the BUSINESS SITUATION

Basic trends in economic activity are being obscured by the auto strike, and this will continue to be the case during the post-strike period. It will therefore be some time before there is much clear evidence as to the strength of the moderate expansion that developed before the strike.

Additional information has become available to round out the picture of developments in the third quarter. The Nation's output expanded modestly but utilization of manpower and of physical capacity remained far below potential. Output per man-hour improved substantially; this held down the rise in unit labor costs and contributed to a modest increase in corporate profits.

AS this issue of the SURVEY went to press, a national agreement had been announced between General Motors Corporation and the striking auto workers, and ratification by the union rank-and-file was expected shortly. Although some plants will remain shut until local issues are resolved, tentative plans call for regaining a fairly substantial rate of production by early December. The impact of the strike, during the more than 2 months of full shutdown, was large enough to obscure basic trends in economic activity. It will continue to be difficult to assess the underlying state of the economy during the post-strike period, as efforts are made to recoup lost production and sales.

It will therefore be some time before there is much clear evidence as to the strength of the moderate expansion that developed before the strike. Residential construction is quite evidently expanding, and construction spending by State

and local governments also continues to recover. Beyond that, the picture is less clear—especially in regard to consumer demand, which is the key to the strength of the economic outlook in the near term. Consumers remained very cautious in the third quarter, once again saving a large share of income, and the auto strike has undoubtedly worked to sustain cautious attitudes. The strike had a direct effect on the incomes of a very substantial number of people—counting both strikers and those affected in industries supplying GM. More generally, the strike was of such a magnitude that it likely had an unsettling effect on the attitudes of many who were not directly affected at all.

Additional information has become available to round out the picture of developments in the third quarter. The Nation's output expanded modestly but utilization of manpower and of physical capacity remained far below potential. With labor input cut further, output per man-hour improved substantially. As in the second quarter, the productivity gain held down the rise in unit labor costs, and this was an important factor contributing to a modest increase in corporate profits. As to the centrally important question of price behavior, there were some indications of a slowdown in the rate of increase. The evidence was mixed, however, and prices generally continued to rise at an unacceptable rate.

It is taking a painfully long time for price behavior to show any marked response to the substantial restraint that has been put on the economy. The Nation experienced several years of serious inflation, which worked its way into costs and prices, as well as atti-

tudes, throughout the economy. Excess demand has been eliminated. However, it is a very difficult task to reverse deep seated inflationary expectations, and the process by which wages and other costs come to reflect the changed conditions is proving to be very slow. Some progress has been made in affecting basic cost (and price) behavior. A good deal

CHART 1

Productivity and Labor Costs in the Private Economy

Because of sharp gains in productivity the rate of increase in unit labor costs has dropped substantially

U.S. Department of Commerce, Office of Business Economics
Data: BLS 70-11-1

more is needed, however, and achieving it will be more difficult in conditions of expanding economic activity.

Productivity and Labor Costs

Recent improvements in productivity have contributed very substantially to moderating the uptrend of labor costs (chart 1). Following five quarters of very small increases or actual declines, output per man-hour rose 3¼ percent at a seasonally adjusted annual rate in the second quarter and 4½ percent in the third. With output essentially unchanged in the spring and only modestly higher in the summer, the improvement in productivity was largely the result of rather sizable reductions in man-hours.

Productivity in the Private Economy
[Percent change, seasonally adjusted annual rate]

	Output	Man-hours	Output per man-hour
1969:			
I.....	2.8	3.4	-0.5
II.....	2.1	3.3	-1.1
III.....	2.5	.9	1.6
IV.....	-1.0	-1.8	.8
1970:			
I.....	-3.0	-.5	-2.5
II.....	.7	-3.0	3.7
III.....	1.6	-2.9	4.6

Since early last year, output and man-hours have followed a course typical of that seen during cyclical fluctuations in business activity. In periods of slackening demand, pressures on profits force business to pay increasingly close attention to costs. As operations are trimmed, firms reduce the work-week, cut hiring, and in many cases proceed eventually to lay off workers. The adjustment of man-hours in the early phases of a contraction tends to be slow, however, and this is especially true if businessmen believe—as many apparently did last year—that the economic slowdown will be brief and mild. In any event, an adjustment in man-hours which trails the slowdown in output naturally has an adverse effect on productivity. Once the man-hours adjustment is well underway,

however, it is likely to persist even after the economy has resumed an expansionary course. Man-hours often continue to decline for a short while and then tend to increase more slowly than output, as firms find that they can do without “excess fat” that had accumulated in the earlier expansion. Consequently, output per man-hour typically registers strong increases in the early stages of economic recovery.

Developments in the closing months of this year are of course obscured by the work stoppage at GM. However, the fact that business has now been streamlining operations for more than a year suggests that cost consciousness is a dominant attitude. It thus seems likely that the growth of man-hours will not be commensurate with growth of output, at least in the near term, so that some further sizable gains in productivity appear to be in the offing.

The improvement in productivity that has already occurred has served to offset a major part of the continued large increases in hourly compensation, and the rise in unit labor costs has slowed noticeably. In the third quarter, compensation per man-hour in the private economy rose at a seasonally adjusted annual rate of nearly 7¼ percent. That increase was roughly in line with recent experience; it was a little larger than the rise in the first half of 1970 and a little smaller than that in the second half of last year. In the past two quarters, however, the recovery in output per man-hour has held the average rise in unit labor costs to an annual rate of 2¼ percent, far below the pace in the preceding 2 years. It seems clear at this juncture in the anti-inflationary struggle that sustaining this significant improvement in unit labor costs is the key to future cost-price developments. If unit costs begin to accelerate sharply, the prospects for achieving a reduction in inflationary pressures will be dim indeed.

Union wage rates

Although union members comprise only a relatively small share of the labor force, developments in union contract negotiations this year are an important

factor contributing to the sustained rapid increase in average hourly compensation. The contracts negotiated in 1970 have not only provided very large increases—larger even than those negotiated last year—but they have affected an unusually large number of workers. The number of workers involved reflects the prevalence of multiyear contracts, coupled with the fact that the terminations of such contracts are not evenly distributed through time. A substantial number of them run in the same 3-year cycle and are up for renegotiation this year.

The large size of this year's contract settlements suggests an insensitivity to the slack condition of economic activity. To some extent, these outcomes reflect forces peculiarly associated with the multiyear bargaining pattern. Because most major contracts expiring this year were last negotiated 3 years ago, and will not be renegotiated until 1973, settlements are bound to reflect the inflationary conditions of the last few years. In the last round of negotiations, inflation was not so dominant an issue and, in many cases, cost-of-living adjustment clauses were traded off for other types of benefits. Now there is great pressure on union leaders to “catchup” with the rise in prices and in the general wage level in the intervening period, and to allow for the possibility of continued inflation.

The prevailing pattern in 1970, as in other recent years, is for the first-year increases under new multiyear contracts to be larger than the deferred increases provided for subsequent years. The impact of this practice is especially significant this year because some 5 million workers—an unusually large number—are covered by contracts up for renegotiation. In short, 1970 negotiations cover a very large number of workers whose demands are swollen by the inflationary buildup during the life of their expiring contracts. This conjunction of events, occurring at a critical time, is complicating the task of slowing the rate of increase in prices and costs. It should be recognized, however, that the 3-year contract cycle can also work the other way, to have a moderating influence on the behavior of labor

compensation in "light" bargaining years when relatively few workers negotiate new contracts.

Major contracts

Data compiled by the Bureau of Labor Statistics show that major contracts (covering 1,000 or more workers) negotiated in the first 9 months of 1970 provided a median first-year increase in straight time hourly earnings of $10\frac{1}{4}$ percent, compared with 8 percent in 1969. The acceleration occurred primarily in nonmanufacturing industries, where the median first-year increase negotiated through September was $15\frac{3}{4}$ percent, up from 10 percent last year. The construction and trucking industries accounted for most of this jump. In manufacturing, the first-year increase negotiated through September was 8 percent, compared with 7 percent last year. The manufacturing settlements included contracts primarily in the rubber, electrical equipment, and apparel industries.

Most workers not involved in new negotiations are receiving deferred increases provided by negotiations in earlier years, and some increases are being received under cost-of-living adjustment clauses. Taken together, the first-year increases negotiated this year and the deferred increases (including cost-of-living adjustments) have an overall impact on wage rates this year which can be expressed as the "effective wage increase" (EWI) for workers covered by major contracts. If the EWI calculated for the first 9 months of the year is a reasonable indicator of that for the full year, then the median EWI in 1970 for workers under major contracts will be about $6\frac{3}{4}$ percent, up sharply from about 5 percent in 1969.

Union vs. nonunion wage behavior

Workers covered by major contracts are only a small portion of all nonfarm workers. An interesting and an important question, therefore, is whether nonunion wages are responding more sensitively to the slowdown in economic activity. Data bearing on this question

are compiled only for manufacturing. These data suggest that overall wage behavior in nonunion firms is in fact more responsive to fluctuations in aggregate economic activity.

It is reasonable that this should be the case. In the nonunion sector, the granting of increases and the size of the increases given probably tend to be more subject to management discretion. Moreover, wage actions which occur annually, as is generally the case in the nonunion sector, should be more sensitive to current conditions than actions taken under contracts negotiated every 2 or 3 years.

BLS calculates on an annual basis the median "effective wage adjustment" (EWA) for union and for nonunion manufacturing workers. The EWA for a given year is the percentage change in straight time hourly earnings which occurs in that year. It reflects all changes occurring in the year and is based on data for all "situations" reported to BLS, including situations with decreases and no change as well as those with increases. The EWA thus differs from the "effective wage increase," which includes increases only. In general, the pattern of the union

and nonunion EWA's over the past decade has indicated a greater sensitivity in nonunion establishments (chart 2).

Data compiled by BLS for the first 6 months of 1970 can be used to make rough estimates of the union and nonunion EWA's for 1970. The two major factors influencing the EWA for any year are the size of the increases received by workers (whether the result of current or past decisions) and the percentage of workers receiving increases. For union manufacturing workers, the effective increase (EWI) was higher in the first 6 months of 1970 than in the same period last year, and almost all union workers received some kind of increase. For nonunion workers, both the EWI and the percentage receiving increases were down in the first half of the year from the first half of last year.

On the basis of these data, the median effective wage adjustment for union workers in manufacturing this year can be estimated at perhaps 6 to $6\frac{1}{2}$ percent, up 1 to $1\frac{1}{2}$ percentage points from last year. The nonunion effective wage adjustment can be estimated at approximately $3\frac{1}{2}$ to 4

CHART 2

Wage Adjustments in Manufacturing

Note.—Median annual "effective adjustment" in straight time hourly earnings. "Effective adjustment" reflects all situations reported to BLS, including those with decreases or no change, and includes wage changes resulting from decisions made (e.g., contracts negotiated) in past years.

percent, down 1 to 1½ points from last year, indicating a considerably greater responsiveness of nonunion wages—on average—to the state of economic activity.

Corporate Profits

During the third quarter, before-tax book profits of corporations registered their first increase in more than a year, rising \$3 billion at a seasonally adjusted annual rate. Half of the increase reflected inventory profits; the balance resulted from both a small expansion in corporate output and a slight improvement in profit margins. At \$85 billion, pre-tax book profits were nevertheless \$8 billion below the record level reached in the first two quarters of 1969.

Widespread increases among non-manufacturing industries accounted for most of the third quarter profit advance. Profits in manufacturing showed little change in the aggregate, largely because earnings of the automobile industry were down very sharply. It has been in manufacturing, particularly in durable goods manufacturing, that most of the recent profits decline has occurred. Manufacturing profits in the third quarter were roughly \$7 billion below their level in the first half of 1969.

The third quarter expansion in profits resulted in increased tax liabilities of \$1½ billion, and after-tax profits rose \$1½ billion to \$45½ billion. (The behavior of after-tax profits was not affected by the complete elimination of the tax surcharge at midyear; in the estimates of profits in the national income accounts, allowance was made as of the first quarter for the full-year effect of the surcharge elimination.) Dividends were up only slightly in the third quarter and retained earnings rose more than \$1 billion. Capital consumption allowances (mainly depreciation charges) continued to advance and cash flow rose \$2¼ billion. This followed a decline of \$2¼ billion in the year ending in the second quarter, and was the largest increase in internally generated funds since the closing quarter of 1967.

The book value measure of profits includes gains or losses due to the difference between the replacement cost of goods taken out of inventory and the cost at which they are charged to production. These inventory profits or losses are excluded from the profits component of national income—an aggregate which measures the factor incomes arising from current production—by the “inventory valuation adjustment” (IVA). Inventory profits rose \$1½ billion in the third quarter. After adjusting for this, the national income measure of pre-tax profits rose \$1½ billion to \$79 billion.

The volume of corporate output increased only modestly and the improvement in profits was to a considerable extent due to expansion of profit margins—i.e., profit per unit of real output. The average price per unit of non-financial corporate output continued on its steady upward course, rising a little more than 1 percent, but unit costs slowed noticeably, primarily because of a marked moderation in unit labor costs (chart 3). The latter development presumably reflected a productivity gain which offset continued increases in hourly compensation.

The summer improvement in profits and cash flow will no doubt help relieve some of the severe liquidity strain in the corporate sector. It appears that liquidity improved somewhat during the summer as corporations added to liquid asset holdings and made strenuous efforts to restructure their debt maturities. Corporations have substantially reduced short-term debt liabilities—mainly bank loans and open market paper—in large part funding these liabilities through the issue of long-term securities.

With demand slack and the manufacturing utilization rate down sharply further (to 76¼ percent in the third quarter), it appears that any near-term increase in profits will be channeled to improving corporate liquidity positions and not used for investment in plant and equipment. The latest OBE-SEC survey, taken in August, showed businessmen expecting virtually no growth in capital spending in the third and fourth quarters of this year. The results of this year's final quarterly

survey are not yet compiled. Although businessmen's plans for capital spending in 1971 are of necessity still tentative, there are indications from private surveys that spending will grow very little next year, and that the real volume of investment will probably decline.

Federal Deficit

The Federal Government recorded another large budget deficit in the third quarter. As measured in the national income accounts, the deficit was at an annual rate of \$11¼ billion, down from \$14¼ billion in the second quarter. There has been a deficit in each quarter of 1970 and another large deficit is in prospect for the fourth quarter. By

CHART 3

Corporate Sector: Prices, Costs and Profits

Price per unit of corporate output has continued to increase

The rise in labor cost per unit has slowed sharply, contributing to an upturn in profit per unit

Note.—Values plotted are calculated by dividing current dollar corporate product (total and its components) by real corporate product; nonfinancial corporations only.

U.S. Department of Commerce, Office of Business Economics

70-11-3

contrast, every quarter in 1969 showed a substantial surplus. However, this swing in the Federal budget position is largely the result of the slowdown in economic activity. The "high employment budget," which is a measure of Federal fiscal impact that attempts to abstract from the effects on revenues of changes in economic activity, has not changed very much over the past year.

The modest expansion of economic activity in the third quarter resulted in a \$3½ billion increase in taxes on incomes and profits. This was more than offset, however, by the revenue losses resulting from the mid-year expiration of the surtax and increase in the personal tax exemption, and total receipts fell \$1¼ billion to \$195½ billion.

Expenditures were at an annual rate of \$206¼ billion, down \$4¼ billion from the second quarter. Apart from the effects of special factors, expenditures in fact changed very little—rising by only \$¼ billion, or about \$1 billion less than the increase in the second quarter calculated on a comparable basis. The very small increase in the third quarter was the net result of higher net interest and subsidy payments, offset by reductions in defense purchases, grants-in-aid, and transfer payments.

The major factor affecting the recent behavior of total expenditures was the large retroactive payment of higher social security benefits and Federal pay. This one-time payment (amounting to about \$5¼ billion) swelled the expenditure figure in the second quarter but was absent in the third. Partly offsetting this swing was the fact that the third quarter expenditure total was swelled by another retroactive pay-

ment—about three quarters of a billion dollars—resulting from a pay increase for postal workers.

Income and Employment in October

Wage and salary disbursements were down sharply in October and personal income fell \$2½ billion at a seasonally adjusted annual rate. Government payrolls declined about \$1¼ billion because the retroactive payment to postal workers, which swelled September income by almost \$2 billion, was not in the October figures. Private payrolls declined sharply, as a \$5¼ billion drop in manufacturing wage and salary disbursements far outweighed a moderate rise in nonmanufacturing pay. The manufacturing decline reflected the heavy impact of the strike in the auto industry and was most pronounced in the transportation equipment and primary metals industries. Smaller declines, which were probably also due in good part to the auto strike, were registered in the fabricated metals, machinery, electrical equipment, and rubber industries. It should be pointed out that the decline in private payrolls resulting from the auto strike was partially offset by union strike benefits, which are not included in the personal income figures.

Transfer payments were up nearly \$2 billion last month, mainly because of a nonrecurring retroactive payment of railroad retirement annuities. Other nonwage components of income recorded small changes.

The effects of the auto strike were clearly visible in the reduction of more

than 600,000 workers, seasonally adjusted, on the payrolls of manufacturers. Although employment was down in most major industries, the decline centered in durable goods manufacturing, particularly in transportation equipment. The decline in manufacturing was partly offset by increases elsewhere, mainly in trade, services, and State and local government. Total nonfarm payroll employment fell 480,000, seasonally adjusted.

The average workweek was unchanged last month following a sharp drop in September. The September reduction was probably overstated because the survey week included Labor Day, and persons who did not receive holiday pay were reported as having reduced hours that week. The fact that the average workweek did not recover in October probably reflected production cutbacks and shortened work schedules associated with the auto strike.

The effects of the auto strike are more difficult to identify in the data on the total civilian labor force, in large part because striking employees are counted as employed. In October, both the civilian labor force and employment rose more than seasonally, with adult women accounting for the bulk of gains. The number of workers unemployed was up only a bit and the overall unemployment rate—at 5.6 percent—was essentially unchanged from September. The jobless rates for most major groups in the labor force were also about unchanged in October. The rate for married men rose 0.2 percentage point to 3.1 percent, continuing the trend evident since late last year.

- In October: Unemployment rate edged up to 5.6 percent, rate for married men reached 3.1 percent
- Nonfarm payroll employment dropped by 480,000, largely because of the auto strike
- Wholesale price index unchanged; industrial prices accelerated while nonindustrials declined

TOTAL PRODUCTION

THE LABOR MARKET

PRICES

* Seasonally Adjusted ** Seasonally Adjusted at Annual Rates

Sources and Uses of Funds of Foreign Affiliates of U.S. Firms, 1967-68

Foreign affiliates of U.S. firms had increased sources and uses of funds in 1968. However, their reliance on funds from the U.S. was reduced, probably reflecting the impact of the Foreign Direct Investment Program.

THIS article presents data on sources and uses of funds of foreign affiliates of U.S. firms for 1967 and 1968.¹ Sources and uses totaled \$10.7 billion in 1968 (excluding income paid out), a rise of \$1.6 billion over 1967. Most of the rise was used for building up inventories and current receivables, while investment in property, plant and equipment rose only slightly from 1967. Funds obtained from the United States fell, probably reflecting the impact of the Foreign Direct Investment Program which was made mandatory in 1968. Funds obtained abroad rose; while the Program may have contributed to this rise, other factors were probably more important. Retained earnings and depreciation and depletion also rose, but remained about the same portion of total sources.

The data presented here are related to the capital and income flows in the balance of payments accounts, but there are differences in concept and in coverage. Essentially, sources and uses accounts are oriented towards an overview of the financial developments of the foreign affiliates, rather than only flows between U.S. parents and affiliates. Sources of funds include all retained earnings, depreciation and depletion, all funds received from the United States (not only those the affiliates re-

ceived from their U.S. parents), and funds received from foreigners. Uses of funds include property, plant, and equipment expenditures of the affiliates, changes in inventories and in current receivables. The relation between balance of payments flows and these data are discussed in detail at the end of this article.

In respect to coverage, the data discussed here are based on annual reports

from about 450 U.S. parent companies covering approximately 4,000 foreign affiliates; in contrast, the balance of payments reports cover more than twice as many parent firms and foreign affiliates. Furthermore, this report is limited to three industries—mining and smelting, petroleum, and manufacturing—while all industries are included in the balance of payments data.

No attempt has been made to expand

CHART 8

Foreign Affiliates' Adjusted Sources and Uses of Funds: Percent Distribution*

* Adjusted sources or adjusted uses of funds equals total sources or uses less income paid out. The adjusted amounts represent the funds available for internal use by the affiliates.

1. The last report, covering 1965, appeared in the SURVEY in January 1967.

the 1967 and 1968 reported data on sources and uses to figures representing the universe of foreign affiliates, nor is the data for 1963-65, which is also included, expanded. While these data do not constitute a measure of total flows or absolute amounts, they do represent a reasonably consistent, but unmatched, sample of larger firms, giving a relatively accurate impression of the trend in the foreign affiliates' sources and uses of funds. When originally published, the 1963-65 data were blown up on the basis of the benchmark given by the 1957 census of direct investments. However, it was felt that 1957 was not a suitable benchmark for the 1967-68 data. Sources and uses data for a new base year have been collected—along with much other information—in the census of U.S. direct investment for 1966; these data cover about 3,500 U.S. parents and almost 25,000 foreign affiliates. When processing of the 1966 census is completed, the sources and uses figures for 1967 and 1968 will be revised to incorporate the new benchmark information.

Uses

Total uses of funds amounted to \$14.5 billion in 1968, of which \$3.7 billion was income paid out; if this is excluded,

adjusted uses were \$10.7 billion (tables 1 and 2). Of the adjusted total, 64 percent went for expenditures on property, plant, and equipment, 8 percent to finance increased inventories, 14 percent to finance increased current receivables, and 14 percent for other assets.

The rise in adjusted uses in 1968 was \$1.6 billion. However, expenditures for property, plant, and equipment increased only \$0.1 billion. There was consequently a fall in such expenditures as a percent of adjusted uses in 1968. Expenditures in the developed countries showed sizable declines in 1968, offset by increases in the less developed countries. The drop in Europe was particularly noticeable. This may have been partly related to the direct investment program, since controls are more stringent on outflows to developed countries. However, cyclical factors were probably more important. Economic growth in Europe was quite slow in 1967 (particularly in Germany), and the renewal of growth in 1968 evidently did not require an acceleration in plant and equipment expenditures, given the amount of unused capacity.

Financing increased inventories took only 2 percent of adjusted uses of funds in 1967, down sharply from the 1965 share, but jumped to 8 percent in 1968.

A substantial part of the increase in inventories in 1968 took place in Europe, and particularly in the United Kingdom, with a shift from liquidation of inventories in 1967 to a sizable build-up in 1968. Current receivables showed a similar pattern, with a particularly noticeable shift again in the United Kingdom.

While the shares of funds used for inventories and current receivables move rather erratically, the reduction of both in 1967 and their recovery in 1968 may have been associated with two particular developments. The first is that business conditions in Europe were relatively slow in 1967, which would reduce the need for increases in inventories and receivables. The second factor was probably anticipations of the devaluation of sterling (which occurred in late 1967) and the accompanying leads and lags in trade payments.

Funds obtained abroad by affiliates in the United Kingdom showed a sharp drop in 1967 as a percent of adjusted sources, and then recovered in 1968. The swing was concentrated in short-term liabilities to nonbanks, a good part of which is trade credits (table 3). To the extent that such credits were denominated in dollars, British affiliates would have had an incentive to reduce

1. Adjusted sources or adjusted uses of funds equals total sources or uses less income paid out. The adjusted amounts represent the funds available for internal use by the affiliates.

2. This item reflects funds obtained through the sale of fixed assets, changes in certain reserve accounts, valuation adjustments, and residual entries unidentified by reporters.

such liabilities in order to avoid later repayment that would be more expensive in terms of sterling; for the same reason, foreigners would not have wished to extend credits denominated in sterling. Such a reduction in borrowing by British affiliates may have required a reduction in their inventories and current receivables, unless other sources of funds were available. Domestic sources in the United Kingdom were particularly difficult to tap since lending

(in sterling) by British banks was restricted by a credit squeeze.

Although the amount of funds used for other assets increased in 1968, the percentage share of these items of adjusted uses remained unchanged at 14 percent. No details are collected on the items in this category, which also contains unidentified balancing items.

Sources

Adjusted sources rose \$1.6 billion in

1968, of which internally generated funds—retained earnings and depreciation and depletion allowances—contributed about \$1.0 billion. However, in both 1967 and 1968, foreign affiliates provided for about half of their financing needs (exclusive of income paid out) from these internally generated funds. This had been the case since 1963, except for 1965 when the proportion temporarily declined to 40 percent. Retained earnings rose as a proportion

of adjusted sources in 1968 but depreciation and depletion fell slightly.

There was a sizable decline from 1965 to 1968 in the financing of foreign affiliates' operations from U.S. sources—parent companies, U.S. banks, other nonaffiliated U.S. residents, and sales in the United States of the affiliates' securities. U.S. sources in 1965, at \$2.3 billion, accounted for 24 percent of adjusted sources. The percentage declined to 19 percent in 1967 and 15 percent in

1968, when funds from the United States amounted to only \$1.6 billion, \$0.1 billion less than in 1967. The decline was concentrated mainly in Europe, particularly in manufacturing affiliates. Canadian affiliates also used a smaller amount of U.S. funds in 1968, but affiliates in Latin America and in the oil producing countries increased their financing from U.S. sources.

The shift away from U.S. funds was probably associated with the Foreign

Direct Investment Program which became mandatory in 1968. In fact, these figures probably understate the impact of the program since "funds from the United States" include funds borrowed abroad by U.S. parent companies which are then invested in the foreign affiliates. Under the program, such borrowing offsets the outflow from the United States and thus helps the balance of payments.

"Funds obtained abroad" rose almost \$1.0 billion in 1968 and accounted for 31 percent of adjusted sources. This was a higher proportion than in 1967 (26 percent), but still below the 1965 figure (34 percent). Some of the shift in 1968 may have been associated with the direct investment program becoming mandatory. However, there was little change in 1968 in the volume of such flows in the EEC countries where the program was most stringent. The shifts were largest in Latin America (where the program was least stringent) and in Europe other than the EEC. This includes the United Kingdom—where the shift was most likely associated with a reversal of the flows in 1967 that had been generated by anticipations of the devaluation of sterling. The increases in inventories and current receivables associated with the recovery in business conditions mentioned earlier may have also been a factor increasing the need for borrowing from abroad.

Concepts

Definitional differences between the balance of payments and the sources and uses statistics are discussed below. There are also differences due to a number of accounting and statistical problems, including foreign exchange losses, different effective exchange rates used to convert the accounts to U.S. dollars, and different accounting periods.

Data on net income, income paid out, and retained income in the sources and uses statement include not only the U.S. parents' share but also the share of foreign owners. Net income is reported after depreciation and depletion charges. The balance of payments statistics, on the other hand, take account only of the income paid out

(or retained earnings as used in calculating the investment position) that represents the U.S. share in the ownership of the foreign enterprise and are reported after depreciation but before depletion charges.

The data classified under "funds from United States" for sources include the financing of foreign affiliates by their U.S. parent companies and sales

of new securities to the public, funds for the establishment of a new enterprise by a parent, funds from other U.S. residents—such as lending by U.S. financial institutions (both private and government)—and the extension of credit by U.S. suppliers. The latter two items are not included in direct investment capital outflows (although they are included, along with transac-

tions with nonaffiliated foreigners, elsewhere in the balance of payments). On the other hand, a significant part of direct investment net capital flows, as reported for balance of payments purposes, is not included in the sources of funds of affiliates. In particular, expenditures by parent companies for the acquisition of foreign business firms or minority interests are excluded because

N.s.s. Not shown separately.

they go not to the affiliates but rather to stockholders of the affiliates. Thus, they do not figure in the financial flows entering an analysis of sources and uses of funds of the affiliates themselves. Also, earnings left abroad by *branches* of U.S. companies are recorded in the balance of payments as income (paid out) and as direct investment capital outflows; in sources and uses data they are treated simply as retained earnings.

"Funds obtained abroad" include funds obtained by foreign affiliates from other foreign affiliates of the U.S. reporter. Also included, on a net basis, are funds obtained from foreign financial institutions, trade credits from foreigners, sales or purchases of capital stock of the foreign affiliate by foreigners, and other increases in liabilities to foreigners. The sources category "other sources and adjustments" includes sales of fixed assets, changes in certain reserve accounts, unidentifiable sources, and adjustments for unrealized gains or losses due to exchange rate variations which the reporter was unable to exclude from the other individual sources categories.

Plant and equipment expenditures represent gross outlays for fixed capital. Expenditures include acquisitions of existing fixed assets by affiliates, but exclude the sale of fixed assets (which is reported in sources as "other sources and adjustments").

The use of funds for "inventories" refers to the net increase or decrease in book value of warehouse and factory stocks and in materials in process other than those classified as fixed assets by the reporter. The increase in "current receivables" is the net change in receivables due from foreign customers. (To the extent possible, receivables from nonaffiliated customers in the United States are netted against the affiliates' payables in "funds from the United States" under sources.) The net change in "other assets" includes all other current assets, other non-fixed assets, and unspecified transactions.

Comparison with other data

In order to test whether these data on affiliates' sources and uses of funds maintain a reasonable relationship to other information on direct investment

generated by OBE, an attempt was made, as far as possible, to reconcile the two sets of data. The results are shown in table 4. While there are distinct definitional differences that cannot be adjusted for, the comparison should give an indication of the extent to which the sample sources and uses data maintains a consistent relationship to the total flows reported in the balance of payments statistics.

The initial comparison is between direct investment capital flows (line 33 of table 1 in the balance of payments accounts) and the funds reported as coming from the United States in the sources and uses of funds statistics. The direct investment figures are adjusted to exclude flows related to placement and amortization of foreign affiliates' securities held by U.S. residents other than the parent firms, and all liquidations of investments and acquisitions of existing foreign enterprises.

Funds from the United States reported as a source in the sources and uses are adjusted to exclude the portion of funds coming from the United States from other than parent companies.

Comparison of the two sets of data on capital flows reveals that the balance of payments data show consistently higher outflows, partly reflecting much

more complete coverage of the balance of payments reports (950 reporting parents compared with 450 parents). The balance of payments figures also include reinvested earnings in branches, while "funds from the United States" do not. The difference in dollar amounts for the three industries combined is in the range of \$600 million to \$750 million a year, with the exception of 1967 when the difference was larger. Available information gives no clear explanation of the 1967 figures. When 1966 and 1969 data are available, more detailed reconciliations will be possible.

The earnings of foreign affiliates as derived from the balance of payments reports (column 3) represent the U.S. share of earnings for all U.S. foreign direct investments in the selected industries. These are compared to total earnings, both U.S. and foreign, given by the sample of affiliates reporting sources and uses information (column 4). While the differences in coverage and definition make any comparison of magnitudes meaningless, the rather steady ratios between the different sets of data, even at the industry level, indicate that at the very least there is a reasonable degree of consistency between balance of payments data and the reports on sources and uses of funds.

Sources and Uses of Funds, Nonfarm Nonfinancial Corporations

Revised estimates of the sources and uses of funds of nonfarm nonfinancial corporations are shown in the following table. The source for these statistics is the flow of funds accounts prepared by Board of Governors of the Federal Reserve System. Historical data back through 1946 (annually) and 1952 (quarterly) were published in the November 1969 SURVEY. The latest revisions affect the data only from 1967 onward, and bring the estimates of internal sources and of physical asset purchases into line with the revised national income and product data published in the July 1970 SURVEY.

Table A.—Sources and Uses of Funds, Nonfarm Nonfinancial Corporate Business, 1967-70

1. The figures shown here for "internal sources," "undistributed profits," and "capital consumption allowances" differ from those shown for "cash flow, net of dividends," "undistributed profits," and "capital consumption allowances" in the gross corporate product table (p. 12 of this issue of the SURVEY) for the following reasons: (1) these figures include, and the statistics in the gross corporate product table exclude, branch profits remitted from

foreigners, net of corresponding U.S. remittances to foreigners; and (2) these figures exclude and the gross corporate product figures include, the internal funds of corporations whose major activity is farming.

CURRENT BUSINESS STATISTICS

THE STATISTICS here update series published in the 1969 edition of BUSINESS STATISTICS, biennial statistical supplement to the SURVEY OF CURRENT BUSINESS. That volume (price \$3.00) provides a description of each series, references to sources of earlier figures, and historical data as follows: For all series, monthly or quarterly, 1965 through 1968 (1958-68 for major quarterly series), annually, 1939-68; for selected series, monthly or quarterly, 1947-68 (where available). Series added or significantly revised after the 1969 BUSINESS STATISTICS went to press are indicated by an asterisk (*) and a dagger (†), respectively; certain revisions for 1968 issued too late for inclusion in the 1969 volume appear in the monthly SURVEY beginning with the September 1969 issue. Also, unless otherwise noted, revised monthly data for periods not shown herein corresponding to revised annual data are available upon request.

The sources of the data are given in the 1969 edition of BUSINESS STATISTICS; they appear in the main descriptive note for each series, and are also listed alphabetically on pages 189-90. Statistics originating in Government agencies are not copyrighted and may be reprinted freely. Data from private sources are provided through the courtesy of the compilers, and are subject to their copyrights.

Unless otherwise stated in footnotes below, data through 1968 and descriptive notes are as shown in the 1969 edition of BUSINESS STATISTICS	1967	1968	1969	1967				1968				1969				1970

Unless otherwise stated in footnotes below, data through 1968 and descriptive notes are as shown in the 1969 edition of BUSINESS STATISTICS

Table with columns for years 1968, 1969, and 1970, and sub-columns for months (Annual, Sept., Oct., Nov., Dec., Jan., Feb., Mar., Apr., May, June, July, Aug., Sept., Oct.).

GENERAL BUSINESS INDICATORS—Continued

Main data table containing various business indicators such as 'MANUFACTURERS' SALES, INVENTORIES, AND ORDERS', 'Shipments', 'Inventories', 'New orders', and 'Supplementary series'.

* Revised. 1 Based on data not seasonally adjusted. 2 Advance estimate; total mfrs. new orders for Sept. 1970 do not reflect revisions for selected components. ... Industries: unfiled orders for other nondurable goods industries are zero.

Unless otherwise stated in footnotes below, data through 1968 and descriptive notes are as shown in the 1969 edition of BUSINESS STATISTICS	1968	1969	1969				1970

† Revised. ‡ Preliminary. † Data for indicated month exclude loans by Federal Intermediate Credit Banks outside the Farm Credit Adm. system. ‡ Excludes figures for the interstate trucking industry stoppage. † Revised (back to 1960) to incorporate new seasonal factors; see note "4", p. S-15, Oct. 1969 SURVEY for data through May 1968 (revisions for June and July 1968, 197 and 204). Δ See note "4", p. S-14.

⊙ Beginning Jan. 1970, data include claims filed under extended duration provisions of regular State laws.

⊙ Insured unemployment as % of average covered employment in a 12-month period.

⊙ Total SMSA's include some cities and counties not designated as SMSA's.

† Includes Boston, Philadelphia, Chicago, Detroit, San Francisco-Oakland and Los Angeles-Long Beach. ‡ Includes data not shown separately.

Unless otherwise stated in footnotes below, data through 1968 and descriptive notes are as shown in the 1969 edition of BUSINESS STATISTICS	1968	1969	1969				1970

1 Revised. 2 Average for Dec. 3 Beginning June 1969, data are revised to include all bank-premise subsidiaries, and other significant majority-owned domestic subsidiaries; also, loans and investments are now reported gross. For complete details see the Aug. 1969 Federal Reserve Bulletin. 4 Average for year. 5 Daily average. 6 Revisions for Jan. 1969 are shown in the Mar. 1970 issue of Federal Reserve Bulletin. 7 For demand deposits, the term "adjusted" denotes demand deposits other than domestic commercial bank and U.S. Government, less cash items in process of collection; for loans,

exclusive of loans to and Federal funds transactions with domestic commercial banks and after deduction of valuation reserves (individual loan items are shown gross; i.e., before deduction of valuation reserves). 8 Includes data not shown separately. 9 Adjusted to exclude interbank loans: beginning June 1969, data are reported gross. 10 For bond yields, see p. S-20. 11 Finance companies consist of those institutions formerly classified as sales finance, consumer finance, and other finance companies. Miscellaneous lenders include savings and loan associations and mutual savings banks.

Unless otherwise stated in footnotes below, data through 1968 and descriptive notes are as shown in the 1969 edition of BUSINESS STATISTICS	1968	1969	1969				1970

¹ Revised. ² End of year. ³ Because of changes in series, data beginning July 1970 are not directly comparable with those for earlier periods.

⁴ Includes data not shown separately.

⁵ Number of bonds represented fluctuates; the change in the number does not affect the continuity of the series.

Prices are derived from average yields on basis of an assumed 3 percent 20-year bond.

For bonds due or callable in 10 years or more.

Unless otherwise stated in footnotes below, data through 1968 and descriptive notes are as shown in the 1969 edition of BUSINESS STATISTICS	1968	1969	1969				1970

* Revised. † Preliminary.

‡ Annual total reflects revisions not distributed to monthly data.

§ Trade in silver is included in value and quantity indexes for 1968 and all indexes thereafter.

¶ Includes data not shown separately. † Passenger-miles as a percent of available seat-miles in revenue service; reflects proportion of seating capacity actually sold and utilized.

‡ Applies to passengers, baggage, freight, express, and mail carried.

* New series. Source: Civil Aeronautics Board. Certificated route industry covers passenger-

cargo (including local service, helicopter, and other carriers) and all-cargo carriers. Beginning Jan. 1970, domestic series reflects operations between the 48 States and Alaska and Hawaii; prior to 1970 this traffic was included in the international and territorial series. Selected revenues by type (as shown for total industry) and all traffic statistics cover scheduled service only; total revenues, expenses, and income for all groups of carriers also reflect nonscheduled service.

Unless otherwise stated in footnotes below, data through 1968 and descriptive notes are as shown in the 1969 edition of BUSINESS STATISTICS	1968	1969	1969				1970

* Revised. † Preliminary. ‡ Less than 500 tons. † Annual total reflects revisions not distributed to the monthly data.
 ‡ Totals include data for types of lumber not shown separately.
 † Data for orders, production, shipments, and stocks have been revised back to 1962; corresponding monthly revisions are available for 1968 and 1969 only.

† Receipts previously shown for the period Apr. 1967-Sept. 1969 have been corrected to represent net receipts (i.e., less scrap shipped, transferred, or otherwise disposed of during the period); data comparable with the net receipts shown through Mar. 1967 appear in the Feb. 1970 SURVEY, p. S-31. † Corrected.

Unless otherwise stated in footnotes below, data through 1968 and descriptive notes are as shown in the 1969 edition of BUSINESS STATISTICS

* Revised. † Preliminary. ‡ Annual; monthly revisions are not available.

§ Average for Apr.-Dec. ¶ Less than 50 tons. ‡ Beginning Feb. 1970, the new METALS WEEK price (based on mine production rates and known selling prices of U.S. producers only) is not comparable with prices for earlier months.

§ For revised 1968 monthly data, see Feb. 1970 SURVEY, p. S-32.

Δ Revised data (1966-68) are in the Apr. 1970 SURVEY. * New series. Source, U.S. Dept.

of Commerce; monthly data back to Jan. 1967 are available.

† Prices shown are averages of delivered prices; average differential between the delivered and the refinery price is 0.400 cents per lb. through 1969 and 0.500 cents thereafter.

‡ Consumers' and secondary smelters' lead stocks in refinery shapes and in copper-base scrap.

§ Producers' stocks elsewhere, end of Sept. 1970, 24,000 tons.

Unless otherwise stated in footnotes below, data through 1968 and descriptive notes are as shown in the 1969 edition of BUSINESS STATISTICS	1968	1969	1969				1970

† Revised. ‡ Preliminary. § Revisions for Jan.-Aug. 1968 for synthetic rubber consumption are as follows (thous. lg. tons): 162.96; 154.29; 162.07; 155.85; 162.67; 153.44; 135.82; 154.33. ¶ Annual total includes revisions not distributed to the months.

*Data have been regrouped by the American Paper Institute; details and available earlier data appear in their April 1970 *Monthly Statistical Summary*.

§ As reported by publishers accounting for about 75 percent of total newsprint consumption. ¶ Monthly data are averages for the 4-week period ending on Saturday nearest the end of the month; annual data are as of Dec. 31.

*New series. Monthly data are available back to 1955.

¶ Revisions for Jan.- May 1969 will be shown later.

Unless otherwise stated in footnotes below, data through 1968 and descriptive notes are as shown in the 1969 edition of BUSINESS STATISTICS	1968	1969	1969				1970

* Revised. ¹ Season average. ² For 5 weeks; other months, 4 weeks. ³ Average for 6 months, July-Dec. ⁴ Beginning 1969, the average omits two cloths previously included. ⁵ Revised total; revisions not distributed by months. ⁶ Beginning Jan. 1970, quotation refers to Australian wool, 64s, Type 62; comparable prices prior to 1970 are not available.

⁷ Season average through Apr. 1970 for all cotton. ⁸ Omits quantities of chiefly nylon combination fabrics. ⁹ Beginning Apr. 1970, average is for cloth 38½-inch, 64 x 56, 5.50 yds./lb.; data not comparable with prices for periods prior to Apr. 1970.
⁰ Includes data not shown separately.

Unless otherwise stated in footnotes below, data through 1968 and descriptive notes are as shown in the 1969 edition of BUSINESS STATISTICS	1968	1969	1969				1970

CURRENT CONSTRUCTION REPORTS

CONSTRUCTION accounts for approximately 12 percent of the gross national product!

To assist industry representatives, research specialists, market analysts, and government officials interested in this vital segment of the Nation's economy, the Bureau of the Census issues **monthly, quarterly, and annual reports** on the value of new construction put in place, building permits, housing starts, housing completions, housing sales, alterations and repairs and demolition of residential structures.

Current Construction Reports include:

- C20 - Housing Starts
- C22 - Housing Completions
- C25 - Sales of New One-Family Homes
- C30 - Value of New Construction Put in Place
- C40 - Housing Authorized by Building Permits and Public Contracts
- C41 - Authorized Construction—Washington, D.C. Area
- C45 - Permits Issued for Demolition of Residential Structures in Selected Cities
- C50 - Expenditures on Residential Additions, Alterations, Maintenance and Repairs, and Replacements

For further information and a **Publications Order Form**, free of charge, on all the above reports, write to the **Publications Distribution Section, Bureau of the Census, Washington, D.C. 20233**

**U.S. DEPARTMENT OF
COMMERCE**
