# the BUSINESS SITUATION

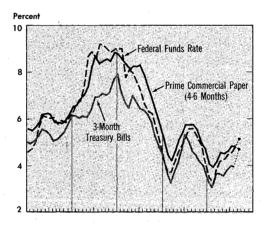

CURRENT evidence indicates continued brisk economic expansion during the summer months, though the rate of advance was probably less rapid than the exceptionally fast pace set in the second quarter.

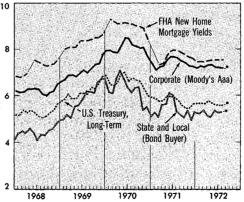

Employment, which had changed little in July, increased strongly in August. The August unemployment rate was 5.6 percent, essentially unchanged from the reduced level of 5.5 percent recorded in June and July. The industrial production index increased 0.5 percent in August, not an exceptionally large gain but the strongest since April and one that reflected a broadly based advance in output. Housing starts had peaked at an annual rate averaging somewhat more than 2.5 million units in December through February, then averaged close to 2.3 million units in March through July: in August, the rate jumped to nearly 2.5 million units. It seems probable that starts will move down again in the fall, but the fact remains that the August figure reflects a stronger rate of activity in this sector than generally expected.

The August increase in personal income was \$7 billion (seasonally adjusted annual rate). This was a relatively strong advance: the average for the year's first 7 months was \$6 billion. The August increase in wage and salary income was \$5 billion, the largest since April, and included a sizable advance in manufacturing pay that reflected increases in employment, hours, and hourly pay. The nonwage income components increased \$2 billion. This is in line with the gain in most months this year-abstracting from the distortion caused by losses suffered in the June floods; the losses cut sharply into rental and proprietors' income in that month. and those two components then moved back up to roughly normal levels in

CHART 1

#### **Short - and Long-Term Interest Rates**

Data: FRB, HUD, Moody's, Bond Buyer & Treasury

. Last data plotted are weekly figures through mid-Sept

The latest BEA survey of business investment in new plant and equipment indicates that the spending rate changed barely at all from the first quarter to the second but that expectations are for a large increase this quarter (for details, see report on page 14). Starts of new investment projects increased substantially in the second quarter, and the survey also found manufacturers reporting an increase in the need for more facilities.

As this issue of the Survey goes to press, data on inventory investment are available only through July. The monthly figures up through July showed a strengthening of inventory demand, especially by manufacturers. Such a development is to be expected, given the ongoing expansion of economic activity. Although the overall accumulation rate increased substantially from the first quarter to the second, it was still surprisingly low relative to the size of total GNP.

#### Interest rates move up

The brisk pace of economic activity has resulted in a long expected strengthening of business and other short-term credit demands, and money market interest rates have been rising steeply since early August. The monetary authorities are apparently willing to accept firmer conditions in money markets, as they made little effort to dampen the recent rise in rates. The objective of monetary policy has been to slow the growth of the monetary aggregates in order to abate inflationary pressures, and this implies a willingness on the part of the authorities to accept rising short term rates when credit demands strengthen. In fact, at its meetings in the spring the Federal Open Market Committee acknowledged that its efforts to slow the growth of the aggregates would probably be associated with some tightening of money market conditions in the months ahead. (The records of the policy action of the Federal Open Market Committee are released 90 days following the date of the committee meeting and are available only through the end-of-June meeting.)

Thus far, the rise in interest rates has been largely confined to short-term markets where increases have generally ranged between one-fourth and one-half of a percentage point. The largest increase by far has occurred in the yield on 3 months Treasury bills; from early August to mid-September bill yields rose nearly a full percentage point. In part, that surge reflected selling pressures associated with Federal Reserve open market operations and with some liquidation of bill holdings of foreign central banks, and also an increase in the Treasury's new bill offerings. In late August and early September, these factors combined to add about \$3½ billion to the supply of bills to be absorbed by the private domestic market.

From early August to mid-September, long-term yields changed little, continuing the pattern that has prevailed all year (chart 1). It does appear, however, that the mild upward drift of mortgage yields is continuing and that the downward trend of recent months in the yield on long-term Government securities has been reversed. With short-term rates rising and longterm yields showing little net change, the unusually wide spread that had developed between long- and shortterm rates has narrowed. Nonetheless, the differential remains substantial by historical standards and it seems likely that short-term rates could move up somewhat further without transmitting significant pressures to long-term markets.

Rising short-term interest rates are not yet creating serious problems for the thrift institutions and are not likely to adversely affect mortgage markets in the near future. The thrift institutions have experienced exceptionally strong savings deposit growth from early 1970 through July of this year (the latest month for which data are available), and appear to be very comfortably situated with respect to liquidity. The huge inflow of funds to the thrift institutions has led to a large volume of outstanding mortgage commitments. which increased strongly in this year's first half, suggesting that funds will be readily available for mortgage lending over the next 6 months or so.

#### The housing market

Although credit conditions have remained favorable, the boom in homebuilding nevertheless seems to have reached a peak early this year. The rate of new housing starts for the 6 months March through August averaged 2.3 million units (seasonally adjusted annual rate), even with the surprisingly high August figure included, down from an average for December through February of more than 2.5 million. Thus far, the decrease has centered in starts in multiunit buildings, as starts of single-family homes have held fairly steady all year at a rate of about 1.3 million units.

A review in the June issue of the Survey pointed out what seemed to be some signs of softening in the market for single-family homes. The evidence that has become available since then is consistent with that picture. The number of new one-family homes sold, which had been rising since the spring of 1971, fell slightly during the second quarter, and the inventory of unsold houses in the hands of homebuilders increased. In the second quarter, the stock of new homes for sale was equal to 5.9 months of sales, on average. This is the highest this ratio has been since 1970, when the single-family market was relatively slack, and is far above the low of 4.2 recorded in the first quarter of 1971, when the homebuilding boom was just getting underway.

The boom in starts of multiunit buildings has yet to have its full impact on the housing supply, for multifamily structures typically require three or four quarters from start to completion. At the end of the second quarter, there were nearly 900,000 units in multiunit buildings still in the construction pipeline, up about 9 percent over the first quarter and 32.2 percent over a year earlier (not seasonally adjusted). Calculated on an over-the-year basis, the rate of increase in the number of units under construction has been slowing since last fall except in the South, where it is still accelerating; in that region, the number of units under construction at the end of the second quarter was up 47 percent from a year earlier.

Most units in multiunit structures are intended for the rental market. In the second quarter, the rental vacancy rate was 5.5 percent, about the same as it has been for the past 2 years and well below the levels recorded earlier in the 1960's. However, the rate can be expected to move up in the future as the large number of units still under construction comes onto the market.

Mobile homes are not included in the data on housing starts, but they do supply an important share of new low cost housing. Over the past 2 years, the rate of mobile home shipments has increased about 50 percent. In the second quarter, it was about 600 thousand units (seasonally adjusted annual rate)—compared with starts of about 1 million units in multiunit structures and about 1.3 million singlefamily homes (seasonally adjusted annual rates). Mobile home shipments increased 10 percent from the fourth quarter to the first and 6 percent from the first quarter to the second.

#### Consumer demand

Consumer spending growth continued strong during the summer as the auto sales boom accelerated and retail sales in other lines recorded a broadly based advance.

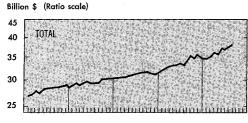

Sales of new cars, including both domestic and import models, averaged 11½ million units (seasonally adjusted annual rate) in July and August (table 1). That sales rate represents an appreciable increase from the average of 10¾ million units in the second

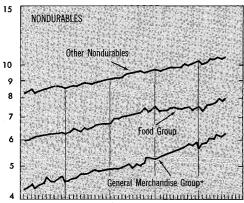

quarter, and about matches the rate in September-November last year when sales surged following introduction of the wage-price freeze and announcement of the intended repeal of the auto excise tax.

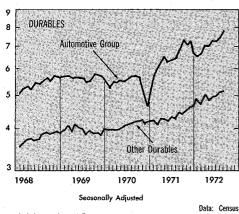

The sales rate for domestic models has been advancing all year and averaged 9½ million units in July and August. The strength of sales this summer cut sharply into inventories of 1972 models and apparently resulted in some shortages. Sales of foreign cars have also strengthened significantly in recent months. They had dropped from a rate of 1.7 million units in the spring and summer of last year to 1.4 million

CHART 2

#### **Retail Sales**

\*Includes nonstore retailers.

U.S. Department of Commerce, Bureau of Economic Analysis

72-9-2

in the fourth quarter, when the import surcharge and dock strikes evidently had an effect. Sales recovered moderately to an average of 1.5 million units in the first 5 months of this

Table 1.—New Car Sales
[Millions of units, seasonally adjusted at annual rates]

	Total	Domes- tic models <sup>1</sup>	Import models
1968	9.7	8.6	1.0
	9.6	8.5	1.1
	8.4	7.1	1.3
	10.3	8.7	1.6
1971: I	10.0	8.5	1.5
	9.9	8.2	1.7
	10.7	9.1	1.7
	10.5	9.1	1.4
1972: I	10.3	8.8	1.5
	10.7	9.2	1.5
July-August	11, 2	9.6	1.6

<sup>1</sup> Includes domestic models built in Canada for sale in the U.S. Market.

year and then accelerated to 1.6 million units in June and July and 1.7 million in August. The strengthening of foreign car sales may be partly due to greater willingness on the part of dealers to offer discounts below list prices; it is also possible that some potential buyers of domestic models were discouraged by dealer shortages and switched to competitive import models.

Total retail sales have increased significantly this year (chart 2). The advance figures for August show a rise of 1½ percent, similar to the gain in July and well above the average monthly increase of one-third of 1 percent in the second quarter; the average in the first quarter was 1½ percent per month.

Sales of auto dealers have been the fastest growing component in the durables group, but sales by other durables retailers have also been strong. Sales of furniture and appliance stores showed strength early in the year, weakened in the spring, and turned up again in the summer, while sales of lumber and building materials retailers were on the rise this summer after a distinctly lackluster performance in the spring.

In the nondurable goods category, sales of the general merchandise group

(primarily department and variety stores, mail order houses, and vending machine operators) continued to expand during the summer as did sales of food stores. However, sales of apparel stores and eating and drinking establishments showed little growth, and drugstore sales apparently declined.

#### Consumer credit

Strong growth of consumer installment credit continued in July (the latest month for which data are available) though the rate of advance slowed from the exceptionally rapid pace set this spring (table 2). Installment credit increased at a seasonally adjusted annual rate of \$121/4 billion in July as compared with a rate of \$15\% billion in the second quarter. The slowing was mainly in auto credit, a somewhat puzzling development since July was a month when auto sales increased substantially. However, there are probably lags between the sale of a car on credit and the recording of the credit extension; also, there are variations in the proportion of cars sold on credit.

Table 2.—Net Change in Consumer Installment Credit Outstanding

[Billions of dollars]

	Total	Auto	Other con- sumer goods	Other 1
1968	8. 9	3.4	2. 5	3. 0
1969	8. 1	2.4	2. 6	3. 1

#### **Industrial Production**

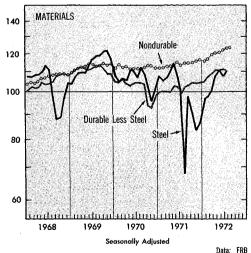

Index, 1967=100 (Ratio scale)

U.S. Department of Commerce, Bureau of Economic Analysis

72-9-3

amply supplied with funds. Some evidence of more liberal lending policies can be seen in the lengthening of maturities and lowering of downpayments on auto loans. New car installment credit contracts with maturity of 31 to 36 months averaged 85 percent of all new car loans written by major finance companies in the first 7 months of this year, up from a share of 83\% percent in the second half of last year and 82 percent in the first half. Contracts with maturity of 24 months or less fell to 11% percent of all new car loans in the January-July period, down from 13% percent in the last half of 1971 and 14½ percent in the first half. Also, there has been an increase this year in the percentage of auto loans in which the downpayment is relatively low—as indicated by a high ratio of the amount lent to the dealer cost of the car. In the case of installment credit for used cars, there is similar evidence of lengthening maturities and declining downpayments.

#### Industrial production

The industrial production index increased one-half of 1 percent in August to a level about 2 percent above its previous peak in September 1969. Output had increased fairly strongly from late last year through May of this year, but changed little in June and July, in part because of flooding in the East in late June. The August increase included advances in virtually every broad market category, with business equipment, defense and space equipment, and durable materials registering the strongest gains (chart 3).

The index of business equipment production increased nearly 1 percent in August, in a broadly based advance extending to all types of industrial equipment as well as to commerical and transit equipment. Defense and space equipment production continued to advance in August as it has since January. The Federal budget program for fiscal 1973 proposes several new weapons programs, which suggests that defense equipment output will continue to expand in the months ahead.

Durable materials output increased sharply in August after having been essentially unchanged in June and July. This increase was widespread, but particularly strong for raw and processed metals. Iron and steel output was up sharply following a dip in June and rebound in July.

#### Labor markets

The unemployment rate in August was 5.6 percent, essentially unchanged from the 5.5 percent recorded in June and July. During the preceding 1½ years—that is, since late 1970—the rate had persistently run at, or very close to, 6 percent.

Both employment and the civilian labor force increased strongly in August, following little change in July. In June, the month when the unemployment rate first dropped well below the 6 percent level, employment increased substantially while the civilian labor force actually shrank. The June decline in the unemployment rate centered in the labor force group aged 16-24. As was pointed out in last month's SURVEY. it appears that the June decline in that group's unemployment rate was related to problems of seasonal adjustment in the month when school vacations begin, and the group's unemployment rate moved back up in July. However, quite apart from the volatile swings in the employment and unemployment of young workers, the data for recent months show a fairly clear improvement in the employment situation of groups whose labor force participation is far more stable, and whose employment situation thus more closely reflects basic labor market conditions. The unemployment rates for workers aged 25 and over, especially for men, have been edging slowly but clearly downward, as has the rate for married men (a group whose labor force participation is very stable). The rate for manufacturing workers has been declining all year and was around 5½ percent during the summer, compared to a range between 6½ and 7 percent throughout 1971 and in late 1970.

While it is probable that the reduced level of the unemployment rate during the summer is a fairly solid development, and not just a temporary aberra-

tion, the 3 months in question seem to be too short a period to warrant being isolated in an analysis of labor market developments. It is difficult to choose time periods that highlight such developments fairly and do not distort them. The time periods used in table 3 are meant to put into focus the major labor market developments over the past 2% years—a span marked by recession, then slow recovery, and then a stronger recovery in the past year. The first column of table 3 shows the compound annual rates of change from 1962 to 1969, to provide a sense of long-term trends in a time span generally marked by strong economic expansion. (From 1962 to 1969, the unemployment rate dropped from 5.5 percent to 3.5 percent.)

Following the cyclical peak in economic activity in November 1969, aggregate civilian employment continued to rise for a short time but then declined in the first half of 1970. Table 3 shows seasonally adjusted annual rates of change in employment and labor force from January-February 1970 to July-August 1970. (Averages of 2 months are used for these calculations, to reduce distortions.) Adult employment was close to stable in the period but teenage employment dropped very sharply. The teenage civilian labor force shrank in reaction to the weakening of labor demand, but the adult labor force continued to grow-women in line with the 1962-69 trend, men faster. The overall unemployment rate rose from 4 percent to 5.1 percent.

From July-August 1970 to July-August 1971—a span encompassing the trough of the recession and the slow early recovery—civilian employment

grew only 0.7 percent. Labor force growth outran that advance, and the unemployment rate moved up to 6 percent. Growth in the number of women in the labor force slowed to a mere 1 percent, as women's participation was dampened by the weakness of demand, but the number of men in the civilian labor force continued to increase at a relatively fast pace. The teenage labor force increased fairly briskly.

Employment growth has been strong during the past year-3 percent from July-August 1971 to July-August 1972—but it has been accompanied by almost equally strong growth in the civilian labor force. Until the summer months of this year, this combination stood in the way of any decline in the unemployment rate. As can be seen in table 3, growth of the adult male civilian labor force from summer 1971 to summer 1972 was only slightly faster than it had been in 1970-71, but growth of the female labor forcewomen and girls—accelerated sharply in response to the improved labor demand. Nevertheless, the over-theyear increase in the civilian labor force was a little slower than the increase in employment, so that the overall unemployment rate dropped from 6.0 percent in July-August 1971 to 5.6 percent this summer.

Civilian labor force growth during the past year has been generally in line with 1962–69 trend growth rates, except in the case of adult men. The number of adult men in the civilian labor force increased 1.8 percent from summer 1971 to summer 1972, and 1.6 percent in each of the 2 preceding periods shown in table 3. These rates are well ahead of the 1962–69 average of only 0.8 percent

per year. The difference in the case of adult men is mainly the result of the reduction of the armed forces, which has augmented the natural growth of the civilian population and thus of the civilian labor force.

The effect of the armed forces reduction can be seen by comparing in table 3 the growth rates for the civilian labor force with those for the total labor force (civilian plus armed forces). It can be seen that the adult male total labor force has been increasing during the past 2½ years at rates very closely in line with the 1962–69 trend; the deviation from the 1962–69 trend occurs only for the civilian labor force. Armed forces reduction has also worked to boost the growth rate of the teenage male civilian labor force, but the effect in the past year was not large.

#### HISTORICAL STATISTICS

National income and product data for 1929-63 are in *The National Income and Product Accounts of the United States, 1929-1965, Statistical Tables* (available at \$1 from Commerce Department Field Offices or the Superintendent of Documents; see addresses inside front cover). Each July Survey contains preliminary data for the latest 2 years and final data for the preceding 2. The July 1972 issue has data for 1968-71. BEA will provide on request a reprint of final data for the years 1964-67. Prior July issues have final data as follows: 1964-65, July 1968; 1965-66, July 1969; 1966-67, July 1970; 1967-68, July 1971.

- In August: Nonagricultural payroll employment increased 280,000
- The jobless rate was 5.6 percent
- The overall wholesale price index rose 0.2 percent; prices of nonindustrial products turned down

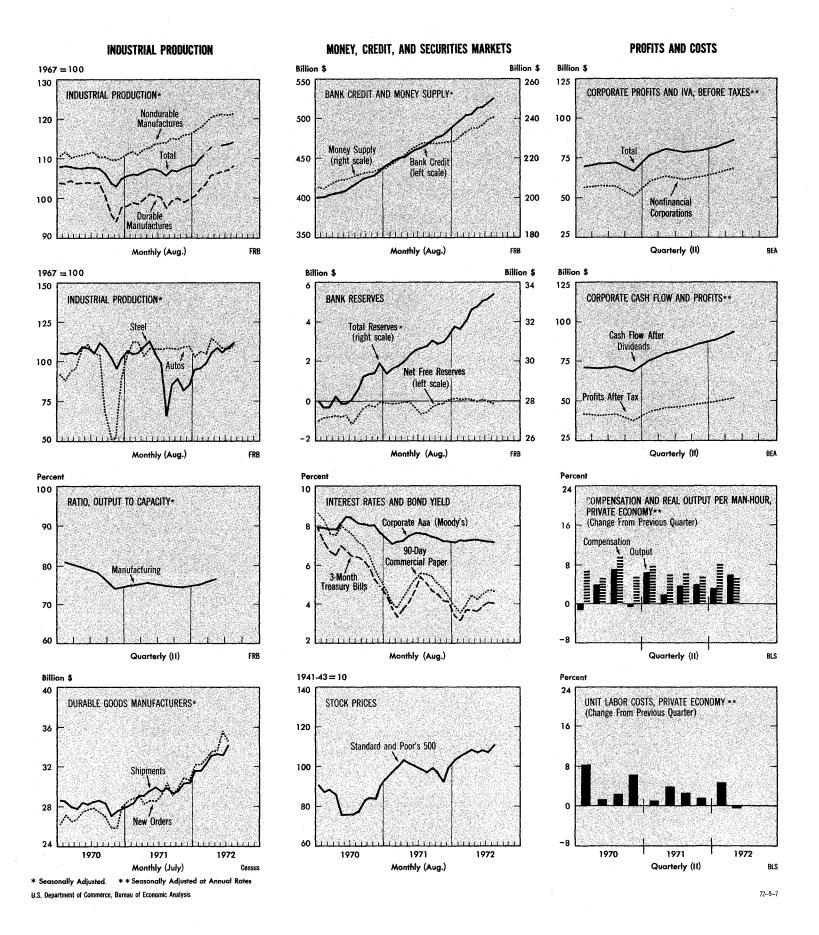

- In August: Personal income advanced about \$7 billion; wages and salaries accounted for most of the advance
- Advance report shows retail sales up 1½ percent
- ullet Expenditures for plant and equipment expected to rise \$31⁄4 billion in third quarter and \$11⁄2 billion in fourth

- In July: U.S. merchandise trade balance continued to show large deficit
- Balance of payments deficit on current account and long-term capital was sharply lower in second quarter

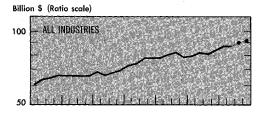

- In August: Industrial production increased 0.5 percent
- Money supply continued to grow; bank credit up sharply

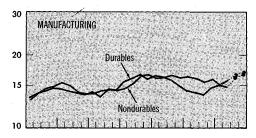

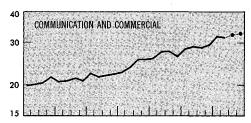

### **Business Capital Outlays in 1972**

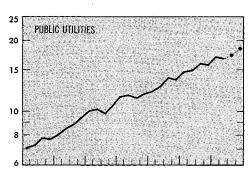

CHART 8

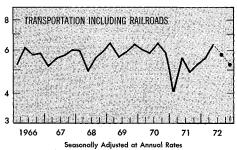

#### **Plant and Equipment Expenditures**

Expectations

U.S. Department of Commerce, Bureau of Economic Analysis

72-9-1

BUSINESS expenditures for new plant and equipment were at a seasonally adjusted annual rate of \$87.1 billion in the second quarter of 1972, up about 0.4 percent from the prior quarter, according to the survey conducted in late July and August by the Bureau of Economic Analysis. In the survey conducted 3 months earlier, businessmen had projected a very substantial increase of 4.5 percent from the first to the second quarter, following a 4.3 percent rise from the fourth quarter of 1971 to the first quarter of 1972.

In the third quarter of 1972, capital investment is projected to rise 3.7 percent to an annual rate of \$90.4 billion. A rise of 1.6 percent is projected for the fourth quarter. For the year as a whole, businessmen now plan to spend \$89.1 billion <sup>1</sup> for new plant and equipment, or 9.7 percent above 1971 outlays of \$81.2 billion. The expected 1972 spending increase is moderately below the 10.3 percent increase projected from the May survey (table 1), but is sharply higher than the actual increases of 1.9 percent and 5.5 percent in 1971 and 1970, respectively.

#### Shift in spending expectations

The expectation reported in the May survey was that spending would increase strongly in the second quarter (4.5 percent), in line with the sharp increase in the prior quarter (4.3 percent). There is no clear reason for the large difference between that expectation and the actual second quarter rise of only 0.4 percent. The shortfall from expectations was fairly widespread among the manufacturing industries, with the only exceptions occurring in the textile, paper, and "other nondur-

able goods" industries. In the nonmanufacturing category, the shortfall occurred in the airline, gas public utility, communications, and "commercial and other" industries. Table 2 compares actual first quarter 1972 spending by broad industry categories with expected (as of May) and actual outlays in the second quarter, and current expectations for the second half with previous expectations.

A significant portion of the second quarter shortfall has apparently been shifted into the second half, resulting in upward revisions of spending expectations for the third and fourth quarters (see table 2). As a consequence, total spending for the year 1972 is projected at a figure only moderately below that reported in the May survey.

#### Recent capital spending trends

Quarter-to-quarter movements in capital spending are rather volatile, and

<sup>1</sup> Includes industries not shown separately

<sup>1.</sup> The expectations figures have been adjusted for systematic biases in survey responses (footnote 2, table 6). Before adjustment, 1972 expenditures were expected to be \$89.1 billion for all industries, \$82.3 billion for manufacturing, and \$56.7 billion for nonmanufacturing. The adjustments were applied separately to each major industry; their net effect was to decrease the manufacturing total by \$0.7 billion and to raise the nonmanufacturing total by \$0.7 billion.

Source: U.S. Department of Commerce, Bureau of Economic Analysis.

trends are often more discernible in semiannual movements. Table 3 shows percentage changes in spending by halfyears, beginning with the change from the second half of 1969 to the first half of 1970.

Perhaps the most striking aspect of these data is the indicated strength of

the current recovery in investment outlays by the manufacturing industries. Following four successive semiannual declines in spending during 1970 and 1971, outlays by the manufacturing industries rose 1.5 percent in the first half of 1972, and are slated to rise 8.9 percent in the second half. This may reflect the fact that capital spending, especially by the manufacturing industries, tends to lag the overall business cycle. Expectations of gains in the second half are widely spread through the manufacturing industries. The largest percentage gains are expected by producers of nonferrous primary metals, stone-clay-glass products, petroleum, food and beverages, and nonelectrical machinery.

Tending to confirm the manufacturers' expectations of increased spending in the second half are the reported increases in manufacturing investment project starts (see table 5) and in the need for additional plant capacity (see table 4).

<sup>1.</sup> According to respondent companies' characterizations of their plant and equipment facilities, taking into account their current and prospective sales for the next 12 months.

2. Includes industries not shown separately.

3. Includes machinery, transportation equipment, and fabricated metals industries.

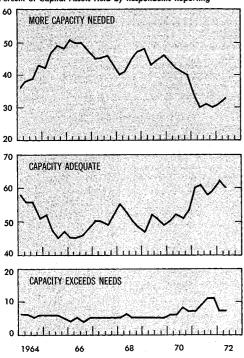

In contrast to the expected acceleration of spending by manufacturing industries in the second half, the nonmanufacturing industries as a group project a marked deceleration—a 2.6percent increase in the second half as against an actual gain of 8.7 percent in the first half. The deceleration is fairly widespread but is particularly marked in the transportation, communications, and "commercial and other" industries. Electric utilities, which have been persistently increasing spending at a fairly rapid rate in recent years, project a second half gain of only 3.6 percent, less than half as large as the gain in the first half. Gas utilities, on the other hand, whose spending has been generally sluggish in recent years and who spend considerably less than they projected in the second quarter, are scheduling a sharp gain in spending— 23.4 percent—in the second half.

Capital spending in the air transportation industry is highly volatile even on a semiannual basis. Airline capital

Starts are estimated by adding changes in carryover to expenditures during the given period.
 Carryover refers to expenditures yet to be incurred on plant and equipment projects already underway at end of period.
 Includes data not shown separately.
 Includes guided missiles and space vehicles.

Note.—Details may not add to totals because of rounding. Source: U.S. Department of Commerce, Bureau of Economic Analysis.

outlays fell 43.5 percent in the first half of last year from the preceding 6 month period, apparently reflecting traffic declines, temporary excess capacity in the industry, and a sharp decline in earnings. A 10.3-percent industry increase in expenditures in the second half of 1971 followed by the substantial advance of 23 percent in the first half of 1972 may have stemmed not only from a continuation of the economic recovery for the industry, but also from increased deliveries of a new type of wide-bodied craft, the so-called "airbus." For the second half of 1972, airlines project a more moderate 61/2 percent rise.

#### Manufacturers' capacity evaluation

Manufacturers' evaluation of the adequacy of their plant and equipment facilities as of June 30, relative to their current and prospective sales, indicated a further small increase in the need for more facilities (table 4 and chart 9). Companies owning 33 percent of fixed assets in manufacturing reported that they needed more facilities, as against 31 percent in March and 30 percent in December 1971. Among durable goods manufacturers, the proportion rose from 25 percent in March to 28 percent in June, while the proportion for nondurable goods companies rose from 36 percent to 37 percent. The "need more" proportion increased 4 percentage points for primary metals producers and 5 percentage points for chemical firms; these increases were offset in part by a decrease of 2 percentage points for food and beverage companies.

Facilities viewed as "about adequate" in June represented 60 percent of manufacturers' fixed assets, down from 62 percent in March. Companies reporting plant and equipment in excess of current and near-term needs accounted for 7 percent of fixed assets at the end of June, the same as at the end of March.

#### Starts and carryover of projects

The value of investment projects started by manufacturers during the second quarter of 1972 was a record \$8.6 billion, seasonally adjusted, up 13 percent from the preceding quarter and 32 percent from the second quarter of 1971. Durable goods manufacturers reported a 21 percent rise in new projects started from the first to the second quarter, and nondurable goods producers had an increase of 7 percent. The second quarter advance in starts centered in the machinery, stone-clayglass, petroleum, and paper industries.

The value of new projects started by manufacturing companies exceeded their capital expenditures in the second quarter by about \$1 billion (seasonally adjusted). The resulting increase in carryover—the amounts still to be spent on projects already underwaywas the fourth successive advance and was widespread among manufacturing industries. Manufacturers reported a seasonally adjusted carryover of \$20.9 billion at the end of June. This represented 2.76 times the second quarter 1972 expenditure level (seasonally adjusted), up from a corresponding ratio of 2.57 a year earlier.

New projects started by public utilities totaled \$5.7 billion in the second quarter, \$700 million lower than in the first quarter. Carryover of projects by the utilities rose \$1.6 billion in the April-June period to a total of \$35.3 billion. This represented 8.50 times the second quarter 1972 seasonally adjusted expenditure level, up from a corresponding ratio of 7.21 a year earlier.

<sup>1.</sup> Excludes agricultural business; real estate operators; medical, legal, educational, and cultural service; and nonprofit organizations.

2. Estimates are based on expected capital expenditures reported by business in late July and August 1972. The estimates for the full year 1972 and for the third quarter, and fourth quarter have been corrected for systematic biases. The adjustment procedures are described in the February 1970 issue of the SURVEY OF CURRENT BUSINESS. Before such adjustments, 1972 expenditures were expected to be \$89.06 billion for all industries, \$32.33 billion for manufacturing, and \$56.73 billion for nonmanufacturing.

3. Includes data not shown separately.

Includes guided missiles and space vehicles.
 Includes fabricated metal, lumber, furniture, instrument, ordnance and miscellaneous except guided missiles and space vehicles.
 Includes apparel, tobacco, leather and printing-publishing.
 Includes trade, service, construction, finance and insurance.

# Plant and Equipment Expenditures by Foreign Affiliates of U.S. Corporations, 1971–73

THE rate of growth of plant and equipment expenditures by U.S.-owned foreign affiliates is expected to dip significantly this year but will speed up slightly in 1973. The most recent survey of affiliates' spending plans indicates outlays are expected to rise only 4 percent this year following an increase of 14 percent in 1971. First estimates for 1973 indicate an expenditure increase of 6 percent. For the 3 years 1971–73, petroleum industry affiliates show high rates of expansion each year while expenditures by manufacturing affiliates display very little growth.

Final figures for 1971 spending were significantly higher than had been indicated in the previous semiannual survey. That survey was conducted at the end of last year after most expenditures had been completed, so that the revision of the 1971 figure primarily reflects more and better information available to reporters. Also, several large reporters do not report spending projections but file only yearend final figures. Expenditures of such reporters are assumed to expand at the same rate as reported projections of other reporters, but in 1971 their rate of expansion was faster and this was not reflected in the 1971 data until the most recent report was filed. The current estimate of 1972 spending, in dollars,

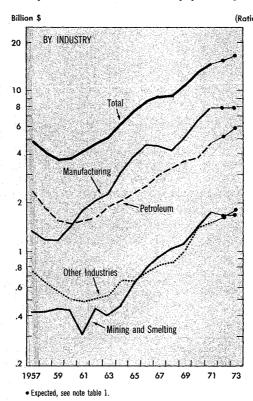

Note.—Data for this article were prepared under the supervision of Howard Murad.

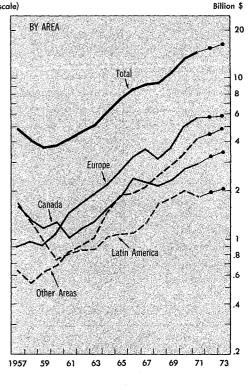

is \$15.4 billion, up slightly from the previous projection. However, because of the upward revision of the 1971 figure, the current estimate of the increase in affiliate spending this year, 4 percent, is down from the 7-percent increase projected 6 months earlier.

An attempt was made in the latest survey, as in the previous one (see March 1972 issue of the *Survey*), to assess the effects on affiliate spending of the various economic policy measures instituted beginning in August 1971. Of the 325 parent company responses to the special questionnaire, 305 indicated that these measures had no identifiable direct effect on their affiliates' capital expenditures. The remaining 20 companies reported a mixture of effects, in some cases lowering and in other cases raising planned expenditures. In sum, it appears that other factors such as anticipated demand, profitability, and availability of financing have

CHART 10

#### Expenditures for Plant and Equipment by Foreign Affiliates of U.S. Companies

U.S. Department of Commerce, Bureau of Economic Analysis

72-9-10

<sup>1.</sup> These findings are the result of BEA's latest semiannual survey, taken in June 1972, covering about 450 U.S. direct investors and their 4,800 affiliates. The data are universe estimates, derived from reported sample data, for gross property, plant, and equipment expenditures by all directly held affiliates in which the U.S. equity interest is 25 percent or more.

played the more identifiable role in investment decisions, with no clear impact as yet from the devaluation of the dollar and incentives to domestic expansion instituted since last August.

Nevertheless, the relative growth of domestic and foreign plant and equipment expenditures appears to have changed dramatically from 1971 to 1972. Last year, foreign spending increased 14 percent while a 2-percent increase was recorded in the United States. This year, the 4-percent rise scheduled abroad is well below the most recent estimate of a 10-percent increase in the United States (see report on p. 14). If 1972 expectations are realized both at home and abroad, this will be the first year since 1968 in which domestic spending will have grown faster than spending by affiliates abroad.

The faster growth in domestic expenditures is probably a result of the United States being further ahead in the business recovery cycle than most other developed countries. As an indication of this, expenditures by affiliates operating in the Canadian economy, which is tied closely to that of the United States, are expected to rise 9 percent this year, about the same rate of increase as in the United States. Spending in 1972 in all other developed areas taken together is expected to remain at approximately the 1971 level, while in developing areas an 8 percent rise in outlays is projected.

The 6 percent rise in affiliate spending planned for 1973 is concentrated by area in the developing countries and by industry in petroleum. The high level unused manufacturing capacity, particularly in Western Europe, sug-

gests that increases in these penditures in developed areas may lag behind the economic recovery abroad.

#### Industry and area patterns

The projected growth in spending abroad in 1972 and 1973 is centered in substantial expansion by affiliates in the petroleum industry. Following a record 25 percent increase in 1971 which boosted outlays to \$4.7 billion, plant and equipment expenditures of petroleum affiliates are expected to rise 10 percent this year and 13 percent in 1973. The substantial growth in spending is primarily related to the need to extract, refine, transport, and market an increasing volume of petroleum products in response to the world's soaring energy requirements.

Continuing negotiations on pricing and local participation, as well as the

projection is based on the third estimate (C report) of spending for the year. The 1973 projection is based on the first estimate (A report) of spending for the year. For 1972 C and 1973 A, separately, the projections were derived by calculating ratios of actual spending (the final E estimate) to the reported expectation for each of the previous 5 years. No bias adjustment was made unless there was a deviation in the same direction in at least 4 of the 5 years. Also, no adjustment was made to items below \$10 million. When adjustment was necessary under these criteria, the median ratio of actual to expected spending in the 5-year period was applied as an adjustment factor. (For further discussion, see the Note on Methodology on page 31 of the September 1971 Survey.)

Revised.

1. Based on results of the survey taken in June 1972.

2. Based on results of the survey taken in December 1971, as published in March 1972; no adjustments have been made to reflect information received subsequent to the publication.

Note.—Spending projections are adjusted in order to eliminate—or at least reduce—any ystematic bias in response to the four surveys of estimated expenditures taken for each year in June and December of the preceding year and June and December of the year in question, e., A, B,C, and D reports) before the final figures are available (the E report). The 1972

recent nationalization of two important, largely European-owned companies, have affected the investment climate in some petroleum producing areas and may be shifting the geographic focus of petroleum expansion. Expenditures

by petroleum affiliates in Africa (excluding the Republic of South Africa), after reaching a peak of \$560 million in 1969, have declined steadily and 1973 outlays are expected to be only \$225 million. The decline in Africa is

centered in Libya. In Venezuela, too, expenditures are expected to continue to decline through next year. In the rest of Latin America taken together, spending will decrease slightly this year following a 70-percent rise in

r Revised. 1. See note, table 1. Source: U.S. Department of Commerce, Bureau of Economic Analysis.

1971. Although expenditures by oil affiliates in the Middle East as a whole are expected to double this year and increase an additional 36 percent in 1973, most of the increase will be in Saudi Arabia where a settlement on the amount of local participation was reached earlier this year.

Expenditures for exploration and production in Canada are expected to show sizable increases both this year and next. In Europe, the pace of expansion will slow somewhat in 1973, following recent substantial gains, but offshore discoveries in the North Sea imply strong future growth. The major factors boosting spending by petroleum affiliates in 1973 will be expansion of refining facilities in Japan and heavy new investment in tanker fleets.

Expenditures by manufacturing affiliates are expected to show little change this year or in 1973, following a small increase last year. In 1969 and in 1970, manufacturing affiliates greatly expanded their production facilities. The subsequent slowdown in economic activity in most developed countries, beginning in 1970, probably has resulted in significant underutilization of plant capacity. Signs of an upswing in economic activity abroad are becoming more evident, but current expenditure levels are probably expected to be sufficient to handle initial increases in demand. Evidently, plant and equipment expenditures abroad, as in the United States, tend to lag behind economic recovery.

A sharp cutback in spending by manufacturing affiliates in the United Kingdom this year is expected to be offset by healthy gains in Canada and Latin America. Next year, manufacturing affiliates in most areas plan to spend at about their 1972 levels.

As in manufacturing, spending estimates for affiliates in the mining industry appear to have been affected by overcapacity. Outlays are expected to fall 4 percent this year and to increase only slightly in 1973, following 2 years of extraordinary growth.

Led by the strong growth of trading affiliates, aggregate spending in industries other than mining, manufacturing, and petroleum is expected to rise substantially in both 1972 and 1973.

Affiliates in this group taken together account for about 10 percent of total expenditures for all industries.

#### Plant and equipment expenditures and U.S. direct investment abroad

Plant and equipment expenditures increase the asset base of U.S.-owned foreign investments, but they do not necessarily result in an increase in the value of U.S. direct investment abroad which is a measure of the U.S. claims on those assets.

The relationship between affiliates' plant and equipment expenditures and

U.S. direct investment largely reflects the source of financing. For instance, foreign affiliates may obtain funds for plant and equipment expenditures directly from their U.S. parent companies in the form of loan or equity capital. Such transfers of funds are recorded as direct investment capital outflows in the U.S. balance of payments and they increase the value of U.S. direct investment abroad. U.S. owners, to the extent of their equity participation, also have a claim on the earnings of their affiliates. Thus, the use of reinvested earnings to finance

<sup>2.</sup> There are no expenditures in the United Kingdom and Japan. 1. See note, table 1.

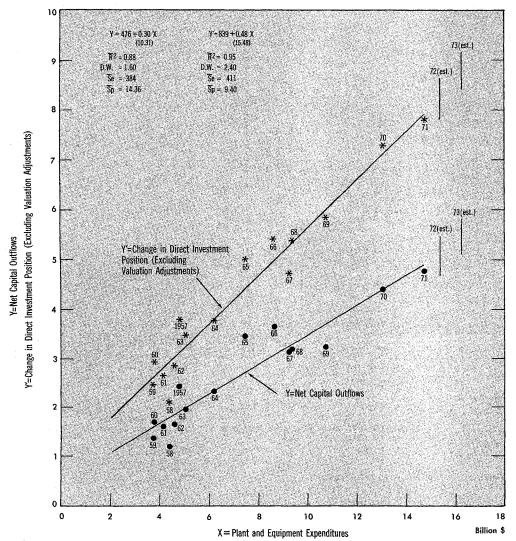

capital expenditures also results in an increase in the U.S. direct investment position abroad. The use of other sources of financing for plant and equipment expenditures, such as foreign equity participation, affiliate borrowing abroad, and affiliates' depreciation reserves, does not increase the U.S. investors claims on the foreign affiliate

and therefore does not increase the value of U.S. direct investment abroad. (The annual change in the direct investment position is equal to the sum of net capital outflows and the U.S. share of reinvested earnings, plus any valuation adjustments. See "U.S. Direct Investments Abroad in 1970" in the October 1971 Survey.)

CHART II

#### Plant and Equipment Expenditures, Net Capital Outflows, and Change in Direct Investment Position (Excluding Valuation Adjustments)

Billion \$

NOTE-Figures in brackets are t ratios.

 $\overline{R}^2$ = Coefficient of determination corrected for degrees of freedom.

Se = Corrected standard error of the estimate.

Top = Corrected standard error of the estimate divided by the mean of the dependent variable (in percent).

Since foreign affiliates have a mix of funds available to them to finance their capital outlays, only a portion of their total plant and equipment expenditures is related directly to funds which affect the balance of payments or the direct investment position of the United States. The remainder of this article presents a brief analysis of that relationship.

The results of simple regression analysis are shown in chart 11 for, first, the relationship between affiliates' plant and equipment expenditures and balance of payments net capital outflows for direct investment, and second, the relationship between plant and equipment expenditures and the change in the U.S. direct investment position excluding valuation adjustments (i.e., net capital outflows for direct investment plus the U.S. share of affiliates' reinvested earnings<sup>2</sup>). The points on the chart represent data for 1957, when the first plant and equipment spending survey was taken, through 1971. A simple regression line has been fitted to each of the two sets of points.

Of course, net capital outflows and the change in investment position are affected by many factors other than plant and equipment expenditures. Credit conditions and profit rates both here and abroad, for instance, influence the mix of available financing. Government policies, such as the U.S. direct investment control program discussed below, may also have an impact. However, in spite of these other influences, there is a surprisingly strong simple relationship between net capital outflows or changes in the direct investment position and plant and equipment expenditures.

The relationship between plant and equipment expenditures and net capital outflows indicates that annual net capital outflows averaged about one-third of annual plant and equipment expenditures in the years 1957 through 1971. The regression, with plant and equipment expenditures as the independent variable, indicates a high correlation  $(\overline{\mathbf{R}}^2=0.88)$  between the two variables. The regression coefficient (t statistic=

D.W. = Durbin-Watson statistic.

<sup>2.</sup> Current balance of payments methodology does not include the U.S. share of affiliates' reinvested earnings as a direct investment capital outflow.

10.31) is significant and the Durbin-Watson statistic (D.W.=1.60) leads to the acceptance of the hypothesis that error terms are serially independent.

The relationship between plant and equipment expenditures and annual changes in the U.S. direct investment position excluding valuation adjustments indicates that, over the period covered, net capital outflows plus reinvested earnings were on average about one-half of total plant and equipment expenditures. As in the the first equation, the regression coefficient is significant (t=15.48) and the Durbin-Watson statistic (D.W.=2.40) suggests the absence of serial correlation.

There were two periods of time in which the actual relationship between expenditures and capital outflows differed substantially from that estimated by the regression line. (The same differences also occurred in the relationship between expenditures and the change in the direct investment position.) First, in 1957 net capital outflows were much higher, and in the following year much lower, than the regression estimate. Foreign affiliates may well have used a portion of 1957 outflows to finance expenditures in 1958. In addition, 1957 was a year for which a benchmark survey of direct investment was taken and therefore the coverage of capital flows was probably better. In other than benchmark years, total capital flows are the sum of reported data for a somewhat smaller group of U.S. direct investors.

The second significant deviation occurred in 1965 and 1966. In both years, net capital outflows were substantially higher than the regression estimate. These were the second and

third years of a 3-year period of exceptionally rapid spending growth. The average annual increase in expenditures for the 3 years 1964-66 was about 20 percent. The high ratio of capital outflows to expenditures in 1965 and 1966 may have reflected an unusually large need for U.S. funds to finance this sustained rapid growth, since internally generated funds of the affiliates grow rather steadily over time and foreign financing may not have been available. In future work with these data, any systematic variation in these years due to the sustained high rate of growth must be taken into account.

The high ratio of direct investment capital outflows to expenditures in 1965 and 1966 occurred despite initiation of voluntary controls designed to improve the balance of payments. (A portion of the unusually large increase in such flows in the first half of 1965 may have been in anticipation of those controls.) The voluntary program regulating direct investment was made mandatory in 1968. The effect of these controls has been to encourage U.S. corporations or their affiliates to borrow funds abroad in order to reduce the impact of direct investment on the U.S. balance of payments. While these regulations do not necessarily restrain either net capital outflows or plant and equipment expenditures, they probably have resulted in structural changes affecting their relationship. If the regulations result in increased U.S. parent company borrowing abroad and these funds are used to finance affiliates' capital spending, then net capital outflows and the change in the direct investment position and their relationship to capital expenditures would be essentially the same as in the absence of controls. If,

on the other hand, the regulations result in increased affiliate borrowing abroad to finance plant and equipment expenditures, then net capital outflows and the change in investment position would be lower than they would be in the absence of controls and their relationship to plant and equipment expenditures would be changed. There is some evidence (although inconclusive) that the latter has happened. From 1957 through 1967, the last year prior to mandatory controls, total net capital outflows averaged 39 percent of plant and equipment expenditures. In 1968-71, the percentage was 33 percent.

The estimated relationships may be useful in giving an indication of what impact planned affiliate expenditures in 1972 and 1973 will have on balance of payments net capital outflows and on the U.S. direct investment position. Of course, it must be recognized that the relationships estimated by the regressions may not hold very closely in any given year. The lines on the right-hand side of chart 11 represent the range (to one standard error) of net capital outflows and of the change in the U.S. direct investment position associated with the current estimates of plant and equipment expenditures in 1972 and 1973. The range is about plus or minus \$385 million for net capital outflows and about plus or minus \$410 million for the change in the direct investment position. These relationships provide useful insight. However, to develop more precise predictive tools further research is needed to take into account the numerous factors other than plant and equipment expenditures which affect net capital outflows and the change in the direct investment position.

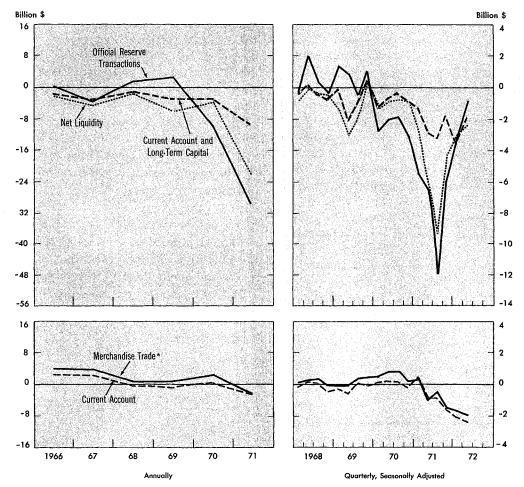

# Balance of Payments Developments, Second Quarter 1972

DESPITE a small deterioration in the current account, most balance of payments measures showed a significant improvement in the second quarter, reflecting a favorable shift in

capital flows. The balance on current account and long-term capital improved \$1.7 billion as U.S. direct investment outflows dropped sharply and foreign direct investment in the United States

CHART 12

#### **Balances on Major U.S. International Transactions**

\*Excludes exports under military grants and U.S. military agency sales contracts and imports of U.S. military agencies.

U.S. Department of Commerce, Bureau of Economic Analysis

swung from an outflow to an inflow. In addition, nonliquid short-term bank reported flows improved sharply. These shifts, however, were largely offset by an adverse swing in errors and omissions, so that there was only a moderate reduction in the net liquidity deficit. But recorded liquid private capital flows improved by almost as much as errors and omissions deteriorated, so that the deficit in the official reserve transactions balance declined \$2.4 billion from the first quarter to only \$0.9 billion.

The deficit on merchandise trade was \$1.9 billion, a small increase over the first quarter, reflecting a greater decline in exports than in imports (see Highlights and Perspectives). As the small services accounts surplus dwindled further and remittances remained stable, the balance on goods and services and the balance on goods, services, and remittances both worsened about \$0.4 billion, to deficits of \$1.5 billion and \$1.9 billion, respectively. The adverse shift in the current account deficit was smaller—about \$0.3 billion—because there was a dip in U.S. government grants, and a deficit of \$2.4 billion was registered.

#### Long-term capital flows

During most of the second quarter, at least until mid-June, there was evidently a growing confidence that the dollar would not depreciate further

2-9-12

24

<sup>\*</sup>In Highlights and Perspectives, Max Lechter wrote the section on Merchandise Trade, Joseph Quinn the section on Corporate Capital flows and Jack Bame the section on Changes in U.S. Liquid Liabilities.

against other currencies, at least in the near term, and this feeling probably contributed to the favorable swing in capital flows. Among the long-term capital accounts, foreign direct investment in the United States shifted favorably by more than \$700 million to a net inflow of \$345 million. Most of this swing was accounted for by a reflux of funds transferred by Japanese trading companies in the United States to their parent companies during the first quarter, when there was renewed speculation that the ven would be revalued further. The second quarter reflux may also have been encouraged by policy measures taken by Japanese authorities to reduce their reserves.

The sharp reduction in U.S. direct investment outflows, from \$1.3 billion to \$0.2 billion, may also have been associated with the increased confidence in the dollar. Previous outward transfers of funds through the direct investment accounts were partly related to exchange market instability; a return of confidence in the dollar would temporarily hold down new outflows. Other factors were also important, including modest planned plant and equipment expenditures by foreign affiliates in 1972 and some special inflows (see Highlights and Perspectives).

Other long-term capital transactions showed mostly offsetting shifts. There was a notable change in the pattern of foreign purchases of U.S. securities. Foreigners bought about \$750 million of new Eurobond issues of U.S. corporations, about \$450 million more than in the first quarter, but their purchases of U.S. stocks dropped by \$530 million to \$165 million. Since many of the Eurobond issues were convertible into stocks, favorable prospects for U.S. corporate profits and stock prices probably contributed to the rise.

The volatility of these purchases and of the direct investment accounts in late 1971 and thus far in 1972 underlines the difficulties of assuming that long-term capital flows necessarily reflect fundamental factors. In fact, such flows appear to be heavily influenced by changes in near-term expectations that induce temporary movements of funds and change the timing of long-term investments.

#### Short-term capital flows

Nonliquid short-term private capital flows, which improved \$1.0 billion, liquid private capital flows, which improved \$1.7 billion, and errors and omissions, which deteriorated \$1.9 billion (probably associated with un-

recorded capital flows), are all subject to many common influences. Favorable shifts in expectations regarding the dollar (including those associated with increased stability in the foreign exchange market or a rise in U.S. interest rates compared with those abroad) tend to improve these accounts, other things being equal.

During most of the second quarter, both these factors tended to be more favorable that in the first. The exchange markets were relatively calm for most of the quarter, although most leading currencies continued to be quoted at a premium against the dollar. This calm was conducive to the absence, or some actual unwinding, of the outflows in 1971 and early 1972 which had been associated with anticipations of exchange rate changes.

Short-term interest rates in the United States were significantly higher in the second quarter than in the first, and they rose more than rates abroad. This was particularly noticeable at the shortest end of the maturity spectrum. Overnight Eurodollars were consistently quoted at lower than the domestic Federal funds rate during the quarter. This encouraged borrowing by U.S. banks and U.S. agencies of foreign

banks in the Eurodollar market and led to a large increase in liabilities of branches and agencies of foreign commercial banks to their head offices abroad, as well as some increase in liabilities of U.S. banks to their foreign branches. Both these flows played a part in the improvement in liquid private capital flows.

Nonliquid short-term claims reported by banks, which had shown a persistent build-up during the last few years, were reduced by \$455 million in the second quarter, a favorable shift of \$1 billion over the first. In addition to the influences already mentioned, the shift reflected measures taken by Japanese monetary authorities to provide dollars to Japanese banks, which were utilized to liquidate previous borrowing from U.S. banks.

Renewed unsettled conditions in exchange markets, immediately preceding and following the floating of the pound sterling in late June, probably contributed to the quarter's net outflow of \$1.1 billion in errors and omissions, following the \$850 million inflow in the first quarter. The floating of the pound which led to renewed doubts about the stability of the dollar, resulted in another round of heavy dollar accumulations by foreign central banks (which spilled over into the third quarter) and most of the second quarter official reserve transactions deficit was registered during this period.

#### **Highlights and Perspectives**

#### Merchandise trade

Merchandise exports and imports in the second quarter—adjusted to a balance of payments basis, excluding "military" trade of the defense agencies—were both below the peak levels of the first quarter. The decline in exports exceeded that in imports by \$255 million, resulting in a widening of the trade deficit to \$1,930 million, seasonally adjusted, from \$1,675 million in the first quarter. (See tables B1, B2, and 4.)

Two special factors contributed to the deterioration in the balance. First, import prices (measured by unit values) rose more than 3 percent from the first quarter to the second, while export

prices showed only a marginal gain. Second, exports were inflated more than imports in the first quarter by make-up shipments in the wake of the late-1971 dock strike, leading to a greater decline of exports than imports in the second quarter.

The trade deficit for the first six months of 1972 totaled \$3.6 billion on a balance of payments basis, compared to the full-year deficit of \$2.7 billion in 1971. Both exports and imports were running at a seasonally adjusted annual rate substantially higher than the 1971 total. Imports in the first half of 1972 were at an annual rate of \$53.7 billion, more than 18 percent ahead of the 1971 total of \$45.5 billion, while exports were at an annual rate of more then \$46.5 billion, about 9 percent above last year's total.

The strong upsurge in both exports and imports occurred at the outset of the year and, although there was some retreat from January's abnormally high figures, trade remained at an elevated level in succeeding months, with no significant upward or downward tendency in either exports or imports. This suggests that the 1971 coast-to-coast dock strikes and the import surcharge may have lowered last year's trade totals by more than earlier estimates suggested, thus obscuring the underlying growth in both exports and imports in the last half of 1971, and that the effects of these distortions contributed significantly to the large jump in trade at the start of 1972. The subsequent phase-out of post-strike and post-surcharge shipments offset the underlying growth, and this contributed substantially to the stability that showed up in the monthly trade figures. (A breakout from this pattern occurred in July and August, when both exports and imports showed sizable gains for the first time in five months.)

Overall export prices (unit values) in the first half of 1972 were 2.3 percent higher than the 1971 average, while import prices were up 5.2 percent. These disparate price movements partly explain the much greater gain in imports than in exports this year.

On an area basis, the largest trade deficits in 1971 and 1972 were with

Japan (see table B2) but the major deterioration from 1971 to 1972 was with Western Europe. The trade balance with that area shifted from a surplus of \$800 million in 1971 to a deficit of \$900 million (annual rate) in the first half of 1972. This adverse swing of \$1.7 billion exceeded the swing of about \$1 billion in our deficit with Japan, from \$3.2 billion in 1971 to an annual rate of almost \$4.2 billion in 1972's first half. In the second quarter, the balance with Western Europe worsened by \$175 million as exports dropped more than imports; the deficit with Japan improved by \$35 million as imports dropped more than exports. The cut in imports from Japan may have reflected the effects of the Japanese seamen's strike which began in mid-April.

Agricultural products, which normally comprise less than one-fifth of total exports, accounted for one-fourth of the overall export rise from 1971 to the first half of 1972. The increase in agricultural exports can be attributed to a rise in corn shipments to the Soviet Union, increased soybean exports, higher prices, and post-strike make-up shipments (especially of tobacco), which more than offset a sizable drop in raw cotton exports.

Among nonagricultural exports, increased automotive shipments to Canada more than offset a decline in deliveries of civilian jet transports. After adjustment to eliminate the distorting effects of the dock strikes on the 1971 and 1972 trade figures, it appears that the major export gains were in finished products—machinery

and nonfood consumer goods (other than automotive); automotive shipments to overseas markets were down.

The sharp rise in imports this year was also concentrated in finished products-machinery, autos, and other consumer goods-although large gains were also recorded in imports of fuels and building materials. Automotive imports from Canada in the first half of 1972 increased more than corresponding exports. There was also a large rise in the value of foreign car imports from overseas, reflecting both higher prices (due largely to currency revaluations) and a shift toward more expensive models. In number of units, however, the penetration of foreign cars in this year's expanded U.S. market, at 14½ percent

r Revised. r Preliminary.

1. Includes goods physically exported from the United States under U.S. military agency sales contracts and recorded in Census trade statistics; includes goods physically imported into the United States directly by U.S. military agencies (and by the Atomic Energy Commission and the Coast Guard) and recorded in Census trade statistics.

2. The statistical identification of automotive products imports from Canada (line 27), which are definitively classified for duty-free status under the U.S.-Canada Automotive

Products Trade Act, is more complete and comprehensive than the identification of automotive products exports to Canada (or of automotive export and import trade with all other areas). The less comprehensive identification of U.S. trade statistics on automotive exports to Canada results in an undercounting of such exports (line 14) which—estimated from examination of Canada's import statistics—amounted to about \$0.4 billion in 1971.

Note.—Seasonally adjusted quarterly details may not add to unadjusted annual totals.

of sales, was down from the 16 percent share in the first half of 1971 and the 15½ percent share for 1971 as a whole.

#### Corporate capital flows

There was a large net corporate capital inflow of \$725 million in the second quarter, a \$1,940 million improvement from the first quarter outflow (see table C). Direct investment outflows dropped sharply, by \$1,065 million, borrowing abroad rose \$680 million, and other corporate claims shifted favorably by \$195 million. The

very sharp improvement in the corporate capital accounts was probably a temporary phenomenon.

According to preliminary data, direct investment outflows were only \$200 million in the second quarter. During much of the quarter there was increased confidence in the dollar and foreign exchange markets were relatively calm, and the sharp drop in outflows may have been associated with these conditions. Some of the direct investment outflow in prior quarters was attributed to expectations of exchange

rate changes. Those excess funds may have been utilized in the second quarter to finance investment abroad, thereby reducing the need for funds from the United States, and some funds may actually have been returned to the United States. Also contributing to the decline in net capital outflows was a slowing in the growth rate of plant and equipment spending by foreign affiliates of U.S. companies to a projected 4 percent in 1972, compared to 14 percent in 1971 (see article beginning on page 18). With a rate of increase this low, a

larger than usual share of total capital spending can probably be met out of internally generated funds-depreciation and retained earnings—and borrowing abroad by affiliates.

Total corporate borrowing abroad increased \$680 million from the first quarter to the second, when it totaled \$985 million. A portion of the proceeds may have been used both to pay off existing foreign bond debt and for transfer to the United States to pay off existing short-term debt. The fact that interest rates on these borrowings were below the level of the past 2 years appeared to be a factor in these developments. Convertible bonds, with an average interest rate of close to 4½ percent, accounted for about \$460 million of total borrowing in the second quarter.

There was a favorable swing of \$195 million in other corporate claims. Short-term liquid claims showed a net inflow of \$60 million for the quarter, a \$255 million improvement. Much of the inflow was from Canada, due mainly to a narrowing of the differential between Canadian and U.S. short-term interest rates which favored a shift of funds to the United States. There was an outflow of \$115 million

in short-term nonliquid claims, a largely trade-related account

#### Changes in U.S. liquid liabilities

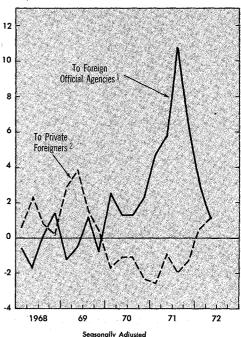

Liquid private capital flows-particularly changes in liquid liabilities to private foreigners-have been among the most volatile elements in the U.S. balance of payments accounts in recent years (see chart 14). In the first half of 1972, after 2 years of heavy outflows (reductions of liabilities) totaling almost \$13 billion, liquid liabilities to private foreigners rose by \$1.7 billion. Partly reflecting such private flows, such liabilities 1 to foreign official agencies rose almost \$35 billion in the 1970-71 period, but increased only about \$4 billion in the first half of 1972.

By far the largest changes in liquid liabilities to private foreigners are in those to foreign commercial banks, including liabilities of U.S. banks to their foreign branches, and liabilities of U.S. agencies of foreign banks to their head offices and others abroad. These liabilities are sensitive to differentials between short-term interest rates in the United States and in foreign money market

<sup>1.</sup> Including certain nonliquid liabilities to foreign official agencies which are considered to be of reserve quality (see Technical Notes, p.30).

<sup>\*</sup> Revised. \* Preliminary. †Portion of line. n.a. Not available.

1. Excludes claims and liabilities of U.S. banking and brokerage institutions.

2. Excludes funds obtained abroad by U.S. corporations through bank loans and other credits and also excludes securities issued by subsidaries incorporated abroad. However, securities issued by finance subsidiaries incorporated in the Netherlands Antilles are treated as if they had been issued by U.S. corporations to the extent that the proceeds of such issues are transferred to U.S. parent companies.

3. Excludes brokerage transactions.

<sup>4.</sup> Corporate foreign borrowing may not be entirely related to direct investment but may also include funds borrowed to finance trade or for domestic use. The amount of such nondirect investment related borrowing cannot be disaggregated.
5. A (-) reflects a decline in foreign deposits and money market paper held in the United States.

<sup>6.</sup> Includes \$11 million of proceeds from a new issue of stock sold abroad by a U.S.

London. Other aspects of monetary policy, including the U.S. interest-rate ceiling on time deposits (Regulation Q) and changes in bank Eurodollar reserve requirements (Regulation M), also have affected these flows. In certain periods, anticipations of exchange rate changes have been the dominating influence on shifts in liquid liabilities to private foreigners.

The first substantial borrowings of Eurodollars by U.S. banks from their branches abroad—which are not subject to maximum rate ceilings-were directly related to the credit "crunch" of 1966; these borrowings totaled over \$4 billion at yearend. With credit available in ample amounts in 1967, such borrowings were reduced during the year, but they subsequently rose to more than \$7 billion in the fall of 1968, as U.S. moneymarket rates increased along with business activity. In 1969, coincident with another very tight monetary policy, outstanding Eurodollar borrowings of U.S. banks jumped to a record \$15.4 billion in mid-October and increased almost \$7 billion for the year. The demand by U.S. banks for such funds grew to such proportions that 90-day Eurodollar rates at midyear exceeded 12 percent per annum, a level which lured funds out of foreign central banks, and from U.S. residents—the latter funds mostly unrecorded. As dollar liabilities to private foreigners rose, those to foreign official agencies dipped by \$2 billion for the 2-year period and the official reserve transactions balance showed considerable improvement in 1968 and in 1969. The net liquidity balance, however, was pushed further into deficit, as unrecorded outflows to the Eurodollar market increased sharply.

A reversal of these movements occurred in 1970 and 1971, because of very expansive U.S. monetary policy and a concomitant sharp decline in U.S. interest rates. The suspension in June 1970 of Regulation Q ceilings on large denomination time deposits of less than 90 days maturity was also a factor in reducing U.S. banks'

incentive to borrow Eurodollars. There was a decline in liquid liabilities to foreign commercial banks, mostly to branches of U.S. banks, of almost \$13.5 billion for the 2 years combined. At the same time, these and large amounts of other dollar holdings flowed into the tills of foreign central banks. For one thing, European firms—especially German, which were subject to restrictive credit policy at home-borrowed these dollars to finance domestic activities, turning the dollars into their commercial banks for marks. The commercial banks subsequently channeled these dollars to the central bank. For another, beginning in the spring of 1971. widespread expectations of an upward revaluation of several European currencies and the Japanese yen led to a very large-scale run on the dollar on the part of both foreigners and U.S. residents. Reflecting both new outflows from the United States and switches out of privately held dollars abroad, liquid dollar liabilities to foreign official agencies soared by almost \$35 billion in the 1970-71 period. These developments were a major contributing factor to the suspension of dollar convertibility into gold and other reserve assets in August 1971.

In the first half of 1972, with U.S. short-term interest rates rising and an exchange rate realignment having been effected towards the end of 1971, liquid liabilities to private foreigners—again mostly to banks—rose about \$1.7 billion, reversing the 2-year decline, and this tended to improve the official reserve transactions balance. (In the wake of the floating of the pound sterling in late June, the pace of additions to foreign official dollar holdings accelerated, continuing early in the third quarter before abating).

#### **Technical Notes**

#### Liabilities to foreign official agencies

Conceptually, the official reserve transactions balance should reflect changes in U.S. reserves and changes in

all official reserve holdings of foreign countries that are liabilities of the United States. In order to distinguish official reserve holdings from other, more permanent investments of the authorities of foreign countries, the nature of the U.S. liability must be taken into account. All U.S. government securities held by foreign official agencies are considered to be foreign official reserve assets. Foreign official agencies' holdings of U.S. private liabilities that can be readily monetized without risk of a significant loss of value may be regarded as a reserve instrument, whether or not the foreign country includes it among its published official reserves.

The range of private instruments to be included among U.S. liabilities used to measure the official reserve transactions balance thus is broadened to include nonguaranteed securities of U.S. federally sponsored agencies, regardless of maturity date, and bonds issued by U.S. State and local governments and private corporations. Details are shown in table 8, lines 22–45.

#### Reversion of Ryukyu Islands to Japan

The Ryukyu Islands that were under U.S. military administration since the end of World War II were transferred to Japan and became a province of that country on May 15, 1972. U.S. balance of payments transactions with that area are reported with "other countries in Asia and Africa" through the fourth quarter 1971 and with Japan beginning in the first quarter 1972.

#### Historical data

Data covering the years 1963-67 for lines 56 and 57 of table 2, which were omitted in the June Survey, are as follows:

r Revised. r Preliminary. \*Less than \$500,000.

 $<sup>1.\</sup> Mainly$  net additions to or liquidations of U.S.-owned grains stored in Canada, and exports of electrical energy.

<sup>2.</sup> Mainly exports of exposed motion picture film for rental rather than sale, and exports to Panama Canal Zone.

<sup>3.</sup> Irregular and occasional adjustments; valuation adjustments for goods considered to be underpriced or overpriced in Census data; timing adjustments for goods recorded in Census

data in one period but found to have been shipped in another; and coverage adjustments for special situations in which shipments were omitted from Census data.

4. Correction for discrepancy between sum of four quarters, seasonally adjusted, and the unadjusted recorded annual totals.

5. Exports of military equipment under U.S. military agency sales contracts with foreign governments to the extent such exports are identifiable from Census export documents. These exports are included in table 2, line 3: "Transfers under U.S. military agency sales contracts."

<sup>6.</sup> Mainly imports of electrical energy.

<sup>7.</sup> Mainly foreign charges for repair of U.S. vessels abroad, which are included in tables 2, 3, and 9, line 20 (Other transportation); also imports from Panama Canal Zone, and imports of domestically owned grains returned from storage in Canada.

<sup>8.</sup> Merchandise imported directly by the Department of Defense, as well as "defense" imports of the Coast Guard and Atomic Energy Commission, to the extent such imports are identifiable from Census import documents and verifiable from separate reports of the importing agencies. These imports are included in tables 2, 3, and 9, line 17: "Direct defense expenditures."

<sup>9.</sup> The statistical identification of automotive products imports from Canada (lines 91, 92) which are definitively classified for duty-free status under the U.S.-Canada Automotive Products Trade Act, is more complete and comprehensive than the identification of automotive products exports to Canada (or of automotive export and import trade with all other areas). The less comprehensive identification of U.S. trade statistics on automotive exports to Canada results in an undercounting of such exports (line 47) which—estimated from examination of Canada's import statistics—amounted to about \$0.4 billion in 1971.

Note.—Details may not add to totals because of rounding.

r Revised. p Preliminary. Less than \$500,000 (±).

1. The identification of transactions involving direct dollar outflow from the United States is made in reports by the operating agency. However, such data for all quarters 1971 and for first and second quarters 1972 are only extrapolated estimates by BEA, because of incomplete reports from one operating agency.

2. Line A.28 includes foreign currency collected as interest and line A.30 includes foreign currency collected as principal, as recorded in lines A.6 and A.7.

3. Lines A.29 and A.31 include some short-term U.S. Government claims, collections of which are recorded in line A.34. Collections of those short-term claims recorded in lines A.29 and B.14 are included in line B.15.

4. Consists of transfers of military goods and services financed by U.S. Government credits and of advance payments to the Defense Department (on military sales contracts) financed by credits extended to foreigners by U.S. Government agencies.

5. Includes securities payable in U.S. dollars and in convertible foreign currencies.

<sup>6.</sup> Transactions under military sales contracts are those in which the Defense Department sells and transfers military goods and services to a foreign purchaser, on a cash or credit basis. The entries for the several categories of transactions related to military sales contracts in this and the other tables are partially estimated from incomplete data.
7. Consists of transfers of military goods and services financed by U.S. Government credits (included in line B.16) and of increases in Defense Department liabilities (on military sales contracts) which arise from advance payments to the Defense Department financed by credits to foreigners by U.S. Government agencies.
8. Excludes liabilities associated with military sales contracts financed by U.S. Government credits and included in line B.11.

\*Less than \$500,000 (±). N.a. Not available.

1. Acquisition of capital stock of existing and newly established companies, capitalization of intercompany accounts, and other equity contributions.

2. Sales and liquidations of capital stock and other equity holdings, total, and partial.

3. Includes security issues placed with outside interests in the United States, the amortization of these security issues, and verified transactions of non-reporters not classified by type of transaction.

4. Mining and smelting includes the exploration and development of mining properties, the extraction of raw ores and the processing necessary for basic refined metals. Petroleum includes the exploration, development and production of crude oil and gas, and the transportation, refining and marketing of petroleum products exclusive of petrochemicals. Manufacturing excludes petroleum refining and the smelting operations of mining companies. "Other" industries includes all industries except those previously listed, the major ones being agriculture, public utilities, transportation, trade, insurance, finance and services.

5. As published in Treasury Bulletin. Treasury data are based on transactions by foreigners reported by banks and brokers in the United States; net purchases by foreigners (+) correspond to net U.S. sales (+).

6. Redemptions measure scheduled retirements and identifiable premature retirements of U.S. held foreign debt securities. Unidentifiable nonscheduled retirements appear in line 45.

7. Securities newly issued by finance subsidiaries incorporated in the Netherlands Antilles are included to the extent that the proceeds are transferred to U.S. parent companies.

8. Includes \$11 million of proceeds from a new issue of stock sold abroad by a U.S. corporation.

9. Mainly reflects exclusion of investments by foreign official reserve agencies in nonguaranteed bonds of U.S. federally sponsored agencies. These investments are included in table 2, line 57.

r Revised. P Preliminary. \* Less than \$500,000 (±).

1. During 1971, data included special Export-Import Bank and Treasury securities held as custody items by U.S. reporting banks on behalf of their foreign branches.

2. With maturity of 1 year or less; negotiable certificates of deposit with a maturity of 1 year or less are included with "other obligations."

3. Includes nonguaranteed securities of U.S. federally sponsored agencies with a maturity of 1 year or less.

4. Includes nonguaranteed securities of U.S. federally sponsored agencies.

5. Includes liabilities of U.S. monetary authorities for gold deposited by and held for the IMF and includes U.S. Treasury obligations obtained from proceeds of gold sales by the IMF to the United States to acquire income-earning assets. Investment was terminated in February 1972 and gold was reacquired by the IMF.

<sup>6.</sup> Includes, in addition to foreign official reserve agencies, other foreign official agencies.
7. Position figures reflect increases of \$7 million in U.S. Treasury bills and certificates (line 28), \$33 million in U.S. Treasury bonds and notes (line 32) \$70 million in nonmarketable, nonliquid U.S. Treasury obligations (line 43), and \$28 million in convertible currencies (line 49) resulting from the revaluations under the international monetary agreement of December 18, 1971. Total official reserve assets also include an increase of \$1,016 million resulting from a change in par value of the U.S. dollar on May 8, 1972, consisting of \$828 million gold, \$155 million SDR, and \$33 million gold tranche position in IMF.

7 Revised. 
7 Preliminary. 
7 Less than \$500,000 (±).

1. Credits, +: Exports of goods and services; unilateral transfers to U.S.; capital inflows (increase in U.S. liabilities or decrease in U.S. assets); decrease in U.S. official reserve assets.

Debits, -: Imports of goods and services; unilateral transfers to foreigners; capital outflows (decrease in U.S. liabilities or increase in U.S. assets); increase in U.S. official reserve assets.

<sup>2.</sup> Excludes transfers of goods and services under U.S. military grant programs.

3. Excludes exports of goods under U.S. military agency sales contracts identified in Census export documents, and imports of goods included under direct defense expenditures identified in Census import documents, and reflects various other balance-of-payments adjustments (for valuation, coverage, and timing) to Census statistics; see table 4.

<sup>4.</sup> Excludes reinvested earnings of foreign incorporated affiliates of U.S. firms or of U.S. incorporated affiliates of foreign firms.

5. Includes sales of foreign obligations to foreigners.

6. Transactions with the Ryukyu Islands that were under U.S. military administration from the end of World War II until May 15, 1972, are included with Japan beginning in the first quarter 1972; in previous periods they are included with "other countries in Asia and Africa".

<sup>7.</sup> Includes transactions with shipping companies  ${\it operating}$  under the flags of Honduras, Liberia and Panama.

r Revised. r Preliminary.

1. Balances of payments by area on the net liquidity basis and the official reserve transactions basis lack validity because liquid dollar holdings of private and official foreigners may be affected not only by their transactions with the United States but also by transactions among themselves. The balances shown by area here have some shortcomings due to statistical discrepancies including errors, omissions, and incorrect area attributions.

Balances are derived from lines in table 2 (all areas) and table 9 (individual areas) as follows:

The balance on current account and long-term capital with "all areas" includes changes in long-term liabilities to all private foreigners reported by U.S. banks; with "international

organizations" includes only liabilities to IBRD and affiliated organizations; and with other areas includes only liabilities to regional organizations. Increases in the long-term liabilities to other private foreigners included in the total, but not in the areas, amounted to (millions of dollars): 1971–I, 8; 1971–II, 12; 1971–III, 7; 1971–IV, 68; 1971 year, 95; 1972–I, 17; 1972–II, 20.

2. Adjusted to balance of payments basis; excludes exports under U.S. military agency sales contracts and imports under direct defense expenditures.

3. Includes some short-term U.S. Government assets; area data exclude long-term liabilities reported by U.S. banks other than to international and regional organizations (see footnote 1).

4. Transactions with the Ryukyu Islands that were under U.S. military administration from the end of World War II until May 15, 1972, are included with Japan beginning in the first quarter 1972; in previous periods they are included with "other countries in Asia and Africa."

# **CURRENT BUSINESS STATISTICS**

THE STATISTICS here update series published in the 1971 edition of Business Statistics, biennial statistical supplement to the Survey of Current Business. That volume (available from the Superintendent of Documents for \$3.00) provides a description of each series, references to sources of earlier figures, and historical data as follows: For all series, monthly or quarterly, 1967 through 1970 (1960–70 for major quarterly series), annually, 1947–70; for selected series, monthly or quarterly, 1947–70 (where available). Series added or significantly revised after the 1971 Business Statistics went to press are indicated by an asterisk (\*) and a dagger (†), respectively; certain revisions for 1970 issued too late for inclusion in the 1971 volume appear in the monthly Survey beginning with the September 1971 issue. Also, unless otherwise noted, revised monthly data for periods not shown herein corresponding to revised annual data are available upon request.

The sources of the data are given in the 1971 edition of Business Statistics; they appear in the main descriptive note for each series, and are also listed alphabetically on pages 189-90. Statistics originating in Government agencies are not copyrighted and may be reprinted freely. Data from private sources are provided through the courtesy of the compilers, and are subject to their copyrights.

r Revised. p Preliminary. 1 Estimates (corrected for systematic biases) for July-Sept. and Oct.—Dec. 1972 based on expected capital expenditures of business. Expected expenditures for the year 1972 appear on p. 17 of the Sept. 1972 SURVEY. 2 Includes communication.

† See corresponding note on p. S-1. 2 Includes remote present adjustment.

† Personal outlays comprise personal consumption expenditures, interest

paid by consumers, and personal transfer payments to foreigners. § Personal saving is excess of disposable income over personal outlays.

\*\*TData for individual durable and nondurable goods industries components appear in the Mar., June, Sept., and Dec. issues of the Survey.

\*\*Amore complete details appear in the quarterly reviews in the Mar., June, Sept., and Dec. issues of the Survey.

Revised. Preliminary. 1 Series discontinued.
o'See corresponding note on p. S-8. Pincludes data for items not shown separately.

(Data have been revised to reflect the incorporation of new basic data, the change in estimating procedures, the modification of the type of construction classifications for private non-residential buildings, the inclusion of farm housing in new private housing units, and the

introduction of the results of a survey covering private nonresidential building construction in the 18 Western States. More detailed information may be obtained from the Bureau of Censuus Report C30-70S, available from the Superintendent of Documents, U.S.Government Printing Office (Washington, D.C. 20402).

r Revised. p Preliminary. 1 As of July 1. 2 See note § below. §Effective Jan. 1972, data reflect adjustment to the 1970 Census of Population. Civilian labor force, nonagricultural employment, and unemployment figures for Jan. 1972 are raised by about 0.4% over the 1960-based figures. For comparison of Jan. 1972 (and subsequent months) with pre-1972 data, the following approximate amounts (in thous.) should be added to the

earlier figure: Civilian labor force, 330; nonagricultural employment, 290; unemployment, 30. Unemployment rates are unaffected.

1Effective Feb. 1972 SURVEY, labor force data reflect new seasonal factors; comparable figures for prior periods appear in EMPLOYMENT AND EARNINGS, Feb. 1972 (USDL, Bureau of Labor Statistics). †See note "f," p. S-14.

r Revised. r Preliminary. 1 See note "§", this page. 2 Beginning Dec. 1971, data on new basis reflect inclusion of paper issued directly by real estate investment trusts and several additional finance companies. § Average weekly insured unemployment (all programs) data include claims filed under extended duration provisions of regular State laws; amounts paid under these programs are not included in the 1971 annual figure.

Alnsured unemployment as % of average covered employment in a 12-month period.

Series revised to reflect recalculation of seasonal factors and trading-day adjustment; revisions for periods prior to Feb. 1971 will be shown later.
 Total SMSA's include some cities and counties not designated as SMSA's.
 Includes Boston, Philadelphia, Chicago, Detroit, San Francisco-Oakiand and Los Angeles-Long Beach.

r Revised. r Preliminary. I End of year. \*New series; more detailed information appears in the February 1972 Federal Reserve Bulletin.
P Includes data not shown separately. Seginning April 1971 Survey, data restated to include "other transportation" in addition to railroad data formerly shown.

Number of bonds represented fluctuates; the change in the number does not affect the continuity of the series.

¶Prices are derived from average yields on basis of an assumed 3 percent 20-year bond.

⊙ For bonds due or callable in 10 years or more.

<sup>\*</sup> Revised. \* Preliminary. <sup>1</sup>Annual total reflects revisions not distributed to monthly or quarterly data.

§ Includes data not shown separately.

¶Applies to passengers, baggage, cargo, and mail carried.

Passenger-miles as a percent of available seat-miles in revenue service; reflects proportion of seating capacity actually sold and utilized. OT otal revenues, expenses, and income for all groups of carriers also reflect nonscheduled service.

r Revised. P Preliminary. Number of carriers filing complete reports for the year.

2 For month shown. See note "\\$". 4 Annual total reflects revisions not distributed to the monthly or quarterly data. See note on six months ending in month shown. Before extraordinary and prior period items. Reporting roads only; excludes AMTRAK operations. For six months ending in month shown.

Calndexes are directly comparable for the identical quarter of each year (and from year to year). 

Ballroad Passenger Corp. (AMTRAK) operations for 1971 (mil. \\$): Operat-

ing revenues, 86; expenses, 179; net income, -55 (Interstate Commerce Comm.). Q Includes data not shown separately. IRevised monthly data back to 1969 will be shown later.

O Not comparable with data in 1971 Business Statistics.
§Effective Jan. 1972, data reflect an expanded sample that includes many motor-hotels; comparable July 1971 figures are as follows: Average sale per room \$18.95; occupancy, 61%.
¶Data include visits, effective Jan. and July 1971, to Guadalupe Mts. and Redwood National Parks, and effective Jan. 1972, to Arches and Capitol Reef National Parks.

r Revised. 
p Preliminary. ¹ Annual data; monthly revisions are not available.
2 Average for 11 months. ³ Less than 50 tons. ⁴ Jan.—Mar. 1972. \* New series.
△ Effective Dec. 1971, nationwide delivered price substituted for N.Y.-basis price.

<sup>∂</sup>Includes secondary smelters' lead stocks in refinery shapes and in copper-base scrap. ⊙ Producers' stocks elsewhere, end of Aug. 1972, 11,400 short tons.

r Revised. r Preliminary. 1 Annual data; monthly or quarterly revisions are not available. 2 Excludes figures for rubber-tired dozers (included for other periods). 3 For month shown. 4 Data cover 5 weeks; other periods, 4 weeks. 4 Effective with the Apr. 1972 SURVEY, index reflects new seasonal factors. Revisions for 1969-71 appear at bottom of p. S-34 of the Apr. 1972 SURVEY.

\*New series. Industrial supplies (marketed through distributors)—orders index (American

Supply & Machinery Mirs. Assn.), based on 2-month moving average of selected members, new orders, is also adjusted for number of working days. Sales index (National and Southern Industrial Distributors Assns.) is based on selected panel of members' operations which cover national sales for maintenance, repair, and operations for all types of industries. Dishwashers and disposers (Assn. of Home Appliance Mirs.) and gas equipment (Gas Appliance Mirs. Assn.) reflect total industry sales. Monthly data prior to 1971 are available upon request.

<sup>&</sup>lt;sup>7</sup> Revised. <sup>1</sup> Reported annual total; revisions not allocated to the months or quarter. <sup>2</sup> Data cover 5 weeks; other months, 4weeks. <sup>3</sup> Ginnings to Dec. 13. <sup>4</sup> Ginnings to Jan. 16. <sup>5</sup> Crop for the year 1971. <sup>6</sup> Sept. 1 estimate of 1972 crop. ⊖Data for total board products are available back to 1947; however, no comparable data prior to 1971 are available for the components. <sup>9</sup> Includes data not shown separately.

o'Stocks (owned by weaving mills and billed and held for others) exclude bedsheeting, toweling, and blanketing, and billed and held stocks of denims.

¶Unfilled orders cover wool apparel (including polyester-wool) finished fabrics; production and stocks exclude figures for such finished fabrics. Orders also exclude bedsheeting, toweling, and blanketing.

△Total ginnings to end of month indicated, except as noted.

Unless otherwise stated in footnotes below, data through 1970 and descriptive notes are as shown	1970   1971				19	1971				1972
