Economic Highlights

Variation in Hourly Earnings

Average hourly earnings vary widely between industries . . . but on the average are highest ever paid. Top rates are in parts of highly skilled machinery industry; fast-growing shipbuilding; powerfully organized bituminous coal . . . each with \$1.06 an hour . . . twice the hourly earnings in cotton goods manufacture.

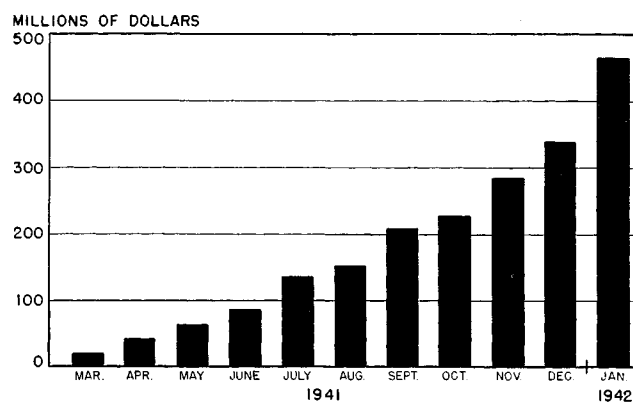

Average Hourly Earnings in All Manufacturing and Selected Industries.

Average for all manufacturing is 79 cents . . . that for iron and steel 98 . . . aircraft 92. In general, durable goods lines are above the average . . . consumers' nondurables below. In the selected industries here shown, rates have increased from 9 percent (for baking) to 33 percent (machinery) in June 1940-December 1941. More overtime pay has added to earnings . . . but the advance chiefly is the result of a record rise in wage rates during 1941.

Lend-Lease Aid

Lend-lease aid now expands rapidly concurrent with increased arms shipments for United States fighting forces. January total 462 millions . . . almost twice the average export to the British Empire and Egypt during the first 9 months of last year. The advance reflects rising output of war material, including ships

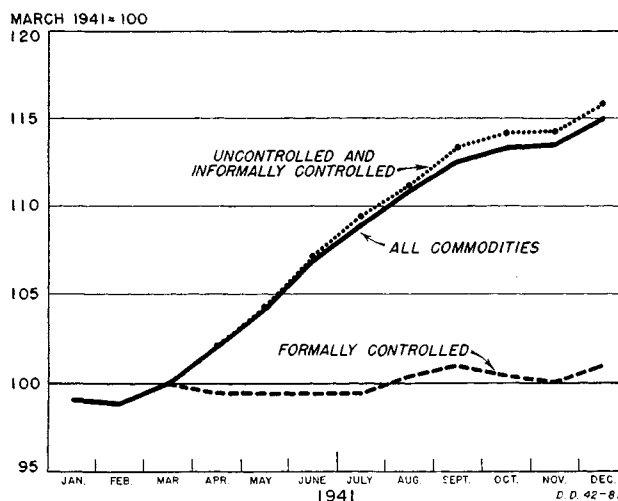

Total Lend-Lease Aid.

and ship repair. Expenditure for lend-lease was equivalent to approximately half the \$635 million total export in December. Movement abroad of all arms categories is heavier . . . and food shipments to Great Britain also are enlarged. One of most serious limitations to aid continues to lie in shipping shortage . . . but shipbuilding climbs steadily . . . with 123,000 gross tons delivered in January . . . and sharp increase scheduled for subsequent months.

Prices: Controlled and Uncontrolled

Application of formal controls effectively retards price advances. The index of controlled prices rose only 1 percent in March-December . . . several controlled price schedules having been revised upward, while others moved automatically (e. g., textiles) with uncontrolled raw-material prices. Uncontrolled items climbed 16 percent in the same period . . . have continued up since. Latter index includes prices subjected to informal controls . . . suggestions, warnings, fair-price requests, or freeze letters having been sent

Wholesale Price Indexes of Controlled and Uncontrolled Commodities.

to producers . . . but thus far such prices have moved similarly to those uncontrolled. At mid-December only 17 percent of total Bureau of Labor Statistics' index (by value) represented prices under formal control . . . the proportion, of course, continues to increase. Experience to date suggests formal control over key prices only is inadequate to prevent a general price rise . . . widespread regulation at both wholesale and retail seems required in the absence of a more stringent fiscal restraint.

The Business Situation

REOrientation of the economy to the war effort was pushed forward during February. Notwithstanding sharply reduced output in certain consumer lines now under conversion, activity in general continued to advance at a pace comparable to that of other recent months. Industrial production again recorded a net gain under strengthened efforts to expand war output as quickly as possible. Electric power remained close to peak volume, though a seasonal decline has been usual in the past. On the other hand, freight carloadings were down somewhat, averaging about 780,000 cars weekly. Coal loadings continued to show a slight decrease from the sizable volumes in the final months of 1941. But the principal decline occurred in the movement of industrial freight. Shipments to export ports remained in good volume. In contrast to the experience of the last War, the carriers are regulating carefully the flow of goods into ports, in order that freight equipment may not lie idle as goods await transfer.

Despite difficulty in obtaining metallic materials, construction activity this winter has fallen off little more than that required by seasonal influences. Construction associated with the war effort is now at an annual rate which surpasses the total of new construction in 1940. Moreover, private residential building has been substantial in answer to the growing needs in areas engaged in turning out war material.

Heavy Consumption.

In retail trade, buying has continued to be in good volume for all manner of commodities, with special emphasis being devoted to goods expected to be in short supply. Purchasing failed to match the extraordinary January volume, however, and the adjusted index of sales by all retail stores dropped to 137 (preliminary) from the peak of 149.

More detailed information on the buying in January reveals it to have been very heavy in almost all types of stores with particularly large sales for the month reported by apparel shops, building material and hardware stores, and general merchandise stores.

The current level of sales undoubtedly reflects some forward buying; nevertheless, it bears remembering that purchasing should be unusually high, for consumers possess the largest incomes on record. Moreover, while buying in the aggregate is expected to fall off as stocks of goods now under limited production are reduced, the subsequent decline in consumption as a whole is not expected to be drastic during 1942. For the calendar year it is probable that the total physical volume of goods and services purchased will fall little more than a tenth below the record volume of 1941. The bulk of this decrease will be in the consumer durables—the

output of which can hardly be more than a third of that of last year, if the maximum of equipment and materials in these lines is diverted to war production. But the record stock of durables already in the hands of consumers (and to some extent, dealers) should greatly limit any little actual decrease in the utility derived from these sources this year.

This statement on consumption needs clarification. It is based on a review of available and prospective supplies and on the considerations presented in more detail in the article on page 9 of this issue. There it is indicated that about 85 percent of the consumer expenditures in 1941 were devoted to nondurables and services. Equipment for the production of these goods and services will continue available, because little of it is adaptable to war output. The total labor force, however, may not be sufficient fully to maintain such civilian output, while also producing the war material required by the President's program. Moreover, a reduction in supplies of many articles for civilian use will occur by reason of raw-material shortages (wool, leather, certain chemicals, are cases in point) and diversion of output to the armed forces or to other countries under lend-lease (see the discussion of canned foods below).

Table 1.—Consumer Expenditures for Services ¹

[Millions of dollars]

Year	Total	Housing	Household utilities	Laundry, tailoring, and personal care	Transportation	Medical care	Recreation	Other
1929.....	20,994	9,119	1,771	1,908	2,880	2,231	1,156	1,929
1933.....	15,553	7,358	1,680	1,110	1,716	1,475	785	1,429
1939.....	19,173	8,398	2,026	1,605	2,012	2,058	1,309	1,765
1940.....	20,073	8,609	2,151	1,709	1,973	2,232	1,552	1,847
1941.....	21,563	8,968	2,240	1,967	2,165	2,528	1,711	1,984

¹ These are preliminary estimates by the Department of Commerce and are subject to revision.

Source: U. S. Department of Commerce.

Such a decline among the nondurables will not bulk large in the aggregate, gains in some lines (cotton goods, for example) offsetting reductions in others. The services—constituting 30 percent of total consumer expenditures last year—may show a net increase on the whole. Transportation and household utilities are the only components shown in table 1 which might decline because of supply difficulties, and such a decrease would be small if it occurred at all.

Though a drastic reduction in consumption should not occur this year, the situation may be expected to worsen steadily. As stocks decline, raw material and transport shortages grow more acute, and additional pressure is directed against the available labor force, the Nation's living standard will of necessity be lowered.

Further Limitation on Civilian Output.

Efforts have been speeded to complete the task of turning existing civilian goods equipment to war output where that is possible. Outstanding in this respect during February was the final cessation of domestic civilian passenger car assembly. Activity in the automobile industry as a whole, however, did not decline seriously. About a fourth of the industry's automobile facilities were engaged in the manufacture of military and civilian trucks, scout cars, other military vehicles, and parts necessary for maintenance and repair. In addition, large new plants erected by the industry over the past year and a half for the production of tanks, aircraft, and ordnance are now active. As a result of these developments, employment remained fairly heavy throughout the industry, though it is only a fraction of that expected by the autumn of this year.

Other consumer lines now in the process of changing over to exclusive production of war materials include domestic mechanical refrigerators, the output of which is to be discontinued after April 30, and the manufacture of radios for domestic civilian use, which is to be eliminated shortly thereafter. In the intervening period, production of refrigerators is to be stepped up markedly over quotas which had been previously established. This output will be frozen in an effort to realize a stockpile of approximately 750,000 units, these to be rationed among essential civilian and military requirements.

The degree to which production is being limited in a number of other consumer durables lines varies widely as between plants. In general, where some continuation of output is essential, activity is to be centered in the plants of small producers. Manufacturers having facilities of substantial size are required to convert them to war production as a result of severe restrictions on their normal activity. This procedure is being followed, for example, in the case of laundry equipment and cooking appliances.

In still other cases, conversion largely takes the form of a diversion of activity from civilian use to military use. Such is the case, for example, with restriction on the consumption of wool for civilian use and the production of certain types of tractors and auxiliary equipment.

Facilities rendered idle by orders curbing the flow of essential raw materials are in some instances being converted to the production of other civilian goods. Thus, the extremely heavy cotton consumption of recent months is in the process of being further augmented by the use of some remodeled machinery formerly employed in the carpet and apparel wool industries.

While these shifts are occurring in the production of consumer goods, activity in such basic war industries as aircraft, shipbuilding, ordnance, and machinery is advancing at a rate even more rapid than that which prevailed throughout the latter half of 1941. Production of basic chemical raw materials is also expanding. Output of steel, however, while up from January, was

little changed on a daily-average basis from December. Further gains, as with the nonferrous metals, must occur with the completion of a variety of new facilities. In this regard, arrangements for further increasing aluminum and magnesium output were announced in February. Previously aluminum facilities either in operation or under construction had a capacity of 1.45 billion pounds annually. This will be increased to 2.1 billion pounds. Moreover, arrangements have been effected to expand imports from Canada, and these will result in a total annual supply of primary aluminum of more than 2.5 billion pounds. Production in 1939 was 330 million pounds. Magnesium capacity, previously scheduled to reach 400 million pounds annually, is to be stepped up to 725 million pounds.

Bituminous coal production was reduced slightly during February, as was also petroleum refining. Activity in the latter instance has been held up to some extent by the conversion of certain existing facilities to the refining of airplane gasoline.

The Production of Agricultural Implements

Not only does equipment for manufacturing consumer durables lend itself to conversion. The facilities heretofore used to produce many types of machinery and tools also can be utilized in direct arms production and must be so employed if the Nation's armament goals are to be realized. Some of these manufacturers early turned to producing war material, supplementing their existing plant with new equipment. This is the case, for example, with the producers of locomotives, whose activity in February (as measured by the Federal Reserve index) was roughly 5 times the 1935-39 average and growing rapidly.

The textile machinery industry is still another turning out direct war materials. By midyear approximately one-half of its plant capacity will be devoted to this purpose, with the other half producing parts essential for repair and maintenance.

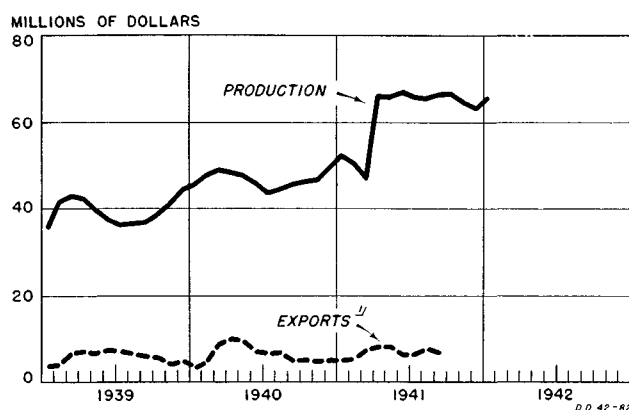

Industries of this character differ from those producing certain consumer durables in that it is usually impossible to cut out production for civilian use entirely. Some replacement of worn-out equipment is essential, even to a minimum standard of living for the community. One of the best illustrations in this respect is the farm equipment industry. Last year these producers manufactured equipment with a total estimated value of 742 million dollars, only a small part of which was in the form of direct war materials. This was the largest output in the history of the industry, exceeding the 1940 total by nearly one-fifth.

In 1940 the farm equipment industry had consumed about 2.1 million tons of steel and cast iron, and 60,000 tons of such other critical materials as copper, zinc, tin, chromium, and rubber. Consumption of these materials in 1941 was of course heavier in keeping with the increased output. Thus, even if the equipment of

the industry were not needed for war output, the largest feasible curtailment of its operations would have been required in order to save scarce materials.

In this respect, inventories of farm equipment, like those of other durables, fortunately are very sizable. Moreover, a substantial part of the equipment is relatively new, purchases having been considerable ever since 1936. Present stocks include, for example, 1.8 million tractors as compared with less than 1 million in 1930. More than half the farm tractors are less than 5 years old, while almost three-fourths have been in use less than 10 years. Other equipment in the record farm machinery inventory includes 2.2 million mowers, approximately an equal number of hay rakes, 1.4 million grain binders, over 1 million manure spreaders, 300,000 milking machines, and almost as many combines.

Figure 1.—Estimated Production and Domestic Exports of Farm Equipment

¹ Data subsequent to September 1941 are not available for publication.

Source: U. S. Department of Commerce.

These large equipment stocks of course may be operated much more effectively than in the past. A further expansion of cooperatives for utilizing existing equipment, as well as better organization of seasonal supplies of farm labor, are expected to be directed to this end.

Notwithstanding the substantial inventory and the opportunity to improve the efficiency of its utilization, a considerable output of farm equipment still will be required throughout 1942. The Government's farm program contemplates widespread changes in the pattern of agricultural output. Some of the sharply expanded crops—peanuts and soybeans are examples—will require much new machinery and other units are essential for replacement. In addition, a large volume will be required for essential exports to the British Empire, the U. S. S. R., and the American Republics.

To date the program for limiting the output of farm equipment has not been completed. Policy laid down at the end of 1941 restricted the industry's use of raw materials for civilian purposes during the 12 months through next October, to 83 percent of those consumed

in 1940. To this end the industry was granted an A-3 preference rating. At the same time, quotas were established for the production of various types of machinery. These quotas presumably reflected the needs for this year, repair parts, for example, being produced at 150 percent of the 1940 rate and requiring nearly one-third of the total raw material consumption. Equipment for the rapidly expanding dairy industry is in large quota, as also is machinery for crops and other livestock products scheduled to be produced in heavier volume this year.

The quotas may not be fulfilled if the industry is not given a higher preference rating for raw materials. At the same time, however, the curtailment envisaged by the order in December is very small when the need for equipment and materials in the production of finished arms is considered.

In this latter respect, the present limitation falls short in failing to concentrate the entire production in certain selected plants. Prevailing quotas apply equally to every enterprise which manufactures equipment. As a result, facilities which might otherwise be used wholly for the production of war material are now engaged only part time, and that time is devoted to turning out commodities for civilian use.

The Canning Industry

Canning is one food industry feeling the pinch of a raw-material shortage in a rather indirect way. The loss of Malaya and other sections of the Far East to enemy forces has cut off the major part of the tin output available to the United States. Though large tin stockpiles have been accumulated, these are prudently to be conserved by the elimination of nonessential civilian uses. Since approximately 40 percent of the normal consumption of tin in this country is in the form of containers, any real curtailment must of necessity be reflected also in the operations of the canning industry.

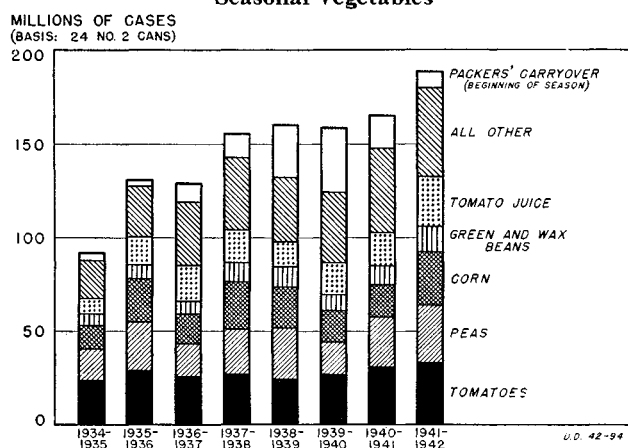

This industry has experienced a strong secular growth, though year-to-year fluctuations with changes in the level of income have been considerable. Thus, the 1941 pack of all foods rose some 20 percent over 1940, while in terms of the longer movement, 1941 vegetable canning stood one-fourth higher than the 1937 total and at least 60 percent above 1929. Canning of fruits has expanded in somewhat smaller degree. In general, this upward movement has been the result of a shift from home preparation of food to factory canning, as well as of a growing consumption of fruits and vegetables relative to other foods.

If the 1942 agricultural program is to be fulfilled, the production of fruits and vegetables will be the largest on record. The two major canning vegetables, for example, are tomatoes and peas, and the crops of these are scheduled to be increased nearly one-fifth and one-third, respectively. In addition, plantings of other vegetables are expected at least to equal the aggregate

of last year. The supply of such commodities available for civilian consumption, of course, hinges on the quantities required by the armed forces and by other countries under lend-lease or otherwise. The sum of these requirements, however, is not expected to reduce civilian consumption (on a per capita basis) below the average of the past several years. That is not to say, of course, that supplies of certain selected items for civilian use may not be reduced considerably.

This conclusion also holds for the effect of the tin-plate order on the canning of fruits and vegetables. The total food supply is, of course, unaffected by the order—it merely alters the form in which existing food supplies might have appeared in absence of the order.

Figure 2.—Production and Packers' Carry-Over of Canned Seasonal Vegetables

Source: U. S. Department of Commerce.

No restriction is imposed on the canning of important foods comprising 70 percent of the vegetable pack last year, 40 percent of the normal fruit pack, and about 85 percent of the normal pack of fish. Included in this unrestricted group are such staples as tomatoes and tomato juice, peas, sweet corn, green beans, peaches, pears, salmon, and evaporated milk. A number of these staples have been even reserved for Government purchase in amounts varying up to 30 percent of the pack. The civilian quotas placed upon the canning of other foods range from 125 percent of the tin plate used in 1941 to complete prohibition, according to the possibility of distributing the commodities in other forms—fresh, frozen, and dried, or in glass, paper, and other containers. In the instance of certain quota foods, such as carrots and beets, however, Government purchases, which are entirely exempt from the tin-plate restrictions, will require total packs far above civilian quotas.

Among the foods denied further civilian use of tin containers are such staples as pork and beans, other dried beans, spaghetti, and hominy. These amounted to some 40 million cases in 1941, out of a total of 260 million cases for all vegetables. The most important item is beans which has shown a strong upward trend, with 33.6 million cases packed in 1941 as compared with 25 million in 1937. Canning of soup for civilian use is restricted to 100 percent of that in 1941; nevertheless,

the total may increase somewhat through the use of larger cans and the substitution of condensed soups for the liquid form.

In addition to the limitations reviewed above, substantial savings in use of tin are expected by the elimination of smaller can sizes, as these consume more tin plate in proportion to their volume than do the large cans. Moreover, economies are to be effected through thinning the coat of tin plate, save in those instances where the nature of the food or product requires exceptionally heavy tinning. Recent technical improvements have made possible the use of smaller quantities of tin on the ordinary can.

Prices of Canned Foods Frozen.

A corollary to the above developments in the canning industry was the temporary freezing of packers' and wholesalers' price quotations on 25 important canned vegetables and fruits. Prices for March and April are not to exceed the average of those prevailing from February 23-27, inclusive. In part, this price action was taken in an effort to forestall the disrupting effect upon supplies of possible hoarding induced through fear of price changes. For the time being no action has been taken on retail prices, though if these fail to be stabilized, it is likely that they also will be placed under ceiling. Meanwhile, no control short of rationing can be exercised over hoarding induced by expectation of shortages in particular supplies.

The Expansion of Shipments

A review of the expansion of manufacturers' shipments last year reveals significant changes in the structure of output that lent added impetus to the increased need for transport. For the whole of 1941 the gross value of products shipped by American manufacturers reached an all-time high of 92 billion dollars, about 40 percent above the 1940 volume and substantially more than the previous peak of 70 billions in 1929. Adjustment for price changes brings the advance over 1941 down to 30 percent, while the physical quantity of goods delivered by manufacturers last year was 50 percent more than in 1929.

Aggregate shipments of course include a considerable amount of duplication in the form of transfers made from one producer to another. Ordinarily, the net value of shipments to consumers (largely that portion of the total value which has been added by the manufacturer) is around 50 percent of the gross. However, in a period of expanding output, the net value of shipments tends to increase more rapidly than does the gross.

This is the result of a greater emphasis on durable-goods output. Commodities of this character are more likely to be produced by highly integrated firms, and a larger proportion of their total gross output represents value added by the manufacturers themselves.

The production of durable goods in 1941 was exceptionally heavy. Growing activity in finished arma-

ment industries, a tremendous expansion of industrial facilities, large military, residential, and other construction, and the record demand for consumer durables, all combined to raise the value of durable good shipments more than 50 percent. The advance of nondurable shipments was about one-third. For the first time on record durable shipments were of larger value than the nondurables, the former having been 44 billion as against 41 billion for the latter. This was a significant development from the standpoint of transport requirements. Durable commodities are in general more bulky, both in terms of finished goods and raw materials. Moreover, their production is more concentrated, so that shipments must be made over a wider geographic area.

In dollar terms, the value of food shipments last year surpassed those of any other group. These aggregated about 14 billion, more than a fourth above a year earlier. Second in terms of total value were the shipments of iron and steel and their associated products, which advanced approximately one-half to 13 billion. Actually, the physical increase in shipments of iron and steel relative to food was larger than these figures indicate, as higher prices were of more significance in swelling the total value of food shipments.

Table 2.—Estimated Dollar Value of Manufacturers' Shipments
[Billions of dollars]

Industry	1939	1940	1941
Total, all industries (including printing, publishing, and miscellaneous)	56.9	66.0	92.0
Total, durable goods	23.0	29.2	44.2
Total, nondurable goods	29.5	31.6	40.7
Iron and steel	6.6	8.3	12.8
Transportation equipment	9.9	1.6	4.2
Electrical machinery	1.7	2.3	3.6
Other machinery	3.3	4.2	6.6
Automobiles and equipment	4.0	5.3	6.9
Food	10.6	11.2	14.3
Textiles	3.9	4.2	6.4
Paper	2.0	2.3	3.0
Chemicals	3.8	4.3	5.8

Source: U. S. Department of Commerce.

By far the largest expansion of shipments occurred in the transportation equipment group, which includes such important arms industries as aircraft, shipbuilding, and the railway equipment manufacturers, but excludes automobiles. Shipments from these industries were valued at more than 4 billion in 1941 as compared with 1.6 billion in 1940. Shipments of machinery (including electrical) were at an all-time peak of 10 billion, an advance of 57 percent over 1940, while some 7 billion dollars worth of automobiles and various types of equipment (including war material) were moved from the hands of producers, an increase of 30 percent.

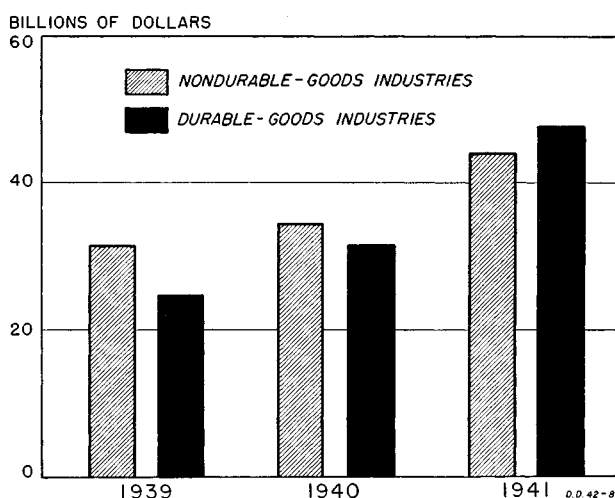

Of the other nondurable groups, a larger output and higher prices were of about equal importance in raising the value of textile shipments some 52 percent to a total of 6.4 billion. Other commodity groups whose shipments had a substantial value included chemicals and

allied products (5.8 billion) and paper and allied products (3 billion), these totals representing gains of 35 percent and 30 percent, respectively.

Corporate Earnings in 1941

Corporation earnings during 1941 rose substantially over the aggregate of the preceding year. A preliminary tabulation of the reports thus far made available suggests that earnings after taxes for all corporations—which include small firms as well as large—increased to approximately 7.2 billion dollars.¹ This total rep-

Figure 3.—Value of Manufacturers' Shipments

Source: U. S. Department of Commerce.

resents an estimated advance of 30 percent over the 5.5 billions of last year. It was almost three-fourths above the 4.2 billions of 1939.

The rise in earnings during 1941 was achieved despite the considerable increase in taxes on corporate profits and a very sizable wage rate advance. The Revenue Act of 1941 increased the yield from corporate taxes by close to 1.5 billions dollars, thus cutting in half the earnings increase that would have been recorded under the 1940 tax law. In the matter of wage rates, the advance was general, permeating all sectors of business, and as suggested by the figure on page 2, the upward revision in many instances was the largest on record.

These wage-rate changes were more than offset throughout industry by a rise in prices. Wholesale prices of all commodities other than farm climbed an average of 11 percent within the year. This may be contrasted with an average wage-rate increase of 9 percent received by two-thirds of the workers engaged in manufacturing. In this connection, it bears recalling that little more than a third of the value added by manufacturing represents wage payments; for the national economy as a whole, only about one-half the value of all goods and services produced goes to pay

¹ This estimate is meant to compare with the corporate profit volume as reported by the Statistics of Income. For that reason, the profits reported by many firms have been adjusted in an effort to derive the figure corresponding to the legal definition for tax purposes. Such adjustments this year were almost invariably upward, as many firms set aside large reserves for various contingencies not allowable as deductions under the tax laws.

wages and salaries. Hence, higher prices were not a little responsible for the rise in profits.

Also of major importance in increasing earnings was a further expansion of production and sales. Physical economies incident to an enlarged output appear to have been much smaller last year for most lines than in 1940, when plant operations were raised from relatively low levels. Nevertheless, the large volume of costs which change but little as production is increased were spread over a greater output, and this, along with heavier sales, helped earnings.

Still a final factor influencing aggregate returns was the change in the structure of output. Durable goods became a larger proportion of the total, and many new facilities were added to these lines. Such industries usually employ more capital than others and their earnings are larger at high operating levels.

Heavy Earnings in Manufacture.

Considerable variation existed in the extent of the profit gain as reported by different broad industrial groups. At the extremes, for example, earnings of contract construction and transportation companies rose about three-fourths from a relatively low base in 1940; whereas, power and gas companies actually experienced a decline in their net return.

Manufacturing lines account for well over one-half of the total profit volume. Increases in these industries during 1940 had been above the average for other broad groups. For 1941, however, the magnitude of this advance was reduced to around one-fourth, less than that reported by most of the other categories. Again the durable-goods industries which expanded output most rapidly showed a relatively larger rise in earnings than most of the nondurables. Net returns of the automobile and automotive-equipment producers were up close to 30 percent, while those of all other metal and metal-product manufacturers apparently rose approximately a fourth.

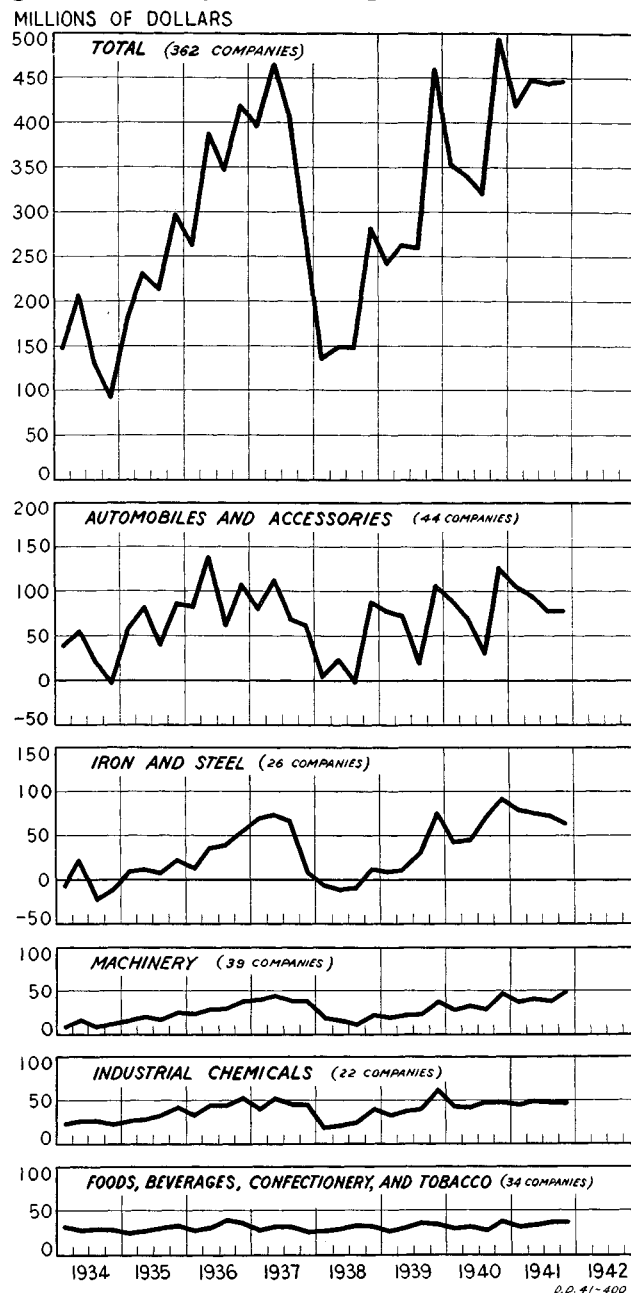

Within this latter group, producers engaged in turning out equipment for the war program reported an exceptionally heavy increase in net earnings; some of these companies, such as the railroad-equipment producers, had relatively low earnings prior to their armament business, however. The rapidly growing machinery industry also reported larger profit gains, as did the manufacturers of agricultural implements, hardware, and tools. On the other hand, iron and steel producers showed profits as increasing little more than an eighth; whereas a year earlier they had been almost doubled.

The increase in earnings has in general been smaller for the nondurables—even including those chemical lines that have grown rapidly. Both producers of food products and textiles reported larger earnings in 1941. These manufacturers not only had expanded sales considerably but they also had received substantially higher prices.

Smaller Rise in Earnings of Large Industrial Corporations

It is of interest to note that the gain in earnings reported by a number of the larger industrial corporations was, on the whole, smaller than that estimated for all manufacturing corporations. According to a compilation made by the Federal Reserve Board (shown in

Figure 4.—Quarterly Profits of Large Industrial Corporations
MILLIONS OF DOLLARS

NOTE.—The companies included in these series are, for the most part, large companies in the durable-goods industries and consequently the series are not representative of small corporations.

Source: Board of Governors of the Federal Reserve System.

figure 4), 362 large industrial corporations received profits in 1941 averaging about 17 percent above the 1940 aggregate. As revealed by figure 4, magnitude of the change in the various industrial lines was smaller for these large corporations, but the degree to which they differed from one another paralleled that for all

(Continued on p. 17)

War Expenditures and National Production

By Milton Gilbert

FROM the initiation of the rearmament program in the middle of 1940 to the attack on Pearl Harbor, the American economy experienced a phenomenal increase in activity. The adjusted index of industrial production rose from 116 in May 1940 to 167 in December 1941 and the index of income payments from 110 to 149 over the same period. Civilian nonagricultural employment increased by 5,500,000, concurrent with an increase in the armed forces of more than 1,500,000, and the average factory workweek rose from 37 to 40.5 hours. The national income was expanded over this period from an annual rate of 75 billion dollars in the middle of 1940 to an annual rate of about 104 billion at the end of 1941.

This tremendous spurt in economic activity not only allowed a substantial start to be made in the rearmament effort, but produced record output of many types of civilian goods, including those for both consumption and capital formation. In other words, the increase in military expenditures from under 3 billion dollars in 1940 to over 13 billion in 1941, far from being associated with a reduction in civilian consumption, was actually accompanied by the highest level of consumption in our history.

Since the attack on Pearl Harbor and our entrance into war in both Europe and Asia, the military program has been increased substantially so as to provide the overwhelming superiority necessary to insure complete victory. The President announced in his budget message that military expenditures of 56 billion dollars would be required in the fiscal year 1943. It has been generally recognized that the expenditure of this huge sum for equipping and maintaining a large armed force and for assisting the Allied Nations will necessitate sweeping changes in our economy. The nature of these changes, however, have not been fully understood. While many details of the supply situation a year hence cannot possibly be foreseen today, we can inquire into the general character of the economic requirements of total war and into the implications of those requirements for present policy.

Comparison of National Income and War Expenditures.

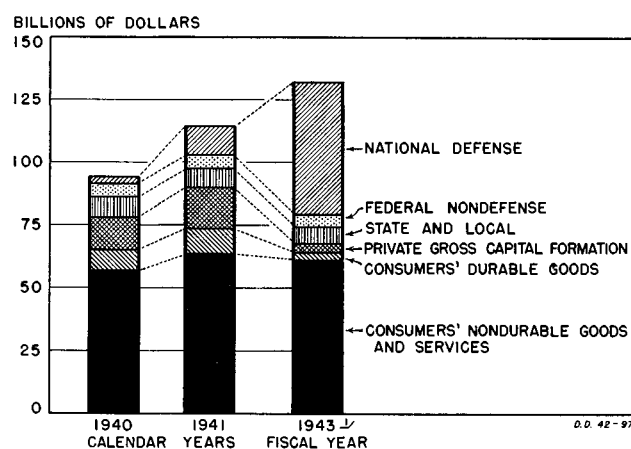

It may prove of assistance to some readers to discuss briefly one of the sources of confusion concerning the impact of the war program upon the economic structure; namely, that which has arisen from inappropriate comparisons of war expenditures and national income.¹

The total of war expenditures expressed as a percentage of national income, can be used to symbolize the

general magnitude of the war effort, or its changes over time. However, the projected war program of 56 billion dollars frequently has been subtracted from a forecasted national income total for the fiscal year 1943, in the belief that the remainder would represent the output of goods and services available for civilian consumption. This remainder is then contrasted with one calculated for 1941 and a conclusion is drawn as to the extent of curtailment of consumption required to realize the war program.

For example, projected war expenditures of 56 billion dollars have been subtracted from an assumed

Figure 5.—Utilization of Gross National Product, 1940-41, and Requirements of the War Program for the Fiscal Year 1943

¹ Calculated in 1941 prices. Represents calculated requirements, not a forecast.
Source: U. S. Department of Commerce.

national income total for fiscal 1943 of 110 billion, leaving a residual of 54 billion. In 1941, on the other hand, defense expenditures were 13.2 billion and national income 94.5 billion, leaving a comparable residual of 81.3 billion. It is then concluded that goods for consumers must be cut by a third if the real resources required for the war program are to be made available.

Such a use of national income and war expenditure statistics does not produce useful or significant results. It does not show the real character of the economic problem and cannot yield proper directives for economic policy. It does not show the disposition of economic resources required for the fulfillment of the war program, the changes that are necessary in the structure of production, nor the nature or magnitude of the fiscal problem involved.

The reason is that the national income is a type of aggregate which is not strictly comparable with the total of war expenditures. The latter figure represents, largely, purchases of the current output of goods and

¹ For a more complete discussion of this problem, see: "Measuring National Income as Affected by the War," a paper presented by the writer at the annual meeting of the American Statistical Association, December 27, 1941.

services, measured in terms of market prices paid. Therefore, the statistical quantity with which it can legitimately be compared is the aggregate of all final goods and services produced within a given period, valued at their market prices. The national income, on the other hand, measures the *net* value of current output as the sum of the net returns to the various factors of production in the form of wages, salaries, interest, rents and royalties, and *net* profits earned.

Further incomparability arises because total war outlays include several types of expenditure which do not utilize current output, and which cannot, therefore, be compared with or subtracted from current output.

There are two major changes which must be made in order to convert national income into a measure of the aggregate of goods and services at market prices.² In the first place, a significant proportion of the proceeds realized from the sale of privately produced goods and services accrues directly to the Government in the form of corporation income taxes, excise taxes, and other business taxes and does not ever appear in the income accruing to any of the factors of production. Thus, it does not appear in the national income. The Government, itself, in other words, may be said to be the recipient of a distributive share of the income paid out by business. Clearly, the amount it receives in this fashion must be added to the national income if a total is to be built up which measures the value *at market prices* of all final output. In the second place, it is desirable, in analyzing the impact of war expenditures upon the national economy, to consider the *gross* output of capital goods.³ But in computing the national income, current depreciation and depletion are deducted from gross capital formation in order to yield a *net* figure. Therefore, these amounts, too, must be added back in order to yield an aggregate of the type required. The quantity derived by making these two additions to national income may be designated as the *gross national product or gross national expenditure at market prices*.⁴

Gross national expenditure (or product), as thus defined, consists of two elements. First, it must contain the value of the output of private enterprise at market prices. This component could be obtained by summing the sales of all business units, adjusting for changes in inventory, and then deducting interbusiness purchases. The figure for the value of output of private enterprise that would be obtained by this computation

¹ It may be pointed out that the incomparability between national income and war expenditures can be eliminated by converting war expenditures to a factor cost basis, as well as by the method used here. The writer believes that for general analysis the method used here is both easier to grasp and presents fewer statistical difficulties.

² For some purposes, of course, it is desirable to compare war expenditures with net national product. That procedure might bring into sharper focus, perhaps, the fact that net capital consumption is an important source of war finance in real terms. However, the accounting measure of depreciation and depletion is so faulty an indication of capital consumption—particularly in war time when rates of obsolescence become fairly negligible—that it was considered less ambiguous to use gross product for the purpose of this article.

³ The terms "gross national product at market prices" and "gross national expenditure" are used interchangeably in this article. Those accustomed to using the gross national product estimates of Professor Kuznets will recognize that his concept differs materially from that presented here, because the two measures were designed for different purposes.

can best be visualized as the income from sales that would be shown on a consolidated income statement for all private business, with adjustment for changes in inventory holdings. In addition, the gross national product aggregate must contain the value of the goods and services produced directly by the Government in terms of their cost to the Government. This sum could be obtained by adding the various payments made to factors of production employed directly by Government. The sum of these two components could then be broken down by various categories of expenditure so as to show the relation of war expenditures to those for other types of goods and services.

Direct estimates of this concept of gross national expenditure at market prices, derived by multiplying the various quantities of goods produced by their market prices, are not available. However, indirect estimates can be derived through the national income statistics and certain other available data. The results must, of course, be tentative but it is believed that sufficient accuracy can be obtained to clarify the economic problems associated with the conversion to a war economy. The additions to national income that are required to approximate the concept of gross national expenditure defined above are shown in table 1.

Table 1.—Derivation of Gross National Product at Market Prices From National Income (at Factor Costs)

³ Excise, sales, and other direct business taxes, plus 75 percent of State and local property taxes. Excludes pay-roll taxes, which are included in national income estimates.

⁴ Emergency and contingency reserves and bad debt allowances.

Source: U. S. Department of Commerce.

At the cost of some repetition a few comments may be added to clarify the relation between these two concepts. National income is equal to the net value of economic goods produced as represented by the sum of the returns paid or accruing to the various factors of production. It consists of salaries and wages, various supplements to labor income, entrepreneurial withdrawals, interest, dividends, net rents and royalties, and undistributed profits after taxes but before capital gains and losses. The national income, therefore, already contains the cost value of Government production which forms one component of the gross national product. So far as the output of private enterprise is concerned, however, the national income does not contain the whole of the income from sales that would be shown on the consolidated income statement of all private business. It contains only such revenues that are transferred or that accrue to the various

factors of production. And, while this total represents the bulk of business revenues, it does not equal them. The major charges against business revenues which must be added to factor incomes to approximate the sales value of private enterprise output are, as indicated previously, all taxes paid by business and accounting depreciation and depletion.

There are also other categories of reserves which can be estimated only in part at this time. The addition of "business taxes" and "other charges" to the national income are required in order to convert the sum of the factor returns to the sales value of output at market prices. The addition of depreciation and depletion charges is required because of the desirability of considering the gross output of capital goods in this analysis.

An adjustment for revaluation of inventory has also been made in deriving the estimates of gross national product at market prices. It is of a different character than the other additions. The purpose of this adjustment is to eliminate that part of the change in the book value of inventories which represents essentially a capital gain or loss so as to leave only the current value of the physical change in inventory holdings in the gross national product.

It should be pointed out that the estimates of "business taxes" that have been added to national income in table 1 have nothing to do with the *incidence of taxation*. They consist of those taxes which are paid by or through business firms as a matter of administration, whether they are passed on to the consumer in the form of higher prices or not. The first component of business taxes includes corporate income, excess profits, and capital stock taxes. This figure does not include income taxes paid by owners of unincorporated businesses since these are not deducted from business income in the estimates of the national income. The second component contains estimates of all other taxes paid by business units to all Government units with the exception of pay-roll taxes paid by employers under the Social Security system. The latter are included in the national income as a supplement to labor income.

Distribution of Gross National Expenditure.

In table 2 is presented a breakdown of the gross national expenditure as defined above, showing, in part, the type of purchaser and, in part, the type of product purchased. So far as the purchases of Government are concerned, these are shown only as either defense or nondefense. In the sphere of private purchases, some of the details of capital expenditure and consumption expenditures are set forth. Before proceeding with an analysis of the data, it may be helpful to introduce a few words in explanation of the various items shown.

The first item of expenditures in table 2 is national defense expenditures. The figure consists of the amount shown in the Daily Treasury Statement plus

changes in the assets of the various national defense corporations, apart from changes in their cash balances. This defense expenditures total, however, does not all represent utilization of current output as measured by the gross national product. Consequently, it is necessary to deduct that part which makes no draft on current output. This is the explanation of the negative figures shown as the second item in table 2. The major components of this adjustment are net advance payments made to holders of war contracts for which no goods have as yet been received, purchases of land and other existing capital assets, apart from inventories, and offshore expenditures, apart from goods for import into the United States.

Similarly, in the case of Federal nondefense and state and local expenditures, the items included in the table are not gross budgeted expenditures but only such parts of Government outlays as are used to purchase current output of goods and services. Budgeted expenditures have been adjusted to eliminate such outlays as inter-governmental transfers, direct relief, Social Security benefits, veterans' pensions, purchases of land, etc., since none of these appear in the estimate of gross national expenditure. The figures include all Government production of goods and services utilized by Government, as well as that part of the current output of private enterprise which was purchased by Government.

Increase in Output in 1941.

The data in table 2 show the changes in the output of goods and services which occurred in 1941. The total increase in gross national expenditure was approximately 20 billion dollars in comparison with an increase

of the national income of 17 billion. The latter increase in the national income, however, makes no allowance for the upward revaluation of inventory holdings for which an adjustment was made in the gross national expenditure. If this adjustment were made in the national income estimate, there would be shown an increase in 1941 of 14 billion dollars in contrast to the gross national expenditure increase of 20 billion.

In part, the substantial rise in the current value of the gross national product was accounted for by rising prices. The change in the level of prices of the goods and services which were paid for by net national defense outlays is not known. In the civilian sector of the economy, however, the price index appropriate to the national income rose 6 percent. This would indicate a real increase in the gross national expenditure in the neighborhood of 14 billion dollars as against the current dollar increase of 20 billion.

There was, consequently, a very impressive rise in the real output of total goods and services. It may be seen from the table that, apart from the current output of goods and services utilized by government units for nondefense purposes, every category of expenditure shown in table 2 increased. In addition to the net rise in defense expenditures of almost 10 billion dollars, private gross capital formation was expanded by 3.1 billion and consumer purchases by almost 9 billion.

Several factors account for the sizeable expansion of real output in 1941. In the first place there was a large rise in man-hours employed in nonagricultural pursuits. On the average, 3 million more persons were employed in 1941 than in 1940. Furthermore, the average length of the work-week increased from 38.5 in 1940 to 40.5 in 1941. In all probability, there was also an increase in labor productivity, always particularly marked in periods of expanding productive activity. Moreover, another factor contributed to the expansion of real output (as customarily measured) which is often overlooked. That is the shift in the percentage composition of total output from industries of relatively low value of output per man-hour to industries of high value of output per man-hour. Such a shift occurs in every period of business expansion as the output of durable goods industries increases relative to that of nondurable goods. This shift is particularly significant during the transition to a war economy since the value of output per man-hour in war industries is very high.

Economic Requirements of the War Program.

We may now attempt to map out the fundamental changes in the gross national product that are essential for achieving the war production program in the fiscal year 1943. It must be emphasized at the outset that the requirements set forth in the discussion to follow do not represent a forecast of the gross national product or its actual distribution among the various categories of expenditures. They are intended to indicate objectives—objectives which can be reached

but which cannot be merely assumed into being. Their attainment will only be assured by clear vision and strenuous effort on the part of Government, industrial management, labor, and agriculture. It should be particularly evident that the values used below are *not forecasted values as they are based upon average prices of 1941.*

The basic and primary objective of economic policy must be the fulfillment of the production schedules contained in the war program of 56 billion dollars set forth in the President's budget message. Of this total expenditure projected for the fiscal year 1943 it may be anticipated that a possible minimum of 3 billion dollars will represent outlays which do not utilize currently produced goods and services. This sum will consist of prepayments on defense contracts, purchases of existing capital assets, and offshore expenditures for labor, materials, and services. This last item, in particular, can be expected to be much larger than it was in 1941. Therefore, the net utilization of the gross national product for war purposes, including such civilian needs as defense housing, is taken as 53 billion dollars. In contrast, the net expenditure in 1941 was approximately 11.3 billion dollars. Thus, our primary objective is an increase in net war expenditures of almost 42 billion dollars. From what real resources must this increase be obtained?

At the present stage in the transition to a war economy there are two readily apparent facts of outstanding importance. The first is that the full economic potential of the Nation has not yet been reached. The labor force can still be expanded considerably by a reduction of unemployment and by drawing additional persons into the labor market. The average work-week is still far from its maximum. The use of industrial facilities can undoubtedly be further expanded by more continuous operation. Furthermore, capacity will be increased as new production facilities are brought into operation.

On the other hand, it is just as evident that the huge war program outlined for the coming fiscal year cannot be realized by an expansion of production alone, in view of existing shortages of productive facilities and raw materials. The production of many sorts of goods must be discontinued to make way for the production of materials of war. These two facts mean that the success of the war program is dependent upon both an expansion of total output and a shift in the composition of output from civilian to war goods.

Expansion Required.

In broad outline, the disposition of resources required to meet the war program in the fiscal year 1943 is shown in table 2. As previously stated, this is not a forecast; it is intended to show the total output which must be achieved and the distribution of that output which is necessary to yield the scheduled increase of war goods and services.

In terms of average 1941 prices, it is calculated that, to meet the war production goals, the gross national

product must rise to 132 billion dollars in the fiscal year 1943, as against the 1941 total of a little less than 115 billion. In part, of course, this expansion has already occurred, since the present rate of gross output on an annual basis is much above that recorded for 1941. The order of magnitude of the expansion to date might be surmised from the change in the Federal Reserve index of industrial production, the present level of the index being about 171 compared with the 1941 average of 156. The gross national product estimate of 132 billion dollars implies an increase in the industrial production index to an average of 190 for the fiscal year 1943. Inasmuch as continued expansion must be made in the face of curtailment of civilian output, and from a position of more complete utilization of capacity, however, the difficulty of the task ahead cannot be minimized.

This increase in real output is not merely desirable in the sense that the higher the output of civilian goods can be pushed, the better off we will be. It is an increase which is necessary to achieve the production goals contained in the war program. It is sometimes thought that greater diversion of production from civilian to war goods is an alternative to a total increase in production. But this is not the case with the program we have undertaken. In the estimates of requirements presented here all civilian output that competes with the war industries for either scarce materials or convertible facilities, apart from the bare essentials, has been eliminated. This conversion alone, however, is inadequate to yield the scheduled output of planes, tanks, ships, and ordnance called for by the war program.

The resources for achieving this volume of total production are available. They do require, however, effective mobilization and use. It will be necessary to increase total civilian employment by well above 2 million persons from the 1941 level, in addition to replacing those drawn off to the armed services. The magnitude of the labor training task that this implies is hardly yet realized, except in the agencies directly concerned with the labor problem. Besides more persons at work, a lengthening of the average factory work-week from the 1941 figure of 40.5 hours to something approaching 43 hours will be needed.

On the side of industrial facilities, the requirements are more continuous operation of machinery and equipment, particularly in the war industries and industries producing scarce material; extensive rationalization and pooling of facilities; conversion of the bulk of plants producing durable goods to war production, and the erection of such new facilities as are needed to meet the various goals for military and naval equipment.⁵

In addition to the greater utilization of labor and industrial facilities, the estimated potential increase in the gross national product reflects the increased value

of output that will be derived from the substantial shift in production from civilian to war goods—even though calculations are made without allowing for a price rise in either category. This means that there will occur, or rather that there must occur, what might be called an upgrading of the factors of production, or an inflation of factor costs, as the shift is made from civilian to war production. Whatever it may be called, however, it is something quite apart from an increase in the prices of products. This will occur not only with labor, but with other factor costs as well, higher managerial and depreciation costs being obvious instances of the latter. Furthermore, it is quite probable that the war industries will be carrying a larger tax load in proportion to dollar output than civilian industries, thus having the same effect upon a measure of total output in constant prices as upgrading of factors of production.

Conversion Required.

The other source from which requirements of the war program must be met is the conversion or transfer of nonwar output to war goods and services.⁶ It is calculated that in the neighborhood of 23 billion dollars of the equivalent civilian goods output of 1941 could be converted or transferred to the war production program. To put the matter another way—the war program calls for a net expenditure of 53 billion dollars out of a gross national product of 132 billion, leaving, therefore, only 79 billion dollars of product for all other uses—Government nondefense, private gross capital formation, and consumers' expenditures for durable goods and nondurable goods and services. This compares with the 1941 figure of 102.5 billion dollars.

It must be recognized for all aspects of economic policy that the restriction of civilian output from 102 to 79 billion dollars (without allowance for price increases) cannot be made in accordance with the peace time preference for various sorts of goods. There are, in other words, severe technical limitations on the composition of the total of goods and services that can be left for civilian uses. This is only the complement of the prop-

⁶ Expansion has been discussed before diversion merely to aid the reader in following the data in tables 2 and 3. No implications for "policy" are intended by this order of treatment. In fact, the substance of the argument is that, after all diversion possible within the coming fiscal year, we will still need expansion to meet the production program as now outlined.

⁵ See "Impact of Defense Upon Industrial Capacity and Investment," by M. Joseph Meehan, March 1942 issue of the *Journal of the American Statistical Association*.

osition that there are technical limitations on the conversion possibilities of the output of civilian goods and services. In order to make it possible to achieve the war program, drastic restriction of the output of all types of nonwar durable goods will be necessary. This will be dictated alike by the scarcity of the basic raw materials required in the production of durable goods, and by the conversion of plant facilities from civilian to war uses. In itself, therefore, the success of the war program implies that the vast bulk of durable goods and construction which went for civilian uses in 1941 must be cut from all categories of nonwar expenditures.

The approximate effect of the diversion of materials and productive facilities to war uses is shown in the changes in nonwar expenditures for the fiscal year 1943 in table 2 and table 3. Quite apart from budgetary or fiscal considerations, it is estimated that Federal non-defense and State and local government utilization of currently produced goods must decline about 1.4 billion. A very heavy curtailment must come in private gross capital formation and in consumers' durable goods. Residential construction on private account will undoubtedly be sharply curtailed both because of shortage of material and because a large quantity of defense housing will be financed by Government funds. Private expenditures for nonresidential construction and for purchases of equipment shown in the table do not represent purely civilian uses of this output, but rather costs of conversion and new facilities for war purposes which are financed by private funds. The projected figure of 3 billion dollars for private expenditures on equipment represents, in part, necessary replacements in essential civilian industries.⁷ An exceedingly large decline in the output of consumers' durable goods is, of course, inevitable. A possible total of 3 billion dollars for the fiscal year 1943, as shown in the table, merely represents such types of output as do not compete for materials with war production.

From the standpoint of economic requirements alone, it is necessary that the upward trend of inventories over the past three years be stopped and that an actual decline in the physical stock be achieved in the coming fiscal year. It was for this purpose that the provision requiring that inventories be restricted to minimum practicable working levels was included in Priorities Regulation No. 1.

Obviously, stocks of scarce materials must be fully utilized if the maximum output of finished instruments of war is to be reached. This is already one of the primary objectives of the priorities and allocations program. It may be expected, too, that the existing stocks of a fairly wide variety of civilian durable goods will move out from business hands as current output is either shut off or sharply reduced. In civilian non-durable lines where shortages are particularly acute,

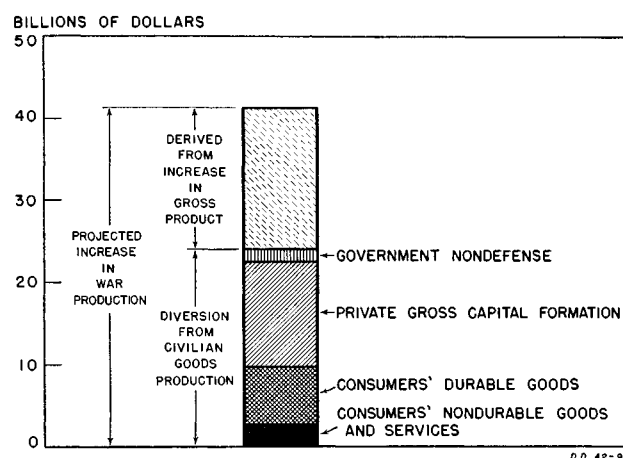

⁷ If this figure appears low, it should be recognized that maintenance costs are implicitly carried at their 1941 figure in these calculations.

too, a reduction of outstanding stocks can be secured as a result of direct price control.

It should be the aim of direct inventory control and of qualitative credit control to ease the strain on the productive and price system as much as possible by continuous lowering of outstanding inventories. There would seem to be little technical difficulty in the way of a reduction of a billion and a half dollars a year for three or four years, in view of the present record level of inventory holdings. This course also recommends itself from the standpoint of facilitating post-war adjustment.

A reduction in the net increase in foreign claims of 1 billion dollars from 1941 to fiscal 1943 is shown in tables 2 and 3. This estimate does not imply that any careful forecast of imports and exports on private account can be made in the face of the present uncertainties in the shipping situation. However, a substantial shift from direct purchases in this country by the United Nations to lend-lease shipments can be

Figure 6.—Changes from 1941 Required to Meet the War Production Program in the Fiscal Year 1943¹

¹ Calculated in 1941 prices.

Source: U. S. Department of Commerce.

assumed and this will have the effect of reducing the yearly increase in net foreign claims. It may be mentioned that curtailment of imports arising out of the shipping shortage, will be offset to some extent by curtailment of exports (apart from lend-lease shipments).

Consumers' Goods Curtailment.

It is calculated that total consumer expenditures for privately produced goods and services must decline at least from 74 billion dollars in 1941 to 64 billion in fiscal 1943, valuing the goods and services in the latter year at 1941 prices. A sharp curtailment in the availability of durable commodities purchased by consumers is already implicit in the orders issued by the War Production Board and further diversion of materials and facilities can be expected. For non-durable goods and services, however, it is calculated that *total* supply will be restricted much less severely from the 1941 volume.

As the extent of the decline indicated for fiscal 1943 is markedly different from other forecasts of quick and drastic deterioration of the standard of living, a few additional comments may be desirable. The requirements of the situation with regard to durable goods are generally recognized and can be passed over. In the field of consumers' nondurable goods and services, it is evident that there will be some conspicuous curtailments. There are additional items in which the continuation of present supplies is far from certain. The sum of these inevitable and possible curtailments, however, do not constitute a major portion of the consumers' budget for purchases of nondurable goods. It should be remembered in this connection that, while a large volume of nondurable goods will be required for the armed forces and for lend-lease shipments, it is expected that these will be provided for largely by an increase in agricultural production.

On the other hand, there are some kinds of consumer expenditures for which available supplies can and will be increased as the pressure of demand rises. It is to be expected that some substitutes will be found, that consumers' demand will spill over into areas where expansion is possible, and that a fairly substantial increase in consumers' expenditures for services will occur. Furthermore, deterioration of quality in some lines, which will tend to maintain quantities and yet not show up as a price rise, is more than probable.

This view of the matter rests, obviously, on the belief that the limiting factors in nondurable goods and services will be raw materials and productive facilities—not a general shortage of labor. The fact that a skilled labor shortage is already upon us is much more serious for the prospects of war production than it is for consumers' goods and services output.

Predictions of curtailment of consumption by a third or more would appear, therefore, to overestimate the possibilities of conversion and diversion for the entire gamut of consumers' nondurable goods and services achievable within a period so brief as a year or two. They are based on an arithmetic handling of national income and war expenditures figures which, as has been shown earlier, rest upon a misconception of the meaning of these data. It may seem that the rather strained conditions in consumers' goods markets at the present time contradict the conclusion that consumers' expenditures in constant prices need not decline more than has been indicated above by 1943. The present strains, however, are due more to constantly rising demand, including inventory demand, and not principally to general and widespread decline in supply.

It is not contemplated here that output of consumers' goods and services be maintained at any detriment to the war program. Any materials or facilities needed for war production must be diverted. It can safely be left to the ingenuity of both producers and consumers to secure whatever increase in the production of consumers' goods and services that is possible. The essential

government policy that is required is that of inventory control in order that the potential output of final products should not be retarded by hoarding of materials.

It might also be pointed out that the reduction in the current output of durable consumers' goods greatly overstates the sacrifice that is imposed upon current consumption in a real sense. Current consumption is derived not only from the current output of these goods but from the vastly larger stock of durables already in the hands of the public. The services that will be derived from the existing stock of consumers' durables such as owner-occupied homes, automobiles, radios, household equipment, etc., is not given a value in estimates of current production. In any consideration of the standard of living, however, these services must have a heavy weight.

The contribution to the war effort that must be made during the period here discussed (through fiscal 1943) by the civilian population as a whole, therefore, is not one of seriously impairing its standard of living. This situation will prevail so long as the size of the armed forces is not so large as to strain our total labor potential and to actually curtail the food supply and a wide range of services available to civilians. Of course, the necessary cut in consumption cannot be applied equally to all consumers, since an increase in employment means that some persons will be better off than formerly. Then too, all civilians must expect to have a somewhat different assortment of goods and services in 1943 than they had in 1941—an assortment which excludes some of the most desirable items. It should be possible to make these adjustments without great difficulty. The vital contribution which the civilian population must make, therefore, is that of working harder and longer so that the production goals of the war program can be achieved.

This appraisal of the supply potential for total consumers' goods is necessarily tentative and need not be debated. Shortages of nondurable materials or army requirements of nondurables may well prove to be much greater than now seem probable. There is one important conclusion, however, that must not be overlooked. That is, that the conversion possibilities in consumers' goods industries of both facilities and materials are strictly limited and can yield only a limited quantity of instruments of war. For the rest, there must be conversion of capital goods industries as well as overall expansion.

The point to be made is just this. The major decisions regarding conversion of consumer durable goods industries such as automobiles, electrical appliances, etc., have by and large been made. It can be assumed, also, that the armed forces and Britain will get what food and clothing is necessary or can be shipped. Beyond that, however, the consumers' goods industries have little to offer that can be of assistance to the war program. If, therefore, railroad equipment, farm machinery, trucks, or other capital goods are produced

instead of tanks and guns, we cannot expect to secure the resources for the armaments by cutting items of consumption which are physically incapable of contributing to armaments. We must recognize that all resources are not shiftable. Consequently, the same standards of necessity must be imposed upon capital goods output as are being invoked in the case of consumers' durables if our war potential is to be realized.

As a corollary it may be mentioned that continuous upward revision of the war expenditures total cannot be made on the assumption that the only necessity for its fulfillment is further restriction of consumption. Regardless of where one may put the point, there is necessarily a point below which resources devoted to consumption cannot contribute to the war program. Higher figures for war expenditures after that (assuming maximum conversion of capital goods industries) imply either overall expansion or inflation.

Estimation of Fiscal Requirements.

Just as inappropriate use of the national income concept can lead to misconceptions regarding the prospects for consumers' goods output, so it can lead to a vast exaggeration of the fiscal program needed to prevent inflation. Errors are common on both the supply and demand sides of this question. On the supply side, as has been pointed out earlier in this article, the quantity of consumers' goods likely to be available is often greatly underestimated by direct subtraction of war expenditures from national income.

On the demand side, several common pitfalls may be mentioned. The national income cannot be used as if it measured income in the hands of the consuming public. The measure of Income Payments to Individuals is the more appropriate concept for this purpose. Even with this measure, however, it should be kept in mind that the tax liabilities of individuals must be deducted to arrive at disposable income of consumers.

As to the magnitude of consumers' income in fiscal 1943, errors are frequent because of a failure to offset the leverage of war expenditures by the reduction of private capital formation which the war program requires. The business funds that are made redundant

through the limitation on investment possibilities, thereby lose their income creating effect. By and large, this offset will come about automatically if plant and equipment investment is prevented by priority and allocation control. For the flow of investment funds into inventory purchasing, however, contraction is far from certain until direct controls of both inventory holdings and retail prices are instituted.

In calculating the volume of spending that is likely to reach the market it is also necessary, of course, to take account of individuals' savings out of disposable income. The amount of such saving will tend to increase substantially because of two factors. The first and most important will be the non-availability of durable goods usually purchased by consumers. It cannot be expected that the whole of the purchasing power not spent for such goods will be saved. However, the necessity of continuing payments on outstanding consumer debt at a time when new debt creation will be curtailed simply because sales are curtailed, will absorb a substantial amount of buying power. Consumer credit outstandings may decline by more than 4 billion dollars this year, and by as much as 3 billion during the coming fiscal year.

A second factor tending to increase the volume of individual saving is the Defense Savings Bond campaign. While all sales of bonds and stamps do not represent a net addition to saving, they are undoubtedly having their effect in limiting consumers' expenditures.

It need hardly be emphasized that there are important factors tending to increase consumers' income that should be considered. The possibilities with regard to upward adjustments of wage rates and farm income, quite apart from the increase that will flow from greater employment and production, are too apparent to need elaboration.

There has been no intention here, therefore, to minimize the inflationary danger. The index of income payments has risen over the past 7 or 8 months at the phenomenal average rate of almost 3 points per month. Against this, we face an inevitable reduction in the supply of consumers' goods. The cold facts should be sufficiently impressive, without any exaggeration of the magnitudes involved.

(Continued from p. 8)

manufacturing corporations. Thus, large-scale producers of durables, including automobiles, other transport equipment, iron and steel, machinery, and the like, had somewhat heavier gains than did the producers of most nondurables.

Several reasons may be offered for the smaller profit rise in the larger corporations. Taxes generally bear more heavily on them, both locally and in the case of Federal levies. Moreover, the expansion in output possible for these companies last year was less than that realized by some of the smaller firms, and, in general, the smaller concerns operated in an unusually favorable market.

Sharp Advance in Transport Earnings.

In percentage terms, the most substantial increase in earnings recorded by any of the broad industrial groups during 1941 was in transportation. The steam railways accounted for the bulk of this expansion, but from a rather low total in 1940. The carriers have an exceptionally large proportion of costs remaining

relatively fixed in the face of heavier operations. Hence, the much larger volume of business they were called upon to perform last year (freight carloadings rose 16 percent and passenger car-miles were up 22 percent) increased their net return by about seven-eighths over the 1940 volume. A large advance in earnings also was reported for water transport companies, both seagoing and inland.

On the other hand, profits of power and gas companies were down approximately a tenth from 1940. Most of these companies have rate schedules that are graduated downward with increased sales. While sales were up 18 percent, rising labor, fuel, and tax costs were not offset by an upward revision in rate schedules; so earnings were reduced.

Profit gains reported by those engaged in wholesale and retail trade compared favorably with manufacturing, the increase for the trade group as a whole being estimated at the average for all corporations, or about 30 percent.

¹ Compiled by the Bureau of Business Research, Ohio State University. Construction employment covers only general private building construction. The employment indexes are the same that were formerly published in the Survey with the exception that the base period has been shifted from the average month 1926=100 to the average month 1935-39=100 (for description of the series see note 6 to p. 36 and note 1 to p. 38 of the 1940 Supplement). The description for manufacturing employment is also applicable to the index of pay rolls, which is a new series. Data for January 1942 appear on pp. S-9 and S-10 of this issue.

¹ Revised series. Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. Except for the shift in base from 1929=100 to 1935-39=100 and the inclusion in the basic data of reports for delinquent cities for the year 1940, the series are the same as those published previously in the Survey. For a more detailed description of the series, see note 5 to page 18 of the 1940 Supplement. For data for 1941 see p. 8-4 of this issue.

² Average for the year.

Monthly Business Statistics

The data here are a continuation of the statistics published in the 1940 Supplement to the SURVEY OF CURRENT BUSINESS. That volume contains monthly data for the years 1936 to 1939, and monthly averages for earlier years back to 1913 insofar as available; it also provides a description of each series and references to sources of monthly figures prior to 1936. Series added or revised since publication of the 1940 Supplement are indicated by an asterisk (*) and a dagger (†), respectively, the accompanying footnote indicating where historical data and a descriptive note may be found. The term "unadjusted" and "adjusted" used to designate index numbers refer to adjustment of monthly figures for seasonal variations.

Data subsequent to January for selected series will be found in the Weekly Supplement to the Survey.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1942	1941

* Revised. † Preliminary.

1 See note 1, p. S-1.

2 Formerly designated as "automobiles."

3 See note marked with a "†".

† Revised series. Revised indexes of industrial production for 1919-39 (1923-39 for industrial groups and industries), including the new series, are available on pp. 12-17 of the August 1940 Survey, except for subsequent revisions in the series marked with a "†" and data for all years for the new series on "automobile bodies, parts and assembly;" data for the latter series and revisions for the series marked "†" (with the exception of zinc and changes in the combined indexes for minerals and metals) are available in table 24, pp. 21 and 22 of the September 1941 Survey; the latter table includes also revisions of 1940 data for nondurable goods, petroleum and coal products, coke, rubber products, leather and products, shoes, textiles and products, wool textiles, fuels, anthracite and bituminous coal, and 1939 revisions for alcoholic beverages, and crude petroleum. Revisions for zinc and the combined indexes for minerals and metals will be shown in a later issue. No seasonal adjustments have been made for the following industries beginning with the month indicated, since recent conditions have obliterated seasonal movements: Aircraft, January 1939; machinery, October 1940; cotton consumption, and zinc (under minerals) November 1940; nonferrous metals, most components, November or December 1940; iron and steel, steel component, December 1940; railroad cars, locomotives, shipbuilding, rayon, wool textiles, and coke, December 1940; rubber consumption under rubber products, July 1941; silk, August 1941; the two automobile series, September 1940.

* New series. For industrial production series, see note marked with "†." For indexes of manufacturers' orders and shipments beginning January 1939, see monthly surveys beginning with the September 1940 issue (description of data and figures for January-June 1939 are available on pp. 7-13 of that issue except for revisions given in note marked with an "†" on p. 20 of the November 1940 Survey).

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1942	1941

* Revised. * Preliminary. * Number of quotations increased to 889 in January 1941. † For monthly data beginning 1933, see p. 18 of the April 1940 Survey.

‡ Data for February 15, 1942: Total, 145; chickens and eggs, 135; cotton and cottonseed, 150; dairy products, 147; fruits, 98; grains, 121; meat animals, 175; truck crops, 161; miscellaneous, 133.

§ Covers 35 cities.

† Revised series. National Industrial Conference Board's index of cost of living and food component and index of wholesale prices of lumber revised beginning 1935, see tables 5 and 7, respectively, p. 18 of the January 1941 Survey; since June 1941, the Board's food index is based on its own data collected in 56 cities, theretofore, the food index was based on the Department of Labor's series. For the Department of Labor's revised index of retail food prices beginning 1913, see table 51, p. 18 of the November 1940 Survey. Data for chemicals and allied products and subgroups revised beginning 1926; see table 32, p. 18 of the August 1940 Survey.

* New series. For description of data on manufacturers' inventories, see pp. 7-13 of the September 1940 Survey and for revised figures beginning December 1938, see table 40, p. 22, of the January 1942 Survey. For data beginning 1913 for the Department of Labor's cost of living series, see table 19, p. 18, of the May 1941 Survey; for index of prices of commodities other than farm products beginning 1913, see table 36, p. 18, of the September 1940 Survey.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1942	1941

* Revised. † Preliminary. § Data for January, May, July, and October 1941 and January 1942 are for 5 weeks; other months, 4 weeks. ‡ No quotation.

*New series. For indexes of rayon and silk prices beginning 1926, see table 29, p. 18 of the May 1940 Survey. Earlier data for concrete pavement contract awards for airports and for the total revised to include airports will appear in a subsequent issue.

†Revised series. Indicated series on "Purchasing power of the dollar" revised beginning January 1935; see table 4, p. 18 of the January 1941 Survey. Revised data beginning September 1929 for indexes of new dwelling units provided and permit valuation of building construction are shown on p. 18 of this issue. For revision in total concrete pavement awards, see note marked with an asterisk. Revised data on number of dwelling units provided for 1939 are shown in table 18, p. 17, of the May 1941 Survey. Estimates beginning January 1940 cover urban areas as defined by results of the 1940 Census; revised data for earlier months of 1940 are available on p. 22 of the June 1941 Survey, except or revisions in April figures as follows: all types, 38,324; multifamily, 7,013.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1942	1941

§Beginning with the September 1940 issue of the Survey indexes computed as of the first of the month are shown as of the end of the preceding month. The Engineering News Record index is similarly shown in the 1940 Supplement as of the end of the preceding month.

†Figures beginning April 1941 include mortgages insured under the defense housing insurance fund.

‡Revised indexes of the American Appraisal Co. beginning 1913 are available in table 44, p. 13 of the November 1940 Survey. Data beginning 1935 for the Federal Home Loan Bank Board's revised index of construction costs and beginning 1926 for the index of nonfarm foreclosures are shown on p. 26 of the October 1941 Survey.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1942	1941

* Revised. * Preliminary. * Indexes are in process of revision. * Not available.
† Revised series. Indexes of department-store sales in Atlanta and Minneapolis districts revised beginning 1919, and Chicago and Philadelphia beginning 1923; for Atlanta, see table 53, p. 16 of the December 1940 Survey; for Minneapolis, table 20, p. 18 of the May 1941 Survey; revised Chicago and Philadelphia data will appear in a subsequent issue. For revisions in adjusted index of United States department-store sales for 1935-39, see note marked with a "†" on p. 25 of the January 1941 Survey.
* New series. Indexes of department-store receivables are available only beginning January 1940; 1940 data not shown above are available on p. 8-7 of the September 1941 Survey. Estimates of total civil nonagricultural employment, employees in nonagricultural establishments, manufacturing, and service industries (included in the miscellaneous group) have been revised beginning January 1929 and trade beginning January 1935, to adjust monthly estimates to the 1939 Census levels of employees in manufacturing concerns engaged in clerical, distribution, or construction activities, and retail trade employment and to figures shown by the 1930 Census of Occupations; the revised data will be published later. Data for mining, construction, transportation and public utilities, Government, and military and naval forces are correct as published in table 11, on pp. 17 and 18 of the March 1941 Survey.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1941

* Revised.

† Revised series.

For revised indexes, beginning in 1937 for all industries and nondurable goods, and January 1938 for durable goods, see table 12, p. 18 of the March 1941 Survey. Slight revisions were made in data for textiles and products and fabrics beginning 1933; revisions not shown on pp. 25 and 26 of the May 1940 Survey are available upon request. Index for transportation equipment revised beginning January 1939; see table 57, p. 17 of the December 1940 Survey.

*New series. Adjusted estimates of employment beginning January 1929 will be shown in a subsequent issue. For indexes beginning 1923 for machine tools and shipbuilding, and index for 1931 through 1938 for aircraft, see tables 39 and 40, pp. 15 and 16 of the October 1940 Survey; for aircraft indexes (revised) for 1939, see table 57, p. 17 of the December 1940 Survey.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1942	1941

* Revised.

† Not available.

† Revised series. For revisions in indexes for all manufacturing, durable goods, and nondurable goods, for 1938 and 1939, see table 12, p. 18 of the March 1941 Survey. Index for transportation equipment revised beginning January 1939, see table 57, p. 17 of the December 1940 Survey. Slight revisions were made in data for textiles and their products and fabrics beginning 1933; revisions not shown on p. 27 of the May 1940 Survey are available upon request. For revisions in Illinois and Chicago indexes

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1942	1941

* Revised. * Less than \$500,000. * None held by Federal Reserve banks. * Preliminary.

† Construction wage rates as of February 1, 1942: common labor, \$0.780; skilled labor \$1.54.

‡ Figures for special types of public assistance and general relief exclude the cost of hospitalization and burial. The cost of medical care is also excluded beginning September 1940; this item is included in all earlier data on general relief and in figures for July 1937–August 1940 on special types of assistance.

† Revised series. Indexes for Illinois revised to a 1935–39 base; for factors for converting indexes on a 1925–27 base beginning 1935, see p. 29 of the January 1941 Survey. Revised indexes for Wisconsin beginning 1925 will be shown in an early issue. Total public assistance and "other Federal agency projects financed from emergency funds" revised to exclude earnings on regular Federal construction projects and also on projects financed from Reconstruction Finance Corporation funds; revised data beginning January 1933 will appear in a subsequent issue. Index for Massachusetts revised beginning 1935; earlier data will be published in a later issue.

* New series. Earlier data for aircraft and shipbuilding not shown on p. 29 of the March 1941 Survey are available upon request. For data beginning 1933 for old-age assistance, see table 56, p. 17 of the December 1940 Survey. Data on earnings on regular Federal construction projects beginning January 1933 will appear in a later issue.

† Because of changes in the composition of the reporting sample (usually an enlargement of sample) data for the indicated series for a recent period are not strictly comparable with earlier data; for the month when the change in the sample occurred and the issue of the Survey in which the revised data were first published, see note marked with "†" on p. 29 of the July 1941 Survey and p. 8–12 of the August 1941 issue.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1942	1941

* Preliminary.

* Revised.

* To avoid duplication these loans are excluded from the totals.

* For bond yields see p. 8-18.

* New series. For data beginning 1929 for industrial banking companies, see p. 18 of the September 1940 Survey; for data beginning 1929 for personal finance companies, see table 25, p. 26 of the September 1941 Survey; data beginning 1929 for credit unions are shown in table 27, p. 26 of the October 1941 issue.

* Revised series. For revisions in data on emergency crop loans published in the Survey prior to the September 1940 issue, see note marked "t" on p. 76 of the February 1941 Survey.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1942	1941

⊙ Preliminary. ⊙ Publication of data discontinued. ⊙ Revised. ⊙ Average for May 1-20. ⊙ No quotation. ⊙ Average for June 1-14. ⊙ Average for July 1-25.
 ⊙ No quotation for Belgium, France, and the Netherlands since June 1940. ⊙ The total includes guaranteed debentures of certain agencies not shown separately.
 ⊙ Or increase in earmarked gold (—). ● Number of companies varies slightly. Δ Formerly Standard Statistics Co., Inc.
 * New series. Earlier data on new items under Federal expenditures are shown in table 31, p. 23 of the November 1941 Survey.
 † Revised series. Beginning July 1940 social security employment taxes are appropriated directly to the old-age and survivors insurance trust funds and do not appear as transfers under expenditures, as formerly; earlier data on total expenditures and transfers to trust accounts have, therefore, been revised to exclude transfers to this fund (net receipts on p. 8-16 similarly exclude amounts transferred to this fund); for revised data beginning January 1937, see table 31, p. 23 of the November 1941 Survey. Data for total obligations guaranteed by the United States and for the Home Owners' Loan Corporation have been revised beginning September 1939 to exclude matured debt, funds for payment of which have been deposited with the Treasury; earlier data shown in the Survey similarly exclude matured debt.
 ‡ The reduction of one company from the number shown in the 1940 Supplement was due to a merger during the second quarter of 1940.
 § Data reported by the Canadian Government; see note marked "§" on p. 33 of the June 1941 Survey.
 ¶ Beginning with April 1940, where direct reports from foreign countries are lacking, available reports of the American Bureau of Metal Statistics are used. When no current reports are available at the time of compilation, the last reported figure is carried forward. The comparability of the data has been affected by these substitutions. Data for Belgian Congo and Sierra Leone, formerly included in figures for Africa and total reported monthly, are excluded beginning May 1940 and April 1941, respectively, as reports are not available. During recent years, the reported figures for Belgian Congo amounted to between 1½ and 2 percent of the total reported for Africa; production for Sierra Leone is of minor importance. The total reported monthly has been revised to include exports of gold from Nicaragua, representing approximately 90 percent of the total production of that country.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1942	1941

* Revised. * Less than \$500. † Includes repayments unallocated, pending advices, at end of month.

† Revised series. For revised data on income taxes beginning September 1936, see table 50, p. 18 of the November 1940 Survey. Data on total loans of the Reconstruction Finance Corporation and "other loans and authorizations" revised beginning January 1937 to exclude a loan of \$146,500,000 to the Rural Electrification Administration, advanced in varying amounts during 1937-39, now classified under allocations; this loan has been excluded from data shown in the Survey beginning with the October 1940 issue. Certain other comparatively small revisions have been made in the grand total; currently such revisions are not carried into the detail. Data on security registrations revised beginning January 1938, see table 47, p. 15 of the November 1940 Survey.

* New series. The new item of "net receipts" excludes social security employment taxes appropriated directly to the Federal old-age and survivors insurance trust fund; for data beginning January 1937, see table 50, p. 18 of the November 1940 Survey. For data beginning 1938 for substitute securities, see table 47, p. 15 of the November 1940 issue. National defense data include loans, participations and purchases of capital stock in corporations created by the Reconstruction Finance Corporation to aid in national defense.

⊗ Because of changes in the tax rate under the Revenue Act of 1941, the series on collections from admissions to theaters and stock transfers which were included for the purpose of showing trends in the volume of business in these fields of industry, rather than from a revenue standpoint, have been discontinued in the Survey. Data shown above exclude collections from national defense taxes under the Revenue Act of 1940.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1942		1941

* Less than \$500.

† Figure overstated owing to inclusion in October export statistics of an unusually large volume of shipments actually exported in earlier months.

Revised series. Revised data beginning February 1928 for preferred stocks are shown in table 39, p. 22, of this issue. Indexes of agricultural exports have been revised to new base. Earlier monthly data will be shown in a subsequent issue.

* New series. Data beginning 1915 for indexes of agricultural imports will be shown in a subsequent issue.

The publication of detailed foreign trade statistics has been discontinued for the duration of the war, effective with October data. For revised 1939 data on value of foreign trade see tables 14 and 15, pp. 17 and 18 of the April 1941 issue.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1942	1941

* Revised.

* See note marked "a" on p. S-19.

† Data for January, March, May, August, November 1941, and January 1942 are for 5 weeks; other months, 4 weeks.

* New series. Adjusted data on financial operations of railways beginning 1921 appear in table 33, p. 16 of the September 1940 issue. The new series on taxes and joint facility and equipment rents is shown to provide figures for obtaining total railway expenses as given in the adjusted figures of financial operations; earlier data not shown in the September 1940 and subsequent issues of the Survey may be obtained by deducting operating expenses and net railway operating income from operating revenues.

† Revised series. Data on fares revised beginning August 1936; see p. 45 of the July 1940 Survey. Passengers carried revised to cover data for 188 companies. Data for 1940 on the revised basis differ only slightly from those shown in table 13, p. 8 of the March 1941 Survey. Revised indexes of freight carloadings beginning 1919 appear in table 33, p. 21-22 of the August 1941 Survey.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1942	1941

^a Revised. ^d Deficit. ^e Data revised for 1939; for exports, see table 14, p. 17, and for imports, table 15, p. 18, of the April 1941 Survey.

^b Publication of detailed foreign trade statistics and data on clearances of vessels in foreign trade has been discontinued for the duration of the war.

^c Data are no longer available for publication.

^d Collection of data in this form has been discontinued beginning with September 1941.

^e Revised series. ^f Data for telegraph and cable carriers revised beginning 1934,

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1942	1941

* Revised.

* Less than 500 bushels.

† December 1 estimate.

‡ Publication of detailed foreign trade statistics has been discontinued for the duration of the war.

\$ Data revised for 1939; for exports, see table 14, p. 17, and for imports, table 15, p. 18, of the April Survey.

† Revised series. Wholesale price of gum rosin revised beginning 1919; see table 3, p. 17 of the January 1941 Survey.

‡ Revisions for quarters of 1940 not shown in the December 1941 Survey will be shown in a subsequent issue.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1942	1941

* Revised. † Data for 1939 revised; for exports, see table 14, p. 17, and for imports, table 15, p. 18, of the April 1941 Survey.

† The publication of detailed foreign trade statistics has been discontinued for the duration of the war.

† Data on natural gas revised beginning 1929; earlier data will appear in a subsequent issue. Data for the indicated series on dairy products revised for 1939 and 1940; for revised 1939 data on production of condensed and evaporated milk, see note marked "†" on p. 42 of the January 1941 Survey; revised 1939 data for butter and cheese production and consumption, superseding figures shown in the January 1941 Survey, appear in table 26, p. 26 of the September 1941 Survey; for revised 1940 data, see note marked "†" on p. S-24 of the December 1941 Survey.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1942	1941

* Revised. ¹ December 1 estimate. ² Revised estimate. ³ For domestic consumption only, excluding grindings for export.
⁴ Less than 500 bushels. ⁵ See note "a" on page S-26. ⁶ Data for 1939 revised; see table 14, p. 17 of the April 1941 Survey.
⁷ Production in "commercial areas." Some quantities unharvested on account of market conditions are included.
⁸ For monthly data beginning 1913, corresponding to monthly averages shown on p. 105 of the 1940 Supplement, see table 20, p. 18 of the April 1940 Survey.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1942	1941

* Revised.

†Data for exports and imports revised for 1939; see table 14, p. 17, and table 15, p. 18, respectively, of the April 1941 Survey.

‡The publication of detailed foreign trade statistics has been discontinued for the duration of the war.

§Revised series; revisions beginning January 1937 appear in table 8, p. 18, of the January 1941 Survey; see also note marked "†" which applies to both production and stocks.

¶Includes fats rendered from hog carcasses now reported as "lard" and "rendered pork fat." Figures are comparable with data reported prior to November 1940.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey

* Revised. † Revised beginning February 1941 to exclude for East Coast district, stocks of "shuttle oil" and stocks transferred to the U. K. pool board.

* The publication of detailed foreign trade statistics has been discontinued for the duration of the war.

* New series. Data on wholesale price of fuel oil beginning January 1918 appear in table 46, p. 14 of the November 1940 Survey. Data beginning 1920 for the new series on retail service-station price of gasoline, which replaces a similar series shown in the Survey through February 1941, appear in table 10, p. 16 of the March 1941 Survey. † Exports of motor fuel revised; for data for 1913 to 1939, see table 54, p. 16 of the December 1940 Survey; for data for all months of 1940, see note marked "†" on p. S-28 of the August 1941 Survey. Data beginning January 1941 include mineral spirits; the comparability of the series is affected to a negligible extent by the inclusion of this item. For revised series on wholesale tank wagon (N. Y.) price of gasoline, see table 6, p. 18 of the January 1941 Survey. Gas and fuel oil consumption in electric power plants revised for 1939. See p. 45 of the August 1940 Survey.

† Revised data for 1939 appear in table 1, p. 17 of the January 1941 Survey.

§ Data revised for 1939; for exports, see p. 17, and for imports, p. 18 of the April 1941 Survey.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey

* Revised.

†Data beginning January 1940 include fashers and exclude skivers.

* The publication of detailed foreign trade statistics has been discontinued for the duration of the war.

†Data for 1939 revised; for exports see table 14, p. 17, and for imports, table 15, p. 18 of the April 1941 Survey.

†Revised data for 1939 and January and February 1940 appear in table 17, p. 17 of the May 1941 Survey.

†Beginning January 1941, data include a small number of pairs of shoes other than men's leather (nurses, athletic, etc.) made for Government contract.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1942	1941

\$Data for 1939 revised; for exports see table 14, p. 17 and imports see table 15, p. 18 of the April 1941 issue.

* Revised.

† No quotation.

† Revised series. Revisions for 1939 and January and February 1940 for southern pine, western pine, and west coast woods, and also revisions for 1938 for the latter group, appear in table 17, p. 17 of the May 1941 issue.

* New series. These prices replace series shown in the Survey through the February 1941 issue; data beginning 1922 appear in table 16, p. 17 of the May 1941 Survey.

* The publication of detailed foreign trade statistics has been discontinued for the duration of the war.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1942	1941

* Revised. • Data are for 7 manufacturers beginning January 1940.

† Monthly data beginning 1929, corresponding to the monthly averages on p. 132 of the 1940 Supplement, appear on p. 18 of the April 1940 Survey.

‡ Beginning January 1942, percent of capacity is calculated on annual capacity as of December 31, 1941, of 88,566,170 tons of open-hearth, Bessemer, and electric steel ingots and steel for castings; data for July–December 1941 are based on capacity as of June 30, 1941 (86,144,900 tons) and earlier data on capacity as of December 31, 1940 (84,148,350 tons).

† Revised series. Data on pig-iron production converted from a long to a short tonnage basis; data beginning 1913 are shown in table 38, p. 14, of the October 1940 issue. Steel production and percent of capacity revised completely; for revision through 1939 see table 9, p. 16 of the March 1941 issue; for revisions in 1940 data see p. 49 of the June 1941 issue. Porcelain-enameled products revised beginning 1939 to include data for 99 manufacturers; for 1939 data, see p. 49 of the March 1941 issue. Steel products production for sale, have been converted to a short tonnage basis; see table 45, p. 14 of the November 1940 issue.

* New series. Earlier monthly data will be shown in a subsequent issue.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey

* Revised. * See note "a," p. 30. † Data for January, April, July, September, and December 1941 are for 5 weeks; other months, 4 weeks. ‡ Average for 14 days.

§ Average impossible due to lack of offerings part of month. ¶ Data revised for 1939; for exports see table 14, p. 17 and for imports see table 15, p. 18 of the April 1941 issue.

‡ Revised to include foreign ores beginning January 1940; see p. S-32 of October 1941 Survey for earlier data. § Beginning March 1941, includes duty-paid foreign copper.

* New series. Earlier data for the new breakdown of copper imports and the new series for tin and zinc imports will appear in a later issue. For domestic shipments of zinc beginning January 1940, see p. S-32 of the October 1941 Survey.

† Revised series. Data beginning January 1939 for the new series on bearing metal will be published later (see also note marked with a "†" on p. S-32 of the December 1941 Survey). For series on foundry equipment, see note marked with a "†" on p. S-32 of the September 1941 issue.

• Represents deliveries of foreign virgin tin; virgin tin produced in the United States from foreign ores is not included.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1942	1941

* Revised. § Preliminary. * See note "a," p. 30. • Domestic pulp used in producing mills and shipments to market.

† Shown in 1940 Supplement and monthly issues through February 1941 as A. C. motors. † Data revised for 1939; see table 15, p. 18 of the April 1941 issue.

• New series. For data beginning 1931 on unit sales of electric ranges, see table 52, p. 18 of the November 1940 issue (for revision in note regarding coverage of the data, see note marked with an "n" on p. 8-33 of the October 1941 Survey). Data beginning 1937 for shipments of rigid steel conduit and fittings are shown in table 34, p. 26, of the November 1941 Survey. Earlier monthly data for the indexes of domestic appliances are shown in table 38, p. 22, of the January 1942 issue. Data beginning 1913 for wood pulp are shown on p. 13 of the October 1940 issue.

§ Data on consumption, production, and stocks have been revised for 1939 and 1940 to adjust monthly figures to annual census data on production. The revised data will be published in a subsequent issue.

† Revised series. This series replaces the adjusted index; earlier data will appear in a subsequent issue.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1942	1941

* Revised. * The publication of detailed foreign trade statistics has been discontinued for the duration of the war.
 * New series. Data for glass containers for the period January 1934-December 1939 are shown in table 49, pp. 16 and 17, of the November 1940 issue; minor revisions for 1940 for wide mouth food containers and liquor were not shown on p. 8-35 of the September 1941 issue are available on request; earlier data on glassware other than containers are shown in table 2, p. 17, of the January 1941 Survey.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1942	1941

* Revised.

* See note "a", p. 37.

† Dec. 1 estimate of 1941 crop.

‡ Not available.

§ Data for 1939 revised; for exports, see table 14, p. 17, and for imports, table 15, p. 18 of the April 1941 issue.

• Total ginnings to end of month indicated.

¶ Data for January, April, July, and October 1941 are for 5 weeks; other months, 4 weeks.

** Monthly data beginning January 1930, corresponding to monthly averages shown on p. 155 of the 1940 Supplement, appear on p. 18 of the April 1940 Survey.

*** New series. Data for cotton consumption by products have been discontinued. For monthly data on rayon yarn deliveries beginning 1923, see table 41, p. 16 of the October 1940 issue. The new rayon price series replaces the data shown in the 1940 Supplement; earlier monthly data are shown in table 30, p. 22 of the November 1941 issue.

§ Revised monthly data for August 1939—July 1940 will be shown in a subsequent issue.
¶ Beginning September 1941 certain amounts of raw silk were returned from mills to warehouses; these amounts are reflected in warehouse stocks and should be deducted from the cumulative figures for deliveries. The number of bales returned were as follows: Sept., 542; Oct., 7,927; Nov., 2,717.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1942	1941

* Revised. † Preliminary.

• The publication of detailed foreign trade statistics has been discontinued for the duration of the war.

b Discontinued.

†Does not include Australian wool held by the Defense Supplies Corporation. The total includes for June, September and December 1941 a comparatively small amount of certificated wool in licensed warehouses not included in the detailed figures.

§Data revised for 1939. See table 14, p. 17, of the April 1941 Survey. Data on exports of airplanes have also been revised, beginning January 1940, to include exports of "landplanes minus engines." Prior to 1940, these were not reported separately. For revisions for all months of 1940 see note marked "§" on page S-37 of the November 1941 Survey. Beginning September 1941 data on exports of airplanes are not available.

¶New series. Data beginning 1936 are shown in table 33, p. 25 of the November, 1941 Survey.

* Since publication of foreign trade statistics has been suspended for the duration of the war, the Bureau of the Census has ceased publishing foreign and domestic data separately. The series, therefore, have been revised to include both foreign and domestic data. Comparable earlier figures are available on request.

†Data beginning June 1941 exclude Federal Government deliveries and are therefore not comparable with earlier data. See note "†", p. S-37, of December 1941 Survey.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1942		1941

* Revised. * The publication of detailed foreign trade statistics has been discontinued for the duration of the war.

†Data on life-insurance sales revised beginning September 1936; for revisions see p. 56 of the September 1940 Survey. For revisions of new bond issues for 1939 see p. 56 of the March 1941 Survey. All Canadian index numbers to which this note is attached have been revised to a 1935-39 base; earlier cost of living data appear in table 35, p. 19 of the January 1942 issue. Common stock price and bond yield indexes have been converted to the new base by multiplying the old series by a constant. The production and distribution indexes have been completely revised and no comparable data prior to January 1940 are available at this time. Complete 1940 data for production and distribution indexes are shown on p. 56 of the April 1941 Survey.

‡Beginning with July 1940, data are reported by the *Industrial Truck Statistical Association* and cover reports of 8 companies. They are approximately comparable with previous data which were compiled by the Bureau of the Census.

§Includes straight electric types only (trolley or third-rail and storage battery); data for 1939 and earlier years, published in the Survey, include some units of only partial United States manufacture and are not comparable with data here shown.

*New series. Comparable data on total shipments are available only beginning January 1940. "Other" includes Diesel-electric, Diesel-mechanical, and gasoline or steam locomotives; these are largely industrial; for data beginning with the first quarter of 1939, see p. 55 of the May 1941 Survey.

Nonmanufacturing	8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500
Employment, security operations	8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 40

U. S. DEPARTMENT OF COMMERCE

INTERNATIONAL REFERENCE SERVICE

containing data on FOREIGN economic and commercial conditions; market areas; industrial developments; investments of capital; transportation; export and import data; monetary, financial, and budgetary developments; international laws; tariff restrictions and regulations, etc.; was inaugurated January 1941, Volume I, Nos. 1 to 67. Copies of the reports, Nos. 1 to 66, inclusive (except No. 6, which is out of print) are available at the single report price, or \$3 for the entire set (except No. 6), from the Superintendent of Documents, Government Printing Office, Washington, D. C. Copies of No. 67, Summary of Foreign Trade of the United States—Calendar Year 1940, are available free of charge from the Bureau of Foreign and Domestic Commerce, Washington, D. C., as long as the limited life of the International Reference Service was suspended for the duration of the war, December 1941. After that time, when available for public use, will appear in FOREIGN COMMERCE WEEKLY; annual subscription price, \$3.00. Superintendent of Documents.
