Price Control in Germany

Policy and Technique

International Reference Service: Volume I, Number 19

PRICE 5 CENTS PER COPY

Growing interest in price-control problems aroused by the tremendous demands of national defense on our industrial facilities makes it highly desirable that we become familiar with the price-control policies and experience of other countries. Germany has had the longest experience with price control among countries with highly developed economies. This report, from the International Reference Service, is a detailed analysis of the policies and techniques pursued in the control of prices in Germany from the first world war to date. The analysis

recognizes that in considering price control under the National Socialist regime sufficient allowance should be made for the fact that a totalitarian regime is in a position to introduce economic controls without considering political consequences, and has also better facilities for covering up, temporarily at least, any unfavorable economic results by adopting additional controls. American businessmen should find in this detailed report information essential for a proper understanding of the basic problems involved in price control.

International Reference Service

Contains information on foreign economic and commercial conditions. Printed on substantial white paper (8½ x 11 inches), standard 3-ring binder punching. The entire service, by subscription, is \$6 per year, in advance. Individual releases, such as that one described above, are available at varying prices. Orders for copies of Price

Control in Germany—Policy and Technique, Volume I, Number 19, at 5 cents per copy, and for subscriptions, should be accompanied by full remittance, check or money order, payable to the Superintendent of Documents, and forwarded directly to the Government Printing Office, Washington, D. C.

Sample copies and more complete details of the International Reference Service are available from the Bureau of Foreign and Domestic Commerce, Department of Commerce, Washington, D. C.

Figure 1.

The Business Situation

FIRST break in the year-long upward climb of industrial output was caused by management-labor disputes in April. Further expansion in industries producing finished defense goods failed to offset reduced output of coal, automobiles, and steel, and aggregate production declined for the first time in 12 months. Directly reflecting this decrease, freight loadings and electric power output fell to the lowest levels of the year, though still remaining substantially above the same period in 1940. In the construction field, however, the advancing pace of residential and plant building showed no signs of diminishing and total activity continued high. Similarly, retail buying remained in heavy volume after the best Easter season since the latter twenties; while on the foreign trade side, March reports revealed one of the largest export totals since the outbreak of war.

Among the month's important defense developments, the establishment of the Office of Price Administration and Civilian Supply was of especial interest to the business community. To this office the President delegated broad powers for implementing necessary control over prices. Since prices are the focal point of all market forces, the Executive order expressly set forth as the concern of the office a number of diverse but related items. The more important of these include the setting of maximum prices, stimulation of raw material and finished consumer goods supply, and formation of programs for distributing equitably products which remain in inadequate supply after defense requirements have been fulfilled. The office also is expected to cooperate with the Office of Production Management in regulating inventories. That inventory regulation is a necessary part of control over prices and supply is self-evident. Its practical importance at the moment was suggested by the announcement at month's end that the Division of Priorities would exercise control over consumer and producer stocks of 16 metals and classes of metals. This was in addition to inventory control in the case of the seven commodities being strictly allocated under mandatory priorities.

Aluminum Situation Illustrates Problems.

Some of the problems confronting the new office, as well as its joint relationship with the Office of Production Management in solving them, are aptly illustrated by the present situation in aluminum. With an extremely large proportion of April shipments of the primary metal going to industries producing for defense needs, supplies available for civilian demand fall far short of those used in 1940 when consumer incomes were much lower than now. New capacity, organized with the help of the Office of Production Management,

is now under construction and will increase primary output from the annual rate of 540 million pounds in April to 920 million pounds in the latter part of 1942. Though this will relieve the supply situation considerably, much new capacity in addition to that announced thus far must be provided if the tight position is to be completely eliminated. Meanwhile, the price of the primary metal has remained unchanged through cooperation from the producers, and maximum prices have been established in the secondary markets.

From month to month necessary supplies are allocated to military producers by the Priorities Division of the Office of Production Management. The remaining metal, including scrap, is then apportioned by the same office among producers of civilian goods on the basis of broad preference principles laid down by it and the Office of Price Administration and Civilian Supply. For example, purchasers of aluminum for products essential to public health and safety or for replacement parts of standard apparatus which cannot be redesigned to use substitutes receive a large percentage of their requirements. But manufacturers of products in which a substitute for aluminum is available obtain small amounts as compared with what they formerly received.

Wide substitution for aluminum is possible and at present the necessary substitutes are available in adequate amount. Hence, while the shortage this year will require much readjustment of productive methods and possibly some decline in the quality of finished products, its effect on the total output of most civilian commodities will be small. Only as increasing tightness eventually develops in the supply of some substitutes will the shortage of aluminum be a factor contributing to limited output of particular civilian commodities. If this should occur, the Office of Price Administration and Civilian Supply will be faced not only with the problems of what and how much of various commodities shall be produced, but it will also have to formulate plans for equitably distributing the scarce finished goods among the ultimate consumers.

Maximum Steel Prices Set.

As one of his first acts, the Price Administrator established a schedule freezing steel prices at the levels which prevailed during the past quarter. This followed substantial wage increases in the industry and was announced as temporary while "the effect of the defense program upon the industry and its cost factors might be rationally appraised." That modifications would later be made if warranted was indicated by experience in the bituminous coal industry. There a ceiling on prices had been established March 28. But this was raised April

16 after wage costs had increased, the Administrator pointing out "that these prices, generally speaking, do no more than return to producers their average costs."

Meanwhile, the marked advance of the past several months in basic commodity prices was appreciably

Figure 2.—Indexes of Daily Spot Market Prices of 28 Basic Commodities by Groups, August 31, 1939–May 1, 1941 (U. S. Department of Labor).

NOTE.—Daily figures August 1939=100. Data plotted are for Thursday each week, unless a holiday falls on this day, in which case Wednesday prices are plotted.

diminished during April. The 28 commodities index moved only from 134.4 to 137.6, the smallest increase since January. In contrast to recent experience (shown in fig. 2), the rise which did occur was concentrated in a few domestic agricultural and foodstuff commodities, imported products showing but very small change. Much of the gain was associated with products whose prices are currently being supported by the Department of Agriculture through purchases in the open market, either to encourage increased production or for export abroad. Thus, under stimulus of Government buying at higher prices, hogs (100 pounds) rose during the month from \$7.92 to \$8.77, one of the highest prices in the past 4 years. Lard, which is being exported to the United Kingdom, advanced from 7.9 cents a pound to 8.5 cents. Barley, cottonseed oil, rosin, and tin prices were others experiencing some rise.

In addition to the increased farm and food prices enumerated above, a smaller advance in certain textile and chemical prices contributed to a one-point gain in the Bureau of Labor Statistics' weekly "all commodity" index; which ended the month at 83.2. The cost-of-living index, though tending to rise, shows but a slight advance over the level of a year ago.

New Business Still Expanding.

The smaller advance in prices was in no sense the result of a wide change in the demand situation. The

latest comprehensive report on new orders—that for March—revealed continued strength in all lines with a further rise in the tremendous volume of new business flowing to most durable goods industries. Thus, the increase in the Department of Commerce index of manufacturers' new orders from 189 in February to 194 in March was almost entirely concentrated in durable-goods lines, as the index for this component jumped from 277 to 286. Among nondurables, changes were small, the aggregate moving only slightly above its high level of the previous month. With the exception of electrical machinery, and iron and steel, almost all durable industries shared in the advance. New iron and steel business, which in recent months has grown most rapidly, equaled the huge February volume.

At the same time, shipment of commodities in most heavy demand also expanded. A larger movement of durable goods raised the aggregate index of manufacturers' shipments from 159 in February to 164 in March. The chief gain occurred in aircraft and railway equipment, though products of the iron and steel, machinery, and automotive industries were also moved in greater quantity. Most nondurable shipments (on a daily average basis) remained at their February level, at which time they had been sharply expanded. However, shipments still did not match incoming business, and order backlogs in the durable goods manufacturing industries rose another 8 percent. These have been growing at a reduced rate over the past several months; an increasing proportion of the backlogs, moreover, does not reflect current demand but rather represents an effort on the part of buyers to assure deliveries necessary many months hence.

That goods produced are now flowing in somewhat larger degree to ultimate consumers was again apparent from March inventory reports. Aggregate accumulation by manufacturers was about 125 million dollars, more than the 75 million dollars in February but much less than the monthly average of last fall and early winter. As usual, rapidly expanding defense industries requiring larger raw material and goods-in-process stocks led the upward movement. In nondurables, where considerable excess capacity is available, inventory shifts were small.

Decline in Adjusted Production Index.

For the first time in a year of steadily expanding demand, aggregate output in April failed to respond with an advance. Labor-management disagreements curtailed production in a number of important industries, and though output in many other sectors continued to increase at the rapid pace of previous months, the Federal Reserve's unadjusted index declined rather sharply from its record March high of 143. After allowance for the seasonal variation usual in more normal

times, the adjusted index slipped below the February level of 141. The downturn in April, which must be regarded as temporary, followed an upsurge in the unadjusted index which averaged about 3 points per month in the 8 months from August through March.

By far the largest April decline occurred in the bituminous coal industry. Cessation of work began in

In contrast to the normal experience of past years, output in the automobile industry also declined sharply, the result of a shut-down in the operations of the Ford Motor Co. during part of the month. However, delivery to dealers by other companies remained very high in response to record sales and production averaged more than 100,000 weekly as compared to 126,000 in March.

Some offset to these declines was provided by industries whose products are in extremely heavy demand for defense purposes. The expansion in some of the more important of these is shown in figure 3. Over recent months shipbuilding activity has been rising at an average rate of 8 percent, aircraft and machinery growth have averaged about 6 and 4 percent, respectively, and monthly output in the shops of the railroad car industry (partly ordnance) has increased slightly less than 2 percent. A further advance in these lines was evident during April. Not only is newly constructed capacity being made available—especially in the shipbuilding and aircraft industries where an enormous expansion is yet to come—but much idle capacity remains to be utilized. Field investigations by the Department of Labor indicate that in most lines (with machinery an outstanding example) operations have been at capacity for only a single shift.¹ Personnel employed on other shifts has usually been small, though overtime work has been widespread. Moreover, 7-day operations are still the exception and not the rule.

Textiles have been another area of considerable expansion over the past few months. Cotton consumption in March reached the record high of 854,000 bales and was further extended on a daily average basis in April. Among other industries of importance, production of crude petroleum remained virtually unchanged, while lumber output increased less than it usually has in past years.

The heavy decrease in coal production was instrumental in reducing freight carloadings about 9 percent under the March average. Movement of coke and grains also dropped, the latter less than seasonally. Miscellaneous shipments, which include most industrial commodities, again rose above their already high level, though the gain was less than the normal gain of past seasons. But the largest percentage increase occurred in movement of ore. In anticipation of a record season, navigation through the Soo Canal opened earlier than at any other time in the history of lake transportation, and by April 10, 90 percent of the Great Lakes ore fleet was in operation. For April as a whole more than 6,950,000 gross tons were loaded into the boats at upper lake ports, which compared with 465,000 tons in the like month a year previous.

Figure 3.—Indexes of Production of Selected Commodities, Without Adjustment for Seasonal Variations, 1939-41 (Board of Governors of the Federal Reserve System).

most union mines on April 2 and continued throughout the month, reducing output to about 13 percent of that in March. Activity in the latter month had been unusually high because of consumer stocking in anticipation of the stoppage; so that even after allowing for a normal seasonal decrease of 12 percent, the precipitous drop was in itself enough to reduce the Federal Reserve adjusted production index by more than 4 points.

The steel industry began to feel the effects of the coal stoppage by the end of the month. Inadequate coke supplies forced some furnaces to shut down, and activity was reduced from about 100 percent of capacity in the first part of the month to 94 percent during the final week. Production for the month as a whole was 6,758,000 tons, as compared with the record of 7,146,000 tons in March.

¹ See Extent of Week-End Shut-downs in Selected Defense Industries, Monthly Labor Review, March 1941, pp. 539-545.

A further reflection of lower industrial activity was to be found in reduced electric power output. This declined somewhat more than seasonally from a weekly average of 2,818 kilowatt-hours in March to 2,738 kilowatt-hours in April.

Large Residential and Plant Construction.

The construction industry furnished a more typical picture of the response of business activity to existing demand during April than was evident in industrial output. Propelled by large contract backlogs and heavy current awards, many types of new building are now steadily expanding. While activity as a whole has continued very high, further gains during the last 2

Figure 4.—Value of Construction Contracts Awarded for Residential Buildings in 37 States, by Quarters, 1939-41 (F. W. Dodge Corporation).

months have been limited by completion of a large part of the Army Cantonment program. Final cost of these projects was announced to be 947 million dollars, considerably higher than the 609 million originally estimated to be adequate.

Workers freed from cantonment projects may find employment opportunities chiefly in growing residential and plant construction. During the first quarter, contract awards in 37 States as reported by the F. W. Dodge Corporation were 1,055 million dollars, of which 376 million were residential and 216 million for new plant facilities. The quarterly movement of contract awards for each of these categories is shown in figures 4 and 5. Residential awards for the first quarter of this year are 37 percent above the like period in 1940 and were the highest for that quarter since 1929. Since January residential awards have increased steadily and are now approaching the 1940 monthly peak.

The rise in plant construction, of course, has been the most dramatic building development since the mid-1920's. Contracts reported in the first quarter this year (and the Dodge Corporation is late in reporting many plants because of difficulties of classification) were the highest on record and more than four times those in the first quarter of 1940. These, too, show an upward monthly trend.

Published reports do not convey accurately the overwhelming proportion of current plant construction

which is directly necessary for defense purposes. For example, the Dodge Corporation publishes a defense construction component. But this classifies as non-defense many publicly financed plants for which contract awards are let by private firms who will manage the facilities. Moreover, all plants being erected under "certificates of necessity" (which give a company plant amortization privileges for tax purposes) are classified as private rather than defense building. About 35 to 40 percent of total defense expenditure on manufacturing facilities is devoted to plant construction. Hence contracts had been awarded or commitments made from June through April 15 for about 800 million dollars of publicly financed plant expenditure, while private in-

Figure 5.—Value of Construction Contracts Awarded for Manufacturing Buildings in 37 States, by Quarters, 1939-41 (F. W. Dodge Corporation).

dustry itself is financing (through aid from the Government in some cases) another 350 million dollars. Insofar as future contract awards are concerned, present plans call for roughly twice the publicly financed facilities for which provision had thus far been made, and it is not unlikely that this figure will be further increased.

With a few exceptions, the vast public plant expenditures are being devoted to various types of ordnance, aircraft, and shipping plant, the comparative size of the expenditures in each case following in the order named. Moreover, of the plant constructed under "certificates of necessity," more than a fourth is for aircraft and parts and about an eighth for guns, ammunition, and ships. Thus, only about 20 percent of the aggregate plant contracts and certificates of necessity to date are for other than finished war goods facilities. Of this remainder, the most important expenditures (now including both plant and equipment) are 157 million dollars for nonferrous metal facilities, 142 million for iron and steel products facilities, 91 million for machinery facilities, 44 million for rail facilities, and 33 million for chemical facilities. Excepting the rails and chemicals these expenditures are very sizable as contrasted with the average of those made in recent years when expansion of our peacetime plant lagged. Only in the food products and petroleum industries are large plant extensions being made that are not directly related to defense.

Income Payments at Annual Rate of 80 Billion Dollars.

The extent of the over-all growth in business activity previous to April was well mirrored in the March figures on employment, pay rolls, and income. The addition during the month of another 300,000 new employees to nonagricultural pursuits raised the total of such workers to 37,218,000, the highest for any March in our history and 2,366,000 above a year previous. As in earlier months, a large proportion of the newly employed in March—more than half—were added to factory pay rolls. Similarly, industries in the forefront of the defense program, such as foundries, machine shops, electrical machinery, shipbuilding, and aircraft, again made the most sizable expansion in working force. A more-than-seasonal gain was also apparent in the 69,000 new workers employed by wholesale and retail establishments. The only February-March decline of significance was reported in the construction industry, where, as pointed out above, wage earners were released by completion of cantonments.

The growth in pay rolls during March still exceeded that in employment as longer hours, overtime payments, and wage increases became more widespread. From March 1940 the expansion in employment was 14.8 percent as against a 31.3 percent rise in pay rolls. Of course, in addition to the above named factors, hiring of a larger proportion of relatively skilled labor in connection with defense production has helped to augment pay rolls.

The increased salaries and wages were aided by a sharp advance in farm income during the month, in raising March income payments to an annual level of 80 billion. On an adjusted basis, the index of total income payments duplicated its movement of the previous month, rising from 97.3 in February to 97.8 in March. Insofar as farm income was concerned, the index of cash income from farm marketing rose to 89.0 (a new high for the war period) as compared with 84.0 in February. For the first quarter as a whole, income from farm marketings were 135 million dollars above last year, a gain of 8 percent.

A further rise in farm income is expected for April as a result of the developments in farm prices discussed above. By mid-April the index of prices received by farmers had risen from its February-March mark of 103 to 110. All major product components shared in the advance to some extent; so the increased income was expected to be distributed over a wide section of the farm community.

Heavy Easter Purchasing.

The present high level of income combined with favorable weather conditions in the early part of April to produce the best Easter sales volume on a dollar value basis since the latter twenties. Heavy purchasing of apparel items as well as continued strength in the demand for consumers' durables featured the buy-

ing upsurge which lasted through April 12, the peak of the Easter season. Sales in the 4 weeks preceding this Easter were 21 percent above the corresponding period a year ago; regional increases ranged from 9 percent in the Minneapolis district to 35 and 36 percent, respectively, in the Philadelphia and Richmond districts where defense expansion has been particularly large. Moreover, the post Easter decline was smaller than usual, so that expansion during April as a whole was well above the ordinary seasonal movement.

Other channels of distribution have experienced an increase in demand in recent months similar to that faced by department stores. Over the first quarter sales of general merchandise in rural areas, as well as purchases from chain grocery stores and variety stores, exceeded volumes of the similar period a year ago by 10 percent or more. Furthermore, in most cases the rise has been cumulative. For example, the adjusted index of variety store sales climbed to 119.9 in March from 116.2 in February, while that for chain grocery sales rose to 126.1 from 122.8 over the same period. An exception was provided by the adjusted index of rural sales, which showed little change from the record high of 150.8 established in February. As yet the rising dollar sales represent purchasing of a larger physical output, the contribution of higher prices to the increased total having been relatively small.

Buying continues to be most favorable in all durable goods lines, with heavy purchasing of new automobiles particularly outstanding. After 2 record months, March sales shot to 526,000 units, second only to the April 1929 high, and existing evidence pointed to a further growth in recent weeks. Automobile agencies and automobile finance companies are cooperating in stimulating buying at this time by accepting smaller down payments and a longer period for maturity of notes covering the balance of payment. With further large purchasing this year added to the comparatively high average output from 1937 through 1940, the public will be in an exceptionally good position to stand a sizable cut in 1942 car production. Even now the total stock of cars in existence is larger than at any previous time, both absolutely and on a per capita basis, while among the available cars is a high proportion of late models capable of rendering service for a long time to come.

Sharp Increase in Exports and Imports.

The inauguration of lease-lend aid during March helped to create an expansion in United States export trade. After declining since last summer, when shipment of war materials from stock made for an extremely heavy movement of goods, March exports rose to 351 million dollars. This was 38 million dollars above the average of the past 6 months and was about equal to the peak movement in early 1940, a time of heavy

agricultural shipment and large export to Continental Europe.

The chief gains, of course, appeared in the movement of war materials, a part of which was transferred from stock after signing of the Lease-Lend Act on March 11. Outflow of aircraft, firearms, explosives, and ammunition, all were expanded, with aircraft at 50 million dollars, substantially above its former peak. Export of machinery and vehicles other than aircraft went to 98.8 million dollars, the largest since the outbreak of war and about one-quarter above those last summer.

Since last summer, shipments of a number of commodities have been growing smaller, and these showed little improvement in March. One of the most important of these declines has occurred in iron and steel mill products, which had a value of 38 million dollars in March as compared with an average of 52 million during last July and August. Other recent reductions of note occurred in nonmetallic minerals, including petroleum, coal, coke, and glass, which fell from 40 million dollars to 28 million over the same period, and in wood and paper, which dropped from 17 million to 14 million. Changes in the total movement of agricultural commodities—particularly hard hit by the loss of European markets—have been small since July. The March aggregate increased about 5 million dollars to a total of 29 million, about 50 percent of the March average during the previous 5 years.

Most of the export shifts since last summer have centered around the United Kingdom, Canada, and Japan. Figure 6 depicts the course of export trade to these and other areas. Combined shipments to the United Kingdom and Canada averaged about 184 million dollars last July and August and were only 164 million in March. However, a substantial quantity of aircraft and other war materials has moved on British account to other sections of the world and is not included in the United Kingdom totals. Of course, the flow of remaining war materials, increasing constantly in volume, is reported as sent to the United Kingdom or its Empire units. Nevertheless, because of her tight shipping position, the United Kingdom has been forced to limit the import of other commodities to those absolutely essential. Aggregate British imports from all sections of the world are today about two-thirds of the prewar volume. From this country in recent months the United Kingdom has been taking less iron and steel, less wood and paper, and smaller amounts of grain, cotton, and tobacco than were imported last summer.

The largest percentage decline in American exports has occurred in shipments to Japan (not including those received in China) which averaged under 11 million dollars during the first quarter, less than half the volume of last summer and one of the smallest totals of the past two decades. About half of this reduction represents a smaller Japanese import of metals, with a reduced

movement of machinery and cotton responsible for most of the remainder.

To the important Latin American area, total exports continued unchanged from last summer through February. But in March shipments jumped 20 percent to 74 million dollars, the highest since December 1939.

The rise in March of total exports from this country was accompanied by an increased inflow of goods from other countries; imports advanced from 217 million dollars in February to 255 million, the highest in almost

Figure 6.—Value of Exports of United States Merchandise, by Selected Countries and Regions, 1939-41 (U. S. Department of Commerce).

4 years. As in other recent months, principal gains appeared in receipt of such strategic and critical materials as rubber, copper, nickel, tin, manganese, chrome, and other ferro-alloying ores. Though purchases covering most of the stock piling program have been completed, a sizable proportion of these materials still remains to be delivered.

For this reason, among others, the President's announcement at month's end that about 2,000,000 tons of shipping available for American coastwise and non-European trade would be diverted to British needs over coming months was of extraordinary interest. Already much of our ocean-going shipping space has been subject to informal rationing. The new policy will necessitate a more complete control and will likely introduce a decline in both export and import movement to non-belligerent areas.

Finance.

Rising business activity again brought forth an increase in bank loans during April, though partly as a result of seasonal influences the expansion was smaller than in the 2 previous months. Total business loans reported by Federal Reserve member banks rose only 89 million dollars in the 4 weeks prior to April 23, compared with 193 million in March and 151 million in February. A heavier addition to bank portfolios during the month, however, was made through the acquisition of further Government obligations, the increase amounting to 577 million dollars. Since January member bank holdings of such securities have expanded approximately 1.5 billion, about three times the advance in business loans.

Corporate financing in April changed little from the monthly volumes throughout the first quarter. Refunding operations continue to be the principal source of new issues despite the huge capital formation now under way. Of the 790 million dollars new securities issued during the first quarter of this year, only 170 million represented new capital. This was close to the best volume in 1940, with the exception of the final quarter, when American Telephone & Telegraph sold a single issue of 140 million. However, new capital sought currently from security markets is much lower than that obtained in 1936 or 1937.

As may be seen from figure 7, the present restriction is particularly noticeable in the industrial field, where capital formation now is extremely heavy. Some of these new industrial facilities are being financed by bank loans and corporate cash balances accumulated over recent years. But as indicated in the discussion of construction above, about three-quarters of the 2.8-billion-dollar defense plant contracts and "certificates

of necessity" for new manufacturing facilities are being financed either directly or indirectly by the Government. New railroad issues have also been smaller than in 1936 or 1937, but these are expected to increase over coming months as equipment buying expands.

Figure 7.—Total Corporate New Capital Flotations by Type of Borrower, Quarterly Averages for the Years 1936-39, and by Quarters for 1940 and 1941 (Commercial and Financial Chronicle).

In the stock market prices again displayed intermittent weakness. British reverses in the Mediterranean area were accompanied by a further decline in the Dow-Jones 65 stock average to 39.65 on April 22, the lowest level since last June. For the month as a whole, industrial shares were off nearly 6 percent. Bonds also weakened, but in the late sessions of the month they recovered a substantial part of their earlier losses.

The Product Concentration of Large Corporations

Walter F. Crowder, Chief, Business Structure and Operations Unit, Division of Research and Statistics

IT is a well known fact that a comparatively few large corporations control a substantial part of the national corporate wealth. But little analytical material has been available to indicate the role played by these same corporations in the output of the individual products manufactured by them. Although many basic and critical business decisions are made in terms of products, the information available for the study of these leading corporations has been in other terms. Many obvious questions have gone unanswered. How many different products do they manufacture? What is the significance of each product in the company total? How important in the national market is a company's output of each of its products?

As a part of the report on "The Structure of Industry,"¹ which was prepared by the Department of Commerce in cooperation with the Temporary National Economic Committee, a new measure of concentration in product terms was developed which throws light on how big corporations look productwise. For each of the products of the largest manufacturing corporations answers are supplied to two questions, how important is the value output of each product to the individual company, and how important is each company's output of each product in the total domestic production of that product?

The analysis which follows is based on product² data for the largest 50 manufacturing companies reporting in the Census of Manufactures for 1937. The companies were selected on the basis of their value of products; that is, the concerns reporting in the Census of Manufactures for 1937 were arrayed in terms of the total value of their products and the largest 50 selected.

¹ "The Structure of Industry," Monograph No. 27 of the TNEC series, prepared under the direction of Willard L. Thorp and Walter F. Crowder. The newly developed materials which form the basis of this article were taken from Pt. VI, "The Product Structures of Large Corporations," of the above-named report. The monograph is available from the Superintendent of Documents, Washington, D. C., \$1.

² The thousands of physical commodities produced by our industries and listed separately by the Census of Manufactures as products differ among themselves with respect to physical characteristics, although frequently the differences are very slight. Physical differences between two census products are in some cases, indeed, so slight as to make it doubtful that the products are significantly different in an economic sense, one being so easily substituted for the other as to render them functionally homogeneous for all important valuation decisions. It is impossible to say just when a gap in substitutability exists sufficient to warrant saying that two different physical things are economically different products. The Census of Manufactures treats 100-percent-wool blankets as a different product from 90-percent-wool blankets. Obviously the functional economic difference here is not of the same order as that between either one of these blanket products and a cast-iron radiator. In fact, it may not be so great as the difference between two identical blankets sold under two different brand names by means of two different advertising programs. In general, however, one is warranted in assuming that census product differentiations do reflect in varying degrees significant economic functional differences since they represent in large measure the cumulative result of suggestions and requests made through the years by manufacturers and their trade associations.

Since the Bureau of the Census is prohibited by Federal statute from revealing the confidential data supplied by reporting companies, the data for individual companies and products are presented under symbols. While this procedure undoubtedly reduces the news value of the data, it still makes possible the presentation of significant facts about the product structures of large American manufacturing companies. Indeed, comparisons of these corporations in abstract product symbols bring out structural similarities and differences which might not be so apparent if attention were directed to the concrete nature of the several product structures.

Each of these 50 companies is a central office in the meaning used by the Census; that is, each concern operates more than one establishment or plant and the production data from all are brought together and reported from one central office. These may be holding companies in which the subsidiaries operate on an independent or semi-independent basis. In such cases, the operating data of the subsidiaries are keyed to those of the top holding company and the total manufacturing operations are reported for the whole ownership interest. The control over establishments is limited to those which are owned outright or those of subsidiary companies in cases where the majority of the voting stock is controlled. There are undoubtedly some cases of majority voting stock control not known to the Census although the understatement is probably quite small. Moreover, many situations obviously exist in which less than majority voting stock is sufficient to give effective working control to the compact minority owner. Interlocking directorates, common banking interests, well-organized trade associations, and a variety of agreements which are functionally of vast importance in a study of concentration of control are not measured in the data presented here.

The Significance and Extent of the Operations of the Largest 50 Companies

Before presenting the data on the individual product structures of the largest 50 manufacturing corporations, it is interesting to appraise the significance of these giant corporations in over-all terms.

The Largest 50 Corporations Played an Important Role in the Economy.

The role played by these 50 large companies in all manufacturing may be reviewed and their significance

appraised by an inspection of the material presented in table 1. In order that the position held by the "largest 50" among other large corporations may be examined, similar data measuring the significance of the largest 100 and the largest 200 corporations are also presented. The measures of over-all bigness of a relatively few large corporations as presented in this table make possible a quantitative evaluation of their significance in a manner which has not heretofore been possible.

Although the largest 50 corporations controlled only 2 percent of all establishments in manufacturing, they employed 16 percent of all wage earners, paid 21 percent of the wage bill, and their aggregate output was 28 percent of the total value of products in all manufacturing in 1937. These 50 companies, of course, were not active in the production of all the different manufactured products. If the comparison is limited to the products actually manufactured by them, their value output made up 38 percent of this adjusted total.

By comparison, the largest 200 corporations controlled 3.2 percent of all manufacturing establishments, employed 26.3 percent of all wage earners in manufacturing, paid 32.8 percent of the wage bill, and accounted for 41.0 percent of the total value of all manufactured products.

Among these 50 giant corporations there was a wide range in the degree of bigness. The largest of the 50 had a value output approximately 20 times that of the 50th company in the array. Some idea of the relative size of these 50 as compared with the largest 100 and 200 corporations is afforded by the fact that the total value output of the largest corporation was approximately 40 times that of the 100th company, and 80 times that of the 200th company.

The Operations of the Largest 50 Companies Were Concentrated in a Few General Lines.

The activities of these 50 manufacturing companies tended to be much more heavily concentrated in certain general lines of activity or in certain census industry groups than in others. On the basis of their predominant activity (measured by value of products), 10 of

the 50 companies were classified in the iron and steel group, 7 in the food and kindred products group, 7 in the products of petroleum and coal group, 5 in the transportation group, and 4 each in the chemicals group, the nonferrous metals group, and the machinery group. This concentration in certain industry groups points to the conclusion that something in the nature of the products or in the technology under which they were produced probably was conducive to mass production. It also suggests the possibility that these giant corporations found some of their competition within the ranks of the 50 companies themselves.

These 50 companies taken together manufactured 2,043 distinct census products. Obviously, several of the companies may have participated in the manufacture of any one of these products. Actually, 13 of the 50 companies were active in the manufacture of four products. By far the greater proportion of the products, however, had only one among the 50 companies active in their production. Specifically, about half of the products were produced by only one among the 50 companies, 25 percent of the products were produced by two companies, a little more than 10 percent by three companies, and the remaining products by four companies or more.

The operations of these 50 companies were spread over many industries, but the extent of their activities varied widely. One of the companies actually manufactured products which were classified in 39 census industries, while, at the other extreme, one company operated in only two industries. For a more typical measure, 27 of the 50 companies manufactured products classified in 10 industries or more.

The distribution of the 50 companies according to the number of establishments or plants operated per company gives further evidence of the wide range in the extent of their operations. Three of the companies operated only 7 establishments each, while one company operated 497 establishments. Almost half of the companies operated 25 or fewer establishments and only 16 companies operated more than 50 establishments.

Table 1.—Importance of the Largest 50, the Largest 100, and the Largest 200 Manufacturing Companies, 1937

Measures of importance	All manufacturing	Largest 50 companies		Largest 100 companies		Largest 200 companies	
		Amount	Percent of all manufacturing	Amount	Percent of all manufacturing	Amount	Percent of all manufacturing

Wage earners:							
Average number for the year.....	8, 569, 231	1, 390, 503	16.2	1, 780, 951	20.8	2, 255, 725	26.3
Wages paid (thousands of dollars).....	10, 112, 883	2, 155, 038	21.3	2, 688, 482	26.6	3, 318, 147	32.8
Salaried employees:							
Average number for the year.....	1, 217, 171	189, 354	15.6	234, 912	19.3	300, 474	24.7
Salaries paid (thousands of dollars).....	2, 716, 866	425, 939	15.7	525, 861	19.4	667, 565	24.6
Value of products (thousands of dollars).....	60, 712, 872	16, 805, 135	27.7	20, 845, 673	34.3	24, 886, 973	41.0
Cost of materials, fuels, energy, etc. (thousands of dollars).....	35, 539, 333	11, 719, 824	33.0	14, 302, 891	40.2	16, 567, 159	46.6
Value added by manufacture (thousands of dollars).....	25, 173, 539	5, 085, 309	20.2	6, 542, 782	26.0	8, 139, 814	32.3

*This figure represents the difference between the total number of manufacturing establishments and the number of establishments operated by central-office companies plus the number of central-office companies. There were 5,625 central-office concerns active in manufacturing in 1937 and these multi-plant companies operated 25,699 establishments.

The number of products manufactured by each of the 50 companies also varied within a wide range. One of the companies produced only 6 products, while, at the other extreme, one company manufactured 302 separate products. Between these limits, the companies tended to cluster at the lower end of the range. Approximately three-fourths of the companies manufactured fewer than 100 products.

In general, there was a tendency for the concerns to organize their activity in such a manner that only a few products were manufactured in each particular establishment—actually, there were five or less products manufactured in 75 percent of the establishments and almost 90 percent of the establishments produced fewer than 11 products.

The Importance to the Individual Company of Each Product Manufactured

The analysis of the individual product structures of these 50 large manufacturing corporations is based on two measures of the significance of each product. First, the importance of an individual product to each company is measured in terms of the contribution that product made to the total value of the company's output; and, second, the importance of each company's

United States value of the product. In this section, the analysis of the product structures of the 50 companies is based on the data derived from the first measure.

Majority of Products Made Small Contribution to Total Company Output.

These 50 companies manufactured a total of 4,085 products (table 2). This does not mean that the companies manufactured 4,085 distinct and separate products. It only represents a cumulation of the number of products manufactured by each company.³ Of this total, there were 1,472 products, or 36 percent, which accounted individually for less than 0.1 percent of the total output of each company. Furthermore, there were 1,929 products which accounted for 0.1–1.0 percent of any company's total. In other words, 83.3 percent of all the products manufactured by these 50 companies accounted individually for 1 percent or less of a company's total output and 94.7 percent of the total number of products manufactured accounted individually for 5 percent or less of any company's output.

³ Products in this sense may be referred to as instances of production. Since the same census product may be made by more than one company, this amount (4,085) is larger than the number of different census products made by the 50 companies. If all duplications are removed, it is found that these companies, in total, made 2,043 different census products. For purposes of analyzing the product structures of individual companies every product must be included regardless of whether or not the same product was made by one or more other companies among the 50.

Figure 8.—Number of Products Manufactured by Each of the Largest Fifty Manufacturing Companies, 1937 (U. S. Department of Commerce).

output of an individual product is measured in terms of the proportion which that output was of the total

Figure 9.—Percentage Contribution of Individual Products to the Total Value of Products of Each of the Largest Fifty Manufacturing Companies, 1937 (U. S. Department of Commerce).

NOTE.—The number of products grouped in the right-hand portion of each bar accounted individually for less than one-half of one percent of the company's total value of products.

There were only 4 products from the whole list which individually accounted for more than 75 percent of a single company's value output.

Although the products which separately accounted for a small proportion of each company's total output represented the majority of the number of each company's products, they made up, even in the aggregate, only a small percentage of the total value of products of the individual companies. The relative variation in the number of products manufactured per company is shown in figure 8, while the proportion of the total value output for each company accounted for by the major product is shown graphically in figure 9. By inspecting these charts together a visual comparison of the percentage contribution of each product to the company total and the absolute number of products per company may be obtained. From figure 9 the relative significance of the aggregate values of the minor products discussed in the preceding paragraph may be seen. Only in company "S," which produced the largest number of products, 302, did the aggregate value of minor products amount to more than 20 percent of the company's total value of products.⁴ For the majority of the companies, the aggregate value of these products was less than 5 percent of the company's total.

¹ Less than $\frac{1}{10}$ of 1 percent.

Output of a Few Leading Products Made Up Large Portion of Each Company's Production.

Turning now to an examination of the contribution of the major products of each company, we see the tendency for a few products to account for a large proportion of the total value of each company's output. The length of the solid horizontal bars in figure 9 indicates

⁴ Throughout the text and figures, the identity of each company is indicated by the same code letter. The assignment of letters was not related in any way to a particular company characteristic.

the percentage contribution of the most important product (valuewise) to each company and the subsequent sections of each bar indicate the contribution of each succeeding product in order of importance. At one extreme, the most important product of company "S" accounted for 8.4 percent of the total output of that company, while, at the other extreme, the most important product of company "AJ" accounted for 84.6 percent of the total value output of that company.

Between these extremes there was considerable variation among the individual companies, but, in general, a rather broad inverse relation existed between the number of products manufactured by a company and the contribution of the leading product to the company's total value output.

To summarize the material presented in this section, the largest 50 manufacturing companies were engaged in the production of many products. The majority of these products, taken individually, made relatively small contributions percentagewise to the total value of products of the companies. On the other hand, the major portion of the total value of products of these companies was accounted for by the value contribution of relatively few products. In some of the companies these major products were undoubtedly related in the sense that they were joint products, by-products, or successive products in an integrated organization, but in the product structures of other companies, there was probably no functional relation among the major products.

Importance of Each Company's Output of an Individual Product in the Total Domestic Production of That Product

In describing the product structures of these 50 companies in the preceding section, it was seen that the total value output of each company resulted from the production of many products. In this section, the output of each product of each company is measured against the total United States output of that product. The data presented will help to clarify the relationship between bigness and concentration in the control of the production of individual products.

The product data are computed on a national basis, and the output of a given product by an individual company represents the aggregate production of that product in the various plants operated by the concern. To the extent the market for any particular product was not national in scope the measure of concentration of control developed here understates the true situation. A market is defined geographically by the area over which sellers compete and, when this area is reduced by transportation costs or difficulties of communication among potential sellers and buyers, the number of competitors is reduced and the degree of concentration correspondingly increased. In other words, the bigness

or smallness of a concern for price analysis must be measured in terms of the size of the markets for its separate products. The local gristmill of frontier days, although extremely small in terms of the volume of its output, presumably was much larger relative to the size of its market than the big flour milling concern of today, selling on a national basis. It is believed, however, that this limitation is not particularly important. For these large corporations to attain their size, the major products manufactured by them must ipso facto be products for which there is an enormous mass demand derived from a large part of the population.

The Concentration Percentages⁵ of Products Varied Widely.

The data which show the range of the importance in the United States of the products manufactured by these 50 companies cover wide differences in the actual proportions of the national totals accounted for by each company. Forty-three percent of the number of products were items in which the companies individually manufactured 5 percent or less of the total value of each product. The distribution of products over the entire range of concentration may be obtained from the data presented in table 3. Although not shown in the table, the concentration percentages for 157 of the products were less than 0.1 percent. If each of the largest 50 manufacturing companies is examined separately, it is seen, then, that a large percentage of the number of products were items in which the companies were small producers.

Table 3.—Distribution of the Number and Value of Products Manufactured by the Largest 50 Companies by Concentration Classes, 1937

Concentration class ¹ (percent of United States total)	Number of products			Value of products			Number of companies represented
	Total	Percent	Cumulative percent	Total (thousands of dollars)	Percent	Cumulative percent	
Total.....	4,085	100.0	-----	16,805,135	100.0	-----	-----
Less than 5.1.....	1,758	43.0	43.0	1,052,671	6.3	6.3	49

90.1 to 95.0.....	17	.4	98.6	37,307	.2	99.4	11
95.1 to 100.0.....	59	1.4	100.0	89,704	.6	100.0	20

¹ For ease in analysis, the various concentration percentages have been grouped into 5-percent intervals, and in this and in the following table, these groupings are called concentration classes.

Forty-nine of the fifty companies manufactured at least one product in which the output of the company was less than 5.1 percent of the United States total. For the remaining company, the least important product

⁵ The relation between a company's output of a product and the total United States production of that product has been expressed in percentage form and, throughout the remaining portion of the analysis, this ratio is referred to as the *concentration percentage* of a product.

accounted for 9.3 percent of the total value for that product. On the other hand, the output of products with the highest concentration ranged from 12.9 percent of the domestic total in the case of one company to 100 percent of the total in the case of 13 other companies.

Figure 10.—Percentage Distribution of the Number of Products of Each of the Largest Fifty Manufacturing Companies by United States Concentration Classes, 1937 (U. S. Department of Commerce).

In other words, these 13 companies each produced at least one product in which they accounted for the entire output. It is interesting to note that 7 companies manufactured no product in which their output made up more than 25 percent of the total domestic production.

In the upper concentration range, there were 59 products for which the output of individual companies accounted for 95 to 100 percent of the total domestic output, and 20 of the 50 companies participated in their production. For about one-fifth of the total number of products, the output of an individual company accounted for more than 25 percent of the United States total.

The relative number of products falling in the various concentration percentage classes for each company is summarized graphically in figure 10. From this chart it will be seen that the distributions among the companies do not vary significantly with the number of products manufactured by each. For example, 21 percent of the

total number of products of company "S" (302 products) fell in the 5 percent or less class, while 33 percent of the total number of products of company "AJ" (6 products) fell in this same class. At one extreme, company "M" (42 products) had 81 percent of its products in the "5 percent or less" class, while company "L" (10 products) manufactured no product with a concentration percentage as low as 5 percent.

Important Products of the Companies Had High Value.

In the preceding discussion, interest centered in a description of the proportion of the *number* of products falling in the various concentration classes. There it was seen that the majority of the *number* of products were those in which the individual company production made up a small portion of the domestic total. How important were these products in *value* terms? Conversely, how important in value terms were those much fewer products, numerically, in which there was higher concentration in output?

The aggregate value of the products falling in the "less than 5.1 percent" concentration class was 6.3 percent of the total value of products of the 50 companies. Thus, it may be said that 43 percent of the total *number* of products manufactured by the 50 companies were those in which the individual company output was 5 percent or less of the United States total, while the total *value* of these products made up only 6.3 percent of the aggregate value of products of the companies. (See table 3.) For the products with concentration percentages above 15 percent, the value greatly exceeded the number. In fact, one-third of the number of products fell in this range, but these products accounted for more than two-thirds of the total value of all the products. In general, then, those products in which the company proportion of the domestic total was low were the relatively less important products valuewise, while the most important products were those in which the output of individual companies

represented an important portion of the United States total.

Products Important to Companies Were Also Important in Domestic Total.

The importance of each product to each of these 50 large corporations was analyzed in an earlier section and we have just examined the significance in the United States total of every company's output of each individual product. We may now put the materials of these segments together and study the interrelation of the parts. Consulting table 4, it may be seen that there were 1,472 products which individually accounted for less than 0.1 percent of a company's total output. The value contribution of each of 152 of these to the total domestic production was less than 0.1 percent and the value contribution of 1,041 items was 5 percent or less of the national total (table 4). There were 14 instances, however, in which a product that made up less than 0.1 percent of the company's total accounted for the entire output of the particular product.

Again consulting table 4, among the various products produced were three whose value in each case made up 80 to 85 percent of the producing company's total output. Two of these 3 products, in turn, had an individual value which accounted for 20 to 25 percent of the aggregate value of that product manufactured in the United States, while the third accounted for 25 to 30 percent of the United States total.

Reading from the table along the other axis, we find that, of the 157 products with concentration percentages less than 0.1 percent, 152 were products which individually accounted for less than 0.1 percent of a company's total value output, and 5 products were in the "0.1-5.0" percent class. At the other extreme, there were 42 products for which the output of an individual company made up the total United States production and, in the case of 14 of these products, the output of the individual product accounted for

Table 4.—Distribution of Products Manufactured by the Largest 50 Companies by Percentage of Company Total and by Concentration Percentage, 1937

Concentration class (percent of United States total)	Percent of company total value of products																		
	Total	Less than 0.1	0.1 to 5.0	5.1 to 10.0	10.1 to 15.0	15.1 to 20.0	20.1 to 25.0	25.1 to 30.0	30.1 to 35.0	35.1 to 40.0	40.1 to 45.0	45.1 to 50.0	50.1 to 55.0	55.1 to 60.0	60.1 to 65.0	65.1 to 70.0	70.1 to 75.0	75.1 to 80.0	80.1 to 85.0

less than 0.1 percent of the company's total value output and 28 of the products were in the "0.1-5.0" percent class.

Certain general observations may be drawn from the material presented in this table regarding the relation between products important to each company and the significance of each company's output of these products in the United States total. If we may say that a company's output of a particular product represents an "important" part of the United States total production of that item when the company's output makes up 10 percent or more of the United States total (this percentage is, of course, quite arbitrary and subject to obvious limitations), then about 40 percent of the products were items in which the individual company's output made up an important part of the United States total. Of these "important" products, about 90 percent were items which individually made up 5 percent or less of the company's total output and may thus, in a sense, be classed as "unimportant" to the companies.

On this same basis, it may be said that, for 60 percent of the individual products, a single company's output was relatively "unimportant" in the total domestic production and half of these products were items which individually contributed less than 0.1 percent to the total value of the company's output.

How important in the domestic production picture is each company's output of its most important product? The value output of the most important product of one of the companies accounted for only 3.1 percent of the total production of that product. At the other extreme, the value output of the most important product of each of 3 companies made up 75 percent or more of the total domestic production of these 3 products. For 29 of the 50 companies, however, the value output of the leading product of each company accounted for 25 percent or less of the total production of these products.

General Conclusions

This investigation of the product structures of large corporations demonstrates with better evidence than has been heretofore available that corporate bigness and concentration in the production of individual products are not always the same thing. An independent tabulation of the assets of the largest 50 corporations in 1937, as reported in Moody's, reveals that these corporations had approximately one-third of the total assets of all manufacturing corporations as reported in the *Statistics of Income*. Further, these corporations accounted for approximately one-half of all taxable income in manufacturing and they accounted for about 28 percent of the total value of products in the manufacturing segment of the economy. These are the over-all measures of corporate size.

In appraising the role played by these large corporations in the economy, data must be developed which will aid in answering different types of questions. For

some business decisions, the area of applicability is company-wide and for these decisions the over-all company measures of size are relevant. For example, when a company makes a decision to adopt a certain labor policy or a decision to extend plant capacity, the concern often operates as a unit and its over-all size is one factor of considerable weight. For other types of decisions, however, in which only a part of the concern's operations is affected, measures of a different type are indicated. For example, when the decisions relate to the pricing policies to be followed for an individual product, the most significant factor is not the over-all size of the corporation but the control which the corporation maintains over the output of that individual product. Such data will throw light on the extent of a company's potential control over production in the areas where critical price decisions are made, namely, in the markets for individual products.

From the data developed in the Commerce study of *The Structure of Industry*, which has been briefly summarized here, we see that, in terms of individual products manufactured by them, there is an extremely wide range in the degree of control over production maintained by these big corporations individually. For the great majority of the products manufactured by them the individual company's control of the tangible sort measured here is very small. Many of these items are undoubtedly the result of integration in various forms in the manufacturing process whereby by-products, supplementary, auxiliary, and complementary products are produced as a part of the activity of one concern. For the relatively fewer products numerically the output of these companies individually makes up an important part of the domestic production, and the products are generally the more important items to the companies themselves.

All sorts of conditions of control exist and the individual product structures of each of the largest 50 corporations are strikingly different. Each product and each company is unique. All these corporations are big in terms of over-all measures, but their control over the individual products manufactured by them varies widely.

The general picture of concentration in production which is gained from the use of this new measure of product concentration cannot but impress one with the extreme complexity of the whole problem of concentration. Sweeping statements which lump all big corporations together as if they were identical in structure or over-all treatment from the policy angle cannot contribute much toward solving the problems associated with concentration or the problems associated with the big corporations. This is certainly one of the most striking conclusions, though a negative one, which may be drawn from the data supplied in the Commerce study. In all those matters involving price decision, the individualness of each case would seem to indicate the wisdom of dealing with each company or, for that matter, with each product on an individual basis.

¹ New series. These data compiled by the Bureau of Labor Statistics of the Department of Labor replace the wholesale prices of Douglas fir boards and flooring shown in the 1940 Supplement and monthly issues of the Survey through February 1941. The series shown above are considered more representative by the compiling source on the basis of the volume of goods newly made available for sale; that is, domestic production plus imports, minus exports. A more complete description of the framing lumber is as follows: Dimension, No. 1 common, 2 by 4 inches by 16 feet, dried, S4S, S1E, or rough. Both prices are for mixed carlot, f. o. b. mill (rail shipment), mill to retail lumber dealer, and are seller's list prices subject to current cash discount. Data are computed from Tuesday prices reported by manufacturers.

¹ Lumber statistics for 1939 have been revised by the reporting associations to the 1939 Census of Manufactures totals. In addition to the data shown above the west coast woods figures have been revised for 1938 as follows (figures in millions of board feet): Production—January, 393; February, 345; March, 478; April, 441; May, 416; June, 397; July, 403; August, 524; September, 526; October, 527; November, 468; December, 463. Shipments—January, 402; February, 386; March, 504; April, 460; May, 453; June, 463; July, 467; August 528; September, 521; October, 521; November, 447; December, 464. Minor revisions in the quarterly data for production and shipments of west coast woods for 1929-33 and western pine unfilled orders for 1930-35 are available upon request. For data beginning March 1940 see pp. 47 and 48 of this issue.

¹ New series. Compiled by the Bureau of Labor Statistics, U. S. Department of Labor, to show the trend in the cost of goods purchased by wage earners and lower-salaried workers in large cities. Indexes beginning 1935 are computed at quarterly intervals from price data for 33 large cities, except the food index which covers 51 cities and is computed monthly. Beginning in October 1940, monthly indexes are computed also for groups other than foods based on a more limited list of items than are priced quarterly and covering 20 cities; these monthly indexes are linked to the quarterly indexes and are subject to revision after each quarterly pricing. The index from 1935 for quarterly pricing periods is based on prices of nearly 200 goods and services (more than one quality being priced for the more important items) and rents collected for the types of dwellings occupied by wage earners and clerical workers. In addition to food, clothing, rent, fuel, electricity, and ice, and housefurnishings, the index covers a miscellaneous group which includes transportation, medical care, household operation, newspapers, movies, tobacco products, and personal care. Prices are taken as of the middle of the month. Weights used to combine price ratios for individual commodities and services into subgroups by cities were obtained from a study of the disbursements of wage earners and lower-salaried clerical workers for some year in the period 1934-36, and represent actual family expenditures in each city covered, except for clothing and housefurnishings for which weights were derived from expenditures by regions. The weights were computed so as to represent all goods and services classified in each group rather than only the items priced. Aggregate costs are computed for each group of items in the individual cities for each pricing period and the group costs combined to obtain the all-items costs for the city. These costs are then related to costs in the base period 1935-39 to obtain the indexes. The individual city indexes are combined into the all-cities averages shown in the above table with weights based on the 1930 population of the given metropolitan area and other cities in the same region and size class. The relative importance of each group of items in the combined index for 33 cities in 1935-39 was as follows: Food, 33.9 percent; clothing, 10.5; rent, 18.1; fuel, electricity, and ice, 6.4; housefurnishings, 4.2; and miscellaneous, 26.9. These percentages change from time to time, because the prices in the different groups change at different rates.

A complete series beginning 1913 has been obtained by linking indexes based on a smaller number of commodities and cities to the index beginning in 1935. The annual average for the food index is an average of monthly indexes for each year; the annual averages for other groups are based on costs for each relevant pricing period, weighted in accordance with their relative importance. For example, for years when goods were priced only in June and December, costs in the preceding December were considered.

For a more complete description of the indexes and data for the individual cities, see pp. 367-404 of the August 1940 issue of the Monthly Labor Review of the U. S. Department of Labor.

² For monthly data beginning 1923, see table 51, p. 18, of the November 1940 Survey; this index was formerly shown in the Survey under retail prices.

Monthly Business Statistics

The data here are a continuation of the statistics published in the 1940 Supplement to the SURVEY OF CURRENT BUSINESS. That volume contains monthly data for the years 1936 to 1939, and monthly averages for earlier years back to 1913 insofar as available; it also provides a description of each series and references to sources of monthly figures prior to 1936. Series added or revised since publication of the 1940 Supplement are indicated by an asterisk (*) and a dagger (†), respectively, the accompanying footnote indicating where historical data and a descriptive note may be found. The term "unadjusted" and "adjusted" used to designate index numbers refer to adjustment of monthly figures for seasonal variations.

Data subsequent to March for selected series will be found in the Weekly Supplement to the Survey.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1941	1940											1941

* Revised. * Preliminary.

†Revised series. Revised indexes of industrial production beginning 1919 (1923 for industrial groups and industries), including the new series, are available on pp. 12-17 of the August 1940 Survey, except for subsequent 1939 revisions for aircraft on p. 19 of the December 1940 Survey, and for rayon deliveries, total manufactures (unadjusted), and durable manufactures (unadjusted) on p. 20 of the March 1941 Survey; a few minor revisions in 1939 data for transportation equipment, alcoholic beverages, dairy products, textiles and products, minerals, and crude petroleum are available upon request.

New series. For industrial production series, see note marked with "†". For indexes of manufacturers' orders and shipments beginning January 1939, see monthly Surveys beginning with the September 1940 issue (description of data and figures for January-June 1939 are available on pp. 7-13 of that issue except for revisions given in note marked with an "" on p. 20 of the November 1940 Survey).

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1941	1940										1941

* Revised. † Preliminary. • Number of quotations increased to 887 in recent months. ‡ For monthly data beginning 1933, see p. 18 of the April 1940 Survey.

§ Data for April 15, 1941: Total, 110; chickens and eggs, 104; cotton and cottonseed, 88; dairy products, 121; fruits, 89; grains, 90; meat animals, 137; truck crops, 161; miscellaneous, 94.

¶ Covers 38 cities in March, 37 in June, September, and October, 36 in November, and 35 beginning in December; data now available monthly for coal-burning season.

‡ Revised series. National Industrial Conference Board's index of cost of living and food component and index of wholesale prices of lumber revised beginning 1935, see tables 5 and 7, respectively, p. 18 of the January 1941 Survey. For the Department of Labor's revised index of retail food prices beginning 1913, see table 51, p. 18 of the November 1940 Survey. Data for chemicals and allied products and subgroups revised beginning 1926; see table 32, p. 18 of the August 1940 Survey.

* New series. For Department of Labor's index of prices of commodities other than farm products beginning 1913, see table 36, p. 18 of the September 1940 Survey. For indexes of manufacturers' inventories beginning January 1939, see monthly Surveys beginning with the September 1940 issue (description of data and figures for January-June 1939 are available on pp. 7-13 of that issue except for revisions given in note marked with an "*" on p. 21 of the November 1940 Survey). Earlier data for the Department of Labor's cost of living series appear in table 19, p. 18 of this issue.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1941	1940											1941

* Revised. † Preliminary. § Data for May, August, and October 1940 and January 1941 are for 5 weeks; other months, 4 weeks.

*New series. For indexes of rayon and silk prices beginning 1926, see table 29, p. 18 of the May 1940 Survey. Earlier data for concrete pavement contract awards for airports will appear in a subsequent issue.

† Revised series. Indicated series on "Purchasing power of the dollar" revised beginning January 1935; see table 4, p. 18 of the January 1941 Survey. Total concrete pavement awards revised to include contracts for airports; earlier data will appear in a subsequent issue. Revised data on dwelling units beginning January 1939 are shown in table 18, p. 17 of this issue.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1941	1940										1941

* Revised. † Preliminary. * Less than \$500. ‡ Index discontinued December 1940; data for radio advertising are included, however, in computing combined index.

† Revised series. Revised indexes of variety store sales beginning 1929 appear in table 30, p. 10 of the August 1940 Survey. H. L. Green Co. data revised beginning February 1939; for an explanation of the revision and revised data, see notes marked with a "†" on p. 24 of the September 1940 and December 1940 Surveys.

*New series. For data beginning July 1934, see table 1, p. 11 of the November 1940 Survey.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1941	1940										1941

* Revised.

† Revised series. Indexes of department-store sales in Atlanta and Minneapolis districts revised beginning 1919, for Atlanta, see table 53, p. 16 of the December 1940 Survey; for Minneapolis, table 20, p. 13 of this issue. For revisions in adjusted index of United States department-store sales for 1935-39, see note marked with a "+" on p. 25 of the January 1941 Survey. For revised indexes of employment, beginning in 1937 for all industries and nondurable goods and January 1933 for durable goods, see table 12, p. 18 of the March 1941 Survey.

* New series. For data beginning 1929, see table 11, pp. 17 and 18 of the March 1941 Survey, except for total employment, total employees in nonagricultural establishments, and manufacturing beginning 1937, which were revised to include preliminary adjustment of factory wage-earner estimate to 1939 Census data. Revisions not shown above will appear in an early issue.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1940												1941

* Revised. * Preliminary.

• Designation changed from "quit" as separations such as deaths, permanent disabilities, retirements on pensions, etc., are included.

† Data are a weekly average of the number receiving benefits, based on an average of the weeks of unemployment compensated during weeks ended within the month.

‡ Compilation of separate figures for private placements, shown in previous issues of the Survey through February 1941, has been discontinued by the reporting source.

§ Revised series. Telephone and telegraph indexes revised beginning 1932, other indicated

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1941	1940										1941

* Revised.

†Data for shipbuilding, leather, and boots and shoes revised beginning October 1940 in the April 1941 Survey on the basis of more complete reports; the revision could not be extended to earlier months. For similar revisions beginning August 1940 for tin cans, electrical machinery, and chemicals, see p. 75 of the February 1941 Survey, and beginning June 1940 for brick, tile, and terra cotta, p. 29 of the December 1940 Survey.

*New series. Earlier monthly data not shown on p. 29 of the March 1941 Survey are available upon request.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1941	1940										1941

* Revised. * Preliminary. * Less than \$500,000. † To avoid duplication these loans are excluded from the totals. ‡ Not available.

† Construction wage rates as of April 1, 1941: common labor, \$0.725; skilled labor, \$1.48.

§ Figures for special types of public assistance and general relief exclude the cost of hospitalization and burial. The cost of medical care is also excluded beginning September 1940; this item is included in all earlier data on general relief and in figures for July 1937–August 1940 on special types of assistance.

† Revised series. Indexes for Illinois revised to a 1935–39 base; for factors for converting indexes on a 1925–27 base beginning 1935, see p. 29 of the January 1941 Survey. Revised indexes for Wisconsin beginning 1925 will be shown in an early issue. For revisions in data on emergency crop loans published in the Survey prior to the September 1940 issue, see note marked "†" on p. 76 of the February 1941 Survey. Total public assistance and "other Federal agency projects financed from emergency funds" revised in the March 1941 Survey to exclude earnings on regular Federal construction projects; revised data beginning January 1933 will appear in a subsequent issue.

* New series. For data beginning 1933 for old-age assistance, see table 56, p. 17 of the December 1940 Survey. Data on earnings on regular Federal construction projects beginning January 1933 will appear in a subsequent issue.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1941	1940											1941

* Revised. † Preliminary. • Deficit. • Number of companies varies slightly. Δ Formerly Standard Statistics Co., Inc.

†A merger during the second quarter of 1940 reduced the number of corporations in the miscellaneous group to 54 and the total to 167.

• Excludes collections from national defense taxes under Revenue Act of 1940. • The total includes guaranteed debentures of certain agencies not shown separately.

†Data reported by the Canadian Government have been substituted beginning 1940 for data previously reported directly by producers to the American Bureau of Metal Statistics, as the latter data have been temporarily discontinued. Annual totals from the two sources have been in fairly close agreement but the monthly movement in the past has been quite different.

†Beginning with April 1940, where direct reports from foreign countries are lacking, available reports of the American Bureau of Metal Statistics are used. When no current reports are available at the time of compilation, the last reported figure is carried forward. The comparability of the data has been affected by these substitutions.

†Revised series. Data on total expenditures and transfers to trust accounts revised beginning 1937, and on income taxes beginning September, 1936; see table 50, p. 18 of the November 1940 Survey.

*New series. For data beginning January 1937, see table 50, p. 18 of the November 1940 Survey.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1941	1940										1941

* Revised.

* Less than \$500.

† Includes repayments unallocated, pending advices, at end of month.

† See note marked "†" on p. 35 of this issue.

† Includes \$154,350,000 in face amount instalment certificates not included in the break-down by type of security.

† Revised series. Data on security registrations revised beginning January 1938, see table 47, p. 15 of the November 1940 Survey. Data on total loans of the Reconstruction Finance Corporation and "other loans and authorizations" revised beginning January 1937 to exclude a loan of \$146,500,000 to the Rural Electrification Administration, advanced in varying amounts during 1937-39, now classified under allocations; this loan has been excluded from data shown in the Survey beginning with the October 1940 issue. Data beginning July 1940 for "other loans and authorizations" also revised to exclude capital stock purchases in corporations created by the RFC to aid in national defense, now included in authorizations for national defense. Certain other comparatively small revisions have been made in the grand total; currently such revisions are not carried into the detail.

* New series. For data beginning 1938 for substitute securities, see table 47, p. 15 of the November 1940 issue. Authorizations for national defense include loans, participations, and purchases of capital stock in corporations created by the Reconstruction Finance Corporation to aid in national defense (only loans were shown in previous issues of the Survey).

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1941	1940											1941

* Revised.

† December 1 estimate.

‡ For domestic consumption only, excluding grindings for export.

§ No quotation.

¶ Production in "commercial areas"; not comparable with earlier estimates of total crop or "commercial" crop. Some quantities unharvested on account of market conditions are included.

†† For monthly data beginning 1913, corresponding to monthly averages shown on p. 105 of the 1940 Supplement, see table 20, p. 18, of the April 1940 Survey.

††† Data for 1939 revised. See note marked "†", p. 42 of the January 1941 survey.

§§ Data for 1939 revised; for exports, see table 14, p. 17, and for imports, table 15, p. 18, of the April 1941 Survey.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1941	1940											1941

* Revised.
† Revised series; revisions beginning January 1937 appear in table 8, p. 18, of the January 1941 Survey; see also note marked "†" which applies to both production and stocks.
‡ Monthly figures beginning 1913, corresponding to the monthly averages shown on p. 113 of the 1940 Supplement, are available on request.
§ In accordance with new definitions effective November 1, 1940, fats rendered from hog carcasses formerly reported as "lard" are now reported as "lard" and "rendered pork fat." The two are here combined to have figures comparable with the earlier data.
|| Data for exports and imports revised for 1939; see table 14, p. 17, and table 15, p. 18, respectively, of the April 1941 Survey.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1941	1940										1941

*Revised.

†Data for 1933 revised. See p. 45 of the August 1940 Survey.

‡December 1 estimate.

§Composite price for 38 cities in March; 37 cities in June, September, and October; 36 cities in November; and 35 cities beginning in December. Data for retail coal prices, both anthracite and bituminous, are now compiled on a monthly basis for the coal-burning season, September through April.

¶Data for exports and imports revised for 1939; see table 14, p. 17, and table 15, p. 18, respectively, of the April 1941 survey.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1941	1940											1941

* Revised.

†New series. Data on wholesale price of fuel oil beginning January 1918 appear in table 46, p. 14 of the November 1940 Survey. Data beginning 1920 for the new series on retail service-station price of gasoline, which replaces a similar series shown in the Survey through February 1941, appear in table 10, p. 16 the March 1941 Survey.

‡Exports of motor fuel revised; for data beginning January 1913, see table 54, p. 16 of the December 1940 Survey. Data beginning January 1941 include mineral spirits. The comparability of the series is effected to a negligible extent by the inclusion of this item. For revised series on wholesale tank wagon (N. Y.), price of gasoline, see table 6, p. 18 of the January 1941 Survey.

§Revised data for 1939 appear on table 1, p. 17 of the January 1941 Survey.

¶Data revised for 1939; for exports, see table 14, p. 17, and for imports, table 15, p. 18 of the April 1941 Survey.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1941	1940											1941

† Revised. † Quarterly data; monthly reports initiated April 1940. • Data are for 7 manufacturers beginning January 1940.

‡ Average for 14 days; not quoted part of month. ‡ Average impossible due to lack of offerings part of month.

§ Monthly data beginning 1929, corresponding to the monthly averages on p. 132 of the 1940 Supplement, appear on p. 18 of the April 1940 Survey.

† Revised series. Steel products, production for sale, have been converted to a short tonnage basis; see table 45, p. 14 of the November 1940 issue. Steel production and percent of capacity revised completely; see table 9, p. 16 of the March 1941 issue. Porcelain enameled products revised beginning 1939 to include data for 99 manufacturers; for 1939 data see p. 49 of the March 1941 issue.

§ Data for 1939 revised; for exports, see table 14, p. 17, and for imports, table 15, p. 18, of the April 1941 issue.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1941	1940											1941

† Revised.

† Data for May, July, and October 1940 and January 1941 are for 5 weeks; other months, 4 weeks.

† Reports indefinitely suspended.

† Revised series. Data on air-conditioning equipment compiled on a revised basis beginning January 1939; see p. 50 of the September 1940 Survey. Index of total foundry equipment net new orders beginning January 1940 is based on average sales to metal-working industries during 1937-39; earlier data are based on the old new orders index (1922-24 base) converted to the new base by dividing by 1.328; index for new equipment and repairs available only beginning May 1940.

† Data revised for 1939; see table 15, p. 18 of the April 1941 issue.

† This series has been discontinued by the reporting agency.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1941	1940										1941

* Revised.

† Preliminary.

♦ Domestic pulp used in producing mills and shipments to market.

§ Shown in 1940 Supplement and monthly issues through February 1941 as A. C. motors.

† Revised series. For revised data on "total paper" and "paper, excluding newsprint and paperboard" beginning 1934, see table 43, pp. 12 and 13 of the November 1940 issue.

* New series. Data beginning 1913 for wood pulp are shown on p. 13 of the October 1940 issue. For data beginning 1931 on unit sales of electric ranges, see table 52, p. 18 of the November 1940 issue; the note with regard to the coverage of the industry has been revised to read: The Association believes the coverage for 1936-40 was between 90 and 95 percent. No data are available for coverage prior to 1936. Earlier monthly data for the indexes of domestic appliances excluding refrigerators will be shown in a subsequent issue.

§ Revised 1939 and January 1940 data and an explanation of revisions in the 1940 data will be shown in a subsequent issue. Revised data beginning February 1940 are shown on p. 51 of the April 1941 issue.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1941	1940											1941

* Revised.

* New series. Data for glass containers beginning January 1934 are shown in table 49, pp. 16 and 17, of the November 1940 issue; earlier data on glassware other than containers are shown in table 2, p. 17, of the January 1941 Survey.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1940												1941

* Revised. † Total ginnings to end of month indicated.

‡ Total ginnings of 1939 crop.

§ Dec. 1 estimate of 1940 crop.

¶ Not available.

§ Data for 1939 revised; for exports, see table 14, p. 17, and for imports, table 15, p. 18, of the April 1941 issue.

¶ Data for April, July, and October 1940 and January 1941 are for 5 weeks; other months, 4 weeks.

† Monthly data beginning January 1930, corresponding to monthly averages shown on p. 155 of the 1940 Supplement, appear on p. 18 of the April 1940 Survey.

‡ New series. For monthly data on rayon yarn deliveries beginning 1923, see table 41, p. 16, of the October 1940 issue. The new rayon price series replaces the data shown in the 1940 Supplement. Earlier monthly data will be shown in a subsequent issue.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1941	1940										1941

* Revised.

* Comparable data not available.

* Temporarily discontinued by reporting source.

† Designation changed from "commercial licensed" or "civil" aircraft (1940 Supplement).

‡ Includes straight electric types only (trolley or third-rail and storage battery); data for 1939 and earlier years, published in the Survey, include some units of only partial United States manufacture and are not comparable with data here shown.

§ Data revised for 1939. See table 14, p. 17 of the April 1941 Survey.

¶ New series. Comparable data on total shipments are available only beginning January 1940. "Other" includes Diesel-electric, Diesel-mechanical, and gasoline or steam locomotives; these are largely industrial; data for 1939, the earliest available, are as follows: first quarter, 21; second, 20; third, 26; fourth, 52.

Monthly statistics through December 1939, together with explanatory notes and references to the sources of the data, may be found in the 1940 Supplement to the Survey	1941	1940										1941

† Revised.

†Data on life-insurance sales revised beginning September 1936; for revisions see p. 56 of the September 1940 Survey. For revisions of new bond issues for 1939 see p. 56 of the March 1941 Survey. All Canadian index numbers to which this note is attached have been revised to a 1935-39 base; earlier data for these series will be shown in a subsequent issue. Common stock price and bond yield indexes have been converted to the new base by multiplying the old series by a constant. The production and distribution indexes have been completely revised and no comparable data prior to January 1940 are available at this time. Complete 1940 data for production and distribution indexes are shown on p. 56 of the April 1941 Survey.

†Beginning with July 1940, data are reported by the *Industrial Truck Statistical Association* and cover reports of 8 companies. They are approximately comparable with previous data which were compiled by the Bureau of the Census.

STATISTICAL ABSTRACT
OF THE UNITED STATES
1940

Assembled in this one compact volume
is information on most of the impor-
tant phases of the social, economic, and
industrial life of the Nation.

Presenting
The Sixty-Second Annual Edition
of the
**STATISTICAL ABSTRACT OF THE
UNITED STATES
1940**

A volume of statistical tables on a wide range of subjects. Many tables present figures from the earliest available dates, and are particularly valuable in the study of long-time trends. The 1940 Population Census totals for States and large cities are included.

925 pages—BOUND IN BUCKRAM—\$1.50 per copy

SUBJECTS COVERED Include:

Area, Population, Vital Statistics
Immigration, Emigration, Naturalization
Education
Climate
Army, Navy, Civil Service
Veterans' Benefits, Social Security
Finance—Government and Business
Money and Banking, Insurance
National Income and Debt
Prices
Wages and Employment

Postal Service
Power
Construction
Transportation and Communication Services
Foreign and Domestic Commerce
Agriculture
Forests and Forest Products
Fisheries
Mining and Mineral Products
Manufactures
Wholesale and Retail Trade
National Parks

Copies may be purchased from the Superintendent of Documents, Government Printing Office, Washington, D. C., or from the district offices of the Bureau of Foreign and Domestic Commerce.
