## the BUSINESS SITUATION

$R_{\text {EAL GNP increased at an annual }}$ rate of about 4 percent in the first quarter of 1983, after five consecutive quarters of poor performance ending with a 1-percent decline in the fourth quarter of 1982. Inflation continued to slow; the 3-percent increase in GNP prices registered in the first quarter was the lowest in over a decade. ${ }^{1}$ The unemployment rate, at 10.2 percent in February, remained near its postwar high.

- Real personal consumption expenditures increased moderatelyabout $2 \frac{1}{2}$ percent at an annual rate. Purchases of motor vehicles dipped, after a large increase in the fourth quarter in response to the introduction of subsidized interest rates (see the following section on motor vehicles). Purchases of other durable goods strengthened, in part reflecting the revitalization of the housing market. An increase in purchases of gasoline, after two quarters of decline, appears to have been related to declines in its price. Services continued weak; within them, expenditures on home heating declined, due to the unusually mild winter weather in some parts of the country.

[^0]- Information on fixed investment other than residential construction is sketchy. It appears that real nonresidential construction increased, largely due to construction of commercial buildings other than offices. This category, which includes stores and warehouses, had declined steadily over the past year. Weakness persisted in industrial construction and in oil well drilling; public utility construction was down again. In producers' durable equipment, motor vehicles changed little and it appears that other categories, in total, were down about as much as in the fourth quarter of 1982, but less than earlier in that year.
- As discussed in the section on housing markets, real residential investment was up strongly, in large part due to continued improvement in the financial conditions affecting housing.
- Little information is yet available about the other components of final sales-net exports and government purchases. It appears that real exports and imports both were up, but imports were up more. The increases were in merchandise trade; investment income continued to decline, reflecting the fall in interest rates here and abroad. The major factor in real government purchases was a drop-off in the price-support operations of the Commodity Credit Corporation. In the fourth quarter, farmers had responded to low market prices for crops by placing substantial amounts-mainly of soybeans, corn, cotton, and wheatunder loan. In the first quarter, they placed much less under loan.
- For the change in business inventories, reasonably complete information is available only for motor vehicles. Real motor vehicle inventories changed little after having been run down sharply in the fourth quarter;
the swing from liquidation made a large positive contribution to the change in GNP. The limited evidence about other inventories suggests further liquidation in the first quarter.
- GNP prices as measured by the fixed-weighted price index increased at an annual rate of 3 percent. The slowing from the fourth-quarter increase of 5 percent was attributable to energy prices; among these, gasoline prices resumed their downtrend. For most other components, first-quarter increases were in the range of 2 to 5 percent. Some of these increases differed noticeably from those registered in the fourth quarter: food prices, which had changed little in the fourth quarter, increased about 2 percent in the first; prices of residential structures had declined 5 percent in the fourth quarter but increased moderately in the first; and prices of Federal purchases increased less than in the fourth quarter, when a pay raise for Federal employees had added about 5 percentage points to the increase in prices.

## Personal income

Personal income was up $\$ 21$ billion in the first quarter, the net result of several increases and decreases in its components. ${ }^{2}$ Wage and salary disbursements were up sharply-about $\$ 21 \frac{1}{2}$ billion. Disbursements in all major industry groups shown in table 1 were up. A $\$ 6$ billion increase in manufacturing, centered in durable goods, was the first sizable one in over a year. Farm proprietors' income
2. Quarterly estimates in the national income and product accounts are expressed at seasonally adjusted annual rates, and quarterly changes in them are differences between these rates.
declined $\$ 6$ billion. Fourth-quarter farm income had included a $\$ 61 / 2$ billion step-up in subsidy payments by the Commodity Credit Corporation; in the first quarter, these payments decreased $\$ 3$ billion. Also, farm receipts were down; a decrease in farm production more than offset an upturn in farm prices.
Personal interest income increased $\$ 1 \frac{1}{2}$ billion, after a $\$ 31 / 2$ billion decline in the fourth quarter. Transfer payments declined $\$ 2$ billion, largely due to declines in benefits paid under regular unemployment insurance programs and under social security. In the fourth quarter, the increase in social security payments had been unusually large, reflecting retroactive payments and resumption of payments to college students; also, unemployment benefits had been stepped up under the supplementary extended benefits program authorized by the Tax Equity and Fiscal Responsibility Act of 1982. Personal contributions for social insurance, which are sub-

[^1]tracted in deriving the personal income total, increased $\$ 31 / 2$ billion, after no change in the fourth quarter. An increase in the taxable wage base from $\$ 32,400$ to $\$ 35,700$ accounted for $\$ 2$ billion, and the start of Federal contributions to health insurance under social security accounted for $\$ 1$ billion, of the step-up.
Disposable personal income increased only $\$ 18$ billion, or $3 / 2$ percent at an annual rate. However, the increase in prices paid by consumers was even less, and real disposable income increased $11 / 2$ percent. In 1982, quarterly changes in real disposable income had ranged from a 2 -percent decline in the first quarter to a 3 -percent increase in the second.

Personal outlays increased more than disposable income, so that personal saving and the saving rate declined. The saving rate was down several tenths of a percentage point from the 6.0 percent registered in the fourth quarter.

## Motor vehicles

Motor vehicle output increased about $\$ 6 \frac{1}{2}$ billion (1972 dollars) in the first quarter, following a $\$ 71 / 2$ billion decline in the fourth (table 2). The first-quarter increase in motor vehicle output accounted for about one-half of the increase in GNP; the $\$ 14$ billion turnaround in motor vehicle output accounted for about three-fourths of the turnaround in GNP.

The turnaround in motor vehicle output was in both autos and trucks; output had been at very low levels in the fourth quarter. Sales of motor vehicles declined slightly in the first quarter, but remained above the levels registered in the first three quarters of 1982. Inventories changed little after dropping sharply in the fourth quarter.

Unit sales of new cars declined to about 8.3 million (seasonally adjusted annual rate), from 8.7 million in the fourth quarter (chart 1). Earlier in 1982, sales had ranged from 7.5 to 8.0 million. Sales of both domestic and imported cars were down in the first quarter.

Imported car sales declined from 2.5 million to about 2.4 million, but their share of total sales remained at
about 29 percent. In the latter part of the quarter, sales of Japanese cars, which make up the bulk of imports, may have been held down by short supplies. Shipments of cars to the United States had slowed as Japanese automakers complied with the agreed limit of 1.68 million for the year ending March 31, 1983. Japan has ex-

## CHART 1 Retail Sales of New Passenger Cars

U.S. Department of Commerce, Bureau of Economic Analysis
tended the agreement to limit shipments to 1.68 million for a third year, beginning April 1, 1983.

Domestic car sales declined to about 5.9 million in the first quarter from 6.1 million in the fourth. Fourth-quarter sales had been boosted by belowmarket installment loan rates-under 11 percent-offered by major automakers through their financial subsidiaries. In the first quarter, rates about 1 percentage point higher were offered. The net increase in new car sales over the last two quarters has been modest-not surprising in view of the lackluster performance of real disposable income and the continued high unemployment rate.

Car production was stepped up to 5.9 million units (seasonally adjusted annual rate) in the first quarter from a very low level- 4.7 million-in the fourth. Production had been curtailed in the fourth quarter, as automakers worked down excessive inventories of carryover 1982 models. Low production combined with increased sales reduced domestic car inventories from $1,481,000$ (seasonally adjusted) at the end of the third quarter to $1,193,000$ at the end of the fourth. The ratio of inventories to sales fell from 3.2 to 2.3 , a ratio close to that usually considered desirable by the industry. To prevent further inventory liquidation, production was raised to the level of sales in the first quarter, and inventories edged up to about $1,250,000$ at the end of February. Second-quarter production is scheduled at about the same level as in the first, indicating that automakers are cautious about prospects for an immediate strong recovery in sales.

Total new truck sales changed little from the 2.6 million units (seasonally adjusted annual rate) registered in the fourth quarter. Sales of both light domestic trucks (up to 10,000 pounds) and "other" domestic trucks (over 10,000 pounds) increased slightly, from 1.9 to 2.0 million and from 0.17 to 0.18 million, respectively. Sales of imported trucks receded from the 3 year high of 0.54 million reached in the fourth quarter. The course of truck production paralleled that of cars: down in the fourth quarter as excess inventories were liquidated, and up in the first to maintain the in-ventory-sales balance.

## Housing markets

The residential investment component of real GNP, which had increased $\$ 3.4$ billion ( 39 percent at an annual rate) in the fourth quarter of 1982, increased even more sharply in the first. Single-family construction accounted for about two-thirds of the increase, but multifamily construction and the "other" component also posted substantial gains. (The "other" component includes additions and alterations, brokers' commissions on the sale of new and existing residences, and mobile home sales.) The continued strengthening in residential investment was attributable, in large part, to continued improvement in the financial conditions affecting housing.
Housing demand had been depressed by high mortgage rates and the long recession. With the decline

*Projected. Based on unit production in January and February and scheduled production for March, unit sales of autos
through the first 10 days of March and of trucks for January and February, and unit inventories for January and February.
Nore.-For estimates through 1982: IV, see tables 1.14-1.15 and 1.16-1.17 of the National Income and Product Accounts Tables. Auto output includes dealers' margins on their used car transactions; truck output includes new trucks only.
in mortgage rates that began in mid1982, demand picked up. The commitment interest rate on 30 -year levelpayment mortgages with an 80 percent loan-to-price ratio dropped from almost 17 percent in early July to below 14 percent by yearend. The commitment rate continued down in 1983, dropping below 13 percent by late February. Sales of new onefamily houses responded immediately, increasing from an average of 366,000 (annual rate) in the second quarter of 1982 to 401,000 in the third, and to 525,000 in the fourth. Sales of existing single-family homes turned up in the fourth quarter, increasing to $2,133,000$ from $1,893,000$ in the third. Sales of both new and existing single-family homes continued up early in the first quarter.

Improving sales and declining interest rates encouraged builders to stepup their activity. Sales provided funds for working capital and reduced the inventory of unsold units from $81 / 2$ months' supply in July to only $5 \frac{1}{2}$ months' supply in January. Moreover, interest rates on construction loans fell, probably about in line with the prime rate. (The prime declined from $16 \frac{1}{2}$ percent in July, to $111 / 2$ percent by yearend, and to $101 / 2$ percent by mid-March.)
Reflecting these factors, housing starts increased substantially in the third and fourth quarters (chart 2). Unseasonably mild weather in January helped boost starts to $1,707,000$, the highest level in more than 3 years, and 33 percent-a record month-to-month gain-above December's level. Starts rose again in February (to $1,756,000$ ). The January-February average was 37 percent higher than the fourth-quarter level.
The housing expansion is likely to continue unless interest rates turn sharply upward. Building permits rose for the sixth consecutive month in February. Moreover, mortgage funds appear to be ample. Net new deposits received by savings and loan associations increased by unprecedented amounts in December and January with the authorization, effective December 14, of money market deposit accounts. Associations were able to reduce borrowings by record amounts in both months and to build liquidity ratios to record levels.

## 1. Not at annual rates.

Nors.-For the fourth quarter of 1982, the following revised or additional major source data became available: For personal consumption expenditures, revised retail sales for December, consumer share of new car purchases for December, and consumption of electricity for December, for nonresidential fixed investment, revised manufacturers' shipments of equipment for December, revised construction put in place for December, and business share of new car purchases for December; for residential investment, inventories, revised book values for manufacturing and trade for December; for net exports of goods and services, revised merchandise trade and revised service receipts for the quarter; for government purchases of goods and services, revised construction put in place for December; for wages and salaries, revised employment, average hourly earnings, and average weekly hours for December; for net interest, tinancial assets held by households ior the quarter, and revised net interest received from $G N P$ prices, revised residential housing prices for the quarter, and revised producer price indexes for December.

## Corporate profits

Corporate profits from current pro-duction-profits with inventory valuation and capital consumption adjust-ments-increased $\$ 1 \frac{1}{2}$ billion to $\$ 1671 / 2$ billion in the fourth quarter of 1982, following an $\$ 11$ billion dollar increase in the third. In the fourth quarter, a decrease in the domestic profits of nonfinancial corporations was more than offset by increases in the profits of domestic financial corporations and profits from the rest of the world.

Domestic profits of nonfinancial corporations decreased $\$ 7 / 1 / 2$ billion to $\$ 117 \frac{1}{2}$ billion in the fourth quarter, following an increase of $\$ 101 / 2$ billion. The decrease in domestic profits of nonfinancial corporations was, in turn, accounted for by a decrease in manufacturing profits. Within manufacturing, profits of all major durables industries and most nondurables industries decreased. The weakness in manufacturing profits reflected decreases in the constant-dollar sales of all major manufacturing industries. In particular, a swing from profits to losses for motor vehicle manufacturers reflected both a decrease in their sales and the costs of consumer incentive programs, which were designed to reduce large dealer inventories of unsold motor vehicles. A sizable decrease in petroleum manufacturers' profits reflected lower sales and, be-
cause petroleum manufacturers extract a major share of domestic crude oil, lower prices for crude oil.

Profits of nonfinancial nonmanufacturing corporations increased moderately, as increased profits of trade, utilities, and "other" nonmanufacturing corporations more than offset decreased profits of transporation and communication corporations. Airlines registered increased losses despite increased revenue passenger miles and a continued run-up of prices of regular tickets; the effects of intense competition on many major routes hurt profits. Decreased profits of communication corporations resulted from lower telephone and telegraph profits. Much of the increase in trade profits was accounted for by a swing from losses to profits for auto dealers. This swing reflected increased unit auto sales, which resulted in part from the manufacturer-supported consumer incentive programs.

Domestic profits of financial corporations increased $\$ 41 / 2$ billion to $\$ 29$ billion in the fourth quarter, following an increase of $\$ 2 \frac{1}{2}$ billion. The fourth-quarter increase occurred as savings and loan associations and mutual savings banks registered reduced losses and profits of commercial banks increased; these changes more than offset decreased profits of Federal Reserve banks. (Federal Reserve banks are treated as part of corporate business in the national income and product accounts.) The reduced losses reflected the impact of decreasing interest rates, which lowered the cost of attracting deposits. Savings and loan associations registered very large net inflows of deposits in December, as Money Market Deposit Accounts became available, after a number of months of when withdrawals exceeded deposits. The effect of the inflows into Money Market Deposit Accounts on savings and loan associations' profits is not clear; many associations attracted deposits by initially offering very high rates of interest.

Profits from the rest of the world increased $\$ 41 / 2$ billion in the fourth quarter to $\$ 21$ billion, following a decrease of $\$ 2$ billion. Two-thirds of the increase was due to an increase in earnings on U.S. corporations' foreign assets. An increase in earnings on
nonpetroleum operations, centered in the European manufacturing operations of U.S. corporations, more than offset a decrease in earnings on petroleum operations. The rest of the increase in profits from the rest of the world was accounted for by a decrease in the earnings on foreign corporations' U.S. assets. These earnings are netted against U.S. corporations' foreign earnings in the calculation of profits.

Other measures of profits.-Profits before tax decreased $\$ 1 \frac{1}{2}$ billion to $\$ 179$ billion in the fourth quarter, following an increase of $\$ 8 \frac{1}{2}$ billion. These profits exclude the inventory valuation adjustment (IVA) and the capital consumption adjustment (CCAdj). Inventory profits-the IVA with sign reversed-increased $\$ 21 / 2$ billion to $\$ 12 \frac{1}{2}$ billion in the fourth quarter, following an increase of $\$ 1$ billion. The profits component attributable to the misdepreciation of capi-tal-the CCAdj with sign reversedregistered a loss-that is, became neg-ative-for the first time since the second quarter of $1974 .^{3}$ The fourthquarter loss was $\$ 1 / 1 / 2$ billion, following a profit of $\$ 4$ billion in the third quarter. The swing reflected the effects of provisions of the Economic Recovery Tax Act of 1981 (ERTA), which permit the use of relatively short service lives for measuring the depreciation on new capital (as reported to the Internal Revenue Service) used as a deduction from receipts in the calculation of corporate profits. As corporations depreciate increasing amounts of capital using the relatively short service lives, the component of the CCAdj that adjusts depreciation to consistent service lives becomes increasingly positive. The effects of ERTA have progressively reduced profits attributable to the misdepreciation of capital by somewhat more than $\$ 2$ billion per quarter beginning with the first quarter of 1981. The
3. The capital consumption adjustment places the using up in production of fixed capital on a consistent basis with respect to service lives ( 85 percent of Internal Revenue Service Bulletin F for equipment and nonresidential structures) and depreciation formulas (straight line). It also values fixed capital used up in production at replacement cost, the valuation concept underlying national income accounting, rather than at historical cost, the concept generally underlying business accounting.
swing to a loss was also consistent with rates of inflation in prices for fixed nonresidential investment that were lower than those experienced over the service lives of the assets. Such lower rates of inflation lead to less negative values for the portion of the CCAdj that revalues fixed capital used up in production at replacement cost from historical cost.

Disposition of profits.-Corporate profits taxes decreased $\$ 1 / 1 / 2$ billion to $\$ 59 \frac{1}{2}$ billion in the fourth quarter, following an increase of $\$ 51_{2}$ billion. Dividends continued their 7-year uptrend in the fourth quarter, increasing $\$ 2$ billion to $\$ 721 / 2$ billion, following an increase of $\$ 1$ billion. Undistributed profits decreased $\$ 2$ billion to $\$ 47$ billion, following an increase of $\$ 2$ billion.

## Government sector

The fiscal position of the government sector in the national income and product accounts (NIPA's) continued to deteriorate in the fourth quarter, as the combined deficit of the Federal government and the State and local governments increased $\$ 43$ billion. Compared with a year earlier, the combined deficit increased substantially, from $\$ 72 \frac{1}{2}$ billion to $\$ 1661 / 2$ billion. All of this deterioration occurred at the Federal level, where the deficit increased over $\$ 100$ billion.

The Federal sector:-The Federal Government deficit increased $\$ 47$ billion in the fourth quarter, to $\$ 203$ billion, reflecting a much larger increase in expenditures than in receipts.

Receipts increased $\$ 21 / 2$ billion, compared with a $\$ 31 / 2$ billion decline in the third quarter, when personal income tax withholding rates were reduced for the second time under provisions of the Economic Recovery Tax Act of 1981. In the fourth quarter, a $\$ 3 / 2$ billion increase in personal tax and nontax receipts more than accounted for the increase in total receipts; all other categories declined on balance. Corporate profits tax accruals declined $\$ 1 / 2$ billion, reflecting the decline in corporate profits. Indirect business tax and nontax accruals were down slightly, largely the net result of a $\$ 1 / 1 / 2$ billion decline in the windfall profits tax and increases- $\$ 1 / 2$ billion each-in tobacco and in air-
port and airway taxes. The increase in tobacco taxes reflects a special tax on cigarette floor stocks held at the nonretail level provided for by the Tax Equity and Fiscal Responsibility Act of 1982; the increase in the airport and airway taxes reflects the first full-quarter effect of increased taxes provided for by the same act.
Expenditures increased $\$ 491 / 2$ billion, compared with $\$ 33$ billion in the third quarter. Purchases of goods and services increased $\$ 20$ billion. Nondefense purchases, up $\$ 13$ billion, included a $\$ 10 \frac{1}{2}$ billion increase for agricultural purchases by the Commodity Credit Corporation (CCC). A 4 -percent pay raise in October and steppedup purchases for the strategic petroleum reserve contributed $\$ 1 / 2$ billion each to the increase. National defense purchases, up $\$ 7$ billion, included $\$ 2$ billion for the pay raise.
Transfer payments to persons increased $\$ 15 \frac{1}{2}$ billion; $\$ 7 / 2$ billion was for social security benefits and $\$ 6$ billion was for unemployment benefits. The increase in social security benefits was unusually large, partly reflecting retroactive payments and resumption of payments to college students. Unemployment benefits were boosted by the first full-quarter impact of supplemental benefits; they accounted for $\$ 41 / 2$ billion of the increase in total unemployment benefits.

Subsidies less the current surplus of government enterprises increased $\$ 9$ billion. Agricultural subsidies accounted for $\$ 6 \frac{1}{2}$ billion of the increase. Roughly one-quarter of the increase in agricultural subsidies was in regularly scheduled deficiency payments for 1982 crops-mainly wheat and cotton. Most of the remainder was due to a speed-up in payments for 1982 crops-mainly corn and other feed grains-that would otherwise have been paid in the first quarter of 1983 and to diversion payments for some 1983 crops. The CCC deficit increased $\$ 3$ billion and the Postal Service deficit declined $\$ 1 / 2$ billion; the latter largely reflected the absence of an employee bonus paid in the third quarter.

Grants-in-aid to State and local governments increased $\$ 2 \frac{1}{2}$ billion. Increases in grants for education, public assistance, and food and nutrition were partly offset by declines in grants for waste treatment and health care:

On a high-employment budget basis, the Federal fiscal position moved from a deficit of $\$ 33$ billion in the third quarter to a deficit of $\$ 63$ billion in the fourth quarter (table 3 on page 18). The high-employment deficit as a percentage of potential GNP increased from 1.0 percent in the third quarter to 1.8 percent in the fourth-a move toward a more expan-
sionary fiscal position. As percentages of potential GNP, high-employment receipts did not change, but high-employment expenditures increased sharply from the third quarter to the fourth.

The State and local sector.-The State and local government surplus increased $\$ 4 \frac{1}{2}$ billion, as receipts increased more than expenditures. The increase in the surplus was largely accounted for by a $\$ 3$ billion decline in the "all other" deficit; the surplus of the social insurance funds continued to increase.

Receipts increased $\$ 91 / 2$ billion, compared with $\$ 6$ billion in the third quarter; a $\$ 5 \not y_{2}$ billion swing in grants-in-aid more than accounted for the acceleration. Indirect business tax and nontax accruals increased $\$ 5$ billion, including $\$ 3$ billion for property taxes. Personal tax and nontax receipts increased $\$ 1 / 2$ billion and contributions about $\$ 1$ billion.
Expenditures increased $\$ 5 \frac{1}{2}$ billion, compared with $\$ 6$ billion in the third quarter. Purchases of goods and services accounted for all of the increase; all other expenditures, on balance, were unchanged. Within purchases, compensation increased $\$ 1 / 2$ billion more than in the third quarter, partly reflecting an increase in employment other than in education. Construction purchases declined $\$ 1 / 2$ billion, following an increase in the third quarter.

# Summary of BEA Staff Paper 

'Summary Input-Output Tables of the U.S. Economy: 1976, 1978, and 1979"

By Paula C. Young and Mark A. Planting

THIS paper presents summary (85-industry/commodity) tables that are updates of the 1972 study. Of necessity, they are based on information that is much less adequate than that used in 1972, for which the economic censuses are available. In addition to presenting the tables, the paper describes the tables, explains their derivation, and examines the changes in output requirements during the 1972-79 period that are revealed by the update estimates.

This paper, which is No. 39 in the BEA Staff Paper series, may be ordered from the National Technical Information Service, 5285 Port Royal Road, Springfield, VA 22161. The accession number is PB-83 167-403, enclose $\$ 13.00$ for a paper copy and $\$ 4.50$ for microfiche.

## National Income and Product Accounts Tables

New estimates in this issue: Fourth quarter and annual 1982, revised.
The abbreviations used in the tables are: CCAdj Capital consumption adjustment

| IVA | Inventory valuation adjustment |
| :--- | :--- |
| NIPA's | National income and product accounts |
| $p$ | Preliminary |
| $r$ | Revised |

The NIPA estimates for 1929-76 are in The National Income and Product Accounts of the United States, 1929-76: Statistical Tables (Stock No. 003-010-00101-1, price $\$ 10.00$ ). Estimates for 1977-81 and corrections for earlier years are in the July 1982 Survey. These publications are available from the Superintendent of Documents and Commerce Department District Offices; see addresses inside front cover.

Table 5.10-5.11:

1. Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories in this table is not the current-dollar change in business inventories (CBI) component of GNP. The former is the difference between two inventory stocks, each valued at their respective end-of-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition, changes calculated changes calculated from the constant-dollar inventories shown in this table are at quarterly rates, whereas the constant-dollar change in business inventories component of GNP is stated rates, whereas
2. Quarterly totals at monthly rates. Business final sales less gross product of households and institutions, government, and rest-of-the-world and includes a small amount of final sales by farms.

Table 5.8-5.9:

1. The IVA shown in this table differs from that which adjusts business income. The IVA in this table reflects the mix of methods (first-in-first-out. etc.) underlying book value inventories derived primarily from Census Bureau Statistics. The mix differs from that underlying business income derived primarily from Internal Revenue Service statistics.
2. Consists of personal consumption expenditures, producers' durable equipment, and government purchases.

Table 3.-High-Employment Federal Receipts and Expenditures
[Billions of dollars; quarters at seasonally adjusted annual rates]

# Plant and Equipment Expenditures, First and Second Quarters and Second Half of 1983 

NONFARM business in the United States plans to spend $\$ 310.9$ billion for new plant and equipment in 1983, 1.7 percent less than in 1982, according to the BEA quarterly survey conducted in late January and February (tables 1 and 9, and chart 3).

Spending totaled $\$ 316.4$ billion in 1982, 1.6 percent less than in 1981. The latest estimate of planned spending for 1983 is $\$ 4.8$ billion lower than that reported in the annual survey conducted in late November and December 1982 and released in January. That survey showed planned spending of $\$ 315.7$ billion for $1983,1.3$ percent less than the preliminary estimate of

1982 spending. The year-to-year decline indicated by the latest survey is only slightly different from that reported in the previous survey because estimates of 1982 actual spending and 1983 planned spending were both revised down in the latest survey. ${ }^{1}$

1. The results of this quarterly survey may differ from the results of the annual survey released in January not only because of changes in the company reports, but also because of differences in the bias adjustment procedures. In the annual survey, 1983 spending plans for each major industry were adjusted for systematic biases when planned spending deviated from actual spending in the same direction in at least 5 of the last 7 years. When this criterion was met, an adjustment was derived by taking the median deviation between planned and actual spending for the

The plans, after adjustment by BEA for price changes, indicate a decline in real spending of 3.8 percent in 1983 (table 2). Real spending declined 5.5 percent in 1982. BEA's latest estimates indicate that the price deflator for capital goods purchases by busi-
last 5 years. In the quarterly survey, spending plans for each major industry were adjusted for systematic biases for each time period within the year by taking the median deviation between planned and actual spending for that period in the preceding 8 years.
Before adjustment, planned spending for 1983 reported in the latest survey was $\$ 306.8$ billion for total nonfarm business, $\$ 120.5$ billion for manufacturing, and $\$ 186.3$ billion for nonmanufacturing. The net effect of the adjustments was to lower manufacturing $\$ 4.60$ billion and to raise nonmanufacturing $\$ 8.75$ billion.

Changes in Business Investment

1. Plans reported by business in January and February 1982.
2. Plans reported by business in November and December 1982
3. Plans reported by business in January and February 1983.
4. Includes industries not shown separately.
ness increased 4.5 percent in 1982, and will increase 1.7 percent in 1983. The latest projected increase in 1983 capital goods prices is lower than the earlier estimate because the latest estimate incorporates the very small increase in capital goods prices in the fourth quarter of 1982 and because there are differences in the procedures used for the annual and quarterly surveys. ${ }^{2}$ (If the previous estimate were used to adjust the latest survey results, a 5.9 -percent decline in real spending plans would be indicated for 1983.)

Current-dollar spending in the fourth quarter of 1982 declined 4.1 percent from the third quarter, to an annual rate of $\$ 302.8$ billion, following a 2.3 -percent decline in the third quarter; fourth-quarter spending was 3.9 percent lower than planned spending reported 3 months ago. Plans indicate a 0.2 -percent decline in the first quarter of 1983 , little change from the first to the second quarter, and a 5.5 percent increase from the first to the second half of 1983.

In real terms, spending fell 4.2 percent in the fourth quarter of 1982 , following a 2.2 -percent decline in the third quarter. Estimates indicate declines of 0.7 percent in each of the first two quarters of 1983, and a 4.6percent increase from the first to the second half of 1983.
Other highlights of the survey are:

- Manufacturers expect their sales to increase 9.7 percent in 1983, compared with a decline of 5.4 percent in 1982. In nonmanufacturing, trade firms expect an 8.3-percent increase, compared with a decline of 1.4 percent last year. Public utility firms expect a 14.6 -percent increase, compared with 12.3 percent (table 3).
- The rate of capacity utilization in manufacturing declined 1 point

2. To estimate real spending, the figures reported by survey respondents are adjusted using implicit price deflators for each industry prepared by BEA based on unpublished data in the national income and product accounts. The estimates of real planned spending for 1983 derived from the latest survey incorporate deflators extrapolated by BEA using the average rate of change during the latest four quarters for which they are available. The estimates of 1983 real spending released in January incorporated deflators extrapolated by BEA using an estimate of the year-to-year change in 1982 prices from 1981. For both surveys, the percentage changes in the deflators for 1983 were adjusted by the ratio of the expected 1983 price changes to the estimated 1982 price changes reported by survey respondents.
from September to December 1982, to 68 percent (table 4 and chart 4). The September-to-December decline continued the downward movement in the utilization rate that began during the third quarter of 1981; the December rate is 10 points below the rate in June 1981.

- The value of new investment projects started by manufacturers declined by $\$ 2.2$ billion-or 8.7 per-cent-to $\$ 23.4$ billion in the fourth quarter; starts by public utilities declined in the fourth quarter to $\$ 4.6$

1. Expectations for 1982 are based on the survey conducted in late January and February 1982.
2. Includes industries not shown separately
billion, compared with $\$ 10.1$ billion in the third quarter (table 5).

- Current-dollar spending for new plant declined 5.9 percent in the fourth quarter; spending for new equipment declined 2.8 percent (table 6). In real terms, plant spending declined 6.2 percent and equipment, 3.1 percent.

The planned 1.7-percent decline in 1983 current-dollar spending is the first decline in annual plans reported in the January-February survey since 1963. Experience since 1970 indicates that spending plans reported in the January-February surveys differed from actual spending by an average of about 3 percentage points. Plans understated actual spending in 6 of the 13 years and overstated spending in 7 years. The weakness in investment in-

U.S. Department of Commerce, Bureau of Economic Analysis $\quad 83 \cdot 3.4$
dicated by the latest spending plans is consistent with other indicators of future investment activity reported in the BEA survey-capacity utilization, manufacturing starts, and manufacturers' facility needs. Furthermore, despite fourth-quarter increases in capital appropriations in manufacturing and in new orders for nondefense capital goods, these measures are still well below their peaks reached in the second quarter of 1981.

## Manufacturing Programs

In manufacturing, current-dollar spending declined 7.8 percent in the fourth quarter, to an annual rate of $\$ 110.1$ billion, following a 3.5 -percent decline in the third. Durable goods industries declined 11.6 percent in the fourth quarter and nondurables, 4.4 percent. Manufacturers plan a 2.5 percent increase in the first quarter of 1983 and a 1.3 -percent decrease in
the second; plans for the second half indicate an average quarterly increase of 4.8 percent.
For the year 1983, manufacturers plan to spend $\$ 115.9$ billion, 3.2 percent less than they spent in 1982; their spending declined 5.6 percent in 1982. Durables plan a 3.9 -percent decline; nondurables plan a 2.4 -percent decline. The largest declines are in iron and steel, 26.2 percent; nonfer(Text continued on $p$. 24)

1. The survey asks manufacturers to report actual and preferred rates of capacity utilization for the last month of each quarter. Utilization rates for industry and asset-size groups are weight ed averages of individual company rates. See "The Utilization of Manufacturing Capacity, 1965-
73, SUREET, July 1974, p. 47.
2. Also includes lumber, furniture, fabricated metals, instruments, and miscellaneous. 3. Also includes other transportation equipment.
3. Also includes tobacco, apparel, printing-publishing, and leather.
4. Consists of lumber; stone, clay, and glass; primary metals; fabricated metals; textiles; paper; chemicals (at $k_{2}$ weight); petroleum; and rubber.
5. Consists of furniture, electrical machinery, machinery except electrical, motor vehicles, air-
craft, other transportation equipment, instruments, food including beverage, craft, other transportation equipment, instruments, food including beverage, tobacco, apparel,
printing-publishing, chemicals (at $1 / 2$ weight), leather, and miscellaneous.

1. Starts are estimated by adding changes in carryover to expenditures during the given period.
2. Carryover refers to expenditures yet to be incurred on plant and equipment projects already underway at the end of the period.
3. Includes industries not shown separately.

1. Seasonal factors are applied to each quarter separately; the average of the seasonally adjusted current-dollar quarterly estimates is not forced to equal the unadjusted annual value.
2. Estimates are based on planned capital expenditures reported by business in late January and February 1983. The planned expenditures are adjusted for systematic biases in reporting. The adjustment procedures are described in the October 1980 SURVEY. Before adjustment, plans for 1983 were $\$ 306.78$ bilion for total
3. Includes industries not shown separately.
4. Consists of lumber, furniture, instruments, and miscellaneous.
5. Consists of apparel, tobacco, leather, and printing-publishing.
6. Consists of construction; social services and membership organizations; and forestry, fisheries, and agricultural services.
7. Procedures for preparing constant-dollar estimates are described in the September 1981 Survex. Constant-dollar estimates for the third quarter have been revised to reflect new price deflators based on revisions in the national income and product account data. To estimate real spending plans, BEA adjusts the survey results for assumed price changes.
rous metals, 12.2 percent; fabricated metals, 9.7 percent; aircraft, 8.1 percent; and petroleum, 7.9 percent. The decline in petroleum spending is principally in refining and marketing activities (table 7). A sizable increase, 8.0 percent, is planned by rubber.

Real spending for the year 1983 is estimated to decline 4.3 percent from 1982, with declines of 4.8 percent in durables and 3.7 percent in nondurables. In 1982, durables declined 10.1 percent and nondurables, 7.2 percent.

Manufacturers started new investment projects during the fourth quarter of 1982 totaling $\$ 23.4$ billion- 8.7 percent less than in the third quarter. Sizable declines in paper, electrical machinery, petroleum, primary metals, and transportation more than offset increases in chemicals, nonelectrical machinery, and food-beverage.

The value of new projects started by manufacturers in the fourth quarter was less than their capital expenditures, resulting in a decline in car-ryover-the amount still to be spent on plant and equipment projects underway. Carryover totaled $\$ 79.1$ billion at the end of December, $\$ 4.2$ billion less than at the end of September. Durable goods carryover declined $\$ 1.9$ billion, and nondurables, $\$ 2.3$ billion.

## Capacity utilization

The 1-point decline in the manufacturing utilization rate, from 69 percent in September to 68 percent in December, was widespread. Durables declined 2 points, to 63 percent, and nondurables declined 1 point, to 73 percent. Among major industry groups, petroleum reported the larg-
est decline, 6 points, to 69 percent. Primary metals, nonelectrical machinery, and chemicals each declined 3 points, to 45,76 , and 66 percent, respectively. Motor vehicles, aircraft, stone-clay-glass, and paper reported 2 point declines, to $56,67,62$, and 79 percent, respectively. Rubber increased 3 points, to 73 percent. Other major industries reported little or no change from their September rates.
The utilization rates for primaryand advanced-processed goods industries each declined 2 points, to 64 and 69 percent, respectively.
The rate reported by large-sized firms for December declined 3 points, to 67 percent. The rates for mediumand small-sized firms were unchanged at 70 and 67 percent, respectively.
Manufacturers also evaluated the adequacy of their facilities in light of their current and prospective sales for the next 12 months and reported little change (table 8). Companies owning 20 percent of fixed assets reported a need for more facilities as of the end of December, the same proportion as at the end of September. Companies owning $51 \frac{1}{2}$ percent of fixed assets reported that facilities were about adequate, a decline of onehalf of 1 percentage point from September; the proportion of companies owning facilities that exceeded needs increased slightly, to 28 percent.

## Nonmanufacturing Programs

In nonmanufacturing, currentdollar spending declined 1.9 percent in the fourth quarter, to an annual rate of $\$ 192.7$ billion, following a 1.6 -
percent decline in the third. Mining, gas utilities, and services reported the largest fourth-quarter declines, while air transportation and railroads reported sizable increases. Nonmanufacturing firms expect a 1.7 -percent decline in spending in the first quarter of 1983 and a 0.8 -percent increase in the second. Plans for the second half imply an average quarterly increase of about 3.5 percent.

For 1983, nonmanufacturing industries plan to spend $\$ 195.0$ billion, 0.9 percent less than they spent in 1982; their spending increased 1.1 percent in 1982. The largest declines for 1983 are planned in air transportation, 15.3 percent; gas utilities, 7.5 percent; "other transportation," 4.8 percent; and railroads, 4.0 percent. Smaller declines are planned in "communication and other" and electric utilities. Mining plans spending at about the same level as last year and trade and services plans a 1.0 -percent increase.

Real spending for year 1983 is estimated to decline 3.6 percent from 1982. The largest decline is in transportation, 10.6 percent. Smaller declines are estimated in "communication and other," public utilities, and trade and services. Because of a projected decline in the implicit price deflator for mining, a small increase in real spending is estimated.

Starts of new investment projects by public utilities totaled $\$ 4.6$ billion in the fourth quarter, compared with $\$ 10.1$ billion in the third quarter. Carryover of utility projects totaled $\$ 100.5$ billion at the end of December, $\$ 6.1$ billion less than at the end of September; the decline partly reflects the cancellation of several large projects.

# Capital Expenditures by Majority-Owned Foreign Affiliates of U.S. Companies, 1983 

MAJORITY-OWNED foreign affiliates of U.S. companies plan capital expenditures of $\$ 41.8$ billion in 1983, almost unchanged from 1982. Last year, spending declined 5 percent, following a 3 -percent increase in 1981 (table 1 and chart 5). ${ }^{1}$
Largely as a result of depressed economic conditions worldwide, corporate illiquidity, and high interest rates, spending appears to have leveled off in 1981-83, after record increases in 1979 and 1980. The increases in 1979 and 1980 were largely attributable to manufacturing affiliates, particularly transportation equipment manufacturers that were constructing new facilities (see later discussion). In 1980, spending was also boosted by petroleum affiliates, partly because of expectations of continued high returns on investment following the near-doubling of crude oil prices in 1979.

The latest estimate for 1982, based on the BEA survey taken in December 1982, is much lower than the estimate based on the survey taken 6 months earlier, which indicated expenditures would increase 6 percent. The latest estimate for 1983 is also

Note.-Patricia E. DiVenuti and Edward L. Simons assisted in preparing the estimates. Smith W. Allnutt III designed the computer programs for data retrieval and analysis.

[^2]lower than the earlier one; the year-to-year percentage change is the same, however, because it is calculated from the lower 1982 base.
By area, affiliates in developed countries plan a 1 -percent increase in spending, to $\$ 29.1$ billion, compared with an 8 -percent decline in 1982. In developing countries, a planned 4 -percent increase, to $\$ 11.8$ billion, follows a 2-percent increase. Affiliates in "in-ternational"-those that have operations spanning more than one country and that are engaged in petroleum shipping, other water transportation, petroleum trading, or operating oil and gas drilling equipment that is moved from country to country during the year-plan to cut spending nearly two-fifths, to $\$ 0.9$ billion, after an 8 -percent increase.

## Petroleum

This year's 3 -percent reduction, to $\$ 17.2$ billion, in planned spending by petroleum affiliates reflects the worldwide weakening of petroleum markets, which has partly resulted from depressed economic conditions and continued energy conservation and substitution. Also, some U.S. petroleum companies may be shifting some spending from abroad to the United States, partly in response to decontrol of domestic oil prices and the granting of exploration and production rights in previously restricted areas.
In each successive survey of 1982 or 1983 spending plans, estimates have been revised downward (table 2). For a given year, four estimates of planned expenditures and one estimate of actual expenditures are made, based on data reported in five successive semiannual surveys. The

NoTE-Estimates are for nonbank foreign affiliates of nonbank U.S. parents.
first estimate of 1982 spending, based on the June 1981 survey, was $\$ 53.3$ billion; the current-fourth-estimate, based on the December 1982 survey, is $\$ 41.6$ billion. The first estimate of 1983 spending was $\$ 46.6$ billion; the current-second-estimate is $\$ 41.8$ billion.
The downward revisions in 1982 and 1983 planned expenditures have paralleled the worsening of economic conditions. Although, for both years, estimates for every major industry were revised downward, about onehalf of the total revision from the first to the most recent estimate for each year was in petroleum and nonelectrical machinery manufacturing combined. In petroleum, a sizable share of the revision was in projects to develop alternative energy sources, especially coal; the cutback in spending on these projects has coincided with a sharp decline in petroleum affiliate earnings, which, in turn, partly reflects the current world oil glut. In nonelectrical machinery manufacturing, most of the revision was centered in computers.

The estimates of planned spending are not adjusted for reporting bias-
that is, for the systematic overpredicting or underpredicting of actual expenditures by reporters. Although historical data suggest that respondents tend to overestimate a given year's spending in the early surveys relative to actual spending for the year, such bias cannot be separated from changes due to other causes, particularly changing economic and political conditions. ${ }^{2}$ The reductions in 1982 spending in the successive surveys far exceeds what could be attributed to bias alone.
Manufacturing affiliates plan to increase spending 3 percent this year, to $\$ 17.2$ billion, after a $13-$ percent decline last year. These changes are largely offset by spending of petroleum affiliates; petroleum affiliates plan to reduce spending 3 percent this year, to $\$ 17.2$ billion, following a 13 percent increase last year. Affiliates in all other industries combined plan to increase spending 2 percent, after an 18 -percent decline.

*Less than 0.5 percent ( $\pm$ ).
a.a. Not applicable.

1. Results of the June 1981, December 1981, and June 1982 surveys were published in the October 1981, March 1982, and
September 1982 issues of the Survey of Current Business, respectively. Results of the December 1982 survey are presented in this article.

In developed countries, affiliates plan to reduce spending 2 percent, to $\$ 10.5$ billion, following a 9 -percent increase in 1982 (tables 3-5). A 2-percent decline, to $\$ 3.2$ billion, is planned in Canada, largely as a result of an affiliate's withdrawal, in mid-1982, from participation in an oil sands project. A 20 -percent increase last

[Millions of dollars]

year reflected spending on several upstream and downstream projects.

In the North Sea area, British affiliates plan to cut spending 7 percent, to $\$ 3.5$ billion, after a 9 -percent decline. This year's spending partly reflects the oil companies' response to falling oil prices and a smaller-thanexpected decline in taxation on North Sea operations. Norwegian affiliates plan an increase of 4 percent, to $\$ 1.4$ billion, following a 15 -percent increase. This year's increase-the smallest in a decade-reflects a slowdown in the pace of development of some offshore oilfields and gasfields.

In developing countries, affiliates plan a 4 -percent increase, to $\$ 6.2$ billion, following an 18 -percent increase last year. The largest increase this year is in "other Asia and Pacific," mostly in Indonesia and Malaysia; it is for continued development of offshore oilfields and gasfields. Partly offsetting is a decline in "other Africa," largely in Cameroon, which reflects a slowdown in oilfield development.

Affiliates in "international" plan to cut their spending about in half, to $\$ 0.6$ billion, after a 24 -percent increase last year. Reduced spending for both tankers and offshore drilling platforms is planned.

## Manufacturing

Manufacturing affiliates plan a 3 percent increase in spending, to $\$ 17.2$ billion, after a decline of 13 percent. Although all industries except transportation equipment plan increases, affiliates in nonelectrical machinery, especially computer manufacturers, plan a particularly large increase.

In transportation equipment, a 10 percent decline in spending, to $\$ 3.4$
billion, follows a 27-percent decline. Beginning in the late 1970's, affiliates in this industry undertook massive new programs involving construction of assembly and parts production facilities for "world cars." Consequently, these affiliates' expenditures increased from an average of 6.7 percent of total expenditures in 1970-78, to 9.7 percent in 1979-83. Their expenditures rose from an average of $\$ 1.2$ billion in $1970-78$ to $\$ 3.9$ billion in 1979-83. The declines in spending planned in 1982 and 1983 largely result from the completion of some new facilities and the deferral of nonessential spending due to the current weak worldwide demand for autos.
In developed countries, manufacturing affiliates plan a 4-percent increase in spending, to $\$ 13.6$ billion, following a 15 -percent decline in 1982. Canadian affiliates plan a 6 -percent increase, to $\$ 3.0$ billion, after a 27 -percent decline. The largest increase is in transportation equipment; it reflects increased spending on a new van and bus manufacturing facility.
In Europe, spending increases of 35 percent by French affiliates, to $\$ 1.4$ billion, and 4 percent by British affiliates, to $\$ 2.6$ billion, are centered in nonelectrical machinery; they largely reflect increased capitalization of computers for rental. French manufacturers recently sharply cut back their 1982, but not 1983, spending plans. German affiliates plan a $10-$ percent increase, to $\$ 2.5$ billion; a small decline in primary and fabricated metals is more than offset by increases in every other manufacturing industry. In "other Europe," affiliates plan to cut spending over two-fifths, to $\$ 0.8$ billion. The cut is almost en-
tirely due to the completion of transportation equipment manufacturing facilities in Spain and Austria in 1982.

In developing countries, affiliates plan a 3 -percent spending rise, to $\$ 3.6$ billion, after a 6 -percent decline last year. The largest rise is in Brazil; it reflects expansion by a bauxite mining and aluminum manufacturing affiliate. Partly offsetting is a decline in Mexico, where spending for a new engine manufacturing plant was higher in 1982 than in 1983.

## Other industries

Mining affiliates plan to cut spending 38 percent, to $\$ 0.5$ billion, after a slightly larger cut last year. The cuts in both years are centered in Australia, mostly in bauxite mining, and in Canada, mostly in coal mining last year and potash mining this year. In part, they reflect the completion of some smelter renovation and expansion projects and the deferral of others because of depressed mineral demand.

Trade affiliates plan an 11-percent increase this year, to $\$ 4.0$ billion. The increase, which is widespread among areas, is mostly by affiliates that market computers.

Spending by affiliates in finance (except banking), insurance, and real estate is to remain at $\$ 0.3$ billion in 1983; small changes among several countries are offsetting.

Affiliates in "other industries"-agriculture, construction, transportation, communication, public utilities, and other services-plan a 3 -percent increase, to $\$ 2.7$ billion. The increase is centered in Hong Kong and is largely for electric powerplant construction.

# Net Exports of Goods and Services, 1980-82 

TTHE exchange of goods and services between the United States and foreign countries has been strongly affected in recent years by recessions in the United States and abroad; by changes in the value of the dollar relative to foreign currencies; and record high interest rates and financial innovations. Developments are discussed each quarter in the Survey of CurRENT Business from the perspective of the U.S. international transactions accounts (hereafter called balance of payments accounts, BPA's). This Survey, for example, contains a discussion of the fourth quarter and year 1982. The purpose of this article about net exports is to review developments from the perspective of the national income and product accounts (NIPA's). In particular, the review will be in terms of constant-dollar estimates. (Quarterly constant-dollar estimates, expanded two years ago, appear in tables 4.2 and 4.4 in the National Income and Product Accounts Tables.)

The first section of the article provides definitions and a summary methodology. Its primary purpose is to present material that is basic to the use of a set of estimates on which attention has focused recently. A secondary purpose is to facilitate use of both the NIPA's and BPA's by noting the similarities and differences between the parts of the two sets of accounts that cover the same area of economic activity. Because the adjustment for price change is a distinguishing feature of the estimates discussed in this article and because the adjustment is not conceptually clear cut in all cases, let alone statistically perfect, the methodology will emphasize deflation procedures.

The next two sections discuss movements in net exports in 1980-82: the halving of net exports from the first quarter of 1980 to the fourth quarter of 1982, almost all due to a decline in exports; the atypicality of this pattern during an economic downturn; the shift in the composition of net exports away from merchandise and toward factor income, and, within the latter, away from corporate profits and toward interest; and the factors underlying these developments. These factors include the general ones mentioned above and the pervasive influence of petroleum. The discussion begins with an overview of these developments and then proceeds to detail by component.
The last section discusses two supplementary measures of constantdollar net exports. One, based on an alternative deflation procedure, shows that the quantity of goods and services that the United States can purchase with the proceeds of its exports held up better than did the conventional measure of net exports. The other shows that imports declined much more if expressed in 1981 dollars, rather than in 1972 dollars.

## Definitions and methodology

The net exports component of GNP is exports of goods and services from the United States less imports of goods and services into the United States. Goods and services exported are part of U.S. production and thus must be included in accounting for production. Goods and services imported, because they are included in the type-of-purchaser categories (for example, personal consumption expenditures), must be subtracted be-
cause they are not part of U.S. production. Conventionally, the subtraction is from exports, and the resulting net measure is of interest, particularly in evaluating aspects of the U.S. economic position relative to that of foreigners.
The net exports measure shown in the NIPA's is related to one of the balances included in the BPA presentations. As shown in table 1 of the Reconciliation and Other Special Tables, on page 18, the BPA balance on goods and services differs from NIPA net exports because: (1) the treatments of nonmonetary gold differ; (2) the NIPA's exclude capital gains net of losses from the income of foreign affiliates of U.S. parent companies and of U.S. affiliates of foreign parent companies; (3) the NIPA's exclude statistical revisions already incorporated in the BPA's; (4) the NIPA's exclude interest paid by the U.S. Government on its liabilities to foreign governments, businesses, and persons (and account for it instead like a transfer payment); and (5) the treatments of unusual transactions may differ. In recent years such unusual transactions, which are shown in the table as "other items," were arms shipments to Israel financed under the Emergency Security Act of 1973 and subsequent legislation. In the BPA's, the shipments are included in exports; in the NIPA's, they are excluded from exports and accounted for instead as government purchases when acquired by the U.S. Government. ${ }^{1}$

1. For a fuller discussion of the reconciliation items, see the note that introduced the reconciliation table: Survey or Current Business 59 (December 1979): 6 .

## Net Exports of Goods and Services, 1956-82

Note.-Business cycle peaks (P), and troughs ( $T$ ), are as designated by the National Bureau of Economic Research, Inc. Shaded areas represent recessions.
U.S. Department of Commerce, Bureau of Economic Analysis

By far the largest of these reconciliation items is the NIPA exclusion of interest paid by the U.S. Government. In recent years, it has increased sharply-from $\$ 12.5$ billion in 1980 to $\$ 18.0$ billion in 1982 . In that year, it accounted for most of the difference between the BPA balance on goods and services and NIPA net exports; the other items, each $\$ 1.5$ billion or less, were partially offsetting.

Definitions.-A basic classification within the NIPA estimates of exports and imports is: (1) merchandise, or goods; (2) factor income, or payments for the services of factors of production; and (3) other services. Within the three categories, the content of items is the same, with the exceptions just noted, as that of corresponding BPA items. ${ }^{2}$ (See, for example, table 1 of the BPA presentation.)

[^4]Merchandise consists of movable goods (other than those associated with transactions of U.S. defense agencies) that are sold, given away, or otherwise transferred from U.S. to foreign or from foreign to U.S. ownership.

Factor income consists of labor and property income, measured as compensation of employees, net interest, and corporate profits. Compensation of employees, which is small and stable enough to be ignored for most purposes, consists of the compensation paid to those crossing the U.S.-Canadian or U.S.-Mexican border to work and to U.S. residents temporarily working abroad and to foreigners temporarily working in the United States. Interest consists of interest flowing between parent businesses and their affiliates, and interest on debt securities, loans, deposits, and other claims. Profits consist of divi-

[^5]dends, earnings of unincorporated affiliates, and reinvested earnings of incorporated affiliates. ${ }^{3}$

Other services include a number of items: U.S. Government transactions, largely those of defense agencies; travel expenditures (lodging, food, internal transportation, personal purchases, and related items); passenger fares for ocean and air transportation; other transportation (including freight, port expenditures, and charters and rentals); fees and royalties for use or sale of intangibles such as patents and trademarks, for rental of tangible property, and for certain services rendered; and other private services, such as reinsurance, technical services, and communications.

Usually the content and classifications of exports and imports are symmetrical: A given item appears both as an export and as an import, and is classified in the same way in both
3. For a discussion of reinvested earnings of incorporated affiliates, which were introduced as a component of rest-of-the-world corporate profits in the comprehensive revision of the NIPA's completed in 1980, see the Special Note "Reinvested Earnings of Incorporated Affiliates in the National Income and Product Accounts," Survey 62 (September 1982): 6-7.
cases. For example, travel expenditures appear both as an export and as an import, and are classified as a service in both. As a result, a number of net measures (or balances), calculated as the export less the corresponding import, may be assembled for components of exports and imports. An example of such a balance is that on factor income. This balance is identical to the rest-of-the-world sector in presentations of GNP by sector. In this context, it is the difference between GNP-that is, gross national product-and gross domestic product, and is of interest in showing the part of national production originating in the rest of the world. ${ }^{4}$
Methodology.-Current-dollar estimates of exports and imports are prepared as part of the BPA's and are incorporated, with the necessary reconciliations, into the NIPA's. For example, the estimates for the fourth quarter of 1982 shown in the National Income and Product Accounts Tables in this issue of the Survey are the same as the corresponding estimates that appear in "International Transactions Accounts, Fourth Quarter and Year 1982." ${ }^{5}$ (The NIPA currentdollar estimates of net exports in this issue are second-revision estimates for the fourth quarter of 1982. The NIPA estimates that appeared before the BPA estimates became available-the estimates for the fourth quarter that appeared in the January and February issues-were based on incomplete information supplemented by assumptions.)

Constant-dollar estimates-often called "real" or "deflated" esti-mates-are estimates from which price change has been removed. For these estimates, a component is valued at its price in a valuation (base) year-at present, the year 1972, and hence the expression " 1972 dollars." Statistically, most constantdollar estimates are obtained by dividing detailed current-dollar components by appropriate price indexes, with $1972=100$.
4. For definitions of "national" and "domestic," and of others such as "gross" and "net," see "The National Income and Product Accounts of the United States: An Overview," Survey 61 (February 1981): 28-34.
5. For the sources and methods from which the cur-rent-dollar estimates are derived, reference can be made to BPA documentation. See the "Explanatory Notes," Survey 58 (June 1978, Part II): 8-15 and 48, for a summary methodology.

Note.-Estimates are from table 4.2 of the National Income and Product Accounts Tables

The constant-dollar estimates of net exports, although improved in a number of ways in recent years, are not fully satisfactory because of inadequacies in the underlying price information. Constant-dollar estimates of exports and of imports are prepared separately for merchandise, factor income, and, for annual estimates, five types of services. The estimates of exports and imports are summed and constant-dollar net exports are derived as exports less imports.
For merchandise, current-dollar estimates are based on administrative records filed as goods leave or enter the country. Constant-dollar estimates for exports and for imports are prepared, by end-use category, by dividing the current-dollar estimates by corresponding unit-value indexes; the resulting quotients are summed to obtain total exports and imports of merchandise. The unit-value indexes are not strictly appropriate for this use, because they are not true price indexes-they are obtained by dividing the total value of a commodity exported or imported by the number of physical units, rather than by specification pricing-and because detailed indexes are not combined in a wholly appropriate way. (BEA has underway a project to improve the deflation of merchandise that involves the substi-
tution of price indexes developed by the Bureau of Labor Statistics for the unit-value indexes.)
For factor income, the currentdollar estimates are based, for direct investment income, largely on reports by those in the United States involved in such investment (major U.S. direct investors reporting on their affiliates and major U.S. affiliates of foreign direct investors reporting on themselves) and, for portfolio investment, on representative asset yields in combination with outstanding positions. ${ }^{6}$ The totals of both factor income received and factor income paid are divided by the implicit price deflator for net domestic product to obtain con-stant-dollar estimates. Lack of detailed price data necessitates the use of such a broad domestic price measure, but its use is consistent with the basic concepts of measuring factor income. ${ }^{7}$
6. Direct investment and portfolio investment are classifications based on extent of ownership by a foreign resident in the case of investment in the United States and by a U.S. resident in the case of investment abroad-10 percent or more for direct, less than 10 percent for portfolio.
7. For a detailed discussion of the deflation of factor income as well as a description and evaluation of deflation of the other components of net exports, see Edward F. Denison, "International Transactions in Measures of the Nation's Production," Survey 61 (May 1981): 22-28.

Within other services, current-dollar estimates of U.S. government transactions, largely transfers under U.S. military sales contracts and direct defense expenditures abroad, are based mainly on reports from the Department of Defense. The transfers, which are exports, are deflated by type of product using implicit price deflators prepared for the national defense purchases component of government purchases, and the direct defense expenditures, which are imports, are deflated by the national defense deflators and foreign consumer price indexes. Travel expenditures, based on data on number of travelers and average expenditures, are deflated by consumer price indexes for the countries in which the goods were purchased. Passenger fares, based on the number of travelers and average round-trip fares, are deflated by price indexes derived from information on average fares as reported by travelers and published fares. For other transportation, freight charges and port expenditures in a base year are moved by volume indexes. For the remaining services, no directly relevant price information is available; they are deflated by the implicit price deflator for gross domestic product because they closely resemble factor services.
As noted earlier, the preparation of the constant-dollar estimates for the other services category in this detail is for annual estimates. For current quarters, constant-dollar estimates are prepared only for the total, using an extrapolation of the implicit price deflator for the total.

## 1980-82: An Overview

From early 1980 to the end of 1982, constant-dollar net exports plummeted (chart 6 and table 1). ${ }^{8}$ Technically, a peak was reached in the second quarter of 1980 , at $\$ 53.2$ billion. (The third quarter, $\$ 0.1$ billion lower, was, given measurement error, the same.) However, the first quarter, when net exports were $\$ 50.5$ billion, will be used as the initial period for comparisons, for two reasons. First, both ex-
8. Hereafter, reference will be to estimates in constant (1972) dollars unless otherwise noted. Quarterly estimates are at seasonally adjusted annual rates, and changes in them are differences between those rates.
ports and imports, after trending up, reversed direction in that quarter. Second, the U.S. economy, as measured by real GNP, was at a peak in that quarter. After mid-1980, net exports turned down (with only two onequarter interruptions), reaching $\$ 27.2$ billion in the fourth quarter of 1982a drop of almost one-half over 3 years.

Exports, at $\$ 164.4$ billion in the first quarter of 1980, declined to $\$ 155.1$ billion by the end of that year, increased to a quarterly average of $\$ 159.5$ billion in the first half of 1981 , and then declined steadily (except in the second quarter of 1982 ) to $\$ 138.8$ in the fourth quarter of 1982 . Over the 3 years, the decline was $\$ 25.6$ billion and more than accounted for the decline in net exports. Imports, at $\$ 113.9$ billion in the first quarter of 1980, declined to $\$ 102.8$ billion in the third quarter, and then resumed an uptrend, reaching $\$ 120.4$ billion in the fourth quarter of 1981. In 1982, imports dropped about $\$ 6$ billion in the first quarter, recovered that amount over the second and third quarters, and then declined $\$ 8.4$ billion in the fourth quarter to $\$ 111.6$ billion. Over the 3 years, imports were down $\$ 2.3$ billion.

If $1980-82$ is treated as a single economic downturn, as may be argued is reasonable because real GNP in the fourth quarter of 1982 remained well below its 1980 peak, the direction of these changes is atypical. Usually, net exports have increased during downturns, as exports increased and imports decreased. As shown in table 2, this was the pattern of the downturns of the 1960 's and 1970's. The 1980-82 decline in net exports was $\$ 2.1$ billion per quarter, in contrast to an increase of $\$ 1.8$ billion in the three preceding downturns. Exports and, to a smaller extent, imports contributed to the atypical pattern: exports registered a decline of $\$ 2.3$ billion per quarter, in contrast to a $\$ 0.6$ billion increase; imports registered a small decline ( $\$ 0.2$ billion per quarter), in contrast to a $\$ 1.2$ billion decline.
The table also shows two subperiods that are usually designated recessions. In the two-quarter recession of 1980, exports-rather than increas-ing-declined sharply. Imports declined, and even more sharply, so that the net increased. For the recession that began in the third quarter of 1981, exports again declined sharply, but this time far more than imports,

[^6]so that the net, too, declined- $\$ 12.0$ billion over the next five quarters.

An approximate measure of the effect on the rate of change in GNP of disproportionate changes in net exports is obtained by comparing rates of change of GNP-referred to as gross national product in this section to emphasize its nature-and gross domestic purchases. The latter is a measure of purchases within the boundaries of the United States and is equal to gross national product less exports plus imports-in other words, it differs from gross national product by the amount of net exports. (Gross domestic purchases-dollar amounts and percent change from the preceding period-are shown in tables 1.31.4 and 8.1 in the National Income and Product Accounts Tables.) As shown in column 4 of table 3 , in all except two quarters in $1980-82$, the disproportionate changes in net exports reduced the rate of increase or added to the rate of decline in gross national product. In two quarters, those when the difference between the annual rates of increase exceeded 2 percentage points, the effect was substantial. Over the period as a whole, gross national product declined at an average annual rate of 0.4 percent and gross domestic purchases increased at an average annual rate of 0.1 percent. The difference between the two rates indicates that net exports reduced the average annual rate of increase in gross national product by approximately 0.5 percentage points over the period.

Another way of accounting for the decline in net exports is in terms of three balances (table 1). The merchandise balance accounted for about fourfifths of the decline from the first quarter of $1980-\$ 19.4$ billion of the $\$ 23.3$ billion. The factor-income balance, down $\$ 5.2$ billion, accounted for about one-fifth. The balance on other services was up, about $\$ 1$ billion.

The composition of net exports in terms of these balances can be thought of as weights helping to assess the importance of the several factors influencing net exports at a point of time. As will be brought out in the discussion that follows, the balances are affected by different factors or, if by the same factors, to different extents and in differing ways. The

composition of net exports in terms of these balances shifted sharply over the period, as shown in the accompanying tabulation. The balance on mer-

chandise accounted for 33 percent of net exports in the first quarter of 1980. By the fourth quarter of 1982, the balance was negative, $-\$ 2.8$ billion, within net exports of $\$ 27.2$ billion. In recessions the percentage of net exports accounted by this balance has usually increased, rather than declined. The decline is consistent, however, with a trend: After each cyclical increase over the last 20 years (except around 1970, when the balance was negative), the percentage was lower than after the preceding one, falling from 80 percent in 1961 to 50 percent in 1975. The offsetting increase was shared by the balances on factor income and other services. The percent accounted for by the balance on factor income increased from 57 percent to 86 percent in the fourth quarter of 1982, when the balance was $\$ 23.4$ billion. This percentage has declined in recessions, but has not shown a trend. The balance of other services, which had generally been negative until 1974, accounted for about 10 percent of net exports in the
first quarter of 1980. By the fourth quarter of 1982 , when it was $\$ 6.5$ billion, it accounted for about 25 percent.

## 1980-82: Detail

In this section, the changes in the balances on merchandise, factor income, and other services will be related to general factors, such as levels of economic activity, foreign exchange rates, and financial developments, and to specific developments or events.

Merchandise-The $\$ 19.4$ billion drop in the merchandise balance from the first quarter of 1980 to the fourth quarter of 1982 was more than accounted for by exports. Exports declined $\$ 20.7$ billion, about 22 percent; most of the decline was after mid1981 (chart 7). Merchandise imports, which declined early in the period but then moved irregularly higher until near its end, were down only $\$ 1.3$ billion, about 2 percent.

The percent decline in merchandise exports was much larger than that in the total of goods produced in the United States (4 percent), and production for export became a smaller part of total goods production. Exports accounted for about 14 percent of the goods component of GNP in early 1980, but by the end of 1982 the percentage had declined 2.5 points. A decline in this percentage is unusual in a recession and, as well, goes contrary to trend. At the cyclical peak in 1960,

Net Exports of Goods and Services

exports accounted for only about 7 percent of GNP goods, and there has been a fairly steady uptrend since. In contrast, the percent decline in imports was only slightly larger than that in the total of goods purchased in the United States (1 percent). Import penetration was about the same in the fourth quarter of 1982 as in the first quarter of 1980 , when it was 11.6 percent. This percentage also is about double the percentage at the peak in 1960.

As will be seen, recessions here and abroad and changes in the value of the dollar relative to other currencies were major factors affecting merchandise. As shown in the lower panel of chart 8, the dollar had depreciated during the late 1970 's, with the result that U.S. merchandise became progressively less expensive to foreigners and foreign merchandise became more expensive to Americans. Beginning in late 1980, the dollar appreciated strongly (except in late 1981) through the end of 1982. Against the currencies of 22 countries of the Organization for Economic Cooperation and Development (OECD), on a tradeweighted basis, the dollar appreciated almost 36 percent from the third quarter of 1980 to the fourth quarter of 1982. As a result, U.S. merchandise became more expensive and foreign goods less expensive.
The resulting tendency for exports to decline, with some lag, was compounded by the effect of depressed or declining levels of economic activity of U.S. trading partners. As shown in the upper panel of chart 8 , industrial production in Japan and Canada turned down in mid-1980, recovered modestly, and turned down again in 1982, and in European OECD countries, after a peak early in 1980, declined and remained depressed. The effect on imports of the U.S. recessions countered the tendency of imports to increase-again with a lagdue to the dollar's appreciation. The uptrend in imports was interrupted during the brief but sharp recession in 1980 and the sharper and more prolonged one in 1981-82.

Chart 9 shows exports by end-use category. Each of the six categories declined from the first quarter of 1980 to the fourth quarter of 1982 , by amounts ranging from about 10 to 40 percent. The decline in capital goods,

U.S. Department of Commerce, Bureau of Economic Analysis 83-3.8
except automotive, was the largest decline in dollars- $\$ 10.2$ billion, one-half of the total decline-and among the sharpest in percentage terms ( 29 percent). Reduced investment activity, first in Europe and more recently in developing countries, and the effect of the dollar's appreciation on price competitiveness were factors. Further, aircraft shipments, which had been well-maintained through mid-1981 as foreign fleets were being rebuilt, dropped sharply thereafter and accounted for a sizable part of the total decline.

Automotive exports were down $\$ 3.1$ billion (41 percent). Exports of cars

[^7]
and trucks to Canada, which account for the bulk of exports of finished vehicles, were affected by the Canadian recessions. Exports of parts to Canada, a substantial part of which are for assembly in Canada and return to the United States as finished vehicles, reflected the weakness of the auto markets in both countries in 1982.

Industrial supplies and materials, down $\$ 2.8$ billion ( 12 percent), also showed sensitivity to economic conditions abroad and the dollars' valuethe potential effect of the latter underscored by the homogeneity of many commodities in this category. Among them, exports of iron and steel products and steel-making materials and of nonferrous metals fell in 1982. The fall in steel products also reflected a worldwide slowing in oil well drilling. In contrast, energy ex-ports-petroleum and petroleum products as well as coal-were up. Exports of petroleum products stepped up following removal of export restrictions in March 1981.

Consumer goods were down $\$ 2.4$ billion ( 25 percent). The decline was in durable goods; after a spike in the first quarter of 1980 due to numismatic coins, they declined steadily; nondurable goods, although registering the impact of recession abroad, changed little. The smallest percentage decline among end-use categories was in foods, feeds, and beverages, down $\$ 1.6$ billion ( 11 percent). Part of the decline can be traced to the embarbo on shipments to the Soviet Union imposed in January 1980shipments of corn, wheat, and soybeans in 1980 were less than onethird their 1979 volume-and the strained trade relations thereafter that led the Soviet Union to limit its purchases of U.S. grain. In addition, in the face of record world suppliesfor example, in corn and wheat-and weakening demand in 1982, price competition intensified; other exporters appear to have stepped up marketing efforts, offering favorable credit terms and export subsidies, while the appreciation of the dollar made U.S. products relatively more expensive. Other exports-a small but, in recent years, volatile category that includes reexports of foreign merchandise from the United States-declined $\$ 0.5$ billion (12 pervent).

Changes from the first quarter of 1980 to the fourth quarter of 1982 in the end-use categories of imports were more diverse than in exports; declines in some categories were almost offset by increases in others (chart 10 ). $\mathrm{Pe}-$ troleum and petroleum products were down $\$ 2.7$ billion ( 34 percent), reflecting both the U.S. recessions and con-

## Merchandise Imports

tinuing efforts to conserve energy. (Because international trade in petroleum is largely denominated in dollars, the dollar's appreciation was not a factor.) The decline was in part a reponse to continued price increases. In 1979, OPEC initiated the second "oil price shock," and the average price per barrel was run up to $\$ 28.06$ in the first quarter of 1980 and to $\$ 35.62$ in the second quarter of 1981. Thereafter, with a worldwide glut of oil adding to competition among producers, prices fell, reaching $\$ 30.98$ in the fourth quarter of 1982.

Over 1980-82, petroleum imports more than accounted for the decline in total imports. Excluding petroleum, imports were up $\$ 1.4$ billion, or 2.0 percent. Two categories-capital goods, except autos, and consumer goods-continued uptrends, but with interruptions traceable to the U.S. recessions. Capital goods were up $\$ 2.2$ billion (14 percent) and consumer
goods were up $\$ 1.1$ billion ( 7 percent). In capital goods, electronic equipment and components and business equipment accounted for most of the increase. In consumer goods, both durable and nondurable goods registered the interruptions; a strengthening in nondurables after mid-1981 maintained the uptrend in the total.

The impact of the recessions was also evident in nonpetroleum industrial supplies and materials. With sharp drops in early 1980 and in 1982, this category declined $\$ 2.0$ billion ( 11 percent). Iron and steel imports, after a decline in 1980, increased substantially through the first quarter of 1982, in part reflecting the enhanced competitiveness in the U.S. market of European iron and steel following the dollar's appreciation. Thereafter, imports were slowed by a dispute between the European Communities and the United States over subsidies.

Three end-use categories showed considerable quarterly irregularity, and the impact of general factors is hard to discern: Autos were down $\$ 1.1$ billion ( 10 percent); foods, feeds, and beverages were up $\$ 0.6$ billion ( 9 percent); and other imports-a category consisting largely of low-value shipments and U.S. goods returned-were up $\$ 0.7$ billion ( 32 percent). The Japanese auto agreements, negotiated to hold Japanese imports at 1.68 million units for the year beginning April 1, 1981 and subsequently extended for another year, influenced both the level and quarter-to-quarter movements. During 1982, fluctuations in auto imports from Canada reflected an increase in shipments of large cars, in response to a shift in U.S. demand; the second-quarter opening of a facility to build engines; and anticipation of a strike in September at the expiration of a labor agreement.

Factor income.-The $\$ 5.2$ billion decline in the balance on factor income from the first quarter of 1980 to the fourth quarter of 1982 was more than accounted for by a $\$ 5.9$ billion decline in exports, that is, receipts of income for factor services provided by U.S. residents (table 4). Within the period, the pattern of functuations of receipts and payments was similar, but with payments better maintained (chart 7).

Within factor income, the decline was in the balance on corporate profits, down $\$ 10.6$ billion; the balance on interest was up $\$ 5.4$ billion. As a
result of these changes, a shift in the composition of the factor-income balance, which had been gradual in the last half of the 1970 's, became pronounced. In the first quarter of 1980 , the balance on interest accounted for 28 percent of the total, and by the fourth quarter of 1982, it accounted for 57 percent.
The relative strengthening of interest income points to the growing role of interest rates as one of the general determinants of the course of factor income. Levels of economic activity in the United States and abroad as well as changes in the value of the dollar were other general determinants. Further, developments in the petroleum industry significantly affected corporate profits and strong increases in outstanding claims and liabilities significantly affected interest income.
As noted earlier, the balance on factor income is the difference between GNP and gross domestic product. This relationship can be used to obtain an approximate measure of the effect on the rate of change in GNP of disproportionate changes in the part of national production originating in the rest of the world. As shown in column 5 of table 3, disproportionate
changes in rest-of-the-world production in the fourth quarter of 1980 and in the first quarter of 1982 reduced the annual rates of growth of GNP 0.8 and 1.0 percentage points, respectively. In other quarters of $1980-82$, the effect was smaller, sometimes reducing and sometimes increasing the rate of change in GNP. From the first quarter of 1980 to the fourth quarter of 1982, rest-of-the-world product increased the average annual rate of decline in GNP by approximately 0.1 percentage point.

In corporate profits, the decline in the balance from the first quarter of 1980 to the fourth quarter of 1982 was more than accounted for by a $\$ 12.7$ billion decline in receipts (chart 11). Receipts were halved: From a high in late 1979 and in the first quarter of 1980 of almost $\$ 26$ billion, they declined, with few interruptions, to $\$ 13.2$ billion in the fourth quarter of 1982. The decline was in large part due to the slowing of economic activity, especially in 1980 and 1982, in countries where foreign affiliates are located. Petroleum affiliates, which account for about one-third of total receipts, were particularly hard hit. The decline in receipts from these af-

[^8]Nore.-Estimates of total factor income are from table 4.2 of the National Income and Product Accounts Tables. Estimates of corporate profits are derived by dividing rest-of-the-world corporate profits, from table 6.20B of the National Income and Product Accounts Tables, and exports and imports separately, from unpublished data, by the implicit price deflator for net domestic product. (That deflator can be found as the implicit price deflator for factor income in table 7.16 of the National Income and income less corporate profits.

## Facior Income, Receipts and Payments

Note.-Interest is derived as lotal factor income less corporate profits.
U.S. Depariment of Commerce, Bureau of Economic Analysis
filiates started from a high level in early 1980 , when they were benefitting from the run-up in petroleum prices initiated by OPEC in 1979, and was large during 1980. After stabilization in 1981, a further weakening in 1982 reflected the softness in petroleum prices that was related to the oil glut.
Appreciation of the dollar also contributed to the decline in total receipts. Dollar appreciation has an effect on affiliate profits because earnings abroad, which, in general, firms calculate initially in foreign currencies, are reported to BEA in dollars. Thus, dollar appreciation against the currency of a country where the earnings originate generally lowers the dollar measure. This effect is a kind of capital gain (loss). Capital gains (losses) are definitionally excluded from NIPA measures and, as noted earlier, the reconciliation between the BPA's and the NIPA's includes an item to remove capital gains (losses) from income of foreign
affiliates. Most gains (losses) of this kind are excluded from affiliate income by the reconciliation item, but a small part-those that cannot be separated statistically-remain. They may have significantly affected receipts from foreign affiliates over the 1980-82 period because of the sizable dollar appreciation. Finally, in 1980, receipts reflected a decline following a one-year jump caused by a change in the United Kingdom in the tax treatment of inventory profits.

Payments of corporate profits declined $\$ 2.1$ billion, from $\$ 5.3$ billion in the first quarter of 1980 to $\$ 3.2$ billion in the fourth quarter of 1982. Within this period, payments fell initially in response to the 1980 recession, recovered by mid-1981, and then fell in response to the 1981-82 recession. The gradual decontrol of U.S. petroleum prices beginning in the third quarter of 1979 and the OPEC price hikes bolstered earnings of petroleum affiliates in 1980 and, to a smaller extent, in 1981; payments by these affiliates are roughly one-third of total payments.
In interest, as noted earlier, the balance was up $\$ 5.4$ billion from the first quarter of 1980 to the fourth quarter of 1982. Within the period, the balance grew steadily from $\$ 8.0$ billion to $\$ 15.3$ billion in the second quarter of 1982 , then fell to $\$ 13.4$ billion. The growth occurred as, during the quarterly fluctuations in which receipts and payments paralleled each other, receipts usually increased more and fell less (chart 11). The fluctuations follow closely the pattern of interest rates. This point is brought out by reference to chart 12 , which shows the rate on U.S. 90 -day certificates of deposit. This rate can serve as a representative rate for tracing fluctuations in yields because short-term, rather than long-term, instruments make up the preponderant share of both claims and liabilities, and because dollar-denominated instruments make up the preponderant share of both.

In addition to affecting fluctuations in interest receipts and payments, interest rates also affected their levels. The climb in interest rates to record highs in mid-1981-to $171 / 2$ percent (quarterly average) on the U.S. 90-day certificates of deposit-gave them an upward tilt. The level of outstanding

## U.S. 90-Day Certificates of Deposit

claims and liabilities also affected both the fluctuations and level, and contributed to the faster growth of receipts than payments. Both U.S. bank claims on and liabilities to foreign-ers-but especially the former-increased strongly almost throughout the period. Beginning in the fourth quarter of 1981, both were affected by the establishment of International Banking Facilities (IBF's). IBF's, which (as authorized by the Board of Governors of the Federal Reserve System) are exempt from reserve requirements and interest rate ceilings, conduct only international banking such as receiving foreign deposits and making foreign loans. As they were being established, shifts of claims and liabilities to the United States from foreign branches took place, and banking operations, which previously had taken place offshore, were handled by IBF's, adding significantly to the outstanding positions in claims and liabilities.

Other services.-The balance on other services was up $\$ 1.2$ billion from the first quarter of 1980 to the fourth quarter of 1982 , to $\$ 6.5$ billion (table 1). The increase was almost all in exports; which fluctuated moderately around an uptrend, reaching $\$ 24.8$ billion; imports fluctuated somewhat less around an $\$ 18$ billion dollar level (chart 7).

Because deflation of the several heterogenous components that make up other services is carried out in detail

1. For exports, transfers under U.S. military agency sales contracts plus U.S. Government receipts for miscellaneous services. For imports, direct defense expenditures abroad plus U.S. Government payments for miscellaneous services.
only for annual estimates, with 1982 estimates not yet available, and because changes in most of the components are usually small over short time spans such as that being analyzed in this article, it is not possible to discuss other services in a manner comparable to other components of net exports.

A few points may be made, however (table 5). For exports: (1) U.S. Government transactions appear somewhat erratic, and changes are often traceable to special occurrences. The 1981 increase was concentrated in aircraft deliveries to Israel, Saudi Arabia, Japan, and NATO countries. In 1982, a sizable increase probably occurred, reflecting stepped-up deliveries of equipment to the Middle East, NATO, and Latin America. (2) Travel receipts are affected by exchange rates (those assumed to prevail for purposes of planning and those actually prevailing at the time of travel), which tended to make travel in the United States by foreigners increasingly expensive, and by levels of economic activity, which were depressed in most areas from which visitors are drawn. ${ }^{9}$ Nevertheless, receipts were up in 1980 and 1981, but are likely to have
9. Travel expenditures and passenger fares are reviewed intensively in the BPA context in articles that appear annually in the Survey. See, for example, "International Travel and Passenger Fares, 1981," Survey 62 (June 1982): 32-35 and 72.
shown a sizable decline in 1982 (cur-rent-dollar estimates are down 6 percent). A sharp drop in receipts from Mexico, an effect of the devaluation of the peso, was a major factor in contributing to the 1982 decline. (3) Passenger fare receipts also moved up through 1981. They tend to parallel travel expenditures, reflecting the same general factors. (4) Other transportation changed little. These receipts tend to move with merchandise trade-freight receipts with the volume of exports and port charges with the volume of imports. After little change in 1980-81, they probably declined in 1982.

For imports: (1) U.S. Government transactions were up in 1981 and probably in 1982, mainly due to higher off-base expenditures by military personnel and purchases of equipment. (2) Travel expenditures were unchanged. The effects of depressed economic activity and higher airfares appear to have offset the effects of the dollar's appreciation and, for most of the period, the stimulus to visit Canada and Mexico provided by the lower gasoline prices there than in the United States. (3) Passenger fares, after an increase in 1981, probably changed little in 1982 . (4) Other transportation payments reflected the converse of the factors affecting receipts. In 1982, with both imports and exports down, a decline probably occurred.

## Supplementary measures

Two supplementary measures of net exports are presented in what follows. The first is the measure of net exports associated with command GNP, which takes into account the effect of changes in the relationship between export and import prices. The second is net exports calculated using 1981, rather than 1972 , as the valuation period.

Command net exports.-Constantdollar net exports are derived by subtracting constant-dollar total imports from constant-dollar total exports. If, instead, current-dollar net exports are divided by an appropriate price index, the resulting measure is the excess ( + or - ), in 1972 dollars, of the quantity of foreign goods and services a country can purchase from the proceeds of its exports over the quantity of those exports.

Such a net export series, calculated using the implicit price deflator for imports as the price index with which to divide current-dollar GNP, is shown in the lower panel of chart 13 labeled "command" net exports. (See also table 2 in the Reconciliation and Other Special Tables, on page 18 of this issue.) It is labeled "command" because it is one of a family of series-counterparts of the conventional production series-that measures the command over goods and services resulting from current production. ${ }^{10}$ As shown in the chart, this series did not plummet over the 198082 period, as did the conventional net export series, labeled "GNP" net exports. Instead, from an irregular plateau in the $\$ 4$ to $\$ 8$ billion range in 1979 and the first quarter of 1980 , the command series moved to a higher, irregular plateau in the $\$ 8$ to $\$ 13$ billion range that lasted through the second quarter of 1982, dropping substantially only in the third quarter, to $\$ 2.4$ billion, and changing little in the fourth.

The source of the difference between the command and GNP series

[^9]
## Terms of Trade and Net Exports of Goods and Services

Billion 1972 \$

for net exports can be traced in the upper panel of chart 13. It shows the terms of trade, measured as the ratio of the implicit price deflator for exports to that for imports and indexed to 1972. After declining in 1979 and the first quarter of 1980, the index increased over the next two years from 72.2 to 85.0 in the second quarter of 1982, and then slipped to about 83.0. The improvement occurred as the import deflator, which had been rising more rapidly than the export deflator, rose less rapidly through the first quarter of 1981, and then declined through the second quarter of 1982. Through that quarter, the improvement was about 17 percent; if
petroleum prices, rather than following their actual course, had followed the course of other import prices, the improvement would have been roughly three-fifths as much. The weakening in the terms of trade from the second quarter was more than accounted for by petroleum.

Recent valuation period.-For the constant-dollar estimates referred to so far, 1972 is the valuation period. BEA plans to supplement its regular constant-dollar estimates by approximating constant-dollar estimates valued in dollars of a recent year. The project has not yet been completed, but some preliminary calculations suggest the impact on the estimates of net exports of moving forward the valuation period to 1981 . The impact on net exports could be expected to be of particular interest because of the large changes since 1972 in the prices and quantities of some components of exports and imports.

The average annual rates of change from the first quarter of 1980 to the fourth quarter of 1982 in table 6 show that imports on the 1981 valuation base declined much more than on the 1972 valuation base- 3.6 percent compared with 0.1 percent-and exports on the 1981 base declined only slightly more- 7.0 percent compared with 6.8 percent. Within imports, petroleum, which has a larger relative importance in imports on the 1981 base, fell by over 14 percent.

As noted earlier, gross national product differs from gross domestic purchases in that the product measure includes exports and excludes imports but the purchases measure includes imports and excludes exports. Accordingly, a comparison of their average annual rates of change on the two valuation bases can be used to quantify for net exports the effect of moving forward the valuation period. In 1972 dollars, for the period from the first quarter of 1980 to the fourth quarter of 1982, product declined at a rate of 0.5 percent and purchases increased at a rate of 0.2 percent. Thus, the decline in net exports reduced the average annual rate of change of product 0.7 percentage point relative to that of purchases. In 1981 dollars,

Table 6.-Average Annual Rates of Change in Selected Measures, 1980: I to 1982: IV

*Approximations.
product and purchases declined at rates of 0.6 percent and 0.2 percent, respectively. Thus, in these dollars, the decline in net exports reduced the average annual rate of change of product 0.4 percentage points relative to that of purchases. The 0.3 percentage point difference in the amount by which net exports reduced the rate of change of product relative to purchases on the 1972 and 1981 valuation bases is the effect of moving forward the valuation period for net exports. Because moving the valuation period had little effect on the average annual rate of decline in exports and because the relative importance of exports in GNP increased only slightly from 1972 to 1981, it follows that most of the effect is due to imports-specifically, the larger decline in imports in 1981 dollars. The relative importance of imports in GNP increased substantially from 1972 to 1981.
The implicit price deflator for imports shows a much larger average annual rate of increase on the 1981 base than on the 1972 base and that for exports shows a similar rate of increase on both bases. With reasoning similar to that just used, the smaller increase in the terms of trade (from the first quarter of 1980 to the fourth quarter of 1982) on the 1981 base than on the 1972 base- 5.9 percent (not an average annual rate) compared to 17.0 -is the effect on the terms of trade of moving forward the valuation period.

# U.S. International Transactions, Fourth Quarter and Year 1982 

## Fourth Quarter 1982

THE current-account deficit increased to $\$ 6.1$ billion in the fourth quarter from $\$ 5.3$ billion in the third. A larger decline in receipts than in payments of income on portfolio investment and a step-up in unilateral transfers more than accounted for the increase. Partly offsetting was an increase in receipts of income on U.S. direct investment abroad.

Declining interest rates, combined with a slower increase in U.S. bankreported claims and liabilities, sharply lowered income receipts and, to a
lesser extent, payments on portfolio investment. The increase in unilateral transfers was in U.S. Government grants.

The merchandise trade deficit decreased to $\$ 12.1$ billion from $\$ 12.5$ billion. Imports decreased $\$ 4.6$ billion, or 7 percent, to $\$ 60.2$ billion. Exports decreased $\$ 4.3$ billion, or 8 percent, to $\$ 48.1$ billion. Most of the decrease in imports- $\$ 4.0$ billion-was in nonpetroleum imports, nearly all in volume. This decrease was the first since the first quarter of the year. Most of the decrease in exports- $\$ 3.7$ billion-was in nonagricultural exports; volume

## The Statistical Discrepancy in the International Transactions Accounts

The statistical discrepancy-errors and omissions is reported transactions-was a record inflow of almost $\$ 42$ billion in 1982, uncomfortably large by any standard. Indeed, over the 1980-82 period, the discrepancy registered a cumulative inflow of more than $\$ 96$ billion.
Such unusually large unrecorded flows probably reflect a number of factors: the international demand for dollars to acquire dollar-dominated assets, which both resulted from and added to the attractiveness of the United States as a "haven" for foreign funds and to the strength of the dollar in exchange markets; very high real interest rates in the United States; and a myriad of financial, economic, and political problems-actual and potential-in both the developing and industrial countries. Also, statistical reporting procedures have not kept pace with the numerous recent innovations in U.S. financial markets. As a result, some instruments and participants have not been adequately covered or not covered at all by the statistics. An interagency group, in cooperation with financial market participants, is working to improve reporting procedures.
The very large unrecorded inflows in recent years should be included in any
meaningful analysis of U.S. international transactions. For instance, the inflow in 1982 can be compared with some net recorded flows. Combining the balance on current account-a deficit of $\$ 8.1$ bil-lion-with that for net recorded private capital flows-an outflow of $\$ 26.1$ bil-lion-results in an outflow of $\$ 34.2$ billion, $\$ 7.7$ billion less than the $\$ 41.9$ billion unrecorded inflow. For the 1980-82 period, the cumulative balance on current account was a deficit of $\$ 2.1$ billion, that for net recorded private capital flows was an outflow of $\$ 85.6$ billion, for a combined $\$ 87.7$ billion outflow. Cumulative unrecorded inflows for the same period were $\$ 96.5$ billion.
Although efforts to identify sources of errors and omissions will continue, it is unrealistic to expect the discrepancy to be reduced dramatically or to disappear in short order. Even if the dollar should depreciate somewhat in exchange markets in the period ahead, net unrecorded inflows-probably largely in the capital accounts-are likely to persist in a global environment of continued financial, economic, and political uncertainties.

Jack Bame
declines more than accounted for the decrease.
U.S. assets abroad increased $\$ 23.6$ billion, compared with a $\$ 25.6$ billion increase. U.S. official reserve assets increased $\$ 1.9$ billion, over one-half of which resulted from net acquisitions

of foreign currencies. Although German mark balances declined as a result of the redemption of U.S. Treasury mark-denominated notes, net holdings of Mexican pesos and of Brazilian cruzerios increased substantially as these countries drew on credit lines provided through both existing and special reciprocal currency arrangements. U.S. bank-reported claims on foreigners-which increased $\$ 16.7$ billion, compared with $\$ 20.4$ bil-lion-reflected some decline in credit demands in both industrial and developing countries, and uncertainty about the ability of several private and government borrowers in developing countries to repay maturing
short-term debts in the immediate future. Some outflows in December were related to substantial inflows to new deposit-type bank accounts out of money market mutual funds and the desire of banks to place funds from these accounts in higher yielding Eurodollar deposits at foreign branches. Net U.S. purchases of foreign securities were $\$ 3.5$ billion, up slightly from $\$ 3.3$ billion. A decline in foreign new security issues in the United States, which occurred despite the decline in interest rates, was more than offset by increased U.S. purchases of foreign stocks, which occurred as stock prices in all major foreign markets rose substantially, and increased purchases of
outstanding bonds. Net capital outflows for U.S. direct investment abroad were $\$ 0.6$ billion, following $\$ 0.5$ billion in inflows in the third quarter. Dollar inflows from U.S. direct investors' borrowing through Netherlands Antilles finance affiliates dropped to $\$ 1.8$ billion from $\$ 2.2$ billion. Reinvested earnings were $\$ 3.4$ billion, compared with $\$ 1.5$ billion.
Foreign assets in the United States increased $\$ 13.1$ billion, following a $\$ 16.7$ billion increase. Increases in foreign official assets slowed to $\$ 1.7$ billion, reflecting the easing of pressures on foreign currencies in the exchange markets as the dollar depreciated in November and December. Unusual of-

1. Western Europe, Canada, Japan, Australia, New Zealand, and South Africa.
2. Bascon data for Ecuador, Venezuela, Indonesia, and other Asian and African oil-exporting countries
3. Consists of transactions of the Federal Reserve System and the U.S. Treasury Department's Exchange Stabilization Fund.
ficial inflows from Australia and Singapore bosted increases from industrial and non-OPEC developing countries, respectively; holdings of OPEC members decreased. U.S. bank-reported liabilities to private foreigners and international financial institutions increased $\$ 6.5$ billion, down from a $\$ 12.0$ billion increase, as U.S. interest rates decreased. Foreign purchases of U.S. securities other than U.S. Treasury securities increased to $\$ 1.9$ billion from $\$ 0.2$ billion. Foreign purchases of U.S. stocks in December accounted for most of the rise. Capital inflows for foreign direct investment in the United States were $\$ 3.0$ billion, up from $\$ 2.4$ billion; equity and intercompany inflows and reinvested earnings both increased.

After appreciating further in October, the dollar gave up some of its earlier gains in November and December, when it depreciated 3 to 12 percent against most major foreign currencies. With the rapid drop in U.S. interest rates, U.S. rates were only slightly above key rates in Germany and Japan and funds moved to those countries. Dollar depreciation was largest, nearly 12 percent, against the Japanese yen; the yen benefited partly from capital flows into the Japanese stock market.

## The Year 1982

## U.S. dollar in exchange markets

U.S. interest rates remained on a high plateau during the first half of 1982. With foreign rates declining sharply, interest differentials were

Indexes of Foreign Currency Price of the U.S. Dollar (1977 = 100)

strongly in favor of the dollar and inflows into all types of dollar-denominated assets remained large. Conflict in the Falkland Islands in April and growing international financial problems further encouraged capital flows to the United States. Consequently, the dollar appreciated between 8 and 15 percent against most major currencies through June.

Several other factors contributed to the dollar's strength. Inflationary pressures in the United States continued to abate and the U.S. current account remained in surplus, in contrast to some deterioration early in the year of both Germany's and

Japan's current-account positions. Political instability in Eastern Europe, open hostilities in Lebanon, and the conflict between Iran and Iraq also contributed.

Although short-term U.S. interest rates fell more than 5 percentage points and interest differentials in favor of the dollar narrowed rapidly in July-October, the dollar continued to rise to record highs against many currencies. At the end of October, the dollar was 12 to 25 percent above De cember levels against most major currencies, with the exception of the Ca nadian dollar. Concern over the international financial situation, particu-

[^10]
larly the external debt of Poland, Argentina, Mexico, and Brazil, encouraged continued dollar inflows, many of them apparently unrecorded.
In November and December the dollar gave up some of its gains from the past $2 \frac{1}{2}$ years, depreciating 3 to 12 percent against most major currencies. Some key interest differentials were only slightly in favor of the dollar. Also, international financial concerns lessened somewhat, as Mexico and other countries negotiated balance-of-payments adjustment programs with the International Monetary Fund (IMF) and restructured financing requirements with commercial banks.

## Merchandise trade

The U.S. merchandise trade deficit was $\$ 36.3$ billion in 1982, compared with a deficit of $\$ 27.9$ billion in 1981. A sharper decrease in exports than in imports accounted for the increase. Exports decreased $\$ 25.2$ billion, or 11 percent, to $\$ 211.1$ billion; volume decreased 12 percent. Both agricultural and nonagricultural exports de-

Merchandise Trade: Export and Import Volume and Prices

creased. Imports decreased $\$ 16.8$ billion, or 6 percent, to $\$ 246.1$ billion; volume decreased 1 percent. The decrease in imports was nearly all in petroleum products.
Real U.S. merchandise exports decreased over 15 percent during the current U.S. recession. Much of the decrease can be attributed to recession in other major countries during the past 3 years (chart 16). Other factors were the 36 -percent dollar appreciation against 22 OECD currencies since the third quarter of 1980 and the 19 -percent rise in prices of goods produced for export over the past 3 years, as measured by the implicit price deflator for nonagricultural exports (chart 17). (Prices in other key trading-partner countries increased at about the same or a slower rate.) The decrease in U.S. export volume contributed to the U.S. recession, as indicated by the marked reduction in the
percentage of U.S. goods production that is exported. In contrast, in the previous four recessions, sustained foreign demand for U.S. goods increased the percentage of U.S. goods production exported, mitigating the severity of U.S. recessions.
Real U.S. merchandise imports have remained about constant during the current U.S. recession. Although domestic demand has weakened, import volume has been relatively strong, partly because, given the dollar's appreciation, the implicit price deflator for nonpetroleum imports was virtually flat over the past 3 years in contrast to an 18 -percent rise in domestic prices (chart 17). Slack economic conditions also caused softness in commodity prices in major world markets and may have led to more aggressive selling of some exports to the United States. In the previous four recessions, imports fell at
least proportionately with the decline in domestic demand.
U.S. nonagricultural exports decreased $\$ 18.4$ billion to $\$ 173.6$ billion in 1982; volume decreased 13 percent. All major commodity categories decreased. The largest decreases were in industrial supplies and materials and in capital goods (table D). The decrease in industrial supplies had begun in the third quarter of 1980 , as U.S. inflation and recession abroad began to slow these exports; dollar appreciation was a contributing factor in 1981-82. In 1982, exports of metallurgical coal, iron and steel products, and metals and metal products all declined sharply from levels in the first half of the year or from 1981. Lumber, wood, and paper products and chemicals declined only moderately. In capital goods, the decrease had begun in the second quarter of 1981. About one-half the decrease in 1982 was in civilian aircraft, which was adversely affected by high financing costs. The other one-half was due to declines in many components of nonelectrical machinery, as shown in the accompanying tabulation. Some components-for example drilling and oil field equipment-showed modest growth for the year, but fell sharply after midyear. Other components were severely affected by economic conditions and the strong dollar throughout the year.

|  | Billions of dollars |  | Percent change |
| :---: | :---: | :---: | :---: |
|  | 1981 | 1982 |  |
| Drilling and oilfield equipment | 4.5 | 5.4 | 20 |

| Agricultural machinery .............. | 2.2 | 1.8 | -20 |

Agricultural exports decreased $\$ 6.8$ billion to $\$ 37.4$ billion; volume decreased 5 percent. The decrease in volume was concentrated in corn and wheat, which fell 11 and 6 percent, respectively; soybean volume increased 17 percent, cotton 12 percent. Average prices of these crops declined between 11 and 22 percent. Record world supplies of major commodities and weakening demand intensified price competition among world producers. The decline in total volume was due almost entirely to reduced shipments to Eastern Europe, excluding the

Soviet Union, down 50 percent, and to Mexico, down 46 percent.
Nonpetroleum imports were nearly unchanged at $\$ 186.1$ billion; volume was also unchanged. Among major commodity categories, industrial supplies and materials had begun to decline in the second quarter of 1981; about two-thirds of the decrease was due to declining petroleum consumption. The impact of the U.S. recession on nonpetroleum supplies was partly offset by rapidly declining prices in world commodity markets and the effects of the appreciation of the dollar. Iron and steel imports were dampened by the decline in demand for oilfield pipe and by the dispute between the European Communities (EC) and the United States over subsidies. That dispute was resolved in October, when-effective November 1-the EC agreed to limit shipments of carbon and alloy steel, and steel pipe and tube products, in exchange for the
withdrawal by U.S. steel producers of dumping and unfair trade practices complaints. Capital goods, excluding automotive products, declined in the first quarter of 1982 but showed suprising strength through the third quarter, before dropping sharply in the fourth (see table D). Changes in various components are shown in the accompanying tabulation. Only some components were severely affected by the U.S. recession.

Automotive imports were up strongly to record levels. Imports from Canada, where a new engine plant was opened in midyear, were especially strong. Imports from other areas were slightly higher. A voluntary agreement to limit the number of autos imported from Japan remained in effect. Although the number imported from Japan was 6 percent lower, their unit value (as measured by the Census Bureau's unit value index) rose 7 percent. The share of Japanese autos as a percentage of total U.S. sales increased to 22.6 percent from 21.8 percent.
Petroleum imports decreased $\$ 16.4$ billion to $\$ 61.2$ billion. Most of the decrease was in volume. The average price per barrel declined to $\$ 31.26$ from $\$ 34.02$ The average number of barrels imported daily declined to 5.36 million from 6.25 million. Recession, conservation, reductions in inventories, and a slight increase in domestic production contributed to the decrease in both value and volume. Consumption, as measured by petroleum products supplied by refiners, decreased 5 percent; stocks, excluding those in the strategic petroleum reserve, decreased 8 percent; and production increased 1 percent. The volume of imports comprised 35 percent of total domestic products supplied in 1982, compared with 39 percent in 1981, and 42 percent in 1980 (chart 18). The value of imports from OPEC members decreased 38 percent. The value from Mexico increased 25 percent; from Canada, 4 percent; and from Western Europe, 2 percent. Imports from OPEC members accounted for 48 percent of all petroleum imports in 1982, compared with 61 percent in 1981.
By area, the deficit with industrial countries increased sharply to $\$ 16.7$ billion, due to lower exports and unchanged imports. There was a shift to

## U.S. Petroleum Consumption, Production, and Imports

Data: Consumption defined as deliveries from refineries. Consumption
and production, U.S. Department of Energy. Imports, BEA.
U.S. Department of Commerce, Bureau of Economic Analy sis
an $\$ 11.4$ billion deficit with non-OPEC developing countries, largely due to much lower exports to Mexico; exports to other developing countries declined only slightly, while imports were about unchanged. The deficit with OPEC countries declined to $\$ 10.9$ billion from $\$ 29.9$ billion, due to lower U.S. petroleum purchases (table E).

## Service transactions

Net service receipts were $\$ 36.1$ billion, compared with $\$ 39.0$ billion (table F). Continued high U.S. interest rates in the first half of the year and increased bank lending abroad helped to raise income receipts on portfolio investment $\$ 7.7$ billion and payments $\$ 5.3$ billion. The global recession contributed to an $\$ 8.2$ billion decrease in income receipts on U.S. direct investment abroad and a $\$ 2.2$ billion decrease in payments of foreign direct investment in the United States. Transfers under U.S. military sales contracts increased from $\$ 9.7$ billion to $\$ 12.6$ billion and U.S. defense expenditures abroad increased from $\$ 11.2$ billion to $\$ 12.0$ billion. Travel and passenger fare receipts decreased
$\$ 0.8$ billion; payments increased $\$ 1.2$ billion.
Receipts of income of portfolio investment were $\$ 58.1$ billion, compared with $\$ 50.4$ billion. Larger bank-reported claims on foreigners, partly related to the rebooking and channeling of new business to International Banking Facilities (IBF's)-discussed later in the article-and to high interest rates in the first half of the year, boosted income. The sharp drop in interest rates beginning in July and, to a lesser extent, a slower increase in bank claims, resulted in smaller quarterly increases in the last half. U.S. Government income receipts were slightly higher at $\$ 4.1$ billion.
Payments of income on portfolio investment were $\$ 33.6$ billion, up from $\$ 28.4$ billion in 1981. The rebooking of liabilities to IBF's and high interest rates boosted payments in the first half. The decline in interest rates was the primary factor slowing payments in the second half, although the smaller increase in bank liabilities also contributed. U.S. Government payments of income on foreign official assets in the United States were $\$ 18.0$ billion, compared with $\$ 16.7$ billion.
Receipts of income on U.S. direct investment abroad were $\$ 23.7$ billion, down from $\$ 31.9$ billion-a larger decline than in 1981. Income from manufacturing and other affiliates continued to be depressed by the global recession. Income from petroleum affiliates, which was stable in 1981, dropped as petroleum comsumption and prices declined. Income of many affiliates-especially those in Mexico-was also adversely affected by dollar appreciation that resulted in both reductions in operating income (measured in U.S. dollars) and in capital losses. Capital losses were $\$ 1.7$ billion, compared with gains of $\$ 0.4$ billion in 1981. Also, there was a shift to net payments of $\$ 1.6$ billion on the interest component of income, due to increased borrowing by parents from affiliates, particularly from finance affiliates in the Netherlands Antilles.
Payments of income of foreign direct investment in the United States were also lower, $\$ 5.6$ billion compared with $\$ 7.8$ billion. Interest, dividends, and earnings of unincorporated affiliates increased; reinvested earnings of incorporated affiliates fell to $\$ 1.1$ billion from $\$ 4.1$ billion. There was a large increase in nega-
tive reinvested earnings of manufacturing affiliates, and decrease in the reinvested earnings of petroleum and other affiliates.
U.S. military transactions with foreigners resulted in net receipts of $\$ 0.6$ billion, compared with net payments of $\$ 1.5$ billion. Transfers under U.S. military agency contracts increased $\$ 2.9$ billion to $\$ 12.6$ billion. Transfers of equipment to the Middle East, Western Europe, and Latin America increased; deliveries to the Far East and Israel declined. Construction activity in Saudi Arabia also increased. U.S. direct defense expenditures abroad increased $\$ 0.7$ billion to $\$ 12.0$ billion. Personnel expenditures and pay to foreign nationals, especially in Germany and Japan, accounted for much of the increase.
Net international travel and passenger fare payments increased to $\$ 2.8$ billion, compared with $\$ 0.8$ billion. Foreign visitors spent $\$ 11.4$ billion for travel in the United States, down 6 percent. Travel receipts from overseas increased 2 percent, as higher expenditures in the United States more than compensated for a 5 -percent drop in the number of visitors from overseas. The increase was more than offset by a 22 -percent drop, to $\$ 3.0$ billion, in receipts from Mexico; three peso devaluations and currency controls were major factors. The U.S. dollar, which could be purchased a year ago for 26 pesos, cost about 160 pesos at the end of 1982 . Travel receipts from Canada declined 2 percent to $\$ 2.6$ billion. U.S. travelers spent $\$ 12.3$ billion for travel in foreign countries, up 8 percent. The number of overseas travelers was up 6 percent, and their payments rose 9 percent to $\$ 6.5$ billion. Payments to Mexico increased 15 percent to $\$ 3.3$ billion. Although the peso devaluations lowered prices to U.S. travelers, the high rate of inflation in Mexico was partly offsetting. Travel payments to Canada were $\$ 1.9$ billion, down 5 percent. The number of travelers to Canada was down 18 percent. Most of the drop in travelers and expenditures was in the first half of the year; during the same period in 1981, large numbers of U.S. travelers went to Canada to buy gasoline at cheaper prices. Passenger fare receipts, at $\$ 3.0$ billion, did not change; payments increased 6 percent to $\$ 4.8$ billion,
mainly due to a 3-percent increase in the number of U.S. travelers departing on foreign flag carriers.

Other transportation receipts decreased 1 percent to $\$ 12.0$ billion. Ocean freight and port expenditure receipts decreased 11 percent and 2 percent, respectively. Air port expenditure receipts increased 7 percent. Other transportation payments decreased 9 percent to $\$ 10.6$ billion. Ocean freight payments and port expenditures decreased 15 percent and 6 percent, respectively, due to large drops in tonnage, and air port expenditure payments decreased 6 percent.

Net unilateral transfers were $\$ 7.9$ billion, compared with $\$ 6.6$ billion. There was a substantial increase in
foreign economic assistance, especially to Israel, Turkey, and Egypt. Payments to Israel in the fourth quarter accounted for one-half of the economic assistance to that country appropriated by Congress for the fiscal year beginning in October.

## U.S. assets abroad

U.S. assets abroad increased $\$ 118.3$ billion in 1982, compared with a $\$ 109.3$ billion increase.
U.S. official reserve assets increased $\$ 5.0$ billion, compared with a $\$ 5.2$ billion increase. Foreign currency holdings increased $\$ 1.0$ billion, compared with a $\$ 0.9$ billion increase. There were several partly offsetting transactions. First, payments of $\$ 1.8$ billion in German marks were made to

| 1. U.S. bank-reported claims and liabilities were increased, beginning December 1981, by the shift from foreign branches to international banking facilities in the United States of claims on, and liabilities to, foreigners. <br> 2. Excludes liabilities to foreign official agencies. |  |  |  |  |  |  |  |

redeem maturing U.S. Treasury foreign currency-denominated notes. Second, U.S. monetary authorities provided nearly $\$ 6.2$ billion in shortterm credits to Mexico and Brazil, $\$ 4.1$ billion of which was repaid within the year. These credits, provided through existing and new reciprocal currency arrangements, were sometimes provided in cooperation with the Bank for International Settlements and monetary authorities in other industrial countries. Mexico repaid some of its drawings with the proceeds of a $\$ 1$ billion advance payment in August by the United States for petroleum purchases for the strategic petroleum reserve. In other official reserve asset accounts, the U.S. reserve position with the IMF increased $\$ 2.6$ billion, almost unchanged from last year's increase. U.S. holdings of special drawing rights increased $\$ 1.4$ billion, compared with a $\$ 1.8$ billion increase.
Claims on foreigners reported by U.S. banks increased $\$ 106.7$ billion, compared with $\$ 84.5$ billion (table G). The increase in claims slowed as 1982 progressed, largely due to cyclical weakening of credit demands in the major industrial and a number of developing countries, and to the increased recourse by borrowers to national and international bond markets. In addition, many banks reassessed their country risk exposure as the financial positions of a number of private and public borrowers deteriorated.

The higher level of lending in 1982, compared with the 1981, was largely associated with the rebooking of existing business from foreign branches and the channeling of new business through the newly created IBF's in the United States. Most of the initial rebooking and channeling of new business was from Caribbean branches. Some portion of IBF funding from London branches may have been provided by the establishing entity in the United States.

The change in booking of some international business altered the pattern of U.S. bank-reported claims and liabilities vis- $a$-vis branches in London and in the Caribbean. The increased importance of IBF lending, especially in the foreign interbank market, led to an increase in U.S. claims on U.K. branches (other than custody claims) of $\$ 21$ billion, compared with $\$ 7$ bil-
lion in 1981; the increase in liabilities was $\$ 19$ billion, compared with $\$ 6$ billion. Most lending by IBF's was to unaffiliated foreign banks. The increase in U.S. claims on Caribbean branches was about unchanged at $\$ 19$ billion; the increase in liabilities dropped from $\$ 22$ billion to $\$ 17$ billion.
In other areas, U.S. bank-reported claims on Western Europe, excluding the United Kingdom, increased $\$ 15$ billion compared with $\$ 7$ billion; the rate of increase slowed during the year as credit demands weakened. The increase in claims on Canada was about unchanged at $\$ 4.1$ billion; claims on Japan increased $\$ 0.5$ billion, down from a $\$ 4.0$ billion increase.
The increase in claims on Latin America, excluding Caribbean banking centers and OPEC member Venezuela, was $\$ 25$ billion, but slowed during the year from a 32 -percent increase in the first half to a 6 -percent increase in the second. Claims on other non-OPEC developing countries in Asia and Africa increased $\$ 9$ billion and slowed from a 21 -percent increase to a 16 -percent increase. Much lending to Latin America was concentrated in Mexico, Brazil, and Argentina, where U.S. bank claims increased 64 percent in 1981 but only 35 percent in 1982. Nearly all of the increase in 1982 occurred in the first half of the year. Much of this increase in claims, and those to other developing countries, was in the form of short-term credits.
Bank's custody claims increased $\$ 4.2$ billion in 1982 , compared with an $\$ 10.2$ billion increase in 1981. Purchases of Eurodollar certificates of deposit (CD's), mostly for the accounts of U.S. money market mutual funds, were strong in the first quarter, but showed no growth in the second and net sales in the third, in response to perceptions of greater risk in Eurodollar than in U.S. CD's associated with unsettled international financial conditions. Purchases rose again in the fourth quarter.

Net U.S. purchases of foreign securities were $\$ 7.8$ billion, compared with $\$ 5.4$ billion. A shift to net purchases of foreign stocks and decline in net sales of outstanding bonds more than offset a decline in foreign new issues in the United States. Net purchases of foreign stocks were concentrated in the September-December period, to-

1. Interest rates for other Group of 10 countries and Switzerland weighted by average total trade shares in 1972-76.
Data: Federal Reserve Board.
U.S. Departiment of Commerce, Bureau of Economic Analysis 83-3.19
taling $\$ 1.4$ billion. There were substantial increases in share prices on all major exchanges in the fourth quarter when net U.S. purchases were $\$ 0.5$ billion in Japan, $\$ 0.3$ billion in Western Europe, and $\$ 0.1$ billion in Canada.

Foreign new issues in the United States were $\$ 7.5$ billion, down from $\$ 8.0$ billion. Canada continued to borrow heavily in the Eurobond mar-
kets as it had in 1981, partly because Eurobond interest rates were as much as $140-200$ basis points lower than U.S. interest rates in the first half of the year. However, when U.S. interest rates declined sharply and differentials narrowed-as they did in the first quarter and in August-OctoberCanada shifted some borrowing to the U.S. markets (chart 19). The absence of Canadian borrowing from the U.S. market in November-December reflected unusually large placements in the Canadian market by issuers who usually borrow only in the U.S. or Eurobond market; the differential of Canadian over U.S. rates had dropped from over 260 basis points in July to 60 basis points in December. Borrowing by international financial institutions, including the World Bank, was up strongly.

Net redemptions and sales of outstanding bonds were $\$ 0.8$ billion, compared with $\$ 2.6$ billion. Net sales through the third quarter were partly related to the realization of capital gains from the strengthening in bond prices over the previous year. In the fourth quarter, there were large net purchases.

Net inflows on U.S. direct investment abroad were $\$ 2.2$ billion, compared with outflows of $\$ 8.7$ billion. Several factors affect year-to-year comparisons. First, there were large inflows in 1982 related to the sale of a U.S. mining company's Canadian affiliates when the U.S. company was acquired by a French company (the offset to transactions recorded in the foreign direct investment accounts). Second, encouraged by a $140-200$ basis point advantage in Euromarket borrowing and by tax advantages, capital inflows from finance affiliates in the Netherlands Antilles rose to $\$ 9.7$ billion from $\$ 3.6$ billion (table H). The
borrowing slackened somewhat in the second half of the year as U.S. interest rates dropped rapidly. (Excluding Netherlands Antilles financing transactions, there would have been equity and intercompany inflows of $\$ 0.7 \mathrm{bil}-$ lion in 1981 and outflows of $\$ 0.5$ billion in 1982.) Third, and partly offsetting, the large equity inflows from the sale of Canadian energy affiliates in 1981 were not present in 1982. Reinvested earnings decreased from $\$ 13.0$ billion to $\$ 7.0$ billion.

## Foreign assets in the United States

Foreign assets in the United States increased $\$ 84.5$ billion, compared with a $\$ 77.9$ billion increase in 1981 .

Foreign official assets in the United States increased $\$ 3.0$ billion, compared with a $\$ 4.8$ billion increase. Dollar assets of industrial countries decreased $\$ 6.5$ billion, compared with a $\$ 12.2$ billion decrease. Through April, much of the reduction was associated with dollar sales by foreign monetary authorities to support weaker currencies (French franc, Belgian franc, and Italian lira) within the European Monetary System (EMS) system. Germany's dollar assets decreased in the second quarter prior to the EMS realinement in June. Dollar assets of France fell sharply in the third quarter prior to the arrangement of a large standby Eurocurrency credit line. A large reduction in United Kingdom dollar assets occurred in the fourth quarter when the pound sterling came under further pressure. Substantial intervention sales of dollars by Japanese authorities occurred through the third quarter to limit yen depreciation. There was an unusually large increase in dollar assets of Australia, whose foreign exchange reserves had
been substantially increased by direct investment capital inflows and by Japanese purchases of Australian Government debt instruments.

Dollar assets of OPEC members increased $\$ 7.2$ billion, compared with a $\$ 13.3$ billion increase. The increase in assets, mainly of Middle East members, dropped sharply in the second half of the year, shifting to a decrease in the fourth quarter, reflecting falling petroleum prices and declining revenues.

Dollar assets of non-OPEC developing countries increased $\$ 2.3$ billion, compared to a $\$ 3.7$ billion increase. Excluding an especially large increase from Singapore, assets of most countries decreased as these countries continued to experience large current-account deficits and debt service burdens.

The increase in U.S. liabilities to private foreigners and international financial institutions reported by U.S. banks was $\$ 69.8$ billion, compared with a $\$ 44.2$ billion increase. The increase in bank liabilities slowed as the year progressed, due in large measure to cyclical weakening of credit demands in the United States and the sharp drop in U.S. interest rates (table F). Inflows were large in the first and second quarters (as they had been in the last half of 1981) when there was a large demand for short-term credit (as evidenced by the growth of CD's, commercial paper, and bank credit) and when U.S. rates were well above declining foreign rates.

About one-half of the 1982 step up in liabilities was with the international banking centers. Partly in response to the change in booking of some international business to IBF's in the
(Text continued on p.68)

[Millions of dollars]

See footnotes on page 61.

## Footnotes to U.S. International Transactions Tables 1-10

General notes for all tables:
${ }^{r}$ Revised.
${ }^{p}$ Preliminary.

* Less than $\$ 500,000( \pm)$.
n.a. Not available.

Table 1-2:

1. Credits, + : exports of goods and services; unilateral transfers to United States; capital inthows increase in f

Debits, - :imports of goods and services; unilateral transfers to foreigners; capital outflows (decrease in foreign assets (U.S. liabilities) or increase in U.S. assets); increase in U.S. official reserve assets.
2. Excludes transfers of goods and services under U.S. military grant programs (see line 16 .
3. Excludes exports of goods under U.S. military agency sales contracts identified in Census export documents, excludes imports of goods under direct defense expenditures identiffied in Census import documents, and reflects various other adjustments
timing) of Census statistics to balance of payments basis; see table 3.
4. For all areas, amounts outstanding December 31, 1982, were as follows in millions of dollars: 4. For all areas, amounts outstanding December 31,1982 , were as follo
line $38,33,957$; line $39,11,148$; line $40,5,250$; line $41,7,348$; line $42,10,212$.
5. Includes sales of foreign obligations to foreigners.
6. Consists of bills, certificates, marketable bonds and notes, and nonmarketable convertible and nonconvertible bonds and notes.
7. Consists of U.S. Treasury and Export-Import Bank obligations, not included elsewhere, and f debt securities of U.S. Government corporations and agencies.
8. Includes, primarily, U.S. Government liabilities associated with military sales contracts and ther transactions arranged with or through forelgn offial agencies; see table 4
9. Consists of investments in U.S. corporate stocks and in debt securities of private corporations and State and local governments.
10. Beginning with estimates for the sceond quarter of 1978 , the distinction between short- and ong-term liabilities is discontinued.
11. Conceptually, the surn of lines 79 and 74 is equal to "net foreign investment" in the NationNIPA's (a) ind Product Accounts (NIPA's). However, the foreign transactions account in the gold, (b) excludes capital gains and losses of foreign affiliates of U.S. parent companies from the NIPA's measure of income receipts from direct investment abroad, and from the corresponding income payments, and (c) beginning with 1973-IV, excludes shipments and financing of militar orders placed by Lsrael under Public Law 93-199, and subsequent similar legislation. Line 77 difers from "net exports of goods and services" in the NIPA's for the same reasons with the exception of the military financing, which is excluded, and the additional exclusion of U.S. Govern ment interest payments to foreigners. The latter payments, for NIPA's purposes, are excluded A partial reconciliation table of the international accounts and the NIPA's foreign transactions account appears in the "Reconciliation and Other Special Tables" section in this issue of the account appears in the Recont
12. The maturity breakdown is available only on the limited basis shown in table 7
13. The maturity breakdown is available only on the limited basis shown in table 8
14. Includes foreign currency denominated notes sold to private residents abroad. See table 9 , line 35, footnote 7.

Table 3:

1. Exports, Census basis, represent transaction values, f.a.s. U.S. port of exportation; imports, ports and imports shown in line A1, A10, D1, and D56, are as published by the Census Bureau, as are the seasonally adjusted figures in lines A1 and A10; Census data are adjusted to include trade between the U.S. Virgin Islands and foreign countries. The seasonally adjusted figures in lines D1 and D56 are prepared
by BEA and represent the summation of seasonally adjusted 4 -digit end-use categories (see Technical Notes in the June 1980 Survey).
2. Beginning in 1970, adjustments in lines A5, A12, B9, B26, and B43 reflect the Census Burreau's reconciliation of discrepancies in the merchandise trade statistics published by the United tributed to the countecter end-use categories in section C. 3 Exports of military equipment under US military
3. Exports of military equipment under U.S. military agency sales contracts with foreign govA13), to the extent such trade is identifiable from Customs declarations. These exports are includ ed in tables 1,2 , and 10 , line 3 (transfers under U.S. military agency sales contracts); and the imports are included in tables 1, 2 , and 10 , line 19 (direct defense expenditures).
4. Addition of electrical energy; deduction of exposed motion picture film for rental rather than sale, net change in stock of U.S.owned grains in storage in Canada; net timing adjustments for goods recorded in Census data in one period but found to have been shipped in another; and coverage adjustments for special situations in which shipments were omitted from Census data.
5. Correction for discrepancy between sum of four quarters, seasonally adjusted, and the unad justed annual totals, plus the difference between Census published seasonally adjusted totals and the summation of seasonally adjusted 4 -digit end-use categories
6. Addition of inland freight on U.S. merchandise imports from Canada; addition of electrical energy; deduction of foreign charges for repair of U.S. vessels abroad, which are included in
tables 1, 2, and 10, line 22 (other transportation); net timing adjustments for goods recorded in Census data in one period but found to have been shipped in another; and coverage adjustments for special situations in which shipments were omitted from Census data.
7. Annual and unadjusted quarterly data shown in this table correspond to country and area data in table 10, lines 2 and 18, except that trade with international organizations, namely pu chases of nonmonetary gold from the IMF and transfers of to to the International Tin Counci (ITC), are included in data for other countries in Asia and Africa. The memorandum items are defined as follows: Industrial countries: Western Europe, Canada, Japan, and Australia, New Zea Qatar, United Arab Emirates, Indonesia, Algeria, Libya, Nigeria, Gabon; Other countries: Latin Qatar, United Arab Emirates, Indonesia, Algeria, Libya, Nigeria, Gabon; Other countries: Latin OPEC, the IMF and the ITC.
8. The statistical identification of automotive products exports to Canada (line D43) is not as complete and comprehensive as the identification of imports under the U.S.Canada Automotive Products Trade Act. However, the underestimation of automotive shipments to Canada due to unidentified auto parts and unreported exports, amounting to about $\$ 1,842$ million in 1981 , and $\$ 1,650$ million in 1982, has been largely corrected in line C24.
9. Includes nuclear fuel materials and fuels.

## Table 4:

1. Expenditures to release Israel from its contractual liability to pay for defense articles and ervices purchased through military sales contracts-authorized under Public Law 98-199, section 4, and subsequent similar legislation-are included in line A3. Deliveries against these military sales contracts are included in line C10; see footnote 2 . Of the line A3 items, part of the military expenditures is applied in lines A38 and A41 to reduce short-term assets previously recorded in
lines A36 and C8; this application of funds is excluded from lines C3 and C4. A second part of line A3 expenditures finances future deliveries under military sales contracts and is applied directly to lines A37 and C9. A third portion of line A3, disbursed directly to finance purchases by Israel and other countries from commercial suppliers, is included in line A32.
2. Transactions under military sales contracts are those in which the Department of Defense sells and transfers military goods and services to a foreign purchaser, on a cash or credit basis. Purchases by foreigners directly from commercial suppliers are not included as transactions under mintary sales contracts. The entries for the several categories of transactions related 3. The identification of transactions involving direct dollar outflows from the United States is made in reports by each operating agency.
3. Line A33 includes foreign currency collected as interest, and lines A38 and B2 include foreign currency collected as principal, as recorded in lines A13 and A14 respectively
4. Includes (a) advance payments to the Department of Defense (on military sales contracts) financed by loans extended to foreigners by U.S. Government agencies and (b) the contraentry for the part of line C10 which was delivered without prepayment by the foreign purchaser. Also, includes expenditures of appropriations available to release foreign purchasers from liability to make repayment.
5. Excludes liabilities associated with military sales contracts financed by U.S. Government

7 .
8. Includes receipts on short-term Commodity Credit Corporation asset financing U.S. merchandise export.

Table 5:

1. Acquisition of capital stock of existing and newly established companies, capitalization of intercompany accounts, and other equity contributions.
2. Sales and liquidations of capital stock and other equity holdings, total and partial.
3. Petroleum includes the exploration, development and production of crude oil and gas and the transportation, refining, and marketing of petroleum products exclusive of petrochemicals. Manufacturing excludes petroleum refining. "Other" industries includes mining; trade; banking; finance (except banking), insurance, and real estate; agriculture, forestry, and fishing; construc-
tion; transportation, communication, and public utilities; and services.

Table 6:

1. As published in Treasury Bulletin. Treasury data are based on transactions by foreigners reported by banks and brokers in the United States; net purchases by foreigners ( + ) correspond to net U.S. sales ( + ).
2. Redemptions consist of scheduled retirements and identifiable premature retirements of U.S.held foreign debt securities, and estimates for redemptions of Canadian issues held by U.S. residents based on Canadian statistics. Unidentifiable nonscheduled retirements appear in line 3.
3. Consists of International Bank for Reconstruction and Development (IBRD), International Development Association (IDA), International Finance Corporation (IFC), Asian Development
4. Mainly reflects exclusion of investments by foreign
5. Mainly reflects exclusion of investments by foreign official agencies in U.S. corporate stocks State and local governments. These investments are included in table 1 , lines 60 and 63 .

Table 7:

1. Amounts outstanding were reduced by an increase in the reporting exemption level from $\$ 2$ million to $\$ 10$ million, effective March 31. Capital flows omit the impact of the drop in reporting
2. Conse
3. Consists of Western Europe, Canada, Japan, Australia, New Zealand, and South Africa.
4. Mainly in the Bahamas and Cayman Islands.
5. Based on data for Ecuador, Venezuela, Indonesia, and other Asian and African oilexporting
countries. countries.

## Table 8:

1. Consists of Western Europe, Canada, Japan, Australia, New Zealand, and South Africa.
2. Mainly in the Bahamas and Cayman Islands.
3. Based on data for Ecuador, Venezuela, Indonesia, and other Asian and African oilexporting
4. Includes central governments (central banks, departments, and agencies), state, provincial and local governments, and international and regional organizations.

## Table 9:

1. Negotiable certificates of deposit issued to foreigners by U.S. banks are included with U.S. banks' custody liabilities, and are shown in the memorandum.
2. Mainly negotiable and readily transferable instruments; excludes U.S Treasury securities. 3. Consists of Western Europe, Canada, Japan, Australia, New Zealand, and South Africa.
3. Mainly in the Bahamas and Cayman Islands.
4. Based on data for Ecuador, Venezuela, Indonesia, and other Asian and African oil-exporting countries.
5. Mainly the International Bank for Reconstruction and Development (IBRD), International Development Association (IDA), International Finance Corporation (IFC), Asian Development Bank (ADB), Inter-American Development Bank (IDB), and the Trust Fund of the International Monetary Fund.
6. Consists of U.S. Treasury notes denominated in foreign currencies, sold through foreign cen-
ral banks to domestic residents in country of issue; notes are subject to restricted transferability ral banks to domestic residents in country of issue; notes are subject to restricted transferability. 8. Valuation of foreign currency indebtedness based on market exchange rates at end of month.

## Table 10:

For footnotes 1-9, see table 1.
10 . See footnote 11 to table 1 .
11. The "European Communities (10)" includes the "European Communities (6)," the United Kingdom, Denmark, Ireland, and Greece.
12. The "European Communities (6)". includes Belgium, France, Germany, Italy, Luxembourg, the Netherlands, the European Atomic Energy Community, the European Coal and Steel Community, and the European Investment Bank.
13. Includes transactions with U.S. affiliated shipping companies operating under the flags of Honduras, Liberia, and Panama, and U.S. affiliated multinational trading companies, finance, and insurance companies, not designated by country.
14. See footnote 12 to table 1.
5. See footnote 13 to table 1 .
16. Details not shown separately; see totals in lines 57 and 64.
17. Details not shown separately are included in combined line 72 and 73.

United States, the increase in U.S. banks' liabilities to the United Kingdom (other than custody liabilities) was sharply higher (about matching the step up in U.S. banks' claims on the United Kingdom). U.S. liabilities
to Caribbean branches increased less in 1982 than in 1981; some of the slowdown was related to the change in booking.

The other one-half of the step-up was an increase in liabilities to Swit-
zerland and other European countries, reflecting the demand for dollar-denominated assets.

Net foreign purchases of U.S. securities other than U.S. Treasury securities decreased $\$ 1.1$ billion to $\$ 6.0$ bil-

Table I.—Selected U.S. Transactions With OPEC Members ${ }^{1}$
[Millions of dollars]

${ }^{\text {D }}$ Suppressed to avoid disclosure of data of individual companies.
${ }^{r}$ Revised.
p Preliminary.

* Less than $\$ 500,000( \pm)$.

1. OPEC members are Algeria, Ecuador, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, United Arab Emirates, Venezuela, and associate member Gabon. Individual coun-
try information is not available for all accounts; therefore, some accounts are estimated from regional data.
2. The distinction between long- and short-term is not available.
3. The distinction between long- and short-term liabilities is discontinued.

Source: Bureau of Economic Analysis, U.S. Department of Commerce.
lion, reflecting a $\$ 1.3$ billion drop in stock purchases from the record 1981 level. Most of the decline was from Canada and Western Europe. Throughout most of the year, foreign purchases were small, partly due to the attractive yields available on debt securities; even after the August-October rise in stock prices, foreign investors stepped up their purchases only slightly. In December, foreigners purchased a record amount of U.S. stocks. Much of the increase was from the United Kingdom, whose purchases had been strong all year.

Other Western European countries sold a net $\$ 0.8$ billion of stocks, after more than $\$ 1.5$ billion in purchases in 1981.

Net foreign purchases of outstanding U.S. bonds were $\$ 1.8$ billion, compared with $\$ 1.7$ billion in 1981. Purchases were especially strong in the first half of the year when U.S. interest rates were high-purchases by West Germany more than accounted for the rise in net purchases by Western Europe.

Capital inflows on foreign direct investment in the United States
dropped to $\$ 9.4$ billion from $\$ 21.3$ billion. If the extraordinarily large 1981 transactions related to a Middle East acquisition of a U.S. petroleum construction and drilling company, a French acquisition of a U.S. mining company (and the sale of that company's Canadian affiliates), and a British acquisition of a U.S. bank are excluded, there was only a moderate decrease from year to year in equity and intercompany account inflows. Reinvested earnings decreased to $\$ 1.1$ billion from $\$ 4.1$ billion, reflecting the U.S. recession.

## Announcing the

 Second Edition of the State and Metropolitan Area Data Book

If you need ready access to up-to-date statistical information at the metropolitan, State, regional, or national level, then the new State and Metropolitan Area Data Book is for you.

If you are in marketing, the Data Book contains vast information on population change, age distribution, educational attainment, per capita money income, housing value and ownership, and other key indicators.

For planners, it presents a variety of statistics on population, births, deaths, the elderly, poverty, employment, health care, and human services.

For librarians, data from over 40 government and private agencies are summarized, including explanatory text and source citations.

For the economist, researcher, journalist, or whatever your profession may be, you will find this new book an invaluable aid both to you and to your organization.

The State and Metropolitan Area Data Book, 1982, packs into 700 pages a wide assortment of information on the entire United States, 318 standard metropolitan statistical areas (SMSA's) and 16 New England county metropolitan areas (NECMA's) and their component counties, 429 central cities located in SMSA's, 50 States, 4 census regions, 9 census divisions, and the District of Columbia.

It presents 320 data items for the SMSA's and NECMA's; 73 items for the central cities of SMSA's; and 2,018 items for the United States, regions, divisions, States, and the District of Columbia.

Featured are new data from the 1980 Census of Population and Housing, including 1979 income data for families and households; comparative rankings among States and metropolitan areas for 21 demographic and economic measures; and 10 pages of statistics covering recent trends between 1970 and 1980.

The State and Metropolitan Area Data Book, 1982, is handy and easy to use.

Use the GPO order form in this announcement to order your copy today. $\$ 15$ (paperbound).

An outline of table headings showing data included in this volume can be obtained at no charge. Also, computer tapes containing the data for States and metropolitan areas will be available for purchase. For additional information, call 301/763-1034, or write:

§ See note " $\dagger$ " for $\mathrm{p} . \mathrm{S}$-8.
(a. See note " $\ddagger$ " for p. S-8.

* New series. Data back to 1967 are available from the National Income and Wealth Division, Bureau of Economic Analysis.

Pảge S-3
$\ddagger$ Revised series. For wholesale see note " $\ddagger$ " for $p$. S-8. For manufacturing see note " $\dagger$ " for this page. For retail see note " $\dagger$ " for $p$. $\stackrel{S}{ }-8$.
$\dagger$ Revised series. Data have been revised back to 1972. A detailed description of these revisions and historical data appear in the reports "Manufacturers' Shipments, Inventories, and Orders" M3-1.10 (1972-1980) and M3-1.11 (1977-81), available from the Bureau of the Census, Washington, D.C. 20233.
§ See note "t" for p. S-8.
(a) See note "审" for p. S-8.

* New series. Data back to 1967 are available from the National Income and Wealth Division, Bureau of Economic Analysis.
\# Includes data for items not shown separately.

## Page S-4

1. Based on data not seasonally adjusted.

+ See note " $\ddagger$ " for p. S-3.
\# Includes data for items not shown separately.
$\ddagger$ Includes textile mill products, leather and products, paper and allied products, and printing and publishing industries; unfilled orders for other nondurable goods industries are zero.

T For these industries (food and kindred products, tobacco, apparel and other textile products, petroleum and coal, chemicals and allied products, and rubber and plastics products) sales are considered equal to new orders.

## Page S-5

1. Based on unadjusted data.
2. Beginning with data for January 1983, the index is affected by a change in methodology used to compute the homeownership component. For additional information regarding this change see p . S-36 of this Survey
$\dagger$ See note " $\ddagger$ " for p. S-3.
@ Compiled by Dun \& Bradstreet. Inc.
\# Includes data for items not shown separately.
§ Ratio of prices received to prices paid (parity index).
T Revisions, back to 1975 for some commodities, are available upon request.
$\ddagger$ See note " $\ddagger$ " for p. S-4.

## Page S-6

1. See note 2 for p. S-5.
2. Index no longer available from the source, BLS.
§ For actual producer prices of individual commodities see respective commodities in the Industry section beginning p.S-19. All data subject to revision four months after original publication.
$\ddagger$ Revised series. Stage-of-processing producer price indexes have been revised back to 1976 to reflect updated industry input-output relationships and improved classification of some products.
\# Includes data for items not shown separately.
$\ddagger$ Effective Feb. 1983 Survey, data have been revised back to 1978 to reflect updated seasonal factors. Effective Feb. 1982 Survey, data have been revised back to 1977 to reflect updated seasonal factors. These revisions are available upon request.
(a) Effective with the Feb. 1983 SURver, the percent change and indexes as shown here have been revised back to 1967 except for the transportation group and services which were revised back to 1978 . These revisions as well as those for indexes not shown here are available from the Bureau of Labor Statistics, U.S. Department of Labor, Washington, D.C. 20212.

## Page S-7

1. Computed from cumulative valuation total,
2. Index as of Mar. 1, 1983: building, 348.1; construction, 372.9.
\# Includes data for items not shown separately.
§ Data for Jan., Apr., July, Sept., and Dec. 1982 are for five weeks; other months four weeks.

## Page S-8

1. Advance Estimate.

I Home mortgage rates (conventional first mortgages) are under money and interest rates on p. S-14.
§ Data include guaranteed direct loans sold.
$\ddagger$ Effective Oct. 1982 Survey, seasonally adjusted wholesale trade data have been revised for Jan. 1981-March 1982. Effective April 1982 Survey, wholesale trade data have been revised for Jan. 1972-Dec. 1981. Revised data are available upon request.
$\dagger$ Effective April 1982 Survey, retail trade data have been revised for the years 1972-1981. Revised data and a summary of the changes are available from the Census Bureau, Washington, D.C. 20233.
\# Includes data for items not shown scparately.

## Page S-9

1. Advance estimate.
2. Effective Jan. 1979 data, sales of mail-order houses are included with department store sales.
3. As of July 1.
\# Includes data for items not shown separately.
$\ddagger$ Revisions for Jan. 1977-Oct. 1979 appear in "Current Population Reports," Series P-25, No. 870, Bureau of the Census.
If Effective with the January 1983 Survey, the seasonally adjusted labor force series have been revised back to January 1978. Revised monthly series appear in the January 1983 issue of Employment and Earnings. Effective with the February 1982 SURVEY the labor force series have been revised back to 1970 to reflect the 1980 Census of Population. Seasonal adjustment factors were revised accordingly. Revised monthly series appear in the February 1982 issue of Employment and Earnings. Revised annual series will appear in the March 1982 issue of Employment and Earnings, U.S. Department of Labor, Bureau of Labor Statistics.

* New series. The participation rate is the percent of the civilian noninstitutional population in the civilian labor force. The employment-population ratio is cmployment as a percent of the total noninstitutional population, 16 years and over.
$\dagger$ See note " $\dagger$ " for p. S-8.

## Page S-10

1. This series has been discontinued.
§ These unemployment rates are for civilian workers only. The unemployment rate for all workers, including the resident armed forces, was 10.2 in Feb. 1983.
$\ddagger$ Effective June 1982 SURVEY, data have been revised back to 1977 based on March 1981 benchmark levels and updated seasonal adjustment factors. See "BLS Establishment Estimates Revised to March 1981 Benchmarks," in the June 1982 issue of Employment and Earnings. Effective July 1981 SURVEY, data have been revised back to 1974 to reflect new benchmarks and new seasonal adjustment factors. See "BLS Establishment Estimates Revised to March 1980 Benchmarks," in the July 1981 issue of Employment and Earnings.
T See note "ஏ"' for p. S-9.

## Page S-11

$\dagger$ See note " $\ddagger$ " on p . S-10.
$\ddagger$ This series is not seasonally adjusted because the seasonal component is small relative to the trend-cycle and/or irregular components and consequently cannot be separated with sufficient precision.
I Production and nonsupervisory workers.

## Page S-12

1. This series has been discontinued.

+ See corresponding note on p. S-10
IT Production and nonsupervisory workers.
$\$$ Earnings in 1977 dollars reflect changes in purchasing power since 1977 by dividing by Consumer Price Index.
§ Wages as of Feb. 1, 1983: Common, \$14.92; Skilled, \$19.46.

## Page S-13

Page S-16

1. Average for Dec.
2. Reported annual; monthly revisions are not available.

II Effective April 1982 Surver, the series for work stoppages involving six or more workers have been discontinued and have been replaced by series for work stoppages involving 1,000 or more workers.
\# Includes data for items not shown separately.
§ For demand deposits, the term "adjusted" denotes demand deposits other than domestic commercial bank and U.S. Government, less cash items in process of collection; for loans, exclusive of loans to and Federal funds transactions with domestic commercial banks and include valuation reserves (individual loan items are shown gross; i.e. before deduction of valuation reserves)

* New series. Beginning Dec. 1978, data are for all investment account securities; comparable data for earlier periods are not available.
(el) Insured unemployment (all programs) data include claims filed under extended duration provisions of regular State laws; amounts paid under these programs are excluded from state benefits paid data.
@@ Insured unemployment as a percent of average covered employment in a 12 -month period.

## Page S-14

1. Data are for fiscal years ending Sept. 30 and include revisions not distributed to the months.
2. Average for the year
3. Daily average
4. Beginning Jan. 1981, data are for top-rated only. Prior data cover a range of top-rated and regional dealer closing rates. See also note 3 for this page.
5. Beginning Oct. 1981, data represent the total surplus or deficit (budget surplus or deficit plus off-budget surplus or deficit). See also note 1 .
6. Interest rate charged as of Mar. 1, 1983 was 10.83.
\#. Includes data for items not shown separately.
$\S$ The Department of Health, Education, and Welfare was redesignated as the Department of Health and Human Services by the Department of Education Organization Act.
f Adjusted to exclude domestic commercial interbank loans and Federal funds sold to domestic commercial banks.
$\ddagger$ Rates on the commercial paper placed for firms whose bond rating is Aa or the equivalent. Data through Oct. 1979 show a maturity for 120-179 days. Beginning Nov. 1979, maturity is for 180 days.
@ Data through Oct. 1979 show a maturity for 150-179 days. Beginning Nov. 1979, maturity is for 180 days.

@@ Average effective rate

## Page S-15

+ Effective Feb. 1982 Surver, the money stock measures and components have been revised back to 1959. The Federal Reserve has redefined the monetary aggregates. The redefinition was prompted by the emergence in recent years of new monetary assets-for example, negotiable order of withdrawal (NOW) accounts and money market mutual fund shares-and alterations in the basic character of established monetary assets-for example, the growing similarity of and substitution between the deposits of thrift institutions and those of commercial banks. Monthly data from 1959 to date are available from the Banking Section of the Division of Research and Statistics at the Federal Reserve Board, Washington, D.C. 20551.
$\ddagger$ Composition of the money stock measures is as follows:
MI.-This measure is currency plus demand deposits at commercial banks and interest-earning checkable deposits at all'depositary institutions-namely NOW accounts, automatic transfer from savings (ATS) accounts, and credit union share draft balances-as well as a small amount of demand deposits at thrift institutions that cannot, using present data sources, be separated from interest-earning checkable deposits.
M2. -This measure adds to M1 overnight repurchase agreements ( RP 's) issued by commercial banks and certain overnight Eurodollars (those issued by Caribbean branches of member banks) held by U.S. nonbank residents, money market mutual fund shares, and savings and small-denomination time deposits (those issued in denominations of less than $\$ 100,000$ ) at all depositary institutions. Depositary institutions are commercial banks (including U.S. agencies and branches of foreign banks, Edge Act corporations, and foreign investment companies), mutual savings banks, savings and loan associations, and credit unions.
M3.-This measure equals M2 plus large-denomination time deposits (those issued in denominations of $\$ 100,000$ or more) at all depositary institutions (including negotiable CD's) plus term RP's issued by commercial banks and savings and loan associations.
L.-This broad measure of liquid assets equals M3 plus other liquid assets consisting of other Eurodollar holdings of U.S. nonbank residents, bankers acceptances, commercial paper, savings bonds, and marketable liquid Treasury obligations.
$\ddagger \ddagger$ Includes ATS and NOW balances at all institutions, credit union share draft balances, and demand deposits at mutual savings banks.
* Overnight (and continuing contract) RP's are those issued by commercial banks to the nonbank public, and overnight Eurodollars are those issued by Caribbean branches of member banks to U.S. nonbank customers.
(a) Small time deposits are those issued in amounts of less than $\$ 100,000$, Large time deposits are those issued in amounts of $\$ 100,000$ or more and are net of the holdings of domestic banks, thrift institutions, the U.S. Government, money market mutual funds, and foreign banks and official institutions.
\# Includes data for items not shown separately
§ Number of issues represents number currently used; the change in number does not affect the continuity of the series.

1. Beginning Jan. 1981 data, U.S. Virgin Islands trade with foreign countries is included.
§ Number of issues represents number currently used; the change in number does no affect the continuity of the series.
$\ddagger$ For bonds due or callable in 10 years or more.
\# Includes data for items not shown separately.
(13) Data may not equal the sum of the geographic regions, or commodity groups and principal commodities, because of revisions to the totals not reflected in the component items.

## Page S-17

1. See note 1 for p. S-16.
2. Beginning Jan. 1982 data, the Customs value is being substituted for the f.a.s. value.
\# Includes data not shown separately.
§ Data may not equal the sum of geographic regions, or commodity groups and principal commodities, because of revisions to the totals not reflected in the components.

## Page S-18

1. See note 1 for p. S-16.
2. Annual total; quarterly or monthly revisions are not available
3. Before extraordinary and prior period items.
4. For month shown.
5. Domestic trunk operations only (averaging about 90 percent of domestic total).
6. See note 2 for p. S-17.
7. Beginning October, 1982; data are not comparable because of the exclusion of some small carriers who chose to waive filing a Form 41.
\# Includes data for items not shown separately.
§ Total revenues, expenses, and income for all groups of carriers also reflect nonscheduled service.
$\ddagger$ Beginning Jan. 1977, defined as those having operating revenues of $\$ 50$ million or more.
I: Average daily rent per room occupied, not scheduled rates.
(a) Effective January 1, 1980, contract carriers are not included because the data filed by these carriers were substantially reduced in scope, in accordance with the ICC revised reporting regulations.

Page S-19

1. Reported annual total; monthly revisions are not available.
2. Less than 500 short tons
3. Beginning Jan. 1981, data represent gross weight (formerly phosphoric acid content weight) and are not comparable with data shown for earlier periods.
4. A portion of data is being withheld to avoid disclosing information for individual companies; not comparable with other published data.
5. Beginning Jan. 1980 data, another company is included.
6. A portion of data is being suppressed because of not meeting publication standards. For nitrogen solutions, see also note 4 for this page.
\# Includes data for items not shown separately.
§ Data are reported on the basis of 100 percent content of the specified material uniess otherwise indicated
$\ddagger$ Revisions, back to 1977 for some commodities, are available upon request.
II Data for Jan. 1977-June 1979 exclude potassium magnesium sulfate; not strictly comparable with data shown for other periods.

## Page S-20

1. Reported annual total; monthly revisions are not available.
2. Reported annual total, including Hawaii; monthly data are preliminary and subject to change.
3. Beginning 1982, the reporting frequency has been changed from a monthly to a quarterly basis. Revised quarterly data for 1979 through 1981 are available upon request.
§ Data are not wholly comparable from year to year because of changes from one classification to another.
$\ddagger$ Revisions back to 1977 are available upon request.

\#\# Revisions back to 1977 are available upon request.
$\dagger \dagger$ Includes Volkswagens produced in the U.S.
(a)@ Includes passenger vans.

## Change in the Treatment of Homeownership in the CPI-U

Beginning with data for January 1983, the Consumer Price Index for All Urban Consumers (CPI-U), shown along with selected components on pages S-5 and S-6, reflects changes in the methodology used to compute the homeownership component. A rental equivalence measure is now used. Historical data for the CPI-U based on the new methodology will not be available. However, the change has been made in such a way that the indexes based on the new and old methodologies are equal for December 1982 (the so-called link month), and calculations based on the old method will be available for a 6 -month overlap period (January through June 1983). The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) will continue to be calculated by the old method through 1984. Beginning with data for January 1985, it will also reflect a rental equivalence measure of homeownership.

Under the old method of computation, the CPI homeownership component consisted of five subcomponents: the net price of homes purchased, the amount of mortgage interest expected to be paid over one-half the stated life of a home mortgage, property taxes, property insurance, and home maintenance and repairs. As such, it reflected investment elements, largely related to the purchase price and mortgage interest subcomponents, as well as consumption elements. The large weight of the homeownership component in the CPI and the sensitivity of the all-items index to the procedures used in its calculation focused attention on it.

A change to a flow-of-services-consumed treatment for homeownership has been under discussion for some time. Because such a treatment would abstract from investment elements of homeownership, it would be consistent with the design of the CPI as a measure of change in the prices of the market basket of services consumed in the base period. More recently, problems in obtaining reliable data for calculating the home price and mortgage interest cost subcomponents have highlighted the need for change. For home prices, the prices used in the CPI pertained only to purchases financed with FHA-insured mortgages. These prices represented a very small, specialized, and declining segment of the housing market, and thus were becoming less representative. For mortgage interest, new types of mortgages-involving variable rates, shorter financing terms, and other special arrangements-had become increasingly prominent, making the standard, long-term, fixed-rate
mortgage used in the CPI increasingly unrepresentative. Further, because of high interest rates and difficulties faced by home buyers in securing mortgages from financial institutions, many homeowners were offering to provide financing at below commercial rates in order to sell their homes; these arrangements were not reflected in the CPI.

Under the new method of computation, the CPI-U homeownership component has been replaced with a homeowners' cost component to reflect costs associated with homeowners' consumption of shelter service. (The new rental equivalence CPI-U is a descendant, with important refinements, of the CPI-U-X1, one of the experimental measures produced since 1980 and now discontinued.) In the new CPI-U, the homeowners' cost consists of owners' equivalent rent and household insurance. Owners' equivalent rent, the primary rental equivalence item, is a measure of the rental income owners forego when they choose to occupy their homes instead of renting them out. It replaces home purchase, home financing, and property tax of the old method, plus the portions of the property insurance, maintenance and repairs, and household appliances that are implicitly included in rents. The household insurance subcomponent is a measure of the portion of property insurance not implicitly included in rents-insurance for liability and house contents. Except for the portions now included in owners' equivalent rent, maintenance and repairs (now excluding capital improvement items) and household appliances are listed separately. As a result of the change in methodology, the overall weight of homeownership in the CPI-U declined, from about 26 to 14 percent.

The notes to pages S-5 and S-6 indicate which CPI-U series shown on those pages are affected by the change in methodology: the all-items index and series based on it; the indexes for commodities, services, and some major commodities and services aggregates; and the indexes for housing and its shelter and household furnishings and operation subcomponents. Two indexes-homeownership, and services less rent-are no longer available. In addition, a number of detailed and special-group indexes not shown on these pages are affected.

For a detailed discussion of the change in the treatment of homeownership, see "Changing the Homeownership Component of the Consumer Price Index to Rental Equivalence," CPI Detailed Report, January 1983: 1-8.

# INDEX TO CURRENT BUSINESS STATISTICS, Pages S1-536

GNP Fixed-Weighted Prige Index

Real Final Sales

Real Disposable Personal Income

[^0]:    1. The major source data that shed light on firstquarter GNP components are limited to 1 or 2 months of the quarter, and in some cases are preliminary. These data are: For personal consumption expenditures (PCE), January and February retail sales, unit sales of (PCE), January and February retail sales, unit sales of sales of new trucks for January and February; for nonresidential fixed investment, the same data for autos and trucks as for PCE, January construction put in place, January manufacturers' shipments of equipment, and business investment plans for the quarter; for residential investment, January construction put in place, and housing starts for January and February; for change in business inventories, January book values for manufacturing and trade, and unit auto inventories for January and February; for net exports of goods and services, January merchandise trade; for government purchases of goods and services, Federal unified budget outlays for January, State and local construction put in place for January, and State and local employment for January and February; and for GNP prices, the Consumer Price Index for January, and the Producer Price Index for January.
[^1]:    *Projected.

[^2]:    1. Capital expenditure estimates are for majorityowned nonbank foreign affiliates of nonbank U.S. parents. (An affiliate is majority owned when the combined ownership of all U.S. parents exceeds 50 percent.) Capital expenditures are expenditures that are made to acquire, add to, or improve property, plant, and equipment, and that are charged to capital accounts. They are on a gross basis; sales and other dispositions of fixed assets are not netted against them. Capital expenditures are reported to BEA in current dollars; they are not adjusted for price changes in host countries or for changes in the value of foreign currencies, because the data needed for these adjustments are unavailable.
[^3]:    2. The discontinuation of the bias adjustment is discussed in Jeffrey H. Lowe, "Capital Expenditures by Majority-Owned Foreign Affiliates of U.S. Companies, 1981 and 1982," Survey of Current Business 61 (October 1981): 67-68.
[^4]:    2. The three NIPA categories consist of the follow ing items from BPA table 1: merchandise, lines 2 and 18; factor income, lines 11-15, 27-30, and the small amount of labor compensation in lines 9 and 25 ; other services, lines $3-10$ and 19-26, less the small amounts of labor compensation in lines 9 and 25 . (Line 31 is interest paid by the U.S. Government to foreigners, which is excluded from NIPA imports.)
    Because of the similarity of content, the line-by-line definitions for BPA table 1 in the "Explanatory
[^5]:    Notes" of the June 1978 Survey (Part II) can be used for the NIPA items. Also, the BPA service items, which include both NIPA factor income and other services, are described in detail in Anthony J. DiLullo, "Service Transactions in the U.S. International Accounts, 1970-80," Survey 61 (November 1981): 29-46.

[^6]:    1. Use of the fourth quarter of 1970 as the trough, when real GNP, after increasing in the second and third quarters, declined to $\$ 1,084.7$ billion, does not significantly affect the results
    2. Latest quarter available.
