## Business Situation Summarized

**B**USINESS did not undergo marked change in December from the position prevailing at the end of November, after allowance for the divergence in the usual seasonal movements between retail trade and industrial production. The very substantial rise in consumer purchasing power in recent months of expanded activity had assured the increase in retail sales over a year ago that was realized. The irregularity in store sales which developed over the November month-end was not significant, as higher pay rolls, larger farm income, and a year-end flow of dividends much in excess of that in 1938 brought trade through retail channels to a strong close for the year.

On the whole, industrial production was maintained at a high rate during the month. There were seasonal declines in some industries but in total the let-up was probably less than usual for December. Steel ingot production, which in the spectacular autumn rise reached the practical limits of capacity by the end of November, tended to decline as the volume of new orders fell to a figure more in line with current utilization. Pressure for delivery of steel has decreased following the announcement that prices for the first quarter of 1940 would be about the same as those listed for the past several months. By the third week of December the rate of ingot production was off to 90 percent of capacity, against 94 percent at the end of November. This recession is not indicative of a general decline since the rate of steel production was above the operating rate for the steel-consuming industries generally. The more highly fabricated lines of steel manufacture are not subject to such quick adjustments as those which characterize ingot production, and no signs of slackening activity have appeared among them as yet. In some of the metal industries incoming business remained comparatively high during November; e. g., orders received by metal trade concerns in Massachusetts were as large as in September, though well below the October volume. New orders in the other major industries reported for this State were much smaller in November than in September.

Activity has been sustained in machine tool, aircraft, shipbuilding, and electrical equipment manufacturing. Automobile assemblies were stepped up in December as Chrysler plants again came into production. Total assemblies rose to about 440,000 units, the highest total since the middle of 1937. This represented a larger volume than retail sales plus exports, as stocking of dealers continued. Domestic retail sales of passenger cars in November amounted to 257,000 compared with 241,000 in November 1938.

### Output of Consumers' Goods Maintained.

In the industries manufacturing consumers' goods, operations continued high in December. Some downward adjustments occurred, but these were neither large nor widespread. November figures show the extent to which the operations of these industries were pushed by the September-October buying. Output of cotton textile mills, already high in October, increased further in November. While some increase in the purchasing of textiles occurred in the middle of December, following the rise in raw cotton prices, the mills have been operating at a rate above the volume of incoming business for some time. Woolen mills in November also operated at a very high rate.

The extent of the rise over a year ago in a number of important areas of the economy is indicated by the comparisons presented in figure 2. The rise in durable goods manufactures—still relatively depressed toward the end of 1938—is outstanding, as is the increase of about one-fifth in the volume of freight moved. The general advance in production and distribution brought the rise in the national income payment total to 6 percent. The price data given show that price changes were not an important factor in the magnitude of the change in dollar figures, though actual and anticipated price movements did have an important influence on the volume of purchasing and sales during the final third of the year.

Estimates of the dollar sales of service and limited function wholesalers prepared by the Bureau of Foreign and Domestic Commerce show a sharply increased relative gain over 1938 in the final quarter of the year. Moderate advance in the first half gave way to a wider increase for the third quarter, but in the final 3 months sales ran well over 10 percent in excess of the final quarter of 1938 which was, it will be recalled, a period of improving trade. For the year 1939, the percentage increase in sales was 9 percent, the total rising from 19,023 million dollars in 1938 to 20,700 million dollars in 1939. The more important increases were in such lines as electrical goods, metals and metal work, lumber and construction material, jewelry and optical goods, machinery, automobiles, and furniture. Sales of food and farm products, which make up an important part of the total, showed only moderate increases as prices were generally lower throughout the year. Price changes were not a factor in the larger annual sales total for this group of merchants, since they averaged lower in 1939 than in 1938. It was not until the last quarter of the year that average wholesale prices moved higher than a year ago.

**Income Payments Higher.**

Reference to the chart on page 3 will reveal the unusual rise in income payments that has occurred during the few months subsequent to the outbreak of war in Europe. The reaction in domestic markets to this event—superimposed as it was on a rising trend of domestic economic activity—brought a rise in the index of income payments to 88.8 in November (1929=100) from the August figure of 85.4. The advance in this index of more than 1 point a month for the past 3 months means an increase in income payments on an annual basis from 69.7 billion dollars at the August rate to 72.5 billion dollars at the November rate. Some further increase in income payments probably resulted from December business; for the year 1939 a

Farmers' incomes rose sharply after the prices of agricultural products advanced in September. The improvement of the past 4 months has raised the estimated total of cash farm income for the year 1939 to \$7,625,000,000, virtually the same as in the preceding year. With Government payments of \$675,000,000 estimated to be almost \$200,000,000 larger than in 1938, the total income of farmers of \$8,300,000,000 from marketings and Government payments is expected to be about 2.5 percent higher than in 1938.

A marked rise in dividends, particularly in the final month of the year, has been an important factor in increasing the flow of income to individuals. It is estimated on the basis of data now available that dividends in 1939 were at least half a billion dollars larger

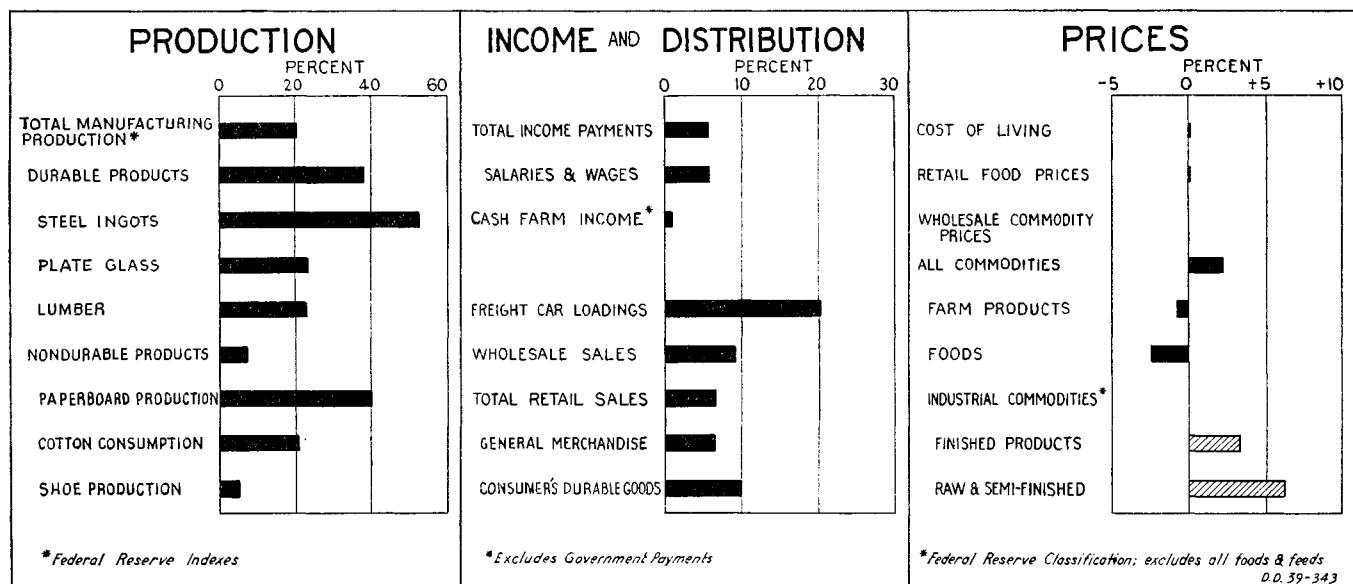

Figure 2.—Industrial Production, Income and Distribution, and Prices—Percentage Change November 1939 from November 1938.

NOTE.—All series shown on this chart are those regularly published in the Survey except wholesale and retail sales which are estimates of the U. S. Department of Commerce and prices of industrial commodities which are compiled by the Board of Governors of the Federal Reserve System from data of the U. S. Bureau of Labor Statistics.

total of almost 70 billion dollars is indicated, as compared with 66.3 billion dollars in 1938 and 72.4 billion dollars in 1937.

Income payments in November were 310 million dollars larger than a year ago, an increase of nearly 6 percent. In general, the industrial sections of the Nation have shown the greater improvement over the same month of last year. Although salaries and wages as a whole during November were only 6 percent above those of November 1938, aggregate pay rolls in the commodity-producing industries were 208 million dollars or nearly 15 percent larger than a year ago. While representing less than one-quarter of all income payments, pay rolls in these important industries account for two-thirds of the increase in total income over November 1938. Factory employment in November was 11 percent higher than in 1938, and pay rolls were one-fifth larger. In contrast, the governmental contribution to employee's income was nearly 10 percent less than November of last year, reflecting the lower level of work-relief wages during 1939.

than the 1938 figure of 3.7 billion dollars, representing an increase of 14 percent. The marked increase in dividends relative to the increases in other types of incomes reflects partly the more variable character of this type of income and partly the concentration of the present recovery in those industrial branches (notably manufacturing) where share capital represents an important factor of production. Enlarged dividends reflect the substantial expansion in business profits that has occurred in the fourth quarter of 1939. Data are not available at this time to compute the actual increase in current profits, but recent months have undoubtedly produced a volume of earnings which are not far removed from the results of early 1937.

**Financial Markets Quiet.**

As in November, domestic and international financial markets were relatively quiet, aside from the drop in quotations of Finnish bonds which followed the attack of the U. S. S. R. on Finland. Prices of stocks and corporate bonds on the whole did not show significant or material changes. Corporate security flotations on

the open market achieved substantial volume after 3 months of stagnation. The issues were predominantly utility refunding operations; the amount of new capital raised was small. That business concerns have required some additional funds is evidenced by the trend of commercial loans; the amount outstanding with reporting member banks has increased \$400,000,000 since August to \$4,400,000,000 in December.

As the year ends the prospects for business in the first half of 1940 remain uncertain, though the level of activity is currently well above that of the first quarter of 1939. Production in the basic industries during the final quarter of 1939 has matched that of the best quarter of 1929. But with industrial activity not being supported at present by a volume of incoming business of corresponding magnitude, some readjustment in productive activity can hardly be avoided as the backlog of orders are reduced. Buying policies during the fall rush were predicated largely upon covering requirements for some months ahead rather than upon immediate needs. As these commitments brought company positions into line with their raised expectations regarding sales trends and inventory needs, purchasing settled down to a replacement basis. The mere cessation of inventory accumulation can only result in some decline in industrial activity unless a

prompt expansion in consumption, investment, or export demand, not now in evidence, should come in as an offsetting influence.

What is uncertain at this time is the magnitude and duration of the reaction to come in the next few months. The fact that inventory holdings have been and are still being enlarged through previous commitments is an unfavorable factor in the present situation. The attitude taken toward these holdings may largely determine the extent of the readjustment. There are several factors on the favorable side which militate against liquidation. The advance in prices, particularly retail prices, has not been as large as seemed likely two months ago. Hence, an expanded volume of goods should continue to be taken off the market by consumers. The prospects for farm income have been strengthened by the December rise in the prices of a few agricultural staples, principally wheat and cotton. Activity in the construction industry has been well maintained during recent months, and a continuance of the expansion of 1939 into the spring of next year would provide added stimulus to the economic structure. Furthermore, there has been a sizable increase in commitments for capital expenditures by business in the past 4 months and the activity created by it will be felt during the first quarter of 1940.

# Recent Trends in United States Export Trade

THE foreign trade returns for recent months reveal a number of abrupt changes in both the composition and destination of United States exports, but they do not show any significant increase in the export totals which can clearly be attributed to the war in Europe. This is probably due to the character of the war to date; if and when the war enters a more destructive phase a larger volume of exports from this country may still reasonably be expected. It is, nevertheless, a fact that the expectations of greatly enlarged foreign sales, which formed the basis for the unusually rapid acceleration in domestic business since August, have not been realized. On the other hand, dislocations arising out of shipping and other difficulties have not restricted trade as they did immediately upon the outbreak of war in 1914.

## Exports Rising Since June.

In the 3-month period from September to November exports were 17 percent higher than in the same period of 1938. (See table 1.) This fact might at first appear to be attributable to the war. In making the comparison with 1938, however, it must be recalled that that year was one of falling foreign demand for

our goods, as is evident in figure 3. Our exports this year were already showing a rising tendency before the outbreak of the war, and have been higher than last year in every month since June. The direct requirements of intensified foreign rearmament programs and the expansion of industrial activity abroad resulting from them both contributed toward an increase of foreign demand for American goods. If the comparison is made with 1937, exports from September to November of the current year have fallen slightly. From these facts it might be assumed that the war had little effect upon our export trade and that the increase over 1938 reflects merely the continuation of an upward movement which was already under way. Analysis of the detailed figures demonstrates, however, that the war has affected both the commodity and the geographic distribution of shipments from this country.

Comparative data for the September–November periods of 1938 and 1939 show that the 17 percent advance in exports was entirely the consequence of increased exports to the European neutrals and to countries outside Europe, as is shown in table 1. Purchases of United States merchandise by the Scandinavian

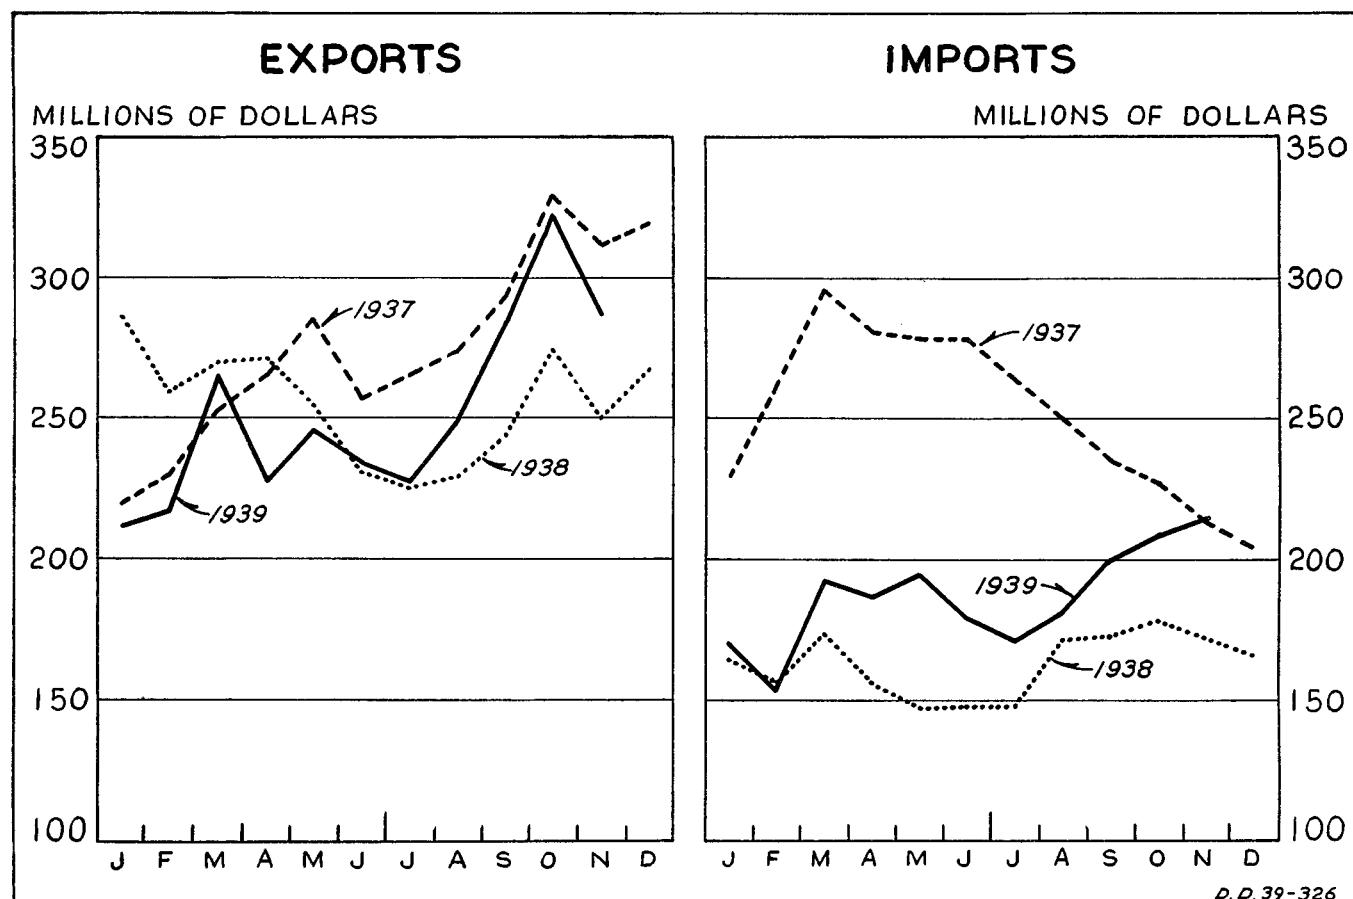

Figure 3.—Value of United States Exports of Merchandise, and Imports for Consumption, Calendar Years 1937-39 (U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce).

countries rose by no less than 70 percent over 1938; those by Canada and other northern North American countries increased approximately 42 percent and for Latin-American countries the gain was 40 percent. Direct shipments to Germany, relatively small in recent years, fell almost to zero. An increase to the United Kingdom and France, however, has not materialized. Exports to the United Kingdom declined somewhat and those to France increased slightly, as compared with 1938; both were far below the same months of 1937.

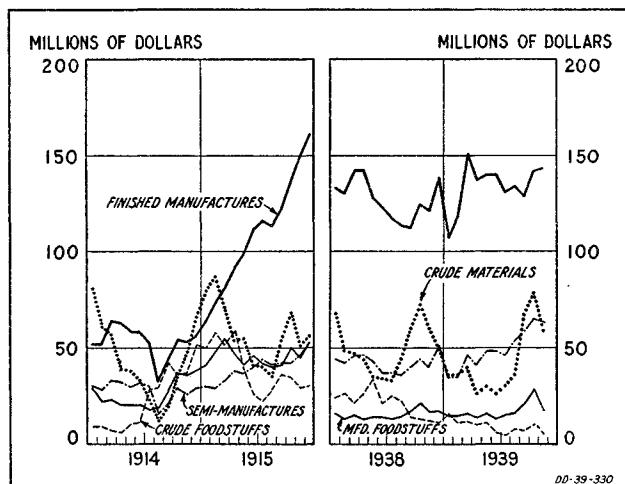

Figure 4.—Value of United States Exports of Merchandise, by Economic Classes, Calendar Years 1914, 1915, 1938, and 1939 (U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce).

Our exports to these two countries together were in fact lower than in the corresponding period of any year since 1934. The sharp divergence between actual developments and the widely held anticipations of increased sales to the European Allies is brought out even more clearly by the movement of exports within the 3-month period. Shipments to the United Kingdom fell from 60 million dollars in September to 31 million dollars in November; a substantial decline occurred in all but one minor group of commodities.

Of the gain in total exports over 1938, approximately one-third was accounted for by higher cotton shipments. (See table 1.) Cotton exports in 1938, however, were unusually low; exports in 1939, despite the operation of the cotton-export program were still below those of 1937. Large wartime demand for pork products and dried fruits failed to materialize, while the demand for fresh fruits and tobacco was curtailed even more rapidly than at first seemed likely. Tobacco exports fell from 65 million dollars in September-November, 1938, to 17 million dollars in the same period of 1939, as a result of the sharp decline in British purchases. In the first 2 months of hostilities, the quantity of farm products, other than cotton, exported to France, Germany, Poland, and the United Kingdom, was 61 percent less than in September and October of last year. Foreign purchases of nonagricultural commodities on the other hand, showed significant increases over 1938, but this was the case in every month since

April. The expansion since the outbreak of war occurred in foreign purchases of metals and metal manufactures, chiefly iron and steel-mill products, non-metallic minerals, mainly coal and petroleum products, machinery, and chemicals. Our exports of aircraft, parts, and accessories also increased in spite of a decline in October. Foreign purchases of United States automobiles, including parts for assembly abroad, on the other hand, fell nearly 10 percent from 1938 and were nearly 35 percent below exports in the same period of 1937.

These developments are in many ways different from those of the first few months of the World War, par-

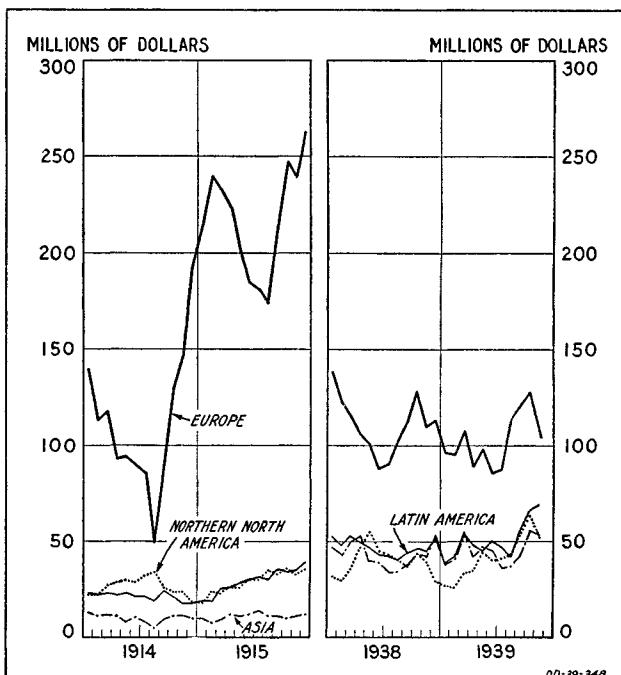

Figure 5.—Value of Total Exports (Including Reexports) By Geographic Areas, Calendar Years 1914, 1915, 1938, and 1939 (U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce).

ticularly with respect to exports of agricultural commodities. In 1914 it was the cotton trade which was most severely affected by the first dislocations resulting from the outbreak of hostilities. Shipments of grain and foodstuffs, as given in figure 4, showed an early rise, although this was in great part a result of the fact that Canadian and Australian wheat production was small while the United States enjoyed a record crop. Foreign purchases of finished and semimanufactured articles increased sharply in September and October of 1914 as they did in 1939. In 1914, however, they had been declining prior to the outbreak of war and in the September-November period of 1914 they were still lower than in 1913. Thus the World War reversed a downward movement whereas the present war began at a time when exports of semimanufactures and finished manufactures were already higher than in the preceding year. As may be seen in figure 5 the two periods differ also in the fact that exports to non-European areas did not expand immediately in 1914 as they have in 1939.

1 For purposes of comparison, trade with Austria, Czechoslovakia, and Poland are included with that for Germany in all periods shown.

The time which was required before our exports felt the full impact of the World War is likely to be for-

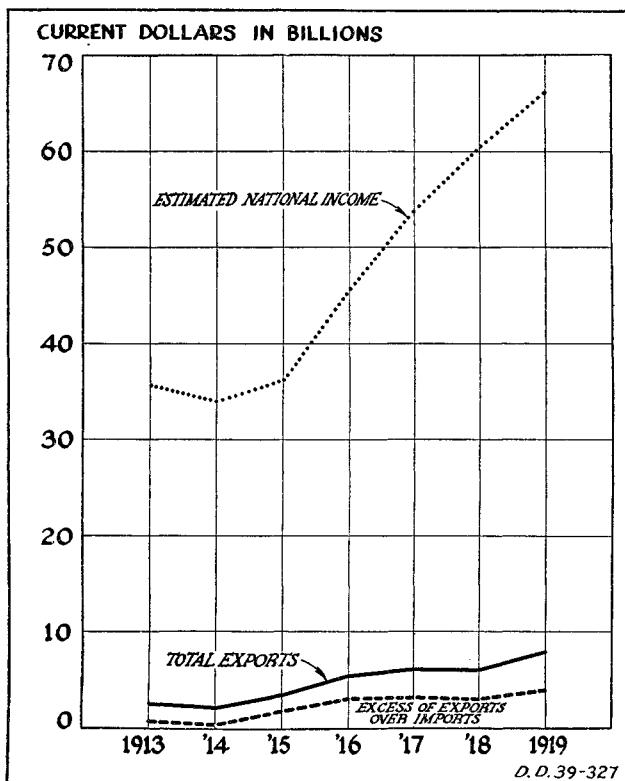

Figure 6.—National Income, Total Exports, and Net Exports, Calendar Years 1913-19 (U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce).

gotten. The War tends to be remembered as a single episode which resulted in a tripling of our exports between 1914 and 1918. It will be recalled that under the stimulus of expanding exports, industrial production, commodity prices, and the national income increased to high levels. (See figs. 6 and 7.) The memory of this enormous expansion appears to have been the primary factor in the wave of buying and the sudden expansion of business activity which began in September. Although the decline in shipments to the United Kingdom and the failure of total exports to expand more than they have are at variance with the expectations which played a major part in the September expansion, these developments appear to be quite consistent both with the changed position of the United States as a supplier of food and raw materials, and with the economic policies of the Allies.

In recent years nearly two-thirds of exports from the United States have consisted of finished and semifinished manufactures. (See table 2 and fig. 8.) Crude materials comprise about a fourth of all exports, with crude and manufactured foodstuffs making up the remainder. Before the World War, on the other hand, crude materials, principally cotton, constituted one-third of our exports while foodstuffs amounted to about one-fifth. Finished and semifinished manufactures comprised less than one-half of our exports.

These differences in the structure of our export trade are closely related to changes in the geographic distribution of exports. The decline in relative importance of crude materials and of foodstuffs since the pre-World War years has been accompanied by a decline in the proportion of our total exports taken by European

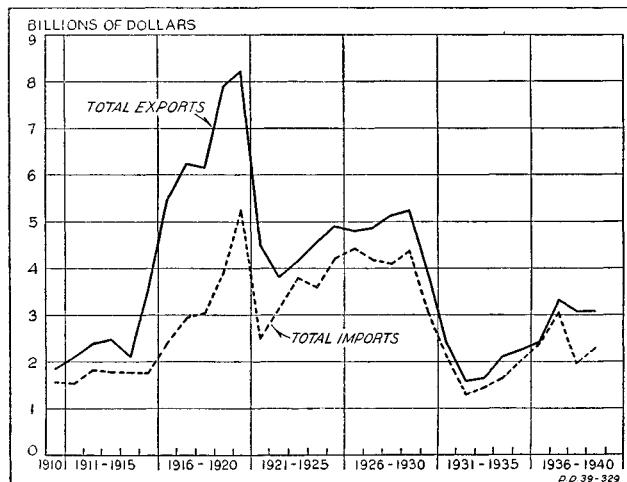

Figure 7.—Value of Total Exports (Including Reexports) and General Imports, Calendar Years 1910-39 (U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce).

NOTE.—Figures for 1939 include estimates for December.

countries, which were the principal markets for these products. Shipments to Europe during the 5-year period preceding the present conflict were approximately two-fifths of shipments to all countries; in the period preceding the World War they were three-fifths of the total. The relative importance of exports to all other world areas has increased, the rise in the proportion of exports going to Asia being particularly notable.

Whatever gains or dislocations in foreign trade may be anticipated as a result of the European War, it should be emphasized that exports of crude products are not now of the same importance that they were in 1914 and that trade with Europe, partly for this reason, does not occupy the place that it then did. Behind these facts lie long-run developments with a direct bearing upon the probable course of export trade during the present conflict. Additional major sources of breadstuffs and other agricultural products outside the United States have appeared since 1914, and many of the belligerent countries are themselves more nearly self-sufficient in essential foodstuffs than they were at the time of the World War.

Moreover, it is precisely in the case of the United Kingdom, which must import large quantities of food, that alternative sources of supply have been developed. At the outset of the World War we supplied 20 percent of British imports of food, drink, tobacco, and raw materials. In recent years we have contributed only about 10 percent. In the case of other crude materials as, for example, in the case of minerals, production

outside the United States has been greatly increased since the World War period. These considerations, among others, suggest what is to some extent already evident from trade returns: that any increase in exports to European countries and to the belligerent countries in particular will be concentrated to a considerable degree in manufactured articles. As a matter of fact, it was this category of exports which expanded to the greatest extent during the World War years, although the rise in shipments of foodstuffs was significant for the war period as a whole and especially during the first year.

A second factor operating to restrict the great expansion of our exports to the belligerents lies in the economic policies which France and the United Kingdom have adopted. Strict control of foreign trade and repressive fiscal policies were immediately put into effect, in order to minimize nonessential uses of labor, materials, and foreign exchange. Consumption and private investment are being repressed by drastic increases in income and other taxes while the capital markets are under strict control. These measures, by restricting the expansion of incomes and by forcing a reduction in the standard of living, cause a reduction in certain types of imports. In addition the depreciation of sterling impedes the flow of goods into sterling countries from the United States. Imports are being further reduced by direct limitation and, in some cases, absolute prohibition. Cautious and coordinated buying by the Allies contrasts sharply with the competition and duplication which characterized orders during the first part of the last war. It is clear that the Allies intend to limit their expenditures in the United States as much as possible. They are carefully conserving their gold, dollar balances, and securities marketable in the United States to meet the needs which may arise if and as the war develops. Furthermore, they evidently hope to minimize the inflationary effects of war expenditure at home.

The movement of our goods to neutrals is limited by

the controls imposed by the belligerents upon neutral trade, applied with greater severity and at a much earlier stage than in the World War. Blockade and

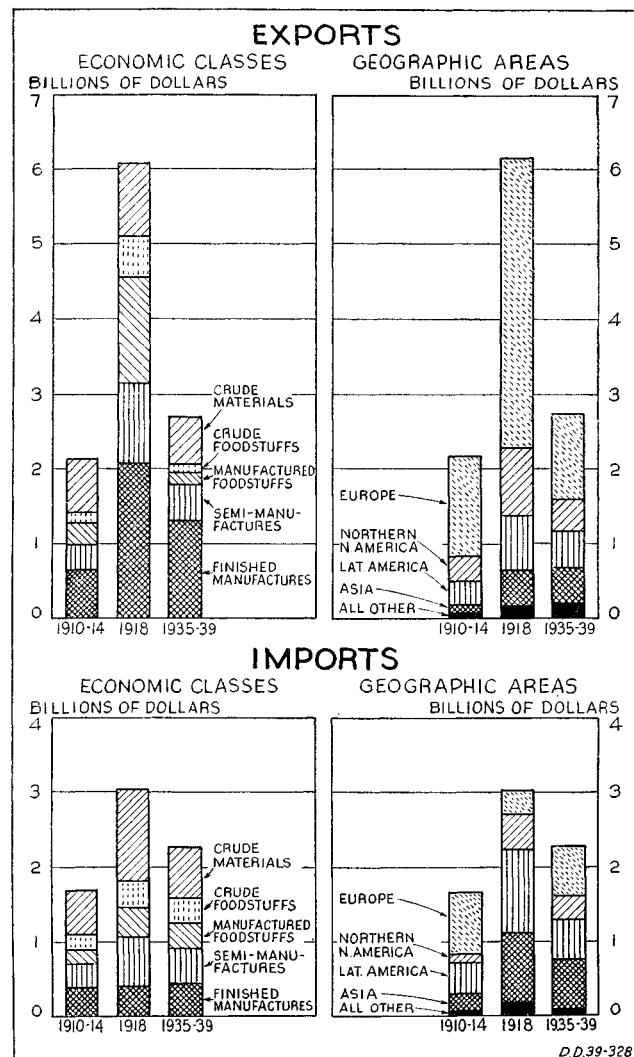

Figure 8.—Value of United States Exports of Merchandise and Imports for Consumption, by Economic Classes, and Total Exports (Including Reexports) and General Imports By Geographic Areas, 1910-14, 1918, and 1935-39 (U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce).

NOTE.—Data for 1918 are for the calendar year; other data are for fiscal years.

contraband regulations will keep at a minimum our exports to certain of the belligerents as well as to some neutral countries. The existence of substantial accumulated stocks of both war materials and civilian supplies is yet another factor which will presumably restrict the demand for American products in the near future. In a measure, as export statistics during the past several years indicate, the war demand for domestic exports has been already felt. Armament requirements, the building up of reserve stocks, and the generally high rate of industrial activity induced by war preparations have all been reflected in the export trade of the United States.

The foregoing considerations apply particularly to prospective export trade with the European belligerents and with some qualifications to other European coun-

tries also. The prospects of improved trade with non-European countries, belligerent and neutral, turn upon rather different issues. The possibility of an expansion of exports from the United States to such countries as a result of a lessening of trade with Europe, depends, of course, upon the trend of their exports to the United States, upon the disposable proceeds of their total exports, and upon the possibility of borrowing in the United States. The fact that the productive facilities of many of the countries concerned are not in high degree complementary to those of the United States need not constitute an insuperable obstacle in this direction, provided that receipts from shipments to Europe and elsewhere can be freely utilized for making purchases of our goods.

Here it should be noted that the movement of prices,

especially the prices of the primary materials which comprise such a large proportion of the exports of countries outside of Europe, is a factor of primary importance. The boom in the external trade of Latin America during the World War, for example, was in large measure the consequence of a great rise of prices. Aside from the price factor, the experience of the World War period suggests that trade between the United States and Latin-American countries may be expected to increase moderately in the short run and significantly over an extended period of time under the conditions created by war in Europe. An increase over both 1937 and 1938 has occurred in exports from the United States to Canada, and the use of Canadian facilities for the manufacture or processing of war materials may lead to a further marked expansion.

# Present Position of the Lumber Industry

By W. LeRoy Neubrech, Chief, Lumber and Allied Products Section, Forest Products Division

IT IS well known that one of the differences between the immediate repercussions of the outbreak of war in September and the start of the holocaust in 1914 was the generality of the impetus given this time to prices. There was no hesitancy in many important sectors of the price structure during the first few weeks of war as there was in 1914. Rather, expectations changed quickly and the psychological impact was virtually all-inclusive. Prices of such commodities as lard, copper, lead, and cotton did not follow the 1914 precedent and dip downward. Presumably many people thought that price inflation like that of 1916-20 was imminent and sought to protect themselves, though there were, no doubt, some who were merely guarding against delays in delivery.

It is largely on such grounds that an explanation of the rush of buying and the consequent price rise that came in the lumber industry must rest. One might, not unreasonably, have expected a less optimistic reaction to the war, since during the World War lumber had proved not to be a war stimulated industry.

### Buying Rush in September.

Nevertheless, a sharp lumber buying movement did develop in September. The trend of developments is indicated by the data in figure 9 which cover a large fraction of the industry. New orders for those mills reporting to regional associations had been coming in at about 260 million board feet a week during the period immediately preceding the start of hostilities, somewhat above the level of production of about 240 million feet a week. By the week ended September 23 new business of over 370 million feet was received. While the data to show the precise sources of this increased demand are not available, there is a presumption that it resulted from anticipatory buying by wholesalers, retailers, and industrial consumers. The movement was fostered by the relatively low stock position of these groups. There is no evidence of an increase in total consumption although there has been expansion in particular lumber consuming areas; in fact, the Lumber Survey Committee<sup>1</sup> estimated in its report of November 4 that consumption in the fourth quarter would decline to 6.8 billion feet from the third quarter total of over 7 billion.

After several weeks of accelerated business there was a reappraisal of the situation. A sharp decline in new orders occurred and by the middle of October they fell below production. During November this gap between output and new business was rather wide with

the latter fluctuating under 200 million board feet per week. From the end of October to the end of November unfilled orders were reduced from 980 million board feet to 769 million and this downward movement has continued in December. They had been 836 million at the end of August.

This strong buying wave soon produced a marked increase in lumber prices generally. The Bureau of Labor Statistics index of wholesale lumber prices rose from 91.8 (1926=100) in August to 93.7 in September and again to 98.0 in October. The movement of mill prices for some typical lumber items is indicated in table 1. As can be seen from these data, a large part of the price rise, which was transmitted to all the important types of lumber, came between mid-September and mid-October. During the rest of October mill prices leveled off and with the decided decline in new business in November many lumber items were offered at lower prices.

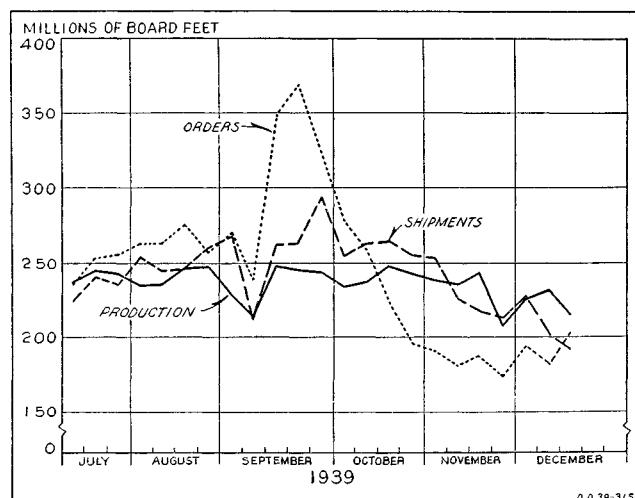

Figure 9.—Total Lumber Production, Shipments and Orders, by Weeks, 1939.  
D.O. 39-315

Source of data: National Lumber Manufacturers' Association, based upon data for approximately identical mills.

This price reaction was not immediately reflected widely in wholesale markets. The Bureau of Labor Statistics index of prices in wholesale markets did not decline in November but showed a further slight increase to 98.3.

While supply conditions and the pricing process differ widely among the various sectors of the lumber industry, short-term price changes generally result from the impact of changed demand upon existing stocks. The industry has large possibilities for expansion from the relatively low levels of production of recent years, but it takes some time for these to be realized. The time required for the logging, log transportation, saw milling, drying, and finishing operations does not allow a

<sup>1</sup> Special Lumber Survey Committee established upon recommendations to the President by the Timber Conservation Board, June 1931.

marked expansion of production to meet a flood of new orders within a few weeks or a month's time, particularly during those months when, for climatic reasons, a seasonal decline in production is customary. It has been characteristic of the lumber industry for some time that production lags considerably behind changes in demand so that stocks tend to move in the opposite direction to production. The fact that production and stocks have opposite cyclical patterns can be seen in figure 10. Hence, a sudden increase in demand must be met largely out of stocks and is likely, if of sufficient magnitude, to give a temporary lift to the price structure.

#### Lumber Stocks Declining.

Total shipments of lumber, which in August had been larger than at any time since 1930, were maintained in September at 2.5 billion board feet and increased to 2.6 billion in October against a customary seasonal contraction at this time of the year. As production declined, though less than seasonally, from 2.4 billion in August to approximately 2.3 billion in September and October, the volume of shipments was maintained partly by withdrawals from existing stocks. This decline in mill stocks continues a movement which has been under way for about 2 years. During 1937 lumber stocks had increased by 1 billion board feet because of the sharp decline in demand that came in the second half of that year. In 1938 these enlarged stocks were reduced 555 million feet and in 1939, by the end of August, a further reduction of over 500 million had been effected. Then, in the next 2 months there was a decline in stocks of 515 million board feet, as a result of the buying touched off by the war. Lumber stocks, in relation to the current rate of consumption, now appear to be somewhat low. Furthermore, present stocks, as the Lumber Survey Committee observed at the end of the third quarter, are broken and ill-assorted in some regions and this tends to encourage erratic price changes. The committee adds that such price changes benefit neither producers nor consumers and evidently discourage more liberal use of lumber and timber products.

#### Consumption of Lumber Increases in 1939.

An accurate appraisal of the current position and prospects of the lumber industry must, however, be made in terms of more fundamental factors than a short period buying movement. The fact is that lumber con-

sumption in 1939 will exceed that of any year since 1929. Lumber consumption in 1939 is estimated at slightly above 26.5 billion board feet, more than double the depression low of 1932. It will surpass the 1937 figure by about a billion and a half feet. Production has also expanded in 1939 although it is estimated to be about 2 percent under 1937 and 1930, total output in each of these years having been approximately 26 billion feet. The steep climb from 10.8 to 25.5 billion feet measures the progress made from the trough of the depression in 1932 to 1939. Nevertheless, consumption stands far below the level of the twenties; in 1929, not an exceptional lumber year for that decade, consumption was 35.8 billion feet. It is necessary to inquire whether the difference between 1929 and 1939 consumption represents a trend away from lumber use or merely the relatively depressed condition of the national economy.

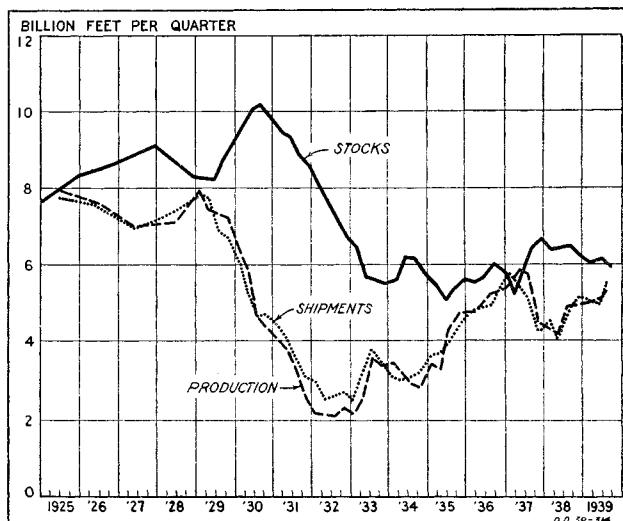

Figure 10.—Softwood Production, Shipments, and Stocks by Quarters, 1925-39 (National Lumber Manufacturers' Association).

NOTE.—Data are adjusted for seasonal variation.

Even in 1929 lumber was known to be in the category of declining rather than expanding industries. The peak in lumber production and consumption came in the years 1906-7. Up to that time it can fairly be said that lumber was the dominant manufacturing industry in our economic development, although for about 10 years steel had become increasingly important. Lumber was the lowest priced and most widely used material for durable goods during the great economic and territorial expansion that followed the Civil War. Its consumption increased from about 8 billion feet in 1859 to almost 45 billion in 1906. The Great Plains of the Middle West were being settled rapidly, towns and cities were springing up, and population, even in the East, was multiplying. This expansion and migration of the population, coupled with the rising productivity of our economic machine, resulted in an increase in the per capita consumption of lumber during the half century from 260 to 525 board feet.

**Declining Trend in Consumption Since 1907.**

After 1907 this rising trend was reversed and the lumber industry entered its new phase of declining production and consumption. The great agricultural migration that had added approximately 90,000 new farms per year to the economy, each with a requirement of about 50,000 board-feet of lumber,<sup>1</sup> was over. New materials were being developed and they began to replace lumber in urban buildings, sidewalks, shipbuilding, fencing, and a host of industrial uses.

The comparison of the major outlets for lumber in 1912 and 1928, given in table 2, shows in what areas the trend was declining after the peak in 1907.

**Table 2.—Estimated Distribution of National Lumber Consumption for 1912 and 1928<sup>1</sup>**

<sup>1</sup> Forest Service, a National Plan for American Forestry, S. Doc. No. 12, 73d Cong., 1st Sess., 1933, vol. 1, p. 249.

In construction the use of manufactured lumber products (sash, doors, etc.) increased during this period but the total lumber used in this field declined by 5.6 billion board feet. It was entirely in rural construction that the decline occurred, a result of the rural-to-urban shift in population that was taking place. The relatively depressed condition of agriculture during the twenties, which was the underlying cause of the shift in population, also held back the normal replacement and repair demand for lumber. Actual consumption in urban construction, including planing-mill products, increased by substantially more than 3 billion board feet. This increased urban consumption was occasioned by the much higher level of construction activity in 1928 and took place despite the tremendous increase in the use of other building materials which was a concurrent development. It has been estimated that the volume of urban nonresidential building construction in 1928 was twice that of 1912 although lumber consumption was about the same in both years. Thus the relative displacement of lumber by other materials was 50 percent.<sup>2</sup> In urban residential construction, the relative displacement of lumber was also very high, probably in excess of 25 percent, largely a result of the development of multifamily housing.

<sup>1</sup> A National Plan for American Forestry, S. Doc. No. 12, 73d Cong., 1st sess., 1933, vol. 1, p. 249.

<sup>2</sup> Op. cit., pp. 250-253.

It is also notable that, despite the large increase in industrial production during this period, the industrial use of lumber declined from 11.2 billion board feet in 1912 to 10.3 billion in 1928. Other materials of all kinds encroached upon the use of lumber for all industrial purposes although in certain areas the expansion of output was large enough to require an increase in the absolute amount of lumber used. This occurred in some of the largest areas of industrial demand; e.g. boxes and crating, furniture, and motor vehicles; but such gains and those arising out of new industries were more than offset by the decreased consumption in minor industries as is shown in table 3.

Source: A National Plan for American Forestry.

The declining trend of lumber consumption is illustrated by the estimate of future "normal" requirements<sup>3</sup> of from 30 to 34 billion board feet annually, a

<sup>3</sup> A National Plan for American Forestry, p. 256.

substantial decline from the 45-billion peak of 1906-07. Had lumber consumption followed the general trend of industrial expansion, its use would have amounted to 54 billion board feet in 1928 instead of 37 billion.

#### A Decade of Low Consumption.

For the period 1929-39 the trend of lumber consumption is indicated in table 4. It can be seen that, except in 1929, consumption was much below the estimated normal of 30 to 34 billion board feet. The decline from 1929 to 1932 was of the substantial magnitude that characterized durable-goods industries generally. Since 1932 considerable and almost continuous progress has been made, but in 1939 consumption was still more than 9 billion board feet under the 1929 total.

This failure of lumber to regain its former volume is not merely a concomitant of the depressed condition of the economy. The consumption of lumber in the building and construction field is now at the high point since 1929 and is only slightly below the level attained in that year. But in all the other areas shown in table 4 the difference between 1929 and 1939 consumption is considerable, in large part a result of the displacement of lumber by other materials.

Table 4.—Total Lumber Consumption by Major Uses, 1929-39

<sup>1</sup> 1939 estimated.

Source: Lumber Survey Committee quarterly reports to the Department of Commerce.

The fact that consumption of lumber in boxes and crating is still less than the 1931 figure is indicative of the increased use of paperboard, plywood, and veneer for this purpose. It is probable that this was influenced to some extent by the shift from rail to truck transportation. The relative decline in industrial consumption has been larger than in any other area and this is in some measure because of the use of alterna-

tive materials. While the Federal Reserve index of durable-goods production was almost 80 percent of the 1929 figure in 1939, the industrial use of lumber was less than 40 percent. In the case of railroad consumption the decline in lumber used can probably be entirely accounted for by the decrease in outlays for capital goods and maintenance rather than by further displacement of lumber by alternative materials.

The factors influencing our export trade have been of a different character. Lumber exports in 1938 totaled only 947 million feet, the smallest volume in four decades. Although there has been an increase of more than 100 million feet this year, the total is still only one-third that of 1929 when the United States was the major lumber exporting nation of the world. This loss has not been due primarily to a decline in consumption, for world lumber consumption, excluding the Orient, has been fairly well maintained. The United Kingdom imported more lumber in each of the past 5 years than

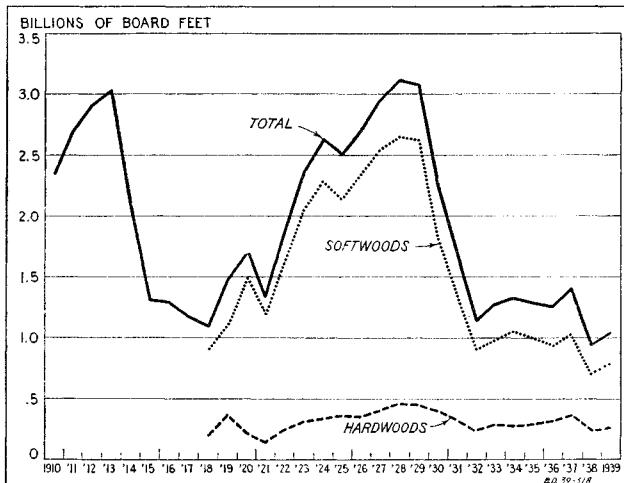

Figure 11.—Total Exports of Hardwood and Softwood Lumber, 1910-39  
(U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce).

NOTE.—Figures for 1939 include estimates for December. Data for hardwood and softwood lumber are not reported separately prior to 1918.

in any year since 1913, excepting only 1927, and yet our exports to that market have dwindled. Comparative prices, freight costs, preferential tariffs and other trade barriers, larger log exports, and, in recent years, the war in the Orient, have been the major factors responsible for the decline in our lumber exports. Imperial preference, adopted in 1931, was particularly important as it transferred a large part of our British and Dominions market to British Columbia.

It is interesting to note in this regard that, if the World War is a reliable precedent, export prospects have not been improved by the renewal of armed conflict in Europe. As can be seen in figure 11, lumber exports dropped precipitously after the outbreak of war in 1914 and remained very low until the work of reconstruction after 1918 increased world demand. This decline was immediate; from a total of 235 million feet

in July 1914 exports fell to less than 100 million by October of that year. Of course, even a relative decline of this magnitude is not anticipated from the present low level of exports but, on the other hand, a sizable expansion cannot be expected.

The loss that has been sustained in the boxes and crating, industrial, railroad, and export markets for lumber, means that the fortunes of the lumber industry, particularly the softwood section, are more closely tied to building and construction than they were a decade

ago. Whereas the construction demand was only little more than 50 percent of the lumber market in 1929 it has been close to 70 percent for the past 2 years. It is only because of the heavy demand of the construc-

tion industry that total lumber consumption this year has been able to rise above that of any year since 1929. There is a further significant development. While the quantity of lumber consumed in building and construction in 1939 has been only a little below the 1929 figure, construction activity itself was still much under that of 1929. This fact can be explained by the relatively greater expansion in residential building compared with other types of construction. As can be seen in figure 12, lumber consumption in recent years has become more dependent upon residential building. But several other factors appear to be important. There has been relatively more building in the smaller cities where wood is used more extensively. Architectural styles which use wood in combination with other materials for both exteriors and interiors have found more favor with the home builder. It also appears from the little data available that a larger proportion of the houses built have been of frame construction. Furthermore, there is little doubt that the proportion of small lower-priced homes built has been greater and that this activity has provided a large outlet for lumber. For the past several years both lumber manufacturers and retailers, through their national associations, have promoted a project known as the National Small Homes Demonstration, Inc. This project, in cooperation with Federal agencies and other private industry groups, has resulted in stimulating greater interest in housing, especially low-cost housing. The prospects for the lumber industry at this time are to a large degree dependent upon further expansion in this field. The possibilities in this field have already been demonstrated, but only a beginning has been made in tapping this market.

ago. Whereas the construction demand was only little more than 50 percent of the lumber market in 1929 it has been close to 70 percent for the past 2 years. It is only because of the heavy demand of the construc-

<sup>1</sup> Revised series: Computed by the U. S. Department of Labor, Bureau of Labor Statistics. The revised series supersedes those formerly published, and they differ from the old series in that (1) the railroad repair-shop group has been eliminated, and (2) a more refined system of weighting has been used in the construction of the revised average hours and average hourly earnings. Revisions have also been made in several industries because of changes in the composition of the industry and the reclassification of establishments.

In addition to the data shown above, revisions in the major groups and in selected industries beginning November 1938 appear on pp. 28 and 29 of this issue.

The Bureau of Labor Statistics has released a mimeograph containing tables of yearly averages from 1932-1938 and monthly data from January 1938 to September 1939 for the separate manufacturing industries and for the major groups; this mimeograph is available upon request to the Bureau of Labor Statistics. Earlier monthly data will be released at a later date in a special bulletin of the U. S. Department of Labor. This bulletin will contain a more complete description of the revisions and methods used in the construction of the series.

<sup>1</sup> Revised series. Computed by the National Industrial Conference Board. These revisions, which affect only the figures from 1934 to date, were occasioned by (1) the receipt from cooperators of additional reports covering the year 1938, and (2) by the adjustment of the averages for the automobile industry to conform with data compiled by the Automobile Manufacturers Association which cover practically the entire automobile- and body-manufacturing industry.

<sup>1</sup> Revised series. Computed by the Federal Reserve Bank of San Francisco and represents a complete revision of the data previously shown in the Survey. The indexes are based on daily average department store sales in the Twelfth Federal Reserve District. The data for the individual cities which make up the total have been adjusted to levels indicated by Census of Distribution data for 1929, 1933, and 1935 except for 2 cities where it appeared that such adjustments were unnecessary. The seasonal adjustment factors were also recomputed.

<sup>1</sup> Revised series. Computed by the Federal Reserve Bank of Cleveland. Seasonal factors have been recomputed for the period 1929 to date; the new factors take into account the shifts which have occurred in the seasonal element in recent years. The revision does not affect the index without adjustment for seasonal variations or the adjusted index prior to 1929.

# Monthly Business Statistics

The data here are a continuation of the statistical series published in the 1938 supplement to the SURVEY OF CURRENT BUSINESS. That volume contains monthly data for the years 1934 to 1937, inclusive, and monthly averages for earlier years back to 1913 insofar as available; it also provides a description of each series, and references to sources of monthly figures prior to 1934. The 1938 supplement may be secured from the Superintendent of Documents, Government Printing Office, Washington, D. C., for 40 cents per copy.

A few series have been added or revised since the 1938 Supplement went to press. These are indicated by an asterisk (\*) for the new series and by a dagger (†) for the revised series. A brief footnote accompanying each of these series provides a reference to the source where the descriptive note may be found.

The terms "unadjusted" and "adjusted" used to designate index numbers refer to the adjustment for seasonal variations. Data subsequent to November will be found in the Weekly Supplement to the SURVEY.

Monthly statistics through December 1937, together with explanatory notes and references to the sources of the data may be found in the 1938 Supplement to the Survey												1939	1938		1939									
	November	December	January	February	March	April	May	June	July	August	September	October

Revised.

## » Preliminary

<sup>1</sup> Temporarily discontinued; for several of the series, data have not been available since the outbreak of war.

<sup>†</sup>Revised series. Data on world prices revised beginning 1920; see table 4, p. 17, of the January 1939 issue. For construction contract awards, see note marked with a "†" on p. 21 of the July 1939 issue. The data on building permits are based on reports from 1,790 identical cities having populations of 2,500 or more, and supersede those shown in the Survey through the issue of May 1939 which were for 1,728 cities in the same size group. The present series include data for 62 additional cities, but the total estimated cost of permits issued was increased by only 0.2 percent in 1937. Data beginning January 1936 will appear in a subsequent issue of the Survey.

Monthly statistics through December 1937, together with explanatory notes and references to the sources of the data may be found in the 1938 Supplement to the Survey	1939		1938		1939									
	November	November	December	January	February	March	April	May	June	July	August	September	October

† Revised.

‡ Less than \$500,000.

§ Construction wage rates as of Dec. 1, 1939, common labor \$0.685, skilled labor \$1.46.

† Revised series. For revisions in U. S. Department of Labor factory weekly and hourly earnings, and hours worked per week, see table 1 p. 17 of this issue. Farm wages revised beginning 1913; see table 53, p. 18 of the November 1939 issue. Data on all public relief revised beginning with January 1933; The historical record can be obtained from the most recent Social Security Bulletin together with the issue for August 1939. The revised series differ from those previously published in that they include, in addition to earnings of persons certified as in need of relief, the earnings of all other persons employed on work or construction projects financed in whole or in part from Federal funds. Wisconsin weekly earnings revised beginning January 1929; data not shown in the December 1939 Survey will appear in a subsequent issue.

Monthly statistics through December 1937, together with explanatory notes and references to the sources of the data may be found in the 1938 Supplement to the Survey	1939		1938		1939

† Revised.

‡ Revised series. Data on commercial failures revised beginning June 1934; see table 3, pp. 17-18 of the December 1938 issue. Data for insurance written, ordinary (Life Insurance Sales Research Bureau) revised for the period 1936-38 to include a small amount of intermediate insurance omitted from the original compilation. Revised data not shown on p. 31 of the November 1939 Survey will appear in a subsequent issue.

†37 companies having 82 percent of total assets of all United States legal reserve companies.

‡40 companies having 82 percent of total life insurance outstanding in all United States legal reserve companies.

Monthly statistics through December 1937, together with explanatory notes and references to the sources of the data may be found in the 1933 Supplement to the Survey	1939		1938		1939

† Revised.

\* The total includes \$12,576,000 of face amount installment certificates.

† Series differ from current presentation of the Securities and Exchange Commission, due to a reclassification of certain items, but data as shown here are comparable throughout. When earlier data are available on the new basis, they will be presented in the Survey.

\* New series. Data for drainage, levee, irrigation, and similar districts beginning December 1933 will appear in a subsequent issue of the Survey; this series was formerly included with "Other loans."

† Revised series. Details for assets of Government corporations and credit agencies have been revised beginning June 1937 due to changes in the underlying U. S. Treasury Department compilations and are not comparable with the series shown in the 1938 Supplement. Several new series on loans and other assets have been brought out. No changes have been made in the series on liabilities. Data not shown on p. 33 of the November 1938 Survey will appear in a subsequent issue. For Reconstruction Finance Corporation loans outstanding, minor revisions beginning August 1934 will appear in a subsequent issue.

Monthly statistics through December 1937, together with explanatory notes and references to the sources of the data may be found in the 1938 Supplement to the Survey	1939		1938		1939

\* Revised.

† For petroleum and petroleum products, see note marked with a "+" on p. 45. Retail distribution of gasoline revised for 1937-38; data not shown on p. 46 of the June 1939 Survey will appear in a subsequent issue. Wholesale price of chrome, calf, B grade leather revised beginning January 1938; data not shown above will appear in a subsequent issue.

‡ The gasoline statistics in the above table have been rearranged and data on the production of benzol have been added. With this series included, it is possible to derive figures of total production of motor fuels, as shown here. Data for benzol production beginning 1928 appear in table 52, p. 18, of the November 1939 issue.

§ Revised series. Data revised for 1937; see tables 19 and 20, pp. 14 and 15 of the April 1939 Survey.

Monthly statistics through December 1937, together with explanatory notes and references to the sources of the data may be found in the 1938 Supplement to the Survey	1939		1938		1939

\* Revised.

† Temporarily not available.

● Data are for 46 identical manufacturers; beginning January 1938 data are available from the reports of the Bureau of the Census for 26 additional small establishments. As reported by 21 manufacturers through December 1938; subsequently, 2 of these ceased operations. For 1937 and 1938, data are available from the reports of the Bureau of the Census for 34 additional establishments, and, beginning January 1939, for 80 additional establishments.

† Data for November 1938, March, May, August, and November 1939 are for 5 weeks; other months, 4 weeks.

§ Revised series. Data revised for 1937; see tables 19 and 20, pp. 14 and 15 of the April 1939 Survey.

Monthly statistics through December 1937, together with explanatory notes and references to the sources of the data may be found in the 1938 Supplement to the Survey

#### **Bipments**

卷之三

\* Revised.      \* Less than \$500.      \* Pulp used in the producing mills and shipments to the market.  
 \* New series. Data on battery sales beginning 1934 appear in table 35, p. 17 of the August 1939 issue. Sales of washing machines and ironers beginning 1929 appear in table 43, p. 17 of the October 1939 issue. For data on electrical products beginning 1934, see table 32, p. 18, of the June 1939 Survey; data are furnished by both member and nonmember companies rather than member companies alone as therein stated.

Revised series. Data revised for 1937; see table 20, p. 15 of the April 1939 Survey.

Revised series. Data on vulcanized fibre shipments revised beginning 1934; data not shown on p. 51 of the January 1939 Survey will appear in a subsequent issue.

Monthly statistics through December 1937, together with explanatory notes and references to the sources of the data may be found in the 1938 Supplement to the Survey

<sup>\*</sup> Revised.<sup>a</sup> Estimated.

1 Discontinued by compilers; data on an index basis appear on p. 20.

2 Discontinued by reporting source.

\* New series. For data on floor and wall tile beginning 1935, see table 31, p. 18 of the June 1939 Survey. For the new series on pneumatic casings and inner tubes see tables 27 and 28, pp. 16-18 of the May 1939 Survey.

<sup>†</sup> Revised series. Data for pneumatic casings and inner tubes revised for 1936, 1937, and 1938: see tables 27 and 28, pp. 16-18 of the May 1939 Survey. Data for glass containers revised beginning 1936: the revisions, which for the most part are small, will appear in the 1940 Supplement.

Monthly statistics through December 1937, together with explanatory notes and references to the sources of the data may be found in the 1938 Supplement to the Survey.

\* Revised.

† New series. Data represent sales to United States and Canadian dealers only; discontinued series included overseas shipments, which are no longer available. Data on the new basis not shown on p. 55 of the December 1939 Survey will appear in a subsequent issue.

‡ Revised series. Data on pyroxyl-coated textiles revised beginning January 1938; see note marked with a "†" on p. 55 of the November 1939 Survey. Data on shipments and unfilled orders, locomotives, revised beginning January 1939 on the basis of a more definite segregation between railroad locomotives shown above and mining and industrial electric locomotives shown on p. 56. Quarterly data beginning 1939 are available from the Bureau of the Census for Diesel-electric, Diesel-mechanical, and gasoline-mechanical or steam locomotives, in addition to the data for industrial electric locomotives shown on p. 56 which are for trolley or third-rail and storage-battery locomotives.

§ Excludes military planes for domestic use.

¶ Revised series. Data revised for 1937; see table 19, p. 14 of the April 1939 Survey.

Monthly statistics through December 1937, together with explanatory notes and references to the sources of the data may be found in the 1938 Supplement to the Survey	1939		1938		1939
