The Business Situation

FEBRUARY was another month of increasing business activity. Nonfarm employment moved up to a new high, and, together with a pickup in weekly hours, was responsible for a good-sized gain in payrolls. Rising consumer demand appears to be providing most of the impetus to overall production so far in the first quarter. Retail trade continues to advance, with automobile sales particularly strong. Now that the tax cut has become law, the stimulating role of consumer buying should be reinforced.

Activity is being buttressed by a high rate of fixed investment. The 1964 annual OBE-SEC survey of plant and equipment expenditures, reported in detail further on, indicates that business investment in the first quarter will continue at the high rate of the closing quarter of 1963. Sizable advances in expenditures are programed for the remaining quarters of the year. For 1964 as a whole a 10-percent increase in capital outlays over 1963 is expected. Residential construction outlays so far in the first quarter are at peak rates. While seasonally adjusted outlays have not changed much from those of last year's fourth quarter, housing starts, which lead outlays, suggest some further increase. Private nonfarm starts in January were at an annual rate of 1.67 million, up from the 1.62 million rate of the fourth quarter and the 1.56 million rate for 1963 as a whole.

A rise in business inventory investment added to the advance in total output in the closing months of 1963.

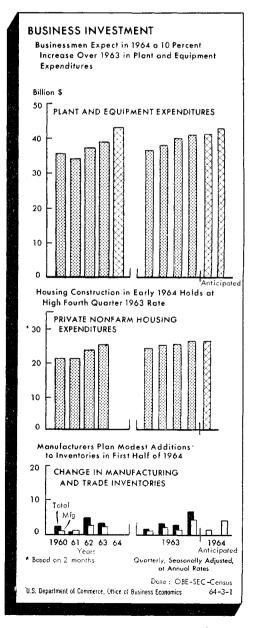

While stocks on an overall basis are low relative to sales, the effect of inventory investment on the change in output in the present quarter is still uncertain, in view of the slight decline in total business stocks in January and the small increase projected by manufacturers for the first quarter of this year. It is significant, however, that according to the latest anticipations survey manufacturers expect to make good-sized additions to their stocks in the second quarter.

Employment and hours advance

The employment picture looks much better than it did last month, when bad weather during the survey week affected the figures, particularly in outdoor activities. The seasonally adjusted establishment total rose approximately 300,000 in February. Gains were most pronounced in contract construction, where employment had fallen the month before, but extended to most major industry divisions. There was a modest increase (about 50,000) in manufacturing. The February all-industry total was 430,000 greater than the fourth quarter 1963 average and 1.6 million above a year ago.

Hours of work in manufacturing also recovered sharply from what appears to have been an abnormally low level in January. The seasonally adjusted increase more than made up for the January decline, and at 40.6 per week is now about the same as the average level of September–December 1963.

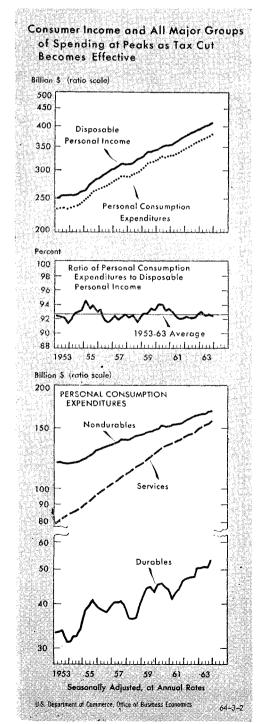

The seasonally adjusted unemployment rate fell slightly to 5.4 percent about the low part of the range over

which it has fluctuated in the past 2 years.

Personal income unchanged, payrolls higher

Personal income in February was unchanged from the January seasonally adjusted annual rate of \$478 billion. If transfer payments are excluded, however, the February total was up by \$2½ billion over the month. January transfer payments had included the large accelerated dividend payment to holders of GI life insurance.

With man-hours up over the month and rates of pay about unchanged, wage and salary disbursements in February rose by approximately \$2 billion on an annual basis. Other types of personal income from current production were little changed on balance.

Wholesale industrial prices firm

Prices in wholesale industrial markets have been firming since about last summer although the overall increases that have occurred have been very small and thus far have not shown any acceleration. The BLS index wholesale prices of commodities other than farm and food products has tended to rise since last spring. February 1964 prices, which were unchanged from those of the month before, were about 0.8 of 1 percent above the second quarter 1963 average. Price increases continue to be selective rather than widespread, limited in size and offset in part by price decreases.

The comprehensive index of industrial prices has increased much less than the volatile spot price index of basic "industrial" commodities, which rose about 5 percent from late August 1963 to the end of February of this year, but which was still lower than the 1961

average. This sensitive index is confined to a handful of commodities for which daily spot quotations are available. It was little changed, on the average, from January to February but edged down late in February and early March because of some softening in steel scrap and lead scrap quotations.

Interest rates stable

Interest rates have shown little change so far this year. Yields on Treasury bills and prime commercial paper have fluctuated close to the average levels of late 1963, after having risen rather sharply in the months following the increase in the discount rate last summer. Yields on corporate bonds, which rose only slightly in the second half of last year, have likewise shown stability in 1964 and mortgage yields have moved in the very narrow range which has prevailed since last spring. The rise in the discount rate by the Bank of England in early March has had little effect on domestic money markets.

Corporate profits up

Corporate earnings before taxes, excluding inventory profit, rose \$1\% billion in the fourth quarter of 1963 to

Fourth quarter and annual 1963 national income total and the corporate profits share are based on preliminary estimates and are subject to revision in next month's SURVEY.

reach a record \$53½ billion rate. Profits including such inventory gains rose more sharply—\$2.3 billion—as prices of goods held in inventory increased.

The profit advance in the final quarter of last year, a continuation of the upward movement that started last spring, carried total corporate earnings for 1963 to an alltime high of \$51 billion, up \$4 billion from 1962. On an after-tax book profits basis the total for 1963 was \$27 billion, \$2½ billion above the 1962 amount. Last year's profit increase was noteworthy because it came in the third year of a cyclical

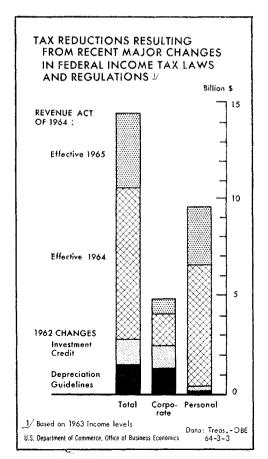

expansion; during previous postwar economic advances, profits have generally stabilized or started to decline earlier.

With corporate profits data now available, national income is estimated at \$489 billion in the final quarter of last year, \$7.3 billion or 1½ percent higher than the third. For the year as a whole, national income totaled \$478 billion, \$25 billion more than in 1962.

The fourth quarter and full year 1963 national income and corporate profits figures are based on preliminary data and may be revised in next month's Survey.

The Revenue Act of 1964

AS a result of the Revenue Act of 1964, which was signed into law on February 26, personal and corporate income tax liabilities are estimated to fall by over

\$7½ billion in 1964 and by \$11½ billion in 1965 and later years. Personal tax liabilities alone will decline \$6 billion in 1964 and a further \$3 billion in 1965, for a total of \$9 billion. These calculations, which were made by the Treasury Department, are based on 1963 income levels. If the economy continues to expand and if the revenue measure further stimulates business activity, as is generally anticipated, the effect of the Revenue Act on liabilities will, of course, be greater.

Including the \$2½ billion reduction in business tax liabilities through the Investment Tax Credit and administrative changes in Depreciation Guidelines, which were introduced in 1962 for the purpose of stimulating capital investment, the total annual reduction in Federal individual and corporate income taxes amounts to more than \$14 billion. The accompanying chart illustrates these reductions and their division between corporations and persons. In relative terms the cut in tax liabilities for each group is about one-fifth.

Personal tax payments drop more than liabilities in 1964

Although the new tax legislation calls for a two-step reduction in individual income tax rates—one to take place on 1964 income and a smaller reduction on 1965 income—the withholding tax rate is being cut immediately in line with the lower 1965 rates. The reduction, from 18 to 14 percent, will reduce current collections through the withholding system for 1964 by more than the decrease in 1964 tax liabilities, in spite of the higher withholding rates that were in force in January and February.

If, as is widely believed, taxpayers do not decrease the number of exemptions they claim or alter their quarterly declarations, net underpayments in 1964 will total about \$\frac{3}{4}\$ billion more than they customarily do. Consequently, final settlements in early 1965 will involve larger than usual payments by some taxpayers and smaller than usual refunds to others.

Increased disposable income

The tax cuts are being reflected in withholding rates effective March 5; this month disposable personal income, which measures after-tax earnings, will be \$7 billion to \$8 billion higher, at an annual rate, than it would have been in the absence of the tax cut. In April and succeeding months—when

Preliminary.

the new withholding rates will be effective for the entire month—after-tax income will go up by about another \$2 billion as the direct result of the tax cut, for a total increase of roughly \$9½ billion or 2½ percent at an annual rate. The

corresponding figure for calendar year 1964 (assuming no changes in exemptions or declarations) will be nearly \$8 billion, which is approximately 2 percent of disposable personal income.

While personal tax liabilities will drop further next year, there will be little change in disposable income directly traceable to the tax cut; disposable income is related to tax payments, not liabilities.

Nearly all of the reduction in personal income taxes during 1964 and in later years is traceable to rate changes; while there are several structural revisions in the income tax law, their effects are estimated to be largely offsetting. The structural changes which increase taxes will add about \$0.7 billion but this is nearly offset by reductions of \$0.5 billion. Rates, on the other hand, fall from a 1963 range of 20 percent on the lowest bracket to 91 percent at the top, to a range of 16–77 percent for the current year, and 14–70 percent in 1965.

The personal tax base

Tables I and II show the relationship between the individual tax base and the total of personal income for 1961 and 1963. The data show that just over one-half the adjusted gross income, and a somewhat smaller proportion of personal income, have been subject to tax. These tables are based on the previous laws and regulations. Data are not available to incorporate

Note.—Amounts of adjusted gross income, tax and tax changes exclude capital gains taxed at the alternative rate. Source: U.S. Treasury Department.

changes resulting from the new legislation, which will probably reduce the base, but not alter the percentages subject to tax to any major extent.

The most important changes which will reduce the tax base are the regulations permitting a minimum standard deduction in excess of that previously allowed low-income taxpayers; the doubling of the dividend exclusion; and the deduction of moving expenses from taxable income in certain instances. Partly offsetting these reductions are increases in the base from the prohibition against itemizing deductions for certain State and local taxes; the tightening of rules governing the exclusion of sick pay and deductions for casualty losses.

Tax cuts by income class

The accompanying table shows the effects of the 1964 Act on families and individuals by adjusted gross income class, i.e., it divides taxpayers into groups according to the size of their adjusted gross income based on 1963 income levels and patterns. It shows that the decline in tax liabilities from \$47 to \$38 billion is approximately a 20-percent reduction and increases adjusted gross income after taxes by 3 percent. Nearly \$4 billion of the \$9 billion cut is centered in the tax bracket where most income is concentrated— \$5,000-\$10,000 per year. There is a reduction of \$2 billion in the second largest income group—\$10,000-\$20,000. The other major cuts-more than \$1

billion each—are in the \$3,000-\$5,000 and the \$20,000-\$50,000 groups. The relative tax decline is greatest for the lowest income group—two-fifths—and the cuts decrease as income rises, falling to a 13-percent decline for the top bracket.

In contrast, the relative gain in income after taxes in the lower and middle income groups—which embrace over 95 percent of all taxpayers—is fairly uniform, ranging from 2½ to 3½ percent. For the upper income groups, the relative gains in after-tax income are greater, e.g., 4½ percent for adjusted gross incomes of from \$20,000 to \$50,000, and more than 7 percent for incomes above \$50,000.

As a result of the new law, Federal corporate income tax accruals would fall about \$1½ billion calculated in terms of 1963 profit levels. A cut of this size would amount to 6 percent of last year's after-tax profits of \$27 billion. Corporate taxes are to be reduced an additional \$¾ billion through a further cut in rates in 1965, bringing the total business cut to \$2½ billion, or nearly 10 percent.

Corporate taxes will be cut primarily through a reduction in the maximum tax rate from 52 percent in 1963 to 50 percent in 1964 and to 48 percent in 1965. A part of the immediate revenue loss to the Federal Government will be made up through a gradual speedup in tax payments schedules.

Small corporations will receive substantial tax reductions this year. The

¹ The estimates for 1963 are preliminary.

Note.—For detailed 1960 data (tables I and II) see May 1963 Survey, page 3. The method follows that developed by Joseph Pechman in "Yield of the Individual Income Tax During a Recession," National Tax Journal, March 1954.

Source: U.S. Department of Commerce, Office of Business Economics and U.S. Treasury Department.

tax rate on the first \$25,000 of income has been reduced from 30 percent to 22 percent, but the rate on net corporate income above \$25,000 has only fallen from 52 percent to 50 percent this year. In 1965 and later years, the tax rate on the smaller corporations will remain at 22 percent but the rate on earnings above \$25,000 will drop from 50 percent this year to 48 percent in the next.

The only major structural revision is the repeal of the requirement to reduce the depreciation basis of assets eligible for the Investment Tax Credit enacted in 1962. The original law allowed most business concerns to deduct 7 percent of the value of certain new investments from their taxes for the year in which the equipment was purchased, but permitted business firms to depreciate only 93 percent of the investment outlay. Thus, over the life of the asset, the old law gave an effective tax credit of about 3½ percent (at overall effective tax rates of 50 percent). The present law retains the 7 percent tax credit, but permits depreciation of 100 percent of the investment outlay. The effect of this revision, while small in the first year, about doubles the value of the investment tax credit over the depreciable life of the equipment.

The investment tax credit for 1963 is estimated at slightly more than \$1 billion for corporations and at \$0.2 billion for noncorporate firms. Without the recent revision, this credit, because of additional taxes due to the reduced depreciation base, would have eventually eroded to about \$0.6 billion.

Comparisons with other major tax cuts

There have been two other major income tax reductions since high wartime levels were first cut as World War II closed. In 1948 personal taxes were reduced by about \$5 billion, and in 1954 personal, corporate, and excise taxes were reduced by about \$7 billion. Thus, in dollar terms the 1964–65 tax cut of \$11½ billion is the largest on record. However, relative to tax liabilities, the 1964–65 cut appears to be only slightly larger than in 1948, but clearly greater than in 1954.

The Revenue Act of 1948 cut personal income taxes by somewhat less

than \$5 billion, and eliminated gift and estate taxes of about \$250 million. The major provisions of the act were a general reduction in income tax rates, an increase in personal and dependency exemptions from \$500 to \$600, and the introduction of income-splitting for married persons.

In 1954 personal income taxes were cut by somewhat less than \$4 billion, corporate taxes by more than \$2 billion, and excises by about \$1 billion, for a total tax reduction of about \$7 billion. Partially offsetting these cuts was a rise in the social security tax rate that increased personal and business contributions by nearly \$1½ billion in total. Thus, the net personal reduction came to about \$3 billion (\$4 billion income tax less \$¾ billion social security taxes) and the total net cut to about \$5½ billion.

Comparisons of the effects of the present tax cut and the earlier ones are

hampered by the fact that the earlier cuts occurred when underlying economic conditions were different. The 1948 cut appears to have bolstered consumer buying and so kept the 1949 recession moderate and of short duration. The 1954 tax cut came in the midst of the 1953–54 recession and appears to have helped business activity turn around after the middle of 1954.

In mid-1963, in order to stimulate a lagging economy, the United Kingdom also reduced income taxes. The British tax cut was somewhat smaller than the recent U.S. tax cut in relation to total output, but it was undertaken following the adoption of a general policy of economic expansion: There was a substantial increase in government spending for goods and services, sales taxes were also cut, and there was a turn towards an expansionary monetary policy. An acceleration of economic activity followed.

Manufacturers' Inventory and Sales Expectations— First Half of 1964

MANUFACTURERS expect further gains in sales to successive new records, and continuing inventory additions in the first two quarters of 1964, after seasonal adjustment, according to a survey conducted in February by the Office of Business Economics. The anticipated increases in the first half of this year match the gains of the last half of 1963, although the quarter-to-quarter changes in inventories show considerable fluctuation.

Manufacturers anticipate seasonally adjusted sales rises of 1 percent per quarter in the first half of the year. The expected inventory additions of \$\% \text{billion} in the first quarter and \$1 billion in the second quarter compare with actual increases of \$400 million and \$1.1 billion, respectively, in the final two quarters of 1963. If these rates eventuate, the stock-sales ratio will continue

at 1.7, a relatively low ratio which has held with minor fluctuations since mid-1961. The current survey also finds some improvement in inventory condition from last November's survey. At yearend 1963 only 13 percent of total manufacturers' stocks were held by producers who considered their stocks "high" relative to sales and unfilled orders; this was several points below the ratios reported in the earlier quarters of last year.

Sales are expected to reach \$107 billion in the first quarter, and \$108\% billion in the second quarter, after seasonal allowances. If the 6 percent sales rise from 1963 to 1964 projected by the respondents to the manufacturers' plant and equipment survey (reported elsewhere in this issue) proves correct, sales will accelerate in the second half of 1964 to an average level

of over \$112 billion per quarter. It should be noted, however, that the second half projection is determined by a residual calculation using the results of two different samples.

Similar sales expectations for durables and nondurables

Durable goods producers project sales of almost \$56 billion and \$56½ billion, respectively, in the first and second quarters of this year, after seasonal adjustment. The rise of 1 percent per quarter equals that of the second half of 1963, but is only about one-third the rate of advance in the first half of last year.

Nondurable goods producers anticipate seasonally adjusted sales of \$51 billion in the first quarter and \$52 billion in the second, up ½ percent and 1½ percent, respectively, from preceding quarters. These gains are about in line with the average quarterly rise during 1963 of 1 percent.

Inventory additions moderate

Durable goods producers are planning to maintain their inventories at the yearend level of \$36 billion through March, after seasonal adjustment. Λ \$650 million addition to stocks is anticipated during the second quarter—the largest increase in 2 years. In the

past year durable goods producers have maintained somewhat less than 2 months supply of inventories on hand. This ratio is expected to continue through midyear.

Nondurable goods producers expect to increase their stocks \$300 million from December 1963 to this March, and by a similar amount from March to June, after seasonal allowances. After 9 months of stable inventories from the end of 1962 to September of 1963, producers have evidently begun to enlarge their stocks, expanding by almost \$600 million in the fourth quarter of last year.

The 1960's have been characterized by a stable stock-sales ratio among nondurable goods producers with stocks equivalent to somewhat over 1.4 months of sales. Manufacturers expect to continue operating at these ratios in the first half of 1964.

General improvement in inventory condition

At yearend 1963, about 85 percent of both durable and nondurable goods inventories were in the hands of producers who regarded their inventories "about right" relative to their current sales and unfilled orders. Most industries indicated an improvement in their inventory position over the previous quarter, as gauged by a reduction in the proportion of stocks considered "high".

The improvement was particularly pronounced among durable goods producers. The "high" percentage in primary metals has fallen steadily from early 1962 to September and December of 1963 (see chart). The "high" ratio for metal fabricators, which had risen from September 1962 to September 1963, fell back last December to a percentage below any period since 1958 except for the second half of 1961.

Among nondurable goods producers the percent of inventories classified as "high" fell from 14 percent at the end of September 1963 to 10 percent in December, with most major industries recording declines. The December "high" was at the average level in 1962.

Business Expects Plant and Equipment Expansion and Larger Sales in 1964

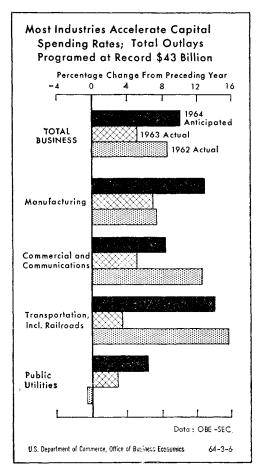

BUSINESSMEN anticipate spending a record of \$43.2 billion for new plant and equipment in 1964, a 10 percent increase over 1963. Current capital budgets provide for a rising trend in outlays through the year with the projected rate in the final half of this year almost one-tenth higher than a year earlier. Associated with these investment plans are expectations of 1964 sales well in excess of the record 1963 results.¹

The expected rise in investment rests upon a broad industrial base. All major lines of business, except mining, anticipate record outlays in 1964—generally substantially above 1963. Increases range from 6 percent for utilities to one-fourth for the railroads. Manufacturers are projecting an advance of 13 percent; communications and commercial firms, 8 percent (see chart). Mining companies now plan to spend about as much this year as last.

If the programs as now outlined are carried out—and both the favorable current business environment and the large carryover of uncompleted investment projects at the beginning of this year (discussed later) strongly suggest that they will be—the recent investment expansion that started in mid-1961 will have lasted 3½ years. This would exceed the 1955–57 advance in duration, and would about match its degree of rise measured in physical volume though not in current dollar

terms. In the current expansion expenditures for new plant and equipment increased 9 percent from the cyclical low in 1961 to 1962, slowed down with a 5 percent advance in 1963 as the recovery matured, and are now programed to move up again at an accelerated pace.

While the forces which influence investment are extremely complex and not easily measurable, there is little doubt that the general background for investment currently is distinctly favor-

able. Sales and profits achieved successive new highs each quarter last year, and internal funds became available in unprecedented amounts, not only through the expansion in retained earnings but also through the accelerated depreciation rates of the new guidelines and the investment tax credit. A further sizable contribution to cash flow in 1964 will be made by the recent reduction in corporate tax rates.

More importantly from an investment point of view, the cut in individual taxes will increase overall demand to ensure a more adequate utilization of existing capacity, and is likely to cause businessmen to revise upward their evaluation of prospective plant and equipment requirements. In addition, the cuts in business tax rates per se enlarge the expected net return on business investment so that many previously postponed projects would now appear attractive.

The investment programs now outlined for 1964 will be a substantial stimulant to business activity this year. Most directly affected will be the equipment-producing industries and their suppliers, where the inflow of new orders has risen in recent months to record levels. Industrial construction contracts also are at new highs.

A few findings in the current survey suggest a renewed emphasis on capacity-increasing expenditures. First, the very size of the projected 1964 expenditure can result in a much more significant rise in capacity than realized in any year since 1957. Also suggestive is the fact, discussed more fully

^{1.} These and other findings discussed in this article are based upon reports filed by business firms in February 1964 in the regular investment surveys conducted by the Office of Business Economics and the Securities and Exchange Commission.

below, that manufacturing firms holding about one-half of gross capital assets report the need of at least some additional capacity to meet their prospective 1964 sales volume.

Realization of 1963 programs

Actual expenditures in 1963 were unusually close to projections made at this time last year—\$39.2 billion as against an expected \$39.1 billion. Capital spending programs in manufacturing, mining, and public utilities were closely realized. The railroads and the nonrail transportation group spent more than originally planned—14 percent and 4 percent, respectively. Actual outlays by commercial firms were slightly under anticipations made in February 1963.

Actual expenditures in the fourth quarter of 1963 exceeded plans made in November by somewhat over 1 percent. Anticipations for the first

and second quarters of this year have also been raised from those reported 3 months earlier. Most lines of business either exceeded or equaled outlays anticipated in November.

Rising 1964 trends widespread

Capital expenditures are expected to be at a seasonally adjusted annual rate of \$41½ billion in the first quarter—or

about the same as actual outlays in late 1963. Spending in the second quarter is slated to rise 4 percent to \$42\% billion, and to increase further to a \$44\% billion rate in the second half of the year.

Among most major lines of business there is a recurrent pattern in the rate of investment during 1964: little change in the opening quarter, followed by successive increases in the second quarter and in the second half of 1964. Exceptions are nonrail transportation and mining companies, whose outlays in the second half are now scheduled to be somewhat lower than in the first 6 months of 1964. Within manufacturing, only the transportation equipment, electrical machinery, and food industries do not now show further increases in the second half of this year.

Manufacturing investment strong

Manufacturers spent \$15.7 billion for new plant and equipment in 1963, \$1 billion more than in 1962. This year they expect to spend \$17.7 billion to top the 1957 dollar record by more than \$1½ billion. Equipment and construction prices have advanced over the period, however, so that the volume of new capital goods to be put in place this year is probably about the same as in the boom year 1957.

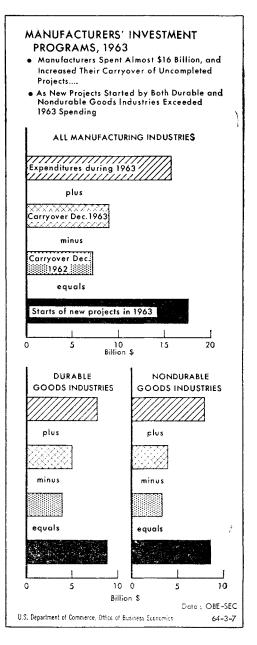

Since 1961, the rise in investment in durable goods manufacturing has been relatively larger than in most other major sectors. This year expenditures are projected at \$9 billion, 14 percent higher than in 1963; outlays had risen 12 percent in each of the two preceding years. These industries had made very sharp cutbacks in capital spending in 1958 and had shown the weakest expansion in 1959–60.

Expenditures for new plant and equipment by heavy goods producers are expected to rise nearly one-tenth from the first to the second quarter of 1964 to a seasonally adjusted annual rate of \$9 billion. A more moderate advance is anticipated during the second half of 1964. If achieved, the \$9.3 billion seasonally adjusted annual rate at that time would be 14 percent above the second half of 1963.

Leaders in investment among the durable goods industries, both in 1963 and

1964, are the iron and steel and motor vehicle industries—although in neither case will 1956–57 records be exceeded. Capital expenditures in 1963 by steel companies increased one-eighth over 1962, and are now expected to rise one-fourth this year to a total of almost \$1.6 billion. Steel companies account for a large share of the projected spending rise by all durable goods companies from the second quarter to the second half of this year.

The motor vehicle industry is anticipating higher outlays in the first quarter of this year than in the fourth quarter of 1963. By the second quarter, seasonally adjusted spending is expected to come close to an annual rate of \$1\% billion, and to remain at this rate in the

second half of 1964. Total expected outlays for this year as a whole would be one-fifth higher than in 1963, following an increase of one-fourth from 1962 to 1963.

Plant and equipment expenditures of nonelectrical machinery companies are now programed to increase 8 percent to \$1\% billion in 1964, after a slight reduction in 1963. Such spending would equal the previous high, and is apparently a response to the large inflow of machinery orders in recent months.

In contrast, electrical machinery producers are planning lower outlays this

year than last. This industry ran counter to the general investment trends in the 1959-61 period when it had substantially expanded its expenditures in order to meet the upsurge in demand for newly developed electronic components and systems. The lowered sights for 1964 in this industry and in nonautomotive transportation equipment may reflect changes in defense spending programs.

Nondurable goods producers, as a group, are programing a 12 percent increase in expenditures from 1963 to 1964—only slightly less than that in the durables. Last year spending by the soft goods industries expanded by only 2 percent to \$7.8 billion. Outlays are expected to rise moderately in both the first and second quarters of this year, and more substantially in the final half of 1964.

The pickup in nondurable goods investment this year, particularly in the second half, is characteristic of many

of the component industries. The largest relative advances—more than one-fourth—are programed by paper and textile companies, and would bring outlays to new records in both industries.

Increases of one-tenth in capital expenditures are now planned by both the chemical and petroleum processing industries. 1964 expenditures at \$1% billion and \$3½ billion, respectively. would be a little under previous highs. Outlays by chemical producers had declined sharply from 1961 to 1962 and advanced a moderate 3 percent last year as capacity had outrun demand for many of the industry's products. New processes and new products are important factors in the 1964 projected rise. As can be seen in table 2, the expected rise in petroleum company spending is due to exceptionally large increases for refining and transportation facilities. Declines are expected in marketing, production, and other types of investment.

Food and beverage manufacturers expect outlays to rise 5 percent. This industry had expanded investment in the 1960–61 period contrary to the general investment trend, and has been showing a rather sustained upward movement in plant and equipment expenditures since 1958.

An Evaluation of Current Capacity

Each manufacturing company in the current survey was asked: "Taking into

account your company's current and prospective sales for 1964 how would you characterize your December 31, 1963 plant and equipment facilities: -more plant and equipment needed; —about adequate; —existing plant and equipment exceeds needs"? In all questions concerning industrial capacity. there are very difficult definitional problems—including those on product-mix. number of hours or shifts, and cost relationships associated with the use of facilities of varying ages and efficiencies-which make measurement of capacity and of capacity utilization extremely difficult. It was hoped that the present inquiry, which required only a qualitative answer, would elicit a larger response, although it does not. of course, permit a quantitative estimate of how much yearend 1963 capacity exceeded or fell short of requirements in 1964.

The survey results are shown in table 3 in terms of the distribution of firms by number and by gross capital assets. It is probable that the most fruitful results of the question may come from comparisons over time as later surveys are completed. Without an attempt at a detailed interpretation at this time, some interesting highlights emerge. Almost one-third of the companies, accounting for just under 50 percent of the total capital assets in manufacturing, indicated that their facilities at the end of 1963 were inadequate to meet their needs in 1964; 60 percent of the firms with 44

percent of the assets considered their facilities about adequate. Thus less than 10 percent of the firms (with 7 percent of assets) felt that existing capacity exceeded their needs.

Manufacturing companies evaluating their present facilities as inadequate for 1964 prospective sales were on the average the larger firms in terms of capital assets. Firms reporting their existing plant and equipment as about adequate, on the other hand, were the smaller firms on balance. The results for durable and nondurable goods producers were similar to those for all manufacturing firms. (See table.)

^{1.} Carryover refers to expenditures yet to be incurred on projects already underway.

A tabulation was made breaking down actual capital expenditures in 1963 and anticipated expenditures in 1964, according to the response to the adequacy-of-capacity question. It was found that among both durable and nondurable goods companies, those reporting their 1963 capacity as inadequate plan the largest relative increases in spending from 1963 to 1964.

In considering these new statistics, it should be stressed that the fact that large numbers of companies with substantial capital assets report inadequate capacity does not necessarily mean that the amount of inadequacy is large. Also a company may find its capacity inadequate for only one of its products; or the inadequacy reported may apply

to only one stage of the production processes; or capacity may be inadequate in some geographical area but not in others. Finally, it should be clear that the firms which report a need for more capacity for 1964 operations may now have available excess capacity that will be drawn into production as demand rises to the expected levels.

Nonmanufacturing Programs

The nonmanufacturing segment of the economy is also substantially increasing its investment schedules in 1964. Some \$25½ billion is expected to be spent in the acquisition of new facilities this year. After a slight dip in the opening quarter of 1964, outlays are expected to rise throughout the remainder of the year.

For 1964, as in most of the post-World War II period, communications and commercial firms are in the fore-front of the investment picture. Both groups increased expenditures last year by 5 percent to \$3.8 billion and \$10 billion, respectively. For 1964 the projected rise is 8 percent, with both groups reporting strong second half programs.

Within the commercial group there is, however, some diversity of investment expectations for this year. Both wholesale and retail trade firms are planning substantial increases in outlays for new facilities and equipment in 1964. Finance, construction, and service firms, on the other hand, are planning little change in expenditures from 1963.

While their expenditures are only a small part of the total, railroads have recently been reporting substantial increases in investment. Expectations of the industry are for a rise of one-fourth this year to \$1.4 billion, after a 30-percent advance last year. Most of the increase is in equipment purchases, which will account for nearly four-fifths of total outlays, a higher proportion than in any previous postwar year. Unfilled orders for freight cars at the beginning of this year were almost twice as high as a year earlier.

Nonrail transportation companies anticipate outlays of more than \$2 billion in 1964, 8 percent higher than in 1963. Spending for new facilities and equipment by this group last year had dropped below 1962. The rise for 1964 centers in the airlines, where large acquisitions of short-range jet passenger and jet cargo planes are being made. If delivery schedules are met, expenditures would be somewhat smaller in the second half than in the first half. Trucking firms are planning to hold 1964 outlays at about 1963 totals while other transportation companies are reducing expenditures from last year's rates.

The 5-year decline in public utilities expenditures for new facilities and equipment appears to have been halted with the 3 percent rise in actual outlays last year and the 6 percent increase projected for 1964. Spending would reach \$6 billion under current programs—about 10 percent short of the \$6.6 billion record in 1957. Both electric power and gas companies are contributing to the projected rise for 1964, and both groups anticipate continuing rises through the second half of the year.

Carryover of Plant and Equipment Projects

An additional inquiry on the "carryover" of plant and equipment projects has been asked in these regular quarterly surveys for the past year. The question asks the amount of expenditures at the end of each quarter yet to be incurred on plant and equip-

ment projects already underway. Data from the inquiry aid in the evaluation of the probable firmness of projected expenditures since projects underway are more likely to be completed than those for which commitments have not yet been made. Such data also make possible estimates of "starts" or new projects undertaken: Actual expenditures during the period, plus the amount of carryover at the end of the period minus the carryover at the beginning of the period equal the value of projects started during that period.

The new data for manufacturers and public utilities are presented in table 4. The quarterly information suggests a strong seasonal pattern but unfortunately it will be several years before such fluctuations can be quantified. Manufacturers reported in the current

survey that the carryover of their new plant and equipment projects at the end of 1963 amounted to \$9 billion. This amount was up \$1.8 billion from the total reported at the end of 1962. With manufacturers spending \$15.7 billion for new plant and equipment during 1963, the carryover rise of \$1.8 billion over the year suggests that \$17.5 billion in new projects were started by manufacturers last year. (See chart on page 9.)

Of the total carryover in manufacturing at the end of 1963, about \$5 billion was due to durable goods producers and \$4 billion to the nondurable goods group. Carryover rose about one-fourth from yearend 1962 for each group. Starts of new projects are estimated at \$9 billion for the durable goods group and at \$8½ billion for the nondurables. The rise in carryover for public utilities during 1963 was about \$400 million. With actual expenditures at \$5.6 billion in 1963 the total cost of new projects started during the year was about \$6 billion.

Industries with the largest increases in carryover during 1963 are generally those projecting the largest rises in expenditures for 1964; there is also an association between cutbacks in investment programs and in carryover. For example, the steel, automobile, and paper industries reported increases in carryover of 40 percent or more, and, as noted earlier, these groups expect the largest relative rises in investment this year. Similarly, carryover declines in 1963 were reported by electrical machinery and the "other nondurable goods" group—both of which expect to spend less for new plant and equipment in 1964 than in 1963.

Manufacturers' carryover at the beginning of 1963 represented almost one-half of actual outlays during that year. The proportions were slightly higher for durables than for nondurables; industries whose plant and equipment requirements usually require long production periods characteristically had the higher ratios, as would be expected. In public utilities the carryover of \$5.1 billion yields a ratio of almost one to one.

Plant and equipment projects carried over by durable and nondurable goods manufacturers to the beginning of 1964 relative to expected capital outlays in 1964 were each just over 10 percent higher than the ratios of beginning-of-1963 carryover to 1963 outlays. The corresponding ratio for the public utilities in 1964 was slightly higher than in 1963.

Record Sales Expected in 1964

In the plant and equipment survey during the opening quarter of each year respondents are asked to give a projection of their sales for that year. Responses received from manufacturers, trade firms, and the public utilities have provided usable estimates in the past—although it should be noted that sales are less subject to a company's control than are capital outlays. In 1963 manufacturers' actual sales rose

4 percent from 1962 totals; the projection had been for a 5 percent increase. Trade sales were up by 5 percent, almost the same as expectations, with wholesalers overestimating and retailers underestimating slightly. Public utilities, however, expected a 1963 rise of 5 percent, but actual revenues increased about one-tenth (see table).

The current survey finds that both manufacturers and trade firms expect somewhat larger gains in sales from 1963 to 1964 than they had experienced

^{1.} Data exclude expenditures of agricultural business and outlays charged to current account.

4. Includes apparel, tobacco, leather, and printing-publishing.
5. Includes trade, service, finance, and construction.

Note: Details may not add to totals due to rounding. Data for earlier years were published in the June 1956, March 1958, 1960, 1961, 1962, and 1963 Survey of Current Business.

Sources: U.S. Department of Commerce, Office of Business Economics, and Securities and Exchange Commission.

from 1962 to 1963, while the public utilities do not expect to match last year's revenue rise.

Manufacturers project a 6 percent sales advance from 1963 to 1964. The expected 1964 sales volume suggests a rise of about 4 percent to 5 percent from the yearend 1963 rate. Durable goods producers expect a slightly larger rise in sales from 1963 to 1964 than the

nondurable goods group—6 percent against 5 percent. Within durables electrical machinery, nonelectrical machinery, and stone, clay and glass industries are now expecting the largest advances. Among the nondurables the larger advances are anticipated by paper and textile companies.

Trade firms anticipate a sales advance of 6 percent from 1963 to 1964. This

would imply a rise of 4 percent from the end-of-1963 sales rate. Wholesalers look forward to a little larger increase from 1963 to 1964 than do retailers. The public utilities, as they did last year, are projecting a 5 percent rise. The electric power companies are a little more optimistic than gas producers regarding revenue movements for this year.

account.

2. Estimates are based on anticipated capital expenditures reported by business in February 1964. The estimates for 1964 have been adjusted when necessary for systematic tendencies in anticipatory data. The adjustment for each industry and time period is based on the median ratio of actual to anticipated expenditures for the past Syears. However, no adjustment is made unless the anticipations have shown a bias in the same direction in at least 4 of the last 5 years and in at least two-thirds of all years since 1953. The only departure from this procedure is in the estimate for retail trade (in the second half 1964) where the sample may be inadequate and the suggested correction factor would yield an unusually large and unlikely figure.

 $^{{\}bf 3}.$ Includes fabricated metal, lumber, furniture, instrument, ordnance, and miscellaneous industries.

The Balance of Payments in 1963

m THE outstanding development in our foreign transactions during 1963 was the sharp decline in the adverse balance from the first to the second half of the year. For the year as a whole, the improvement from the preceding year was considerably smaller. The changes are most evident in the balances on the "regular" types of transactions, including goods and services, Government grants and capital flows, movements of U.S. private capital and private foreign investments (other than changes in liquid assets) in the United States. After adjustment for seasonal variations, the balance on these transactions shifted from about \$2,300 million in the first half of 1963 to \$1,000 million in the second half (revised from the preliminary release). The total for the year was \$3,300 million, as compared with \$3,570 million in 1962, \$3,040 million in 19.61, and between \$3,500 and \$4,200 million during the years 1958 to 1960 (table 1, line A13).

Special transactions

If "special" Government transactions are added to the regular types of transactions, the improvement in the balance from the first to the second half of 1963 is also evident, although the quarter-toquarter changes are affected by the large changes that occurred in "special" transactions. If sales of nonmarketable medium-term Government securities which are convertible by the foreign holders into cash at short notice-first issued in 1963—are included with liquid liabilities, the seasonally adjusted balance changed from about \$2,170 million in the first half to about \$490 million in the second half of 1963 (table 1, line (11). If these securities are considered a medium-term capital inflow (although of the "special" type) the balance shifted from \$1,670 million to \$290 million (table 1, line C2). The annual balance under the first classification of these securities was \$2,660 million, and under the second, \$1,960 million. The balance on "regular" plus "special" types of transactions in 1962 was about \$2,190 million and in 1961 \$2,370 million.

In addition to the sale of nonmarketable medium-term securities, the special transactions include advances by foreign governments in excess of deliveries on military contracts, and repayments of foreign debts to the U.S. Government in advance of contractual schedules. Advances by foreign countries on military contracts exceeded deliveries during 1963 by \$360 million with most of the difference accruing in the second half of the year. Data on deliveries in that period are still preliminary however, mainly with respect to timing between the third and fourth quarters. For the year 1963 as a whole receipts from net advances were about \$110 million less than in 1962. (Table 1, line B2.)

Repayments on foreign loans in advance of contractual schedules were relatively large in the third quarter when France and the Netherlands made large payments. The figures in the other quarters represent mainly sales by the Export-Import Bank of foreign notes prior to their maturity. For the year 1963 as a whole nonscheduled receipts were \$325 million, compared with \$666 million in 1962. (Table 1, line B1 and table 5, line 41.)

Except for the sale of nonmarketable medium-term convertible securities, which amounted to \$702 million during 1963 (with \$502 million in the first half of the year and \$200 million in the second), net receipts from special transactions in 1963 were \$640 million, compared with about \$1,380 million in 1962.

While these receipts improved the balance as measured by changes in monetary reserves and liquid liabilities, the decline from 1962 to 1963 demonstrates the advisability of separating these transactions from the other or "regular" types in analyzing developments affecting the balance of payments.

Changes in reserves

A major change in 1963 affecting our international financial position stemmed from the fact that foreign countries kept much more of their net receipts from transactions with the United States in liquid dollar assets. Accordingly, U.S. reserve assets, including the gold tranche in the IMF (which measures our nearly automatic drawing right) declined substantially less than in 1962. The total decline in reserve assets during 1963 was \$378 million, compared with \$1,533 million in 1962, and going back 4 years, between a low of \$600 million in 1961 and a high of \$2,275 million in 1958. The decline during 1963 in gold holdings alone was \$461 million, by far the smallest amount since 1957.

The reduction in foreign purchases of U.S. gold can in part be attributed to strengthened cooperation between the monetary authorities of the principal countries involved in international financial transactions. This cooperation since 1961 has gradually become more effective in dampening the impact of various adverse political and economic developments on international gold and capital markets. Larger sales of gold in 1963 by the Soviet Union to finance increased purchases of foodstuffs by the Soviet bloc countries were another factor reducing foreign demand for U.S. gold. The total amount of gold added to foreign reserves from sources outside the United States, which include Soviet sales as well as new gold production less private purchases in the free world is estimated to have been about \$930 million in 1963, as compared with less than \$400 million in 1962 and \$740 million in 1961. (See table 5, Memorandum item III.)

The rise in foreign holdings of liquid dollar assets in 1963 was about \$1,580 million. In addition to this foreign central banks purchased the \$700 million of nonmarketable, medium-term convertible U.S. Government securities. In 1962 the total rise in foreign holdings of liquid dollar assets was about \$650 million. The rise in 1963 is believed to have been accentuated by the accumulations of dollar proceeds from gold sales by Soviet bloc authorities in private foreign banks, in anticipation of dollar payments for increased imports of foodstuffs.

An important development in 1963 was the substantial gains in gold and dollar holdings of several of the less developed countries. As a group these countries accounted for more than \$1 billion of the total foreign gain in liquid dollar assets and gold purchases from the United States, while the developed countries accounted for about \$1.6 billion (including the \$700 million of nonmarketable medium-term convertible securities). In 1962, the less developed countries as a group had only a minor increase in reserves.

Among these countries, major increases in dollar and gold holdings were registered by Argentina, Mexico, Venezuela, and Spain.

Major changes in foreign transactions

The major changes in the "regular" types of international transactions are shown in the following tabulation.

Among the changes from 1962 to 1963 the following appear most significant:

(1) The \$1.4 billion rise in merchandise exports considerably exceeded the \$800 million rise in imports. About \$400 million of the rise in exports and, therefore, in the trade balance was directly financed by Government grants and capital outflows, and in this period at least did not contribute to dollar receipts from abroad. (To the extent

that exports are financed by dollar loans, principal and interest will be received in subsequent periods, while some of the loan repayments received in the current period may be considered payments for exports in earlier periods.)

- (2) A reduction was achieved in military expenditures.
- (3) Net income on foreign investment increased as it did in most of the postwar years, but only by \$40 million as compared with \$365 million in 1962 and \$680 million in 1961.
- (4) Net outflows of private capital rose by about \$570 million. A part of that rise may have been associated, however, with the rise in exports, although data to measure the relationship between exports and private capital flows are not available.
- (5) Government grants and capital outflows rose by \$250 million, but goods and services supplied under these programs from the United States and other expenditures in the United States rose by about \$440 million so that direct dollar outflows were about \$190 million less than in 1962.
- (6) The balance on unrecorded transactions (and errors in the estimates)

continued to be on the debit side during the year as a whole, but it was about \$530 million less than in 1962. The decline may be due, in part, to better coverage in 1963 of the figures on capital flows and in part to a decline in capital movements, both longand short-term, which usually fail to be recorded. It would be incorrect, however, to assume that errors and omissions are limited to the data on capital flows.

The major factor in the improvement of the balance from the first to the second half of 1963 was the decline in capital outflows. The changes from the third to the fourth quarter were largely offsetting. The rise in net credits on goods and services was offset by a rise in net debits on private capital outflows, Government grants and capital movements, while net debits on unrecorded transactions declined.

Merchandise trade

The rise in U.S. exports of agricultural goods from 1962 to 1963 accounted for about \$560 million of the \$1.4 billion increase in merchandise exports (excluding goods sold and transferred under military programs). Starting in the second quarter and accelerating later in the year, it comprised about \$220 million, or one-fourth of the increase in total exports from the first to the second half of 1963, and for about \$175 million, or nearly twothirds, of the rise from the third to the fourth quarter. Wheat and other grains accounted for about \$235 million of the \$560 million rise over the previous vear in all agricultural products. All of that increase occurred in the second half of the year.

Adverse weather conditions leading to short crops in large parts of Europe and Asia contributed to the increase in foreign imports. A part of these imports were obtained from the United States. When these imports were obtained from other countries, such as Canada, Australia, and Argentina, their higher earnings enabled them to increase their imports, some of which have already or may in the future come from the United States.

Weather conditions abroad provide

only a partial explanation of the rise in agricultural exports, including some of the increase in grain shipments. The expansion in cotton sales particularly in the fourth quarter of the year (which more than compensated for a decline during the first half of 1963) was due to changes in Government sales procedures which make it easier for U.S. exporters to compete in international markets. Increased sales of tobacco reflect largely a recovery from the preceding year, when sales were temporarily reduced. While sales of these products may not continue to rise as fast as they did in the latter part of 1963, the new level does not appear to be too high relative to the longer run export trend which may be anticipated.

Agricultural exports also reflect the rising standard of living abroad, particularly in the other industrialized countries. A major part of the export rise to these countries was in dairy products, vegetable oils and oilseeds, and various animal feeds.

About \$150 million of the 1962-63 rise in agricultural exports (from about \$1,250 million to about \$1,400 million) was financed by Government grants and capital. Such exports were relatively large in the first half of 1963 but fell off in the second half. During that period the rise in dollar sales was, therefore, even larger than in total agricultural exports.

Dollar sales of agricultural products in 1963 which were due to temporary conditions may be estimated roughly at about \$100-\$150 million. Most of these shipments occurred in the last quarter of the year.

About \$150 million of the 1962-63 export rise resulted from higher shipments of fuels, mostly coal. The rise in coal exports was accentuated by weather conditions and interruptions in coal production in Europe last spring, but is also due to a reduction in import restrictions as European requirements rose relative to production and inventories rapidly declined. U.S. coal is competitive in European markets provided low cost transportation facilities are available. To a large extent U.S. coal is used there in steel production. Coal exports did not continue to rise after the middle of 1963, but the gains achieved by that time were maintained.

Exports of nonagricultural materials and of finished manufactures, with the exception of commercial aircraft and "special category" goods (largely military and electronic equipment), rose in response to the acceleration in business activity in the other industrialized countries, although domestic demand, which competes with foreign demand for our industrial output, also increased. Exports to Western Europe and Japan appear to have increased somewhat more than one would expect on the basis of past relationships. In the case of Europe, the additional exports appear to have been—in part at least consumer goods. Such exports rose over 1962 by about \$60 million, as compared with the previous year's rise of \$10 million. Nevertheless, they continued to comprise only a rather small percentage of total exports to that area, and remained a rather insignificant part of the rapidly rising consumer demand abroad.

The major part of the rise in exports to Western Europe, most of which was presumably associated with the rise in production in that area, was in various industrial materials, and in machinery.

Exports to Japan also expanded earlier and initially faster than may have been expected on the basis of past relationships, but this relative advance narrowed again toward the end of 1963 as production in Japan accelerated.

Directly and indirectly the major turns in export to Japan also appear to be influenced by major changes in Japanese reserves. Downturns in reserves have in the past resulted in restrictions on imports and slowdowns in output, while growing reserves have facilitated relaxations of import restrictions and accelerations in economic activity.

A major factor in the export rise, particularly in the second half of the year, were expanding purchases by Canada. This increase may reflect the effects of the elimination of special import restrictions imposed during the Canadian exchange crisis in the middle of 1962 as well as the rise in Canadian business activity, and the increased incomes derived from the rise in sales of agricultural products.

Substantial increases in exports to Australia and South Africa were also

achieved, reflecting increases in the receipts of these countries from higher imports and investments by the United States and other industrialized countries. Shipments to the other countries in Asia, particularly India and Pakistan reflected higher Government aid, as well as higher returns on their exports.

In contrast to the rising exports to other parts of the world, business with Latin America stagnated through most of the year but some acceleration occurred in the last quarter. The major increase at that time was to Venezuela but there was also a rise in sales to some of the mineral exporting countries, and—with the major exception of Brazil—to some of the coffee exporters. The recent strengthening in prices for their exports should provide a basis for a further expansion in their imports from the United States.

Merchandise imports

Although imports did not rise in the last quarter of 1963 the increase for the year as a whole was just over 5 percent, not much less than the 5.4 percent rise in GNP. In past periods of expanding business activity imports frequently have risen somewhat more than domestic output.

The largest relative rise in imports was in manufactured consumer goods, including automobiles. For the year as a whole it amounted to 11.5 percent, more than twice the rate of increase in all imports, and more than double the rate of rise in total consumer expenditures on goods other than food, gasoline and oil. Imports of capital equipment also moved up faster than total imports. These two groups of manufactured goods comprise more than 40 percent of the total import rise.

A sharp rise occurred also in steel imports, which advanced by about \$150 million or 28 percent. Imports of other industrial materials and fuels rose only by 1.7 percent or less than one-third the rate at which domestic business activity expanded.

Imports of foodstuffs, which are much less sensitive to fluctuations in domestic production and incomes, expanded mainly because of rising prices, particularly for sugar. World coffee quotations started to rise about mid-September 1963, but through the end of the year had relatively little effect on import values. The price rise accelerated sharply, however, during the first 2 months of 1964. Imports of cattle, meat products and fish, which totaled close to \$1 billion, were only slightly higher than in 1962 and the upward trend in previous years was almost stopped.

Among the countries which benefited most from the rise in imports were

Japan and Hong Kong (with U.S. imports rising by more than 10 percent), Canada (6 percent), and Australia, and New Zealand (14 percent). The increase from Europe was only about 4 percent, and from Latin America not much over 2 percent, and most of that was in imports from Argentina.

^{1.} Excludes military transfers under grants.

Military and services transactions

A major improvement of the balance of payments was achieved through a reduction by about \$150 million in defense expenditures abroad. Nearly half of that decline was due to lower payments for fissionable materials, as the backlog on deliveries, contracted for in earlier years, gradually declined. The reduction in other expenditures is also significant, however, because it was achieved in spite of rapidly rising costs abroad, particularly for services. and increased salaries for U.S. personnel during the latter part of the vear.

Deliveries on foreign orders for military equipment, according to preliminary figures, did not rise, however, although the backlog of orders continued to expand. In the second half of 1963 advance payments by foreign countries for military equipment exceeded deliveries by about \$360 million. As these receipts change considerably from one quarter to the next. and the build-up of such liabilities cannot be expected to continue at the current rate, they are entered in the analysis table (table 1, line B2) as special transaction. In table 2, however, instead of deliveries and changes in liabilities cash receipts are shown (line B2). Total cash receipts in 1963 were about \$150 million less than in 1962, and approximately offset the decline in cash expenditures.

Travel exependitures continued to rise during the year. Receipts from abroad increased only by \$20 million. The major reason that this rise was not larger was the decline in Canadian travel in the United States following the devaluation of the Canadian dollar in May 1962. Receipts from other countries increased by about \$80 million or about one-sixth.

Income on investments

The balance on investment income, as was pointed out earlier, increased from 1962 to 1963 only by about \$40 million. the smallest amount since 1959. The decline in net receipts was the result of a slowdown in the rise in income on direct investments to hardly more than \$100 million for the year as a whole

Excludes military transfers under grants. (x) Less than \$500,000, r Revised. P Preliminary. Short-term capital movements between parent companies and their foreign affiliates are reported as part of direct

investment.

3. Excludes liabilities associated with military transactions, with Government assistance operations, and with sales of nonmarketable, medium-term, convertible Government securities.

(and an actual decline during the latter part of the year) and a substantial acceleration in income payments.

It is still true that the outflow of U.S. capital is mostly for long-term investments, which yield more than we pay on the inflow of foreign funds, a large part of which are held in liquid assets. However, the rise in domestic interest rates on time deposits and Government securities has affected not only the new foreign funds flowing in subsequent to that rise, but also, rather promptly, payments on all such foreign assets held here. This rise was the major reason for the increase in payments of income on foreign investments.

Receipts from all private U.S. investments abroad advanced further to a new high of \$4.1 billion in 1963, but the rate of growth was lower than in the past few years and receipts in the fourth quarter of 1963, according to preliminary data, were slightly less than in the corresponding quarter of the previous year.

Income received from direct foreign investments accounted for about threequarters of the total. Partial data now available indicate that branch profits in 1963, derived mainly from the petroleum and mining industries, were growing at a steady rate, but that dividend distributions from manufacturing and other affiliates did not increase in 1963 and may have diminished. The failure of dividends from these subsidiaries to rise may suggest that a larger part of their earnings was reinvested abroad. Data to confirm this are not yet available, however.

The quarter-to-quarter changes in income on direct investments are frequently the result of the timing of dividends by a few large subsidiaries in continental Europe. If these were smoothed out, the drop in the fourth quarter of 1963 from the fourth quarter of 1962 would be eliminated, but for the year as a whole there would still be a gain of only about 3 percent in total direct investment receipts, compared to about 10 percent in 1962.

Income from U.S. holdings of foreign securities and from short- and mediumterm loans increased by about \$100 million in 1963, about the same as in 1962. This gain is based largely on

additional investments averaging \$2 billion per year in 1962 and 1963.

Private capital movements—General developments

The outflow of U.S. capital, which had started to rise in the last quarter of 1962, continued that increase in the first half of 1963, reaching a total of about \$2,660 million in that period. The rise was largely in new issues of foreign securities, but direct investments were also up and so were longand short-term bank loans, as well as investments of corporate funds in foreign, particularly Canadian, banks. To stem the outflow of capital, the President proposed in the middle of July the enactment of an interest equalization tax on purchases of foreign securities to be effective generally as of the following day for purchases of outstanding securities and for purchases of new issues which were arranged after that date. In addition the ceiling on interest rates on time deposits was raised, and the discount rate was increased; these measures made it possible for the rates on short-term Treasury bills and on private negotiable obligations with comparable liquidity to

The capital outflow dropped to about \$1,420 million during the second half of the year—although this period still included the sales of some new issues which had been arranged for earlier. The decline was mainly in the third quarter, however. In the fourth quarter capital outflows—after allowance for seasonal changes—increased again to about \$950 million, which was about as high as the quarterly average during the years 1960 to 1962. About \$390 million of the \$470 million rise between the two quarters was in direct investments.

For the year as a whole the net outflow of U.S. private capital was about \$4,080 million, \$810 million more than in 1962 but still less than in the previous peak year of 1961.

Inflows of foreign private funds for investment in other than liquid assets were about \$240 million up from 1962, as a result of increased purchases of U.S. securities. Inflows of foreign capital for direct investments in the

United States were somewhat smaller than in 1962.

Both U.S. investments in foreign securities (new issues) and foreign purchases of U.S. securities were increased in the second quarter by about \$100 million as a result of transactions closely linked to each other.

The debit balance for the combination of U.S. capital outflows and foreign capital inflows was about \$3,690 million, or \$570 million higher than in 1962.

Major types of capital transactions

U.S. direct investments abroad for the year as a whole were about \$1,800 million, as compared with \$1,560 million in 1962. The outflow was relatively large in the first half of the year. In the third quarter the outflow dropped sharply, but that decline was nearly compensated by a rise in the fourth.

The large shift in direct investment capital outflows from the third to the fourth quarter even after seasonal adjustment reflected a change from a short-term cash inflow from continental Europe in the third quarter to an outflow in the fourth. Another factor was a large cash outflow to Venezuela, considerably higher than in the fourth quarter of 1962. The change may be associated with tax payments and seems to be reflected in official dollar balances held by that country.

Direct investments in the fourth quarter were also raised by a higher rate of permanent investment in manufacturing and petroleum companies, including about \$40 million spent to acquire existing European companies.

Although direct investment capital flows varied sharply between quarters, the overall rise in 1963 would correspond to the projected increase in plant and equipment expenditures of the foreign enterprises, as reported by the U.S. parent companies early in the year.

Net purchases of foreign securities, both newly issued and outstanding (excluding the special transaction in the second quarter mentioned above) were not much higher in 1963 than in 1962. During 1963, they declined, however, from about \$900 million in the first half (which was nearly twice the 1962 rate) to about \$100 million in the second. Purchases of newly issued securities dropped—after seasonal adjustment—from a quarterly average of \$430 million in the first half of the year to \$218 million in the third quarter and \$115 million in the fourth.

Transactions in outstanding securities shifted from net purchases of about \$110 million in the first half of 1963 to net liquidations of \$150 million in the second half. The net liquidation of foreign equity securities in the fourth quarter was about \$100 million, with continued net selling of Canadian stocks and sizeable selling of European stocks in contrast to large net purchases through August. The shift from net purchases to net sales probably was stimulated by the relatively buoyant situation of the U.S. stock market, as well as by the interest equalization tax proposal.

There was also a substantial shift from 1962 to 1963 in investments by nonfinancial corporations of funds in foreign time deposits and other shortterm receivables. In 1962 their holdings of such assets increased by \$266 million while in 1963 they were reduced by \$70 million (table 3). New investments in such assets were still large during the first half of 1963, but the movement was reversed sharply during the second half when over \$200 million of such assets were liquidated. Both the outflow in 1962 and early 1963 and the subsequent inflow affected mainly U.S. dollar assets held in Canada. This change in movements during 1963, which exceeded the usual seasonal shifts of funds, may be related to the higher earning opportunities for relatively liquid investments in the United States following the rise in interest payments on such assets in the middle of the year. Longer term corporate loans were also reduced, particularly in the fourth quarter, when more than \$150 million of credits appeared to have been shifted to U.S. commercial banks.

The largest rise in capital outflows in 1963 was in bank credits, both in medium-term credits with a contractual maturity of over one year and in short-

¹ Survey of Current Business, October 1963, p. 15.

term loans some of which are made on a revolving basis and de facto are frequently extended for periods exceeding 1 year. The total for the year (without the apparent shift of outstanding loans from commercial concerns) was about \$1,280 million, of which about \$580 million were mediumterm loans. In 1962 total bank credits were less than \$400 million, including not quite \$120 million in medium-term credits.

The rise in medium-term bank credits started in the second quarter of the year (before the interest rate equalization tax was proposed) but it accelerated during the second half even after taking account of the more than \$150 million apparently shifted from commercial concerns. The short-term bank credits followed the same pattern (particularly if a very short-term loan to Europe of about \$100 million extended at the end of June and repaid early in July is disregarded). With these adjustments and allowance for seasonal variations, bank credits in the first half of 1963 were about \$500 million and in the second half about \$780 million.

The net increase in medium-term bank loans for the fourth quarter was \$459 million (\$415 million after seasonal adjustment), nearly all in December, but this included the credits apparently taken over from commercial firms. The loans were extended to several European countries, as well as to a number of Latin American countries, and Japan.

Short-term credits by U.S. banks shifted abruptly from a net liquidation of about \$100 million in the third quarter to net extensions of \$490 million in the fourth. A major part of the shift was seasonal and it also resulted from large credits provided to Japan. In the fourth quarter these credits were \$275 million, and followed over \$100 million in credits extended during the second quarter (see table 3). Other credits were mainly to Latin America and other less developed countries. Some increase occurred also in credits to Canada (offsetting in part the return flow of corporate funds), but new lending to the major financial centers in Eurpoe continued to be relatively small.

Summary

The improvement in the balance of payments during 1963 reflects in part favorable changes in the more basic economic relationships between this country and the rest of the world, measures taken by the Government, and some developments which may have only temporary significance.

The change in these relationships seems to have been reflected mainly in merchandise trade, and perhaps some of the capital movements. It seems to be based on the rapid rise in living standards in most of the other industrialized countries and some improvement in investment opportunities here. The rise in exports seems to have been somewhat more than what could be expected from past experience. The additional exports—particularly to the other industrialized countries—appear to have been in agricultural and to a lesser extent in consumer goods. At the same time our other exports, particularly in industrial materials and machinery, rose as foreign business activity expanded.

In addition to these developments we had the benefit of exceptionally high exports of agricultural goods which may be attributed to strictly temporary factors.

Imports, while also expanding, moved up somewhat slower than in earlier periods of rising business activity, but the lesser rise was mainly in imports from the less developed countries, some of whom spend a relatively large part of their exports earnings in the United States. The longer run balance of payments effect of the relatively slower rise in imports, therefore, may not be as large as the relatively slow import rise itself may suggest.

Government measures to reduce expenditures and increase receipts abroad resulted in a drop in military expenditures and an increase in foreign orders for military equipment which should be followed by an increase in shipments.

The large change during the year was, of course, in capital outflows, particularly in net purchases of foreign securities. During the first half of the year these transactions included large

amounts of Canadian issues which were not expected to continue at that rate. There were also indications, however, that new issues of other countries would continue to rise. The proposed interest equalization tax provided a barrier to such new issues and also resulted in a change from net purchases to net sales of other foreign securities. This change, however, may also have reflected improved investment opportunities in domestic securities. An important shift also occurred in the flow of corporate funds-not related to direct investments—from net acquisitions of foreign assets in 1962 and the first half of 1963 to relatively large liquidations during the latter part of the year. This shift may reflect the rise in interest rate on relatively liquid assets in the United States.

Even with these improvements, the outflow of U.S. capital—which basically reflects the larger supplies relative to demands here than abroad—remained large, particularly through direct investments and bank loans, which increased substantially during the year.

The renewed rise of capital outflows in the fourth quarter appears to reflect deeper lying economic relationships as well as temporary diversions from longer-run trends. The exceptionally sharp rise in direct investments may be in the latter category, and this may also apply to part of the rise in bank loans. On the other side, however, was the exceptionally large return of funds from Canadian banks. This would suggest that omitting temporary fluctuations capital movements in the fourth quarter may have been somewhat but not much below the actual figures, but perhaps by as much as one-third under the rate in the first half of the year.

Abstracting from the temporary developments, and from the "special" Government transactions that have been reviewed, it would seem, that the balance during the latter part of 1963 was improved and probably broke out of the range of adverse balances between \$3 to \$4.5 billion experienced between 1958 and the first half of 1963. This improvement, while significant, was not quite as large, however, as the actual transactions may suggest.

†Revised for 1958 and following years to include creamed cottage cheese and frozen products (these products are excluded from data for 1958 and earlier as shown above). Source: U.S. Department of Agriculture, Economic Research Service.

^{*} Estimated.

¹ The revised index, back to 1951, reflects the following changes: Enlargement of the sample (currently representing 52 newspapers): weighting of component indexes based on the labor force in the cities covered; updating of the seasonal factors; and shifting of the index base from 1957 to 1957-59=100.

² For the period 1948-50, the data are based on an original index compiled by the Metropoli-

Current BUSINESS STATISTICS

THE STATISTICS here update series published in the 1963 edition of Business Statistics, biennial Statistical Supplement to the Survey of Current Business. That volume (price \$2.00) contains data by months, or quarters, for the years 1959 through 1962 (1951–62, for major quarterly series) and averages of monthly or quarterly data for all years back to 1939; it also provides a description of each series and references to sources of earlier figures. Series added or significantly revised after the 1963 Business Statistics went to press are indicated by an asterisk (*) and a dagger (†), respectively; certain revisions for 1962 issued too late for inclusion in the aforementioned volume appear in the monthly Survey beginning with the August 1963 issue. Also, unless otherwise noted, revised monthly data (for periods not shown herein) corresponding to revised monthly averages are available upon request. Except as otherwise stated, the terms "unadjusted" and "adjusted" refer to adjustment for seasonal variation.

Statistics originating in Government agencies are not copyrighted and may be reprinted freely. Data from private sources are provided through the courtesy of the compilers, and are subject to their copyrights.

4 Unadjusted. Data represent firms in operation as of Jan, 1; estimate for Jan, 1, 1963 is based on incomplete data. §Personal saving is excess of disposable income over personal consumption expenditures shown as a component of gross national product on p. S-1. ¡More complete details are given in the quarterly reviews in the Mar., June, Sept., and Dec. issues of the Survey.

^{*}Revised. *Preliminary.

1 Estimates for Jan.-Mar. 1964 based on anticipated capital expenditures of business.

2 Estimates for Apr.-June 1964 based on anticipated capital expenditures of business.

Anticipated expenditures for the year 1964 are as follows (in bit. 8): All industries, 43.19; manufacturing, total. 17.72; durable goods industries, 897; nondurable goods industries, 8.75; mining, 1.04; railroads, 1.38; transportation, 2.06; public utilities, 6.01; commercial and Digitized for PRACER communications). 14.98.

3 Includes communications.

r Revised. P Preliminary. The total and components are annual totals. Italicized totals for Jan. 1963 and Jan. 1964 exclude stepped-up rate of Government life insurance payments to veterans (Jan. 1963 total also excludes special GLI dividend payments); total disbursements of \$298 million (Jan. 1963) and \$172 million (Jan. 1964) multiplied by 12 (to

put on annual rate basis) amounted to \$3.6 billion (Jan. 1963) and \$2.1 billion (Jan. 1964.) Figures for transfer payments and total nonagricultural income reflecting similar exclusions are as follows: Jan. 1963—\$35.5 billion and \$432.3 billion; Jan. 1964—\$37.9 billion and \$459.5 billion. 9 Includes data not shown separately.

*Revised. 1 Advance estimate. and components are end-of-year data. \$See note marked "†" on p. S-4. \$See note marked "†" on p. S-4. *New series. See similar note on p. S-5 of Nov. 1963 Survey. †Revised series, Effective with the Dec. 1963 Survey, data reflect the following major changes: Introduction of the Annual Survey of Manufactures as the new benchmark, revision of sample design, refinement

of industry reporting, expansion of industry groups published, and revision of seasonal factors. In addition, data by market groupings are presented for the first time. Data for shipments and new orders not seasonally adjusted are adjusted for trading day variation. Revisions back to 1947 and a detailed description of the current revision appear in the Census Bureau publication, "Manufacturers' Shipments, Inventories, and Orders: 1947-63 Revised." § Includes data for items not shown separately.

r Revised. ¹ Monthly average. ² Advance estimate. ³ Data for total and components (incl. market categories) are monthly averages based on new orders not seasonally adjusted. † See corresponding note on p. S−5. ♀ Includes data for items not shown separately. ⊕Includes textile mill products, leather and products, paper and allied products,

and printing and publishing industries; unfilled orders for other nondurable goods industries are zero. For these industries (food and kindred products, tobacco products, apparel and related products, petroleum and coal products, chemicals and allied products, and rubber and plastics products) sales are considered equal to new orders.

r Revised. • Corrected. ¹ Based on unadjusted data. ² Annual data for 1961-63 for parity ratio adjusted for government payments made directly to farmers are as follows (unit as above): 83; 83; 81. Descriptive material and annual data back to 1933 appear in the Dept. of Agriculture publication, "Agricultural Prices," January 1964. ³ "All items" index on old basis. ⁴ New series. Beginning Jan. 1964 the index reflects the following changes: (1) updated weighting factors and price data base; (2) improvements in statistical procedures; (3) a more comprehensive index, incl. single workers living alone, as well as families of wage earners and clerical workers; (4) expansion of the "market basket" from 325 to 400 items; and (5) increase in the sample of priced cities to 50 metropolitan areas and cities in the U.S. incl. Alaska and Hawaii. The new series has been linked to the old series as of Dec. 1963 to provide continuous series (see exceptions in notes "¶" and "*"). More complete

information and data are available from the Bureau of Labor Statistics, U.S. Dept. of Labor (Washington, D.C., 20210).

a Data are from Dun & Bradstreet, Inc. †Revised beginning Jan. 1963 (unad), and seas. adj.) to incl. data for District of Columbia. Seas, adj. data revised beginning Jan. 1962 to reflect new seas. Retors. Revisions for Jan.—Dec. 1962, respectively, (seas. adj.) are as follows (number): 15,599; 15,755; 15,670; 15,372; 15,245; 14,947; 15,171; 15,056; 15,249; 14,892; 14,951; 14,985. ‡See note marked "‡" on p. S-7 of the Feb. 1964 Survey. §Ratio of prices received to prices paid (incl. interest, taxes, and wage rates). ¶Data beginning 1962 as shown here are not comparable with "old series" data formerly published. ♀Incl. data not shown separately. *New indexes.

^{*}Revised. 1 Not yet available; estimate included in total. 2 Data for total and components are totals for the year. 3 Computed from cumulative valuation total. 4 Includes yardage reported as "miscellaneous." 1 Hevised series. Revisions back to 1959 are shown in Construction Report C30-53 (Supplement); data back to Jan. 1950 will be available in a later Supplement (Bu. of the Census). 2 Includes data not shown separately.

AMonthly averages for 1962 are based on annual totals including revisions not distributed by months.

§ Data for Jan., May, Aug., and Oct. 1963 and Jan. 1964, are for 5 weeks; other months, 4 weeks. Comparable data prior to 1961 not available.

♂Data for Jan., Apr., July, Oct., and Dec. 1963 are for 5 weeks; other months, 4 weeks. †Revised to 1957–59 reference base; also reflects revision of basic data.

r Revised.

Advance estimate.

Includes data not shown separately.

Comprises lumber yards, building materials dealers, and paint, plumbing, and electrical stores.

Revised (back to Jan. 1953) to reflect use of new seasonal factors and new adjustments for trading day differences. Revisions for periods not shown here appear in the July 1963

Census report, "Monthly Retail Trade Report, Adjusted Sales, Supplement."
†Revised series. Revised to take account of the latest (1962) Annual Survey of Retail
Trade benchmark data, and to reflect new seasonal factors beginning 1956. Data for earlier
periods appear on pp. 16-19 of the Dec. 1963 Survey.

r Revised.

Average for Dec. 2 Quarterly average. 3 Monthly average.

For demand deposits, the term "adjusted" denotes demand deposits other than domestic commercial interbank and U.S. Government, less cash items in process of collection; for loans, exclusive of loans to domestic commercial banks and after deduction of valuation reserves (individual loan items are shown gross; i.e., before deduction of valuation reserves).

⁹ Includes data not shown separately. OAdjusted to exclude interbank loans. § For bond yields, see p. 8–20.
*New series (FHLBB); earlier data not available. ¶ Data are as of end of consecutive 4-week periods ending in month indicated, except June figure which is as of June 30 (end of fiscal year). †Unadj. data revised back to 1962; seas. adj., back to 1960. Revisions for periods not shown here are available in the Nov. 1963 Federal Reserve Bulletin.

¶Includes grant-aid shipments under the Dept. of Defense Military Assistance Program, as well as economic aid shipments under other programs. The indicated totals for 1962 and 1963 have been revised to reflect all revisions published with data through Dec. 1963; the various breakdowns have not been so revised and, therefore, do not add to the appropriate totals. △Excludes "special category" shipments.

⁷ Revised. ^p Preliminary. ¹ Quarterly average at annual rate. ² For 12 months ending Dec. ³ Jan. and Feb. data reflect effects of dock strike and its aftermath. ⁴ Less than \$50,000. ⁵Number of stocks represents number currently used; the change in number does not affect continuity of the series. ⁹ Includes data not shown separately. [†]Revised series; former series covered fire insurance only.

Unless otherwise stated, statistics through 1962	1962	1963						196	33						19	64

SURVEY OF CURRENT BUSINESS

r Revised. ¹ Quarterly average. ² For month shown. ⁸ Data cover 5 weeks; ⁵ ther months, 4 weeks. ⁴ Data cover 6 weeks. ⁹ Includes data not shown separately. ^AProducers' stocks, elsewhere, end of Feb. 1964, 19,200 tons. ⁸ New series. Shipments (from The Institute of Boiler and Radiator Manufacturers) represent the following approximate percentages of total industry shipments: Convectors ¹⁰ to 95%; radiators and baseboards, 80 to 85%.

Alneludes data for built-in gas fired oven-broiler units; shipments of cooking tops, not included in figures above, totaled 26,700 units in Dec. 1963,

⊙Data exclude sales of combination washer-drier machines; such sales (iucl. exports) totaled 1,500 units in Jan. 1964.

§ Radio production comprises table, portable battery, auto, and clock models; beginning Jan. 1964, television sets include figures for color sets.

Unless otherwise stated, statistics through 1962	1962	1963						19	63						1964

<sup>Revised.
Preliminary.
Monthly average based on Apr.-Dec. data.
Data beginning Jan. 1963 not entirely comparable with those for earlier periods.</sup>

Beginning Jan. 1963, data exclude condensate wells formerly included.
 Less than 50,000 bbls.
 See note I for p. S-36.
 Y Includes data not shown separately.
 Includes nonmarketable catalyst coke.

Revised. ** Preliminary.
 Effective Jan. 1964, compiled on basis of 6.5 days per week (formerly, 6 days); not comparable with earlier data (on new basis, rate of activity in 1963 averaged 87 percent; in 1962, 85 percent).

[†] Monthly averages for 1962 for new orders, production, and shipments reflect revisions to adjusted annual totals; revisions by months not available. σ^2 As reported by publishers accounting for about 74 percent of total newsprint consumption in 1963.

Unless otherwise stated, statistics through 1962	1962	1963						19	63						196	64

⁷ Revised. P Preliminary. 1 Season average. 2 Season average to Feb. 1, 1963.
2 Data cover 5 weeks; other months, 4 weeks. 4 Data are for month shown. 5 Qtrly.
average. 6 Less than 500 bales. 7 Revised 4th quarter 1962.
9 Includes data not shown separately. © Revisions for Aug.—Dec. 1962 are available.

© Beginning Feb. 1963, price in skeins, AAA grade; comparable Jan. 1963 price, \$7.67 per
Digitized and Parkersions for 1st half of 1962 are available upon request.
Beginning Jan. 1963, includes small quantities of carbonized wool imports in actual weight.

http://fraser.stiouisted.org/

^{*}New series. Data cover wools, not finer than 46s, and camel hair, duty-free, for use in the manufacture of rugs, carpets and certain specified items. Prior to the Feb. 1964 SURVEY, imports of apparel class wool were shown; however, the calculated difference between total wool imports and the former apparel class is not comparable with the present carpet class since the former apparel class included duty-free wools, finer than 40s. Monthly data for 1959-62 are available upon request.

r Revised.

Reflects year-end adjustments and changes in accounting practice involving the concept of backlog.

Preliminary estimate of production.

Monthly revisions for Jan. 1961-Oct. 1962 are available upon request.

Total includes backlog for nonrelated products and services and basic research.

[⊕]Data include military-type planes shipped to forcign governments.

♂Data cover complete units, chassis, and bodies.

⊙Courtesy of R. L. Polk & Co; republication probibited.

§Excludes railroad-owned private refrigerator cars and private line cars.

BALANCE OF PAYMENTS STATISTICAL SUPPLEMENT

REVISED EDITION

Covering about 40 years, this comprehensive array of statistical information on the balance of payments of the United States, with revised and internally consistent data organized for ready reference, includes:

Specially constructed tables on MERCHANDISE TRADE since 1923, giving exports and imports by economic end-use categories.

Full details on international TRAVEL expenditures and receipts, freight and shipping, miscellaneous services and private remittances.

U.S. Government: military and non-military expenditures abroad; credits, grants, and other economic assistance; receipts for interest and principal.

PRIVATE FOREIGN INVESTMENTS: detailed data on values, capital flows, earnings, income receipts; data on sources and uses of funds of direct investments; short-term and portfolio capital flows.

-[PRICE, \$1.25]--

Orders may be placed with the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C., 20402, or with any U.S. Department of Commerce Field Office. Check or money order should be sent with orders.
