The Business Situation

BUSINESS activity in November continued upward at a slow pace. There was a temporary interruption in the tempo of economic activity for a period immediately after the assassination of President Kennedy. The upward momentum was resumed, however, reflecting basic underlying strength of the economic forces. Business confidence has been bolstered by prospects of a tax cut that is expected to be retroactive to the beginning of 1964.

In particular, output was increased as a result of the upturn in the steel industry, and further advances occurred in the production of automobiles and investment goods, and in residential construction. With output being further stimulated by higher expenditures by State and local governments, and for consumer services, another fair-sized gain in aggregate production seems assured for the fourth quarter.

Investment advance

The overall investment pattern which is depicted in the subsequent reviews of business investment plans and housing activity is comparatively favorable: Aggregate investment is an expansionary force in the present quarter and business expects a moderate rise in plant and equipment outlays in the first half of the coming year. A significant aspect of business investment outlook is that no single major sector—plant and equipment, inventory investment or housing—is expected to expand by large proportions. The fact that excesses have been avoided in these activities that have typically been sources of cyclical instability is a favorable factor in the near-term.

Income and employment

Personal income rose by about \$1½ billion in November to a seasonally

adjusted annual rate of \$472½ billion; the year-ago total was \$450 billion. Payrolls were little changed over the month. Mostly as a result of higher unemployment, transfer payments increased \$½ billion; interest and dividend payments together rose by a somewhat larger amount. So far in the fourth quarter personal income has averaged \$7 billion higher, at an annual rate, than in the third quarter and is 5 percent above the year-ago rate.

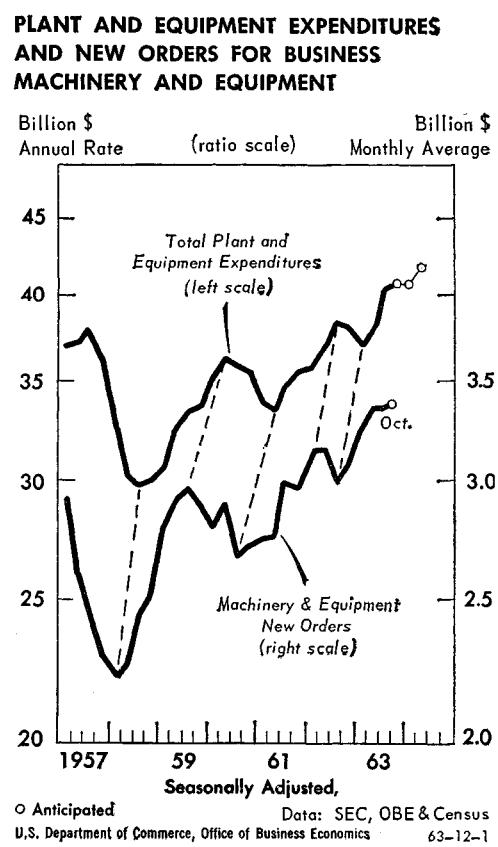

Aside from the fact that the military pay raise became effective in October, the smaller rise in payrolls in November as compared with the previous month was attributable to the small gain in employment. The preliminary seasonally adjusted nonfarm employ-

ment total was up fractionally over the month. This resulted from the combination of very modest increases in nonmanufacturing and government employment and a somewhat larger than seasonal decline in manufacturing. Compared with a year ago the November nonfarm employment was up nearly 1½ million or 2½ percent. Seasonally adjusted unemployment moved up to 4.3 million, representing a rate of 5.9 percent compared with 5.5 percent in October.

Steel and auto output higher

Iron and steel production has been rising since August but it was only in November that the gain exceeded seasonal expectations. On a seasonally adjusted basis, the 3 percent rise in November reflected renewed buying by steel consumers, who came back into the market late in the summer and stepped up their ordering in October to the best level since the spring. Steel demand has increased both because stocks have been reduced and demand for hard goods has continued to advance. In October, inventories held by steel users were reduced by 1 million tons—the third successive monthly drop—while consumption of steel increased, so that the stock-consumption ratio at the end of the month was about the lowest in 2 years.

In spite of the summer dip, output of the steel industry for 1963 as a whole was the best in some years. Production is expected to exceed 109 million ingottons—up 11 million tons over 1962 and the highest volume since 1957, when output totaled 113 million tons. It is expected that consumption of steel this year will exceed that of 1957. In that year exports of steel exceeded imports by about 4 million tons; this year it is

expected that imports will exceed exports by approximately 3 million tons.

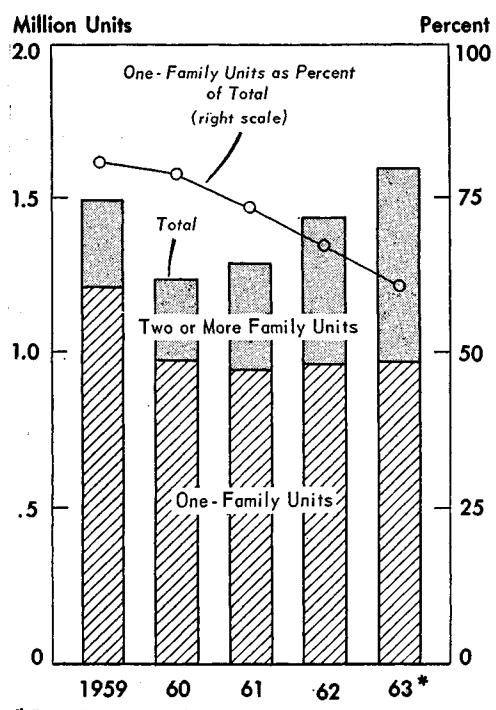

Expectations of continued strength in steel markets, together with the improved profit position of the industry and the requirements for modernization of steel plants, are factors in the sharp step-up of capital outlays by the industry.

Assemblies of motor vehicles, which increased sharply from September to October, advanced further in November, after adjustment for seasonal variation. Output rose in spite of interruptions from temporary work stoppages which reduced assemblies below planned production schedules in some important plants. Carmakers turned out about 875,000 passenger cars and trucks in November, the second largest monthly total this year and the highest count for the month on record. Production in December is expected to be maintained close to the November rate. The fourth quarter output is expected to be at a record high—about one-eighth above the October–December period of 1962.

For the full year, assemblies of passenger cars and trucks are likely to

PRIVATE NONFARM HOUSING STARTS

1963 Total Highest Since 1959
Single Family Units Have Changed Little Since 1960

U.S. Department of Commerce, Office of Business Economics

top 9 million units, almost 900,000 higher than in 1962 though still 130,000 short of output in 1955. Truck production, at 1.45 million units, would be the highest for any year on record, exceeding slightly the previous high in 1951.

Retail sales

November sales slipped somewhat from the record October rate. On the whole, the November retail business held up well in view of the fact that there were sharp and widespread declines in retail buying immediately after the death of President Kennedy.

An average of October and November would put retail sales about even with

the third quarter rate and 3½ percent above the corresponding year-ago totals. So far in the fourth quarter, durable goods sales are running well above the third quarter rate as a result of a strong auto demand and very buoyant furniture and appliance sales. Nondurables are lagging, mainly because sales of clothing have been slow. A slightly lower rate of food sales in the current quarter reflects mainly a decrease in food prices.

Sales in the first week of December recovered sharply from the preceding week. With incomes rising and consumers making free use of credit, continued strength may be expected in consumer markets.

Recent Housing Developments

- Rise in multifamily-unit construction
- Single family units remain sluggish

HOMEBUILDING activity has been high this year and has made an important contribution to increased output. With data now available for 11 months, it appears that private nonfarm residential construction outlays for 1963 will total some \$26 billion, a \$2 billion or 8 percent increase over 1962. If allowance is made for higher construction costs, the physical volume rise amounts to 6 percent.

A rising trend since last winter has extended to almost 3 years the somewhat uneven advance in residential activity that has coincided with the rise in general business activity. By October and November, seasonally adjusted expenditures were running at an annual rate of \$27 billion, almost \$3 billion above the year-ago total and roughly one-third above the recent low in early 1961.

These record dollar totals for 1963 reflect the best volume of private nonfarm housing starts in several years—close to 1.6 million units. In recent months, starts have been quite strong—averaging better than 1½ million in September and October, at seasonally adjusted annual rates. The starts series is particularly erratic but the less

volatile series on building permits in October also was at a peak for the year—some 10 percent above the 1963 average.

Composition of New Housing Units

This year, as in the 2 previous years, multifamily units have accounted for all of the gain in housing starts. Despite some slowing down in the relative advance of multifamily units this year, since 1960 new starts of this type have increased by well over 100 percent, while new one-family units have changed very little. The one-family proportion of total starts, which had begun to edge down as far back as 1957, dropped from approximately four-fifths in 1960 to about three-fifths this year.

Although detailed information on removals from the housing inventory is needed for a proper accounting of changes in the housing stock, it is likely that there has been a shift toward multifamily housing in the housing inventory, but probably only in the past 2 years. The text table below provides a breakdown, by type of structure, of the occupied units in the nonfarm housing stock in April 1960, as shown in the latest census.

Type of structure	Percent of total
1-family units.....	73.2
2-4 family units.....	13.9
5- or more family units.....	11.3
Trailers.....	1.5
Total.....	100.0

The failure of single-family home starts to change much since 1960 even though personal income has risen by almost one-sixth over the past 3 years and funds for construction and purchase loans have been generally ample, suggests that more fundamental forces than current income and financing may be at work. In the analysis of long-term housing demand that appeared in last month's SURVEY, it was pointed out that the age distribution of the population in recent years has not been and in the near future is not expected to be particularly favorable for growth in the single-family market. For example, the age groups that typically buy rather than rent—roughly, those from 25 to 44—are expected to decline in number from 1960 to 1965. By contrast, the

population in the age group that initially rents—those from 20 to 24—is undergoing a rise, though, as was indicated, the large population push is not expected until after 1965.

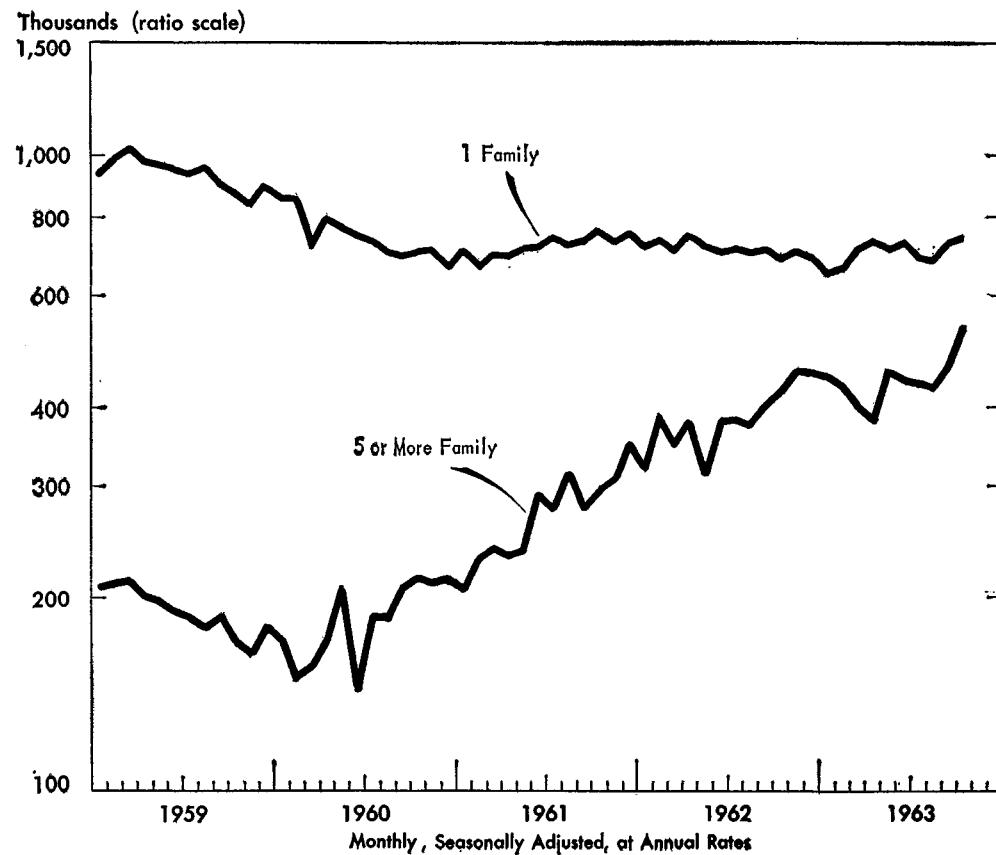

This is not to suggest that rising income is having no effect on housing demand. Last month's analysis also pointed out that advancing income was an important factor in the trend toward the establishment of separate households by single individuals—young unmarried adults and older widowed or divorced persons—whose housing demand is mainly for apartment space. In addition, higher incomes are strengthening replacement demand, particularly for apartment units. We note below some aspects of recent multifamily house construction which may be helpful in assessing current housing trends.

First, the recent trend to apartment houses represents much more than a shift to the building of luxury apart-

ments, the market for which is comparatively small. If multifamily building were changing in favor of high-priced units, we might expect to find a larger rise in average construction costs per unit than in the construction cost index, but this has not been the case in recent years. From 1959 to 1963 (first 8 months) average unit costs have risen approximately 7 percent for multifamily structures—somewhat less than the rise in the average unit cost for 1-family houses and about the same as the increase in the residential construction cost index. Second, although some large metropolitan areas such as New York and Los Angeles are fairly important in the multifamily building totals, the apartment-house surge is not confined to a handful of areas; it is widespread, reaching out to numerous parts of the country. Table 1, which is based on a tabulation of building permits, shows that since 1960 the

proportion of apartment units has increased in all major geographical regions and in 23 out of 25 of the largest metropolitan areas, ranked by total population in 1960.

Suburban trend continues

Another very important locational aspect of the new apartment-house building deserves mention: A significant proportion of this construction is being erected in the suburbs, although the bulk of the multifamily housing inventory is located in central cities. In 1962, some 46 percent of multifamily buildings (5- or more unit) permits were issued for units located outside of central cities, mostly in metropolitan areas. By way of contrast, according to the 1960 Housing Census, only 22 percent of all existing multifamily units of this type were located outside of central cities. To look at the data another way—in 1960 less than 6 percent of the occupied housing inventory in metropolitan areas but outside of central cities were apartment units. During 1962, one-fourth of new units covered by

construction permits in metropolitan areas outside of central cities have been apartment units. The apartment house appears to be following to the suburbs the single family home—and, in addition—the shopping centers, schools, churches, and other types of public and neighborhood facilities which have proliferated in outlying areas in the past decade and a half and which have recently been sustained by the growth in multifamily housing.

The multifamily trend also represents an overdue freshening of the apartment-house stock, particularly in the cities. Because comparatively little multifamily housing had been built since the 1920's, the inventory of such housing had become comparatively old at a time when those families and individuals who prefer apartment-house living were enjoying rising incomes and could thus afford newer apartment accommodations. As of 1960, for example, 72 percent of apartment units were 20 years old or more, as against 52 percent for 1-family units. The Census data also

suggest that the proportion of old housing units in the residential inventory increased from 1940 to 1960.

Rental vacancies stable

To judge from vacancy statistics, the recent large volume of apartment-house construction has not been accompanied by any significant change in vacancies on a national basis, although some rise in rental vacancies has occurred in the northeast part of the country. In the third quarter of 1963, the overall vacancy rate for rental housing was about the same as the average of the previous 3 years—7.6 percent. On the other hand, single family vacancies this summer were significantly higher than in the corresponding period of previous years—a development which is consistent with the sluggish behavior of single family home starts.

The outlook

While there may be some question as to whether the very high rate of starts in September and October is a sustainable one in the near-term, underlying demand for multifamily housing appears to be fairly strong, and some further growth in this type of housing over average 1963 levels appears probable. Single family units are likely to continue the pattern of little change. Although the recent trend of less ease in money markets has thus far not affected homebuilding, to judge by postwar experience, a movement toward monetary stringency would probably adversely affect new housing starts.

Business Plant and Equipment Programs, First Half of 1964

EXPENDITURES for new plant and equipment in the third quarter were at a record seasonally adjusted annual rate of \$40 billion, having risen \$2 billion from the previous quarter. A further increase to \$40½ billion is anticipated for the current quarter, and this rate

of spending is expected to be maintained in the opening quarter of 1964.¹ Businessmen anticipate an increase in outlays to a \$41.7 billion rate in the

second quarter of 1964. Sustained strength in investment through mid-1964 is shown by durable goods manufacturers, communications companies, and the airlines.

This is the first time that the OBE-SEC plant and equipment survey has

¹ These results are based on reports filed by business in November 1963 in the regular investment surveys conducted by the Office of Business Economics and the Securities and Exchange Commission.

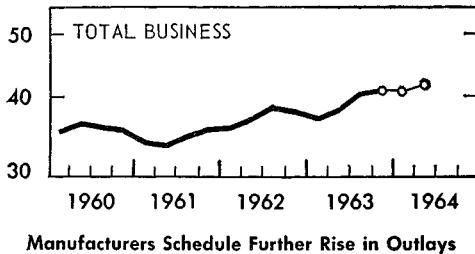

presented a 3-quarter-ahead projection; the tentative nature of the second quarter 1964 figure should be noted. Comparable expectations data were previously collected only in the November 1961 and November 1962 surveys. Accordingly, the adjustments which are made to the reported quarterly anticipations to correct them for systematic departures from actual outlays on the basis of past experience, are in this case based on only two observations.

In the first half of 1964 expenditures for new plant and equipment are expected to be slightly higher than in the second half of 1963, and 10 percent

Nonmanufacturing.....	22.10	22.75	24.05	24.50	24.35	25.15

¹Anticipated in November 1963.

Realization of 1963 programs

Capital outlays this year are expected to aggregate \$39 billion—about the same as projected in last February's survey. This represents an increase of 5 percent over 1962, and compares with a 9-percent advance from 1961 to 1962. Spending by most major industries in 1963 is closely in line with investment programs reported early in the year. Motor vehicle and petroleum producers, as well as railroads, are spending more than planned, while outlays by the commercial group are off a little from expectations.

Actual expenditures in the third quarter were the same as projected 3 months ago. The current anticipation for the fourth quarter is off by 1 percent from the preceding estimate, due almost entirely to a reduced projection by the commercial group. The currently expected rate of \$40½ billion in the fourth quarter is 2 percent higher than actual outlays in the third quarter; all of the major business groups except public utilities are scheduling higher expenditures in the fourth quarter than in the third.

Manufacturers' programs

Manufacturers' expenditures for new plant and equipment, after a small setback last winter, have recovered to a near-record \$16 billion (seasonally adjusted annual rate) in the third quarter. An increase of 2 percent is expected for the closing 3-month period of this year. Aggregate outlays in 1963 will be 6 percent higher than last year's total—or about the same rate of advance as in 1962.

Further increases in new plant and

equipment spending, but at slower rates, are indicated by the current plans for the first and second quarters. Generally, industries with the larger investment increases in 1963—steel, autos, food—are projecting increases for early next year; while other industries are reporting mixed trends. This would suggest that the first half 1964 anticipations as reported in November reflect more the continuance of existing projects than the initiation of large new programs.

Durable goods

Both the durable and nondurable goods groups are anticipating some further increase in expenditures for new plant and equipment in the first two quarters of 1964. For durable goods producers the increase would mark 12 successive quarters of expansion; and total 1963 expenditures will probably top those of 1962 by 11 percent, following the 12 percent advance from 1961 to 1962.

The 1963 pacesetter in the durable-goods group was the iron and steel industry, where expenditures for new plant and equipment will be nearly one-eighth larger than in 1962. The advance in capital spending by steel companies during 1963—averaging over

5 percent per quarter—is expected to be followed by a slight rise in the first quarter of 1964. If anticipations are realized, spending for new steelmaking facilities will reach an annual rate of \$1.4 billion in the opening quarter of 1964. While this amount is one-third higher than a year earlier, it is still more than one-fourth under the record third quarter of 1957.

Producers of motor vehicles have substantially increased their 1963 expenditure programs from plans formulated early this year. Outlays are now expected to exceed \$1 billion this year—up one-fourth from 1962. Actual outlays in the first half of 1963 were about in line with earlier anticipations, but third quarter spending at an annual rate of \$1.1 billion was 25 percent more than expected 3 months earlier. Expenditures are expected to drop somewhat in the fourth quarter and to pick up again in early 1964.

Investment in the machinery industries has been relatively weak this year. Expenditures for plant and equipment by nonelectrical machinery producers

in 1963 are expected to be 6 percent below 1962. Outlays by this industry fell steadily for three successive quarters from the third quarter 1962 record, and then leveled out in the second half of 1963. Some improvement is anticipated in early 1964.

Capital outlays by electrical machinery producers in 1963 are now expected to exceed 1962 by 5 percent. The advance occurred in the first half of this year, however, and outlays have since been cut back to year-ago rates.

Nondurable goods

Within the nondurable goods manufacturing group the sharpest current uptrend in capital expenditures is in the food industry; an additional rise of 5 percent is scheduled for the first quarter. Spending for new plant and equipment by the industry is at an annual rate in excess of \$1 billion.

Petroleum producers have also increased their investment outlays sizably during 1963, although the 1963 total is only slightly larger than last year's. These companies spent at a seasonally

adjusted annual rate of more than \$3 billion in the third quarter—8 percent above the first half rate. Further increases are planned for the fourth quarter, with first-quarter expenditures to hold at about the same rate.

The chemical industry is scheduling a moderate rise for fourth-quarter capital spending, and little further change for early 1964. If fourth quarter anticipations are realized, expenditures would be restored to late 1961 levels. This industry, in contrast to most other manufacturing groups, reduced capital expenditures last year. This year's total may exceed 1962 by 3 percent.

The textile industry had sharply expanded its capital buying in 1962 following the liberalization of depreciation allowance on textile-producing equipment in the fall of 1961; the further rise this year from 1962 will be 4 percent. Outlays in each of the first three quarters of 1963 have held close to \$650 million (at seasonally adjusted annual rates), and this rate is expected

to continue through the first quarter of next year.

Communications and commercial outlays

Investment in construction and equipment by communications and commercial companies has picked up in late 1963. Expenditures for capital goods by these firms had been reduced in the first half of 1963, after a prolonged advance following the 1958 recession. Third quarter actual expenditures rose above \$14 billion at a seasonally adjusted annual rate to set a new high, and a further increase is anticipated in the final quarter of this year. Spending in early 1964, according to current programs, will be maintained at the advanced level in the fourth quarter of 1963.

Communications companies' spending in 1963 has held close to budgets formulated early this year. Rising revenues, and rapid technological advances in communication equipment have given impetus to investment programs in this area. Expenditures in

1963 are likely to top 1962 by about 3 percent.

Utility and transportation investment

Public utilities spent nearly \$6 billion in the third quarter on new facilities, a seasonally adjusted annual rate about 8 percent above 1962. Under current plans outlays would be reduced a little in both the fourth quarter and first quarter, but increased substantially in the second. Expenditures for the full year 1963 are expected to exceed 1962 by about 3 percent—the first year-to-year increase since 1957. The dip in expenditures programmed for the current and first quarter is attributable to gas utilities. Investment by this industry is very volatile. Expenditures rose sharply this year through the third quarter but anticipations point to an equally steep reduction in the ensuing 6 months.

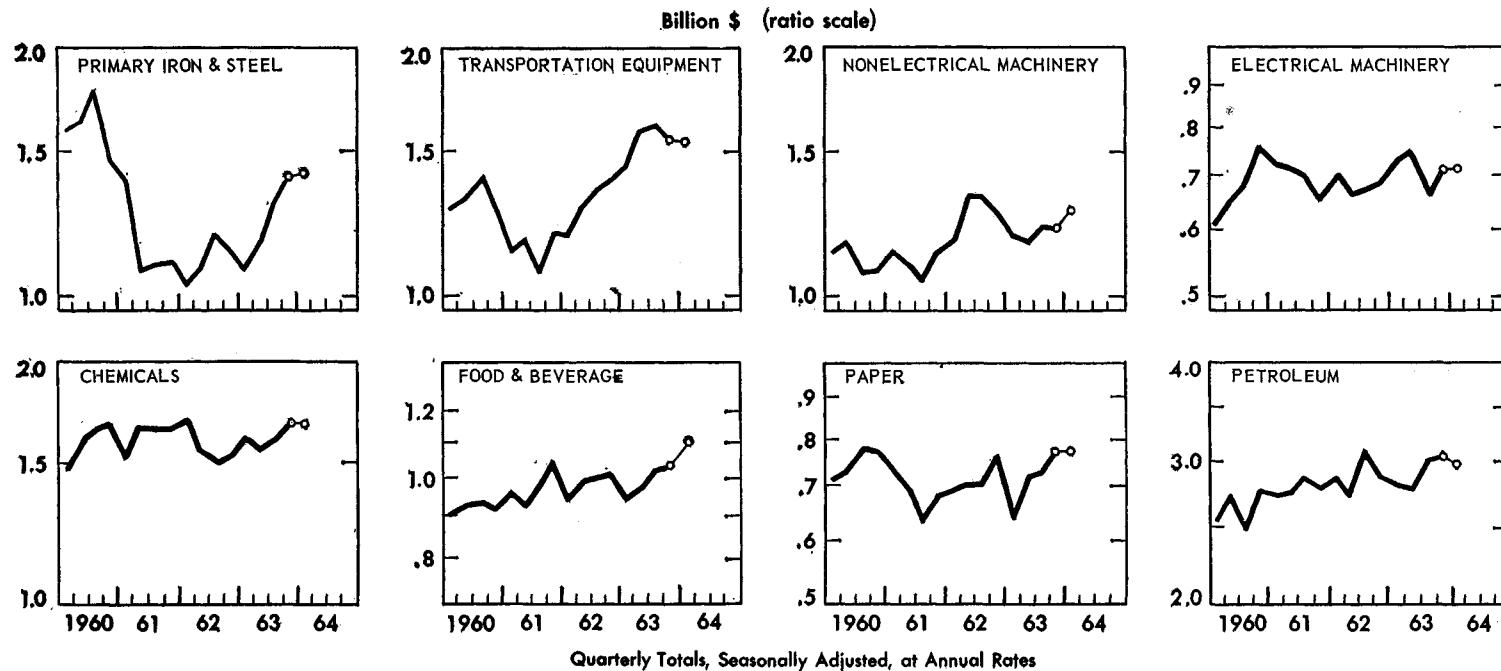

The railroads, with a 27 percent investment rise in 1963 over 1962, have made the largest relative increase of all the major industry groups shown in

table 3. The increase was in equipment buying—particularly for freight cars. Unfilled orders for freight cars in October totaled 22,000 cars, up almost two-fifths from the end of 1962, and about the highest level since late 1960.

The non-rail-transportation group now shows a rising trend in capital spending through the first quarter of 1964. While most of the component groups expect to maintain fourth quarter spending rates, the airlines anticipate a substantial pickup late this year and early next year. Payments on orders for new short-range jet craft are expected to comprise the bulk of these expenditures. If present plans are realized, airlines expenditures in the first 3 months of 1964 will be more than double expenditures in the third quarter of this year.

Trucking and bus companies are holding expenditures rather steady at high rates. Outlays by independent pipeline companies are declining from a second quarter 1963 high, when they were unusually large.

MOST MANUFACTURING INDUSTRIES EXPECT HIGHER CAPITAL EXPENDITURES THIS FALL AND WINTER

Manufacturers' Sales and Inventory Expectations in the First Quarter of 1964

ACCORDING to the sales and inventory expectations survey conducted by the Office of Business Economics during November manufacturers anticipate a 1½ percent rise in sales in the fourth quarter of 1963, on a seasonally adjusted basis. Sales in the first quarter of 1964 are expected to hold close to the fourth quarter rate.

Inventory book values are expected to rise \$600 million in the fourth

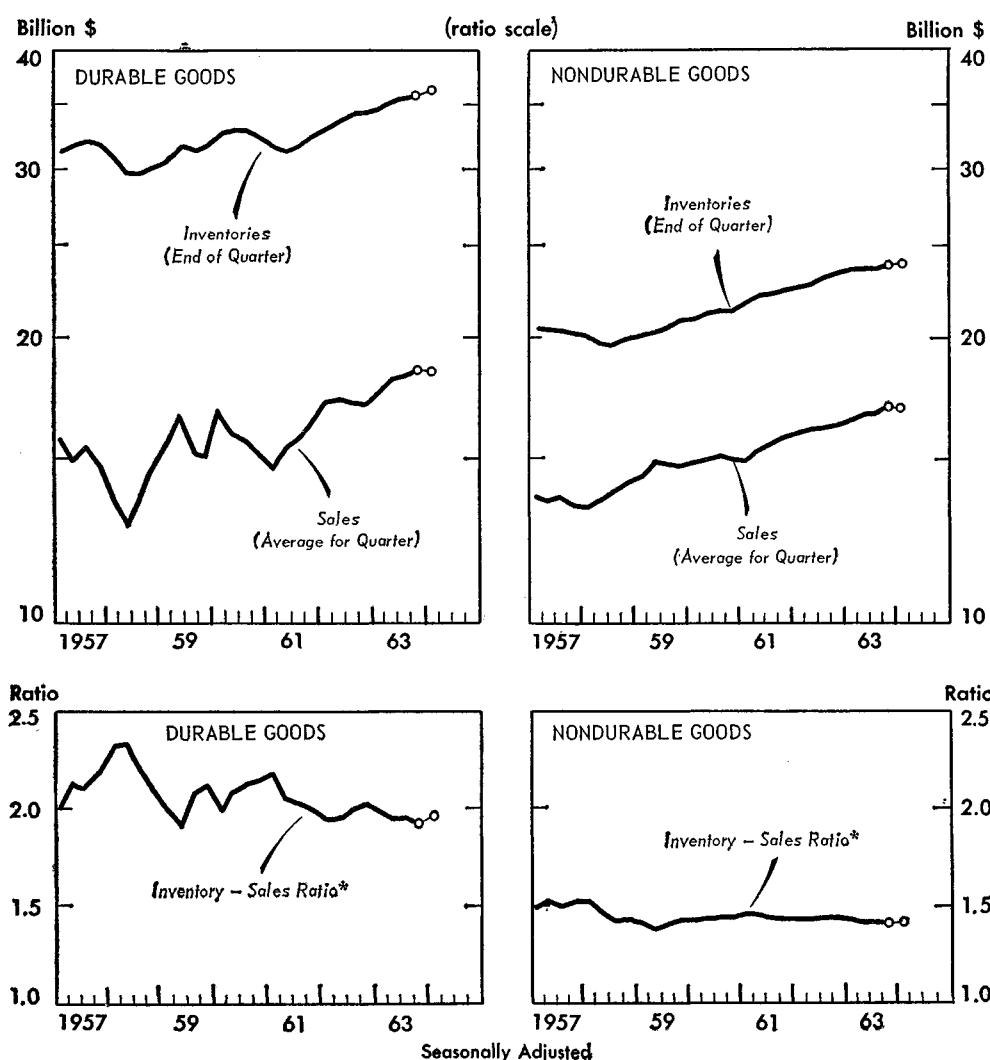

quarter, and a further \$400 million in the first quarter of 1964, after seasonal adjustment. Actual inventory additions during the first three quarters of 1963 have averaged \$450 million per quarter.

These inventory anticipations together with the expected sales trends imply a small rise in manufacturing stock-sales ratios in the opening quarter of 1964 from the relatively low current

rate. As of September 30, manufacturers holding 17 percent of total factory inventories characterized their stocks as "high" in relation to sales and unfilled orders positions, as compared to 15 percent on June 30. There were slight increases from the June 30 evaluations for both durable- and nondurable-goods producers.

MANUFACTURERS' INVENTORY AND SALES EXPECTATIONS

Inventory Rise to Continue; Manufacturers Expect New Sales High in Fourth Quarter and Little Further Change in Early 1964

● Anticipated

*Based on average quarterly sales and end of quarter inventories.

U.S. Department of Commerce, Office of Business Economics

Sales currently at new high

Manufacturers project sales at a record rate of \$106.7 billion in the fourth quarter on a seasonally adjusted basis and at \$106.3 billion during the first 3 months of 1964. The fourth quarter expectation implies a 1½-percent rise from third quarter actual sales of \$105 billion. Quarterly sales increases averaged about 2 percent in the first half of this year.

The rise in sales in the fourth quarter is expected to be somewhat stronger for durable goods than for nondurables. Actual sales of durables in the third quarter reached \$54.8 billion and are expected to rise 2 percent in the fourth. This would be nearly one-tenth higher than the fourth quarter 1962 rate. But producers in most durable goods industries are not now expecting any further increase in the first quarter, and in some industries an easing from the fourth quarter highs is foreseen. Further expansion in the opening months of the new year is expected only by the fabricated metals and the stone, clay, and glass industries, whose products to a large extent consist of construction materials, and by electrical machinery producers.

Non-durable-goods sales rose fractionally in the third quarter to \$50.2 billion, on a seasonally adjusted basis. The fourth quarter rate is now projected 1 percent higher than the third quarter, and 4 percent above the closing quarter of 1962. Total sales are expected to be maintained in the first quarter of 1964.

¹ Revised series. Condition of actual inventories relative to sales and unfilled orders position as viewed by reporting companies. Percentage distribution of inventory book values according to company's classification of inventory condition.

Source: U.S. Department of Commerce, Office of Business Economics.

Inventory accumulation continues at steady rate

The current cyclical upswing has been accompanied by a steady but moderate increase in manufacturers' inventories. Stocks on a seasonally adjusted basis have risen each quarter since the spring of 1961; the aggregate rise, however, has not quite kept pace with the sales advance over the period. Current anticipations indicate continuing accumulation into early 1964 of about the same order of magnitude.

Inventories held by durable-goods manufacturers are anticipated at \$35.8

billion at yearend—up \$1½ billion from December 1962. Additions of \$300 million in the fourth quarter of 1963 and a similar amount in the first quarter of 1964 are expected—a rate of advance about equal to the average quarterly buildup during the previous year and a half. Most durable-goods industries project further inventory additions into early 1964.

If the expectations by durable-goods manufacturers are realized, stocks at the end of 1963 would be just over 1.9 times sales, having declined from a ratio of 2.0 a year earlier. This ratio would

rise to 1.95 months of sales in the first quarter of 1964.

Non-durable-goods manufacturers expect to hold slightly under \$24 billion in inventories at yearend—a \$½ billion addition during 1963. Seasonally adjusted inventories rose \$100 million in the first three quarters of 1963. Current anticipations are for a \$300 million rise in the fourth, with the additions concentrated in the food, chemicals, and rubber industries. The rate of accumulation is expected to fall back to \$100 million during the first quarter of 1964.

The stock-sales ratio for non-durable-goods producers, which had been falling since the beginning of the current upturn in early 1961, stabilized by mid-1963 at just over 1.4. Fourth and first quarter anticipations imply little change in this ratio.

Manufacturers' inventory condition

When asked to evaluate the current condition of their inventories in relation to their sales and unfilled orders position, manufacturers indicated that their stocks were somewhat heavier than at any other time in the current recovery. Producers holding 17 percent of manufacturers' inventories classified September 30 stocks as "high" and those holding 81 percent classified them as "about right." The "high" category had been 14–15 percent since early 1962, and the "about right" category 82–84 percent.

Durable-goods producers holding 19 percent of their group's stocks regarded their September 30 inventory as "high," while those holding 80 percent of stocks classified them as "about right." The "high" proportion has been rising slowly this year at the expense of the "about right" proportion. Within the durables, the "high" proportion has been falling steadily among primary metal producers; this has been more than offset by a rise in the "high" category of metal fabricator's stocks.

In nondurable goods, the "high" percentage has been gradually rising since March 1962—from 8 percent to 11 percent on September 30, 1962 and 14 percent this September. In this instance also, the offsetting changes were mainly in the proportion considered "about right."

The Balance of Payments in the Third Quarter of 1963

THE balance of international transactions during the third quarter was sharply improved.

Including the rise in foreign holdings of nonmarketable, medium-term securities convertible into cash at short notice, the balance in the third quarter was adverse by \$593 million. If these securities are not considered liquid obligations, the adverse balance was \$418 million.

Strong seasonal movements, such as, increased travel expenditures and relatively low exports, tend to have an unfavorable effect on the balance during the third quarter. On a seasonally adjusted basis, the balance, counting the convertible Government securities as liquid liabilities, was \$256 million, and counting these securities as long-term obligations, \$81 million.

The decline in official monetary reserves was about \$100 million larger than in the second quarter, but this change was a temporary deviation from the earlier experience in 1963 when the decline in reserves was much smaller than in preceding years and in relation to the size of the overall balance. To some extent the improvement in the balance measured by changes in monetary reserves and liquid liabilities was due to "special" Government transactions, particularly advance repayments of postwar debts by France and the Netherlands. The adverse balance on the "regular" types of transaction was about \$750 million, and after seasonal adjustment about \$410 million. The latter figure compares with \$1,260 million in the second quarter and quarterly averages ranging from \$750 to \$1,050 for the years 1958 to 1962.

Major third quarter changes

A major development during the third quarter was the substantial decline in the net outflow of capital (including both private U.S. and foreign capital but excluding foreign liquid balances held here). The recorded net capital outflow, based on

data which are still preliminary, declined from the exceptionally high amount of nearly \$1.5 billion in the second quarter to an unusually low figure of \$450 million in the third. The \$1.0 billion decline was in part offset, however, by a \$476 million change in the balance on unrecorded transactions (after allowing for normal seasonal changes) from net receipts of \$142 million in the second quarter to net payments of \$334 million in the third. Some of this change may well reflect shifts in the flow of capital opposite to that shown by the available data. Even so, it must be concluded that private capital movements accounted for a major part of the nearly \$900 million decline in net payments on "regular" types of transactions.

Government grants and capital outflows during the third quarter—even after allowance for the usual seasonal decline—were about \$365 million less than the relatively high amount of \$1,340 million in the second quarter. The major part of the decline involved exports of agricultural products under the Public Law 480 program. Cash disbursements to foreign countries and international organizations were about \$90 million less than in the previous quarter and at the lowest point for any quarterly period since the beginning of 1960.

The surplus of goods and services in the third quarter was reduced by about \$150 million from the second quarter, but this decline was more than accounted for by smaller shipments financed by Government grants and credits.

Goods and services transactions financed through cash transfers or private capital resulted in a surplus of about \$584 million, considerably above the first two quarters of this year and the quarterly average of \$485 million in 1962 (see table 1, line A6).

The fact that in the third quarter of this year the balance on goods and services (excluding transactions fi-

nanced by Government grants and credits) improved concurrently with a decline in the net outflow of capital accounted for the improvement in the overall balance. In recent years it was the more common experience that the balance on capital movements and on goods and services moved in opposite directions. The fact that these movements were largely offsetting explains why the fluctuations in the annual balance on the "regular types of transactions" during the years 1958 to 1962 were confined within the relatively narrow range of -\$3.0 billion to -\$4.2 billion.

The question is, of course, to what extent the changes in the third quarter are temporary and to what extent they may signify a more lasting improvement.

Decline in capital outflows

The decline in the outflow of private U.S. capital occurred in nearly all of the major categories and in all of these the decline was from an exceptionally high amount in the previous quarter. This applies in particular to direct investments, purchases of newly issued securities, purchases of outstanding securities, to short-term bank credits and other short-term investments.

Direct investments

The outflow of capital through direct investments dropped from nearly \$500 million in the second quarter to \$220 million in the third. In 1962 the decline in the corresponding period was also from nearly \$500 million but only to \$324 million. The third quarter decline was more than seasonal, and resulted in direct investments in that quarter of about two-thirds of what they had been a year earlier.

The greater decline from the second to the third quarter this year as compared with 1962 appears to have been due mainly to financial transactions of U.S. oil companies with their affiliates in Latin America, the Middle East,

and with their shipping affiliates shown in table 5 in the column "International Institutions and Unallocated." A large part of the capital outflow during the second quarter was on intercompany accounts and designated as short term by the companies. The change from the second to the third quarter appears to have been largely in that category of capital.

Capital flows to Europe were considerably less in the third quarter of this year than a year earlier, but the same difference was recorded for the second quarter as well. The third quarter net capital outflow was held down as a result of large repatriations of funds by a relatively few major companies from some of their affiliates in Germany and Switzerland.

On the basis of the still incomplete data, it thus appears that both the second and third quarter figures were affected by temporary developments, raising the capital outflow in the second quarter, and reducing it in the third. It is possible, however, that the return flows of funds during the third quarter were increased (or outflows lessened) by the higher interest rates on time deposits obtainable in the United States as a result of the raising in the middle of July of ceilings on such rates by the Federal Reserve System under regulation Q.

Transactions in securities

Purchases of newly issued foreign securities declined from the second to the third quarter from \$518 million to \$179 million, or from \$486 million to \$216 million seasonally adjusted. Over \$100 million of the second quarter figure represented an issue of a European company which did not affect the overall balance, but was offset by an equivalent increase in foreign purchases of U.S. securities. Without this special transaction the decline from the second quarter, after seasonal adjustment, was about \$155 million.

From the recent peak of \$490 million in the last quarter of 1962, new issues—after seasonal adjustment—declined during each of the first three quarters of this year to \$475 million, \$370 million (omitting the special transaction mentioned above) and to \$216 million respectively. Although the third quar-

ter rate was sharply lower than in the first half of the year, it was still above the quarterly averages for any other postwar year except 1956 and 1962.

The decline in the third quarter can in large part be attributed to the proposal to Congress to enact an interest equalization tax retroactive to the

middle of July. The effect of the tax proposal was considerably more than the figures for the third quarter as a whole indicate. Most of the issues during the third quarter were exempt from the tax as they had been arranged before the tax proposal was announced by the President on July 18, and were

sold in July and August. New issues sold in September dropped to \$18 million.

The decline in new issues was not limited to securities of countries which would be subject to the tax under the bill now in Congress but extended also to Canadian securities which are expected to be exempt from the tax. Purchases of newly issued foreign securities remained low in October, but rose slightly in November. It may be assumed that the longer run effect of the tax will be somewhat less than the initial impact and that sales of new issues will not continue at the very low rate of September and October after the tax is enacted and uncertainties concerning the provisions are resolved. This is particularly so with respect to Canadian issues once their expected exemption is in effect.

The proposed interest equalization tax also affected transactions in outstanding foreign securities. Net purchases of foreign securities of \$64 million in the second quarter were followed by net sales of \$51 million in the third, with a resulting improvement in the balance of \$115 million. During the third quarter the major changes were in purchases of foreign stocks which declined considerably more than sales. Transactions in foreign bonds also declined sharply, but the balance between purchases and sales did not change significantly. The shift in the balance on recorded transactions in outstanding foreign securities affected all of the major areas whose securities are generally traded here.

Bank and commercial loans

Banking and commercial credits for periods exceeding 1 year were the only major type of capital outflow which rose during the quarter (after seasonal adjustment), although such credits were already high in the previous quarter relative to earlier years. Because the rise had started several months before the interest equalization tax was announced it can hardly be interpreted as a substitution of bank loans for new security issues. The increase over last year was in bank credits, but the change from the second to the third quarter was to a large extent due to a shift from a net decline in outstanding commercial

loans to a balance between repayments and new loans.

Short-term funds

While bank credits with a maturity of over 1 year continued relatively high, short-term bank credits fell off sharply from the second quarter. The shift was from an outflow (before seasonal adjustment) of nearly \$400 million in the second quarter to an inflow of nearly \$100 million in the third. This shift of about \$500 million (which remains about the same after seasonal adjustment) was a major factor contributing to the improvement in the overall balance in the third quarter. Likewise, however, the relatively large amount of bank credits in the second quarter was one of the major factors accounting for the large adverse balance in that period.

Nearly half of the \$500 million shift was due to very short-term credits of about \$120 million to Germany in June which were repaid in July. Outstanding loans to Canada increased in the second quarter—by over \$70 million—and declined by about the same amount in the third quarter, although these changes may not be part of the same transactions. There was also a net increase of short-term banking claims on Japan in the second quarter which did not continue in the third.

To some extent, therefore, the shifts in short-term bank credits from the second to the third quarter appear to have been due to a coincidence of relatively large short-term and quickly reversed transactions with only temporary significance.

Net movements of short-term funds of nonfinancial concerns also shifted from relatively large outflows in the second quarter to moderate inflows in the third (see table 3). Most of that change was in relatively liquid funds held in Canada, and may reflect the raising of the ceiling on interest rates on time deposits in the United States. In view of the very large deposits of U.S. corporations in Canadian banks withdrawals could continue over a considerable time. Whether or not this will be the case, will depend on the rates offered by Canadian banks, which in turn depend on their earning opportunities on U.S. dollar loans, a large part of which are made in the Euro-dollar market.

Merchandise trade

The \$130 million improvement from the second to the third quarter in the

seasonally adjusted balance on goods and services, excluding transactions financed by Government grants and

services, was facilitated by a rise in merchandise exports by about \$270 million which more than compensated for the rise in imports, although the latter was exceptionally large.

The rise in exports was in part in commercially financed shipments of agricultural products, and to a relatively large extent in fuels and non-agricultural industrial materials. The increase in manufactured goods was rather small, but reflected a substantial decline in private exports of special category commodities, a large part of which is military equipment, and a somewhat larger increase in other manufactures.

Commercially financed agricultural exports in the third quarter were about \$135 million, or 15 percent higher than a year ago. The value of shipments has advanced close to the average quarterly rate which is expected for the remainder of this crop year, unless current negotiations with the Soviet bloc result in additional sales. The increased demand for agricultural products reflects the bad harvests in Europe and elsewhere, and a rise in cotton exports attributable to the exhaustion of stocks in other countries and to changes in our sales procedures. To the extent that the rise in agricultural exports was stimulated by special conditions, it should not be considered as part of a longer run export trend. The rise in exports of fuels, particularly coal to Europe, was also induced by last year's severe winter, and may in part be temporary.

Other exports continued higher than could have been expected on the basis of historic relationships, but the relative improvement that was observed earlier in the year apparently did not progress further. Imports also were boosted by temporary factors. A large part of the rise in the third quarter was in imports of foodstuffs which were comparatively low in the second. Since total imports may thus have been somewhat higher in the third quarter than could be expected on the basis of longer term developments, the rises in the near future may be somewhat slower.

(Continued on p. 19.)

Manufacturing and Trade—Revised Estimates of Sales, Inventories, and New Orders

REVISED statistics for manufacturers' sales, inventories, and orders, wholesalers' sales and inventories, and retailers' inventories are presented in this issue of the SURVEY. Retail sales estimates have not been revised. Also shown are the corresponding stock-sales ratios.

The tables below present the monthly estimates for the years 1956 through 1962. The 1963 estimates appear on pages S-4, S-5, S-6, and S-11 of this issue. Monthly estimates for the summary series shown below covering the period 1948 through 1955 are available on request from the U.S. Department of Commerce, Office of Business Economics, Washington, D.C., 20230.

All of the estimates for recent years are based on sample data collected by the Bureau of the Census, and the seasonal adjustments have been processed through the Bureau's computer programs. All of the series are now adjusted to 1957 Standard Industrial Classification and utilize an establishment (plant) framework.

Descriptions of the sample designs, methodology, additional historical series—particularly in industrial detail, for new and unfilled orders, and by marketing groups for manufacturing—seasonal adjustment and trading day factors are shown in the following publications (all available from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C., 20402, or Field Offices of the U.S. Department of Commerce): *Manufacturers' Shipments, Inventories, and Orders, 1947-1963 Revised*, Price \$1.00; *Monthly Wholesale Trade Report*, Price \$0.10; *Annual Retail Trade Report—1962 and earlier issues*, Price \$0.20; *Monthly Retail Trade—Adjusted Sales Supplement, (BR-63-7 Supp. 1)*, Price \$0.10.

Manufacturing

The responsibility for the monthly estimates of manufacturers' sales, orders, and inventories has been transferred from the Office of Business Economics to the Bureau of the Census.

Extensive modifications have been introduced in the new statistics including benchmarking of the series to the plant data in the Annual Surveys and Census of Manufactures and the introduction of "divisional" reporting for large firms.

The old and new series show essentially the same in overall month-to-month movements, but the level of the two series is sometimes significantly different for particular industries. As the benchmark in the new series is plant (or establishment) figures rather than company data, the new series excludes some nonmanufacturing activities which were included in the old, company benchmark. On the other

hand, the new plant benchmark includes the duplication which occurs when one plant of a firm ships its output to another plant of the same firm. These factors are roughly offsetting in total but for detailed industries the new data are sometimes higher and in other instances lower than the old series. Comparisons of the two series and related explanations are included in the Census report listed above.

The new series provide additional industrial categories for shipments, new orders, unfilled orders, inventories and inventories by stage of fabrication; statistics are also shown by market groupings which are designed to segregate

Current BUSINESS STATISTICS

THE STATISTICS here update series published in the 1963 edition of BUSINESS STATISTICS, biennial Statistical Supplement to the SURVEY OF CURRENT BUSINESS. That volume (price \$2.00) contains data by months, or quarters, for the years 1959 through 1962 (1951-62, for major quarterly series) and averages of monthly or quarterly data for all years back to 1939; it also provides a description of each series and references to sources of earlier figures. Series added or significantly revised after the 1963 BUSINESS STATISTICS went to press are indicated by an asterisk (*) and a dagger (†), respectively; certain revisions for 1962 issued too late for inclusion in the aforementioned volume appear in the monthly SURVEY beginning with the August 1963 issue. Also, unless otherwise noted, revised monthly data (for periods not shown herein) corresponding to revised monthly averages are available upon request. Except as otherwise stated, the terms "unadjusted" and "adjusted" refer to adjustment for seasonal variation.

Statistics originating in Government agencies are not copyrighted and may be reprinted freely. Data from private sources are provided through the courtesy of the compilers, and are subject to their copyrights.

Unless otherwise stated, statistics through 1962 and descriptive notes are shown in the 1963 edition of BUSINESS STATISTICS	1960	1961	1962	1960		1961				1962				1963

Motor Carriers (Interstate)

Motor Carriers (Interstate)

Carriers of property, class 1 (qtrly. avg. or total):						
Number of reporting carriers.....	2,965					
Operating revenues, total.....	1,234.4					
Expenses, total.....	1,185.4					
Freight carried (revenue).....	71.6					
*Partial. **Preliminary. †Deficit.						
	1	Quarterly average				
			obtained from Bu. of Census reports			
				§Excludes "special category" shipments and all		

⁷ Revised. ⁸ Preliminary. ⁹ Before quarterly average.
² Number of carriers filing complete reports for 1961.
⁹ Includes data not shown separately. *New series. Data prior to Sept. 1962 may be obtained from DA or CECOM reports. ¹⁰ Includes special category shipments and commodities exported under foreign-aid programs as Department of Defense controlled cargo.

Digitized for ERASER

¹⁸See similar note on p. S-21.

Unless otherwise stated, statistics through 1962 and descriptive notes are shown in the 1963 edition of BUSINESS STATISTICS

* Revised. † Preliminary. ‡ Corrected.

¹ Crop estimate for the year. ² Nov. 1 estimate of the 1963 crop. ³ Quarterly average.

⁴ Old crop only; new crop not reported until beginning of new crop year (July for barley, oats, rye, and wheat; Oct. for corn). ⁵ Average based on months for which quotations are available.

⁶ Revisions for Jan. 1961–June 1962 for cheese and nonfat dry milk and those for Jan.–June 1962 for butter, condensed and evaporated milk, and dry whole milk are available upon

request. Revisions for July–Dec. 1962 appear in the Sept. 1963 SURVEY.

⁷ Revisions for Jan. 1959–Dec. 1961 are available upon request; those for Jan.–Dec. 1962 appear in the Aug. 1963 SURVEY.

⁸ Excludes a small amount of pearl barley.

⁹ Revised series (for No. 2; formerly, for No. 3).

¹ Bags of 100 lb.

Unless otherwise stated, statistics through 1962 and descriptive notes are shown in the 1963 edition of BUSINESS STATISTICS	1961	1962	1962			1963

INDEX TO CURRENT BUSINESS STATISTICS, Pages S1-S40

SECTIONS

General:

Business indicators	1-7
Commodity prices	7, 8
Construction and real estate	9, 10
Domestic trade	10-12
Employment and population	12-16
Finance	16-21
Foreign trade of the United States	21-23
Transportation and communications	23, 24

Industry:

Chemicals and allied products	25
Electric power and gas	26
Food and kindred products; tobacco	26-30
Leather and products	30, 31
Lumber and manufactures	31
Metals and manufactures	32-34
Petroleum, coal, and products	35, 36
Pulp, paper, and paper products	36, 37
Rubber and rubber products	37
Stone, clay, and glass products	38
Textile products	38-40
Transportation equipment	40

INDIVIDUAL SERIES

Advertising	10, 11, 16
Aerospace vehicles	40
Agricultural loans	16
Air carrier operations	23
Aircraft and parts	3, 13-15, 40
Alcohol, denatured and ethyl	25
Alcoholic beverages	8, 10, 26
Aluminum	23, 33
Apparel	1, 3, 4, 7, 8, 10-15, 40
Asphalt and tar products	35, 36
Automobiles, etc.	1, 3-6, 8, 10, 11, 13-15, 19, 22, 40
Balance of international payments	2
Banking	16, 17
Barley	27
Barrels and drums	33
Battery shipments	34
Beef and veal	28
Beverages	4, 8, 10, 26
Blast furnaces, steel works, etc	13-15
Bonds, outstanding, issued, prices, sales, yields	18-20
Brass and bronze	33
Brick	38
Broker's balances	20
Building and construction materials	8, 10, 31, 36, 38
Building costs	9, 10
Business incorporations (new), failures	7
Business population	2
Business sales and inventories	4, 5
Butter	27
Cans (tinplate)	33
Carloadings	24
Cattle and calves	28
Cement and concrete products	8-10, 38
Cereal and bakery products	8
Chain-store sales, firms with 4 or more and 11 or more stores	12
Cheese	27
Chemicals	4-6, 8, 13-15, 19, 22, 25
Cigarettes and cigars	8, 30
Civilian employees, Federal	14
Clay products	8, 38
Coal	4, 8, 13-15, 22, 24, 35
Cocoa	23, 29
Coffee	23, 29
Coke	24, 35
Communications	2, 13-15, 20, 24
Confectionery, sales	29
Construction:	
Contracts	9
Costs	9, 10
Employment, hours, earnings, wages	13-16
Highways and roads	9, 10
Housing starts	9
New construction put in place	1, 2, 9
Consumer credit	17, 18
Consumer expenditures	1, 2
Consumer goods output, index	3, 4
Consumer price index	7
Copper	23, 33
Corn	27
Cost of living (see Consumer price index)	7
Cotton, raw and manufactures	7, 8, 22, 38, 39
Cottonseed cake and meal and oil	30
Credit, short- and intermediate-term	17, 18
Crops	3, 7, 27, 28, 30, 38
Crude oil and natural gas	4, 13-15, 35
Currency in circulation	19
Dairy products	3, 7, 27
Debits, bank	16
Debt, U.S. Government	18
Department stores	11, 12, 17
Deposits, bank	16, 17, 19
Disputes, industrial	16
Distilled spirits	26
Dividend payments, rates, and yields	1, 3, 18-21
Drug stores, sales	11, 12

Earnings, weekly and hourly	14-16
Eating and drinking places	11, 12
Eggs and poultry	3, 7, 29
