Reserve Bank of 515 Louis\*\*

\*\*Data for the period January 1933—August 1935.\*\*

Revisions not shown above will appear in the December 1935 issue.

Revised.
† Revised. For revisions on the following subjects, refer to the indicated pages of the monthly issues. Massachusetts weekly earnings for 1931, p. 19, August 1933; and for 1932-1934, p. 20, September 1935; factory hourly earnings for 1933, p. 20, July 1934.
† Data for 1934 revised. See pp. 30 and 56 of the May 1935 issue.
† Construction wage rates as of Oct. 1, 1935, common labor, \$0.529; skilled labor, \$1.10.
# Beginning with March 1932 data are based on Federal aid and State projects; before that time the data are based on Federal-aid projects.
† Joint stock land banks in liquidation.

\*New series. For earlier data on the following subjects, refer to the indicated pages of the monthly issues as follows: Factory weekly earnings for period of January 1927 through August 1932, p. 20, October 1932; factory hourly earnings for January 1926-December 1931, p. 18, December 1932; weekly earnings Massachusetts for January 1926-December 1931, p. 18, December 1932; construction wage rates for January 1922-July 1933, p. 19, September 1933. Additional series on agricultural loans were first included in the June 1934 issue for Land Bank Commissioner for July 1933-April 1934.

A Breakdown of figures shown in issues up to November 1934.

<sup>•</sup> Revised
• Revised
• Revised 1034 other than Farm loan issues for which Treasury has acted as fiscal agent.
† Revised series on domestic bond prices for July 1931-February 1933 appeared on pp. 19 and 33 of the April 1933 issue.
• New series. For earlier data see p. 20 of the August 1934 issue.
† Revised series on domestic bond prices for July 1931-February 1933 appeared on pp. 19 and 33 of the April 1933 issue. For earlier data on yield of domestic and municipal bonds see pp. 19 and 33, of the April 1933 issue.
• New series. For earlier data see pp. 20 of the August 1934 issue, yield on United States domestic long term bonds (all issues except those due or callable within 8 years) for years 1926-1934; for data for years 1919-25 see p. 20 of the June 1933 issue, U. S. Government bond prices.

A Monthly data on yields from 19-day bills, for period December 1929 to May 1934 are shown on p. 20 of January 1935 issue.

Data on yields from 182-day bills not available prior to February 1934.

<sup>•</sup> Revised.

• Data revised for 1933. See p. 20 of the October 1934 issue.

• Beginning with January 1934, import data represent imports for consumption and are not comparable with earlier figures, which consist of general imports. See explanation on p. 9 of the March 1934 issue.

† Revised series. Data for January 1929-May 1935, inclusive, on electric railway passengers carried and operating revenues for January 1932-April 1935, inclusive, are shown on p. 19 of the August 1935 issue.

¶ Data for September, December 1934, March, June, and August 1935, are for 5 weeks; other months, 4 weeks.

• New series. Data prior to April 1933 on value of imports for consumption will be shown in a subsequent issue.

\*Returns reflect adjustments! or estimated refunds. In December 1934 operating revenues are reduced by approximately \$900,000 and net operating income by approximately \$803,000. Refunds in February 1935 are of minor importance and reduce the several accounts only slightly.

† Revised series. For earlier data see p. 20 of the April 1934 issue for operating expenses, and net railway operating income of class I railways. For revisions of data for clearances of vessels in foreign trade, see p. 36 of the September 1934 issue. For revisions on Panama Canal from August 1914 to June 1935, see p. 19 of the September 1935 issue.

\* New series. Data on airplane travel covers scheduled airlines operating in United States. For data on passengers earlied for period of 1926 to 1933 and passenger-miles flown from 1930 to 1933, see p. 20 of the February 1934 issue. For data on miles flown and express earlied from 1926 through 1933, see p. 19 of the January 1935 issue. For alcohol withdrawn tax paid from 1925 to 1934, see p. 20 of the April 1936 issue. New series on telephones as compiled by Federal Communications Commission. Data super-sed those published in previous issues of the Survey which covered all carriers having annual operating revenues in excess of \$250,000; present series covers only those companies with operating revenues of these companies were 97.7 percent of the total Digitized for FRASE the companies previously reporting.

This figure covers room revenue only.

<sup>\*</sup>New series. For earlier data see p. 20 of the April 1933 issue (crude methanol) and p. 19 of January 1934 issue (explosives).
† Revised series, see p. 36 of the June 1933 issue, for 1932 revisions, exports and imports of fertilizer and imports of vegetable oils; for 1933 revisions on exports see p. 20 of the September 1934 issue; for revised data for crude methanol production for 1933, see p. 36 of the May 1934 issue. Quarterly data on fats and oils for the years 1932 and 1933 were shown on p. 19 of the March 1935 issue; for 1934 on p. 19 of this issue.

A The refined equivalent of crude production is approximately 82 percent.

Texas only. Louisiana produced 23 percent of United States production in 1933 and 16 percent in 1934.
† Figures since January 1922 revised due to dropping of Missouri from Southern States classification. See p. 19 of the January 1934 issue.

Revised.

Digitized for FRASER

<sup>•</sup> Revised.
• Revised.
• Condember, 1 estimate.
• December, 1 estimate.
• Revised series: Monthly data on cottonseed and sottonseed products for the year ended July 1932 were shown on p. 20 of the February 1933 issue; revisions for each month of 1933 were shown when monthly data for 1934 became available; revisions for year 1934 were shown on p. 30 of the November 1934 issue and for year ended July 1935 on p. 20 of this issue.
• For exports of cottonseed cake and meal for the year 1932 sec p. 37 of the June 1933 issue, data revised for 1933 see p. 19 of the September 1934 issue.

Quarterly data on fats and oils for the years 1932 and 1933 were shown on p. 19 of the March 1935 issue; for 1934 on p. 19 of this issue.

# See footnote on p. 37 of the October 1934 issue.

Befort revised data on paint, varnish, and lacquer products for the years on "total" for 1928-35 and "unclassified" for years 1932-35 see p. 20 of this issue.

This series prior to September 1935 was listed as "Lard Compound."

<sup>\*</sup> New series. For earlier data see p. 19 of the May 1935 issue, manufactured and natural gas. Beverage figures are from the U. S. Treasury, Alcohol Tax Unit. Monthly data on distilled spirits available beginning July 1933 and on fermented malt liquors, April 1933. Series on cellulose products prior to January 1933 not available.

¶ Revised series. Data revised beginning with January 1932. See p. 39 of the April 1935 issue. Revisions for period January 1932-January 1934, inclusive, will be shown in a subsequent issue.

¶ For revised data for electric-power production for 1932 see pp. 38 and 56 of the May 1933 issue; for 1933 see pp. 38 of the May 1934 issue; 1934 data also revised. Revisions not shown in the June 1935 issue will appear in a subsequent issue. Manufactured and natural gas revisions for years 1929-34, inclusive, were shown on pp. 19 and 20 of the May 1935 issue. Data on consumption of distilled spirits revised to include brandy tax paid direct from fruit distilleries. For revisions see p. 39 of the March 1935 issue.

© Consumption of distilled spirits (withdrawn tax paid) plus brandy tax paid direct from fruit distillers plus ethyl alcohol withdrawn tax paid (see p. 38) equals Bureau of Internal Revenue total of distilled spirits withdrawn tax paid.

Revised.

\*Revised.

\*Revised.

\*Represents the visible supply east of the Rocky Mountains as reported by Dun & Bradstreet.

\*New series. For earlier data see p. 20 of the November 1932 issue, barley receipts; for receipts of milk in Greater New York, p. 20 of the August 1934 issue. Since the division of no. 2 barley by the Department of Agriculture into straight and malting grades as of July 1, 1934, prices for each grade have been reported separately. See p. 19 of the June 1933 issue for butter consumption. Data on consumption of rectified spirits are as indicated by the sale of stamps. Data prior to April 1933 not published.

\*Revised series. For revisions refer to the indicated pages of the monthly issues, as follows: For 1931 on apparent consumption of cheese, production of condensed and evaporated milk, p. 20, January 1933. For earlier data on stocks (cold-storage holdings) of total and American whole-milk cheese, p. 19, April 1933. For 1932 revised data on production of factory and American whole-milk cheese, production of condensed and evaporated milk, p. 39, September 1933. For subsequent revisions for 1932 on production of evaporated milk, p. 39, Sovember 1933. For 1932 and 1933 revisions on butter and cheese consumption and 1933 revisions on production of butter, cheese, condensed and evaporated milk, see p. 19 of the March 1933 issue. For 1934 revisions on production of obster, cheese, condensed and evaporated milk, and apparent consumption of butter and cheese see p. 19 of this issue. For final revision for 1933, car-lot shipments of apples, citrus fruits, onions, and potatoes, see p. 20, January 1935 issue, and for 1934 revisions for car-lot shipments of apples, citrus fruits, onions, and potatoes, see p. 20 of this issue. For revised figures for 1933 exports of principal grains and barley, see p. 20 of September 1934 issue.

Revised
Brewer's rice not included.
Dec. 1 estimate.
Oct. 1 estimate.
New series. For earlier data, see p. 20 of the November 1932 issue, rye; and p. 20 of the June 1935 issue, wholesale price of wheat, No. 1 Dark Northern Spring, Minnellis

<sup>\*</sup> New series. For earlier data, see p. 20 of the November 1932 issue, rye; and p. 20 of the June 1935 issue, wholesale price of wheat, No. 1 Dark Northern Spring, Minneapolis.

† Data revised. For revisions of wheat flour, production and consumption (Russell's) from July 1931 to December 1932, see p. 19 of the August 1933 issue. For revised data on rice exports for 1932 see p. 39 of the June 1933, issue and for 1933 exports, see p. 20 of the September 1934 issue. For 1933 revisions on corn, wheat, and wheat (including flour), see p. 20 of the September 1934 issue.

\* Represents the visible supply east of the Rocky Mountains as reported by Dun & Bradstreet.

\* Government slaughter not included.

Bee footnote on p. 37 of this issue. Data for 1933 also revised, see p. 20 of the October 1934 issue.

<sup>\*</sup>Revised.

\*Revised series. For revisions refer to the indicated pages of the monthly issues, as follows: Exports of tobacco for 1932, p. 42, June 1933—data revised for 1933, See p. 20 of the September 1934 issue, 1932 final revision of anthractic production, p. 42. Junuary 1934. Anthractic shipments for 1932, p. 42, December 1933; consumption of bituminous coal by electric power plants for 1932, p. 42, May 1933; for 1933, p. 42, May 1934. Data also revised for 1934. Revisions not shown on p. 43 of the June 1935 issue will appear in a subsecuent issue. For revisions of exports in 1932, see p. 20 of the September 1934 issue. Revised data on shipments and exports see p. 41 of the June 1933 issue. For revisions of exports in 1933, see p. 20 of the September 1934 issue. Revised data on shipments and stocks of refined sugar at 2 ports (for period January 1925-April 1935) are shown on p. 18 of the October 1935 issue, change resulted from a reduction in the number of reporting refineries.

# See footnote on p. 37 of this issue. Data revised for 1933. See p. 20 of the October 1934 issue.

\* Beginning with August 1934 certain anthractic stocks were included which had not been covered in previous reports.

† Price converted to short-ton basis. Data on a short-ton basis prior to April 1931 were not published. Earlier monthly data were reported on a long ton basis.

\* Note major correction in data on imports of refined sugar from Cuba June-November 1934 were shown in the February 1935 issue.

\* Note major correction in data on imports of refined sugar from Cuba June-November 1934 were shown quarterly.

Digitized for FF Monthly retail price of coal was discontinued with the month of August 1935. In the future the price will be shown quarterly.

<sup>\*</sup> Revised.

\* New brsis due to reclassification of motor-ruel stocks.

\* Preliminary.

\* Revised series. For revisions refer to the indicated pages of the monthly issues, as follows: Bituminous coal production, for 1932, p. 42. January 1934. Bituminous coal production revised for 1933 and 1934. Revisions not shown in the May 1935 issue will appear in a subsequent issue. Beehive and byproducts coke for 1932, p. 43 of December 1933 issue, and for 1933 revisions see p. 43. July 1934 Data for 1934 also revised; revisions not shown in the July 1935 issue will appear in a subsequent issue. Crude petroleum production, stocks, east of California (total), at refineries and at tank farms and pipe lines, and wells completed, for 1932. See footnote on p. 56, November 1933. Consumption of gas and fuel oils in electric power plants for 1932, p. 43, May 1935, 1935 and wells completed for 1934. Revisions for months not shown for 1934 on p. 44 of the June 1936 issue will appear in a subsequent issue. Production of residual fuel oils and gas oil and distillate fuels, stocks of residual fuel oil east of California, consumption of gasoline, production of gasoline at natural-gas plants and refineries, stocks of gasoline at refineries, consumption of kerosene and lubricating oil, for 1932, p. 56, November 1933; retail distribution of gasoline in 41 States for 1932, p. 43, May 1934.

\*\*See footnote on p. 37 of this issue.\*\* Imports also revised for 1933. See p. 20 of the October 1934 issue

\*\*Data revised for 1933. See p. 20 of the September 1934 issue

\*\*Data revised for 1933. See p. 20 of the September 1934 issue

\*\*Digitized for FRASER\*\* New series.\*\* For earlier data see p. 20 of the February 1933 issue, production and stocks of residual fuel oil and gas oil and distillate fuels.

\*\*New series.\*\* For earlier data see p. 20 of the February 1933 issue.

\*\*Digitized for FRASER\*\* Monthly retail price of coal was discontinued with the month of August 1935.\*\* In the future the price will be shown quarterly.

<sup>•</sup> Revised.

1 Data discontinued by reporting source in July 1935.

1 Raw stocks in all hands as shown above include all hides from Government animals slaughtered under Federal inspection. Hides from cattle allotted to State relief agencies and which were not killed under Federal inspection are no included unless they have already moved into sight it is obvious, therefore, that a quantity of hides from noninspected slaughter held by State Relief Agencies constitutes an invisible addition to the visible supplies shown above.

1 Date on production of speep and lamb and goat and kid leathers from 1927-34 have been revised. For revisions not shown on p. 44 of the April 1935 issue see p. 19 of the June 1935 issue.

A dovernment relief slaughter included for the period June 1934-February 1935. See p. 44 of the June 1935 issue for the figures, excluding relief slaughter. For sheep and lambs, relief slaughter only affected the data for the months of September to December 1934

5 Data revised for 1933. See p. 20 of the January 1935 issue. For 1934 see p. 20 of the October 1935 issue.

# See footnote on p. 37 of this issue. Imports revised for 1933, see p. 20 of the October 1934 issue

New series: For earlier data refer to the indicated pages of the monthly issues. Leather production, p. 19, June 1933; leather stocks, p. 19, January 1935. New series on gloves and mittens cover 234 identical manufactures as reported to the U. S. Department of Commerce, Bureau of the Census. Data prior to July 1934 are not available. These data are not comparable with data through January 1934 previously shown

† Revised series. For earlier data refer to the indicated pages of the monthly issues, Production of cattle, sheep, and lamb leather, p. 44, April 1934; imports of total hides and skins, exports of upper leather, p. 43, June 1933; boot and shoe production for 1934, p. 45, March 1935. Production of asphalt for 1932, p. 56, November 1933.

• Data revised for 1933. See p. 20 of the September 1934 issue.

Revised.

Data temporarily discontinued.

New series. For data on lumber exports for period of January 1919 to September 1932, see p. 20 of the November 1932 issue. See special footnote below on lumber production, shipments, and stocks.

Data revised for 1932, see p. 44 of the June 1933 issue, exports of Douglas fir lumber and timber, for revisions not shown above on production, shipments, and stocks of total number, hardwoods and softwoods, see p. 19 of the October 1935 issue.

Data revised for 1933. See p. 20 of the September 1934 issue.

New series on lumber production, shipments, and stocks compiled by National Lumber Manufacturers' Association and represent an estimate of the total lumber cut based on monthly reports received from regional associations covering between 80 and 90 percent of the total cut in 1934 and 70 to 80 percent in 1935. The figures for 1935 are not final and are subject to revision. No comparable figures are available prior to January 1934. Complete data for 1934 are shown on p. 48 of the July 1935 issue.

Data for November 1934 and January and May 1935 are for 5 weeks; other months, 4 weeks.

Revised.

Revised.

New series. Data on furniture activity, all districts, prior to April 1933 not published. For imports of iron and steel, see p. 20 of the November 1932 issue; for malleable castings, p. 20 of the April 1933 issue. New series on iron and steel composite price was shewn on p. 19 of the January 1935 issue.

Data revised for 1932. For revisions, see p. 45, exports of southern pine lumber and timber, and p. 45, iron and steel, of the June 1933 issue. Data revised for 1933; see p. 20 of the September 1934 issue

Revised. Data prior to April 1933 not published.

Revised. Data prior to April 1933 not published.

Beginning with January 1934 the report includes all known operators; prior to this time approximately 89 percent of the listed capacity was included.

Imports from Cuba not included.

See footnote on p. 37 of this issue. Data revised for 1933; see p. 20 of the October 1934 issue.

<sup>\*</sup>New series. For earlier data, see p. 20 of the January 1933 issue wholesale price of plumbing and heating equipment. Figures on convection-type radiators prior to January 1932 not published. Steel castings, see p. 20 of the October 1934 issue.

† In equivalent direct radiation.

† Revised series. For earlier data on bathroom accessories see p. 20 of the October 1933 issue, and for range boilers see p. 20 of the July 1934 issue. Data on vitreous china plumbing fixtures revised starting January 1933, see p. 47 of the April 1935 issue; revisions for 1933 will be shown in a subsequent issue.

A Steel casting series revised January 1935 by the increase of the number of companies from 164 to 180; comparable data not completed for 1934 and earlier years. Figures for 164 companies in January 1935 were new orders, total 31,816, percent of capacity 20.3; new orders, railway specialties, 6,835; production, total, 28,519, percent of capacity 18.2, production, railway specialties 6,052.

§ For 1932 revision see p. 46 of the July 1933 issue, for 1933, p. 47 of the August 1934 issue, for 1934, p. 50 of the August 1935 issue.

Revised.
 New series. For earlier data see p. 18 of the January 1934 issue, United States Steel Corporation shipments, and p. 20 of the December 1932 issue for tin and terneplate.
 Current oil-burner series available only back to January 1933 are based on reports from 160 concerns.
 † Revised series. Data on air-conditioning machinery, oil burners revised starting January 1933 see footnote on p. 48, April 1935. The revisions for 1933 will be shown in a subsequent issue.
 A Revised data on steel furniture shelving for years 1932, 1933, and 1934 will be shown in a subsequent issue.

<sup>Revised.
Series covering shipments and unfilled orders temporarily discontinued.
New series; for earlier data, see p. 20 of the December 1932 issue, tin and terneplate; p. 20 of the July 1934 issue for machine tools (incl. forging equipment).
Present series on water systems now cover 52 companies.
Data on exports revised for 1933; see p. 20 of the September 1934 issue.
Sata for 1932 revised, for revisions see p. 48 of the June 1933 issue, exports of refined and total imports of copper. For 1933 revisions on zinc, see p. 49 of the January 1934 issue; for 1934 revisions see p. 49 of the February 1935 issue.
# See footnote on p. 37 of this issue. Data for 1933 revised; see p. 20 of the October 1934 issue.
¶ Revised series on domestic pumps and water systems starting January 1934; see p. 49 of the April 1935 issue; mechanical stokers, see p. 48 of the April 1935 issue.
New series on water-softening apparatus revised starting January 1933; revisions for 1933 will be shown in a subsequent issue.</sup>

<sup>\*</sup> Revised.
† Revised series; for earlier data on new orders for electrical goods see p. 19 of the August 1933 issue; and p. 49 of the June 1933 issue for 1932, for chemical wood pulp imports.

\* New series. For earlier data on hand-type vacuum cleaners see p. 20 of the August 1934 issue. For electric refrigerators, see p. 20 of the July 1935 issue. Data prior to October 1931 not published on plumbing brass. Wood pulp figures based on reports to the Pulp Executive Authority by 172 mills, representing 91 percent of the total U. S. pulp industry. Figures available beginning with January 1934. Data not exactly comparable with figures previously shown. See footnote on p. 56 of the April 1935 issue for the complete 1934 wood-pulp figures.

# See footnote on p. 37 of this issue. Data for 1933 revised; see p. 20 of the October 1934 issue.

\* Since January 1934 the figures are more complete than those on deliveries previously shown. Shipments of the concerns formerly reporting contribute about 80-85 percent of the total for the present series.

\* These series have covered a varying number of companies for period covered in survey; percentage of industry coverage not known. Reports have been from 12 companies since January 1934.

Monthly statistics through December 1931,

1935

1935

• Revised.

† Revised. Pata for period January 1933-January 1934 inclusive on consumption and stocks of waste paper at mills will be shown in a subsequent issue. Data on total paper for 1934 revised. Revisions for months not shown above will appear in the September 1935 issue.

† The Bureau of the Cen.us has changed the title of the "Boxboard" report to "Paperboard" since data actually cover all board of .0012 of an inch or more in thickness reported by the cooperating manufacturers. Figures given on production and new and unfilled orders are for 94 identical manufacturers; and consumption and stocks of waste paper for 92 manufacturers. Estimated coverage is given in general footnote below

\*New series. New series on paperboard shipping boxes compiled by the National Container Association, Chicago, Ill., from reports rom all members of the industry of record beginning in January 1934. The volume of companies not reporting each month is estimated by the association, so as to keep the series comparable. The solid fiber figures are complete as reported. Prior to January 1934 data covering this industry were compiled by the Paper Board Industries Association. See note below for total, book, fine, and wrapping paper.

†The figures on paper (including total, fine, and wrapping) are as reported by the American Paper and Pulp Association. See note below for total, book Paper Division of the Piper and Pulp Industry; they are not comparable with the data carried in the Survex from the American Paper and Pulp Association through December 1933. The present classification of the association differs from that previously used by them, as well as from the Bureau of the Census classification to the classes shown, the association is reports on printing paper (including uncoated book), boards, paperboard, and newsprint. The first two of these classifications are not used in the Survex, while the Bureau of the Census reported by the association, the Newsprint Service Bureau's report for newsprint (the latter series is identical wi Digitized for FRASER

<sup>Revised.
See footnote marked "‡".
‡ Data for 1934 and for the period January to July 1935 are estimated to represent approximately 97 percent of the industry; for August 1935 the coverage is estimated to 81 percent. Previously published data are estimated to cover about 80 percent of the industry for 1929-33, inclusive, and 75 to 80 percent prior to 1929.
# See footnote on p. 37 of this issue. Data for 1933 revised. See p. 20 of the October 1934 issue.
In October 1933, 4 new companies were included in the report and 1 additional company in January 1934. Since that month, the coverage of the industry is 100 percent. For preceding periods the coverage varied; in 1929 it was 90 percent; in 1931, 80 percent, and in 1933, 95 percent, according to the Census of Manufactures. Overlapping figures are available for October 1933. See the October 1934 issue for October 1933 data for the smaller number of firms.
New series. Earlier data not published on rubber heels and soles prior to December 1932.
† Revised series. Data on consumption of rubber for tires revised for 1932, 1933, and 1934. See p. 51 of the August 1934 issue. Revised data from September 1930-December 1934—rubber world stocks, world afloat, and afloat to the United States appear on p. 20 of the July 1935 issue, for 1932 revisions for United States stocks, see p. 50 of the Jule 1933 issue. See p. 50 of the Jule 1933 issue See p. 50 of the Jule 1933 issue for crude rubber imports.
▲ Coverages of Rubber Association data has varied considerably over period for which data have been shown in Survey. Coverage was generally higher in 1934 and 1935 than in earlier years.</sup>

<sup>Revised.
New series. Earlier data not published on illuminating glassware prior to July 1932 (except production and percent of capacity); for earlier data see p. 20 of the June 1933 issue, face brick, machine production. Series on common and vitrified paving brick and tile beginning January 1934 were shown on p. 20 of the June 1935 issue. For earlier data on gypsum see p. 20 of the January 1933 issue.
‡ Adjusted for degrading and year-end physical inventories.
† Data on plate glass represent the total output of the industry. Complete figures for the months of 1932 were shown on p. 52 of the March 1933 issue, and for 1933 on p. 52 of the March 1934 issue.
# Scries on glass containers are not comparable for 1934, 1935, and earlier years due to increase of number of firms reporting to 44. Shipments of the 44 firms for the year of 1933 amounted to 33.056,706, compared with 23.511,963 for the 30 firms reporting for the same year. Comparable statistics on shipments for the companies, now reporting by years, from 1928 to 1933, inclusive, were as follows (in gross): 1928, 31,943,016; 1929, 33,765,996; 1930, 31,965, 1932, 24,74.949; and 1933, 33.048,747. Data are not available for this period on production and stocks, nor are monthly figures on shipments available. It may be noted from the trend of these data that the monthly figures prior to 1934 had a downward bias. Basis of estimating capacity was changed in computing the new series. Data for 1934 revised, see p. 52 of the May 1935 issue.</sup>

Preliminary. # See footnote on p. 37 of the August 1935 issue.

1 Discontinued by the reporting source in April 1935.

5 Since July 1934 report has been on a weekly basis. Data for September and December 1934 and March, June, and August 1935 are for 5 weeks; other months, 4 weeks. Figures for July and succeeding months are computed from Census Bureau figures so as to represent 100 percent of the wool industry; earlier figures incomplete.

1 Compiled by the Silk Code Authority (The National Federation of Textiles, Inc.) and represent the percentage of operations based on an 80-hour week (2 shifts of 40 hours each). Data are not comparable with the series previously shown in the Survey which were based on a smaller sample and computed on the basis of a 48-hour week.

New series. Silk spindle activity, compiled by Silk Throwing Code Authority; not comparable with spinning data previously shown. For earlier data on silk percentage of operations are silk spindle activity, compiled by Silk Throwing Code Authority; not comparable with spinning data previously shown. For earlier data and september 1934. See p. 20 of the July 1935, issue for earlier data and explanation of new wool consumption series.

Beginning with the July 1934 report the statistics are reported on the basis of 4 and 5 weeks, the weekly distribution being determined by the Saturdays. The statistics presented herewith are still based on the pre-code computed normal (currently based on the single-shift performance over the 5-year period 1928-32). The current data represent practically complete coverage of the industry. No allowance for holidays in January 1934, January 1935, and December 1934. Conversion will be made for earlier months (since effective date of code) at a later date.

A Foreign receipts for year 1934 are compiled by U. S. Department of Agriculture and are not comparable with data carried through December 1933. This results in a total figure which also is not comparable with earlier data.

The figures for the 3 quarters of 1934 have been

Revised.
 New series. For earlier data see p. 20 of the February 1934 issue for total shipments, accessories and parts, and registrations of new commercial cars.
 Revised series. For earlier data see p. 19 of the August 1933 issue for fire extinguishers and passenger-car registrations; p. 55 of the June 1933 issue for 1932 exports and possenger cars is see p. 19 of the August 1934 issue. Data on automobile production revised for 1933. See p. 55 of the August 1934 issue. For revised data in the production is the production revised for 1932. See p. 55 of the August 1934 issue.
 Index of sales of new passenger cars is shown on p. 26 of this issue.
 Data revised for 1932. See p. 54 of the June 1933 issue. Data revised for 1933. See p. 20 of the September 1934 issue.
 Taxicabs are included in figures for passenger cars, beginning January 1934 in order to avoid disclosure of individual companies.
 United States and Canadlan dealers, plus overseas shipment.

Revised.

Data for 1934 revised See p. 56 of the May 1935 issue.

New series. For earlier data see p. 18 of the February 1933 issue, business indexes, and p. 20 of the October 1933 issue, commercial failures.

Revised series. See p. 55 of the April 1934 issue, construction, and mining, for 1933. Series on common-stock prices revised back to December 1932 as a result of additional stocks being added; for revision see p. 56 of the April 1934 issue.

\*Number of commodities changed from 502 to 567 beginning with month of January 1934.

Data revised January 1932 through July 1933. Revision for 1932 see p. 55 of the November 1933 issue. For final revisions for 1933 see p. 56 October 1934 issue.
