the BUSINESS SITUATION

CHART 1

Personal Income and Consumption Expenditures

U.S. Department of Commerce, Bureau of Economic Analysis 76-12-1

ON the basis of information available as of mid-December, it appears that the fourth-quarter increase in real GNP was smaller than the third-quarter increase, and that the increase in GNP prices was larger.

The information that sheds light on the fourth-quarter GNP is limited to 1 or 2 months of the quarter, and in some cases is preliminary. The major sources are: for inventories, October book values for manufacturing and trade, and unit auto inventories through November; for personal consumption expenditures (PCE), October and November retail sales, unit sales of autos through the first 10 days of December, and October and November sales of trucks; for nonresidential fixed investment, the same information for autos and trucks, October construction put in place, October shipments of equipment, and business investment plans for the quarter as a whole; for residential investment, October construction put in place, and October and November housing starts; for net exports of goods and services, October merchandise trade; for government purchases of goods and services, Federal expenditures for October, State and local construction put in place for October, and State and local employment for October and November; and, for GNP prices, the Consumer Price Index for October, the Department of Agriculture food market basket for November, and the Wholesale Price Index for October and November.

The fourth-quarter increase in real GNP was in final sales. Inventory investment was less than in the third quarter. The main assumption about inventories is that durable goods manu-

facturers added much less to their inventories in November and December than in October, when their additions were unusually large. Combined inventory accumulation by nondurable goods manufacturers and trade except autos is also assumed to be less than in October. PCE increased a little more in the fourth quarter than in the third. This conclusion is based on the increases in October and November retail sales. Only a small increase in nonresidential fixed investment appears likely in the fourth quarter. In reaching this conclusion, the increase in investment plans indicated by the recent BEA plant and equipment survey is averaged with information on shipments of capital goods destined for business investment; these shipments were weak in October. The increase in residential investment accelerated sharply, reflecting the pickup of housing starts in the fall. For net exports and for government purchases, no abrupt changes are indicated by the information at hand.

It is not yet possible to trace in detail the industrial composition of the fourth-quarter change in real GNP. The large increase in residential construction was partly offset by a reduction in truck production. All other production combined appears to have increased roughly in line with the increase of total GNP.

Part of the acceleration of GNP prices in the fourth quarter is due to the payraise for Federal employees. Food and energy prices appear to have increased less in the fourth quarter than in the third, and other GNP prices appear to have increased somewhat more.

Revised Third-Quarter Corporate Profits and GNP

Profits from current production—corporate profits with inventory valuation and capital consumption adjustments—increased at an annual rate of \$5½ billion in the third quarter. A \$½ billion upward revision in profits from abroad offset a lower estimate of profits of nonfinancial corporations.

On the revised basis, profits of nonfinancial corporations rose \$4½ billion. Profits were up in nondurable goods manufacturing (especially food), wholesale and retail trade, and transportation, communication and public utilities. Profits in durable goods manufacturing were down. The largest declines were in primary metals and in motor vehicles and equipment. Nonelectrical machinery was up. Profits of financial corporations and profits from abroad both increased \$½ billion.

Before-tax book profits were up \$4 billion in the third quarter. These profits differ from profits from current production for two reasons. First, they include inventory profits, which arise because inventories used up are generally valued by business at historical rather than at replacement cost. Second, they reflect tax return-based rather than "economic" capital consumption allowances. The capital consumption adjustment converts the tax return-based measure to the economic measure, which is constructed to reflect uniform service lives and depreciation formulas and replacement cost valuation. The difference between the third-quarter change in before-tax book profits and that in profits from current production was more than accounted for by a decline in inventory profits, from \$14½ billion in the second quarter to \$12½ billion in the third.

Income from abroad—consisting largely of profits and interest flows—is a component of GNP. As a result of information from BEA's quarterly survey of foreign direct investment, third-quarter GNP was revised up \$1½ billion. Gross domestic product, which does not include income from abroad, was not revised.

State-Local Fiscal Position, 1976

The State and local government fiscal position improved in 1976; the rate of increase in spending slowed and that in general own-source receipts picked up. On an NIPA basis, the surplus amounted to about \$12 billion, compared with \$7 billion in each of the previous 2 years.

Expenditures

Expenditures increased less than 9 percent, compared with increases averaging 11½ percent in 1973-75 (table 1). Total purchases increased 8½ percent. Compensation, which accounts for over half of purchases, increased 10 percent. The latter increase largely reflected higher average pay; employment was up only about 2 percent, less than in the last several years.

Purchases of structures declined 5 percent. Educational construction fell about 15 percent—a fall had been expected for several years, because of declining public school population. Highway construction also fell sharply, about 10 percent. Transit and water and sewer construction rose moderately, and all other types of structures purchases declined slightly.

Less: Current surplus of government enterprises.....	3.8	1.6	3.8	-.9

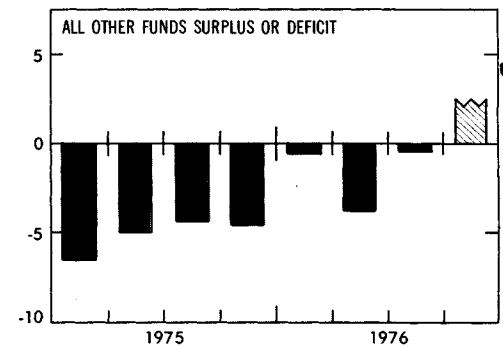

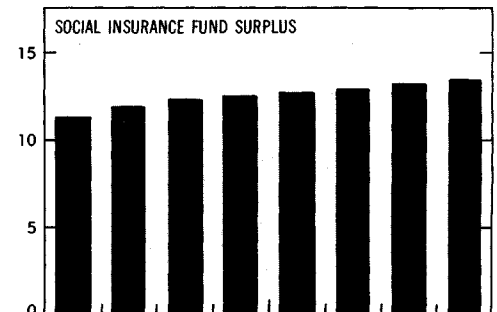

* Estimated as of December 1976.

Improved economic conditions limited the increase in transfer payments to persons. Direct assistance payments—largely aid for dependent children—increased at less than half of the 1975 rate. Other transfer payments, mainly benefits payments from pension systems administered by State and local governments, increased slightly faster than in 1975.

The amount by which interest on investments exceeded interest paid on State and local government debt increased, as it had for a number of years. This trend continued, even though in 1976 record levels of long-term borrowing resulted in a large increase in total debt.

CHART 2

State and Local Governments

Quarterly, Seasonally Adjusted at Annual Rates

U.S. Department of Commerce, Bureau of Economic Analysis

76-12-2

Receipts

Total receipts increased more slowly than in 1975, due to a sharp deceleration in Federal grants-in-aid. Increased economic activity led to a larger rise in general own-source receipts than in 1973-75. Most types of receipts rose 9½ to 11½ percent; the one exception was corporate profits tax accruals, which increased about 30 percent, reflecting the cyclical recovery in corporate profits (table 2).

Personal tax and nontax receipts increased 11½ percent. Personal income taxes increased about 16 percent; about one-fifth of the increase was due to legislative actions. New Jersey's new personal income tax generated about half of the increased receipts due to such action. Personal nontaxes—for example, university tuition payments—rose about 7 percent, the smallest increase in the past 4 years.

Indirect business tax and nontax accruals increased about 10 percent. Property taxes and sales taxes—the two largest components—increased 9½ and 11½ percent, respectively, in response to economic expansion and continued inflation. Legislative actions

contributed little to the increases. Gasoline taxes, which had declined in 1974 and increased only about 3 percent in 1975, rose about 5 percent in 1976, with most of the rise occurring in the first half of the year.

The increase in contributions for social insurance was the smallest in recent years. Most of the 1976 increase in State-local employment reflected hiring of persons through federally financed programs, such as under the Comprehensive Employment and Training Act (CETA), which are generally not covered by State and local government employee retirement systems.

The increase in grants—about 9½ percent—was significantly less than in 1975, when grants for public assistance and public service jobs had accelerated. Most of the 1976 increase, which occurred mainly in the second half of the year, was for sewer and water treatment plants and highways, and for the Public Works Employment Act of 1976, which was enacted in midsummer. Public assistance grants also increased, but at a somewhat slower rate than in 1975. The large increase in CETA grants occurred in late 1975 and early 1976.

Fiscal position

As measured in the NIPA's, the overall State-local government surplus rose from about \$7 billion in 1975 to about \$12½ billion in 1976. Much of this improvement occurred in the first quarter, as expenditures rose only \$2¼ billion, because of a sharp decline in construction outlays. The overall fiscal position worsened somewhat in the second quarter, as grants receipts declined sharply, but improved again in the second half of the year (chart 2).

State-local social insurance funds generally record surpluses, but these surpluses are not usually available to finance capital spending projects or deficits in operating funds. Accordingly, it is useful to exclude these surpluses in

assessing the fiscal position of these governments. Excluding the transactions of these funds, the fiscal position remained in deficit for 1976. However, this deficit was less than \$1 billion, compared with \$5 billion in 1975. A small surplus is expected in the fourth quarter.

Outlook

The overall fiscal improvement that began in mid-1975 is likely to continue in 1977. General own-source receipts will continue to increase by about 10 percent, given moderate expansion in the economy; legislative actions are not expected to be a major factor. Federal grants are expected to increase at least 10 percent, with sharp increases in grants designed primarily to stimulate employment and to support specific kinds of new construction. The former will be made under CETA and additional public service employment programs. The bulk of the latter will be made under the Clean Water Act of 1972, for waste treatment facilities, and under urban mass transit legislation, for transit construction. The Public Works Employment Act of 1976 will also provide funds for waste treatment facilities, although the main effect of this legislation will be to provide for additional public service employment and to fund other current outlays.

Expenditures not related to these grants will increase about 8½ percent. Other purchases of structures may reverse their recent decline, but any growth is likely to be modest. For instance, recent data on plans and borrowing suggest no increase in highway construction. Compensation of State-local employees other than those in public service jobs will increase by about 9 percent. Welfare-related expenditures—chiefly direct assistance transfers and medical vendor payments—will increase about the same.

1. Equals GNP in constant dollars measured as the sum of final products less GNP in constant dollars measured as the sum of gross product by industry. The quarterly estimates are obtained by interpolating the annual estimates with the statistical discrepancy deflated by the implicit price deflator for gross domestic business product.

NOTE.—Table 2: "Final sales" is classified as durable or nondurable by type of product. "Change in business inventories" is classified as follows: For manufacturing, by the type of product produced by the establishment holding the inventory; for trade, by the type of product sold by the establishment holding the inventory; for construction, durable; and for other industries, nondurable.

Table 3: The industry classification within the business sector is on an establishment basis and is based on the 1967 Standard Industrial Classification.

*See footnote on page 3.
1. In February 1974, the U.S. Government paid to India \$2,010 million (quarterly rate) in rupees under provisions of the Agricultural Trade Development and Assistance Act. In the national income and product accounts, this payment is included in capital grants received by the United States (net); in the balance of payments accounts, it is included in unilateral transfers (excluding military grants of goods and services), net. Accordingly, this payment is excluded from Federal Government transfers to foreigners and related totals shown in tables 12, 14, and 15, and is included in the first quarter of 1974 as —\$8.0 billion (annual rate) in capital grants received by the United States (net) shown in tables 14 and 15.
2. Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories shown in this table is not the current-dollar change in business inventories (CBI) component of GNP. The former is the difference between two

inventory stocks, each valued at end-of-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition, changes calculated from this table are at quarterly rates, whereas CBI is stated at annual rates.

3. Quarterly totals at annual rates.

4. Equals ratio of nonfarm inventories to final sales of business. These sales include a small amount of final sales by farms.

NOTE.—Table 16: Inventories are classified as durable or nondurable as follows: For manufacturing, by the type of product produced by the establishment holding the inventory; for trade, by the type of product sold by the establishment holding the inventory; for construction, durable; and for other nonfarm industries, nondurable. The industry classification is based on the 1967 Standard Industrial Classification.

Domestic output of new autos ¹	106.0	115.0	114.3	115.4	118.1	120.2	121.0	122.2
Sales of imported new autos ²	105.8	115.0	114.5	115.1	118.0	120.4	121.2	122.1

1. Consists of final sales and change in business inventories of new autos produced in the United States.
 2. Consists of personal consumption expenditures, producers' durable equipment, and government purchases.

NOTE.—Table 21: "Final sales" is classified as durable or nondurable by type of product. "Change in business inventories" is classified as follows: For manufacturing, by the type of product produced by the establishment holding the inventory; for trade, by the type of product sold by the establishment holding the inventory; or construction, durable; and for other industries, nondurable.

Tables 22 and 24: The industry classification within the business sector is on an establishment basis and is based on the 1967 Standard Industrial Classification.

The Employment Ratio

THE employment ratio is used increasingly as a supplement to the better known unemployment rate as a measure of labor market conditions.¹ The purpose of this article is to make SURVEY readers more familiar with the employment ratio, mainly by comparing it with the better known measure.

1. Julius Shiskin, "Employment and Unemployment: The Doughnut or the Hole?," *Monthly Labor Review*, February 1976.

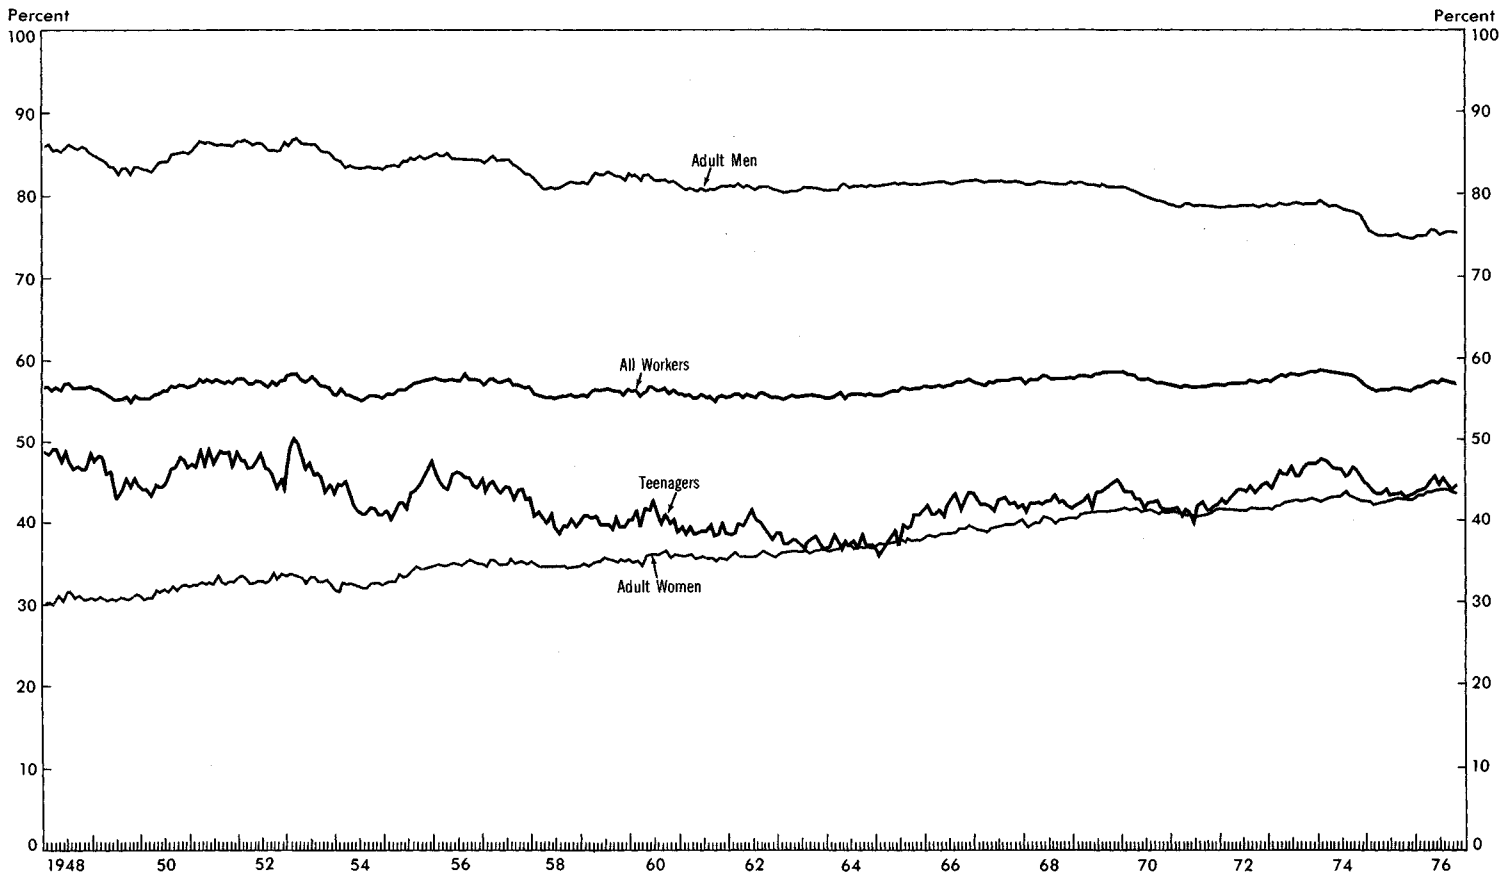

The article consists of a comparison of the analytical and statistical features of the employment ratio and the unemployment rate, an analysis of movements since 1948 in the aggregate employment ratio and in the ratios of various age-sex groups, and a comparison of the cyclical behavior of the employment ratio and the unemployment rate.

Analytical and statistical features

The employment ratio is the percentage of the civilian noninstitutional population aged 16 and over that is employed. The unemployment rate is the percentage of the civilian labor force aged 16 and over that is unemployed. The civilian labor force is the sum of employed and unemployed persons, and an unemployed person is a

CHART 3

Employment Ratio by Age-Sex Group

Note.—Based on seasonally adjusted data.

U.S. Department of Commerce, Bureau of Economic Analysis

Data: BLS
76-12.3

person not employed and looking for work. Both measures are based on data obtained in the monthly household survey conducted for the Bureau of Labor Statistics (BLS) by the Census Bureau. In 1973, BLS began publishing the employment ratio for all workers, as well as for men aged 20 and over, women aged 20 and over, and teenagers. The all-worker ratio is available monthly and quarterly; the ratios for the groups, quarterly.

A major analytical advantage of the employment ratio is that it is a better measure of the strength of the demand for labor in the presence of the "discouraged worker" effect. This effect is the tendency when jobs are scarce for persons to become discouraged about their prospects of finding jobs and therefore to leave the labor force or remain outside it; when jobs are more plentiful, these persons reenter or enter the labor force. If the demand for labor declines, the employment ratio will reflect this decline irrespective of the

proportions in which persons remain undiscouraged or become discouraged. The effect of the same decline in the demand for labor on the unemployment rate will depend on the relative proportions of these persons.

A statistical advantage of the employment ratio is that employment can be defined more clearly than unemployment. BLS classifies as employed those who, during the week prior to the survey, did any work either as paid employees or in their own business or profession, those who worked 15 hours or more as unpaid workers on a farm or in a business operated by a family member, and those not working who had jobs or businesses from which they were temporarily absent because of factors such as illness, vacation, or labor-management disputes. Although there are some ambiguities in applying this definition, it is more difficult to determine whether someone without a job is actually looking for one, and should therefore be counted as unem-

employed. BLS classifies persons as unemployed if they did not have a job during the week prior to the survey, were available for work, and had actively looked for work in the 4-week period immediately preceding the survey. The interpretation of what constitutes "actively looking for work" is left largely to the survey respondent; also, the respondent provides information on all members of the household, whether or not the respondent is familiar with their job-seeking efforts, or lack thereof.

Another statistical advantage of the employment ratio is that, because employment is much larger than unemployment, it is subject to relatively smaller sampling error. Also, because seasonal fluctuations are relatively much smaller for employment than for unemployment, seasonal adjustment is less of a problem with respect to employment than unemployment.

Difficulties arise in the interpretation of the employment ratio, because it

CHART 4

Employment Ratio for Adult Men, Selected Age Groups

Note.—Based on seasonally adjusted data.

U.S. Department of Commerce, Bureau of Economic Analysis

Data: BLS
76-12.4

assigns the same weight to part-time workers as to full-time workers. However, this equal treatment of part- and full-time workers is similarly applied in the calculation of the unemployment rate, and gives rise to difficulties in its interpretation also.

A major drawback of the employment ratio is that, unlike the unemployment rate, it does not provide an indication of the performance of the economy with respect to the goal of full employment. Although there is disagreement as to what level of the unemployment rate corresponds to "full employment," there is agreement that full employment—in the language of the Employment Act of 1946, "useful employment opportunities . . . for those able, willing, and seeking to work"—is a national goal and that progress toward that goal is reflected in changes in the unemployment rate.

Long-term trends

The employment ratio for all workers has remained fairly steady for the past three decades, ranging from 55 to 58 percent during more than 90 percent of the months during the period (chart 3). The high for any 3-month span was

58.2 percent in the first quarter of 1974, and the low was 55.0 percent from June to August 1949. The ratio has shown a slight upward tilt during the 1970's, when it has averaged 57.1 percent, compared with an average of 56.5 percent for the period 1948-69.

The long-term stability of the aggregate employment ratio is the product of offsetting movements in the employment ratios for different demographic groups. The ratio for adult men has fallen slowly but steadily, from 85.7 percent in 1948 to 75.1 percent in 1976. (The low figure for 1976 reflects cyclical, as well as secular, factors; at no time during the last 3 years, however, has the employment ratio for adult men exceeded 79 percent.) In contrast, the ratio for adult women has risen, especially during the past decade and a half. It averaged under 31 percent in 1948 and under 36 percent in 1962, and stood at or above 43 percent throughout 1976. The teenage ratio decreased from an average of 47.8 percent in 1948 to 37.3 percent in 1964, and then increased to 47.3 percent in the first quarter of 1974, before declining again during the recent recession.

The secular decline in the employ-

ment ratio for adult men reflects declines in the ratio for older men (chart 4). For men aged 65 and over, the decline—from about 45 percent in 1948 to a current level under 20 percent—has been steady. The employment ratio for men 55-64 has also declined, especially during the 1970's. These declines are explained by the trend toward earlier retirement, as evidenced by the falling labor force participation rates for men 55 and over. From 1948 to 1975, the civilian labor force participation rate for men 65 and over fell from 46.8 percent to 21.7 percent, and the rate for men 55-64 fell from 89.5 to 75.8 percent, with most of the latter decline occurring during the 1970's.

The employment ratios for adult men under 55 years old have remained steady during the past three decades. The ratio for men 20-24 has shown pronounced cyclical variation about the trend, reflecting the unemployment experience of young men. For example, from the first quarter of 1974 to the second quarter of 1975, the seasonally adjusted unemployment rate of men 20-24 rose 6.9 percentage points (from 7.8 to 14.7), while the rate for all adult men rose only 3.6

CHART 5

Employment Ratio for Adult Women, Selected Age Groups

Note.—Based on seasonally adjusted data.

76-12-5

percentage points (from 3.4 to 7.0). This difference between the two increases in the unemployment rates was reflected in a correspondingly sharper drop in the employment ratio for men 20-24 than for all adult men.

The secular increase in the employment ratio for women reflects increases in the ratios for women in all age groups except those aged 65 and over (chart 5). The timing of the increases has

varied by age group. For women 45-64, most of the increase occurred during the first half of the postwar period, and the employment ratio for this group has leveled off during the past decade. In contrast, the employment ratios for women 20-24 and 25-44 remained steady during the first half of the postwar period and have risen sharply in recent years. These patterns can be traced to trends in the labor

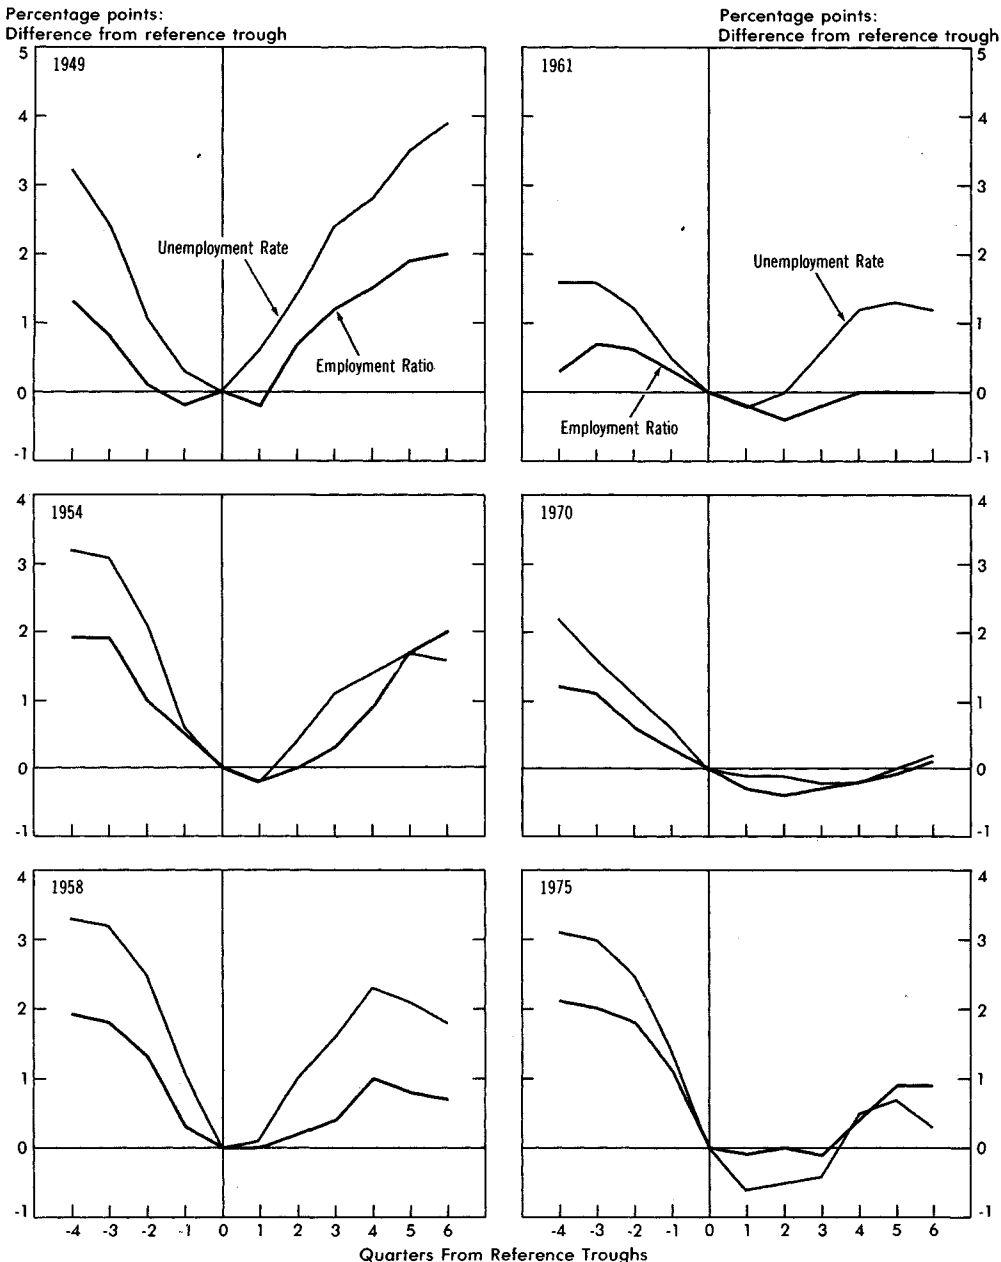

Table 1.—Employment Ratio

CHART 6

Employment Ratio and Unemployment Rate in Postwar Business Cycles

Note.—Based on seasonally adjusted data. Years indicate reference troughs as designated (except 1975) by the National Bureau of Economic Research. For the unemployment rate, negative differences from reference troughs are shown.

Source: Bureau of Labor Statistics.

force participation rates of married women. The civilian labor force participation rate of wives aged 45-64 rose more than 12 percentage points from 1950 to 1960, but only 5 percentage points from 1965 to 1975; in contrast, the rate for wives aged 20-24 rose less than 2 percentage points from 1950 to 1960, but almost 22 percentage points from 1965 to 1975.

Movements in the labor force participation rates that are parallel for teenage boys and girls underlie the V-shaped path of the teenage employment ratio (chart 3). The civilian labor force participation rate of males 16-19 declined from 63.8 percent in 1948 to 52.4 percent in 1964, before reversing direction and climbing to about 60 percent in 1974 and 1975. Similarly, the civilian labor force participation rate of females 16-19 declined from 42 percent in 1948 to 37 percent in 1964, before beginning its climb to about 49 percent in 1974 and 1975. Also, the employment ratio for teenagers shows sharp fluctuations around its long-term trend, which are reflections of the sensitivity of teenage employment to changing business conditions.

Cyclical behavior

The movement of the employment ratio has generally paralleled that of the unemployment rate during postwar economic downturns and recoveries. However, their relative behavior has not been quite the same in each postwar business cycle (chart 6).

(Continued on page 50)

Relationship Between Personal Income and Taxable Income, 1947-74

A reconciliation of the BEA measure of personal income and the Internal Revenue Service (IRS) measure of taxable income is shown in table 1 for 1947-74. It incorporates the results of this year's comprehensive revision of the national income and product accounts (NIPA's), which were described in the January 1976 SURVEY OF CURRENT BUSINESS. The last reconciliation of this type, which extended through 1972, appeared in the February 1975 SURVEY.

Personal income is the income received by persons from all sources, that is, from participation in production, from transfer payments from government and business, and from government interest, which is treated like a transfer payment. Persons consist of individuals, nonprofit institutions, pri-

vate noninsured welfare funds, and private trust funds. Personal income is the sum of wage and salary disbursements, other labor income, proprietors' income, rental income of persons, dividends, personal interest income, and transfer payments, less personal contributions for social insurance.

Taxable income as defined by the IRS consists of adjusted gross income (AGI) less personal deductions and exemptions. AGI is defined as gross income from all sources subject to tax less certain deductions. Gross income subject to tax includes specified items of money income: wages and salaries; a portion of dividend, interest, and pension income; net business and farm income; net capital gains income; and other miscellaneous items. Deductions allowed in the calculation of AGI include various expenses considered necessary in earning income, certain allowances for capital gains and losses, contributions to retirement funds by the self-employed, a portion of sick pay, and other items.

Differences between personal income, AGI, and taxable income

The significant differences between personal income and AGI are summarized in lines 2 and 3 of table 1. Line 2 is the sum of items included in personal income, but not in AGI. Most transfer payments, such as social security benefits and unemployment compensation, are in this category. Other labor income consists of employer contributions to private pension and welfare funds, which are not taxable under the individual income tax. Imputed income is income received in non-money form, such as payments in kind to employees and net rental value of

owner-occupied dwellings. Among the other types of personal income included in line 2 are income received by non-individuals (fiduciaries and nonprofit institutions), sick pay, moving expenses, and interest on State and municipal bonds.

Line 3 of table 1 is the sum of items included in AGI, but not in personal income. Personal contributions for social insurance consist of payments by employees, the self employed, and other individuals who participate in government social insurance programs, such as social security and medicare. Net gain from sale of capital assets consists of income derived from the sale of investment property, such as stocks, bonds, and nonbusiness real estate. The capital consumption adjustment is historical cost depreciation measured by the IRS less current cost depreciation as measured by BEA.¹ Among the other types of income included in line 3 are taxable private pension benefits, income of residents of Alaska and Hawaii prior to statehood, noncorporate special assessments, and many miscellaneous items, such as prizes, awards, and gambling receipts.

Personal income can be adjusted to conform to the IRS definition of AGI by accounting for these differences. The difference between AGI derived from personal income and AGI reported by the IRS in *Statistics of Income* (SOI) is

1. The capital consumption adjustment in line 3(c) of table 1 is the sum of the capital consumption adjustments on farm and nonfarm proprietors' income and on rental income of persons, excluding the amount applied to owner occupied dwellings. (See table 1.13 in the January 1976 and July 1976 SURVEY.) The capital consumption adjustment on owner occupied dwellings is used by BEA in calculating imputed net rental income. The IRS does not recognize imputed rental income, and thus does not allow depreciation on owner occupied dwellings. This difference is accounted for in line 2(c), with the subtraction of imputed income from personal income.

1. Net of deficits.
 2. Figures published by IRS in *Statistics of Income* for 1951, 1952, and 1953 have been reduced by the amount of income and exemptions reported on returns showing self-employment tax but no income tax liability; this has been done in order to improve comparability with data published in *Statistics of Income* for subsequent years.
 3. Beginning in 1970, with the establishment of the tax on tax preferences, individuals subject to this tax are classified as taxable individuals even if they have negative taxable income (adjusted gross income less deductions and exemptions). Such individuals are included

in *Statistics of Income* tabulations as having taxable income of zero, rather than the negative amount. Therefore, taxable income of taxable individuals shown in *Statistics of Income* is greater than the amount obtained by subtracting deductions and exemptions from adjusted gross income. The entries on this line show the amount of the difference.

NOTE.—A more detailed reconciliation between personal income and BEA's estimate of adjusted gross income (lines 1 and 4) is available on request.

Taxable income on taxable returns.....	39.7	37.3	40.0	42.7	43.5	44.2	47.4	51.4	52.1	50.0	48.1	47.4	48.5	49.6

shown in line 5. There are several reasons why this difference—often referred to as nonreported AGI—should not be interpreted as a measure of non-compliance with the tax code. First, it includes amounts earned by low-income individuals who are not required to file tax returns. Second, it includes income subsequently uncovered by IRS audit programs. (SOI figures are based on tax returns before audit.) Third, it includes errors or omissions in the reconciliation items and in personal income.

The remaining lines of the table reconcile the IRS measure of AGI with taxable income reported on taxable returns. The first step in this reconciliation is to subtract AGI reported on nontaxable returns. Nontaxable returns are those on which deductions and exemptions exceed AGI, or on which tax credits exceed tax liability. Second, deductions (standard and itemized), and third, exemptions are subtracted. A final adjustment (tax preferences adjustment) is made to account for small amounts of negative taxable income shown on returns that are classified as taxable because of realized tax preferences.²

Postwar trends

Taxable income has increased substantially as a percentage of personal income since 1947 (chart 7 and table 2). Table 2 shows the major factors that produced this trend. Nonreported AGI, AGI on nontaxable returns, and exemptions on taxable returns declined relative to personal income, thus tending to increase taxable income as a percentage of personal income. This

effect was partially offset by increases relative to personal income in the amount of the conceptual difference between personal income and taxable income, and in deductions on taxable returns. The net result was that taxable income increased from about 40 percent of personal income in 1947 to 50 percent in 1974.

The amount of the conceptual difference rose from 9 percent of personal income in 1947 to nearly 17 percent in 1974. The major factor was that transfer payments and other labor income consistently grew at a faster rate than personal income.

Nonreported AGI declined from 12 percent of personal income in 1947 to about 5 percent in 1974. A probable explanation is that rising income levels and minimum wage laws reduced the relative importance of income earned below the withholding and filing requirements. Relatively few workers are now outside the withholding system; consequently, a higher percentage of wages is reported on tax returns.

AGI on nontaxable returns also declined relative to personal income. As money incomes grew, a smaller proportion of total AGI was reported on returns that met the requirement for nontaxability. This trend was interrupted in 1970 and 1972, when legislation liberalized deductions and exemptions.³

Deductions on taxable returns increased from 8 percent of personal income in 1947 to 15 percent in 1974. Before 1971, most of the increase resulted from growth in itemized deductions. Itemized deductions increased with growth in home ownership, State and local taxes, and consumer credit. Also, as incomes grew, additional tax-

payers found it advantageous to itemize, because from 1949 through 1970 there was a maximum of \$1,000 on the 10 percent standard deduction. The 1969 Tax Reform Act greatly liberalized the standard deduction. The low income allowance was introduced in 1970, with its amount determined by income and number of exemptions. In 1971, the allowance was set at \$1,050, and raised in 1972 to \$1,300. In addition, the percentage standard deduction was increased from 10 to 13 percent in 1971, with a maximum of \$1,500, and to 15 percent in 1972, with a maximum of \$2,000. These legislative changes produced substantial growth in total standard deductions in 1971 and 1972. In 1973 and 1974, with laws unchanged, itemized deductions again accounted for most of the growth in total deductions.

Exemptions on taxable returns declined from 23 percent of personal income in 1947 to 12 percent in 1974. The decline reflects the fact that the personal exemption was set at \$600 from 1948 until 1970. The amount was increased to \$625 in 1970, to \$675 in 1971, and to \$750 in 1972. These legislative changes produced a temporary increase in exemptions relative to personal income.

Since 1947, the upward trend in the ratio of taxable to personal income was interrupted several times, most recently in 1970-72. In 1970, the amount of the conceptual difference between personal income and AGI increased substantially, due to rapid growth of transfer payments and other labor income and a sizeable decline in capital gains income. As noted earlier, AGI on nontaxable returns also increased in 1970. In 1971 and 1972, provisions of the 1969 Tax Reform Act greatly

2. The Tax Reform Act of 1969 imposed a 10 percent tax on realized tax preferences. Tax preferences are income and deduction items that receive preferential treatment under the tax code.

3. Legislative changes also liberalized deductions and exemptions in 1971, but had only minor impact.

Metropolitan and Nonmetropolitan Nonfarm Personal Income: Growth Patterns, 1969-73

FROM 1969 to 1973—the most recent peak years in the national business cycle—nonfarm personal income grew faster in nonmetropolitan than in metropolitan counties, and the sources of this differential growth were industrially widespread. Within this national pattern, two basic regional patterns can be distinguished. In the slow-growing New England, Mideast, Great Lakes, Plains, and Far West BEA regions—where most of the Nation's nonmetropolitan and metropolitan nonfarm income originates—nonfarm income in most industries grew much faster in nonmetropolitan counties than in counties in large Standard Metropolitan Statistical Areas (SMSA's with populations of 1 million or more in 1973). Industrial growth in these large SMSA's lagged, in part because of high labor and distribution costs and high taxes for the maintenance of costly public services. In the fast-growing Southeast, Southwest, and Rocky Mountain BEA regions, in contrast, nonfarm income grew faster in large SMSA's than in either small SMSA's (those with populations of less than 1 million) or nonmetropolitan counties. Growth in these large SMSA's reflected their increasing importance as centers for the provision of transportation, trade, finance, and other services to the fast-growing regions.

National Pattern

From 1969 to 1973, nonfarm income grew 45 percent in nonmetropolitan counties but only 37 percent in metropolitan counties (table 1). All

industrial components of nonfarm income¹ except professional services and State and local government grew faster in nonmetropolitan counties. Property income (rental income of persons, dividends, and personal interest income) and retirement-related transfer payments also grew faster—the latter because of an influx of retirees to nonmetropolitan counties.

In general, the nonmetropolitan growth advantage was larger in goods-producing industries (mining, contract construction, and manufacturing) than in service-producing industries (transportation, communication, and public utilities; trade; finance, insurance, and real estate; services other than professional; and Federal Government).

Among goods-producing industries, the largest advantage—83 percent—was in durable manufacturing. Each durable goods industry except ordnance grew faster in nonmetropolitan counties; ordnance declined in both groups of counties. Transportation equipment was the fastest growing durable goods industry in nonmetropolitan counties, because of increases in the production of recreational vehicles, mobile homes, and automobiles. Automobile production was strong also in metropolitan counties, but cutbacks in aircraft production retarded the overall growth of transportation equipment. The electrical machinery industry grew more than twice as fast in nonmetropolitan than in metropolitan counties. In the face of import competition, labor-intensive electronics plants relocated in nonmetropolitan counties to take ad-

NOTE.—Robert B. Bretzfelder and Eleanor N. Curry assisted in development of the analytical tables and in the analysis.

1. All industrial components except Federal Government and State and local government consist of labor income (wage and salary disbursements and "other labor income") and proprietors' income; Federal Government and State and local government consist only of labor income.

vantage of low-wage, especially female, labor; capital-intensive electronics plants requiring a relatively small input of highly skilled labor remained in metropolitan counties.

Within nondurable manufacturing, the largest nonmetropolitan advantages were in apparel, rubber and plastics, and leather products. High labor costs and shifting regional markets led to the relative decline of these industries in their traditional northern metropolitan locations.

Among service-producing industries, the largest advantage—36 percent—was in finance, insurance, and real estate (FIRE). Strength in residential and nonresidential construction spurred the growth of banking and real estate services in nonmetropolitan counties; weakness in securities markets and in construction retarded the growth of supporting FIRE services in metropolitan financial centers. The overall nonmetropolitan advantage was narrowed somewhat by the relatively more rapid advance of professional services, business services such as advertising, consulting, and research and development, and State and local government in metropolitan counties. The growth of State and local government in large SMSA's contributed to fiscal difficulties, particularly in New York, because it coincided with unprecedented population and enterprise losses, which were eroding private incomes and their contributions to an increasingly strained tax base.

Regional Patterns

Northern, central, and far western regions

In the slow-growing New England, Mideast, Great Lakes, Plains, and Far West regions, as in the Nation as a whole, nonfarm income grew more slowly in metropolitan than in nonmetropolitan counties. Growth was slowest in large SMSA's, which accounted for about three-fifths of the nonfarm income of these regions in 1973 and thus had a large weight in the group's overall growth.

Nonfarm income grew at rates below the national average in 21 of the 28 large SMSA's located in these regions

(all except Anaheim, Washington, San Jose, Portland, Columbus, Riverside, and Nassau-Suffolk). Growth was especially slow in Seattle, Los Angeles, and Hartford—all affected by the slump in aircraft production—and in New York, Cleveland, Buffalo, St. Louis, Pittsburgh, and Philadelphia. The latter group consists of old industrial centers faced with high production, distribution, and public-service costs due in part to high wage rates and costs of maintaining and operating obsolescent public and private plant.

The industrial developments affecting the large SMSA's differed among the regions. In New England, Boston's overall growth reflected weakness in nondurable manufacturing, particularly apparel and leather, despite rapid growth in instruments and other industries requiring advanced technological skills. Relatively high wage rates and taxes led some Boston manufacturers to relocate to southern New Hampshire and to the Southeast. Hartford, the only other large SMSA in New England, experienced cutbacks in aircraft, electronics, and related production, which followed a decline in military procurement as the Vietnam war ended.

In the Mideast region, developments in New York illustrate the growth pattern of the region's large SMSA's. New York's growth was well below the national average in industries accounting for large shares of total nonfarm income, such as manufacturing, trade, and FIRE (table 2), but above-average in State and local government. Growth in government contributed to subsequent fiscal difficulties in New York and most other large Mideastern SMSA's. Among the latter, only Nassau-Suffolk and Washington, D.C. grew at rates faster than the national average. Nassau-Suffolk's growth was spurred by the relocation of industrial activity from New York, and Washington's was sustained by the Federal Government, trade organizations, research institutions, and services supporting these groups.

In the Great Lakes region, developments in Detroit typify the problems faced by the large SMSA's. Detroit's manufacturing growth was limited by

high production and distribution costs. Not even rapid expansion in automobile output in Detroit and in other large SMSA's, where peak demand made it profitable for manufacturers to operate older plants at near-capacity levels, could offset the retarding effect of these high costs. Automotive parts, fabricated metals, and machinery manufacturers continued their movement to lower cost or otherwise more desirable locations in nonmetropolitan counties in the Great Lakes region and in the South. Columbus, the region's only large SMSA with above-average growth, benefited from strength in nondurable manufacturing (particularly food processing) and from its role as the State capital and as a services and higher education center.

In the Plains, growth in nonfarm income was below the national average in all three large SMSA's—St. Louis, Minneapolis, and Kansas City. Slow-growing industries included food processing and chemicals in St. Louis, food processing and electrical machinery in Minneapolis, and durable manufacturing in Kansas City. Slow nonfarm income growth in large SMSA's retarded overall growth less in the Plains than in other slow-growing regions, because most of the Plains' nonfarm income originated in nonmetropolitan counties and in small SMSA's, which grew rapidly. Farm income, which constitutes a large share of total income in the Plains, grew rapidly and stimulated nonfarm income growth in these small SMSA's and nonmetropolitan counties.

In the Far West, growth in nonfarm income was below the national average in four of the largest SMSA's (Seattle, Los Angeles, San Francisco, and San Diego) and above the national average in the remaining four large SMSA's (Anaheim, Riverside, Portland, and San Jose). Unlike the large SMSA's in the Mideast and Great Lakes regions, where growth was limited by weaknesses in most manufacturing industries, the relatively slow growth of the largest SMSA's in the Far West is attributable mainly to a few manufacturing industries that depend heavily

(Text continued on page 28)

Plant and Equipment Expenditures in First Half of 1977

BUSINESS plans to increase spending for new plant and equipment 1.2 percent in the first quarter of 1977 and 1.5 percent in the second (table 1). These are smaller increases than the 4.3 percent planned for the fourth quarter of 1976 and the actual increase of 3.7 percent in the third quarter. The figures are based on the latest BEA survey conducted in late October and November.¹ If plans are realized, spending in the first half of 1977 will be at a seasonally adjusted annual rate of \$130.3 billion, 4 percent above the second half of 1976. This increase compares with a 7½-percent increase from the first to the second half of 1976.

The actual spending increase in the third quarter of 3.7 percent compares with a planned increase of 4.1 percent in the survey released 3 months ago. This shortfall was much smaller than the ones that occurred earlier this year: In the second quarter, a 5½-percent increase had been projected, but the actual increase was 3 percent; the corresponding figures for the first quarter were 6 percent and 2½ percent.

1. Spending plans have been adjusted for systematic biases (table 6, footnote 2). The adjustments were applied separately to each major industry. Their net effect on 1976 plans was to lower the manufacturing total of \$53.07 billion by \$0.09 billion and the nonmanufacturing total of \$68.40 billion by \$0.15 billion.

Capital spending in 1976 is projected to total \$121.1 billion, 7.5 percent higher than actual 1975 spending (table 2). This increase is close to those reported in August—7.4 percent—and in May—7.3 percent; the February survey had projected 6.5 percent. Spending rose 0.3 percent from 1974 to 1975.

The reported figures are not adjusted for price change. There is little information available on business expectations for capital goods price changes next year, and so it is difficult to assess the change in real spending implied by these results. If business expects price increases to continue at the 4-percent annual rate registered in the first three quarters of this year and if such increases are reflected in their spending plans, then the plans imply that real spending in the first and second quarters will be virtually unchanged from the fourth quarter of this year. Real spending in 1976 appears to be about 3 percent higher than in 1975, compared with a decline of 10 percent in 1975.

The reasons for the planned slowing in the investment expansion in the first two quarters of 1977 are not clear. Corporate profits and cash flow have continued to rise through the third

quarter of this year. Another favorable factor was the recent extension of the 10-percent investment tax credit to 1980. On the other hand, the progressive deceleration of economic activity and the failure of capacity utilization to rise after the first quarter were probably unfavorable influences on business investment plans.

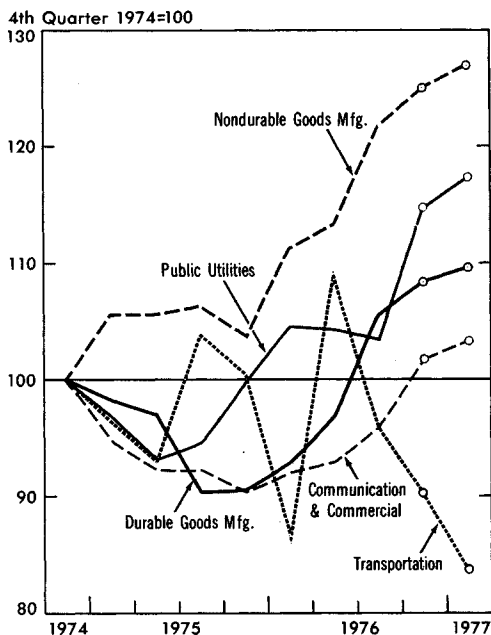

The slowing in investment growth in the first half of next year extends to most major industry groups. It is most pronounced in nondurables manufacturing and in transportation. The decline in spending planned for the second quarter of 1977 by the nondurables group is in sharp contrast to its relative strength over the past two years (table 1 and chart 9). Transportation spending declined sharply in the third quarter of 1976, and further declines are planned through the first two quarters of 1977, primarily reflecting reduced spending for the Trans-Alaska pipeline.

CHART 9
Capital Spending Programs by Selected Major Industry Groups

4th Quarter 1974=100
 Note.—The fourth quarter of 1974 was the most recent peak in capital spending for all industries combined. The trough in spending was in the fourth quarter of 1975.
 U.S. Department of Commerce, Bureau of Economic Analysis 76-12-9

Manufacturing Programs

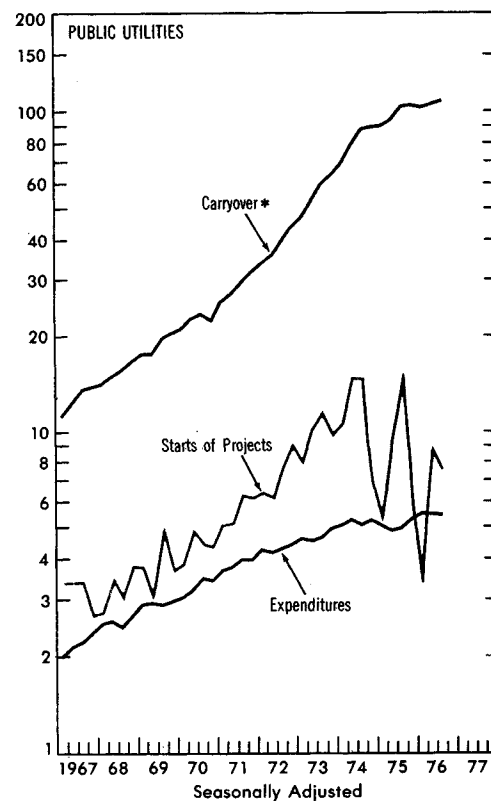

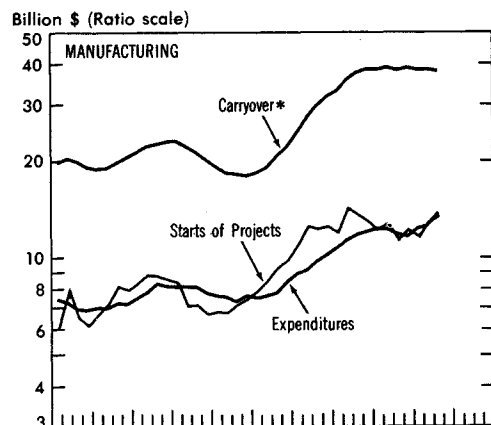

Manufacturers' spending rose 8 percent in the third quarter, to an annual rate of \$54.8 billion, after a 3-percent rise in the second. Plans call for spending to rise 2½ percent in the fourth quarter, 1½ percent in the first quarter of 1977, and 1 percent in the second. The third-quarter advance was strong in both durable and nondurable goods—9 percent and 7½ percent, respectively. Plans for the fourth quarter and the first quarter also show about equal increases for both groups. In the second quarter, durables plan a 4-percent increase and nondurables, a 1-percent decline.

The plans for the full year 1976 indicate that manufacturers' spending will increase 10½ percent from 1975, compared with a 4-percent increase from 1974 to 1975. In nondurables, spending will increase 12½ percent this year; increases are widespread among the major industries, but are largest in textiles, food-beverage, paper, and petroleum. In durables, an 8-percent increase is chiefly due to the motor ve-

hicle, stone-clay-glass, and machinery industries; primary metals shows a small decrease.

The value of manufacturing projects started in the third quarter of 1976 totaled \$13.2 billion, 3½ percent more than in the second quarter (table 3 and chart 10). The increase was in durables, largely in the machinery industries. In nondurables, declines in food-beverage and chemicals more than offset increases in petroleum and paper.

CHART 10
Starts and Carryover of Investment Projects

* Carryover as of end of period.
 U.S. Department of Commerce, Bureau of Economic Analysis 76-12-10

In the third quarter, the value of projects started was less than spending, so that carryover declined. At the end of September, carryover was \$37.9 billion, \$500 million less than at the end of June.

Evaluating the adequacy of their facilities at the end of September, manufacturing companies owning 36 percent of fixed assets reported a need for more facilities, 1 point below the percentage reported at the end of June (table 4 and chart 11). Facilities viewed as about adequate increased from 55 percent of fixed assets to 57 percent, and facilities viewed as in excess of needs dropped from 8 percent to 7 percent.

Capacity utilization

The utilization of manufacturing capacity declined 2 points, after having

advanced from its recession low of 75 percent to 82 percent in March and June (table 5 and chart 12).² The decline reflected a 20-point drop in motor vehicles, which was due largely to work stoppages. Among the other durables industries, primary metals reported a 4-point decline, to 79 percent, and stone-clay-glass reported a 3-point increase, to 79 percent.

In nondurables, declines were reported by petroleum, 6 points; chemicals, 3 points; paper, 3 points; and textiles, 2 points. As a result of strike settlements, the utilization rate in the rubber industry rose from 68 percent in June to 82 percent in September.

2. The survey asks manufacturers to report actual and preferred rates of capacity utilization for the last month of each quarter. Utilization rates for industry and asset-size groups are weighted averages of individual company rates. See "The Utilization of Manufacturing Capacity, 1965-73," SURVEY OF CURRENT BUSINESS, July 1974, p. 47.

Food-beverage rose 3 points, to 79 percent.

The utilization rate reported by large-sized firms declined 3 points, to 82 percent, and that reported by medium-sized firms declined 1 point, to 78 percent. Small-sized firms remained at a 75-percent rate. Primary-processed goods industries as a group reported a rate of 82 percent in September, a 1-point decline, and advanced-processed goods industries reported 79 percent, a 3-point decline.

Nonmanufacturing Programs

Total spending by nonmanufacturing industries rose one-half of 1 percent in the third quarter, to an annual rate of \$67.8 billion. Their spending had increased 3 percent in the second quarter. Plans are for a 6-percent increase in the

1. Starts are estimated by adding changes in carryover to expenditures during the given period.

2. Carryover refers to expenditures yet to be incurred on plant and equipment projects already underway at end of period.

3. Includes data not shown separately.

4. Includes guided missiles and space vehicles.

CHART 11

Manufacturers' Evaluation of Plant and Equipment Facilities*

U.S. Department of Commerce, Bureau of Economic Analysis 76-12-11

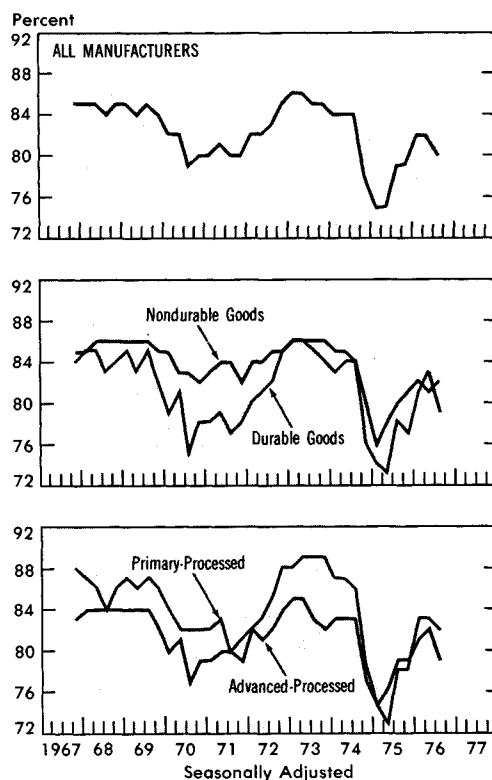

fourth quarter and 1 percent and 2 percent increases in the first and second quarters of 1977.

In the third quarter, increases by communications and mining were largely offset by decreases in transportation and electric utilities. The advance planned for the fourth quarter is in public utilities, communications, and air transportation. In the first half of 1977, the increases are principally in electric utilities and the commercial group.

If plans for the fourth quarter are realized, spending in 1976 will increase 5 percent, compared with a 2½-percent decline in 1975. Spending by public utilities will increase 11½ percent; this contrasts with a 2-percent decline in 1975, but is in line with their average rate of expansion for the past several years. The value of starts of new projects by public utilities totaled \$7.5 billion in the third quarter, compared with \$8.6 billion in the second. Carry-over was \$107.7 billion at the end of September, \$2.1 billion higher than at the end of June.

1. According to respondent companies' characterizations of their plant and equipment facilities, taking into account their current and prospective sales for the next 12 months.
 2. Includes industries not shown separately.
 3. Includes machinery, transportation equipment, and fabricated metals industries.

"Other transportation" reports a 13-percent rise; in 1975, spending by this group had increased 50 percent due to the sharp rise in spending for the Trans-Alaska pipeline. Communications will increase spending 7 percent in 1976, compared with a 9-percent decline in 1975. Spending by railroads will be down 8 percent from 1975 and 1974 levels. Air transportation reports a 28-percent drop; spending had fallen 8 percent in 1975 and 17 percent in 1974.

(Continued from page 19)

increased total deductions and exemptions, thus slowing the growth of taxable income.

In 1973 and 1974, the ratio of taxable to personal income increased, but there are reasons to believe that in 1975 the ratio will decline. The standard deduction was increased to 16 percent, with a maximum of \$2,350 for single returns and \$2,650 for joint returns. The low income allowance was raised to \$1,600 for single returns and \$1,900 for joint returns. In addition, in 1975—a recession year—transfer payments increased rapidly.

1. Also includes producers of lumber, furniture, fabricated metals, instruments, and ordnance and miscellaneous manufactures.

2. Also includes producers of other transportation equipment.

3. Also includes producers of tobacco, apparel, printing and publishing, and leather.

4. Includes producers of lumber; stone, clay, and glass; primary metals; fabricated metals; textiles; paper; chemicals (at ½ weight); petroleum; and rubber.

5. Includes producers of furniture, electrical machinery, machinery except electrical, motor vehicles, aircraft, other transportation equipment, instruments, ordnance and miscellaneous manufactures, food including beverage, tobacco, apparel, printing and publishing, chemicals (at ½ weight), and leather.

(Continued from page 22)

on Government procurement. Growth in Seattle, Los Angeles, and San Diego was limited by cutbacks in procurement of aircraft and other military goods at the end of the Vietnam war, and by reduced demand for civilian aircraft. Rapid growth in Anaheim, Riverside, and San Jose reflected urban sprawl out of San Francisco and Los Angeles. In addition, San Jose expanded its machinery production.

Southern and mountain regions

In general, both metropolitan and nonmetropolitan nonfarm income grew faster in the Southeast, Southwest, and Rocky Mountain regions than in the northern, central, and far western

regions, and, in the former group, nonfarm income grew faster in metropolitan than in nonmetropolitan counties. Growth in both categories of counties was particularly rapid in retirement-related transfer payments, contract construction, and manufacturing as a result of the migration of retirees and the expansion and relocation of manufacturing plants to the Sun Belt. Examples of relocation were the movement to nonmetropolitan counties in the Southeast region of apparel, leather, and other nondurable manufacturing from the New England and Mideast regions, and of machinery and fabricated metals from the Mideast and Great Lakes regions. The dispersal of these manufacturing in-

dustries was in part a response to improved highways and truck transportation and other technological developments, which encouraged movement to low-cost areas.

Nonfarm income grew at rates well above the national average in six of the eight large SMSA's in the southern and mountain regions, at the national average rate in Dallas (where cutbacks in aircraft production limited growth), and at a rate somewhat below the national average in New Orleans. Growth in the six fast-growing SMSA's—Tampa, Phoenix, Miami, Denver, Atlanta, and Houston—was particularly strong in construction and in industries that provide services to the rapidly increasing numbers of in-

1. Excludes agricultural business; real estate operators; medical, legal, educational, and cultural services; and nonprofit organizations.
 2. Estimates are based on expected capital expenditures reported by business in late October and November 1976. The estimates for the fourth quarter of 1976 and first quarter of 1977 have been corrected for systematic biases. The adjustment procedures are described in the February 1970 issue of the SURVEY OF CURRENT BUSINESS. Before such adjustment, 1976 expenditures were expected to be \$121.47 billion for all industries, \$53.07 billion for manufacturing and \$68.40 billion for nonmanufacturing.

3. Includes data not shown separately.
 4. Includes guided missiles and space vehicles.
 5. Includes fabricated metal, lumber, furniture, instruments, and ordnance and miscellaneous except guided missiles and space vehicles.
 6. Includes apparel, tobacco, leather and printing-publishing.
 7. Includes trade, service, construction, finance and insurance.

migrating workers and retirees who settled in and around these large metropolitan centers.

In the Southeast, Atlanta provided transportation, trade, finance, and other services to rapidly expanding region-wide markets, and Tampa and Miami provided similar services for retirees and tourists. Miami, with its large low-wage work force, also attracted apparel and other nondurable manufacturing plants from the North.

In the Southwest, Houston expanded its chemicals and nonelectrical machinery industries, and attracted corporation management units and the business, professional, and financial services that provide support to such

units. In Phoenix, services and electrical machinery production grew rapidly. In the Rocky Mountain region, Denver, the only large SMSA, grew as a regionwide services center.

Recent Developments

Although detailed county income data for 1975 have not yet been prepared, available data for BEA regions suggest that the Southeast, Southwest, and Rocky Mountain regions resisted the 1974-75 recession much more effectively than did the New England, Mideast, and Great Lakes regions. The Great Lakes region

was particularly hard hit by cutbacks in the production of automobiles and most other durable goods as well as in construction. New England lagged despite cyclically resistant growth in instruments and other industries requiring inputs of advanced scientific knowledge.

In contrast to 1969-73, the Plains showed above-average nonfarm income growth in 1973-75, as increases in farm plant and equipment expenditures following record farm incomes in 1973 led to advances in manufacturing and construction. The Far West also grew faster than the national average, as a result of relative improvement in durable manufacturing.

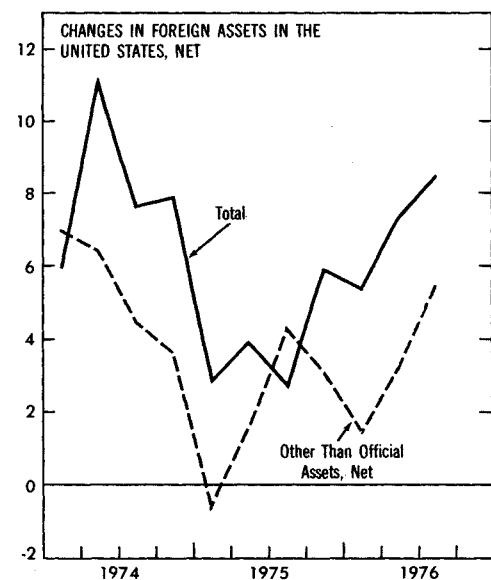

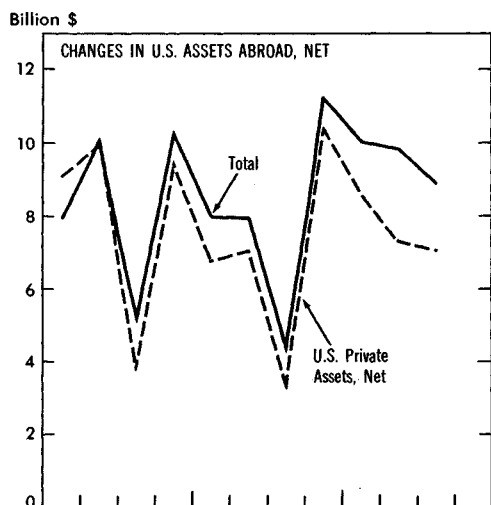

U.S. International Transactions: Third Quarter 1976

U.S. international transactions in the third quarter were highlighted by a swing in the balance on current account

transactions from a surplus of \$0.8 billion in the second quarter to a deficit of \$1.1 billion.¹ A substantial widening of the merchandise trade deficit and an unusual increase in U.S. Government grants more than accounted for the shift.

depreciation of the dollar against the mark (chart 14, table C). Anticipation of an adverse impact of the European drought on the French balance of payments led to a strengthening of the dollar against the franc in July and early August; the franc recovered somewhat toward the end of the quarter. The dollar rose sharply against the pound sterling in September, after remaining steady earlier in the quarter, as strike threats by the British seamen's union and renewed concern about inflation in the United Kingdom led to heavy sales of sterling. The dollar declined against the Japanese yen, reflecting the continued strong performance of Japanese exports. The dollar was virtually unchanged in value against the Italian lira and stabilized against the Canadian dollar and Swiss franc, following a fall against the latter two currencies over the past year. Measured in terms of its trade-weighted average value against either twenty-two OECD currencies or the currencies of ten major industrial countries, the dollar showed little net change, as movements against major currencies continued to be offsetting.

CHART 13
Capital Flows in U.S. International Transactions

U.S. Department of Commerce, Bureau of Economic Analysis 76-12-13

Among capital account transactions, U.S. assets abroad increased \$8.9 billion (capital outflows, chart 13), \$1.0 billion less than in the second quarter. Net U.S. purchases of foreign securities rose sharply, as foreigners placed a record volume of new bond issues in the United States; outflows for U.S. direct investments abroad also rose. These increases were more than offset by a slowing in outflows reported by U.S. banks and a reduction in claims of U.S. nonbanking concerns on unaffiliated foreigners. Foreign assets in the United States rose \$8.5 billion (capital inflows, chart 13), \$1.1 billion more than in the second quarter. The main factor contributing to the larger inflow was an increase in liabilities to private foreigners and international institutions reported by U.S. banks. Inflows from foreign official agencies slowed considerably. Unrecorded transactions (statistical discrepancy) showed inflows of \$1.5 billion, slightly less than in the second quarter.

U.S. dollar in exchange markets

In the third quarter, developments both in the United States and abroad influenced the value of the dollar in exchange markets. The decline in U.S. short-term interest rates relative to German rates, accompanied by renewed speculation concerning upward revaluation of the mark within the joint European currency float, contributed to a

Major Transactions

Merchandise trade

U.S. merchandise imports exceeded exports by \$3.0 billion in the third quarter, compared with \$1.3 billion in the second. Faster growth in imports than in exports accounted for the rise in the trade deficit. (These data are on a balance of payments basis, which excludes the military trade of U.S. defense agencies and reflects adjustments to the Bureau of the Census trade figures for timing, coverage, and valuation.)

1. In the text, data for current account transactions are seasonally adjusted.

Imports increased 10 percent, to \$32.6 billion, following a 4-percent increase in the second quarter. In volume, they increased 8 percent. Both petroleum and nonpetroleum imports registered sizable increases. Purchases in anticipation of a January 1977 price increase by the Organization of Petroleum Exporting Countries (OPEC) con-

tributed to the 11-percent increase in the value of petroleum imports; volume increased 10 percent to a quarterly record of 8.5 million barrels per day. Nonpetroleum imports rose 9 percent in value. Volume rose 7 percent, in contrast to a 2-percent drop in the second quarter. The increase was broadly based; imports of industrial supplies,

consumer goods, foods, machinery, and automotive products from Canada led the advance.

Exports rose 4 percent, to \$29.6 billion, compared with a 6-percent rise in the second quarter. Volume increased 3 percent, compared with 5 percent. Increases in shipments of grains, soybeans, and cotton—particularly to Western Europe, Japan, and the developing countries of Africa and Asia—were major contributors to an 8-percent increase in agricultural exports. Volume advanced 6 percent; agricultural prices registered their first increase in seven quarters. Nonagricultural exports rose 3 percent in value and 2 percent in volume, compared with second-quarter increases of 5 percent and 4 percent. Exports of machinery and industrial supplies rose, and those of civilian aircraft remained strong; there was a partly offsetting decline in automotive exports to Canada.

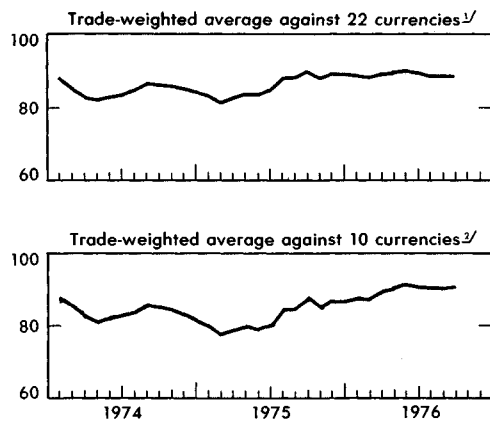

On a geographic basis, the substantial rise in petroleum imports led to a \$0.8 billion increase, to \$4.2 billion, in the trade deficit with OPEC. Imports from Canada continued to rise and exports were virtually unchanged, resulting in a \$0.7 billion deficit following near balance in the second quarter. Likewise, the trade deficit with non-OPEC developing countries widened—to \$0.9 billion from \$0.5 billion—as imports from these countries rose faster than exports to them. On the other hand, the trade deficit with Japan narrowed to \$1.1 billion, and the surplus with Western Europe increased \$0.6 billion, to \$2.8 billion.

Service transactions and unilateral transfers

Net service receipts were \$3.8 billion, \$0.8 billion higher than in the second quarter. Receipts from exports of services increased \$1.0 billion, to \$13.0 billion. A step-up in transfers under U.S. military agency sales contracts accounted for about half of the increase, as deliveries of equipment to Iran and technical assistance to Saudi Arabia increased sharply. Payments for imports of services were \$9.1 billion, \$0.2 billion higher than in the second quarter. Travel and passenger fare payments

rose, after declining in the second quarter; an increase in payments for transportation services mainly reflected the rise in merchandise imports.

Net unilateral transfer payments increased \$1.0 billion, largely the result of a sharp increase in U.S. Government grants to Israel to finance purchases of U.S. military equipment.

U.S. assets abroad

Net U.S. official reserve assets rose \$0.4 billion, following a \$1.6 billion rise in the second quarter. Foreign currency holdings of the United States declined, as an Italian repayment of an earlier swap drawing was only partly offset by a British drawing against standby credits established in June. The U.S. reserve position in the International Monetary Fund (IMF) increased nearly as much as in the preceding quarter, as several countries drew dollars from the IMF, thus increasing the amount of foreign exchange that the United States can automatically draw from the IMF.

Net U.S. private assets abroad increased \$7.0 billion, slightly less than in the second quarter (chart 13). Net claims on foreigners reported by U.S. banks rose \$3.3 billion, compared with a \$4.8 billion increase in the second quarter. The main factors were shifts to net inflows from the United King-

dom, Japan, and Mexico from net outflows in the second quarter. The inflows from the United Kingdom and Mexico may have been related to exchange market pressures on the pound sterling and the peso. In contrast, outflows through Caribbean branches of U.S. banks were \$2.8 billion, compared with \$2.0 billion in the second quarter. U.S. nonbanking concerns reduced their net claims on unaffiliated foreigners—primarily in the United Kingdom and the Caribbean area—by \$0.3 billion, following a \$1.0 billion increase in the second quarter.

Net U.S. purchases of foreign securities doubled to \$2.8 billion. A drop in U.S. long-term interest rates was a factor in the record \$3.1 billion of new foreign issues in the United States. Canadian provincial authority placements increased substantially, and the International Bank for Reconstruction and Development (IBRD) floated sizable new issues. In addition, a Philippine Government corporation placed a large issue guaranteed by the U.S. Export-Import Bank.

Net capital outflows for U.S. direct investments abroad were \$1.2 billion, compared with \$0.2 billion in the second quarter. Outflows to petroleum affiliates increased \$0.3 billion to \$0.8 billion; there were net outflows to Japan and Latin America—in contrast to large net

inflows in the second quarter—and continued large net outflows to affiliates in the United Kingdom and the developing countries of Africa and Asia. There was a shift to outflows of \$0.4 billion to affiliates in nonpetroleum industries—primarily in Western Europe, Canada, and Latin America—from net inflows of \$0.3 billion in the second quarter.

Foreign assets in the United States

Net foreign official assets in the United States increased \$3.0 billion, compared with a \$4.1 billion increase in the second quarter (table B). A smaller increase in official assets of OPEC countries—\$1.7 billion, compared with \$3.3 billion in the second quarter—more than accounted for the slowdown. Non-OPEC developing countries increased their official dollar holdings \$1.7 billion, following a \$0.9 billion rise. Most of this inflow reflected Israeli prepayments, financed by U.S. Government grants, on orders of U.S. military equipment for future delivery and the purchase by a Philippine Government corporation of a U.S. Export-Import Bank obligation, utilizing the proceeds of the previously-mentioned bond issue in the United States. Official dollar holdings of industrial countries continued to decline.

Footnotes to U.S. International Transactions Tables 1-10

General notes for all tables:

^r Revised.^p Preliminary.^{*} Less than \$500,000 (±).

n.a. Not available.

Details may not add to totals because of rounding.

Table 1:

1. Credits, +: exports of goods and services; unilateral transfers to United States; capital inflows (increase in foreign assets (U.S. liabilities) or decrease in U.S. assets); decrease in U.S. official reserve assets.

Debits, -: imports of goods and services; unilateral transfers to foreigners; capital outflows (decrease in foreign assets (U.S. liabilities) or increase in U.S. assets); increase in U.S. official reserve assets.

2. Excludes transfers of goods and services under U.S. military grant programs (see line 14).

3. Excludes exports of goods under U.S. military agency sales contracts identified in Census export documents, excludes imports of goods under direct defense expenditures identified in Census import documents, and reflects various other adjustments (for valuation, coverage, and timing) of Census statistics to a balance of payments basis; see table 3.

4. Consists of interest, dividends, and branch earnings.

5. Excludes reinvested earnings of foreign incorporated affiliates of U.S. firms or of U.S. incorporated affiliates of foreign firms.

6. For all areas, amounts outstanding September 30, 1976, were as follows in millions of dollars: line 34, 18,945; line 35, 11,598; line 36, 2,357; line 37, 3,952; line 38, 1,038.

7. Includes sales of foreign obligations to foreigners.

8. Consists of bills, certificates, marketable bonds and notes, and nonmarketable convertible and nonconvertible bonds and notes.

9. Consists of U.S. Treasury and Export-Import Bank obligations, not included elsewhere, and of debt securities of U.S. Government corporations and agencies.

10. Includes, primarily, U.S. Government liabilities associated with military sales contracts and other transactions arranged with or through foreign official agencies; see table 4.

11. Consists of investment in U.S. corporate stocks and in debt securities of private corporations and State and local governments.

12. Conceptually, the sum of lines 71 and 66 (total, all areas) is equal to "net foreign investment" in the national income and product accounts (NIPA's) of the United States. Beginning with 1973-IV, however, the foreign transactions account in NIPA's excludes the shipments and financing of extraordinary military orders placed by Israel. Line 69 (total, all areas) differs from net exports of goods and services in the NIPA's due to the omission in the NIPA net exports of shipments of extraordinary military orders placed by Israel and of U.S. Government interest income payments to foreigners. The latter are classified in a separate category in the foreign transactions account in NIPA's.

Table 2:

For footnotes 1-12, see table 1.

Table 3:

1. Exports, Census basis, represent transaction values, f.a.s. U.S. port of exportation; imports, Census basis, represent transaction values, f.a.s. foreign port of exportation.
 2. Adjustments in lines A6, A14, B8, B21, and B34 reflect the reconciliation of discrepancies in the merchandise trade statistics published by the United States and the counterpart statistics published by Canada.
 3. Exports of military equipment under U.S. military agency sales contracts with foreign governments (line A7), and direct imports by the Department of Defense and the Coast Guard (line A15), to the extent such trade is identifiable from Customs declarations. These exports are included in tables 1, 2, and 10, line 3 (transfers under U.S. military agency sales contracts); and the imports are included in tables 1, 2, and 10, line 17 (direct defense expenditures).
 4. Addition of electric energy; deduction of exposed motion picture film for rental rather than sale; deduction of exports to the Panama Canal Zone; net change in stock of U.S.-owned grains in storage in Canada; net timing adjustments for goods recorded in Census data in one period but found to have been shipped in another; and coverage adjustments for special situations in which shipments were omitted from Census data.
 5. Correction for discrepancy between sum of four quarters, seasonally adjusted, and the unadjusted annual totals.
 6. Addition of electrical energy; deduction of foreign charges for repair of U.S. vessels abroad, which are included in tables 1, 2, and 10, line 20 (other transportation); deduction of imports from Panama Canal Zone; net timing adjustments for goods recorded in Census data in one period but found to have been shipped in another; and coverage adjustments for special situations in which shipments were omitted from Census data.
 7. Annual and unadjusted quarterly data shown in this table correspond to country and area data in table 10, lines 2 and 16.
 8. The BEA definition for "petroleum and products" (lines C12, C29, and D56) includes propane and butane, in line with current Bureau of Mines and Federal Energy Administration practice.
 9. The statistical identification of automotive products exports to Canada (line D34) is not as complete and comprehensive as the identification under the U.S.-Canada Automotive Products Trade Act. However, the underestimation of automotive shipments to Canada due to unreported exports, amounting to about \$930 million in 1975, has largely been corrected in line C18.
 10. Includes silver ore and bullion.
 11. Includes nuclear fuel materials and fuels.
- NOTE.—The "seasonal adjustment discrepancy lines" (B13, B26, B30, C22, C33, D47 and D67) show the difference between total exports and imports and the sum of major items independently adjusted.

Table 4:

1. Expenditures to release Israel from its contractual liability to pay for defense articles and services purchased through military sales contracts—authorized under Public Law 93-199 and subsequent similar legislation are included in line A3. Deliveries against these military sales contracts are included in line C10; see footnote 2. Of the line A3 items, part of the military expenditures is applied in lines A38 and A41 to reduce short-term assets previously recorded in lines A36 and C8; this application of funds is excluded from line C3. A second part of line A3 expenditures finances future deliveries under military sales contracts and is applied directly to lines A37 and C9. A third portion of line A3, disbursed directly to finance purchases by Israel and other countries from commercial suppliers, is included in line A32.
2. Transactions under military sales contracts are those in which the Defense Department sells and transfers military goods and services to a foreign purchaser, on a cash or credit basis. Purchases by foreigners directly from commercial suppliers are *not* included as transactions under military sales contracts. The entries for the several categories of transactions related to military sales contracts in this and other tables are partially estimated from incomplete data.
3. The identification of transactions involving direct dollar outflows from the United States is made in reports by each operating agency.
4. Line A33 includes foreign currency collected as interest and lines A38 and B2 include foreign currency collected as principal, as recorded in lines A13 and A14, respectively.
5. Includes (a) advance payments to the Defense Department (on military sales contracts) financed by loans extended to foreigners by U.S. Government agencies and (b) the counter-value of the part of line C10 which was delivered without prepayment by the foreign purchaser. Also includes expenditures of appropriations available to release foreign purchasers from liability to make repayment.
6. Excludes liabilities associated with military sales contracts financed by U.S. Government grants and credits and included in line C2.
7. Lines C3 and C4 exclude recovery of investment value of aircraft on long-term lease through physical return of depreciated aircraft.
8. Includes a U.S. Export-Import Bank obligation to a Philippine Government corporation.

Table 5:

1. Acquisition of capital stock of existing and newly established companies, capitalization of intercompany accounts, and other equity contributions.
2. Sales and liquidations of capital stock and other equity holdings, total and partial.
3. Petroleum includes the exploration, development and production of crude oil and gas, and the transportation, refining and marketing of petroleum products exclusive of petrochemicals. Manufacturing excludes petroleum refining and the smelting operations of mining companies. "Other" industries includes industries other than petroleum and manufacturing, the major ones being agriculture, mining and smelting, public utilities, transportation, trade, insurance, finance and services.

Table 6:

1. As published in Treasury Bulletin. Treasury data are based on transactions by foreigners reported by banks and brokers in the United States; net purchases by foreigners (+) correspond to net U.S. sales (-).
2. Redemptions consist of scheduled retirements and identifiable premature retirements of U.S.-held foreign debt securities, and estimates for redemptions of Canadian issues held by U.S. residents, based on Canadian statistics. Unidentifiable nonscheduled retirements appear in line 30.
3. Consists of International Bank for Reconstruction and Development (IBRD), International Development Association (IDA), International Finance Corporation (IFC), Asian Development Bank (ADB), and Inter-American Development Bank (IDB).
4. Mainly reflects exclusion of investments by foreign official agencies in U.S. corporate stocks and in debt securities of U.S. Government corporations and agencies, private corporations, and State and local governments. These investments are included in table 1, lines 54 and 57.
5. Securities newly issued by finance subsidiaries incorporated in the Netherlands Antilles are included to the extent that the proceeds are transferred to U.S. parent companies.

Table 7:

1. Consists of negotiable and other readily transferable foreign obligations payable on demand or having a contractual maturity of not more than one year, including loans payable on demand. Excludes other types of loans, acceptances and accounts receivable.
2. Includes funds obtained by finance subsidiaries incorporated in the Netherlands Antilles from sources other than sales of newly issued securities to the extent that they are transferred to U.S. parent companies.
3. Reports by brokerage concerns have been discontinued.
4. Outstanding amounts as of June 30, 1976.

Table 8:

1. Includes claims of U.S. banks on their foreign branches and those of U.S. agencies and branches of foreign banks on their head offices and foreign branches of such head offices.
2. Mainly claims on U.S. branches in the Bahamas and Cayman Islands.

Table 9:

1. Time deposits with maturity of 1 year or less; negotiable certificates of deposit with a maturity of 1 year or less are included in "other obligations."
2. Excludes long-term liabilities in line B8.
3. Coverage of lines B3 and B4 is limited to Western Europe, Canada, Japan, Bahamas, and Cayman Islands.
4. Consists of International Bank for Reconstruction and Development (IBRD), International Development Association (IDA), International Finance Corporation (IFC), Asian Development Bank (ADB), and Inter-American Development Bank (IDB).
5. Outstanding amounts as of June 30, 1976.

Table 10:

- For footnotes 1-12, see table 1.
13. The "European Communities (9)" includes the "European Communities (6)", the United Kingdom, Denmark, and Ireland.
 14. The "European Communities (6)" includes Belgium, France, Germany, Italy, Luxembourg, the Netherlands, the European Atomic Energy Community, and the European Coal and Steel Community.
 15. Includes transactions with U.S. affiliated shipping companies operating under the flags of Honduras, Liberia, and Panama, and U.S. affiliated multinational trading companies, finance, and insurance companies, not designated by country.
 16. Details not shown separately; see totals in lines 51 and 58.
 17. Details not shown separately are included in combined lines 64 and 65.
 18. See footnote 8 to Table 4.

(Continued from page 32)

Other foreign assets in the United States rose \$5.5 billion, compared with \$3.2 billion in the second quarter (chart 13). Liabilities to private foreigners and international institutions reported by U.S. banks (lines 60, 64, and 65, table 1) increased \$4.7 billion, following a \$2.9 billion increase. A shift from net sales to net purchases of U.S. Treasury securities—primarily by the IBRD—accounted for most of the increase. Among other U.S. bank-reported liabilities, there were continued inflows from branches in the Caribbean area and shifts to large inflows from Japan, Canada, and the United Kingdom from outflows in the second quarter. Net foreign purchases of U.S. securities (other than U.S. Treasury securities) remained very low, at less than \$0.1 billion.

Inflows for foreign direct investments in the United States increased to \$0.8 billion from \$0.4 billion in the second quarter. Virtually all the increase was accounted for by an increase in liabilities to a Middle Eastern country with a participation interest in a U.S.-incorporated petroleum company. Direct investment inflows from other areas were unchanged in total; a shift from outflows to inflows from the United Kingdom and larger inflows from continental Western Europe were offset by a shift to outflows to Latin America and smaller inflows from Japan.

Highlights: January-September 1976

In the first nine months of 1976, the balance on U.S. current account transactions was in deficit by \$0.3 billion, in sharp contrast to a \$8.6 billion surplus in the same period of 1975. A swing in the merchandise trade balance from a surplus of \$6.8 billion to a \$6.1 billion deficit more than accounted for the change. Imports increased more rapidly than exports, largely reflecting the earlier and stronger economic recovery in the United States. Imports were \$90.9 billion, 25 percent higher than in 1975. Petroleum imports were up sharply, in response to a pickup in U.S. demand and, more recently, in anticipation of a price increase. The average daily rate of imports was 7.7 million barrels, up from 6.4 million barrels in 1975. Nonpetroleum imports rebounded from a decline in 1975, with imports of industrial supplies, consumer goods, foods, and automotive products from Canada showing the largest advances. Exports rose 7 percent, to \$84.8 billion. Agricultural exports, led by grains and soybeans, increased. Exports of machinery and industrial materials were major contributors to the increase in nonagricultural exports.

Partly offsetting the swing in the merchandise balance, net receipts on other goods and services rose to \$9.7 billion from \$5.1 billion in 1975. A substantial increase in net investment income receipts—especially from petro-

leum affiliates—accounted for most of this increase.

U.S. assets abroad rose \$28.8 billion, following a \$20.4 billion rise in 1975. U.S. purchases of foreign securities contributed significantly to the increase, as favorable borrowing conditions in the U.S. bond market led to record placements of new foreign issues. Claims on foreigners reported by U.S. banks showed sizable increases; low U.S. interest rates relative to those abroad and weak business loan demand in the United States made it attractive for U.S. banks to lend funds abroad. Outflows for U.S. direct investments abroad declined. Generally slack economic conditions abroad reduced funding requirements of overseas affiliates, and exchange rate and political uncertainties in some countries exerted a further dampening effect on outward direct investment flows. U.S. official reserve assets increased sharply, as several countries drew on swap arrangements with the United States or drew dollars from the IMF (increasing the U.S. reserve position in the IMF) to support their currencies in exchange markets and to help finance their payments deficits.

Foreign assets in the United States increased \$21.2 billion, following a \$9.5 billion increase in 1975. A large part of the increased inflow was accounted for by increases in foreign official assets, particularly those of OPEC, reflecting some shifting of OPEC funds to the United States from other countries

1. EC (9), other Western Europe, Canada, Japan, Australia, New Zealand, and South Africa.

2. Partly estimated. Based on data for Indonesia, Venezuela, and Middle East and African oil-exporting countries.

3. Includes \$250 million, the amount by which the dollar countervalue of the Federal

Reserve pre-August 1971 Belgian and Swiss franc commitments was increased to take account of the two U.S. dollar devaluations of 1971 and 1973 and the Belgian franc revaluation of 1971. This valuation adjustment is excluded from the balance of payments transactions shown in line 1.

4. Includes drawings from the U.S. Treasury Department of \$200 million in 1976-II and \$100 million in 1976-III.

with less stable currencies and a rise in their investable funds. Non-OPEC developing countries also added to their official holdings in the United States. In contrast, official assets of industrial countries declined, as they did in 1975. Among other foreign assets in the

United States, bank-reported liabilities to private foreigners and international institutions increased sharply. Excluding flows associated with a participation interest of a Middle Eastern country in a U.S.-incorporated petroleum company, foreign direct investment

inflows doubled. Net foreign purchases of U.S. securities (other than U.S. Treasury securities) were about the same as in 1975; purchases, mostly of U.S. corporate stocks, were large early in the year but declined sharply in the second and third quarters.

(Continued from page 16)

In the current recovery, the unemployment rate has recovered less from its deterioration during the recession than has the employment ratio. The unemployment rate, which had been at 4.8 percent in the fourth quarter of 1973 before increasing to 8.7 percent in the second quarter of 1975, was 7.8 percent in the third quarter of 1976. The 7.8 percent figure represented a recovery of one-quarter of the ground lost during the recession. The employment ratio has recovered about one-half the ground it lost; it declined from 58.2 percent in the first quarter of 1974 to 56.0 percent in the second quarter of 1975, and subsequently has recovered to 57.0 percent in the third quarter of 1976 (table 1). The fuller recovery of the employment ratio is the combined re-

sult of the secular increase in the labor force participation rate and of the discouraged worker effect. During the recession, the secular increase in the labor force participation rate tended to be offset by the discouraged worker effect; since then, both have worked to increase the labor force participation rate. Consequently, during the recession, population and the labor force grew at the same rate; since then, the labor force increased more rapidly. Because population is the denominator of the employment ratio and labor force the denominator of the unemployment rate, the larger relative increase in the labor force than in the population dampened the recovery of the unemployment rate relative to that of the employment ratio.

The extent to which the employment ratio has regained its pre-recession

peak varied among groups. For adult women, the recovery was more than complete. At 43.7 percent in the third quarter of 1976, the ratio was 1.1 percentage points higher than in the first quarter of 1974.

The third-quarter employment ratios for adult men and for teenagers remained far below their levels in the first quarter of 1974. The teenage ratio, at 44.4 percent, has recovered only about one-fourth of the amount it declined, and the ratio for adult men, at 75.2 percent, has recovered only about one-tenth. The lack of uniformity reflects in large part the different trends to which the employment ratios for these three groups are subject and differences in the cyclical recovery in the industries in which their employment is concentrated.

Subject Guide to Volume 56 (1976)

ARTICLES and sections of the monthly "Business Situation" are listed below by subject. Title, author, and issue and beginning page numbers are given.

Discussions of the quarterly GNP estimates appeared in the "Business Situation" on the schedule shown below. The quarterly National Income and Product Tables appeared in each issue except July.

CURRENT BUSINESS STATISTICS

THE STATISTICS here update series published in the 1975 edition of BUSINESS STATISTICS, biennial statistical supplement to the SURVEY OF CURRENT BUSINESS. That volume (available from the Superintendent of Documents for \$5.10) provides a description of each series, references to sources of earlier figures, and historical data as follows: For all series, monthly or quarterly, 1971 through 1974 (1964-74 for major quarterly series), annually, 1947-74; for selected series, monthly or quarterly, 1947-74 (where available). Series added or significantly revised after the 1975 BUSINESS STATISTICS went to press are indicated by an asterisk (*) and a dagger (†), respectively. Unless otherwise noted, revised monthly data for periods not shown herein corresponding to revised annual data are available upon request.

The sources of the data are given in the 1975 edition of BUSINESS STATISTICS; they appear in the main descriptive note for each series, and are also listed alphabetically on pages 187-88. Statistics originating in Government agencies are not copyrighted and may be reprinted freely. Data from private sources are provided through the courtesy of the compilers, and are subject to their copyrights.

Unless otherwise stated in footnotes below, data through 1974 and descriptive notes are as shown in the 1975 edition of BUSINESS STATISTICS	1973	1974	1975	1973				1974				1975				1976

\varnothing Revised. \ddagger As of July 1.
 \varnothing Includes data not shown separately. \S Except department stores mail order.
 \ddagger See corresponding note on p. S-12.
 \ddagger Revisions back to Oct. 1973 appear in "Population Estimates and Projections: Estimates of the Population of the United States and Components of Change—1930-75," P-25, No. 632 (July 1976), Bureau of the Census.
 \varnothing Beginning in the Feb. 1976 SURVEY, data (revised back to Jan. 1971) reflect new seasonal factors and a modification of the procedures previously used to seasonally adjust a few of the series (teenage unemployment and those few other unemployment series of which teenagers are the exclusive or major part). Comparable monthly data back to 1967 appear in EMPLOYMENT AND EARNINGS (Feb. 1976), USDLS, BLS.

Unless otherwise stated in footnotes below, data through 1974 and descriptive notes are as shown in the 1975 edition of BUSINESS STATISTICS	1974	1975	1975			1976									
	Annual		Oct.	Nov.	Dec.	Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sept.	Oct. *

Revised. Preliminary. Average for year. Daily average. Adjusted to exclude interbank loans. For bond yields, see p. S-21. Beginning Jan. 1959, monthly data have been revised to reflect new seasonal factors and adjustment to bench marks for the latest call date (Dec. 31, 1975). Revisions are available from the Federal Reserve Board, Washington, D.C. 20551. Includes data for items not shown separately. Data have

been revised back to 1970, noninstallment credit will no longer be available on a monthly basis. "Personal loans" and "other consumer goods paper" have been combined to form an "all other" category (not shown separately here). Earlier monthly data are available from the Federal Reserve Board, Washington, D.C. 20551. Beginning Jan. 1973, data have been revised; revisions for Jan. 1973-April 1975 will be shown later. Corrected.

Unless otherwise stated in footnotes below, data through 1974 and descriptive notes are as shown in the 1975 edition of BUSINESS STATISTICS	1974	1975	1975			1976

¹ Revised. ² Preliminary. ³ Before extraordinary and prior period items. ⁴ Annual total; quarterly revisions not available. ^Δ Includes data not shown separately. ¹ Applies to passengers, baggage, cargo, and mail carried. ² Passenger-miles as a percent of available seat-miles in revenue service reflects proportion of seating capacity actually sold and utilized. ³ Total revenues, expenses, and income for all groups of carriers also reflect nonscheduled service. ⁴ New series. Source: ICC (no comparable data prior to 1972).

¹ Indexes are comparable for the identical quarter of each year (and from year to year). ^Δ Effective 1976, defined as those with annual revenues of \$10 million or more; restated 1975 data reflect changes. ¹ Natl. Railroad Pass. Corp. (Amtrak) operations (not included in AAR data above). ² Oper. revenues, 257; 253; oper. expenses, 463; 531; net loss, 273; 353 (I.C.C.). ³ Domestic trunk operations only (domestic trunks average about 90% of total domestic operations). ⁴ 1st qtr. 1975. ⁵ 2d qtr. 1975. ⁶ 3d qtr. 1975.

Unless otherwise stated in footnotes below, data through 1974 and descriptive notes are as shown in the 1975 edition of BUSINESS STATISTICS	1974	1975	1975			1976

* Revised. * Preliminary. † Annual total; monthly revisions are not available.
 ‡ For six months ending in month shown. § For month shown. ¶ See note "§".
 †† Restated 1st qtr. 1975. ††† Data withheld to avoid disclosure of figures from individual companies. †††† Revised Sept. 1975 data (order as above): \$29.27; 63%; \$20.97; 65%.
 ††††† See "Δ" note, p. S-24. ††††† Average daily rent per occupied room, not scheduled rates.
 †††††† Includes data not shown separately.
 © Effective 1976, data are compiled by U.S. Dept. of Transportation from INS records and refer to air travel; travel by sea is omitted (for 1973-75, average annual arrivals and departures by sea are as follows—units and order as above: 814; 784; 159; 129).
 § Effective Jan. 1976, data include visits to Voyageurs National Park (no count of visits for earlier periods is available); data for Mar.-July 1976 are restated to delete visits to Platt National Park which was reclassified as a national recreation area.
 ¶ Includes data for Western Union Int. Cable & Wireless.
 †† Monthly revisions back to 1971 are available upon request.

Unless otherwise stated in footnotes below, data through 1974 and descriptive notes are as shown in the 1975 edition of BUSINESS STATISTICS	1974	1975	1975			1976

¹ Revised. ² Preliminary. ³ Annual data; monthly revisions are not available.
⁴ Totals include data for types of lumber not shown separately.
⁵ Effective Aug. 1976 SURVEY, scrap excludes imports of rolling rails and pig iron excludes sponge iron imports previously included.
[¶] Effective with 1974 annual and Jan. 1975 figures, data reflect expanded sample and exclusion of direct-reduced (pre-reduced) iron, previously included in scrap series.

Unless otherwise stated in footnotes below, data through 1974 and descriptive notes are as shown in the 1975 edition of BUSINESS STATISTICS	1974	1975	1975			1976

^r Revised. ^p Preliminary.

¹ Reported annual total; revisions not allocated to the months. ² Less than 50 thousand barrels. ³ Beginning with January 1975, data for soda combined with those for sulphate; not comparable with data for earlier periods.

⁴ Beginning March 1975, data for defibrated or exploded, screenings etc., not available; not comparable with those for earlier periods. ⁵ Data exclude small amounts of pulp because reporting would disclose the operations of individual firms.

⁶ Monthly revisions back to 1974 are available upon request.

Unless otherwise stated in footnotes below, data through 1974 and descriptive notes are as shown in the edition of 1975 BUSINESS STATISTICS	1974	1975	1975			1976

* Revised. ¹ Annual total; revisions not allocated to the months or quarters. ² Data cover 5 weeks; other months, 4 weeks. ³ Effective January 1976, "dairy products" are included in "Food, wide-mouth containers." ⁴ Crop for the year 1974. ⁵ Crop for the year 1975. ⁶ Dec. 1 estimate of 1976 crop. ⁷ Bales of 480 lbs. ⁸ New series. Source: BuCensus. Data cover warp and weft knit yard goods and knit garment lengths, trimmings, and collars; no quarterly data prior to 1974 are available. ⁹ Monthly revisions for Jan.-Mar. 1975 are available. ¹⁰ Includes data not shown separately. ¹¹ Stocks (owned by weaving mills and billed and held for others) exclude bedsheeting, toweling, and blanketing, and billed and held stocks of denims. ¹² Unfilled orders cover wool apparel (including polyester-wool) finished fabrics; production and stocks exclude figures for such finished fabrics. Orders also exclude bedsheeting, toweling, and blanketing. ¹³ Cumulative ginnings to end of month indicated. ¹⁴ Beginning Jan. 1976, data are shown on a monthly basis.

Unless otherwise stated in footnotes below, data through 1974 and descriptive notes are as shown in the 1975 edition of BUSINESS STATISTICS	1974	1975	1975			1976

Revised. ⊕ Preliminary. ⊕ Season average. ⊕ For 5 weeks, other months, 4 weeks. ⊕ Monthly average. ⊕ Effective Sept. 1976 SURVEY, data omit production and stocks of saran and spandex yarn; for 1975, such production totaled 11.7 mil. lbs. ⊕ Effective 1976, production of blanketing is included in 100% spun yarn fabric; prior to 1976 production of such fabric (totaling 15.5 mil. yd., 4th qtr. 1975) is included in "all other group," not shown separately. ⊕ Season average to Apr. 1, 1976. ⊕ Includes data not shown separately. ⊕ Net-weight (480-lb.) bales. ⊕ Effective Jan. 1976, specifications for the price formerly designated fine good French combing and staple have been changed as shown above. Effective with the May 1976 SURVEY the foreign wool price is quoted including duty. * New series. Apparel (BuCensus)—Annual totals derived from firms accounting for 99% of total output of these items; monthly estimates, from smaller sample. Coats exclude all fur, leather, and raincoats. Suits omit garments purchased separately as coordinates. Except for the year 1974, earlier monthly data are available, except for suits. Prices (USD/L, BLS)—Data not available prior to 1976.

Unless otherwise stated in footnotes below, data through 1974 and descriptive notes are as shown in the 1975 edition of BUSINESS STATISTICS

ATTENTION INCOME DATA USERS!

Here, for the first time, is a comprehensive and detailed source of personal income data for 3,618 areas. Prepared by the Bureau of Economic Analysis and published through the National Technical Information Service, a 4-volume set titled

LOCAL AREA PERSONAL INCOME, 1969-74

shows total and per capita personal income by place of residence, personal income by type of payment, and labor and proprietors' income by major industry and place of work.

SPECIAL FEATURE: DETAIL AVAILABLE FOR ALL COUNTIES

Volume I includes methodology and classification of SMSA's and BEA economic areas. Shows data for all States, BEA economic areas, and SMSA's. Accession No. PB 254055. Price \$10 paper, \$2.25 microfiche.

A summary methodology is included in each of the following volumes.

Volume II shows data for counties and SMSA's in the following States: Connecticut, Delaware, District of Columbia, Illinois, Indiana, Iowa, Maine, Maryland, Massachusetts, Michigan, Minnesota, Missouri, New Hampshire, New Jersey, New York, Ohio, Pennsylvania, Rhode Island, Vermont, and Wisconsin. Accession No. PB 254056. Price \$13.75 paper, \$2.25 microfiche.

Volume III covers Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Virginia, and West Virginia. Accession No. PB 254057. Price \$16.25 paper, \$2.25 microfiche.

Volume IV covers Alaska, Arizona, California, Colorado, Hawaii, Idaho, Kansas, Montana, Nebraska, Nevada, New Mexico, North Dakota, Oklahoma, Oregon, South Dakota, Texas, Utah, Washington, and Wyoming. Accession No. PB 254058. Price \$16.25 paper, \$2.25 microfiche.

The volumes can be ordered from the National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161. Be sure to mention the accession numbers of the volumes desired.
