RETAIL TRADE

The stability of total retail trade since January is due to the continued strength of sales in durable goods stores.....

reflecting higher automobile sales.

Sales in non-durable goods stores, except for the food group, declined.

U. S. DEPARTMENT OF COMMERCE, OFFICE OF BUSINESS ECONOMICS 49-324

857500-49-1

THE

Business SITUATION

By the Office of Business Economics

ECONOMIC activity moved forward in September with a better than average seasonal performance. In general, the change was not marked except that business purchasing was more in line with current levels of consumption and investment use of products than was true in the spring and early summer months. The result of the shift for the third quarter was to produce an over-all stability in economic activity, in contrast to the moderate downward trend in the first half of the year.

Industrial production has moved up from the mid-summer low, though coal output was cut by the work stoppage which began on September 19, and further reductions in total output were in the offing as the result of the stoppage in steel which began on October 1. Employment was seasonally lower during September with the return of students to school and the lag in harvesting operations in many agricultural areas, but unemployment declined to 3.4 million, the lowest figure since May.

Construction activity, particularly residential, continued to be a strong spot. The value of building put in place in September exceeded \$1.9 billion, slightly more than in August and about the same as in the corresponding month of last year. Department store sales advanced with the showing of fall merchandise.

Demand maintained

Most other economic indicators supported the dominant note of stability or modest improvement in the late summer and early fall. Wholesale prices edged slightly upward—though prices of some imported commodities were lower at the end of September, following the devaluation of foreign currencies. Manufacturers' new orders in August were at about the same level as in June and the volume of sales moved to higher levels.

Since early spring there has been little change in personal incomes—at \$211.5 billion, on a seasonally adjusted annual basis in August—or in retail sales, as depicted in the chart on the left. A cross-current in the economic situation was the weakening demand for capital goods, described in the section below on plant and equipment expenditures.

Total industrial production gains

The rise in industrial production in September reflected further gains in output of basic industries such as steel, automobiles, lumber, textiles, paperboard, and crude pe-

troleum. In general, the rate of output in September was higher than in any month since May though still below the peak reached in the autumn of last year.

For most industries the advance from the July low point was somewhat more than seasonal. The automobile industry continued to operate at a record rate in September, turning out over 600,000 cars and trucks for the second consecutive month, despite fewer working days. Sales of copper expanded further, although at a much smaller rate than in August, and output of lumber rose more than seasonally. However, deliveries of freight cars to railroads continued their downward trend in line with the substantial reduction in order on the books of car builders which are now only about one-fifth as large as at the beginning of the year.

Similar production gains were reported for many of the nondurable-goods industries following the midsummer vacation shut-downs. Reflecting the sharp upturn in new orders which have been running at a record rate since July, output of paperboard in September on a daily average basis reached a new postwar peak. Gasoline refinery operations were maintained close to the earlier highs. There was a substantial increase in rayon deliveries to a level above the previous postwar peak and some rise in cotton consumption.

Effect of work stoppages on output

Steel output, as a result of the work stoppage, dropped from about 85 percent of rated capacity in late September to close to 8 percent in the first 2 weeks of October. Production of bituminous coal had dropped to 2 million tons per week in the last 2 weeks of September, compared with the rate of 8 million tons previously prevailing under the 3-day workweek and 11 million tons in the period prior to July 9 under the normal workweek. In anthracite mines, where output had also been cut, full operations were resumed on October 3 and the strike was lifted also for bituminous mines located west of the Mississippi River.

Neither the work stoppage in coal nor the one in steel in early October had immediate effects on consuming industries, though of course there were some exceptions to this general rule among individual firms. Stocks of coal reported to the Bureau of Mines on September 1 ranged from a 49 days' supply for the railroads to 117 days' supply for electric power utilities. Stocks of steel in metal fabricating plants on the eve of the strike, industry reports suggest, were on the average well in excess of a 30 days' supply.

Sales and incomes rise

The rise in production since July was supported in most lines by a pick-up in manufacturers' sales and new orders. The dollar value of manufacturers' sales in August totalled \$18.7 billion, seasonally adjusted, a gain of \$1.6 billion from the previous month, while new orders rose by 10 percent. The further reduction of nearly \$700 million in manufacturers' inventories after seasonal adjustment was accompanied during the month by a slight increase in stocks of retailers and wholesalers, suggesting some relaxation in the cautious purchasing previously characteristic at these levels of distribution.

Underlying the slowly expanding volume of demand at the manufacturers' level was the generally sustained volume of personal incomes and consumer expenditures. Reversing the dip in July, personal incomes rose by \$1.8 billion at a seasonally adjusted annual rate in August and remained within 2 percent of the level of the corresponding month of last year. Retail sales also rose slightly in August and changes by line of trade maintained about the same pattern characteristic of earlier months.

The principal advance was again in the sale of new automobiles, with vehicle dealers grossing one-fourth more

than in August of 1948. Otherwise, the changes were small; jewelry stores and men's and women's apparel were both lower than in July on an adjusted basis and sales in food and jewelry stores were higher. There was an increase of 6 percent in building materials from July and a modest decline for hardware stores. The total volume of retail sales in August on the basis of the revised series of retail sales appearing in this month's issue was \$128 billion on a seasonally adjusted annual basis—3 percent below August of last year which was the postwar peak.

Wholesale markets stabilize

The rise in wholesale prices from August to September, though not large, carried forward the general stabilization of markets which developed in early summer, following the steady decline from the autumn of last year. Industrial

Chart 2.—Weekly Wholesale and Spot Market Prices

¹ Average prices for weeks ending Tuesday.

Source of data: U. S. Department of Labor, Bureau of Labor Statistics.

prices were generally firm or rising with print cloth and steel scrap in particular registering large advances. Agricultural prices also moved upward, though in the latter half of the month the onset of the heavy marketing season brought lower prices for livestock. The price of cotton was another exception. It declined moderately throughout the month reflecting the lower Government support price effective for the crop marketed this fall, the heavy supplies available, and the initial downward pressure, common to many internationally traded commodities, exerted by the widespread devaluation of foreign currencies announced in the latter part of the month.

Small effect of devaluation on price level

The immediate effect of the devaluation upon the domestic price level was slight since the immediate impact affected in the main some of the internationally traded raw materials. Domestic demand remained dominant for the great majority of the products sold in American markets and wholesale prices for all commodities other than farm products and foods continued upward through most of the month, as depicted in chart 2. The over-all wholesale price index declined slightly in the latter part of September because of the lower livestock and meat prices already noted.

Nevertheless, for imported commodities—such as rubber, tin, wool, sisal, and burlap—and also for some domestically produced commodities for which export markets are important, there was a swift reaction, as chart 2 shows.

Table 1 presents details concerning the 28 countries which devaluated their currencies in the 5 days between September 19 and September 23, and the four other countries which followed in subsequent weeks.

Opportunity for world trade adjustment

The termination of the postwar inflationary pressures in the United States during the second half of last year intensified the discrepancies in the economic development between this and many foreign countries, particularly the United Kingdom. These discrepancies are particularly evident in the decline of domestic demand—mainly for inventory accumulation—as compared with the continued high demands abroad by business as well as by consumers and government. These differences in the internal economic conditions were bound to increase the imbalances in international transactions, after an apparent improvement in 1948 when the increase in foreign production was accompanied by abnormally high demands here.

Chart 3.—United States Foreign Trade

Against this background the devaluations abroad appear to be an attempt to facilitate adjustments in external transactions of foreign countries, which could not be as satisfactorily accomplished by means of government regulations or through domestic deflationary policies. It is generally recognized, however, that international payments can not

be brought into balance by monetary measures themselves, but only if these measures are successful in either increasing foreign production and exports or reducing consumption and foreign imports. Thus the effects upon world trade and upon the United States economy can not yet be fully appraised.

¹ All local currencies of British Crown colonies, except British Honduras, have been devalued by 30.5 percent.

² These rates apply to specified commodity transactions. Other commercial rates have been devalued to the same extent, except that the prior dollar-peso rate had been maintained with respect to certain imports and to the export of some basic commodities. The "free" market rate, for non-trade transactions depreciated by approximately 46 percent.

³ Not official.

⁴ Average of buying and selling rates known as middle rate.

⁵ These figures do not represent official exchange rates, but are quotations based wholly or in part on current quotations for the dollar in a "free" market.

Source: Board of Governors of the Federal Reserve System.

The competitive position of foreign countries vis-à-vis the United States has to some extent been restored. Whether they can avail themselves of the improved competitive opportunities depends upon the ability of foreign countries to increase actual deliveries. Over the long run the adjustments following devaluation provide the basis for facilitating a high volume of international trade as well as for ameliorating the financial difficulties associated with the dollar shortage abroad.

Removal of trade restrictions

Recent developments have already pointed to some relaxation of import controls which may make competitive price relationships more important in the direction of products to market and in the allocation of resources in production. Under the program for liberalizing trade of the Organization for European Economic Cooperation, Italy and the Benelux countries have announced the lifting of licensing and quotas on important groups of imports from other Marshall Plan countries. In addition they have submitted lists of other

groups of imports on which similar action would be taken in exchange for comparable reciprocal reductions by other countries. United Kingdom has also indicated that quota restrictions on a long list of imports from other Marshall Plan and commonwealth countries would be removed.

The continued role of the United States as a leader in reducing trade barriers was assured by the action of Congress

in renewing the reciprocal trade agreements act for another 2 years, eliminating the "peril points" amendment enacted last year restricting the power of the President in negotiating reciprocal trade agreements. Meanwhile the first of the multilateral tariff reductions under the renewed authority was completed at the Annecy Conference and was open for signature on October 10 by the participating nations.

Second-Quarter Corporate Profits

CORPORATE profits declined further in the second quarter of this year, according to preliminary estimates of the Department of Commerce. This was the third successive quarterly decline from the third-quarter 1948 high.

On a before-tax basis, second quarter profits amounted to \$6.6 billion, 12 percent below the \$7.5 billion earned in the first quarter of the year and about one-fourth less than in the second quarter of 1948. The first-to-second quarter profit drop was associated with falling profit margins, as sales experienced only a fractional decline over the same period.

Adjustment of the profit estimates to take account of seasonal variations reduces the first-to-second quarter decline to 10 percent. On this basis, at annual rates, the decline in profits before taxes was from \$29.4 billion to \$26.4 billion.

The relative movements of aggregate profits after taxes in the recent period were similar to those of profits before taxes. This similarity reflects the virtual stability of the over-all effective tax rate, which in both 1948 and the first half of this year was approximately 40 percent.

Profits earned in current production, computed by adding to profits before taxes the inventory valuation adjustment—the difference between "book" costs of goods sold and the cost obtained by adjusting book costs to reflect the current, or replacement, value of inventories used up in production—fell much less than book profits. Inclusive of the inventory valuation adjustment, profits before taxes at seasonally adjusted annual rates were \$33.0 billion in the second quarter of 1948, \$31.8 billion in the first quarter of 1949, and \$31.1 billion in the second quarter of the current year.

The more favorable showing of profits including the inventory valuation adjustment is due to the fact that this measure takes into account the effect of the recent downward movement of prices on the replacement cost of inventories. In the computation of "book" profits, the predominant corporate practice is to value inventories used up in production on an original cost ("first-in, first-out") basis, rather than at current replacement prices.

Attention is again directed to the difficulties encountered in the measurement of corporate profits and the inventory valuation adjustment on a quarterly basis, as well as to the problem of adjustment for seasonal variation. These limitations of the data should be considered in the interpretation of quarter-to-quarter changes.

Table 2 presents, for the first and second quarters of this year, preliminary estimates of corporate profits both before and after Federal and State income and excess profits taxes, classified by broad industry groups.

All of these industrial groups except transportation sustained first-to-second quarter profit declines. In transportation both the railroad and non-railroad components advanced considerably, even after allowance for the seasonal factor. The decrease recorded for communications and public utilities was entirely seasonal. Relative declines were largest in manufacturing and mining. Trade, which is included in "all other industries," also experienced a larger-than-average rate of contraction.

Total manufacturing profits declined 17 percent from the first to the second quarters of the year. Declines were wide-

spread among the component industries, with the sharpest relative declines recorded for textiles and apparel, and chemicals. Major exceptions to the declining pattern were the automobile and food industries, in which profits advanced markedly.

Aggregate profits before taxes in the second quarter were one-fourth below the corresponding quarter of last year. Declines were reported for all broad industry groups except communications and public utilities, where a 13 percent increase was recorded. Profits before taxes in these industries had increased but little during the earlier postwar years when total profits were rising sharply.

Table 2.—Corporate Profits Before and After Taxes, First and Second Quarters of 1949¹

[Millions of dollars]

Industry group	Profits before taxes		Profits after taxes	
	First quarter	Second quarter	First quarter	Second quarter
All industries, total²	7,521	6,586	4,572	3,937
Mining	244	202	168	138
Manufacturing	4,281	3,550	2,608	2,127
Metal industries ³	1,962	1,570	1,141	882
Other manufacturing	2,319	1,980	1,467	1,240
Transportation	152	285	46	118
Communication and public utilities	475	442	289	265
All other industries ⁴	2,369	2,107	1,461	1,294

¹ Comparable data for the quarters of 1948 were published on page 4 of the August SURVEY OF CURRENT BUSINESS. Annual corporate profits estimates by major industrial groups for 1948 and revised estimates for the years 1942 through 1947 were published in the SURVEY for July 1949 on pp. 16, 17. For similar data for the years 1929 through 1941, consult the "National Income Supplement" to the SURVEY for July 1947, pp. 30-32. Concepts and methodology have been described in "Trend of Corporate Profits, 1929-45" SURVEY, April 1946, pp. 11-12. The principal change made since that statement was prepared has been to adjust for tax credits flowing from the carry-back of unused excess-profits tax credits and net operating losses; that is, these tax credits were added to profits after taxes in those years to which the tax credits were carried back.

² Total profits for all industries include the adjustment for the net flow from abroad of dividends and branch profits.

³ Consist of iron and steel, nonferrous metals, machinery (except electrical), electrical machinery, transportation equipment (except automobiles), and automobiles.

⁴ Consist of agriculture, forestry, and fisheries; contract construction; wholesale and retail trade; finance, insurance, and real estate; services; and the international balance adjustment.

Source: U. S. Department of Commerce, Office of Business Economics.

In the aggregate, the profits of manufacturing corporations declined 30 percent from the second quarter of 1948 to the second quarter of this year. Declines were recorded for all but two of the twenty major industry groups.

The drop in manufacturing profits was smaller in the metal than in the nonmetal sector. Although this is attributable in large measure to developments in the automobile industry, where profits rose sharply, the pattern persists if this industry is excluded from the comparison. Profits in the second quarter of this year, as compared with the same period a year ago, were down about 40 percent in the nonmetal group and 25 percent in metals, excluding automobiles.

In all nonmetal manufacturing industries except tobacco and food, there were sizable declines in corporate earnings over the period. Profits rose appreciably in the tobacco industry and declined only slightly in food manufactures.

National income estimates incorporating the profits figures presented above may be found on page S-1 of this issue of the SURVEY.

Plant and Equipment Outlays

CONFIRMING the surveys made earlier this year, the latest survey of the anticipated volume of investment in new plant and equipment by nonagricultural business shows that expenditures in the closing months of 1949 are expected to be lower than in the corresponding period of 1948. According to estimates based on reports submitted by business firms this past July in the joint quarterly survey by the Department of Commerce and the Securities and Exchange Commission, expenditures in the second half of 1949 will total \$8.8 billion—a 14-percent decline from the all-time peak reached in the same period in 1948. However, as explained later, actual expenditures will probably not show so large a decline as that indicated by these anticipations.

With \$9.1 billion actually expended in the first half of 1949, total nonagricultural investment in new plant and equipment for the year as a whole will be close to \$18 billion as compared to \$19.2 billion in 1948 (see table on p. 24). While construction and equipment costs have fallen from their peaks in late 1948, average costs in 1949 probably will approximately equal the 1948 average so that the indicated decline in annual outlays for capital goods in 1949 is relatively the same in both value and physical volume. The decrease in physical volume from the second half of 1948 to the second half of 1949 will be considerably less than the decline in value.

In evaluating this decline in fixed investment it should be borne in mind that the 1949 level is higher than that in any year prior to 1948. It is also considerably less affected by the war-induced backlog than were the earlier postwar years though there still appears to be some influence of deferred demand.¹

In addition, there are factors which may result in some overstatement of the expected decline in the latter part of 1949. In the first place, the projected figures for the fourth quarter of 1949 are probably understated in comparison with the reported data for actual expenditures in the fourth quarter of 1948. This is due to the accounting practice by many firms of concentrating additions to capital accounts in the last quarter. If comparison is made between anticipations for the fourth quarter of this year and anticipations reported at the same time last year, the reduction is 9 percent as against 21 percent when actual 1948 data are used.

Second, the current reports reflect business anticipations in July—a period which preceded the current upturn in business activity. Third, the recent firming of prices following the decline in the first half of this year may have reversed some earlier decisions to postpone purchases of capital goods.

Changes in planned investment

The volume of plant and equipment expenditures in 1949 anticipated by business in the survey made in February of this year was only slightly higher than the currently indicated level—and, in the light of the above factors, it may very well be realized or possibly exceeded. The reduction from the earlier anticipations indicated by the current figures is scattered among most of the major industries and appears primarily in curtailment of plant construction programs rather than in equipment acquisition.

On the basis of the current survey capital outlays in the second and third quarters of this year are revised downward by 3 and 2 percent, respectively, from the levels indicated by the survey taken 3 months previously. Actual outlays in the second quarter were below the preliminary estimates in each major industry. In the third quarter, only in the

case of the railroads are preliminary estimates of plant and equipment expenditures above anticipations.

These downward adjustments in anticipated expenditures this year are a reversal of those experienced heretofore in the quarterly surveys. From 1945, when the surveys were initiated, through 1948, anticipations by business have generally been somewhat below actual expenditures. The recent change in part stems from the declining trend in costs of capital goods in 1949 in contrast to the steady upward movement of these prices in the 1945–48 period. It may also reflect the influence of a changing business climate.

(Continued on p. 24)

Chart 4.—Business Expenditures for New Plant and Equipment¹

¹ Excludes expenditures of agricultural business and outlays charged to current account. Data for third quarter of 1949 are preliminary.

² Includes trade, service, communications, construction, and finance.

Sources of data: Beginning with 1945, U. S. Department of Commerce, Office of Business Economics and Securities and Exchange Commission; prior to 1945, Board of Governors of the Federal Reserve System.

¹ See "The Demand for Producers' Durable Equipment", SURVEY OF CURRENT BUSINESS June, 1949.

Public and Private Debt in 1948

This article presents estimates of public and private debt as of the end of 1948. Estimates by major categories of net debt are carried back to 1916, and complete tabulations on both the net and gross basis are shown for 1929 forward.

The scope of the text has been restricted to a short discussion of recent developments and a brief summary of trends in net debt over the past 32 years. A more thoroughgoing analysis of indebtedness would have to be carried well beyond the data presented here.

An explanation of the net and gross concepts is given in the note at the end of the article. The reader is cautioned against interpreting these estimates without an understanding of the meaning of "net" and "gross" as applied in the various debt sectors.

THE sustained high level of economic activity in 1948 was accompanied by an increase in the combined total of net public and private debt. Total net debt amounted to \$429 billion on December 31, 1948—\$14 billion larger than a year earlier.

The increase in total debt during 1948 was a composite of divergent movements in the public and private aggregates. Net public debt was reduced \$5 billion, while net private debt moved upward \$19 billion, continuing the expansion begun at the close of the war. The general postwar advance in production, incomes and prices was reflected in cash surpluses enabling the Federal government to reduce its debt substantially and in strengthened financial positions permitting private business and individual borrowers to expand debt obligations. Private net debt reached a high of \$197 billion at the end of last year. Both the amount and the rate of growth during 1948 were less than those recorded in 1947.

Further reduction in public debt

The reduction of \$5 billion in net public debt during 1948 was the result of a cut in Federal indebtedness of \$6.8 billion and a rise of \$1.8 billion in State and local government obligations.

Whereas Federal net debt—that held by the public and State and local governments—was reduced last year \$6.8 billion, there was a drop of \$12 billion in the Federal gross debt. Approximately \$5 billion of gross debt reduction occurred within the framework of the Federal government.

NOTE.—Mr. Bonnell is a member of the National Income Division, Office of Business Economics.

This decrease of \$5 billion in "duplicating debt" reflected mainly a substantial contraction in Federal agency obligations issued directly to the U. S. Treasury; this contraction was offset in part by a further expansion in the holdings of Federal securities by Federal agencies and trust funds. These recent changes in Federal debt are traced in table 3.

State and local government net debt, defined as that held by the investing public and the Federal government, was \$16.2 billion on June 30, 1948—1.8 billions above the comparable total for 1947 (see table 4). Of this rise, \$700 million was attributable to State governments and resulted chiefly from further flotations of World War II bonus issues. The \$1.0 billion increase in local government indebtedness was largely concentrated in city governments.

Private debt increases at slower rate

The most rapid expansion among components of the debt of private borrowers during 1948 occurred in farm production loans. A 52-percent increase was registered in this category, to place the figure at \$5.4 billion on December 31. Of the \$1.9 billion expansion, 1.2 billions represented increased loans held or guaranteed by the Commodity Credit Corporation in connection with the farm price-support program. The remainder of the increase, roughly \$600 million, was used largely to finance the purchase of farm equipment and improvements needed to sustain the high level of agricultural production. These figures do not include the loans extended to farmers under the financial and consumer credit headings in table 7.

In 1948, as in 1947, the largest absolute increase of any private debt category was recorded in the nonfarm mortgage sector (see table 6). Nonfarm mortgages owed by non-corporate borrowers (corporate debt secured by mortgage agreements is included in the long-term debt series in table 5) moved upward \$6.5 billion in each of these 2 years, reflecting the large volume of new construction activity and the rapid turn-over of existing structures at higher prices. Available evidence indicates that total mortgage indebtedness is still increasing, but at a diminishing rate.

Corporate net long-term debt advanced \$4.8 billion in 1948 to reach \$49.6 billion at the year's end. While this aggregate amount of corporate long-term debt was slightly below the volume reached in 1930 and 1931, the rise during the year was at a record rate. Corporate short-term debt also registered a sharp increase. However, the rise was markedly less than that recorded in 1946 and 1947.

The volume of short-term corporate debt is more immediately responsive to changes in the level of business activity than is long-term debt. In the case of the latter the choice of alternative means of financing a given total of gross investment is generally an important factor. Indications are that in 1948 corporations financed about 70 percent of their investment needs from internal sources, while obtaining, in comparison with 1947, a larger proportion of the external funds required from bond flotations rather than long-term bank loans and equity securities.

Farm-mortgage debt moved upward for the third succes-

sive year. The present level is still well below prewar, however, and is associated with a much more favorable income situation. Although forced sales and foreclosures increased slightly in 1948, they remained few in number and unimportant in amount.

The remaining category of private debt—borrowings of noncorporate businesses and individuals for commercial, financial, and consumer purposes—advanced \$3.3 billion during 1948 to a total of \$28 billion as of December 31. The major share of this increase was recorded in the field of consumer credit, which expanded 2.6 billions. Installment credit was the dominant factor in the consumer-debt rise and has continued to move upward in 1949, despite the reimposition of Regulation W control on September 20, 1948 and its continuance through June 30, 1949.

More than 30 percent of the 1948 gain in consumer credit outstanding is attributable to automobile installment sale credit. From January to July of 1949 automobile sale credit increased one-third, while total consumer credit edged downward. Over this seven-months period installment loans and service credit advanced; installment sale credit other than automobile, single-payment loans, and charge accounts fell off.

Chart 1.—Net Public and Private Debt, by Major Components, End of Calendar Year

¹ Data represent individual and noncorporate private debt.

² Data are for June 30 of each year.

Source of data: U. S. Department of Commerce, Office of Business Economics, based upon data from various governmental and private agencies.

Trends in net debt

The relation of current developments to historical trends in the debt pattern of the United States may be seen in the accompanying chart. Probably the most striking fact displayed in the chart is the long-term growth in Federal net debt. And of particular interest are the depicted changing roles of private and Federal debt as determinants of movements in aggregate net debt.

From 1916 to 1933, except during the first World War, private debt financing exerted the dominant influence on the course of total net debt. Although private debt increased appreciably during the years 1917-19, total debt expansion stemmed mainly from the sharp wartime rise in Federal debt. Over this 3-year period Federal debt rose from 1½ percent to 20 percent of total net debt. Developments in the twenties were marked chiefly by sizable Federal debt

retirement and a large, steady increase in total private obligations.

The influence of the private-debt category on movements in total debt waned in the early thirties, however, and by 1934 rising Federal indebtedness emerged as the dominant element in the pattern of debt changes. From that year through 1945 a continuous expansion in Federal debt resulting from expenditures during the depression, the armament program, and the wartime deficits successively shaped the total net debt curve. As a percentage of total net debt, Federal indebtedness rose from 14 percent at the end of 1933 to 23 percent in 1939, and to a high of 62 percent at the close of 1945.

Again from 1945 to 1946, the direction of change in total debt was established by Federal debt operations. A large decline in Federal net debt during 1946 more than offset an increase in private obligations. Only in the past 2 years, when advances in private indebtedness more than counterbalanced further declines in Federal debt, did movements in the private components reassert a controlling influence on the year-to-year movement of the debt total. At the end of 1948 Federal net debt formed 50 percent of total net debt, private debt accounted for 46 percent, and State and local government debt, 4 percent.

As a reflection of the greatly increased importance of Federal debt in the total debt structure, all other major categories of net debt—private corporate, private noncorporate, and State and local government—were reduced in relative importance over the 32-year span from 1916 to 1948. It is instructive, however, to examine developments within the large private debt sector.

Corporate net debt advanced from 53 percent of total private debt in 1916 to 57 percent in 1948, with the proportion of private indebtedness accounted for by individuals and noncorporate businesses decreasing correspondingly. While these relative shifts were not large, there were noteworthy developments within each of the corporate and noncorporate sectors.

The growth of long-term and short-term corporate debt was markedly different. From 1916 to 1948 corporate long-term debt dropped from 38 percent to 25 percent of total private net debt, whereas corporate short-term debt advanced sharply, from 15 percent to 32 percent of the private total.

Within the noncorporate sector also there was marked disparity in the long-term behavior of individual components. Nonfarm mortgage debt rose sharply in relative importance—from 11 percent of private net debt in 1916 to 24 percent in 1948. On the other hand, farm mortgage debt declined from 8 percent to 3 percent of private debt; and commercial (nonfarm), financial and consumer credit dropped from 26 percent to 14 percent of the total.

Debt series revised

Estimates for earlier years as published in the October 1948 and September 1947 *SURVEYS* have been revised in the present article because of revisions in the Federal Savings and Loan Insurance Corporation series for 1-4 family home mortgage debt and in the Federal Reserve Board consumer credit statistics. Other revisions for recent years reflect the incorporation of more reliable basic data, particularly for the corporate business sector.

The statistical bases for the present estimates are in general similar to those used by the Department of Commerce in the past. These have been explained in articles in the September 1945 and July 1944 issues of the *SURVEY* and in the special bulletin, "Indebtedness in the United States, 1929-41" (Department of Commerce, Economic

Series No. 21, U. S. Government Printing Office, 1942).¹ Discussions in the September 1946 and September 1947 articles were limited to modifications of former procedures.

Gross and net debt concepts

Net public and private debt outstanding is a comprehensive aggregate of the indebtedness of borrowers after

¹ Copies of this bulletin are available from the Superintendent of Documents, Government Printing Office, Washington 25, D. C.; price, 15 cents.

elimination of certain types of duplicating governmental and corporate debt. This measure of indebtedness provides a more significant indication of trends in the debt structure than does gross debt, since the effects of nominal changes in financial practices and organization are largely removed.

To obtain net figures, gross debt is adjusted for specific types of duplications pertaining to the following sectors of the economy: (1) the Federal Government and its corporations and agencies generally; (2) State and local governments,

(Continued from p. 9)

which are treated as a single entity; and (3) within the corporate area, those affiliated but legally distinct corporations which operate under a single management. In the noncorporate private area, data are gross throughout with no adjustments for duplications.

The net debt concept, then, depends upon the definitions employed in measuring gross and duplicating debt. Gross debt, as defined in this study, consists of all classes of legal indebtedness except the following: (1) the deposit liability of banks and the amount of bank notes in circulation;

(2) the value of outstanding policies and annuities of life insurance carriers; (3) the short-term debts among individuals and unincorporated nonfinancial business firms; and (4) the nominal debt of corporations, such as bonds which are authorized but unissued, or outstanding but reacquired.

Duplicating debt may best be described with reference to the sectors mentioned above. Within the Federal Government and its corporations and agencies, duplicating debt consists of Federal holdings of Federal obligations. Within the State and local government area, State and local govern-

New or Revised STATISTICAL SERIES

Revision of Business Sales and Inventories

New data that have become available in recent months fill important gaps that have existed in the information required for estimation of the Office of Business Economics series on business sales and inventories. As a result, the annual process of revising sales and inventories, which ordinarily would modify previously published figures only moderately, has this year involved a fairly extensive adjustment. This article discusses the newly available data and their effect on the estimates.

The 1946 Statistics of Income tabulations have provided the first postwar bench mark data for corporations, while the Bureau of Internal Revenue compilations for sole proprietors and partnerships in 1945, also recently completed, include comprehensive information on unincorporated business for the first time since 1939. Revised estimates of the business population have further modified the population adjustments in the new figures.

The revisions bring the business sales and inventories into line with the current national income and product statistics published in the July 1949 issue of the *SURVEY OF CURRENT BUSINESS*. The new inventory estimates were at that time already incorporated in the "changes in inventories" component of gross private domestic investment.

The revised estimates are shown in the chart and presented for the years 1939 to 1948 in the accompanying tables. Current data will be found in the statistical tables of this *SURVEY*. Monthly figures prior to 1946 are as yet available only for wholesale and retail trade. These may be obtained on request from the Office of Business Economics.

As was indicated in describing the revisions last year, there are a number of sources of data and a variety of procedures used in estimating the manufacturing, wholesale and retail sectors.¹ The current revisions will be discussed separately for each of these three categories.

Manufacturing

The present revision of manufacturers' sales and inventories goes back to 1942, and involves other considerations than the usual annual adjustment on the basis of the most recent Statistics of Income information. These include the following: (1) the industry classification and the weighting of the reporting sample have been placed on a postwar basis starting with 1946; (2) use has been made of new data on unincorporated firms and on the business population; and (3) it was decided to publish seasonally adjusted dollar values of sales instead of the indexes heretofore published, which were based on a 25-day work-month; also adjusted dollar values of inventories replace the unadjusted indexes which have been published up to the present.

The new estimate of manufacturers' sales for 1948 is \$228 billion, raising the previously published figure of \$211 billion by 8 percent. The higher level of sales results primarily from two factors.

The first, and more important, is the rapid growth of noncorporate business during the war, as shown by the

Bureau of Internal Revenue figures for 1945; this is reflected in the upward adjustment to sales during the war years. The increase in number and activity of unincorporated businesses was in part the result of a substantial shift from the corporate to the noncorporate form of legal organization which occurred during the war. This led to an understatement in the old estimates at the end of the war which was maintained in the postwar period. The absence of postwar corporate benchmark accounts for the failure of an offsetting effect to appear as many firms reincorporated after the repeal of the wartime excess profits tax.

The second factor is the large influx of new businesses after the end of the war, requiring an increase in the allowance for changes in the business population.

Chart 1.—Business Sales and Inventories

¹ Total for the year.

² Book value at end of year.

Source of data: U. S. Department of Commerce, Office of Business Economics.

As with sales, the 1942-45 revisions in the book value of manufacturers' inventories are entirely attributable to the increase for unincorporated firms, while the subsequent changes in movement are due in the main to adjustments for changes in the business population. These upward revisions bring the figure for the value of manufacturers' inventories on December 31, 1948, to \$34.2 billion, compared with the previously estimated \$31.7 billion.

Periodic tabulations of Bureau of Internal Revenue partnership and proprietorship data will henceforth provide a continuing source of comprehensive data on unincorporated business. This should prevent the future occurrence of accumulated divergencies in the estimates resulting from the absence over a period of years of benchmark figures for this sector.

Although the revisions have resulted in an appreciable upward adjustment in the level of manufacturers' sales and

NOTE: This report was prepared by the Business Structure Division, Office of Business Economics.

¹ Descriptions of the estimation procedures may be found in the following issues of the *SURVEY OF CURRENT BUSINESS*: manufacturing, May 1948; retail trade, June 1948; wholesale trade, August 1948.

inventories, it should be noted that the new and the old figures are generally in close agreement with regard to month-to-month movements. Furthermore, the indications the new data provide about the postwar position of inventories in relation to sales, are about the same as that shown by the former data. This is true in spite of the change to a postwar basis in classifying and weighting the sample reports from which the estimates are derived.

Industry classification

Since the inception of the series on manufacturers' sales and inventories, the method of estimation has implicitly carried all firms in accordance with their prewar industry classification, except to the extent that this was disrupted by consolidations or mergers. It was felt that such a series would be more useful than one in which the figures by industry groups reflected year-to-year shifts in classification of firms due to temporary changes in their principal activity.

It was recognized, however, that the decision to carry companies on a fixed classification would necessitate periodic revisions of classification, since otherwise the cumulative effect of industry shifts might produce a marked disparity between actual patterns and those based on a fixed classification method of estimation. With the acceleration of industry changes produced by the war, it has appeared advisable at this time to change the postwar estimate to an industry classification based on the principal activity in 1946. The estimates through 1945 remain on a prewar classification.

A revision in classification may introduce a noticeable discontinuity in the series for individual industries. Thus, in the present case the changes from 1945 to 1946 in the figures for a given industry will reflect not only the changes in sales or inventories for the body of firms remaining in the same industry, and the changes due to births and deaths of companies but also the changes due to the reassignment of companies into or out of that industry. The choice of the year 1946 for the shift to a postwar basis has the advantage of placing this discontinuity at a point where it is least likely to interfere with meaningful comparisons.

The change in classification brings with it implicit changes in the weighting of the sample reports. Increased industry detail is being carried in the computations in preparation for breaking a number of industries into subgroups. At the present time, however, the only additional industry groups being published are lumber and apparel, previously combined with "other durable goods" and "other nondurable goods" respectively.

Wholesale trade

The current revisions of the wholesale sales and inventories series go back to 1939, and utilize the recently available data for 1945 sales and stocks of sole proprietorships and partnerships. In addition, the sales estimates are now based on a more complete use of the annual corporate reports to the Bureau of Internal Revenue. Except as noted below, there has been no change in the methods of monthly interpolation and extrapolation as described in the August 1948 SURVEY.

The result of these revisions has been a sizable upward correction in the estimates. These higher levels of both sales and inventories arise primarily out of a systematic understatement in the old series of the noncorporate position during the war years, similar to that already noted in manufacturing.

The new series utilize as bench marks the Bureau of Internal Revenue's compilations of noncorporate sales in 1945 and noncorporate inventories at year-ends 1944 and 1945. The interpolations of the totals between these bench marks and those for 1939, derived from the Census of Busi-

ness for that year, are based on the changes shown by the Bureau of the Census' monthly reporting panel of wholesalers. In correcting these changes to those shown by the bench marks, it was assumed that all the discrepancy occurred in the war period—and that one-half of the discrepancy arose in 1942, when a large number of corporations shifted to a noncorporate status.

The corporate data on wholesale trade released in Part 2 of the annual Statistics of Income contain series covering 11 specific lines of trade and an aggregate for all the unspecified lines. The revised sales series are based on both sets of statistics whereas in deriving the earlier estimates only the data on specific lines were incorporated. This method provides in those years where Statistics of Income data are available a controlling total for a significant part of wholesale sales.

A special adjustment was made in the wholesale automotive series. Most new motor vehicles in the prewar period were wholesaled by subsidiary sales corporations of the manufacturers. However, with the resumption of motor vehicle output after the war, most companies had reorganized into a divisional rather than subsidiary corporation system. These sales are, therefore, included in the corporate reports of manufacturers rather than in wholesalers' sales. The present wholesale series, therefore, excludes new motor vehicle sales after early 1942.

The present series, like the former ones, utilize data from the Bureau of Census' panel of service and limited-function wholesalers for monthly interpolation of both the service and limited-function wholesalers and the total wholesale trade series. In the case of coal and petroleum bulk stations, however, the service and limited-function wholesalers' samples have been supplemented by consumption data.

These interpolating series are derived by multiplying physical volume data (from the Bureau of Mines) on coal and petroleum by related price data from the Bureau of Labor Statistics and the American Petroleum Institute, respectively. The Bureau of Agricultural Economics' estimates of the cash income of farm operators are, with a 1 month lag, used as a monthly interpolator of the wholesale sales of farm products—raw materials.

Retail trade

The annual adjustment of the estimates of retail store sales which is usually derived from the most recently available data on sales tax collections was supplemented this year by revisions of several component series for back years. The food, eating and drinking and motor vehicle groups were revised beginning with 1943, and "other retail" starting with 1945.

The principal source for these additional changes was the 1945 partnership and proprietorship data. Since the retail trade estimates are on an establishment basis, the company data could not be applied directly to determine the adjustment. However, after allowance for differences in coverage and classification, downward revisions for sales of food stores and eating and drinking places and an increase in sales of motor vehicle dealers were indicated. The magnitudes of the revisions were checked in various ways, primarily by using available quantity data and adjusting for price changes.

The changes in the "other retail" group reflect differences in the allowance for growth in the business population. Some quantity figures were employed in revising sales of feed and farm stores in this group.

In addition, revisions of department store sales by the Board of Governors of the Federal Reserve System have been incorporated starting in 1947.

Although the individual groups involved undergo substantial changes in some cases, the effect on total retail sales is

quite small. The greatest difference of the new figures from the earlier estimates is about 1 percent, and in 1948 the old and new estimates are practically identical.

The estimates of year-end retail inventories (as noted in the May 1948 SURVEY) are derived by applying stock-sales ratios by legal status within each line of trade to related sales data.

The present revisions, in addition to adjustment for changes in the sales levels, utilize new estimates of non-corporate stock-sales ratios in the 1939-48 period and of corporate stock-sales ratios after 1945.

Noncorporate stock-sales ratios for each line of trade in 1939 and 1945 were taken from the 1939 Census of Business and the 1945 partnership and proprietorship compilations. These ratios were interpolated in the 1940-44 period and extrapolated for 1946 and 1947 by use of the Bureau of the Census' annual samples of independent stores' sales and inventories. The extrapolations to 1948 were based on data from a special sample of independent stores drawn from the as-yet-incomplete 1948 Census of Business. The corporate stock-sales ratios were adjusted by the newly available data on retail corporations for the year 1946.

Seasonal adjustment

With this revision, all the series on monthly sales and inventories in manufacturing and trade have had seasonal factors computed, and, starting with this issue, seasonally adjusted dollar values will be presented in the table on page S-3. The values of manufacturers' sales and inventories by industry group, unadjusted, will not be printed, but are available upon request.

The use of the adjusted values has the advantage of removing much of the month-to-month variation in the series due simply to the seasonal character of the period, and thus the underlying trends can be discerned more easily. It is well known, however, that seasonal patterns in many industries were disrupted by the war, and that disturbances in the postwar period have interfered with the emergence of typical seasonal behavior. Under these circumstances, the seasonal adjustments employed must be considered as tentative, and subject to modification when more time has elapsed and the seasonal patterns have crystallized.

Comparisons with other series

In attempting to relate the values of sales and inventories as given here to other series on sales and inventories, it should be remembered that the totals, and to a lesser extent the movements, are affected by differences in the concepts and scope which the series reflect. The selection of a basic unit of measurement—whether it is the establishment, the company or the consolidated organization—changes the coverage of activities included in manufacturing, beside its

more obvious influence on industry classification within the manufacturing or trade sector or on the amount of duplication in sales resulting from the treatment of intra-company transactions.

The Office of Business Economics series on manufacturers' sales and inventories, tied as they are to the benchmarks provided by the Statistics of Income data, are necessarily on a company basis. Consolidation occurs to the extent that corporations make consolidated reports to the Bureau of Internal Revenue.

Sales and inventories figures from the Census of Manufactures are obtained on an establishment basis. In combining such Census data, each reporting unit in manufacturing is assigned to its own industry classification rather than to that of the parent company, which may have a different classification and may in some cases not even be a manufacturing firm. In the same way, an establishment of a manufacturing company is not counted in the Census when the principal activity of such an establishment is something other than manufacturing—distributive, extractive, financial, etc.—whereas the establishment would be included in the reports to the Bureau of Internal Revenue.

Although the data needed for a complete reconciliation of manufacturers' sales and inventories between the establishment and the company basis are not available, such studies as have been made indicate that the differences in level or in movement reflect in the main the underlying distinction between the two bases, and cannot be attributed primarily to statistical limitations.

The manufacturing sales and inventories data cover both corporate and noncorporate business, and so cannot be directly compared either with the Statistics of Income corporate data or the figures given in the Quarterly Industrial Financial Report Series, published jointly by the Federal Trade Commission and the Securities and Exchange Commission. A more extended discussion of conceptual differences can be found in the May 1948 SURVEY.

Unlike the manufacturing series, the trade statistics, which are largely tied to Census of Business benchmarks, are on an establishment basis. However, some adjustments of the Census base have been made as described in the August 1948 SURVEY.

Other data

Figures on manufacturers' inventories by stage of fabrication not adjusted for seasonal variation are given by months, starting with January 1946. Data for prior years have not yet been revised, and will be presented later. This holds also for the monthly data on manufacturers' sales and total inventories for the years 1942 to 1945.

The revision of the estimates of new and unfilled orders is not yet completed. The new series are expected to appear later.

(Continued from p. 11)

ment securities held in sinking, trust, or investment funds by either the issuer or other entities within the sector are considered duplicating debt and eliminated. In the private corporate area, duplicating debt is defined as owed to other members of an affiliated system.

Thus, to arrive at net debt, each sector except the non-corporate is adjusted to a net basis by certain consolidations within the sector. A summation of the consolidated estimates for each sector yields the total for net public and private debt.

The net debt concept for each of the four sectors can be

summarized as follows: Federal government net debt is that owed to all other sectors of the economy except the Federal government proper and its corporations and agencies; State and local government net debt is that owed to all other economic entities except State and local governments; corporate net debt is that owed to all other entities (including corporations) except to corporate members of an affiliated system; and private noncorporate net (or gross) debt is the summation of all forms of legal indebtedness except that among individuals and unincorporated nonfinancial business firms. Data showing adjustments for duplication involved in passing from gross to net debt are given in detail in tables 3, 4, and 5.

(Continued from p. 5)

1949 capital investment lower in most industries

Based on the current reports, all major industries other than the railroads and electric and gas utilities will show a reduction in their plant and equipment outlays from 1948 to 1949. As can be seen in the following table, 1949 marks the first postwar decline in the capital expenditures of the manufacturing, mining, commercial and miscellaneous industries. Transportation (other than railroads), the only industry which reported lower plant and equipment expenditures from 1947 to 1948, will show the largest relative decline this year.

Percentage Change in New Plant and Equipment Expenditures

Industry	1946-47	1947-48	1948-49
All industries	+34	+19	-7
Manufacturing.....	+26	+12	-15
Mining.....	+23	+16	-8
Railroad.....	+60	+45	+3
Other transportation.....	+21	-12	-23
Electric and gas utilities.....	+83	+41	+16
Commercial and miscellaneous.....	+34	+22	-6

Expenditures by the railroads for new plant and equipment in 1949 are only 3 percent above last year—with a 6 percent increase in equipment outlays more than offsetting a decline of the same relative magnitude in road investment.

¹ Data represent expenditures of nonagricultural business only and exclude outlays charged to current account. ² Based on preliminary estimates of business in July. ³ Based on anticipated capital expenditures of business. ⁴ Annual estimates include anticipations for the last quarter of the year. ⁵ Includes trade, service, finance, construction and communication. Note: Figures are rounded and will not necessarily add to totals. Source: U. S. Department of Commerce, Office of Business Economics, and Securities and Exchange Commission.

The electric and gas utilities with outlays one-sixth higher than in 1948 thus constitute the only major industry still showing a substantial capital expansion.

Quarterly trends in investment

As can be seen in chart 4, quarterly expenditures for plant and equipment in the first quarter of 1949 were higher than in the first quarter of 1948—but the following quarters of this year fall increasingly below the corresponding quarters of last year. Total outlays roughly adjusted for seasonal variation are on a plateau from the third quarter 1948 to the first quarter of 1949 and then taper off in the last 3 quarters of this year. This downward trend is found in each asset-size group. However, there was a noticeable tendency for the relative magnitude of decline to increase as the asset size of the group became smaller.

Among the major industries only electric and gas utilities indicated an increase in outlays during the last 2 quarters of this year. Without allowance for seasonal factors, all other industries indicated that the second quarter would mark their 1949 peaks. The most sizable declines in the last 2 quarters of 1949 were anticipated by manufacturing and the railroads. Within manufacturing, all large industry groups other than automobiles, rubber, and chemicals expected to lower their rates of plant and equipment expenditures in the last half of 1949.

Monthly BUSINESS STATISTICS

THE DATA here are a continuation of the statistics published in the 1949 Statistical Supplement to the SURVEY OF CURRENT BUSINESS. That volume contains monthly data for the years 1945 to 1948, and monthly averages for earlier years back to 1935 insofar as available; it also provides a description of each series and references to sources of monthly figures prior to 1945. Series added or revised since publication of the 1949 Supplement are indicated by an asterisk (*) and a dagger (†), respectively, the accompanying footnote indicating where historical data and a descriptive note may be found. The terms "unadjusted" and "adjusted" used to designate index numbers and dollar values refer to adjustment of monthly figures for seasonal variation.

Data subsequent to August for selected series will be found in the Weekly Supplement to the SURVEY.

Unless otherwise stated, statistics through 1948 and descriptive notes are shown in the 1949 Statistical Supplement to the Survey	1948					1949

† Revised. ‡ Preliminary.

‡ Data have been revised beginning January 1947 to incorporate revisions in reports on production and sales of farm products; revised figures for January 1947-July 1948 are available upon request. § Seasonal factors for a number of industries were fixed at 100 during 1939-42; data for these industries are shown only in the unadjusted series.

Unless otherwise stated, statistics through 1948 and descriptive notes are shown in the 1949 Statistical Supplement to the Survey	1948					1949

† Revised. ‡ For actual wholesale prices of individual commodities, see respective commodities.

§ The Department of Labor is currently reviewing and revising the samples of commodities and of reporters for the indexes, subgroup by subgroup, to reflect postwar changes in production and distribution. As subgroup revisions are completed, the revisions are incorporated in the pertinent group indexes and the all-commodity index and the subgroup indexes are revised retroactively for the entire period covered by the revision; however, to avoid repeated revisions of the group indexes and the all-commodity index, these are not revised retroactively more than 2 months. If introduction of a revised subgroup into the calculations changes significantly the levels of the group indexes and the all-commodity index, the latter indexes computed with the original sample for the first month of the revision will be provided in a footnote. In some instances, it is necessary to correct previously published indexes because of late reports, incorrect reports, or other errors in prices previously used. Indexes for the latest 2 months are preliminary and are currently revised to incorporate corrections received in the 2 months following. Any additional corrections received are incorporated in final annual summaries issued in the middle of the year. Indexes for June-December 1948 were corrected in the August 1949 SURVEY. Corrected indexes for January-May 1948 are available upon request.

• Revised beginning January 1948 to reflect price increases for wool yarns which occurred after November 1946; comparable data prior to 1948 are not presently available. See also note marked "†" above.

Unless otherwise stated, statistics through 1948 and descriptive notes are shown in the 1949 Statistical Supplement to the Survey	1948					1949

† Revised. ‡ Preliminary.

† Comparable data on magazine advertising cost (Publishers' Information Bureau, Inc.) are available back to January 1948 only. Beginning with this issue of the SURVEY, five new components are shown (marked with "•"); the total of the two components "household equipment, etc." and "household furnishings" covers all items formerly included in "electric household equipment" and "household furnishings, etc." Data for January-July 1948 for the new components are available upon request.

• See note marked "†" above.

Unless otherwise stated, statistics through 1948 and descriptive notes are shown in the 1949 Statistical Supplement to the Survey	1948					1949

* Revised. † Preliminary.

† Revised series. Dollar estimates of sales for all types of retail stores and for chain stores and mail-order houses have been revised for various periods back to 1943; specific periods for which the series have been revised are as stated in the notes below. Revisions beginning 1949 are not noted; corrected data are as shown above. Adjusted dollar values for sales and inventories of all types of retail stores have been substituted in this issue for the index numbers formerly shown. All revisions prior to August 1948 are available upon request.

• Revised beginning 1943.

* Revised. † Preliminary.

†The adjusted indexes of department-store sales have recently been revised; unpublished revisions available upon request are as follows: Atlanta, 1944-April 1948; Chicago, 1945-April 1948; Cleveland and Minneapolis, 1946-March 1948; Kansas City, 1945-March 1948; Philadelphia, 1944-March 1948; Richmond, 1946-May 1948. Current revisions for Dallas and San Francisco are tentative, pending completion of the revision for earlier periods. Department-store sales indexes for the United States reflect all revisions in the district and, therefore, are subject to further adjustment. Recent revisions of data on department-store stocks, by districts, are reflected in the U. S. total which is also subject to further revision. The indexes of rural sales of merchandise have been recomputed on a 1935-39 base; data through 1948 appear in the 1949 STATISTICAL SUPPLEMENT. The series on wholesale trade have been revised back to 1939; revisions prior to August 1948 are available upon request.

§Data for 1947 and 1948 (shown in the 1949 STATISTICAL SUPPLEMENT) have been revised; revisions prior to August 1948 are available upon request.

†Revised series. See note marked "†" on p. S-11.

Unless otherwise stated, statistics through 1948 and descriptive notes are shown in the 1949 Statistical Supplement to the Survey	1948					1949

† Revised. p Preliminary.

† Revised series. Beginning with this issue of the Survey, the indicated series on employment, pay rolls, and hours and earnings have been revised to incorporate three major changes: (1) adoption of the current Standard Industrial Classification; (2) reclassification of reporting establishments on the basis of major postwar product or activity; (3) adjustment to 1947 benchmark levels and a revision in estimating production-worker employment. The periods affected by the revision and the revised data prior to August 1948 will be shown later.

Unless otherwise stated, statistics through 1948 and descriptive notes are shown in the 1949 Statistical Supplement to the Survey	1948					1949

* Revised. † Preliminary.

‡ Beginning July 1, 1948, farm mortgage loan data are reported quarterly.

§ In accordance with Public Law 38, 81st Congress, the Regional Agricultural Credit Corporation of Washington, D. C., was dissolved and as of April 16, 1949, its assets were transferred to the Farmers Home Administration.

† Revised series. See note marked "†" on p. S-11.

‡ Rate as of October 1, 1949: Common labor, \$1.478; skilled labor, \$2.453.

* New series. Comparable data prior to January 1948 are not available.

Unless otherwise stated, statistics through 1948 and descriptive notes are shown in the 1949 Statistical Supplement to the Survey	1948					1949

† Revised. † Deficit. † Revised data for July 1948, \$76,886,000.

‡ Beginning January 1949, data are compiled from reports of carriers having operating revenues of \$250,000 or more; however, the one company excluded on the new basis accounted for only 0.3 percent of total revenues in December 1948.

§ Beginning July 1948, data exclude departures via international land borders; land-border departures during the 12 months ended June 1948 amounted to only 1 percent of total departures.

¶ Revised series. The coverage has been reduced from 100-120 to 53 carriers; however, the comparability of

Unless otherwise stated, statistics through 1948 and descriptive notes are shown in the 1949 Statistical Supplement to the Survey	1948					1949

* Revised. † Not available for publication.

† Revised series. Data for fertilizer consumption have been revised beginning in the July 1949 SURVEY to exclude Texas which has discontinued tax tag sales; revised figures prior to May 1948 will be shown later.

* New series. The series for rosin "WG" (window glass) grade, which is compiled by the U. S. Department of Labor beginning November 1948, and prior to that month by the Oil, Paint, and Drug Reporter, has been substituted for the "H" grade formerly shown. Data beginning 1935 will be shown later.

Unless otherwise stated, statistics through 1948 and descriptive notes are shown in the 1949 Statistical Supplement to the Survey	1948					1949

¹ Revised. ² Beginning January 1949, data include for animal fats, 45 plants and for greases, 23 plants not previously reporting; operations at these plants in January (thous. of lbs.): Animal fats—production, 3,290; stocks, 3,804; greases—production, 953; stocks, 1,949. ³ Beginning January 1949, data on original reports show further details on certain refined oils which are believed to have been included formerly in the crude oil figures. January 1949 figures for the items excluded beginning in that month (thous. of lbs.): Sesame—consumption, 29; stocks, 142; rapeseed—consumption, 550; stocks, 2,763; linseed oil—production, 8,900; consumption, 15,062; stocks, 45,560; other vegetable oils—production, 955; consumption, 1,503; stocks, 1,604. ⁴ September 1 estimate. ⁵ No sales. ⁶ See note "2" for this page.

† Revised series. Beginning in the September 1949 Survey, data include oleomargarine of vegetable or animal origin.

Unless otherwise stated, statistics through 1948 and descriptive notes are shown in the 1949 Statistical Supplement to the Survey	1948					1949

* Revised. 1 Not available for publication. 2 Not comparable with data beginning January 1949 because of the inclusion at that time of some companies not previously reporting.
 * New series. The data for production, compiled by the U. S. Tariff Commission beginning July 1948, are essentially comparable with the series for shipments and consumption (reported by the Bureau of the Census) previously shown here, except for inventory changes (which tend to balance out over a short period), and the inclusion of a few companies not formerly covered. Unpublished figures for July 1948 (thous. of lb.): Cellulose acetate—sheets, rods, and tubes, 1,172; molding and extrusion materials, 3,636; nitrocellulose, 676; other cellulose plastics, 258; phenolic, 20,740; polystyrene, 9,339; vinyl, 14,996; miscellaneous, 8,702. Data for alkyd resins and rosin modifications are not available prior to 1949.

Unless otherwise stated, statistics through 1948 and descriptive notes are shown in the 1949 Statistical Supplement to the Survey

† Revised. 1 December 1 estimate. 2 September 1 estimate. 3 No quotation.

† The total includes wheat owned by the Commodity Credit Corporation and stored off farms in its own steel and wooden bins; such data are not included in the break-down of stocks.
† Revised series. Data for rough rice, included in rice exports, have been revised using a new conversion factor supplied by the U. S. Department of Agriculture, which takes into account changes in milling practices; revisions beginning 1933 are available upon request. Revised data beginning January 1947 for wheat-flour production and grindings of wheat will be published later.

Unless otherwise stated, statistics through 1948 and descriptive notes are shown in the 1949 Statistical Supplement to the Survey

* Revised. * Preliminary.

† Corrected monthly figures are not available; January-July 1949 total (including revisions for January and February) is 218,055 short tons.

‡ December 1 estimate. § September 1 estimate.

¶ This series continues data in the 1942 STATISTICAL SUPPLEMENT to the SURVEY; there were no shipments for 1942 to 1947 except for January, February, and May 1942 (12,136, 1,120, and 8,618 short tons, respectively). Data for 1948 not shown above are as follows (short tons): January, 16,016; February, 17,164; March, 20,674; April, 5,595; May, 23,079; June, 38,989; July, 18,498.

Unless otherwise stated, statistics through 1948 and descriptive notes are shown in the 1949 Statistical Supplement to the Survey

Revised. ¶ Preliminary. 1 Beginning 1949, data include some treated sawed timber which cannot be segregated.

§1948 data for production of shoes and slippers have been revised; revisions January-July are shown in the September 1949 Survey on p. S-31.

¶The figures include a comparatively small number of "other footwear" which is not shown separately from shoes, sandals, etc., in the distribution by types of uppers; there are further small differences between the sum of the figures and the totals for shoes, sandals, and play shoes, because the latter, and also the distribution by kinds, include small revisions not available by types of uppers. ¶See note at the bottom of p. S-38 of this issue regarding revised lumber series.

Unless otherwise stated, statistics through 1948 and descriptive notes are shown in the 1949 Statistical Supplement to the Survey	1948					1949

* Revised. * Preliminary. † See note marked "†." ‡ Beginning July 1949, figures exclude data for one secondary plant included previously.

§ Government stocks represent those available for industrial use; data for December 1948 reflect a considerable transfer of pig tin to strategic stock piles.

Unless otherwise stated, statistics through 1948 and descriptive notes are shown in the 1949 Statistical Supplement to the Survey	1948					1949

♂ Revised. ♀ Preliminary. ¹ Data beginning January 1949, are not strictly comparable with earlier figures because of a reduction in the number of reporting cities; December 1948 figure strictly comparable with January 1949, \$15,844.

² The number of companies reporting beginning the second quarter of 1949 is as follows: Direct current, 28; polyphase induction, 32.

³ Data for coal-mine fuel are included in "other industrial."

Unless otherwise stated, statistics through 1948 and descriptive notes are shown in the 1949 Statistical Supplement to the Survey	1948					1949

r Revised.

1 Beginning January 1949, stocks of heavy crude in California are included in gasoline-bearing figures.

2 Beginning January 1949, cracking stocks (formerly included in finished stocks in California figures) are excluded and stocks held in distributors tanks in California (formerly included in bulk terminal stocks) are excluded; comparable figures on new basis for December 1948 (thous. of barrels): Distillate and residual fuel oil, 71,381 and 63,993, respectively.

3 Beginning January 1949, stocks held by distributors in California (formerly included in bulk terminal stocks) are excluded; comparable figures for December 1948, 23,895,000 barrels.

4 No quotation.

Unless otherwise stated, statistics through 1948 and descriptive notes are shown in the 1949 Statistical Supplement to the Survey	1948					1949

* Revised. † Jelly glasses included with wide-mouth food containers. ‡ Returnable only. § Total ginnings of 1948 crop. ¶ October 1 estimate of 1949 crop.

§ Includes laminated board, reported as component board. ¶ Total ginnings to end of month indicated.

NOTE FOR LUMBER SERIES, p. S. 31.—Exports of sawmill products for 1948 have been adjusted to exclude box shooks, in accordance with the revised commodity classification effective January 1949. Revisions for January-July 1948 are as follows (thous. of board feet): 72,757; 58,039; 73,783; 56,252; 63,895; 48,823; 56,934.

Minor revisions for total lumber production, shipments, and stocks for 1946-47 (since publication of the 1949 STATISTICAL SUPPLEMENT) are available upon request. Revised data for total lumber for January-July 1948 are as follows (units as above): Production—total, 2,754, 2,525; 3,094; 2,987; 3,005; 3,159; 3,309; hardwoods, 621; 574; 677; 624; 604; 649; 706; softwoods, 2,133; 1,951; 2,417; 2,362; 2,401; 2,510; 2,603; shipments—total, 2,858; 2,660; 3,089; 2,929; 3,006; 3,004; 3,054; hardwoods, 616; 632; 697; 647; 659; 607; 601; softwoods, 2,242; 2,028; 2,392; 2,282; 2,347; 2,397; 2,453; stocks—total, 5,548; 5,439; 5,508; 5,577; 5,622; 5,800; 6,116; hardwoods, 2,017; 1,968; 1,956; 1,926; 1,856; 1,885; 1,995; softwoods, 3,531; 3,471; 3,552; 3,651; 3,766; 3,915; 4,121.

Revised data for Western pine for January-March 1948 (since publication of the 1949 STATISTICAL SUPPLEMENT) are as follows (mil. of board feet): Production—335; 353; 428; 544; 666; 658; 698; 705; 667; 663; 504; 508; 391; 386; 471; shipments—433; 414; 462; 545; 573; 558; 602; 633; 608; 617; 550; 557; 473; 429; 485.

Unless otherwise stated, statistics through 1948 and descriptive notes are shown in the 1949 Statistical Supplement to the Survey	1948					1949

● A BASIC TOOL FOR BUSINESSMEN
ECONOMISTS, AND STATISTICIANS ENGAGING
IN CURRENT BUSINESS ANALYSIS
OR RESEARCH IN BUSINESS AND RELATED
ECONOMIC PROBLEMS

1949 Statistical Supplement

• • • *the statistical reference for current business analysis*

More than 2,600 series of commercial and governmental statistics for the business world are included in the 1949 Statistical Supplement presented by the Office of Business Economics as the historical record of series now appearing monthly in the SURVEY OF CURRENT BUSINESS.

• • • *designed for quick and efficient research*

The Supplement provides monthly data from January 1945 through December 1948 and annual averages of monthly data from 1935 through 1948, *plus* complete annotations for meaningful use.

• • • *complete coverage*

Business indexes on income payments, farm marketings, industrial production, orders, shipments, inventories; *statistics* on construction, advertising, postal receipts, domestic trade, employment, wages, pay rolls, banking, commercial failures, life insurance, foreign exchange, corporation profits, public finance, securities and commodity markets; *authoritative figures* on exports, imports, transportation and communications, commodities, and many other classifications for business use.

• • • *explanatory notes*

Complete descriptions and explanations of the data covered in the tables and in the monthly SURVEY OF CURRENT BUSINESS, providing the reader with information essential to the proper use of the data—definitions of the statistical units employed, methods by which they are collected, adequacy of samples. In addition, the notes direct the reader to sources of monthly and annual data prior to January 1945 and call attention to changes in the nature of the data affecting their comparability. Exact sources are listed.
